  - security technologies
  - emerging security issues
- network security measures, including:
  - auditing and penetration testing techniques
  - logging analysis techniques
  - organisational network infrastructure
  - capabilities of software and hardware solutions
  - general features of emerging security policies, with depth in security procedures
  - network management and security process controls
- network security implementation risk management plans and procedures, including:
  - network security planning
  - implementation
• cost analysis and budgeting.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

• a site or prototype where network security may be implemented and managed
• network support tools currently used in industry
• organisational security policies, manufacturer recommendations and security standards.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to implement and manage security on an operational system.

It applies to individuals working in middle management or leadership roles and are responsible for implementing and managing the organisation’s security management system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- conduct a network security system evaluation on at least one occasion
- develop a security plan and security recovery plan on at least one occasion
- implement controls within the security system on at least one occasion.

In the course of the above, the candidate must:

- implement and manage security functions on a system
- conduct a risk assessment
- set up effective controls to manage risk
- monitor risks and controls
- review risk analysis process
- document finalised plans.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard security technologies
- industry standard risk analysis procedures, including:
  - general features and
  - security procedures
- security requirements of an organisation, including:
  - industry standard threats to security
  - security techniques and technologies
- systems management and process control in relation to security
- industry standard systems technologies, including their general features and capabilities.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site where system security may be implemented and managed
- use of utility tools currently used in industry
- organisational security policies
- manufacturer recommendations
- security standards.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- identify and resolve model conflicts and build a model using at least two development tools and test on at least one occasion.

In the course of the above, the candidate must:

- document finalised plan
- analyse organisation’s required outcomes
- develop specific areas of a system for further information or to confirm a software or hardware direction
- identify opportunities for expansion of the model.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- organisational business domain in relation to the organisational structure
- functions and features of:
  - development and test tools
  - industry standard hardware and software products and standards
  - industry standard explain modelling techniques
  - systems development methodologies.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• acceptance criteria
• client requirements
• organisational and process goals
• project budget
• project deliverables
• standards for model development
• technical specifications
• test plans.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:
- determine and develop security policies and operating procedures on at least one occasion.

In the course of the above, the candidate must:
- conduct risk analysis
- analyse and identify organisation’s security requirements
- research and assess security framework requirements with consideration of statutory and commercial requirements
- identify associated costs.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:
- industry standard design criteria for a security framework, including:
  - organisation’s business domain
  - legislation relating to Information and Communications Technology (ICT) security
  - current industry standard hardware
  - current industry standard software products
  - industry standard security features and capabilities
  - operating systems
  - risk relating to ICT security
- industry standard security considerations for businesses, including:
  - typical environments
  - threats
  - policies and strategies.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- information on the security environment
- laws and legislation relevant to ICT security
- existing organisational security policies
- security environment, which also includes the threats to security that are, or are held to be, present in the environment
- risk analysis tools.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- review organisations existing security policies and procedures and design and document security procedures and controls for a system on at least one occasion.

In the course of the above, the candidate must:

- oversee the implementation and evaluation of the strategy.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- communications security, including human organisational interactions
- procedures for conducting information security risk assessments
- internet security technologies and processes, including:
  - firewalls
  - physical security
  - security testing methods for performing security tests
  - wireless security
  - security threats
  - the impact of security policies, plans and strategies
  - general features of specific security technology
  - risk assessment
- current industry standard security processes, including general features and capabilities of software and hardware solutions
- legislative requirements and ethical standards expected when considering security controls, including:
• ethics in Information and Communications Technology (ICT)
• privacy issues.

Assessment Conditions
Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.
This includes access to:
• ICT security assurance specifications
• probability, frequency and severity of direct and indirect harm, loss or misuse of the ICT system
• risk analysis tools and methodologies
• an ICT environment in which there are security risks
• legislation, regulations and standards relating to security
• existing organisational security policies.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design wireless markup language (WML) files and build and test a deck on at least one occasion.

In the course of the above, the candidate must:

- analyse existing parameters
- create code using required language and standards
- test and validate compatibility and performance.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard internet standards and transmission control protocols and internet protocols (TCPs/IPs) required to WML
- five-layer protocol stack of TCP/IP and its function in applications development
- wireless application protocol (WAP)
- application communication protocols
- WML code, including:
  - WMLScript and WMLScript specification
  - extensible markup language (XML) 1.0 standard
  - XML applications
- wireless features:
  - application environment
  - datagram, session, transaction protocol
  - transport layer security
- computer code of ethics as it applies to programming.

**Assessment Conditions**

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

- This includes access to:
  - XML parser
  - WML valuator
  - industry standard hardware and software.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

## ELEMENT | PERFORMANCE CRITERIA
---|---
2.3 | Select required storage applications according to technical specifications
3. Install hardware and software | 3.1 Install required level of Redundant Array of Independent Disks (RAID) hardware and software
| | 3.2 Install hard disks according to manufacturer specifications
| | 3.3 Install operating system software according to manufacturer specifications
| | 3.4 Connect required network media according to manufacturer specifications
| | 3.5 Test functionality of hardware and software according to technical specifications
4. Configure NAS | 4.1 Configure required network address and hostname
| | 4.2 Establish and test required network connection with other LAN devices
| | 4.3 Configure hard disks according to RAID requirements and format with required file system
| | 4.4 Configure access and security according to application and organisational requirements
5. Test and troubleshoot NAS | 5.1 Test NAS according to manufacturer and organisational requirements
| | 5.2 Test access and response times aligned to required applications, users and organisational requirements
| | 5.3 Make required adjustments to configuration according to organisational requirements
| | 5.4 Document finalised process and outcomes and submit to required personnel

## Foundation Skills
This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

| SKILL | DESCRIPTION |
---|---|
Learning | • Monitors outcomes of decisions, considering results and identifying key concepts and principles that may be adaptable in the future
Numeracy | • Uses mathematical formulae to calculate required equipment, undertake measurements and determine response times
Reading | • Recognises and interprets technical, manufacturer and organisational documentation to determine and confirm job requirements
<table>

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- determine specifications, install, configure and test at least three network access storage devices on at least one occasion.

In the course of the above, the candidate must:

- troubleshoot performance issues where required
- document finalised outcomes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- advantages and disadvantages of NAS versus direct attached storage (DAS) devices
- legislative, regulatory, standards and codes of practice related to NAS
- industry standard hard drive types and connectors
- industry standard network cable types and connectors
- common network topologies
- process for implementation and configuration of networks
- redundant array of independent disks (RAID) configurations and their application in data storage.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• a NAS device and basic components to build a NAS including:
  • industry standard personal computer
  • industry standard operating system
  • hard disk and network connection
  • network devices
  • workstations and servers
  • cabling, access points and a wireless access point.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to develop and implement virtualisation technologies, with the goal of providing a more sustainable Information and Communications Technology (ICT) environment.

It applies to individuals working in senior networking roles and are responsible for increasing the sustainability of an organisation through the use of virtualisation technologies.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:
- install, configure and test virtual machines on at least 2 occasions.

In the course of the above, the candidate must:
- manage environmental requirements
- document finalised outcomes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:
- government and industry policies and guidelines related to development of sustainable Information and Communication Technology (ICT) environments
- industry standard technologies and processes designed to produce required ICT environment
- tools and software applications required to manage virtual machines
- configuration of software applications required to manage virtual machines
- configuration required to integrate virtual machines into the existing network design
- outline structure, function and business organisation of the client.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
- a site or prototype where virtual machine environments may be implemented
• the network’s technical requirements
• industry required virtualisation software.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- determine at least three best-fit topologies for local networks.

In the course of the above, the candidate must:

- analyse business and organisational needs
- identify the most viable local area network (LAN), virtual private network (VPN) and wireless local area network (WLAN) topology
- document recommendations and communicate findings to relevant personnel.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- typical network topologies for the following:
  - large and small LANs
  - wide area networks (WANs)
  - VPNs
  - virtual local area networks (VLANs)
  - WLANs
- typical components of a local network, including:
  - adaptor cards
  - bridges
  - Ethernet hardware
  - gateways
  - hubs
  - routers
• transmission control and internet protocols (TCP/IP)
• business considerations for establishing local networks, including:
  • growth projections and capacity planning
  • costs and queuing constraints
  • high and low speed links
  • redundancy paths
  • response time and reliability requirements
  • scope of operation
  • traffic flow patterns
  • traffic load
  • application requirements of users
• requirements for installing:
  • unshielded twisted pair (UTP)
  • installing shielded twisted pair (STP)
  • optic fibre
  • cables
  • Wi-Fi access points
• features and capabilities of industry-accepted hardware and software products
• functions and features of cost-benefit analyses
• features of line-sharing protocols
• characteristics and relative strengths and weaknesses of LAN network topologies
• organisational requirements regarding:
  • identification of different segments in networks
  • creation of prioritised organisational network functional matrices
  • reporting identified best-fit topologies with personnel
• required legislation, codes, company work practices, regulations and standards, work health and safety (WHS) requirements for scoped work.

Assessment Conditions
Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.
This includes access to:
• business requirements
• equipment specifications
• organisational and industry costing.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to troubleshoot local area network (LAN), wide area network (WAN) and wireless network problems.

It applies to individuals working as network managers, network engineers and technical specialists or similar, and who generally work independently with limited supervision. Individuals at this level perform a broad range of problem-solving activities including troubleshooting, evaluating and analysing networks and planning and developing new systems and procedures.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

</tr>
<tr>
<td></td>
<td>1.2 Benchmark network performance and establish network performance reference point</td>
</tr>
<tr>
<td></td>
<td>1.3 Identify critical activity levels and network capacity</td>
</tr>
<tr>
<td></td>
<td>1.4 Plan and document network performance review schedule according to organisational requirements and technical specifications</td>
</tr>
</tbody>
</table>
### ELEMENT | PERFORMANCE CRITERIA
---|---
1.5 Determine additional network enhancing resource requirements according to organisational requirements and technical specifications

2. Prepare to troubleshoot network problems
- 2.1 Determine major network problems according to organisational reporting requirements
- 2.2 Identify organisational and vendor support services and network resolution plan
- 2.3 Plan and document network problem reporting and resolution plan
- 2.4 Lodge plan according to organisational requirements

3. Diagnose network faults
- 3.1 Establish fault hierarchy using data from previous resolution attempts
- 3.2 Progressively isolate and resolve fault according to technical specifications
- 3.3 Document fault resolution steps according to organisational requirements

4. Rectify faults
- 4.1 Isolate repair requirements according to technical specifications
- 4.2 Replace and reconfigure equipment and software
- 4.3 Test network and confirm fault rectification against technical requirements
- 4.4 Document outcomes according to organisational policies and procedures
- 4.5 Document user downtimes and submit report to required personnel

5. Finalise fault rectification process
- 5.1 Review fault resolution and determine likelihood for reoccurrence
- 5.2 Determine and document planned maintenance and upgrade requirements
- 5.3 Submit maintenance plan to required personnel
- 5.4 Seek and respond to feedback from required personnel

### Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- monitor a medium-sized network, determine and rectify network fault.

In the course of the above, the candidate must:

- provide constant monitoring and tuning of network
- document finalised processes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard hardware, cabling and software products, including general features and capabilities
- organisational maintenance response-level escalation procedures
- organisational business domain, including organisational structure and business functionality
- network management tools including general features and capabilities with substantial depth in troubleshooting areas
- outline industry standard network topologies
- networking technologies, features and capabilities including those relating to:
  - protocol stacks of transmission control protocol or internet protocol (TCP/IP)
  - open system interconnection (OSI)
- major organisations that oversee internet protocols
- industry standard network protocols.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a live system and sites with a representative range of network environments and operating systems
- technical records and documentation
- management information base of accumulated fault resolution information
- network support tools.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- plan, design and configure a medium-size virtual network.

In the course of the above, the candidate must:

- document finalised plans and processes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- government and industry policies and guidelines, relating to the development of efficient and reliable, Information and Communications Technology (ICT) environments
- industry standards technologies and processes, designed to produce an efficient and reliable ICT environment
- structure, functions and business organisation of the client
- benefits and costs of virtualisation
- procedures and processes for planning, designing and securing virtual environments
- design and configuration of industry standard tools and software applications required to manage virtual machines
- configuration required to integrate virtual machines into the existing network design
- configuration and management of industry standard storage infrastructure.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• a site or prototype, where virtual machine environments may be implemented
• network technical requirements
• a range of suitable software.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to monitor and troubleshoot virtualisation technologies to provide a more efficient and reliable Information and Communications Technology (ICT) environment.

It applies to those who work as senior networkers and administrators, and responsible for increasing the sustainability of an enterprise or similar environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

<table>
<thead>
<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 7.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- determine best-fit topologies for at least three wide area networks

In the course of the above, the candidate must:

- consider budget constraints and organisational needs
- identify the configuration for wireless local area network (WLAN) and the virtual private network (VPN) into a wide area network (WAN)
- document the configuration
- report the configuration to relevant personnel.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- typical network topologies for the following networks:
  - large and small LANs
  - WANs
  - VPNs
  - WLANs
- typical components and technologies relevant for a WAN, including:
  - internet protocol (IP) addressing
  - packet switching
  - routed and routable protocols
  - routing protocols, including routing information protocol (RIP), enhanced interior gateway routing protocol (EIGRP) and open shortest path first (OSPF)
  - relationship of asynchronous and synchronous communication
• use of microwave and satellite communication in networking
• transmission control protocols and internet protocols (TCPs/IPs)
• functions and features of cybersecurity and firewalls
• business considerations for establishing a WAN, including:
  • constraints and costs
  • features of networking infrastructure
  • the difference between digital and analogue networks
  • growth projections and capacity planning
  • high and low speed links
  • required WAN protocols
  • redundancy paths
  • response time and reliability requirements
  • scope of operation
  • security
  • traffic flow patterns
  • traffic load
  • users and the applications expected
• organisational requirements policies and procedures, regarding:
  • identification of different segments in networks
  • creation of WAN functional matrices
  • reporting identified best-fit topologies with personnel
• required legislation, codes, company work practices, regulations and standards, work health and safety (WHS) requirements for scoped work.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• design documents relating to LANs to be incorporated into the WAN
• equipment specifications
• vendor product catalogues and costs.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
</tbody>
</table>

1. Document WLAN network configuration

1.1 Obtain work details and scope from relevant personnel and arrange for site access in compliance with security arrangements, legislation, codes, regulations and standards
1.2 Obtain details of network layout and parameters
1.3 Hold consultations with planned stakeholders
1.4 Document the network configuration, network topology and links to carrier

2. Research client needs of WLAN

2.1 Discuss current and future network needs with client according to organisational requirements
2.2 Document current and future needs according to organisational requirements
<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 3. Implement site survey | 3.1 Select diagnostic tools and measurement processes for site survey  
3.2 Select test equipment and confirm calibration for site survey  
3.3 Measure and diagnose wireless working environment by conducting a site survey with minimum disruption to client and confirm safe working environment for all relevant personnel  
3.4 Record physical infrastructure, building use, aesthetics and other identified issues that will impact on future network performance and acceptance by the client  
3.5 Record radiofrequency interference issues, sources and subsequent resolution  
3.6 Document results of site survey |
| 4. Develop specifications for upgrade of local area network | 4.1 Document relevant network performance equipment and capacity for the expanded network  
4.2 Assess interferences to radiofrequency, topographic barriers, climate, obstacles, transmission distances and construction materials  
4.3 Assess optimal location and position of access points, repeaters, routers and other equipment  
4.4 Develop cabling plans and repeater links and power requirements  
4.5 Determine frequency to be used based on client and user requirements |
| 5. Model local area network | 5.1 Determine required test and modelling routines  
5.2 Determine estimated network traffic and planned growth  
5.3 Test planned network using modelling tools and techniques  
5.4 Document outcome of tests and revise design where required |
| 6. Determine components for local area network | 6.1 Select and test vendor products and equipment where required  
6.2 Identify sustainable compatibility, economic running costs and user connectivity access according to vendor requirements  
6.3 Finalise components list  
6.4 Prepare implementation plans according to organisational requirements |
| 7. Present local area network design to client | 7.1 Present the design to client according to organisational requirements  
7.2 Advise client of design rationale  
7.3 Inform the client of design limitations, performance expectations, unanticipated outcomes and security threats  
7.4 Obtain and document feedback from client  
7.5 Modify design if required |
### Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

<table>
<thead>
<tr>
<th>SKILL</th>
<th>DESCRIPTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Numeracy</td>
<td>• Interprets numerical data to estimate and project traffic needs, carry out a cost benefit analysis and accurately calibrate equipment</td>
</tr>
<tr>
<td>Oral communication</td>
<td>• Uses listening and questioning skills to confirm knowledge for requirements and participates in a verbal exchange of ideas/solutions</td>
</tr>
<tr>

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design at least two enterprise wireless local area networks.

In the course of the above, the candidate must:

- assess wireless network performance requirements for the client
- measure and diagnose wireless working environment
- produce wireless models and network specifications that meet client requirements
- produce wireless network designs and component lists
- document the design and obtain client approval.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- wireless network survey techniques, including:
  - audit and intrusion detection systems
  - auditing and penetration testing techniques
  - bandwidth and quality of service
  - factors affecting signal quality
- key technical considerations for designing a wireless network, including:
  - features of antenna design
  - layer 2 and layer 3 design issues
  - impact of radio frequency
  - problems associated with topography and obstacles in radio transmission path
  - wireless topologies
Assessment Requirements for ICTNWK561 Design enterprise wireless local area networks

Date this document was generated: 19 January 2021

- wireless local area networks (WLAN) and wireless metropolitan access network (WMAN) solutions
- Wi-Fi access points
- key client organisation considerations when designing a wireless network, including:
  - small office home office (SOHO) and enterprise local area networks (LANs)
  - transmission control protocols and internet protocols (TCP/IP) and applications
  - wireless security strategies
  - security threats
- software considerations when designing wireless networks, including:
  - network protocols and operating systems
  - security protocols, standards and data encryption
- organisational requirements regarding:
  - discussing and documenting current and future network needs for clients
  - preparing implementation plans
  - presenting network designs to clients
- required legislation, codes, company work practices, regulations and standards, work health and safety (WHS) requirements for scoped work.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
- network infrastructure, including wireless hardware and software
- network technical requirements
- real or simulated wireless networks
- required diagnostic equipment and standards.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit addresses the knowledge, processes and techniques necessary to configure and manage a Storage Area Network (SAN) which are widely used in the enterprise datacenter space and when coupled with server virtualisation technology, form the basis for highly available datacentres.

It applies to specialist technicians and storage engineers who manage and maintain highly available data storage in a networked environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 2.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

Evidence of the ability to:

- determine and document the specifications for a Storage Area network (SAN) solution
- select the appropriate SAN solution to meet the client requirements
- document and design a SAN solution that includes backup, security and redundancy
- install and configure a storage cluster, either physically or in a simulated/virtualised environment
- configure network settings to facilitate management of a SAN
- verify and troubleshoot network connectivity
- configure network protocols to facilitate storage access via a client/server environment
- provision shared storage using suitable protocols
- configure and use advanced SAN features if available
- monitor and report on capacity utilization
- resize existing storage to increase the size of existing datastores
- create new datastores utilising capacity on a storage system.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the function and applications of the following network protocols:
  - common internet file system CIFS
  - server message block (SMB)
  - network file system (NFS)
  - internet small computer system interface (iSCSI)
  - fibre channel (FC)
• fibre channel over Ethernet (FCOE)
• describe the advanced SAN features including:
  • snapshots
  • data deduplication
  • flexible volumes
  • replication
  • backup and restore
• describe the advantages and disadvantages of storage area networks (SAN) versus direct attached storage (DAS) devices
• identify and describe common hard drive types including:
  • serial attached SCSI (small computer system interface) -SAS
  • serial ATA (SATA)
  • solid state disk (SSD)
• identify and describe common network cable types and connectors
• outline the common network topologies
• describe the implementation and configuration of SANs
• recognise and describe redundant array of independent disks (RAID) configurations and state their application in data storage
• describe which features of advanced storage systems can be applied in server and/or virtualized environments
• describe the functional and interconnection relationship between storage systems and servers in server and/or virtualized environments
• describe how storage systems can protect against data storage failures and the functional process for recovering data.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the networking field of work and include access to:

• site or prototype where a storage area network may be implemented
• storage area network appliance or simulated appliance
• network technical requirements
• appropriate software.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to use software tools, equipment and protocols to implement a security system.

It applies to individuals who work in ICT roles that involve the planning and implementing of networks, including budgeting, and determining and resolving network security threats.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design and implement a virtual private network (VPN) and mitigate attacks on at least two different occasions.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- authentication protocols and encryption methodologies
- intrusion detection system (IDS) and intrusion prevention system (IPS)
- internet protocol (IP) and networking models
- industry standard procedures, techniques and certifications for:
  - access control lists
  - wireless regulations
  - malicious attacks and prevention techniques
  - network management tools
- procedures and techniques to configure, verify and troubleshoot, including:
  - switch with virtual local area networks (VLANs) and inter-switching communications
  - router
  - access control lists
- command line interface to configure and test network elements
- common features of Terminal Access Controller Access-Control System Plus (TACACS+) and Remote Authentication Dial In User Service (RADIUS) authentication, authorisation and accounting (AAA) protocols.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site where network security may be evaluated and tightened
- required hardware and software, including:
  - LAN or WLAN internet work technologies
  - network security technologies
- organisational guidelines, procedures and policies applicable to designing and implementing security systems.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- install, configure and test network security on a medium sized network on at least one occasion.

In the course of the above, the candidate must:

- monitor the server for security breaches
- document requirements, processes and outcomes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard auditing and penetration testing techniques
- best practice procedures for implementing backup and restore
- industry standard cryptographic techniques
- procedures for error and event logging and reporting
- intrusion detection and recovery procedures
- industry standard network service configuration, including:
  - DNS
  - dynamic host configuration protocol (DHCP)
  - web
  - mail
  - FTP
  - server messages block (SMB)
  - network time protocol (NTP)
  - proxy
• network service security features, options, limitations and vulnerabilities
• planning, configuration, monitoring and troubleshooting techniques
• security protection mechanisms, security threats and risks
• server firewall configuration, monitoring and troubleshooting tools and techniques, including network monitoring and diagnostic utilities
• user authentication and directory services.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• a site where server installation may be conducted
• server specifications
• cabling
• networked (LAN) computers
• server diagnostic software
• switch
• WAN service point of presence
• regulatory documentation that impacts on installation activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

  - router operation and routing
  - virtual local area network (VLAN) switching and inter Switching communications
  - iDevice Operating System (iOS) and internet protocol (IP) networking models
  - intrusion prevention system (IPS) and intrusion detection system (IDS) security protection
  - network security threat mitigation strategies
  - aspects of wireless, including:
    - industry standard regulations, standards and certifications
    - deployment schemes
    - network security technology
    - network topologies, architectures and elements
    - networking protocols
  - WLAN with reference to:
    - advanced security platforms
    - devices, their specification and use
- radio frequency characteristics and their measuring techniques.

**Assessment Conditions**

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
- a site or prototype where network installation may be conducted
- industry standard hardware and software, including:
  - live network
  - stand-alone and lightweight WLAN controllers and access points (AP)
  - WLAN site survey tools
  - IDS and IPS
- organisational guidelines.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to use software tools, equipment and protocols to configure network devices in the design of the infrastructure of a secure network. It applies to individuals with advanced Information and Communications Technology (ICT) expertise, who adapt router and switch operating system capabilities to mitigate attacks.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design, implement and verify network security systems using layer two and layer three devices.

In the course of the above, the candidate must:

- document evaluation outcomes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- configuration, verification and troubleshooting procedures to undertake:
  - virtual local area network (VLAN) switching
  - inter-switching communications
  - setting up and securing firewalls
  - tunnelling protocols
  - key features of deployment schemes
  - iDevice operating system (iOS) and internet protocol (IP) networking models
  - local area network (LAN) and wide area network (WAN) implementations
  - network address translation (NAT) concepts and configuration, topologies, architectures and elements, networking standards and protocols
  - procedures for configuring, verifying and troubleshooting router operations and routing
  - secure connectivity and remote access communications, security protocols, such as secure socket layer (SSL)
  - key features of VPN technologies.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site or prototype where network security may be evaluated and tightened
- organisational guidelines, procedures and policies applicable to configuring network devices securely
- required hardware and software LAN and WLAN internetwork technologies and security technologies.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- identify and evaluate requirements for a medium size digital environment on at least one occasion
- configure, tune and manage intrusion prevention system on at least one occasion.

In the course of the above, the candidate must:

- upgrade and maintain IPS sensors
- document finalised processes and outcomes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- configuration, verification and troubleshooting procedures to undertake switch and router operation and routing protocol
- internetwork operating system (IOS), internet protocol (IP) networking models and deployment schemes
- IP addressing and transmission control protocol (TCP) and IP stack
- IPS and intrusion detection system (IDS) strategies, sensor technologies and licensing requirements
- local area network and wide area network (LAN/WAN) implementations and design
- network topologies, architectures, elements, standards and protocols
- virtual local area network (VLAN) concepts and functionality and virtual private network (VPN) technologies
- legislation, regulations, standards and codes of practice required to network security.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site or prototype where network installation may be conducted
- industry standard hardware and software
- organisational guidelines, policies and procedures
- live network
- an IPS system and its sensors.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- establish and manage an information and communications technology (ICT) system and application security engineering program for a medium size network on at least occasion.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- business and commercial issues related to the management of ICT security
- critical analysis in a management context
- principles and techniques to manage ICT security, including:
  - continuity of operations (COOP)
  - systems development life cycle (SDLC).

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- ICT business specifications
- ICT security assurance specifications
- management related scenarios
- a security environment, including industry standard threats present in the environment
- information on the security environment, including:
  - laws or legislation
  - existing organisational security policies
  - organisational expertise
  - use of risk analysis tools and methodologies currently used in industry.
Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

<thead>
<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version released with ICT Information and Communications Technology Training Package Version 5.0.</td>
</tr>
</tbody>
</table>

Application

This unit describes the skills and knowledge required to test optical communications systems and components using advanced optical test equipment. It involves using the optical time domain reflectometer (OTDR), optical spectrum analyser (OSA) and optical return loss (ORL) test set for performance testing and link budget calculation.

It applies to cablers who combine technical skills with organisational and administrative skills. They may be installation contractors, technical staff and field officers from telecommunications carriers or other private and public organisations or regulatory authorities.

No licensing, registration, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

ICTBWN307 Use optical measuring instruments

<th>Performance Criteria</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
<tr>
<td>1. Prepare to use advanced optical</td>
<td>1.1 Notify customer for site access, security arrangements and location details of optical system and test purpose</td>
</tr>
</tbody>
</table>
measuring instruments

1.2 Identify site hazards and notify appropriate personnel to make site safe
1.3 Devise and implement risk control measures for hazards and risks associated with handling optical fibres and lasers, in consultation with appropriate personnel
1.4 Prepare a testing plan indicating the type of measurement, procedures and nominated wavelength, and seek approval from customer
1.5 Select appropriate tools and test instruments according to required measurement and enterprise practice

2. Evaluate optical performance and link budget using advanced optical test equipment

2.1 Set-up test instrument according to manufacturer instructions, and work health and safety (WHS) and environmental requirements
2.2 Perform measurement and tests in a safe manner to evaluate performance of optical system and component
2.3 Record test results and compare with standard test specifications from manufacturer and enterprise guidelines
2.4 Perform end-to-end measurements on an optical link and record test results and test points
2.5 Calculate optical losses for a link budget figure of an optical link
2.6 Evaluate test results and report on functionality of optical component or equipment and performance of optical link

3. Document measurement results

3.1 Document test results for future reference and make recommendations for optimising component and system performance
3.2 Clean worksite and make safe according to enterprise requirements and customer satisfaction
3.3 Notify appropriate personnel of job completion for sign-off and present test documentation

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance, but not explicit in the performance criteria.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills on two occasions and to:

- obtain operation documentation for advanced optical test instruments
- plan and prepare a schedule of tests to be performed
- conduct at least one optical test
- record the following measurements for a range of parameters:
  - optical power level
  - insertion loss of optical network
  - end-to-end fibre loss (bi-directional)
- test, calculate and document optical link budget according to industry standards using the following test equipment:
  - optical time domain reflectometer (OTDR)
  - optical spectrum analyser (OSA) or equivalent optical spectrum analyser
  - optical return loss (ORL)
- comply with all related work health and safety (WHS) requirements and work practices
- evaluate optical performance using:
  - wavelength spectrum parameters
  - ODTR events.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- optical system and its main components
- hazards and risks associated with optical systems
- health and safety and environmental requirements associated with optical systems
- common tests, measurements and testing plans used for optical systems
- common wavelengths involved with optical systems
- use of tools and test equipment for optical systems
- consequences of mating contaminated optical connectors
- calculations using decibels, dBm
- downstream and upstream signals
- dense wavelength division multiplexing (DWDM) metro and long-haul system architecture
- measurement of:
  - DWDM signals
  - gain and gain flatness of optical amplifier
  - laser spectral stability, drift and unexpected variation in spectral transmission characteristics
- non-linear effects, four-wave mixing
- optical connector types
- optical signal to noise ratio (OSNR)
- optical spectrum limits, wavelengths used in various applications and International Telecommunication Union (ITU) grid
- optical transmitters and receivers
- optical return loss (ORL)
- OTDR dead zones, dynamic range and launch cable reflectance
- safe handling procedures with optical fibres
- transmission system line rates including:
  - optical ethernet
  - optical transport network (OTN)
  - synchronous digital hierarchy (SDH)
- wavelength division multiplexing (WDM), coarse wavelength division multiplexing (CWDM) and DWDM principles and optical multiplexers
- influence of legislation, regulations, codes and standards relevant to advanced optical work.

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- tools and equipment required for measurements
- manufacturer documentation for test instruments and equipment under test.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to install dense wavelength division multiplexing (DWDM) equipment in optical networks.

It applies to technicians who interpret installation manuals and use technical skills to prepare for and conduct system tests and commissioning.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Optical Networks

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills on two occasions and to:

- determine the dense wavelength division multiplexing (DWDM) requirements for a site
- install a DWDM system and associated cabling according to plans and specifications
- test installation for operation, power and ground connections
- analyse test results and rectify faults
- complete and submit an installation report.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- DWDM principles of operation and manufacturers guidelines
- risk management of electrostatic discharge
- optical fibre connector types and characteristics
- optical fibre types and characteristics
- specific work health and safety requirements that impact the safe measurement and inspection of optical connectors and optical power from laser transmission systems
- power wiring faults.

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- tools and equipment requirement for installation
- a range of optical fibres to suit the installation.
Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- plan and configure at least two dense wavelength division multiplexing (DWDM) optical networks.

In the course of the above, the candidate must:

- prepare DWDM shelf configurations and specifications
- plan preliminary optical tests
- complete project and acceptance documentation and submit for approval
- comply with work health and safety (WHS) requirements and job specifications.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- configuration of DWDM shelves
- principles of DWDM operations
- functions and features of cabling plans
- risk of electrostatic discharge
- functions and features of specification documents
- functions and operating features of the following test equipment:
  - hand-held optical power meter
  - optical spectrum analyser
  - optical time domain reflectometer (OTDR)
  - transmission test set
- functions of an optical add drop multiplexer
• role of the following items in planning and configuring DWDM systems internet protocol (IP):
  • subnet masks
  • dynamic host configuration protocol (DHCP)
  • default gateways
• International Telecommunications Union (ITU) wavelength grid for DWDM
• types and characteristics of optical fibre connector types
• path protection and protection switching processes
• features of physical optical loopbacks and software loopbacks used in testing DWDM systems
• protocols used on optical DWDM systems
• use of ring topologies and linear network topologies in DWDM system cable routes
• WHS requirements that impact safe inspection of optical connectors and safe measurement of optical power from laser transmission systems.

Assessment Conditions
Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.
This includes access to:
• test equipment used in industry
• manufacturer technical documentation
• required regulations and specifications.

Assessors of this unit must satisfy the requirements for assessors in required vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- perform at least two acceptance and commissioning tests on optical networks.

In the course of the above, the candidate must:

- analyse results against specified installation and commissioning documents
- verify ‘as built’ installation against at least one installation plan
- complete and submit all acceptance documentation, incorporating test procedures, results and recommendations
- comply with all related work health and safety (WHS) requirements and work practices.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- legislation, codes, regulations and standards, WHS and organisational requirements for scoped work
- features of installation and commissioning specifications
- typical test equipment used for acceptance and commissioning tests
- features of acceptance schedules and test criteria
- cabling, terminations and supporting structures that are encountered in the inspected system
- common performance levels and standards
- electrical and optical properties measured in optical networks
- health and safety issues required to the work environment under inspection
- typical network topologies, switching, routing and transmission techniques
- transmission type and signals that may be encountered
- test equipment types suitable for tests to be made.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- testing equipment used in industry
- required regulatory and equipment documentation.

Assessors of this unit must satisfy the requirements for assessors in required vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- plan for at least two optical system upgrades.

In the course of the above, the candidate must:

- create a detailed installation plan and procedure
- incorporate pre-installation and post-installation test methods and document corresponding results
- assess upgrade progress in accordance with monitoring schedule
- prepare a contingency plan.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- legislation, codes, regulations and standards, work health and safety (WHS) requirements for scoped work
- functions and features of:
  - alarms and backup systems that apply to optical networks
  - escalation and outage procedures
  - network management systems
  - design specifications and design plans
- fundamentals of networks and networking equipment
- networking monitoring tools
- networking test equipment and test setups
- networking wiring practices
- upgrade and post-upgrade routines.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site where upgrade and cutover can be planned
- equipment, software, test and monitoring equipment used in industry
- required regulatory, equipment, enterprise and vendor documentation that impacts work activities.

Assessors of this unit must satisfy the requirements for assessors in required vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- test and commission at least two dense wavelength division multiplexing (DWDM) transmission systems.

In the course of the above, the candidate must:

- plan and coordinate commission
- test and DWDM transmission system according to required regulations and procedures
- complete commissioning documentation according to organisational requirements.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- legislation, codes, regulations and standards, work health and safety (WHS), and organisational requirements for scoped work, including:
  - reporting requirements
  - commissioning test procedures
  - organisational hazard risk control measures
  - procedures to review equipment for faults and compliance with organisational regulations
  - causes of alarms in long term stability tests
  - principles of operating DWDM transmission systems
  - standard electrostatic discharge precautions
  - features and operating requirements of the following test equipment:
    - a hand-held optical power meter
    - a transmission test set
    - an optical spectrum analyser
- functions of an optical add drop multiplexer
- how to set up the following:
  - internet protocol (IP) addressing
  - subnet mask
  - dynamic host configuration protocol (DHCP)
  - default gateway
- International Telecommunications Union (ITU) wavelength grid for DWDM
- identify types and characteristics of optical fibre connector
- path protection and protection switching
- physical optical loopbacks and software loopbacks
- protocols used on optical DWDM systems
- ring topologies and linear network topologies
- specific health and safety requirements that impact the safe inspection of optical connectors and the safe measurement of optical power from laser transmission systems.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
- test equipment used in industry
- manufacturer technical documentation.

Assessors of this unit must satisfy the requirements for assessors in required vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to use specialised equipment for integration into existing optical networks or part of an upgrade for higher bandwidths required by services and applications of Next Generation Networks (NGN).

It applies to individuals who design and plan networks using emerging technologies and who work with network carriers, service providers, public utilities and broadcasting companies. They combine technical optical communications skills with broader organisational and administrative skills in a range of commercial contexts and environments.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- test at least two specialised optical devices and determine suitability for integration into at least two networks.

During the course of the above, the candidate must:

- plan and coordinate test activities and equipment
- analyse test results
- report and make recommendations on suitability for integration
- comply with all work health and safety (WHS) requirements and work practices.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- functions and features of evaluation reports
- manufacturer testing specifications and distinguishing functions and features of specialised optical devices used in industry
- types of test layouts commonly used in testing specialised optical devices
- purpose of amplified spontaneous emission (ASE) source tests
- attenuation characteristics of optical fibres
- principles of operation for dense wavelength division multiplexing (DWDM)
- features and operating requirements of the following test equipment:
  - a hand-held optical power meter
  - an optical spectrum analyser
  - a transmission test set
- dispersion characteristics of various fibres
• dispersion compensation devices
• standard electrostatic discharge precautions
• functions of an optical add-drop multiplexer (OADM) and reconfigurable optical add-drop multiplexer (ROADM)
• gain equalisation theory
• International Telecommunications Union (ITU) wavelength grid for DWDM
• function of measurement of dispersion
• optical amplifier operation features
• optical fibre connector types and characteristics
• optical fibre types and characteristics
• ‘optical return loss’ (ORL)
• path protection and protection switching
• polarisation dependent loss (PDL)
• protocols used on optical DWDM systems
• reflectance in optical systems
• ring topologies and linear network topologies
• WHS requirements that impact the safe inspection of optical connectors and the safe measurement of optical power from laser transmission systems
• required legislation, codes, company work practices, regulations and standards and environmental requirements for scoped work.
• tunable laser sources and characteristics.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• test equipment used in industry
• manufacturer technical documentation, legislation, codes and standards.

Assessors of this unit must satisfy the requirements for assessors in required vocational education and training legislation, frameworks and/or standards.

1. Plan for specialised optical devices for network integration

1.1 Obtain and review required legislation, codes, company work practices, regulations and standards, work health and safety (WHS) and environmental requirements, personal protective equipment, and hazard identification tools for scoped work

1.2 Obtain plans and drawings of existing optical networks from relevant personnel and review locations for suitability of integrating specialised optical devices

1.3 Analyse and evaluate integration options that satisfy customer network requirements and device specifications

1.4 Prepare and submit the business case for adopting recommended
1.5 Prepare design plan with interconnection details to existing system and installation options and seek approval to proceed from customer

1.6 Conduct an impact risk assessment of the hardware integration with the network operations centre (NOC)

1.7 Create a contingency plan and address risks identified in impact risk assessment

2. Integrate specialised optical devices into the network

2.1 Install specialised optical devices into existing network according to design plan

2.2 Test the network, evaluate results and verify optical network performance with integrated specialised optical devices in operation

3. Document evaluation of integrating specialised optical devices into dense wavelength division multiplexing (DWDM) networks

3.1 Produce an updated design plan and submit to customer with archived copies filed according to organisational policies

3.2 Prepare an evaluation report on network performance with specialised optical devices and recommendations for enhancements

3.3 Notify NOC of job completion and obtain sign-off from relevant personnel

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- manage optical ethernet transmissions in at least two networks.

In the course of the above, the candidate must:

- identify test performance parameters and architectural requirements for managing optical ethernet transmission
- plan optical ethernet transmission tests from performance requirements
- select and perform testing regimes on ethernet optical transmissions
- comply with all work health and safety (WHS) requirements and work practices.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- principles and techniques for documenting and reporting test results
- organisational safety requirements and hazard detection guidelines
- industry benchmarks for managing optical ethernet transmission
- intricacies of the following optical ethernet systems:
  - system architecture
  - function and framework within a network environment
  - required testing techniques and analysis
- explain WHS requirements relating to:
  - handling of optical fibre
  - personal safety issues
  - use of laser light sources
• WHS requirements that impact the safe inspection of optical connectors and the safe measurement of optical power from laser transmission systems
• required legislation, codes, company work practices, regulations and standards and environmental requirements for scoped work.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• test equipment used in industry
• manufacturer technical documentation, legislation, codes and standards.

Assessors of this unit must satisfy the requirements for assessors in required vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to manage a dense wavelength division multiplexing (DWDM) transmission system using graphical user interface (GUI) management software.

It applies to individuals who use high-level technical skills and network management software to manage network operations. It is often carried out at a central Network Operations Centre (NOC).

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- manage at least two dense wavelength division multiplexing (DWDM) transmission systems.

In the course of the above, the candidate must:

- determine network parameters and set up performance monitoring
- manage network using required software and tools
- monitor network for faults and performance
- produce at least one fault and performance report
- analyse performance monitoring and alarm data
- prepare at least one report with recommendations based on analysis.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- workplace and industry environment required for DWDM transmission systems
- optical communications principles
- functions, features, operational requirements and testing principles of DWDM technology
- functions and features of simple network management protocol (SNMP)
- organisational policies and procedures required by the DWDM transmission system
- required report formats and communication tools to make recommendations on performance and network degradation
- specific work health and safety (WHS) requirements that impact management of DWDM transmission systems
- required legislation, codes, company work practices, regulations and standards and environmental requirements for scoped work.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- DWDM system and test equipment used in industry
- required equipment manuals, software manuals and other procedural documentation.

Assessors of this unit must satisfy the requirements for assessors in required vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to design a high capacity, dense wavelength division, multiplexing (DWDM) optical network suitable for a metropolitan area network (MAN) and long-haul applications.

It applies to individuals who are skilled technicians and excellent communicators who use optical technologies for the deployment of high capacity networks. The work involves link budget design and providing specification details for configuration and commissioning teams.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

</tr>
<tr>
<td></td>
<td>1.3 Obtain specifications of optical fibre between sites</td>
</tr>
</tbody>
</table>
1.4 Determine fibre loss between sites

2. Calculate link budget for each wavelength path for DWDM system design

2.1 Calculate link budget and link margin for each DWDM wavelength and path
2.2 Evaluate link budget, assess calculated margin and make recommendations for improvements
2.3 Analyse specifications of installed optical fibre and determine if dispersion will limit the maximum traffic data rate
2.4 Generate options for system design that are realistic for the enterprise and network
2.5 Evaluate and select preferred option in consideration of enterprise business strategy outcomes, service policy and compliance with required legislation
2.6 Discuss and confirm selected option with customer

3. Prepare detailed configuration documents for DWDM system

3.1 Outline detailed requirements of the DWDM system for configuration document
3.2 Document the DWDM systems performance, functional and physical attributes according to the customers traffic needs
3.3 Prepare an internet protocol (IP) address allocation for all DWDM shelves and associated routers and gateways
3.4 Submit documentation to relevant personnel for approval and sign off

4. Investigate upgrade options with emerging technologies

4.1 Investigate option of using a reconfigurable optical add-drop multiplexer (ROADM) and make recommendations, outlining benefits
4.2 Investigate feasibility of a future upgrade up to 100 Gbps system using optical transport network (OTN) - DWDM technology

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

</tr>
</tbody>
</table>

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design at least two dense wavelength division multiplexing systems (DWDM).

In the course of the above, the candidate must:

- document an internet protocol (IP) addressing scheme that is suitable for DWDM shelf configuration
- determine fibre loss between sites
- calculate link budgets and link margins
- prepare dense wavelength division multiplexing (DWDM) shelf configuration and specifications
- produce detailed configuration documents
- investigate an emerging DWDM technology.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- features of configuration of DWDM shelf
- operation principles of DWDM systems
- required formats for configuration documents for DWDM system
- functions and features of electrostatic discharge
- features and operating requirements of the following test equipment:
  - an optical time domain reflectometer (OTDR)
  - a hand-held optical power meter
  - a transmission test set
  - an optical spectrum analyser
• functions of an optical add-drop multiplexer (OADM)
• functions of reconfigurable optical add-drop multiplexer (ROADM)
• International Telecommunications Union (ITU) wavelength grid for DWDM
• features of laser stability
• characteristics of dispersion compensation devices
• the importance of a link budget and calculate link margins
• optical fibre connector types and characteristics
• optical fibre types and characteristics
• path protection and protection switching requirements
• physical optical loopbacks and software loopbacks
• traditional protocols and emerging Optical Transport Network (OTN) technologies used on optical DWDM systems
• ring topologies and linear network topologies
• specific work health and safety (WHS) requirements that impact management of DWDM systems
• required legislation, codes, company work practices, regulations and standards and environmental requirements for scoped work.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

• manufacturer technical documentation
• required regulations
• system specifications.

Assessors of this unit must satisfy the requirements for assessors in required vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to verify the characteristics of Next Generation Networks (NGN) to ensure they will support the new modulation requirements of the equipment.

It applies to individuals who are experienced technicians from networking carriers, service providers, or other private and public organisations, who have experience in the optical transmission area.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Optical Networks

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- analyse at least two types of optical transmission systems.

In the course of the above, the candidate must:

- conduct optical transmission measurements
- analyse complex optical measurement results
- liaise with the customer as required
- report on measured network performance and recommendations for future upgrades.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- principles and techniques for documenting measured performance
- conduct characterisation tests on optical networks
- attenuation characteristics of optical fibres
- the chromatic dispersion (CD) test
- principles of operation of dense wavelength division multiplexing (DWDM)
- dispersion and outline dispersion characteristics of various fibres and devices used for compensation
- precautions required to minimise electrostatic discharge
- features and operating requirements of the following test equipment:
  - a hand-held optical power meter
  - an optical spectrum analyser
  - a transmission test set
• functions of an optical add-drop multiplexer (OADM) and reconfigurable optical add-drop multiplexer (ROADM)
• functions and features of gain equalisation techniques
• insertion loss test requirements and procedures
• International Telecommunications Union (ITU) wavelength grid for DWDM
• measurement of dispersion theory
• methods to reduce dispersion
• optical amplifier operation methods
• optical fibre connector types and characteristics
• optical fibre types and characteristics
• the optical return loss (ORL) test procedures
• the optical signal-to-noise ratio (OSNR) test procedures
• the optical time domain reflectometer (OTDR) test procedures
• path protection and protection switching requirements
• performance qualification of 40 Gbit/s and 100 Gbit/s transceivers
• the polarisation mode dispersion (PMD) test procedures
• protocols used on optical DWDM systems
• reflectance in fibre optic systems
• ring topologies and linear network topologies
• required report formats to make recommendations
• work health and safety (WHS) requirements and environmental constraints that impact safe inspection of optical connectors and safe measurement of optical power from laser transmission systems
• required legislation, codes, company work practices, regulations and standards and environmental requirements for scoped work.

**Assessment Conditions**

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

• test equipment used in industry
• test equipment and manufacturer technical documentation.

Assessors of this unit must satisfy the requirements for assessors in required vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to prepare a site for support installation for aerial or underground cable, or for erection of radio towers or above ground or underground equipment enclosures.

It applies to individuals who can apply a broad range of competencies in a varied work context from installation to operation of telecommunications equipment and products.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – project management

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>Elements describe the essential outcomes</th>
<th>Performance criteria describe the performance needed to demonstrate achievement of the element.</th>
</tr>

<tbody>
<tr>
<td>1. Prepare for installation</td>
<td>1.1 Confirm location of proposed installation is according to installation plan and relevant legislation, codes, regulations and standards</td>
</tr>
</tbody>
</table>
1.2 Recognise and report hazards
1.3 Obtain approvals and authorisations for work, and carry at all times during works
1.4 Inform landowner or tenant of imminent works
1.5 Locate adjoining services according to enterprise guidelines and work health and safety (WHS) practices
1.6 Clear site of vegetation and debris according to work specifications and any relevant approvals

2. Excavate site
2.1 Mark out proposed installation according to industry guidelines and site plans
2.2 Excavate using appropriate equipment for size of excavation and location of works, according to industry guidelines
2.3 Conduct levelling of site within tolerance specified in installation plan
2.4 Employ WHS practices and personal protective equipment, where appropriate, in manner intended by manufacturer

3. Complete administration
3.1 Note approved alterations on original plan and design using appropriate symbols, and return plan to originator
3.2 Complete and sign reports according to industry policy where required
3.3 Inform landowner or tenant of construction completion and expected next steps according to industry guidelines

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

<table>
<thead>
<tr>
<th>Skill</th>

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- prepare and clear site for installation
- measure and mark out excavation location and levels
- safely excavate site
- obtain sign off, complete reports and record variations to plans.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- construction methods and performance requirements
- features and operating requirements of construction equipment
- legislation, codes of practice and other formal agreements that impact on the work activity
- manufacturer requirements for safe operation of equipment
- specific work health and safety (WHS) requirements relating to the activity and site conditions
- levelling and measuring procedures for marking out an excavation
- operation of tools and equipment suitable for site preparation and excavation
• typical issues and challenges that occur on site
• communications strategies required when dealing with landowners and tenants.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• sites on which installations can be performed
• equipment and personal protective equipment
• relevant regulatory, organisational and equipment documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- plan, carry out and evaluate two project work tasks, as part of an ICT project management team, using at least two different project management methodologies.

In the course of the above, the candidate must:

- use required project management tools and methodologies
- discuss and agree on frequency of team communication and feedback.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- project management methodologies, which may include:
  - waterfall
  - agile
  - hybrid
  - critical path method (CPM)
  - critical chain project management (CCPM)
  - integrated project management (IPM)
  - PRiSM
  - PRINCE2
  - service and fixed projects.
- organisational procedures, including:
  - work task prioritisation
  - work task performance
  - work task progression and completion
file saving and storage and material disposal
ICT project management team role, structure and responsibilities
ICT hardware and project management software required for work tasks.

Assessment Conditions
Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
- tools, equipment, materials and hardware required for ICT project management activities
- industry software packages required for ICT project management team work
- a range of simulated work tasks within ICT project management teams
- simulated working environment and project management team
- organisational procedure documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- support the initiation, control and completion of two different simple small-scale ICT projects, on separate occasions.

In the course of the above, the candidate must:

- develop a project plan applicable to the individual project objectives, project requirements and project
- comply with requirements and expectations of a project plan
- document and save work.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- project documents, including:
  - project charter
  - project proposal
- project planning process, including:
  - realistic project timelines
  - project costs
- multiple project-management and planning methods and tools
- characteristics of technical teams required to support small scale ICT projects
- different methods of communication and communication styles required to support small scale ICT projects
- applicable organisational values, policies and processes
- risks associated with small scale projects including:
Assessment Requirements for ICTMG411 Support small scale ICT projects

- cost
- scope
- timelines.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- ICT equipment and materials required for supporting simple small-scale ICT projects
- industry software packages
- a range of simulated simple small-scale ICT projects
- stakeholders and project sponsor
- project plan and document templates.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

</tr>
</tbody>
</table>

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- scope and manage activities of a complex Information and Communications Technology (ICT) project, including:
  - preparing the project plan
  - determining project team and duties
  - executing the project
  - confirming requirements have been met
  - closing the project.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- key characteristics of leaders and technical teams relating to managing ICT project teams
- consultation and communication techniques and strategies relating to obtaining required ICT project information
- requirements and process for conducting a feasibility study
- process for preparing a business case
- process of establishing technical teams and determine stages of team development
- estimation and cost-analysis techniques
- methods of communication and communication styles, including interviewing techniques
- organisational values, policies and processes for project management
- performance management and project team appraisal methods
- processes for monitoring team and own performance
- project cash flow and budgeting processes
- project-management methods and tools relevant to managing ICT projects
- systems analysis and modelling techniques
• team roles and delegation in a multi-project methodology context relevant to managing ICT projects
• key features of technology solution models and frameworks.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• office equipment, materials and industry software packages
• project outline and objectives brief
• equipment specifications.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 7.0.</td>
</tr>
</tbody>
</table>

Application

This unit describes the skills and knowledge required to prepare project briefs that outline key characteristics of networking projects, including costing, vendor and technology choices, scheduling and resourcing needs.

The unit applies to those who work under limited supervision and have responsibility to provide guidance and to delegate tasks to others.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – project management

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
</tbody>
</table>

1. Plan network project brief

1.1 Obtain project details and scope from relevant personnel and arrange for network access in compliance with required security arrangements, legislation, codes, regulations, standards, organisational policies and procedures

1.2 Assess network conditions according to organisational requirements

1.3 Obtain and analyse required site survey data and geographical information according to organisational requirements

1.4 Identify and assess barriers to outline key characteristics of project costs, vendor and technology choices, scheduling and resourcing needs
<table>
<thead>
<tr>
<th>Foundation Skills</th>
</tr>
</thead>
<tbody>
<tr>
<td><em>This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.</em></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th><strong>SKILL</strong></th>
<th><strong>DESCRIPTION</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>Numeracy</td>
<td>- Performs mathematical calculations to analyse labour, costs and quantities, and accurately process costs and estimates</td>
</tr>
<tr>
<td>Oral communication</td>
<td>- Clearly articulates information using language suitable for specific audiences and checks for understanding by seeking feedback</td>
</tr>
<tr>
<td>Reading</td>
<td>- Identifies required information and extrapolates content to determine</td>
</tr>
</tbody>
</table>
Writing
- Generates complex written texts, demonstrating control over a broad range of writing styles and purposes
- Demonstrates sophisticated writing skills by selecting required conventions and stylistic devices to express precise meaning

Teamwork
- Selects, implements and seeks to improve protocols governing communications to required personnel in a range of work contexts
- Implements strategies for a diverse range of colleagues and clients to build rapport and foster strong relationships

Planning and organising
- Considers legal requirements and organisational requirements in own role
- Monitors progress of plans and schedules, and reviews and changes them to meet new demands and priorities

Problem solving
- Responds to problems requiring immediate resolution, drawing on past experiences to focus on the cause of a problem rather than the symptom

Self-management
- Accepts responsibility for planning and sequencing complex tasks and workload, negotiating key aspects with others and taking into account capabilities, efficiencies and effectiveness

Unit Mapping Information
Supersedes and is equivalent to ICTPMG503 Prepare a project brief.

</table>

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop at least two network project briefs.

In the course of the above, the candidate must:

- analyse and document project specifications, including project costs, vendor and technology choices, and scheduling and resourcing needs
- consider and apply required legislative and environmental conditions
- assess tenders and vendors against network project brief requirements
- monitor progress of network project.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- characteristics of optimal network conditions
- functions and features of:
  - survey data and geographical information
  - network project briefs
  - network and transmission equipment
  - network topologies, interface and interconnect solutions
  - warranty information and contractor work guarantee
  - techniques to assess barriers against outlining project costs, vendor and technology choices, scheduling and resourcing needs
  - organisational policies and procedures to obtain vendor quotes, approval and issue tenders
- principles and techniques of:
  - evaluating quotes and tenders against project brief criteria
• examining project costing estimates
• monitoring budget parameters
• assessing competitive tenders
• key aspects of common client network applications and related equipment
• advantages and disadvantages of leasing and purchase options
• legislation, codes, regulations and standards, workplace health and safety (WHS), organisational requirements and environmental impacts on scoped work, including options for green information and communications technology (ICT) installations
• common faults in equipment and related connection and transmission media.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• sites on which projects are conducted
• required databases, legislative requirements and other site and project related documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- produce a comprehensive business case using an Information and Communications Technology (ICT) project implementation approach that considers core technology limitations and project constraints on at least one occasion.

In the course of the above, the candidate must:

- document processes and outcomes
- establish and work in a cohesive project team.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- characteristics of leadership and technical teams as it applies to managing ICT projects
- consultation and communication methodologies, styles and strategies, including interviewing techniques required when managing a project
- estimation and cost analysis techniques relating to managing ICT projects
- process of establishing technical teams and determining stages of team development
- process of setting objectives and conducting a benefits analysis
- organisational values, policies and processes that are applicable to ICT projects and teams
- project management methodologies and tools, and how they apply in a formal project management methodology
- process of determining team roles, and delegation process in a multi-project methodology context relating to managing ICT projects
- technology solution models and frameworks applicable to managing ICT projects.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- industry software packages
- organisation’s deliverables and project scope
- organisation’s unfulfilled legislative need.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop and manage Information and Communications Technology (ICT) project plans on at least two occasions.

In the course of the above, the candidate must:

- select methodologies
- develop project schedules
- develop project budgets
- establish budgetary controls.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- current and emerging industry practice in relation to:
  - estimation techniques and methods
  - planning techniques and methods
  - project management methodologies
  - system development methodologies
- impact of business needs on project management, including implications for project control and expected returns on business investment.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.
This includes access to:

- industry software packages
- an organisation’s identified problem, opportunity or unfulfilled legislative need.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- management methodology, including project management roles and responsibilities that relate to managing ICT project delivery
- problem-solving tools and techniques, including systems thinking, that relate to managing ICT project delivery
- information and communications technology (ICT) process models and their application
- key requirements of ICT design that relate to managing ICT project delivery
- business processes applicable to project.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- industry software packages
- an organisation’s identified problem, opportunity or unfulfilled legislative need.
Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to decommission or close an Information and Communications Technology (ICT) project in small, medium and large organisations.

The unit applies to project managers who use advanced project-management skills in undertaking a strategic assessment of the status of a project.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Project management

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- manage at least one complex ICT project closure, including:
  - reviewing project documentation and project metrics
  - analysing project performance
  - recommending and planning decommissioning of project.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- role of project stakeholders relating to managing ICT project closure
- problem-solving techniques to address issues relating to project closure
- project management methods, practices and processes relating to project closure
- project performance metrics relating to managing ICT project closure.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- industry software packages.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- manage systems implementation on at least one occasion, including: communicating and establishing new structures in preparation for change
- coordinating release of new system
- managing system tests and acceptance
- managing training of users
- releasing system to production.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- methods and techniques of configuration management
- organisational policies and standards relating to information and communications technology (ICT) configuration management
- business analysis, processes and methodology relevant to managing ICT implementation projects
- project management and systems development processes, including potential risks associated with implementation activities
- structure and implications of disaster recovery plans and Service Level Agreements (SLAs)
- key features of a training needs analysis and its role in a training program
- purpose of a rollback strategy for an ICT project
- different team roles and responsibilities, including role of release manager.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- industry software packages
- project documentation
- relevant organisational documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design, implement, manage and finalise a complex Information and Communications Technology (ICT) project.

In the course of the above, the candidate must:

- manage planning processes, scheduling, human resources, reporting and respond to contingencies
- align projects with organisational strategies and requirements
- assess outcomes and provide recommendations to refine and improve future ICT project management processes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- key features of risk management planning and processes
- computer software functions and operation, including relevant proprietary software relevant to planning direct complex ICT projects
- legislation, codes and standards relating to project specified in performance evidence
- contingencies for planning for time slippages
- sustainability requirements and ratings, including:
  - reporting mechanisms
  - conservation of energy
  - management of other resources
- tools and models of project management
- organisational frameworks and functions relevant to planning direct complex ICT projects including:
• enterprises
• government bodies
• industry associations.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• computer software packages and hardware
• codes, standards and legislation relevant to jurisdiction and project
• project documentation
• research resources, including product information and data, and theoretical texts.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design and build one simple application according to programming standards and program specifications.

In the course of the above, the candidate must:

- apply programming language syntax, sequence, selection and iteration constructs
- document changes and tests performed
- review code according to feedback obtained during design and development of application.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- language data types, operators, expressions and variables
- basic language syntax rules
- sequence, selection and iteration constructs
- the development of small-sized applications
- industry programming standards and guidelines
- commenting techniques
- debugging techniques
- application testing methods
- basic data structures.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- programming standards and guidelines
- programming software
- required hardware and its components
- industry standard software development tools
- an integrated development environment (IDE).

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 6.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- install and run at least one open source code program according to organisational procedures.

In the course of the above, the candidate must:

- participate in at least one online open source code program community
- document program source code changes and additions
- build, modify and test code
- identify and resolve at least one bug
- test and confirm bug is fixed.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard software development models and tools
- open source licensing models and techniques
- debugging and testing techniques
- documentation techniques, including internal documentation, user guides and technical documentation
- open-source development methodology
- available online resources that may be used to maintain open-source code programs
- existing online project communities and their involvement in maintaining source codes.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- open source code projects and programming languages
- the internet.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 6.0.</td>
</tr>
</tbody>
</table>

Application

This unit describes the skills and knowledge required to retrieve and manipulate information stored in information systems using a query language.

It applies to those who are involved in a range of work environments, who are required to extract information from a relational database by creating and running queries.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Programming and software development

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
</tbody>
</table>

1. Determine requirements of developing queries

1.1 Identify terminologies applicable to query language
1.2 Identify and build queries using required tools and environment

2. Write queries to extract required information

2.1 Sort and selectively retrieve values through query writing
2.2 Aggregate records by multiple attributes using an expression
2.3 Sort and filter aggregated records using an expression
2.4 Create queries and retrieve records from multiple tables
2.5 Retrieve records from multiple tables using different expressions and approaches
2.6 Filter records from multiple tables using an expression
## PERFORMANCE CRITERIA

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>2.7</td>
<td>Retrieve records from multiple tables using expressions, set operators and set logic</td>
</tr>
<tr>
<td>2.8</td>
<td>Construct and execute sub-queries</td>
</tr>
<tr>
<td>3. Perform calculations and use expressions in queries</td>
<td>3.1 Perform a calculation on numeric values and an operation on text values using an expression</td>
</tr>
<tr>
<td></td>
<td>3.2 Perform an operation on date and time values using functions</td>
</tr>
<tr>
<td></td>
<td>3.3 Aggregate values and obtain required output using an expression</td>
</tr>
<tr>
<td>4. Create and manipulate tables</td>
<td>4.1 Identify required columns, data types, keys, relationships, indexes and constraints</td>
</tr>
<tr>

</tr>
</tbody>
</table>

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop, store and execute at least three queries, and retrieve and extract data at least three times
- perform at least three calculations using control statements, operators and functions
- prepare and manipulate at least three tables to meet specific requirements
- create and use at least two views and at least two stored procedures according to task requirements.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- information gathering methods that may be used to apply query language in relational databases
- industry standard database management systems (DBMS)
- methods of connecting to DBMS
- using data definition language (DDL), data manipulation language (DML) and data control language (DCL)
- data analysis techniques
- data mining
- data source characteristics
- information system features
- required systems and procedures that may be used to apply query language in relational databases.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- industry standard software packages
- required hardware and its components
- a data source
- resources in chosen query language
- documentation regarding client and functionality requirements
- resources to aid calculation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- create at least one data access driven application.

In the course of the above, the candidate must:

- select and code data-access layer of multi-layer applications
- retrieve and update data from at least one data source
- document all changes including code and database connectivity.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- features of object-oriented design and multi-layer applications
- relational database management systems, functions and tools
- data-access-layer (DAL) and its functions
- a range of application programming interfaces (API)
- different data providers and vendors
- object-oriented programming expressions and formulas at an intermediate level
- principles of Structured Query Language (SQL)
- organisational guidelines and procedures applicable in assisting the development of data-driven applications.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
- integrated development environment (IDE)
- data access application program interfaces (APIs)
- required data-access layer (DAL)
- database management system software and files
- coding standards
- specific tools and licences, as required for particular data-access API
- different types of data-access methods including data retrieval and storage, back-end coding and disconnected data management.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop at least one test plan that covers specific test requirements, according to organisational guidelines and industry standard test frameworks.

In the course of the above, the candidate must:

- apply at least three test case design techniques
- design, implement and execute a test procedure and a script using a unit test framework and an integrated development environment (IDE)
- create a test progress report according to recorded test results.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- applicable programming languages that may be used to test software developments
- input and output requirements and basic data structures that may be used to test software developments
- software development life cycle
- design techniques that may be used to test software developments
- processes, tools and techniques for testing small-size applications
- industry standard unit test frameworks
- organisational guidelines and procedures applicable to software development and software development testing frameworks
- defect management processes and documentation techniques that may be used to test software developments
- test-case design techniques.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a software development environment
- integrated development environment (IDE)
- specific test requirements including test-plan document
- code requiring testing
- software to create test plan and report
- required hardware and its components.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop at least one algorithmic statement of a solution for a set process according to organisational guidelines.

In the course of the above, the candidate must:

- produce a functional script to automate a set process
- document script for internal and external stakeholders.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- debugging methods that may be used to automate processes
- principles of algorithms and their application in programming
- scripting language syntax and scripting techniques that may be used to automate processes
- script documentation methods at a user and technical level
- organisational guidelines and policies applicable in automating processes.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- applications capable of being scripted, or having their own scripting language
- templates for automating processes
- executable scripts
- debugging tools
- required hardware and its components.
Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop at least one mobile application using a platform and development environment according to task requirements.

In the course of the above, the candidate must:

- determine, prepare and configure a development environment
- design and build a user interface
- test and debug application and confirm task requirements are met.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- programming considerations of mobile device hardware and networking
- applicable programming languages and frameworks
- programming constructs used in interacting with mobile applications
- constraints of different digital devices
- user-interface design principles and implementation methods applicable to developing mobile applications
- organisational guidelines and procedures applicable to developing mobile applications
- industry standard mobile and digital platforms.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• mobile and digital devices and simulators
• integrated development environment (IDE)
• the internet
• server system with sufficient privileges to deploy applications
• platform and its tools
• required hardware and its components.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to design, build and test a user interface (UI) to specification, including command-line interfaces (CLI), graphical user interfaces (GUI), web user interfaces (WUI) and natural user interfaces (NUI).

It applies to those who work as user-interface designers and are responsible for specifying the layout and style of the desired user interface. This includes developers working in the area of user interface design and implementation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Programming and software development

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>

</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
</tbody>
</table>
| 1. Establish task requirements and build a prototype user interface (UI) | 1.1 Gather UI requirements and expectations from clients  
1.2 Identify organisational guidelines relating to task  
1.3 Determine application required to create prototype  
1.4 Build prototype using prototyping tools in determined language  
1.5 Review UI prototype with client and edit as required |
| 2. Design and build UI | 2.1 Formulate application content flow  
2.2 Design UI components according to task |
2.3 Define UI actions
2.4 Itemise UI events
2.5 Determine required language according to task requirements
2.6 Build UI with required functionality according to task and organisational requirements

3. Test and document UI, and obtain client sign-off
3.1 Test overall functionality of UI according to requirements
3.2 Iterate UI design and build, until test results meet requirements
3.3 Document UI and user requirements according to organisational procedures and guidelines
3.4 Obtain client sign-off to completed UI

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design and build at least one fully functional user interface (UI).

In the course of the above, the candidate must:

- comply with organisational requirements
- document the user requirements, UI and obtain client sign-off.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- a range of mathematical strategies that may be used in building a user interface activity
- programming languages that may be used in building a user interface
- open-source development tools
- small-size application development process
- application development languages and required prototyping tools
- organisational guidelines relating to user interface building.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- the internet
- online prototyping and UI design tools
- required hardware, software and its components
- specific tools and licenses available, according to selected platform.
Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

### Application

This unit describes the skills and knowledge required to install a database, manage data, data access and data security and improve database performance.

It applies to those who are responsible for the maintenance and coordination of database operations. They usually work in an organisation providing daily services as database administrators, database developers, database coordinators, or application developers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Unit Sector

Programming and software development

### Elements and Performance Criteria

<table>
<thead>

</tr>
</tbody>
</table>
| 1. Determine requirements and install database system | 1.1 Identify required database and components and user needs  
1.2 Define and use database administrative tools according to database requirements  
1.3 Verify database software installation prerequisites  
1.4 Install database software and related services according to organisational procedures  
1.5 Configure database instance, components and services according to user needs |
| 2. Manage database security and integrity | 2.1 Create and administer users according to task requirements |
2.2 Create and manage permissions and roles
2.3 Configure database including backup and recovery operations
2.4 Create and manage database backups
2.5 Restore and perform database recovery
2.6 Tune and perform database optimisation

3. Document and review database
3.1 Document maintenance and tuning work performed on database
3.2 Document users added to system
3.3 Review database and confirm required users have access

Foundation Skills
This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- configure and maintain at least one database system, according to requirements.

In the course of the above, the candidate must:

- create backup and restore database above
- document database work and database users added.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- database design principles
- relational database principles
- hardware functions and components that may be used to configure and maintain databases
- connection methods to database management systems
- documentation techniques that may be used to document database work
- uses of structured query language (SQL).

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- the database-management system software
- specific requirements, including client and functionality requirements
- required hardware and software.
Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- identify, evaluate and select at least two existing components to be re-used in a software project.

In the course of the above, the candidate must:

- identify costs of incorporating existing components
- address technical impacts and vendor licensing issues
- document selection and evaluation processes
- test functionality of pre-existing components
- comply with organisational guidelines and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry development and design methodologies
- re-use component licensing agreements, requirements and implementation costs
- project designs that may assist in using pre-existing components
- library content and structures
- documentation techniques used to document selection, evaluation and decision processes
- project testing methods that may assist in determining pre-existing components
- re-use component dependency and version compatibility
- repository tools applicable to using pre-existing components
- organisational guidelines and procedures applicable to using pre-existing components.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- software development environment
- libraries and re-use components
- vendor licensing agreements
- technical requirement guidelines
- required hardware and its components.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- create, maintain and update at least one program using coding activities, basic language syntax and layout.

In the course of the above, the candidate must:

- write code using at least two data structures and at least two standard algorithms according to organisational guidelines
- debug at least one program written above using debugging tools provided by integrated development environment (IDE)
- document activities undertaken in at least one program developed above according to organisational guidelines and coding standards
- test program created above and confirm specifications are met
- record results for tests performed above, according to organisational guidelines.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- language syntax rules
- organisational procedures and guidelines that may be used to apply introductory programming skills in different languages
- coding techniques and standards
- documentation techniques that may be used to document programming activities
- application development processes, debugging methodologies, testing techniques and basic data structures guidelines that may be used to apply introductory programming skills in different languages.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- integrated development environment (IDE) for determined language
- specific tools and licences, depending on particular platform and language.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- produce one object-oriented design from requirements, documents and system specifications, which includes:
  - static class diagrams
  - communication and sequence diagrams
  - activity and state diagrams
  - diagrams mentioned above using unified modelling language (UML)
  - refining class design
  - documentation of design.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- design quality metrics, refinement techniques and programming design principles that may be used for applying skills in object-oriented design
- unified modelling language
- different programming methodologies, documentation techniques and development methodologies that may be used for applying skills in object-oriented design.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- programming design software, tools and licenses
- required hardware and its components
• system specifications
• requirement documents
• design specifications.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- manipulate algebraic terms and evaluate at least three numerical expressions in software development
- solve and evaluate at least three different mathematical problems
- create at least two mathematical formulas in standard algebraic form and at least two mathematical formulas in standard computer notation
- simplify and evaluate at least two Boolean expressions and formulas
- convert two sets of numeric values between binary, decimal and hexadecimal number systems as required in software development.

Knowledge Evidence

elements, performance criteria and foundation skills of this unit, including knowledge of:

- Boolean algebra, number types, numerical and algebraic expressions, simple equations and standard computer notation that may be used to apply mathematical techniques for software development
- binary, decimal and hexadecimal number systems
- memory requirements for different number formats including binary, integer, decimal and negatives
- mathematical terms application and operations in computing
- calculation tools available
- organisational procedures impacting on applying mathematical techniques for software development.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.
This includes access to:
- programming language, tools and licensing
- software development tools and environment
- hardware components and required software.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to carry out intermediate programming activities involving coding, debugging and testing of code, and creating applications using different programming languages.

It applies to those who are programmers in a variety of fields and are required to conduct programming activities and produce software programs.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Programming and software development

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design and build an application in response to user requirements and specifications.

In the course of the above, the candidate must:

- code using user-defined data structures and standard algorithms
- develop a maintainable code
- design a test for code and record and document test results
- produce a technical documentation of activities and completed application.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- dynamic variables
- modular programming approach to coding
- medium-size application development processes
- data structures including but not limited to:
  - lists
  - arrays
  - linked lists
  - stack
  - queues
  - trees
  - graphs
  - sets
  - hash tables
• random-access algorithms
• user-defined data structures
• project maintenance and required language-provided facilities
• development methodologies and their application
• organisational guidelines and coding standards applicable to applying intermediate programming skills
• programming methodologies
• documentation techniques and tools within target languages that may be used to apply intermediate programming skills in different languages
• debugging tools and methodologies
• code testing procedures.

**Assessment Conditions**

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

• an integrated development environment (IDE) for determined language and its tools and licenses
• coding standards
• user requirements and specifications
• technical requirements
• required hardware and its components.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop at least two high-level system solutions for one set of software requirements according to client requirements.

In the course of the above, the candidate must:

- analysing and document at least two functional and at least two non-functional requirements
- document requirements and work performed according to organisational procedures
- submit documents and obtain approval.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- tools and techniques that may be used to analyse software requirements including:
  - client business domain
  - content features including clarity and readability
  - system functionality
  - document design and usability
  - budget creation techniques
  - modelling tools including unified modelling language (UML)
  - documentation techniques
  - risk analysis techniques
  - functions and features, of templates and style guides
  - the role of stakeholders and the degree of stakeholder involvement
  - software development life cycle overview
- systems development methodologies
- organisational procedures.

**Assessment Conditions**

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- documentation regarding client and software functionality requirements
- sources of information including client business processes
- word processing software and its features
- required hardware and digital devices
- industry standard modelling software.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- prepare at least one software development review.

In the course of the above, the candidate must:

- document software and implementation standards according to project standards
- apply and document at least three software metrics and at least three milestones.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard accepted software configuration management processes
- organisational and quality requirements applicable to software development review, including:
  - quality assurance practices and standards
  - quality review techniques and processes
  - benchmarking standards
  - organisational standards and guidelines
- software development life cycle
- acceptance criteria for software development testing
- software metrics development
- the client business domain.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.
This includes access to:

- technical specifications and plans
- organisational standards and guidelines
- project management process, and hierarchy
- organisational business processes
- software and interface requirement specifications
- project budget and timeframe
- required hardware and digital devices.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- produce at least two well-formed, formatted and validated XML documents
- use an XML parser to access, modify and transform XML documentation
- create at least one service-oriented application using XML.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- tree structure of data to be represented
- web services architecture and platform elements
- programming concepts and languages including structure and syntax
- validation and styling tools within XML
- XML document elements including:
  - root element
  - child element
  - sub-child element
- syntax rules relating to:
  - case sensitivity
  - closing tag
  - entity reference
  - proper nesting
  - quoted attribute values
  - single-root element
- the main features and services of the internet
- data modelling techniques and procedures
• commonly used elements in hypertext markup language (HTML)
• information system features
• XML parser application programming interface (API) and functions
• source characteristics.

**Assessment Conditions**

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• required hardware and its components
• extensive markup language (XML) and JavaScript object notation (JSON) tools and software
• tools to access and develop a data source including:
  • a text editor
  • a web browser
  • client and functionality requirements and documentation
• a web server and software that hosts services to deploy and test the web-service application
• required libraries.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

Evidence of the ability to:
- design an application and develop high quality code, according to client specifications
- provide quality assurance testing and monitoring
- effectively demonstrate use of code optimisers using rapid application development (RAD) techniques
- accurately document completed work.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:
- outline industry-accepted prototyping tools
- describe quality assurance practices as they relate to RAD
- describe the impact that the client business domain will have on RAD in particular: there effect on:
  - cost
  - quality
- outline the role of the stakeholder, and the involvement required in RAD
- describe three or more current industry development methodologies
- identify and apply three or more programming languages
- identify and apply the most appropriate RAD tool, taking into consideration the targeted platform or multi-platform options.
Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the programming and software development industry, and include access to:

- the computer-aided software engineering tools (CASE) repository, to facilitate the re-use of templates and components
- CASE tools
- a code generator
- detailed user requirements
- prototyping software
- the requirements document, including the model and scope
- the appropriate learning and assessment support, when required.

Assessors must satisfy NVR/AQTF assessor requirements.

Application

This unit describes the skills and knowledge required to use software management tools, to manage a systems development project from initiation to completion.

It applies to software developers, who work in a team or who individually develop systems to specification using software management tools to manage delivery within time and budget parameters.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Programming and software development

Elements and Performance Criteria

<table>

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- research and select at least one software management tool to manage a system development project.

In the course of the above, the candidate must:

- create, monitor and adjust a project plan, according to the required specifications
- define source-control procedures, and check that the correct entries are input into the system
- create, monitor, and resolve issues in a collaborative environment.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- basic principles of project management
- key features of the software development life cycle (SDLC)
- importance of software specifications when applied managing projects using software management tools
- methods and tools used for version control.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- the internet
- source-control software
• industry standard tools and licences that may be used for managing projects using software management tools.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- implement changes to improve an application’s performance on at least one application.

In the course of the above, the candidate must:

- collect application performance data
- identify and analyse performance issues
- use a logging framework to create an event log for an application
- use tools and techniques to trace and debug an application.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard logging frameworks, including:
  - logging
  - tracing tools and their functions
  - profiling tools and their functions
- basic principles of:
  - database-management systems
  - object-oriented programming
  - open-source development tools
  - software development life cycle (SDLC)
- procedures for developing, debugging and monitoring small-size applications.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- performance monitoring tools on client and server system
- specific debugging tools and licenses
- integrated development environment (IDE)
- end user device.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- deploy at least one application to a production environment.

In the course of the above, the candidate must:

- configure variables, parameters and security features for a production environment
- prepare plans for software installation, including account data, resource and security requirements
- install and uninstall packages
- test and troubleshoot issues.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- principles of database management systems applicable to deploying applications to production environments
- software development life cycle (SDLC) that may be used in deploying applications to production environments
- programming language used to create deployment applications
- Information and Communications Technology (ICT) hardware, software, security protocols and standards and organisational policies relevant to deployment of applications.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• packages on client and server system
• database management system software
• required tools and licences
• integrated development environment (IDE).
• end user device.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design and build an advance UI design.

In the course of the above the candidate must:

- determine an organisation’s technology, development tools, and UI platform
- apply advanced techniques in order to create a complex user interface (UI).

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- concepts of programming that may be used to build advanced user interfaces, including:
  - client-side programming
  - object-oriented programming
  - web design programming in hypertext markup language (HTML), cascading style sheet (CSS), and JavaScript
- UI prototyping techniques and purpose.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- integrated development environment (IDE)
- the client system, and the server system
- multimedia tools
- a solution to apply UI design
- required interface and hardware device
- required tools, software and licences required for UI implementation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design application architecture with at least five layered applications
- configure applications and adapt to at least two different locations.

In the course of the above, the candidate must:

- adapt a software product to a target market
- document processes and outcomes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- principles of database design that may apply to designing application architecture
- industry standard software development methodologies
- object-oriented programming and its role in application architecture
- software development life cycle relevant to designing application architecture.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- both functional and non-functional requirements
- tools to design software architecture
- specific information for target market and audience.
Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- secure at least two different applications.

In the course of the above, the candidate must:

- plan a security strategy
- prevent security attacks
- document processes and outcomes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard hardware and networking relating to implementing security for applications
- industry standard programming algorithms and object-oriented programming used to implement applications security
- mathematics required for programming algorithms.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- security configuration tools required to implement security for applications
- required software development environment
- testing and debugging tools applicable to implementing security for applications
• network resources required to implement security for applications.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

<td>This version first released with ICT Information and Communications Technology Training Package Version 6.0.</td>
</tr>
</tbody>
</table>

Application

This unit describes the skills and knowledge required to combine content from more than one source into new integrated applications and create custom mashups.

It applies to those responsible for software developers who develop web applications using the enabling technologies to create mashup applications.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Programming and software development

Elements and Performance Criteria

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- create at least two mashups.

In the course of the above, the candidate must:

- document requirements and process.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- hypertext markup language (HTML), cascading style sheet (CSS) and JavaScript applicable to creating mashups
- server-side scripting language required to create mashups
- outline extensible markup language (XML), web services, Asynchronous JavaScript (AJAX), and metadata
- web design and development and how it applies to creating mashups.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- the internet
- required mashup tools and API providers
- required Web 2.0 tools
- an integrated development environment (IDE)
- organisational deliverables and technical expectations for mashup creation.
Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- maintain and fix at least one custom software application.

In the course of the above, the candidate must:

- deploy range of solutions to replicate results
- document processes and outcomes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- concepts relating to analysing a system performance compared with the system’s current functionality
- processes and procedures relating to testing software systems
- industry standard hardware and software products, as they relate to system maintenance
- programming code required for the project
- program documentation required for maintaining custom software
- impact of changes on applications and systems relating to maintaining custom software
- programming standards relating to custom software.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required fault logs and help-desk reports
• software development tools, documentation and environment required for maintaining custom software
• source code and libraries required to maintain custom software.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- review existing developed software and organisation’s quality standards relevant to software development on at least one occasion.

In the course of the above, the candidate must:

- determine quality issues against quality standards and procedures that support development of defect-free products to meet client requirements
- provide feedback on the software.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard hardware and software products and quality standards that relate to reviewing developed software
- input and output drivers and operating systems used in the reviewing developed software
- procedural and object-oriented languages that relate to the reviewing and developing software
- real-time programming techniques
- testing strategies and processes
- software application measuring and estimating methodologies
- software development and configuration management processes
- software metrics development relevant to reviewing developed software.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- data dictionaries
- design specifications
- a data stream management system (DSMS)
- a simulated scenario
- Australian and international software quality standards.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- review and develop technical architecture documentation and update integration blueprint on at least two occasions.

In the course of the above, the candidate must:

- undertake component compatibility testing
- assess and minimise risk of modifications
- stabilise platform, assess compliance with the technical requirements.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard technology suppliers and components relating to developing integration blueprints
- industry development and design methodologies relevant to developing integration blueprints
- industry standard hardware and software products, features, and capabilities required for developing integration blueprints
- industry standard testing procedures for developing integration blueprints
- stress load testing principles relevant to developing integration blueprints.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
- design specifications
- a high-level, diagrammatic view of the main system components.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

1.4 Develop project plan according to organisational policies and procedures  
1.5 Submit project plan to required personnel and seek and respond to feedback |
| 2. Install pilot system | 2.1 Install and configure pilot according to project plan |
### ELEMENT | PERFORMANCE CRITERIA
---|---
2.2 | Verify technical readiness of the pilot against success and acceptance criteria
2.3 | Test data accuracy and document outcomes in status report
2.4 | Submit document to required personnel and seek and respond to feedback.

3. Test pilot system | 3.1 Determine required pilot group release according to project plan
3.2 | Determine and document test objectives
3.3 | Determine and document new system training brief
3.4 | Run the test and document outcomes
3.5 | Seek and document test feedback from required personnel

4. Evaluate feedback results | 4.1 Identify discrepancies between pilot system test results and pilot system requirements
4.2 | Determine and document troubleshooting for discrepancies
4.3 | Update and submit documentation to required personnel and obtain finalised task sign off

### Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- install, test and evaluate a pilot system on at least one occasion.

In the course of the above, the candidate must:

- establish objectives, acceptance criteria and resource requirements
- document project plan, processes and outcomes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- role of stakeholders and degree of stakeholder involvement in the development of a pilot system
- industry standard information-gathering methodologies applicable to installing, testing and evaluating pilot systems
- industry system development and design methodologies applicable to pilot systems
- industry standard hardware and software products applicable to pilot systems
- features and capabilities of current industry-accepted system piloting methodologies
- quality assurance practices relating to installing, testing and evaluating a system.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- pilot system
Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

</table>

Application

This unit describes the skills and knowledge required to monitor implementation of a system pilot, and to evaluate its performance through testing and review.

It applies to senior software developers, systems analysts or those in infrastructure operation roles, who implement systems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Programming and software development

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>

<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
</tbody>
</table>

1. Prepare to monitor pilot system implementation
   1.1 Determine pilot system implementation requirements
   1.2 Identify existing pilot and system procedures
   1.3 Obtain and determine completeness and relevance of pilot support documentation
   1.4 Determine and document required pilot system updates according to organisational requirements
   1.5 Submit documentation to required personnel and seek and respond to feedback

2. Monitor implementation of pilot system
   2.1 Supervise system functionality and integrity tests according to pilot system implementation plan
   2.2 Document system functionality and integrity test findings
   2.3 Determine and document technical support requirements
### PERFORMANCE CRITERIA

according to organisational policies and procedures

2.4 Provide required technical support

3. Evaluate the pilot system

3.1 Review pilot operation against required pilot objectives, and success criteria and document outcomes

3.2 Prioritise implement and assess impact of required upgrades and modifications

3.3 Document the review process and submit to required personnel

### Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- identify at least one systems pilot objective
- monitor the implementation and evaluate systems of at least one large pilot system.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard system of piloting methodologies including their general features, capabilities and acceptance criteria
- industry standard system development and design methodologies applicable to monitoring systems pilots
- industry information-gathering methodologies
- function and features of a system, including:
  - system integration
  - system response and recovery times
  - user interfaces
  - validation of inputs and outputs.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- pilot plan
- acceptance criteria
- system to be piloted.
Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- interpret software specifications and validate software design, source code and testing requirements on at least one occasion.

In the course of the above, the candidate must:

- document processes and outcomes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- database design and implementation relevant to validating application designs
- business and technical modelling using UML tools at intermediate level
- industry standard software development methodologies applicable to validating application designs
- system development life cycle (SDLC)
- language used in object-oriented programming
- open-source development tools
- software-testing techniques relevant to validating application designs.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- tools to create prototype systems
• static analysis tools
• test plan and test cases.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design and build at least one advanced application program according to a design document
- code at least one sorting algorithm
- apply at least two different techniques to optimise code.

In the course of the above, the candidate must:

- design and write code using dynamic data structures
- write code using hashing techniques, sorting algorithms and advanced searching techniques
- use language features that enable inter-process communication and responses to operating system signals
- use third-party libraries in the construction of an application, including referencing third-party documentation
- evaluate and document debugging test processes and outcomes
- test and debug code and resolve errors of a syntactical, logical and design origin.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- programming languages applicable to applying advanced programming skills in another language
- languages required for a GUI environment
- developing large-scale applications applicable to applying advanced programming skills in another language
- procedures for programming with complex data structures
• procedures for using a third-party supplied library for standard programming features.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

• software development environment required to apply advanced programming skills in another language
• technical and design documentation
• organisational deliverables
• integrated development environment (IDE).

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design and build at least one simple application program from a problem scenario and program specification.

In the course of the above, the candidate must:

- use different object-oriented programming language techniques
- check code optimisation.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- data structures applicable to applying intermediate object-oriented language skills
- object-oriented programming concepts and programming language required to apply intermediate object-oriented language skills
- process and techniques related to use of a graphical user interface (GUI), to interact with an operator
- documenting applications required to apply intermediate object-oriented language skills.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- object-oriented design structures
- programming languages that support object-oriented development
- integrated development environment (IDE)
• database management system (DBMS).

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to translate Information and Communications Technology (ICT) data from one format to another, by means of a data conversion process.

It applies to those in support and implementation roles who are required to convert data from one system to another.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Programming and software development

Elements and Performance Criteria

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- define inherent data requirements, remodel data and code conversion programs on at least one occasion.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- hardware and software products applicable to performing data conversions
- data conversion tools and data modelling methodologies applicable to performing data conversions
- legacy systems conversions required to perform data conversions
- industry standard database management system (DBMS) modelling applicable to performing data conversions.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- source data
- business quality assurance rules associated with data.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop a test-plan document and test cases to verify completeness, reliability and performance of an application and software on at least one occasion.

In the course of the above, the candidate must:

- document and manage test results
- perform application debugging process
- re-test application.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- industry standard programming language applicable to applying testing techniques for software development
- input and output requirements applicable to testing software development
- software development life cycle (SDLC) methodologies
- system layers including data network, hardware, operating system, database management systems, web servers, application servers, and client deployment
- processes and techniques related to small-size application development.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- business, functional, system and user requirements
• system for testing.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 6.0.</td>
</tr>
</tbody>
</table>

Application

This unit describes the skills and knowledge required to create and implement representational state transfer (REST or RESTful) application program interfaces (APIs) in order to request and manipulate data from data sources.

The unit applies to those working as senior software developers, senior back end developers or full stack developers, and responsible for managing information and communications technology (ICT) in small-to-large enterprises.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Programming

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
</tbody>
</table>

1. Create new project
   1.1 Establish need and application of REST APIs according to business needs
   1.2 Review, evaluate and select REST API framework according to required programming language and business needs
   1.3 Review, evaluate and select required integrated development environment (IDE)
   1.4 Create project using IDE according to business needs
   1.5 Configure and implement RESTful API in project

2. Build REST API endpoints
   2.1 Build REST API end point using GET method and return a collection of records
### PERFORMANCE CRITERIA

| ELEMENT | 2.2 Build REST API endpoint and return a single record  
|         | 2.3 Configure REST API endpoint using POST and PUT method according to function  
|         | 2.4 Build REST API endpoint using DELETE method  
|         | 2.5 Test methods and confirm response status code reflects function of REST API according to business needs  
| 3. Enable cross origin resource sharing (CORS) | 3.1 Update REST API GET, POST, PUT and DELETE endpoints and confirm that simple cross-origin requests are allowed  
|         | 3.2 Review and select REST API client and test simple CORS requests  
|         | 3.3 Update REST API GET, POST, PUT and DELETE endpoints and allow pre-flight cross-origin requests using OPTION method  
|         | 3.4 Test CORS for pre-flight request  
| 4. Secure REST API | 4.1 Review, evaluate and select method for securing REST API according to business needs  
|         | 4.2 Implement authentication and authorisation for securing REST API endpoints  
| 5. Finalise REST API | 5.1 Review and evaluate industry tools and conventions for documenting REST API endpoints according to business needs  
|         | 5.2 Develop documentation for REST API endpoints  
|         | 5.3 Validate documentation against REST API endpoints and submit to required personnel  

### Foundation Skills

*This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.*

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- build and test at least one representational state transfer (REST or RESTful) application program interface (API) endpoint and confirm functionality.

In the course of the above, the candidate must:

- enable cross origin resource sharing (CORS)
- use GET, POST, PUT, DELETE and PATCH methods
- secure REST API with authentication and authorisation
- document REST API work.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- features and different applications that applies to the HTTP network protocol
- features and anatomy of REST API HTTP request and response, including HTTP headers and body
- language used in programming language
- HTTP GET, POST, PUT and OPTIONS methods and features of each
- CORS methodology.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
- client/user agent
- integrated development environment (IDE)
- the internet, including connectivity
- required hardware, software and applications.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to implement a data store and manage data persistence using non-structured query language (NoSQL) to provide automatic scaling as well as high performance and availability over semi-structured data.

The unit applies to those working as senior software developers, senior back-end developers or full stack developers, and responsible for managing information and communications technology (ICT) in small-to-large enterprises (SMEs).

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for ICTPRG554 Manage data persistence using noSQL data stores

Modification History

<table>
<thead>
<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 6.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- create at least three different queries, including updating, deleting and creating data types
- create at least two indexes.

In the course of the above, the candidate must:

- specify partition and sort keys
- optimise the data.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- benefits and functions of noSQL database and schema free data persistence, as well as traditional relational data models
- methods and different features and functions between scaling out and scaling up (horizontal and vertical)
- language used in required programming language for noSQL applications
- partitioning in a noSQL environment and its related terms
- functions and features for time-to-live (TTL) requirements
- authorisation and authentications procedures and levels of responsibility according to client access requirements
- distribution of data storage across partitions
- debugging and testing methodologies and techniques
- functions and features of sort keys in noSQL storage
- features of transport encryptions, authentication and authorisation
- different noSQL data store formats, including:
  - key value
• document based
• column based
• graph based
• different noSQL data types, including:
  • numeric
  • string
  • boolean
  • complex
  • date time.

Assessment Conditions
Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• an open source or commercial NOSQL database
• the internet, including connectivity
• required hardware, software and applications.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

</table>

Application

This unit describes the skills and knowledge required to implement an Object Relational Mapping (ORM) framework to map, retrieve and manage object persistence in any programming language.

The unit applies to those working as senior software developers, senior back end developers or full stack developers, and responsible for managing Information and Communications Technology (ICT) in small-to-large enterprises (SMEs).

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Programming

Elements and Performance Criteria

<table>

<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
</tbody>
</table>

1. Establish ORM project

1.1 Confirm use, application and need for ORM framework according to business needs
1.2 Review, select and implement ORM framework according to business needs
1.3 Design, develop and build domain object model according to business needs
1.4 Review and select data persistence technology for data store
1.5 Create mapping between domain object model and
2. Retrieve and manipulate objects according to ORM framework

2.1 Instantiate single object in domain model and persist in data store according to ORM framework
2.2 Instantiate collection of objects in domain model and persist in data store according to ORM framework
2.3 Retrieve objects from data store
2.4 Update object and persist changes back to data store using ORM framework
2.5 Delete data in data store
2.6 Detach data and reattach data
2.7 Implement eager loading of related domain
2.8 Implement lazy loading of related domain objects

3. Manage transactions, concurrency and errors

3.1 Handle transaction commits and rollbacks effectively according to ORM framework and business needs
3.2 Handle data persistence and concurrency effectively according to ORM framework and business needs
3.3 Implement and confirm error-handling
3.4 Test and confirm transaction success according to business needs

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- use ORM framework to handle at least two different transactions
- use ORM framework to manage data persistence to create, update, read and delete operation at least once
- use ORM framework to handle concurrency when working with data persistence
- confirm and use commands affecting at least two entities to the data source.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- functions, features and uses of a database and selected data store
- language used in object-oriented (OO) programming
- different ORM framework methodologies, including:
  - database first methodology
  - object first methodology
- functions and features of an ORM framework
- testing techniques used for ORM framework
- functions and features of transactions, commits and rollbacks
- lazy and eager loading or persistent data objects
- function and use of concurrency
- testing processes for transaction success.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.
This includes access to:

- integrated development environment (IDE) required to use ORM frameworks
- the internet, including connectivity
- hardware, software and applications required for the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

**Application**

This unit describes the skills and knowledge required to use a model view controller (MVC) framework within a development environment that creates and develops dynamic web architecture by convention in any language.

The unit applies to those working as senior software developers, senior back end developers or full stack developers, and responsible for managing Information and Communications Technology (ICT) in small-to-large enterprises (SMEs).

No licensing, legislative or certification requirements apply to this unit at the time of publication.

<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
</tbody>
</table>

1. Create MVC project
   1.1 Confirm use for MVC framework according to business needs
   1.2 Review, evaluate and select Model View Controller (MVC) framework and required Integrated Development Environment (IDE) according to programming language and business needs
   1.3 Review, evaluate and select MVC project template and tools
   1.4 Create new project using IDE and project template

2. Use MVC framework
   2.1 Create and add controllers in project according to business needs
2.2 Create and add dynamic views
2.3 Connect view to controller
2.4 Send request from client to browser
2.5 Confirm controller receives request and builds MVC model
2.6 Confirm dynamic view is returned
2.7 Develop Controller Model and View for handling HTTP GET, POST, PUT and DELETE requests
2.8 Test and ensure function of requests

3. Finalise MVC project
3.1 Run program according to MVC framework and project requirements
3.2 Test and confirm project function
3.3 Use required debugging tools to inspect request data and model binding in controller handler
3.4 Use debugging tools to inspect HTTP request and response and confirm HTTP redirect functions
3.5 Document and save work according to business procedures

**Foundation Skills**

*This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.*

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- create at least one model view controller (MVC) project and confirm functionality of framework, including:
  - HTTP handlers and routes for GET, POST, PUT and DELETE requests
  - HTML templates, view models and dynamic rendering
  - HTTP request, responses and redirects.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- language used in object-oriented (OO) programming
- HTTP protocol
- functions and features of debugging and testing tools
- principles of model view controller design pattern, conventions and architecture, including:
  - scalability
  - maintainability
  - reusability
- features, structures, logic and modes of interactions between models, controllers and views, including:
  - HTTP Request/Response and redirects
  - HTTP request handlers, routes and parameters
  - Query strings and key/value pairs
  - model binding
  - convention over configuration
• HTML language, templates and dynamic rendering
• view models and data models.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• model view controller framework
• integrated development environment (IDE) required to implement MVC frameworks
• the internet, including connectivity
• required hardware, software and applications.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design, build and test applications for mobile devices
- deploy applications onto at least two different types of mobile devices.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard hardware and networking, requirements of a multi-touch application development
- object-oriented programming applicable to advanced mobile multi-touch applications development
- user interface designs and their application in developing multi-touch applications
- web design methodology and its integration with hand-held devices
- industry standard mobile devices that use multi-touch technologies
- extensible markup language (XML) programming and web services applicable to developing multi-touch applications
- industry standard software application development methodologies.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- at least two mobile devices
- integrated development environment (IDE)
- the internet and web services
- the server system
• industry standard tools and licences required for applicable platform.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- evaluate organisational requirements to produce technical solutions and apply design concepts on at least one occasion.

In the course of the above, a candidate must:

- document outcomes and processes against accepted industry practices.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- business processes applicable to managing development of technical solutions
- compatibility issues and resolution procedures relating to managing development of technical solutions
- configuration of internet protocol (IP) networks and desktop applications and the operating system (OS) applicable to managing development of technical solutions
- linking processes and procedures
- industry standard technologies, such as:
  - access and core networks
  - information and communications technology (ICT) network topologies
  - mobile cellular networks
  - network protocols and OS
  - optical networks and principles
  - radio frequency (RF) networks and principles
  - radio frequency identification (RFID) hardware and software
  - security protocols, standards and data encryption
• development platform that provides the tools to build, and deploy, applications into target platform environments.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• organisation’s functional requirements and technical specifications
• database and simulation software
• organisational guidelines
• network or computer layout
• site-design software and hardware
• information on applicable ICT business solutions.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, and to:

- design, build, test and deploy
  - at least one web service to specification that can be accessed and used from a separate web application
  - at least one cloud computing application to specification that can be accessed from different portals.

In the course of the above, the candidate must:

- document completed developments.

Knowledge Evidence

The candidate must demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit. This includes knowledge of:

- agile methodology to design, build, test and deploy web services and cloud computing applications, including for:
  - determining user needs and required functionality of web services and cloud computing application
  - developing uptime strategy for designed services
- characteristics of current and emerging cloud delivery models
- development tools required to produce services deployable through cloud computing
- internet infrastructure necessary for cloud computing
- object-oriented programming and its application to cloud computing
- required languages for database access and manipulation on web.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- client and functionality requirement
- integrated development environment (IDE) for determined language
- database server with tools to access data source and develop queries
- web server for determined environment in performance evidence
- internet and web browser.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to conduct routine maintenance tasks, analysing results and initiating corrective action.

It applies to individuals working as field officers from telecommunications carriers, service providers and contractors. They combine a broad range of optical and radio frequency (RF) technical skills with organisational skills to maintain the hybrid fibre coaxial (HFC) broadband cable network, generally with limited supervision and guidance.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the ICT Implementation Guide Companion Volume or the relevant regulator for details of licensing, legislative or certification requirements.

Unit Sector

## Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

<table>
<thead>
<tr>
<th>Skill</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Reading</td>
<td>• Recognises and interprets enterprise, regulatory and technical information from relevant sources to determine all specifications and frameworks</td>
</tr>
<tr>
<td>Writing</td>
<td>• Uses clear, specific and industry related terminology to complete and update workplace documentation and in written communications to relevant personnel</td>
</tr>
</tbody>
</table>
| Oral Communication            | • Liaises with a diverse range of personnel to provide advice and guidance using relevant language  
• Uses listening and questioning techniques to confirm understanding                                                                                                                                                                                               |
| Numeracy                      | • Interprets numerical information and applies basic calculations to conduct performance measurements                                                                                                                                                                        |
| Navigate the world of work    | • Takes personal responsibility for adherence to legal and regulatory responsibilities relevant to own work, with specific reference to safety and environmental requirements  
• Seeks advice from others when a situation becomes too complex to manage personally                                                                                                                                                                         |
| Get the work done             | • Determines job priorities, resources and equipment and works logically and systematically to undertake clearly defined and familiar tasks                                                                                                  
• Implements actions according to a predetermined plan, making slight adjustments if necessary and addressing some unexpected issues  
• Takes responsibility for routine decision making by selecting from a range of predetermined options in routine situations, identifying and taking situational factors into account  
• Responds to typical problems in different situations and implements standard solutions  
• Understands the purposes and specific functions of common digital systems and uses them effectively to complete routine tasks  
• Uses experiences to evaluate and identify improvements for future work |

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- determine the performance of and maintenance requirements for the hybrid fibre coaxial (HFC) broadband cable
- prepare a maintenance schedule and planned activities, and arrange resources
- carry out maintenance activities following appropriate procedures and techniques, using approved equipment where specified
- perform radio frequency (RF) and optical measurements and analyse results
- administer corrective measures where required, and verify and document actions
- comply with site risk control, work health and safety (WHS), environmental, quality and communication requirements.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- the following terms: 16 QAM, 64 QAM, 256 QAM
- relevance of alternating current (AC) and direct current (DC) electrical equipment in HFC broadband cable network
- forward error correction (FEC) and Reed-Solomon Code
- bit error ratio (BER) and acceptable values
- constellation diagrams
- digital modulation techniques
- Data Over Cable Service Interface Specification (DOCSIS) cable modem characteristics
- future broadband cable network (BCN) and migration to all-optical cable networks
- HFC broadband cable network principles, architecture and associated equipment
- minimum standards allowable in the return path for ingress
- optical fibre characteristics
- quadrature phase shift keying (QPSK)
- services carried on the HFC broadband cable network
- spectrum utilisation of the return path showing location of telephony and data channels, and signalling and test frequencies
- video stream transport formats including:
  - digital video broadcasting (DVB) - asynchronous serial interface (ASI)
  - high definition serial digital interface (HD-SDI)
  - motion picture experts group 2 (MPEG-2)
  - standard definition serial digital interface (SD-SDI)
  - modulation error ratio (MER) and acceptable values
- types of amplifier and placement in a HFC broadband cable network
- bi-directional RF amplifier and unidirectional RF amplifier
- eye diagram interpretation
- frequency spectrum and RF frequency plan HFC broadband cable network
- use of passive devices including filter, attenuator, power inserter, coaxial splitter, coupler, multitap and equaliser
- calculation of overall gain or loss when given signal levels in dBmV
- coaxial transmission line characteristics including cable tilt or slope
- forward path from head end to subscriber showing expected signal levels at key points
- power supply requirements in a HFC broadband cable network
- return path from subscriber to head end showing expected signal levels at key points
- RF amplifier characteristics including gain and tilt adjustment, equalisation and overload
- forms of ingress and where they may fall in the return path
- set up, operation and interpretation of test equipment for complex tests including:
  - optical time domain reflectometer (OTDR)
  - optical power meter
  - digital signal level meter
  - RF sweep equipment
  - spectrum analyser
- hand and power tools required to assemble and disassemble equipment in pits and in elevated work situations.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- sites on which HFC maintenance may be conducted
- maintenance tools and test instruments currently used in industry
- relevant regulatory, enterprise and equipment documentation that impact on maintenance activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to plan and undertake testing, including measuring, recording and interpreting results within all legislative and regulatory frameworks.

It applies to technicians who work in the field to install, maintain, upgrade and commission radio frequency (RF) telecommunications systems. These systems may include satellite and microwave, radio or television broadcasting, pay television, free to air television, radio frequency identification (RFID), mobile radio, cellular and worldwide interoperability for microwave access (WiMAX) networks.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- plan and conduct radio frequency (RF) testing using appropriate equipment and instruments
- measure, record and interpret test results
- monitor work to meet related work health and safety (WHS) requirements and work practices.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes:

- legislation, regulations, codes, standards and enterprise procedures relevant to work activity
- principles and operation of the following:
  - analog and digital modulation methods
  - logarithmic units
  - standard test procedures and test set-ups
  - transmitter and receiver architectures
- principles of radio frequency (RF) operation including:
  - instrument and features and types
  - radiation hazards
  - safety practices.
Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- site/s for RF measurements
- a range of test equipment and items to test
- relevant regulatory and equipment documentation that impact on work activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- collate required information to prepare and conduct testing of at least two cellular handset enhancements and at least two international roaming agreements.

In the course of the above, the candidate must:

- conduct tests on international roaming capability and functionality of handset enhancements
- analyse test results and communicate findings to relevant personnel
- recommend solutions based on test results.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- organisational procedures regarding:
  - international roaming agreements and arrangements
  - mobile service providers
  - manufacturer requirements
  - accessing third-party locations
- features and requirements of cellular handset enhancements
- types of enterprise testing procedures and requirements
- features and requirements of specialised roaming test equipment and test schedules
- types of mobile phone network standards and specifications
- testing and analysis procedures for cellular handsets
- required legislation, codes, company work practices, regulations and standards, work health and safety (WHS) requirements for scoped work.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site where tests on handsets and international roaming agreements may be conducted
- testing equipment currently used in industry
- equipment, system manuals, specifications and required enterprise policy and documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- test and measure at least three different types of cellular phone and network equipment performances.

In the course of the above, the candidate must:

- plan and coordinate test activities and equipment
- test cellular phone and network equipment according to test procedures
- analyse test results
- make recommendations on performance in an evaluation report.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- organisational procedures regarding:
  - accessing third-party sites
  - security arrangements
- functions and features of evaluation reports
- application of manufacturer technical documentation, test procedures, specifications and network procedures
- requirements of measurement schedules
- features and operational requirements of cellular test equipment, including the digital cellular test set, spectrum analyser and radio frequency (RF) power meter
- alarm-blocking procedures
- network components, functions and approved specifications
• information about transmission lines, transmitter and receiver architecture and associated cellular networks
• information about cellular antenna and feedlines, and their impact on mobile spectrum interference
• procedures to test network components
• types of adjustments needed when measuring cellular transmission
• types of networks that influence radio transmission paths and transmission lines
• required legislation, codes, company work practices, regulations and standards, work health and safety (WHS) requirements for scoped work.

**Assessment Conditions**

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• sites on which cellular network testing may be conducted
• test equipment currently used in industry
• manufacturer and enterprise technical documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to combine technical radio communications, organisational and administrative skills to generate and evaluate coverage maps in commercial and community contexts for radio and television broadcasting, radio base station coverage, and point-to-point links.

It applies to individuals who are technically proficient and who work for regulatory authorities and private and public organisations. They are typically responsible for small projects or parts of larger projects, and for the coordination of small technical groups.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- evaluate at least three radio frequency signal coverage plots.

In the course of the above, the candidate must:

- plan and coordinate at least three activities to produce coverage plots using required software settings
- determine a path profile for a point-to-point link
- evaluate and make recommendations on antenna installation specifications.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- organisational procedures regarding:
  - accessing third-party sites
  - security arrangements
  - workplace reports and documentation
- antenna and propagation theory
- antenna array theory
- features of mapping coordinate systems and geocentric datums
- propagation models and their limitations in specific environments
- common issues across antenna installations and the creation of radiation patterns
- required legislation, codes, company work practices, regulations and standards, work health and safety (WHS) requirements for scoped work.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a computer facility on which coverage plots and paths are generated
- propagation prediction software
- a digital terrain database.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to evaluate, analyse and make recommendations at the system design level on antenna installation specifications.

It applies to individuals working as technical officers and network engineers who undertake mobile network performance measurements and report on mobile capacity enhancement to senior management.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – radio frequency networks

Elements and Performance Criteria

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- monitor the capacity of at least two cellular mobile networks and recommend at least two changes.

In the course of the above, the candidate must:

- source and analyse data to prepare a plan indicating growth potential and recommendations for meeting growth goals
- use tools and software packages for forecasting and measurement
- identify site and channel capacity, required network growth and forecasting growth
- adhere to legislative and organisational procedures and requirements.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- characteristics of traffic levels from network management systems
- features of enterprise plans
- functions and features of capacity trigger criteria
- coverage and cell parameters of cellular mobile networks
- types and features of transmission mediums and paths
- methods to calculate return on investment (ROI)
- blocking, non-blocking and grade of service
- features of Erlang B measurements
- features and operating requirements of required monitoring equipment
- methods to measure cell traffic capacity
- methods to:
• analyse and interpret statistical data as applied to teletraffic measurement
• prepare and conduct a capacity measurement
• required legislation, codes of practice and other formal agreements that directly impact radio communications site transmission
• functions and features of:
  • transmission lines
  • transmitter and receiver architecture and their impact on radio communications traffic
• switching architecture with specific reference to space and time switching
• types of adjustments required to meet the standards of particular sites and environmental conditions
• typical challenges that occur in telecommunications cellular capacity design and how they are addressed.

Assessment Conditions
Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• sites with cellular mobile network
• capacity monitoring data and equipment.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- produce at least two fixed radio link budgets and at least two mobile radio link budgets.

In the course of the above, the candidate must:

- analyse signal degradation characteristics of radio paths and calculate power budgets for various distances and antenna heights versus transmitted power
- research at least two constraints imposed by mobile phone frequency allocations and simulate carrier to interference radiation patterns around a cell site
- create evaluation reports on radio system performance
- document at least two processes used to determine power link budget.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- high frequency (HF), very high frequency (VHF), ultra-high frequency (UHF) and microwave receiving techniques
- functions and features of modulation methods, including:
  - AM
  - FM
  - digital
- functions and features of:
  - multiplexing systems
  - operation of transmitters and receivers
  - propagation methods
  - radio communication systems
- weigh factors affecting radio frequency (RF) path loss
- RF technologies
- personal safety issues
- spectral efficiency of functional elements on mobile radio systems
- antennas
- radio system evaluation reports and system improvements
- organisational policies and procedures, covering:
  - personal safety
  - communication methods with relevant personnel
- evaluation reports on radio system performance
- required legislation, codes, company work practices, regulations and standards, work health and safety (WHS) requirements for scoped work.

**Assessment Conditions**

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
- a telecommunications operations site
- mobile telephony devices and equipment
- networked computers and required software.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- produce at least two analytical reports that analyse the implications of integrating at least two emerging technologies into a cellular mobile network system.

In the course of the above, the candidate must:

- research existing and emerging technologies in cellular mobile network systems
- plan frequency allocations for at least one cellular network
- analyse techniques to increase system capacity for a fixed spectrum bandwidth
- develop a plan for integration of emerging cellular technologies
- functions and features of interfaces between mobile networks and clients
- research and report the interfacing of major subsystems to other network subsystems.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- allocations and bandwidth requirements of cellular systems
- efficiency and system capacity given the spectrum allocation, number of channels required and grade of service
- equipment subsystem diagnosis and repair procedures
- features and differences between major frequency bands and their allocation of licences
- features and operating requirements of cellular test equipment
- key features of cellular mobile radio systems
- major element functions of a mobile radio system
- major frequency bands and their allocation of licences
- features of microcellular systems
• features of minimising latency
• components and functions of network components
• features of transmission lines, transmitter and receiver architecture
• restrictions and characteristics of radio spectrum in use
• hazards of radio frequency (RF) and electromagnetic energy (EME)
• components and impacts of antenna performance and mobile components on mobile spectrum interference
• spectrum efficiency
• system configuration procedures
• testing network components
• types of adjustments required to measure cellular transmission
• types of networks that influence radio path/line transmission.

Assessment Conditions
Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• sites on which cellular network analysis, research and simulation may be conducted
• test equipment currently used in industry
• manufacturer’s and enterprise technical documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- analyse at least two satellite communications system architectures.

In the course of the above, the candidate must:

- produce a satellite link budget and calculate link margins for a range of digital modulation types
- calculate the look angles for a geostationary satellite from any receiving location
- analyse and specify the major features of very small aperture terminal (VSAT) systems.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- types of antenna calculations, including:
  - gain
  - beamwidth
  - polarisation
  - effective isotropic radiated power (EIRP)
- definition of bit error rate (BER) and how it affects satellite communications
- carrier and noise ratio calculations
- construction of constellation and eye diagrams
- methods to calculate distance to satellite and typical delays
- features of frequency spectrum (satellite bands)
- methods to calculate gain-to-noise-temperature G/T ratio
- features of geostationary orbits
- methods to calculate link budgets
• look angle calculations
• features of low earth orbiting (LEO) satellites
• modulation types that are suitable for satellite communications:
  • n-FSK:
    • 2FSK
    • 4FSK
  • n-PSK:
    • 2PSK
    • 4PSK
    • 8PSK
    • 16PSK
  • n-QAM:
    • 16 QAM
    • 256QAM
• spread spectrum techniques, including:
  • direct sequence
  • frequency hopping.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• a site on which satellite analysis may be conducted
• data, calculators and appropriate software tools.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- Develop a feasibility report for a systems solution.

In the course of the above, the candidate must:

- Identify and confirm the services required
- Identify and propose feasible solutions for the client.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- client business domain, problem and opportunity potential within that environment
- functions and features of a system’s functionality
- stakeholders’ roles and levels of responsibility in the development of feasibility reports
- industry standard system development methodologies
- feasibility report structure and purpose
- organisational policies and procedures applicable to developing feasibility reports.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- client requirements
- report writing template
- text-editing software
• client expectations brief
• information on required Information and Communications Technology (ICT) business solutions
• organisational business processes
• budgets for business scenarios
• outcomes of business analysis process.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

</tbody>
</table>

Application

This unit describes the skills and knowledge required to define and implement quality assurance processes and procedures to ensure business solutions achieve quality performance expectations.

It applies to senior Information and Communications Technology (ICT) staff in a range of areas who are required to ensure quality in ICT systems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems analysis and design

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
<tr>
<td>1. Plan business quality assurance process</td>
<td>1.1 Determine legislative requirements and organisational quality performance expectations and benchmark standards</td>
</tr>
<tr>
<td></td>
<td>1.2 Discuss and develop organisational standards and guidelines for achieving each benchmark according to organisational procedures</td>
</tr>
<tr>
<td></td>
<td>1.3 Identify and analyse applicable quality management systems guides and quality management plans</td>
</tr>
<tr>
<td></td>
<td>1.4 Document expectations, standards and benchmarks in a quality assurance plan according to organisational documentation procedures</td>
</tr>
</tbody>
</table>
| 2. Develop quality policies and plans | 2.1 Write quality policy for business directive according to organisational expectations, standards and benchmarks  
2.2 Create quality management plan for business solution  
2.3 Distribute and communicate quality management plan and procedures to required personnel and obtain feedback  
2.4 Analyse feedback and determine if corrective action is required  
2.5 Amend quality management plan, as required, and incorporate corrective action  
2.6 Establish and document a quality reporting and monitoring plan according to organisational expectations, standards and benchmarks  
2.7 Check and document skills of staff and confirm ability to meet quality standards required |
|---|---|
| 3. Implement and control quality assurance processes | 3.1 Determine and allocate strategic quality responsibilities and key quality tasks and functions to required personnel according to quality management plan  
3.2 Apply quality performance guidelines, procedures and processes according to quality management plan  
3.3 Obtain stakeholder feedback and monitor implementation of quality processes  
3.4 Monitor quality process performance and report to required personnel according to quality management plan  
3.5 Identify and record system breakdowns and create corrective action requests  
3.6 Take corrective action and escalate as required according to organisational procedures |
| 4. Improve quality | 4.1 Collect, analyse and measure quality performance results against benchmarks and determine if quality standards are being met  
4.2 Use corrective action requests and determine frequency of quality breakdowns, whether defects are isolated incidents or require a wider analysis and corrective action  
4.3 Discuss and determine corrective actions to be taken with required personnel and assign responsibility for taking action as required  
4.4 Implement corrective action solutions and measure performance according to organisational procedures  
4.5 Review and adjust benchmark standards as required and improve quality performance  
4.6 Document quality performance results and disseminate information to required personnel as necessary  
4.7 Review organisational procedures at predetermined schedules as part of a management review process and quality reporting |
**Foundation Skills**

*This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.*

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- plan and implement at least one quality assurance process for a medium sized business.

In the course of the above, the candidate must:

- construct quality standards that can be measured quantitatively and applied universally
- document quality assurance standards, policies and plans
- monitor and review quality assurance standards and processes
- adhere to legislative and organisational procedures and requirements.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- copyright and intellectual property legislation applicable to Information and Communications Technology (ICT) systems development
- legislative requirements and organisational quality performance expectations and benchmark standards
- industry standard quality management system guides, including quality management plans
- features and systems within business model
- quality assurance and quality management plans of:
  - International Organisation for Standardization (ISO)
  - International Electrotechnical Commission (IEC) standards
  - Australian Standards (AS)
- quality assurance improvement processes
- technical performance measurement techniques
- the structure of quality assurance management plans and included standards
• organisational procedures applicable to implementing quality assurance processes, including:
  • documentation standards
  • processes of reporting and monitoring quality assurance plans
  • methods and processes of measuring performance.

Assessment Conditions
Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• industry and organisational quality assurance standards
• data applicable to business model
• required hardware, software and digital devices
• organisational guidelines and procedures applicable to quality standards.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop technical requirements for at least three business solutions.

In the course of the above, the candidate must:

- document internal and external technical environments required
- produce an impact statement of each technical solution above
- evaluate functionality of each business solution above
- comply with organisational procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- business process design
- copyright and intellectual property legislation applicable to Information and Communications Technology (ICT) systems development
- customer and business liaison processes
- technology connectivity implications
- business models and solutions
- corporate strategies which may influence business solutions
- interface requirements of end users
- key policies, procedures and documentation required to develop technical requirements for business solutions, including those related to:
  - business supply chains procedures
  - security protocols
  - time and resource management processes
• performance standards and benchmarks
• methods in calculating implementation costs of business solution
• testing and validation processes applicable to business solution
• software solutions used in building business platforms
• organisational and legislative requirements and procedures applicable to business solutions.

Assessment Conditions
Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• business model
• business requirements and solutions
• customer relationship model
• hardware, software and network requirements
• organisational and legislative requirements
• software solutions
• processes requiring change by business solution
• security protocols applicable to business solutions
• required tools, equipment, materials and industry standard software packages.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- produce a moderately complex feasibility report according to client requirements.

In the course of the above, the candidate must:

- review documentation and confirm client requirements for project
- document at least three different alternative business solutions
- comply with legislative and organisational requirements
- obtain project sign-off from required personnel.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- the client business domain and client requirements
- legislative requirements applicable to project scope
- key organisational standards, guidelines, procedures and documentation required to produce feasibility reports
- the role of stakeholders and degree of stakeholder involvement in developing a feasibility report
- the system’s functionality and improvement options.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• client requirements
• report writing template
• information on a range of Information and Communications Technology (ICT) business solutions
• future organisational business processes
• budgets for scenarios
• outcomes of business analysis process
• financial modelling
• business context
• required tools, equipment, materials, hardware and industry software packages.

Assessors of this unit must satisfy the requirements for assessor in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- perform an ICT-focused enterprise analysis for an organisation.

In the course of the above, the candidate must:

- examine business situation in detail and document a business case for a proposed solution that addresses:
  - business need
  - required capabilities
  - solution scope
  - risk assessment
  - cost estimates
  - most feasible approach.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- business analysis processes, procedures and techniques
- business problems and opportunities, processes, models and strategies
- key organisational policies, procedures and documentation required to perform ICT focused enterprise analysis, including those related to:
  - assumption testing processes
  - organisational capabilities
- market trends and best practices in identifying business opportunities
- constraints and risks in implementing solutions
- solution implementation approaches
• methods of calculating qualitative and quantitative benefits of ICT solutions
• technology solution patterns.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• applicable organisational policies and guidelines
• information applicable to organisational goals, objectives, processes, model and strategies
• business analysis practices and tools
• reports and plans prepared for projects
• required hardware, software and its components.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to establish and manage Information and Communications Technology (ICT) business analysis activities in a medium-to-large organisation.

This unit applies to individuals who require high-level management, business and technical skills to manage complex analysis efforts within the Information and Communications Technology (ICT) industry, often as part of business-critical ICT projects.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems analysis and design

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- plan and monitor at least two different business analysis activities, including determining an approach and required processes.

In the course of the above, the candidate must:

- determine business analysis deliverables, tasks and estimates
- plan business analysis communications
- comply with organisational and legislative requirements.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- business analysis process, procedures and techniques
- project management process, procedures and techniques
- risk management strategies
- technology solution patterns
- stakeholder management techniques and processes
- communication constraints that may impact on stakeholders
- requirements management processes, procedures and techniques
- metrics used in measuring business analysis performance
- organisational and legislative requirements and procedures applicable to business analysis activities.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
- required tools, equipment and materials
- business requirements documentation and information
- industry software packages
- required hardware and its components
- file storage.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- define, specify and prioritise at least three different stakeholder requirements and solutions.

In the course of the above, the candidate must:

- create a model for each stakeholder requirement and solution
- document textual requirements for each stakeholder requirement and solution
- comply with stakeholder and organisational requirements.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- business rules analysis
- data flow diagramming
- data, organisation and process modelling, and applicable business and technical constraints
- functional decomposition
- key policies, procedures and documentation required to analyse stakeholder requirements
- risk management strategies for a range of stakeholder requirements
- potential solutions to a range of stakeholder requirements
- model creation procedures
- assumptions applicable to stakeholder requirements
- business and technical constraints
- verification procedures
- purpose of using scenarios, stories and case studies
• scope modelling.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• required policies and legislation
• business analysis practices and tools
• required hardware, equipment and materials
• industry software packages
• stakeholder requirements
• reports and plans prepared for projects
• a portfolio of projects to be undertaken.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- assess and validate at least three different proposed ICT solutions according to stakeholder requirements.

In the course of the above, the candidate must:

- compare and assess transition requirements between different solutions
- analyse output variances between at least three solutions
- recommend solutions in priority order
- confirm solution metrics and evaluate solutions
- document work performed in assessing and validating solutions.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- the business environment impacts from proposed Information and Communications Technology (ICT) solutions
- techniques used in assessing organisational readiness, including:
  - focus groups, interviews and surveys
  - risk analysis
  - SWOT analysis
  - problem tracking
- techniques for assessing options and validating solutions
- organisational change management processes
- the principles of solution performance metrics
- key policies and documentation required to assess and validate ICT solutions
organisational procedures applicable to assessment and validation of ICT solutions.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required policies and legislation
- business analysis practices and tools
- industry software packages
- required hardware, equipment and its components
- reports and plans prepared for projects including proposed solutions
- portfolio of project work to be undertaken including stakeholder requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to build, deploy, run, and monitor containers, and implement micro services, with the goal of providing a more sustainable, flexible and cost-efficient Information and Communications Technology (ICT) environment.

The unit applies to those working as senior computer systems architects proficient in software development, senior software developers and those who work in DevOps roles, responsible for increasing the resource utilisation of an organisation by using containerisation as an alternative to traditional server and application infrastructure technologies. Containers are used to isolate the runtime environment for applications in order to increase portability and reduce operational costs by increasing the utilisation of resources.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

<table>
<thead>
<tr>
<th>SKILL</th>
<th>DESCRIPTION</th>
</tr>
</thead>
</table>
| Numeracy              | • Designs complex algorithms  
• Selects from, and flexibly applies, a wide range of mathematical and problem-solving strategies, techniques, and principles when solving equations, constructing and reading flow charts and analysing data |
| Oral communication    | • Uses listening and questioning skills to confirm understanding of requirements and participates in verbal exchanges of feedback resolution, ideas and solutions |
| Reading               | • Critically analyses documentation, instructions and data from a variety of sources and records, and consolidates information, in order to determine requirements and steps forwards  
• Identifies and interprets technical material to determine and confirm job, business and systems requirements |
| Writing               | • Demonstrates sophisticated writing skills using specialised language, technical language and scripts and required conventions |
| Teamwork              | • Elicits feedback and provides feedback to others, in order to improve self or workgroup behaviours |
| Planning and organising | • Researches, plans and sequences complex tasks, efficiently and effectively |
| Problem solving       | • Applies systematic and analytical decision-making processes for complex and non-routine situations and bug code  
• Uses nuanced understanding of context to recognise anomalies and subtle deviations to normal expectations, focusing attention and remedying problems as they arise in containers as well as in projects and wider systems |
| Self-management       | • Takes full responsibility for following policies, procedures and legislative requirements, and identifies organisational implications of new legislation or regulation, including privacy and data use legislation  
• Monitors progress of plans and schedules, and reviews and changes them, to meet new demands and priorities  
• Investigates new and innovative ideas, as a means by which to continuously improve, work practices and processes through consultation, formal and analytical thinking |
| Technology            | • Uses complex scripts and tools required within complex systems, applications, operation systems, the internet and required software and hardware components  
• Uses complex cyber security procedures and techniques to maintain data security, and systems and application integrity |

<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 6.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- author at least two files for building container images
- run, test and debug a minimum of two running containers instances
- install and run at least one application within container
- monitor a minimum of two container instance in container runtime
- author, build and run container instances from at least one image with two different versions
- set up container image repository in registry and perform push and pull commands at least once.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- features and functions of operating systems
- continuous integration and continuous delivery/deployment methodology, processes and principles
- network protocols including:
  - network communications protocol
  - TCP/IP (transmission control)
- tools and features of registries, command line interface and text editor
- advanced programming language
- organisational policies and procedures for:
  - documenting work and technical requirements
  - evaluating business processes of uses of containerisation
- stages of software development life cycle (SDLC)
- procedures for implementing container services
Assessment Requirements for ICTSAD612 Implement and maintain uses of containerisation

- basic principles of:
  - computer hardware, networking, operating system, applications, database management systems, cloud solutions and components
  - IT service management systems (ITMS)
  - required programming language, including data serialisation language
  - open-source development tools
- processes for establishing and implementing business requirements for container services
- key functions and features of data flow charts
- methods for monitoring container services, including:
  - manually monitoring services
  - different organisational levels of responsibility relating to application functions.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- the internet, including connectivity
- text editor
- required hardware, software and applications
- vendor products relating to containerisation technology
- containerisation service.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to install and set up orchestration services to manage the lifecycle of containers in large dynamic environments, using platforms for running multiple containers in production.

The unit applies to those working as senior computer systems architects, senior system administrators and those who work in DevOps roles, and responsible for installing, running and coordinating containerised applications, to provide flexible, scalable, predictable, available and sustainable services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems administration

2. Configure containers
2.1 Add different types of images/containers to the service
2.2 Name and move containers as required
2.3 Create pod/swarm and run container in pod
2.4 Configure scaling policy according to business need
2.5 Use instrumentation to configure scaling in and out according to business needs
2.6 Test and confirm container set up, function of containers and required resources
2.7 Finalise and create user documentation according to business needs

3. Test and maintain container service
3.1 Configure load tester to port
3.2 Register containers to central point
3.3 Use load balancer to retrieve container requests
3.4 Test requests and ensure load testing works as required

4. Manage containers according to business need
4.1 Experiment with different volumes of traffic to sites
4.2 Monitor and record metrics
4.3 Add and delete containers as required according to CPU, RAM, network traffic readings and business need
4.4 Set up container trigger alarms according to metrics and business needs
4.5 Create user documentation according to business need
4.6 Report metrics and business impact with required personnel

### Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

<table>
<thead>
<tr>
<th>SKILL</th>
<th>DESCRIPTION</th>
</tr>
</thead>
</table>
| Reading    | • Critically analyses documentation, instructions and data from a variety of sources and records, and consolidates information, in order to determine requirements and steps forwards  
• Identifies and interprets technical material to determine and confirm job, business and systems requirements |
<p>| Writing    | • Demonstrates sophisticated writing skills using specialised language, technical language and scripts and required conventions to create |</p>
<table>

Assessment Requirements for ICTSAD613 Install and configure container orchestration services

Modification History

<table>
<thead>
<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 6.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- configure container orchestration services on at least two host computers or virtual machines
- create and manage at least two containers using at least three different metrics to measure requests and traffic data.

In the course of the above, the candidate must:

- confirm clusters scale out and in required by demand changes and business needs
- document work.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- features and functions of operating systems
- continuous integration and continuous delivery/deployment methodology, processes and principles
- network protocols including:
  - network communications protocol
  - TCP/IP (transmission control)
  - internet protocol
- tools and features of registries, command line interface and text editor
- software development life cycle (SDLC)
- basic principles of container orchestration services:
  - pods/swarms
  - nodes
• services
• virtual machines and containers
• container dependencies
• basic principles of:
  • computer hardware, networking, operating system, database management systems, cloud solutions and components
  • applications
  • database-management systems
  • open-source development tools
  • HTTP
• organisational business needs relating to the use and deployment of containers, including cost constraints
• data flow charts applicable to installing and configuring container orchestration services
• data and metrics of user traffic to sites and applications, including:
  • RAM (random access memory)
  • CPU
  • Network traffic
• different methods of monitoring services, including:
  • manually
  • different organisational levels of responsibility relating to application functions.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• the internet, including connectivity
• required hardware, software and applications
• vendor products relating to containerisation technology
• container orchestration service
• load testing application
• text editor
• user command interface (command prompt).

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to update, store and record details of hardware, software and technical documentation within an inventory management software program.

It applies to frontline technical support personnel who work under supervision to maintain hardware, software and documentation in a small to large office environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems administration and support

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- update and maintain at least one of each hardware and software inventories according to identified storage and retrieval policy and organisational procedures
- update and maintain at least two documentation inventories according to identified storage and retrieval policy and organisational procedures, including:
  - user documentation
  - technical manuals
- create a profile and description for hardware inventories.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- organisational procedures including:
  - hardware, software and documentation inventory access
  - hardware, software and documentation inventory updates
  - software licenses and software upgrades
  - hardware, software and documentation inventory maintenance
  - maintenance documentation and recording
  - escalation procedures
  - technical documentation processes
  - software licensing requirements
  - inventory principles and procedures.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- hardware, equipment and materials
- industry and inventory management software packages
- organisational documentation
- enterprise intranet
- required person for escalation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- identify at least one basic hardware or software malfunction and at least one user or procedural ICT problem
- develop and document potential solutions to each of the above.

In the course of the above, the candidate must:

- refer unresolved problems to required support personnel
- apply problem-solving techniques to determine the origin of ICT problems.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- organisational procedures regarding:
  - accessing malfunctioning hardware, software, user or procedural malfunctions
  - Work Health and Safety (WHS) requirements for hardware and equipment use
- required industry hardware and software products and services
- required industry maintenance, service and helpdesk practices, processes and procedures
- operating systems used within the ICT industry
- required industry standard diagnostic tools
- computer malfunctions and resolutions
- basic industry documentation practices and procedures
- problem solving techniques that may be used in the development of solutions for basic ICT malfunctions and problems.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- hardware and software with ICT malfunctions
- ICT problems relating to users or systems
- organisational procedures
- digital device with internet connectivity and required browsers.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- record, prioritise and escalate at least two client support requests from at least two different clients.

In the course of the above, the candidate must:

- log support requests resulting from tickets, phone calls, emails, video calls, automated requests or direct messages
- determine time sensitivity and importance of requests against business or client needs
- refer client support requests in line with business scheduling requirements
- follow up support request progression and client satisfaction.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- organisational procedures for:
  - obtaining and documenting client support request
  - guidelines for prioritising and rating client requests
  - escalation processes and procedures
  - logging procedures
  - prioritising client requests
- frontline client support software, hardware diagnostic tools and maintenance procedures
- business scheduling requirements
- responsibilities of frontline technical client support
- business documentation and record-keeping practices.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- equipment, software and tools required to process and document requests
- client support requests and required documentation
- client support history records
- organisational policy and procedures for:
  - critical cases and escalation processes and procedures
  - escalation procedures
  - logging procedures
  - prioritising client requests.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- backup, protect and secure at least two client server environments.

In the course of the above, the candidate must:

- review organisational backup schedule
- follow system maintenance procedures
- create, restore, label, delete, archive and report file backups
- check hardware and networks for compliance with licensing requirements
- report data security, privacy, copyright and licensing compliance anomalies
- perform virus protection and scanning software updates.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- organisational procedures for:
  - backups, restoration and testing procedures and operations
  - file name conventions and storage of backups
  - malware and virus scans
  - copyright and privacy legislation
  - inventory and maintenance procedures
- industry accepted hardware and software products
- virus protection methods
- diagnostic tools that may be used in maintaining the integrity of ICT systems
- storage and retrieval guidelines
- system performance metrics and system performance testing tools
- legislation relating to restoration procedures, copyright, privacy and General Public Licence (GPL).

**Assessment Conditions**

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- stand-alone and networked client server environments
- hardware containing information and data
- antivirus and scanning software
- technical records and documentation
- copyright, GPL and privacy legislation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- detect and remove:
  - at least one piece of spam from a device
  - at least one piece of destructive software from a different device.

In the course of the above, the candidate must:

- identify spam types, destructive software and protective measures
- update spam filter and virus protection software as available
- maintain and report on protective measures taken against spam and destructive software.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- spam types and destructive software on a range of different devices including:
  - desktop computers
  - laptops
  - tablets
  - mobile and smartphones
  - wearables
  - media players
- organisational procedures regarding:
  - protective measures against spam and destructive software
  - software updates
  - software security and spam filter settings
- protective procedures for spam and destructive software removal
- documenting and reporting outcome of protective measures
- spam and virus intrusions and remedial actions
- types of protective applications used against viruses and spam
- operating systems features and components
- components of hardware that may be affected by spam
- technical records, vendor documentation, enterprise procedures and guidelines.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- working areas with a representative range of devices, application software and operating systems
- industry standard antivirus and anti-spam software
- technical records and vendor instructions
- enterprise procedures and guidelines.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to ensure information assets are protected from improper access and to secure assets in the event that they are threatened.

It applies to those who, while working under a level of supervision in a frontline technical support capacity, have the responsibility to exercise security measures on information assets in a small or large office environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems administration and support

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- protect and secure at least two different information assets types.

In the course of the above, the candidate must:

- identify how information assets are used, specific to different organisations
- establish and analyse potential threats
- secure, mitigate and prevent damage to assets
- discuss details of security threats and issues relating to information assets
- document and report work issues.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- organisational procedures, including:
  - asset security
  - current state of information asset reporting
  - records and report of information asset maintenance
- key sources of information assets
- types of security responses available to secure assets
- organisational information assets
- general Information and Communications Technology (ICT) hardware and security implications
- security procedures relevant to organisational requirements.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- working areas with required hardware and office environments representing a range of workplaces
- software systems required to demonstrate the performance evidence
- organisational information assets
- technical records, documentation and enterprise procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to maintain the operation of basic Information and Communications Technology (ICT) equipment, and the replacement of consumables.

It applies to technical support individuals who, while working under a level of supervision, perform routine tasks within an office environment concerning the maintenance of ICT equipment and replacement of consumables. ICT equipment and consumables includes applications, chemicals, computer accessories, data storage devices, digital cameras, fax and copier supplies, laser and inkjet cartridges, ribbons, scanners and wireless technology modems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- perform maintenance procedures on two different pieces of basic ICT equipment,
- replace and dispose of a consumable item from basic ICT equipment on at least one occasion.

In the course of the above, the candidate must:

- clean equipment following manufacturer specifications, organisation and WHS policy and procedures
- access, replace and dispose of consumables according to regulations and organisational policy
- test and maintain consumables and ICT equipment
- store unused consumables and ICT equipment
- document, record, log and store documentation of maintenance activities and confirm with required personnel.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- organisational procedures including:
  - consumables replacement information logs
  - consumables storage
  - consumables testing
  - ICT equipment maintenance documentation and filing procedures
  - storage and retrieval of information procedures
  - equipment and chemical storage, control and disposal procedures
• industry standard hardware and software and manufacturer maintenance guides
• work health and safety procedures, principles and responsibilities that may be used in the process of maintaining ICT equipment and replacing consumables
• environmental guidelines that may be used in the storage and disposal of ICT equipment.

Assessment Conditions
Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• a site at which ICT equipment maintenance may be carried out
• cleaning supplies
• a range of consumables, such as those listed within the performance evidence
• ICT equipment currently used in industry
• equipment documentation required for maintenance activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- install, configure and secure a SOHO network on at least one occasion.

In the course of the above, the candidate must:

- install, configure and test hardware and software for SOHO network, including:
  - network technologies
  - device
  - protocols
  - network cables and connectors
- install, configure and test the network according to client requirements and produce required documentation
- troubleshoot client-side connectivity and security system symptoms and issues
- liaise with vendors and service suppliers to:
  - obtain specifications, availability and cost of identified components
- develop installation plans that incorporate:
  - task prioritisation
  - contingency arrangements
  - minimum disruption to clients
- document final network design, security features and installation, boot up and configuration procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry accepted hardware and software products, including those used for networks
• building requirements that may be used in installing, configuring and securing an office
• data and voice transmission technologies and protocols
• hardware and software installation procedures
• organisational procedures including:
  • software and hardware testing methods
  • network setting testing methods
  • software, hardware and network setting problem resolution procedures
• local area network (LAN) capabilities and characteristics, including:
  • network types
  • internet protocol addressing
  • switch and hub operation
• network connections, both wired and wireless
• networking technologies, including network operating systems and cabling standards
• network tools, set-up and configuration procedures
• security implications and methods for a home office network
• software packages supported by the organisation
• industry standards applicable to small networks
• installation and configuration tools.

**Assessment Conditions**

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

• industry standard software, hardware and networking technologies
• server and workstation hardware and software
• internet connection
• live network
• network components, hardware and software
• networked devices
• vendor hardware and software components
• technical documentation and installation manuals.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 1.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

Evidence of the ability to:
- prepare a project plan and implement an approach that addresses:
  - drivers
  - measures of success
  - implementation by functional area
  - coordination.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:
- identify and describe project planning, including the scope and roles of individuals
- outline the key features of:
  - client business domain
  - information and communications technology (ICT) related services and issues
- identify and describe possible legislative requirements relating to cabling and building preservation
- describe the role of stakeholders and degree of stakeholder involvement
- summarise current trends in vendor products
- analyse and describe:
  - current industry accepted hardware and software products
  - prerequisites needed for system installation
  - vendor specifications and requirements for installation.
Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the systems administration and support field of work and include access to special purpose tools, equipment, materials and industry software packages, including:

- project documentation
- staff
- resources
- technical equipment.

Assessors must satisfy NVR/AQTF assessor requirements.

Application

This unit describes the skills and knowledge required to ensure the Information and Communications Technology (ICT) system is operational prior to hand over for client use, including conducting formal testing and trials to determine whether the system satisfies its acceptance criteria.

It applies to individuals who work under supervision but have a level of responsibility ensuring work is planned and completed according to quality and client requirements.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems administration and support

Assessment Requirements for ICTSAS428 Hand over ICT system components to clients

Modification History

<table>
<thead>
<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 6.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- demonstrate operation and hand over a functioning ICT system to clients on at least two occasions.

In the course of the above, the candidate must:

- obtain ICT system acceptance criteria
- check ICT system function and its components in both:
  - stand-alone environment
  - integrated environment
- identify and document system components, operational issues and procedures
- discuss maintenance issues with technical support
- compare maintenance, operational and warranty considerations with SLAs
- provide operational and maintenance guidance.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- business practices related to preparing reports, including:
  - confirming system integrity
  - handing over the system
- organisational procedures including:
  - system component documentation
  - operational issue documentation
  - operational procedures for ICT systems
- industry accepted hardware and software products
• key aspects of change management systems and operational procedures for ICT systems
• client-business domain issues
• information gathering techniques that may be used in the hand over ICT system components to clients
• key features and processes involved in project planning, including:
  • constraints
  • guidelines
  • deadlines
• key features of quality assurance practices that may be used in the hand over ICT system components to clients
• role of stakeholders in SLAs and degree of stakeholder involvement in determining levels of responsibility in a project
• vendor product trends.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• existing ICT systems for client delivery, such as customer computer sites and systems or other simulated systems
• ICT system acceptance criteria
• special purpose tools, equipment and materials
• industry software packages
• implementation plan
• people involved in hand over
• project plan
• SLAs.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

</tbody>
</table>

Application

This unit describes the skills and knowledge required to identify, record, prioritise and resolve client Information and Communications Technology (ICT) support activities and escalate as required.

It applies to experienced individuals who use specialised and technical knowledge to take responsibility in providing client-based ICT support to end users in an office or working environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems administration and support

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
</tbody>
</table>
| 1. Prepare to resolve client ICT problems | 1.1 Determine client problems and impact of problem according to organisational procedures  
1.2 Document client response according to organisational policies and procedures  
1.3 Examine logged requests and determine requirements  
1.4 Confirm additional information with client and respond to new information according to organisational procedures  
1.5 Refer to database of known problems and identify resolution options  
1.6 Establish and record required constraints |
### ELEMENT | PERFORMANCE CRITERIA
--- | ---
2. Prioritise client ICT problems | 2.1 Undertake impact analysis of problem and determine severity and risks  
2.2 Prioritise problem according to organisational procedures  
2.3 Provide problem resolution advice and support to client
3. Refer problems where required | 3.1 Investigate and refer problems to third parties according to organisational procedures  
3.2 Provide third party with client and problem details as required  
3.3 Document advice and support provided by third party according to organisational procedures
4. Carry out maintenance | 4.1 Obtain required components for resolution according to organisational procedures  
4.2 Complete maintenance according to organisational procedures  
4.3 Store and dispose of used components according to organisational environmental guidelines
5. Create maintenance report | 5.1 Prepare maintenance report according to organisational procedures  
5.2 Finalise maintenance report and acquire internal sign off  
5.3 Distribute maintenance report to client and seek and respond to client feedback as required
6. Confirm problem resolution | 6.1 Obtain and respond to client feedback  
6.2 Confirm client requirements have been met  
6.3 Resolve outstanding client requirements and escalate as required  
6.4 Forward client feedback to required personnel for sign-off and record in problems database

### Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

| SKILL | DESCRIPTION |
--- | --- |
Reading | • Interprets technical specifications and numerical data from a range of documentation and sources to assist in rectifying problems
Writing | • Uses clear language and formats required for the audience to convey explicit technical information, requirements and recommendations
### Oral Communication
- Uses inclusive questioning techniques to obtain information from clients and provides precise advice and information to others

### Teamwork
- Selects and uses required conventions and protocols when communicating with client and others in a range of work contexts

### Problem solving
- Uses formal analytical thinking techniques for identifying issues and generating solutions, seeking input from others as required

### Self-management
- Takes responsibility for planning, sequencing and prioritising tasks and own workload for efficiency and effective outcomes

### Technology
- Uses main features and functions of digital tools to complete work tasks

<table>
<thead>
<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 6.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- identify, record, prioritise and resolve a client ICT problem on at least two separate occasions.

In the course of the above, the candidate must:

- record and prioritise client support activities
- determine required resources for maintenance activities
- prioritise client ICT problems, using an impact analysis of the problem
- complete maintenance activities
- resolve client problems and escalate according to organisational guidelines and practices
- refer problems to third parties where required
- prepare, finalise and distribute maintenance report, including information about problems and resolution action
- provide advice to the client and seek and record client feedback
- store and dispose used components.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- hardware and software products:
  - in use
  - supported by the organisation
- organisational procedures, including:
  - problem prioritisation
  - third party support and documentation
• maintenance procedures
• maintenance report preparation and distribution
• sustainable practices consistent with ICT industry
• environmental guidelines that may apply to identifying and resolving client ICT problems
• help desk or service desk structure and escalation procedures
• key functions and basic features of operating system
• organisational structure of workplace that may be relevant to identifying and resolving client ICT problems
• workplace security and network guidelines and procedures.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• special purpose tools, equipment and materials for maintenance
• industry software packages
• a range of industry hardware, software and diagnostic tools
• technical records
• organisational guidelines
• vendor documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- update ICT client support procedures and assist in the formulation of associated policy documents on at least one occasion.

In the course of the above, the candidate must:

- evaluate and analyse existing client support policy and procedures
- elicit feedback to be applied to support procedures and review proposed changes
- make recommendations for changes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- trends and issues in ICT client support
- policy and support recommendation and development practices
- organisational guidelines including:
  - client maintenance and administration
  - policy maintenance updates and key stages of the client review process
- organisational policy including:
  - access of procedures
  - security.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.
This includes access to:

- tools, equipment and materials for support procedures
- industry software packages
- sites, peers and supervisors to identify the extent and quality of the contribution required
- information about systems or networks to be supported
- technical manuals, tools and organisational guidelines
- business requirements and documentation standards.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- receive, review and carry out a change requests according to client requirements and present the outcomes of those changes back to the client on two separate occasions.

In the course of the above, the candidate must:

- receive, review, document and assess change requests and requirements
- plan, implement and test change procedures
- comply with organisational guidelines and client requirements
- prepare and deliver training appropriate to the client.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- organisational procedures, including:
  - help desk procedures
  - system change processes
  - change request reporting
- practices relating to:
  - change management procedures and criteria
  - change-management tools and systems
  - diagnostic tools
  - help desk practices
  - quality assurance practices
- client business domain, including:
  - role of stakeholders
• degree of stakeholder involvement
• system modification plans
• industry-accepted hardware and software products
• service level agreements (SLAs) within or between organisations
• process for system testing
• system’s functionality.

**Assessment Conditions**

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• tools, equipment and materials required for actioning change requests
• training environment, including all required tools, equipment and materials to present changes
• industry software packages
• change request documentation
• physical system or network
• technical manuals required diagnostic tools
• business requirements
• documentation standards
• change management system.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

</tr>
</tbody>
</table>

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- manage system fault resolution on a live system on at least two occasions.

In the course of the above, the candidate must:

- identify the required modifications and the associated effect, implication and impact of each
- itemise the expected outcomes of the modifications
- oversee implementation of modification and test operation
- document and report on the modifications.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- organisational procedures including:
  - change request forms
  - levels of authority for sign-off
  - modification operation testing
  - modification reports
  - modification documents and repositories
- change control procedures
- client business domain including the role of stakeholders and the degree of stakeholder involvement
- industry accepted hardware and software products
- help desk and maintenance practices
- quality assurance practices that relate to resolving system faults on a live system
• the process for system testing
• the system’s functionality and the features and functions of the system under modification
• Information and Communications Technology (ICT) industry fault resolution standards.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry. This includes access to:
• required tools, equipment and materials for system fault management, modification and resolution
• live system
• benchmarking and testing tools
• reporting tools.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 6.0.</td>
</tr>
</tbody>
</table>

Application

This unit describes skills and knowledge required to evaluate the status of a running system, covering both hardware and software aspects to determine system performance and reliability while Information and Communications Technology (ICT) system is still in an operational state.

It applies to individuals who apply specialised and technical knowledge and a systematic approach to assessing and evaluating ICT systems prior to problem resolution or upgrades.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems administration and support

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>

<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
</tbody>
</table>

1. Prepare for ICT system evaluation

1.1 Access ICT system according to organisational procedures
1.2 Determine scope of ICT system status evaluation and performance indicators and agree with client
1.3 Review evaluation purpose using required capacity tools
1.4 Plan a 'change of status' test according to organisational procedures
1.5 Plan and document ICT system status evaluation and required resources according to organisational procedures
1.6 Alert affected users of ICT system status evaluation impacts as required
<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.7</td>
<td>Access resources required for ICT system status evaluation</td>
</tr>
</tbody>
</table>
| 2. Carry out ICT system evaluation | 2.1 Organise required resources and implement evaluation methods  
2.2 Run ICT system evaluation according to agreed scope, evaluation parameters and organisational procedures  
2.3 Record ICT system status and reliability according to procedural parameters and evaluation plan  
2.4 Run ‘change of status’ test according to organisational procedures  
2.5 Observe and record effects of changes to ICT system status according to effect being evaluated  
2.6 Observe and record effects of changes to ICT system status not being evaluated  
2.7 Escalate unresolved effects of changes to ICT system status to required personnel |
| 3. Report on ICT system evaluation | 3.1 Document anomalies observed in ICT system status evaluation outside expected results  
3.2 Finalise ICT system status evaluation procedures according to organisational procedures  
3.3 Prepare report for required personnel  
3.4 Formulate and present recommendations to required personnel |

**Foundation Skills**

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- evaluate the performance and reliability status of a running ICT system’s hardware and software for at least two different systems, on separate occasions.

In the course of the above, the candidate must:

- determine scope of system performance evaluation and reliability for hardware and software
- identify performance indicators
- access and organise required resources
- evaluate system performance and record status and reliability
- observe and record effects of changes to ICT system status
- document and report on results, reliability, changes, anomalies and recommendations for improvements.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- organisational procedures that may be used to evaluate ICT system status, including:
  - ‘change of status’ test planning
  - ICT system evaluating, evaluation planning and finalisation
  - capacity planning and change management tools
  - change-control procedures
- client business domains, including the role and level of stakeholder involvement
- industry standard hardware and software products
• help desk and maintenance practices that are used on the evaluating the status of ICT systems
• quality assurance practices that may be used to evaluate ICT system status
• reasons for system evaluation, including objectives, deliverables and key performance indicators
• ICT system testing procedures
• status evaluation, including:
  • time, environmental, internal and external factors
  • manual and computerised methods of status evaluation
• system functionality characteristics.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• tools, equipment and materials for system status evaluation
• industry software packages
• documentation standards
• backup and recovery policies
• database package with data
• server and networked personal computer.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- optimise the performance of two different ICT systems, on separate occasions.

In the course of the above, the candidate must:

- collect usage and time conditions and analyse ICT system data and performance
- identify and document areas of poor ICT system performance
- identify options to improve performance and determine required technical resources
- access required technical resources
- create optimisation implementation plan to improve performance and submit to required personnel for approval and feedback, including:
  - disruption minimisation plan
  - project budget
  - staff availability
- create ICT system report, including:
  - cost analysis
  - identified improvements
  - alternate options
- develop plan for implementing approved optimisation
- modify and tune ICT system to ensure system balance and performance
- record changes in performance.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- report development including:
• cost analysis
• identified options for alternative courses of action designed to measurably improve ICT system performance
• business scheduling requirements, including the role of stakeholders and the degree of stakeholder involvement
• industry standard hardware and software monitoring tools and the information produced from monitoring
• optimum system performance, change-control procedures and theoretical concepts
• change management tools that may be used in optimising ICT system performance
• quality assurance practices with regard to proposed changes of ICT systems
• ICT system functionality and performance indicators
• ICT system performance improvement and optimisation strategies
• features and functions of ICT system under modification.

**Assessment Conditions**

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

• tools, equipment and materials required to optimise ICT systems
• industry software packages, including:
  • system components
  • software for performance tuning
  • technical manuals and resources
  • fault logs
  • diagnostic tools.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

| 1. Determine maintenance procedures for equipment and software | 1.1 Identify equipment and software that requires maintenance  
1.2 Obtain equipment and software maintenance and reliability data from user  
1.3 Obtain and examine vendor documentation, peer organisations and research information  
1.4 Document equipment and software maintenance procedures  
1.5 Develop recommended maintenance and operations guidelines  
1.6 Identify and record in-house resources, external organisations and third-party suppliers support  
1.7 Develop and update service level agreement (SLA) with internal user and third-party supplier information |
### ELEMENT

#### PERFORMANCE CRITERIA

2. Revise and improve maintenance procedures

- 2.1 Monitor and review organisational maintenance procedures
- 2.2 Identify problem areas according to organisational maintenance procedures
- 2.3 Design improvements to organisational maintenance procedures and seek approval from required personnel
- 2.4 Assess impact and ease of implementing improvements
- 2.5 Implement improvements to organisational maintenance procedures

3. Finalise maintenance improvement procedures

- 3.1 Identify future equipment and software acquisitions
- 3.2 Confirm all maintenance procedures have been performed
- 3.3 Review and assess maintenance procedures impact
- 3.4 Evaluate and report on organisational maintenance procedures

### Foundation Skills

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- improve the existing organisational maintenance procedures of one piece of ICT equipment and one piece of ICT software, on separate occasions.

In the course of the above, the candidate must:

- identify resource requirements with in-house resources, external resources and third-party organisations
- develop and update service level agreements (SLAs).

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- client responsibilities and expectations including:
  - role of stakeholders
  - degree of stakeholder involvement
  - business scheduling requirements
- features and capabilities of industry standard equipment and software
- features and purpose of diagnostic tools
- change management tools that maybe used in implementation maintenance procedure activities
- help desk and maintenance practices and procedures
- organisational quality assurance practices
- ICT systems functionality and performance levels.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- ICT equipment and software packages
- SLAs
- external organisations and third-party suppliers
- internet connectivity
- ICT equipment capable of online and offline research, such as a computer
- technical helpdesk environment
- technical manuals and tools.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- monitor and assess the current and future capacity requirements and plan and implement capacity enhancements for at least two different ICT systems, on at least two separate occasions.

In the course of the above, the candidate must:

- access required hardware and software for testing and enhancement
- review ICT system configuration information, workload and fault logs
- document and analyse capacity requirements, with realistic and achievable forecasts, including financial requirements.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- ICT system functionality and operating levels
- key features of:
  - component performance management
  - industry accepted hardware and software products
  - financial analysis
  - client business domain
  - performance monitoring tools
  - quality assurance practices with regard to proposed ICT capability enhancements
  - SLAs relating to proposed ICT capability enhancements
  - role of stakeholders and the degree of stakeholder involvement
- organisational procedures including:
• ICT system workload analysis
• ICT system fault log analysis
• ICT system capacity analysis documentation procedures
• ICT system requirement documentation
• ICT system capacity enhancement installation
• assessment of ICT system enhancements.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry. This includes access to:

• tools, equipment, materials, hardware and industry software packages required for ICT system capacity analysis and enhancement implementation
• live system
• SLAs
• fault logs
• users and required person.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to monitor security functions of an Information and Communications Technology (ICT) system and administer security measures.

It applies to experienced individuals who, while working under a level of supervision, have responsibility in a frontline technical support capacity to ensure organisational standards are met and apply technical and specialised knowledge to maintain the security of an ICT system.

No licensing, legislative, or certification requirements apply to this unit at the time of publication.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- monitor and administer security functions of at least two different ICT systems.

In the course of the above, the candidate must:

- access and modify user settings to satisfy security policies, including:
  - legal notices at logon
  - password strength
  - email and resource access
- review user accounts for security control
- identify security features in operating environment
- monitor threats to the network using:
  - review logs and audit reports
  - third-party diagnostic tools
  - implementation of virus checking process and schedule
  - preparation of an audit report and recommendations
  - security spot checks.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry accepted hardware and software products related to IT security
- privacy issues and legislation with regard to IT security
- risk analysis processes for system security
- role of users in setting security
- password strength guidelines
- security technology and systems technologies
- client business domains, including:
  - client organisation structure
  - business functionality.

**Assessment Conditions**

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- special purpose tools, equipment and materials required for the monitoring and administration of security functions of ICT systems
- industry software packages
- an environment with an existing security system in place
- security policy for security systems
- industry and organisational standards
- a live ICT system.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- support ICT system software by completing all of the following, on two separate ICT systems:
  - ICT system file management
  - ICT system security management
  - ICT system backup
  - ICT system restore.

In the course of the above, the candidate must:

- prepare documentation and reports
- access required ICT system software and files
- maintain system performance benchmarks
- use a wide range of features and system tools.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- system software and system tools
- reasons for system performance problems, such as:
  - system utilisation
  - file and disk structure
  - performance reports and files
- system data levels
- system performance indicators
- predetermined system performance standards
- key features of change management systems
- the client business domain
- quality assurance practices with regard to supporting system software
- simple programming constructs
- vendor products and trends in product development.

**Assessment Conditions**

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- special purpose tools, equipment and materials for ICT system support
- industry software packages
- organisational performance benchmarks
- live system
- client user requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- resolve one first-level user support issue of an ICT system and one first-level change request of a different ICT system, for two separate clients.

In the course of the above, the candidate must:

- identify nature of the user difficulty and determine required support  
- identify ICT system being used by client, such as:
  - software
  - hardware
  - network connection
  - application
- resolve first-level user support difficulties remotely  
- demonstrate customer service skills  
- engage with the client using a range of communication skills, such as:
  - active listening
  - questioning
  - clear and concise language
  - logical, plain English
- obtain client feedback and document problem resolution.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- customer service policies and procedures  
- contexts where escalation procedures are required
• organisational guidelines, including user support services
• work health and safety (WHS) procedures related to:
  • work environment
  • organisational requirements
• user support policies of limited complexity related to known or basic options.

Assessment Conditions
Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• client issues and change requests
• remote helpdesk hardware and software
• communications hardware
• customer service policies
• user support policies
• escalation procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- provide support to two different OS users, with different support requirements, on separate occasions
- install and troubleshoot applications on at least two different ICT devices.

In the course of the above, the candidate must:

- install, configure and troubleshoot applications
- manage security issues associated with OS and applications
- provide user support to users of OS
- customise computer applications
- anticipate and respond to a range of security incidents.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- organisational procedures, including:
  - application troubleshooting
  - OS access and analysis
  - OS solution implementation
  - OS issues and problem resolution
- sources of OS patches
- OS and application security incidents
- typical systems and procedures of user support.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required OS installation storage and recovery software
- devices with application errors
- samples of operating system patches
- stand-alone or networked ICT device.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- repair the boot up procedures of two different operating systems, on separate occasions.

In the course of the above, the candidate must:

- review technical support procedures with client
- evaluate the functionality of OS
- differentiate OS features, structure and currency
- analyse OS boot processes and procedures
- review and document implemented boot up repair and OS support outcomes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- organisational procedures, including:
  - OS file and root structure examination
  - OS boot up comparison procedures
  - boot up procedures
  - solution implementation for boot up procedures
  - OS boot up repair documentation
- boot process analysis of a large variety of OS
- file analysis of those required for operation
- compare the key features of a range of OS.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- stand-alone or networked operating systems
- required OS installation storage and recovery software
- drivers for connected devices
- system for boot up analysis and repair
- help desk support.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

</tr>
</tbody>
</table>
### Oral Communication
- Articulates ideas and strategies using effective communication techniques and industry standard technical language intended for audience and environment.
- Provides instructions to clients on how changes made to operating systems affect the operating system functionality.

### Initiative and Enterprise
- Takes personal responsibility for following explicit and implicit policies, procedures and technical requirements.

### Teamwork
- Selects and uses required conventions and protocols when communicating with clients and others in a range of work contexts.

### Problem Solving
- Applies analytical processes to resolve technical or conceptual problems.

### Self-management
- Takes responsibility for planning, sequencing and prioritising tasks and own workload for efficiency and effective outcomes.

### Technology
- Uses main features and functions of digital tools to complete work tasks.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- install, configure, optimise and troubleshoot two different operating systems, on two separate occasions, each for a different organisation.

In the course of the above, the candidate must:

- improve system performance with minimum disruption to clients
- identify OS problems and resolve using command line options and system tools.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- requirements of different operating systems
- architecture of technical systems
- industry accepted hardware and software products
- functions and features of the OS used by the organisation
- OS resolution strategies, including:
  - command line options
  - system tools
- installation and configuration of systems software including:
  - organisational requirements for OS software
  - prerequisites for system software installation
  - set-up and configuration procedures
  - software packages supported by the organisation
  - system’s functionality
  - system’s diagnostic software
• vendor specifications and requirements for installation
• organisational procedures, including:
  • OS comparison and contrast methods
  • OS functionality and operation testing
  • OS installation procedure documentation
  • OS troubleshooting procedures
  • OS change documentation
  • OS change procedures.

**Assessment Conditions**

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• industry accepted devices where OS installations can be performed
• OS software
• command line options and system tools
• technical documentation
• organisational documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 6.0.</td>
</tr>
</tbody>
</table>

Application

This unit describes the skills and knowledge required to troubleshoot Information and Communications Technology (ICT) equipment, hardware and software problems and apply systematic processes to fault finding across a wide range of ICT disciplines.

It applies to individuals who, whilst working under minimal supervision and with a level of expertise, apply a systematic approach to finding faults, troubleshooting problems and solving issues in a wide range of ICT disciplines in a small or large helpdesk environment.

No licensing, legislative, or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems administration and support

<thead>
<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 6.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- apply fault finding methods to determine a problem with an ICT system, on at least two occasions, each occasion on a different ICT system
- troubleshoot and resolve problem identified on each ICT system.

In the course of the above, the candidate must:

- identify, analyse and document fault finding method and faults
- develop and document troubleshooting process
- obtain and use suitable tools and equipment
- systematically test variables until problem is isolated.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- ICT systems, including:
  - ICT equipment (including peripheral devices)
  - hardware
  - software
  - operating systems
- organisational procedures, including:
  - fault finding, troubleshooting, analysis and test recording documentation
  - fault finding tool gathering and use procedures
  - ICT system data collection procedures
  - variable and system testing procedures
  - solution implementation procedures
• fault finding test filing procedures
• client support and maintenance practices
• industry accepted hardware and software products
• system’s functionality characteristics
• change management tools that may be used for fault finding and troubleshooting ICT equipment, hardware and software problems
• key features of quality assurance practices, including locating and troubleshooting ICT:
  • equipment faults
  • hardware faults
  • software faults
  • operating system faults
• change control procedures of the organisation
• range of trouble shooting methodologies and system testing tools
• symptoms of faulty ICT equipment and probable causes of problems
• basic preventative maintenance techniques
• legislative, regulatory, standards and codes of practice that impact on the ICT service sector.

**Assessment Conditions**

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

• equipment, hardware, software and systems to be diagnosed
• diagnostic and fault-finding tools
• technical and system documentation
• organisational requirements for documenting solution.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTSAS506 Update ICT system operational procedures

Modification History

| Release 1 | This version first released with ICT Information and Communications Technology Training Package Version 1.0. |

Application

This unit describes the skills and knowledge required to assess, update and document the operational procedures required to use the information and communications technology (ICT) system.

It applies to individuals who apply technical and specialised knowledge and systematic approaches to documentation in a range of ICT related areas.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems administration and support

<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 1.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

Evidence of the ability to:

- analyse system functionality
- review and update technical and user documentation for at least TWO systems or occasions
- develop procedures to operate systems.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the client business domain
- explain current business practices related to preparing reports
- compare and contrast the key features and capabilities of current industry accepted hardware and software products
- describe documentation standards and tools
- discuss the role of stakeholders and the degree of stakeholder involvement.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the systems administration and support field of work, and include access to:

- special purpose tools, equipment and materials
- industry software packages
- system or project related documentation
Assessors must satisfy NVR/AQTF assessor requirements.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements and performance criteria of this unit; including evidence of the ability to:

- On two occasions using one or more systems:
  - prepare and initialise a test environment
  - construct integration tests addressing memory leakage, global name-space pollution and static variables
  - conduct static tests of integration points including the use of arguments, positional parameters and return values
  - adjust test scripts according to results of earlier component testing
  - conduct tests according to test scripts using appropriate test tools, integration standards and quality benchmarks
  - determine whether components operate according to specifications
  - analyse and classify test results
  - prepare and finalise test results report including gaining approval from superior

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements and performance criteria of this unit. This includes:

- Key features of two programming languages
- Features and processes of automated test tools
- Systems specifications analysis
- Features and common problems relating to the system being tested
- Key features and processes of integration testing techniques and tools, and associated advantages and disadvantages
Assessment Conditions

Skills must be demonstrated in a workplace or simulated environment where conditions are typical of those experienced in an ICT workplace or working environment. This includes access to:

- Automated testing tools
- Acceptance and test criteria
- Test plan
- Individual contact in operations in the organisation
- Software life cycle model
- Integration standards
- System specifications
- Results of component testing
- System suitable for testing
- Organisational testing procedures including quality benchmarks and integration standards

Assessors of this unit must satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements and performance criteria of this unit; including evidence of the ability to:

- On two occasions on different systems:
  - Create a test plan including scope, objectives, specific automated tests to place high load on system and expected results and performance impacts
  - Undertake and analyse tests that include analysis of the system's ability to cope with expected high levels of data volume against standards
  - Develop documentation related to stress and load testing including third party responsibilities, processes or steps, test sequencing, and standards for acceptance
  - Identify the high data limits expected by the organisation and reflect in test plan and testing
  - Analyse test results to determine whether system and the individual components operate in the manner expected under expected conditions
  - Identify, diagnose, and rectify faults identified during testing
  - Document the test results and corrective action taken according to project standards and organisational requirements

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements and performance criteria of this unit. This includes:

- Key features and processes of automated test tools
- Third party software and resource options relevant to stress and load testing
- Program design and performance characteristics
- Key features and processes of testing techniques
- System load and level of activity monitoring methods
- Tests for system and system technology components
• Typical fault prioritisation
• Third party supplier communication and relationship management
• Organisational documentation procedures

**Assessment Conditions**

Skills must be demonstrated in a workplace or simulated environment where conditions are typical of those in an ICT working environment. This includes access to or availability of:

• Automated testing tools
• Individual to undertake role of user
• Individual development staff and superior in the organisation
• Organisational requirements relating to the system
• Project documentation, including templates, standards, specifications and user and technical manuals
• Business rules and expected loads
• Technical components of system including platform, software, hardware, and network
• Organisational testing procedures including standards
• System for testing

Assessors of this unit must satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- determine incident response plan requirements, implement and analyse its application in real-world scenarios and document processes and outcomes on at least one occasion.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- key features of:
  - organisational business domain
  - industry standard workplace procedures and legislative requirements that are applicable to formulating prevention and recovery strategy
  - industry standard systems engineering methodologies applicable to threat evaluation
  - industry standard backup methodologies
  - industry standard components of business planning process relevant to development of Information and Communications Technology (ICT) business solutions
  - industry standard system functionality for an organisation.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- ICT business specifications and organisational deliverables
- information on the security environment, including required laws and legislation
- existing organisational security policies, organisational expertise and knowledge
• security environment threats
• risk analysis tools and methodologies
• ICT security assurance specifications
• industry standard incident scenarios.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to plan and conduct acceptance testing as part of a process whereby clients will determine whether to accept the system.

It applies to experienced individuals working in a range of Information and Communications Technology (ICT) environments, who apply specialised and technical knowledge in the development of strategic initiatives and in performing and organising others to complete complex technical operations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop a test plan based on system requirements and acceptance criteria, undertake functional testing, and document outcomes and processes on at least one occasion.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- key features and processes of industry standard automated testing tools
- key aspects of organisational rules and standards
- organisational and user requirements
- industry standard testing methodologies used in acceptance testing.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- business requirements and organisation’s deliverables
- project documentation, including:
  - templates
  - standards
  - specifications
  - client user and technical manuals
  - test plan
- technical components of system, including:
Assessment Requirements for ICTSAS525 Develop and conduct client acceptance tests. Date this document was generated: 19 January 2021

- software
- hardware
- network
- industry standard system application required for testing
- functional test cases that satisfy required acceptance criteria.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop at least one contingency plan that identifies threats and minimises down time for critical business functions
- document finalised outcomes and evidence of improvements to critical business functions.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard backup methodologies
- organisational planning process relevant to the development of Information and Communication Technology (ICT) business solutions
- organisational business domain
- industry standard disaster recovery plan strategies and components, including:
  - physical security
  - system failure, accident or sabotage (hackers)
  - denial of service
  - virus attack
  - cyber attack
  - telecommunications failure
  - contingency arrangements
- workplace health and safety (WHS), legislative and organisational requirements
- organisation’s existing systems functionality and systems engineering.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- vulnerability assessment and general definition of requirements
- acceptance test plan
- business impact analysis
- information technology security assurance specifications
- organisational statutory documentation that may impact on work task activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- determine, plan and implement ICT support and resolution services for at least two different clients' problems.

In the course of the above, the candidate must:

- undertake support and resolution services, including:
  - identifying support requirements and procedures
  - liaising with client contact to determine task alignment
  - documenting support provided
  - liaising with client to obtain feedback
  - act on feedback as appropriate.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- organisations domain and business structure
- features and capabilities of industry standard hardware and software products
- quality assurance practices
• stakeholder role and degree of stakeholder involvement in organisation
• structure and purpose of service level agreements (SLAs).

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• special purpose tools, equipment and materials required to provide client support services
• industry standard software packages
• required organisation’s SLAs
• organisation’s escalation procedure/s
• organisation’s documentation processes and style guides.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop support processes for maintaining required continuity level of Information and Communications Technology (ICT) operations and business functions for at least two different clients
- document support process and outcomes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- organisational business domain
- ICT system features that support required organisational operations and business activity
- features of industry accepted hardware and software products
- industry standard product warranty and service difficulty records
- industry standard helpdesk and maintenance practices, including:
  - general composition
  - operation of information database hardware tracking
  - software and operational issues
- functions, processes and features of data elements and data storage
- quality assurance practices, including maintenance, warranty and repair of industry standard network equipment and software
- relationships between the stakeholders and service providers.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.
This includes access to:

- industry standard special purpose tools, equipment, materials and industry software packages that may assist in the provision of ICT support services
- systems architecture documentation
- warranty documents
- organisational deliverables
- Service Level Agreements (SLAs).

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

<th>SKILL</th>
<th>DESCRIPTION</th>
</tr>
</thead>
</table>
| Numeracy | • Uses mathematical equations to calculate financial and technical data and organise schedules  
<p>|         | • Interprets, analyses and documents numerical and technical system data |
| Oral communication | • Obtains and responds to information and feedback from required personnel using succinct verbal language |
| Reading | • Interprets and analyses technical specifications and data and textual information from a range of sources to develop maintenance strategy |
| Writing | • Prepares documentation detailing analysis, plan and systems impact according to organisational requirements |
| Teamwork | • Identifies and uses appropriate conventions and protocols when communicating with colleagues and stakeholders |
| Planning and organising | • Develops plans to manage relatively complex routine and non-routine tasks with an awareness of how they might contribute to broader strategy and goals |
| Problem solving | • Uses problem solving techniques to analyse required outcomes in order to manage change to ICT systems |
| Self-management | • Takes full responsibility for identifying and considering relevant organisational protocols and requirements |</p>

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- review and prioritise change requests
- develop a change analysis work plan on at least one occasion
- document processes and finalised work plan.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- organisational business domain
- industry standard help desk and maintenance practices
- quality assurance practices relating to Information and Communications Technology (ICT) system changes
- role of stakeholders and the degree of stakeholder involvement that may impact on Information and Communications Technology (ICT) system changes activities
- features and capabilities of industry standard hardware and software products, including change management tools
- organisation’s system functionality and application
- SLAs that may impact on Information and Communications Technology (ICT) system changes activities.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- special purpose tools, equipment and materials
• industry standard software packages
• sites on which change requests may be coordinated
• industry standard SLAs used in industry
• organisational guidelines, policies and procedures that may impact on system changes
  activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational
  education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to apply methodologies and activities that facilitate the planning, implementation and monitoring of Information and Communications Technology (ICT) change.

It applies to experienced individuals who provide specialised technical advice, guidance and leadership in a range of areas requiring change-management in ICT systems.

No licensing, legislative, or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems administration and support

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- identify and plan Information and Communications Technology (ICT) system changes on at least one occasion.

In the course of the above, the candidate must:

- implement, monitor and review ICT system changes, including:
  - applying guidelines and policies to the change management process
  - maintaining required version control
  - maintaining compliance with existing accessibility and other policies.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- major change management principles
- functions and features of industry standard information technology systems
- internet and internetworking architecture
- principles and structure of performance benchmarking
- server access security procedures and general security issues relating to required operating system
- industry standard methods of communicating change to stakeholders
- organisation’s policies and procedures that may impact on implementing change management tasks.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- special purpose tools, software packages, equipment and materials required to implement a change management process
- international standards relating to implementing change management tasks.
- operational data
- organisation's analysis data
- organisational planning guidelines
- version control guidelines.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to install and test virtual servers in networks. It also involves replacing multiple physical servers, reducing power requirements of individual servers and meeting sustainability targets.

It applies to individuals with a high level of specialist technical skills and knowledge in information and communications technology (ICT) networks.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – sustainability

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
<tr>
<td>1. Plan to install virtual server</td>
<td>1.1 Obtain work details and scope and arrange for site access in compliance with required security arrangements, legislation, codes, regulations and standards</td>
</tr>
<tr>
<td></td>
<td>1.2 Analyse use of server virtualisation infrastructure and discuss implementation needs with relevant personnel</td>
</tr>
<tr>
<td></td>
<td>1.3 Research and analyse alternative virtualisation scenarios and produce a risk analysis and comparisons for each consideration</td>
</tr>
<tr>
<td></td>
<td>1.4 Create and distribute a feasibility report to required personnel and determine required resources for server implementation</td>
</tr>
<tr>
<td></td>
<td>1.5 Obtain recommendations and approval for implementation plans from relevant personnel and stakeholders</td>
</tr>
</tbody>
</table>
ELEMENT | PERFORMANCE CRITERIA
--- | ---
2. Design virtual server specification | 2.1 Confirm network operating systems, server applications and server designs with relevant personnel  
2.2 Determine product, vendor architecture and equipment specifications  
2.3 Determine technology and resources according to business requirements and budgets  
2.4 Complete design plan and obtain approval from required personnel
3. Install virtual server | 3.1 Identify installation change management requirements  
3.2 Create detailed task lists and specify sequence of required work  
3.3 Review hardware and software and confirm compatibility with ICT system  
3.4 Install required operating system, additional tools and third-party software as specified in design  
3.5 Patch operating system and applications and confirm compliance with organisational security and reliability standards
4. Integrate and test virtual server | 4.1 Determine virtual server integration (VSI) tests in consideration of resources and network impact  
4.2 Run VSI tests according to plan and record outcomes  
4.3 Create error reports and communicate test outcomes to required personnel  
4.4 Test required changes and additions  
4.5 Validate changes and additions against specifications
5. Document completion activities | 5.1 Document installation and integration process according to organisational guidelines  
5.2 Provide user documentation to required personnel  
5.3 Notify required personnel and obtain sign off

**Foundation Skills**

*This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.*

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- implement server virtualisation for at least two sustainable information and communications technology (ICT) systems.

In the course of the above, the candidate must:

- consider ongoing system management, growth scenarios and future infrastructure capacity
- communicate with required personnel to identify required information technology (IT) system changes and additions
- determine and meet organisational requirements for the installation and testing of virtual servers
- install, integrate and test virtualisation components according to vendor and technical specifications.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, codes, organisational procedures, company work practices, regulations and standards, work health and safety (WHS) requirements for scoped work
- uses and requirements of server virtualisation infrastructure in IT systems
- risks of alternative virtualisation scenarios
- functions and features of feasibility reports
- features of client business domains and business functions
- compatibility issues and resolution procedures for server implementation
- configuration of internet protocol (IP) networks
- industry-accepted server virtualisation products
- processes of documenting technical specifications
• systems diagnostic features
• set up and configuration procedures
• change management process
• functions and features of the following:
  • creating a budget
  • network operating systems
  • power supply requirements and management
  • registered random access memory (RAM)
  • server design and network architecture
  • single and multiple processors
  • virtual server functionality.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• a site and equipment on which servers can be virtualised
• server virtualisation currently used in industry
• documentation, feasibility studies, equipment manuals and other site-related documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- integrate sustainability into at least two information and communications technology (ICT) planning and design projects.

In the course of the above, the candidate must:

- devise strategies to conserve resources
- analyse energy audit data on enterprise resource consumption
- develop and monitor policies for review and improvements, benchmarking against industry best practice and attempting new approaches.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, codes, company work practices, regulations and standards, work health and safety (WHS) requirements for scoped work
- advantages and disadvantages of integrating sustainability into ICT planning and design projects
- methods to explain and calculate carbon dioxide emissions
- ICT power consumption calculations
- policy development processes and practices
- power consumption audit methodology
- features of key performance indicators (KPI) used to measure sustainability in ICT planning and design projects, including:
  - financial considerations
  - cost-benefit analyses
• principles, practices, available tools and techniques for sustainability management required in the ICT networking industry
• organisational quality assurance systems for environmental sustainability
• systems and procedures to facilitate workplace sustainability.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• websites on which planning, design and integration of sustainability may be carried out
• required legislation, standards, guidelines, reports and equipment specifications and drawings
• a range of workplace documentation, personnel, information and resources, including:
  • compliance obligations
  • organisational plans.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- prepare at least two business cases, outlining methods to create sustainability and competitive advantage in at least two information and communications technology (ICT) projects.

In the course of the above, the candidate must:

- demonstrate measurable improvements of businesses through implementation of chosen strategies
- communicate with stakeholders on approaches to improve sustainability, development and implementation, and contribute to dispute resolution among stakeholders
- use software systems to record and file documentation, measure usage, and interpret visual data and information
- identify improvements and benchmarks against industry best practice
- review and improve sustainability policies.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, codes, company work practices, regulations and standards, work health and safety (WHS) requirements for scoped work
- principles, practices and available tools and techniques of sustainability management required in the ICT industry
- best practice approaches required to create sustainable ICT strategies
- features of reputable information sources
- functions and features of cost-benefit analyses and sustainability reports
- methods to calculate and estimate the following project aspects:
- return on investment (ROI)
- project expenditure
- costs
- benefits and risks
- features of implementation plans and executive summaries
- organisational quality assurance systems
- ICT power consumption calculation methods
- energy audit methodology and calculations
- environmental impacts of products, processes, systems and services.

**Assessment Conditions**

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required legislation, standards, guidelines, reports, and equipment specifications and drawings
- workplace documentation and personnel information and resources, compliance obligations, organisational plans and work responsibilities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to conduct life cycle assessments (LCA) to evaluate the human health and environmental impacts arising from delivering products, processes and services.

It applies to individuals who are excellent communicators with a very high level of technical management skills and knowledge of telecommunications networks and systems. In this role, individuals must be able to undertake detailed research, analysis and evaluation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – sustainability

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
<tr>
<td>1. Define and scope LCA goals</td>
<td>1.1 Determine reasons for executing LCA study in compliance with organisational requirements 1.2 Obtain access to information sources and research resources required for LCA study 1.3 Document aims of LCA study and align with organisational sustainability requirements 1.4 Identify sustainability legislation, regulations, policies and procedures and codes of practice required in the information and communication technology (ICT) industry</td>
</tr>
</tbody>
</table>
## ELEMENT | PERFORMANCE CRITERIA
---|---
2. Conduct life cycle inventory (LCI) analysis | 2.1 Construct a life cycle flow diagram and identify all environmental inputs and outputs, and environmental processes  
2.2 Develop data collection strategies for LCI  
2.3 Collect data according to industry and organisational requirements and procedures  
2.4 Evaluate and document LCI results according to organisational requirements and procedures
3. Conduct life cycle impact assessment (LCIA) | 3.1 Identify and define environmental impact categories to be reported to required personnel  
3.2 Classify LCI results into environmental impact categories  
3.3 Model LCI impacts within impact categories using science-based conversion factors  
3.4 Normalise potential impacts in ways that can be compared  
3.5 Assign impact categories by grouping into at least one set and facilitate interpretation of results  
3.6 Assign weighting factors to emphasise most important potential impacts
4. Evaluate results from LCI and LCIA | 4.1 Identify significant issues identified in LCI and LCIA  
4.2 Ensure and evaluate completeness, consistency and sensitivity of results  
4.3 Make recommendations for improving initially identified product, process and service life cycle
5. Complete LCA for sustainability | 5.1 Create a report and document results of LCA according to organisational requirements and procedures  
5.2 Ensure report conclusions and sustainability recommendations align with initial goals of LCA  
5.3 Obtain required sign-off procedures and return used resources to their initial state

### Foundation Skills

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- conduct and manage at least two life cycle assessments (LCA) and at least two life cycle inventories (LCI) for sustainability.

In the course of the above, the candidate must:

- scope and define the goals of an LCA
- produce at least two LCI using required software and data collection strategies
- use at least two LCA and required software for researching and interpreting charts, flowcharts, graphs and other visual data and information
- evaluate LCI and life cycle impact assessment (LCIA) results in light of completeness, consistency and sensitivity factors
- make best practice recommendations based on results of LCA studies.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, codes, company work practices, regulations and standards, work health and safety (WHS) requirements for scoped work
- applications and characteristics of LCA, LCI and LCIA
- industry-approved information sources and research resources used to conduct LCA, LCI and LCIA
- methods to construct life cycle flow diagrams
- industry-approved data collection strategies used in LCA, LCI and LCIA
- types of environmental impact categories (EIC) that affect sustainability
- types of weighting factors used to normalise impact of EIC
- requirements of LCA reports
• equal opportunity, equity and diversity principles when conducting sensitivity checks for policy development
• policy development processes and practices
• principles, practices and available tools and techniques of sustainability management required to the telecommunications industry
• quality assurance systems required to own organisation
• required organisational policies, procedures and protocols
• required systems and procedures to aid in the achievement of workplace sustainability
• information and communications technology (ICT) power consumption calculations
• power consumption and energy audit methodology
• methods to estimate CO₂ emissions
• environmental impacts of products, processes, systems and services.

**Assessment Conditions**

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

• websites on which planning, design and integration of sustainability may be carried out
• required legislation, standards, guidelines, reports and equipment specifications and drawings
• a range of workplace documentation and personnel information and resources (such as compliance obligations, organisational plans and work responsibilities).

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to plan, conduct and report on applied research to influence strategic practices on information and communications technology (ICT) sustainability and outcomes within an organisation. The unit also covers constructing an applied research strategy, using a range of applied research techniques, and analysing and presenting findings.

It applies to individuals who are in a leadership capacity and are competent innovators and communicators, with a very high level of technical management skills and knowledge of ICT networks and systems. In this role, individuals must be able to undertake detailed research, analysis and evaluation. Outcomes and solutions must be presented with clarity.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- lead applied research in information and communications technology (ICT) sustainability for at least two projects.

In the course of the above, the candidate must:

- direct the formulation of a research proposal and plan that includes:
  - specific research questions on sustainability
  - valid population and sample size
  - description of the geographical, cultural, social and institutional context within which the research will be carried out
  - descriptions of data collection methods
  - analysis of research design limitations
- manage the design of applied research projects
- design research reports with analysis of data, and valid and reliable findings
- evaluate relevance of the research results
- conduct research using recognised research techniques.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, codes, company work practices, regulations and standards, work health and safety (WHS) requirements for scoped work
- environmental and sustainability legislation, regulations and codes of practice in the ICT industry
- audit methodology on ICT energy, waste, product life cycles and CO₂ emissions
• principles, practices and available tools and techniques of sustainability management required to the ICT networking industry
• communication processes and methods
• industry-accepted data collection methods
• requirements of research documentation and reports, according to organisational policy
• required legislation, codes, company work practices, regulations and standards, WHS requirements for scoped work
• leadership strategies required in a research environment.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• a research activity that relates to an actual workplace or simulated context and topic
• a range of tools and techniques required for the given situations and research topic.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

1. Prepare for work activity

1.1 Identify the type of work to be performed from work instructions
1.2 Select appropriate hand and power tools for work to be performed in line with industry standards or specified approved tools for use
ELEMENT | PERFORMANCE CRITERIA
---|---
1.3 | Set up and check tools for use according to industry approved information
1.4 | Examine work environment and plan work with tools to maximise safety and productivity
1.5 | Clear and clean work area to make it free of obstructions and allow clear access to tools
2.1 | Mount, support or align work piece correctly to the tool or machine to be used
2.2 | Anchor work piece securely where necessary to prevent movement
3.1 | Use hand and power tools correctly according to industry and enterprise safe working practices
3.2 | Use safety equipment during tool operation according to industry and enterprise safe working practices
3.3 | Monitor tool operation continuously and discontinue use if abnormal operation occurs
3.4 | Clean work area on completion of work
4.1 | Clean and store tools according to industry and enterprise safe working practices
4.2 | Report abnormal tool operation or other problems according to established procedures
4.3 | Perform programmed maintenance of tools according to work role
4.4 | Arrange inspection of power tools according to regulatory requirements

**Foundation Skills**

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- accurately interpret work orders relevant to selection and use of tools
- interpret specifications and instructions relating to materials and equipment on which tools are to be used
- prepare work environment and set up tools for safe and effective use
- perform work processes following all relevant safety requirements applying to use of hand and power tools
- monitor tool operation for correct operation during use
- inspect completed work to verify correct tool operation and use
- communicate evidence of faults and other problems
- comply with all related work health and safety (WHS) requirements and work practices.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- electrical and compressed air safety
- equipment types, characteristics, technical capabilities and limitations
- features and operating requirements of hand and power tools
- general housekeeping policies and procedures
- industry and worksite terminology
- information required to operate equipment according to a test specification
- job safety analysis (JSA) or safe work method statement
- legislation, codes of practice and other formal agreements that impact the work activity
- manufacturer’s requirements for safe operation of equipment
- materials commonly used in the industry
- safety data sheets (SDS) and materials handling methods
- operational, maintenance and basic diagnostic procedures
- common power sources
- specific WHS requirements relating to the activity and site conditions
- typical issues and challenges that occur onsite.

**Assessment Conditions**

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
- sites where hand and power tools may be used
- hand and power tools currently used in industry
- relevant regulatory and equipment documentation that impact the use of hand and power tools.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

<table>
<thead>
<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version released with ICT Information and Communications Technology Training Package Version 5.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- use fundamental electrical principles to solve basic AC and DC electrical problems
- connect and test an AC and a DC circuit
- respond to test results found to be out of expected specifications.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- legislative requirements and enterprise protocols, policies and procedures relevant to work activity
- principles of AC and DC electricity and how it impacts telecommunications work including:
  - AC and DC electrical SI units of measurement
  - work health and safety (WHS) issues including extra low voltage and high voltage precautions
  - principles of Ohm’s law and other relevant calculations for single path circuits
  - circuit configuration
  - common AC and DC faults, fault-finding techniques, and procedures for the use and care of testing equipment
  - application of binary to decimal conversion and vice versa
  - principles of analog and digital electronics and building blocks common to analog and digital circuits
  - distinction between analog and digital signals and devices
• electrical current, electromotive force (EMF), AC and DC electrical current
• features and applications of cable types such as single sheathed cable, unshielded twisted pair (UTP), coaxial and fibre cables
• electronic devices, cable types and their applications
• basic characteristics found in AC waveforms
• techniques to convert analog to digital and digital to analog
• characteristics of signal transmission
• common telecommunications cables and their characteristics of use and application.

Assessment Conditions
Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:
• appropriate AC and DC testing equipment commonly used in telecommunications work
• manufacturer documentation and equipment
• safety personal protective equipment (PPE).

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to install underground telecommunications infrastructure using civil construction skills.

It applies to cablers who install, replace or maintain large size pits, manholes, large conduits and ducts.

Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Refer to the ICT Information and Communications Technology Companion Volume Implementation Guide or the relevant regulator for details of licensing, legislative or certification requirements.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:
- apply techniques for the safe, effective and efficient installation of underground telecommunications infrastructure including:
  - problem-solving and troubleshooting techniques
  - diagnostic techniques
- complete an underground telecommunications infrastructure that meets all of the required outcomes.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:
- legislative, enterprise and site requirements and procedures for:
  - hazard identification, risk assessment and response
  - job safety analysis (JSA)/ job safety and environment analysis (JSEA)/safe work method statements
  - project quality measures
  - excavation/trench safety
  - confined space entry
  - site dewatering
  - safety data sheets and material handling methods
  - civil construction terminology
  - underground telecommunications infrastructure systems and installation procedures for:
• manholes, large pits, conduits, ducts
• inspection covers and minor structures
• pipe joins
• concrete fabrication
• sedimentation and erosion controls
• worksite engineering drawings
• types, characteristics, technical capabilities and limitations of equipment related to work activity
• site isolation and traffic control responsibilities and authorities
• relevant enterprise policies and procedures.

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:
• site/s where underground telecommunications infrastructure can be installed
• tools, equipment and personal protective equipment currently used in industry
• relevant legislation, work instructions and equipment documentation that impacts on work activity.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to prepare for and work within a telecommunications network environment by familiarising oneself with the devices required to work on basic telecommunications networks and by performing information transmissions.

It applies to entry-level workers who undertake basic information transmission tasks on telecommunications networks.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Telecommunications Network Engineering

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- determine the basic components used in two telecommunications devices
- identify at least two signal devices and two transmission mediums used in telecommunications system/s in two different situations
- identify two components used in basic switching system/s.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- transmission devices used for telecommunications and information capture including:
  - smart phones
  - computers
  - network termination devices
  - ADSL/VDSL devices
  - telephones
  - wi-fi modem/router cabinets
- mediums for telecommunications information transmission including:
  - twisted pair cable and patch chords
  - coaxial cable
  - optical fibre cable
- radio and wireless associated connectors/sockets used in transmission mediums
- radio antenna types including:
  - wi-fi omni directional antenna
- switching and cable systems including:
• analog and digital telephone systems
• ethernet switch
• point-to-point
• common exchange equipment including:
  • rack and stack equipment.

**Assessment Conditions**

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

• two types of common customer equipment
• two signal transmission mediums in use
• two different telecommunications switching equipment types
• two telephone exchange devices
• cabling products and cable used in telecommunications systems.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to effectively install and test telecommunications network equipment. It includes processes for checking plans, obtaining equipment, and handling equipment and supplies.

It applies to field officers, technicians or technical supervisors working for carriers, contractors or other service providers who install switching, transmission and radio networks and various transmission paths. It includes cable, optical fibre, radio, microwave and satellite telecommunications equipment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- plan for and install network hardware and cabling according to equipment or system manuals and customer specifications
- configure and test installation
- verify cable continuity
- comply with all work health and safety (WHS) and environmental requirements and work practices
- notify customer of work progress and obtain sign-off.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- WHS requirements and environmental procedures relating to the activity and site conditions
- cabling types, connectors and cabling structures
- equipment and connections to carrier infrastructure and internet service provider (ISP) technologies for single and multi-dwelling environments:
  - carrier, asymmetric digital subscriber line, very-high-bit-rate digital subscriber line, fibre network termination device (NTD), hybrid fibre coaxial (HFC) modems
- electrical and/or optical properties of installation
- network and transmission equipment principles
- power requirements and electrical safety
• typical performance parameters and faults that may be encountered in customer equipment and related connection and transmission media
• various test equipment types suitable for tests to be made
• handling and environmental compliance for waste disposal.

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

• site/s where installation of telecommunications network equipment can be conducted
• network testing equipment currently used in industry
• relevant regulatory and equipment documentation that impact telecommunications network equipment installation activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- discuss faults with customers and co-workers
- test telecommunications networks to identify faults
- identify and rectify recurrent faults
- conduct and report on a fault-finding task in a telecommunications network for a range of faults
- use systematic and logical fault-finding techniques in telecommunications networks and field-testing procedures according to specific workplace situations
- comply with all work health and safety (WHS) and environmental requirements and work practices.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- relevant legislation, regulations, codes, standards, enterprise guidelines, formal agreements and contracts that impact on the work activity in particular:
  - WHS requirements and environmental procedures relating to the activity and site conditions
  - Ohm’s law, impedance and reactance formulas to solve alternating current (AC) electrical problems when diagnosing faults
  - behaviour of faulty network elements including symptoms and impact on network
  - test results and network element/system specifications
Assessment Requirements for ICTEN313 Work on and resolve recurrent network faults

- operation and purpose of testing equipment
- summary of telecommunications networks
- performance testing and fault-finding techniques of telecommunications networks
- systematic and logical fault-finding
- types of power sources used in telecommunications networks
- managing faults on special services (such as police stations, hospitals, customers with heart monitors).

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- site/s on which network testing and fault-finding can be conducted
- line transmission, optical and radio measurement equipment currently used in industry
- system documentation, and other site-related documentation necessary to conduct tests and fault-finding investigations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- develop a block diagram showing a telecommunications system based on copper, fibre and radio mediums
- connect relevant cable to computer components used in a local area network (LAN) environment
- locate components used in a radio/wireless transmission system
- locate components and equipment to facilitate internet operations.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- basic analog and digital theory
- basic radio-communications theory
- basic fibre optic theory
- basic principles of data encapsulation as a frame and packet of data
- basic multiplexing principles
- timing of data transmission as synchronous, plesiochronous and asynchronous formats
- basic concepts of layers within the OSI and TCP-IP Models
- work health and safety (WHS) regulations for electromagnetic and photonics telecommunications systems
- RF amplification, coax feeder and simple aerial concepts, including Yagi, parabolic dish, aerial gain, directional, omnidirectional, polarity, helical
components used in common LAN systems including personal computer devices, NUCs, photocopier/printer/scanners, servers, NASs, cable systems, switches, routers, wi-fi modems, and NTDs

- basic concepts and use of programming language
- basic operation of LED, laser and emerging technology sources, fibre cable and photo detector reception
- basic encoding techniques and principles used in ethernet copper cabling
- switching encountered and used in telecommunications, telephone systems, LAN, carrier/retailer
- basic types of modulation, amplitude, frequency and phase modulation used to attain efficiencies in sharing available bandwidth
- basic principles of FDM, TDM and QAM
- basic concepts and use of internet and telecommunications network related programming languages and protocols
- common internet terminology
- measuring techniques, BER, Viterbi, MER, Error rates (10^-6)
- basic operation of commonly used telecommunications devices and systems.

**Assessment Conditions**

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- safety signs pertaining to electrical, electromagnetic, radio frequency and photonics systems
- equipment currently used in telecommunications systems (electrical, radio and fibre)
- cabling products and cable used in telecommunications systems.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to test and analyse telecommunications copper cabling using a variety of telecommunications industry test equipment.

This unit applies to technicians who conduct basic tests and telecommunications copper cabling analysis.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- select, set-up and operate test instruments for three different cable types from the following list:
  - structured cabling verification/qualification tester
  - wire mapper
  - oscillator and probe
  - spectrum analyser
  - DVB-T/S2 analyser
  - multimeter – analog and digital
  - time-domain reflectometer (TDR)
  - asymmetric digital subscriber line (ADSL)/very-high-bit-rate digital subscriber line (VDSL) test instruments

- select appropriate instrument test cables and adaptors to suit test equipment for three different cable types and:
  - determine safety of cables to be tested (i.e. live or inactive)
  - identify calibration status of selected devices
  - confirm test results are within acceptable operational parameters.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:
• relevant legislation, regulations, codes, standards, rules, guidance notes and other formal agreements that impact on work, in particular:
  • AS/CA S008:2010 Requirements for customer cabling products
  • AS/CA S009:2013 Installation requirements for customer cabling (Wiring Rules)
  • AS/NZS 1367:2016 Coaxial cable and optical fibre systems for the RF distribution of digital television, radio and in-house analog television signals in single and multiple dwelling installations
  • AS/NZS 3000:2018 Electrical installations known as the Australian/New Zealand Wiring Rules
  • AS/NZS 3084:2017 Telecommunications installations – Telecommunications pathways and spaces for commercial buildings
  • National Construction Code
  • work health and safety (WHS) regulations pertaining to electrical and electromagnetic telecommunications systems including energy supply sources
  • different copper cable types utilised to match transmitted and received signals
  • testing concepts and parameters used by test instruments including:
    • impedance, resistance, mismatches, crosstalk, reflections, ACR, spectrum, bandwidth, modulation depth, intermodulation, signal delay, group delay, normalisation, linearity, TDR, clock, jitter, latency, ping, signal to noise ratio (SNR), simplified Fourier analysis concepts, eye patterns, PAM4 or SDI, QAM patterns/constellations, MER, BER, FEC, signal losses, noise, interference, data rates, traffic, upload/download testing, signal levels, dBs, dBm, dBµ, dBBr, dBµV
  • testing acronyms including expansion and meaning
  • common tests utilised with each copper cable telecommunication system
  • telecommunications systems utilised in the telecommunications industry including:
    • telephone/voice over internet protocol (VoIP) systems
    • mobile phones, security systems
    • closed-circuit television (CCTV) systems
    • fire protection systems
    • structured cabling systems
    • local area network (LAN) equipment, telemetry
    • equipment control and monitoring systems
    • automation control systems
    • entertainment and control systems
    • radio communications
    • wi-fi
    • radio links
    • satellite and digital television reception
    • private automatic branch exchange (PABX)
  • technical standards as applicable to copper cable systems
• test devices as applicable to copper cables in each transmission medium
• purpose and use of test results
• solid core cable versus stranded core.

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:
• safety procedures signage and personal protective equipment (PPE) for testing cable
• cabling products and cable used in telecommunications systems
• operating conditions that may be present within local industry and regional contexts
• test equipment to test cable and identify test results, including:
  • wire mapper
  • oscillator and probe
  • spectrum analyser (available in DVB analyser)
  • DVB-T/S2 analyser
  • multimeter
  • TDR (available in SC certifiers)
  • ADSL/VDSL test instruments
• typical cable types including:
  • Cat 6 UTP cable
  • Cat 6/7 STP cable
  • RG6 coaxial cable (quad shielded)
  • RG11 coaxial cable (quad shielded)
  • copper conductor ribbon cable
  • solid core cable
  • stranded core cable
• appropriate connectors for testing cables
• appropriate adaptors and test leads for test instruments and cables to be tested
• backup energy sources, including power supplies and uninterrupted power supply/source (UPS) equipment.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- discuss faults with customers and appropriate personnel
- use systematic and logical fault-finding techniques and field-testing procedures according to workplace situations
- test telecommunications networks to identify a minimum of three different types of faults
- analyse test results and rectify faults for a minimum of three different types of faults
- comply with all related work health and safety (WHS) requirements and work practices
- follow direction from appropriate sources, personnel or network operators (including operation centre, supervisor).

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- work health and safety (WHS) and environmental requirements
- basic communications testing, measuring devices and techniques including:
  - types and applications of testing/measuring devices including voltage testers, multimeters, continuity testers and insulation resistance testers
  - features of testing/measuring devices including safety, user calibration and parameter and range settings
  - test/measuring devices into a circuit
  - safety procedures
- circuit arrangement of test/measuring devices
- readings
- storage, maintenance and care of test/measuring devices.
- Australian Standard quality assurance requirements for test equipment calibration certification
- network fundamentals for analog and digital signals including:
  - how information is carried
  - signal distortion, attenuation, reflection, noise, dispersion, latency and collisions
  - types of networks, network components and hardware
  - local area network (LAN) architecture
  - networking protocols and the open systems interconnection (OSI) model
  - network signal propagation
  - transmission control protocol/internet protocol (TCP/IP)
- basics of encoding networking signals including:
  - internet services
- performance parameters associated with copper cables, coaxial cables and optical cables including:
  - electrical circuit characteristics of voltage, current and resistance/impedance
  - open circuit, short circuit and pair continuity
  - split legs and crossed legs, contacts, earths and foreign battery
  - attenuation
  - return loss
  - insulation resistance (leakage)
  - cross talk
  - attenuation to cross talk ratio (ACR)
  - loop resistance
  - noise (impulse noise and average noise)
  - characteristic impedance
- test result compliance with required regulations, standards and/or codes for structured copper cables, coaxial and optical fibre cables including:
  - tests required to evaluate a given performance parameter
  - test equipment and leads needed to evaluate a given performance parameter
  - operation of test equipment for correct evaluation of specific cable performance parameters and to obtain accurate and reliable results
  - transmission performance requirements
- behaviour of faulty network elements, including symptoms and impact on network
- systematic and logical fault-finding
- interpretation of test results and network element/system specifications
- types of power and signal sources used in telecommunications networks.
Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- site/s on which network testing and fault-finding can be conducted
- line transmission and optical measurement equipment currently used in industry
- system documentation and other site-related documentation required to conduct tests and fault-finding investigations, for a minimum of three different types of faults.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to inspect and clean optical fibre connectors and to follow handling and placement practices for optical fibre patch leads and cables. It relates to practices necessary in the installation and patching of fibre for new or replacement cables in switching, transmission and fixed and mobile radio networks.

It applies to lines workers, technicians or jointers working for carriers and/or service providers. It also applies to work performed under direction of the relevant authority.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- interpret, discuss and confirm required work
- obtain and check documentation, equipment and hardware for required work
- inspect fibre connectors using inspection scopes
- clean connectors using approved methods
- handle optical fibre cable and connectors to prevent damage
- complete patching according to patching schedule and under the direction of the relevant authority
- follow work health and safety (WHS) requirements and anti-static precautions
- follow required practices or contingency plan if hardware replacement is unsuccessful
- restore site to required condition
- liaise with appropriate personnel for information and reporting purposes.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- relevant legislation, regulations, codes, standards and contracts that impact on the work activity, in particular:
  - relevant safety legislation and company work practices, hazards identification, laser safety, dangerous materials handling and personal protective equipment and safety requirements for working with optical fibre cable
  - International Electrotechnical Commission (IEC) Standards acceptance criteria
• environmental requirements
• signal transmission in optical fibres and the impact of various contaminants on fibre connections
• relevant designs, plans and labelling conventions
• relevant equipment used for inspecting and cleaning cables and connectors
• process of inspecting and cleaning cable, connectors and equipment
• escalation processes for damaged hardware.

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:
• site/s suitable for inspecting and cleaning optical fibre connectors
• a range of hardware currently used in industry
• a range of general and test equipment required for testing telecommunications network hardware.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate, on two separate occasions, the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- discuss equipment recovery options with customer
- develop a recovery plan
- safely disconnect, dismantle and recover customer premises equipment
- package and label recovered equipment
- notify customer of progress and obtain sign-off
- apply work health and safety (WHS) requirements and work practices.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- legislation, regulations, codes, standards and other formal agreements that impact the work activity, in particular:
  - specific WHS and environmental requirements
- manufacturer requirements for safe operation of equipment
- customer premises equipment and customer premises cabling
- types of power sources used with telecommunications equipment
- nature of customer equipment recovery and the documentation required to affect recovery with stakeholders
- equipment used for recovery work
- typical issues and challenges that occur on site.

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.
Access is required to:

- site/s where recovery of customer premises equipment can be conducted
- plant, tools and equipment currently used in industry
- relevant regulatory and equipment documentation that impact work activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to commission an electronic unit within a telecommunications environment with applications.

The commissioning may be for a new installation or upgrade of capacity or technology for an existing network or subsystem for convergence to next generation networks (NGNs).

It applies to field officers and technicians working for telecommunications carriers, other service providers and contractors.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Telecommunications Network Engineering

Elements and Performance Criteria

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills at least once each for electrical and optical equipment, and to:

- commission an electronic unit for an electrical and optical input according to specifications
- communicate effectively with stakeholders
- negotiate arrangements for commissioning
- deal with faults and problems, and provide solutions.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- electrical and optical properties to be measured
- common networking equipment
- legislation and licensing requirements surrounding installation of telecommunications equipment
- industry standards and enterprise guidelines relevant to work activity
- commissioning plans based on manufacturer and enterprise guidelines
- network operation procedures
- power requirements and electrical safety
- test equipment types
- transmission type and signals that may be encountered.

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.
Access is required to:

- site/s on which installation and commissioning procedures can be conducted
- testing equipment currently used in industry
- relevant regulatory and equipment documentation that impact commissioning.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to inspect critical aspects of electronic systems and replace and dispose of items performing below specification and required operating levels.

It applies to individuals with the capacity to apply skills in electrical, workplace safety and power tools, working as technicians on site and from remote locations.

This work does not include major servicing of equipment or repair due to breakdowns.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Telecommunications Network Engineering

Elements and Performance Criteria

<table>
<thead>
<tr>

Performance Evidence

The candidate must demonstrate, on two occasions, the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- identify maintenance required
- communicate maintenance details to customer/s and work associates
- undertake manufacturer preventive maintenance routines on site and remotely
- conduct tests
- interpret test results
- complete documentation according to enterprise guidelines.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- features and operating requirements across a range of electronic equipment
- legislation, codes, enterprise guidelines and other formal agreements that impact the work activity, in particular:
  - specific work health and safety (WHS) and environmental requirements
- manufacturer requirements for safe operation of equipment and correction of faults
- testing methods and performance requirements of equipment under test
- troubleshooting and repair procedures
- typical issues and challenges that occur on site and when conducting remote maintenance procedures.
Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- site/s suitable for maintenance of a range of equipment
- test equipment currently used in industry
- relevant regulatory and equipment documentation that impact work activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

<thead>
<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version released with ICT Information and Communications Technology Training Package Version 5.0.</td>
</tr>
</tbody>
</table>

Application

This unit describes the skills and knowledge required to install supporting infrastructure for telecommunications equipment and associated hardware, including access equipment and associated media, power and monitoring equipment, and alarm systems.

It applies to field officers, installation technicians or technical supervisors working for contractors or other service providers who work on switching, transmission, radio networks and various transmission paths including cable, optical fibre, radio, microwave and satellite.

No licensing, legislative or certification requirements apply to this unit at the time of publication. However, technical work in telecommunications must only be done on extra-low voltage power levels otherwise it breaches the electrical licensing laws in Australia set within AS/NZS 3000:2018 Electrical installations known as the Australian/New Zealand Wiring Rules.

Unit Sector

Telecommunications – Telecommunications Network Engineering

Performance Evidence

The candidate must demonstrate, on two occasions, the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- identify potential earthing locations, cable routes, cables support systems, data cabinets, telecommunication enclosures and distributors
- construct metal superstructure and racks
- install protective earth installations
- organise AC mains power infrastructure
- install uninterrupted power supply (UPS) backup power
- notify customer of works progress.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- cabling types, connectors and cabling structures used in telecommunications networks
- common customer telecommunications applications and related equipment
- connections to carrier infrastructure or equipment
- legislation, regulations, codes and standards for compliance relating to installation of telecommunications equipment and connection to carrier services in particular:
  - work health and safety (WHS) requirements for managing hazards on the worksite including:
    - confined spaces
    - electrical safety including the limits of electrical work as set by local electrical regulatory body
    - working at heights
    - lifting
    - materials handling
• physical hazards
• tools and test equipment required for an infrastructure installation
• site survey process and data that should be recorded
• environmental impacts, including options for information and communications technology (ICT) installations
• network topologies, interface and interconnect solutions
• network and transmission customer equipment likely to be encountered
• common backup UPS systems, AC mains power requirements and electrical safety for telecommunications networks
• types of warranty information for equipment supplies and contractor work guarantees
• importance of correctly labelling an installation.

Assessment Conditions
Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.
Access is required to:
• site/s where installation of supporting infrastructure can be conducted
• plant, tools, equipment and personal protective equipment currently used in industry
• relevant regulatory and equipment documentation that impact work activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

</table>

Performance Evidence

Evidence of ability to:

- determine installation options
- produce schematics and plan drawings
- access and interpret database and knowledge systems for network information
- produce design drawings and specifications
- verify specifications with client.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- summarise carrier network practices, procedures and systems, including databases and deployment rules relating to telecommunications designs
- identify and apply legislation, codes of practice and other formal agreements (including schedule of rates and contract requirements) that impact work activity
- describe manufacturer’s requirements for safe operation of equipment
- identify and document specific work health and safety (WHS) requirements relating to the activity and site conditions
- describe typical issues and challenges that occur on site
- establish and describe the various components of telecommunications plans, drawings and specifications.
Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications networks engineering field of work and include access to:

- special purpose tools, equipment and materials
- sites where network installation may be conducted
- equipment currently used in industry
- relevant regulations and company policies
- cabling specifications that impact network installation activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to locate telecommunications equipment including telephony, audio, television and data, and to place associated cables within domestic, commercial or industrial installations. It includes planning access to new and existing infrastructure, and completing all necessary documentation.

It applies to individuals working as cablers and registered with an Australian Communications and Media Authority (ACMA) accredited registrar.

Licensing, legislative, regulatory and certification requirements apply to telecommunications earthing systems. Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the ICT Information and Communications Technology Training Package Companion Volume Implementation Guide or the relevant regulator for details about licensing, legislative or certification requirements.

</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
<tr>
<td>1. Prepare to identify services required</td>
<td>1.1 Contact customer to arrange access to site, identify customer equipment and discuss customer requirements</td>
</tr>
<tr>
<td></td>
<td>1.2 Assess site-specific safety requirements and enterprise work health and safety (WHS) processes and procedures</td>
</tr>
<tr>
<td></td>
<td>1.3 Confirm details of proposed customer equipment</td>
</tr>
</tbody>
</table>
ELEMENT | PERFORMANCE CRITERIA
--- | ---
1.4 Establish intended uses of customer equipment to assist in identifying cabling requirements
1.5 Establish cabling requirements with customer
1.6 Locate existing facilities and systems including network facilities
1.7 Verify building construction by observation and confirm accessibility
1.8 Utilise existing floor plans and integrate into subsequent documentation
1.9 Notify customer, as required, that equipment or cabling location may incur additional cost
1.10 Prepare a report on required services

2. Establish availability of and access to existing cabling
2.1 Calculate capacity of existing cabling against proposed usage to ensure appropriate decisions are taken about extent of new cabling required
2.2 Inspect cabling to ensure compliance with ACMA regulations, relevant legislation, regulations, codes and standards

3. Complete required reports and documentation
3.1 Complete all required documents promptly and accurately according to enterprise policy
3.2 Prepare a report on cabling infrastructure and equipment according to customer requirements
3.3 Obtain customer confirmation of documented requirements as required
3.4 Distribute relevant documentation promptly to required parties
3.5 Obtain sign-off from customer

Foundation Skills

*This section describes those language, literacy, numeracy and employment skills that are essential to performance, but not explicit in the performance criteria.*

### Skill | Description
--- | ---
**Oral Communication** | • Uses listening and questioning skills to confirm understanding for requirements, participates in a verbal exchange of ideas and solutions, and uses appropriate, detailed and clear language to address key personnel and disseminate information

**Numeracy** | • Uses mathematical formulae to measure equipment requirements and calculate equipment costs within budgetary constraints

**Navigate the world of work** | • Takes personal responsibility for following explicit and implicit policies, procedures and legislative requirements

**Interact with others** | • Actively identifies requirements of important communication exchanges, selecting appropriate channels, format, tone and content to suit purpose and audience

**Get the work done** | • Determines job priorities, resources and equipment, and works logically and systematically to undertake clearly defined and familiar tasks
• Implements actions according to a predetermined plan, making slight adjustments if necessary
• Takes responsibility for routine decision-making by selecting from a range of predetermined options in routine situations, identifying and taking some situational factors into account
• Initiates standard procedures when responding to familiar equipment and logistics problems within immediate context

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- negotiate with customers about their equipment needs, such as telephony, video, audio, and data
- agree on services required, and availability and access to existing cabling
- identify locations of equipment and placement of cables on support structures
- verify installation based on permitted building conditions
- complete required reports and documentation, including order forms, service checklists, numerical estimates of capacity of cabling and quotation forms
- ensure the integrity of plans.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- process of evaluating customer premises
- key features of floor and building plans that apply to customer telecommunications equipment
- costing processes as determined by enterprise procedures
- features and operating requirements for equipment
- legislation, codes and other formal agreements that impact the work activity
- typical manufacturer requirements for safe operation of equipment
- specific work health and safety (WHS) requirements relating to the activity and site conditions.
Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- site/s on which telecommunications installations can be conducted
- tools, equipment and personal protective equipment currently used in industry
- relevant databases, licensing requirements and other site-related documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- prepare software configuration
- load software into customer equipment
- install security programs agreed with customer
- test program and program features including:
  - system facilities
  - product features
  - required peripherals associated with the product
  - system functionality
- notify customer of progress and obtain sign-off.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- regulations, manufacturer specifications, industry standards and requirements, and enterprise procedures relevant to work activity, in particular:
  - work health and safety (WHS)
- channel allocations
- common operating systems and their impact on the configuration of, or version of, software to be installed
- internet protocol (IP) address
- logon procedures
- enterprise numbering formats
- product or service functions to ensure correct operation of completed installation.

**Assessment Conditions**

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- site/s suitable for installation of system programs
- equipment currently used in industry
- relevant regulatory and enterprise documentation impacting testing and installation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- select network elements to plan, prepare and install at least one IP network installation
- configure and test network on at least one occasion
- document completed process.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of organisational procedures including:

- industry-accepted hardware and software products
- data and voice transmission technologies and protocols
- networking technologies
- router-based network architectures
- safe installation of networking products
- interoperability across networking layers.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- field measurement equipment currently used in industry
- network design documentation
- equipment specifications
- network components
- hardware and software
• a live network
• organisational guidelines
• networked (LAN) computers
• wide area network (WAN) service point of presence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to solve electrical-based problems encountered in analog and digital signal equipment, signal cabling and wireless networking in the telecommunications sector.

It applies to technicians who undertake a range of functions requiring advanced techniques in testing, fault-finding and rectification for electrical circuitry common to telecommunications signal transmission and operation. These technicians may work in domestic, commercial or industrial situations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
</tbody>
</table>
| 1. Prepare to solve problems within given telecommunications | 1.1 Determine need to test live or isolate circuitry  
1.2 Use specifications or job documentation to verify circuit/signal |
### PERFORMANCE CRITERIA

**circuitry/cable**

- parameters that are to be measured for a given problem
  1.3 Select appropriate test equipment and measure output voltage of digital device for high and low logic states
  1.4 Identify by calculation or given specifications and record expected values within given electrical circuit
  1.5 Determine appropriate fault-finding technique to be used for given problem
  1.6 Select appropriate test equipment and measure circuit according to methodologies already determined
  1.7 Select and source required hand tools/equipment for problem-solving telecommunications circuitry

**2. Test and record electrical operating parameters within given telecommunications circuitry/cable**

- 2.1 Apply work health and safety (WHS) procedures to given task
- 2.2 Isolate circuitry from live source when risk process has indicated that action be taken
- 2.3 Connect appropriate test devices within electrical circuit to obtain operational measurements as pre-determined
- 2.4 Reduce circuit path following accepted fault-finding methodologies and test
- 2.5 Record measured results obtained

**3. Analyse and report findings**

- 3.1 Analyse results obtained against specifications and parameters provided
- 3.2 Determine appropriate circuits and actions to rectify circuitry necessary to resolve given problem
- 3.3 Supply customer with report on fault/s and options to resolve issue/s

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- apply work health and safety (WHS) procedures to problem-solving electrical circuitry and cables
- connect suitable test devices incorporating a multimeter and an oscilloscope to investigate operational parameters within AC and DC circuit/s
- perform measurements and calculations on both series and parallel circuits by comparing actual readings with calculated values
- calculate and verify through tests the voltage, current and resistance in both a series and parallel AC/DC given circuit
- apply fault-finding techniques to rectify at least three electrical issues in telecommunications AC/DC circuits
- use circuit characteristics including inductance, impedance and capacitance to improve electrical or signal performance for two basic electronic filter designs
- resolve three electrical issues in an AC/DC circuit.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- safe work practices in electrical work including relevant codes of practice
- localised electrical regulatory requirements including limitations of certain electrical work
- hazards and risks involved in using electrical instruments and the safety control measures within a telecommunications system
- principles of AC and DC electricity and how they impact telecommunications work including:
- AC and DC electrical International System of Units (SI units)
- Symbols used to represent an electrical energy source, a load, a switch and a circuit protection device in a circuit diagram including:
  - Series and parallel circuits for AC and DC circuits
  - Ohm’s Law and other relevant calculations for AC and DC circuits
- Common circuit configurations
- Current and voltage phase relationships
- Waveform characteristics caused by resistance, inductance and capacitance in AC and DC circuits
- Common faults that cause an increase or decrease in resistance, voltage and current found in telecommunications circuits
- Definitions of electrical terms: period, peak, peak-to-peak, instantaneous, average, root-mean-square value in relation to electrical waveforms
- AC electrical generation producing a sinusoidal waveform including:
  - Differences between analog and digital signals and devices
  - Sinusoidal, pulsed, and static value waveforms found in AC circuitry
  - Characteristics of resonance in AC circuits
- Transformer use in electrical circuits including:
  - Basic construction, operating principles and use of transformers
  - Step-up, step-down, turns ratios, voltage and current ratios
  - Verification of operation of transformer circuit
- Fault-finding techniques including:
  - Half circuit split
  - Quarter circuit split
  - Towards or away from source
- Selection and use of testing equipment in telecommunications circuitry including:
  - Test devices used for signal measurement
  - Test devices for voltage, current and resistance
- Telecommunications signal conversion characteristics including:
  - Analog and digital signals
  - Signal transmissions
  - Application of binary to decimal conversion and vice versa
  - 4-bit binary codes with their decimal equivalent to represent output voltages of a digital to analog converter
  - Techniques to convert analog signals to digital and digital signals to analog
  - Principles of analog and digital electronics limited to block diagrams common to analog and digital circuits
  - Components, circuits and uses of common electronic signal filters in telecommunications (high-pass, low-pass and band-pass)
- Transformer use in electrical circuits including:
  - Construction and operating principles and uses
Assessment Requirements for ICTEN435 Solve electrical-based telecommunications circuitry and cabling problems

- step-up, step-down, turns ratios, voltage and current ratios
- verification of operation of transformer circuit
- typical telecommunications electronic devices, cable types and their applications
- common telecommunications cables, their characteristics of use and application
- features and applications of shielding within telecommunications cables, ‘skin effect’ in cables and transmission losses.

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:
- appropriate AC and DC testing equipment
- test devices that include a multimeter and an oscilloscope for waveform observation
- manufacturer documentation and equipment
- safety equipment
- codes of practice.

Assessment in a simulated environment will require extra low voltage to be used.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge to scope requirements, assess land site suitability, arrange site acquisition and produce building design plans for telecommunications network building projects.

It applies to individuals working for private and public organisations who combine technical design and organisational skills to apply planning principles for provisioning of the various building projects and technologies within a telecommunications network to meet future customer demands.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

</tr>
</tbody>
</table>

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design at least two network building projects.

In the course of the above, the candidate must:

- scope and produce design options
- recommend land acquisition options
- prepare at least two justification reports, including evaluation of environmental impact study (EIS) findings
- prepare completed building design plans.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, codes, enterprise policy and requirements, company work practices, regulations and standards, workplace health and safety (WHS) requirements for scoped work
- characteristics of project briefs and design options
- design requirements
- features and information presented in:
  - EIS
  - justification reports
  - field sketches
  - design plans and principles
  - physical construction impediments
  - access networks
• functions and features of:
  • core networks
  • computer aided design (CAD) software packages used in network designs
  • network performance and capacity
  • site surveys
• Environmental Protection Act (EPA) and its impact on designing network projects
• implications of heritage listings on sites
• networks planning and procedures.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

• sites on which projects may be designed
• CAD drawing facilities
• required databases, legislative requirements and other site and project required documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to commission network equipment by creating check plans, obtain and properly handling equipment and supplies, conduct tests, and complete administrative tasks.

It applies to individuals working as field officers, technicians and technical supervisors for carriers, contractors and other telecommunications network service providers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- commission at least three different types of network equipment.

In the course of the above, the candidate must:

- interact with enterprise personnel, customers and other contractors, keeping a customer focus and consideration of customer needs
- produce at least one outage management plan and at least one contingency plan
- negotiate network activity and timing of commissioning
- commission networking equipment according to specifications
- implement test plan, interpret and analyse results against expected outcomes
- test system monitoring alerts and alarms
- analyse faults, problems and anomalies and provide solutions
- comply with all required workplace health and safety (WHS) requirements and work practices.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, codes, company work practices, regulations and standards, WHS requirements for scoped work
- functions and features of:
  - preliminary commissioning plans
  - outage management plans
  - contingency plans
- electrical and optical properties
• operating functions and features of networking equipment
• functions and features of power requirements and electrical safety
• transmission types and signals that are encountered in networks
• tests and test equipment required for commissioning.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

• sites on which installation and commissioning procedures can be conducted
• required regulatory and equipment documentation impacting commissioning
• testing equipment currently used in industry.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 7.0.</td>
</tr>
</tbody>
</table>

Application

This unit describes the skills and knowledge required to integrate network systems and equipment by following predetermined procedures to confirm operability of the system while minimising impact on affected customers.

It applies to individuals working as field officers, technicians and technical supervisors, for network carriers, contractors and other service providers, who install new, additional and replacement equipment in networks. This includes providing support and administrative infrastructures for integration of new and emerging internet protocol (IP) based technologies.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- integrate at least two network systems and at least two types of equipment into the network system.

In the course of the above, the candidate must:

- prepare and implement at least one integration management plan
- develop at least one contingency plan
- test network systems, equipment and associated features being integrated
- apply enterprise escalation and outage procedures
- negotiate procedures and activity on the network and timing of integration
- comply with required organisational and enterprise requirements.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, codes, company work practices and procedures, regulations and standards, workplace health and safety (WHS) requirements for scoped work
- functions and features of:
  - integration management plans
  - change management plans
  - contingency plans
  - network traffic
  - system monitoring alerts and alarms
- connections to carrier infrastructure or customer interface units (CIU)
- electrical and optical properties to be measured
- health and safety issues, including electrical, optical and electromagnetic radiation (EMR) when working with networks
- network equipment and emerging technology networks
- suitable tests and test equipment types
- typical performance parameters and faults that are encountered with using scoped network equipment and connection and transmission media.

**Assessment Conditions**

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- sites on which integration procedures can be conducted
- relevant regulatory and equipment documentation that impacts integration
- testing equipment currently used in industry
- capacity to simulate network traffic
- a network and equipment for integration
- equipment and systems manuals, specifications and enterprise policies.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:
- develop and implement at least two cut-over plans and at least two outage plans.

In the course of the above, the candidate must:
- develop at least two contingency plans
- apply enterprise escalation and outage procedures
- cut over and test network equipment within an industry acceptable time period.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:
- required legislation, codes, company work practices, regulations and standards, workplace health and safety (WHS) requirements for scoped work
- functions and features of:
  - cut over management plans
  - outage plans
  - incident management plans
  - contingency plans
- electrical and optical properties to be measured
- power electrical safety requirements
- types of test equipment and testing procedures suitable for planned network cut over and replacement
- transmission hierarchy and switching principles
- transmission type and signals.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a network and equipment for cut over
- equipment currently used in industry
- systems manuals, specifications and enterprise policy.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Telecommunications Networks Engineering

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
</tbody>
</table>

1. Prepare to locate and rectify complex faults

1.1 Notify client to arrange site access according to organisational procedures
1.2 Obtain and interpret results of action taken by previous fault repairers
1.3 Obtain fault history from relevant personnel and establish fault patterns according to data and organisational procedures and requirements
1.4 Discuss and develop strategies for fault identification and repair with relevant personnel
1.5 Obtain tools and test identified faulty equipment according to
ELEMENT | PERFORMANCE CRITERIA
--- | ---
organisational procedures and manufacturer specifications  
1.6 Set up equipment according to manufacturer specifications and safe work practices, and reconfigure as required
2. Locate and diagnose faults  
2.1 Isolate and test fault and remove likely variables from assessment, following organisational policies and procedures  
2.2 Escalate equipment fault identification and seek diagnosis advice from relevant personnel  
2.3 Diagnose fault according to organisational procedures  
2.4 Provide progress reports to relevant personnel  
2.5 Seek guidance from national support in fault diagnosis as required, and with third-party vendors for unknown faults  
2.6 Negotiate required system downtime with relevant personnel
3. Rectify faults  
3.1 Identify fault rectification options and present to client  
3.2 Rectify fault according to findings  
3.3 Replace, reprogram and repair faulty equipment according to service agreement and guidance  
3.4 Dismantle and remove temporary service according to organisational requirements  
3.5 Perform routine checks and identify faults  
3.6 Notify client of additional faults and replace, reprogram and repair faults within the scope of agreement
4. Clean up worksite and complete documentation  
4.1 Record and document fault location and equipment faults  
4.2 Remove and dispose of waste and debris from worksite according to environmental requirements  
4.3 Restore worksite to client’s satisfaction and receive client signoff  
4.4 Complete and submit required documentation and explain rectification actions to relevant personnel

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- locate, diagnose and rectify equipment faults in at least four different situations.

In the course of the above, the candidate must:

- conduct advanced tests
- isolate and locate faults
- follow applicable organisational procedures and workplace health and safety (WHS) requirements and work practices.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, codes, company work practices, regulations and standards, WHS requirements for scoped work
- organisational procedures regarding:
  - contacting clients and other external parties
  - fault history and patterns
  - fault identification and completion approaches
  - fault escalation procedures and requirements
  - safety requirements and standards
  - timeframe requirements
  - environmental requirements
- fault-location techniques and test equipment required
- fault types and rectification methods
- function of service agreements
- types of networks and equipment including:
  - access
  - broadband deployment
  - cabling
  - internet protocol (IP) networks for enterprise and customer systems and installations
  - local area networks (LANs)
  - telephony
  - wide area networks (WANs)
- types of workplace environment and practices.

**Assessment Conditions**

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- sites on which faults are required to be diagnosed
- testing equipment and systems currently used in industry
- required regulatory and equipment documentation impacting complex fault repairs.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to methodically diagnose complex faults and organise repair and replacement of defective parts.

It applies to individuals who work as network engineers, installers, maintenance staff, and manufacturers or equipment specialists employed in an advisory and technical rectification role for commercial and residential installations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications Networks Engineering

Elements and Performance Criteria

<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
</tbody>
</table>

1. Research fault background

1.1 Communicate with client and identify type of fault and occurrence according to organisational procedures and requirements
1.2 Obtain report of actions taken by previous fault repairers and result
1.3 Analyse fault history and establish fault patterns according to organisational procedures and requirements
1.4 Develop strategies for identification and repair using advice from engineering and technical personnel
1.5 Refer to required legislation, codes, regulations and standards
<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 2. Conduct complex fault diagnostic | 2.1 Develop an approach to isolate and diagnose the fault within required timeframes  
2.2 Establish ways to escalate fault diagnosis according to organisational procedures and requirements  
2.3 Seek back-up support from the product manufacturer as required |
| 3. Organise complex fault rectification | 3.1 Determine options to rectify fault, including downtime, and present to customer for decision  
3.2 Organise replacement and repair of defective equipment according to service agreement, organisational procedures and manufacturer specifications  
3.3 Establish plan to reconfigure replaced and repaired equipment  
3.4 Determine plan to dismantle and remove fault-repairing service within the required timeframes and according to organisational procedures  
3.5 Provide on-site repair staff with instructions on fault rectification |
| 4. Document complex fault details | 4.1 Record details of fault and actions planned to identify and repair complex fault  
4.2 Notify vendors and clients of repair details according to manufacturer specifications and organisational procedures  
4.3 Recommend changes to faulty equipment where required  
4.4 Advise client and document completion of complex fault repair according to organisational requirements  
4.5 Create a knowledge management document that identifies fault and rectification steps for future occurrences |

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:
- diagnose and organise at least four repairs of complex equipment faults.

In the course of the above, the candidate must:
- identify and rank likely causes of faults
- organise analysis and interpretation of test results
- apply enterprise escalation and outage procedures
- prioritise fault rectification and report progress
- prepare documentation of fault, including details regarding:
  - nature
  - location
  - likely causes
  - repair methodology
  - recommendations relating to system redesign and specification.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:
- required legislation, codes, company work practices, regulations and standards, workplace health and safety (WHS) requirements for scoped work
- organisational procedures regarding:
  - contacting clients and other external parties
  - fault history and patterns
  - fault identification and completion approaches
  - fault escalation procedures and requirements
Assessment Requirements for ICTEN524 Diagnose and organise repair of complex equipment faults

Date this document was generated: 19 January 2021

- documentation of complex faults
- features and operating requirements of test equipment
- test specifications and remote diagnostic procedures
- legislation, codes of practice and other formal agreements relating to repair
- manufacturer requirements for operation of equipment
- test methods and equipment performance requirements
- functions and features of common complex equipment faults in advisory, technical rectification roles, commercial and residential installations.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
- sites on which fault diagnostics are required to be conducted
- testing equipment used in industry
- required regulatory and equipment documentation impacting complex fault repairs.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- plan and prepare for at least two local area network (LAN) switch installations.

In the course of the above, the candidate must:

- select LAN switches to meet client business specifications
- install switches without the network losing connectivity or failing outside of an agreed change window
- install and test switch that confirms interoperability within the network
- use switch configurations
- report on status of completed installation
- seek sign-off from relevant personnel.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, codes, company work practices, regulations and standards, workplace health and safety (WHS) requirements for scoped work
- advantages and disadvantages of LAN switches over hubs
- impact of required sections of the Australian Computer Society Code of Ethics on network switches
- network cable types and connectors
- LAN topologies
- differences between standard and intelligent switches, and between switches and hubs
- importance of client documentation prepared when installing networks
- providing the network with redundant paths for reliability and how routers and switches manage these paths.
Assessment Requirements for ICTEN525 Install, configure and test local area network switches

January 2021

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site where switch installation can be conducted
- field measurement equipment currently used in industry
- required switch specifications, technical requirements for a network, switch, cabling, networked (LAN) computers, workstations, servers and a wide area network (WAN) service point of presence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- dimension and design at least two radio frequency identification (RFID) systems.

In the course of the above, the candidate must:

- adapt RFID technologies to specified plans and designs
- evaluate RFID client specifications against accepted industry practices
- include RFID architecture across secure environments
- integrate RFID information into business applications
- produce design information in configuring the network with internet protocol (IP)
- offer design recommendations and solutions.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, codes, company work practices, regulations and standards, workplace health and safety (WHS) requirements for scoped work
- functions and features of:
  - RFID technology, products and architecture
  - interrogators
  - readers
  - tags
  - wireless units
  - network topologies
  - radio frequency (RF) interference
- methods for conducting surveys of required RFID technologies
• sources of RFID interference
• business process design
• relevant features of business operations, business function and organisation of the client
• compatibility issues with existing system and resolution procedures
• configuration of IP networks
• desktop applications and operating systems
• linkage between operational processes
• network protocols and operating systems
• radio spectrum and RFID frequencies
• RFID hardware and software
• RFID technologies incorporating substantial depth in network operating systems, protocols, interrogators and sensors, wireless technologies and cabling standards
• security protocols, standards and data encryption requirements
• documentation and report requirements according to organisational procedures.

Assessment Conditions
Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• a suitable network site
• client’s functional requirements
• RFID equipment specifications
• database software
• simulation software
• organisational guidelines
• network or computer layout documentation and premises plans.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

<td>1.3 Evaluate and select wireless technology, internet protocol (IP) version and mesh routing protocol in line with design specifications and scope</td>
</tr>
<tr>
<td></td>
<td>1.4 Specify and source hardware and software requirements</td>
</tr>
</tbody>
</table>
ELEMENT | PERFORMANCE CRITERIA
--- | ---
2. Prepare detailed WMN designs | 2.1 Determine and evaluate the maximum line of sight distances achievable between backbone nodes and mesh nodes  
2.2 Plan sites where mesh nodes will be located and plot to scale on a map  
2.3 Estimate quantity and length of links required between mesh nodes and confirm design is within specifications  
2.4 Design backbone links in mesh topology and determine scalability of future deployments  
2.5 Select location of the internet gateway for the WMN  
2.6 Allocate operating frequencies at mesh nodes, backbone nodes and wireless access points for optimum network performance with minimal interference from adjacent network routers
3. Plan IP addresses and subnet masks | 3.1 Produce an addressing scheme and allocate IP addresses and subnet mask to mesh nodes, backbone nodes and access points  
3.2 Produce a configuration scheme to secure network
4. Document WMN plan | 4.1 Document design, installation plan and drawings for the WMN  
4.2 Following installation, configuration and testing of the WMN, incorporate required ‘as built’ amendments

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- plan at least two wireless mesh networks (WMN).

In the course of the above, the candidate must:

- evaluate and select wireless technology and mesh routing protocols
- prepare at least one report outlining WMN design solutions and recommendations for each planned WMN
- produce internet protocols (IP) addressing schemes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, codes, company work practices, regulations and standards, workplace health and safety (WHS) requirements for scoped work
- advantages and disadvantages of the following WMN components:
  - radiofrequency bands
  - wireless networking hardware, routers and gateways
  - IP
  - wireless and mesh-routing protocols
  - cable loss
- methods of determining and evaluating maximum line of sight distances
- functions and features of:
  - mesh nodes
  - links between mesh nodes
  - backbone links in mesh topology
Assessment Requirements for ICITEN527 Plan wireless mesh networks

- internet gateways
- wireless access points
- network routers
- access points
- antenna gain and polarisation
- IP addressing
- subnet masks
- network topologies
- network security
- firewalls
- decibels and required units
- required configuration schemes to secure networks
- calculations for effective isotropic radiated power (EIRP)
- transmission control protocol (TCP)-IP protocols
- workplace plans and reports.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- sites where planning a wireless mesh network may be conducted
- design criteria and other site-required documentation
- equipment specifications and technical documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

</tbody>
</table>

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- assess the integration of at least three different types of international network equipment into at least one Australian network.

In the course of the above, the candidate must:

- apply Australian standards to international designs
- identify customer-specific requirements
- configure and set up tests to assess network integration
- identify and conduct tests, including live system tests, and interpret and analyse results
- approach problem diagnosis systematically, eliminating causes
- re-test design changes
- prepare report, including deficiencies, analysis and recommendations.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required international and Australian legislation, codes, enterprise policy, company work practices, regulations and standards, workplace health and safety (WHS) requirements for scoped work
- features of network designs
- required connections to carrier infrastructure and equipment
- testing and amending network designs
- network and equipment tests required for compliance
- common network architectures
- function and features of trouble reports.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a test site where qualification testing of equipment and systems may be conducted
- equipment currently used in industry
- required Australian and international standards, codes, design specifications, manuals and reference materials.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to maintain the integrity of network support systems and software, for both system platforms and applications of computer systems, including local area networks (LAN) and wide area networks (WAN).

It applies to individuals, working as system administration support officers for service providers and large organisations, who manage and administer networks and make recommendations for improved customer support.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- conduct optimisation and administration activities for at least two network systems.

In the course of the above, the candidate must:

- prepare methodologies for system maintenance
- produce cost-benefit analyses and training for database optimisation and administration
- review development of training instructions
- conduct system measurements
- develop support processes for system users
- manage user accounts and security procedures
- investigate potential system administration problems and make recommendations.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, codes, company work practices, regulations and standards, workplace health and safety (WHS) requirements for scoped work
- methodologies for database system administration and optimisation
- cost-benefit analysis of database optimisation schedules
- return on investment (ROI) calculations
- producing training and related instructions
- functions and features of:
  - back-up systems
  - computer systems
  - error logs
- database checks
- system loading
- user support networks
- hierarchical user profiling systems
- user account security
- profiling systems
- network monitoring tools
- activity plans
- workplace reports
- methods to calculate ageing time on processes
- processes for investigating user requests and actions.

**Assessment Conditions**

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a network for maintenance and analysis of special investigations
- equipment and systems manuals, specifications and enterprise policy.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- coordinate at least two fault rectifications and at least two restorations of service following at least two network outages.

In the course of the above, the candidate must:

- prepare an action plan to manage fault rectification and service restoration
- coordinate implementation of action plan and manage repair activities
- apply escalation procedures
- finalise the administrative and notification processes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, codes, company work practices, regulations and standards, workplace health and safety (WHS) requirements for scoped work
- workplace documentation including action plans
- alarm conditions and areas of the network or service they impact
- connections to carrier infrastructure or equipment
- customer care and service level agreements and policies
- electrical and optical principles underpinning networks
- escalation procedures and list required tier level contacts
- network and transmission equipment faults
- power requirements and electrical safety
- protection switching
- network applications and required equipment
• required test equipment
• transmission hierarchy and switching principles
• performance parameters and faults that will be encountered.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• sites where fault rectification and restoration of service may be conducted
• testing equipment currently used in industry
• manufacturer's and enterprise documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
<tr>
<td>1. Analyse signalling and digital path alarms and clear network faults</td>
<td>1.1 Obtain work details and scope from relevant personnel and arrange for site access in compliance with required security arrangements, legislation, codes, regulations and standards&lt;br&gt;1.2 Activate alarm management system, produce a trouble report and verify common channel signalling (CCS) and data faults&lt;br&gt;1.3 Investigate cause of alarm, analyse results, determine required repair action and allocate resources according to organisational requirements&lt;br&gt;1.4 Monitor repair and restoration procedures and confirm commitment to specified timelines&lt;br&gt;1.5 Initiate escalation procedures according to enterprise procedures</td>
</tr>
</tbody>
</table>
## ELEMENT | PERFORMANCE CRITERIA
--- | ---
1.6 Reset alarms on completion of repair and monitor subsequent alarms to confirm no re-occurrence of the problem

### 2. Monitor integrity of data received on equipment ports

2.1 Activate alarm screens and monitor port times on a regular basis to confirm procedures are running
2.2 Clear port blockage and problems on completion of planned works and log in required database
2.3 Monitor repair and restoration procedures to confirm commitment to specified timelines and initiate escalation procedures as required and according to enterprise procedures

### 3. Monitor and acceptance test repair

3.1 Verify network stabilisation throughout repair and monitor repair action and confirm minimal impact on the network
3.2 Conduct acceptance testing according to prescribed operating procedures
3.3 Monitor network stability on completion and refer problems to required area for action
3.4 Block alarms for out-of-service circuits

### 4. Coordinate CCS relationships

4.1 Log requests for relationship change and follow up problems with required support staff
4.2 Monitor network stability and manage loading of data until the process is completed
4.3 Update models and enterprise systems

### 5. Coordinate CCS rearrangements

5.1 Log requests for rearrangement scenarios and verify feasibility of the rearrangement
5.2 Enter details of rearrangement in required system and update system records
5.3 Monitor completed work for accuracy and network stability on completion
5.4 Produce a copy of documentation for future reference

## Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 7.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:
- manage at least two common channel signalling networks.

In the course of the above, the candidate must:
- identify and implement repair actions within service assurance guidelines
- analyse and interpret alarms including common channel signalling (CCS) and digital path
- apply enterprise fault management priorities and escalation procedures
- resolve problems in a methodical and logical manner
- conduct required tests and interpret results.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:
- required legislation, codes, company work practices, regulations and standards, workplace health and safety (WHS) requirements for scoped work
- functions and features of:
  - alarm management systems
  - trouble reports
  - data faults
  - network repair and restoration procedures
  - acceptance tests
  - CCS data and signalling pathways
- system monitoring alerts and alarm set-ups
- principles of the following aspects of CCS:
  - architecture
- protocols
- signalling
- testing
- repair and restoration procedures
- switching network equipment operation
- workplace documentation.

**Assessment Conditions**

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry. This includes access to:
- a site with CCS network
- tests and equipment currently used in industry
- required legislation, codes, regulations and standards.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to identify faults across all network types, with collaboration from the network operations centre (NOC) and resolve any problems.

It applies to individuals working as network engineers, network officers, installers, maintenance staff and manufacturers or equipment specialists. It also applies to NOC staff in advisory roles and technical rectification roles.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications Networks Engineering

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
<tr>
<td>1. Research fault background</td>
<td>1.1 Obtain work details and scope from relevant personnel and arrange for site access in compliance with required security arrangements, legislation, codes, regulations and standards</td>
</tr>
<tr>
<td></td>
<td>1.2 Analyse required data and previous actions taken by relevant personnel</td>
</tr>
<tr>
<td></td>
<td>1.3 Research areas of similarity to network fault</td>
</tr>
<tr>
<td></td>
<td>1.4 Develop commercial and technical strategies with equipment vendor and NOC for diagnosing the fault</td>
</tr>
<tr>
<td></td>
<td>1.5 Address and discuss all workplace health and safety (WHS) issues</td>
</tr>
</tbody>
</table>
## ELEMENT | PERFORMANCE CRITERIA
---|---
### 2. Diagnose fault | with relevant personnel
2.1 Apply a methodical approach to isolate and diagnose the network problem
2.2 Simulate fault in the required environment
2.3 Seek support from relevant personnel throughout investigation
2.4 Instruct on-site technical staff to run required tests and analyse results
2.5 Identify type of network fault using established methodical strategies without undue disruption to other services

### 3. Organise fault rectification | 3.1 Recommend fault rectification plans and outages to the NOC, seek approval and adjust plans accordingly
3.2 Instruct on-site repairers to proceed in fault rectification
3.3 Organise replacement and repair of faulty equipment with required advice from vendors and manufacturers
3.4 Reconfigure replaced and repaired equipment and test rectified fault against required performance
3.5 Develop method to notify relevant personnel of fault rectification

### 4. Report and document fault details and rectification | 4.1 Notify relevant personnel of repair details and recommend changes to equipment design
4.2 Conduct cause-and-effect studies and forward results to the required area for action
4.3 Complete all administrative tasks and prepare a report that outlines deficiencies, analysis and recommendations

## Foundation Skills

*This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.*

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- analyse and organise the repair of at least two highly complex networks.

In the course of the above, the candidate must:

- diagnose at least three network faults using established methodical strategies without undue disruption to other services
- recommend fault rectification plan to the network operations centre (NOC)
- instruct on-site repairers
- facilitate replacement or repair of faulty equipment with advice from relevant personnel
- facilitate final testing of rectified faults to confirm required performance
- prepare report including deficiencies, analysis and recommendations.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, codes, company work practices, regulations and standards, workplace health and safety (WHS) requirements for scoped work
- fault escalation procedures
- fault-finding techniques and use of test equipment
- fault types and rectification
- operation of integrated packet optical transport networks (P-OTNs)
- use of International Telecommunication Union (ITU) ITU-T G.709 standard
- network protocols
- safety requirements and standards
- service agreements
• synchronous digital hierarchy (SDH)
• transmission control protocol (TCP)-internet protocol (IP)
• the following types of networks and equipment:
  • access
  • broadband deployment
  • cabling
  • customer premises’ equipment (CPE)
  • IP networks for enterprise and customer systems and installations
  • local area networks (LAN)
  • telephony
  • wide area networks (WAN)
  • workplace documentation including reports.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

• a site where highly complex network faults may be demonstrated and analysed without jeopardising live traffic
• equipment currently used in industry
• design specifications and manufacturer’s manuals and reference materials.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- test at least two newly released software items and at least two newly released hardware items within at least two networks.

In the course of the above, the candidate must:

- develop at least one plan for testing new software and hardware releases, including functionality and performance under load conditions
- develop a contingency plan for recognising potential causes of problems and their impact on service levels
- test compatibility of software and hardware within an existing network system
- analyse impact of integration of new hardware and software releases on the network and make recommendations for improvement.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, codes, company work practices, system maintenance and upgrade procedures, regulations and standards, workplace health and safety (WHS) requirements for scoped work
- features of service catalogue systems
- methods of testing newly released software and hardware
- functions and features of software and hardware network contingency plans
- features and operating requirements of testing routines and equipment, key performance indicators (KPIs) and service level agreements
- information required to operate software and hardware according to test specifications
- manufacturer requirements and specifications for equipment operation
• specific organisational requirements surrounding activity and site conditions
• test methods, performance and integration requirements
• issues and challenges that occur with new software and hardware releases.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• a system to verify compliance and compatibility of software and hardware
• test equipment currently used in industry
• systems manuals, vendor specifications and enterprise policy.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- produce and evaluate at least two architecture designs for at least two convergent cellular mobile networks.

In the course of the above, the candidate must:

- provide detailed summaries of the client’s business domain when designing network
- provide detailed summaries of industry-accepted network hardware and software products and their general features and capabilities, when designing a general packet radio service (GPRS) for the latest, required networks
- design viable GPRS network solutions to meet business needs
- research design features of the latest two cellular networks.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, codes, company work practices, regulations and standards, workplace health and safety (WHS) requirements for scoped work
- features and capabilities of industry security products, devices and procedures
- global systems for the latest mobile network designs
- industry-accepted cellular mobile network protocols
- technical characteristics of GPRS systems, including:
  - capability classes and multi-slot classes
  - coding schemes
  - data rates
  - management systems when evaluating roaming features
- operating frequencies and modulation schemes
- remote user issues when establishing siting and types of antennas, terminals, processors, required protocols and the latest network architecture, based on technical specifications and user requirements
- concepts of three or more industry network developments and design methodologies used when designing networks
- requirements of workplace documentation, including reports.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
- cellular mobile network structures
- client requirements
- expected traffic volume
- information on a range of IT business solutions
- technical specifications
- vendors and vendor offerings and pricing.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
</tbody>
</table>

1. Plan and design IP-MPLS network to meet business requirements
   1.1 Obtain work details and scope from relevant personnel and arrange for site access in compliance with required security arrangements, legislation, codes, regulations and standards
   1.2 Determine IP-MPLS network design requirements in consultation with enterprise customer
   1.3 Optimise factors affecting design
   1.4 Use label stacking to route MPLS packets in the network and build MPLS services
   1.5 Dimension layer-3 generation of core backbone and allow MPLS
ELEMENT | PERFORMANCE CRITERIA
---|---
IP-VPN to provide MPLS convergence services
1.6 Obtain MPLS control plane and set up wavelengths
1.7 Produce design topology of a MPLS network to include location and types of edge label switch routers (LSR) and core LSRs in agreement with enterprise customer

2. Configure MPLS network and verify traffic engineering (TE) considerations
2.1 Configure edge and core LSRs to provide secure methods of transporting IP packets in the MPLS network using layer 2 protocols
2.2 Configure LSRs to provide toll bypass for convergence of voice and data over IP network
2.3 Classify traffic in MPLS terms and configure edge LSR to sort traffic into forward equivalent classes (FECs)
2.4 Install and remove two standardised signalling protocols for managing TE of MPLS paths
2.5 Configure MPLS-TE to provide routing on diverse paths to avoid congestion and guarantee bandwidth services

3. Configure VPN and provide a virtual private Local Area Network service (VPLS)
3.1 Configure a MPLS VPN tunnel for a customer network to provide multipoint-to-multipoint VPN connectivity
3.2 Build a content hosting server into a MPLS based VPN to produce a media network
3.3 Use (VPLS) as a VPN method for wide area network (WAN) multipoint-to-multipoint ethernet connectivity spanning multiple metropolitan areas
3.4 Produce VPLS topology using an internet protocol IP-MPLS cloud with provider edge (PE) routers connecting VPLS domains associated with an enterprise customer

4. Complete documentation
4.1 Produce a final design plan including network elements, configuration details and recommendations for design changes
4.2 Notify customer and obtain sign-off according to organisational requirements

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- plan and design at least two multiprotocol label switching (MPLS) networks that meet business requirements.

In the course of the above, the candidate must:

- configure and test the MPLS network according to specified guidelines
- produce design topology of a MPLS network
- produce design plans, including network elements, configuration details and recommendations for design changes
- implement secure virtual private network (VPN) tunnelling.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, codes, company work practices, regulations and standards, workplace health and safety (WHS) requirements for scoped work
- industry-accepted hardware and software products used in IP-MPLS networks
- functions and features of MPLS IP-VPN network operating systems including:
  - transmission technologies
  - protocols
  - principles and techniques of constructing design plans
- effects of the customer’s business domain, function and organisation on customer requirements and network equipment.
**Assessment Conditions**

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a live network and networked computers
- network design documentation, equipment specifications and organisational guidelines
- network components, routers, switches and multi-layer switches.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to compile and evaluate business specifications from a client and produce a set of architecture design solutions to cater for present and future forecast demands.

It applies to individuals working in the field who carry out design and implementation of technical solutions of information communications technology (ICT) networks, employed by information technology networking provisioning companies specialising in integrating converging and emerging technologies of ICT networks.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications Networks Engineering

Elements and Performance Criteria

</table>
| ICT network architecture design | according to manufacturer specifications  
2.2 Select required software solutions  
2.3 Develop preliminary physical network diagrams as a preface to architecture blueprint  
2.4 Produce a document on the possible impact of the network design on the business requirements |
| 3. Evaluate preliminary design and anticipated performance | 3.1 Predict forecast traffic demands, and impact on network design, from current and future demand requirements  
3.2 Benchmark design using expected performance parameters  
3.3 Review likely performance profile of the design  
3.4 Determine costs involved with a range of supplier products  
3.5 Produce an evaluation report on predicted performance and costs of the network architecture design, addressing business specifications and recommendations |
| 4. Finalise network architecture design and obtain approval | 4.1 Review benchmarks, requirements and final design proposed  
4.2 Determine support and training requirements needed  
4.3 Obtain latest technical specifications and pricing by contacting possible vendors  
4.4 Document network design and present documentation to required person for approval  
4.5 Obtain sign off on final business solution |

**Foundation Skills**

*This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.*

<table>
<thead>
<tr>

<tr>
<td>Writing</td>
<td>• Prepares workplace documentation, including diagrammatic material, incorporating technical language to communicate complex information clearly and effectively</td>
</tr>
</tbody>
</table>
**SKILL** | **DESCRIPTION**
--- | ---
Planning and organising | - Uses a combination of formal, logical planning processes to identify required information, test strategies and resources
- Demonstrates a sophisticated understanding of principles, concepts, language and practices associated with the digital world and uses this to propose solutions
- Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering required information, and identifying and evaluating options against agreed criteria
- Uses formal, analytical and lateral thinking techniques for diagnosing problems and generating and evaluating possible solutions

Technology | - Selects and uses required conventions and protocols when communicating with stakeholders in a range of work contexts

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- produce at least two information communications technology (ICT) network architecture designs.

In the course of the above, the candidate must:

- adapt technologies to specified technical solutions
- use site design software and hardware
- evaluate client specifications against accepted industry practices
- produce technical designs from business specifications
- analyse feedback from client and adjust proposal
- apply design concepts to business solutions
- produce technical reports
- make recommendations and offer optimum design solutions.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, codes, company work practices, regulations and standards, workplace health and safety (WHS) requirements for scoped work
- principles of the following technologies:
  - access networks
  - core networks
  - information communications technologies (ICT) network topologies
  - mobile cellular networks
  - network protocols and operating systems
Assessment Requirements for ICTEN622 Produce ICT network architecture designs

- optical networks and principles
- radio frequency (RF) technologies and principles
- radio frequency identification (RFID) hardware and software
- ICT industry business processes, including software solutions and supplier costing
- compatibility issues and resolution procedures
- configuration of internet protocol (IP) networks
- desktop applications and operating systems
- security protocols, standards and data encryption
- network design documentation.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site for design work
- client functional requirements
- business specifications
- database software
- simulation software
- organisational guidelines
- a network or computer layout
- site design software and hardware
- information on a range of ICT business solutions.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to design a multiprotocol label switching (MPLS) network for internet protocol TV (IPTV) and manage delivery of IPTV services. This includes core and access networks for the service provider.

It applies to individuals with outstanding technical skills, including designers and installers of Next Generation Networks (NGN), IP networks providing fast internet, voice over internet protocol (VoIP), IPTV and internet TV services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications Networks Engineering

</tr>
<tr>
<td>1. Produce and evaluate design requirements for an IPTV network</td>
<td>1.1 Analyse major video models and the impact video challenges have on design of an IPTV network 1.2 Evaluate IPTV against other competing TV broadcast technologies to determine optimum design approach 1.3 Produce the topology of an IPTV network, showing network architecture from IPTV standards’ bodies and determine design requirements 1.4 Plan dimensioning of network parameters for multicast and unicast video delivery over broadband in a service provider</td>
</tr>
<tr>
<td>ELEMENT</td>
<td>PERFORMANCE CRITERIA</td>
</tr>
<tr>
<td>---------</td>
<td>---------------------</td>
</tr>
</tbody>
</table>
| 2. Design an IPTV network for video on demand (VoD) delivery | 2.1 Design the content delivery system (CDS) to cache IPTV content in each major metropolitan area for broadcast or streaming VoD models to eliminate performance variability introduced by internet transport or core peering relationships.  
2.2 Design a video network to provide VoD loads with network solutions using VoD design requirements.  
2.3 Design a VoD application to meet bandwidth requirements and quality of service (QoS) requirements for commercial viability of IPTV network. |
| 3. Design and configure an MPLS IPTV network to meet business requirements | 3.1 Determine IP-MPLS network design requirements.  
3.2 Investigate factors that affect design considerations and ways they can be minimised.  
3.3 Produce the design topology of a MPLS network to provide secure methods of transporting IP packets using layer 2 protocols.  
3.4 Design a MPLS layer over the IP networking structure, to combine efficiency of multicast protocols with traffic engineering (TE) facilities to enable fast packet forwarding for real time video streaming applications. |
| 4. Manage delivery of IPTV services | 4.1 Determine operational processes required to support IPTV by operators.  
4.2 Produce a plan of the management and customer support model, including strategies dealing with delivery of VoD issues.  
4.3 Produce a plan of a video network using video delivery strategies to deliver optimum average revenue per user (ARPU) to serve the demographic of an area and the nature of an operator’s business.  
4.4 Manage and monitor video across the network using a management tool. |

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- produce and evaluate design requirements for at least two internet protocol TV (IPTV) networks.

In the course of the above, the candidate must:

- design IPTV network for voice on demand (VoD) delivery
- design and configure a multiprotocol label switching (MPLS) IPTV network to meet business requirements
- manage delivery of IPTV services.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, codes, company work practices, regulations and standards, workplace health and safety (WHS) requirements for scoped work
- competing video delivery over broadband networks
- current industry-accepted IPTV hardware and software products
- networking technologies including:
  - network operating systems
  - internet protocol (IP) networks
  - MPLS networks
- IPTV transmission technologies and protocols
- workplace documentation, including diagrammatic material
- functions and features of:
  - management and customer support plans
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- protocols, configuration documents, management tools and standards
- network and demographic trends, and customer demand data.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to analyse requirements and plan a new or upgraded telecommunication transmission network or convergence to Next Generation Networks (NGN).

It applies to individuals with high-level technical skills working as technical officers, supervisors and engineers working with optical, dense wavelength division multiplexing (DWDM), fibre networks and wireless networks.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications Networks Engineering

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
<tr>
<td>1. Scope requirements to plan transmission networks</td>
<td>1.1 Obtain project brief and scope from relevant personnel and arrange for site access in compliance with required security arrangements, legislation, codes, regulations and standards</td>
</tr>
<tr>
<td></td>
<td>1.2 Evaluate transmission options and select required transmission network that meets criteria outlined in project brief</td>
</tr>
<tr>
<td></td>
<td>1.3 Analyse limitations of transmission path characteristics and develop solutions for transmission impairments</td>
</tr>
<tr>
<td></td>
<td>1.4 Produce a report outlining reasons for selection of a transmission network, together with a shortlist of suitable equipment vendors and products</td>
</tr>
</tbody>
</table>
### ELEMENT | PERFORMANCE CRITERIA
--- | ---
1.5 Obtain traffic load from network information sources or forecasts and dimension the proposed network service  
1.6 Produce brief on relationship between transmission network architecture components and overall network, and their impact on the project  
1.7 Evaluate equipment type and technologies, and determine availability, cost and compatibility with existing network equipment  
1.8 Determine resources and equipment needed for work according to enterprise procedures and organisational requirements  
1.9 Assess capacity limitation of various platforms in context of the work and optimise maximum network performance  
1.10 Determine product capability and calculate allowable capacity of transmission network to allow for network growth  
2.1 Analyse transmission system using equipment and vendor’s specifications to produce a link budget and assess resulting margin  
2.2 Document results of link budget analysis  
3.1 Conduct planning work using required equipment components in compliance with transmission network deployment rules and exemption process criteria  
3.2 Produce preliminary plan on network deployment that maintains transmission network integrity  
3.3 Establish a solution to unexpected situations with consideration to job specifications, safety and enterprise procedures  
3.4 Review plan and confirm that it complies with required standards and codes when working on network access, and make required adjustments  
4.1 Produce final deployment plan and recommendations agreed with the customer  
4.2 Provide report on network management and performance monitoring system to be incorporated in the transmission network

### Foundation Skills
*This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.*

| SKILL | DESCRIPTION |
--- | ---|
Numeracy | • Interprets numerical information to determine business costs and conduct link budget calculations, interpret results and evaluate
**SKILL** | **DESCRIPTION**
--- | ---
 | different types of technical data
Oral communication | • Uses highly developed listening, observational and questioning skills to understand project scope and clarify and explore meaning
Reading | • Organises, evaluates and interprets complex technical and non-technical information including legislative, enterprise and policy documentation
Writing | • Prepares workplace documentation, including reports and recommendations, incorporating technical language to communicate complex information clearly and effectively
Teamwork | • Selects and uses required conventions and protocols when communicating with stakeholders in various work contexts • Collaborates with others to achieve joint outcomes, taking the lead in identifying all issues and facilitating agreement
Planning and organising | • Uses a combination of formal, logical planning processes and an understanding of context for complex, high-impact activities with strategic implications • Demonstrates a sophisticated understanding of principles, concepts, language and practices associated with the digital world and uses these to understand uses and potential of technology • Implements actions according to a predetermined plan, making adjustments if necessary • Takes responsibility for high-impact decisions in complex situations involving many variables and constraints • Uses formal analytical and lateral thinking techniques for identifying issues, generating and evaluating possible solutions
Self-management | • Monitors adherence to organisational policies and protocols and legal and regulatory requirements of self and others

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- plan at least two transmission networks.

In the course of the above, the candidate must:

- scope network requirements
- evaluate transmission options and select required transmission networks
- analyse effects of transmission path characteristics on transmission systems
- develop solutions for transmission impairments
- select required testing regimes for transmission technologies
- determine key multiplexing features of transmission technologies.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, codes, company work practices, regulations and standards, workplace health and safety (WHS) requirements for scoped work
- alternating current and transmission line theory
- emerging network switching and transmission technologies
- network capacity and capability management
- capacity limitation of various platforms
- commercial considerations of Access Network deployment
- common switching and transmission support services
- compatibility issues for new technologies and equipment
- currency of technology and equipment under consideration
- features of:
Assessment Requirements for ICTEN817 Plan transmission networks

- data transmission
- digital multiplexing techniques and hierarchies
- enterprise deployment rules
- exemption process criteria
- network topologies
- product capability and availability that are allowable within a transmission network
- aspects of networks when planning a network, including:
  - alarm management
  - bearers
  - performance monitoring systems
  - transmission
  - architectures and geographical categorisation
  - information sources
  - technology and equipment
- cost analysis for a planned network
- workplace documentation, including reports.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
- a site to plan transmission network
- equipment and system manuals and specifications
- legislation and documentation to plan a transmission network

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- align at least two systems with an organisation’s product and technology strategy.

In the course of the above, the candidate must:

- plan implementation and testing of new system requirements, including system functionality and performance under load conditions
- manage interface elements of systems
- implement systems integration
- recognise potential causes of problems and service level impact
- analyse impact of integration of system changes on network
- prepare documentation for customer acceptance and certification of system integration.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, codes, company work practices, regulations and standards, workplace health and safety (WHS) requirements for scoped work
- technology issues for specified enterprises
- integration, verification and validation plans
- methods of preparing documentation for customer acceptance and certification of system integration
- functions and features of:
  - interface management systems
  - system element interfaces
  - system integration solutions
- technology roadmaps
- workplace documentation
- specific workplace health and safety (WHS) requirements that impact activity in terms of safety of self and the general public
- system life cycles
- product and technology strategies.

**Assessment Conditions**

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry. This includes access to:

- a site where alignment of computer support systems with a product and technology strategy may be conducted
- software tools currently used in industry
- vendor products, specifications, equipment and enterprise policy required for the activity.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- translate at least two domain and solution architectures into platform requirements and designs.

In the course of the above, the candidate must:

- develop system design requirements
- evaluate design concepts for system or system element using complex simulations
- produce a system design using domain specific strategy to platform requirements and design
- use functional analysis tools
- verify solution design and traceability.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, codes, company work practices, regulations and standards, workplace health and safety (WHS) requirements for scoped work
- complex simulation techniques
- enterprise platforms and system designs
- design of management plans
- domain and solution architectures
- technological issues for a specified enterprise
- information required to simulate computer system elements according to a test specification
- interdisciplinary concepts and attributes
- life cycle design attributes
Assessment Requirements for ICTEN819 Translate domain and solution architectures into platform requirements and designs

- remedial actions and select control for inconsistencies
- solution design and traceability
- functions and features of tools required to conduct functional analysis.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site where development, deployment, management and optimisation of domain and solution architectures into platform requirements and designs can be conducted
- documentation, modelling and simulation tools currently used in industry
- tests and equipment currently used in industry.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to analyse business options and design for network infrastructure service providers and implement end-to-end architectural solutions.

It applies to individuals with excellent technical, communication and planning skills working in project management roles with authority to direct installation activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- manage at least two end-to-end architectural solutions across multiple domains.

In the course of the above, the candidate must:

- evaluate tools and techniques for at least two architectural designs
- analyse design options for optimal solutions
- develop interface requirements for effective solutions across multiple domains
- incorporate components of third-party architecture.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, codes, company work practices, regulations and standards, workplace health and safety (WHS) requirements for scoped work
- architectural design tools
- interface management
- management of end-to-end system integration
- new end-to-end architecture design solutions
- solutions for business options across multiple domains
- system integration solution techniques
- system interfaces
- validation plans
- importance of vendors' agreements with specific reference to roles and responsibilities of each party
- methods to calculate components’ costs.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site where architecture solutions across multiple domains can be managed
- simulation software tools currently used in industry
- vendor products, specifications, equipment and enterprise policy required for the activity.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
</tbody>
</table>

1. Plan test effort and develop test strategy for an application software

1.1 Analyse functionalities of an application software from the system design document and create test strategy for new network product lines
1.2 Produce steps for test strategy, including attributes of each step according to enterprise policy
1.3 Produce test strategy for evaluating suitability of application software for integration into networks
1.4 Analyse test strategy and identify types of risks that would hinder test performance or reality

2. Plan test strategy for regime

2.1 Produce phases of a test cycle for a test regime according to system design document
2.2 Assess a range of tests required to evaluate performance and
<table>

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- manage at least two network testing strategies.

In the course of the above, the candidate must:

- produce steps in developing test strategies
- produce test strategies for evaluating suitability of application software
- design test plan and produce test reviews
- produce test plans for specific phases
- develop test scenarios
- produce test reporting associated with particular test phases within test plan
- create traceability matrix
- produce an evaluation report from the traceability matrix to manage defects or failures from the test plan.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, codes, company work practices, regulations and standards, workplace health and safety (WHS) requirements for scoped work
- applications software features and functionalities
- configuration of software testing tools
- creation of a traceability matrix
- different elements of test plans and risks associated with implementation
- features of testing tools and debuggers
- identification of types of risks
- how to manage software defects
- management of test traceability
- phases of test cycles
- production of test reviews
- required steps in developing test strategy
- testing procedures and testing cycles for various system applications
- workplace requirements for evaluation reports.

**Assessment Conditions**

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site where planning and management of a test regime for evaluation of application software may be conducted
- software tools currently used in industry
- vendor products, specifications, equipment and enterprise policy required for the activity.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- investigate applications of at least two cloud networks in network switching.

In the course of the above, the candidate must:

- evaluate physical network capacity and functionality shortfalls
- investigate application of cloud networks and plan at least two architectural designs
- develop components of cloud networking solution for meeting capacity and functionality requirements of the network
- assess network risks
- analyse impact of integration of cloud network solution on network
- prepare test plans with test scenario and produce test management schedules
- use integration document and software test management tools to replicate issues exhibited in test environment
- certify cloud network solution compatibility and compliance
- prepare cost-benefit analyses of cloud network solutions
- develop business cases for implementation of cloud networks.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, codes, company work practices, regulations and standards, workplace health and safety (WHS) requirements for scoped work
- components of infrastructure-as-a-service solutions
- existing digital switching technology in service provider’s core network
- information required to develop architectural solutions
- functions and features of:
• test plans, test scenarios and test management schedules
• business cases
• cost-benefit analysis
• return on investment
• cloud network solutions
• integration document software
• new cloud network technologies
• detailed summary of cloud networking transmission, transmitter and receiver architecture and their associated infrastructure
• performance and integration requirements
• technical documentation
• protocols as used on multiprotocol label switching (MPLS) and infrastructure-as-a-service
• detailed explanation of network components and their functions
• specific organisational requirements relating to computer systems
• typical issues and challenges that occur with system changes.

Assessment Conditions
Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• a site where the application of cloud networks in network switching may be investigated
• software tools currently used in industry
• vendor products, specifications, equipment and enterprise policy required for the activity.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- evaluate and apply at least two digital signal processes to communication systems.

In the course of the above, the candidate must:

- apply digital signal processing (DSP) criteria to a network system
- evaluate linear time invariant (LTI) system properties
- analyse digital and amplitude modulated signals using DSP methods and principles
- demonstrate an awareness of radio frequency issues required to DSP processes
- report on finding of analysis and use of DSP in a network system.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, codes, company work practices, regulations and standards, workplace health and safety (WHS) requirements for scoped work
- digital communications systems
- Fourier transforms
- LTI
- various modulation methods, amplitude (AM), frequency (FM), phase (PM) and digital formats
- organisational policy and procedures for digital signal processing
- common non-compliance issues and responses
- workplace technical documentation and related reports.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a network operations site
- digital communication systems
- simulation software
- network test equipment currently used in industry.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- manage the development and application of at least three different testing artefacts for a network.

In the course of the above, the candidate must:

- produce steps in developing test strategy
- minimise testing risks
- manage defects and failures from the test plan
- produce a test strategy to evaluate suitability of application software
- develop software testing strategies for uncovering evidence of defects in software systems
- create reusable domain artefacts to detect early defects in domain testing
- produce test reporting associated with phases of a test cycle within the test plan
- produce an evaluation report from the traceability matrix.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, codes, company work practices, regulations and standards, workplace health and safety (WHS) requirements for scoped work
- applications’ software features and functionalities
- the configuration of software testing tools
- software artefact and explain the process for testing artefacts
- creation of the traceability matrix
- steps in developing the test strategy and specify various tests that may be applied
- domain and application testing
- essential elements of test plans
- features of testing tools and debuggers
- the identification of types of risks
- the management of:
  - software defects
  - test traceability
- phases of test cycles
- production of test reviews
- steps in developing a test strategy
- testing procedures
- workplace evaluation report.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site where testing artefacts can be developed and applied
- software tools currently used in industry
- vendor products, specifications, equipment and enterprise policy required for the activity.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to use an integrated development environment (IDE) to create, modify and test, simple web pages and web content, according to client requirements.

The unit applies to those who are responsible for creating and maintaining simple websites.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
<tr>
<td>1. Identify authoring and task requirements</td>
<td>1.1 Select preferred integrated development environment (IDE) according to client requirements 1.2 Set preferences for IDE, including site file transfer protocol client</td>
</tr>
<tr>
<td>2. Organise required files</td>
<td>2.1 Create, maintain and save files in required location or directory 2.2 Access and use a range of features in IDE 2.3 Confirm use of IDE with required personnel 2.4 Maintain directory structure for site 2.5 Upload files to required folder using file transfer protocol (FTP)</td>
</tr>
</tbody>
</table>
3. Add content and simple navigation to web pages

3.1 Insert and format text content according to client requirements
3.2 Insert images, data tables and simple forms
3.3 Access markup language and make basic modifications to code
3.4 Create sitemap and plan navigation
3.5 Seek feedback on work performed from required personnel and amend accordingly
3.6 Create links between pages using text and images

4. Test and finalise web pages

4.1 Test elements of website content across multiple browsers and browser versions
4.2 Confirm web page meets client and web content accessibility guidelines
4.3 Evaluate test results and confirm website meets client requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

<table>

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- create a website with at least three different web pages according to client requirements using applicable features of a selected integrated development environment.

In the course of the above, the candidate must:

- create and maintain files and upload them to required locations and servers
- test consistency and security of created web content.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- legislative requirements applicable to developing simple web content
- web content accessibility guidelines including The World Wide Web Consortium (W3C)
- web navigation functions required in supporting web content functionality, including links between pages features of web authoring tools used for web page design
- website publishing and markup languages
- file transfer protocol (FTP) function
- common browsers used for accessing the web
- basic coding techniques
- site map creation methods
- website testing methodologies
- organisational procedures applicable to creating web pages.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- client specifications
- required hardware and software components
- selected integrated development environment (IDE)
- web servers and browsers
- storage media
- required FTP client software
- secure passwords and access procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- produce at least three different digital images for the web according to client requirements.

In the course of the above, the candidate must:

- adhere to copyright standards and legislation
- save images in required format and location.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standards and copyright legislation applicable to using digital images
- digital image formats and their application
- industry-standard digital image editing software
- purposes, specific functions and key features of common digital systems and tools
- organisational policies and procedures, including procedures for:
  - accessing client briefs
  - sourcing and saving digital images required web content.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- image manipulation software
- industry standard hardware, digital devices and storage devices
- client briefs relating to images to be produced
- required image editing software
- image sources.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop social networking presence and upload and link at least three different file types using social media platforms, tools and applications.

In the course of the above, the candidate must:

- evaluate use of social media tools and application and action required changes
- confirm security of social media interactions according to cyber security procedures and protocols
- seek review from required personnel

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- basic technical terminology in relation to social networking, social media applications and tools
- basic methods of uploading images, text files, portable document format (PDF) files, audio files, video files and linking associated files
- features and functions of social media applications
- import and export software functions
- different types of social media tools and applications, benefits and issues associated with their use
- tagging process and facilitating collaborative folksonomy
- social media applications
- organisational procedures applicable to developing web presence through social media
- cyber security procedures and protocols.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required hardware and its components
- online resources
- social media tools and applications that may be used to develop web presence through social media.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- confirm a website is accessible for people with special needs and adheres to general and specific accessibility standards and requirements.

In the course of the above, the candidate must:

- identify wider context of accessibility through research of accessibility standards
- create an accessibility checklist which incorporates accessibility standards and requirements
- test accessibility of pages and website using a range of tools and tests
- apply and document required changes according to testing results
- obtain sign-off from required personnel.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- legislation, regulations and codes of practice, applicable to access, equity and security
- computing and programming standards applicable to access and equity
- technical performance measurement principles
- automatic testing tools and software
- required programming language
- Web Accessibility Initiative (WAI)
- World Wide Web Consortium (W3C), WCAE and other Australian accessibility standards.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a website and included web pages
- required hardware, software and digital devices
- requirements documentation
- the internet
- automatic accessibility measuring tools and software
- organisational requirements and applicable standards.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
<tr>
<td>1. Select and configure file transfer protocol client</td>
<td>1.1 Identify content requiring transfer to website 1.2 Review and select file transfer protocol (FTP) client according to features and functions of content and technical environment 1.3 Enter client details, including user identity (ID), password and host name or ID, into profile fields to create a permanent profile 1.4 Choose settings including auto-detect, save profile and password, depending on organisational security and privacy policies and guidelines</td>
</tr>
</tbody>
</table>
## ELEMENT | PERFORMANCE CRITERIA
--- | ---
1.5 Test and verify, configuration by connecting to web-hosting server

### 2. Plan and prepare for data transfer and establish server connection
2.1 Prepare data content and back it up on local device and server
2.2 Identify data as compressed, or uncompressed, with tools available on server
2.3 Confirm files are in required form and receiving directory structure is applicable
2.4 Log on to remote server using administrative, guest or anonymous accounts
2.5 Proceed through security layers according to organisational guidelines and cyber security protocols
2.6 Initiate file transfer protocol client program and locate destination directory

### 3. Transfer data to remote server
3.1 Select files to be transferred and choose mode, American Standard Code for Information Interchange (ASCII), or binary
3.2 Download files and run antivirus software and confirm files are secure according to cyber security protocols
3.3 Move, rename, copy and delete files on server as required and as permissions allow
3.4 Store and order files according to file extensions and task requirements
3.5 Translate, decompress and de-archive downloaded files
3.6 Confirm data transfer, content functionality and close connection

## Foundation Skills

*This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.*

<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 6.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- transfer at least three files to a remote server using file transfer protocol (FTP) client, according to organisational security and privacy policies and guidelines.

In the course of the above, the candidate must:

- select and configure a file transfer protocol (FTP) client
- test configuration of FTP client
- plan and prepare content to be transferred including file format, receiving directory structure, account logins and security issues
- connect to server using applicable account login
- follow security procedures according to cyber security protocols
- transfer content to remove server
- store and maintain files in required location.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- the FTP server and client software
- cyber security and internet protocols
- content features and functions
- security issues applicable to transferring content
- server access security procedures and connection methods
- website server architecture and operating systems
- data backup and file transfer methodology
- organisational security and privacy policies and guidelines.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
- web servers and tools
- a website
- content requiring transfer
- required hardware and digital devices
- client and login details
- FTP client software
- file storage location
- antivirus software
- server security password and access procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to track and monitor website performance and confirm maintenance of performance levels during peak traffic times and full use access.

The unit applies to individuals who use planning and analytical skills to maintain and improve website performance.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- track, tune and monitor performance of a website’s performance according to client performance expectations, specifications and business requirements.

In the course of the above, the candidate must:

- identify and rectify faults using diagnostic and software tools, where performance is not met
- document faults identified and improvements made according to organisational policy and procedures
- implement scheduled and non-scheduled maintenance
- review and update documentation relating to maintenance and administration and security according to findings
- perform website updates.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- website performance maintenance process including:
  - security issues
  - website server architecture (e.g. Linux, Windows, Unix)
  - website security protocols
  - workload (web traffic) metrics
- business process design methodologies relevant to maintaining website performance
- performance benchmark testing techniques
- website improvement methods
• documentation techniques relevant to maintaining website performance
• security tools and procedures
• website administration techniques including updating website content and links
• organisational policies and procedures applicable to maintaining website performance.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• client specifications documentation
• web servers and websites
• required software, hardware and digital devices
• technical specifications
• web traffic diagnostic tools, including timing tools to gauge website response times
• organisational policies and procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- select and install a site-analysis software and an internet service provider (ISP) according to organisational and vendor requirements and website architecture
- generate and analyse at least two different traffic reports.

In the course of the above, the candidate must:

- recommend and implement changes from traffic reports.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- problems and challenges arising with an organisation website related to:
  - data queues and bottlenecks
  - website security
  - website copyright and intellectual property requirements
- the process of monitoring website traffic, including:
  - functionality of network device drivers
  - functionality of network operating systems
  - queuing systems
  - website architecture
  - workload metrics
  - server design and functionality
- the features and functionality of commercially available drivers, software and systems, including:
  - log file analysis software
• traffic tracking software
• network device drivers
• network operating systems
• queuing systems
• forecasting methodologies relevant to monitoring and reporting on website traffic
• organisational policies and guidelines applicable to monitoring and reporting on website traffic.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• analysis software
• web servers and website
• required hardware, software and digital devices.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- create a website testing procedure according to client requirements and performance specifications.

In the course of the above, the candidate must:

- identify critical performance functions requiring testing
- develop and document required metrics for each function and assign benchmarked performance standards
- validate performance of site against technical requirements
- document results and establish performance benchmarks and obtain client sign off.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- legislation, regulations, codes of practice and standards applicable to web testing including:
  - codes of ethics
  - privacy
  - copyright
  - intellectual property
  - naming
  - documentation
- industry standards, organisational guidelines and technical documentation standards and techniques relevant to creating website testing procedures
- client business domains, including client organisation structure and business functionality
• industry standard hardware and software products
• desktop applications and operating systems
• standard web-testing procedures and optimisation tools
• website design methodologies and standard website structures.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• a website
• required hardware and digital devices
• site design and technical requirements documentation
• site-development software and tools.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- prepare an operational acceptance test that measures the independent and integrated structural content and technical components of the site according to business requirements.

In the course of the above, the candidate must:

- confirm testing panel is aware of test conduct
- develop user and installation manuals
- apply automatic testing software and collect, collate and document results and tests
- conduct tests on at least two browsers and at least two digital devices
- evaluate results against benchmarks
- provide feedback on test results to required personnel.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- the client business domain
- the structure, function and business organisation of the client, including business-process design
- organisational policies and procedures that cover routine work processes and use of:
  - web optimising tools
  - web monitoring tools
  - web testing procedures
- technical performance measurement
- user acceptance testing methods
Assessment Requirements for ICTWEB438 Conduct operational acceptance tests of websites

- website accessibility and equity principles
- website structures, design and testing methodologies and standards
- common website security issues and risk mitigating methods
- common testing software and metrics used and its application
- applicable privacy, accessibility and accessible usage policy standards
- organisational policies and procedures relevant to conducting operational acceptance tests of websites.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required tools, equipment and materials including:
  - web servers, browsers and website
  - industry standard software packages, including site server software and analysis software
  - required hardware, digital devices and its components
  - organisational requirements documentation, customer relationship model, website manuals and instructions.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- confirm a basic level of security for a website according to business requirements.

In the course of the above, the candidate must:

- implement password protection solutions, for the website and server
- install and maintain, an intrusion detection system
- implement protocol security
- confirm security of website with required personnel.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- the client business domain, including client organisation structure and business functionality and requirements
- desktop applications and operating systems, as required
- firewall functionality
- hypertext transfer protocol (HTTP) and disk and executing monitor tools (daemons)
- the range of security protocols, including:
  - secure socket layer (SSL)
  - point-to-point network tunnelling protocol (PPTP)
  - layer 2 tunnelling protocol (L2TP)
- required security patches used to confirm basic website security
- disabling control protocol and internet protocol (TCP/IP) bindings, including file and printer sharing
- industry standard protection solutions
• specific purpose security devices acting as bastion hosts
• web-server operating systems.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• required tools, equipment, materials
• a website and web servers
• the internet
• industry-standard hardware and software packages and products
• digital devices
• organisational requirements documentation
• website manuals and instructions.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop a web page using web authoring tools according to website and business requirements.

In the course of the above, the candidate must:

- create and incorporate files with required formatted text and images
- confirm web pages are functional on at least browsers and at least two devices
- check cyber-security of web page.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- client business domains required to use web authoring tools
- industry standard web authoring tools and preferences including site file transfer protocol (FTP) clients
- organisational guidelines and procedures applicable to using web authoring tools
- vendor standards and requirements for web authoring tools
- text and image formatting techniques
- web page customisation and navigation techniques
- standard web and CSS design principles and structures.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
- industry software packages and vendor instructions
- a website
- web authoring software and tools
- business expectations brief
- required hardware and its components
- multiple browsers and digital devices
- the internet.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design and produce a script according to web document functionality requirements and organisational procedures.

In the course of the above, the candidate must:

- produce dynamic web page documents, considering accessibility of web page
- test and debug web document functionality and confirm web document is secure
- document and seek approval from required personnel.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- basic principles behind open platform programming
- client-side scripting and its application to dynamic web page design, including:
  - events and event handlers
  - internet operation related to clients
  - internet protocols
  - simple hypertext markup language (HTML)
  - applicable standards
- purpose and differences between server-side and client-side scripting
- standards associated with programming documentation
- script testing methodologies
- cyber security procedures and protocols
- organisational procedures relevant to producing client-side scripts.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required tools, equipment and materials
- industry standard software packages and features within
- required hardware and digital devices
- client requirements documentation
- cyber security procedures and protocols
- functionality and scope requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- produce a web animation according to functionality and web document requirements.

In the course of the above, the candidate must:

- determine animation and online advertising requirements
- design interactive animations including gif replacements
- meet industry standard website advertising specifications
- create web page and advertising application animations
- publish animations to web environment and confirm compatibility with at least two browsers and at least two devices
- confirm web animation is cyber safe and secure according to cyber security protocols and procedures
- document actions performed and seek approval.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- web animation programming concepts including:
  - acceptable asset importing formats
  - component libraries
  - cross-browser issues
  - importing and exporting libraries
  - inserting published work to a hypertext markup language (HTML)
  - masking
  - movements and automated movements
• publishing completed work to an acceptable web format
• shape animation and manipulation
• symbols
• text manipulation
• transparencies
• programming control structures, object-oriented programming including:
  • buttons
  • scripting using programming language
• internet technology, including selecting required scripting type
• principles of web parameters analysis and animations design
• methods and attributes of animation and how it enhances website
• web animation testing and debugging methodologies
• organisational and cyber security protocols and procedures
• industry requirements in online advertising.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• a development environment
• the internet
• required hardware and digital devices
• browsers
• a website
• required web design software.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Modification History

<table>
<thead>
<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 6.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- conduct analysis and review two existing websites and create optimisation plans for each, according to business requirements.

In the course of the above, the candidate must:

- analyse website performance
- make recommendations according to analysis performed
- prepare and implement, an internet search engine marketing strategy according to website analysis and business requirements
- monitor search engine performance and compare these with previous results.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- internet marketing methods and practices including:
  - search terms
  - keywords
  - keyword density
  - search engine ranking
  - search engine methods of assessing search engine optimisation (SEO)
  - back links
  - social network media in the context of SEO
  - how search engines work
  - recommendations in optimising the following:
    - image search optimisation (ISO)
• keyword density on web pages
• keywords used in headings and heading levels meta-elements and page tiles
• a website’s internet marketing strategy
• performance budgets, including loading speeds and ways to optimise speed to load
• keyword research methodology including
  • surveys
  • focus groups
  • social media listening platforms
  • statistical analysis
  • research professionals
• search engine traffic sources
• the differences between paid and organic searches
• SEO and website metrics
• mobile friendly websites.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• website files
• file transfer protocol (FTP)
• internet
• profiling tools
• required SEO software
• client requirements documentation
• social network marketing logins
• applicable online tools, reports and web hosting statistics.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 6.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design a web page according to client design specifications.

In the course of the above, the candidate must:

- lay out page elements and style accordingly
- test web pages on at least two browsers and at least two devices
- obtain client sign-off.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- standard web design principles
- principles and components used in website development:
  - cascading style sheets (CSS)
  - hypertext transfer protocol (HTTP)
  - a markup language, including hypertext markup language (HTML)
  - web libraries
  - web frameworks
- web design and development standards, including:
  - organisational standards
  - World Wide Web Consortium (W3C) standards
  - WCAE
- cyber security procedures and protocols.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required hardware and its components
- client design specifications brief
- a variety of browsers and digital devices
- required libraries and frameworks
- website testing and debugging tools
- the internet
- required web design software.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

</tbody>
</table>

Application

This unit describes the skills and knowledge required to create and integrate a website into an open-source content management system.

The unit applies to individuals working as web developers, who apply a wide range of knowledge and skills across ICT, to support small to medium enterprises (SMEs) requiring broader rather than more specialised, ICT support.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- create a content management system (CMS) powered website using an open-source solution.

In the course of the above, the candidate must:

- validate CMS against standards set by the World Wide Web Consortium (W3C)
- test compatibility of website on at least two different browsers and at least two different digital devices
- confirm website is cyber safe
- obtain sign off from required personnel.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- content management systems and additions and plugins requirements
- website content structure and navigation
- licensing and hosting structures
- programming languages
- markup languages and associated standards
- server-side language and security techniques
- web content accessibility guidelines, including World Wide Web Consortium (W3C) standards and their application to website development
- content management system (front and backend) in commonly used browsers
- cyber security procedures and protocols.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- client requirements and content
- text editing software
- browsers
- required hardware, software and a range of digital devices
- a website
- content management system
- required solutions
- the internet.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- integrate a social networking website into an existing website according to website analysis and client requirements.

In the course of the above, the candidate must:

- analyse integration requirements of a social networking website into a pre-existing website
- confirm website functionality against programming and security standards
- validate front end code markup, against standards set by the World Wide Web Consortium (W3C)
- confirm integrated website is functional and compatible with at least two different browsers and at least two different digital devices
- confirm website is cyber secure and safe
- document all changes and obtain sign-off from required personnel.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- markup language and its associated standards
- server-side language features
- social networking websites
- coding and documentation techniques applicable to integrating social web technologies
- integration tools across different social media channels
- social media policies relevant to integrating social web technologies
- evaluation techniques of integrating social networking into websites and audience impact.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- client specifications
- a text editor or web authoring tool
- a range of browsers and devices
- the internet
- required hardware, software and its components including pre-existing scripts and tools
- debugging tools
- application programming interface (API) documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- build a basic website using development software and ICT tools according to client specifications.

In the course of the above, the candidate must:

- conduct an assessment of specifications relating to client website requirements including technical needs and structure
- select applicable software tools
- validate final web design against client requirements and make changes as required
- test and debug website and confirm functionality on at least two different browsers and at least two different devices
- document testing results and obtain client sign off.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- website functionality including structure and navigation flow
- website design principles issues around accessibility and equity principles
- software and tools used in website development
- general principles of hypertext markup language (HTML) and associated documentation standards
- technical attributes specific to building basic websites using development software and ICT tools
- documentation techniques applicable to building basic websites using development software and ICT tools
- types of code used in website generation
• testing and debugging methodologies
• organisational and industry procedures and standards applicable to building websites
• cyber security procedures and protocols
• web development standards.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• basic website specifications and guidelines
• website development software and tools
• the internet
• required hardware and its components
• range of browsers and devices.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

</table>

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- carry out checks and tests and confirm specifications and standards are met for a mix of website content including:
  - at least three multimedia items
  - at least three text-based content.

In the course of the above, the candidate must:

- check and use required streaming and compression techniques
- confirm website content is support by technology, including bandwidth, servers, devices and plug-ins
- manage file transfer protocols (FTPs)
- test and confirm functionality and operability of content and interactive components, on at least two different browsers and at least two different devices
- confirm website is cyber safe and secure
- document testing performed and obtain sign-off from required personnel.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- applicability of copyright, privacy and intellectual property to website development
- industry standard software compression algorithms and associated technologies
- file transfer protocol (FTP) software protocols
- internet protocols
- server access security principles and procedures
- server operating systems
- streaming technologies
• website testing and debugging methodologies
• documentation techniques, style and business design standards applicable to confirming website content meets technical protocols and standards
• multimedia content protocols
• organisational and cybersecurity procedures and protocols.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

• client specifications document
• documents detailing organisational style guide and policies and design brief
• required hardware and its components and plug-ins
• industry standard software and included interactive tools
• compression and streaming software
• the internet
• a live network and its components
• networked computers
• technical documentation and installation manuals
• multiple servers, browsers and devices.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- test and evaluate a website in terms of accessibility and useability, according to business and user requirements.

In the course of the above, the candidate must:

- research various user needs and expectations in website
- design a usability test and set benchmark metrics
- facilitate test process and document results
- confirm user and legal requirements are met
- document and propose solutions according to user and business needs.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- accessibility, privacy and equity principles in website development context
- accessibility needs and requirements
- market conditions for area of business
- technical performance measurement of typical web site
- user testing principles and techniques
- features and functions of a website, including:
  - architecture
  - privacy
  - security
  - navigation
- workload metrics and implications for website design
• organisational policies and procedures relating to website functionality
• documentation techniques applicable to confirming website access and usability.

**Assessment Conditions**

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry. This includes access to:

• required hardware and its components
• industry standard analysis software
• a website
• organisational policy and procedures
• user specifications
• a site server and software
• web servers and devices.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to determine a client’s current and future internet service providers (ISPs) needs.

The unit applies to individuals working in Information and Communications Technology (ICT) who take responsibility for comparing and evaluating internet service provider (ISP) services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- evaluate and select a web hosting service according to business and user needs.

In the course of the above, the candidate must:

- assess client and business needs and establish selection criteria
- identify and evaluate a range of web hosting services
- confirm business and client budgetary, security and technical requirements are met
- test and benchmark web hosting service with client benchmarks
- obtain sign-off from required personnel.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- different web hosting service provision options
- web hosting service characteristics including:
  - support service standards
  - data capacity
  - security technologies and procedures
  - scripting languages
  - performance monitoring systems
  - escalation procedures
  - back up procedures
  - payment procedures
  - email and mailing list services
• a range of hosting services and their characteristics including support service standards, data capacity and availability of security technologies and server-side languages
• industry standard development software, applications, extensions and databases
• internet security issues
• operating systems used by ISPs
• server technologies
• documentation techniques used to evaluate and select a web hosting service
• web hosting services and performance benchmarks
• ISP performance testing methodologies
• organisational procedures applicable to selecting a web hosting service.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

• industry standard web hosting plans, prices and service agreements
• technology underpinning ISP and services offered
• a business plan outlining business requirements
• user requirements
• multiple browsers and devices
• site analysis reports
• required hardware, software and its components.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to produce structured query language (SQL) statements to work with server-side scripts, enabling web developers to interact with web server databases.

The unit applies to individuals in a range of roles who are responsible for creating server-side interaction with dynamic web pages, using SQL as a means of communicating with databases.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- apply structured query language (SQL) to a relational database and gather required information according to task requirements.

In the course of the above, the candidate must:

- generate queries for one or more tables and provide required data
- add, modify, retrieve and delete records from database tables as required test and verify SQL statements.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- organisational policies and procedures relating to SQL application including:
  - identifying SQL requirements from job specifications
  - testing and verifying SQL results
- features and application of primary and foreign keys in database tables, aggregate functions and clause functions required in SQL application
- principles of "combining and/or condition" in SQL statements and Boolean operators
  - IN and BETWEEN conditional operators
  - mathematical operators
  - table joins (relationships)
- documentation techniques relevant to applying structured query language in relational databases
- SQL statement testing methodologies.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- task specification documentation
- structured query language (SQL)
- industry standard software packages
- an integrated development environment (IDE)
- a database server
- required hardware, software and its component.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design, create and save a document using a markup language using a text editor
- In the course of the above, the candidate must:
  - define document structure incorporate elements as required
  - generate markup language document compatible with multiple web browsers and devices
  - confirm document requirements are met and records all outcomes
  - validate markup document against standards set by the World Wide Web Consortium (W3C)
  - obtain sign-off.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- the use of markup languages including:
  - hypertext markup language (HTML)
  - virtual reality modelling language (VRML)
  - extensible markup language (XML)
- standards set by the World Wide Web Consortium (W3C) applicable to markup language
- the range of available web browsers and their accessibility
- issues applicable to accessibility
- documentation techniques, web page components and organisational procedures and guidelines relevant to creating a markup language document to specification
- document validation procedures
- browser and device compatibility.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- an organisational style guide or policy
- user requirements
- industry standard markup languages
- word processing software
- a range of browsers and devices
- the internet
- required hardware, software and its components.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- build a dynamic website using code according to technical requirements.

In the course of the above, the candidate must:

- test the website on at least two different browsers and at least two different devices
- document website requirements and actions performed
- comply with organisational requirements and legislative standards.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- principles of analysis and design
- programming control and design structures
- web programming concepts, including:
  - authentication and web security
  - hypertext transfer protocol (HTTP)
  - session management
  - stateless programming
- client-side scripting and its application to dynamic website design, including:
  - hypertext markup language (HTML)
  - cascading style sheets (CSS)
- documentation processes applicable to documenting website design
- user-interface design requirements and production processes
- website design structures, including hierarchy and navigation design
- website architectural requirements
- data storage requirements
- website testing procedures
- debugging methods
- cyber security procedures and protocols
- organisational and legislative procedures applicable to building dynamic websites, including web development standards.

**Assessment Conditions**

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- client requirements
- a development environment
- a server
- a database server
- web browsers and devices
- hardware, software and its components required for building dynamic websites
- libraries and frameworks required for building dynamic websites
- website testing and debugging tools.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- produce at least three dynamic web pages according to technical requirements.

In the course of the above, the candidate must:

- include client and server-side dynamic content in each web page
- create and debug code
- test web page and code on at least two different web browsers and at least two different devices
- comply with organisational and legislative standards and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- web programming concepts, including:
  - authentication and web security
  - hypertext transfer protocol (HTTP)
  - session management
  - stateless programming
- types of technologies, including:
  - programming control structures
  - hypertext markup language (HTML) and markup languages
  - cascading style sheets (CSS)
  - syntax and uses of programming languages
- client and server-side scripting and its application to dynamic web page design
- data storage requirements
- debugging methods
- coding techniques
- cyber security protocols and procedures
- legislative and organisational procedures and standards applicable to creating dynamic web pages.

**Assessment Conditions**

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
- technical requirements
- a development environment
- a server
- a database server
- web browsers and devices
- web page testing and debugging tools required for creating dynamic web pages
- hardware, software and its components required for creating dynamic web pages.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

| 1. Prepare to create web application | 1.1 Identify and confirm requirements and functionality of web application with required personnel  
1.2 Confirm applicable legislative and organisational standards and procedures applicable to web applications  
1.3 Determine hypertext transfer protocol (HTTP) required  
1.4 Analyse advantages and limitations of HTTP when developing web applications |
| 2. Implement session management | 2.1 Create code and handle session management  
2.2 Create code and retains user interaction with website  
2.3 Review and debug created code |
### ELEMENT
3. Develop and finalise applications in a stateless environment

### PERFORMANCE CRITERIA
- 3.1 Develop web applications that keep track of data between browser requests
- 3.2 Document work performed in web application with reference to its management of statelessness
- 3.3 Seek feedback on web application with required personnel and amend as required

### Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop a web application in a stateless environment according to technical requirements.

In the course of the above, the candidate must:

- confirm user data is tracked in web application
- document testing and work performed on web application
- confirm web application is functional on at least two browsers and at least two devices.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- principles of web analysis and design
- features and functionalities of different web applications
- programming control structures and applicable languages
- code debugging techniques
- web application development process
- legislative and organisational requirements applicable to creating web applications
- web programming concepts including:
  - authentication and web security
  - hypertext transfer protocol (HTTP)
  - session management
  - stateless programming
- web front end and backend languages, including:
  - hypertext markup language (HTML)
  - cascading style sheets (CSS)
• JavaScript
• organisational procedures applicable to creating web applications.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• a website development environment
• a server
• a database server
• web browsers and digital devices
• hardware required to create web applications.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- produce at least two (extensible markup language) XML documents according to technical requirements.

In the course of the above, the candidate must:

- test and validate XML document on at least two different browsers and at least two different devices
- comply with applicable organisational policies, procedures and standards.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- extensible markup language
- unified-modelling language
- software implications for XML programming
- standards impacting XML programming
- design methodologies including software engineering life cycle
- document type definition (DTD)
- XML document components including entities, elements and their attributes
- debugging methods
- document validation and testing procedures
- organisational policies, procedures and standards applicable to building XML documents.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- the client or business requirements
- an XML parser and authoring tool
- web browsers and devices
- hardware, software and tools required to use extensible markup language.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:
- develop at least two complex website layouts according to technical requirements.

In the course of the above, the candidate must:
- lay out and style page elements to suit a variety of devices
- test web page layouts in at least two different browsers and at least two different devices
- validate web page layouts against industry standards.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:
- principles of web site design and web scripting design
- principles and techniques in web site design, including:
  - hypertext markup language (HTML)
  - extensible hypertext markup language (XHTML)
  - cascading style sheets (CSS)
  - hypertext transfer protocol (HTTP)
  - amending browser incompatibilities
  - web libraries
  - web frameworks
- industry procedures, policies and standards applicable to developing web page layouts
- web page testing and debugging procedures
- accessibility standards, including the World Wide Web Consortium (W3C) standards and their application to web design
- cyber security procedures and protocols applicable to developing web page layouts
organisational procedures applicable to developing web page layouts.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- hardware, software and its components required to develop complex web pages
- design specifications brief
- a variety of browsers and digital devices
- the internet
- web page testing and debugging tools required to test complex web pages.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- create a content management system (CMS) powered website, using an open source with at least two additional custom functionalities not available from CMS, according to technical requirements.

In the course of the above, the candidate must:

- perform basic content manipulation tasks on at least two different browsers and at least two different devices
- evaluate additional content management functionality required against programming and security standards
- customise functionalities into pre-existing core CMS using programming techniques
- validate front-end code markup against standards set by the World Wide Web Consortium (W3C)
- confirm final website is cyber secure and complies with cyber security procedures and protocols.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- different content management systems and their respective functionalities, restraints and requirements
- different markup languages and their applicable standards
- customisation creation processes, including development of plug-in’s and extensions and programming techniques
- CMS vendor requirements, installation and configuration processes
- client and business specifications and requirements, including:
- server functionality
- required functionality of website
- required server-side language and application processes and hosting environment
- pre-existing restraints applicable to developing website solutions
- website, web accessibility, programming and security standards applicable to customising CMS
- website validation processes
- cyber security procedures and protocols.

**Assessment Conditions**

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- client and business specifications, requirements and content
- content management system required to customise complex CMS
- hardware, software and its components applicable to developing and installing CMS customisations
- a text editor
- a range of browsers and digital devices
- the internet and its connectivity.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to develop information architecture for a complex website that meets business requirements.

It applies to individuals working as highly skilled web developers and designers and are responsible for the navigation and hierarchy of websites. They liaise with clients to adapt e-business into their corporate strategy, applying high-level knowledge of technical languages and design principles.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

</table>
| 1. Identify content needs | 1.1 Identify strategic intent of website from business requirements and client expectations  
1.2 Define information and content requirements according to websites intent, intended audiences, types of client interactions and the websites long and short-term goals  
1.3 Collate required information and content and group into business schemes applicable to business structure and processes  
1.4 Identify website security access requirements |
| 2. Plan content structure | 2.1 Cluster and document information and content in related topics  
2.2 Develop a hierarchy and site map of information and content |
ELEMENT | PERFORMANCE CRITERIA
---|---
2.3 Check data and confirm sequence of hierarchy
2.4 Confirm labels are accessible to client

3. Develop navigation system and create prototype
3.1 Build website navigation system according to business requirements
3.2 Confirm ease and accessibility of navigation on website and provide different ways of searching
3.3 Construct prototype of information architecture design

4. Test and sign off
4.1 Arrange for client and required personnel to test usability of prototype and determine if architecture meets client expectations
4.2 Confirm site content will format in business and client technical environments and different browsers and digital devices
4.3 Adjust architecture according to client feedback
4.4 Obtain sign-off prototype from required personnel and confirm business requirements are met

Foundation Skills
This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

</tr>
</tbody>
</table>

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop and design information architecture for a complex website with at least ten pages, according to technical requirements.

In the course of the above, the candidate must:

- test access path to all sections of website
- confirm functionality and accessibility of website information architecture on at least two different browsers and at least two different digital devices.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- corporate strategies related to business websites
- the importance and purpose of client and business liaison
- the purpose and function of cascading style sheets (CSS)
- the use of hypertext markup language (HTML), extensible hypertext markup language (XHTML) and hypertext transfer protocol (HTTP), in web design
- technology connectivity implications
- processes for documenting technical specifications
- World Wide Web Consortium (W3C) standards
- website architecture and business process design and linkages between processes
- website accessibility and security access requirements.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
- a web server
- client and business requirement specifications
- an integrated development environment (IDE), required for creating web pages and server-side code
- web development technology required to develop website information architecture.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to use site server tools to host, track and monitor transactions on an e-business site.

It applies to individuals who work in a web environment and are responsible for using site server tools to maintain the integrity of an e-business site, applying detailed technical knowledge and highly developed analysis and interpretation skills.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
<tr>
<td>1. Define and document task requirements</td>
<td>1.1 Identify and confirm task and integration requirements, features and functionality of site with required personnel</td>
</tr>
<tr>
<td></td>
<td>1.2 Confirm platform and software related to business systems</td>
</tr>
<tr>
<td></td>
<td>1.3 Determine standards applicable to task and site functionality</td>
</tr>
<tr>
<td></td>
<td>1.4 Document the organisations current and proposed configuration according to organisational procedures</td>
</tr>
<tr>
<td></td>
<td>1.5 Document and validate client task requirements, performance criteria and scope of work with required personnel</td>
</tr>
<tr>
<td></td>
<td>1.6 Confirm available resources and budget with the client</td>
</tr>
</tbody>
</table>
### ELEMENT | PERFORMANCE CRITERIA
---|---
2. Select and use server tools | 2.1 Identify applicable site server tools according to task requirements  
2.2 Review and evaluate tools according to task and site functionality requirements  
2.3 Load and configure server tools according to vendor guidelines and client requirements  
2.4 Test equipment using server tools  
2.5 Maintain or update required functionality using server tools  
2.6 Complete required tasks using server tools according to vendor guidelines

3. Review server tools and task requirements | 3.1 Monitor, analyse and evaluate organisational procedures  
3.2 Review site server configuration and tools applicable to client task requirements and adjust as required  
3.3 Validate server outcomes using site-analysis software  
3.4 Create and use reports and other documentation according to organisational procedures

### Foundation Skills
*This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.*

| SKILL | DESCRIPTION |
---|---|
Numeracy | • Accommodates business requirements by interpreting budgetary constraints and undertakes mathematical calculations with reference to available resources |
Oral communication | • Uses listening and questioning techniques to convey client requirements, and articulate complex information using specific language applicable to audience |
Reading | • Critically analyses complex documentation from a variety of sources and consolidates information applicable to specific criteria |
Writing | • Prepares reports and required documentation expressing ideas and scope of work, and correspondence for specific audiences according to organisational procedures |
Teamwork | • Builds strong relationships by collaborating with others and sharing information |
Planning and organising | • Accepts responsibility for planning and sequencing complex tasks and workload  
• Negotiates key aspects with others, including required capabilities, |

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- maintain and monitor transactions on an e-business site using at least three different site server tools.

In the course of the above, the candidate must:

- maintain expected business performance and technical standards in an e-business environment
- confirm transactions function on at least two different browsers and at least two different devices
- review e-business site procedures and task requirements.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- integration requirements and different features and functionalities of sites
- legislative and organisational standards and requirements applicable to task requirements
- documentation processes
- vendor guidelines of site server tools
- e-business site procedures and requirements
- devices and equipment required for a business site
- configuration and validation techniques for site server tools
- functions and features of site server tools applicable to:
  - required firewalls and proxy servers
  - hypertext transfer protocol (HTTP) servers
  - search engines
Assessment Requirements for ICTWEB523 Manage transactions using site server tools

- cyber security measures required for site
- tools and products required for site construction
- site-building considerations applicable to business.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
- server hardware
- industry standard site server tools
- an existing e-business website
- site-analysis software
- browsers and digital devices
- client and business expectations brief
- required standards and legislation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

</table>

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- analyse information and assign at least five meta tags, according to technical requirements.

In the course of the above, the candidate must:

- update meta tags in line with client needs and industry developments
- use analysis and description tools, standards, precedents and techniques applicable to nature of the material.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- business conventions and rules for applying meta tags
- client business domain
- data modelling
- database management system (DBMS) fundamentals
- decision support systems
- document indexing and search engines
- functions and features of databases
- different types and structures of meta tags
- metadata standards, including Dublin Core and simple hypertext markup language (HTML) ontology extensions
- reference structure of descriptors and their role in assisting clients
- general conventions and business requirements applicable to meta tags
- meta tag testing and monitoring processes.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- business and client information and materials
- metadata software
- project-related documentation
- hardware required to analyse information and create meta tags
- information applicable to industry developments in meta tagging.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 6.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- identify, establish and implement a quality assurance process for websites with at least three performance benchmarks and at least three quantitative standards.

In the course of the above, the candidate must:

- evaluate existing processes and procedures
- determine applicable quality assurance methodology
- validate a website against performance standards using at least two different browsers and on at least two different devices
- comply with organisational procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- business process design and customer and business liaison
- legislative and organisational requirements and compliance standards applicable to websites, including:
  - copyright and intellectual property
  - provisions of privacy legislation
  - website accessibility and equity legislation
- methods of developing and quantifying performance standards
- different quality assurance methodologies applicable to websites
- documentation techniques
- site validation processes
- different methods and channels for interaction, feedback and suggestions
• benchmark review processes
• functions and features of website architecture and website security
• workload metrics and technical performance measurement.

**Assessment Conditions**

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

• web servers
• a website
• analysis software
• text-editing software
• automatic testing software
• hardware, browsers, tools and devices required to implement quality assurance process for websites
• channels for interaction, feedback and suggestions
• documentation for applicable regulatory, industry compliance and accessibility standards.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

<table>
<thead>
<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 6.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- transform data from at least three relational or other native data sources into an extensible markup language (XML).

In the course of the above, the candidate must:

- provide access to a business functionality via a web service description language (WSDL) file
- locate and retrieve at least three pieces of information about a public web service business function and include it in a website using universal description, discovery and integration (UDDI) and a simple object access protocol (SOAP)
- implement a web service according to business requirements, specifications and industry standards.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- functions and features of web development technologies
- web service testing processes
- purpose and uses of different web services, including XML, WDSL, UDDI and SOAP
- functions and purpose of web service architecture
- functions and features of XML language and data structures and validation techniques
- uses of namespaces
- legislative and organisational requirements applicable to the implementation and use of web services.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- web service business requirement specifications
- legislative requirements applicable to use of web services, including industry standards published by the World Wide Web Consortium (W3C)
- platform-specific documentation and help files describing syntax and use of proprietary technologies
- digital devices simulated development environment including the following elements:
  - a relational database server
  - the integrated development environment (IDE), including related frameworks, APIs and applicable proprietary classes required to implement web services and their enabling technologies
  - a web server
  - web browsers
  - XML editors
  - XML schema
  - XPath testing utilities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- research, investigate and apply at least two emerging web technology trends to a web application, according to organisational needs.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- principles of the internet and technologies that underpin its existence
- key principles of analysis and design
- programming control structures and object-oriented programming applicable to implementing new web technology
- web programming concepts, including:
  - the hypertext transfer protocol (HTTP)
  - stateless programming
  - session management
  - authentication and web security
  - client-side programming
- latest web technology trends and their application to different clients
- features, functions and requirements of different web applications
- web application testing processes
- sources of information regarding new and emerging trends and technologies
- legislative and organisational requirements and standards applicable to implementation of new technologies.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a development environment
- a server
- a database server
- hardware and software applicable to implementation of new technology
- the internet
- browsers and digital devices.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to conduct telecommunications operations near substantial safety hazards. It includes applying a risk management approach to a limited range of predictable problems when working at heights near electrical distribution infrastructure, radiation devices, or other services in confined spaces. This unit also includes the preparation of risk control measures within scope of own role that encompass job safety analysis.

It applies to telecommunications workers who perform work functions such as rigging, telecommunications installation and maintenance, and/or any other activity that requires working safely and complying with requirements and/or established procedures near live electrical apparatus.

It does not include any work that is or may be performed by other competent operatives within the defined ‘safe work zone’, which is defined by relevant state/territory regulatory agencies/bodies, local government legislation, industry bi-partite body, guidelines/codes of practice or other related requirements for safe work and access near live electrical and mechanical apparatus.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements and may require a licence/registration in relation to:

- work health and safety
- electricity/telecommunications/gas/water industry safety and compliance
- industrial relations
- anti-discrimination.

Age limits for operating certain equipment may also be covered by commonwealth, state/territory or local government legislation and regulations.

This unit does not cover legislative requirements for confined space entry, elevating work platform (EWP) operations, traffic control, or spotter/safety observation.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- conduct a risk assessment or simulated risk assessment for a telecommunications work site near power infrastructure
- identify the safety and licensing requirements for working at heights and working in confined spaces
- apply safety precautions while working at heights or in confined spaces near power infrastructure
- test power pole infrastructure for electrical safety before working on the infrastructure
- perform tests on the mechanical soundness of a pole in accordance with the asset (pole) owner guidelines.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- consequences of short circuits including:
  - arc flash
  - basic power industry protection schemes like reclosers
  - drop out fuses and their limitations for current limiting
- effects of current including:
  - physiological effects and protection for physiological effects
  - basic principle by which electrical current can result in the production of heat, light and electromagnetic field
- typical effects of current
- definitions of terminologies including:
  - safe work zone
  - risk assessment
  - safe approach distances zones
  - safe working distances
  - work permit
  - access authorisation permits
  - technical standards
  - isolation procedures
  - compliance requirements
- legislation, regulations, codes, standards, guidelines, enterprise requirements, certification and licensing applicable to above performance evidence and own telecommunications role when working safely up to the defined ‘safe work zone’ near energised electrical apparatus (including electrical powerlines), in particular:
  - electrical safety and technical knowledge relating to operating plant or vehicle near power lines including ‘step and touch potential’ and earth potential rise
  - safe approach distances including safe work zones that may apply for the intended work
  - for work near live electrical infrastructure – including AS/NZS 3000:2018 Electrical installations known as the Australian/New Zealand Wiring Rules
- main components of work health and safety (WHS) that affect the work function
- workplace environmental and WHS procedures including:
  - designation of personnel responsible for WHS
  - requirement for employee participation in WHS management
  - standard meanings of WHS symbols found on signs and labels in the workplace
  - raising WHS issues
  - recognising and reporting on hazards
  - responding to accidents, fires and emergencies
  - work operations to control risks
  - common road and pedestrian safety control measures appropriate to the worksite
- separation and segregation between power and telecommunications cables and fittings
- ground clearances, in-span clearances and attachment point clearances
- test procedure for timber, steel, concrete and composite poles
- techniques and precautions for undertaking different work functions and working safely up to the defined ‘safe work zone’ near energised electrical apparatus (including electrical powerlines) applicable to above performance evidence and own telecommunications role (work functions that may be performed include, vegetation control, rigging, dogging and/or any other activity that requires working safely near live electrical apparatus by a telecommunications worker)
- limitations of installing telecommunications infrastructure on power assets, including installations near transformers and power substations
• environmental control processes:
  • disposal and handling of hazardous and dangerous substances
  • noise pollution
  • waste disposal
• electricity infrastructure assets, related voltages and requirements for working safely near live electrical apparatus as a telecommunications worker
• how step or touch potential manifests itself
• earth potential rise and how it manifests itself
• weather conditions suitable for working near live electrical apparatus as a telecommunications worker
• safe work zone for safe access near live electrical infrastructure for workers and operational plant
• established enterprise procedures relating to working safely near power infrastructure at a telecommunications workplace, including incident management procedures
• low and high aerial voltage systems.

Assessment Conditions

This unit of competency falls into the definition of high risk work and should be delivered and assessed in accordance with the national standard.

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:
• telecommunications site/s near power infrastructure
• relevant WHS legislation, regulations and codes of practice
• enterprise WHS policies and procedures
• personal protective equipment (PPE).

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. Refer also to the Requirements for assessors of high risk units in the ICT Information and Communications Technology Training Package Companion Volume Implementation Guide.

Application

This unit describes the skills and knowledge required to work effectively within the digital and telecommunications industry and to work within enterprise arrangements and requirements.

It applies to individuals directly employed within a large enterprise or preparing to work for a small sub-contractor who undertake a range of tasks under supervision.

This unit applies to people who have recently entered the digital and telecommunications industry and are beginning their career as direct employees or contractors.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- obtain information about relevant digital and telecommunications industry sectors including employment conditions
- develop a list of contracting opportunities within the telecommunications industry
- actively participate in a team.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- range of digital and telecommunications team roles and how these roles impact on the way a team works and what it might achieve
- terms and conditions of employment common to the digital and telecommunications industry
- role of contracting within the digital and telecommunications industry
- legislation, codes and other formal agreements that impact on the work activity
- various sectors of the digital and telecommunications industry
- enterprise policies, plans and procedures
- sources of advice about career planning and skill development
- specific work health and safety (WHS) requirements relating to the activity and site conditions
- environmental policies and procedures applicable to working in the digital and telecommunications industry.
Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- digital and telecommunications technology team
- examples of resumes and career planning resources
- relevant enterprise documentation such as policies, procedures and practices.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- provide routine telecommunications customer services in a professional manner
- document and record concerns and solutions according to enterprise guidelines and escalation procedures
- identify customer needs using appropriate interpersonal skills
- provide prompt service to address customer needs according to enterprise requirements
- identify opportunities to increase the quality of service and products
- respond to and record all customer feedback according to relevant standards, and enterprise policies and procedures.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- telecommunications customer equipment and their general features and capabilities
- enterprise systems and telecommunications work environment
- key provisions of relevant legislation from all forms of government that apply to providing customer service
- enterprise policies and procedures relating to the customer service process
- range of typical issues and challenges that can arise when providing customer service in the telecommunications industry.
Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- workplace documents, enterprise policies and procedures for customer service
- examples of customer feedback
- case studies and, where possible, real situations
- interaction with others.

Assessors of this unit must satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to solve problems, develop questions and respond to feedback on questions on workplace issues.

The unit applies to individuals, often working under supervision or guidance, who may be required to think critically, ask essential questions and consider answers to those questions.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- prepare, deliver, document and review a set of questions to consolidate understanding of a workplace issue within own job role on at least two occasions
- apply basic problem solving techniques to a workplace issue on at least four occasions.

In course of doing the above, the candidate must:

- use a range of different types of questions and styles of questioning
- identify potential issues that may arise in problem solving processes
- develop questions designed to consolidate information of selected issue
- ask questions to relevant stakeholders, using further questions and comments to clarify responses provided
- seek feedback on questions developed.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- key features and processes of critical thinking and problem solving
- basic problem solving techniques
- different types of questions and their relevance to different situations
- effective questioning techniques
- typical blockers to problem solving processes
- role of critical thinking for businesses, the community and at an individual level.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.
This includes access to simulated challenges and situations to demonstrate the application of performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

</table>

Performance Evidence

Evidence of the ability to:

- ask relevant questions to challenge and enhance creative thinking
- use various information sources to provide answers to own questions
- use a range of creative thinking techniques to generate ideas or responses to questions or issues
- record ideas in response to a predetermined issue or situation.

Note: if a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain why it is important to consider different perspectives when asking questions
- list and describe different creative thinking techniques
- describe common blockers to creative thinking,
- explain boundaries that need to be considered when generating ideas and responses
- describe ways of extending and developing individual creative thinking skills.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the creativity and innovation – critical thinking field of work and include access to specific challenges and situations to which creative thinking may be applied.

Assessors must satisfy NVR/AQTF assessor requirements.

Performance Evidence

Evidence of the ability to:

- explain critical thinking concepts and approaches, the value of applying such approaches, and how they may apply to a workplace context
- use a range of critical thinking techniques to identify and address limitations in workplace processes, products or services
- ask questions of self and others to broaden own knowledge and understanding
- use various information sources to provide answers to own questions
- develop a proposal to articulate to a broad range of workplace stakeholders a solution to an identified issue
- incorporate feedback and self-reflection to critically assess performance

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

The candidate must be able to demonstrate the following knowledge to effectively complete the tasks outlined in the elements and performance criteria of this unit, and to manage tasks and reasonably foreseeable contingencies in the context of the work role:

- key features and characteristics of critical thinking concepts and approaches
- key features and limitations of workplace procedures
- key legislative requirements relating to workplace procedures
- key sources of reliable information relevant to workplace procedures.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the creativity and innovation – critical thinking field of work and include access to:
Assessment Requirements for BSBCRT404 Apply advanced critical thinking to work processes Date this document was generated: 19 January 2021

- office equipment, technology, software and consumables required to implement internal and maintain internal control procedures
- corporate governance documentation required for role
- organisational operational policies and procedures required for role.

Assessors of this unit must satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop, refine and implement a solution to address a workplace issue on at least one occasion.

In the course of the above, the candidate must:

- consult with stakeholders to identify workplace issue to be addressed within scope of job role and organisational policy
- generate potential ideas that provide innovative solutions to identified issues
- evaluate viability of ideas
- present ideas and information to others and reflect on responses
- refine chosen solution in response to feedback.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- creative thinking techniques to generate innovative solutions to issues
- existing products, programs, processes or services to address selected issue
- factors affecting viability of possible solutions including:
  - commercial potential
  - suitability for the target audience or purpose
  - feasibility of implementing solution
- issues and requirements to commercialise the concept
- practical and operational issues to be considered in specific work or community context
- practical and operational issues that determine whether a concept can be implemented
- techniques for generating creative ideas and solutions, and for translating them into workable concepts.
**Assessment Conditions**

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- background information required to evaluate the operational factors that will affect the implementation of concepts
- opportunities to collaborate with others throughout the concept development process.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to apply critical thinking in order to develop solutions to complex issues arising in the workplace.

The unit applies to individuals who are required to think critically in order to develop structured and innovative solutions to overcome complex organisational issues. Individuals in these roles operate with a high degree of autonomy and may undertake non-standard work tasks involving escalated risks. These individuals are often responsible for a team or work area.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:
- lead the process for addressing at least one complex workplace issue up to the point of implementation.

In the course of the above, the candidate must:
- identify task objectives and risks involved with pursuing identified problem
- research legislative frameworks and applicable frameworks for identified problem
- calculate resources required for solution development process
- facilitate others in idea generation for possible solutions
- present proposed solution to key stakeholders
- use feedback to revise solution to achieve stakeholder approval
- seek necessary approvals for the implementation of the solution.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:
- legislative frameworks and organisational policy or procedures applicable to identified workplace problem
- critical and creative thinking techniques applicable to performance evidence
- advantages and risks in the development of solutions for identified workplace problems
- decision-making processes including barriers to effective decision-making
- sources of relevant information to identified issue, including desk research and stakeholder consultations
- organisational requirements for development and presentation of a brief and feedback register
- approval process for workplace solution.
Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the customer service field of work and include access to:

- organisational policies and procedures
- opportunities to collaborate with others throughout the concept development process
- resources required to undertake research, prepare a brief and develop a feedback register.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- receive and process three pieces of workplace information according to organisational policies and procedures.

In the course of the above, the candidate must:

- record and document information accurately
- store, classify and maintain information materials.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- organisational policies and procedures relating to collecting and processing workplace information
- key aspects of organisational information items management systems and security and confidentiality procedures.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- examples of workplace information systems.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

Evidence of the ability to:
- follow correct ergonomic requirements and organisational policies and procedures
- produce digital documents that align to document purpose and appropriate to target audience
- adhere to organisational style manual when formatting documents
- use relevant help functions to rectify simple document issues
- produce document in appropriate format for review
- adhere to designated timelines when preparing documents.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

The candidate must be able to demonstrate the following knowledge to effectively complete the tasks outlined in the elements and performance criteria of this unit, and to manage tasks and reasonably foreseeable contingencies in the context of the work role.

- Key elements of basic formatting styles and their effect on formatting, readability and appearance of documents
- Key functions of word processing applications
- Key features of organisational requirements for ergonomics
- Key features of organisational style and presentation guide.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the information and communications technology – IT use field of work and include access to:
• device user information
• relevant organisational policies and procedures
• relevant workplace documentation and resources including a style guide and user manuals.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop and implement a change management plan to lead and manage organisational change.

In the course of the above, the candidate must:

- analyse and interpret information about the organisation’s internal and external environment and consult with stakeholders to identify requirements and opportunities for changes that support organisational objectives
- prioritise opportunities for changes with input from relevant stakeholders
- develop a change management project plan for the priority changes incorporating resource requirements, risk management and timelines
- develop strategies to communicate or educate the changes and embed them
- obtain approvals and agree reporting protocols with relevant managers and implement the plan including addressing barriers to change
- review and evaluate the change management project plan and modify as needed to achieve objectives.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- events or trends that may impact on the achievement of organisational objectives
- existing policies and practices to guide organisational change
- methods for conducting cost-benefit analysis for high priority change requirements and opportunities
- methods for conducting risk analysis, including barriers to change and relevant mitigation strategies
- content of communication and education plans, including:
• promotion of benefits of organisational change
• change management processes or cycles and strategies for communicating and embedding change
• organisational behaviour and how the external environment can impact on change strategies
• components of a change management project plan.

Assessment Conditions
Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• workplace documentation and resources relevant to organisational change management.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- complete at least four tasks in a business environment, including:
  - working to organisational standards
  - managing workload
  - working as part of a team.

In the course of the above, the candidate must:

- comply with legal responsibilities, and organisational requirements
- escalate issues and seek assistance.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- organisational policies and procedures that apply to employer and employee rights in a business environment
- organisational documents relating to effective business operations, including:
  - work health and safety policy
  - code of conduct policy
  - style guide
  - duty of care
- roles, responsibilities and conditions of employment contract for own work role.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.
This includes access to:

- codes of practice relevant to performance evidence
- organisational policies and procedures
- workplace documentation and resources.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- engage with at least three different customers, by:
  - providing customer service according to organisational standards and guidelines
  - using communication equipment and systems efficiently and effectively
  - adapting communication techniques to suit customer profile and requirements.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- operational environment, including customer base and products and services of the organisation
- organisational performance standards and customer service expectations
- organisational policies, procedures, protocols for customer engagement
- relevant product or service details
- equipment and systems to manage customer engagement
- customer service in different contexts and customer behaviour in different contexts
- sources of information to develop customer service skills including relevant organisational personnel
- follow-up considerations for customer queries, including:
  - engagement escalation policy
  - business rules and practices
  - customer expectations
- principles of customer service
- continuous improvement methods including customer retention strategies
- procedures for the operation of telecommunication equipment and systems, relevant to customer service.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- workplace information and data
- performance management records and data and quality assurance guidelines
- customer engagement policies and procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to deliver aspects of customer service at an introductory level. It includes creating a relationship with customers, identifying their needs, delivering services or products, and processing customer feedback.

The unit applies to those who perform a range of routine tasks in the workplace using a limited range of practical skills and fundamental knowledge of customer service in a defined context under direct supervision or with limited individual responsibility.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- deliver a service to at least three different customers.

In the course of the above, the candidate must:

- greet the customer and establish rapport according to organisational requirements
- identify customer needs using interpersonal skills
- provide prompt service to address customer needs
- identify and follow up opportunities to increase the quality of service and products
- respond to and record all customer feedback according to organisational standards, policies and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- key provisions of customer service legislation and consumer law
- requirements for responding to the needs of customers from a diverse background
- workplace organisational policies and procedures relating to customer service and the customer service process.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- workplace documents, and organisational policies and procedures for customer service
- examples of customer complaints and feedback.
Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop a plan for communication with supervisor
- identify and access one formal and one informal wellbeing resource.

In the course of the above, the candidate must:

- develop a plan to communicate with supervisor, including:
  - factors that may impact on own wellbeing, both positively and negatively
  - appropriate style of communication
  - appropriate method of communication
  - strategy to deal with negative response.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- common personal and workplace factors that may impact on wellbeing
- advantages and disadvantages of different communication styles, including:
  - passive
  - assertive
  - aggressive
- methods for communicating with a supervisor
- key features of Employee Assistance Programs (EAPs)
- common workplace resources for addressing wellbeing.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- challenges and situations to demonstrate the application of performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

1. Establish project parameters
   1.1 Identify project scope
   1.2 Define project stakeholders
   1.3 Seek clarification from delegating authority of issues related to project and project parameters
   1.4 Identify responsibilities of relevant stakeholders and reporting requirements
   1.5 Clarify relationship of project to other projects and to the objectives of the organisation
   1.6 Identify availability and access of resources for undertaking the project
2. Develop project plan

- 2.1 Identify risks and develop a risk management plan for project, including Work Health and Safety (WHS)
- 2.2 Develop project budget and timeframe and seek approval from relevant stakeholders
- 2.3 Consult team members and apply their views in planning the project
- 2.4 Identify and access appropriate project management tools
- 2.5 Develop project plan according to project parameters and deliverables
- 2.6 Finalise project plan and gain necessary approvals to commence project according to documented plan

3. Administer and monitor project

- 3.1 Communicate to project team members their responsibilities and project requirements
- 3.2 Establish and maintain required recordkeeping systems throughout the project
- 3.3 Implement and monitor plans for managing the project
- 3.4 Undertake risk management as required

4. Finalise and review project

- 4.1 Complete financial recordkeeping associated with project and confirm according to agreed budget
- 4.2 Complete project documentation and obtain sign-offs for concluding project
- 4.3 Review project outcomes and processes against the project scope and plan
- 4.4 Document feedback and suggested improvements

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:
- undertake project work on a minor project or a section of a larger project.

In the course of the above, the candidate must:
- confirm the quality of project outcomes according to expectations of the organisation
- consult and communicate with relevant stakeholders to generate input and engagement in planning, implementing and reviewing the project
- provide support to team members to enable them to achieve deliverables and to transition them as appropriate at completion of the project.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:
- project management tools
- types of documents and other sources of information commonly used in defining the parameters of a project
- mission, goals, objectives and operations of the organisation
- relevant legislation and regulations, including work health and safety (WHS) requirements, for project planning
- project management processes according to policies and procedures of the organisation and including:
  - lines of authority and approvals
  - quality assurance
  - human resources
  - budgets and finance
  - risk management
  - recordkeeping
• reporting.

**Assessment Conditions**

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

• relevant legislation, regulations, standards and codes
• workplace documentation and resources relevant to performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- manage project scope on at least two occasions.

In the course of the above, the candidate must:

- collaborate with stakeholders to produce a scope-management plan
- review and document scope-management implementation and recommend improvements.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- components of a project scope-management plan
- factors likely to impact the project scope
- formal change-control processes
- methods for measuring work outcomes and progress against plans
- methods for segmenting and documenting a work breakdown structure
- problem areas likely to be encountered in scope management
- procedures for reporting scope change
- project life cycle and the significance of scope management
- project management tools used for managing scope
- roles and responsibilities of project manager in relation to project planning
- types of project initiation documentation.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• workplace documentation used to document and manage project scope
• examples of feedback from project stakeholders regarding management of project scope.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to manage quality within projects. It involves determining quality requirements, implementing quality control and assurance processes, and using review and evaluation to make quality improvements in current and future projects.

The unit applies to individuals responsible for managing and leading a project in an organisation, business, or as a consultant.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- manage project quality on at least two occasions.

In the course of the above, the candidate must:

- document a quality-management plan
- implement quality control and assurance processes for a defined project using a range of tools and methodologies.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- quality management theory
- relevant project quality standards that apply in the organisation
- quality assurance and control techniques, key tools and methodologies
- roles and responsibilities of quality management personnel
- methods for managing continuous improvement.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- project documentation including quality criteria, evidence of quality monitoring and improvement practices.
Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence
The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- manage project risk on at least two occasions.

In the course of the above, the candidate must:

- conduct effective risk management processes for a project of sufficient complexity
- apply risk management techniques, strategies and tools.

Knowledge Evidence
The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- project risks in a range of risk categories
- key components of a risk management plan
- relevant project risk controls
- industry sector risk classifications and different risk contexts
- organisational and industry standard risk frameworks
- project risk-management processes and procedures
- characteristics, techniques and applications of quantitative and qualitative risk management techniques and approaches.

Assessment Conditions
Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- workplace documentation and resources
- feedback from project stakeholders about how risks were managed.
Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

Evidence of the ability to:

- develop strategies and procedures to successfully manage business operations, including:
  - developing an action plan
  - identifying risk management procedures
  - developing a quality system
  - implementing performance measures
  - utilising technologies to optimise business performance
- implement and monitor strategies and procedures developed, including:
  - analysing and correcting business problems
  - reviewing and adjusting the business plan
  - record and research business improvements
  - make appropriate adjustments to business operations as required.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.
Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- summarise relevant industry codes of practice
- explain methods for implementing operation and revenue control systems
- summarise methods for monitoring performance and implementing improvements
- outline work health and safety (WHS) responsibilities and procedures for managing hazards
- identify relevant principles of risk management, including risk assessment
- clarify quality system principles and methods
- summarise relevant performance measures
- discuss role of innovation
- outline systems to manage staff, stock, expenditure, services and customer service
- identify technical or specialist skills relevant to business operations.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the Management and Leadership – Small and Micro Business field of work and include access to:

- business equipment and resources
- relevant legislation, regulations, standards and codes
- relevant workplace documentation and resources
- case studies or possible, real situations
- interaction with others.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to sustain and develop an environment in which continuous improvement, innovation and learning are promoted and rewarded.

The unit applies to individuals with managerial responsibilities who aim to build a better and more effective work environment. Continuous improvement and innovation have links with the model of the learning organisation and people working at this level play an important role in building the culture, values and attitudes of the organisation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Critical Thinking and Problem Solving – Business Strategy

Elements and Performance Criteria
