Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- manage and promote innovation and continuous improvement for an organisation or work area on at least one occasion.

In the course of the above, the candidate must:

- identify opportunities for improvement
- consult with stakeholders
- promote the value of creativity, innovation and sustainability and recognising successes
- support testing and trialling of new ideas
- undertake risk management and cost-benefit analysis for options
- plan for and implement improvements using organisation’s processes for approvals, project management and change management
- facilitate contributions to and communications about continuous improvement and innovation
- capture insights, experiences and ideas for improvements and incorporate them into the organisation’s knowledge management systems and future planning.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- cost-benefit analysis methods
- knowledge management systems
- continuous improvement systems and processes
- creativity and innovation theories and concepts
- organisational learning principles
- quality management and continuous improvement theories
- relevant risk management concepts
- key aspects of supply chains, and operational, product and service systems
- method for conducting gap analysis
- changing trends and opportunities in workplace.

**Assessment Conditions**

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
- workplace documentation and resources.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to measure, support and find opportunities to improve the sustainability of work practices.

The unit applies to individuals, working under supervision or guidance, who are required to follow workplace procedures and instructions. These individuals work in an environmentally sustainable manner within scope of competency, authority and own level of responsibility.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- participate in at least three sustainable work practices.

In the course of the above, the candidate must:

- identify benefits of sustainable work practices and areas of improvement for sustainable practices in the workplace
- identify and apply sustainability legislation and organisational sustainability policies and procedures
- participate in and support discussions for improved resource efficiency processes
- identify, measure and document usage of resources
- collaborate with team members to develop suggestions for improving workplace sustainability practices.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- environmental and resource hazards and risks
- Australian and international standards for corporate social sustainability
- sustainability regulations and codes of practice applicable to own role
- organisational sustainability policies and procedures
- reporting channels and procedures to report breaches and potential issues
- advantages of sustainable practices in the workplace.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.
This includes access to:

- documentation, information and resources on workplace environmental and resource efficiency
- sustainability legislation, regulations and standards.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

</tbody>
</table>

Performance Evidence

Evidence of the ability to:

- analyse information from a range of sources to identify current procedures, practices and compliance requirements in relation to environmental and resource sustainability
- consult and communicate with relevant stakeholders to seek input and encourage engagement with developing and implementing sustainability improvements, encourage feedback and suggestions and report on outcomes
- plan and organise work group activities to:
  - measure current resource usage
  - solve problems and generate ideas for improvements
  - evaluate and implement strategies to improve resource usage
  - plan, implement and integrate improvements into operations
  - meet environmental requirements
- apply continuous improvement approach to sustainability performance
- apply change management techniques to support sustainability performance.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify relevant internal and external sources of information and explain how they can be used to identify sustainability improvements
Assessment Requirements for BSBSUS401 Implement and monitor environmentally sustainable work practices

- explain the compliance requirements for the work area with reference to legislation, regulations, codes of practice and workplace procedures that relate to environmental and resource issues
- outline common environmental and energy efficiency issues within the industry
- give examples of benchmarks for environmental and resource sustainability that are relevant to the organisation
- outline organisational systems and procedures that relate to environmental and resource sustainability improvements including:
  - supply chain, procurement and purchasing
  - quality assurance
  - making recommendations and seeking approvals

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the sustainability field of work and include access to:

- relevant legislation, regulations, standards and codes
- relevant workplace documentation and resources
- case studies or, where possible, real situations
- interaction with others.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

Evidence of the ability to:

- interpret an environmental plan to establish underpinning organisational and legislative requirements
- prepare an implementation process schedule that incorporates resource requirements and meets organisational and legislative obligations
- communicate individual roles and responsibilities to staff
- address training and support needs
- implement and monitor the schedule against required outcomes
- review results and prepare required documentation.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline organisational and legislative requirements in relation to environmental management
- explain methods used to identify and address training needs
- describe how resource requirements are identified
- explain methods for creating and communicating schedules
- explain how to monitor, review and record results of the implementation process.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the sustainability field of work and include access to:
- relevant legislation and workplace policies and procedures
- interaction with others
- case studies or, where possible, real situations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- on at least three occasions, activate, navigate, and deactivate a digital device.

In the course of the above, the candidate must:

- follow user procedures to power up and access a digital device
- follow user procedures and system information when using the basic functions on digital device, seeking assistance where required
- shut down applications and the device.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- user procedures for powering up and accessing a digital device
- key components of the digital system, including what each component does
- ergonomic issues that impact the use of digital devices
- key functions of the operating system
- organisational conventions for naming files.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- device user information
- different types of digital device.
Assessors of this unit must satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to select and use software and organise electronic information and data.

The unit applies to those who use a limited range of practical skills with a fundamental knowledge of equipment use and the organisation of data in a defined context, under direct supervision or with limited individual responsibility.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- select and use at least three business software applications on two occasions each.

In the course of the above, the candidate must:

- select and use technology safely and according to organisational requirements
- identify and address faults according to requirements.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- key features of:
  - organisation’s work health and safety requirements relevant to own role
  - organisation’s requirements for file naming and storage
  - applications used for organising electronic information and data.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- workplace equipment and resources
- electronic files, information and data
- workplace documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to effectively identify, select and use available methods of digital communication in a workplace context. These methods may include email, instant messaging and other similar platforms.

The unit applies to those who use digital technology to communicate with relevant stakeholders. This will be particularly relevant to individuals in teams that work remotely. The individual will use a limited range of practical skills and fundamental knowledge in a defined context under direct supervision or with limited individual responsibility.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- on four occasions send digital communications
- on four occasions receive and process digital communications.

In the course of the above, the candidate must:

- follow organisational and technology provider requirements when communicating electronically across multiple digital applications, including in relation to security of communications
- follow organisational policy and procedures when managing all aspects of digital communication, including by storing, filing, archiving, and deleting inbound communications
- communicate electronically with targeted groups of colleagues, clients or similar as relevant to organisation.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- existing and emerging methods of digital communication, including strengths and limitations
- industry practice relating to digital communication etiquette in a workplace setting
- commercial sensitivities in relation to knowledge management
- organisational policies and procedures relating to the use of digital communication
- security levels and filters for digital communications.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- industry applications/platforms for communicating digitally
- relevant organisational policies and procedures
- relevant workplace documentation and resources.

Assessors of this unit must satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design, produce and finalise four different types of business documents, using at least two different software applications.

In the course of the above, the candidate must:

- comply with organisational policies and procedures for producing business documents
- adhere to task requirements when producing documents including:
  - applying basic design principles
  - applying consistent formatting
  - using appropriate styles
  - using correct layouts
  - proofreading
  - use required data storage options.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- technology required to produce document
- key functions and features of contemporary computer applications
- organisational policies and procedures
- organisational requirements for document design, including style guide.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.
This includes access to:

- workplace equipment and resources
- relevant software applications
- style guide
- organisational policies and procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- plan, design, produce and finalise a spreadsheet on at least four occasions.

In the course of the above, the candidate must:

- produce spreadsheet documents that align to document purpose and appropriate to target audience
- design spreadsheets using:
  - formulas and functions with:
    - addition, subtraction, division, multiplication
    - brackets
- design spreadsheets that address a range of data and organisational requirements
- use software functions to create spreadsheets that adhere to organisational requirements relating to style and presentation
- use relevant help functions to rectify document issues
- produce spreadsheet document in appropriate format for review, including ability to create and modify intermediate-level charts that analyse the dataset.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- key elements of formatting of spreadsheets appropriate to workplace documents, including the ability to calculate:
  - sum totals
  - averages
  - counts of values
- key features of spreadsheet applications, both cloud-based and non-cloud based
• key features of organisational guidelines on spreadsheet design and use
• organisational requirements for ergonomics, work periods and breaks, and sustainability in relation to spreadsheet production.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• industry software/applications for producing spreadsheets
• digital device user information
• relevant legislation and codes of practice
• relevant organisational policies and procedures
• workplace documentation and resources, including style guide.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- on three occasions prepare, create and finalise an electronic presentation.

In the course of the above, the candidate must:

- follow relevant ergonomic requirements and organisational policies and procedures
- adhere to task requirements and organisational policies and procedures relating to:
  - following designated timelines
  - consistency of design and layout
  - editing and style requirements
- use relevant help functions to rectify presentation issues
- produce presentation in appropriate format
- store presentation in accordance with organisation policies and procedures relating to data security.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- design features and their effect on the readability and appearance of electronic presentations
- key functions of relevant applications for producing electronic presentations
- organisational requirements for ergonomics
- key features of organisational style and presentation guide.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.
This includes access to:

- workplace equipment and materials
- relevant digital applications
- examples of electronic presentations
- relevant organisational policies and procedures
- relevant workplace documentation and resources including style guide.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- work with a group to achieve an objective on at least two occasions and address at least one identified problem or conflict on each occasion.

In the course of the above, the candidate must:

- distinguish individual responsibilities from workgroup responsibilities
- demonstrate the ability to:
  - support team members
  - communicate according to the cultural and linguistic requirements of the individual
  - act on constructive feedback
  - use communication channels to share information
  - cooperate and contribute to team goals
  - identify improvement opportunities
- identify problems and conflicts and address them according to organisational and ethical policies and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- organisational and ethical standards, policies and procedures that relate to own work role
- team responsibilities and duties and their relationship to individual responsibilities and duties
- organisational policies and procedures relating to workplace discrimination and bullying
- personal values and beliefs including their importance in the development of relationships
- communication channels used to communicate in work teams including:
  - team meetings
Assessment Requirements for BSBTWK201 Work effectively with others

- one-on-one interactions with individual team members
- emails
- instant messaging
- calls
- key problems and conflicts arising in workgroup contexts
- methods of resolving team problems including referral to relevant organisational personnel
- conflict resolution techniques.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- workplace discrimination and bullying legislation
- organisational and ethical standards, policies and procedures for working with others.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to lead teams in the workplace and to actively engage with the management of the organisation.

The unit applies to individuals working at a managerial level who lead and build a positive culture within their work teams. At this level, work will normally be carried out using complex and diverse methods and procedures requiring the exercise of considerable discretion and judgement. It will also involve using a range of problem solving and decision-making strategies.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- manage the effectiveness of at least one work team.

In the course of the above, the candidate must:

- provide feedback to encourage, value and reward others
- model desired behaviour and practices
- encourage and foster shared understanding of purpose, roles and responsibilities
- support team to meet expected performance outcomes including providing formal and informal learning opportunities as needed
- develop performance plans with key performance indicators (KPIs), outputs and goals for individuals or the team which incorporate input from stakeholders
- communicate effectively with a range of stakeholders about team performance plans and team performance
- evaluate and take necessary corrective action regarding unresolved issues, concerns and problems raised by internal or external stakeholders.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- impacts of group dynamics on team performance
- methods of establishing team activities including communication processes
- strategies that can support team cohesion, participation and performance
- strategies for gaining consensus
- issue resolution strategies.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- workplace documents relevant to team task objectives.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

BSBWHS211 Contribute to the health and safety of self and others

Modification History

<table>
<thead>
<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with BSB Business Services Training Package Version 7.0.</td>
</tr>
</tbody>
</table>

Application

This unit describes the skills and knowledge required to work in a manner that is healthy and safe in relation to self and others, and to assist in responding to incidents. It covers following work health and safety (WHS) policies, procedures, instructions and requirements; and participating in WHS consultative processes.

The unit applies to those who require a basic knowledge of WHS to carry out own work in a defined context, under direct supervision or with some individual responsibility, in a range of industry and workplace contexts.

NOTES

1. The terms ‘occupational health and safety’ (OHS) and ‘work health and safety’ (WHS) are equivalent, and generally either can be used in the workplace. In jurisdictions where model WHS laws have not been implemented, registered training organisations (RTOs) are advised to contextualise this unit of competency by referring to existing WHS legislative requirements.

2. The model WHS laws include the model WHS Act, model WHS Regulations and model WHS Codes of Practice. See Safe Work Australia for further information.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

</table>

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

| 1. Operate safely in own work environment | 1.1 Identify organisational WHS policies and procedures that apply to own work setting  
1.2 Carry out work tasks according to WHS instructions  
1.3 Carry out pre-start systems and equipment checks under supervision and according to organisational policies and procedures  
1.4 Participate in responding to incidents according to organisational policies and procedures |
| 2. Operate safely within requirements of own role | 2.1 Identify individuals and/or parties to whom queries and concerns about safety in the workplace should be directed  
2.2 Identify existing and potential hazards relating to own role, and record and report them according to organisational policies and procedures  
2.3 Identify and contribute to implementing WHS instructions and organisational policies and procedures specific to own work area  
2.4 Identify and report incidents and injuries to required personnel according to organisational policies and procedures |
| 3. Participate in WHS consultative processes | 3.1 Contribute to workplace meetings, inspections, and other WHS consultative activities  
3.2 Identify existing and potential WHS hazards and report them to designated persons according to organisational policies and procedures  
3.3 Participate in actions to minimise or eliminate workplace hazards and to reduce risks |

### Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Assessment Requirements for BSBWHS211 Contribute to the health and safety of self and others

Modification History

<table>
<thead>
<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with BSB Business Services Training Package Version 7.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, and to:

- actively participate in two different work activities that contribute to the health and safety of self and others
- identify and report at least one hazard to designated personnel.

During the above, the candidate must follow required procedures and instructions relating to work health and safety (WHS) and incidents.

Knowledge Evidence

The candidate must demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit. This includes knowledge of:

- organisational safety policies, procedures, instructions and requirements relating to own work role in relation to:
  - checking systems and equipment
  - conducting routine work operations
  - personal protective equipment (PPE)
  - recording existing and potential WHS issues
  - responding to and reporting incidents and injuries
  - responding to fires and incidents
  - meaning of commonly used hazard signs and safety symbols
- duty holder responsibilities, as specified in WHS laws, including:
  - self and co-workers
  - persons conducting a business or undertaking (PCBU)
  - officers
  - others in the workplace
• distinction between hazards and risks
• WHS hazards that may be present in the workplace, including the harm they can cause and how this harm occurs
• process of hazard identification and risk control.

Assessment Conditions

Assessment must comply with WHS laws, and WHS legal responsibilities and duty of care required for this unit. It must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities undertaken by individuals carrying out WHS duties in the workplace, and must include access to:

• organisational policies, standard operating procedures, and work instructions covered in the knowledge evidence
• WHS laws relevant to performance evidence requirements
• opportunities for interaction with others
• workplace equipment and resources required for the performance evidence.

Assessors of this unit must satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- conduct one audit of own personal online profile and identify existing and potential cyber security threats
- identify and address three potential cyber security risks to own personal online profile.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- legislative requirements relating to reporting cyber security threats
- organisational policies and procedures relating to online profiles, including escalation routes for cyber security issues
- basic principles of cyber security, including:
  - importance of data confidentiality, integrity and availability
  - common cyber security terms
  - common cyber security threats that individuals might be exposed to online
  - secure internet browsing
- risk factors relating to own personal online profile, including:
  - password management practices:
    - strength of created passwords
    - number of passwords used for multiple accounts
    - frequency of change to passwords
  - own work role within organisation
  - regular tasks in own work that raise personal risk level, including internet browsing
  - potential targets for cyber attack in own direct professional network
  - protocols for handling personally identifiable information
• physical safety of devices
• industry-specific risk factors and their risk to online profiles
• common strategies, tools and techniques for improving security of own personal online profile, including for:
  • password protection
  • secure password management and account replicating and splitting
  • fundamentals of two-factor authentication
  • billing and account privacy settings
  • software patching
  • connecting to public Wi-Fi via virtual private networks (VPNs)
• common methods and practices for:
  • responding to cyber security issues, including reporting protocols
  • secure internet browsing, including banking and email
• common cyber security threats that individuals and data might be exposed to, including:
  • phishing
  • social engineering
  • social media
  • malware
  • physical threats, including data loss due to working insecurely in public spaces.

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of a work environment requiring cyber secure practices, processes and procedures.

Access is required to:
• information and data sources relating to cyber security
• device with active internet connection
• internet browser
• industry standards and organisational procedures required to demonstrate the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- identify and report three different online security threats in a work area.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- legislative requirements relating to identifying and reporting online security threats, including:
  - data protection
  - implications of Notifiable Data Breach legislation on an organisation and other associated Australian privacy laws
  - established international legislation
- organisational policies and procedures relating to online information security breaches, including:
  - blocking and reporting potential security breaches
  - escalation routes for cyber security issues
- common types of online scams and security risks, including phishing scams
- common techniques of phishing and spear phishing used by attackers, including:
  - spam email and SMS text
  - social engineering, including telephone calls, social media and website requests for information
- basic principles of cyber security
- indicators of insecure connection to websites, in particular where data is being collected
- Australian government sources of information on current online security threats
- common online security threats to which individuals might be exposed to, including physical threats
• common procedures for:
  • mitigating online security threats
  • following organisational cyber security incident response plan
  • responding to cyber security breaches.

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of a work environment requiring cyber secure practices, processes and procedures.

Access is required to:
• information and data sources relating to cyber security
• device with active internet connection
• internet browser
• industry standards and organisational procedures required to demonstrate the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

</tbody>
</table>

Application

This unit describes the skills and knowledge required to securely manage personally identifiable information (PII) and workplace information. It applies to those working in a broad range of industries and job roles under some supervision and guidance who manage large amounts of PII and workplace information. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Digital Competence – Cyber Security

Elements and Performance Criteria

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- use data protection techniques to manage workplace information for one work area over the life of a small project or work cycle.

In the course of the above, the candidate must store and share personally identifiable information (PII) in a secure manner.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- legislative requirements relating to securely managing PII and workplace information, including:
  - data protection
  - implications of Notifiable Data Breach legislation on an organisation and other associated Australian privacy laws
  - established international legislation
- organisational policies and procedures relating to:
  - identifying sensitive data
  - securely storing, sharing and managing customer information
  - encryption, and protocols for its uses
  - data classification
  - media and document labelling
  - monitoring and reporting faults and malfunctions in IT infrastructure
- industry best practice and Australian government sources of information relating to access control, including:
• password protection
• storage locations
• securely sharing
• data deletion
• risks and benefits of cloud storage
• risks of communicating sensitive information via non-secure means e.g. email and SMS
• framework for distributed storage
• technologies, techniques and protocols for storing and retrieving data
• data protection protocols and industry-standard compliance standards relating to:
  • back-up
  • data sharing
  • data storage
  • disposal of sensitive information
  • privacy impact assessments.

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of a work environment requiring cyber secure practices, processes and procedures.

Access is required to:

• information and data sources relating to cyber security
• device with active internet connection
• internet browser
• industry standards, organisational procedures, and legislative requirements required to demonstrate the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- use best practice protection strategies to maintain the security of two different electronic devices over the life of a small project or work cycle
- conduct gap analysis to evaluate effectiveness of all applied best practice strategies.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- external party security risks and methods for mitigating risk
- industry-accepted best practice protection strategies for improving security on digital devices:
  - password management
  - use of anti-virus software
  - virtual private network (VPN) use on public Wi-Fi
  - router settings
  - fundamentals of two-factor authentication
  - encryption
  - patching software applications
  - risk management methodologies
  - tools and techniques to conduct gap analysis of strategy performance
  - data protection requirements for:
    - stored data
    - data in transit
    - data in third party applications
  - mobile device security strategies.
Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of a work environment requiring cyber secure practices, processes and procedures.

Access is required to:

- information and data sources relating to cyber security
- device with active internet connection
- internet browser
- industry standards and organisational procedures required to demonstrate the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop one set of policies and procedures for a work area that promote cyber security awareness and practices
- arrange training or updates to be provided to colleagues that support practice or awareness in relation to two different cyber security matters.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- legislative requirements relating to cyber security context of performance evidence, including:
  - data protection
  - implications of Notifiable Data Breach legislation on an organisation and other associated Australian privacy laws
  - established international legislation
- organisational policies and procedures relating to:
  - securely storing, sharing and managing information
  - encryption, and protocols for its uses
  - data classification and management
  - media/document labelling
  - data governance
  - acceptable use
  - bring your own device
- Australian government sources of information on current threats
- risks associated with workplace cyber security
- strategies and techniques for promoting workplace cyber security
• techniques for:
  • implementing and promoting workplace cyber security awareness
  • facilitating training that promotes cyber security awareness, including the use of simulated activities.

**Assessment Conditions**

Skills must be assessed in a workplace or simulated environment where conditions are typical of a work environment requiring cyber secure practices, processes and procedures.

Access is required to:

• information and data sources relating to cyber security
• device with active internet connection
• internet browser
• industry standards and organisational procedures required to demonstrate the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- provide non-technical support to a cyber security threat assessment in a work area by describing three threats
- communicate and distribute findings of the identified threats.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- legislative requirements relating to contributing to cyber security threat assessments, including:
  - data protection
  - implications of Notifiable Data Breach legislation on an organisation and other associated Australian privacy laws
  - established international legislation
  - potential organisational impact of cyber attacks
  - online risks affecting organisation’s operations
  - common procedures for cyber threat rating and modelling
  - strategies, techniques and tools that improve an organisation’s cyber security and audit processes
  - organisational policies and procedures for information security, including:
    - confidentiality, integrity, and availability
    - communicating threat assessment findings.
Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of a work environment requiring cyber secure practices, processes and procedures.

Access is required to:

- information and data sources relating to cyber security
- device with active internet connection
- internet browser
- industry standards and organisational procedures required to demonstrate the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- contribute to developing and implementing risk management strategies that control two different identified cyber security risks and document the response option applied to each risk
- support evaluation of effectiveness of each implemented strategy.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- legislative and regulatory requirements relating to contributing to cyber security risk management, including:
  - data protection legislation
  - notifiable data breach legislation
  - Australian privacy laws
  - established international legislation
- key risk management strategies, including:
  - regular organisational training
  - regular threat assessment
  - cyber security incident response plan
  - clear escalation routes
- organisational policies and procedures, including for:
  - analysing and reviewing risk management methodologies
  - developing communications plans
  - evaluating effectiveness of risk management strategies
  - monitoring cyber risk
Assessment Requirements for BSBXCS404 Contribute to cyber security risk management

- reviewing currency of risk register
- industry-specific knowledge of suitable procedures for applying risk management strategy
- guidelines required for updating technology
- business process design principles in relation to risk management
- reporting mechanisms for tracking organisational cyber security maturity.

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of a work environment requiring cyber secure practices, processes and procedures.

Access is required to:
- information and data sources relating to cyber security
- device with active internet connection
- internet browser
- industry standards, organisational procedures, and legislative requirements required to demonstrate the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

</tr>
</tbody>
</table>

1. Confirm cyber security incident and contribute to its containment

1.1 Confirm nature and location of cyber security incident according to organisational policies and procedures
1.2 Estimate risk, likelihood and potential consequence of incident according to organisational response procedures
1.3 Assist in ensuring that cyber incident is contained according to legislative requirements and organisational cyber security incident response plan
1.4 Assist in confirming no further risks according to legislative requirements and organisational response procedures

2. Communicate information on cyber security incident

2.1 Escalate cyber security incident with required workplace personnel according to organisational policies and procedures
### ELEMENT | PERFORMANCE CRITERIA
---|---
| procedures | 2.2 Consult with required internal and external stakeholders on communication needs relating to cyber security incident  
| | 2.3 Assist in alerting required external parties according to legislative requirements and organisational procedures  

| 3. Contribute to post-incident activities | 3.1 Support post-breach review and reporting  
| | 3.2 Assist in identifying lessons learnt from incident response and recommended changes to cyber security response plan  
| | 3.3 Assist in updating cyber security response plan to reflect review outcomes according to organisational policies and procedures  
| | 3.4 Communicate lessons learnt and recommendations to required personnel  

### Foundation Skills

*This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.*

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to assist in:

- responding to two different cyber security incidents in a work area
- conducting one post-breach review.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- legislative requirements relating to contributing to cyber security incident responses, including:
  - data protection
  - implications of notifiable data breach legislation on an organisation and other associated Australian privacy laws
  - established international legislation
- procedures for developing communications plans
- organisational policies and procedures relating to cyber security incident response, including procedures for:
  - confirming nature and location of incidents
  - determining risk, likelihood, and consequence of incidents
  - containing incidents
  - notifying internal and external stakeholders of incident
  - internal and external communications
  - conducting post-breach reviews
- reporting methods for cyber security incidents, including official government channels
- key features of cyber security incident response plan
- risk mitigation strategies and procedures relating to cyber security
• internal and external stakeholders involved in responding to cyber security incidents.

**Assessment Conditions**

Skills must be assessed in a workplace or simulated environment where conditions are typical of a work environment requiring cyber secure practices, processes and procedures.

Access is required to:

• information and data sources relating to cyber security
• device with active internet connection
• internet browser
• industry standards, organisational procedures, and legislative requirements required to demonstrate the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to work effectively as part of permanent or project based teams in a workplace within an industry.

This unit applies to a wide range of workers, but has a specific focus on the teamwork skills required for workers with limited responsibility for others.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria, and foundation skills of this unit, including on at least one occasion, evidence of the ability to:

- identify individual and team roles and responsibilities
- plan assigned tasks according to priorities and deadlines, and in accordance with organisational requirements
- contribute to achievement of team goals
- share knowledge, ideas and problems with team members
- act on feedback in a constructive manner
- collaborate with a remote team member on a workplace issue.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- organisational requirements relevant to working in a workplace team:
  - workplace policies
  - codes of conduct
  - organisational reputation and culture
- typical compositions of workplace teams, and the roles and responsibilities of team members within organisations
- techniques for giving and receiving feedback in a constructive manner
- methods to support team members
- key principles of cross-cultural communication and communication with individuals with special needs or disabilities
• methods and tools to work with others remotely:
  • collaboration via phone or mobile
  • collaboration via video conference
  • collaboration via other digital tools or software
• issues that may impact team performance and outcomes
• techniques to collaborate effectively with those working remotely.

Assessment Conditions

Mandatory conditions for assessment include:
• A safe working or simulated environment

Assessors of this unit must satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards.

| Release 2 | This version released with BSB Business Services Training Package Version 7.0.  
Version created to clarify knowledge evidence |
| Release 1 | This version first released with BSB Business Services Training Package Version 4.0. |

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria, and foundation skills of this unit, including on at least one occasion, evidence of the ability to:

- assign tasks to team members with appropriate instruction and considering any required contingencies
- provide feedback and assistance to team members
- collate feedback on individual and team performance
- identify and implement development opportunities for others
- manage conflicts and challenges according to organisational requirements.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- organisational requirements relevant to workplace teams:
  - workplace policies
  - codes of conduct
  - organisational reputation and culture
- legislative requirements relevant to the workplace
- facilitation techniques to encourage team cohesion and effectiveness
- mentoring and coaching techniques to support team members
- strategies for conflict resolution and negotiation
- different methods and styles of communication
- key principles of cross-cultural communication and communication with individuals with special needs or disabilities
- professional behaviours to role model as a leader
- typical workplace contingencies that can impact teams:
  - unplanned leave or absence of workers
  - re-allocation of work tasks
  - succession planning for important team roles
- teamwork challenges relevant to performance evidence:
  - difficulties performing tasks
  - conflicts with clients or team members
  - potential risks or safety hazards
  - unethical or inappropriate behaviour.

Assessment Conditions

Mandatory conditions for assessment include:
- A safe working or simulated environment

Assessors of this unit must satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards.

CPCCBC4004A Identify and produce estimated costs for building and construction projects

Modification History
Not Applicable

Unit Descriptor
Unit descriptor
This unit of competency specifies the outcomes required to establish the estimated costs associated with the acquisition of materials and labour on building and construction sites, together with the application of relevant overhead costs and margins. Knowledge of physical resource and supplier identification, assessment of the availability of and requirements for skilled labour and application of appropriate codes, regulations and approvals gaining processes is essential.

Application of the Unit
Application of the unit
This unit of competency supports the needs of estimators, builders, managers and trade contractors within the construction industry responsible for producing estimated costs for labour, materials, overheads and on-costs on various residential and commercial construction projects within their scope of work as a trade contractor or builder.

Licensing/Regulatory Information

### Employability Skills Information

**Employability skills**

This unit contains employability skills.

### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

### Elements and Performance Criteria

### Required Skills and Knowledge

#### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - read and interpret drawings and specifications
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication
  - contractual arrangement problem solving
  - estimate labour and materials costs from written information
  - numeracy skills to calculate labour hours and costs, material quantities and costs
  - use appropriate costing software programs.

**Required knowledge**

Required knowledge for this unit is:
REQUIRED SKILLS AND KNOWLEDGE

- how to access and interpret:
  - national codes, including Building Code of Australia (BCA) and the Plumbing Code of Australia
  - Australian standards relevant to the industry sector
- includes state or territory and local government building and construction codes, standards and government regulations relevant to the form of building or construction being undertaken (e.g. WorkCover and EPA)
- types of building and construction drawings and specifications
- types, scope and usage of labour through the employee and subcontractor systems
- operation and structure of the organisation's costing and contracting system.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by the preparation of a detailed estimate of labour, materials and other project costs as part of the preparation of a tender or bill for a residential or commercial construction project relevant to the specific trade or sector.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- identify materials required for a project
- gather information about material supply
- interpret measurements and calculate quantities and costs
**EVIDENCE GUIDE**

- plan and allocate human resources
- identify and cost other related costs, such as those required to meet statutory and planning approval processes
- produce documentation that meets the timeframes and quality standards established by the organisation
- communicate effectively, both verbally and in writing.

**Context of and specific resources for assessment**

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- documentation that should normally be available in either a building or construction office
- relevant codes, standards and government regulations
- office equipment, including calculators, photocopiers and telephone systems
- computers with appropriate software to view 2-D CAD drawings, run costing programs and print copies
- a technical reference library with current publications on measurement, design, building construction and manufacturers’ product literature
- a suitable work area appropriate to the construction process.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of
EVIDENCE GUIDE

the Construction, Plumbing and Services Training Package

- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Plans and specifications include:
- building codes
- materials lists and quantity schedules
- materials specifications
- sketches or drawings
- statements of requirements.

Plant or equipment requirements include:
- communications equipment
- conveyors
- heavy equipment, such as wheeled and tracked earthmoving equipment, trucks and articulated vehicles
- hoists
- mobile and tower cranes
- on-site equipment, such as:
  - compressors
  - pumps
  - generators
  - portable lighting
  - lifting equipment
  - portable compaction equipment.

Unit costs may include the cost of:
- construction cost per square metre
- installation of pipes per metre
- installation of sanitary ware per unit
- laying of foundation per metre
- laying of slabs per square metre
- laying of steel tray roofing per square metre
- masonry walls per square metre
- painting per square metre
- tiling per square metre.

Project costs include:
- building or construction materials
- communications costs
- cost of meeting statutory requirements, e.g. EPA
RANGE STATEMENT

- fuels, lubricants and consumables
- organisational and subcontract labour hours
- overheads
- project administration costs
- site facilities, such as:
  - offices
  - toilets
  - lunch rooms
- waste removal fees.

Unit Sector(s)

Co-requisite units

Co-requisite units Nil

Functional area

Functional area
CPCCCM2007 Use explosive power tools

Modification History

Release 1.
Supersedes and equivalent to CPCCCM2007B Use explosive power tools.
The unit of competency was updated to the Standards for Training Packages 2012.
This version first released with CPC Construction, Plumbing and Services Training Package Version 4.0.

Application

This unit of competency specifies the skills and knowledge required to safely and effectively operate explosive power tools (EPTs) using explosive charges in a magazine to fasten materials or fix fasteners to bases.
The unit supports the application of knowledge to safely and effectively use a range of indirect action explosive powered fastening tools used in the construction industry.
It applies to workers who work with EPTs in the construction industry. It involves working under supervision in a team environment.
No licensing, legislative, or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.

|                                                                      | 3.3 Load fastener and charge into EPT in accordance with manufacturers’ specification.  
|                                                                      | 3.4 Carry out EPT operation and fix fastener into place in accordance with manufacturers’ specifications and legislative requirements.  
|                                                                      | 3.5 Check depth of fastening penetration and adjust power regulating device in accordance with conditions.  
|                                                                      | 3.6 Carry out misfire procedures in accordance with manufacturers’ specifications and legislative requirements.  
|                                                                      | 3.7 Remove temporary holdings and fixings without damage to material.                                                                                                                                 |
| 4. Maintain EPTs and kit                                             | 4.1 Check safety features of tools for serviceability in accordance with manufacturers’ specifications.  
|                                                                      | 4.2 Clean and lubricate tools in accordance with manufacturers’ specifications.  
|                                                                      | 4.3 Carry out periodic maintenance service in accordance with manufacturers’ specifications.  
|                                                                      | 4.4 Replenish diminished stocks of charges and fasteners to designed effectiveness of EPT kit.  
|                                                                      | 4.5 Check and complete logbook and record maintenance in |
| 5. Secure and store EPT equipment and charges. | 5.1 Store used charges in designated container in accordance with requirements.  
5.2 Store unused fasteners, the EPT and attachments in a carry case in line with manufacturers’ specifications. |
|------------------------------------------------|--------------------------------------------------------------------------------------------------|
| 6. Clean up after operating EPTs. | 6.1 Clear work area and dispose of, re-use or recycle materials in accordance with legislation, regulations, codes of practice and task requirements.  
6.2 Clean, check, maintain and store tools and equipment in accordance with manufacturers’ specifications and workplace requirements. |

**Foundation Skills**

This section describes the language, literacy, numeracy and employment skills essential to performance in this unit but not explicit in the performance criteria.

- **reading skills to:**
  - interpret legislative requirements including those of Australian Standards and the National Construction Code (NCC)

- **numeracy skills to:**
  - apply measurements and calculations to fastener set-out

- **oral communication skills to:**
  - use questioning to identify and confirm requirements  
  - discuss cause of problems  
  - report work site hazards, including faults in tools, equipment and materials.

**Unit Mapping Information**

Supersedes and is equivalent to CPCCCM2007B Use explosive power tools.

Companion volumes to this training package are available at the VETNet website - https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad
Assessment Requirements for CPCCCM2007 Use explosive power tools

Modification History

Release 1.
Supersedes and equivalent to CPCCCM2007B Use explosive power tools.
The unit of competency was updated to the Standards for Training Packages 2012.
This version first released with CPC Construction, Plumbing and Services Training Package Version 4.0.

Performance Evidence

To demonstrate competency in this unit, a person must use explosive power tools (EPTs) to fix metal and timber to one steel base, one concrete base, and one masonry base.
In doing this, the person must meet the performance criteria for this unit.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- jurisdictional legislation and regulations relating to setting up, operating and maintaining indirect action EPTs including those for work health and safety (WHS), and protection of the environment, including:
  - job safety analyses (JSAs)
  - safe work method statements (SWMSs)
  - safety data sheets (SDSs)
  - safety manuals and instructions for plant, tools and equipment
  - signage and barricades
  - personal protective equipment (PPE)
  - environmental and work site safety plans
- requirements of Australian Standards and the National Construction Code (NCC) relating to setting up, operating and maintaining indirect action EPTs
- functions, operations and limitations of EPTs
- EPT materials
- EPT charges and fasteners
- EPT attachments, including channel, rebate and other manufacturer attachments
- EPT, fastener and charge manufacturers’ specifications
- processes for interpreting drawings and using information for:
  - setting-out fasteners, including:
    - regulated minimum distances
• bases, including concrete, masonry or steel
• positioning material
• processes for:
  • using EPTs, including:
    • stripping and assembling tools
    • completing log of serviceability
    • maintaining and cleaning tools
    • selecting charges and fasteners applicable to the base material and material being fixed
    • misfire procedures
    • using attachments
    • complying with storage and security regulations and work health and safety (WHS) requirements for the working environment
    • selecting signage
    • test fire
  • maintaining EPTs and kits
  • securing and storing EPT equipment and charges
• materials storage and environmentally friendly waste management
• processes for the calculation of material requirements
• security and storage procedures for equipment and charges
• workplace and equipment safety requirements.

Assessment Conditions

Assessors must satisfy the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment of performance must be undertaken in the workplace or in a simulated workplace environment. Tasks are to be performed to the level of proficiency and within the time limits expected in a workplace.

Assessors are responsible for ensuring that the person demonstrating competency has access to:
• industry-standard indirect action EPTs, attachments, fasteners and charges
• specifications for tasks requiring use of EPTs
• appropriate documents, materials, tools equipment and PPE currently used in industry
• requirements of appropriate sections of legislation and regulations
• relevant workplace policies and procedures.

CPCCOHS1001A Work safely in the construction industry

Modification History
Not Applicable

Unit Descriptor

Unit descriptor
This unit of competency specifies the outcomes required to undertake Occupational Health and Safety (OHS) induction training within the construction industry.

It requires the ability to demonstrate personal awareness of OHS legislative requirements, and the basic principles of risk management and prevention of injury and illness in the construction industry.

Licensing requirements will apply to this unit of competency depending on the regulatory requirements of each jurisdiction.

Application of the Unit

Application of the unit
This unit of competency supports the attainment of the basic OHS knowledge required prior to undertaking designated work tasks within any of the sectors within the construction industry. The unit relates directly to the general induction training program specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

<table>
<thead>

4.2. Procedures for accessing first aid are identified.
4.3. Requirements for the selection and use of relevant *personal protective equipment* are identified and demonstrated.
4.4. *Fire safety equipment* is identified and discussed.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- communication skills to:
  - clarify OHS legislative requirements
  - verbally report construction hazards and risks
  - ask effective questions
  - relay information to others
  - discuss OHS issues and information

- comprehension skills to:
  - explain the basic OHS legislative requirements which will be applicable to own work
  - explain the meaning of safety signs and symbols
  - identify common construction hazards
  - discuss the basic principles of risk management.

**Required knowledge**

Required knowledge for this unit is:

- applicable Commonwealth, State or Territory OHS legislation, regulations, standards, codes of practice and industry standards/guidance notes relevant to own work.
REQUIRED SKILLS AND KNOWLEDGE

work, role and responsibilities
• basic principles of risk management and assessment for construction work
• common construction hazards
• common construction safety signage and its meanings
• general construction emergency response and evacuation procedures
• general construction work activities that require licenses, tickets or certificates of competency
• general first aid response requirements
• general procedures for raising OHS issues
• general procedures for reporting OHS hazards, accidents, incidents, emergencies, injuries, near misses and dangerous occurrences
• general procedures for responding to hazards, incidents and injuries
• general workers' compensation and injury management requirements
• OHS hierarchy of controls
• OHS responsibilities and rights of duty holders, including:
  • persons in control of construction work/projects
  • employers and self-employed persons
  • supervisors
  • employees
  • designers
  • inspectors
  • manufacturers and suppliers
• own responsibilities to comply with safe work practices relating to:
  • housekeeping
  • identification of hazards
  • preventing bullying or harassment
  • smoking
  • use of amenities
  • use of drugs and alcohol
• role of OHS committees and representatives
• types of common personal protective equipment and fire safety equipment
• types of OHS information and documentation.

Evidence Guide

EVIDENCE GUIDE
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence must confirm personal awareness of the following:

- applicable OHS legislative and safety requirements for construction work including duty of care
- the range of common construction hazards and procedures for the assessment of risk and application of the hierarchy of control
- OHS communication processes, information and documentation including the role of OHS committees and representatives, the meaning of common safety signs and symbols, and procedures for reporting hazards, incidents and injuries
- general procedures for responding to incidents and emergencies including evacuation, first aid, fire safety equipment and PPE.

Context of and specific resources for assessment

- Resources must be available to support the program including participant materials and other information or equipment related to the skills and knowledge covered by the program.
- It is recommended that the assessment tool designed specifically to support this unit of competency will provide consistency in assessment outcomes.
- Where applicable, physical resources should include equipment modified for people with disabilities
- Access must be provided to appropriate assessment support when required.
- Assessment processes and techniques must be culturally appropriate, and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed
- In all cases where practical assessment is used it will be combined with targeted questioning to assess the underpinning knowledge. Questioning will be undertaken in such a
EVIDENCE GUIDE

manner as is appropriate to the oracy, language and literacy levels of the operator, any cultural issues that may affect responses to the questions, and reflecting the requirements of the competency and the work being performed.

Method of assessment

Assessment methods may include more than one of the following:

- practical assessment
- oral questioning
- written test
- work-based activities
- simulated project based activity

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS legislative requirements relate to:

- Australian standards
- construction industry OHS standards and guidelines
- duty of care
- health and safety representatives, committees and supervisors
- licences, tickets or certificates of competency
- National Code of Practice for Induction Training for Construction Work
- national safety standards
- OHS and welfare Acts and regulations
- safety codes of practice.

Duty of care requirements relate to:

- legal responsibility under duty of care to do everything reasonably practicable to protect others from harm
RANGE STATEMENT

- own responsibilities to comply with safe work practices, including activities that require licences, tickets or certificates of competency
- relevant state OHS requirements, including employers and self-employed persons, persons in control of the work site, construction supervisors, designers, manufacturers and suppliers, construction workers, subcontractors and inspectors.

**Safe work practices** include:

- access to site amenities, such as drinking water and toilets
- general requirements for safe use of plant and equipment
- general requirements for use of personal protective equipment and clothing
- housekeeping to ensure a clean, tidy and safer work area
- no drugs and alcohol at work
- preventing bullying and harassment
- smoking in designated areas
- storage and removal of debris.

**Risk** relates to:

- likelihood of a hazard causing injury or harm.

**Principles of risk management** include:

- assessing the risks involved
- consulting and reporting ensuring the involvement of relevant workers
- controlling the hazard
- identifying hazards
- reviewing to identify change or improvement.

**Hazard** relates to:

- any thing (including an intrinsic property of a thing) or situation with the potential to cause injury or harm.

**Common construction hazards** include:

- confined spaces
- electrical safety
- excavations, including trenches
- falling objects
- hazardous substances and dangerous goods
- HIV and other infectious diseases
- hot and cold working environments
- manual handling
- noise
- plant and equipment
RANGE STATEMENT

- traffic and mobile plant
- unplanned collapse
- ultraviolet (UV) radiation
- working at heights.

**Measures for controlling** risk to eliminate or minimise hazards in accordance with the hierarchy of control include:

- elimination
- substitution
- isolation
- engineering control
- administrative control
- personal protective equipment.

**OHS communication processes** include:

- discussions with OHS representatives
- OHS meetings
- OHS notices, newsletters, bulletins and correspondence
- OHS participative arrangements
- processes for raising OHS issues
- toolbox talks
- workplace consultation relating to OHS issues and changes.

**OHS information and documentation** includes:

- accident and incident reports
- Acts and regulations
- Australian standards
- codes of practice
- construction documentation and plans
- emergency information contact
- evacuation plans
- guidance notes
- job safety analyses
- labels
- material safety data sheets (MSDS)
- proformas for reporting hazards, incidents and injuries
- reports of near misses and dangerous occurrences
- risk assessments
- safe work method statements
- safety meeting minutes
- site safety inspection reports.

**Designated OHS personnel** includes:

- first aid officers
- OHS committee members
RANGE STATEMENT

- OHS representatives
- supervisors.

**Safety signs and symbols** include:
- emergency information signs (e.g. exits, equipment and first aid)
- fire signs (e.g. location of fire alarms and firefighting equipment)
- hazard signs (e.g. danger and warning)
- regulatory signs (e.g. prohibition, mandatory and limitation or restriction)
- safety tags and lockout (e.g. danger tags, out of service tags).

**Relevant authorities** include:
- emergency services (e.g. police, ambulance, fire brigade and emergency rescue)
- OHS regulatory authority
- supervisor.

**Incidents** include:
- accidents resulting in personal injury or damage to property
- near misses or dangerous occurrences which do not cause injury but may pose an immediate and significant risk to persons or property, and need to be reported so that action can be taken to prevent recurrence, for example:
  - breathing apparatus malfunctioning to the extent that the user's health is in danger
  - collapse of the floor, wall or ceiling of a building being used as a workplace
  - collapse or failure of an excavation more than 1.5 metres deep (including any shoring)
  - collapse or partial collapse of a building or structure
  - collapse, overturning or failure of the load bearing of any scaffolding, lift, crane, hoist or mine-winding equipment
  - damage to or malfunction of any other major plant
  - electric shock.
  - electrical short circuit, malfunction or explosion
  - uncontrolled explosion, fire or escape of gas, hazardous substance or steam
  - any other unintended or uncontrolled incident or event arising from operations carried on at a
RANGE STATEMENT

General procedures for responding to incidents and emergencies include:

- basic emergency response (keep calm, raise alarm, obtain help)
- evacuation
- notification of designated OHS personnel and authorities
- notification of emergency services (e.g. when and how)
- referring to site emergency plans and documentation.

Emergencies include:

- chemical spill
- fire
- injury to personnel
- structural collapse
- toxic and/or flammable vapours emission
- vehicle/mobile plant accident.

Personal protective equipment includes:

- aprons
- arm guards
- eye protection
- gloves
- hard hat
- hearing protection
- high visibility retro reflective vests
- protective, well fitting clothing
- respiratory protection
- safety footwear
- UV protective clothing and sunscreen.

Fire safety equipment includes:

- breathing apparatus
- fire blankets
- firefighting equipment.

Functional area

Functional area
CPCCWHS1001 Prepare to work safely in the construction industry

Modification History

Release   Comment

Version   Replaces superseded equivalent CPCCOHS1001A Work safely in the construction industry.

Application

This unit of competency specifies the mandatory work health and safety training required prior to undertaking construction work. The unit requires the person to demonstrate personal awareness and knowledge of health and safety legislative requirements in order to work safely and prevent injury or harm to self and others. It covers identifying and orally reporting common construction hazards, understanding basic risk control measures, and identifying procedures for responding to potential incidents and emergencies. It also covers correctly selecting and fitting common personal protective equipment (PPE) used for construction work.

This unit meets the general construction induction training requirements of:

- Part 1.1 Definitions and Part 6.5 of the Model Work Health and Safety Regulations;
- Division 11 of Part 3 of the Occupational Safety and Health Regulations 1996 for Western Australia; and
- Division 3 of Part 5.1 of the Occupational Health and Safety Regulations 2007 for Victoria.

It is expected that site-specific induction training will be conducted prior to conducting construction work.

Licensing, legislative, regulatory or certification requirements apply to this unit. Relevant work health and safety state and territory regulatory authorities should be consulted to confirm jurisdictional requirements.

Pre-requisite Unit

Unit Sector
Construction

Elements and Performance Criteria

Elements describe the essential outcomes. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.

1. Identify health and safety legislative requirements of construction work.
   1.1. Basic roles, responsibilities and rights of duty holders are identified and explained according to jurisdictional health and safety legislative requirements.
   1.2. Duty of care requirements are identified.
   1.3. Construction safe work practices are identified and explained.

2. Identify construction hazards and risk control measures.
   2.1. Basic principles of risk management are identified.
   2.2. Construction hazards are identified and discussed.
   2.3. Purpose and use of PPE are identified and demonstrated.
   2.4. Measures for controlling hazards are identified.

3. Identify health and safety communication and reporting processes.
   3.1. Health and safety documents are identified and discussed.
   3.2. Roles of designated health and safety personnel are identified and explained.
   3.3. Safety signs and symbols are identified and explained.
   3.4. Procedures for reporting hazards, incidents and injuries are identified.

4. Identify incident and emergency response
   4.1. Procedures for responding to incidents and emergencies are identified and explained.
   4.2. Procedures for accessing first aid are identified.
procedures.  

4.3. Types and purpose of fire safety equipment are identified and discussed.

Foundation Skills

This section describes the language, literacy, numeracy and employment skills essential to performance in this unit but not explicit in the performance criteria.

<table>
<thead>
<tr>
<th>Skill</th>
<th>Performance feature</th>
</tr>
</thead>
<tbody>
<tr>
<td>Numeracy skills to:</td>
<td>• locate and recognise numbers commonly used in safety signs.</td>
</tr>
</tbody>
</table>
| Oral communication skills to: | • ask questions to clarify instructions  
                                  • listen to instructions to identify key safety information  
                                  • tell another person about a construction problem or hazard. |
| Reading skills to:         | • follow simple pictorial safety instructions  
                                  • follow simple safety instructions that are written in English. |
| Problem-solving skills to: | • select risk control measures.                                                     |

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

**Jurisdictional health and safety legislative requirements** must include at least one of the following state and territory Acts or their equivalent:

- Australian Capital Territory: Work Health and Safety Act 2011
- New South Wales: Work Health and Safety Act 2011
- South Australia: Work Health and Safety Act 2012
- Victoria: Occupational Health and Safety Act 2004
- Western Australia: Occupational Safety and Health Act 1984.

Assessment Requirements for CPCCWHS1001 Prepare to work safely in the construction industry

Modification History

Release  Comment

Version  Replaces superseded equivalent CPCCOHS1001A Work safely in the construction industry.

Performance Evidence

A person demonstrating competency in this unit must satisfy the requirements of the elements, performance criteria, foundation skills, and range of conditions of this unit, in addition to the specific performance and knowledge evidence described below.

The person must:

- identify and orally report two construction hazards
- orally explain how risk could be reduced or removed in relation to those two hazards
- select appropriate personal protective equipment (PPE) to control the risk
- orally explain basic procedures for responding to incidents and emergencies, including types and purpose of the following fire safety equipment:
  - fire blankets
  - fire extinguishers, including water, carbon dioxide, powder and foam
  - hose reels and mains
- identify and orally explain the meaning of required safety signs and symbols
- orally explain the purpose of job safety analyses (JSAs), safe work method statements (SWMS) and safety data sheets (SDS)
- orally explain the roles of the following designated health and safety personnel:
  - first aid officers
  - work health and safety representatives
  - work health and safety committee members
  - supervisors.

The person must also demonstrate correctly fitting to themselves the PPE listed below:

- eye protection
- hearing protection
- hard hat
- high visibility retro reflective vest.
Knowledge Evidence

A person must demonstrate knowledge of:

- basic duty of care, and the roles, rights and responsibilities of business owners and workers in relation to working safely while undertaking construction work
- basic meaning of the terms ‘hazard’ and ‘risk’
- basic principles of risk management, including the following five steps in order:
  - identify hazard
  - assess risk
  - consult and report
  - control hazard
  - review
- basic procedures for accessing first aid
- construction hazards, including those relating to:
  - asbestos
  - confined spaces
  - electrical: power lines, cords and equipment
  - excavations and trenches, including underground services
  - dust
  - falling objects
  - hazardous substances and dangerous goods
  - hot and cold work environments
  - manual handling
  - noise
  - plant and equipment operation
  - traffic and mobile plant
  - unplanned collapse
  - ultraviolet radiation
  - working at heights, including scaffolding
- construction work that requires a high risk work licence
- types, purpose and use of PPE used in construction, as specified in the performance evidence, and including safety footwear, harnesses and respiratory protection, and ultraviolet (UV) protective clothing and sunscreen
- construction emergencies, including:
  - chemical spill
  - fire
  - injury to personnel
  - structural collapse
  - toxic or flammable vapour emission
  - vehicle or mobile plant accident
• construction incidents, including:
  • incidents resulting in personal injury or damage to property
  • near misses or dangerous occurrences that do not cause injury but may pose an immediate and significant risk to persons or property, and need to be reported so that action can be taken to prevent recurrence
• safe work practices that should be followed in construction work, including:
  • accessing and using site amenities for drinking water, hand washing and toilets
  • following safety procedures when performing work tasks and using equipment
  • identifying and reporting hazards, incidents and injuries in the workplace
  • keeping the work area clean, tidy and free from debris
  • not using or being affected by drugs and/or alcohol while at work
  • preventing bullying and harassment in the workplace
  • selecting and using required PPE
  • smoking only in designated areas
  • storing and removing waste and debris in designated areas
• meanings and symbols associated with construction safety signs, symbols and tags, including:
  • emergency information signs: exits, emergency equipment and first aid
  • fire signs: location of fire alarms and firefighting equipment
  • hazard signs and symbols: danger and warning
  • regulatory signs and symbols: prohibition, mandatory and limitation or restriction
  • safety and lockout tags: danger and out-of-service tags.

Assessment Conditions
The following must be present and available to learners during assessment activities:
• equipment:
  • all of the PPE listed in the performance evidence
• specifications:
  • state or territory Act relevant to the location of the learner, as specified in the range of conditions.

The assessment of performance evidence must be done by direct observation of the learner by an assessor, either by an assessor observing the learner physically and/or by an assessor observing the learner via audio and visual media in real time.

Assessor requirements
As a minimum, assessors must satisfy the assessor requirements in the Standards for Registered Training Organisations (RTOs) current at the time of assessment.
Assessors must hold the unit *CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry*, or its successor.

**Links**

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Modification History

Release 1.

Supersedes and equivalent to CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry.

The unit of competency was updated to the Standards for Training Packages 2012.

This version first released with CPC Construction, Plumbing and Services Training Package Version 4.0.

Application

This unit specifies the outcomes required to carry out work health and safety (WHS) requirements through safe work practices in all on- or off-site construction workplaces.

It requires the performance of work in a safe manner through awareness of risks and work requirements, and the planning and performance of safe work practices with concern for personal safety and the safety of others.

The unit covers fundamental WHS requirements necessary to undertake work tasks within any sector in the construction industry. It includes the identification of hazardous materials, including asbestos, and compliance with legislated work safety practices. It does not cover removal of asbestos, which is a licensed activity.

It applies to workers in the construction industry.

This unit also relates directly to the general construction induction training requirements of the Model Work Health and Safety Regulations 2011 and relevant occupational health and safety regulations for Victoria and for Western Australia. Achievement of CPCCWHS1001 Prepare to work safely in the construction industry covers these induction training requirements.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

Modification History

Release 1.

Supersedes and equivalent to CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry.

The unit of competency was updated to the Standards for Training Packages 2012.

This version first released with CPC Construction, Plumbing and Services Training Package Version 4.0.

Performance Evidence

To demonstrate competency in this unit, a person must apply WHS requirements, policies and procedures on three separate and different occasions in the construction industry.

In doing this, the person must meet the performance criteria for this unit.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- jurisdictional work health and safety (WHS) and environmental legislation and regulations
- workplace requirements for undertaking all aspects of applying WHS requirements, policies and procedures in the construction industry including interpreting work orders and reporting problems
- procedures and policies for identifying and reporting hazards, safety risks and hazardous materials, including asbestos, in the workplace
- procedures for following safe practices when dealing with hazards and hazardous materials, and controlling risks associated with them
- use of appropriate protective equipment and clothing, choice of tools, use of barricades and signage, and the necessity of following relevant safety procedures as indicated
- methods of safely performing tasks in accordance with legislative requirements and workplace policies and procedures
- procedures for reporting hazards, incidents and injuries
- necessity for keeping work site clear of risks to prevent accidents and to meet environmental requirements
- policies and procedures to be followed in an accident, fire or other type of emergency.
Assessment Conditions

Assessors must satisfy the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment of performance must be undertaken in the workplace or in a simulated workplace environment. Tasks are to be performed to the level of proficiency and within the time limits expected in a workplace.

Assessors are responsible for ensuring that the person demonstrating competency has access to:

- appropriate documents, materials, tools, equipment and personal protective equipment currently used in industry
- requirements of appropriate sections of legislation and regulations
- relevant workplace policies and procedures.

Companion volumes to this training package are available at the VETNet website - https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=7e15fa6a-68b8-4097-b099-030a5569b1ad
CPCPCM2043A Carry out WHS requirements

Modification History

Changes to application, elements and performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPCM2023A

Unit Descriptor

This unit of competency specifies the outcomes required to carry out work health and safety (WHS) requirements through safe work practices in a plumbing and services work environment.

The unit requires the performance of work in a safe manner through awareness of risks, work requirements and the planning and performance of safe work practices with concern for personal safety and the safety of others.

It includes the initial response to workplace emergencies; the safe use of electricity; the identification of hazardous materials, including asbestos; and compliance with legislated work safety practices.

Application of the Unit

This unit of competency supports safe work practices for the plumbing and services industry.

Site location for work application may be either domestic or commercial and may be a new work site or an existing structure or fitting being renovated, extended, restored or maintained.

It could also be conducted in an on or off-site workshop or at a customer's premises.

The unit does not cover the removal of asbestos, which is a licensed activity.

Licensing/Regulatory Information

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites

Nil

Employability Skills Information

This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

| 1 | Participate in workplace induction. | 1.1 *Workplace induction* is received. |
|   |                                  | 1.2 Location of emergency equipment is identified. |
|   |                                  | 1.3 Current workplace emergency and evacuation procedures are identified. |
|   |                                  | 1.4 Identify safe working conditions with employer. |
|   |                                  | 1.5 Identify employee and employer rights and responsibilities regarding safe working conditions. |

| 2 | Assess risks. | 2.1 Hazards in the work area are identified, assessed and reported to designated personnel. |
|   |                | 2.2 WHS issues and risks in the work area are identified, assessed and reported to designated personnel. |
|   |                | 2.3 *Safe work practices*, procedures and instructions are followed. |
|   |                | 2.4 WHS, hazard, accident or incident reports are completed according to workplace procedures and *statutory and regulatory authorities* and legislation. |

| 3 | Identify hazards and hazardous materials on work site. | 3.1 Hazardous materials on a work site are identified, secured and tagged using appropriate signs and symbols; and if appropriate, handled and used according to company and legislated procedures. |
|   |                                                       | 3.2 Measures for controlling risks and construction hazards |
are applied effectively and immediately.

3.3 *Asbestos-containing materials (ACM) are identified* on a work site and *reported* to designated personnel.

4 Plan and prepare for safe work practices.

4.1 Quality assurance requirements of company operations and safe work practices are identified and adhered to.

4.2 Personal protective equipment (PPE) is selected, correctly fitted and used according to the requirements of the job.

4.3 Tools and equipment are selected consistent with safe work practice requirements, checked for serviceability, and any faults are reported to supervisor.

4.4 Required barricades, hoardings and signage are determined and erected at job location.

4.5 Material safety data sheets (MSDS) are identified and applied.

4.6 *Sustainability principles and concepts* are observed when preparing for and undertaking work process.

5 Use safe work practices to carry out work.

5.1 Work is carried out safely and according to state or territory statutory requirements and company policy.

5.2 *Safety hazards* and common workplace accidents and incidents are identified in the course of work and reported according to policy.

5.3 Industry, site and personal safety rights and responsibilities are applied.

5.4 Prohibited tools and equipment in areas with identified asbestos are identified and isolated.

5.5 Firefighting equipment is selected and used according to type of fire and correct operating procedures.

5.6 Current site emergency and first aid procedures are followed.
6 Maintain safety of self and others.

6.1 Safety signs, identified in terms of colour and shape, symbols and alarms, are adhered to.

6.2 Hazardous chemicals and materials are identified, handled and stored, maintaining the safety to self, others and the environment.

6.3 Incidents are reported according to legislative requirements and workplace procedures.

6.4 Common causes of accidents in the industry are identified and prevention measures implemented in line with site induction.

6.5 Site area is maintained to prevent incidents and accidents and protect self and others

7 Use electricity safely.

7.1 Safest supply and route for electrical supply are determined.

7.2 Leads are supported and placed according to regulations.

7.3 Power board visual check is conducted.

7.4 Leads and equipment are checked for tags and visual damage.

7.5 Electrical hazards are identified and reported.

8 Apply emergency response.

8.1 Emergencies are identified.

8.2 Emergency response is provided according to company procedures and requirements.

8.3 Details of actions taken are reported according to company procedures and requirements using appropriate communications.

9 Clean up work site area.

9.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specifications.

9.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations.
and standard work practices.

9.3 Information is accessed and documentation completed according to workplace requirements.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - complete written reports and other relevant documentation
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to:
  - evaluate safety issues in the workplace and determine appropriate action
  - recognise WHS hazards, including asbestos, and take all opportunities to alleviate safety problems in a variety of construction work sites and environments
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools or materials
- literacy skills to read and interpret:
  - documentation from a variety of sources
  - MSDS
  - work safety procedures and instructions
- self-management skills to deal calmly and effectively with any potential safety problems and work closely with other team members and supervisors to ensure safe working conditions are maintained
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- asbestos management code relating to prevention of exposure
- job safety analysis (JSA) and safe work method statements (SWMS)
- manual handling techniques
- MSDS
- relevant legislation, regulations and workplace requirements relating to WHS, including hazard reduction and personal safety
- requirements for working in confined spaces and at height, including on roofs
- tools and equipment prohibited from being used near identified ACM
- risk assessment
- safe work practices in normal working environment
- types, possible location and risks of ACM, including serpentine and amphobile groups and their use in common building materials
- workplace and equipment safety requirements
- workplace hazards and their precautions and reduction
- workplace response to emergencies

**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications for applying safe work practices in the workplace
- apply safety requirements throughout the performance of work sequences, including electrical requirements and personal protective clothing and equipment
- apply sustainability principles and concepts
- undertake site and workplace induction
- correctly identify the location of ACM
- understand and apply policies and procedures for reporting presence of ACM to designated personnel
- assess workplace risks and interpret and apply safe work practices
understand workplace requirements for emergency response, including evacuation procedures

- correctly locate and identify workplace firefighting and other safety equipment and appliances

- correctly select and use appropriate processes, tools and equipment

- safely complete all work to specification

- comply with regulations, standards and workplace instructions, procedures and processes, including reporting and documentation

- communicate and work effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement

- realistic tasks or simulated tasks covering the minimum task requirements

- relevant specifications and work instructions

- tools and equipment appropriate to applying safe work practices

- support materials appropriate to activity

- workplace instructions relating to safe work practices and addressing hazards and emergencies

- material safety data sheets

- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package

- include direct observation of tasks in real or
simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application

- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

*Workplace induction* may include:
- first aid officers and kits
personnel competent and/or licensed in the safe handling of asbestos
site induction work site locations
specific site WHS issues
specific site requirements.

**Safe work practices** are to be according to state and territory legislation and regulations and may include:

- handling of materials
- hazard control procedures and procedures for handling hazardous materials and substances
- PPE prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of first aid equipment
- use of tools and equipment
- workplace environment and safety.

**Statutory and regulatory authorities** include:

- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

**Identifying and reporting asbestos-containing materials:**

- includes recognising common types of ACM that may be found in construction materials and buildings
- covers asbestos rope/fabrics, asbestos cement sheeting, asbestos cement piping and lagging on pipes, bituminous waterproof membrane, millboard, asbestos flues, sheeting under ceramic or vinyl floor or wall tiles in wet areas
- involves reporting ACM to person in control of the workplace as set out in the relevant Asbestos Management Code.

**Sustainability principles and concepts:**

- cover the social, economic and environmental use of resources to meet current and future needs
- may include:
  - selecting appropriate components and material
  - choosing efficient products
  - using material efficiently
  - storing and disposing of hazardous material to ensure minimal environmental impact.
Safety hazards may include:
- hazards and risks associated with tools and equipment
- inflammable materials and fire hazards
- lifting practices
- lighting, gases, electricity and water
- spillage, waste and debris
- toxic and hazardous substances
- working at heights
- working in confined spaces.

Emergencies may include:
- accidents
- fires
- injuries
- sudden illness.

Emergency response may include:
- common site signs
- equipment tags
- facility or location signs
- safety barricades and warning signs
- site direction
- traffic signs
- workplace evacuation involving staff and customers.

Custom Content Section

Not applicable.
CPPSEC3124 Prepare and present evidence in court

Modification History
Release 1.
Supersedes and is equivalent to CPPSEC3009A Prepare and present evidence in court.
Updated to meet the Standards for Training Packages.
This version first released with CPP Property Services Training Package Version 7.0.

Application
This unit specifies the skills and knowledge required to prepare and present evidence in court.
It requires
- sourcing, organising and checking security information to be used as evidence in court
  proceedings, and checking compliance against rules of evidence and evidence
  management principles to ensure admissibility
- participating in oral briefing sessions, submitting evidence briefs and preparing
  documentation and exhibits
- adhering to court procedures and protocols such as those relating to personal presentation,
  manner and language
- presenting evidence in a clear, concise and unambiguous manner and providing specialist
  opinion on request.
It applies to people working independently or under limited supervision as members of a
security team.
This unit may form part of the licensing requirements for people engaged in security
operations in those states and territories where these are regulated activities.

Pre-requisite Unit
Nil

Unit Sector
Security operations

Elements and Performance Criteria

| Elements describe the essential outcomes. | Performance criteria describe what needs to be done to demonstrate achievement of the element. |
1. **Prepare evidence.**

1.1 Review workplace policies and procedures to ensure compliance with legal rights and responsibilities when preparing and presenting evidence in court.

1.2 Source, research and collate case summary and supporting information.

1.3 Select information to be used as evidence in court and confirm its relevance, validity and admissibility in court.

1.4 Organise evidence and check compliance against evidence management principles.

1.5 Interpret requirements for recording and presenting evidence in court.

2. **Prepare for court proceedings.**

2.1 Participate in oral briefing session with relevant persons to confirm court arrangements, own role and involvement.

2.2 Discuss information to be presented as evidence and clarify negotiation parameters with relevant persons.

2.3 Submit briefs of evidence in a logical sequence and check compliance with rules of evidence to ensure admissibility in court proceeding.

2.4 Conduct a thorough review of material to be used or referred to in court proceeding prior to presentation in court to ensure familiarity, completeness and availability.

2.5 Prepare documentation and exhibits and review to confirm their acceptability for use in court.

3. **Attend court proceeding and present evidence.**

3.1 Attend court and adhere to court procedures and protocols including those for personal presentation, manner and language throughout proceeding.

3.2 Present admissible evidence in a clear, concise and unambiguous manner and on request, provide specialist opinion within own area of competence and expertise in accordance with evidence requirements.

3.3 Note, file and store outcomes of proceedings and associated documentation and evidence in accordance with evidence management principles.

---

**Foundation Skills**

This section describes the language, literacy, numeracy and employment skills essential to performance in this unit but not explicit in the performance criteria:

- language skills to use security industry approved terminology
- writing skills to:
  - prepare documentation using formal structure and language
  - sequence security information and evidence to present cohesive text
- reading skills to interpret:
  - procedures and policies that clarify legal rights and responsibilities
  - information and evidence that may be technical in nature, and in pictorial, diagrammatic or written formats
- speaking and listening skills to:
  - use active listening to check understanding when participating in briefing sessions
  - participate effectively in spoken interactions in a court setting using strategies to confirm, clarify or repair understanding
  - make constructive additions to what has been said when offering own specialist opinion in court
- numeracy skills to estimate time required to complete work tasks
- problem solving skills to:
  - verify accuracy and sources when gathering information and evidence
  - analyse information to ensure it complies with rules of evidence for admissibility
- teamwork skills to adjust personal communication styles in response to the opinions, values and needs of others
- technology skills to use a range of common information technologies to access, store, study, retrieve, transmit and manipulate data or information that may be used as evidence.

**Unit Mapping Information**

Supersedes and is equivalent to CPPSEC3009A Prepare and present evidence in court.

**Links**

Companion volumes to this training package are available at the VETNet website - https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=6f3f9672-30e8-4835-b348-205dfc13d9b
Assessment Requirements for CPPSEC3124 Prepare and present evidence in court

Modification History

Release 1.
Supeersedes and is equivalent to CPPSEC3009A Prepare and present evidence in court.
Updated to meet the Standards for Training Packages.
This version first released with CPP Property Services Training Package Version 7.0.

Performance Evidence

To demonstrate competency in this unit, a person must prepare and present evidence in court in two separate court proceedings.
In doing this, the person must meet the performance criteria for this unit.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- standard operating procedures and workplace policies that ensure compliance with legislative and regulatory requirements when preparing and presenting evidence in court:
  - anti-discrimination and diversity
  - duty of care
  - licensing requirements and limits of own authority
  - information privacy and confidentiality
  - workplace health and safety (WHS)
- basic research techniques that can be used to gather information and evidence
- evidence management principles
- methods for complying with privacy and confidentiality regulations when gathering, presenting and storing security information
- methods for identifying proofs of an offence
- methods for preserving, maintaining, storing and transporting evidence and exhibits that may be used in court
- operational functions of a range of information technologies used to gather, organise and present security information and evidence
- own areas of competence and expertise to provide specialist opinion in court
- procedures for preparing briefs of evidence
- procedures, protocols and rules to be followed when presenting evidence in court:
  - addressing court personnel
  - language
• manner
• participating and giving evidence
• personal presentation
• who's who in court
• purpose of the Evidence Act
• requirements for recording information that is factual and can be used as evidence in court, including meaning of ‘continuity of evidence’
• requirements for recording and reporting incidents
• requirements for taking statements from witnesses
• rules of evidence that can be presented in court:
  • contemporaneousness
    • must not be 'hearsay'
    • must not be opinion
    • must be relevant
    • must be admissible
• storage requirements for information that is susceptible to spoil or damage, such as film, tapes and images
• techniques for validating the accuracy and reliability of security information and evidence
• treatment of persons being interviewed
• types of documentation and exhibits that may be presented as evidence in court
• types of law:
  • civil
  • common
  • criminal
  • statute.

Assessment Conditions
Assessors must satisfy the requirements for assessors contained in the Standards for Registered Training Organisations (RTOs). All individuals engaged by a licensed RTO for security licensing purposes must hold both a security trainer’s licence (where such a licence exists within the relevant jurisdiction) and a security operative licence that authorises the security activities about which the individual is training/assessing. Regulators may impose other assessor conditions to meet jurisdictional assessment requirements.

Assessment of performance must be undertaken in an operational workplace environment or environment that reflects workplace conditions. Tasks are to be performed to the level of proficiency and within the time limits that would be expected in a workplace.

The assessment of performance evidence must be done by direct observation of the learner by an assessor, either by an assessor observing the learner physically or by an assessor observing the learner via audio and visual media.

Assessment of performance evidence is only valid where the learner has been assessed performing the role of a security officer.
Assessors are responsible for ensuring that the person demonstrating competency has access to:

- specifications of assessment tasks to prepare and present evidence in court
- appropriate documents, materials, equipment and personal protective equipment (PPE) currently used in industry
- information technologies required to gather, organise and present security information and documentation
- standard operating procedures and workplace policies related to the security work role and which specify requirements for complying with industry legislation and regulations
- access to a court environment to allow achievement of the performance evidence.

**Links**

Companion volumes to this training package are available at the VETNet website - https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=6f3f9672-30e8-4835-b348-205dfcf13d9b
CPPSEC5003 Assess security risk management options

Modification History

Release 1  This version first released with CPP Property Services Training Package Release 9.0.

Supersedes and is equivalent to CPPSEC5003A Assess security risk management options. Updated to meet the Standards for Training Packages.

Application

This unit specifies the skills and knowledge required to assess security risks associated with client operations and formulate suitable treatment options as part of a risk management strategy. It includes analysing the client’s security objectives and operating environment and establishing criteria to select and prioritise risk treatment options consistent with recognised industry practice and guidelines provided by ISO 31000:2018 Risk management – Guidelines (ISO 31000). The unit requires preparing formal reports detailing risk management options and possible consequences of not implementing recommended treatments.

This unit is suitable for those using a broad range of cognitive, technical and communication skills to select and apply methods and technologies to analyse information and provide solutions to sometimes complex problems.

Legislative, regulatory or certification requirements apply in some states and territories to the provision of advice on security solutions, strategies, protocols and procedures. For further information, check with the relevant regulatory authority.

Pre-requisite Unit

None.

Unit Sector

Security/Risk management

Elements and Performance Criteria

Elements describe the essential outcomes. Performance criteria describe what needs to be done to demonstrate achievement of the element.

1. Assess client’s security requirements

   1.1 Access and interpret key requirements of legislation, regulations and Australian standard ISO 31000 to understand and comply with requirements for assessing
1 Define and risk environment. security risk management options.

1.2 Clarify client security objectives and risk assessment terms of reference in consultation with relevant persons.

1.3 Source and review information to identify and assess risks associated with operating environment of client.

1.4 Analyse type, nature and cause of identified security risks and prioritise based on severity and likelihood of occurrence.

1.5 Document risk assessment outcomes and check to ensure data currency and reliability.

2 Formulate security risk management options. Identify security risk treatment options commensurate with risk assessment and client requirements.

2.1 Identify security risk treatment options commensurate with risk assessment and client requirements.

2.2 Research the application of identified treatment options in similar contexts to assess their effectiveness in mitigating risks to client’s operating environment.

2.3 Establish criteria to assess effectiveness of treatment options consistent with recognised industry practice and guidelines provided by ISO 31000.

2.4 Apply criteria to select and prioritise recommended treatment options.

3 Finalise and present security risk management options. Finalise and document security risk assessment detailing recommended risk management options and possible consequences of not implementing recommended treatments.

3.1 Finalise and document security risk assessment detailing recommended risk management options and possible consequences of not implementing recommended treatments.

3.2 Check report to ensure analysis and recommendations are clear, coherent and consistent with terms of reference, and supported by verifiable information.

3.3 Present report to relevant persons within agreed timeframes and explain identified security risks and treatment options to enhance understanding and acceptance of recommendations.

3.4 Complete and secure risk assessment documentation in a manner that facilitates future retrieval and maintains client confidentiality according to workplace and
regulatory requirements.

**Foundation Skills**
As well as the foundation skills explicit in the performance criteria of this unit, candidates require:
- oral communication skills to negotiate client agreement
- writing skills to prepare succinct and logically structured assessment reports
- numeracy skills to apply basic probability statistics when assessing security risks.

**Unit Mapping Information**
Supersedes and equivalent to CPPSEC5003A Assess security risk management options.

**Links**
Companion volumes to this training package are available at the VETNet website - https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=6f3f9672-30e8-4835-b348-205dfcf13d9b
Assessment Requirements for CPPSEC5003 Assess security risk management options

Modification History

Release 1  This version first released with CPP Property Services Training Package Release 9.0.

Supersedes and is equivalent to CPPSEC5003A Assess security risk management options. Updated to meet the Standards for Training Packages.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by assessing security risks and formulating risk management options associated with two of the following scenarios:

- security of a mass gathering
- security of a crowded place
- asset security.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- legislative and regulatory requirements that apply when assessing security risk management options:
  - key requirements of legislation, regulations and codes of conduct governing security risk management in the jurisdiction of operation
  - legal rights and responsibilities of employers, supervisors and employees associated with work health and safety and duty of care
  - licensing requirements in the security industry
  - trespass and removal of persons
  - use of force
- application of integrated security measures including physical security, manpower, security technologies and security of personnel and information
- distinction between information and intelligence and methods for validating information sources
- implications for security risk management arising from:
  - National Guidelines for the Protection of Places of Mass gathering from Terrorism
  - Active Armed Offender Guidelines for Crowded Places
  - Improvised Explosive Device Guidelines for Crowded Places
  - Chemical Weapon Guidelines for Crowded Places
• Hostile Vehicle Guidelines for Crowded Places
• methods for determining the type, nature and causes of potential and actual security risks
• methods for prioritising security risks and treatment options based on degree of risk
• process and application of dynamic risk assessment and risk management methods
• purpose of Australia’s Strategy for Protecting Crowded Places from Terrorism and understanding of:
  • definition of crowded places
  • key security issues for crowded places
  • objectives, characteristics and identification of active armed offenders
  • definition of hostile vehicles and methods of attack
  • signs of chemical weapons attack and recommend response
  • general features of improvised explosive devices and recommended incident response
• recognised industry practice and application of ISO 31000:2018 Risk management – Guidelines (ISO 31000) when establishing criteria to assess risks and treatment options
• types of treatment options appropriate to the range of security risks and threats to various client operating environments:
  • assets
  • buildings
  • crowded places
  • mass gatherings.

Assessment Conditions
Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

All individuals engaged by a licensed RTO for security licensing purposes must hold both a security trainers licence (where such a licence exists within the relevant jurisdiction) and the licence for performing the security activities for which the individual is providing training or assessment. Regulators may impose other assessor conditions to meet jurisdictional assessment requirements.

Assessment must be conducted in the workplace or in a simulated workplace environment. Candidates must have access to:

• legislation, regulations and codes of practice that apply to assessing security risk management options in the jurisdiction of operation
• client instructions and operating environment information, resources and information technologies required to achieve the performance evidence
• ISO 31000
• National Guidelines for the Protection of Places of Mass gathering from Terrorism
• Australia’s Strategy for Protecting Crowded Places from Terrorism
• National Guidelines for the Protection of Places of Mass gathering from Terrorism
• Active Armed Offender Guidelines for Crowded Places
• Improvised Explosive Device Guidelines for Crowded Places
- Chemical Weapon Guidelines for Crowded Places

CPPSEC5004 Develop security risk management plans

Modification History

Release 1 This version first released with CPP Property Services Training Package Release 9.0.

Supersedes and is equivalent to CPPSEC5004A Prepare security risk management plan. Updated to meet the Standards for Training Packages.

Application

This unit specifies the skills and knowledge required to develop comprehensive security risk management plans based on the principles of ISO 31000:2018 Risk management – Guidelines (ISO 31000). It includes identifying and evaluating security risks and existing control measures, developing action plans to identify and manage risks, designing risk treatment options and testing them in the field as part of a security risk management strategy.

This unit is suitable for those using a broad range of cognitive, technical and communication skills to select and apply methods and technologies to analyse information and provide solutions to sometimes complex problems.

Legislative, regulatory or certification requirements apply in some states and territories to the provision of advice on security solutions, strategies, protocols and procedures. For further information, check with the relevant regulatory authority.

Pre-requisite Unit

None.

Unit Sector

Security/Risk management

Elements and Performance Criteria

Elements describe the essential outcomes. Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Evaluate security risks and controls.

1.1 Access and interpret key requirements of legislation, regulations and Australian standard ISO 31000 to understand and comply with requirements for developing security risk management plans.
1.2 Clarify client security requirements and operating environment in consultation with relevant persons.

1.3 Source and review information to identify security risks.

1.4 Clearly distinguish and confirm acceptable and unacceptable security risks.

1.5 Set priorities for risk treatment and assurance of controls.

1.6 Highlight and specify risks that are high priority to ensure appropriate controls are developed.

1.7 Evaluate existing controls to determine impact on risk occurrence and implement required modifications.

2 Plan risk management strategies.

2.1 Develop and document action plans that identify tasks, activities and resources required to achieve security risk management objectives.

2.2 Select security risk control measures based on assessed type, nature, cause and degree of risk associated with identified security risks.

2.3 Incorporate actions to respond to contingencies when planning risk management strategies.

2.4 Establish communication and reporting arrangements to maintain currency of action plans in consultation with relevant persons.

3 Design security risk treatment options.

3.1 Assess client’s operating environment to confirm potential and real security risks.

3.2 Select feasible risk treatment options and conduct research to confirm implications for controlling whole or part of security risks.

3.3 Document and cost recommended risk treatment options to ensure compatibility with nature of risk and client requirements.

3.4 Consult with relevant persons to verify suitability of recommended risk treatment options and obtain required approvals.
3.5 Test risk treatment options in the field and analyse results to verify effectiveness of treatments in the security context.

4 Finalise and present security risk management plan.

4.1 Finalise and document comprehensive security risk management plan in the required format according to workplace requirements.

4.2 Check security risk management plan to ensure analysis and recommendations are clear, coherent and consistent with client requirements, and based on the principles of ISO 31000.

4.3 Present risk management plan to relevant persons within agreed timeframes and explain identified security risks and treatments to enhance understanding and acceptance of recommendations.

4.4 Implement procedures to monitor and review security risk management activities to ensure continuous improvement.

4.5 Complete and secure risk management plan in a manner that facilitates future retrieval and maintains client confidentiality according to workplace and regulatory requirements.

Foundation Skills
As well as the foundation skills explicit in the performance criteria of this unit, candidates require:
- oral communication skills to negotiate client agreement
- writing skills to prepare succinct and logically structured security risk management plans
- numeracy skills to apply statistical methods and present statistical data.

Unit Mapping Information
Supersedes and equivalent to CPPSEC5004A Prepare security risk management plan.

Companion volumes to this training package are available at the VETNet website - https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=6f3f9672-30e8-4835-b348-205dfcf13d9b
Assessment Requirements for CPPSEC5004 Develop security risk management plans

Modification History

Release 1 This version first released with CPP Property Services Training Package Release 9.0.

Supersedes and is equivalent to CPPSEC5004A Prepare security risk management plan. Updated to meet the Standards for Training Packages.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by developing and documenting two security risk management plans that meet the requirements of clients with different risk management requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- legislative and regulatory requirements that apply when developing security risk management plans:
  - key requirements of legislation, regulations and codes of conduct for security risk management in the jurisdiction of operation
  - legal rights and responsibilities of employers, supervisors and employees associated with work health and safety and duty of care
  - licensing requirements in the security industry
  - trespass and removal of persons
  - use of force
  - application of integrated security measures including physical security, manpower, security technologies and security of personnel and information
  - distinction between information and intelligence and methods for validating information sources
  - activities to be included in action plans for security risk management
  - implications for security risk management arising from:
    - National Guidelines for the Protection of Places of Mass gathering from Terrorism
    - Active Armed Offender Guidelines for Crowded Places
    - Improvised Explosive Device Guidelines for Crowded Places
    - Chemical Weapon Guidelines for Crowded Places
    - Hostile Vehicle Guidelines for Crowded Places
• methods for determining the type, nature and causes of potential and actual security risks
• methods for distinguishing between acceptable and unacceptable security risks
• methods for prioritising security risks and treatment options based on degree of risk
• methods for testing treatment options in the field
• process and application of dynamic risk assessment and risk management methods
• purpose of *Australia’s Strategy for Protecting Crowded Places from Terrorism* and understanding of:
  • definition of crowded places
  • key security issues for crowded places
  • objectives, characteristics and identification of active armed offenders
  • definition of hostile vehicles and methods of attack
  • signs of chemical weapons attack and recommended response
  • general features of improvised explosive devices and recommended incident response
• recognised industry practice and application of *ISO 31000:2018 Risk management – Guidelines* (ISO 31000) when designing security risk management strategies and treatment options
• types of treatment options appropriate to the range of security risks and threats to various client operating environments:
  • assets
  • buildings
  • crowded places
  • mass gatherings.

**Assessment Conditions**

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

All individuals engaged by a licensed RTO for security licensing purposes must hold both a security trainers licence (where such a licence exists within the relevant jurisdiction) and the licence for performing the security activities for which the individual is providing training or assessment. Regulators may impose other assessor conditions to meet jurisdictional assessment requirements.

Assessment must be conducted in the workplace or in a simulated workplace environment. Candidates must have access to:

• legislation, regulations and codes of practice that apply to developing security risk management plans in the jurisdiction of operation
• client instructions and operating environment information, resources and information technologies required to achieve the performance evidence
• ISO 31000
• *National Guidelines for the Protection of Places of Mass gathering from Terrorism*
• *Australia’s Strategy for Protecting Crowded Places from Terrorism*
• *National Guidelines for the Protection of Places of Mass gathering from Terrorism*
• Active Armed Offender Guidelines for Crowded Places
• Improvised Explosive Device Guidelines for Crowded Places
• Chemical Weapon Guidelines for Crowded Places
• Hostile Vehicle Guidelines for Crowded Places.

CPPSEC5005 Implement security risk management plans

Modification History

Release 1 This version first released with CPP Property Services Training Package Release 9.0. Supersedes and is equivalent to CPSEC5005A Implement security risk assessment plan. Updated to meet the Standards for Training Packages.

Application

This unit specifies the skills and knowledge required to implement security risk management plans. It includes organising, costing and allocating resources, monitoring emerging security risks and changes in the operating environment against activities and targets in action plans, and reviewing treatment options to update security risk management plans. Risk management plans are implemented based on the principles of ISO 31000:2018 Risk management – Guidelines (ISO 31000).

This unit is suitable for those using a broad range of cognitive, technical and communication skills to select and apply methods and technologies to analyse information and provide solutions to sometimes complex problems.

Legislative, regulatory or certification requirements apply in some states and territories to the provision of advice on security solutions, strategies, protocols and procedures. For further information, check with the relevant regulatory authority.

Pre-requisite Unit

None.

Unit Sector

Security/Risk management

Elements and Performance Criteria

Elements describe the essential outcomes. Performance criteria describe what needs to be done to demonstrate achievement of the element.

1 Organise and allocate resources to support security risk management plan.

1.1 Access and interpret key requirements of legislation, regulations and Australian standard ISO 31000 to understand and comply with requirements for implementing security risk management plans.
1.2 Review security risk management plan to clarify and cost resource requirements.

1.3 Plan and schedule activities and targets to meet requirements of risk management action plans.

1.4 Define roles, responsibilities and work schedules for implementing security risk management plan and communicate to relevant persons.

1.5 Organise efficient allocations of resources, equipment and materials required to implement risk management action plans.

1.6 Disseminate information to support security risk management plan information according to workplace and regulatory requirements.

2 Monitor emerging security risks and operating environment.

2.1 Monitor emerging risks and assess ongoing suitability of implemented security risk treatment options based on ISO 31000 principles.

2.2 Monitor changes to operating environment and identify and incorporate corrective contingency measures into security risk management plan.

2.3 Regularly review risk management targets and outcomes against action plans to confirm aims and objectives are achieved.

2.4 Prepare documentation and guidelines explaining incidence, nature and causes of emerging security risks and contingencies implemented.

3 Review treatment options and update security risk management plan.

3.1 Systematically review effectiveness of security risk treatment options in meeting risk management objectives.

3.2 Identify and test required corrective measures to confirm suitability to meet risk management objectives.

3.3 Modify security risk management plan to incorporate corrective measures and address discrepancies between treatment options and risk incidence.
3.4 Seek feedback from relevant persons on effectiveness of treatment options and make required adjustments to incorporate feedback.

3.5 Cost long and short-term options to accurately estimate resource allocations to support security risk management plan.

3.6 Confirm stages of implementation for security risk management plan and coordinate required resources to ensure availability.

3.7 Finalise updated security risk management plan according to workplace and regulatory requirements.

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- oral communication skills to negotiate agreements
- writing skills to prepare succinct and logically structured security risk management documents and guidelines
- numeracy skills to apply statistical methods and present statistical data.

Unit Mapping Information

Supersedes and equivalent to CPPSEC5005A Implement security risk management plan.

CPPSEC5006 Develop strategies to implement advanced technology security systems

Modification History

Release 1 This version first released with CPP Property Services Training Package Release 9.0.

Supersedes and is not equivalent to CPPSEC5006A Determine strategy for the implementation of biometrics technology. Unit has been broadened to cover other advanced technologies in addition to biometrics. Updated to meet the Standards for Training Packages.

Application

This unit specifies the skills and knowledge required to develop strategies to implement security systems that employ advanced technologies including biometrics, artificial intelligence (AI), robotics, smart technologies and video integration. It includes assessing risks and threats to client assets, evaluating existing security measures, and devising feasible implementation options that integrate advanced technology security systems within existing security architectures.

This unit is suitable for those using a broad range of cognitive, technical and communication skills to select and apply methods and technologies to analyse information and provide solutions to sometimes complex problems.

Legislative, regulatory or certification requirements apply in some states and territories to the provision of advice on security solutions, strategies, protocols and procedures. For further information, check with the relevant regulatory authority.

Pre-requisite Unit

None.

Unit Sector

Security/Risk management

Elements and Performance Criteria

Elements describe the essential outcomes. Performance criteria describe what needs to be done to demonstrate achievement of the element.
1. Assess client’s security requirements.
   1.1 Access and interpret key requirements of legislation and regulations to understand and comply with requirements for implementing advanced technology security systems.
   1.2 Clarify client assets, security requirements, budget and timeframes for implementing advanced technology security system in consultation with relevant persons.
   1.3 Identify and assess threats to physical and technical security of client.
   1.4 Identify and assess security risks to client assets and prioritise risk levels.
   1.5 Evaluate reliability and effectiveness of existing security measures against identified threats and risks.
   1.6 Document findings and seek specialist assistance as required to assess security requirements of client.

2. Identify requirements for implementing advanced technology security system.
   2.1 Assess advanced technology security system options to meet security threats and risks and client requirements.
   2.2 Analyse and confirm physical and technical specifications for advanced technology security system to be installed.
   2.3 Assess existing security architecture to identify requirements for effectively integrating advanced technology security system.
   2.4 Identify resources, skills and training required to implement advanced technology security system.
   2.5 Summarise implementation requirements in a format suitable for further analysis.

3. Design and verify implementation options for advanced technology security system.
   3.1 Design system implementation options based on analysis of implementation requirements.
   3.2 Conduct checks to verify implementation options are feasible and comply with time schedules, available resources and budget.
   3.3 Confirm implementation options will effectively control assessed risks and threats to client assets.
4 Finalise strategy for implementing advanced technology security system.

4.1 Finalise and document strategy to implement advanced technology security system.

4.2 Check strategy to ensure analysis recommendations are clear, coherent and consistent with client requirements, include contingency measures, and are supported by verifiable information.

4.3 Present strategy to relevant persons within agreed timeframes and explain system design and implementation requirements to enhance understanding and acceptance of recommendations.

4.4 Complete and secure implementation strategy documentation in a manner that facilitates future retrieval and maintains client confidentiality according to workplace and regulatory requirements.

Foundation Skills
As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- oral communication skills to negotiate client agreements
- writing skills to prepare logical and sequenced technical specifications for implementing advanced technology security systems
- reading skills to interpret key requirements of technical specifications, plans and designs for security systems.

Unit Mapping Information
Supersedes and non-equivalent to CPPSEC5006A Determine strategy for the implementation of biometric technology.

Links
Companion volumes to this training package are available at the VETNet website - https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=6f3f9672-30e8-4835-b348-205dfcf13d9b
Assessment Requirements for CPPSEC5006 Develop strategies to implement advanced technology security systems

Modification History

Release 1  This version first released with CPP Property Services Training Package Release 9.0.

Supersedes and is not equivalent to CPPSEC5006A Determine strategy for the implementation of biometrics technology. Unit has been broadened to cover other advanced technologies in addition to biometrics. Updated to meet the Standards for Training Packages.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by developing and documenting two strategies to implement security systems that employ at least two types of advanced technologies from the list below:

- artificial intelligence (AI)
- biometrics
- robotics
- smart technologies
- video integration.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- legislative and regulatory requirements that apply to the implementation of advanced technology security systems:
  - client service standards
  - licensing requirements in the security industry
  - regulatory requirements associated with providing advice on implementing security systems
  - application of ISO 31000:2018 Risk management – Guidelines (ISO 31000) when developing strategies to implement advanced technology security systems
- methods for achieving efficiencies when allocating resources, equipment and materials to the implementation of advanced technology security systems
- methods for assessing security risks and threats and determining the type, nature and causes of potential and actual security risks
- methods for comparing and contrasting advanced technology security system information
• methods for determining security system requirements including single and multiple applications of advanced technologies
• operational principles of, and information technologies used in internet protocol networked security systems
• process and application of dynamic risk assessment and risk management methods
• purpose of Australia’s Strategy for Protecting Crowded Places from Terrorism and understanding of:
  • definition of crowded places
  • key security issues for crowded places
  • objectives, characteristics and identification of active armed offenders
  • definition of hostile vehicles and methods of attack
  • signs of chemical weapons attack and recommend response
  • general features of improvised explosive devices and recommended incident response
• requirements for integrating a range of advanced technology security systems within existing security architecture across local area networks and wide area networks
• types, functions and parameters of a range of advanced technology security systems involving:
  • AI
  • biometrics
  • robotics
  • smart technologies
  • video integration
• ways that social and cultural differences may be expressed.

Assessment Conditions
Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

All individuals engaged by a licensed RTO for security licensing purposes must hold both a security trainers licence (where such a licence exists within the relevant jurisdiction) and the licence for performing the security activities for which the individual is providing training or assessment. Regulators may impose other assessor conditions to meet jurisdictional assessment requirements.

Assessment must be conducted in the workplace or in a simulated workplace environment. Candidates must have access to:
• legislation, regulations and codes of practice that apply to the implementation of advanced technology security systems in the jurisdiction of operation
• client specifications and information, resources and information technologies required to achieve the performance evidence
• ISO 31000
• Australia’s Strategy for Protecting Crowded Places from Terrorism.

Application

This unit describes the skills and knowledge required to plan and implement design concepts and use industry animation software to create 2D animations for inclusion in interactive media products, short stand-alone animated sequences and basic games.

It applies to individuals who work in a team environment and report to a senior animator, designer, director or producer.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Visual Communication – Animation and Digital Effects

</tbody>
</table>

Performance Evidence

Evidence of the ability to:
- interpret design specifications and generate a range of creative ideas and concepts that respond to the brief
- collaborate with others to clarify requirements, discuss ideas, select final design concept and review final animations
- use animation software to create 2D animations that meet requirements of design briefs within production deadlines
- correctly name and store animations in appropriate file formats.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:
- explain basic animation techniques and principles
- describe screen, visual design and communication principles as they apply to animations
- outline intellectual property considerations if using images from external sources
- identify work health and safety standards as they apply to using screens and keyboards for extended periods of time.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in creative arts industry environments. The assessment environment must include access to:
- production documents and briefs
- resources, equipment and software required for 2D animations
• interaction with others.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational educational and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to animate simple 3D models and create 3D animations, which may include audio components. The models are for inclusion in interactive media products, short stand-alone animated sequences and basic games.

It applies to individuals who plan and create 3D animated sequences in consultation with relevant personnel in a wide variety of contexts in the digital content industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Visual Communication – Animation and Digital Effects

Assessment Requirements for CUAANM302 Create 3D digital animations

Modification History

<table>
<thead>
<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with CUA Creative Arts and Culture Training Package version 2.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

Evidence of the ability to:
- interpret design specifications and generate a range of creative ideas and concepts that respond to the brief
- collaborate with others to clarify requirements, discuss ideas, select final design concept and review final animations
- use animation software to create 3D animations that meet requirements of design briefs within production deadlines
- correctly name and store animations in appropriate file formats.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:
- explain basic animation techniques and principles
- describe screen, visual design and communication principles as they apply to animations
- outline intellectual property considerations if using images from external sources
- outline work health and safety requirements as they apply to using screens and keyboards for extended periods of time.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in creative arts industry environments. The assessment environment must include access to:
- production documents and briefs
- resources, equipment and software required for 3D animations
• interaction with others.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational educational and training legislation, frameworks and/or standards.

CUAANM402 Create digital visual effects

Modification History

<table>
<thead>
<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with CUA Creative Arts and Culture Training Package version 2.0.</td>
</tr>
</tbody>
</table>

Application

This unit describes the skills and knowledge required to use a range of industry software applications and material from various sources to create and refine digital visual effects sequences for projects in film, television or digital media productions, including games.

It applies to individuals who combine elements into the final image while retaining the established style and continuity of the project. They work collaboratively with a production team in 3D animation to meet production deadlines.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Visual Communication – Animation and Digital Effects

Elements and Performance Criteria

<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
<tr>
<td>1. Clarify work requirements</td>
<td>1.1 Clarify requirements for digital visual effects with reference to production documentation</td>
</tr>
<tr>
<td></td>
<td>1.2 Clarify workflow sequences in consultation with relevant personnel to ensure production deadlines are met</td>
</tr>
<tr>
<td></td>
<td>1.3 Select software that best suits the type of production and delivery platform for which visual effects sequences are being created</td>
</tr>
<tr>
<td>ELEMENT</td>
<td>PERFORMANCE CRITERIA</td>
</tr>
<tr>
<td>---------</td>
<td>---------------------</td>
</tr>
<tr>
<td>1.4 Gather and analyse reference material to help with visualisation of final sequences</td>
<td></td>
</tr>
</tbody>
</table>
| 2. Prepare components | 2.1 Gather all assets for integration and check they are in the correct output file format and do not infringe copyright laws  
2.2 Choose digital visual effects that best represent the vision of scripts to create optimum visual impact  
2.3 Check components comply with storyboard requirements  
2.4 Determine appropriate methods and techniques to create required digital visual effects |
| 3. Assemble previsualisations | 3.1 Create previsualisation of required visual effects sequences using appropriate assets and compositing techniques  
3.2 Adopt safe ergonomic practices when using screens and keyboards for extended periods of time  
3.3 Experiment with previsualisation to establish the best results and solve problems that arise during the process of creating the visual effects  
3.4 Submit previsualisation visual effects sequences to relevant personnel for evaluation and feedback  
3.5 Match elements as required, such as colour, lighting and camera |
| 4. Produce visual effects | 4.1 Create final visual effects  
4.2 Generate additional required effects to final stage  
4.3 Render visual effects to desired format  
4.4 Submit visual effects sequences to relevant personnel for evaluation and feedback by agreed deadlines |
| 5. Finalise visual effects | 5.1 Respond to feedback by making adjustments to visual effects so they comply with design and production specifications  
5.2 Save files to specified storage system accessible to production team  
5.3 Make back-up copies of files, and save and store visual effects using appropriate output file formats and standard naming conventions  
5.4 Review personal performance and the process of creating digital visual effects for improvement |
Foundation Skills

Assessment Requirements for CUAANM402 Create digital visual effects

Modification History

<table>
<thead>
<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with CUA Creative Arts and Culture Training Package version 2.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

Evidence of the ability to:

- create digital visual effects sequences that meet specifications provided in production documents
- select visual effects software appropriate for delivery platform
- assemble previsualisations based on storyboards and scripts to achieve optimum visual impact
- store visual effects in appropriate file formats using industry naming conventions
- work collaboratively with other production personnel to ensure product meets all requirements and production deadlines
- review own performance and the visual effects process for improvement.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline typical challenges of creating visual effects and how to handle these
- explain how effects such as lighting, colour and composition influence visual impact
- explain how the delivery platform impacts the visual effects creation process
- describe compositing methods and techniques as they apply to visual effects creation
- describe the process of rendering visual effects
- outline procedures for checking copyright requirements
- describe the relevant work health and safety standards which relate to working with computers and keyboards.
Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in creative arts industry environments. The assessment environment must include access to:

- production documents and briefs
- relevant personnel
- visual effects software.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational educational and training legislation, frameworks and/or standards.

<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with CUA Creative Arts and Culture Training Package version 2.0.</td>
</tr>
</tbody>
</table>

Application

This unit describes the skills and knowledge required to shoot material for screen productions using a single-camera unit.

It applies to individuals whose prime responsibility is to capture screen images using a range of video equipment. They generally work under direction, and perform all camera, sound and lighting functions. Depending on the scale of the shoot, they may have an assistant or may be required to assist senior camera operators.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Media and Entertainment Production – Camera/Cinematography

</tbody>
</table>

Performance Evidence

Evidence of the ability to:

- contribute to pre-production discussions about ways to capture desired style of moving images
- assemble equipment and accessories in readiness for camera shoots
- position camera on location so shots are captured from the best angles
- safely set up and test sound equipment, lighting equipment and accessories
- safely operate a range of professional video camera equipment and accessories to capture shots as directed and in a way that facilitates post-production editing
- work within production deadlines
- work effectively as a team member to position equipment before and during shoots and to pack up gear at the conclusion of shoots
- assist with moving cables and cameras during shoots
- follow procedures to complete workplace documentation.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline roles and responsibilities of production and post-production personnel
- identify typical problems that arise in the context of shooting material for screen productions, and briefly describe solutions
- explain how different image capture media are used
- describe basic framing techniques and methods of composition
- describe characteristics of microphones and audio equipment commonly used for shooting screen productions
- outline the effect different light sources, lenses and filters have on lighting sets and talent
- explain basic principles of lighting that apply in the context of shooting material for screen productions
- describe techniques for handling and attaching cabling
- outline work health and safety procedures that apply to shooting on location.

**Assessment Conditions**

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in creative arts industry environments. The assessment environment must include access to:

- camera, lighting and sound equipment
- locations for shooting video
- productions for which material needs to be filmed
- production documents
- workplace safety and security procedures that apply to shooting video on location
- interaction with others.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational educational and training legislation, frameworks and/or standards.

</tbody>
</table>

Performance Evidence

Evidence of the ability to:

- maintain interactive content for websites and/or social media channels including:
  - checking links and media assets
  - updating text, media assets and pages
  - assigning correct metadata or tags
  - checking that changes have uploaded successfully
  - use a content management system proficiently
  - document technical and content issues according to enterprise procedures
  - store content according to industry conventions.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain how outdated links impact usability of web pages
- explain the procedure for checking copyright clearance
- describe how metadata and tags are used to classify content
- describe the purpose of alt tags and how they relate to accessibility standards
- explain safe work practices in relation to working on computers for periods of time.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in creative arts industry environments. The assessment environment must include access to:
• appropriate content
• content management system, the internet and authoring tools.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational educational and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to use basic techniques to work with digital images.

It applies to individuals who are applying fundamental skills in the use of digital software for general design or drawing purposes in a creative arts practice.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Visual communication – digital content and imaging

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Elements describe the essential outcomes.</strong></td>
<td><strong>Performance criteria describe the performance needed to demonstrate achievement of the element.</strong></td>
</tr>
<tr>
<td>1. Prepare digital imaging resources</td>
<td>1.1 Identify and obtain tools, equipment and materials used to create digital images</td>
</tr>
<tr>
<td></td>
<td>1.2 Prepare tools, equipment and materials according to workplace procedures and safety requirements</td>
</tr>
<tr>
<td></td>
<td>1.3 Set up a safe work space with guidance from key people</td>
</tr>
<tr>
<td>2. Use and test digital imaging techniques</td>
<td>2.1 View a range of digital images in different styles produced by key practitioners and discuss with others how these effects are achieved</td>
</tr>
</tbody>
</table>
ELEMENT | PERFORMANCE CRITERIA
---|---
2.2 Match potential techniques for producing images to own ideas with assistance from key people
2.3 Test nominated techniques to determine the effects they achieve
2.4 Use selected techniques and safe work practices to produce digital images
2.5 Clean work space and equipment and return to original condition

3. Make plans to develop skills
3.1 Seek and use feedback from key people on own digital imaging work and identify areas for improvement
3.2 Review different opportunities to build own skills and select suitable options

### Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

<table>
<thead>
<tr>
<th>Skill</th>
<th>Performance Criteria</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Learning</td>
<td>3.1, 3.2</td>
<td>Uses feedback to identify skill improvement needs, considers opportunities and begins to plan and manage the learning process</td>
</tr>
<tr>
<td>Reading</td>
<td>1.2</td>
<td>Interprets straightforward information from relevant sources to plan and complete tasks</td>
</tr>
</tbody>
</table>
| Oral Communication | 2.1, 2.2, 3.1 | Uses clear and relevant language to discuss concepts and techniques with others and seek feedback on work outcomes
Uses questioning and active listening techniques to clarify information, and confirm understanding |
| Navigate the world of work | 1.2, 1.3, 2.4 | Follows defined procedures and safety and intellectual property requirements to plan and complete tasks, with some guidance from others |
| Interact with others | 2.1, 2.2, 3.1 | Follows accepted communication methods and practices to seek guidance and advice from others |
| Get the work done | 1.1, 1.2, 1.3, 2.1, 2.2, 2.3, 2.4, 2.5, 3.2 | Uses simple organisational methods to prepare work space and identify and assemble required resources with input from others
Makes simple analytical decisions to determine potential techniques and evaluate outcomes of limited
testing and exploration
- Uses familiar digital tools and equipment to produce work
- Uses feedback to assist decision making about directions for further skill development

Performance Evidence

Evidence of the ability to:

- produce a series of digital images where the techniques and materials support the idea for the work
- discuss the process for producing video art with others
- review own progress to identify ways to further develop skills.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the function and capabilities of materials, tools and equipment commonly used for digital imaging
- outline the major styles of digital imaging and the work of key practitioners
- describe a range of digital imaging techniques
- describe safe cleaning techniques for tools and equipment used in producing digital images
- outline procedures for working safely with digital materials, tools and equipment.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in creative arts industry environments. The assessment environment must include access to:

- tools, equipment, materials for producing digital images
- information sources.
Assessors of this unit must satisfy the requirements for assessors in applicable vocational educational and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to prepare video assets for inclusion in interactive media.

It applies to individuals who work in collaboration with others and under supervision to convert video into forms appropriate for streaming, downloading and/or digital media products. In smaller organisations, they may combine this role with video editing, authoring or programming.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Visual Communication – Digital Content and Imaging

Performance Evidence

Evidence of the ability to:
- prepare video sequences for use in media distribution channels or interactive media products
- use video encoding software to prepare video sequences that meet quality requirements within production deadlines
- save and store files according to industry or enterprise conventions.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:
- outline the features of the delivery platforms used to prepare video assets
- explain why video file compression is required
- identify common digital video sources and output formats
- explain appropriate codecs for various platforms and destinations
- describe techniques for saving and preparing digital video output to optimise file size
- explain purposes and procedures for correctly naming and tagging video files
- explain safe work practices in relation to working on computers for periods of time.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in creative arts industry environments. The assessment environment must include access to:
- video encoding and editing software and equipment
- manuals and instructions.
Assessors of this unit must satisfy the requirements for assessors in applicable vocational educational and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to use an authoring tool to produce discrete interactive sequences for websites.

It applies to individuals working collaboratively with technical assistance and under direction, who develop small components such as web pages or a sequence of screens, which are integrated into a larger project.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Visual Communication – Digital Content and Imaging

Performance Evidence

Evidence of the ability to:

- assemble text content, interactive media components and media assets required for a project
- use appropriate software to produce interactive media sequences that meet design and project specifications within deadlines
- apply visual design principles, templates, style sheets and HTML mark-up language to interactive sequences
- check interactive sequence functionality on at least two operating systems, browsers and devices
- save and store files correctly.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- list appropriate file formats for web delivery
- outline when optimisation of media assets is necessary
- explain why application of accessibility standards in the web environment is important
- describe basic visual design principles as they apply to website page layout
- explain safe work practices in relation to working on computers for periods of time
- explain the procedure for checking copyright clearance.
Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in creative arts industry environments. The assessment environment must include access to:

- text and media assets
- authoring software.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational educational and training legislation, frameworks and/or standards.

<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with CUA Creative Arts and Culture Training Package version 2.0.</td>
</tr>
</tbody>
</table>

Application

This unit describes the skills and knowledge required to create visual designs for interactive media components that can be integrated into a range of media products.

It applies to individuals who generate and assess ideas to create visual design components in response to specifications under supervision in a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Visual Communication – Digital Content and Imaging

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
</tbody>
</table>

1. Clarify work requirements

1.1 Clarify visual design components required in the project brief, in consultation with relevant personnel

1.2 Identify project timelines and discuss factors that may determine or affect visual design concepts

1.3 Clarify, in discussion with relevant personnel, the target user or audience, and determine format and delivery platform

2. Generate and assess ideas

2.1 Research media products, designs, images, artwork and other creative sources that may inspire visual design ideas
### ELEMENT | PERFORMANCE CRITERIA
---|---
2.2 | Develop a range of visual design ideas that are technically feasible, respond to project specifications and provide creative solutions to design issues
2.3 | Present and review visual design ideas with relevant personnel

3. Develop design concept
3.1 | Experiment with traditional and digital methods to create required visual design components
3.2 | Explore a range of typographical and visual design elements to create components
3.3 | Evaluate initial design ideas with relevant personnel to select final design concept
3.4 | Confirm design concept complies with copyright laws
3.5 | Check output format meets delivery platform requirements
3.6 | Adopt safe ergonomic practices when using equipment for long periods of time

4. Produce components
4.1 | Develop components based on the final design concept using various design techniques
4.2 | Apply visual design principles and communication principles to produce components that have high visual impact
4.3 | Save components in an appropriate format according to project specifications

5. Finalise visual design components
5.1 | Review visual design components against design and technical specifications
5.2 | Discuss and confirm additional requirements or modifications with relevant personnel, and make amendments as required
5.3 | Save and archive visual design components using industry or enterprise naming conventions and version control protocols

### Foundation Skills

- Names files according to requirements

1.1-1.3, 2.3, 3.3, 4.3, 5.2
- Participates effectively in spoken interactions using active listening and questioning to confirm and clarify understanding

3.4, 3.6
- Complies with legislative requirements

1.1-1.3, 2.3, 3.3, 4.3, 5.2
- Collaborates with relevant personnel to ensure that end result meets requirements

- Takes responsibility for planning and producing design components according to project requirements and design principles
- Makes decisions directed related to completion of tasks
- Uses experimentation to develop new or innovative design approaches
- Selects and uses appropriate software to conceive, produce, store and present visual design components

Performance Evidence

Evidence of the ability to:

- explore and experiment with design techniques and visual design and communication principles to produce ideas and concepts for visual design components
- use design techniques to create visual design components that respond effectively to a project brief
- present and discuss ideas, concepts and designs with relevant personnel
- save and archive files using standard industry or enterprise naming conventions.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe differences between traditional and digital methods in creating visual images, and advantages and disadvantages of each
- describe visual design, typographic and communication principles used to construct visual design components
- explain safe work practices in relation to working on computers for periods of time
- explain the procedure for checking copyright clearance.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in creative arts industry environments. The assessment environment must include access to:

- project briefs
- relevant software
• manuals and information to support software.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational educational and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to author a complete interactive media product, for example, an entire website.

It applies to individuals who apply sound knowledge of mark-up and scripting languages to develop templates, themes styles sheets, forms and form objects for programmers and the technical support team. They may also use a variety of authoring software used to produce complex interactions such as digital simulations, games and puzzles. They work primarily on client-side technologies.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Visual Communication – Digital Content and Imaging

| 2. Identify scope of authoring software | 2.1 Identify a range of industry-standard authoring software and assess in relation to specified delivery platform  
2.2 Discuss suitability of authoring software to meet specified outcomes with relevant personnel  
2.3 Select authoring software to meet production requirements |
| 3. Use authoring software | 3.1 Load authoring software and create a file directory structure for the specified task and name using standard industry or enterprise naming conventions  
3.2 Display and use tools and features of authoring software relevant to the authoring process  
3.3 Adopt safe ergonomic practices when using screens and keyboards for extended periods of time. |
| 4. Create interactive sequence | 4.1 Slice and reassemble the user interface appropriate to the authoring software  
4.2 Import and assemble components in appropriate sequence according to creative requirements  
4.3 Create interactive features according to creative and technical requirements, sourcing and writing appropriate mark-up and scripting languages as required  
4.4 Check that interactive sequence conforms to navigation design  
4.5 Integrate media assets to optimum levels of technical performance  
4.6 Check interactive sequence conforms to loading specifications  
4.7 Test for interoperability and accessibility, eliminate all bugs and validate scripting  
4.8 Present interactive sequence as a prototype ensuring sequence meets creative, production and technical requirements  
4.9 Save output file formats and identify for specified purpose |
| 5. Evaluate interactive prototype | 5.1 Present prototype to relevant personnel  
5.2 Evaluate prototype against design specifications, including achievement of a creative and user-centred product  
5.3 Discuss and agree on any required changes and make adjustments to prototype  
5.4 Assist in user testing as required |
## ELEMENT

### PERFORMANCE CRITERIA

5.5 Evaluate feedback from user testing
5.6 Seek confirmation from relevant personnel to transform prototype into final product

6. Finalise interactive media product

6.1 Make necessary changes as indicated by user testing
6.2 Replicate prototype functionality to complete the interactive product
6.3 Make final checks to ensure sequences conform to design specifications
6.4 Test for interoperability and accessibility, eliminate bugs and validate scripting
6.5 Save to specified storage system accessible to production team
6.6 Assist in loading product to specified platform as required

---

### Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Performance Evidence

Evidence of the ability to:

- discuss and determine requirements for an interactive media product
- use authoring software to create logical file directory structures and build a prototype of an interactive media product
- evaluate and incorporate feedback from user testing to the prototype
- use authoring software to develop a fully functional interactive media product that:
  - conforms to design and creative requirements specifications
  - meets accessibility and interoperability standards.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain technical requirements for integrating media assets (video, audio, animation, images) for use on a range of delivery platforms
- describe interoperability and accessibility standards used in interactive media product design
- explain the purpose and process of script validation
- outline basic health and safety requirements when working on computers and keyboards.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in creative arts industry environments. The assessment environment must include access to:

- design specifications
• sample content including a range of media assets
• authoring software
• software manuals and other relevant information.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational educational and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to design digital applications, which may consist of one or many technologies integrated in various combinations.

It applies to individuals who work with clients to design specifications for digital applications, which are then built by other specialised team members. Digital applications may be operated in a web or mobile device environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Visual Communication – Digital Content and Imaging

Performance Evidence

Evidence of the ability to:

- research digital applications and analyse how they meet audience, function and content requirements
- design specifications for digital applications that:
  - meet client and audience requirements
  - are technically feasible
  - detail all aspects of the application’s permissions, search capability, architecture, content, assets, screen designs, functions, reports, production requirements and testing strategies
- present and discuss draft specifications.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain the sequence and interrelationships of stages in the process of designing digital applications
- outline issues relating to technical standards and platform functions that may impact on digital application options
- outline the impact of web standards on the design of digital applications
- describe typical formats and techniques for documenting the design of digital applications
- describe the concept of intellectual property rights and how this is managed in context of digital applications.
Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in creative arts industry environments. The assessment environment must include access to:

- project briefs on which designs can be based
- sample content.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational educational and training legislation, frameworks and/or standards.

Assessment Requirements for CUADIG503 Design e-learning resources

Modification History

<table>
<thead>
<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with CUA Creative Arts and Culture Training Package version 2.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

Evidence of the ability to:
- research and select suitable instructional design models to meet project requirements
- design specifications for e-learning resources for delivery on different platforms that:
  - meet the project brief, including learner requirements
  - are technically feasible
  - detail all aspects of e-learning resource architecture, interactive learning and assessment activities, media assets, communication and collaboration tools, user interface production requirements and testing strategies
- present and discuss design specifications.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:
- list and briefly describe instructional design learning models for e-learning
- outline target learner characteristics and how these may impact on instructional design choices
- list a range of e-learning delivery platforms, and briefly describe any particular design requirements
- outline typical media assets used for e-learning
- describe common formats and techniques for documenting design of e-learning resources
- outline the impact of web standards on the design of e-learning resources
- describe the concept of intellectual property rights and how this is managed in the context of e-learning resource development.
Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in creative arts industry environments. The assessment environment must include access to:

- project briefs on which designs can be based
- sample content.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational educational and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to design digital simulations of real world environments and processes.

It applies to individuals who work closely with subject experts to develop virtual environments for fields including architecture, science and engineering, medicine, conservation and manufacturing. They may also collaborate with programmers and software authors so the simulation is technically achievable.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Visual Communication – Digital Content and Imaging

<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with CUA Creative Arts and Culture Training Package version 2.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

Evidence of the ability to:

- research and generate a range of ideas for simulations that meet the project brief and target audience
- develop draft design specifications for digital simulations that are clear, detailed and technically feasible
- review and seek feedback from relevant personnel and produce final design specifications.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe typical formats and documentation for presenting simulation designs
- outline a range of authoring tools used for digital simulations
- describe the ways in which algorithms, laws, rules and mathematical formulas can represent real world processes
- outline intellectual property rights and how these are managed in design of digital simulations.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in creative arts industry environments. The assessment environment must include access to:

- briefs for digital simulations on which designs can be based
- facilities and resources to develop design simulations.
Assessors of this unit must satisfy the requirements for assessors in applicable vocational educational and training legislation, frameworks and/or standards.

</tbody>
</table>

Application

This unit describes the skills and knowledge required to prepare client image files for pre-press processing.

It applies to individuals who possess the self-directed skills and knowledge to process image files prior to printing.

No licensing, legislative or certification conditions apply to this unit at the time of publication.

Unit Sector

Visual communication – photo imaging

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
<tr>
<td>1. Consult with pre-press bureau about formatting requirements</td>
<td>1.1 Source printing requirements from relevant personnel and follow throughout preparation process</td>
</tr>
<tr>
<td></td>
<td>1.2 Obtain relevant specifications for software and image file formatting from relevant personnel</td>
</tr>
<tr>
<td></td>
<td>1.3 Discuss and resolve with relevant personnel any constraints associated with different printing processes and other diffusion techniques</td>
</tr>
<tr>
<td>2. Prepare files for</td>
<td>2.1 Prepare image files using appropriate pre-press processing</td>
</tr>
</tbody>
</table>
### ELEMENT  | PERFORMANCE CRITERIA
---|---
pre-press processing  |  2.2 Choose suitable test charts or targets and print to appropriate specifications for ink density and stock on linearised proofer  
|  2.3 Calibrate digital proofing device to examine test charts and use results to generate colour profile  
|  2.4 Print test file on calibrated digital proofing device and use results to generate output profile for press and stock  
|  2.5 Produce sample image, confirm with relevant personnel and modify if required  
|  2.6 Optimise images and output image product to profile specifications using industry standards  
|  2.7 Save image files in appropriate format for pre-press processing and prepare invoice or account for client  
|  2.8 Assemble completed images for electronic or physical dispatch and deliver with invoice or account to agreed location by appropriate methods within agreed timeframe
3. Wrap up and review print preparation  |  3.1 Catalogue and archive images according to industry standards  
|  3.2 Review feedback from relevant personnel on final printed product  
|  3.3 Maintain contractual and financial records for business and taxation purposes  
|  3.4 Evaluate own performance in job context and identify future improvements  
|  3.5 Identify future opportunities, work directions, equipment needs and workflow changes resulting from job

### Foundation Skills

Assessment Requirements for CUAPHI514 Prepare digital images for pre-press processing

Modification History

<table>
<thead>
<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with CUA Creative Arts and Culture Training Package version 2.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

Evidence of the ability to:
- use appropriate pre-press processing techniques to prepare digital images according to printing requirements
- manage colour in pre-press processing
- produce required test files and samples
- correctly save and archive completed images
- evaluate outcomes and identify future improvements or opportunities.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:
- explain the important aspects of colour management during pre-press processing
- outline equipment, tools and materials required for pre-press processing
- summarise the technique for pre-press processing of images
- explain different printing and diffusion techniques and their constraints with respect to design
- explain why stock and press are considered as part of pre-press
- outline systems used to catalogue and archive photo images and business records.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in creative arts industry environments. The assessment environment must include access to:
• an environment in which digital image files can be prepared for pre-press processing
• suitable equipment and materials.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational educational and training legislation, frameworks and/or standards.

<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with CUA Creative Arts and Culture Training Package version 2.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

Evidence of the ability to:

- transfer and digitise video content
- prepare vision and sound content segments for editing
- log single images, audio grabs and basic sequences according to enterprise procedures
- edit content using basic functions of editing software, within clearly defined parameters
- take direction and respond to feedback from a supervising editor
- follow procedures for completing workplace documentation
- meet work deadlines.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline basic vision and sound editing conventions and techniques
- explain roles of post-production personnel
- outline basic features of digital vision and sound editing software
- describe health and safety procedures that apply to using computers and keyboards.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in creative arts industry environments. The assessment environment must include access to:

- screen content that requires editing
- post-production facilities
• editing software.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational educational and training legislation, frameworks and/or standards.

<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with CUA Creative Arts and Culture Training Package version 2.0.</td>
</tr>
</tbody>
</table>

Application

This unit describes the skills and knowledge required to use non-linear digital facilities to edit screen content for fast turnaround.

It applies to individuals with a reasonable level of experience who are involved in editing for daily programs such as television news and current affairs. At times they work on more complex programs of a formatted or routine nature, or on the editing of daily rushes for feature films.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Media and entertainment production – post-production

Elements and Performance Criteria

Performance Evidence

Evidence of the ability to:

- review and prepare materials to be edited
- select and note in and out points of sequences to be used in edits
- produce final edits that bring vision and sound content together in line with production requirements and deadlines
- follow procedures for completing workplace documentation
- work collaboratively with production personnel to produce edited sequences.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline vision and sound editing techniques
- describe features of industry-standard editing software and equipment
- outline roles and responsibilities of post-production personnel
- describe creative and technical elements of screen content that typically need to be edited within short timeframes
- identify typical problems with editing vision and sound content for fast turnaround, and briefly describe solutions.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in creative arts industry environments. The assessment environment must include access to:

- vision and sound content to be edited
• editing software and equipment
• production documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational educational and training legislation, frameworks and/or standards.

</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with CUA Creative Arts and Culture Training Package version 2.0.</td>
</tr>
</tbody>
</table>

Application

This unit describes the skills and knowledge required to implement systems and processes to manage media assets for screen productions and projects.

It applies to individuals working in large enterprises on projects or productions that require a wide range of media assets. They work directly with the creators of audio, video and graphic assets to ensure the asset management system accommodates their needs. They set up conventions for file naming, sourcing, sorting and storing formal documents and media assets. Though reporting to a producer or manager, they work with a fair degree of autonomy.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Media and entertainment production – post-production

Elements and Performance Criteria

Performance Evidence

Evidence of the ability to:

- develop processes and systems for the organisation and filing of formal documents and media assets
- use information tracking and repository systems to meet project requirements
- produce and accurately update records
- archive assets from completed projects with suitable ongoing access conditions
- provide clear directions to users of the processes and systems.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline roles and responsibilities of personnel involved in creating and managing media assets for screen and media projects
- explain the relationship between creative aspects of screen and media projects and the process of managing media assets
- identify typical problems with implementing media asset management systems, and briefly describe solutions
- explain the requirements for maintaining copyright and permissions requirements
- describe features of file and resource repository systems.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in creative arts industry environments. The assessment environment must include access to:

- file and resource management systems
- media assets.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational educational and training legislation, frameworks and/or standards.

<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with CUA Creative Arts and Culture Training Package version 2.0.</td>
</tr>
</tbody>
</table>

Application

This unit describes the skills and knowledge required to create and develop storyboards for a broad range of digital content, including video, film, animation and interactive media.

It applies to individuals who break down content, stories or scripts into discrete elements and visualise creative concepts in collaboration with a creative production team. Storyboard artists, designers, producers and information architects can create storyboards, depending on the type and scale of production. In the film and television industry, people creating storyboards work closely with directors.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

Evidence of the ability to:

- interpret scripts and specifications
- visualise creative concepts using storyboard techniques and appropriate tools and methods
- produce clear and logical storyboards that break down content, stories and scripts into discrete elements and meet specified requirements
- present storyboards to others for discussion or implementation, and adjust as required in response to feedback.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe roles and responsibilities of different members of the creative team, and how they contribute to the process of visualising and interpreting creative concepts into storyboards
- list and describe typical storyboard tools
- explain the components of storyboards including frames, elements and descriptions
- outline health and safety procedures that apply to creating storyboards and working for periods of time on computers.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in creative arts industry environments. The assessment environment must include access to:

- scripts, stories or texts to serve as the basis for creating storyboards
- storyboard and visualising tools
- different types of productions requiring storyboards

Assessors of this unit must satisfy the requirements for assessors in applicable vocational educational and training legislation, frameworks and/or standards.

</table>

Application

This unit describes the skills and knowledge required for basic digital sound editing.

It applies to individuals working under supervision who are responsible for preparing, assembling and digitally editing relatively simple sound sequences for media content.

Individuals are expected to contribute to creative outcomes, including selection and acquisition of sound materials.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

Evidence of the ability to:
- prepare and edit audio content to meet creative and technical production requirements
- use editing software and equipment proficiently, manipulating and applying effects where required
- digitise audio content in compatible formats
- assess and optimise quality of sound sequences
- accurately mark, log, document and archive edited sequences
- seek feedback from others to improve own technical and creative performance.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:
- describe a range of digital formats compatible with various editing processes, platforms and equipment
- outline procedures to log and document edited sequences
- outline typical challenges that arise collecting and organising content for broadcast and publication, and how to handle these
- identify characteristics of sound that can be manipulated to achieve high quality output
- outline work health and safety requirements for working with sound.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in creative arts industry environments. The assessment environment must include access to:
• audio editing software and equipment
• manuals and instructions to support software and equipment
• audio content.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational educational and training legislation, frameworks and/or standards.

Performance Evidence

Evidence of the ability to:

- prepare audio content for inclusion in interactive media products and media distribution channels
- use editing software to treat, equalise and clip sound sequences to meet technical standards
- use audio encoding and editing software
- complete file naming and storage according to industry or enterprise conventions.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain the need for audio file compression in media distribution channels and interactive media products
- describe how codecs work to optimise audio outputs and identify appropriate codecs for various platform destinations
- explain techniques to achieve audio equalisation
- explain file compression
- outline procedures for naming and tagging audio files following standard enterprise or industry conventions
- outline work health and safety requirements for working with sound.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in creative arts industry environments. The assessment environment must include access to:
- audio encoding and editing software and equipment
- manuals and instructions that support encoding and editing software.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational educational and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to edit sound material to meet production requirements. This involves assessing the quality of source materials, preparing source materials for sound editing, making technically accurate sound edits, and applying sound effects to enhance the final product.

It applies to individuals who work as part of a production team to edit sound material for a range of productions. It also applies to individuals working in film and sound archives. Individuals work with minimal supervision and guidance, and may supervise others.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Media and entertainment production – audio/sound

Elements and Performance Criteria

Performance Evidence

Evidence of the ability to:
- edit sound material and create final mix for productions
- incorporate appropriate sound effects into final mix
- work collaboratively as part of a production team within set deadlines
- use the features of a range of industry current sound editing software and equipment in line with production requirements and industry standards.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:
- explain the different purposes for which sound is used in productions
- explain the copyright implications that relate to sound editing
- explain the main principles and techniques of sound editing
- explain the issues and challenges that typically arise when editing sound material, and how to address them
- explain the work health and safety (WHS) procedures and principles that relate to sound editing.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in creative arts industry environments. The assessment environment must include access to:
- sound editing software and equipment
- productions where sound editing is required
- production documentation
• interaction with others.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational educational and training legislation, frameworks and/or standards.

Performance Evidence

Evidence of the ability to:
- develop creative sound concepts for recording projects
- work creatively, collaboratively and constructively with others to produce at least two sound recordings for distribution
- adjust recordings to achieve project outcomes
- document the evaluation of the recording process, outcomes and own role.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:
- describe the production requirements that may impact decisions about recording projects
- explain the legislative requirements that relate to sound recording
- explain how different recording and performance environments affect sound, and what adjustments can be made to produce required sound recordings
- explain the sound equipment required for a range of recording situations
- describe techniques for evaluating the quality of a sound recording
- explain the issues and challenges that typically arise when producing sound recordings, and how to address them.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in creative arts industry environments. The assessment environment must include access to:
- relevant instruments and equipment
- scores, charts or other written music resources
- participants, such as performers and technical crew
- appropriate recording facilities with adequate space and acoustic qualities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational educational and training legislation, frameworks and/or standards.

Performance Evidence

Evidence of the ability to:

- comply with all work health and safety (WHS) regulations, standards and work practices
- safely use optical power test equipment
- accurately measure optical signals at two wavelength division multiplexing (WDM) wavelengths
- correctly install splitter in the enclosure
- connect input and output optical fibres to the splitter
- test optical splitter
- complete connection recording.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify the location and summarise the contents of relevant organisational policies and procedures
- discuss WHS risks and control measures when working with optical fibre and equipment
- explain propagation of light in optical communication systems
- outline the role of transmitters and receivers in optical communication systems
- identify and describe the critical aspects of cleaning of connectors
- summarise specific WHS requirements relating to the handling of optical fibre and the use of laser light sources
- explain WDM applications.
Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – broadband and wireless networks field of work and include access to:

- a fibre distribution hub and relevant optical splitter
- tools, equipment and personal protective equipment currently used in industry
- relevant regulatory and equipment documentation that impacts on work activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to install a lead-in module and its associated cable for a fibre to the premises (FTTP) installation. Optical networks and FTTP are part of the strategies by service providers using wavelength division multiplexing (WDM) to deliver very high speed broadband capacity through the access network for the National Broadband Network (NBN) initiative.

It applies to individuals with specialist technical skills who work in teams to provide either underground or aerial services in next generation networks (NGN) using emerging technologies.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the ICT Implementation Guide Companion Volume or the relevant regulator for details of licensing, legislative or certification requirements.

Unit Sector

Telecommunications – broadband and wireless networks

</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 2.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

Evidence of the ability to:

- safely use optical power test equipment
- accurately measure optical signals at TWO wavelength division multiplexing (WDM) wavelengths
- install lead-in module in the enclosure for both an aerial and an underground installation
- complete connection recording for both lead-ins
- perform and test an optical fibre lead-in to a distribution joint.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline licence requirements for working at heights
- identify the location and summarise the contents of relevant organisational policies and procedures
- discuss personal safety issues
- explain the propagation of light in optical communication systems
- describe the role of transmitters and receivers in optical communication systems
- identify the critical aspects of site engineering
- explain specific WHS requirements relating to the handling of optical fibre and the use of laser light sources
- explain WDM applications.
Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – broadband and wireless networks field of work and include access to:

- a fibre lead-in module, distribution pit, premises conduit and relevant optical network termination (ONT) unit
- tools, equipment and personal protective equipment currently used in industry
- relevant regulatory and equipment documentation that impacts on work activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

</tbody>
</table>

Application

This unit describes the skills and knowledge required to joint metallic conductor cable.

It applies to individuals who work in technical roles completing tasks on customer premises in underground situations, pits, jointing enclosures or above ground.

All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media Authority (ACMA) accredited registrar.

Unit Sector

Telecommunications – cabling

Elements and Performance Criteria

</table>

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- organise resources and prepare for the task of jointing
- joint at least one 20 pair (or greater) cable
- test joint
- interpret test results
- rectify cable faults
- check that the enclosure is properly sealed
- comply with all related work health and safety (WHS) requirements and work practices.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- the current Australian Communications and Media Authority (ACMA) Competency Requirements for Telecommunications Cabling Provider Rules, legislation, codes of practice and other formal agreements that impact on the work activity
- features and operating requirements of test equipment
- information required to operate equipment according to a test specification
- manufacturer’s requirements for safe operation of equipment
- specific WHS requirements relating to the activity and site conditions
• test methods and performance requirements
• typical issues and challenges that occur on site
• purpose, construction and characteristics of cable types
• cable colour screening
• basic telephony, including operation.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• sites where jointing metallic conductor cable may be conducted
• use of joint testing equipment currently used in industry
• relevant regulatory and equipment documentation that impacts on cable jointing and testing activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to plan, build, install and earth an equipment enclosure for cabling provisioning on or above the ground.

It applies to individuals who work in technical roles in civil construction including the installation of enclosures such as pillars, cabinets, remote integrated multiplexers (RIM) and mobile equipment enclosures for new or upgrade network installations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – cabling

Performance Evidence

Evidence of the ability to:

- prepare to install an enclosure using construction plans
- use appropriate tools and equipment to construct and connect an enclosure according to plans, specifications, and work health and safety (WHS) requirements
- complete reports and document alterations to plans as appropriate.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- list the plant, tools and equipment required for construction
- describe enclosure construction methods
- describe footings and foundations
- read, interpret and make basic modifications to plans
- read and interpret legislation, codes of practice and other formal agreements that impact on the work activity
- identify specific WHS requirements relating to the activity and site conditions
- identify typical issues and challenges that occur on site.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – cabling field of work and include access to:

- sites where enclosure construction and connection may be conducted
- construction tools and equipment currently used in industry
- relevant regulatory and equipment documentation that impacts on construction.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes skills and knowledge required to erect cable supports in small aerial client installations and access networks where they may be required to do new installations, upgrades or maintain existing networks in domestic, commercial and industrial installations to deliver services in xdigital subscriber lines (xDSL), fibre to the home (FTTH) and hybrid fibre coaxial (HFC) networks.

It applies to individuals working as telecommunications linesmen and line installers who make use of aerial support structures and specialist tools.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements.

Refer to the ICT Implementation Guide Companion Volume or the relevant regulator for details of licensing, legislative or certification requirements.

Performance Evidence

Evidence of the ability to:

- install a pole and aerial fixing device after relevant authorities have been notified and approvals obtained prior to commencement
- demonstrate use of specialised hand or power tools and equipment for the installation of aerial cable supports safely
- apply work health and safety (WHS) requirements and work practices associated with the installation of aerial cable supports, including protective clothing and personal safety items, adequate warning signs and safety devices.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the features and operating requirements of equipment
- describe the information required to operate equipment according to a specification
- identify legislation, codes of practice and other formal agreements that impact on the work activity
- describe licence requirements for working at heights
- identify the manufacturer’s requirements for safe operation of equipment
- identify specific WHS requirements relating to the activity and site conditions
- describe test methods and performance requirements
- identify typical issues and challenges that occur on site.
Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications – cabling field of work and include access to:

- sites where aerial cable supports may be installed
- plant, tools and equipment to erect aerial supports currently used in industry
- relevant regulatory and equipment documentation that impacts on aerial support erection activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to practice safe installation, alteration and configuration of the carrier network termination device/asymmetric digital subscriber line (NTD/ADSL) filter and modem/mode 3 socket/cabling, for an alarm system connected to a monitoring station using a carrier line supporting an ADSL modem service, used for Open and Restricted Cabling Registration.

It applies to cablers, installers and technicians working in the field of installation, maintenance or upgrades of existing systems in voice, data or security systems, and in the context of technology convergence and digital subscriber line (DSL) technologies as applied in the telecommunications industry.

Working functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the ICT Implementation Guide Companion Volume or the relevant regulator for details of licensing, legislative or certification requirements.

Performance Evidence

Evidence of the ability to:

- demonstrate the use of asymmetric digital subscriber line (ADSL) concepts in application and design
- demonstrate fault-finding techniques to locate cabling faults in telecommunications networks
- solve calculations for direct current (DC) and alternating current (AC) electrical problems
- apply digital transmission principles and testing
- demonstrate the use of ADSL test equipment
- comply with all related work health and safety (WHS) requirements and work practices in the alteration of existing client services.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- discuss WHS issues and practices relating to ADSL circuits and working with electricity
- describe typical electrical faults, fault-finding techniques and the type and use of testing equipment, including:
  - multimeter to measure direct current (DC) voltage, current and resistance
  - continuity tester to check continuity wiring
  - testing of open circuits and short circuits
  - ADSL test set
- identify the appropriate tools used in ADSL cabling
• describe the types of cable terminations used for a range of telecommunications cable applications
• outline the following:
  • ADSL circuitry and configurations
  • digital transmission concepts, including installation practices and testing
  • procedures in altering existing services, including sign off
  • the distinction between analog and digital signals.

Assessment Conditions
Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications – cabling field of work and include access to:
• special purpose tools, equipment and materials
• a site where altering of existing services for a client may be conducted
• appropriate AC and DC testing equipment
• manufacturer’s documentation and equipment
• correct tools and measuring equipment currently used in industry.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to safely install, maintain and modify communications cabling required on a customer’s premises, according to Australian Communications and Media Authority (ACMA) Lift Cabling Provider Rule.

It applies to individuals who are qualified licensed electricians working in technical roles for lift installations on new or upgrade installations for an existing network or subsystem for convergence to next generation network (NGN) applications.

All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an ACMA accredited registrar.

To undertake aerial and underground cabling, individuals must attain the specialist competencies as indicated in ACMA cabling provider rules Pathways to cabling registration.

Unit Sector

Telecommunications – cabling

Elements and Performance Criteria

<p>| ELEMENT | PERFORMANCE CRITERIA |</p>
<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
</tbody>
</table>
| 1. Work within constraints imposed by customer premises and ACMA regulatory environment | 1.1 Prepare for lift cabling work according to regulatory environment, cabling environment, cable type, cable identification, termination systems, earthing and protection, records and relevant legislation, codes, regulations and standards  
1.2 Identify building infrastructure that places critical constraints on cabling when undertaking typical lift cabling installation from local distributor (LD) to lift car socket  
1.3 Develop strategies to manage other infrastructure in relation to cabling  
1.4 Notify appropriate personnel of identified safety hazards at cabling worksite |
| 2. Manage remote power feed | 2.1 Identify and avoid risks posed by contact with remote power feeding services when performing cabling activity  
2.2 Make site safe by identifying remote power feeding services that operate at above telecommunications network voltage (TNV) inside customer premises |
| 3. Install and modify cable support, earthing and termination infrastructure | 3.1 Install fixings and cable support structures of adequate strength safely and align with environment according to manufacturer’s and customer’s specifications  
3.2 Secure catenary supports to building structure and tension where necessary to ensure cable weight can be carried in operating conditions with interference and safety segregation maintained, including adherence to current Australian Standards  
3.3 Install protective earthing of metal work to industry standards where required  
3.4 Inspect installed support structure to ensure cable will not be exposed to damage during installation and general operation  
3.5 Position terminating equipment and fixing to accepted industry codes of practice, current Australian Standards and customer requirements  
3.6 Inspect control cubicles, travelling cable supports, junction boxes, line isolator units, backmount and outlet layout, to ensure compliance with manufacturer’s specifications, allow adequate work space for ease of access and avoid overlaying  
3.7 Segregate incoming and outgoing cables to ensure ease of access, and avoid overlaying |
<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 4. Install cables and earth wires | 4.1 Install lift communications cable from LD to lift car socket  
4.2 Install cables according to manufacturer’s application specifications, including tension and bending stress requirements  
4.3 Identify and avoid sources of possible damage to cable, including hot pipes, sharp edges, cable burn, kinks and stretching  
4.4 Allow sufficient excess at cable ends to facilitate termination  
4.5 Place and secure cable to maintain safety and interference segregation according to legislative and industry standards  
4.6 Install cable fasteners with correct tension to prevent cable sheath damage or transmission impairment, and trim flush to prevent risk of personal damage  
4.7 Install aerial cables supported by catenaries in external environment to meet minimum above ground clearances and clearances from hazardous electrical services according to current Australian Standards  
4.8 Install and secure travelling cables to maintain safety and according to relevant legislative, industry and manufacturer’s standards  
4.9 Install local isolation units (LIU) as required according to current Australian Standards  
4.10 Install over-voltage protection devices to all cable pairs, where required, to suppress voltage surges, with devices protectively earthed and according to current Australian Standards  
4.11 Protect earth wire insulation against damage with protective earths segregated according to relevant industry and legislative standards |
| 5. Terminate and test cables and earth wires | 5.1 Remove cable sheath to allow for correct termination length and without damage to underlying conductors and their insulation  
5.2 Install terminating modules according to manufacturer’s specifications, ensuring cable pairs are neatly and sequentially fanned for termination  
5.3 Terminate conductors according to recommended colour code sequence using appropriate termination tools in manufacturer’s specified manner  
5.4 Earth cable shield, if applicable, to manufacturer’s specifications and relevant industry codes of practice, including current Australian Standards  
5.5 Undertake visual inspection to confirm termination colour code sequence has been followed, prior to end to end testing of wire and... |

Performance Evidence

Evidence of the ability to:

- install a lift cabling system from local distributor (LD) via a travelling cable to a lift car socket, including accurate completion of installation records, drawing alterations and compliance forms
- read and interpret cable drawings and plans for locations and terminations
- apply cable conductor identification codes
- conduct and interpret cable test results
- interpret and apply related regulations and industry codes
- comply with all related work health and safety (WHS) requirements and work practices.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements and performance criteria of this unit. This includes:

- Australian Communications and Media Authority (ACMA) competency requirements for Telecommunications Cabling Provider Rules
- the features and operating requirements of test equipment
- the information required to operate equipment according to a test specification
• legislation, codes of practice and other formal agreements that impact on the work activity
• manufacturer’s requirements for safe operation of equipment
• explain protection earthing
• the features of lift construction and the types of cables required
• the types of cable used for manual controlled fire services
• cables and the types of cabling
• common distributors
• specific WHS requirements relating to the activity and site conditions
• typical issues and challenges that occur on site.

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace and include access to:

• a site on which lift communications cabling activities may be carried out
• cabling and field equipment currently used in industry
• licensing requirements and other site related documentation.

Note: All client cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media (ACMA) accredited registrar. Assessment by a Telecommunications Industry Training Advisory Board (TITAB) registered assessor is recommended for this unit.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to place, secure and terminate structured cabling for indoor and outdoor installations and to certify the installation within a domestic, commercial or industrial client's premises.

It applies to technical staff who install, terminate and certify structured cabling installations for communications applications including digital and analog, telephony, data, video, digital broadcasting, computer networks, local area networks (LAN), wide area networks (WAN) and multimedia.

All client cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media (ACMA) accredited registrar.

The ACMA Pathways for Cabler Registration of Specialist Competency ICTCBL301 requires completion of ICTCBL247 and a WHS/OHS unit.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- install, terminate and certify a structured cabling installation to industry standards, applying related work health and safety (WHS) requirements and work practices
- install and test the following UTP (Cat 6, Cat 6A & Cat 7) and FTP (Cat 6 2x2)
- install termination hardware
- conduct a termination test and interpret the results
- verify compliance with manufacturer’s installation specifications and warranties
- provide a report certifying the installation and test results to the client.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- Australian Communications and Media Authority (ACMA) competency requirements for Telecommunications Cabling Provider Rules
- legislation, codes of practice and other formal agreements that impact on the work activity
- application of industry standards on cable bending, anchors, tension, twist and labelling
- tools and equipment commonly used in cable installations and testing
- features and operating requirements of test equipment
• types and structure of cable and termination hardware used in communications installations
• information required to operate equipment according to a test specification
• identify the manufacturer’s requirements for safe operation of equipment
• identify specific WHS hazards and requirements relating to the activity and site conditions
• test methods and performance requirements
• different types of records and documentation that may be required for certification and reporting
• typical issues and challenges that occur on site.

Assessment Conditions
Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• sites where installation, termination and certification of structured cabling may be conducted
• testing equipment currently used in industry
• relevant regulatory and equipment documentation that impacts on installation.

Note: All client cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media (ACMA) accredited registrar. Assessment by a Telecommunications Industry Training Advisory Board (TITAB) registered assessor is recommended for this unit.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to install and terminate coaxial cable on client premises in communications applications, digital and analog, including master antenna television (MATV), cable television (CATV), closed-circuit television (CCTV), digital video broadcasting – terrestrial (DBVT), digital video broadcasting – satellite (DVB-S), data and video, including digital broadcasting, computer networks such as local area networks (LAN) and wide area networks (WAN), and multimedia.

It applies to technical staff who install and terminate coaxial cable for new installations, upgrades or the maintenance of existing networks in domestic, commercial and industrial installations on a client's premises.

Where this unit of competency is undertaken as a competency related to the ACMA Cabler Registration, this requires prior completion of ICTCBL247 and a WHS/OHS unit of competency.

All cabling work for clients in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media Authority (ACMA) accredited registrar.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- install and terminate coaxial cable types including RG6 quad shielded coaxial cable
- install different connector types
- conduct and interpret test results
- verify the installation complies with manufacturer’s specifications and warranties
- prepare a report for a client that documents the installation and test results
- comply with all related work health and safety (WHS) requirements and work practices.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- legislation, regulations, standards and codes of practice associated with the installation of coaxial cables
- features of types of coaxial cable and the manufacturer’s specifications that apply
- features and operating requirements of test equipment for coaxial cable
- information required to operate equipment according to a test specification
- manufacturer’s requirements for safe operation of coaxial cable tools and equipment
- safety precautions when working with coaxial cable and radio frequency (RF) based systems
- specific WHS requirements relating to the activity and site conditions
- test methods and performance requirements
- types and techniques for connecting and termination of coaxial cable, including:
  - compression termination
  - crimp termination
- function of over-voltage protection devices
- transmission and propagation characteristics of coaxial cable
- typical issues and challenges that occur on site.

**Assessment Conditions**

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry. This includes access to:

- special purpose tools, equipment and materials
- sites where installation and termination of coaxial cabling may be conducted
- equipment and personal protective equipment currently used in industry
- testing equipment currently used in industry
- relevant regulatory and equipment documentation that impacts on installation activities.

Note: All client cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media (ACMA) accredited registrar. Assessment by a Telecommunications Industry Training Advisory Board (TITAB) registered assessor is recommended for this unit.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to effectively transfer control of a newly installed or upgraded system to a client. It includes the transfer of information to the client and the completion of relevant documentation.

It applies to field officers, technicians or technical supervisors from carriers, contractors or other service providers completing domestic, commercial or industrial installations. Communications applications include digital and analog, telephony, data, video, digital broadcasting, computer networks, local area networks (LAN), wide area networks (WAN) and multimedia.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – cabling

Elements and Performance Criteria

</tbody>
</table>
**ELEMENT** | **PERFORMANCE CRITERIA**
---|---
1. Inform client of system functions and capacities | 1.1 Provide client with cables systems and equipment information  
1.2 Demonstrate physical installation, cable system usage or equipment operation and answer client queries on system functions  
1.3 Confirm variations to specifications with client

2. Hand over records and documentation | 2.1 Update documentation and plans  
2.2 Present complete and orderly records and system documentation to client  
2.3 Adhere to all relevant company policies and relevant legislation, codes, regulations and standards

3. Complete contract documentation | 3.1 Provide guarantees to client in required format where work is subject to guarantee  
3.2 Present invoices to client to complete contractual arrangements  
3.3 Obtain client’s sign off to confirm acceptance of cabling work completed where required  
3.4 Advise client of opportunities for system upgrades, additional services and training where appropriate

**Foundation Skills**

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

<table>
<thead>
<tr>
<th>Skill</th>
<th>Description</th>
</tr>
</thead>
</table>
| **Reading** | • Reads and interprets plans, specifications and technical information to pass on to client  
• Evaluates information and products from a variety of sources to ensure appropriateness to client needs |
| **Writing** | • Prepares documentation and correspondence using clear language and correct spelling and terminology  
• Accurately records and completes information in organisational systems  
• Records outcomes of communication with client for action |
| Oral Communication | • Interacts effectively in verbal exchanges, using active listening and questioning, to convey and clarify information  
• Clearly explains detailed information using language, tone and pace appropriate to the audience |

| Numeracy | • Performs mathematical calculations to present financial data and contract requirements, and to accurately process invoice |

| Navigate the world of work | • Takes personal responsibility for following explicit and implicit policies, procedures and legislative requirements |

| Interact with others | • Uses a range of strategies to establish a sense of connection and build rapport with clients and workmates  
• Recognises and accommodates basic differences and priorities of others |

| Get the work done | • Takes responsibility for planning, sequencing and prioritising tasks and own workload for efficiency and effective outcomes  
• Uses familiar digital technologies and systems to access information, enter data, present information and communicate with the client |

Performance Evidence

Evidence of the ability to:
- demonstrate and explain the cable and equipment system to the client
- present accurate records and system documentation to the client
- complete contract documentation
- respond to client requests.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements and performance criteria of this unit. This includes:
- cabling types, connectors and cabling structures
- equipment on the client’s premises
- typical performance parameters and faults that may be encountered with the client equipment
- various equipment types
- warranty information for equipment supplied and contractor work guarantees.
Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – cabling field of work and include access to:

- sites where cabling system and client equipment have been installed or upgraded
- relevant regulatory and equipment documentation that impacts on system and equipment installation activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

</table>

Application

This unit describes the skills and knowledge required to locate and identify cable system faults in communications cables at enterprise and client premises sites. The cable types may be telecommunications digital, voice and data in digital TV cabling.

It applies to technical staff who are required to locate and rectify communications cable system faults, including local area networks (LAN) and wide area networks (WAN), master antenna television (MATV), cable television (CATV), closed-circuit television (CCTV), digital video broadcasting – terrestrial (DVB-T), digital video broadcasting – satellite (DVB-S), security alarm systems, fire systems, voice over internet protocol (VoIP) networks and radio communications. The telecommunications cabling types may be twisted pair, coaxial or fibre optic types’

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the Implementation Guide Companion Volume or the relevant regulator for specific guidance on requirements.

Unit Sector

Telecommunications – cabling

</tr>
</tbody>
</table>
| 1. Prepare to locate and rectify cable fault | 1.1 Prepare for given work according to relevant legislation, codes, regulations and standards  
1.2 Inform appropriate personnel of existing and potential hazards on worksite  
1.3 Arrange access to site according to required procedure  
1.4 Establish type of cable and nature of fault from client for cable system  
1.5 Select suitable testing tools and equipment and personal protective equipment to meet required industry standards |
| 2. Locate and diagnose cable fault | 2.1 Conduct appropriate test following work health and safety (WHS) and environmental requirements to identify type of cable fault  
2.2 Isolate fault progressively to remove likely variables from assessment  
2.3 Locate cable or cable termination equipment fault without undue interruptions to client activity in shortest possible time  
2.4 Notify client of findings |
| 3. Rectify fault | 3.1 Present client with options to rectify fault  
3.2 Advise client of costs of any repair not covered by service agreement  
3.3 Conduct fault rectification, if client agrees, in a manner that is safe for repair team and client  
3.4 Escalate any unresolved faults to other parties for resolution if required |
| 4. Complete documentation and clean up worksite | 4.1 Advise client of successful fault clearance and obtain sign off  
4.2 Complete all records  
4.3 Complete reports to justify fault diagnosis and rectification methodology if required  
4.4 Remove all waste and debris from worksite and dispose of according to environmental requirements  
4.5 Restore any changes made to worksite during fault repair to client’s satisfaction |

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- identify different faults using checks, tests and fault-finding methodology
- determine and rank likely causes of fault
- provide the client with solutions for rectifying faults
- rectify the faults
- escalate unresolved faults to other parties for resolution
- comply with all related health and safety requirements and work practices.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- Australian Communications and Media Authority (ACMA) competency requirements for Telecommunications Cabling Provider Rules
- features and operating requirements of test equipment
- equipment according to a test specification
- legislation, codes of practice and other formal agreements that impact on the work activity
- manufacturer’s requirements for safe operation of testing instruments
- specific work health and safety (WHS) requirements relating to the activity and site conditions
- test methods and identify the test performance requirements
• typical issues and challenges that occur on site.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• sites where cable system tests may be conducted
• fault-finding equipment currently used in industry
• relevant regulatory and equipment documentation that impacts on cable system testing and fault-finding activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

Evidence of the ability to:
- read and interpret:
  - related floor plans
  - building plans
  - reflected ceiling plans
  - schematic drawings
- install customer premises equipment
- configure and test systems and equipment
- apply relevant regulations and standards
- comply with all related health and safety requirements and work practices.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:
- identify and select cabling types, connectors and cabling structures
- describe the connections to carrier infrastructure or equipment, such as main distribution frame (MDF) or asymmetric digital subscriber line (ADSL), multiplexer (MUX), integrated services digital network (ISDN), network termination device (NTD) or other carrier interface unit
- recognise electrical and/or optical properties to be measured
- explain the health and safety considerations for the works including:
  - electrical safety
  - lifting hazards
  - manufacturer’s requirements for safe operation of equipment
• describe the equipment to be installed on the customer's premises
• identify and select the test methods and performance requirements for the installation
• identify typical issues and challenges that occur on the worksite.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – cabling field of work and include access to:

• a site where installation of electronic equipment and customer cabling may be conducted
• plant, tools and equipment currently used in industry
• relevant regulatory and equipment documentation that impacts on work activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to install indoor or outdoor, domestic, commercial or industrial network cable equipment at a client's premises or service provider access networks. This may include communications applications in telephony, broadband, data, video, radio frequency (RF) equipment, security and computer networks, including local area networks (LAN), wide area networks (WAN) and multimedia.

It applies to technicians and lineman installers who install network cable equipment within the broadband infrastructure deployment where they may upgrade coaxial or optical fibre cables as part of a hybrid fibre coaxial (HFC) network, a broadband access network or a large client private network.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the Implementation Guide Companion Volume or the relevant regulator for specific guidance on requirements.

Performance Evidence

Evidence of the ability to:

- prepare for installation of network cable equipment
- provide cable infrastructure
- install cable equipment support structure for power, alarms and interrogation requirements
- install equipment, test and interpret test results
- label equipment correctly
- safely use any specialised hand or power tools and equipment
- apply regulations and standards related to the installation
- comply with all related health and safety requirements and work practices.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify and select cabling types, connectors and cabling structures
- identify connections to carrier infrastructure or equipment, such as main distribution frame (MDF) or customer interface units (CIU)
- describe the network cable installation requirements for the client's equipment
- define the electrical and/or optical properties to be measured
- identify the health and safety considerations including:
  - electrical safety
  - lifting hazards
  - manufacturer’s requirements for safe operation of equipment
- describe the test methods and performance requirements to be used
- identify the typical issues and challenges that occur on the worksite
• describe the purpose of warranties and service level agreements.

**Assessment Conditions**

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications—cabling field of work and include access to:

• a site where installation of network cable equipment may be conducted
• plant, tools and equipment currently used in industry
• relevant regulatory and equipment documentation that impacts on work activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the performance outcomes, skills and knowledge required to install ribbon cable in the fibre access node (FAN) site and distribution, local and access underground enclosure joints. Cables may range from 12 fibre to 576 fibre cables.

It applies to individuals who are optical fibre cable installers and splicers deploying broadband access networks using optical technologies. They combine technical skills with specific work health and safety (WHS) skills to work safely on ribbon fibre.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Elements describe the essential outcomes.</strong></td>
<td><strong>Performance criteria describe the performance needed to demonstrate achievement of the element.</strong></td>
</tr>
</tbody>
</table>

### 1. Prepare for installation of ribbon fibre

1.1 Select safety equipment to protect self, co-workers and public in line with WHS and environmental requirements

1.2 Identify and obtain tools and appropriate equipment required for installation

1.3 Check physical conditions relevant to installation and confirm layout of equipment to be installed

1.4 Inform appropriate personnel of identified hazards on worksite

1.5 Locate other services from relevant authorities

1.6 Secure worksite with tests for dangerous gases and guards around open manholes

1.7 Obtain approval for alterations to design within organisational guidelines

### 2. Check and secure existing optical fibre cable

2.1 Following WHS practices, verify that cable was installed according to installation plan and inspect cable for signs of sheath damage

2.2 Maintain minimum bend ratios of cable according to manufacturer specifications while manoeuvring into position

2.3 Secure cable according to safe industry practice, avoiding damage to cable and sheath

### 3. Install ribbon fibres into high density drawers and/or pivot sub-racks in internal cabinets

3.1 Introduce cable into cabinet rack through appropriate route

3.2 Remove cable sheath and lay up ribbon loose tubes into sub-racks without damage to fibre

3.3 Remove loose tubes, clean ribbon fibres and prepare for splicing using organisational techniques

3.4 Splice ribbon fibres and secure into splice holders

3.5 Confirm that fibres are accurately spliced according to organisational specifications

### 4. Install and splice ribbon cable in underground enclosures

4.1 Select appropriate enclosure for function and cable type

4.2 Prepare cables for mid-span and butt splicing following vendor guidelines

4.3 Feed cable accurately into enclosure according to network owner guidelines
| 4.4 Lay up ribbon fibre in enclosure splice tray to allow accurate and efficient splicing  
4.5 Cross-reference fibre numbering to match fibres accurately  
4.6 Strip ribbon fibres to specifications  
4.7 Splice ribbon fibres accurately  
4.8 Apply heat-shrink sleeves to ensure protection of spliced ribbon fibres  
4.9 Secure spliced ribbon fibres in splice holders |
<table>
<thead>
<tr>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>5. Close and seal enclosure</td>
</tr>
</tbody>
</table>
| 5.1 Check cable and ribbon fibre placement in splice trays conform to vendor and network owner specifications and adjust if necessary  
5.2 Close and secure splice trays and fit enclosure cap  
5.3 Heat shrink seals around cable entry ports when using heat shrinking techniques, according to vendor and network owner guidelines  
5.4 Close and tighten seals around ribbon fibre cables when using mechanical sealing techniques, according to vendor and network owner guidelines  
5.5 Check for signs of effective seal and re-seal if necessary |
| 6. Complete site reinstatement, reporting and sign off requirements  |
| 6.1 Place sealed enclosure in pit and secure to vendor and network owner specifications  
6.2 Identify signs of damage or potential damage to pit and cable and take steps to mitigate  
6.3 Reinstall site to network owner specifications  
6.4 Prepare and finalise reports, including test results and alterations to plans, according to network owner requirements  
6.5 Advise client of work completion and obtain sign off |

**Foundation Skills**

*This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.*

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- prepare cable for mid-span splicing – strip and coil
- prepare cable for butt end splicing – strip and coil
- install ribbon fibre cable into:
  - one heat shrink seal enclosure
  - one mechanical seal enclosure
  - one high density ribbon fibre termination drawer
- splice ribbon fibre according to specifications
- observe all network owner requirements and product practices to ensure optimal performance of cable systems
- adapt techniques to a range of technical and environmental conditions.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- applicable network owner standards, specifications and procedures for cable installation
- cable installation requirements, including:
  - causes of signal strength loss in optical fibre
• colour coding and numerical coding of fibres
• application of relevant safe operation of laser instruments
• installation equipment
• industry and organisational policies and procedures when splicing optical fibre cable
• manufacturer requirements for safe operation of optical fibre equipment
• common hazards associated with the construction site
• work health and safety (WHS) and environmental control processes and responsibilities on worksites
• safe handling of optical fibres and related equipment including:
  • hazards relating to handling of optical fibre and laser light source in the workplace
  • injuries:
    • damage to retina from lasers
    • damage to lungs from inhalation of fibre offcuts and particles
    • needle stick injury from fibres and offcuts
  • laser warning signs and labels relating to optical fibre components and equipment
• safety requirements when handling and working with:
  • active equipment
  • laser light sources
  • optical fibre connectors
  • optical fibres
  • patch cords
• major feature and use of ribbon fibre, including:
  • bend ratios for ribbon fibre
  • procedures for handling and placing ribbon fibre in enclosures
  • procedures for physical handling of ribbon fibre cables
  • structure of ribbon fibre cables
  • splicing techniques for ribbon fibre
  • types and functions of ribbon fibre enclosures
• risks associated with confined spaces and determine the appropriate responses.

**Assessment Conditions**

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

• optic fibre cabling and equipment
• a range of cabinet types and other housings requiring cable-handling techniques
• personal protective equipment
• first aid and fire safety equipment
• ribbon fibre cleaners, stripper and splicer
• joint pressure testing equipment.
Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to modify a large size cable network or cut over new large size cables in the telecommunications access network. It includes telephony, data security and emergency services within the cable sheath.

It applies to linesworkers, technicians or copper jointers working for carriers, contractors or other service providers who cut over and rearrange large size cable to distribution cabinets and housings.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the Implementation Guide Companion Volume or the relevant regulator for specific guidance on requirements.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- obtain and use information to prepare a plan to implement cutover tasks
- obtain all resources required to carry out cutover tasks
- implement plan including:
  - preparing jointing cabinets and chambers for cutover
  - preparing, entering and sealing new cables to large size joint enclosures
  - using jointing machines and jigs for jointing
  - conducting tests to determine success of cutover
  - interpreting results and rectifying faults occurring as a result of cutover
  - sealing joints and restoring alarms
- comply with all related health and safety requirements, client and work practices
- complete and store required project documentation.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- common cabling types, connectors and cabling structures
- use of colour for identification of cables
- legislation, codes of practice and other formal agreements that impact on the work activity
- equipment used for the work activity and the manufacturer’s requirements for safe operation
- cutover of large size cable and client equipment
- health and safety concerns relevant to the work activity
- cable performance test requirements
- equipment, including operating requirements, used to test cable
- issues and challenges that occur on worksites, and how to address them
- warranties and service level agreements (SLAs).

**Assessment Conditions**

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- systems and equipment required for cutover activities
- installation equipment currently used in industry
- regulatory and equipment documentation that impacts on work activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to jumper metallic conductor cable in access network cabinets or exchange distribution frames. It applies to new or existing jumpering for upgrades or network cabling rearrangements for convergence to next generation networks (NGN).

It applies to linesworkers, technicians or jointers who carry out technical roles involving indoor and outdoor distribution frame jumpering. All jumpering in access network distribution cabinets must be conducted by workers who have been authorised by the network owner or carrier to undertake the work involved.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the Implementation Guide Companion Volume or the relevant regulator for specific guidance on requirements.

<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 3.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

Evidence of the ability to:

- plan and prepare for jumpering activity including:
  - arranging safe access to site
  - identifying special services and remote power feeds
  - following appropriate procedures
- carry out jumpering activity including:
  - populate terminal frames with new terminal blocks where necessary
  - running jumpers through frame and terminate jumper to terminal blocks
  - using correct methods to terminate a range of jumpers
  - conducting tests and interpreting cable test results for several different types of lead-in faults
  - interpreting and applying relevant legislative requirements
- finalise jumpering activity including:
  - updating records and plans to show cable locations
  - restoring site to required condition
  - obtaining final sign off.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- list the termination tools required for the work activity and explain how to operate them according to safety and manufacturer's guidelines
- describe the features and operating requirements of testing equipment
• describe the process used to install and maintain cabling products according to manufacturer's guidelines
• outline legislation, codes of practice and other formal agreements that impact on the work activity
• describe specific work health and safety requirements relating to the activity and site conditions
• explain termination methods and performance requirements for jumpering activity
• describe typical issues and challenges that occur on site and how to address them.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – cabling field of work and include access to:

• sites where metallic conductor cable may be terminated
• colour codes for visual inspections or wire-mappers for 4 pair cable tests
• regulatory and cabling documentation that impacts on cable terminating activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

</table>

Application

This unit describes the skills and knowledge required to prepare design drawings and specification for indoor or outdoor, domestic, commercial or industrial cable installations for communications applications compliant with appropriate Australian Communications and Media Authority (ACMA) technical standards.

It applies to technical staff who prepare design drawings and specifications for digital and analog, telephony, data, video, digital broadcasting, computer networks, local area networks (LAN), wide area networks (WAN) and multimedia cable communication installations on a client’s premises.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the Implementation Guide Companion Volume or the relevant regulator for specific guidance on requirements.

Unit Sector

Telecommunications – cabling

Elements and Performance Criteria

<table>

</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
<tr>
<td>1. Gather information on existing and proposed</td>
<td>1.1 Confirm cable installation requirements with client</td>
</tr>
<tr>
<td></td>
<td>1.2 Inspect site to confirm building plans where possible</td>
</tr>
</tbody>
</table>
ELEMENT | PERFORMANCE CRITERIA
--- | ---
Installation | 1.3 Review existing cable plans and drawings

2. Determine installation options | 2.1 Assess available installation options against client requirements and relevant legislation, codes, regulations and standards  
2.2 Establish and assess cost of options against client’s budget  
2.3 Select most suitable option based on function and cost considerations, and present to client

3. Prepare suitable drawings | 3.1 Prepare clear and accurate cable installation drawings indicating proposed outlets and services  
3.2 Provide drawings to relevant parties and file copies for later reference according to company policies

4. Prepare cabling specifications | 4.1 Prepare detailed cabling specifications for cabling system  
4.2 Prepare accurate costing from detailed specification, including equipment and material required

5. Verify specifications with client | 5.1 Verify prepared documentation with client  
5.2 Obtain authorisation and sign off from client to proceed according to company policy

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Performance Evidence

Evidence of the ability to:

- determine installation requirements and options
- produce schematic and floor plan drawings based on design parameters
- produce specifications based on design drawings
- verify design drawings and specifications with client
- produce a costing of the design and specifications.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- recognise and apply the Australian Communications and Media Authority (ACMA) regulation requirements for Telecommunications Cabling Provider Rules in the design
- recognise and apply legislation, codes of practice and other formal resources that impact on the design
- recognise and apply industry recognised drafting principles and standards
- identify key features and operating requirements of resources and equipment required for the client cable installation
- identify and include the manufacturer’s performance specifications for equipment and consumables in the design
- assess health and safety requirements relating to the design.
Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – cabling field of work and include access to:

- sites where cable installation may be conducted
- equipment currently used in industry
- relevant regulations, company policies and cabling specifications that impact on cable installation activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

Evidence of the ability to:

- plan and provide appropriately skilled labour, volume and type of material to meet key dates and milestones for installations
- identify labour and material sources and negotiate with contractors, suppliers and other service providers to meet installation deadlines
- monitor work progress and adjustment of resource requirements to meet both client’s needs and costing parameters in installations.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe appropriate methods for scheduling labour and resources
- recognise the requirements to safely operate equipment and install components according to a manufacturer’s specification
- outline the work health and safety (WHS) standards and practices required to:
  - manage risk and hazards in the workplace
  - use health and safety standards
  - work systematically with required attention to detail without injury to self or others
- identify and describe legislation, codes of practice and other formal agreements that impact on the work activity
- identify typical issues and challenges that occur in scheduling work and overseeing a worksite.
Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – cabling field of work and include access to:

- sites and equipment where cabling installation may be conducted
- relevant regulatory and equipment documentation that impacts on installation activities
- organisational policies and procedures for documenting schedules.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to supervise an indoor or outdoor, domestic, commercial or industrial communications cabling project. It requires planning, preparing financial budgets and monitoring cabling work. Communications applications include digital and analog telephony, data, video, digital broadcasting, computer networks, local area networks (LAN), wide area networks (WAN) and multimedia.

It applies to technical staff who supervise a cabling project on a client's premises where technical and organisational skills are required to ensure an effective outcome for the client.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the Implementation Guide Companion Volume or the relevant regulator for specific guidance on requirements.

Performance Evidence

Evidence of the ability to:

- complete all appropriate plans and financial budgets for cabling activities
- supervise cabling project applying human resource policies, including awards and conditions and all related health and safety and work practices
- monitor and implement alternate plans where necessary to meet work schedules and client requirements
- complete a project report on a cabling project detailing recommendations for improvement.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe appropriate methods for scheduling, costing and managing labour and resources on a project
- recognise the requirements to safely operate equipment and install components according to a manufacturer’s specification
- outline the health and safety standards and practices required to:
  - manage risk and hazards in the workplace
  - use health and safety standards
  - work systematically with required attention to detail without injury to self or others
- identify and describe legislation, codes of practice and other formal agreements that impact on the work activity
- identify typical issues and challenges that occur in scheduling and supervising a worksite
- outline the components of reports and identify the reasons for other documentation required when supervising a project.
Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – cabling field of work and include access to:

- a site with a cabling project
- human resource policies, including awards, conditions and all related work health and safety (WHS) and work practices
- relevant regulatory and equipment documentation that impacts on monitoring activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to test cable bearers. It involves setting up, testing and interpreting test results and determining appropriate action for all cable types (metallic, optical fibre and coaxial).

It applies to technicians and line installers whose work involves testing cable bearers for connections, signal strength or loss of cable links on client cable and service provider networks, in accordance with manufacturer’s and design specifications.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the Implementation Guide Companion Volume or the relevant regulator for specific guidance on requirements.

Unit Sector

Telecommunications – cabling

Elements and Performance Criteria

Performance Evidence

Evidence of the ability to:
- perform tests on cable bearers
- use a range of tests
- interpret test results
- rectify a range of faults
- report on the completed tests
- comply with all related health and safety requirements and work practices.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:
- describe the features, operation and specifications of test equipment
- identify a range of tests performed on cable bearers
- describe codes of practice and standard procedures that apply to cable bearers
- list common cable bearer faults and describe how to rectify them
- specify health and safety requirements relating to use and operation of test equipment
- outline the components of reports and identify the reasons for other documentation required when conducting tests.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – cabling field of work and include access to:
- sites where testing may be conducted
• cabling and equipment currently used in industry
• relevant regulatory and equipment documentation that impacts on testing cable bearers.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

</table>

Application

This unit describes the skills and knowledge required to remotely locate and identify cable network faults in voice, video and data telecommunications applications using metallic and optical fibre cables.

It applies to technicians who are required to locate telecommunications cable faults in access networks. This may be done at a centralised testing office and make use of computer test routines and databases.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the Implementation Guide Companion Volume or the relevant regulator for specific guidance on requirements.

Unit Sector

Telecommunications – cabling

Elements and Performance Criteria

<table>

<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
<tr>
<td>1. Verify fault report</td>
<td>1.1 Locate source of fault using available information and contacts to verify nature of fault as reported</td>
</tr>
<tr>
<td></td>
<td>1.2 Perform preliminary operational testing according to type of fault presentation, fault environment and enterprise guidelines to verify nature of fault</td>
</tr>
</tbody>
</table>
ELEMENT | PERFORMANCE CRITERIA
--- | ---
1.3 Analyse historical data to identify possible causes and solutions

2. Conduct remote testing to diagnose network fault
2.1 Evaluate cable fault details and plan strategy to conduct remote testing
2.2 Conduct appropriate remote diagnostic test to isolate and diagnose network fault
2.3 Determine urgency and impact of fault and identify required response time frame
2.4 Evaluate diagnostic tests to determine type, location and nature of network fault

3. Dispatch fault-finding field personnel
3.1 Prepare fault report and forward to appropriate staff according to enterprise guidelines
3.2 Notify fault centre and arrange for dispatch of technician to rectify fault
3.3 Notify client of fault progress and arrange for fault clearance time

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Performance Evidence

Evidence of the ability to:

- methodically approach fault identification
- conduct tests appropriate to the type of fault identified
- interpret test results
- provide instructions to staff engaged in on-site repair.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the features and operating requirements of test equipment
- identify appropriate tests to be performed
- describe the legislation, codes of practice and standard procedures for cable network faults
- specify health and safety requirements relating to fault finding in cable networks
- identify typical issues and challenges that occur when performing remote tests and fault finding.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – cabling field of work and include access to:

- sites where remote investigation of cable network faults may be conducted
- fault-finding equipment currently used in industry
- relevant documentation that impacts on cable network and fault-finding activities.
Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to organise teams undertaking cabling work on all cable types, and to ensure compliance with regulatory and industry standards.

It applies to technical staff supervising teams within a customer premises and ensuring compliance with the Australian Communications and Media Authority (ACMA) and industry standards. They may make use of formal documentation, such as accurate completion of a telecommunications cabling advice (TCA) form (TCA1 form), test routines and databases.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

Evidence of ability to:

- organise, schedule and establish communication protocols for cabling work
- monitor work activity and reallocate as required to meet specifications, work health and safety (WHS) and ensure compliance with relevant regulations and standards
- ensure cabling work is completed and records are maintained.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete unit requirements safely and effectively, the individual must:

- describe and explain Australian Communications and Media Authority's (ACMA) Competency Requirements for Telecommunications Cabling Provider Rules, legislation, codes of practice and other formal agreements that impact work activity
- describe and explain cable installations
- list features and operating requirements of test equipment
- describe and explain information required to operate equipment according to a test specification
- explain manufacturer’s requirements for safe operation of equipment
- identify specific work health and safety (WHS) requirements relating to activity and site conditions
- describe test methods and performance requirements
- identify and explain typical issues and challenges that occur on site.
Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the Telecommunications – Compliance field of work and include access to:

- sites where staff monitoring may be required
- supervision rules
- use of tools, materials and equipment currently used in industry
- relevant regulatory and equipment documentation that impact work activities.

Note: Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Refer to the ICT Implementation Guide Companion Volume for recommended assessor details.

Performance Evidence

Evidence of the ability to:
- identify technical considerations affecting the implementation of a database
- analyse and monitor performance issues during the implementation of a database
- modify a database to meet project and client performance requirements.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:
- describe the client business domain
- list current industry-accepted hardware and software products
- describe requirements of basic database design
- identify required database performance standards
- outline quality assurance practices
- outline testing and benchmarking processes
- list three or more current principles of databases.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the database field of work, and include access to:
- industry software packages
- the database management system (DBMS)
- the target database prototype
• testing and benchmarking software.

Assessors must satisfy NVR/AQTF assessor requirements.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements and performance criteria of this unit; including evidence of the ability to:

- For one database:
  - analyse user requirements and system architecture
  - determine the scope and size of the database
  - evaluate at least three database management systems and select option to meet user requirements
  - develop technical database requirements including tables, relationships, dictionary, attributes and keys
  - document the database scope and requirements
  - align database management system and related user security with data security plan
  - seek and incorporate user feedback

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements and performance criteria of this unit. This includes:

- Principles of databases and database design
- General features and capabilities of current databases and database management systems
- Data types and storage requirements of data types and database management systems
- Quality assurance practices that apply to database design
- Technical and security database requirements

Assessment Conditions

Skills must be demonstrated in a workplace or simulated environment where conditions are typical of those in an ICT working environment or ICT workplace. This includes:
- User requirements and acceptance criteria
- Technical documentation defining the system architecture
- Operating system specifications and security plan
- Database supplier technical specifications and manuals
- Data sample
- Individual user to consult
- Database package

Assessors of this unit must satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to establish database backup and restore procedures in accordance with organisational requirements, and consistent with the database architecture.

It applies to individuals who are technical support personnel, such as help desk supervisors, information and communications technology (ICT) support technicians, database support technicians and user-support specialists.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Database

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
</tbody>
</table>
| 1. Plan database backup and restore | 1.1 Examine architecture of database file systems and determine likely risk and failure scenarios  
1.2 Determine methods for database backup and restore to mitigate likely risk and failure scenarios  
1.3 Prepare backup maintenance schedules according to organisational backup and restore policy  
1.4 Prepare contingency plans according to organisational |
### backup and restore policy

| 2. Undertake backup methods appropriate to database requirements | 2.1 Complete full off-line backups with acceptable downtime according to organisational backup and restore policy and procedure  
2.2 Complete online file backups with acceptable downtime according to organisational backup and restore policy and procedure and organisational data security plan  
2.3 Deploy redundant array of inexpensive disks (RAID) configuration aligned with the organisational backup and restore policy  
2.4 Arrange off-site copies of backup files consistent with organisational back and restore procedure and organisational data protection plan |
|---|---|
| 3. Establish and test recovery points and disaster-recovery procedures | 3.1 Determine and document database recovery points based on backup methods, according to organisational backup and restore policy and procedure  
3.2 Test restore process to ensure database can be restored to given recovery points with acceptable downtime as specified in organisational backup and restore policy  
3.3 Complete and document restoration of databases to point of failure, without loss of committed transactions |
| 4. Create and deploy a standby database | 4.1 Create and deploy standby databases to support critical organisational functions according to organisational back and restore policy and procedure  
4.2 Prepare documentation for standby databases that meet requirements of organisational backup and restore policy |

### Foundation Skills

*This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.*

<table>
<thead>
<tr>
<th>Skill</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Reading</td>
<td>• Analyses complex textual information in order to evaluate a range of backup and restoration methods</td>
</tr>
</tbody>
</table>

Performance Evidence

The candidate must demonstrate the ability to complete tasks outlined in the elements and performance criteria of this unit; including evidence of the ability to:

- Backup and restore one database

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements and performance criteria of this unit. This includes:

- Principles and functions of diagnostic tools, structured query language (SQL), databases and backup tuning methodologies
- Principles of backup and recovery methods, database administration, database security and open file backup procedures and restore operations

Assessment Conditions

Skills must be demonstrated in a workplace or simulated environment where conditions are typical of those in an ICT workplace or working environment. This includes:

- Organisational data backup and restore policy and procedure
- Organisational security plan
- Vendor documentation
- Information of current industry standard software and diagnostic tools
- Database package with data
- Server, and a networked computer, on which to conduct the backup and restore procedures

Assessors of this unit must satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards.

<tr>
<td>1. Confirm the database design</td>
<td>1.1 Review database design documentation, including data structures, queries, reports, and user interfaces to identify organisational data management, access and security requirements</td>
</tr>
<tr>
<td></td>
<td>1.2 Evaluate sufficiency of database access and security feature design to organisational data security plan</td>
</tr>
<tr>
<td></td>
<td>1.3 Document and rectify inconsistencies between database design and organisational data security plan</td>
</tr>
<tr>
<td>2. Create a prototype</td>
<td>2.1 Develop prototype database according to database design</td>
</tr>
</tbody>
</table>
2.2 Populate database tables with current organisational data to test database implementation
2.3 Write conversion programs to import data from existing systems in accordance with scope specified in database design documentation
2.4 Assess functionality of prototype with user, including identifying errors in program code and modifying user interfaces and reports
2.5 Incorporate feedback from user into prototype
2.6 Obtain user approval of prototype

3. Deploy the database
3.1 Develop implementation plan for database aligned with user acceptance criteria
3.2 Install database management system software on network in accordance with implementation plan
3.3 Populate database tables with organisational data in accordance with implementation plan
3.4 Implement security and access controls in accordance with database design documentation and implementation plan
3.5 Test and document database output and security controls, and record results in accordance with database design documentation

4. Evaluate the database
4.1 Review the database against user acceptance criteria and rectify discrepancies
4.2 Complete database documentation in accordance with user acceptance criteria
4.3 Identify and document user training requirements from database design documentation
4.4 Seek and secure user acceptance of database in accordance with user acceptance criteria

**Foundation Skills**

*This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.*

<table>
<thead>
<tr>
<th>Skill</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Reading</td>
<td>• Analyses and interprets textual information in order to establish client system requirements and establish design inconsistencies</td>
</tr>
</tbody>
</table>
Writing

- Uses appropriate technical terminology in recording test results and discrepancies
- Produces reports and documentation that are cohesive and well-structured, in order to convey detailed and accurate information, and instructions

Oral Communication

- Uses active listening, questioning and summarising skills to establish client requirements, training needs and when seeking product or stage approval

Interact with others

- Recognises and applies the protocols governing what to communicate, with whom, and how

Get the work done

- Sequences and schedules complex activities, monitors implementation and manages relevant communication
- Uses a formal decision-making process, setting or clarifying goals, gathering information, and identifying and evaluating several choices, against a limited set of criteria
- Uses analytical processes to decide on a course of action, establishing criteria for deciding between different options

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in elements and performance criteria of this unit; including evidence of the ability to:

- For one database:
  - review the database design documentation including data structures, queries, reports, access, and user interface
  - identify the organisation’s data management and security requirements
  - produce a prototype database including current organisation data and assess the functionality of the database with the user
  - populate and perform tests on the database
  - interact with the user to obtain approval
  - identify and document user training requirements

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements and performance criteria of this unit. This includes:

- Principles of database design including database management system (DBMS) fundamentals
- Functions and features of a database
- Logical data modelling
- Object-model design concepts related to:
  - development of data structures
  - development of a prototype
  - queries
  - user interfaces
  - reports
- Physical design concepts in relation to a prototype
- Run-time facilities related to implementing a live database and operation of a prototype
- Structured query language (SQL)
• Principles and concepts underpinning the design, and operation of digital systems and tools.

Assessment Conditions

Skills must be demonstrated in a workplace or simulated environment where conditions are typical of those in an ICT working environment or ICT workplace. This includes:

• Software packages and systems containing organisational data
• Database design documentation including data structure, queries, reports, and user interfaces
• Database management system software
• Individual user to consult
• User acceptance criteria
• Networked computer on which to install the database management system software and conduct testing
• Organisational data security plan.
• Data organisation system with existing data

Assessors of this unit must satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards.

</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 1.0.</td>
</tr>
</tbody>
</table>

Application

This unit describes the skills and knowledge required to design, develop and implement a data warehouse within an organisation.

It applies to individuals who are senior database staff required to provide data warehouse functionality for their organisation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Database

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
</tbody>
</table>

1. Identify the required data and sources

1.1 Identify the required organisational data, according to the enterprise’s knowledge management strategy

1.2 Identify the subject areas, according to the business processes and the required enterprise data

1.3 Explore the operational data, define the warehouse sources, and record the outcomes

1.4 Develop the warehouse source specifications, according to the existing data tables and files
### ELEMENT | PERFORMANCE CRITERIA
--- | ---
2. Determine warehouse operational steps and processes | 2.1 Develop the warehouse targets, according to the business processes and the required enterprise data  
2.2 Identify the warehouse agents, according to the system’s configuration  
2.3 Identify and develop, warehouse steps and processes
3. Design and develop warehouse features | 3.1 Design and develop the warehouse user interface, according to the principles of user interface design  
3.2 Develop and implement the warehouse security strategy, according to the enterprise’s security plan  
3.3 Identify dimension tables and fact tables, according to the required enterprise data  
3.4 Develop the warehouse information catalogue, according to the enterprise’s knowledge management strategy
4. Test and implement the data warehouse | 4.1 Test data the warehouse against the business requirements, to ensure that iterations meet the business objectives  
4.2 Recommend changes to business processes, to ensure compatibility with the data warehouse and the knowledge management strategy  
4.3 Implement the data warehouse  
4.4 Establish an ongoing maintenance schedule to keep the system efficient  
4.5 Benchmark and document the performance level of the data warehouse
5. Finalise work processes | 5.1 Arrange for users to have ongoing training in the data warehouse  
5.2 Validate the test results  
5.3 Obtain sign-off for the data warehouse

### Foundation Skills
*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 1.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

Evidence of the ability to:
- prepare the specifications for a data warehouse, from a range of organisational information
- design a data warehouse system that reflects the current, and future, business specifications, and also the business’s knowledge management strategy
- test the data warehouse system
- implement the data warehouse design.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:
- explain the functions and features of:
  - data warehousing and data mining
  - dimension tables and fact tables
  - various steps and processes, including transformer steps, program steps, structured query language (SQL) steps, and user-defined program steps
  - subject areas, warehouse sources and warehouse targets
  - warehouse agents and agent sites
- outline the business operating systems related to the data sources
- describe the decision support systems related to the knowledge management strategies
- define the parameters for a security plan
- outline the system’s configuration parameters
- describe the key features of "Big Data" including:
  - data access speeds and processing
- the information handled by large corporations
- distribution, via the cloud, across the database servers.

**Assessment Conditions**

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the database field of work, and include access to:

- equipment and materials
- industry software packages
- the business requirements
- computers configurable as information servers
- the enterprise’s knowledge management strategy
- internet connectivity tools
- the local area network (LAN), with a relational database management system (DBMS)
- proxy server software
- specialised internet security software.

Assessors must satisfy NVR/AQTF assessor requirements.

Performance Evidence

Evidence of the ability to:

- produce, visualise and interpret creative concepts for digital video
- demonstrate application of the principles of video-editing and production techniques
- design, compile, edit and test the digital interactive media incorporating video.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain contemporary video software
- explain the importance of and actions required to ensure continuity during the editing process
- outline editing conventions
- identify electronic digital language and other terminology
- explain the purpose of using montage as part of a presentation, and the impact of sound and visual effects
- describe principles of video production and formats
- describe the types of cutting
- explain video-editing and post-production techniques.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the digital media field of work, and include access to:
- special purpose tools, equipment, and materials
- industry software
- the internet
- copyright and intellectual property legislation
- workplace health and safety (WHS) legislation
- enterprise policy.

Assessors must satisfy NVR/AQTF assessor requirements.

</tbody>
</table>

Application

This unit describes the skills and knowledge required to locate and rectify all types of customer digital reception equipment (DRE) faults on a customer premises as part of a home network.

It applies to individuals who install and maintain integrated services in digital receiving equipment or small business networks, and who apply skills and knowledge in this unit to locate and rectify faults of DRE home networks such as broadband, digital TV, free to air (FTA), subscription TV (pay TV) and internet protocol TV (IPTV).

No licensing, legislative or certification requirements apply at the time of publication.

Unit Sector

Telecommunications – Digital Reception Technology

<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 2.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

Evidence of ability to:

- determine parameters for addressing digital reception faults for a customer and keep customer informed on progress
- apply a methodical approach to fault identification
- use test equipment to identify faults
- interpret test results
- install temporary equipment while repairs are affected
- repair faults, repair cable terminations or replace faulty cable equipment and test to verify correct function
- complete documentation in accordance with enterprise requirements and present to customer for approvals.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- discuss broad knowledge of whole industry product range
- outline customer service principles, particularly dealing with customers face to face
- explain enterprise methods for test analysis and diagnosis
- discuss enterprise or service specific knowledge of products and services supplied
- review work health and safety (WHS) general principles and enterprise specific job safety analysis (JSA) requirements
- give an overview knowledge of:
  - objectives and methods of training for product use for customer education
  - radio frequency (RF) theory, principles and safety
• telephony principles to support return path awareness
• identify pre-installation enterprise-specific requirements
• state quality assurance of enterprise requirements
• explain return path technology
• list signal measurement and other enterprise-specific tools
• discuss understanding of contemporary equipment and connection methods.

Assessment Conditions
Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the Telecommunications – Digital Reception Technology industry and include access to:

• site for digital reception equipment installation
• digital reception equipment currently used in industry
• test equipment required for digital reception equipment installation and testing.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application
This unit describes the skills and knowledge required to design, install, test and commission a complex digital reception broadband service system.

It applies to individuals who work on complex radio frequency (RF) and digital distribution systems, such as master antenna television (MATV) and satellite master antenna television (SMATV), in commercial or multi-dwelling unit (MDU) environments.

No licensing, legislative or certification requirements apply at the time of publication.

Unit Sector
Telecommunications – Digital Reception Technology

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- obtain relevant approvals for access to site and equipment
- plan, assemble and install a complex digital reception system
- conduct functionality tests and interpret results
- examine performance of adjustments (tuning, balancing and replacing components)
- perform handover with customer
- apply related work health and safety (WHS) requirements and work practices.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- procedures and equipment required for measurement of:
  - forward and reflected radio frequency (RF) power
  - feedline insertion loss
  - distance to fault
  - modulation error rate (MER) and bit error rate (BER) for purpose of signal integrity
- features of instruments, test equipment and performance requirements
- legislation, codes of practice and other formal agreements directly impacting operation and testing of radio communications antennas and equipment
• principles of master antenna television (MATV) and satellite master antenna television (SMATV)
• RF spectrum and its relationship to digital reception systems
• RF awareness, electromagnetic radiation (EMR) standards and specific WHS requirements impacting use and testing of radio communications instruments and equipment
• typical issues and challenges that occur in telecommunications antenna installations.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• site for complex digital reception system installation
• complex digital reception systems currently used in industry
• test equipment required for digital reception system installation and testing.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 2.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

Evidence of ability to:
- Comply with standards, regulations and work health and safety (WHS) procedures and practices when developing an integrated system
- Communicate with customers
- Determine the full scope of specifications for an integrated digital reception system
- Use calculations to correctly determine the number of network and current requirements
- Place system devices appropriately in system scheme
- Apply and check appropriate modes of programming and diagnostic tools in the design
- Program devices and set load operating parameters according to manufacturer specifications
- Use diagnostic tools to locate and correct system defects, faults and anomalies
- Document and backup system during appropriate stages of the project.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:
- Describe the applications and advantages of integrated systems
- Identify the bus system cable type, polarity, length and acceptable topologies
- Describe the process of controlling digital system integration (DSI) and communicating with digital addressable lighting interface (DALI) electronic ballasts
- Identify factors that affect control bus stability, including number of units on a network, and current drawn by devices in relation to current output of power supplies
- Define the operating parameters of integrated systems and programming to an extent indicated by:
  - Importance of project documentation and backup
• importance of location of output and input devices and control bus power supplies
• describe lighting dimmer capabilities and selection
• determine the low voltage (LV) supply overcurrent and surge protection
• describe multiple network connectivity
• identify the software used for system and device programming, monitoring and control
• explain system and device programming, encompassing:
  • addressing conventions for networks, devices, applications, output groups, types of control and outputs, which include ‘on’, ‘off’, a specific level, and over a specific time
  • PC programming tools and methods (programming includes configuring network database using addressing tools and objects, function objects, editing, altering and transferring the database to network)
• identify and describe system fault-finding processes
• determine the system components, encompassing:
  • support devices for control bus supply and control
  • support devices for programming, interconnection between networks and integration with third party systems
• describe the types and capabilities of input and output devices.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the Telecommunications – Digital Reception Technology industry and include access to:

• a typical contemporary dwelling into which a digital system will be developed
• availability of all functional requirements of a modern home
• access to contemporary digital equipment
• access to all current standards, codes and regulations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 2.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

Evidence of ability to:

- identify modulation and other signal characteristics of a range of contemporary products
- design and build system
- install three types of equipment and services, applying all related work health and safety (WHS) requirements and work practices
- configure services and optimise customer system
- conduct functionality tests and interpret results
- provide customer training appropriate to equipment
- complete task and handover to customer.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify analog and digital connectors
- list contemporary equipment and connection methods
- explain continuity, ingress, egress, signal level and signal quality performance tests
- outline customer service principles, particularly dealing with customers face-to-face
- discuss enterprise or service specific knowledge of products and services supplied
- describe equipment types:
  - amplifiers
  - couplers
  - splitters
  - taps
- discuss modulation techniques
• define objectives and methods of training for product use for customer education
• discuss WHS general principles and enterprise-specific job safety analysis (JSA) requirements
• assess performance adjustments for tuning, balancing and replacing components
• summarise quality assurance of enterprise requirements
• review test analysis and diagnosis (enterprise diagnosis methods)
• describe video and audio fundamentals

Assessment Conditions
Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the Telecommunications – Digital Reception Technology industry and include access to:
• a site for Digital Reception Technology (DRE) integration
• DRE currently used in industry
• test equipment required for DRE integration.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to connect and configure a media centre that integrates signal for distribution.

It applies to individuals working as installers in the digital reception sector integrating services from multiple sources and in multiple formats (radio frequency, digital, data, and voice) for both inward and outbound signals into complex customer systems.

No licensing, legislative or certification requirements apply at the time of publication.

Unit Sector

Telecommunications – Digital Reception Technology

Performance Evidence

Evidence of ability to:

- identify service requirements of a range of contemporary products
- design and build a multiple service customer system solution
- install and integrate at least two services to a customer system comprised of at least three equipment components applying all related work health and safety (WHS) requirements and work practices
- activate and optimise customer equipment using two or more signal sources
- configure services and optimise customer system across multiple services
- conduct functionality tests and interpret results
- provide customer training appropriate to the equipment.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- list contemporary equipment and connection methods
- outline customer service principles, particularly dealing with customers face to face
- discuss enterprise or service specific knowledge of products and services supplied
- describe equipment types:
  - amplifiers
  - couplers
  - taps
  - splitters
- describe home automation
- identify functions of home theatre system components
- explain modulation techniques
- discuss WHS general principles and enterprise specific job safety analysis (JSA) requirements
- assess performance adjustments for tuning, balancing and replacing components
- summarise quality assurance of enterprise requirements
- evaluate security systems
- review test analysis and diagnosis (enterprise diagnosis methods)
- identify test equipment and signal measurement and other enterprise-specific tools
- explain principles of video and audio technologies
- explain wireless local area networks (WLANs)
- explain wireless technology.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the Telecommunications – Digital Reception Technology industry and include access to:

- a site for data delivery modes integration
- equipment currently used in industry
- test equipment required for data delivery integration.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to conduct training for customers on telecommunications equipment including convergent technology applications, such as internet protocol television (IPTV), digital television and internet protocol (IP) based customer equipment. It involves assessing the type of training suitable for the product and customer, delivering and checking the training.

It applies to individuals involved with installation of new technology or an upgrade of an existing network or subsystem deploying next generation networks (NGN) for customer premises equipment (CPE) installation, or as dedicated trainers involved in very large installations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Education

| 1. Identify training required | 1.1 Confirm training to be provided with installation quote  
1.2 Assess customer’s expertise and actual training details |
### Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

<table>
<thead>
<tr>
<th>Skill</th>
<th>Performance Criteria</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Reading</td>
<td>1.1, 1.2, 1.3, 2.4, 3.1, 3.2, 3.3</td>
<td>• Evaluates and integrates facts and ideas to construct meaning and develop training plans from a range of sources</td>
</tr>
<tr>
<td>Writing</td>
<td>1.3, 1.4, 2.1-2.5, 3.2, 3.3</td>
<td>• Communicates relationships between ideas and information in a style appropriate to audience and purpose</td>
</tr>
<tr>
<td>Oral Communication</td>
<td>1.1, 1.4, 2.1, 2.2, 2.3, 2.4, 2.5, 3.1</td>
<td>• Demonstrates flexibility in spoken texts by choosing appropriate structures and strategies while instructing, providing constructive feedback or interacting with customers, employer, supervisors, work associates, team members and other contractors</td>
</tr>
<tr>
<td>Numeracy</td>
<td>1.1, 1.4, 3.1,</td>
<td>• Identifies and comprehends relevant mathematical information in familiar activities or texts such as costing training</td>
</tr>
</tbody>
</table>
| Navigate the world of work   | 3.3                  | • Complies with explicit policies and procedures  
• Explores and implements, where identified, implicit expectations of policies and procedures |
Interact with others

1.2, 2.1, 2.2, 2.3, 2.4, 2.5

- Identifies and takes steps to follow accepted communication practices and protocols
- Recognises common cultural and other differences of people in the work context, and makes adjustments in addressing differences
- Elicits feedback and provides feedback to others

Get the work done

1.1, 1.3, 3.1, 3.2

- Plans and implements routine tasks and workload making limited decisions on sequencing, timing and collaboration, seeks assistance in setting priorities
- Makes low-impact decisions within familiar situations, based on a range of predefined or routine solutions, and evaluates effectiveness of outcome

Performance Evidence

Evidence of ability to:

- review and confirm predetermined training for telecommunications installation
- analyse learner characteristics and actual training needs
- prepare training material, including equipment specifications and guidelines
- conduct customer training on a telecommunications installation including:
  - demonstration
  - hands-on experience
  - feedback on performance
  - complete training documentation.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe in detail the content of learning to be provided
- explain common sources of technical training information
- summarise and explain appropriate training techniques for:
  - demonstration
  - individual and group activities
  - instruction
  - questioning.
Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the Telecommunications – Education field of work and include access to:

- a range of information and training resources
- customer premises equipment product information
- appropriate training facilities
- relevant industry software packages.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

Evidence of the ability to:

- clarify 3-D modelling requirements
- create 3-D digital models that:
  - demonstrate the application of simple 3-D modelling techniques
  - demonstrate the efficient use of geometry and attention to detail
  - meet production documentation requirements
- work collaboratively with the other members of the design and development team
- meet deadlines.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify 3-D digital model design techniques
- outline 3-D digital modelling techniques
- outline the stages in the production process, from the initial concept through to the finished product
- discuss the features of a range of delivery platforms
- discuss geometry as it applies to the creation of realistic 3-D digital models
- outline the issues and challenges of creating 3-D digital models
- outline work health and safety (WHS) standards, as they relate to working for periods of time on computers
- outline the roles and responsibilities of project team members in the relevant industry sector
- discuss the use of scale, form, weight and volume in the design, and development, of 3-D digital models
- discuss basic copyright issues associated with designing and creating 3-D models.

**Assessment Conditions**

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the game development field of work, and include access to:

- the production documentation
- reference materials
- computer hardware
- industry software packages
- games engines
- file storage
- enterprise policy about WHS requirements.

Assessors must satisfy NVR/AQTF assessor requirements.

<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 1.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

Evidence of the ability to:

- comprehend design requirements
- complete texturing and shading tasks according to brief requirements
- create and apply textures to digital art
- use and optimise software components for best performance
- adhere to system requirements related to file sizes and formats
- store completed file components to software and organisational requirements
- develop textured, shaded and rendered models
- integrate texturing activities into the overall production pipeline.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- discuss camera textures and filters that can be used to achieve shading and texturing effects
- outline the features of software used for:
  - 3-D modelling
  - appropriate file sizes and formats
  - digital image manipulation
  - lighting
  - rendering
  - scanning
  - the scheduling of production activities
  - shading
texturing
describe how to interpret design, texturing, and shading briefs
discuss digital image capture, using cameras and scanners
describe shader attributes and their optimisation
describe shader and texture mapping, and projection
discuss texturing and shading requirements for games.

Assessment Conditions
Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the game development field of work, and include access to:
• the appropriate computer hardware, software and peripheral devices
• models and scenes to be shaded and textured
• style shots
• rendering briefs or specifications
• the schedules.

Assessors must satisfy NVR/AQTF assessor requirements.

Application

This unit describes the skills and knowledge required to review the traditional animation process and design and produce 3-D animated sequences using modelling and animation software.

It applies to individuals who support the design, development and programming of basic digital games as part of a larger development team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Game development

Elements and Performance Criteria

</tr>
</tbody>
</table>

| 1. Prepare the traditional animation process, and the sequence of its component parts | 1.1 Describe the traditional animation process and its application in the production of quality 3-D animation |
| | 1.2 Describe the twelve principles of animation and their application in the production of quality 3-D animation |
| | 1.3 Identify the components that are essential to producing quality 3-D animation |

| 2. Prepare scene layout | 2.1 Describe and demonstrate the scene layout techniques used |
ELEMENT | PERFORMANCE CRITERIA
--- | ---
and storyboarding techniques | in traditional animation
| 2.2 Describe and demonstrate the storyboarding techniques used in traditional animation
3. Nominate appropriate animation keys in a proposed animation sequence | 3.1 Describe the key animation process
| 3.2 Produce sample key drawings
| 3.3 Identify the criteria used for the selection of animation keys
| 3.4 Select the appropriate animation keys in a proposed animation sequence
4. Create a short animation | 4.1 Produce shot animation key drawings
| 4.2 Produce line image recordings of drawings
| 4.3 Create a short, animated sequence
5. Apply traditional animation principles to a 3-D animation | 5.1 Produce a 3-D animated sequence, employing traditional animation principles, using 3-D modelling and animation software
| 5.2 Save and store, or archive, an animated sequence onto appropriate equipment or media

**Foundation Skills**

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

<table>
<thead>
<tr>
<th>Skill</th>

<td>3.2, 3.3, 3.4, 4.1, 4.2, 4.3, 5.1, 5.2</td>
<td>• Uses positive and negative whole numbers, decimals, degrees and percentages when setting measurement, scale, coordinates, colour, shading, and other parameters in the development of animations</td>
</tr>
</tbody>
</table>
| Get the work | 3.2, 3.4, 4.1-4.3 | • Follows clearly defined instructions, monitors own
done | 5.1, 5.2 | progress and seeks assistance, when necessary
- Makes routine decisions and implements standard procedures for routine tasks
- Uses creativity and initiative in design
- Uses key features of specific digital systems and tools to complete routine tasks
- Understands the importance of secure information in relation to own work and takes responsibility for data storage

Range of Conditions

This section specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

| Twelve principles of animation must include: | • anticipation | • appeal | • arcs | • exaggeration | • follow through and overlapping action | • secondary action | • slow in and slow out | • solid drawing | • squash and stretch | • staging | • straight ahead action and pose to pose | • timing. |

Performance Evidence

Evidence of the ability to:

- create digital animated sequences of a model that:
  - demonstrates the principles of simple model animation, basic screen, visual design and communication
  - meets the technical requirements of specific platforms
  - satisfies the design brief and client requirements
  - meets the production deadlines.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline basic digital animation techniques
- outline the principles of animation, screen, visual design and communication in relation to the production of animated sequences
- describe the features of a range of delivery platforms for animated sequences
- discuss the issues and challenges that arise in the context of creating models for digital animations
- outline the stages in the production process from initial design through to finished product
- outline the roles and responsibilities of project team members.

Assessment Conditions

conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the game development field of work, and include access to:
- appropriate computer hardware, software and games engines
- file storage
- design specifications and production documentation.

Assessors must satisfy NVR/AQTF assessor requirements.

Assessment Requirements for ICTGAM419 Build a database to support a computer game

Modification History

<table>
<thead>
<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 1.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

Evidence of the ability to:

- interpret a conceptual database model
- create a database from a conceptual model, that allows for the persistence of state data for a computer game
- evaluate, and improve, the performance of a database built to support a computer game.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify computer hardware specifications and performance required to support database development
- discuss the creation, use and testing of stored procedures
- explain why input and output parameters are required
- explain database stress testing and stress testing software
- discuss the principles of database testing methodologies
- describe object-oriented database management systems
- discuss the similarities and difference between relational database management systems:
  - IBM DB2
  - Microsoft Access
  - Microsoft SQL (MS SQL) server
  - MySQL
  - Oracle
  - Postgre Structured Query Language (Postgre SQL)
• discuss relational database modelling building blocks and theory, including attributes, entity relationship modelling and normalisation of database tables
• discuss relationship cardinality and connectivity:
  • 1:1
  • 1:M
  • M:N
• outline the features, and functions, of structured query language (SQL), including data definition language and data manipulation language
• discuss the evolution of relational database management systems and their relationship to the flat file, hierarchical, and network data storage legacy of games
• outline the important functions of a relational database management system within the context of a computer game
• interpret data access languages, such as SQL and language-integrated query (LINQ)
• interpret data application programming interfaces (APIs) including:
  • ADO.Net
  • data integrity
  • disaster recovery and backups
  • data dictionary
  • data storage
  • security requirements of the data
  • transforming and presenting the data
• discuss the importance of data models
• describe the different types of data models, including Chen and Crow’s Foot models
• describe the relationship between game-play rules and the modelling of the database structure.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the game development field of work, and include access to:

• computer-aided software engineering and modelling tools
• a relational or object-oriented database management system
• performance testing and analysis software for selected database management system/game architecture specifications
• the game design and requirements documentation
• the client or server hardware
• networking infrastructure sufficient to simulate the game architecture specifications.

Assessors must satisfy NVR/AQTF assessor requirements.

<tr>
<td>1. Determine software or software upgrade requirements</td>
<td>1.1 Document client requirements and report to appropriate person</td>
</tr>
<tr>
<td></td>
<td>1.2 Act on instructions to meet client requirements, according to organisational requirements</td>
</tr>
<tr>
<td>2. Obtain software or software upgrade</td>
<td>2.1 Investigate and select a software application program that best conforms to requirements and organisational policies</td>
</tr>
<tr>
<td></td>
<td>2.2 Obtain application program under instruction from appropriate person</td>
</tr>
</tbody>
</table>
## PERFORMANCE CRITERIA

2.3 Determine licensing requirements and record, according to organisational guidelines

2.4 Ensure target computer conforms to the minimum hardware and operating system requirements of the application program

### 3. Install or upgrade software

3.1 Install new or upgraded software application program according to appropriate person or organisational instructions

3.2 Complete the installation process efficiently and effectively to minimise disruption

3.3 Carry out testing and acceptance, according to organisational guidelines, paying particular attention to possible effect on other systems

3.4 Ensure client requirements are satisfied

3.5 Refer outstanding client issues to appropriate person as necessary

### Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 1.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

Evidence of the ability to:

- install software applications through operating system instructions
- configure computer to accept new software or upgrade
- carry out testing and acceptance according to organisational guidelines.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe a typical client business domain
- identify typical hardware storage devices
- identify typical input and output devices
- describe key licensing arrangements and responsibilities to ensure they are adhered to
- identify operating systems supported by the organisation
- describe the organisational guidelines for purchasing
- identify the installation requirements for key software application packages
- describe typical software copyright responsibilities.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

- a personal computer (PC) where software installation may be performed
• application software currently used in industry
• documents detailing organisational testing and acceptance policy and procedures.

Assessors must satisfy NVR/AQTF assessor requirements.

**Application**

This unit describes the skills and knowledge required to manipulate, convert and integrate data between two or more different commercial software applications.

It applies to individuals who require foundation skills and knowledge to use information and communications technology (ICT) in any ICT business or office environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

**Unit Sector**

General ICT

**Elements and Performance Criteria**

<table>
<thead>

Performance Evidence

Evidence of the ability to:

- select appropriate software and file formats
- create mailing list and merge with another document
- manipulate and integrate data between commercial application software following organisational procedures.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline current business practices related to preparing reports
- identify features and functions of commercial computing packages
- identify import and export software functions
- outline processes for linking documents
- outline workplace health and safety (WHS) principles and responsibilities for ergonomics
- identify software packages used by the organisation
- outline strategies for integrating commercial computing packages
- outline the use of input and output devices.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:
- a personal computer (PC) and printer
- software currently used in industry
- documents detailing organisational style guide and policy
- documents or information containing data suitable for use with multiple computing packages.

Assessors must satisfy NVR/AQTF assessor requirements.

Performance Evidence

Evidence of the ability to:

- load and configure accounting software
- create and maintain enterprise financial records as per business and legislative requirements
- record and track transactions
- back up data
- reconcile accounts and generate reports.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- discuss basic accounting concepts, including:
  - assets
  - cost of sales
  - creditors
  - debtors
  - equity
  - expenses
  - income
  - liabilities
- identify basic accounting devices, including:
  - accounts
  - chequebook register
• general ledger
• invoices
• purchases
• sales journals
• transaction journals
• outline current legislative requirements relating to enterprise requirements, including:
  • goods and services tax
  • income tax rates
  • pay as you go
  • superannuation
• discuss the features and functions of common accounting reports, including:
  • balance sheet
  • business activity statements
  • chart of accounts
  • profit and loss
• outline the features and functions of common accounting software.

**Assessment Conditions**

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

• a printer and personal computer (PC) with appropriate specifications to run the software
• industry standard commercial accounting applications
• documents detailing business requirements
• legislative requirements if required.

Assessors must satisfy NVR/AQTF assessor requirements.

Performance Evidence

Evidence of the ability to:

- design and develop a simple database using a standard database package
- add data
- create and use a query with multiple criteria
- create and modify reports and forms.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline basic database design principles
- discuss the purposes of forms, reports and queries for retrieving and displaying information
- outline the reasons for relationships between tables (cardinality)
- describe the purpose, use and function of database software.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry and include access to:

- a PC and printer
- database software currently used in industry
- documents detailing organisational style guide and policy
- documents or information containing data suitable for creating a database.

Assessors must satisfy NVR/AQTF assessor requirements.

Performance Evidence

Evidence of the ability to:

- install, configure and test an operating system to improve system performance with minimum disruption to clients.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- compare current industry accepted hardware and software products
- outline functions and features of operating systems used by the organisation
- explain the installation and configuration of systems software
- explain the architecture of current technical systems
- outline the deployment of current organisational systems
- list organisational requirements for operating system (OS) software
- explain prerequisites for system software installation
- outline set-up and configuration procedures
- list software packages supported by the organisation
- describe system’s current functionality
- list system’s diagnostic software
- outline vendor specifications and requirements for installation.
Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

- a personal computer where installation may be performed
- OS software and technical documentation
- organisational documentation.

Assessors must satisfy NVR/AQTF assessor requirements.

<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 1.0.</td>
</tr>
</tbody>
</table>

Application

This unit describes the skills and knowledge required to acquire, install, configure and evaluate system hardware components according to client and user requirements.

It applies to individuals who work with a degree of self-sufficiency and provide support in a range of information and communications technology (ICT) work areas and activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
</tbody>
</table>

1. Identify, categorise and distinguish between the different types of internal hardware components

1.1 Identify and categorise the different internal hardware components

1.2 Define the purpose and characteristics of the different internal hardware component categories

1.3 Distinguish between different types of devices within each internal hardware component category

2. Determine components required

2.1 Identify and clarify user internal hardware component requirements according to organisational guidelines
<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>2.2 Organise and record user component requirements, pass on to appropriate person for evaluation and vendor selection</td>
<td></td>
</tr>
<tr>
<td>3. Obtain components</td>
<td>3.1 Contact vendors to obtain technical specifications for the proposed components</td>
</tr>
<tr>
<td></td>
<td>3.2 Assess options and provide recommendations to the appropriate person for final analysis</td>
</tr>
<tr>
<td></td>
<td>3.3 Obtain components to prepare for installation</td>
</tr>
<tr>
<td>4. Install components</td>
<td>4.1 Develop plans, with prioritised tasks and contingency arrangements, for the installation of selected components with minimum disruption to clients</td>
</tr>
<tr>
<td></td>
<td>4.2 Liaise with appropriate person to obtain approval for the plans</td>
</tr>
<tr>
<td></td>
<td>4.3 Install and configure components according to plan, installation procedures and organisational requirements</td>
</tr>
<tr>
<td></td>
<td>4.4 Test components for error-free performance, using available technology</td>

Performance Evidence

Evidence of the ability to:

- identify and categorise the different types of internal hardware components
- modify system's hardware to meet client requirements
- plan modification of and connect internal hardware components according to vendor and technical specifications
- install components across a variety of situations and account for unexpected contingencies
- evaluate the system on completion.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe areas of the operating system relevant to configuration and testing
- compare current industry accepted hardware and software products
- outline environmental considerations in e-waste disposal
- outline organisational guidelines and organisational requirements with regard to safety, recycling and component installation
- outline system's diagnostic software and current functionality
- interpret vendor specifications and requirements for component installation.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:
- a personal computer and internal hardware components for installation
- current industry standard performance testing software
- documents detailing organisational guidelines and requirements
- technical manuals and tools.

Assessors must satisfy NVR/AQTF assessor requirements.

Performance Evidence

Evidence of the ability to:
- evaluate, document and implement changes to the system with minimum disruption to the system and client users
- hand over the project to the client with instructions and updated documentation.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:
- identify and describe business scheduling requirements
- identify change control procedures
- describe client business domain
- discuss current industry accepted hardware and software products
- discuss emerging standards for data and voice communications
- outline the system's current functionality
- discuss the features of the system under modification
- outline the organisational policy and procedures with regard to system changes
- recognise vendor software services with regard to system changes.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:
• a computer
• system software currently used in industry
• technical manuals and tools.

Assessors must satisfy NVR/AQTF assessor requirements.

Performance Evidence

Evidence of the ability to:

- identify new and emerging technology in information and communications technology (ICT)
- test and evaluate new equipment for the benefit of the organisation
- use features and functions of new technologies, including software and equipment.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- discuss current technology trends and directions in ICT including:
  - hardware
  - new developments
  - new protocols
  - services
  - software
- describe the general features and capabilities of current industry hardware and software products
- outline information gathering techniques
- outline vendor product directions relating to specified technology.
Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general ICT industry, and include access to:

- a site where new technology may be used
- new equipment and software currently used in industry
- documents detailing work health and safety (WHS) standards, environmental guidelines and organisational requirements.

Assessors must satisfy NVR/AQTF assessor requirements.

Performance Evidence

Evidence of the ability to:

- use investigative techniques to obtain information and document the business system problem
- produce a clear statement of business expectations and needs, including critical business requirements.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe a variety of data gathering techniques
- describe areas related to the client business in detail
- interpret functional organisational charts
- outline physical requirements of the client's business, taking into account current system functionality, geography, environment, client user and cost constraints
- describe products related to data capture
- discuss the role of stakeholders and the degree of stakeholder involvement.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

- current business needs
- a client expectations brief
• business objectives
• systems, data gathering and appropriate software products.

Assessors must satisfy NVR/AQTF assessor requirements.

Performance Evidence

Evidence of the ability to:

- define the client business domain and client's critical business functions and processes
- design and prepare a clear and best-fit technical design for a set project, incorporating:
  - changes to design model based on user requirements
  - detailed specification of modules
- produce updated documentation to reflect changes.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain various life cycle options
- describe design fundamentals and refinement
- discuss design quality metrics.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

- requirements model
- business requirements
- project deliverables
- acceptance criteria
• current ICT blueprint.

Assessors must satisfy NVR/AQTF assessor requirements.

Performance Evidence

Evidence of the ability to:

- establish customer needs
- design and develop technical documentation, such as system, procedures, training material and user guides, incorporating appropriate standards
- update document with client feedback
- prepare documentation for publication.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe content features, such as clarity and readability
- outline the principles of document design, web design and usability
- explain the functions and features of templates and style guides
- explain instructional design principles
- list organisational policies, procedures and standards that cover document design.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

- technical specifications
- documentation standards
• organisational resources and documentation
• information about system, platform, network or application being documented
• relevant standards
• appropriate word processing software.

Assessors must satisfy NVR/AQTF assessor requirements.

### Application

This unit describes the skills and knowledge required to determine the cyber security requirements of an organisation and use a range of resources to protect valuable assets.

This unit applies to individuals who are required to participate in the identification and implementation of cyber security controls.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Unit Sector

General ICT

### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
</tbody>
</table>
| 1. Analyse cyber security requirements | 1.1 Identify and document valuable assets to create register of valuable assets  
1.2 Perform threat and risk assessment on valuable assets register to identify and document cyber security requirements  
1.3 Review current cyber security controls against the cyber security requirements to identify cyber security gaps |
| 2. Select and implement cyber security controls | 2.1 Identify cyber security controls which address cyber security gaps |
2.2 Determine specific cyber security controls to address cyber security gaps against the organisation’s risk appetite
2.3 Seek feedback from organisational representative and agree on cyber security controls to implement
2.4 Implement, test and document agreed cyber security controls to address cyber security gaps
2.5 Seek feedback from organisational representative to identify discrepancies between cyber security controls and cyber security requirements

3. Maintain and improve security controls
3.1 Determine currency of valuable assets register to identify new valuable assets and changed threats and risks
3.2 Identify, determine, and agree on cyber security controls to address new cyber security gaps
3.3 Implement and document new and modified cyber security controls to address cyber security gaps

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

<table>
<thead>
<tr>
<th>Skill</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Learning</td>
<td>• Identifies, plans and implements strategies to manage gaps in cyber security knowledge</td>
</tr>
</tbody>
</table>
| Reading                    | • Analyses and consolidates information and data from sources, against defined criteria and requirements, and checks for accuracy and completeness  
  • Recognises and interprets textual information to determine specific information about security incidents |
| Writing                    | • Develops material for a specific audience, using clear and detailed language in order to convey explicit information |
| Oral Communication         | • Articulates information clearly, using specific and relevant language suitable to audience to convey recommendations and provide verbal reports  
  • Uses listening and questioning techniques to confirm understanding |
| Numeracy                   | • Extracts and evaluates the mathematical information embedded in a range of tasks and texts |
| Navigate the world of work | • Accepts responsibility and ownership for the task and makes decisions on completion parameters and the need for coordination with others  
  • Takes personal responsibility for following explicit and implicit |
Interact with others
- Selects form, channel and mode of communication for a specific purpose relevant to own role

Get the work done
- Plans strategic priorities and outcomes within a flexible, efficient and effective context, in a diverse environment exposed to competing demands
- Gathers and analyses data, and seeks feedback, to improve plans and processes
- Makes decisions in a complex and diverse environment, using input from a range of sources
- Explores and incubates new ideas through unconstrained analysis and critical thinking, to develop and improve the organisation’s controls

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements and performance criteria of this unit; including evidence of the ability to:

- For two difference cyber security requirements:
  - analyse cyber security requirements to protect valuable assets
  - determine threats and risks based on current controls and requirements
  - identify and apply controls to protect valuable assets
  - identify improvements to cyber security controls

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements and performance criteria of this unit. This includes:

- Common cyber security threats and risks
- Common cyber security controls, key features, and associated advantages and disadvantages
- Industry standards relevant to cyber security
- Testing procedures and processes
- Legislative and regulatory requirements relevant to cyber security
- Approaches to performing cyber security threat and risk assessment

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in an ICT working environment or workplace. This includes access to:
• Organisational representative
• Organisational cyber security requirements
• Specifications of existing cyber security controls
• Information on organisational assets, both valuable and non-valuable
• Software required for performing cyber security threat and risk assessments

Assessors of this unit must satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements and performance criteria of this unit; including evidence of the ability to:

- Describe and evaluate purpose, features, attributes and potential applications of:
  - three emerging technologies
  - three emerging practices in the ICT sector
- Develop a strategy to respond to each of the three emerging technologies and three emerging practices, including:
  - potential organisational opportunities and threats resulting from the emerging technology and practice
  - likely impact on current organisational technologies and practices
  - objectives of the organisation in responding to the emerging technology or practice
  - changes required in order to achieve intended objectives of the organisation
  - considerations for how to implement the changes required

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements and performance criteria of this unit. This includes:

- Research approaches for emerging technologies and practices in the ICT sector and their potential impact on current technologies and practices
- Technology implementation planning methods
- Organisational technologies and practices
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in an ICT working environment or workplace. This includes access to:

- Organisational representative

Assessors of this unit must satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements and performance criteria of this unit; including evidence of the ability to:

- Determine the cloud storage needs of an organisation within the scope of own responsibilities including the identification of three cloud storage options through considering the following:
  - data
  - security
  - performance
  - usability
  - and broader organisational benefits and detriments
- Review service level agreements (SLAs) for the three identified cloud storage options to identify hidden costs, ownership of data, disaster recovery and rights to retrieval, availability and performance, security standards and audit rights, data storage location and dispute mediation processes in the identification of potential cloud service providers
- Evaluate the performance and usability of the three cloud storage options
- Develop and document one cloud storage implementation plan for an organisation including the evaluation and selection of cloud storage solutions

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements and performance criteria of this unit. This includes:

- Key requirements of an ICT implementation plan
- Business types that may have cloud storage requirements
- Current trends and directions in information and communications technology (ICT), and the major industry technology standards used in cloud storage options
- Advantages and disadvantages of cloud storage options and providers
- Major themes relating to data and cyber security and their application within the organisational environment
• Current industry hardware and software products and their general features, capabilities and application as relevant to cloud storage options
• Characteristics relating to cloud storage that must be included in service level agreements
• Costs and organisational impacts relevant to a cloud storage strategy
• SLA terms related to service availability and performance

Assessment Conditions

Skills must be demonstrated in a workplace or simulated environment where conditions are typical of those in an ICT working environment or ICT workplace. This includes:

• A site where cloud storage technologies may be used
• Organisational data storage requirements and guidelines relating to the storage of information
• Cloud storage options currently used in industry
• Service level agreements (SLA) documentation relevant to cloud storage providers
• Standards, guidelines, and organisational requirements relating to work health and safety (WHS) and sustainability

Assessors of this unit must satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards.

| 2.3 Document audit outcomes as the audit progresses |

3. Review and confirm contract and specifications

| 3.1 Review system contract against audit outcomes |
| 3.2 Compare system functionality against audit outcomes and system contract |
| 3.3 Identify items of non-compliance where audit outcomes do not meet performance targets or fall short of contract requirements |
| 3.4 Review system procedures for corrective action |
| 3.5 Document items of non-compliance and proposed corrective action |

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

<table>
<thead>
<tr>
<th>Skill</th>
<th>Performance Criteria</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Reading</td>
<td>1.1-1.3, 1.7, 3.1-3.3</td>
<td>• Interprets, analyses and evaluates text with complex terminology, diagrams, code, syntax, icons and symbols to: evaluate current system functionality, determine audit objectives, scope and criteria, and review audit findings</td>
</tr>
<tr>
<td>Writing</td>
<td>1.4, 1.5, 1.7, 1.8, 2.2, 2.3, 3.5</td>
<td>• Uses plain English, appropriate grammatical structures and terminology, diagrams and flow charts, numerical information, and formatting and document structure relevant to the job role and organisation to develop an audit plan and document</td>
</tr>
</tbody>
</table>
### Oral Communication

1.1-1.3, 1.7, 2.1, 3.1, 3.4

- Uses effective listening and open questioning techniques to obtain information and elicit the view and opinions of others
- Uses appropriate questioning strategies, avoiding loaded or leading questions, when collecting evidence
- Uses specific and complex system/product terminology when applicable, translating complex terms into plain English as required by the audience

### Numeracy

1.2-1.5, 3.1-3.4

- Interprets and analyses numerical and financial information, and applies mathematical calculations and financial functions related to performance and financial metrics developed

### Navigate the world of work

1.4

- Recognises and follows explicit and implicit protocols, and meets expectations associated with own role

### Get the work done

1.1-1.7, 3.2-3.4

- Applies formal processes when planning more complex tasks, producing plans with logically sequenced steps and reflecting some awareness of resource constraints
- Demonstrates a sophisticated understanding of principles, concepts, language and practices associated with the digital world and uses these to troubleshoot
- Uses analytical processes in a variety of situations, setting goals, gathering relevant information and identifying and evaluating options against agreed criteria

Performance Evidence

Evidence of the ability to:

- determine audit criteria
- conduct an audit
- review system procedures for non-compliance
- propose corrective actions.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline acceptance criteria
- translate detailed design principles and specification standards
- discuss fault tolerance technologies
- describe the process of quality audits
- discuss quality levels, both generally and as required by the organisation.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

- audit tools
- documentation guidelines
- relevant standards and benchmarks
• service level agreement (SLA)
• archive policies
• acceptance criteria
• ICT security specifications
• live system, including database, system files and designed interface
• technical specifications of system.

Assessors must satisfy NVR/AQTF assessor requirements.

</table>

Application

This unit describes the skills and knowledge required to ensure that development projects are contracted to developers who are able to accomplish the task within the mutually agreed parameters of the project.

It applies to individuals who manage a range of information and communications technology (ICT) projects, including software development, hardware procurement and implementation, network analysis and deployment, and web and/or system development.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

<td>1. Specify development requirements</td>
<td>1.1 Prepare and document clear specifications for the project</td>
</tr>
<tr>
<td></td>
<td>1.2 Submit specifications to appropriate person for sign-off and authority to contract developers</td>
</tr>
<tr>
<td></td>
<td>1.3 Prepare request for tender document if appropriate, using specifications</td>
</tr>
<tr>
<td></td>
<td>1.4 Prepare and document agreed selection guidelines</td>
</tr>
<tr>
<td>ELEMENT</td>
<td>PERFORMANCE CRITERIA</td>
</tr>
<tr>
<td>---------</td>
<td>----------------------</td>
</tr>
</tbody>
</table>
| 2. Identify potential developers | 2.1 Investigate potential developers in line with organisational guidelines  
2.2 Request development quotes from potential developers  
2.3 Assess submitted quotes against selection guidelines and make a shortlist of potential developers, where appropriate |
| 3. Select a potential developer | 3.1 Assess the capability of developers to do the project work  
3.2 Confirm that potential developers understand the scope of the work to be undertaken  
3.3 Conduct a due diligence check where appropriate and assess the quality of developers  
3.4 Select appropriate developers using selection criteria  
3.5 Inform developers of their selection according to organisational guidelines |
| 4. Sign off the selection process | 4.1 Prepare contract for signing according to enterprise procedures  
4.2 Sign contract and prepare developers to commence work according to contract |

**Foundation Skills**

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

<table>
<thead>
<tr>
<th>Skill</th>
<th>Performance Criteria</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Reading</td>
<td>2.1, 2.3, 3.1, 3.3</td>
<td>• Interprets and evaluates a range of documentation containing ICT specific terminology and budgetary information to obtain information relating to project requirements and to identify and select developers</td>
</tr>
<tr>
<td>Writing</td>
<td>1.1, 1.3, 1.4, 2.3, 3.5, 4.1</td>
<td>• Uses correct spelling and grammar, clear plain English, task related terminology, and a formal document structure, format and style appropriate to the audience and organisation</td>
</tr>
<tr>
<td>Oral Communication</td>

Performance Evidence

Evidence of the ability to:

- specify requirements for a project
- prepare information for tender document and document selection criteria
- seek suitable developer candidates
- select suitable developers
- prepare and implement contracts procedure.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline the processes and procedures relating to business liaison
- summarise business negotiation and interview techniques
- outline the process for tendering and writing tenders
- outline the principles and features for preparing contracts
- identify and describe the state and federal legislative requirements and industry standards that relate to:
  - due diligence
  - codes of practice
  - ethics
  - industry and e-commerce standards
  - contracts.
Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

- a business plan
- procurement policies
- selection policies.

Assessors must satisfy NVR/AQTF assessor requirements.

</table>

Performance Evidence

Evidence of the ability to:

- develop and document a re-engineering process that supports organisational objectives
- take into consideration the complex interdependencies between organisational and external drivers
- implement a re-engineering process
- monitor and analyse the impact of the process in the organisation.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- discuss business case preparation process and how it can be applied to developing organisational strategies
- identify and summarise relevant laws and standards as they apply to process re-engineering strategies, including:
  - benchmarks
  - copyright
  - intellectual property
  - ethics
  - cultural and political diversity
- outline the impact that new processes may have on an organisation
- outline procedures relating to consulting internally and externally.
Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

- a process re-engineering plan
- analysis software
- e-business models
- modelling software
- an organisational strategy
- an organisational structure and culture
- a personal computer (PC)
- stakeholder analysis.

Assessors must satisfy NVR/AQTF assessor requirements.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements and performance criteria of this unit; including evidence of the ability to:

- For one organisation:
  - interpret a strategic plan and objectives of the organisation
  - evaluate the current state of ICT in the organisation
  - identify possible gaps and opportunities in ICT and evaluate organisational impact with reference to the strategic plan and the objectives
  - determine and prioritise proposed changes to meet organisational needs
  - evaluate the difficulty of implementing proposed changes
  - develop an action plan for implementation

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements and performance criteria of this unit. This includes:

- Key sections of an action plan for ICT implementation projects
- Methods of evaluation and planning approaches to technical problems and strategic objectives
- Methods of evaluation of competing and complementary internal and external ICT systems and products
- Current and emerging system and product trends and directions

Assessment Conditions

Skills must be demonstrated in a workplace or simulated environment where conditions are typical of those in an ICT working environment or ICT workplace. This includes:

- A site where ICT needs and strategic directions of the organisation are coordinated
- Detailed information relating to a strategic organisation plan, objectives, and direction
Assessment Requirements for ICTICT517 Match ICT needs with the strategic direction of the organisation

- Organisational policies and procedures relating to the implementation of ICT changes
- Individual superior in the organisation
- Information on current ICT systems and practices in the organisation including operating systems, hardware, and security

Assessors of this unit must satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards.

| Writing                | 2.3, 3.6, 4.4        | • Uses plain English, appropriate grammatical structures and specialised terminology, diagrams and flow charts, logical document structures and formatting relevant to the job role and organisation to record document proposals and agreements |
| Oral Communication     | 1.1-1.3, 2.1, 2.2,  
3.1-3.5, 4.1, 4.2     | • Uses open questioning and effective listening techniques to elicit information, clarify requirements and conduct effective negotiations  
• Uses appropriate vocabulary, grammatical structure,
voice tone, body language and reflective responses to build business relationships and present proposals

| Numeracy          | 1.2, 1.3, 2.3, 3.3-3.5, 4.3, 4.4 | • Interprets numerical information and applies mathematical calculations and financial functions relating to time durations and projected costs |
| Navigate the world of work | 1.3, 4.3 | • Recognises and responds to both explicit and implicit protocols within familiar work contexts and appreciates the importance of identifying and responding to organisational procedures |
| Interact with others | 3.1, 3.2, 3.4 | • Invests considerable time and energy in building and maintaining effective working relationships within and beyond immediate work context, recognising and intuitively responding to the subtle and complex mix of factors at play in every interaction |
| Get the work done | 1.1, 1.2, 2.1-2.3, 4.1 | • Takes responsibility for defining key aspects of own workload, balancing own needs and priorities with new opportunities
• Makes decisions quickly and intuitively in familiar situations requiring immediate attention, drawing on past experience to identify key variables, consider possible implications of different courses of action and determine the best course of action
• Demonstrates a sophisticated understanding of principles, concepts, language and practices associated with the digital world
• Demonstrates a sophisticated understanding of expectations, social protocols and online etiquette, intuitively selecting the appropriate channel, content and tone for diverse purposes and audiences |

<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 1.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

Evidence of the ability to:

- assemble a proposal for a new business initiative
- develop a strong awareness of the clients business
- present and negotiate a proposal with the client
- formulate and implement new business
- monitor and maintain client relationship and requirements of service.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- discuss business practices relevant to understanding client needs, including:
  - change management
  - information gathering techniques
  - planning process, including development of information and communications technology (ICT) business solutions
  - preparation of reports
- identify current industry accepted hardware and software products relevant to client services and support, including:
  - general features and capabilities
  - vendor product directions
- identify and interpret legal principles of commercial contracts and service level agreements (SLAs)
- interpret organisational policies, plans and procedures, including contracting
- summarise the concepts of negotiation and the process for building business relationships.
Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general ICT industry, and include access to:

- organisational policies, procedures and SLAs for the ICT industry
- contexts for negotiating agreements and contracts
- current ICT hardware and software products.

Assessors must satisfy NVR/AQTF assessor requirements.

Application

This unit describes the skills and knowledge required to consider business drivers in a decision-making process for network planning and investment. It prepares individuals for entry into planning and design for network additions and implementations to accommodate network growth and new technologies within the industry.

It applies to individuals with a range of telecommunications skills and extensive knowledge of core and access network capabilities of the service provider.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Network Planning

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>Element</th>
<th>Performance Criteria</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
<tr>
<td>1. Analyse forecasts using customer demand</td>
<td>1.1 Gather and organise information concerning customer service and usage data to determine customer demand</td>
</tr>
<tr>
<td></td>
<td>1.2 Determine trends in customer demands in specific customer operating environments and markets</td>
</tr>
<tr>
<td></td>
<td>1.3 Assess key measures of capacity and customer demand for forecast</td>
</tr>
</tbody>
</table>
### 2. Build models to develop business cases

2.1 Construct a model to represent key options to formulate strategic proposals in network planning
2.2 Determine rights of carriers and service providers in installing facilities under Commonwealth legislation
2.3 Produce a strategic network plan using key variables, and communicate them to intended audience
2.4 Apply business case methodology to determine key economic measures and risks to business success
2.5 Evaluate business value and options to recommend appropriate planning strategy

### 3. Apply financial analysis

3.1 Use a financial investment tool relevant to the business environment to determine financial viability of the planning project
3.2 Apply key economic measures in an analysis process and develop business strategy
3.3 Determine relevant level of financial analysis required to optimise network planning

### 4. Analyse demographic trends for strategy development

4.1 Gather demographic data and determine impact of demographic diversity on planning strategies
4.2 Analyse data and produce demographic trends for use in strategy developments in network planning

### 5. Assess technology implementation

5.1 Determine unit costs associated with technologies and products by using lifecycle of technologies
5.2 Research what different technology bases can deliver and circumstances and locations in which they should be successfully deployed

### 6. Evaluate network deployment architecture

6.1 Evaluate network deployment architecture using network deployment rules and reasoning behind architecture rules
6.2 Produce a business model of network planning, applying commercial considerations and exemption process

---

Performance Evidence

Evidence of the ability to:

- analyse forecasts using customer demand
- build accurate models to develop business cases, applying financial analysis
- analyse demographic trends for strategy development
- assess technology implementation
- communicate with customers
- evaluate network deployment architecture.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain different forms of business modelling
- identify commercial considerations, including:
  - capital expenditure (CAPEX)
  - operational expenditure (OPEX)
  - product revenue and demand versus network cost
  - return on investment (RoI)
  - time to market
- identify role of demographics in the planning process
- outline emerging technologies of telecommunications
- identify financial investment tools:
  - cost-benefit analysis
  - investment management system
• net present value (NPV)
• identify financial models
• explain forecasting of trends
• identify and explain relevant legislation as it applies to:
  • Australian competition and consumer affairs
  • telecommunications industry regulatory accounting
  • universal services obligations
• describe network planning processes.

**Assessment Conditions**

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the Telecommunications – Network Planning field of work and include access to:

• network planning data
• relevant databases
• business and financial models
• systems and deployment rules and relevant legislation
• planning processes and regulatory frameworks.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

<tbody>
<tr>
<td>Elements describe the essential outcomes</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
<tr>
<td>1. Scope the project</td>
<td>1.1 Prepare for work according to site specific safety requirements and enterprise work health and safety (WHS) processes and procedures</td>
</tr>
<tr>
<td></td>
<td>1.2 Determine type of access network by accessing and using network information sources</td>
</tr>
<tr>
<td></td>
<td>1.3 Produce a brief on how access network architecture components relate to the larger network and their impact on the work</td>
</tr>
</tbody>
</table>
### 1. Perform equipment selection and plan deployment for Access Network

1.4 Evaluate equipment type and technologies to be considered, to determine availability and compatibility with existing network equipment

1.5 Obtain resources and equipment needed for the work according to enterprise procedures and check for correct operation and safety

1.6 Assess capacity limitations of various platforms in the context of the work to ensure maximum network performance

1.7 Determine product capability and calculate allowable capacity of the access network to allow for network growth

### 2. Produce deployment plan for an Access Network

2.1 Conduct planning work using current equipment components and complying with access network deployment rules and exemption process criteria

2.2 Produce a preliminary plan on deployment of the network that maintains integrity of the access network

2.3 Discuss unexpected situations with appropriate personnel, with consideration to job specifications, safety and enterprise procedures to establish a solution

2.4 Review plan to ensure it complies with all standards and codes required when working on network access, and where appropriate make adjustments

### 3. Complete work and report its impact on network access

3.1 Produce final deployment plan including recommendations agreed with customer

3.2 Provide a report on network monitoring techniques used to manage the network to ensure it is performing at optimum level

### Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Performance Evidence

Evidence of ability to:

- gather data appropriately within information sources and evaluate how the data relates to the access architecture
- source current major equipment and technologies used in an access network and detail their compatibilities
- accurately plan deployment of an access network architecture, including deployment rules, capacity and capability management and monitoring techniques
- complete work within a timeframe typically expected of the discipline, work function and industrial environment.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline the features of an access network, including:
  - architectures and geographical categorisation
  - information sources
  - technology and equipment
- define capacity and capability management
- identify capacity limitation of various platforms
- describe commercial considerations of access network deployment
- identify compatibility issues of technology and equipment
- explain currency of technology and equipment use
- summarise enterprise deployment rules and rationale
- identify exemption process criteria
- identify major equipment components of a modern access architecture
- describe monitoring techniques to manage the access network
- outline network topologies
- identify product capability and availability allowable within an access network
- outline telecommunications access networks issues and challenges.

**Assessment Conditions**

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the Telecommunications – Network Planning field of work and include access to:

- network design documentation and other site-related documentation
- equipment specifications
- live network or training facilities
- organisational guidelines
- networked computers
- networked telecommunications components.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

and using network information sources

1.3 Determine nature, quantity, architecture and condition of existing network equipment and their attributes

1.4 Produce a brief on deployment scope of current access networks, including geographical limitations and their contribution to the larger network

2. Assess capability and technologies of current and future access networks

2.1 Produce layout of the topology of identified types of access networks with network elements clearly indicated

2.2 Evaluate equipment type and technologies of the access network to determine compatibility with existing network equipment and interoperability with other networks

2.3 Assess current and future capability and limitations of the network to ensure potential growth of the network

2.4 Determine future offerings of product and services outlining product offerings allowable over each network

3. Document capability evaluation

3.1 Assess capability of current access networks to deliver products and services to customers

3.2 Recommend preferred solutions for network growth with future capabilities

Performance Evidence

Evidence of ability to:

- evaluate capability and limitations of the various access network technologies for present and future needs
- determine and source equipment that will be used across the spectrum of access network technologies
- outline product offerings allowable across all competing access network technologies.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify access networks from information sources
- explain access networks in terms of:
  - common attributes and features
  - typical access network technologies and topologies
- explain how to assess capability and limitations of a network including:
  - its contribution to the boarder network; and,
  - its capacity to deliver customer products and services
- outline typical problems and challenges that arise from working with access network technologies
- explain the basis on which various network technologies are selected.
Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the Telecommunications – Network Planning field of work and include access to:

- network design documentation and other site related documentation
- equipment specifications
- live network or training facilities
- organisational guidelines
- networked computers
- networked telecommunications components.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTNPL404 Evaluate the planning requirements for provisioning a telecommunications building facility

Modification History

<table>
<thead>
<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 2.0.</td>
</tr>
</tbody>
</table>

Application

This unit describes the skills and knowledge required to evaluate building service capability to meet present and future demands for a building facility housing telecommunications equipment, including gathering information and evaluating allowable types of building services, power systems, air conditioning, fire safety services, energy use and alarm systems within each technology.

It applies to individuals with a range of telecommunications skills and extensive knowledge of core and access network capabilities of the service provider. It prepares individuals for entry into planning and design for network additions and implementations to accommodate network growth and new technologies within the industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Network Planning

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>Elements</th>
<th>Performance Criteria</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
<tr>
<td>1. Scope the</td>
<td>1.1 Prepare for given work according to relevant legislation, codes, regulations and standards including work health and safety (WHS) processes</td>
</tr>
</tbody>
</table>
| 1.2 Obtain building plans and specifications from planning section
| 1.3 Determine type of facility and building services required to house telecommunications network equipment and plant to efficiently support the network
| 1.4 Determine the purpose of the main areas or rooms in the network building and note special requirements to support safe operation of the facility
| 1.5 Verify who is responsible for planning, provisioning, maintaining and operation of a facility

| 2.1 Assess how functions of the main power and building services support network equipment and the impact if building services are not provided correctly or fail
| 2.2 Produce a schematic diagram of the relationship of electrical components in an end-to-end power and building services system
| 2.3 Assess different types of power sources likely to supply network equipment and determine benefits or deficiencies
| 2.4 Determine how resiliency is built into provisioning of a reliable power supply and how different levels of reliability can be achieved
| 2.5 Evaluate the impact of energy use and energy loads in the facility and determine how energy use can be minimised

| 3.1 Assess the main types of air conditioning components or plant available and their suitability to building requirements, and draw a schematic diagram of proposed layout
| 3.2 Determine how different equipment rack heat dissipation and size of a load can affect cooling needs
| 3.3 Evaluate how deployment of network equipment and other supporting infrastructure can affect performance and loading of the installed air conditioner

| 4.1 Assess type, functions and components of fire service protection systems for fire and smoke required in a network facility for the safety and protection of people and assets
| 4.2 Use the building plan to locate fire systems to be deployed to comply with fire regulations
| 4.3 Evaluate effect equipment deployments may have on fire services and its ability to protect the site and maintain regulatory obligations
5. Evaluate requirements of alarm systems

- 5.1 Determine alarm requirements from the building plan and specifications
- 5.2 Assess if basic monitoring is to be used with system or plant interrogation capabilities to produce an integrated alarm system for the facility
- 5.3 Determine where alarm systems are monitored and actioned and the personnel responsible
- 5.4 Evaluate what systems are used to connect power and building services output alarms, and the software requirements needed to allow interrogation

6. Produce evaluation document

- 6.1 Assess requirements for each building service needed to support the facility, allowing for projection of future network growth and building expansion
- 6.2 Produce an evaluation document on planning requirements for proposed provisioning including identified services to support the building facility

Performance Evidence

Evidence of ability to:

- evaluate facilities used for housing network equipment and how they may be used for provisioning
- produce documentation that correctly associates responsibilities to planning, provisioning, maintenance and operation of a building facility
- evaluate planning requirements for telecommunications building facilities
- determine equipment for air conditioning systems and power supplies into building facilities
- determine requirements for energy use, alarm and fire safety services.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline these aspects of network planning:
  - alarm monitoring and hierarchy of responsibility
  - capacity of air conditioning system on a given load
  - different building services supported at a network site
- describe basic monitoring and plant interrogation capabilities
- outline complexities of various levels of alarm as applied to building facilities
- identify general types of facilities within building housing network equipment
- outline services and equipment, including:
  - types of air conditioning
• types of fire safety services
• types of power sources
• equipment deployments on fire safety services
• main energy loads associated in a facility
• identify regulatory obligations in relation to fire safety services
• identify software systems needed to allow alarm interrogation (outputs).

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the Telecommunications – Network Planning field of work and include access to:

• building facilities where planning requirements for provisioning may be conducted
• relevant regulatory and organisational procedures
• documentation that impacts work.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

**Application**

This unit describes the skills and knowledge required to develop provisioning of building services, including gathering information on the role of power and building services, equipment and infrastructure deployments, building standards, building services capacity and building works programs to evaluate allowable types of building services.

It applies to individuals with a range of telecommunications skills and extensive knowledge of core and access network capabilities of the service provider. It prepares individuals for entry into planning and design for network additions and implementations to accommodate network growth and new technologies within the industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

**Unit Sector**

Telecommunications – Network Planning

**Elements and Performance Criteria**

<table>
<thead>
<tr>

</tr>
</tbody>
</table>
processes and procedures

1.2 Determine the main role power and building services perform in a network facility and note their effect on network reliability and performance

1.3 Assess the provisioning process required to identify, plan and implement power and building services for equipment deployment plans

2. Assess equipment and infrastructure deployments

2.1 Evaluate available capacity from power and cooling plant to support the effect on floor loading, power and heat load from equipment deployments

2.2 Determine different levels of reliability performance standards applicable to specific equipment deployment needs

2.3 Develop a process to plan or implement a power and building services upgrade compatible to the network equipment requirements

2.4 Assess options available to manage capacity growth in a facility and the effect of potential single points of failure in an end-to-end power and building services system

3. Develop building works programs

3.1 Develop short- and long-term works programs for building projects that include minor upgrades to large installations

3.2 Determine triggers that may require a power and building services capacity or reliability upgrade

3.3 Prioritise projects based on customer demand and business needs

4. Assess provisioning of building services

4.1 Assess the possible effect on current and future use of a building or space when provisioning power and building services

4.2 Produce cost estimates including constraints for provisioning of a power and building services upgrade

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Performance Evidence

Evidence of ability to:

- assess capacity and suitability of available power and building services for telecommunications building works
- develop a process to implement a power and building services upgrade
- develop short- and long-term works projects for equipment and infrastructure deployments
- produce accurate cost estimates for provisioning.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the process to assess capacity and suitability of available power and building services
- outline the following features of a building works project:
  - correlation between building service systems to network equipment requirements
  - different levels of reliability performance standards, applicable to specific equipment deployment needs
  - information required to assess effect on floor loading, power and heat load from equipment deployments
  - main regulatory standards
  - role of power and building services, capacity and standards
  - establish the source of budget cost estimates
  - define the specific short and long term works programs
• identify typical issues and challenges that occur in telecommunications building service systems and how these may be addressed
• outline the process for power and building services upgrades.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the Telecommunications – Network Planning field of work and include access to:

• building facilities where a telecommunications network project may be conducted
• relevant regulatory, organisational procedures
• documentation impacting work.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 2.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

Evidence of ability to:

- determine first three layers of the open system interconnect (OSI) model
- determine the role of switches and routers in the core network and different types of routing protocols
- evaluate synchronous digital hierarchy (SDH) switching and transmission and its ability to create resiliency in the network through various redundant configurations
- evaluate benefits, purpose and structure of ADSL networks and other broadband products
- determine and compare data networks with specific reference to internet protocol (IP) and multiprotocol label switching (MPLS)
- evaluate the most important routing protocols of internal and external MPLS and the resilience built into them
- evaluate limitations of an ethernet network and how VLAN can be incorporated in them
- compare various voice protocols
- determine the purpose of various hosting in data centres and media and distribution platforms.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline the following features of core network architectures:
  - client business domain, business function and organisation
  - networking technologies
  - theoretical concepts of three or more current industry network development and design methodologies
• transmission technologies and protocols
• outline MPLS and IP architectures across a core network environment
• outline current industry-accepted hardware and software products
• identify and describe relevant protocols, such as routing information protocol (RIP), enhanced interior gateway routing protocol (EIGRP), open shortest path first (OSPF), and border gateway protocol (BGP) operations
• identify VLANs and VPN tunnels and describe how they may be implemented in an ethernet/MPLS environment.

Assessment Conditions
Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the Telecommunications – Network Planning field of work and include access to:
• network design documentation
• site-related documentation
• equipment specifications
• live network or training facilities
• organisational guidelines
• networked computers
• networked telecommunications components.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to plan deployment of core network for a telecommunications service provider, including use and consideration of core network deployment data, technology, equipment, capacity management and network management information sources. Core networks use convergent internet protocol (IP) based technologies with conventional technologies.

It applies to individuals with a range of telecommunications skills and extensive knowledge of core and access network capabilities of the service provider. It prepares individuals for entry into planning and design for network additions and implementations to accommodate network growth and new technologies within the industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Network planning

**PwC’s Skills for Australia**

<table>
<thead>
<tr>
<th>Information Sources</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.3 Produce a brief showing how core network architecture components relate to the larger network and their impact on the work</td>
</tr>
<tr>
<td>1.4 Evaluate equipment type and technologies to be considered to determine availability and compatibility with existing network equipment</td>
</tr>
<tr>
<td>1.5 Obtain resources and equipment needed for the work according to enterprise procedures and check for correct operation and safety</td>
</tr>
<tr>
<td>1.6 Assess capacity limitation of platforms in context of the work to ensure maximum network performance</td>
</tr>
<tr>
<td>1.7 Determine product capability and calculate allowable capacity of the core network to allow for network growth</td>
</tr>
</tbody>
</table>

### 2. Produce deployment plan for a core network

| 2.1 Assess demand for the core network using key geographic, demographic, forecast and bandwidth data |
| 2.2 Identify key parameters of the core network to be measured for capacity management |
| 2.3 Produce a preliminary deployment plan for the core network using architectural principles and assessed demand to maintain integrity of the core network |
| 2.4 Assess additional planning requirements for voice over internet protocol (VoIP) and wireless voice networks from voice networks, and for hosting and content distribution networks from media and content networks |
| 2.5 Create a financial business case for deployment of the core network based on assessed demand to justify a return on investment (RoI) and operational costs |
| 2.6 Discuss unexpected situations with appropriate personnel, with consideration to job specifications, safety and enterprise procedures to establish a solution |

### 3. Complete work and report its impact on network performance

| 3.1 Produce final deployment plan including recommendations agreed with customer |
| 3.2 Provide a report on network monitoring techniques used to manage the network to ensure the network is performing at optimum level |

### Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

Performance Evidence

Evidence of ability to:

- gather data from information sources efficiently and evaluate how the data relates to the core network
- source major equipment and technologies accurately to be used in a core network and detail their compatibilities
- prepare a business case for deployment of a core network
- produce a deployment plan for a core network including monitoring techniques and recommendations for the customer.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify multiprotocol label switching (MPLS) and internet protocol (IP) architectures across a core network environment
- outline different protocols such as routing information protocol (RIP), enhanced interior gateway routing protocol (EIGRP), open shortest path first (OSPF), and border gateway protocol (BGP) operations
- identify virtual local area networks (VLAN) and virtual private network (VPN) tunnels and explain how they are implemented in an ethernet and MPLS environment
- outline the following features of core network architectures:
  - client business domain, business function and organisation
  - current industry-accepted hardware and software products
  - networking technologies incorporating substantial depth in some areas
  - transmission technologies and protocols
- theoretical concepts of three or more current industry network development and design methodologies.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the Telecommunications – Network Planning field of work and include access to:

- network design documentation
- other site-related documentation
- equipment specifications
- live network or training facilities
- organisational guidelines
- networked computers
- networked telecommunications components.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to gather information on the types of end-to-end services and product delivery and evaluate their capability to meet present and future demands.

It applies to individuals with a range of telecommunications skills and extensive knowledge of core and access network capabilities of the service provider. It prepares individuals for entry into planning and design for network additions and implementations to accommodate network growth and new technologies within the industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Network Planning

Elements and Performance Criteria

Performance Evidence

Evidence of ability to:

- access relevant network information databases to determine the types of end-to-end services and products
- conduct site evaluation assessment accurately
- evaluate capacity and capability of end-to-end services to meet current and future demands
- assess limitations of current end-to-end services and produce specifications to meet future demands
- assess limitations of current building facility and services and produce specifications to meet future demands
- summarise and produce planning briefs to network, sales and marketing planning sections.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify emerging technologies, trends and products available overseas that will be in demand in the Australian market
- describe information required to prepare and review limits of:
  - broadband networks
  - data networks
  - facilities and environmental issues
  - fixed access transmission network
  - media and content
- regional and metropolitan network
- voice networks
- wireless network
- outline the following aspects of network planning:
  - basic network design including routing and redundancy
  - levels of reliability performance standards applicable to specific equipment deployment needs
  - standards and regulations
- describe the distribution structure of networks including:
  - access
  - backbone
  - edge
- outline current equipment and product types to meet future service obligations.

**Assessment Conditions**

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the Telecommunications – Network Planning field of work and include access to:

- a network planning area with systems and deployment rules and standards
- end-to-end services and products databases
- relevant workplace procedures
- product and manufacturing specifications
- codes of practice and standards
- manuals and reference materials.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to assess the impact of deregulation, competition, economic conditions, regulations and legislation on enterprise-specific policies and procedures and its subsequent incorporation into the planning process.

It applies to individuals with a range of telecommunications skills and extensive knowledge of core and access network capabilities of the service provider. It prepares individuals for entry into planning and design for network additions and implementations to accommodate network growth and new technologies within the industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
<tr>
<td>1. Evaluate economic and political influences</td>
<td>1.1 Research the impact of deregulation and competition in the telecommunications industry on planning priorities of competing service providers in Australia due to the different federal government policies</td>
</tr>
</tbody>
</table>
1.2 Assess the influence of local and international economic conditions on the growth of the industry that would impact on the planning justification for a new network

1.3 Evaluate and produce a report on the economic and political influences on public and commercial enterprises providing services in a competitive telecommunications market of fast changing technologies

2. Evaluate impact of key regulations and legislation

2.1 Access all legislation governing carriers in Australia to determine the rights of carriers and service providers in installing facilities under Commonwealth legislation

2.2 Use the Telecommunications Industry Regulatory Accounting Framework (RAF) to determine the method used by the Australian Competition and Consumer Commission (ACCC) in enforcing competitive provisions between service providers

2.3 Evaluate the impact on planning of services by the obligation placed by Universal Service Obligation (USO) on service providers to ensure services are reasonably accessible to all people in Australia on an equitable basis

2.4 Produce a summary report evaluating the impact of the legislation on the planning process of access networks and plan strategies to facilitate network planning

3. Apply internal financial compliance

3.1 Use an enterprise-specific investment management system (IMS) to create on the spot reports for performance measurement of an existing planning project against the business plan

3.2 Produce a report of planning work activities incorporating enterprise-specific policies and procedures underpinned by regulatory and compliance obligations

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Performance Evidence

Evidence of ability to:

- produce a comprehensive evaluation report on economic and political influences on the telecommunications industry in Australia
- produce a comprehensive evaluation report on the impact of key regulation and legislation on the telecommunications industry
- produce an accurate summary report evaluating the impact of the legislation on the planning process of access networks.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the impact of deregulation on the telecommunications industry
- outline the investment management system
- identify and describe the purpose and implementation of relevant telecommunications legislation
- identify and describe the impact of market forces on telecommunications
- outline procedures for developing plans for telecommunications systems
- outline the telecommunications industry, framework and networks.
Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the Telecommunications – Network Planning field of work and include access to:

- relevant legislation
- planning processes
- Telecommunications Industry Regulatory Accounting Framework (RAF) planning tools
- enterprise-specific investment management system (IMS)
- relevant databases
- licensing requirements
- other related procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

Evidence of ability to:

- implement planning processes including associated monitoring and control mechanisms
- develop effective solutions to address access network shortfalls that satisfy customer and enterprise needs
- develop network plans with consideration of appropriate technological developments and product implementation
- produce accurate forecasts for a specific network including cost-benefit analysis.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify and summarise legislation affecting the telecommunications industry
- outline the features of an access network and the influence on:
  - cost estimates and operating budgets according to enterprise policy
  - telecommunications industry in Australia
- describe the theory of project management and associated databases and project management software programs
- describe the process and features of planning for an access network on an estate
- determine the economic and political influences on public and commercial enterprises
- describe the financial authorities and delegations associated with an access network plan
- define the influence of the local and international economic conditions on the telecommunications industry
- describe the typical challenges and limits facing technology today and the consideration of future needs
• describe the process of collating and writing project briefs, reports and project charters.

Assessment Conditions
Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the Telecommunications – Network Planning field of work and include access to:

• a network planning area systems and deployment
• rules and standards
• relevant databases
• licensing requirements and other site related procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to satisfy the regulatory environment in the planning, design and installation of telecommunications equipment and infrastructure.

It applies to individuals with the organisational, economic and regulation skills to enable them to plan and design the access network infrastructure of private and/or carrier service providers. These individuals may be responsible for small projects or parts of larger projects and for the operation and engineering of the enterprise and telecommunications network in general.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 2.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

Evidence of ability to:

- produce a detailed report from a design, identifying acts and codes of practice for each aspect of a project
- produce a report detailing common construction practices to mitigate the environmental impact of the project
- produce a summary report detailing a designer’s and constructor’s obligations regarding land access under the telecommunications act and code of practice.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- summarise regulations, standards, legislation and codes of practice relevant to the telecommunications industry
- describe the impact of the following on telecommunications systems and installations:
  - Environmental Protection Authority and legislation
  - waterways and their responsibilities
  - national, state and council regulations
  - National Parks and Wildlife acts
  - ports authority
  - rail authority and their requirements
  - power distribution authority and requirements
  - roads authority
  - footpath allocations
• describe technical compliance requirements for the following:
  • separations and depth of cover
  • earth potential rise (EPR)
  • low frequency induction (LFI)
• describe the framework for the telecommunications industry including its various networks

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the Telecommunications – Network Planning field of work and include access to:

• relevant legislation
• planning processes and telecommunications industry Regulatory Accounting Framework (RAF)
• planning tools
• enterprise-specific investment management system (IMS)
• relevant databases
• licensing requirements
• relevant procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to install and manage network protocols in a networking environment.

It applies to individuals with competent information and communications technology (ICT) skills, working as network administrators who are required to ensure that appropriate protocols have been installed in networks to allow user functionality and maintenance.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

Performance Evidence

Evidence of the ability to:

- configure, test and validate network protocols in order to facilitate interconnectivity
- install and manage network protocols in a network, and troubleshoot problems.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the client business domain, including client organisation structure and business functionality
- list current communications technologies and their associated protocols
- outline current industry accepted hardware and software products, and general features and capabilities
- summarise network protocols currently in use in the organisation and industry, including:
  - transmission control protocol
  - internet protocol (TCP/IP)
  - OSI models
- clarify the vendor product range and development directions
- describe how network protocols transcend organisational size and network complexity.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry, and include access to:
- a live network
- application software and operating system
- appropriate learning and assessment support when required
- networked computers
- organisational guidelines
- technical documentation and installation manuals
- vendor software.

Assessors must satisfy NVR/AQTF assessor requirements.

Performance Evidence

Evidence of the ability to:

- develop an algorithmic statement of a solution for a set process
- design, document, construct and test a small single purpose operating system (OS) utility application in response to a problem description
- create scripted programs that access information stored in files on the system and use system utility programs to sort or find information within these files
- validate and record script results.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- summarise the principles of algorithm design
- identify and describe operating system components and processes, including:
  - command line interface
  - log files
  - program scheduling utilities
  - development methodologies
  - tools and utilities
  - testing methods
- explain debugging for a variety of scripting scenarios
- outline programming structured control constructs: sequence, selection and iteration
- summarise scripting techniques and language syntax.
**Assessment Conditions**

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry, and include access to:

- technical requirements
- software development environment
- software testing environment.

Assessors must satisfy NVR/AQTF assessor requirements.

Performance Evidence

Evidence of the ability to:

- evaluate client user requirements and hardware installation
- install a range of network hardware by planning, managing and supporting the installation of new components in a network, according to organisational policies and procedures.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- summarise current industry, data and voice networking, security products, devices and procedures, including:
  - current industry accepted network protocols
  - organisational contracting procedures and responsibilities
  - system diagnostic software
- outline current industry accepted network hardware and software products
- explain hardware and software installation procedures
- describe local area network (LAN) capabilities and characteristics, such as network type, internet protocol (IP) addressing, switch or hub operation
- describe various features of network connections, including types of cables, cabling distance limitations and wireless connections
- outline operating systems sufficient to enable basic installation
- summarise set-up and configuration procedures
- describe software packages supported by the organisation.
Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry, and include access to:

- vendor hardware and software components
- application software and operating system
- hardware maintenance tools
- a live network
- networked computers
- organisational guidelines
- technical documentation and installation manuals.

Assessors must satisfy NVR/AQTF assessor requirements.

<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 1.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

Evidence of the ability to:

- identify client software requirements
- plan and deploy automatic installation of operating systems and software
- configure and test installation, ensuring client needs are met.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- summarise network protocols and operating systems, including:
  - transmission control protocols (TCP)
  - internet protocols (IPs)
  - network applications
- describe organisational contracting procedures and responsibilities
- outline software licensing requirements and documentation
- explain current industry standards related to software deployment, including:
  - deployment software configuration
  - configuration of automated deployment processes
  - operating system deployment
  - software package deployment
  - troubleshooting deployment processes.
Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry, and include access to:

- a site or prototype where deployment processes may be implemented
- a live network
- software tools to support implementation of deployment processes
- technical documentation and installation manuals
- organisational guidelines.

Assessors must satisfy NVR/AQTF assessor requirements.

</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 1.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

Evidence of the ability to:

- configure a router to provide the required security
- implement and maintain security functionality for a virtual private network (VPN), including:
  - site to site VPN
  - remote access VPN
- produce security documentation.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline the characteristics of a VPN system, including:
  - site to site
  - remote access systems
  - network protocols and operating systems relevant to VPN, including its features, issues and functions
- describe the security requirements for a VPN, including:
  - auditing and penetration testing techniques
  - configuration of routers and switches
  - security protocols, standards and data encryption
  - processes and techniques related to security perimeters and their functions
  - security threats, including eavesdropping, data interception, data corruption and data falsification
- transmission control protocol or internet protocol (TCP/IP) protocols and applications
- audit and intrusion detection systems
- authentication issues
- recognise and describe the differences between common networks, including:
  - local area network (LAN)
  - wireless local area network (WLAN)
  - wide area networks (WAN)
- identify and describe organisational issues surrounding:
  - security cryptography
  - screened subnets
  - virus detection software.

**Assessment Conditions**

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry, and include access to:

- network technical requirements
- network infrastructure, including servers and security hardware and software.

Assessors must satisfy NVR/AQTF assessor requirements.

Application

This unit describes the skills and knowledge required to build an enterprise, community or mesh wireless network within and outside buildings.

It applies to individuals with excellent task management, interpersonal and information and communications technology (ICT) skills working in senior design roles in the networking area, who are required to develop complex wireless networks for organisations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Performance Evidence

Evidence of the ability to:

- confirm client organisational and business requirements
- determine hardware and software requirements
- prepare for safe installation
- select, install and configure required wireless hardware
- train users
- test, monitor, and administer the installation
- finalise installation and prepare required documents documentation.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- Identify and describe current wireless local area network (WLAN) and wireless area network (WAN) solutions, including:
  - audit and intrusion detection systems
  - auditing and penetration testing techniques
  - bandwidth and quality of service
  - factors affecting signal quality
  - layer 2 and layer 3 design issues
  - suitability for small office home office (SOHO) and enterprise local area networks (LANs)
  - transmission control protocols or internet protocols (TCPs/IPs) and applications
  - wireless topologies
• describe the common features of security threats and how to develop a security strategy, including:
  • security protocols
  • standards
  • data encryption
• identify and describe common network protocols and operating systems.

**Assessment Conditions**

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry, and include access to:

• technical requirements
• network infrastructure, including wireless hardware and software.

Assessors must satisfy NVR/AQTF assessor requirements.

Performance Evidence

Evidence of the ability to:

- identify current new, and emerging, virtualisation technology
- identify and use, the features and functions of industry-specific virtualisation technologies
- review and evaluate the virtualisation software.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe current technology trends, and directions, in information and communications technology (ICT), specifically in the major industry technology standards used in virtualisation technology
- recognise the vendor product directions relating to virtualisation technology
- outline current industry hardware and software products, and their general features, capabilities and application
- recognise information-gathering techniques
- describe the environmental and sustainability policies of the workplace
- identify the features of virtualisation technology
- recognise how to test, and evaluate, virtualisation technology
- locate the appropriate sources of information regarding virtualisation technology.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry, and include access to:
• a site where industry-specific technologies may be used
• industry-specific technologies currently used in the industry
• documents detailing work health and safety (WHS) standards, environmental guidelines, and enterprise requirements
• the virtualisation software.

Assessors must satisfy NVR/AQTF assessor requirements.

| 1. Identify options and select virtualisation solution | 1.1 Research and determine government and industry guidelines and policies for use of desktop and server virtualisation  
1.2 Determine and document current and future requirements of organisations based on guidelines, policies and organisational structure  
1.3 Identify benefits and detriments of virtualisation of desktop and server environments relevant to needs of organisation  
1.4 Identify available features of current virtualisation software |
relevant to needs of organisation

1.5 Select virtualisation solutions based on current and future needs of organisation
1.6 Seek and obtain feedback on selected virtualisation solution from organisation and incorporate feedback into selected virtualisation solutions

2. Prepare for, install and configure virtualisation technology

2.1 Identify, clarify and document technical requirements of organisation relating to virtualisation technologies including virtual machines, virtual networks, and virtualisation software
2.2 Identify and document hardware, software, network, and infrastructure components required to be installed and configured to meet technical requirements
2.3 Seek and obtain feedback on technical requirements and documented components from organisation and incorporate feedback into technical requirements and documented components
2.4 Install and configure software to provide support for virtualisation of desktop and server operating systems according to technical requirements
2.5 Configure virtualisation software application features to accommodate required functionality according to organisational needs

3. Install, configure and test virtual machines

3.1 Install and configure virtual machines according to technical requirements
3.2 Install and configure virtual networks according to technical requirements
3.3 Test functionality of installed virtual machines and virtual networks against technical requirements and rectify errors

**Foundation Skills**

_This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria._

<table>
<thead>
<tr>

<tbody>
<tr>
<td>Reading</td>
<td>• Recognises and interprets industry and government guidelines to determine organisational requirements</td>
</tr>
<tr>
<td>Oral Communication</td>
<td>• Elicits information and organisational needs by using listening and questioning techniques</td>
</tr>
</tbody>
</table>
Navigate the world of work

- Complies with explicit organisational policies and procedures

Get the work done

- Determines job priorities, resources and equipment, and works logically and systematically to undertake clearly defined and familiar tasks
- Takes responsibility for routine decision making by selecting from a range of predetermined options in routine situations, identifying and taking some situational factors into account
- Initiates standard procedures when adapting configuration procedures, depending on differing operational contingencies, risk situations and environments
- Understands key principles and concepts underpinning the design and operation of digital systems and tools, and applies these when troubleshooting existing technology and when seeking to understand the potential impact of new technology
- In familiar contexts, responds promptly and intuitively to problems involving virtualised machine environments requiring immediate attention

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements and performance criteria of this unit; including evidence of the ability to:

- Identify one virtualisation solution for the organisation including the identification of applicable guidelines or policies, benefits and detriments and currently available software
- Interpret organisational needs to determine technical requirements of virtualisation solution once
- Install and configure virtualisation software to accommodate organisational needs once
- Install, configure, and test the functionality of two virtual machines, including evidence of the ability to:
  - backup virtual machine state on shutdown
  - restore virtual machine state on start up
  - backup and restore a virtual hard drive and software configuration files for virtual machine
- Configure and test the functionality of a virtual network for the two virtual machines, including the ability to:
  - configure internet protocol (IP) addresses to match selected network configuration
  - configure virtual network as host only, bridged, and network address translation (NAT) configurations
  - configure services to operate under current network configuration

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements and performance criteria of this unit. This includes:

- Government and industry policies and guidelines related to virtualisation
- Technologies and processes relating to virtualisation
- Tools and software applications for virtual machine management
- Configuration of software applications required to manage virtual machines
Configuration requirements for the integration of virtual machines into an existing network design

Assessment Conditions
Skills must be demonstrated in a workplace or simulated environment where conditions are typical of those in an ICT working environment or ICT workplace. This includes:

- Site or prototype where virtual machine environments are to be implemented
- Information relating to organisational policies and procedures and structures
- Current and future user needs relating to desktop and server environments
- Network technical requirements
- Networked computers
- Individual user to clarify and confirm requirements
- Software to support implementation of virtual machines.

Assessors of this unit must satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to install, configure and test network security in an organisational environment.

It applies to individuals who are involved in the installation, configuration, and testing of network security for networks of any size in job roles including network administrator, penetration tester, and security consultant.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
<tr>
<td>1. Assess network security threats and vulnerabilities</td>
<td>1.1 Review current system security against organisational asset security requirements to identify security threats and vulnerabilities</td>
</tr>
<tr>
<td></td>
<td>1.2 Analyse network, software, hardware and system security threats and vulnerabilities to prioritise deficiencies to be addressed</td>
</tr>
<tr>
<td></td>
<td>1.3 Make recommendations to management to address security deficiencies according to organisational asset security</td>
</tr>
</tbody>
</table>
2. Implement countermeasures for identified threats and vulnerabilities

- 2.1 Implement required level of perimeter security to meet organisational asset security requirements and according to identified threats and vulnerabilities
- 2.2 Assess and implement server and network hardening techniques and measures
- 2.3 Implement secure authentication and user account controls to secure data integrity and transmission

3. Test and verify functionality and performance of countermeasures implemented

- 3.1 Design function and performance test items to verify key functions and performance of countermeasures
- 3.2 Conduct function and performance tests to modify and debug countermeasures
- 3.3 Develop documentation on the current system settings and file according to organisational guidelines

4. Maintain and improve network security

- 4.1 Review logs and audit reports to identify and record security incidents, intrusions and attempts
- 4.2 Carry out spot checks and audits to ensure that procedures are not being bypassed
- 4.3 Document newly discovered security threats vulnerabilities and recommendations in a report for presentation to superior to gain approval recommendations to be implemented

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

<table>
<thead>
<tr>
<th>Skill</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Reading</td>
<td>• Recognises and interprets textual information to determine specific information about security incidents</td>
</tr>
<tr>
<td>Writing</td>
<td>• Accurately records test results and develops material for a specific audience, using clear and detailed language in order to convey explicit information</td>
</tr>
<tr>
<td>Oral Communication</td>
<td>• Articulates information clearly, using specific and relevant language suitable to audience to convey recommendations and provide verbal reports</td>
</tr>
<tr>
<td></td>
<td>• Uses listening and questioning techniques to confirm understanding</td>
</tr>
</tbody>
</table>
Numeracy

- Extracts and evaluates the mathematical information embedded in tasks and texts

Get the work done

- Determines job priorities, resources and equipment, and works logically and systematically to undertake clearly defined and familiar tasks
- Understands the purposes, specific functions and key features of common digital systems and tools, and operates them effectively to complete routine tasks
- Recognises and responds to predictable routine problems related to own role in the immediate work context, including detecting intrusion and debugging the system when required

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements and performance criteria of this unit; including evidence of the ability to:

- With respect to one network:
  - identify and analyse network security threats and vulnerabilities
  - make recommendations to management to address network security deficiencies and fulfil organisational asset security requirements
  - implement perimeter security, network hardening measures and authentication and user account controls according to identified deficiencies and organisational asset security requirements
  - design and conduct testing to verify the key function and performance measures of network security
  - debug network security according to test results
  - review logs and audit reports to identify and record five security incidents, intrusions and attempts
  - undertake three spot checks and audits to ensure that procedures are not being bypassed

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements and performance criteria of this unit. This includes:

- Security requirements of the organisation, including:
  - organisational structure and functions
  - features and capabilities of networking technologies
  - privacy issues and privacy legislation
  - security information sources
  - risk analysis
• Virtual private network (VPN) issues, including bandwidth and dynamic security environment
• Configuration of routers and switches
• Current hardware and software security products, including general features and capabilities
• Function and operation of VPN concepts including encryption, firewalls, packet tunnelling, and authentication
• Network protocols and operating systems
• Security perimeters and functions
• Security protocols, standards and data encryption
• Security threats including eavesdropping, data interception, data corruption and data falsification
• Types of VPNs including site-to-site and user-to-site internet traffic and extranets
• Systems and procedures related to:
  • audit and intrusion detection systems
  • auditing and penetration testing techniques
  • cryptography
  • local area network (LAN), wireless local area network (WLAN) and wide area network (WAN)
  • screened subnets
  • transmission control protocol, internet protocol (TCPs/IPs), and applications
  • virus detection software

Assessment Conditions

Skills must be demonstrated in a workplace or simulated environment where conditions are typical of those in an ICT working environment or ICT workplace. This includes:

• Site where secure network installation, configuration, and monitoring may be conducted
• Network security documentation
• Organisational asset security requirements and information on organisational structure and functions
• Equipment specifications
• Network components
• Testing software
• Individual manager in the organisation
• Firewalls (hardware and software)
• Live network
• Networked (LAN) computers
• WAN service point of presence

Assessors of this unit must satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for ICTNWK529 Install and manage complex ICT networks

Modification History

<table>
<thead>
<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 1.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

Evidence of the ability to:

- design and implement a complex network that involves integrating multiple network services to meet business requirements
- design and implement an appropriate security strategy for a complex network
- monitor and test the performance of aspects of the solution
- provide ongoing management and support of the network.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe firewall configurations and their application
- summarise internet protocol (IP) addressing and network configuration
- summarise and apply the following aspects of a network:
  - infrastructure
  - load balancing for applications
  - security
  - server operating systems
- service configuration, including:
  - domain name system (DNS)
  - dynamic host configuration protocol (DHCP)
  - file transfer protocol (FTP)
  - network time protocol (NTP)
  - server messages block (SMB)
• mail
• proxy
• web
• service management
• identify and describe troubleshooting tools and techniques, including network diagnostic utilities
• outline the purpose of user authentication and directory services
• describe voice over internet protocol (VoIP)
• describe virtual private network (VPN).

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry, and include access to:

• network design and business requirements documents
• a complex network or hardware and software required to build a network involving multiple servers, multiple physical locations (or simulation of) and a combination of network services.

Assessors must satisfy NVR/AQTF assessor requirements.

Performance Evidence

Evidence of the ability to:

- determine client requirements and network specifications
- determine security measures and brief users
- connect network hardware devices to an internet gateway
- configure and test gateway products
- configure and test node according to vendor specifications and client requirements.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify and describe current browser software
- explain domain name server (DNS) resolution
- outline the features and functions of:
  - network architecture
  - bridges as required
  - desktop operating systems
  - hubs
  - network gateways
  - network operating systems:
    - routers
    - switches
- describe the security issues that may impact on an internet gateway
- describe common security solutions and strategies
• identify and describe the principle function of current gateway software.

**Assessment Conditions**

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry, and include access to:

• a network and internet where gateway products may be installed and configured
• use of hardware and software currently used in industry
• client requirements documentation
• vendor specifications.

Assessors must satisfy NVR/AQTF assessor requirements.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements and performance criteria of this unit; including evidence of the ability to:

- Plan, implement and test enterprise communication solutions including:
  - one email system including:
    - preparing existing networks
    - configuring users, mailboxes, address lists, distribution lists, user constraints, remote email access, message integrity and antispam controls, antivirus controls and anti-phishing controls
  - one content management system including:
    - planning namespace and server roles
    - configuring access, security, network infrastructure and customisations
    - providing high availability and disaster recovery
  - one collaboration tool including:
    - planning namespace and server roles
    - configuring access, security, network infrastructure and customisations
    - providing high availability and disaster recovery

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements and performance criteria of this unit. This includes:

- Key requirements of an ICT implementation plan
- Features and purpose of an email server application
- Features and purpose of organisational collaboration tools
- Features and purpose of web portal or content management software
- Testing processes
- Key principles of data protection, including:
• backup and restoration
• firewall configuration
• security and authentication practices

Important features of network administration, including:
• load balancing for applications
• server and directory administration
• infrastructure
• web server administration

Assessment Conditions
Skills must be demonstrated in a workplace or simulated environment where conditions are typical of those in an ICT working environment or ICT workplace. This includes:

• Site where server applications can be installed
• Networked servers
• Organisational requirements for email solution, remote access to email, content management system, and collaboration tools.
• Details relating to enterprise email requirements including users, mailboxes, address lists, distribution lists, and user constraints
• Antivirus, antispam, and anti-phishing controls
• Enterprise collaboration software
• Workstations
• Switch
• Wide area network (WAN) service point of presence
• Individual stakeholders to consult

Assessors of this unit must satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge necessary to plan, configure and support advanced internet protocol (IP) addressing and routing when implementing scalable and secure routers connected to local area networks (LANs) and wide area networks (WANs). The unit also covers configuration of secure routing solutions to support branch offices and mobile workers.

It applies to individuals with advanced information and communications technology (ICT) skills who are working in a variety of roles, including network specialists, network engineers, network infrastructure engineers, senior network administrators, network and systems managers, ICT security specialists, security engineers, communications engineers and communications managers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for ICTNWK603 Plan, configure and test advanced internetwork routing solutions

Modification History

<table>
<thead>
<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 1.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

Evidence of the ability to:

- plan, configure and support advanced routed network infrastructure
- use network tools
- plan and analyse redistribution solutions
- produce and configure layer 3 path control implementation plan
- provide solutions to static and dynamic routing issues together with optimisation strategies.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain broadband technologies relevant to advanced internetworking routing solutions
- summarise business justifications for having integrated and unified enterprise networks
- outline emerging viable business and social technologies
- clarify external developments or factors that affect network design
- summarise IPv4 and IPv6 technologies and solutions
- outline maintenance and management tools and practices suitable for complex networks to achieve availability and resilience
- summarise network topologies
- explain regulations, standards and certifications relevant to advanced internetworking routing solutions
- explain risk management strategies and practices suitable for a complex network environment
- outline routing tables, protocols and operational processes
• summarise routing technologies for an enterprise environment
• summarise security for enterprise networks
• explain security standards and technologies for network environments
• outline the benefits of formal or structured approaches to network management
• summarise virtual private network (VPN) technologies.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the networking industry, and include access to:

• a site where network installation may be conducted
• router hardware and software
• organisational guidelines
• computers
• local area network (LAN) and wide area network (WAN) systems.

Assessors must satisfy NVR/AQTF assessor requirements.

Performance Evidence

Evidence of the ability to:

- design, configure and support advanced switched network infrastructure
- implement wireless extension solution with multi-layered (layer 3) switches
- prepare infrastructure to support advanced services
- use network tools.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain the benefits of formal or structured approach to network management
- summarise business justifications for having integrated and unified enterprise networks
- outline current wireless regulations, standards and certifications
- clarify emerging viable business and social technologies
- explain external developments or factors that affect switched network design
- summarise maintenance and management tools and practices suitable for complex networks to achieve availability and resilience
- outline network topologies
- explain organisational policies for internetworking
- summarise risk management strategies and practices suitable for a complex switched network environment
- outline security for an enterprise-switched environment
- explain security standards and technologies for switched network environments
- summarise switching and routing technologies for an enterprise-switched environment.
Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the networking industry, and include access to:

- a site where network installation may be conducted
- hardware and software
- organisational guidelines
- computers
- local area network (LAN) and wide area network (WAN) systems, including voice and video (hardware or software).

Assessors must satisfy NVR/AQTF assessor requirements.

Performance Evidence

Evidence of the ability to:
- plan and conduct a wireless local area network (WLAN) site survey
- produce design specifications and layout of wireless network
- configure and test a controller-based WLAN
- test wireless security configurations
- maintain a WLAN.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:
- explain authentication and encryption methods
- summarise configuration, verification and troubleshooting procedures regarding:
  - router-operation
  - routing virtual local area network (VLAN) switching
  - inter-switching communications
- outline configuration of WLAN securities
- clarify current wireless regulations, standards and certifications
- summarise internetwork operating system (IOS) and internet protocol (IP) networking models
- explain radio frequency (RF) and WLAN technology and network design
- outline RF propagation and implementation issues
- explain spread spectrum technologies
- summarise wireless network topologies and elements
- outline wireless networking protocols
• describe WLAN devices, their specification and use
• summarise WLAN radio frequencies characteristics and their measuring techniques.

**Assessment Conditions**

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the networking industry, and include access to:

• a site where network installation may be conducted
• hardware and software
• organisational guidelines
• computers
• stand-alone and lightweight WLAN controllers and access point (AP)
• hardware and software WLAN site survey tools.

Assessors must satisfy NVR/AQTF assessor requirements.

Application

This unit describes the skills and knowledge required to use network tools, equipment, software and protocols to design and integrate voice over wireless local area network (VoWLAN) services into the wireless local area network (WLAN), and to implement into the wireless network quality of service (QoS), multi-protocol label switching (MPLS), and high bandwidth applications.

It applies to individuals with excellent information communications and technology (ICT) skills who are working as wireless help desk technicians, wireless network support specialists and wireless network engineers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 1.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

Evidence of the ability to:

- analyse and specify voice over wireless architecture requirements
- design and implement voice applications over wireless local area network (WLAN)
- implement a quality of service (QoS) for wireless applications
- use network tools to configure and test wireless infrastructure and applications
- plan and scope the wireless network bandwidth.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain the configuration, verification and troubleshoot procedures required to undertake:
  - router operation and routing
  - virtual local area network (VLAN) switching and inter-switching communications
- summarise iDevice operating system (iOS) and internet protocol (IP) networking models
- outline video and high-bandwidth applications and requirements
- explain voice applications and protocols
- clarify voice over wireless local area network (VoWLAN) technologies
- describe the following aspects of wireless networks:
  - current regulations, standards and certifications
  - deployment schemes
  - network security technology
  - network topologies and elements
  - networking protocols
• summarise WLAN devices and their specification and use.

**Assessment Conditions**

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the networking industry, and include access to:

• a site where network installation may be conducted
• hardware and software
• organisational guidelines
• computers
• stand-alone and lightweight WLAN controllers and AP
• hardware and software LAN/WLAN voice technologies.

Assessors must satisfy NVR/AQTF assessor requirements.

Application

This unit describes the skills and knowledge required to use appropriate tools, equipment, software and protocols to design and build an internet protocol (IP) based integrated voice network for small-to-medium enterprises.

It applies to individuals with advanced information and communications technology (ICT) skills who are working as voice over internet protocol (VoIP) network support specialists, VoIP network engineers and VoIP systems installers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

Evidence of the ability to:

- determine requirements and produce a concepts design of a voice over internet protocol (VoIP) network
- produce a design layout
- configure and test voice gateways
- design site numbering plan, dial plans and priorities
- use networking and network management tools
- configure and test real-time protocols, call management protocols and gateway signalling protocol in the network elements
- implement voice systems and applications.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain codecs and their protocols for use
- summarise configuration, verification and troubleshooting procedures to undertake basic router operation and routing switch with VLANs and inter-switching communications
- outline design considerations and deployment schemes
- explain gateway technologies
- summarise internetwork operating system (IOS) and internet protocol (IP) networking models
- outline procedures and techniques for implementing local area network/wide area network (LAN/WAN) topologies
- explain network topologies, architectures and elements
- identify and describe networking standards and protocols
• outline voice applications and protocols
• explain VoIP technologies.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the networking industry, and include access to:

• a site where network installation may be conducted
• hardware and software
• organisational guidelines
• computers
• stand-alone and lightweight wireless local area network (WLAN) controllers and access point (AP)
• hardware and software local area network LAN/WLAN voice technologies.

Assessors must satisfy NVR/AQTF assessor requirements.

Performance Evidence

Evidence of the ability to:

- produce design plan and requirements of call processing network elements
- configure and test voice gateways and local area network (LAN) switches
- evaluate voice call manager server requirements and design voice call systems and applications
- implement voice systems and applications on voice call manager
- manage security of voice network.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- summarise call processing network element technology
- outline codecs and their protocols for use
- explain configuration, verification and troubleshoot procedures to undertake:
  - basic router operation and routing
  - switch with virtual local area network (VLANs) and inter-switching communications
- summarise design considerations and deployment schemes
- explain interoperability of legacy private branch exchange (PBX) to internet protocol (IP) voice communications
- outline internetwork operating system (IOS) and IP networking and network support models
- summarise LAN and wide area network (WAN) implementations
- outline network topologies, architectures and elements
- summarise network, signalling and call management protocols
- outline networking standards and protocols
- summarise security deployment scenarios
- explain voice applications and protocols
- outline voice over internet protocol (VoIP) technologies.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the networking industry, and include access to:

- site where network installation may be conducted
- hardware and software
- organisational guidelines
- computers
- stand-alone and lightweight WLAN controllers and access points (AP)
- hardware and software LAN/WLAN voice technologies.

Assessors must satisfy NVR/AQTF assessor requirements.

</tr>
<tr>
<td></td>
<td>1.2 Plan the isolation of network segments for troubleshooting procedures</td>
</tr>
<tr>
<td></td>
<td>1.3 Plan the testing sequences and scenarios of network</td>
</tr>
</tbody>
</table>
### ELEMENT | PERFORMANCE CRITERIA
--- | ---
infrastructure | 1.4 Select appropriate network testing and monitoring tools, and software application to suit the specific network troubleshooting and monitoring sequence

2. Manage and monitor troubleshooting strategies for complex enterprise networks | 2.1 Manage and monitor strategies for network monitoring structure  
2.2 Produce a routine internetwork operating system (IOS) device maintenance plan to include monitoring of routing protocols and router configurations  
2.3 Isolate sub-optimal internetwork operations at the appropriate open systems interconnection (OSI) model layer  
2.4 Produce a plan for troubleshooting and monitoring security issues related to IOS services for mission critical applications  
2.5 Produce a plan for troubleshooting and monitoring internet protocol version 6 (IPv6) and version 4 (IPv4) interoperability

3. Implement test plans for advanced network solutions | 3.1 Test switch-to-switch connectivity, access ports and loop prevention for the virtual local area network (VLAN) based solution  
3.2 Test private VLANs  
3.3 Test switch virtual interfaces (SVI)  
3.4 Test switch support of advanced services  
3.5 Troubleshoot switch configuration

### Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

<table>
<thead>
<tr>
<th>Skill</th>
<th>Performance Criteria</th>
<th>Description</th>
</tr>

Performance Evidence

Evidence of the ability to:

- plan and monitor internet protocol (IP) networks for performance and reliability
- evaluate, design and implement a troubleshooting structured plan
- use network testing and monitoring tools
- produce a maintenance plan for monitoring routing protocols and configurations
- implement tests of advanced network solutions.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- summarise advanced network solutions
- explain configuration, verification and troubleshoot procedures to undertake:
  - router operation and routing
  - virtual local area networks (VLANs) switching and inter-switching communications
- outline deployment schemes
- explain iDevice operating system (iOS) and IP networking models
- explain IOS services
- explain IP network topologies, architectures and elements
- identify and describe network testing and monitoring tools
- outline networking standards and protocols
- summarise threat mitigation strategies
- outline VLAN technologies.
Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the networking industry, and include access to:

- a site where complex network installation may be conducted
- hardware and software
- organisational guidelines
- computers
- local area network (LAN) and wide area network (WAN) systems, including voice and video hardware and software.

Assessors must satisfy NVR/AQTF assessor requirements.

# Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

<table>
<thead>
<tr>
<th>Skill</th>
<th>Performance Criteria</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Reading</td>
<td>1.3, 1.4, 2.1</td>
<td>• Identifies, analyses and evaluates complex text to determine all technical, regulatory and business requirements</td>
</tr>
<tr>
<td>Writing</td>
<td>1.1, 2.2, 2.3</td>
<td>• Develops a broad range of operational material for a specific audience, using clear and detailed language to convey explicit information, requirements and recommendations</td>
</tr>
<tr>
<td>Oral Communication</td>
<td>1.4</td>
<td>• Initiates and contributes to a range of complex conversations about technical concepts and issues relevant to personnel, responding, clarifying, explaining and expanding on information as required</td>
</tr>
<tr>
<td>Numeracy</td>
<td>1.2, 1.3, 2.4</td>
<td>• Interprets numerical data when testing plans for advanced network solutions, including taking measurements to evaluate performance and interoperability of network</td>
</tr>
<tr>
<td>Navigate the world of work</td>
<td>2.1</td>
<td>• Recognises protocols and policies that must be respected and maintained</td>
</tr>
</tbody>
</table>
| Get the work done             | 1.1, 1.3-1.5, 2.1-2.4, 3.1-3.9 | • Recognises the critical importance of clarifying, focussing and aligning goals and expectations, and may use the process to build ownership of and broad commitment to achieving outcomes  
  • Demonstrates a sophisticated understanding of principles, concepts, language and practices associated with the digital world and uses these to troubleshoot and understand the uses and potential of new technology  
  • Is acutely aware of the importance of understanding, monitoring and controlling access to digitally stored and transmitted information  
  • When dealing with complex issues, may use intuition to identify the general problem area, switching to analytical processes to generate possible solutions, depending on differing operational contingencies, risk situations and environments |

</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 1.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

Evidence of the ability to:

- analyse, document and troubleshoot a given complex network using industry methodologies and resources
- develop monitoring and management plans
- use networking and network fault management tools
- evaluate risk assessments and minimise threats on enterprise networks.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline benefits of a formal or structured approach to network management
- explain disaster recovery strategies
- summarise emerging viable business and social technologies
- outline enterprise network technologies, design plans and policies
- summarise enterprise network topologies, architectures and elements
- outline external developments or factors that affect network design
- explain internet protocol version 4 (IPv4) and internet protocol version 6 (IPv6) addressing configurations
- outline maintenance and fault procedures
- explain maintenance and management tools and practices suitable for complex networks
- outline networking standards and protocols
- summarise risk management strategies and practices suitable for a complex network environment
- clarify routing and routed protocols
• outline routing and switching technologies for an enterprise environment
• summarise security for enterprise networks
• outline security standards and technologies for network environments
• explain service level agreements (SLAs)
• describe the value and process of conducting a skills audit
• explain troubleshooting and threat mitigation strategies.

**Assessment Conditions**

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the networking industry, and include access to:

• a location where the network configuration can be implemented
• routers and switches with appropriate operating systems
• computers
• suitable testing and analysis tools.

Assessors must satisfy NVR/AQTF assessor requirements.

</tbody>
</table>

Application

This unit describes the skills and knowledge required to design, and configure, the desktop virtualisation technologies needed to support an enterprise virtualisation business solution.

It applies to senior networking staff responsible for increasing the sustainability of an enterprise.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

Performance Evidence

Evidence of the ability to:

- design, configure and manage the implementation of the virtualised enterprise desktop environment
- analyse and critically evaluate, the features and functions of the virtualised enterprise desktop environment
- plan, configure and maintain, the application virtualisation software.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- research current government and industry policies, and guidelines, relating to the development of efficient and reliable, information and communications technology (ICT) environments
- research the current technologies and processes designed to produce an efficient and reliable ICT environment
- determine the structure, functions and business organisation of the client
- identify and apply, the available tools and software applications required to manage the virtual desktop environment
- formulate the configuration of software applications required to manage the virtual desktop environment
- formulate the configuration required to integrate virtual machines into the existing network design.
Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry, and include access to:

- a site where industry-specific technologies may be used
- industry-specific technologies currently used in the industry
- documents detailing workplace health and safety (WHS) standards, environmental guidelines and enterprise requirements.

Assessors must satisfy NVR/AQTF assessor requirements.

<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 2.0.</td>
</tr>
</tbody>
</table>

Application

This unit describes the skills and knowledge required to prepare the activity plans and specifications required by field technical staff to deploy a fibre to the x (FTTx) installation for optical access networks.

It applies to individuals who work in a supervisory capacity within a team environment. They are technically skilled and integral to the delivery of a very high speed broadband through the access network for the National Broadband Network (NBN) initiative.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Optical Networks

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>Element</th>
<th>Performance Criteria</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
<tr>
<td>1. Prepare for FTTx planning tasks</td>
<td>1.1 Obtain relevant legislation, codes, regulations and standards for compliance when conducting work 1.2 Scope work by obtaining project plan from appropriate personnel and arrange for site access to comply with security arrangements</td>
</tr>
</tbody>
</table>
1.3 Notify appropriate personnel of identified safety hazards at the worksite
1.4 Obtain tools and safety equipment and material to perform tasks safely and efficiently
1.5 Select and use required protective equipment and make site safe and secure for installation work
1.6 Identify and select plant and machinery for installation work activities

2. Plan FTTx activities and develop specifications

2.1 Follow work health and safety (WHS) and environmental requirements for given work and identify and avoid other services
2.2 Inspect proposed cable route visually according to cable plan and identify barriers to the cable installation
2.3 Modify cable plan, if required, and notify appropriate personnel
2.4 Prepare installation activities for FTTx provisioning according to project plan
2.5 Prepare installation specifications according to safe work practices and manufacturer’s instructions to include optical fibre cable size, distribution area (DA), distribution joint including lead-in multiport serving area (DLMSA), enclosures, location of optical network terminations (ONT), location and type of fibre distribution hub (FDH) and optical splitter provisioning
2.6 Verify cable length from customer access network fibre centre to end-user ONT is within 20 km operating limit
2.7 Consult with appropriate personnel to confirm project scope, installation requirements and installation specifications according to project plan

3. Complete documentation and obtain sign-off

3.1 Complete and present updated planning activities documentation to authorised personnel
3.2 Complete and provide updated specification documentation to vendors for supply of material and resources
3.3 Submit documentation to appropriate person for approval and sign-off

Foundation Skills

Assessment Requirements for ICTOPN403 Prepare activity plans and specifications for a fibre to the x installation

Modification History

<table>
<thead>
<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 2.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

Evidence of ability to:
- determine the scope of the installation
- visually inspect proposed cable route
- prepare installation activities for fibre to x (FTTx) provisioning
- prepare and document FTTx designs and specifications and submit for approvals
- comply with all related work health and safety (WHS) requirements and work practices.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:
- outline properties of passive optical devices, including splitters and couplers
- identify FTTx installation equipment, including tools and safety equipment
- explain FTTx specifications
- outline legislative privacy, safety and environmental requirements including:
  - WHS requirements relating to handling of optical fibre and using laser optical sources
  - other personal safety issues
  - plant and equipment safety to be used in installation plans
  - discussion of manufacturer’s requirements for safe operation of equipment
- summarise operation of optical transmitters and receivers
- identify organisational policy and procedures relevant to this work
- discuss propagation of light in optical communication systems
- summarise the role of optical transmitters and receivers in optical communication systems
- explain the concept of wavelength division multiplexing (WDM)
discuss the importance of a knowledge of site engineering
- describe typical issues and challenges in preparing an activity plan for a site
- demonstrate a knowledge of the workplace and industry environment and their relationship to this work.

**Assessment Conditions**

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the Telecommunications Optical Networks field of work and include access to:

- vendor product information and installation guides
- relevant regulatory and equipment documentation impacting installation activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

Evidence of the ability to:

- plan and prepare for work activities
- coordinate and undertake work activities, applying all related work health and safety (WHS) requirements and work practices
- complete all documents and reports for work activities according to organisation procedures
- demonstrate alignment with job request and consideration of client needs.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify appropriate tools, plant, equipment and materials required to do the work
- describe enterprise permit procedures and recording procedures
- identify and describe WHS requirements for work activities
- identify relevant engineering and design practices and procedures
- identify relevant statutory requirements
- explain the team communication process and goals
- list personal time management techniques
- outline work planning and organisation theory.
**Assessment Conditions**

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – project management field of work and include access to:

- sites on which work may be conducted
- equipment currently used in industry
- relevant regulatory and organisational procedures and equipment documentation that impact on the work undertaken.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Navigate the world of work

1.1, 1.6

- Recognises and follows explicit and implicit protocols and meets expectations associated with own role
- Takes personal responsibility for adherence to legal and regulatory responsibilities relevant to own work context with specific reference to workplace safety

Get the work done

1.1, 1.2, 1.3, 1.5, 1.6, 1.7, 2.1, 2.2, 2.3, 3.1, 3.2

- Applies formal processes when planning more complex tasks, producing plans with logically sequenced steps, and reflecting some awareness of time and resources constraints
- Implements standard decisions for routine tasks
- Initiates standard procedures when responding to familiar problems within the immediate context
- Recognises general design and operating principles of digital tools and uses this information when planning the installation of new technologies

Assessment Requirements for ICTPMG402 Schedule installation of customer premises equipment

Modification History

<table>
<thead>
<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 2.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

Evidence of the ability to:

- access relevant information and plan an installation project
- schedule work for the installation team according to the plan
- organise supply of materials in a timely manner
- arrange for connection of network services
- monitor and apply contingencies if required.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- discuss the importance and requirements of Australian Communications and Media Authority (ACMA) licensing
- outline the use of computers and application of software programs used in the telecommunications industry
- outline industry cabling practices
- identify work health and safety (WHS) procedures
- outline the stages of project management including:
  - phases of project management
  - roles and responsibilities within project management
  - project reporting
- identify telecommunications components and assemblies
- identify telecommunications customer premises equipment (CPE).
Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – project management field of work and include access to:

- a work site where scheduling may be conducted
- relevant hardware and software.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTPMG403 Manage the delivery of network infrastructure

Modification History

<table>
<thead>
<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 2.0.</td>
</tr>
</tbody>
</table>

Application

This unit describes the skills and knowledge required to manage the delivery of network infrastructure, including scoping the project, developing a project brief, managing the project and directing the activities of installation staff, building workers, contractors, manufacturers and vendors.

It applies to individuals who work in appropriate project management roles associated with access and core networks, including switching and transmission via optical fibre, radio, microwave and satellite.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – project management

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>Elements</th>
<th>Performance Criteria</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
<tr>

<td>1.1 Determine requirements of project from client and approved network plan</td>
</tr>
<tr>
<td></td>
<td>1.2 Assess current access network conditions to determine existing</td>
</tr>
</tbody>
</table>
network capacity and capability

1.3 Analyse site survey data and geographical information where necessary to assess suitability of site to design requirements

1.4 Assess risk of barriers to plan realisation to ensure delivery of network infrastructure project is achievable

1.5 Analyse impact on planning of relevant legislation and associated operational codes

1.6 Produce scoping document with consideration to new technology or technology features required in project

2. Develop project brief

2.1 Develop planning options considering current and new technology, facilities, features, and present and future needs

2.2 Conduct cost-benefit studies to guide decision making processes according to sound business practice

2.3 Discuss project brief with client, as required, and obtain approval of planning options

2.4 Produce planning specifications relating to location, route, area, product and/or platform

2.5 Estimate timing, costing and operating budget according to enterprise policy

2.6 Prepare final project brief and present to operational staff for implementation

3. Manage project

3.1 Define roles and responsibilities of stakeholders within terms of project

3.2 Establish reporting and communications line to ensure project is effectively managed

3.3 Review and continually monitor progress of project against deliverables and timelines, and invoke contingencies if required

3.4 Complete project documents in line with enterprise standards and guidelines

---

**Foundation Skills**

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

</tbody>
</table>

Performance Evidence

Evidence of the ability to:

- determine scope of network infrastructure requirements
- accurately analyse and document considerations in project specifications and the impact of legislative and environmental conditions on the project plan
- prepare a project brief outlining specifications, timeframes, costing and operating budget
- manage the delivery of network infrastructure to completion.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline Australian Communications and Media Authority (ACMA) licensing requirements
- explain common client telecommunications applications and related equipment
- identify correct computer operation
- describe the workplace and industry environment
- outline industry cabling practices
- explain leasing versus purchase options
- identify legislative and environmental impacts, including options for green information and communications technology (ICT) installations
- outline network and transmission equipment, network topologies, interfaces and interconnect solutions
- describe work health and safety (WHS) procedures
- identify performance parameters and typical faults in equipment and related connection and transmission media, and various test equipment types
- explain the process of project management
- identify telecommunications components and assemblies
- identify warranty information and contractor work guarantees.

**Assessment Conditions**

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – project management field of work and include access to:

- sites on which projects may be conducted
- relevant databases, legislative requirements and other project related documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

Evidence of the ability to:

- develop a project brief for a telecommunications project
- analyse and document considerations in project specifications
- apply legislative and environmental conditions to project brief development
- appropriately assess tenders
- monitor contract work to completion.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the key aspects of common client telecommunications applications and related equipment
- discuss the telecommunications workplace and industry environment, and how it affects project design
- describe leasing versus purchase options
- identify legislative and environmental impacts, including options for green information and communications technology (ICT) installations
- identify and discuss the key features of network and transmission equipment
- discuss a variety of network topologies, interface and interconnect solutions
- describe the performance parameters and typical faults in equipment and related connection and transmission media, and various test equipment types
- identify the key features of warranty information and contractor work guarantees.
Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – project management field of work and include access to:

- sites on which projects may be conducted
- relevant databases, legislative requirements and other site and project related documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

Evidence of the ability to:

- apply programming language syntax, sequence, selection and iteration control structures to the development of an application, or game
- produce an application, or game, that is designed and built from the program specifications
- confirm that the created application, or game, meets the original program specifications, and obtain user sign-off for the completed program.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify and describe common games programming languages, their syntax, and command structure
- describe the development of small-sized applications or games.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the programming and software development industry, and include access to:

- the requirement documents
- the site documents
- software development tools currently used in industry, such as a compiler
- an independent development environment (IDE).
Assessors must satisfy NVR/AQTF assessor requirements.

<td>2.1 Develop application according to application design and organisational code conventions</td>
</tr>
<tr>
<td></td>
<td>2.2 Document application according to organisational documentation conventions</td>
</tr>
</tbody>
</table>
3. Test the application

3.1 Develop tests to determine that application logic and syntax satisfies user requirements and application specifications, and modify application to meet user requirements and application specifications

3.2 Document tests according to organisational documentation conventions

4. Hand over the application to the user

4.1 Review application against user requirements to ensure user requirements are satisfied

4.2 Present application to user and obtain user acceptance

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

<table>
<thead>
<tr>
<th>Skill</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Reading</td>
<td>• Evaluates, and integrates, information and ideas to construct meaning and selects, and applies reading strategies in relation to design specifications, coding standards, and coding-language documentation</td>
</tr>
<tr>
<td>Writing</td>
<td>• Communicates relationships between ideas and information, in a style appropriate to the audience and purpose, and selects the vocabulary, grammatical structures and conventions appropriate to the text, in relation to coding, recording outcomes, and documenting activities</td>
</tr>
</tbody>
</table>
| Numeracy                     | • Selects from, and flexibly applies, mathematical and problem-solving strategies and techniques, in a programming context
  • Uses formal written mathematical language and representation, in the context of programming |
| Navigate the world of work   | • Recognises and follows, explicit and implicit standard and meets expectations associated with own role when developing code that is compliant with standards and guidelines |
| Get the work done            | • Uses a formal decision-making process, identifying and evaluating several choices against a limited set of criteria, when selecting language data types, operators and expressions
  • Evaluates the effectiveness of decisions, in terms of how well they meet the stated design specifications
  • Uses analytical processes to decide on a course of action when debugging
  • Utilises features within applications in order to develop software programs
  • Recognises, and uses language and symbols, when applying the coding syntax |
• Actively identifies systems, devices and applications with the potential to meet current and future needs regarding programming

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements and performance criteria of this unit; including evidence of the ability to:

- Select and use three language data types, three operators and three expressions
- Use correct language syntax for one sequence, one selection and two iteration constructs
- Use a modular approach to implement the logic for one object operation
- Implement a class that uses arrays of primitive data types twice.
- Read from and write to one text file
- Implement two classes that each contain four instance variables
- Implement one class that contains two options for object construction
- Implement one class that uses user-defined object aggregation
- Implement polymorphism once for code extensibility
- Use one debugging tool
- Apply code and documentation conventions that specify at least 3 aspects, according to organisational requirements
- Perform and document two unit test cases

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements and performance criteria of this unit. This includes:

- Processes and techniques related to object-oriented programming, including the concepts and language
- Syntax language rules, data types structures
- Primitive instance variables
- Class variables
- Small-size application development processes
- Polymorphism and inheritance
- Debugging and testing approaches and techniques
- Constructors
- Object aggregation
- Sequence, selection and iteration constructs
- Organisational documentation

Assessment Conditions

Skills must be demonstrated in a workplace or simulated environment where conditions are typical of those in an ICT working environment or workplace. This includes:

- Integrated development environment
- Applications relevant to software development
- Organisational code and documentation conventions
- User requirements
- Individual user to consult

Assessors of this unit must satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to carry out application development using current methods.

It applies to ICT workers and individuals who are programmers in a variety of job roles.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Programming and software development

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
<tr>
<td>1. Determine application development requirements</td>
<td>1.1 Review detailed organisational requirements and application requirements to select tool sets 1.2 Develop prioritised plan using series of recursive and iterative stages of build to satisfy organisational and application requirements 1.3 Identify and formally allocate responsibilities for features to developers to implement prioritised plan 1.4 Plan and document endorsement of reviews, administration</td>
</tr>
</tbody>
</table>
2. Determine the work metrics

2.1 Set development goals in consultation with user
2.2 Seek and secure agreement on, and adherence to, single common notation with user
2.3 Determine tools, features and techniques for development environment
2.4 Plan, develop, document and facilitate version and change-control methods
2.5 Plan for and facilitate training and exposure for user via chosen development method

3. Implement the administration method

3.1 Determine and reach agreement on specifications with user
3.2 Confirm dates for established milestones with user and secure written agreement
3.3 Administer and maintain time-recording and management methodologies

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

<table>
<thead>
<tr>
<th>Skill</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Reading</td>
<td>• Interprets, and critically analyses, complex texts and applies the appropriate strategies to construct meaning from complex technical documents</td>
</tr>
<tr>
<td>Writing</td>
<td>• Displays a knowledge of structure and layout, employing a broad vocabulary, grammatical structure and the conventions appropriate to text, when developing documentation</td>
</tr>
</tbody>
</table>
| Oral communication     | • Demonstrates flexibility in spoken texts by choosing the appropriate structures and strategies  
                          • Applies appropriate strategies to extract the main ideas from oral texts when liaising with stakeholders, facilitating training and informing parties on the administration method |
| Interact with others   | • Recognises and applies, the protocols governing what to communicate, with whom, and how, when liaising with stakeholders, facilitating training and informing parties on administration methods  
                          • Recognises the importance of joint ownership of the process, and outcomes, and tries to identify common ground, shared goals, and agreement on the best course of action |
Get the work done

- Sequences and schedules complex activities, monitors implementation, and manages relevant communication, when implementing a prioritised plan and database, scheduling timelines, allocating responsibilities, and establishing goals and methods.
- Makes a range of critical and non-critical decisions in relatively complex situations, taking a range of constraints into account.
- Uses analytical processes to decide on a course of action, establishing the criteria for deciding between options.
- Demonstrates a sophisticated understanding of principles, concepts, language and practices associated with the digital world, and uses these to troubleshoot and understand, the uses and potential of new technology.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements and performance criteria of this unit; including evidence of the ability to:

- Prepare once for application development using current methods, including the ability to:
  - determine the organisational requirements including selecting and using a tool set, implementing and incorporating a physical database, and identifying the schedule of modules
  - determine the work metrics including development goals, features and techniques most appropriate to the development environment
  - facilitate, plan, develop and document the version and change-control methods
  - facilitate training and exposure for users via chosen method
  - determine and secure agreement as to specifications and milestones
  - inform the production-system parties and secure written acknowledgment
  - administer and maintain time-recording and management

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements and performance criteria of this unit. This includes:

- Commonly used and industry-accepted prototyping tools
- Programming languages commonly used for application development
- Quality assurance practices required for software development
- Iterative software development methodologies
- Training development and facilitation approaches
Assessment Conditions

Skills must be demonstrated in a workplace or simulated environment where conditions are typical of those in an ICT working environment or ICT workplace. This includes:

- Integrated development environment
- Physical database
- Detailed user requirements
- Prototyping software
- Individuals users including to enable training facilitation
- Application requirements document, including the model and scope

Assessors of this unit must satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements and performance criteria of this unit; including evidence of the ability to:

- Plan, implement, test, and handover one application, using two object-oriented languages, including the ability to:
  - implement nested classes
  - design and implement dynamic data structures including a doubly linked list and a binary tree
  - design and implement a data structure utilising a hash function
  - compare three sorting algorithms
  - select and implement a sorting algorithm and a comparator
  - compare three search algorithms
  - select and implement a search algorithm
  - implement two inter-process communication mechanisms
  - select and implement a search algorithm
  - implement a graphical user interface with:
    - drag and drop
    - help files
    - 2D graphics
  - utilise an architectural framework and third party library
  - implement a client-server application including data transfers
  - create tests and debug an application
  - document code
  - utilise a version control system for code and documentation management
**Knowledge Evidence**

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements and performance criteria of this unit. This includes:

- Architectural framework for web-enabled application development
- Inter-process communication mechanisms
- Development methodologies for large-size applications
- Testing techniques as applied to distributed application development
- Design patterns
- Graphical user interface design principles
- Client-server model
- Dynamic data structures and associated space and time complexities
- Hash functions and data structures using hash functions and associated space and time complexities
- Sorting algorithms and associated time complexities
- Search algorithms and associated time complexities
- Programming language features and syntax

**Assessment Conditions**

Skills must be demonstrated in a workplace or simulated environment where conditions are typical of those in an ICT working environment or ICT workplace. This includes:

- Database management system (DBMS)
- Networked computers
- Integrated development environment
- Debugging tools
- System specifications including problem descriptions
- Organisational code conventions
- Organisational documentation conventions
- Individual user
- Access to third party libraries and related documentation
- Access to architectural frameworks and related documentation
- Access to version control system

Assessors of this unit must satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards.

</tbody>
</table>

Application

This unit describes the skills and knowledge required to assemble, connect, align and test equipment according to plans, specifications and site specific requirements.

It applies to individuals who work on single and multiple dwellings, commercial buildings, telecommunications structures and at ground level to enable signals from geostationary communications satellites. Installations might be new or existing, stand alone or be a part of a site with multiple antennas.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the ICT Implementation Guide Companion Volume or the relevant regulator for details of licensing, legislative or certification requirements.

Unit Sector

Telecommunications – radio frequency networks

Elements and Performance Criteria

</tbody>
</table>
ICRFN201 Install a satellite antenna

1.3 Contact client to arrange access to site and notify about possible outage
1.4 Organise tools and equipment and ensure they are in safe working order and adjusted to manufacturer’s specifications
1.5 Obtain details of satellite to be acquired and precise details of satellite antenna location
1.6 Determine azimuth and elevation for satellite receiving antenna
1.7 Determine polarisation angle of satellite receiving antenna feedhorn
1.8 Determine suitable position to mount antenna with agreement from client

2. Assemble and mount satellite antenna and cables
2.1 Assemble satellite antenna on site according to plans, specifications and enterprise guidelines using safe industry practices
2.2 Connect coaxial cable to antenna and install lightning protection devices
2.3 Mount satellite antenna on to installed mounting arrangements and set initial antenna azimuth, elevation and polarisation

3. Test and align antenna system
3.1 Connect installed antenna system to satellite receiver or test equipment and make final adjustments to azimuth, elevation and polarisation to optimise signal level and quality
3.2 Conduct performance tests according to manufacturer’s specifications and enterprise guidelines
3.3 Interpret test results, compare with manufacturer’s design specifications and make adjustments

4. Complete administrative duties
4.1 Record test results and complete appropriate records
4.2 Secure and clean up site to original condition in environmentally safe manner
4.3 Notify client of work completion and obtain sign off

Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

<table>
<thead>
<tr>

Modification History

<table>
<thead>
<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 2.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

Evidence of the ability to:

- prepare the site and obtain resources in preparation for installation
- determine satellite type and orientation
- assemble, install, align and test a satellite antenna according to plans and specifications, and site specific safety requirements
- conduct performance tests according to manufacturer's specifications and enterprise guidelines.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline the following features of a satellite antenna:
  - directivity
  - operation of parabolic reflector and feedhorn
  - optimum placement
  - pattern
  - polarisation
  - discuss bit error ratio (BER)
  - summarise coaxial cable types and properties
  - discuss electromagnetic waves with reference to:
    - absorption by trees and buildings
    - effect of weather on absorption
    - awareness of exposure to electromagnetic radiation (EMR)
• outline legislation, codes of practice and other formal agreements that directly impact on antenna installation
• explain modulation:
  • bandwidth
  • individual spectrum shape of digital satellite television signals
• discuss modulation error ratio (MER)
• outline radio frequency (RF) spectrum terminology related to bands used for satellite broadcasting (C, S, L, Ku, Ka bands)
• outline satellite antenna product knowledge
• summarise signal level expressed in dBuV units
• explain specific work health and safety (WHS) requirements that impact on the installation of satellite antenna equipment.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications – radio frequency networks field of work and include access to:

• a suitable site for satellite antenna installation
• a range of antennas and cables currently used in industry
• a range of general tools and test equipment required for satellite antenna installation and testing.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

Evidence of the ability to:
- organise the site and obtain relevant resources in preparation for installation
- assemble, install, align and test a terrestrial antenna according to plans and specifications, and site specific safety requirements
- conduct performance tests according to manufacturer's specifications and enterprise guidelines.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline the following features of an antenna:
  - directivity
  - front to back ratio
  - optimum placement
  - pattern
  - polarisation
  - discuss bit error ratio (BER)
  - summarise coaxial cable types and properties
  - discuss electromagnetic waves including:
    - absorption by trees and buildings
    - awareness of exposure to electromagnetic radiation (EMR)
    - reflection
- outline legislation, codes of practice and other formal agreements that directly impact on antenna installation
- explain modulation including:
  - bandwidth
  - individual spectrum shape of analog and digital television signals and digital audio broadcasting plus (DAB+) digital radio signals
- discuss modulation error ratio (MER)
- outline radio frequency (RF) spectrum including:
  - Australian DAB+ digital radio channel frequencies
  - Australian television ultra high frequency (UHF) and very high frequency (VHF) channel plan (digital and analog)
  - terminology related to bands used for broadcasting (Bands I, II, III, IV and V)
- explain signal level expressed in dBuV units
- discuss specific work health and safety (WHS) requirements that impact on the installation of terrestrial antenna equipment
- summarise television antenna product knowledge.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications – radio frequency networks field of work and include access to:

- a suitable site for satellite antenna installation
- a range of antennas and cables currently used in industry
- a range of general and test equipment required for satellite antenna installation and testing.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 2.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

Evidence of the ability to:

- determine installation requirements and ensure site inspection activities are conducted prior to installation
- conduct installation of a communications antenna according to plans and specifications
- assess hazard levels at a radio frequency (RF) site and apply knowledge of safety precautions for self, fellow workers and the public
- mount an antenna, connect a transmission line and physically align an antenna
- use appropriate test equipment to perform a return loss sweep measurement or a measurement of forward and reflected power on at least two different antenna systems.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline current industry practice for antenna installation including:
  - earthing
  - lightning protection
- describe the procedures and equipment required for:
  - antenna sweep testing to measure return loss
  - measurement of distance to fault
  - measurement of feedline insertion loss
  - measurement of forward and reflected RF power
- summarise features of instrument and equipment test methods and performance requirements
• outline legislation, codes of practice and other formal agreements that directly impact on operation and testing of radio communications antennas and equipment
• identify the general components and installation of antennas and feedlines
• discuss the application of RF and electromagnetic radiation (EMR) standards and specific work health and safety (WHS) requirements
• discuss the impact on the use and testing of radio communications instruments and equipment
• identify the types of antennas that can withstand extreme environments
• summarise typical issues and challenges that occur in telecommunications antenna installations.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications – radio frequency networks field of work and include access to:

• a site for antenna installation
• a range of antennas and feedlines currently used in industry
• a range of general tools and test equipment required for antenna installation and testing.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to fit radio transceivers and cellular mobile phone handsets with powered docking cradles and to install peripheral components such as external antenna, microphone, loudspeaker, mobile data terminals and global positioning systems (GPS) in domestic, commercial or industrial motor vehicles.

It applies to individuals working as installers and technicians who liaise with clients to determine all technical requirements and interpret all regulatory and legislative requirements appropriately.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – radio frequency networks

</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 2.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

Evidence of the ability to:

- obtain installation parameters and compliance requirements in preparation for installation
- install cable loom, wiring mobile and peripheral equipment
- test the equipment to verify correct installation and operation.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline customer service principles, particularly dealing with clients face to face
- discuss electrical fundamentals
- summarise electromagnetic radiation (EMR)
- discuss enterprise or service-specific knowledge of products and services supplied
- outline objectives and methods of training for product use for client education
- summarise work health and safety (WHS) principles and enterprise-specific job safety analysis (JSA) requirements
- provide an overview of mobile radio and cellular radio product range and connection methods
- summarise pre-installation enterprise-specific requirements
- explain the following aspects of radio frequency (RF):
  - principles
  - safety
  - theory
- explain return path technology
- discuss telephony principles to support return path awareness
- summarise test set ups for final testing
- outline vehicle electrical, electronics and computer-managed systems.

**Assessment Conditions**

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications – radio frequency networks field of work and include access to:

- vehicles and sites at which installation may be conducted
- testing equipment currently used in industry
- relevant regulatory and equipment documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

Evidence of the ability to:

- ensure that the site access, resources and installation requirements are confirmed prior to installation
- install and test Worldwide Interoperability for Microwave Access (WiMAX) customer premises equipment (CPE) outdoor units
- install indoor unit and connect to customer network
- reinstate site, document and complete installation reports.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the wireless standard ‘WiMAX’ including:
  - general characteristics of WiMAX networks e.g. mobile broadband and internet access
  - applications of WiMAX technology
  - terminology associated with WiMAX technologies
  - range and function of gateway devices
  - protocols IEEE 802.16 and IEEE 802.11
- identify and discuss the relevant legislation, codes, regulations and standards, work health and safety (WHS) and environmental requirements
- explain the impact of location on microwave propagation and losses.
Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications – radio frequency networks field of work and include access to:

- sites on which WiMAX installations can be conducted
- tools and equipment required for installation
- relevant regulatory and equipment documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

<thead>
<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 2.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

Evidence of the ability to:

- obtain read and interpret radio communications instrument operating documentation
- prepare, operate and maintain radio communications instruments and field equipment appropriate to a radio communications environment
- comply with site risk control, work health and safety (WHS), environmental, quality and communication requirements.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- summarise the features and operating requirements of calibrated equipment and test equipment including:
  - digital radio communications measuring equipment
  - radio frequency (RF) termination
  - spectrum analyser
  - power meter
  - modulation analyser

- outline features of instrument and equipment test methods and performance requirements
- explain legislation, codes of practice and other formal agreements that directly impact on operation and testing of radio communications instruments and equipment
- outline manufacturer’s requirements for operation and testing of radio communications equipment and calibrated equipment
- summarise measurements according to test specifications
- list radio communications instruments and equipment
- list and describe the common WHS requirements that impact on the use and testing of radio communications instruments and equipment
- discuss typical issues and challenges that occur with radio communications instruments and field equipment.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications – radio frequency networks field of work and include access to:

- sites on which instruments and field equipment can be operated
- field measurement equipment currently used in industry
- relevant instrument and equipment manuals and other procedural documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 2.0.</td>
</tr>
</tbody>
</table>

Application

This unit describes the skills and knowledge required to interpret industry practices and theories, and select appropriate antenna equipment for small projects or parts of larger projects to a job specification.

It applies to individuals working alone or responsible for a technical team within regulatory authorities or other private and public organisations where they combine technical radio communications skills with broader organisational and administrative skills.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – radio frequency networks

Elements and Performance Criteria

<thead>
<tr>
<th>Elements</th>
<th>Performance Criteria</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
</tbody>
</table>

1. Prepare to select antenna system

1.1 Establish extent of project from design brief or specification within team environment

1.2 Obtain and review plans and drawings of existing or proposed installation site
1.3 Determine whether antenna system hardware requires secure hut or shelter
1.4 Determine antenna requirements and antenna feedline requirements from design brief or specifications, and research available commercial products
1.5 Determine earthing components to meet regulatory and earthing requirements of antenna system
1.6 Prepare antenna feedline route to comply with job specifications and regulatory requirements
1.7 Identify installation options, and assess against performance requirements and client requirements

2. Select antenna system
2.1 Evaluate potential antenna system solutions that satisfy required performance, budgetary and regulatory requirements, and are suitable for installation in specified environment
2.2 Make recommendations and select optimum antenna system

3. Document antenna system selection
3.1 Document calculations, final specifications and reasons for selection of antenna system
3.2 Prepare final report, including documentation and drawings of selected antenna system, and distribute to appropriate persons in accordance with enterprise policies and procedures

**Foundation Skills**

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

Performance Evidence

Evidence of the ability to:
- identify the antenna installation parameters
- select an antenna system required to meet the parameters
- determine the feedline installation from design and specifications
- document the recommendations for the antenna system selection
- comply with specifications and regulatory requirements.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:
- describe the principles of antenna wave propagation and the impact on antenna array design
- describe the principles of transmission line design and operation, and the impact on antenna design and installation including:
  - allowable loss in dB
  - characteristic impedance
  - mechanical characteristics
  - method of securing
  - radio frequency (RF) connector type
  - weatherproofing.
- describe the process for selecting an antenna design based on the application and performance requirements
- identify and describe a range of antenna systems
- summarise specific issues related to antenna installations and the creation of particular radiation patterns
- identify and describe the regulatory and industry standards relevant to antenna installations.

**Assessment Conditions**

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications – radio frequency networks field of work and include access to:

- antenna resources such as manufacturers’ data sheets, specifications and catalogues
- transmission line resources such as manufacturers’ data sheets, specifications and catalogues.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

</tbody>
</table>

Performance Evidence

Evidence of the ability to:
- prepare the cellular network alarm system
- produce an alarm list and use this to locate faults
- test cellular network parameters and performance
- measure output power received around a cell
- run diagnostic tests on sub-elements and subsystems
- locate and repair faulty sub-elements and subsystems.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:
- explain anti-static protection and its importance and potential effect on cellular network equipment
- summarise cellular antenna installation procedures
- outline electrical concepts and measurements required for cellular network repairs
- explain electromagnetic radiation (EMR) and mitigation
- list the common network components and describe their basic functions
- provide an overview of:
  - the progression of generations of cellular networks
  - features and operating requirements of test equipment
- outline procedures for repairs and swap activities
- summarise test operation of cellular network equipment
- list and describe the tests required for network components
• describe the importance of voltage levels and polarity
• describe the precautions and actions required to minimise, control or eliminate hazards related to cellular network equipment installations.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications – radio frequency networks field of work and include access to:

• a site for mobile phone network tests and measurements
• performance testing software
• relevant legislation and documentation to test and repair network equipment.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 2.0.</td>
</tr>
</tbody>
</table>

Application

This unit describes the skills and knowledge required to check radio communications signals for interference management, investigation, licence conditions intelligence and frequency occupancy purposes with discretion to determine appropriate action according to relevant legislation and regulations.

It applies to individuals working as field officers from regulatory authorities or other private and public organisations. They combine technical skills with broader organisational and administrative skills to monitor and action non-compliance of radio communications.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the ICT Implementation Guide Companion Volume or the relevant regulator for details of licensing, legislative or certification requirements.

Unit Sector

Telecommunications – radio frequency networks

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>Elements</th>
<th>Performance Criteria</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
<tr>
<td>1. Prepare for radio communications</td>
<td>1.1 Prepare for given work according to relevant legislation, codes, regulations and standards, including work health and safety (WHS) issues and possible hazards</td>
</tr>
</tbody>
</table>
### 1. Identify and Confirms Monitoring Signals

1.2 Identify specific triggers that lead to need for monitoring activities
1.3 Determine monitoring coordinates as result of client complaint
1.4 Determine extent and nature of communications problem through desktop research and relevant information
1.5 Enter necessary details into appropriate work management system

### 2. Plan and Organise Monitoring Activities

2.1 Determine monitoring activities and responsibilities according to organisational requirements
2.2 Determine procedures, timeframes, resources and equipment requirements for self and others according to organisational and task requirements
2.3 Obtain resources and equipment and prepare according to organisational and task requirements
2.4 Identify communication strategies to make clients aware of their obligations under relevant legislation, codes, regulations and standards according to organisational policies and procedures
2.5 Update and review procedural and information guides as required
2.6 Implement risk management strategies as required according to set procedures and timelines

### 3. Undertake Monitoring

3.1 Carry out monitoring activities according to organisational and legislative requirements, including WHS
3.2 Use and maintain resources and equipment according to organisational and task requirements
3.3 Identify and confirm communications and/or interference problems
3.4 Locate position and source of communications and/or interference problems
3.5 Identify organisation responsible for communications and/or interference problems
3.6 Undertake compliance analysis of unlicensed, unauthorised and non-standard equipment if appropriate
3.7 Provide advice to operational and technical subordinate officers according to organisational policies and procedures as required

### 4. Act on Non-compliance

4.1 Provide information to client and take action as result of failure to achieve compliance according to organisational guidelines and legislative requirements based on seriousness of possible breach
4.2 Identify contraventions of compliance requirements and report recommended action according to organisational policies and procedures
4.3 Refer serious or complex situations for advice or resolution according to organisational policies and procedures
4.4 Use relevant collection methods to gain information and evidence about elements of each offence to be prosecuted and provide according to legislation, procedures and rules of evidence
4.5 Conduct and fulfil court attendance requirements in compliance with organisational guidelines as required
4.6 Ensure case is finalised according to court outcomes and organisational guidelines

5. Provide reports and information
5.1 Interpret requirements of relevant legislation and provide information and advice on technical and operational matters
5.2 Advise clients affected by outcomes within limits of privacy legislation
5.3 Maintain records and prepare and provide reports according to organisational requirements
5.4 Update any compliance management systems with relevant findings and outcomes

Performance Evidence

Evidence of the ability to:

- comply with site risk control, work health and safety (WHS), environmental, quality and communication requirements
- apply knowledge of appropriate procedures and techniques for conducting radio communications signals monitoring
- perform efficient and effective preparation and monitoring appropriate to a communications environment site
- calibrate, maintain and commission instruments and field equipment
- monitor communications under general direction in a range of different contexts
- respond effectively to different challenges and operational requirements for monitoring, including coping with difficulties, irregularities and breakdowns in routine.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify and summarise the legislation, codes of practice and other formal agreements that directly impact on monitoring of radio communications signals including:
  - specifics of what constitutes an offence
  - responses for non-compliance
  - environmental requirements
  - privacy issues
- outline specific WHS requirements that impact on monitoring in terms of safety of self and public safety including:
  - radio frequency (RF) personal protective equipment
• electromagnetic radiation (EMR) at RF transmission sites
• building site induction requirements
• environmental conditions
• explain specific monitoring procedures for radio communications and relevant organisational policies and procedures
• summarise characteristics of different environments and workplaces where monitoring takes place
• explain radio communications systems used in the relevant work context
• outline specific issues related to antenna performance including:
  • directivity
  • gain
  • height
• summarise the effects of cable attenuation and impedance mismatch
• outline the effects of ionosphere including:
  • high frequency (HF) propagation
  • warning, fadeout and solar flares
  • ionospheric prediction service (IPS)
• explain modulation methods, AM, FM and digital formats
• explain field strength surveys and EMR measurements
• outline the propagation properties of the terrain
• describe the legal process for prosecuting a complaint and undertaking attendance at court
• describe the process and use of direction finding equipment for HF, very high frequency (VHF), ultra high frequency (UHF) and microwave technologies.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications – radio frequency networks field of work and include access to:

• sites on which monitoring may be conducted
• monitoring and testing equipment currently used in industry
• relevant regulatory and equipment documentation that impacts on monitoring activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# ICTRFN405 Install radio communications base station equipment

## Modification History

<table>
<thead>
<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 2.0.</td>
</tr>
</tbody>
</table>

## Application

This unit describes the skill and knowledge required to operate transmitters, receivers, feedline, multicoupling, data and voice equipment to connect a station in the very high frequency (VHF), ultra high frequency (UHF) or microwave bands.

It applies to individuals working as field officers from private or public organisations. They combine technical radio communications skills with organisational and administrative skills in a range of commercial and community contexts.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Unit Sector

Telecommunications – radio frequency networks

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>Elements</th>
<th>Performance Criteria</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes</td>
<td></td>
</tr>
<tr>
<td>1. Prepare to install radio communications base station equipment</td>
<td></td>
</tr>
</tbody>
</table>

**Performance criteria describe the performance needed to demonstrate achievement of the element.**

1.1 Assess available installation options against client requirements and relevant legislation, codes, regulations and standards
1.2 Arrange access to site according to required procedure
1.3 Confirm equipment locations
| 1.4 Confirm base station equipment listings and manufacturer’s and enterprise documents against installation brief |
| 1.5 Review installation briefs in consultation with designers or manufacturers |
| 1.6 Adjust tools and equipment to manufacturer’s specification |

| 2. Install equipment and terminate voice and data cables, power cables and radio frequency (RF) cables |
| 2.1 Observe anti-static precautions when handling circuit cards and conduct all work in manner that is safe to self, fellow workers and the public |
| 2.2 Install racks, frames and shelves as required for data and voice frequency (VF) interface equipment, transmitter and receiver |
| 2.3 Position equipment and install according to manufacturer’s specifications and design detail |
| 2.4 Label equipment, distribution frames and blocks according to enterprise policy |
| 2.5 Strip cables and terminate conductors according to manufacturer’s specifications |
| 2.6 Clean optical fibre connectors using appropriate cleaning techniques |
| 2.7 Connect network termination unit (NTU) cables to data and VF interface unit via distribution frame |
| 2.8 Connect data and VF cables to radio equipment |
| 2.9 Connect digital and analog alarm inputs and outputs to supervisory, control and data acquisition (SCADA) controller |
| 2.10 Connect power cables to rectifier, battery rack, circuit breakers and equipment according to manufacturer’s and enterprise documents |
| 2.11 Use computer or handheld device to program internal software in data and VF interface equipment, and transmitter and receiver |
| 2.12 Interconnect multicoupling equipment to antenna feedline and transmitter and receiver units |
| 2.13 Mount lightning protection equipment and earth wire according to specification |

| 3. Connect receiver and transmitter multicoupling equipment to antenna feedline |
| 3.1 Perform distance to fault measurement on antenna feedline |
| 3.2 Perform return loss measurement of overall antenna system at transmitter and receiver connector points |
| 3.3 Record test results |

| 4. Finalise installation and complete |
| 4.1 Complete preliminary tests to verify transmitter and receiver operation prior to commissioning |
| 4.2 Complete installation report, test results and administrative tasks and |
preliminary tests and administrative tasks

forward to appropriate person according to enterprise policy

4.3 Dispose of packaging according to accepted environmental conditions

4.4 Notify appropriate person that base station is ready for commissioning and integration

---

### Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 2.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

Evidence of the ability to:

- assess the client and installation requirements
- ensure relevant regulations and standards will be applied
- install radio communications base station equipment
- perform distance to fault measurement on feedline
- perform return loss measurement on feedline
- document and complete installation report.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain the following:
  - anti-static precautions
  - radio frequency (RF) radiation hazard awareness
  - network termination unit
  - radio transmitter system
  - radio receiver system
  - multicoupler
  - supervisory, control and data acquisition (SCADA) system inputs and outputs
- outline the operation and purpose of testing equipment
- interpret the meaning of various test results
- identify network element and system specifications
• outline the principles and performance testing and fault finding techniques of telecommunications networks
• describe the practices and procedures for installation of radio communications equipment for the following:
  • fibre optic connector cleaning techniques
  • computer software installations to various devices
• identify and describe the appropriate test equipment to undertake performance and fault-finding techniques in telecommunications networks including:
  • distance to fault measurement
  • return loss measurement
  • terminate data and voice and RF cable.

**Assessment Conditions**

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications – radio frequency networks field of work and include access to:

• sites on which base station installation can be conducted
• tools and equipment required for installation
• technical specifications, organisational documentation and requirements for installation and testing.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 2.0.</td>
</tr>
</tbody>
</table>

Application

This unit describes the skills and knowledge required to analyse test results and recommend modifications to the network.

It applies to individuals working as field officers and supervisors from telecommunications carriers, service providers, contractors and other public or private organisations who perform measurements during equipment upgrades or during commissioning, acceptance testing and routine maintenance on cellular network equipment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – radio frequency networks

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>Elements</th>
<th>Performance Criteria</th>
</tr>
</thead>
<tbody>
<tr>
<td><em>Elements describe the essential outcomes</em></td>
<td><em>Performance criteria describe the performance needed to demonstrate achievement of the element.</em></td>
</tr>
<tr>
<td>1. Prepare to test cellular phone and network equipment</td>
<td>1.1 Obtain and follow relevant legislation, codes, regulations and standards</td>
</tr>
<tr>
<td></td>
<td>1.2 Scope work by obtaining work details from appropriate personnel and arrange for site access to comply with security</td>
</tr>
</tbody>
</table>
1.3 Evaluate manufacturer’s technical documentation and network procedures to plan test schedule for cellular network
1.4 Verify calibration of test equipment to ensure that tested cellular equipment is compliant
1.5 Prepare cellular equipment for testing according to manufacturer’s test procedure
1.6 Notify operational staff of test and measurement schedule to ensure minimal impact on cellular network

2. Test and measure cellular phone and network equipment
2.1 Work safely following work health and safety (WHS) and environmental requirements for given work, identifying hazards and using personal protective equipment
2.2 Configure network equipment for testing and set options to record test results
2.3 Block or mask alarms that may be triggered and interfere with test program
2.4 Run performance measurement software with options set and record test results
2.5 Re-establish alarms and normal operational status at conclusion of tests, and notify appropriate personnel of completion of test schedule

3. Analyse measurement and prepare evaluation report
3.1 Analyse results of performance tests and measurements and determine performance level of cellular equipment and compatibility with network
3.2 Prepare evaluation report, making recommendations on network modifications or changes to configurations settings for improved quality of service
3.3 Present test results and evaluation report to appropriate personnel according to enterprise policy

### Foundation Skills

Performance Evidence

Evidence of the ability to:

- plan and coordinate test activities and equipment
- test cellular phone and network equipment according to test procedure
- analyse test results
- report and make recommendations on performance.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- summarise the features and operating requirements of cellular test equipment, including the digital cellular test set, spectrum analyser and radio frequency (RF) power meter
- explain network components, their functions and approved specifications
- provide detailed information about transmission lines, transmitter and receiver architecture and associated cellular network
- provide detailed information about cellular antenna and feedlines, and their impact on mobile spectrum interference
- explain testing network components
- outline the types of adjustments that need to be made when measuring cellular transmission
- summarise the types of networks that will influence the transmission on the radio path and/or the transmission line.
Assessment Conditions
Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications – radio frequency networks field of work and include access to:

- sites on which cellular network testing may be conducted
- test equipment currently used in industry
- manufacturer’s and enterprise technical documentation
- relevant regulations and standards.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

Evidence of the ability to:

- document client business requirements
- construct an entity relationship diagram
- construct and document a data model
- normalise the model
- validate the model.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- fully describe:
  - database identifiers and their impact on database usability
  - normalisation rules and processes
  - type hierarchies, including sub-types, super-types and root-types related to development of structured data types
  - validation procedures and processes
  - describe the function and features of:
    - an approach to data modelling, such as the entity-relationship model
    - keys, e.g. unique keys, composite keys, primary keys and primary index
    - time stamps related to the use of keys
    - user defined types, structured types, reference types and user defined functions
    - data types and their application
  - summarise the particular business domain.
Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the systems analysis and design field of work, and include access to:

- client’s business requirements
- special purpose tools, equipment and materials
- industry software packages
- computer aided software engineering (CASE) tools
- entity relationship diagrams.

Assessors must satisfy NVR/AQTF assessor requirements.

Performance Evidence

Evidence of the ability to:

- identify data processes that represent the client’s business reality
- model data processes according to industry and organisation standards
- complete documentation of the data model.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- discuss modelling rules and conventions with reference to naming processes and events
- outline features and functions of process mappers
- explain features of data analysis, particularly in determining process flows
- describe processes and techniques, using logical design concepts related to designing process models.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the systems analysis and design field of work, and include access to:

- client’s business requirements
- special purpose tools and equipment
- industry software packages.

Assessors must satisfy NVR/AQTF assessor requirements.

Performance Evidence

Evidence of the ability to:
- develop procedures that identify where risk occurs
- identify measures to be taken to treat the risk
- document a risk management plan
- implement risk management plan
- establish a risk review procedure.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:
- outline business process design
- explain business supply chain
- describe copyright and intellectual property relating to new technologies
- identify and describe how business sites fit into corporate strategy
- explain the purpose of user analysis and customer relationship management software
- describe risk management process and planning strategies.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the systems analysis and design field of work, and include access to:
- analysis software
• business website
• customer relationship model
• requirements documentation
• site server and software
• updated or new technology
• user analysis
• web servers.

Assessors must satisfy NVR/AQTF assessor requirements.

### Unit Mapping Information

- Monitors and reviews the organisation’s policies, procedures and adherence to legislative requirements in order to implement and manage change
- Selects, implements and manipulates communications systems, processes and practices for maximum impact
- Develops and implements communications strategies with internal and external persons in order to build rapport
- Influences and fosters a collaborative culture, facilitating a sense of commitment and workplace cohesion
- Plans strategic priorities and outcomes within a flexible, efficient and effective context, in a diverse environment exposed to competing demands
- Gathers and analyses data and seeks feedback to improve plans and processes
- Makes high-impact decisions in a complex and diverse environment, using input from a range of sources
- Explores and incubates new and innovative ideas through unconstrained analysis and critical thinking to develop and improve the organisation’s goals

Performance Evidence

Evidence of the ability to:

- document the identified explicit and implicit knowledge in an organisation
- establish and record the knowledge required to meet current needs
- establish and record the forecast knowledge required to meet future needs.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain how the organisation’s business, policies, procedures and structure influence corporate knowledge
- describe the difference between implicit and explicit knowledge
- analyse and identify concepts of risk management planning and processes
- explain the requirements for the design and development of questionnaires and the procedures for analysis of completed questionnaires
- explain the reporting mechanisms that influence a knowledge audit
- describe the key tools and models of project management.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the systems analysis and design field of work, and include access to:

- an organisation
- data sources and staff
- relevant tools, equipment and materials
- relevant industry software.

Assessors must satisfy NVR/AQTF assessor requirements.

</table>

**Application**

This unit describes the skills and knowledge required to manage and communicate requirements for new information and communications technology (ICT) systems to a broad and diverse audience.

This unit applies to individuals who require high-level management, business and technical skills to manage complex analysis within the information and communications technology (ICT) industry, often as part of business critical ICT projects.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

**Unit Sector**

Systems analysis and design

**Elements and Performance Criteria**

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
</tbody>
</table>
| 1. Manage identified client ICT requirements and scope of solution    | 1.1 Establish baseline client ICT requirements and change control processes to track changes to requirements and solution scope  
1.2 Resolve issues and conflicts that emerge during final stages of identifying and analysing requirements  
1.3 Determine how requirements will be presented for review  
1.4 Secure approval of requirements from those stakeholders who       |
## ELEMENT | PERFORMANCE CRITERIA
--- | ---
have the appropriate authority | 2. Manage requirement relationships and dependencies
2.1 Examine and organise the set of requirements and record the dependencies and relationships for each
2.2 Perform impact analysis to assess or evaluate the impact of a change
2.3 Deploy requirements management tools as necessary
3. Maintain requirements for re-use
3.1 Identify requirements that the organisation will use in the long term
3.2 Name and define requirements available for future re-use
4. Prepare requirements package
4.1 Decide which formats are appropriate for a particular project and its stakeholders
4.2 Prepare requirements package according to organisational need

### Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

<table>
<thead>
<tr>
<th>Skill</th>
<th>Performance Criteria</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Reading</td>
<td>1.1, 2.1, 2.2</td>
<td>• Critically analyses complex documentation from a variety of sources and consolidates information relating to specific criteria to determine requirements</td>
</tr>
</tbody>
</table>
| Writing | 1.4, 2.1, 3.2, 4.2, 5.1, 5.2 | • Writes, edits and proofreads documents to ensure clarity of meaning, and accuracy and consistency of information  
• Prepares documentation and correspondence using clear language, correct spelling and terminology, and ensuring accuracy of information |
| Oral Communication | 1.4, 5.1, 5.2 | • Uses collaborative and inclusive techniques, including active listening and questioning, and reading of verbal and non-verbal signals to convey and clarify information and to confirm understanding |
| Navigate the world of work | 4.2, 5.2 | • Works autonomously, making high-level decisions to achieve and improve organisational goals  
• Develops and implements strategies that ensure organisational policies and procedures are being met |
Interact with others

1.2, 1.4, 5.1, 5.2

- Selects, implements and manipulates communications systems, processes and practices for maximum impact
- Influences and fosters a collaborative culture, facilitating a sense of commitment and workplace cohesion
- Shares knowledge, information and experience openly as an integral part of the working relationship
- Recognises potential for conflict and, working with others, seeks to develop organisational processes to deal with conflict

Get the work done

1.1-1.3, 2.1-2.3, 3.1, 3.2, 4.1

- Plans strategic priorities and outcomes within a flexible, efficient and effective context, in a diverse environment exposed to competing demands
- Gathers and analyses data and seeks feedback to improve plans and processes
- Identifies key factors that impact on decisions and their outcomes, drawing on experience, competing priorities, and decision making strategies where appropriate
- Explores and incubates new and innovative ideas through unconstrained analysis and critical thinking to develop and improve the organisation’s goals

Performance Evidence

Evidence of the ability to:

- establish processes to:
  - trace requirements
  - control and track changes to requirements
  - scope solutions
  - manage requirement relationships
  - package and communicate requirements according to what is appropriate for a project or stakeholder group.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain conflict resolution and issue management techniques to handle possible changes to solution scope
- outline requirements management and traceability processes
- list and apply techniques for managing version control and configuration.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the systems analysis and design field of work, and include access to:

- a simulated or workplace project in a medium-to-large enterprise
• observation of the candidate carrying out business analysis work
• reports and plans prepared for the projects
• a portfolio of the project work to be undertaken.

Assessors must satisfy NVR/AQTF assessor requirements.

Performance Evidence

Evidence of the ability to:
- construct and implement requirements for elicitation activities
- select and apply elicitation techniques that are appropriate to the situation
- document requirements and obtain stakeholder sign-off.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:
- explain conflict resolution and issue management techniques
- provide an overview of negotiation and consensus strategies
- summarise techniques to elicit and manage the gathering of requirements
- formulate risk management strategies with regard to requirements gathering, staff management and proposed systems
- outline scope management and change control processes
- describe version control and configuration management approaches.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the systems analysis and design field of work, and include access to:
- appropriate policies
- current business analysis tools
- appropriate legislation
• reports and plans prepared for the projects
• a portfolio of the project work to be undertaken.

Assessors must satisfy NVR/AQTF assessor requirements.

<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 1.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

Evidence of the ability to:

- Connect several different types of hardware peripherals to the system safely and according to vendor instructions with a minimum of downtime, using known routines and procedures.
- Locate, interpret and use vendor documentation related to connection and storage of hardware peripherals.
- Test the operation of newly installed hardware peripherals and confirm client satisfaction.
- Follow work health and safety policies and procedures.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- Describe the commonly used computer operating systems.
- Identify help desk and maintenance practices.
- Describe common peripheral devices.
- Summarise WHS procedures for electrical equipment.
- List the system components and describe their interconnectivity.
- Identify current industry accepted hardware and software products.
- Describe procedures relevant to maintaining inventory.
- List the organisational guidelines and standards that impact on service support including:
  - External suppliers and vendors.
  - Internal and external communications.
  - Internet access.
  - Security of information and data.
• identify common principles for environmentally sustainable business practices.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the systems administration and support field of work and include access to:

• sites with a representative range of workstations, hardware peripherals, internet connections and cabling
• software to be installed, interconnected and configured
• hardware and software currently used in industry
• technical documentation, including organisational hardware blueprint and vendor support.

Assessors must satisfy NVR/AQTF assessor requirements.

<th>Performance Criteria</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Reading</td>
<td>1.1-1.3, 2.1-2.4, 3.1, 3.4, 4.1, 4.2</td>
<td>• Researches and interprets a range of texts to identify requirements and standards, compare technical specifications, and identify solutions to new and emerging issues to maintain the environment</td>
</tr>
<tr>
<td>Writing</td>
<td>1.1-1.3, 3.2</td>
<td>• Uses simple vocabulary to record key information in a sequential manner to maintain the appropriate standards and for internal reference</td>
</tr>
</tbody>
</table>
Oral Communication

- Presents factual information in a clear manner, using specific and appropriate language

Numeracy

- Recognises and applies familiar measurements relating to time durations and uses mathematical calculations to measure and calculate amounts

Navigate the world of work

- Takes some personal responsibility for adherence to legal and regulatory requirements by establishing safe work practices

Get the work done

- Plans and implements routine tasks and workload, making limited decisions on sequencing, timing and collaboration, and seeks assistance in setting priorities
- Makes low-impact decisions within familiar situations, based on a range of predefined or routine solutions and evaluates the effectiveness of the outcome
- Responds to predictable routine problems and implements standard or logical solutions
- Identifies ideas for other applications and considers them in current contexts
- Uses digital technology for basic reading, recording and searching information, and communications, following routine procedures and security requirements

<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 1.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

Evidence of the ability to:

- perform diagnostic functions by replacing components, reloading software and using operating system and other diagnostic tools
- establish location requirements for system hardware and associated peripheral devices
- follow safe work practices
- determine maintenance requirements and establish maintenance schedule
- apply appropriate quality standards to computer hardware and peripherals.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the range of quality levels in current common hardware
- describe the importance of maintenance
- describe workplace health and safety principles specific to working with mains-powered equipment
- identify and describe the potential environmental effects of common types of hardware
- identify common security issues that impact on computer hardware
- identify the software related to hardware operations
- identify common system hardware and associated peripherals functions.
Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the systems administration and support field of work and include access to:

- computer hardware, software and diagnostic tools
- warranty records and reports
- maintenance schedules
- vendor documentation
- safe work practices.

Assessors must satisfy NVR/AQTF assessor requirements.

Application

This unit describes the skills and knowledge required to implement components of systems backup, restore, security and licensing in a stand-alone or client server environment.

It applies to individuals who, while working under limited supervision, have responsibility in a frontline technical support capacity to exercise discretion and judgement, using appropriate knowledge to provide assistance.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems administration and support

Performance Evidence

Evidence of the ability to:

- perform a systems backup, restore and maintain correct usage according to licensing agreements in a stand-alone or client server environment
- maintain software licence records and check for copyright compliance within the system
- maintain security access records and apply access controls on network resources.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe common backup procedures
- identify and outline operating systems used by the organisation
- describe the organisational security procedures
- identify organisational standards to:
  - carry out backup and restore operations
  - label and store backups
  - record security and software details
- describe the selection, functions and features of appropriate diagnostic tools
- identify software copyright responsibilities
- identify the system's current functionality.
Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the systems administration and support field of work and include access to:

- operating systems
- software licence records
- technical records and documentation
- organisational backup and restore procedures
- organisational security guidelines.

Assessors must satisfy NVR/AQTF assessor requirements.

</table>

Performance Evidence

Evidence of the ability to:
- investigate client support requests and provide a documented solution after consultation with client
- convey comprehensive technical information to clients in a clear, concise, jargon-free and coherent manner
- use technical manuals and ‘help’ documentation.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:
- identify and describe the available in-house and vendor support
- explain contract and service agreements with vendors
- identify features of different types of hardware supported by the organisation
- identify sources of information relevant to the provision of services and support
- identify operating system:
  - functions and basic features
  - supported by the organisation
- identify and describe security and network guidelines and procedures
- identify the advanced features of software, including the functions and support provided by the organisation.
Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the systems administration and support field of work and include access to:

- peers and supervisors for obtaining information
- relevant information sources
- technical records and documentation.

Assessors must satisfy NVR/AQTF assessor requirements.

ICTSAS308 Run standard diagnostic tests

Modification History

<table>
<thead>
<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 4.0.</td>
</tr>
</tbody>
</table>

Application

This unit describes the skills and knowledge required to troubleshoot problems, identify and implement preventative maintenance techniques, and conduct diagnostic tests on a range of platforms.

It applies to individuals who, while working under a level of supervision, have responsibility to action tasks in a frontline technical support capacity.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems administration and support

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
</tbody>
</table>

1. Identify common symptoms and preventative maintenance techniques for ICT software and hardware

1.1 Plan troubleshooting processes for ICT software and hardware to guide the resolution of common ICT problems based on requirements for ICT testing and maintenance

1.2 Determine and document common symptoms of ICT problems for ICT software and hardware to increase troubleshooting process efficiency and focus

1.3 Identify and select testing and preventative maintenance
techniques taking into consideration the common symptoms of ICT problems to complete planning troubleshooting processes

2. Operate system diagnostics

2.1 Run the system diagnostic program according to specifications to identify required modifications in line with requirements for ICT testing and maintenance
2.2 Modify the system configuration as indicated by the diagnostic program to address symptoms
2.3 Carry out preventative maintenance techniques to address common symptoms of ICT problems

3. Monitor and remove system viruses

3.1 Scan system to check and maintain virus protection
3.2 Report identified viruses and proposed actions to superior to gain approval
3.3 Implement approved actions to remove detected virus infections using software tools and procedures and by restoring backups
3.4 Document virus symptoms and removal information to keep a record of actions for future application

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

<table>
<thead>
<tr>

</tbody>
</table>

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements and performance criteria of this unit; including evidence of the ability to:

- Identify and document six ICT problems and corresponding testing and preventative maintenance techniques to provide for troubleshooting process planning
- Implement preventative maintenance techniques to address three common symptoms of problems associated with each of the following:
  - desktop application
  - operating system
  - laptop
  - mobile device
  - printer
- Identify and address three virus infections using a system diagnostic program

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements and performance criteria of this unit. This includes:

- Impact of organisational structure, diagnostic testing procedures and guidelines, and software specifications on conducting diagnostic testing
- Hardware and software diagnostic tools, including products that manage:
  - backup procedures
  - configuration procedures
  - hardware maintenance
  - security
- Common symptoms of problems associated with:
  - desktop applications
  - operating systems
• laptops
• mobile devices
• printers
• Preventative maintenance techniques relevant to maintaining hardware and software applications
• Common diagnostic testing approaches

Assessment Conditions
Skills must be demonstrated in a workplace or simulated environment typical of those in an ICT working environment.

• Hardware and software diagnostic tools and specifications
• System with virus protection software installed
• Tools, equipment, materials, software packages
• ICT documentation including details of current architecture, operating system, software applications, and hardware
• Requirements relating to ICT maintenance and testing
• Individual superior in the organisation

Assessors of this unit must satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for ICTSAS502 Establish and maintain client user liaison

Modification History

<table>
<thead>
<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 1.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

Evidence of the ability to:

- establish and maintain client liaison
- establish and document procedures for providing required support
- identify information and communications technology (ICT) skill requirements
- assign appropriate support personnel.

Note: Evidence must be provided in at least TWO ICT environments.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- specify adequate response times for providing services
- analyse the role of stakeholders in the organisation, and their level of dependence on ICT infrastructure
- explain the capabilities of a range of ICT devices
- research and evaluate current industry accepted hardware and software products
- identify and describe equipment that is vital in supplying business critical services, including:
  - internet file transaction security for client accounts
  - web server for e-business
- describe in detail the areas related to the organisation’s services and the ICT system functionality required to supply the essential and desirable services to the organisation
- describe the quality assurance practices relating to the supplied service and service level agreements (SLAs)
- analyse the role of ICT in the client's business domain
- identify and describe server types to provide:
  - application
• backup
• email
• firewall
• proxy
• web.

**Assessment Conditions**

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the systems administration and support field of work, and include access to:

• special purpose tools, equipment and materials
• industry software packages
• agreed procedures or SLAs
• documented support requirements
• technical records and documentation.

Assessors must satisfy NVR/AQTF assessor requirements.

<tr>
<td></td>
<td>2.2 Undertake a review of infrastructure</td>
</tr>
</tbody>
</table>
### ELEMENT | PERFORMANCE CRITERIA
---|---
| 2.3 Record areas of discrepancy |
| 3. Determine and implement solutions | 3.1 Compare service standards and infrastructure discrepancies, and identify gaps in existing service  
3.2 Document discrepancies identified  
3.3 Determine cost effective solutions and impact  
3.4 Implement solutions |
| 4. Organise reviews | 4.1 Determine guidelines for regular reviews with stakeholders  
4.2 Undertake reviews as per agreed guidelines  
4.3 Document review process and submit to the stakeholder  
4.4 Ensure effective reporting procedures are in place and used |

### Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

Performance Evidence

Evidence of the ability to:

- analyse and report on faults and restoration performance
- comply with service level agreement (SLA)
- review infrastructure and document discrepancies
- analyse and prioritise requests according to business requirements
- implement cost effective solutions and evaluate impact.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe and explain business scheduling requirements
- discuss capacity planning and change-control procedures
- compare and contrast current industry accepted hardware and software products, including their general features and capabilities
- outline key features of the client business domain
- evaluate help desk and maintenance practices
- analyse the role of stakeholders and the degree of stakeholder involvement
- describe the system's current functionality and the features and functions of system under modification.
Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the systems administration and support field of work, and include access to:

- special purpose tools, equipment and materials
- industry software packages
- sites on which review of maintenance-services delivery may be conducted
- established ICT service infrastructure
- SLAs and business guidelines.

Assessor must satisfy NVR/AQTF assessor requirements.

Performance Evidence

Evidence of the ability to:

- to manage a network effectively
- identify and use appropriate hardware and software tools:
- monitor network performance
- identify network threats
- isolate security breaches.

Note: Evidence must be provided on at least TWO networks or occasions.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe available network tools
- explain processes and techniques related to using network tools
- analyse key features of the range of attacks that affect network security
- discuss key problems and challenges relating to network security.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the systems administration and support field of work, and include access to:

- special purpose tools, equipment and materials
- hardware and software tools
- security diagnostic software
- maintenance procedures
- network system.
Assessors must satisfy NVR/AQTF assessor requirements.

Performance Evidence

Evidence of the ability to:
- determine organisation operating systems (OS) requirements
- install or upgrade OS
- customise OS to user requirements
- manage and configure hardware devices
- manage and configure desktop.

Note: Evidence must be provided for at least TWO operating systems.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:
- explain procedures and techniques involved in the installation and upgrade of OS
- explain procedures and principals involved in unattended OS installation
- describe OS configuration issues that may arise with hardware and desktop environments.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the systems administration and support field of work, and include access to:
- special purpose tools, equipment and materials
- industry software packages
- stand-alone or networked personal computers
- appropriate OS installation compact disk or recovery boot disks
- drivers for connected devices
• helpdesk system
• OS service packs.

Assessors must satisfy NVR/AQTF assessor requirements.

</table>

Application

This unit describes the skills and knowledge required to ensure that the properties of an entire system are tested and proved adequate before handover to the user for final acceptance testing.

It applies to individuals employed in a range of information and communications technology (ICT) work environments who apply specialised and technical knowledge and systematic approaches to testing, fault finding and problem solving.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems administration and support

Elements and Performance Criteria

<tr>
<td></td>
<td>1.2 Determine and document software life cycle according to system specifications and contact in operations</td>
</tr>
<tr>
<td></td>
<td>1.3 Define test plan from acceptance criteria, software life cycle, system specifications and in compliance with organisational testing and acceptance processes</td>
</tr>
<tr>
<td></td>
<td>1.4 Notify contact in operations of scheduled tests to understand</td>
</tr>
</tbody>
</table>
implications for operations and modify schedule to minimise implications for operations

1.5 Develop test scripts for online test and test run for batch test according to test plan
1.6 Prepare test environment and select test tools according to test plan
1.7 Prepare test logs and result sheets according to test plan
1.8 Conduct walk-through with superior to review expected results against acceptance criteria and incorporate feedback

2. Conduct test

2.1 Create clean test environment and initialise test environment according to test plan
2.2 Run test scripts and document results according to organisational testing and acceptance processes and test plan
2.3 Finalise test environment and document completed tests according to test plan and test logs and result sheets.
2.4 Compare and document actual results to expected results for each system unit and complete result sheets

3. Analyse and classify results

3.1 Analyse test results against acceptance criteria to identify variances
3.2 Summarise and classify test results to prepare report highlighting critical and urgent variances
3.3 Notify contact in operations of test completion to communicate implications
3.4 Obtain and incorporate feedback from superior on test results report to finalise report

### Foundation Skills

*This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.*

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements and performance criteria of this unit; including evidence of the ability to:

- Perform two system tests on a system including:
  - develop acceptance criteria
  - develop test plans
  - prepare and initialise a clean test environment
  - test the operation and consistency of the total system prior to delivery according to system specifications, including testing:
    - performance
    - security
    - configuration sensitivity
  - start-up and recovery from failure modes
  - analyse and report test results
  - obtain and act on feedback coming from test results

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements and performance criteria of this unit. This includes:

- Key features and processes of automated test tools
- Typical procedures for system testing and acceptance
- Implications for organisational operations of system testing activities
- Software life cycles
- Test planning and scheduling
- Test script development
- Test environment preparation
Assessment Conditions

Skills must be demonstrated in a workplace or simulated environment where the conditions are typical of those in an ICT working environment or workplace. This includes:

- Relevant industry software packages
- Documentation of system requirements and design
- Organisational testing and acceptance processes
- Individual contact in operations in the organisation
- Superior in the organisation
- Hardware and environments for system test use
- System or application suitable for testing

Assessors of this unit must satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to plan for testing information and communications technology (ICT) systems including software, systems administration, networking, and web development, by collating documentation of conditions and expected results sufficiently to allow for thorough system testing.

It applies to individuals who use technical and specialised knowledge and systematic approaches in performing or organising others to complete complex technical testing operations.

No licensing, legislative, or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems administration and support

Elements and Performance Criteria

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements and performance criteria of this unit; including evidence of the ability to:

- For two systems:
  - interpret software specifications to plan for system testing
  - develop a comprehensive test plan that includes:
    - test approach including activities
    - test conditions and cases to be applied
    - test objectives
    - acceptance processes
    - data to be processed
    - automated testing coverage
    - expected results
    - dependencies
    - quality benchmarks
  - gain acceptance of test objectives and test schedule from stakeholders and contact in operations

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements and performance criteria of this unit. This includes:

- Systems relevant to testing requirements
- System specifications analysis
- Implications of testing processes for organisation
- Quality benchmarks for comparison
- Testing approaches and processes and associated advantages and disadvantages in different scenarios
Assessment Conditions

Skills must be demonstrated in a workplace or simulated environment where the conditions are typical of those in an ICT working environment or workplace. This includes:

- Testing software package
- System engineering management plan
- Test and evaluation program plan
- System suitable for testing and associated documentation including system specifications
- User account details
- Individual stakeholders
- Individual contact in operations in the organisation
- Organisational testing procedures including acceptable test approaches, log entry requirements and quality benchmarks.

Assessors of this unit must satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements and performance criteria of this unit; including evidence of the ability to:

- Develop one test schedule including plan, timeline, objectives and reporting arrangements
- Manage the testing process including allocating personnel to testing procedures on one occasion
- Review the system based on test results, brief organisational representative or line manager on outcomes and evaluate the results to determine acceptability on one occasion
- Identify, prioritise, schedule and evaluate required code changes based on test results on one occasion

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements and performance criteria of this unit. This includes:

- Testing techniques and automated test tools and associated key features and processes
- Typical testing procedures, standards and requirements
- Key system requirements and features
- Resource allocation and scheduling approaches and methodologies
- System testing evaluation methodologies

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in an ICT working environment or workplace. This includes access to:

- Automated testing tools
- System requirements and acceptance criteria
- Organisational testing procedures and standards
- Project procedures and timeframe
• Individual organisational representative or line manager
• Individual personnel carrying out test procedures
• Test hardware and environments; test and production
• System or application suitable for testing

Assessors of this unit must satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to own, operate and manage a small scale contractor business with employees that install telecommunications services.

It applies to individuals who operate their own contracting business delivering and installing telecommunications services to major service providers.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the ICT Implementation Guide Companion Volume or the relevant regulator for details of licensing, legislative or certification requirements.

Unit Sector

Telecommunications – small and micro business

Elements and Performance Criteria

<table>

<td><em>Elements describe the essential outcomes</em></td>
<td><em>Performance criteria describe the performance needed to demonstrate achievement of the element.</em></td>
</tr>
<tr>
<td>1. Set up business operation</td>
<td>1.1 Develop business plan for small business operation according to business planning guidelines 1.2 Follow statutory and legal requirements to register business 1.3 Mitigate liabilities by obtaining adequate business insurance 1.4 Provide and maintain vehicle through purchase, lease or hire purchase, including managing fringe benefits tax (FBT) liabilities</td>
</tr>
</tbody>
</table>
2. Provide client service
   2.1 Develop and maintain client base to support business plan
   2.2 Analyse and determine client expectations in relation to industry standards
   2.3 Provide client service that meets client expectations according to enterprise standards
   2.4 Monitor and evaluate performance on installations completed against industry standards

3. Perform small business financial management tasks
   3.1 Record income and expenditure using bookkeeping tools and software according to normal accounting standards
   3.2 Construct small business financial balance sheet using banking records or supply information to accountant according to normal accounting standards
   3.3 Calculate small business taxation and superannuation requirements or supply information to accountant according to normal accounting standards
   3.4 Complete a business activity statement (BAS) or supply data to accountant according to normal accounting standards

4. Cost and quote installation
   4.1 Establish extent of work to be completed through professional and personable discussions with client
   4.2 Complete job specification for quote with cost estimates of time required to complete work
   4.3 Estimate and include cost of materials using supplier quoted prices
   4.4 Determine and include margin for profit and ongoing costs for installation according to business plan
   4.5 Check finalised quote for accuracy
   4.6 Submit quote to client within agreed timeframe

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Performance Evidence

Evidence of the ability to:

- produce a business plan and set up a business
- define and meet client needs
- perform simple financial management tasks including maintaining simple financial records, and completing business activity statement (BAS), fringe benefits tax (FBT) and insurance documentation
- quote for installation jobs that cover all aspects of costing.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- specify business registration and licensing requirements
- identify and describe Commonwealth, state, territory and local government legislative requirements relating to business operations including:
  - anti-discrimination
  - environmental issues
  - equal employment opportunity
  - industrial relations
  - work health and safety (WHS)
  - taxation requirements
- analyse costs associated with running a business
- identify the current tax rates
- identify relevant industry codes of practice and evaluate their impact on the business
- identify relevant industry standards in relation to:
Assessment Requirements for ICTSMB401 Set up and operate a contractor business

- materials and labour costs
- rates of pay
- identify common business liabilities
- evaluate several sources of advice and specialist services
- identify sources of information about regulatory, taxation and insurance requirements and issues.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – small and micro business field of work and include access to:

- Australian Taxation Office guides
- industry standards labour rates
- general office bookkeeping procedures
- client service guides
- material suppliers
- financial management record keeping software.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

Evidence of the ability to:
- recruit employees and document roles
- maintain payroll management records
- allocate work and supervise employees
- identify business growth opportunities
- develop promotional materials
- identify business compliance requirements
- develop compliance processes
- monitor compliance

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:
- interpret Commonwealth, state, territory and local government legislative requirements relating to contract business operation, including those relating to:
  - anti-discrimination
  - the environment
  - equal employment opportunity
  - industrial relations
  - work health and safety (WHS)
- outline and evaluate the common methods of marketing relevant to a contractor business
- identify and interpret compliance requirements within the limits of an installation service business
- identify sources of advice and specialist services.
Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – small and micro business field of work and include access to:

- resources and references, including Australian Taxation Office guides, human resource texts, recruitment guides and compliance legislation codes and practices
- performance management tools
- financial management record-keeping software.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

Evidence of the ability to:

- determine and meet client requirements for installation and testing of power saving hardware
- plan and connect the hardware components according to vendor and technical specifications.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe systems diagnostic features
- outline business processes
- summarise client business domain, business function and organisation
- discuss compatibility issues and resolution procedures
- describe the process of configuration of internet protocol (IP) networks
- identify current industry accepted hardware products
- describe the major components of client and business liaison
- explain how to document technical specifications
- discuss linkage between processes
- identify set up and configuration procedures
- outline technologies such as:
  - areas of the hardware relevant to configuration and testing
  - installation procedures
  - power saving hardware functionality
• explain vendor specifications and requirements for component installation.

Assessment Conditions
Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – sustainability field of work and include access to:
• a site on which energy saving solutions can be implemented
• power saving hardware currently used in industry
• relevant documentation, feasibility studies, equipment manuals and other site-related documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

Evidence of the ability to:

- clarify and meet client requirements for installation and testing of power management software
- plan and connect the software components according to vendor and technical specifications across a variety of situations.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify areas of the hardware relevant to configuration and testing
- explain current industry-accepted software products, with general features and capabilities
- summarise appropriate installation procedures
- outline work health and safety (WHS) requirements in relation to work safety, environmental factors and ergonomic considerations
- explain power saving software functionality
- describe set up and configuration procedures
- discuss systems diagnostic features
- explain vendor specifications and requirements for component installation.
Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – sustainability field of work and include access to:

- a site on which energy saving solutions can be implemented
- power saving hardware currently used in industry
- relevant documentation, feasibility studies, equipment manuals and other site-related documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

**Application**

This unit describes the skills and knowledge required to set up energy and cost efficient installations to meet sustainability targets by remotely feeding power over ethernet (PoE).

It applies to individuals with a range of telecommunication skills who install and configure thin client applications to enable PoE on a low powered workstation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

**Unit Sector**

Telecommunications – sustainability

**Elements and Performance Criteria**

Performance Evidence

Evidence of the ability to:
- determine and meet client requirements for thin client applications
- install and configure components according to vendor and technical specifications.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:
- outline why businesses use thin technologies
- explain client business domain, business function and organisation
- summarise compatibility issues and resolution procedures
- explain the configuration of internet protocol (IP) networks
- discuss the importance of client and business liaison
- explain how to document technical specifications
- summarise linkage between processes
- explain set up and configuration procedures
- discuss systems diagnostic features
- explain Web 2.0 including:
  - applications and functionality
  - areas of the Web 2.0 relevant to configuration and testing
  - current industry accepted Web 2.0 products
  - vendor specifications and requirements for Web 2.0 applications
  - Web 2.0 application procedures.
Assessment Requirements for ICT SUS404 Install thin client applications for power over ethernet

Date this document was generated: 19 January 2021

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – sustainability field of work and include access to:

- a site on which remote power feeding applications can be implemented
- relevant documentation, feasibility studies and equipment manuals.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to perform rigging work during system installations for telecommunications radio structures.

It applies to individuals who are usually highly skilled verbal and non-verbal communicators working in a team environment. They must be appropriately licensed to complete high risk work and be able to safely use all required equipment.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the ICT Implementation Guide Companion Volume or the relevant regulator for details of licensing, legislative or certification requirements.

Unit Sector

Telecommunications – telecommunications rigging installation

Elements and Performance Criteria

<tr>
<td>1. Prepare rigging systems</td>
<td>1.1 Prepare for work according to relevant legislation, codes, regulations and standards</td>
</tr>
<tr>
<td></td>
<td>1.2 Arrange access to site and confirm client requirements</td>
</tr>
<tr>
<td></td>
<td>1.3 Inform appropriate personnel of existing and potential site hazards</td>
</tr>
</tbody>
</table>
1.4 Select tools and safety equipment required for safe rigging practice
1.5 Use rigging systems in telecommunications environment according to specifications
1.6 Identify proposed position of equipment to be mounted on telecommunications radio structures according to specifications and industry practice
1.7 Estimate safe working loads for rigging systems and equipment according to specifications
1.8 Select and inspect rigging equipment to ensure it is fit for purpose according to specifications

2.1 Set up rigging and dogging equipment following safe working practices and procedures according to all relevant work health and safety (WHS) legislation
2.2 Operate rigging equipment and install telecommunications antenna and associated equipment according to specifications
2.3 Use internationally recognised communication signals and protocols with crane drivers and helicopter crews according to the Crane Association Crane Safety Manual for Operators/Users

3.1 De-rig and lower rigging equipment according to specifications
3.2 Restore site to client expectations following completion of installation according to industry practice
3.3 Complete documentation and notify client for sign off

### Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

Performance Evidence

Evidence of the ability to:

- apply work health and safety (WHS) requirements and work practices associated with rigging
- carry out basic dogging skills
- carry out basic rigging skills
- use specialised hand or power tools and equipment normally used in rigging.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline the features and operating requirements of rigging equipment
- explain hypothermia symptoms and methods of prevention and treatment
- discuss licensing and regulatory issues applying to rigging practices and systems on telecommunications radio structures
- summarise knowledge of meteorology and weather prediction
- describe remote-area first aid
- explain:
  - electromagnetic radiation (EMR) safety practices
  - optical fibre-cabling and equipment safety practices
  - personal protective equipment for rigging projects
  - requirements of WHS legislation, relevant regulations, and applicable site and company WHS procedures
  - rigging practices and systems to telecommunications radio structures
  - working-at-heights safety practices.
Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – telecommunications rigging installation field of work and include access to special purpose tools, equipment and materials.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

Evidence of the ability to:

- apply all work health and safety (WHS) requirements and work practices associated with fall arrest, fall guarding and fall restraint when working at heights in a telecommunications rigging environment.
- check and fit a safety harness according to industry practice
- use a safety harness where a fall hazard exists at height in a telecommunications context
- produce a rescue plan to be activated in the event of a fall.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline electromagnetic radiation (EMR) safety practices
- discuss fall arrest, fall guarding and fall restraint when working at heights in a telecommunications rigging environment
- list features and operating requirements of rigging equipment
- identify government legislation, regulations, and by-laws relating to rigging works including:
  - applicable site and company WHS procedures
  - WHS legislation
  - relevant codes of practice
  - subsequent amendments in regards to fall arrest, fall guarding and fall restraint when working at heights in a telecommunications rigging environment
- describe hazards associated with wearing a safety harness and associated equipment
- summarise licensing and regulatory issues applying to rigging practices and systems on telecommunications radio structures
- discuss optical fibre cabling and equipment safety practices
- identify personal protective equipment for rigging projects
- describe the rescue plan to be activated in the event of a fall
- outline risks present when working on telecommunications radio structures
- explain safe rigging practices and systems to telecommunications radio structures
- describe suspension trauma
- summarise working-at-heights safety practices
- identify workplace operational procedures.

**Assessment Conditions**

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – telecommunications rigging installation field of work and include access to special purpose tools, equipment and materials.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to assess risk, use rigging equipment, and climb and perform rescues on standard telecommunications network structures.

It applies to technical staff who work in a team environment and who use rigging on telecommunications radio structures and may make use of rigging plant and equipment, fall arrest, fall guarding and fall constraint.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the ICT Implementation Guide Companion Volume or the relevant regulator for details of licensing, legislative or certification requirements.

• Uses appropriate, detailed and clear language to address key personnel and to disseminate information |
| Numeracy                      | 1.2, 4.2, 4.3, 4.5   | • Uses mathematical formulae to calculate ratios and scale, make adjustments to equipment and interpret methodological information                                                                               |
| Navigate the world of work    | 1.2, 2.1, 2.2, 3.1, 3.2, 4.1-4.5, 5.1, 5.2, 6.1, 6.3 | • Takes personal responsibility for adherence to legal and regulatory requirements, standards, manufacturer’s instructions and industry practice relevant to own work context, and draws attention to any issues that may affect self or others in relation to climbing and performing rescues |
| Get the work done             | 1.2, 2.1, 2.2, 3.1, 3.2, 4.4, 6.2 | • Uses a combination of formal, logical planning processes and an increasingly intuitive understanding of the climbing and rescue context to identify relevant information and risks, and to identify and evaluate alternative strategies and resources  
• Makes a range of critical and non-critical decisions regarding route, equipment and need for medical treatment in relatively complex climbing and rescue situations, taking a range of constraints into account  
• Recognises and takes responsibility for addressing predictable and some less predictable safety problems in familiar work contexts |
• Initiates standard procedures when responding to familiar problems within immediate context
• Applies formal problem-solving processes when selecting equipment and managing ropes, breaking complex issues into manageable parts and identifying and evaluating several options for action

Performance Evidence

Evidence of the ability to:

- use safe rigging practices according to all work health and safety (WHS) legislative requirements, regulations and standards
- assess the status and condition of the telecommunications structure to be climbed and plot a climbing route according to industry practice
- select climbing equipment and climb a telecommunications network structure
- work safely using climbing and working fall arrest systems
- perform rescues from telecommunications network structures to industry standards.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- discuss falls, including:
  - fall factors according to the Guidelines for the Prevention of Falls
  - fall prevention
  - fall types according to Australian Standards and regulations
- list features and operating requirements of rigging equipment
- summarise optical fibre cabling and equipment safety practices
- identify personal protective equipment for rigging projects
- summarise, in relation to radio frequency (RF) electromagnetic radiation (EMR):
  - associated risks
  - methods of detecting
- need to verify and maintain the EMR hazard management plan against an on-site situation
- preparing for work at a telecommunications site with potential EMR hazards
- reporting EMR hazards safety practices
- sources and types of RF EMR
- discuss rescue methods and practices relevant to the rigging environment
- outline safe rigging principles
- describe suspension trauma, including:
  - cause
  - effect
  - prevention
  - treatment
- discuss, in relation to a safety harness:
  - hazards associated with wearing a safety harness
  - how to check, fit and use a safety harness
  - the types and application of different safety harnesses
- explain licensing and regulatory issues applying to rigging practices and systems on telecommunications radio structures
- outline risks present when working on telecommunications radio structures
- clarify specific WHS issues that affect rigging, including:
  - relevant regulations, and applicable site and company WHS procedures
  - rigging practices and systems for telecommunications radio structures
  - safe climbing practices, including maintaining three points of contact while climbing
  - safe working and minimum approach distances for hazards on telecommunications network structures, according to standards and regulations
  - safety requirements when working at heights according to WHS legislation.

**Assessment Conditions**

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – telecommunications rigging installation field of work and include access to special purpose tools, equipment and materials.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to build a foundation, and assemble and mount a telecommunications radio structure.

It applies to individuals who have a dual specialist classification as rigger installers and who may install radio structures for Worldwide Interoperability for Microwave Access (WiMAX) wireless broadband access networks, antenna installation for radio and television broadcasting, and cellular mobile communications.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the ICT Implementation Guide Companion Volume or the relevant regulator for details of licensing, legislative or certification requirements.

Pre-requisite Unit

ICTTTCR201 Use rigging practices and systems on telecommunications network structures
ICTTTCR202 Use operational safety in a telecommunications rigging environment
ICTTTCR203 Use safe rigging practices to climb and perform rescues on telecommunications network structures

Unit Sector

Telecommunications – telecommunications rigging installation

| 1. Prepare materials and secure site | 1.1 Notify appropriate personnel and take necessary precautions to minimise, control or eliminate hazards that may exist during work activities  
1.2 Determine nature and location of structure from construction design plans, relevant legislation, codes, regulations and standards  
1.3 Determine materials, tools and equipment required from construction design plans  
1.4 Check steel for assembly against construction design plans to ensure no parts are missing  
1.5 Secure and clean site according to site security instructions for public safety |
| 2. Construct foundations for radio structure | 2.1 Locate other services according to industry practice, and arrange for relocation of services if required  
2.2 Oversee excavation of foundation according to engineering specifications, and construction of foundations according to construction design plans  
2.3 Install earthing according to construction design plans, enterprise work health and safety (WHS) guidelines and industry practice  
2.4 Provide samples of concrete for analysis according to enterprise guidelines and manufacturer’s specifications, relevant standards and regulations |
| 3. Assemble and mount telecommunications radio structure | 3.1 Select area free of interference and close to construction site suitable for structure assembly  
3.2 Assemble radio structure in sections on ground according to engineering specifications, using personal protective equipment and following safety guidelines  
3.3 Mount and secure preassembled sections to tower construction according to plans, specifications and enterprise WHS guidelines  
3.4 Maintain vertical positioning of structure within twist tolerances during construction phase  
3.5 Secure and tension guy wires according to construction design plans, enterprise WHS guidelines and industry practice |
| 4. Complete administrative duties | 4.1 Update original design plan with approved amendments and return to design section  
4.2 Secure and clean up site to original condition in environmentally safe manner  
4.3 Notify client and obtain sign off |
## Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Performance Evidence

Evidence of the ability to:

- undertake pre-construction checks to ensure a safe working environment
- construct foundations according to engineering specifications
- select site for hoisting equipment, ensuring location is safe for the operator and the construction
- preassemble the structure at ground level, ensuring completion of each assembled component
- assemble and mount a telecommunications radio structure, including temporary and permanent guy anchors
- install functional and protective earthing systems, following security and safety procedures.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- summarise the impact that weather conditions impose on the constructions and installation of telecommunications structures
- describe the safety risks associated with the installation of telecommunications equipment in remote areas including:
  - hypothermia symptoms and methods of prevention and treatment
  - electromagnetic radiation (EMR) safety practices
  - personal protective equipment for rigging projects
  - working-at-heights safety practices
- discuss the features and operating requirements of:
• construction equipment
• rigging equipment
• identify the information required to build a telecommunications radio structure
• describe rigging practices and systems for telecommunications radio structures
• list legislation, codes of practice and other formal agreements that impact on the work activity
• summarise licensing and regulatory issues applying to rigging practices and systems on telecommunications radio structures
• describe manufacturer’s requirements for safe operation of equipment
• discuss the following work health and safety (WHS) requirements:
  • WHS legislation and regulations
  • company procedures relating to the activity and site conditions
• discuss typical issues and challenges that can occur on an installation site.

**Assessment Conditions**

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – telecommunications rigging installation field of work and include access to special purpose tools, equipment and materials.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to install basic telecommunications radio plant and equipment on standard telecommunications structures.

It applies to technical staff who install basic telecommunications radio plant and equipment on telecommunications structures and use rigging plant and equipment, fall arrest, fall guarding and fall constraint.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the ICT Implementation Guide Companion Volume or the relevant regulator for details of licensing, legislative or certification requirements.

Pre-requisite Unit

ICTTTCR201 Use rigging practices and systems on telecommunications network structures
ICTTTCR202 Use operational safety in a telecommunications rigging environment
ICTTTCR203 Use safe rigging practices to climb and perform rescues on telecommunications network structures

Unit Sector

Telecommunications – telecommunications rigging installation

Performance Evidence

Evidence of the ability to:

- install basic telecommunications radio plant and equipment according to job specifications and all work health and safety (WHS) legislation, regulations, standards and environmental requirements
- assist with testing and fault-finding basic telecommunications radio plant and equipment mounted on telecommunications structures
- use effective communications skills related to:
  - dogging
  - work associates
  - supervisors
  - team members
  - enterprise documentation.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline antenna principles
- outline the features and operating requirements of rigging equipment
- discuss relevant regulations and typical issues and challenges that may occur on site
- explain rigging practices and systems in relation to telecommunications radio structures, and related licensing and regulatory issues
- discuss the main principles of:
  - electromagnetic radiation (EMR) safety practices
  - optical fibre cabling and equipment safety practices
- working-at-heights safety practices
- summarise specific WHS requirements relating to the activity and site conditions, including:
  - basic survival skills
  - company WHS procedures
  - hypothermia
  - remote area first aid.

**Assessment Conditions**

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications - telecommunications rigging installation field of work and include access to special purpose tools, equipment and materials.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required for entry level networking support to establish a small office or home office (SOHO) internet connected PC network.

It applies to individuals who may work as an installer or network technician configuring small networks with simple internet protocol (IP) addressing schemes that share a limited range of resources.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Telecommunications Networks Engineering

Performance Evidence

Evidence of ability to:

- implement work health and safety (WHS) workplace procedures and practices
- plan installation of an internet connected network with advice and approvals of relevant personnel
- set up and configure wired and wireless networks with simple addressing schemes
- troubleshoot network and internet connectivity
- set up resource sharing
- deploy simple firewall network security
- obtain sign-off with relevant personnel.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline correct usage of tools and equipment
- describe enterprise WHS procedures
- outline basic computer systems and network operating systems
- describe computer networking principles (wired and wireless)
- outline network addressing systems (basic)
- explain network services and associated network models and protocols
- outline network security management
- outline troubleshooting procedures.
Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications network engineering field of work and include access to:

- a site where installation of a small office home office network may be conducted
- tools, equipment and materials currently used in the industry
- relevant workplace procedures, specifications and reference materials.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 2.0.</td>
</tr>
</tbody>
</table>

Application

This unit describes the skills and knowledge required to establish and support a small to medium business network capable of providing wide area network (WAN) connectivity and common web internet services.

It applies to individuals who may be working as a small to medium enterprise (SME) internet protocol (IP) network installer, network technician or SME network support person.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Telecommunications networks engineering

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>

<tr>
<td>1. Prepare for installation of small to medium enterprise network</td>
<td>1.1 Prepare for given work, confirming site-specific work health and safety (WHS) and environmental requirements with appropriate personnel</td>
</tr>
<tr>
<td></td>
<td>1.2 Identify safety hazards and implement risk control measures in consultation with appropriate personnel</td>
</tr>
</tbody>
</table>
ELEMENT | PERFORMANCE CRITERIA
---|---
1.3 Determine nature and scope of business network and network resources from job briefs or appropriate personnel
1.4 Select and obtain computer system and network device requirements according to enterprise procedures
1.5 Obtain operating instructions, manuals, hardware and software testing methodologies
1.6 Consult appropriate personnel to ensure the task is coordinated effectively with others involved at worksite

2. Install and configure small to medium enterprise network
2.1 Set up wired infrastructure according to manufacturer’s specifications and enterprise procedures
2.2 Set up and configure resource sharing on a network server
2.3 Install WAN connection and ISP services and configure according to enterprise procedures
2.4 Troubleshoot network and internet connectivity according to manufacturer’s specifications and enterprise procedures
2.5 Implement data back-up and disaster recovery measures according to enterprise procedures

3. Complete and document network installation
3.1 Restore worksite to safe condition according to established safety procedures
3.2 Record and store essential installation information according to enterprise procedures
3.3 Notify appropriate personnel of completion of the task according to enterprise procedures
3.4 Notify customer and obtain sign-off

Foundation Skills
This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Performance Evidence

Evidence of ability to:
- implement work health and safety (WHS) workplace procedures and practices
- plan installation of a network that uses subnet addressing and provides internet service provider (ISP) services
- set up and configure wired infrastructure
- troubleshoot local network and wide area network (WAN) connectivity and services
- configure resource sharing on a network server
- provide network data back-up and disaster recovery.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:
- identify correct usage of tools and equipment
- outline data back-up services and procedures
- describe enterprise WHS procedures
- define ISP services
- outline network device configuration
- describe network models and topologies
- define subnet addressing
- outline troubleshooting procedures
- describe WAN services and ISP responsibilities.
Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications network engineering field of work and include access to:

- a site where installation of a small to medium business network may be conducted
- tools, equipment and materials currently used in industry
- relevant workplace procedures

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

Evidence of ability to:

- effectively implement work health and safety (WHS) workplace procedures and practices
- develop a network addressing scheme
- determine required network components to build the network
- plan, build, configure, test and analyse performance of a network
- troubleshoot network problems.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe enterprise WHS procedures
- explain internet and computer network communication
- outline network addressing schemes including open systems interconnect (OSI) and transmission control protocol (TCP/IP) model
- describe planning the cabling of ethernet networks
- define the seven layer OSI model
- identify correct tool and equipment usage
- identify troubleshooting procedures.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications network engineering field of work and include access to:
• a site where building and maintenance of secure network may be conducted
• tools, equipment and materials currently used in industry
• relevant workplace procedures
• product and manufacturing specifications and reference material.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

</table>

Application

This unit describes the skills and knowledge required to produce a media design through selection and appraisal of media software tools, assessment and manipulation of software functions and the use and creation of graphics and editing media files.

It applies to individuals who want an introduction to the use of media software packages and may eventually lead to employment in graphic design, industrial design, or production of promotional and marketing media material.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Telecommunications Networks Engineering

Elements and Performance Criteria

<table>

Performance Evidence

Evidence of ability to:
- evaluate new media software
- manipulate files effectively
- produce an effective media design using two new media software packages
- evaluate a design
- test and run a design.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:
- explain functions and features of two new media applications
- define graphic design and stylistic language conventions
- identify software tools to develop, edit and test design
- outline principles of:
  - digital imaging and file formats
  - file management
  - transfer systems
  - video and sound file formats
  - visual design principles
- outline vendor product directions in new media hardware and software
- describe visualisation and interpreting creative information, scripts (text) and images.
Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications network engineering field of work and include access to:

- work stations with appropriate software tools
- media capable PCs
- peripheral media equipment with HD capability
- LAN with media server
- internet access.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

</tr>
</tbody>
</table>
| 1.2 Identify safety hazards and notify appropriate personnel  
1.3 Obtain identified operating instructions, manuals, and hardware and software testing methodologies  
1.4 Obtain documentation on a range of IP devices that can be networked according to the open system interconnection (OSI) reference model in networking  
1.5 Obtain the range of required IP devices to be connected to the network and identify the IP-based telecommunications application that will be provided |  

2. Prepare for installation of IP device  
2.1 Select IP device for installation that can be integrated into existing network  
2.2 Obtain appropriate hardware, software, network protocols, peripheral devices and media types and connectors for configuration process  
2.3 Draw physical topology of the device connection to network and seek approval from appropriate personnel  
2.4 Obtain configuration details to start setting up device |
| 3. Configure and test IP device  
3.1 Determine network addressing scheme for mapping network connectivity and verify by calculations  
3.2 Assign a valid static IP address to device  
3.3 Use network commands to determine and verify the media access control (MAC) address, the IP address and network performance of the device  
3.4 Determine security threats and initiate security solutions to prevent security breaches according to enterprise procedures |  

4. Complete and document network installation  
4.1 Restore worksite to safe condition according to established safety procedures  
4.2 Record and store essential installation information according to enterprise procedures  
4.3 Notify appropriate person of task completion according to enterprise procedures |
| 5. Test wireless link  
5.1 Select types of wireless connections used in telecommunications  
5.2 Set up a wireless link to connect two wireless devices, following safe work practices  
5.3 Transmit data over the link and verify accuracy of received data |

Performance Evidence

Evidence of ability to:

- prepare for installation of internet protocol (IP) device connected to a network
- set up and configure IP device with simple addressing schemes
- test and secure device against security threats
- produce essential installation information
- follow work health and safety (WHS) workplace procedures and practices
- test wireless link.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe principles of computer networking and identify common types and protocols used
- describe IP-based telecommunications and importance of network configuration including:
  - IP addressing
  - IP devices
- identify and describe the purpose of common hardware and software used in IP communications
- identify and summarise organisational policies and procedures relating to installation and testing of internet protocol devices
- describe common procedures for basic testing and troubleshooting an IP device
- describe procedures for assigning networking protocols
- explain the purpose for internet security and describe common configurations
• describe various basic wireless technologies and their application in communications
• describe environmental factors requiring management on telecommunications equipment
• identify and describe WHS requirements and personal safety issues relating to installation and testing of internet protocol devices
• define open system interconnection (OSI) and explain various levels involved
• identify common types of peripheral devices used in network communications systems
• calculate using the binary system
• describe common computer commands used to verify and manage IP and network performance
• identify common security threats attributed to networks and specify solutions to combat these threats
• identify common wireless technologies used in communications.

**Assessment Conditions**

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications network engineering field of work and include access to:

• a small network with IP devices
• tools, equipment, materials and documentation required for installing and testing IP devices
• relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to install supporting infrastructure for telecommunications equipment and associated hardware equipment.

It applies to field officers, installation technicians or technical supervisors from carriers, contractors or other service providers who install switching, transmission and radio networks and the various transmission paths – including cable, optical fibre, radio, microwave and satellite.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the ICT Implementation Guide Companion Volume or the relevant regulator for details of licensing, legislative or certification requirements.

<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 2.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

Evidence of ability to:

- identify potential earthing locations, cable routes, cables trays, data cabinets, telecommunication enclosures and distributors
- build metal superstructure
- install protective earth and functional earth installations
- install power infrastructure
- supervise DC power distribution
- discuss and inform the customer on the progress of works and obtain sign off when completed.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify and describe cabling types, connectors and cabling structures
- recognise common customer telecommunications applications and related equipment
- demonstrate connections to carrier infrastructure or equipment
- recognise and describe current legislation relating to installation of telecommunications equipment and connection to carrier services
- describe environmental impact of cabling works, including options for green ICT installations
- describe network topologies, interface and interconnect solutions
- recognise and describe work health and safety (WHS) requirements for:
  - working in confined spaces
  - electrical safety
• working at heights
• lifting
• materials handling
• other physical hazards
• outline network and transmission equipment and their application
• describe power requirements and electrical safety as they apply to the network environment
• recognise warranty information for equipment supplies and contractor work guarantees.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the Telecommunications networks engineering field of work and include access to:

• a site where installation of supporting infrastructure may be conducted
• plant, tools and equipment currently used in industry
• relevant regulatory and equipment documentation that impact work activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to fix and reinstate equipment in switching, transmission and fixed and mobile radio networks; including the various transmission path components, such as cable, optical fibre, radio, microwave and satellite.

It applies to individuals working as field officers, technicians or technical supervisors for carriers, or other service providers. It also applies to work performed under direction of the Network Operations Centre (NOC), where control of the network is coordinated.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

Evidence of ability to perform the items listed on two occasions:

- rectify fault as instructed by Network Operations Centre (NOC), following work health and safety (WHS) requirements and anti-static precautions
- replace telecommunications hardware within service assurance guidelines according to enterprise procedures
- update fault records database according to enterprise procedures
- liaise with appropriate personnel in the NOC for information and reporting purposes.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements and performance criteria of this unit. This includes:

- application of direct current (DC) and alternating current (AC) electrical principles
- static electricity and its importance in testing and working with telecommunications equipment
- variety of possible symptoms and their impact on an operational network caused by faulty network elements
- test results and network element or system specifications
- operation and purpose of testing equipment
- common telecommunications hardware and network structures
- performance testing and fault-finding techniques of telecommunications networks
- systematic and logical fault-finding
- types of power sources used in telecommunications networks
- appropriate test equipment used to undertake fault finding procedures.

**Assessment Conditions**

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications networks engineering field of work and include access to:

- a suitable site to replace telecommunications network hardware
- a range of hardware currently used in industry
- a range of general and test equipment required for testing telecommunications network hardware.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for ICTTEN310 Remove and replace electronic circuit boards in carrier equipment

Modification History

<table>
<thead>
<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 3.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

Evidence of the ability to:

- interpret, discuss and confirm required work
- obtain documentation, equipment and hardware for required work
- notify relevant personnel of alarms that could be activated in the access and restoration of equipment cabinets and enclosures
- prepare a contingency plan to use if card replacement is unsuccessful, in consultation with relevant personnel
- remove and replace circuit boards as instructed by relevant authority, following work health and safety (WHS) requirements and anti-static precautions
- replace telecommunications hardware according to client practices
- follow required practices or contingency plan if hardware replacement is unsuccessful
- update fault records and complete required documentation
- restore site to required condition
- liaise with personnel from relevant authority for information and reporting purposes.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain application of direct current (DC) and alternating current (AC) electrical principles to the removal and replacement of circuit boards
- describe static electricity and its impact on electronic circuit boards in telecommunications equipment
- outline performance testing and fault finding techniques of telecommunications networks
- describe the purpose and operation of common testing equipment
• describe the behaviour of faulty network elements including symptoms and impact on network  
• summarise common telecommunications hardware and network structures  
• list types of power sources used in telecommunications networks.

**Assessment Conditions**

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications networks engineering field of work and include access to:

• a suitable site to replace telecommunications network hardware  
• a range of hardware currently used in industry  
• a range of general and test equipment required for testing telecommunications network hardware.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

Evidence of ability to:

- determine customer equipment requirements
- prepare detailed estimates, updated schematic drawings and specifications, including material and labour costs for telecommunications equipment installations
- negotiate with contractors on material availability and pricing for customer equipment installations
- complete detailed quotes for installations that allow for variations
- negotiate and confirm variations to quote and financial arrangements with customer.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe features of customer telecommunications equipment
- outline legislation, codes of practice and other formal agreements that impact the work activity
- explain processes and techniques required to prepare plans, estimate and quote for installations
- describe specific work health and safety (WHS) issues that may impact a quotation for customer equipment installation
- outline typical issues and challenges that occur when negotiating with customers.
Assessment Requirements for ICTEN402 Estimate and quote for customer telecommunications equipment installation

Date this document was generated: 19 January 2021

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications networks engineering field of work and include access to:

- sites on which estimates and quotes may be conducted
- relevant databases, licensing requirements and other site-related documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN403 Assign a transmission path

Modification History

<table>
<thead>
<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 2.0.</td>
</tr>
</tbody>
</table>

Application

This unit describes the skills and knowledge required to allocate channel capacity to a customer or customer group based on details provided in a service request.

It applies to individuals working as technical officers or engineers for private and public organisations. They combine technical skills with organisational skills to assess customer requirements and allocate a transmission medium to provide access to the customer.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Telecommunications Networks Engineering

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>

1. Collect data to evaluate capability of transmission path

1.1 Determine service details from service request
1.2 Use transmission medium plans to locate customer position relative to the access network provisioning
1.3 Evaluate existing transmission mediums in close proximity to assess their capability to deliver service to customer
1.4 Specify equipment to be used on the service from service request
<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.5 Specify line interface type to be used, according to enterprise guidelines</td>
<td></td>
</tr>
<tr>
<td>2. Allocate transmission medium for service</td>
<td></td>
</tr>
<tr>
<td>2.1 Select appropriate transmission medium to deliver service to customer’s premises</td>
<td></td>
</tr>
<tr>
<td>2.2 Record information about transmission medium between customer’s premises and exchange or network terminal point</td>
<td></td>
</tr>
<tr>
<td>2.3 Verify service delivery point interface at exchange or network terminal point is compatible with required system</td>
<td></td>
</tr>
<tr>
<td>2.4 Conduct appropriate allocation process to assign new services and send completed allocation information to appropriate field staff to verify physical allocation before providing service</td>
<td></td>
</tr>
<tr>
<td>3. Maintain transmission medium records</td>
<td></td>
</tr>
<tr>
<td>3.1 Advise relevant personnel of impending bearer shortages to facilitate future planning allocation</td>
<td></td>
</tr>
<tr>
<td>3.2 Update plans and databases to record all details</td>
<td></td>
</tr>
</tbody>
</table>

</table>

Performance Evidence

Evidence of ability to:

- assess transmission needs for a transmission path according to service request
- select suitable equipment to provide new services
- communicate effectively with stakeholders to meet customer needs
- assess future needs.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- review common customer telecommunications applications and related equipment
- investigate core networks using emerging and converging technologies
- explain current legislation relating to installation of telecommunications equipment and connection to carrier services
- evaluate customer access options and their technical support systems
- describe multiplexing principles and transmission hierarchies
- summarise network and transmission equipment
- outline network topologies, interfaces and interconnect solutions.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications networks engineering field of work and include access to:

- sites where transmission paths can be allocated
- a computer networking facility
- relevant regulatory and equipment documentation
- equipment currently used in industry.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
</tbody>
</table>

1. Configure wireless mesh nodes and wireless access points

1.1 Determine internet protocol (IP) addressing schemes from design plan, obtained from appropriate personnel

1.2 Confirm compatibility of factory installed firmware in wireless routers with mesh routing requirements – otherwise install upgrade firmware

1.3 Configure wireless router settings and wireless fidelity (WiFi) for wireless access point settings for inclusion in mesh network

1.4 Connect mesh node and access node back-to-back via a straight
<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 2. Connect separate mesh networks via backbone | 2.1 Configure routing software on mesh and backbone nodes to enable mesh traffic to reach backbone  
| | 2.2 Connect mesh node and backbone node back-to-back via a straight LAN cable  
| | 2.3 Configure gateway server and gateway node and add required services to network |
| 3. Test connectivity within mesh network | 3.1 Assemble all wireless mesh routers with configuration sheets attached, and power up routers  
| | 3.2 Connect PC to a wireless mesh router and confirm an IP address is provided automatically by dynamic host configuration protocol (DHCP)  
| | 3.3 Confirm connectivity to mesh nodes and the gateway by pinging individual IP addresses, and rectify faulty nodes if required |
| 4. Test network connectivity via wireless backbone | 4.1 Install mesh nodes according to design plan  
| | 4.2 Install and align directional antennas on wireless backbone path according to installation instructions and work health and safety (WHS) procedures  
| | 4.3 Confirm connectivity between mesh clusters at either end of wireless backbone |
| 5. Clean up worksite and complete administrative work | 5.1 Remove waste from worksite, dispose of according to environmental requirements and restore work area to customer's satisfaction  
| | 5.2 Update documentation records and make recommendations according to enterprise policy  
| | 5.3 Notify customer of job completion and obtain sign-off |

Performance Evidence

Evidence of ability to:
- configure wireless mesh nodes
- install wireless mesh nodes, access point nodes and gateway
- test nodes for connectivity.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:
- explain requirements for 802.11 wireless protocols
- describe allocation of internet protocol (IP) addresses and subnet masks
- summarise antenna gain and polarisation
- outline cable loss
- explain calculation of effective isotropic radiated power (EIRP)
- explain calculation of line of site radio range
- explain decibels and related units
- outline network topologies
- describe radio frequency (RF) bands
- summarise routing protocols
- outline transmission control protocols(TCP)-IP describe wireless networking hardware, access points, wireless routers and gateway.
Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications networks engineering field of work and include access to:

- sites on which configuring and installing wireless mesh network may be conducted
- technical documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

Evidence of ability to:

- identify customer’s needs
- develop plans and drawings to give effect to planned changes to systems and equipment
- alter system and equipment including physical and programming change according to work health and safety (WHS) regulations and relevant standards
- identify, conduct and interpret tests appropriate to the change
- notify customer and relevant personnel of progress.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline legislation, codes of practice and other formal agreements that impact changes to customer equipment and systems
- identify manufacturer’s requirements for safe operation of equipment
- define network addressing
- consider specific WHS requirements relating to customer premises’ equipment
- establish types of customer premises’ equipment (CPE) that may require upgrade
- describe typical issues and challenges that occur on site
- identify vendor products.
Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications network engineering field of work and include access to:

- systems and equipment to effect changes
- appropriate manuals and specifications
- relevant enterprise policies.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Navigate the world of work 1.1-1.3, 2.1, 2.2, 3.4, 3.5 • Takes personal responsibility for following explicit and implicit policies, procedures and legislative requirements relevant to own work context

Interact with others 1.4, 1.7, 3.3 • Selects appropriate form, channel and mode of communication when liaising with customers and personnel on technical and operational matters

Get the work done 1.4, 1.5, 1.7, 2.1, 2.2, 2.4, 3.3 • Considers a range of complex factors when planning and completing tasks to ensure work is completed accurately and safely
• Applies problem-solving processes to determine solutions for less predictable problems
• Recognises and anticipates a range of problems, actively looking for early warning signs and implementing contingency plans when appropriate
• Uses digital technologies and systems to complete required tasks

<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 2.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

Evidence of ability to:

- develop and implement an effective cut over plan
- identify and organise resources including customer resources and access as necessary to complete cut over
- conduct cut over and relevant tests according to work health and safety (WHS) and environmental requirements
- interpret test results to identify and resolve problems
- finalise administrative tasks and initiate training.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline cut over procedures
- define customer premises’ equipment CPE
- illustrate features and operating requirements of test equipment
- outline information required to operate equipment according to a test specification
- outline legislation, codes of practice and other formal agreements that impact the work activity
- explain manufacturer’s requirements for safe operation of equipment
- describe specific work health and safety (WHS) requirements relating to activity and site conditions
- explain test methods and performance requirements
- describe typical issues and challenges that occur on site.
Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications network engineering field of work and include access to:

- a site where cut over can be conducted
- plant, tools and equipment currently used in the industry
- relevant regulatory and equipment documentation impacting work activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to upgrade telecommunications equipment and software in service provider networks and customer premises, and may apply to switching, transmission, radio, and computer networks using cable, optical fibre, radio, microwave and satellite transmission.

It applies to individuals who supervise installation and maintenance teams involved in new installations or maintenance, upgrades and cut overs of emerging technologies in IP-based telecommunications networks.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Telecommunications Networks Engineering

Performance Evidence

Evidence of ability to:
- analyse implications of hardware and software upgrade on remainder of the network
- identify components of the upgrade process
- prepare an upgrade plan and organise system back-up
- run test plan and analyse test results
- implement upgrade according to work health and safety requirements
- monitor progress of upgrade periodically using both vendor- and enterprise-specific monitoring tools
- implement contingency plan when required, and analyse alarms and alarm conditions
- escalate unresolved problems and review customer complaints to assess impact of upgrade
- make necessary arrangements with the customer for site access and training.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:
- explain alarms used to monitor operation of computer software systems
- explain use of back-up systems
- illustrate common upgrades and post-upgrade routines
- describe escalation and outage procedures
- investigate network management systems
- outline telecommunications networks and equipment
- identify telecommunications monitoring tools
- describe telecommunications test equipment and test set-ups
- describe telecommunications wiring practices.
Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications networks engineering field of work and include access to:

- a site where upgrade may be conducted
- equipment, software, test and monitoring equipment currently used in industry
- relevant regulatory, equipment, enterprise and vendor documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to commission an electronic system with applications, including cellular telemetry, voice over IP (VoIP), radio frequency identification (RFID), supervisory control and data acquisition (SCADA) networks and SCADA security, telephony, data, video, IP television (IPTV) and multimedia.

It applies to individuals who may work as field officers and technicians employed by telecommunications carriers, service providers or contractors.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Telecommunications Networks Engineering

Performance Evidence

Evidence of ability to:

- effectively negotiate arrangements for commissioning
- accurately configure electronic equipment and system parameters
- commission electronic system according to specifications and following work health and safety (WHS) requirements
- deal with faults and problems and provide solutions
- identify potential security threats and vulnerability.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain acceptance testing
- formulate a commissioning procedure and commissioning tests for an electronic system
- identify electrical and optical properties to be measured
- evaluate an extensive range of networking equipment
- outline legislation and licensing associated with installation of telecommunications equipment
- outline network operation procedures
- explain power requirements and electrical safety
- explain setup and operation of test equipment applicable to a wide range of measurements
- outline transmission type and signals that may be encountered.
Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications networks engineering field of work and include access to:

- sites on which installation and commissioning procedures may be conducted
- relevant regulatory and equipment documentation
- testing equipment currently used in industry.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

Evidence of ability to:

- effectively identify different faults
- establish context and background information, and determine and rank likely causes of fault
- obtain suitable tools and equipment and apply simple checks, tests and fault-finding methodology
- apply recommended means to rectify fault
- comply with all related work health and safety (WHS) requirements and work practices
- ensure customer and relevant personnel are informed of progress.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- evaluate various fault-finding techniques for different networking situations
- specify and evaluate test equipment used for fault finding
- specify safety standards required when testing different types of systems
- outline common network faults and their rectification
- explain the value of specific regulatory and other documentation required when testing and reporting on test results.
Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications networks engineering field of work and include access to:

- an appropriate site
- test and related equipment currently used in industry
- relevant technical specifications and requirements
- regulatory and site-related documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

</tr>
<tr>
<td></td>
<td>1.2 Assess likely impact to client and network of the alarm</td>
</tr>
<tr>
<td></td>
<td>1.3 Notify the network operating centre (NOC) and other relevant parties of alarm condition</td>
</tr>
<tr>
<td></td>
<td>1.4 Prioritise actioning of alarms according to existing service level</td>
</tr>
</tbody>
</table>
### ELEMENT | PERFORMANCE CRITERIA
---|---
| agreement obligations and enterprise policy | 1.5 Assess impact of any outage issues and major customers affected
|  | 1.6 Provide information to and seek advice from other relevant parties in identifying the problem and cause of the alarm condition
|  | 1.7 Diagnose likely cause of alarm condition using established methodical strategies
|  | 1.8 Escalate diagnosis to higher level fault clearance unit according to enterprise policy where necessary

#### 2. Arrange rectification of network problem

| 2.1 Implement enterprise policy relating to outages as required | 2.2 Rectify network problems when appropriate capability and time constraints can be met
| 2.3 Enact escalation procedures according to enterprise policy | 2.4 Make all alarm data and diagnosis available to other areas with responsibility and jurisdiction for network restoration
| 2.5 Provide clear and concise instructions to field staff to facilitate all repair efforts | 2.6 Monitor progress of the network repair effort
| 2.7 Apply enterprise policy in relation to alarms requiring no further action | 3. Complete alarm clearance tasks

| 3.1 Reset alarms following network restoration | 3.2 Notify all relevant parties of problem rectification
| 3.3 Undertake appropriate cause and effect studies to prevent re-occurrence of problem | 3.4 Complete administrative tasks and recommend any changes required by the enterprise quality assurance system

- Uses clear, specific and industry-related terminology to produce and update workplace documentation
- Articulates requirements clearly and concisely to provide advice and guidance to others and to liaise with technical personnel working across different levels and in different contexts
- Uses well-developed listening and questioning techniques to confirm understanding
- Uses mathematical formulae to interpret numerical data
- Actively identifies requirements of important communication exchanges, selecting appropriate channels, format, tone and content to suit purpose and audience
- Understands key principles and concepts underpinning the design and operation of digital systems and tools, and applies these when troubleshooting existing technology and when seeking to understand the potential of new technology
- Works logically and systematically to monitor, analyse and action job priorities
- Implements actions according to a predetermined plan, making adjustments if necessary
- Makes decisions quickly and intuitively in familiar situations requiring immediate attention, drawing on past experience to identify key variables and determine the best course of action
- Uses analytical processes to decide on a course of action, establishing criteria for deciding between options and seeking input and advice from others when necessary

Assessment Requirements for ICTTEN411 Monitor, analyse and action telecommunications network alarms

Modification History

<table>
<thead>
<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 2.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

Evidence of ability to:

- monitor and analyse a range of network alarms including use of fault history and ranking of likely causes
- ensure customers and relevant personnel are appropriately notified of network status
- undertake and monitor network repairs
- plan and coordinate actioning of network alarms.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- define purpose of escalation policies and procedures for network alarm systems
- describe installed telecommunications systems and equipment
- explain principles and use of path protection
- outline key components of a telecommunications network
- evaluate commonly used test equipment and test procedures
- outline typical problems and challenges that arise in Network Operations Centres (NOCs) and in the field
- describe typical systems and procedures for monitoring alarms.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications networks engineering field of work and include access to:
• sites on which local and remote monitoring and analysis of network alarms may be conducted
• manufacturer’s technical documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN412 Undertake routine maintenance of the telecommunications network

Modification History

<table>
<thead>
<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 2.0.</td>
</tr>
</tbody>
</table>

Application

This unit describes the skills and knowledge required to perform routine maintenance of network plant and equipment in various telecommunications switching and transmission environments, including wide area networks (WAN), virtual private networks (VPN) and core networks, using wireless, optical, broadband and Next Generation Networking (NGN) technologies.

It applies to individuals working as field officers or technicians from carriers, contractors and other service providers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Telecommunications Networks Engineering

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
<tr>
<td>1. Plan routine maintenance</td>
<td>1.1 Obtain relevant legislation, codes, regulations and standards for the given work 1.2 Determine network elements requiring maintenance, and maintenance details from manufacturer's equipment manual</td>
</tr>
</tbody>
</table>
ELEMENT | PERFORMANCE CRITERIA
--- | ---
1. Notify the Network Operations Centre (NOC) of proposed maintenance schedule and maintenance details to minimise disruption to the network
1.4 Assess potential impact of proposed maintenance on customers and network, and plan for possible outage or deferral of maintenance
1.5 Obtain necessary tools, test equipment and resources to undertake maintenance
1.6 Produce a written schedule of planned routine maintenance
1.7 Negotiate schedules and access with the customer, and find out where equipment to be maintained is located on customer premises
1.8 Ascertain and record network stability to determine network performance

2. Undertake planned maintenance
2.1 Conduct routine maintenance tasks following work health and safety (WHS) and environmental requirements, and record results
2.2 Escalate unresolved faults according to established enterprise procedure
2.3 Test network equipment for required performance following routine maintenance
2.4 Check operation of associated network equipment to ensure the maintenance did not generate other faults or alarms

3. Report on routine maintenance and document results
3.1 Notify all relevant parties of results of the routine maintenance
3.2 Update routine maintenance logs and record other additional work for inclusion in the next cycle of maintenance
3.3 Complete administrative tasks and recommend any changes as required by the enterprise quality assurance system
3.4 Notify NOC of job completion and obtain sign-off

**Foundation Skills**

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 2.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

Evidence of ability to:

- plan a detailed routine maintenance schedule
- conduct and record routine maintenance activities, procedures and techniques
- test network equipment and analyse results
- carry out works in compliance with site risk controls, work health and safety (WHS), environmental, quality and communication requirements.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe computer systems required to facilitate a routine maintenance check of a telecommunications network
- explain the operation of network alarm systems
- describe the function and purpose of network management systems
- outline key components of a telecommunications network equipment and architecture, and their function including:
  - switching
  - mobile communications
  - satellite
  - transmission
  - antennas
  - radio frequency
  - basic telephony
• identify and specify telecommunications test equipment, test configurations, and analysis of results for a range of telecommunications network problems
• describe WHS risks associated with routine maintenance tasks
• explain telecommunications wiring practices
• explain the use of a scheduler
• describe the importance of customer relations when dealing with clients, in particular, obligations and expectations of the technician
• describe the operation, application and characteristics of digital logic integrated circuits and installation packages
• outline the importance of enterprise policies and procedures for:
  • escalation of issues
  • enterprise information systems

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications networks engineering field of work and include access to:

• sites on which routine maintenance may be conducted
• maintenance tools and test instruments currently used in industry
• relevant regulatory and equipment documentation impacting maintenance activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 2.0.</td>
</tr>
</tbody>
</table>

Application

This unit describes the skills and knowledge required to undertake fault diagnostic and repair strategies for working with remote network equipment.

It applies to individuals working as field technicians, remotely accessing the network and the Network Operation Centre (NOC) which controls the coordination of remote network activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Telecommunications Networks Engineering

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
<tr>
<td>1. Diagnose remote faults</td>
<td>1.1 Install remote access software on notebook computers</td>
</tr>
<tr>
<td></td>
<td>1.2 Verify network fault by analysing relevant data</td>
</tr>
<tr>
<td></td>
<td>1.3 Investigate context and background information relevant to the network fault</td>
</tr>
<tr>
<td></td>
<td>1.4 Source appropriate documentation and test equipment relevant to</td>
</tr>
</tbody>
</table>
## ELEMENT PERFORMANCE CRITERIA

The network fault

1.5 Conduct appropriate tests and analyse results  
1.6 Diagnose network faults using established methodical strategies in a timely fashion without disruption to other services

### 2. Plan remote repair

2.1 Assess involvement level of the NOC in planning the repair  
2.2 Plan for any necessary outages and notify customers  
2.3 Develop repair strategies to clear fault  
2.4 Develop a strategy for rerouting customer traffic if applicable  
2.5 Advise on-site personnel of required work and clearly communicate the repair strategy

### 3. Repair fault

3.1 Initiate remote repair strategies to reconfigure or repair remote equipment in a manner safe to self, fellow workers, network equipment and public  
3.2 Inform customers of repair progress where fault has caused degradation of service or outage  
3.3 Escalate unresolved faults according to established enterprise procedure  
3.4 Test remote repair for required performance  
3.5 Assess ongoing network performance and the likelihood of further problems

### 4. Report remote diagnosis and repair and document results

4.1 Notify all relevant parties of results of remote diagnosis and repair  
4.2 Record details relating to any outage according to enterprise procedures  
4.3 Complete all relevant documentation and recommend any changes required by the enterprise quality assurance system

---

### Foundation Skills

</tbody>
</table>

Performance Evidence

Evidence of ability to:

- communicate effectively with customers and other personnel, using appropriate technical and non-technical language to ensure understanding
- diagnose and identify faults methodically, using fault history and recognition of likely causes
- repair telecommunication equipment according to manufacturer’s or enterprise procedures, applying related work health and safety (WHS) requirements and work practices
- test equipment following repairs and put back into commission
- communicate with personnel and customers during and upon completion of works.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe anti-static procedures required to protect equipment under repair
- outline enterprise policies and procedures
- summarise fault diagnosis techniques
- describe general fault-finding techniques and test equipment
- outline work health and safety (WHS) requirements and work practices
- identify commonly used and emerging products
- explain safety requirements and standards
- summarise telecommunications network and equipment fault types and rectification
- describe telecommunications network and equipment types
- provide a detailed explanation of test equipment.
Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications networks engineering field of work and include access to:

- sites on which diagnosis and repair of communication equipment may be conducted
- test equipment currently used in industry
- manufacturer’s technical documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

<tr>
<td>Writing</td>
<td>1.1, 2.4, 2.5, 4.2, 4.3</td>
<td>• Uses clear, specific and industry-related terminology to produce plans and update workplace documentation</td>
</tr>
</tbody>
</table>
Oral Communication 4.3
- Articulates clearly and concisely to provide advice and guidance to customers and personnel
- Uses well-developed listening and questioning techniques to confirm understanding

Navigate the world of work 1.1, 4.1
- Takes personal responsibility for adherence to organisational procedures and protocols, and legal and regulatory responsibilities relevant to own work

Get the work done 1.1, 1.2, 2.1-2.3, 2.5, 3.1-3.6
- Understands key principles and concepts underpinning design and operation of digital systems and tools, and applies these when troubleshooting existing technology
- Works logically and systematically to monitor, analyse and action job priorities
- Implements actions according to a predetermined plan, making adjustments if necessary
- Makes decisions quickly and intuitively in familiar situations requiring immediate attention, drawing on past experience to identify key variables and determine the best course of action
- Uses analytical processes to resolve a predictable range of network problems, establishing criteria for deciding between options and seeking input and advice from others when escalating difficulties

<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 2.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

Evidence of ability to:
- create and follow implementation plans for internet protocol television (IPTV)
- install relevant network hardware and software
- configure and test IPTV network according to specified guidelines
- integrate IPTV to existing network
- produce appropriate documentation
- implement secure network.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:
- explain competing video delivery over broadband networks
- outline current industry-accepted hardware and software products
- summarise IPTV configurations
- clarify IPTV protocols and encoding techniques
- summarise networking technologies, incorporating substantial depth in network operating systems and IP networks
- outline transmission technologies and protocols
- summarise video compression formats
- describe the common issue that affects home network performance.
Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications networks engineering field of work and include access to:

- a site where installation and configuration of an IPTV network may be conducted
- equipment currently used in industry
- information on different protocols
- relevant technical information, legislative requirements and other site and project-related documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to select network elements to meet client business specifications, ensure interoperability within the network, apply network topologies, protocols and security issues, and troubleshoot when required.

It applies to individuals who carry out installation, maintenance and upgrade of information and communications technology (ICT) networks, and are employed by telecommunications or information technology networking provisioning companies.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Telecommunications Networks Engineering

Elements and Performance Criteria

<table>

<td>Liaise with appropriate person to obtain approval for the plans, including security clearance and timing</td>
</tr>
</tbody>
</table>

2. Install and configure IP network

2.1 | Install and configure server hardware and software according to organisational and industry standards, following plans |
2.2 | Install and configure computer, other hardware and software, according to organisational and industry standards and plans |
2.3 | Install and configure other software required for the network to operate with security and integrity according to the plan |

3. Test and reconfigure IP network

3.1 | Test installed software and hardware, utilising available technical tools, to ensure all components are functioning as expected |
3.2 | Test the network to ensure it is functioning according to specifications |
3.3 | Resolve problems identified in the modified network |

4. Complete documentation and clean worksite

4.1 | Complete hardware and asset recording document in line with organisational requirements |
4.2 | Document installation, boot-up and configuration procedures according to organisational requirements |
4.3 | Tabulate test results and complete all user reports |
4.4 | Complete client report and notify of network status |
4.5 | Clean up and restore worksite to client’s satisfaction |
4.6 | Secure sign-off from appropriate person |

Foundation Skills

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

Performance Evidence

Evidence of ability to:

- plan and prepare for the IP network installation task
- select network elements to meet client’s business specifications
- install, configure and test network elements to ensure interoperability within the network
- apply network topologies, protocols and security issues
- apply solutions to defined network problems.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain client’s business domain, business function and organisation
- describe current industry-accepted hardware and software products
- outline data and voice transmission technologies and protocols
- summarise networking technologies, incorporating substantial depth in some areas
- explain router-based network architectures.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications networks engineering field of work and include access to:

- a site where network installation may be conducted
- field measurement equipment currently used in industry
- network design documentation
- equipment specifications
- network components
- hardware and software
- a live network
- organisational guidelines
- networked (LAN) computers
- a wide area network (WAN) service point of presence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 2.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

Evidence of ability to:

- plan and prepare for router installation task
- select router to meet client’s business specifications
- install and test the router ensuring interoperability within the network, and applying router principles and technologies
- report on status of completed installation and seek sign-off and customer satisfaction
- use routers
- apply solutions to defined routing problems.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify and outline codes of practice for computing
- explain the effect of a router on delimiting broadcast traffic and on conserving bandwidth
- explain how dynamic routing algorithms or protocols create and maintain routing tables
- explain how to provide the network with redundant paths for reliability, and the way routers manage these paths
- summarise the following aspects of routers including:
  - basic router commands
  - configuration
  - clock rate
  - password protection of router
  - routing protocol
  - dynamic routing
• firewalls
• functions
• routing protocols and how they operate
• tables
• describe router-based network architectures
• explain the use of routing tables in intelligent packet routing and switching.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications networks engineering field of work and include access to:

• a site where router installation may be conducted
• field measurement equipment currently used in industry
• relevant router specifications
• technical requirements for a network
• router
• cabling
• networked (LAN) computers
• wide area network (WAN) service point of presence
• relevant equipment and organisational documentation.

Assessors must satisfy NVR/AQTF assessor requirements.

</table>

Application

This unit describes the skills and knowledge required for installation of either a new logistical or security network or upgrade of an existing system.

It applies to individuals who integrate new and converging functionalities to information and communications technology (ICT) networks. They are employed by telecommunications and information technology networking provisioning companies specialising in radio frequency identification (RFID) technology.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Telecommunications Networks Engineering

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
<tr>
<td>1. Prepare to install specified RFID system</td>
<td>1.1 Prepare for given work according to relevant legislation, work health and safety (WHS) regulations, codes, and standards</td>

<tr>
<td></td>
<td>1.2 Arrange site access according to required procedure</td>
</tr>
<tr>
<td></td>
<td>1.3 Choose the most suitable RFID system based on specifications and in consultation with appropriate person</td>
</tr>
</tbody>
</table>
## ELEMENT | PERFORMANCE CRITERIA
--- | ---
1.4 | Evaluate options for equipment installation siting and antenna positioning to include effects of electromagnetic interference and shielding
1.5 | Investigate causes of interference with RFID systems
1.6 | Specify network element requirements for the installation and any training requirements for clients
1.7 | Create a deployment plan including down times and advise the user group
1.8 | Obtain all components and devices required for the RFID system

2.1 | Install interrogators or readers according to given plan
2.2 | Install tags and document correct procedures for locating and orienting tags
2.3 | Install and undertake network configuration activities using relevant operating system and application upgrades to integrate RFID system into the overall network
2.4 | Troubleshoot problems between interrogators or readers, tags and networks, including tuning for optimum performance and rectify any faults

3.1 | Test system installation according to design specifications and standards including optimum placement of tags, data transmission completeness and record outcomes
3.2 | Carry out any changes
3.3 | Validate changes or additions against specifications
3.4 | Document the test results

4.1 | Complete all documentation for users according to the design and customer requirements
4.2 | Complete report and notify client of network status and standards applying to the installation
4.3 | Clean up and restore worksite to client’s satisfaction
4.4 | Secure sign-off from appropriate person

Assessment Requirements for ICTTEN418 Install and test a radio frequency identification system

Modification History

<table>
<thead>
<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 2.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

Evidence of ability to:

- plan installation
- use basic research skills for adapting radio frequency identification (RFID) technologies to specified plan and design
- implement and verify RFID operations
- implement RFID architecture across a secure environment
- encode RFID tags and attach to items
- integrate RFID information into business applications
- configure network with IP addressing
- cable and test RFID network
- create technical and user documentation.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain the client business domain, business function and organisation
- describe common network cable types and connectors
- summarise compatibility issues and resolution procedures
- describe configuration of internet protocol (IP) networks
- describe current industry-accepted hardware and software products used in RFID systems
- explain desktop applications and operating systems as required
- summarise enterprise communication and training systems in relation to training and advising staff involved in deployment
- summarise network topologies
• outline RFID technologies including:
  • network operating systems
  • protocols
  • interrogators and sensors
  • wireless technologies
  • cabling standards.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications networks engineering field of work and include access to:

• a site where RFID installation may be conducted
• field measurement equipment currently used in industry
• relevant network element specifications
• technical requirements for an RFID network
• cabling
• networked (LAN) computers
• workstations
• RFID diagnostic software
• wide area network (WAN) service point of presence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 2.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

Evidence of ability to:

- determine customer networking requirements
- configure routers and switches using hierarchical addressing over virtual local area networks (VLANs) to meet network link requirements
- enable and control access to network services and applications across the network
- diagnose and rectify network hardware and device configuration faults
- document configuration information, fault-finding history and remediation action.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- summarise access control lists
- give examples of characteristics of a typical enterprise including:
  - features and applications
  - work health and safety (WHS) procedures
  - record keeping procedures
  - switching and routing protocols and strategies:
    - hierarchical addressing
    - multilayer switching
    - routing protocols
    - VLAN routing
- summarise implementation of enterprise wide area networks (WAN) links
- explain network diagnostic and troubleshooting techniques
- describe network modelling
• specify how to configure and activate network access and security measures
• describe the process of configuring switches and routers to enable local area networks (LAN) and WAN links
• describe the connection process for enterprise networks using WAN services and applications
• describe the purpose of maintaining enterprise network documentation
• summarise the process and importance of troubleshooting network faults and implementing recovery actions
• describe the use of a hierarchical internet protocol (IP) network address scheme
• select and use tools and equipment to analyse enterprise networks.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications networks engineering field of work and include access to:

• a network facility and workstations
• operating instructions, installation documents and manuals
• hardware and software testing tools currently used in industry.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to determine customer needs, create appropriate workplace documentation, connect and organise an internetwork according to design specifications, resolving technical problems as they arise.

It applies to individuals who design and install internet protocol (IP) networks including enterprise internetwork technicians, network administrators and network support personnel for large, medium and small office home office (SOHO) enterprises.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Telecommunications Networks Engineering

Assessment Requirements for ICTTEN420 Design, install and configure an internetwork

Modification History

<table>
<thead>
<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 2.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

Evidence of ability to:

- determine customer requirements
- design internetwork that uses advanced routing and addressing techniques
- install internetwork according to design specification
- configure network devices to meet design functionality
- document internetwork design, installation and configuration.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe enterprise work health and safety (WHS) procedures
- summarise open systems interconnect (OSI) layered communication model
- outline network requirements including:
  - applications
  - lifecycle
  - manageability
  - quality of service
- clarify network design concepts including:
  - business requirements
  - network topologies
  - physical and financial constraints
  - security
  - wired or wireless options
• describe tool and equipment use
• outline troubleshooting components of this work including:
  • impact of network failure
  • maintenance
  • troubleshooting methodologies
• analyse impact of applications on traffic flow in the network
• describe network design methodologies used to design networks providing a range of services and applications found in larger networks
• define technical requirements, constraints and manageability issues for a given customer network
• identify and describe common tools and equipment used in internet work.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications networks engineering field of work and include access to:

• a site where design and installation of an internetwork network may be conducted
• tools, equipment and materials currently used in industry
• relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to use software tools, equipment, software and protocols to configure and troubleshoot network routers.

It applies to individuals who work cooperatively with others, interpret technical information accurately and work proficiently with information communication technology (ICT). Installers of internet protocol (IP), small and medium sized enterprise (SME) network technicians, network administrators and network support personnel complete this type of work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

Evidence of ability to:

- plan network routing requirements to meet design specification
- configure advanced protocols on network routers
- manage network addressing
- troubleshoot network
- install network security.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain distance vector routing protocols RIP v1 and v2
- outline dynamic routing
- summarise enterprise work health and safety (WHS) procedures
- outline hybrid routing protocols enhanced interior gateway routing protocol (EIGRP)
- explain link-state routing protocols open shortest path first (OSPF)
- explain routing and packet forwarding
- describe routing tables
- summarise scalable routing strategies variable length subnet masking (VSLM) and classless inter-domain routing (CIDR)
- outline security protocols using access lists
- clarify static routing
- explain the use of software tools and equipment.
Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications networks engineering field of work and include access to:

- a network facility and workstations
- tools, equipment and materials currently used in industry
- relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to perform network switch configuration and troubleshooting. This unit applies to large networks involving wireless local area networks (WLANs), virtual local area networks (VLANs), interVLAN routing, remote access management and operating system management of network devices.

It applies to individuals who work cooperatively with others, interpret technical information accurately, and work proficiently with information communication technology (ICT). Installers of internet protocol (IP), enterprise network technicians, network administrators and network support personnel complete this type of work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

Evidence of ability to:
- build and configure a routed network
- configure a virtual local area networks (VLAN) on a given network topology
- configure VLAN trunking and spanning tree protocols
- establish VLANs over a wireless network
- design and deploy remote access and network security.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:
- outline enterprise work health and safety (WHS) procedures
- explain interVLAN routing
- describe spanning tree protocol
- clarify switch and remote network security management
- describe the tool and equipment required, and their correct usage
- outline troubleshooting procedures
- summarise VLAN trunking protocol
- explain wireless local area network (LAN) set-up and access configuration.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications networks engineering field of work and include access to:
Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

### Application

This unit describes the skills and knowledge required to use appropriate tools, equipment, software and protocols to connect and support a wide area network (WAN).

It applies to individuals who work cooperatively with others, interpret technical information accurately and work proficiently with information communication technology (ICT). Installers of internet protocol (IP) networks, IP network technicians, network administrators and network support personnel complete this type of work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Unit Sector

Telecommunications – Telecommunications Networks Engineering

Assessment Requirements for ICTTEN423 Install and maintain a wide area network

Modification History

<table>
<thead>
<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 2.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

Evidence of ability to:

- plan installation of a wide area network (WAN) accessible network
- select and apply WAN link protocols
- configure internet protocol (IP) addressing across WAN
- troubleshoot WAN communication issues
- install WAN access security measures.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline enterprise work health and safety (WHS) procedures
- explain IP addressing services and network scaling
- summarise methods of securing network services including access control lists
- explain Open Systems Interconnection (OSI) layered communication model
- outline requirements to provide teleworker network services
- describe correct usage of relevant tools and equipment
- outline WAN link protocols including:
  - frame relay
  - high-level data link control (HDLC)
  - link access procedure, balanced (LAPB)
  - point-to-point protocol (PPP)
- summarise WAN troubleshooting methodologies and analysis and diagnostic tools.
Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications networks engineering field of work and include access to:

- a site where installation and maintenance of a WAN may be conducted
- tools, equipment and materials currently used in industry
- relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to design and connect a multi-protocol label switching (MPLS) network for internet protocol TV (IPTV). This includes secure core and access networks for the service provider.

It applies to individuals who interpret technical information accurately and work proficiently with information communication technology (ICT). Technical staff installing an internet protocol (IP) service provider network for delivery of emerging technologies for IPTV using multicast (broadcast) and unicast video on demand (VoD) streaming complete this work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Telecommunications Networks Engineering

Elements and Performance Criteria

Performance Evidence

Evidence of ability to:
- install relevant network hardware and software
- configure and test internet protocol television (IPTV) network according to specified guidelines
- configure label switch routers (LSR) in an multi-protocol label switching (MPLS) network
- build and configure content delivery network (CDN) architecture network
- implement secure network.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:
- explain competing video delivery over broadband networks
- summarise current industry-accepted hardware and software products
- outline networking technologies incorporating detailed knowledge of network operating systems and IP networks
- describe transmission technologies and protocols including:
  - border gateway protocol (BGP)
  - enhanced interior gateway routing protocol (EIGRP)
  - flash
  - hypertext transfer protocol (HTTP)
  - internet group management protocol (IGMP)
  - open shortest path first (OSPF)
  - real time streaming protocol (RTSP)
  - routing information protocol (RIP)
Assessment Requirements for ICTEN424 Install and configure internet protocol TV in a service provider network

- web cache communication protocol (WCCP) operations.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications networks engineering field of work and include access to:

- a site where installation and configuration of an IPTV network may be conducted
- equipment currently used in industry
- information on different protocols
- relevant technical information, legislative requirements and other site and project-related documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 2.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

Evidence of ability to:
- determine job requirements by referring to documentation and through discussion with appropriate people
- design a smart technology network that uses advanced networking techniques
- install a smart technology network according to design specification
- configure network devices to meet design functionality
- document smart technology network design, installation and configuration.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:
- outline enterprise work health and safety (WHS) procedures
- summarise network design concepts including:
  - business requirements
  - network topologies
  - physical and financial constraints
  - security
  - wired or wireless options
- explain network requirements:
  - applications
  - lifecycle
  - manageability
  - quality of service
• summarise open systems interconnect (OSI) layered communication model

• summarise the following areas of troubleshooting including:
  • impact of network failure
  • maintenance troubleshooting
  • different problem-solving methodologies.

Assessment Conditions
Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications networks engineering field of work and include access to:

• a site where design and installation of a smart technology network may be conducted

• tools, equipment and materials currently used in industry

• relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for ICTTEN426 Design network projects

Modification History

<table>
<thead>
<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 2.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

Evidence of ability to:

- identify the most suitable network technology to be deployed for a given requirement
- apply established planning, design or management techniques for project deployment
- produce a design, which is compliant to the techniques, rules and standards of the deployed network.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline the following features of a telecommunications network:
  - architecture and geographical categorisations
  - information sources
  - technology and equipment
  - capacity and capability management
  - capacity limitation of various platforms
  - commercial considerations of access network deployment
  - compatibility issues of technology and equipment
  - currency of technology and equipment use
  - enterprise deployment rules and rational
  - exemption process criteria
  - major equipment components of a modern access architecture
  - monitoring techniques to manage the access network
  - network topologies
- product capability and availability allowable within an access network
- telecommunications access networks issues and challenges
- telecommunications legislation, acts and regulations
- identify and describe key features of common telecommunications networks.

**Assessment Conditions**

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications networks engineering field of work and include access to:

- network planning, design and other site-related documentation
- equipment specifications
- live network of training facilities with simulated network organisational guidelines
- relevant standards and practices documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to implement design processes, develop solutions, and merge technological development and product implementation in access, building and core networks.

It applies to individuals working as technical staff on projects within a carrier network for carrier, commercial or industrial installations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Telecommunications Networks Engineering

Elements and Performance Criteria

</tbody>
</table>
| 2. Identify existing infrastructure | 2.1 Confirm details of installation with stakeholders  
2.2 Verify site conditions and building construction  
2.3 Locate and record existing facilities and systems  
2.4 Confirm installation locations and identify barriers to planned network extension  
2.5 Integrate existing network and floor plans into documentation where available |
| 3. Integrate existing infrastructure into design brief | 3.1 Review existing plans, drawings and databases against the design brief  
3.2 Calculate capacity of existing facilities against proposed usage to ensure appropriate design decisions for new installation  
3.3 Incorporate all data into new installation design  
3.4 Mark up plans and prepare report on new installation design  
3.5 Develop contingency plans for anticipated constraints |
| 4. Review design for compliance with standards and legislation | 4.1 Examine standards, practices and requirements for locating telecommunications infrastructure in the access network  
4.2 Review installation design to ensure compliance with requirements of federal, state and local regulations, relevant legislation, codes and standards  
4.3 Initiate any special studies or investigations necessary for completion of the project |
| 5. Complete required reports and documentation | 5.1 Complete required documents promptly and according to planning parameters  
5.2 Obtain carrier confirmation from documented requirements  
5.3 Distribute design documentation to stakeholders promptly  
5.4 Obtain project plan sign-off from carrier |

**Foundation Skills**

Assessment Requirements for ICTTEN427 Conduct site surveys to identify carrier installation requirements

Modification History

<table>
<thead>
<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 2.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

Evidence of ability to:

- evaluate existing infrastructure on an installation site
- integrate existing infrastructure into an installation design
- develop design specifications for an installation project
- engage stakeholders and carriers in design approval process.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify and explain the impact of relevant legislation, codes of practice and other formal agreements that impact communications work
- describe access networks in Australia and state how it influences development of projects
- identify costs associated with carrier installations and determine estimates and operating budgets for an installation
- identify network performance information required to produce a network design
- specify current, new and emerging technologies to be considered for a communications design, including barriers that may have an impact
- define project management and its purpose and explain associated databases and project management software programs used
- explain economic and political influences and trends that impact communications installations for public and commercial enterprises
- describe a network plan and its components
- explain the purpose of having authorities and delegations required when costing and estimating financials for projects
• explain the impact of local and international economic conditions on telecommunications installations and infrastructure, and typical challenges and limits facing technology today and on future needs
• describe the process and documentation required to collate and write project briefs, reports and project charters
• identify specific work health and safety requirements relating to site conditions and activities, including manufacturer's requirements for safe operation of equipment to be incorporated into project documentation.

Assessment Conditions
Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications networks engineering field of work and include access to:

• a network planning area, systems and deployment rules and standards
• relevant databases, licensing requirements and other site related procedures
• a location and scenario suitable to conduct a site survey.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

</tr>
</tbody>
</table>

**Application**

This unit describes the skills and knowledge required to prepare detailed estimates and quotes, including updating schematic drawings and specifications for carrier telecommunications equipment installations.

It applies to technical staff who provide estimates and quotes to clients for indoor and outdoor installation within a carrier network for commercial or industrial communications installations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

**Unit Sector**

Telecommunications – Telecommunications Networks Engineering

**Elements and Performance Criteria**

<table>
<thead>
<tr>

Performance Evidence

Evidence of ability to:

- prepare detailed estimates
- update schematic drawings and specifications for telecommunications equipment installations including:
  - materials
  - labour costs
- negotiate material availability and pricing for carrier equipment and network installations with contractors
- document detailed quotes for installations that allow for changes and variations
- prepare and confirm quote and financial arrangements with carrier.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- compare and contrast features of carrier telecommunications equipment
- identify and summarise application of legislation, codes of practice and other formal agreements that impact the work activity
- analyse and document the manufacturer's requirements for safe operation of equipment
- describe processes and techniques required to prepare plans, estimate and quote for installations
- identify and apply specific work health and safety (WHS) requirements relating to design and site conditions
- identify and remedy typical issues and challenges of dealing with carriers
- explore allocations to be included in the design specifications and quotation
• determine common contingencies to consider in a specification or quotation.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications networks engineering field of work and include access to:

• special purpose tools, equipment and materials
• sites on which estimates and quotes may be conducted
• relevant databases and licensing requirements
• site-related documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to design supporting infrastructure for telecommunications network installations; for carrier grade switching, transmission and access equipment and associated media, power and monitoring equipment and alarm systems, fibre distribution hubs (FDHs), and remote power feeds.

It applies to field officers, design technicians or technical supervisors from carriers, contractors or other service providers working with switching, transmission and radio networks and the various transmission paths including cable, optical fibre, radio, microwave and satellite.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the ICT Implementation Guide Companion Volume or the relevant regulator for details of licensing, legislative or certification requirements.

Unit Sector

Telecommunications – Telecommunications Networks Engineering

Elements and Performance Criteria

<td>PERFORMANCE CRITERIA</td>
</tr>
<tr>
<td>-------------------------------</td>
<td>--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
</tbody>
</table>
| 1.2 Notify client to arrange site access and obtain plans and specifications | 1.3 Conduct a site survey to verify infrastructure design requirements can be met  
1.4 Identify site hazards and notify appropriate personnel to make site safe  
1.5 Develop a design activity schedule to minimise workplace disruption and according to relevant regulation and standards  
1.6 Discuss material supplies, safety equipment, resources, tools and test equipment with the construction group so they are available when required for installation for safe work practice |
| 2. Design network equipment infrastructure | 2.1 Prepare infrastructure designs according to electrical safety and work health and safety (WHS) and environmental requirements after consultation with operational staff  
2.2 Design metal superstructure to house equipment according to manufacturer’s specifications  
2.3 Design cable pathways, including cable distribution frames and support materials, according to specifications |
| 3. Design power infrastructure | 3.1 Design power supply and earthing according to specifications and standard electrical practices  
3.2 Design battery and rectifier equipment for project according to manufacturer’s and WHS requirements  
3.3 Design high Ohmeric distribution (HOD) and associated power distribution systems |
| 4. Design DC power distribution | 4.1 Design power distribution work to meet electrical safety requirements and certifications  
4.2 Monitor electrical work to ensure compliance with installation plan  
4.3 Identify and rectify faults where possible or escalate according to enterprise policy |
| 5. Restore site and complete documentation | 5.1 Attach infrastructure labels and designations according to enterprise requirements  
5.2 Complete inspection sheets and declare asset ready for next stage of installation using appropriate sign off documentation  
5.3 Clean up and prepare site in readiness for next installation phase  
5.4 Notify carrier and obtain sign-off |
## Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Performance Evidence

Evidence of ability to:

- determine potential earthing locations, cable routes, cables trays, data cabinets, telecommunication enclosures, distributors
- design metal superstructure
- design protective earth and functional earth installations
- design power infrastructure
- design, monitor and rectify faults in DC power distribution
- design locations and facilities for access network infrastructure.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- evaluate capabilities and performance of cabling types, connectors and cabling structures for given design parameters
- explore common carrier telecommunications applications and related equipment and infrastructure suited to a design
- determine the most appropriate connections to carrier infrastructure or equipment
- identify and recognise compliance requirements of current legislation relating to installation of telecommunications equipment and connection to carrier services
- evaluate environmental impacts including options for green information and communications technology (ICT) installations for network topologies, interfaces and interconnect solutions
- define work health and safety (WHS) requirements for the design to ensure a safe installation plan including:
  - confined spaces
• electrical safety
• working at heights
• manual handling and lifting
• materials handling
• physical hazards
• evaluate and summarise network and transmission supplies and equipment required for a design
• determine power requirements and electrical safety for a specific design
• specify warranty information for equipment supplies and contractor work guarantees
• devise an appropriate survey to determine design criteria for a given site
• explore and evaluate the nature of tools and equipment required for installation of the design
• consider power distribution work requirements and the impact on the design.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications networks engineering field of work and include access to:

• special purpose tools, equipment and materials
• site where installation of supporting infrastructure may be conducted
• plant, tools and equipment currently used in industry
• relevant regulatory and equipment documentation that impact work activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 2.0.</td>
</tr>
</tbody>
</table>

Application

This unit describes the performance outcomes, skills and knowledge required to design a dense wavelength division multiplexing (DWDM) system in optical networks.

It applies to telecommunications technical staff who design systems for installation of long haul or metropolitan area DWDM equipment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Telecommunications Networks Engineering

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
<tr>
<td>1. Obtain access to worksite safely and with authority from site owner</td>
<td>1.1 Obtain and review DWDM installation brief</td>
</tr>
<tr>
<td></td>
<td>1.2 Determine site access requirements</td>
</tr>
<tr>
<td></td>
<td>1.3 Notify parties if necessary to arrange site access and discuss DWDM installation requirements</td>
</tr>
<tr>
<td></td>
<td>1.4 Assess site-specific safety requirements and enterprise work health and safety (WHS) processes and procedures</td>
</tr>
</tbody>
</table>
### ELEMENT

2. Prepare to install design DWDM units

2.1 Survey location for DWDM installation and scope installation parameters

2.2 Identify suitable location for DWDM equipment racks

2.3 Determine number and location of shelves and cards in racks

2.4 Determine capacity of optical distribution frames (ODFs), patching and network management system (NMS) connections for the installation

2.5 Determine power feed options

3. Design DWDM units and associated cabling

3.1 Design DWDM racks, including locations and layout

3.2 Examine standards, practices and requirements for designing DWDM systems

3.3 Design DWDM shelf and card positions from customer and manufacturer documents

3.4 Design supporting patch panel and jumpering schemes

3.5 Include appropriate ancillary equipment and connections in design specifications

3.6 Prepare detailed design drawings for racks, shelves and cards from manufacturer and carrier documents

3.7 Prepare detailed design drawings for patching, jumpering and power feeds from manufacturer and carrier documents

4. Review design for compliance with standards and legislation

4.1 Confirm DWDM installation design meets the brief

4.2 Review installation design to ensure compliance with requirements of federal, state and local regulations, relevant legislation, codes and standards

---

### Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

<table>
<thead>
<tr>
<th>Skill</th>
<th>Performance Criteria</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Reading</td>
<td>1.1, 1.4, 3.2, 3.3, 3.6, 3.7, 4.1, 4.2</td>
<td>• Critically analyses complex documentation from a variety of sources and consolidates information relating to specific criteria to determine design</td>
</tr>
</tbody>
</table>
| Writing                                      | 1.3, 3.1, 3.3-3.7 | • Prepares and produces dynamic material for a specific audience using clear and detailed language to convey explicit information, requirements and recommendations  
• Produces plans using industry-relevant terminology and recognised industry symbols |
| Oral Communication                          | 1.3 | • Uses collaborative and inclusive techniques, including active listening and questioning and reading of verbal and non-verbal signals, to convey and clarify information and confirm understanding |
| Numeracy                                    | 2.3-2.5, 3.1, 3.3, 3.4 | • Uses highly-developed numeracy skills to interpret complex information, perform calculations and record outcomes for designs |
| Navigate the world of work                 | 1.4, 3.2, 4.2 | • Works independently or with others to make decisions to achieve organisation outcomes  
• Takes full responsibility for following policies, procedures and legislative requirements, and identifies organisational implications of new legislation or regulation |
| Interact with others                       | 1.3, 4.1 | • Implements strategies for a diverse range of colleagues and clients to build rapport and foster strong relationships |
| Get the work done                           | 1.1, 1.2, 1.4, 2.1-2.5, 3.1, 3.3, 3.6, 3.7, 4.1 | • Accepts responsibility for planning and sequencing complex tasks and workload, negotiating key aspects with others taking into account capabilities, efficiencies and effectiveness  
• Makes critical decisions quickly and intuitively in complex situations, taking into consideration a range of variables  
• Applies systematic and analytical decision-making processes for complex and non-routine situations  
• Responds intuitively to problems requiring immediate resolution, drawing on past experiences to focus on the cause of a problem  
• Uses and investigates new digital technologies and applications to manage and manipulate data and communicate effectively with others, in a secure and stable digital environment |

Performance Evidence

Evidence of ability to:

- design a dense wavelength division multiplexing (DWDM) system and associated cabling according to plans and specifications
- design DWDM power and ground connections
- complete and confirm installation design report.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- recognise principles of operation of a DWDM
- recognise electrostatic discharge and apply work practices to minimise damage to equipment
- recognise and describe the function and types of optical fibre connectors and characteristics of optical fibre
- describe specific work health and safety (WHS) requirements that impact the safe inspection of optical connectors
- recognise and apply principles of safe measurement of optical power for laser transmission systems
- describe tools and ancillary equipment commonly used for DWDM systems
- recognise and describe common power wiring faults.
Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications networks engineering field of work and include access to:

- special purpose tools, equipment and materials
- a suitable site for DWDM equipment installation
- tools and equipment required for installation
- a range of optical fibres to suit the installation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to undertake local area network (LAN) switch installation, configuration and testing in field work. It also applies to switching protocols and diagnostics required for integrating new and converging functionalities to the network.

It applies to individuals, employed by telecommunications companies and information communications technology (ICT) networking provisioning companies, who carry out installation, maintenance and upgrade of ICT networks.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Telecommunications Networks Engineering

Elements and Performance Criteria

| 2. Install and configure the network switch |
| 2.1 Assemble, rack mount and connect switch and peripherals according to manufacturer’s requirements |
| 2.2 Connect user to access points using cable that meets appropriate standard |
| 2.3 Establish a valid network connection with other network devices |
| 2.4 Configure a network internet protocol (IP) address for the switch |
| 2.5 Install or configure simple network management protocol (SNMP) agent software, on each switch, to collect network traffic data for the management information base (MIB) from that segment of the network and relay it to the management console |
| 2.6 Install and configure SNMP management console software on a computer designated to be the network manager’s main console, to collect network traffic data from the switch acting as agents |
| 2.7 Manually configure user access ports of the switch for speed and full or half-duplex operation |

| 3. Test the network switch and reconfigure the network |
| 3.1 Test the switch and other network devices according to manufacturer’s requirements and organisational guidelines |
| 3.2 Test to ensure connectivity across the network |
| 3.3 Modify the network to verify SNMP management software |
| 3.4 Make adjustments to the network, depending on test and troubleshooting results |

| 4. Complete documentation and clean worksite |
| 4.1 Tabulate test results and complete all user reports |
| 4.2 Complete report and notify client of network status |
| 4.3 Clean up and restore worksite to client’s satisfaction |
| 4.4 Secure sign-off from appropriate person |

<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 2.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

Evidence of ability to:
- plan and prepare for the local area network (LAN) switch installation task
- select a LAN switch to meet client business specifications
- install switches without the network losing connectivity or failing
- install and test switch that ensures interoperability within the network
- use a range of switch configurations
- apply solutions to a variety of switch-related problems
- report on status of completed installation
- seek sign-off from customer.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:
- describe advantages and disadvantages of switches over hubs
- identify and evaluate the impact of pertinent sections of the Australian Computer Society Code of Ethics in relation to network switches
- describe common network cable types and connectors
- summarise common network topologies
- explain differences between standard and intelligent (i.e. configurable) switches, and between switches and hubs
- outline the importance of client documentation prepared when installing networks
- explain how to provide the network with redundant paths for reliability and how routers and switches manage these paths.
Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications networks engineering field of work and include access to:

- a site where switch installation can be conducted
- field measurement equipment currently used in industry
- relevant switch specifications, technical requirements for a network, switch, cabling, networked (LAN) computers, workstations, servers and a wide area network (WAN) service point of presence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

Evidence of ability to:

- analyse server and network operational issues
- apply user applications and relate to user needs when configuring a server
- create technical and user documentation
- install and configure server
- test server and reconfigure network
- troubleshoot server and network failures.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the Australian Computer Society Code of Ethics
- describe the following aspects of a common network:
  - cable types and connectors
  - topologies
- explain compatibility issues and resolution procedures
- summarise desktop applications and operating systems
- outline documentation requirements for networks
- describe typical enterprise communication and training systems for staff involved in deployment
- outline features of:
  - current network operating systems (NOS)
  - current server applications compatibility issues and resolution procedures
- outline implementation and configuration of servers
• explain system back-up procedures.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications networks engineering field of work and include access to:

• a site where server installation may be conducted
• relevant server specifications
• cabling
• networked local area network (LAN) computers
• server diagnostic software
• switch
• technical requirements for a network
• wide area network (WAN) service point of presence
• workstations
• relevant regulatory documentation impacting installation activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to ensure, and maintain, the security of a dynamic commercial website.

It applies to individuals working as website developers responsible for security of dynamic websites, who are proficient communicators and can analyse technical data capably and with efficiency.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Web

Elements and Performance Criteria

Performance Evidence

Evidence of the ability to:

- determine the client security framework, and its requirements
- identify any potential security threats to a website, and document the risk and performance benchmarks
- develop and implement, strategies to secure a dynamic website.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- summarise the Australian Computer Society Code of Ethics
- explain a client business domain, its structure, function and organisation, including the organisational issues surrounding security
- identify and outline the legislation, regulations, and codes of practice pertinent to website information, including:
  - copyright
  - intellectual property
  - privacy
  - ethics
- outline current industry-accepted hardware and software products
- describe desktop applications and operating systems (OS), as they relate to website security
- explain the functions and features of:
  - automated intrusion detection software
  - authentication and access control
- common stored account payment systems
- cryptography
- common gateway interface (CGI) scripts
- generic secure protocols
- stored-value payment systems
- explain the implications of network address translation (NAT), related to:
  - securing internal, internet protocol (IP) addresses
  - buffer overruns and stack smashing
  - operating system deficiencies
  - the protocol stack for internet communications
  - physical web server security, particularly remote
- describe the advantages, and disadvantages, of using a range of security features
- identify and describe, host security threats.

**Assessment Conditions**

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the website technologies field of work, and include access to:

- a dynamic website
- a security plan
- the user requirements
- all relevant legislation, standards and organisational requirements.

Assessors must satisfy NVR/AQTF assessor requirements.

Application

This unit describes the skills and knowledge required to produce server-side scripts for dynamic web pages using a range of relevant features from different languages.

It applies to individuals working as web designers who apply a wide range of knowledge and skills across different information and communications technology (ICT) environments to support organisations that require broad ICT support.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Web

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
<tr>
<td>1. Analyse the requirements for web documents requiring server-side dynamic interaction</td>
<td>1.1 Review and assess user requirements with user to determine the necessary web document 1.2 Determine and document dynamic functionality of web document to meet user requirements 1.3 Determine appropriate language based on required dynamic functionality 1.4 Finalise web document requirements</td>
</tr>
</tbody>
</table>
## 2. Design server-side scripts

2.1 Design web document and server-side code to interact with an external data source
2.2 Design web document and server-side code to allow administrator to insert, update, and delete entries to external data source
2.3 Implement security features in web document based on user requirements

## 3. Produce the web documents

3.1 Write extensible hypertext markup language (XHTML) in line with XHTML standards, to define web page structure
3.2 Write server-side scripts in line with XHTML standards to enable customised page content generation
3.3 Upload images to web-hosted database to enable dynamic retrieval for web page

## 4. Test the scripts and debug

4.1 Test web document and rectify issues to meet user requirements
4.2 Complete test results documentation and submit it to superior for discussion and acceptance

## 5. Set up security

5.1 Determine and implement permissions to prevent error messages displaying to the public
5.2 Configure server software to minimise potential database attacks

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements and performance criteria of this unit; including evidence of the ability to:

- Create a dynamic web page according to one set of user requirements
- Use server-side scripting to retrieve information from a web-hosted database in two different instances
- Analyse three language options and the associated advantages and disadvantages based on web document requirements to select most appropriate language
- Configure one webserver to deliver the website using HTTPS
- Create one script for each of the following:
  - inserting, updating, and deleting data from a web server database
  - implementing security features
  - uploading and retrieving images
  - managing sessions and creating secure logins
- Test web document and undertake corrective actions to meet requirements

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements and performance criteria of this unit. This includes:

- Server-side technologies and at least three web scripting languages and associated advantages and disadvantages
- Server-side web analysis and design parameters
- XHTML standards
- Testing tools and processes and associated advantages and disadvantages
- Control structures and object-oriented programming
- Web-programming concepts including:
- the hypertext transfer protocol (HTTP) and HTTP Secure (HTTPS)
- stateless programming
- session management
- authentication and web security
- database vulnerabilities and preventative software configuration and programming practices
- Organisational procedures to document test results

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in an ICT working environment or workplace. This includes access to:
- Web-hosted database
- Server with software for configuration
- User requirements relating to web documents
- Software development environment
- XHTML standards
- Individual users as well as superior in the organisation

Assessors of this unit must satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements and performance criteria of this unit; including evidence of the ability to:

- Interpret and implement one set of user requirements, including the ability to
  - select markup language according to requirements
  - use a markup language without the automated generation of code
  - customise website style and layout according to user requirements
  - create consistent style and format using CSS across multiple documents on the web page
  - identify testing approach and test cases based on user requirements
  - develop a website style and format using cascading style sheets (CSS)
- Test website in at least two common browsers and take corrective action according to test results

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements and performance criteria of this unit. This includes:

- Markup languages and their associated standards, advantages, and disadvantages
- Standard web and CSS design principles
- Application of the following to CSS:
  - hypertext mark-up language (HTML)
  - extensible hypertext mark-up language (XHTML)
  - standards for design
- Hypertext transfer protocol (HTTP) and HTTP Secure (HTTPS)
- Testing tools and processes and associated advantages and disadvantages
- Troubleshooting processes relating to CSS and websites
- Features and limitations of common web browsers
• Organisational procedures to document test results

Assessment Conditions

Skills must be demonstrated in a workplace or simulated environment where conditions are typical of those in an ICT working environment or workplace. This includes, but is not limited to:

• Software package
• Computer with internet connection
• User requirements relating to website
• Common web browsers to allow testing of website
• Individual users

Assessors of this unit must satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

Evidence of ability to:

- locate, interpret and apply relevant information, standards and specifications for working safely on roofs
- apply safety requirements throughout the work sequence, including the use of personal protective equipment
- provide for erection, maintenance and dismantling of the fall and perimeter protection requirements for the site
- carry out a risk assessment ensuring:
  - correct identification of risks and safety requirements
  - correct selection and use of appropriate processes, tools and equipment
  - completion of all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - open communication and the ability to work effectively and safely with others.

Note: As a minimum, given the plans and specifications for the roof working area of a corner, extending at least 4 metres in either direction and greater than 1.8 m high, incorporating harnesses and harness fixing points for safe personal and stores access to the roof, stores and equipment locations

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the purpose of job safety analysis (JSA) and safe work method statements
- identify the various hazards associated with working on roofs
- identify levels of responsibility when operating in a hazardous situation
- specify workplace procedures relating to working on roofs
• describe the hierarchy of control in a workplace health and safety environment in the context of:
  • hazards
  • risk
  • control
• list and describe common workplace practices that impact health and safety
• explain ‘duty of care’ and its relevance to workplace health and safety
• list and describe the use of safety personal protective equipment (PPE) and equipment used for working on roofs
• describe safe lifting methods
• explain reporting methods for safe work practices
• explain the nature of work undertaken on roofs
• list and apply processes of providing for safe working practices
• identify and comply with relevant statutory and regulatory authority requirements related to working safely on roofs
• identify and use roof safety equipment and systems and considerations to facilitate working safely on roofs
• apply SI system of measurement for measurement.

**Assessment Conditions**

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the Telecommunications – Occupational Health and Safety field of work and include access to:

• site on roof where operations may be conducted
• induction procedure and requirements
• relevant specifications and work instructions
• tools and equipment appropriate to applying safe work practices
• support materials appropriate to activity
• workplace instructions relating to safe working practices and addressing hazards and emergencies
• relevant regulations, standards specifications and manuals, including industry related systems information.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the performance outcomes, skills and knowledge required to use organisational risk control procedures when working with a risk of exposure to radio frequency (RF) electromagnetic radiation (EMR) hazards.

The unit applies to site maintenance staff, technicians and installers who install or maintain equipment at installations that are sources of RF EMR.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the ICT Implementation Guide Companion Volume or the relevant regulator for details of licensing, legislative or certification requirements.

Unit Sector

Telecommunications – work health and safety

**Performance Evidence**

Evidence of the ability to:

- identify the effect of radio frequency (RF) electromagnetic radiation (EMR) on the human body
- locate, interpret and apply relevant information, standards and specifications for working safely with RF EMR
- identify organisational controls for exposure to RF EMR, including lock-out procedures and the use of personal protective equipment
- identify risks and safety requirements and record in a job safety analysis (JSA) sheet or safe work method statement (SWMS) or similar record sheet
- select and use appropriate processes, tools and equipment to minimise RF EMR risk
- comply with regulations, standards and organisational procedures and processes
- communicate and work effectively and safely with others.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

**Knowledge Evidence**

To complete the unit requirements safely and effectively, the individual must:

- describe the characteristics of RF EMR and sources of RF EMR, and state their effect on the human body
- describe the nature of work undertaken close to sources of RF EMR and identify the associated risks and hazards
- identify and summarise the regulations and standards that govern the generation of RF and EMR
- identify the relevant statutory and regulatory requirements relating to working safely with RF EMR
- describe the organisational control processes for managing exposure to RF EMR.
Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications – work health and safety field of work and include access to:

- induction procedures and requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- relevant regulations, standards, specifications and manuals, including industry related systems information.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to follow safe working practices and environmental policy in the management of a telecommunications workplace.

It applies to telecommunications staff working under supervision in a technical environment and includes school based workers, entry-level workers, trainees and apprentices, and field officers deploying broadband access networks using optical technologies and other work on live systems.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the ICT Implementation Guide Companion Volume or the relevant regulator for details of licensing, legislative or certification requirements.

Unit Sector

Telecommunications – work health and safety

Performance Evidence

Evidence of the ability to:

- identify and apply the work health and safety (WHS) legislative and safety requirements for construction work
- identify the range of common construction hazards and procedures for the assessment of risk and application of the hierarchy of control
- apply WHS communication processes, information and documentation
- contribute to the WHS committees and support representatives
- recognise the common safety signs and symbols
- identify and apply procedures for reporting hazards, incidents and injuries
- identify and apply the general procedures for responding to incidents and emergencies, including evacuation, first aid, fire safety equipment and personal protective equipment
- recognise and report hazards to designated personnel
- follow workplace procedures necessary to control risks in the workplace
- recognise the safe handling procedures for optical fibres and laser sources.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:
• describe the relevant Commonwealth, state and territory WHS legislation, regulations, codes of practice, and industry standards and guidance notes relevant to own workplace, role and responsibilities
• describe the differences between Commonwealth, state and territory WHS legislation and regulations
• identify and describe the common construction hazards
• identify different types of asbestos containing materials (ACM) (via photographs) and common sources of asbestos containing materials (ACM) found in the work environment and describe the controls required to mitigate risk
• identify the general construction work activities that require licences, tickets or certificates of competency
• identify and discuss the information and documentation used to maintain and inform on safe work practices
• explain the purpose of environmental control processes for the following:
  • air quality management
  • disposal and handling of hazardous and dangerous substances
  • noise pollution
  • safe disposal of fibre offcuts
  • stormwater and materials spillage
  • waste disposal
• describe the WHS responsibilities and rights of duty holders and workplace parties under environmental and WHS legislation, regulations and codes of practice, including:
  • persons in control of construction work and/or projects
  • employers and self-employed persons
  • persons in control of a business or undertaking (PCBU) and officers
  • supervisors
  • employees and workers
  • designers
  • inspectors
  • manufacturers and suppliers
• describe how individuals engage and participate in WHS activities in the workplace
• list the safety implications of working with optical fibres and equipment including:
  • hazards relating to handling of optical fibre and laser light source in the workplace
  • injuries that may occur:
    • damage to retina from lasers
    • damage to lungs from inhalation of fibre offcuts and particles
    • needle stick injury from fibres and offcuts
  • laser warning signs and labels relating to optical fibre components and equipment
• safety requirements when handling and working with:
  • devices
  • laser light sources
  • optical fibre connectors
• optical fibres
• patchcords

• state the personal responsibilities in complying with safe work practices including those relating to:
  • housekeeping
  • identification of hazards
  • preventing bullying or harassment
  • smoking
  • use of amenities
  • use of drugs and alcohol

• discuss the principles of risk management (including hazard identification, risk assessment and control) for construction work

• state ways in which WHS is managed in the workplace, and activities required under WHS legislation including:
  • hazard identification
  • hazards that exist in the workplace
  • WHS instruction
  • preferred order of ways to control risks (known as the hierarchy of control)
  • risk assessment and controls
  • role of WHS committees and representatives
  • training and provision of WHS information
  • types of common personal protective equipment and fire safety equipment
  • types of WHS information and documentation

• describe the workplace environmental and WHS procedures relevant to various types of work being undertaken, including procedures for:
  • designated personnel responsible for WHS
  • employee and worker participation in WHS management
  • general first aid response requirements
  • general workers compensation and injury management

• describe the procedure for recognising, reporting and responding to WHS for:
  • accidents
  • dangerous occurrences
  • emergencies
  • hazards
  • incidents
  • injuries
  • fires
  • near misses
  • evacuation procedures

• identify and describe the function of WHS communications processes within an organisation
• discuss the purpose and process for completing job safety analysis or safe work method statements
• describe the meaning of WHS symbols found on signs and labels in the workplace
• describe the work operations to control risks
• explain the process of traffic control for a single vehicle
• describe the risks associated with confined spaces and harmful gasses, and explain the appropriate responses.

Assessment Conditions
Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications – work health and safety field of work and include access to:

• relevant WHS legislation, regulations and codes of practice
• WHS implementation resources, such as sample forms, signs and procedures
• enterprise WHS policies and procedures
• personal protective equipment
• first aid equipment
• fire safety equipment
• relevant work areas for identification of hazards and control measures
• optic fibre cabling and equipment.

Note: Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Refer to the ICT Implementation Guide Companion Volume for recommended assessor details.

Application

This unit describes the skills and knowledge required to organise resources for a telecommunications project in a client environment, including preparing and evaluating tenders, organising equipment and labour resources, and client training.

It applies to individuals who may be involved in assessing installation requirements, planning and performing installations, testing installed equipment and fault finding. It involves a degree of autonomy and may include limited supervision of others.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – workplace effectiveness

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>Elements</th>

<tr>
<td>1. Organise for third party supply</td>
<td>1.1 Develop specifications and company criteria for material supply and purchasing, and include in appropriate tender documents</td>
</tr>
<tr>
<td></td>
<td>1.2 Prepare tender documents according to company policy</td>
</tr>
<tr>
<td></td>
<td>1.3 Identify likely material suppliers and invite to tender and supply</td>
</tr>
</tbody>
</table>
1.4 Evaluate and accept tenders as appropriate to company policy
1.5 Negotiate price and conditions of purchase to company guidelines and satisfaction

2. Organise supply of equipment and material
2.1 Develop specifications detailing types and quantities of equipment and material
2.2 Notify supplier to deliver equipment and material to designated location within specified timeframe

3. Organise client training
3.1 Ascertain detail of training required from client and establish timeframe for client training
3.2 Determine and organise resources to undertake level of training required

4. Assess and organise labour resources
4.1 Produce estimate of total labour resources required, using standard installation times and allowing for contingencies
4.2 Determine required labour skills to meet resource allocation for planned activities
4.3 Establish workforce with required numbers and skills of staff to meet demand
4.4 Notify workforce of job requirements including work health and safety (WHS) considerations, and organise priorities to ensure agreed timeframe with client is met

### Foundation Skills

Performance Evidence

Evidence of the ability to:

- accurately develop tenders for customer premises equipment (CPE) products, equipment, peripherals and associated equipment
- assess tenders and provide a clear report outlining all options, including recommendations with supporting reasons
- organise supply of equipment and material to designated location to meet specified timeframe
- identify labour needs and organise labour to meet installation schedules
- determine client training needs.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline appropriate engineering and design practices and procedures
- identify appropriate tools, equipment and materials required to do the work
- identify enterprise permit procedures and recording procedures
- identify the work health and safety (WHS) practices
- outline work planning and organisation theory
- identify relevant plant and equipment operations
- identify relevant statutory requirements
- explain time management techniques.
Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – workplace effectiveness field of work and include access to:

- a site for organising resources
- enterprise and site-related documentation
- regulatory, supplier and equipment documentation than impacts on activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to organise material supplies for a telecommunications project, including preparing and evaluating tenders from third party suppliers.

It applies to individuals who may be involved in assessing installation requirements, planning and performing installations, testing installed equipment and fault finding. It involves a degree of autonomy and may include limited supervision of others.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – workplace effectiveness

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>Elements</th>

<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
</tbody>
</table>
| 1. Determine material needs | 1.1 Assess material needs from design plans and comply with relevant legislation, codes, regulations and standards  
1.2 Check availability of required materials within existing stock  
1.3 Assess availability of material from preferred suppliers |
2. Prepare and evaluate tenders

- 2.1 Develop specifications and criteria for material supply and purchasing
- 2.2 Prepare tender documents and invite quotes from material suppliers according to enterprise policy
- 2.3 Evaluate tenders and ensure they are detailed in accordance with enterprise procedures

3. Organise delivery of equipment and material to site

- 3.1 Select types and quantities of equipment available from existing stocks and pack for distribution
- 3.2 Arrange delivery of equipment and material within specified timeframe
- 3.3 Organise third party supply according to agreed timeframe and supply agreements

4. Undertake administrative tasks

- 4.1 Record warranty details and distribute to relevant parties as required
- 4.2 Issue relevant financial documents according to enterprise policy
- 4.3 Record materials received in asset register according to enterprise procedures
- 4.4 Complete administrative requirements according to enterprise procedures

**Foundation Skills**

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

<table>
<thead>
<tr>
<th>Skill</th>
<th>Performance Criteria</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Reading</td>
<td>1.1-1.3, 2.3</td>
<td>• Recognises and interprets written and visual text to determine key information and specific requirements and responsibilities</td>
</tr>
</tbody>
</table>
| Writing              | 2.1, 2.2, 3.2, 3.3, 4.1, 4.4 | • Develops material for a specific audience using clear and detailed language to convey explicit information, requirements and recommendations  
• Employs the expected writing and formatting conventions to meet the expectations of a specific audience |
| Oral Communication   | 2.2, 3.2, 3.3, 4.1   | • Participates in a verbal exchange of ideas and elicits the view and opinions of others by listening and questioning |
Numeracy

1.1, 2.2, 2.3, 3.1, 4.2, 4.3

- Uses mathematical skills to estimate materials and resource requirements

Navigate the world of work

1.1, 4.2-4.4

- Takes personal responsibility for adherence to relevant legislation, codes, regulations and standards, and enterprise policies and procedures

Get the work done

1.1-1.3, 2.1-2.3, 3.1-3.3

- Plans purchasing and supply of materials and equipment, accepting stated goals and aiming to achieve them efficiently
- Implements actions in relation to supply and delivery as per plan, making slight adjustments if necessary, and addressing some unexpected issues
- Uses a formal decision making process, setting or clarifying goals, gathering information, and identifying and evaluating several choices against a limited set of criteria in relation to assessing needs, selecting materials and equipment, and evaluating tenders

Performance Evidence

Evidence of the ability to:
- accurately apply the tender process according to both enterprise and legislative requirements
- comply with all related work health and safety (WHS) requirements and work practices
- determine material needs:
  - from design plans
  - from relevant databases
  - beyond current holdings
- organise supply of equipment and material to site
- record materials received on asset register.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:
- identify appropriate engineering and design practices and procedures
- outline enterprise permit and recording procedures
- describe WHS practices
- outline work planning and organisational theory
- describe relevant plant and equipment operations
- identify relevant statutory requirements
- identify time management techniques
- identify tools, equipment and materials required to do the work.
Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – workplace effectiveness field of work and include access to:

- a site for ordering materials
- relevant regulatory, enterprise, supplier and equipment documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

Evidence of the ability to:

- identify resource requirements from plans, equipment and system manuals, specifications and relevant enterprise policy
- plan and provision to meet key dates and milestones for:
  - appropriately skilled labour
  - volume and type of material
- monitor work progress, and coordinate and adjust resource requirements to meet client needs and cost parameters.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify appropriate engineering and design practices and procedures
- identify enterprise permit procedures and enterprise recording procedures
- identify relevant industrial awards and work health and safety (WHS) practices
- outline relevant plant and equipment operations
- identify relevant statutory requirements
- describe team communication processes and deadline setting
- explain time management techniques
- identify tools, equipment and materials required to do the work
- outline work planning and organisational theory.
Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – workplace effectiveness field of work and include access to:

- a suitable telecommunications operations site
- current equipment
- relevant enterprise and site related documentation
- relevant regulatory, supplier and equipment documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTWOR304 Manage spare parts

Modification History

<table>
<thead>
<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 2.0.</td>
</tr>
</tbody>
</table>

Application

This unit describes the skills and knowledge required to manage spare parts in all areas of telecommunications and includes maintenance of a database, stock control and dispatch.

It applies to individuals who may be involved in assessing installation requirements, planning and performing installations, testing installed equipment and fault finding. It involves a degree of autonomy and may include limited supervision of others.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the ICT Implementation Guide Companion Volume or the relevant regulator for details of licensing, legislative or certification requirements.

Unit Sector

Telecommunications – workplace effectiveness

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>Elements</th>
<th>Performance Criteria</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
<tr>
<td>1. Manage receipt and dispatch of spare parts</td>
<td>1.1 Obtain relevant legislation, codes, regulations and standards, and follow work health and safety (WHS) and environmental requirements for given work</td>
</tr>
<tr>
<td></td>
<td>1.2 Identify hazards and make worksite safe according to relevant safety legislation and company work practices, and use personal</td>
</tr>
</tbody>
</table>
1. Unload, unpack and store incoming spare parts using appropriate methods and enterprise procedures, and check off delivered items on documentation.

1.4 Package, label and relocate outgoing spare parts ready for dispatch using enterprise procedures.

1.5 Update parts database to reflect current spare parts movements and holdings, following each dispatch or delivery, and complete any other administrative task required by enterprise.

2. Store spare parts

2.1 Label spare parts using appropriate identification scheme and place in predefined storage locations.

2.2 Observe antistatic precautions when handling equipment susceptible to damage by electrostatic discharge.

2.3 Display, maintain and update material safety data sheets (MSDS) on site.

3. Manage stock flow

3.1 Action spare parts requests by checking database for availability and location, and organise the dispatch.

3.2 Monitor levels of spare parts stock by examining database reports against enterprise usage and replenishing stock when necessary.

3.3 Investigate and keep records of alternative suppliers of spare parts to minimise impact of availability and cost issues with regular suppliers.

3.4 Monitor spare parts with limited shelf life, and dispose of and replace when necessary.

3.5 Audit spare parts holdings for ready supply of items to minimise disruptions to job completions.

3.6 Update database from appropriate documentation each time a store’s transaction occurs to maintain validity of data.

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Performance Evidence

Evidence of the ability to:

- safely apply spare parts management procedures
- efficiently arrange for storage and ordering of spare parts
- research alternative parts replacements
- accurately update spare parts management database.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain computer and database operation
- describe handling of:
  - chemicals and dangerous materials
  - sensitive electronic equipment using antistatic procedures and safeguards
- outline modern storage practices and identification of parts location
- outline work health and safety (WHS) procedures
- identify service level agreements
- describe stocktake and audit of spare parts holdings
- identify telecommunications components and assemblies.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – workplace effectiveness field of work and include access to:
- a site where work may be conducted
- current equipment
- a database for relevant regulations
- organisational procedures
- equipment documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

</table>

Performance Evidence

Evidence of the ability to:

- accurately plan work activities, prioritising and allocating tasks
- liaise effectively with client or project manager
- monitor work progress and reallocate resources to meet completion requirements
- supervise staff, ensuring compliance with work health and safety (WHS) and relevant regulations.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify appropriate tools, equipment and materials required for the work
- identify enterprise permit procedures and recording procedures
- describe WHS practices
- identify relevant plant and equipment operations
- identify relevant statutory requirements and industrial awards
- explain team communication processes
- describe typical worksite issues
- describe work planning and organisation theory.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – workplace effectiveness field of work and include access to:
• a telecommunications operations site
• equipment currently used in industry
• enterprise and site related documentation
• agency licences and relevant regulatory, supplier and equipment documentation that impacts on worksite activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

### Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

1.3 Engage effectively with client to confirm initial referral details and propose initial course of action

2. Obtain information from multiple information systems
   - 2.1 Identify information needs and sources of this information
   - 2.2 Log on to and navigate relevant information systems efficiently
   - 2.3 Record details of informant and enquiry in information systems according to enterprise requirements
   - 2.4 Identify and verify information relevant to enquiry and its resolution with informant

3. Develop plan to resolve enquiry
   - 3.1 Review critical information with informant and apply technical expertise to develop options for resolving enquiry
   - 3.2 Consider all inputs and recommend course of action, including escalation
   - 3.3 Negotiate suitable course of action with informant
   - 3.4 Record details of course of action as required by enterprise information systems

4. Implement plan to resolve enquiry
   - 4.1 Confirm negotiated course of action with informant prior to initiating actions and seek agreement on schedule of actions for longer term resolutions
   - 4.2 Identify and initiate actions to be taken by technical support operator, informant or other parties
   - 4.3 Contact informant to confirm success of planned actions
   - 4.4 Record outcomes of resolution as required by information systems
### Oral Communication

Assessment Requirements for ICTWOR306 Resolve technical enquiries using multiple information systems

Modification History

<table>
<thead>
<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 2.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

Evidence of the ability to:

- apply efficient computer usage to efficiently navigate relevant systems for the required information
- use effective interpersonal skills to develop a plan of action to deal with the enquiry
- develop agreement to resolve the enquiry
- accurately document all dealings for future reference and follow up resolution effectively.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain a range of conflict resolution approaches
- identify database and spreadsheet concepts
- describe enterprise escalation policies and procedures
- identify enterprise information systems
- identify legislation, codes of practice and other formal agreements that directly impact on resolution processes
- outline typical issues and challenges that occur when dealing with clients in a telecommunications environment.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – workplace effectiveness field of work and include access to:
- a client contact centre
- current client contact technologies
- relevant regulatory and equipment documentation that impacts on work activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 2.0.</td>
</tr>
</tbody>
</table>

Application

This unit describes the skills and knowledge required to investigate a technical situation involving the collection and analysis of information from a variety of sources, including interviews and database systems. The technical situation under investigation may be the result of a fault or failure of a product, service or process.

It applies to individuals who undertake investigations. It may involve a degree of autonomy and some accountability for the quality of outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunication – workplace effectiveness

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>Elements describe the essential outcomes</th>
<th>Performance criteria describe the performance needed to demonstrate achievement of the element.</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Obtain recorded information</td>
<td>1.1 Apply all relevant legislation, codes, regulations and standards in analysis process</td>
</tr>
<tr>
<td></td>
<td>1.2 Verify situation to be investigated and identify appropriate sources of information for this situation</td>
</tr>
<tr>
<td></td>
<td>1.3 Obtain relevant information from computer systems and analyse</td>
</tr>
</tbody>
</table>
and record information

| 2. Conduct simple interview | 2.1 Select interviewees with correct information about matter being investigated and select interview process to suit circumstances of interviewee  
2.2 Prepare for interview by performing preliminary research  
2.3 Develop interview questions to identify key points for effective interview  
2.4 Inform interviewee how the information will be used and observe their right to privacy  
2.5 Conduct interview using effective listening and questioning techniques, and focus interviewee on information relevant to matter being investigated  
2.6 Record information obtained in interview |

| 3. Analyse information | 3.1 Analyse critical information by reviewing situation being investigated  
3.2 Distinguish between factual information and assumptions, and make deductions based on factual critical information  
3.3 Incorporate assumptions into reasoning process where it assists in forming valid inferences  
3.4 Analyse inferences from those deductions and assumptions, and produce resolution of situation being investigated |

| 4. Implement outcomes of analysis | 4.1 Identify practical actions based on inferences arising from analysis process  
4.2 Implement practical actions to resolve situation  
4.3 Review outcomes of practical action by assessing their impact on situation |

### Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

<table>
<thead>

</tbody>
</table>
| Oral Communication                             | 1.2, 2.1, 2.4, 2.5 | - Participates in a verbal exchange of ideas and elicits the view and opinions of others by listening and questioning, modifying the approach according to individual responses  
- Presents expectations of workplace procedures, choosing language appropriate to the audience |
| Numeracy                                        | 3.1, 3.2     | - Performs mathematical calculations to check, interpret and confirm results of analysis                                                                                                                    |
| Navigate the world of work                     | 1.1          | - Takes personal responsibility for adherence to legal and regulatory requirements relevant to the analysis process                                                                                               |
| Get the work done                              | All          | - Takes responsibility for planning and organising the resolution process, identifying ways of sequencing and combining elements for greater efficiency, and considering how to link with the work of others  
- Applies formal processes when planning analysis, producing plans with logically sequenced steps and reflecting some awareness of time and resource constraints and the needs of others  
- Implements practical actions as per plan, making slight adjustments if necessary, and addressing some unexpected issues  
- Uses a formal decision making process in analysing information, setting or clarifying goals, gathering information, and identifying and evaluating against a limited set of criteria  
- Applies formal problem solving processes when tackling an unfamiliar problem, breaking complex issues into manageable parts and identifying and evaluating several options for action |

Performance Evidence

Evidence of the ability to:
- apply keyboard skills and computer literacy to accurately use a database
- demonstrate appropriate listening, questioning and interviewing techniques
- develop an accurate record of interview
- integrate information from varied sources
- draw logical inferences from information gathered and make sound recommendations for action based on inferences.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:
- describe analytical techniques appropriate for information analysis, especially deductive reasoning
- explain conflict resolution approaches
- explain database and spreadsheet concepts and enterprise information systems
- explain information types and their sources
- identify sources of legislation, codes of practice and other formal agreements that directly impact on resolution processes
- describe listening, questioning and interviewing techniques
• identify privacy issues
• outline the influence of human factors on information analysis, including prejudice, biases and fallacies in reasoning
• describe typical issues and challenges that occur when dealing with clients.

Assessment Conditions
Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – workplace effectiveness field of work and include access to:

• a client contact centre
• current client contact technologies
• interview and evidence recording equipment
• relevant regulatory and equipment documentation that impacts on work activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to assess a site for a telecommunications project, including gathering information about the site and the project, surveying the site and evaluating the suitability of the site for the work.

It applies to individuals who work as technical staff with a range of telecommunications skills, involves a degree of autonomy and may include limited supervision of others.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – workplace effectiveness

Elements and Performance Criteria

Get the work done

- Keeps up to date on changes to legislation or regulations relevant to own rights and responsibilities, and considers implications of these when negotiating, planning and undertaking telecommunications project work
- Recognises and follows explicit and implicit protocols and meets expectations associated with own role in relation to communication with stakeholders
- Sequences and schedules survey activities, monitors implementation and manages relevant communication with stakeholders
- Uses systematic, analytical processes in planning and implementing a survey, setting goals, gathering relevant information, and identifying and evaluating options against agreed criteria
- Uses analytical processes to decide on a course of action, establishing criteria for deciding between options in relation to new structures and planned changes

Performance Evidence

Evidence of the ability to:

- negotiate with key stakeholders, enterprise personnel, clients, community representatives, specialists and other contractors on environmental and network needs
- accurately undertake a survey of environmental conditions, land, buildings and facilities for a telecommunications project
- apply legislative requirements to the project, including relevant operational codes, work health and safety (WHS) requirements and work practices
- report survey findings, outlining options and including recommendations with supporting reasons and coverage of existing and proposed needs.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline the background information required to undertake a civil site survey
- explain basic meteorology and weather conditions
- describe the features and operating requirements of construction equipment
- describe geographical barriers to signalling
- identify legislation, codes of practice and other formal agreements that impact on the work activity
- describe licensing and regulatory issues applying to a civil site survey on telecommunications sites
- outline soil testing methods and requirements
- describe
  - civil site safety practices
  - personal protective equipment for civil survey projects
- WHS requirements relating to surveys and site conditions
- outline typical issues and challenges that occur on site.

**Assessment Conditions**

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – workplace effectiveness field of work and include access to:

- a site for survey
- current equipment
- relevant regulatory and enterprise documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

Evidence of the ability to:

- plan and organise a preventive maintenance schedule according to vendor specified requirements and client agreements
- negotiate fault clearance arrangements with clients, applying related work health and safety (WHS) requirements and work practices
- plan and schedule fault clearance activity, allocating an appropriately skilled repair officer to rectify faults.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe electronic databases, spreadsheets and schedulers
- describe equipment to be maintained
- outline legislation, codes of practice and other formal agreements that impact on the work activity
- describe the process for the procurement of spare parts
- explain service level agreements
- outline specific WHS requirements relating to the activity and site conditions
- describe typical issues and challenges that occur on site
- outline vendor procedures.
Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications – workplace effectiveness field of work and include access to:

- a site where equipment maintenance may be conducted
- enterprise and site-related documentation
- regulatory, enterprise, supplier and equipment documentation that impacts on work activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

</table>

**Foundation Skills**

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.
### Skill | Performance Criteria | Description
---|---|---
Reading | 1.1, 1.2, 3.1, 4.1, 4.2, 4.4 | - Understands requirements in organisational policy and procedure documents  
- Interprets product and service information in a range of formats to provide customer advice

Writing | 4.2 | - Records customer information according to organisational requirements

Oral Communication | 1.1, 1.3, 1.4, 1.5, 2.1-2.4, 3.2, 3.3, 4.3 | - Provides information or advice using structure and language to suit the audience  
- Asks questions and listens to gain information or confirm understanding

Navigate the world of work | 1.1, 1.2, 3.1, 4.1, 4.2, 4.4 | - Follows organisational procedures and practices relevant to own role

Interact with others | 1.1, 1.3-1.5, 2.1-2.4, 3.1, 3.2, 3.3, 4.1, 4.3, 4.4 | - Uses accepted communication practices to establish connections, build rapport and develop professional working relationships  
- Adjusts personal communication style in response to the opinions, values and particular needs of others

Get the work done | 3.2, 3.4, 4.1-4.3 | - Addresses routine problems in familiar work contexts  
- Recognises opportunities to enhance work practices and outcomes

Performance Evidence

Evidence of the ability to:

- greet customer and establish rapport/relationship in accordance with organisational requirements
- identify customer needs using appropriate interpersonal skills
- provide prompt service to address customer needs in accordance with organisational requirements
- identify and follow up opportunities to increase the quality of service and products
- respond to and record all customer feedback according to organisational standards, policies and procedures.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify and briefly describe key provisions of relevant legislation from all forms of government that apply to provision of customer services
- identify and explain workplace organisational policies and procedures relating to customer service and the customer service process.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the customer service field of work and include access to:

- office equipment and technology
- workplace documents, organisational policies and procedures for customer service
• examples of customer complaints and feedback
• case studies and, where possible, real situations
• interaction with others.

Assessors must satisfy NVR/AQTF assessor requirements.

</table>

Application

This unit describes the skills and knowledge required to manage an ongoing relationship with a customer over a period of time. This includes helping customers articulate their needs and managing networks to ensure customer needs are addressed.

It applies to individuals who are expected to have detailed product knowledge in order to recommend customised solutions. In this role, individuals would be expected to apply organisational procedures and be aware of, and apply as appropriate, broader factors involving ethics, industry practice and relevant government policies and regulations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Stakeholder Relations – Customer Service

Performance Evidence

Evidence of the ability to:

- communicate effectively with customers including
  - helping customers to articulate their needs and evaluate options
  - explaining products/services and how they match customer needs
  - establishing regular communication
  - explaining customer rights and responsibilities
- address customer’s needs
- use organisational procedures to document customer satisfaction
- develop and maintain networks to support meeting customer needs
- identify potential difficulties in meeting customer needs and taking appropriate action.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain organisational procedures and standards for establishing and maintaining customer service relationships
• describe informed consent
• explain consumer rights and responsibilities
• describe ways to establish effective regular communication with customers
• outline details of products or services including with reference to:
  • possible alternative products and services
  • variations within a limited product and service range.

**Assessment Conditions**

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the customer service field of work and include access to:

• office equipment and resources
• business technology
• organisational policies, procedures, quality systems, manuals and guidelines for customer management
• examples of products/services and promotional strategies
• case studies and, where possible, real situations
• interaction with others.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to generate design solutions in response to a particular design need.

It applies to individuals who generate concepts and solutions in response to a design challenge in any industry context. The starting point may be an open or closed brief; a spontaneous idea; modification of an existing product, service, process or system; or a point in an ongoing design process.

This unit builds on BSBDES201 Follow a design process, and places greater focus on research, concept generation and collaboration with others as key aspects of the design process.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Design – Design Process

Elements and Performance Criteria

</tr>
</tbody>
</table>
| 1 generate design solutions | **design challenge in consultation with relevant stakeholders**  
1.3 Articulate essence of the design challenge in an appropriate format |
| 2 Undertake research to inform the design solution | 2.1 Source, evaluate and acknowledge information that may assist in responding to the design challenge  
2.2 Consider historical, current and future perspectives and trends that might inform design solutions  
2.3 Consider relevant social, economic, environmental, ethical and cultural issues that may impact design solutions  
2.4 Analyse, distil and collate information to inform the development of the design solution |
| 3 Communicate and collaborate with others | 3.1 Establish and develop working relationships with key stakeholders  
3.2 Seek and integrate input and ideas from others during design process  
3.3 Inform key stakeholders about progress of the design and related implications  
3.4 Negotiate and agree on any changed requirements or modifications |
| 4 Generate ideas and responses to the design challenge | 4.1 Reflect on and integrate ideas generated from research and consultation  
4.2 Use a range of creative thinking techniques to generate different options and ideas  
4.3 Apply relevant principles of functionality, ergonomics, aesthetics and sustainability to development of different options |
| 5 Select a design solution | 5.1 Develop and use a range of criteria to evaluate different options and ideas  
5.2 Select a preferred solution based on agreed criteria and in consultation with relevant key stakeholders  
5.3 Adjust and refine proposed design solution based on research, testing and reflection  
5.4 Present proposed design solution with appropriate supporting documentation according to project requirements |
## Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Performance Evidence

Evidence of the ability to:
- develop and document a design solution through research, reflection, and generation and refinement of ideas
- demonstrate effective collaboration with others in the design process.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:
- explain the elements and principles of design and their application in the relevant design context
- describe key features of the wider industry, and the economic, social and historical context design solutions are being generated in
- discuss design trends and technologies including other designs and the work of other design practitioners in the relevant industry context
- identify sources of information that support the development of technical and other knowledge
- describe the materials, tools, equipment, techniques and processes used in the generation of design solutions in the relevant industry context.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the design process field of work and include access to:
- interaction with others to reflect the collaborative nature of the design process
- sources of information on design for the relevant industry context.

Assessors must satisfy NVR/AQTF assessor requirements.

<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with BSB Business Services Training Package Version 1.0.</td>
</tr>
</tbody>
</table>

Application

This unit describes the skills and knowledge required to interpret and creatively respond to a design brief through the production of work.

It applies to individuals working in any industry or design context where work is prescribed by a commissioning agent/client in a brief. Individuals are required to integrate the creative, communication and planning processes that support effective response to a design brief.

Work is carried out independently, although guidance is available if required.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Design – Design Process

Elements and Performance Criteria

Application

This unit describes the skills and knowledge required to take a design concept or solution to the implementation stage. The outcome of work could be a completed product, object, system or service, but is more likely to be a complete or partial prototype or model for the design. The focus of the unit is on a general knowledge of design techniques and processes, and practical application to a specific design context.

It applies to individuals who implement concepts and solutions in response to a design challenge in any industry context.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Design – Design Process

### PERFORMANCE CRITERIA

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 2 Test the design solution | 2.1 Experiment with a range of different techniques and processes to test the design solution  
2.2 Evaluate, challenge and refine testing processes  
2.3 Gain input and feedback from key stakeholders during testing  
2.4 Accurately document outcomes of testing  
2.5 Select final design solution based on outcomes of testing and input from others |
| 3 Develop prototype or model | 3.1 Create prototype or model based on agreed approaches  
3.2 Select and organise materials, tools and equipment, where appropriate, according to chosen design solution  
3.3 Expose model or prototype to quality checks and ongoing analysis, enhancement and refinement  
3.4 Compare completed prototype or model against identified needs and other considerations and make adjustments as required |
| 4 Present prototype or model | 4.1 Identify key stakeholders design should be presented to  
4.2 Select appropriate format for presentation based on nature of audience and design  
4.3 Present prototype or model to optimise clarity, conciseness and appeal |

</tr>
</tbody>
</table>

Performance Evidence

Evidence of the ability to:

- undertake critical analysis, testing and development of a model, prototype or aspect of a design solution to meet an identified need
- present model to key stakeholders using the most appropriate best practice methods.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain the elements and principles of design and their application in relevant design context
- describe key features of the wider industry, with the economic, social and historical context for the design solution
- discuss design trends and technologies including other designs and the work of other design practitioners in the relevant context
- summarise sources of information that support the development of technical and other knowledge
- describe the technical expertise, resources, materials, tools, equipment, techniques and industry processes required for the area the design solutions are being implemented in.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the design process field of work and include access to:

- other people to reflect the collaborative nature of the design process
• resources required to test a design solution in a given industry context including materials, tools, equipment and expertise.

Assessors must satisfy NVR/AQTF assessor requirements.

BSBDES502 Establish, negotiate and refine a design brief

Modification History

<table>
<thead>
<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with BSB Business Services Training Package Version 1.0.</td>
</tr>
</tbody>
</table>

Application

This unit describes the skills and knowledge required to work proactively with a client or commissioning organisation to develop and negotiate a design brief.

It applies to individuals working in any industry or design context where the designer plays a key role in determining the scope and nature of work required. Establishment, negotiation and refinement of a design brief requires the integration of highly-developed creative thinking, communication and planning skills in a process that may not be linear. Adaptability and effective responses to change and new ideas are crucial.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Design – Design Process

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
</tbody>
</table>
| 1 Establish design requirements | 1.1 Identify and make appropriate contact with relevant stakeholders for the design project, in addition to the client  
1.2 Identify and source information and references relevant to the design project  
1.3 Undertake critical analysis of sources and extract key information to inform the design project |
### ELEMENT | PERFORMANCE CRITERIA
--- | ---
|  | 1.4 Liaise with client and other key stakeholders to determine overall objectives and parameters for the design project
|  | 1.5 Proactively seek, review and act on information needed to inform constructive communication with client
|  | 1.6 Build trust and respect between self and client through effective communication and demonstration of professional integrity

#### 2 Develop and refine design brief
|  | 2.1 Develop concepts and ideas for inclusion in design brief, taking account of overall objectives and parameters
|  | 2.2 Undertake own analysis of concept and challenge ideas and approaches taken to ensure responsiveness to project needs
|  | 2.3 Present ideas in an appropriate format/medium and seek feedback from key stakeholders
|  | 2.4 Use effective communication techniques to generate discussion, debate and critical analysis
|  | 2.5 Re-evaluate and refine options based on own analysis and discourse with others
|  | 2.6 Establish and agree on final nature and scope of design brief with client and accurately document details

#### 3 Negotiate terms and conditions
|  | 3.1 Negotiate and agree terms and conditions of brief in accordance with relevant organisational and professional standards
|  | 3.2 Clarify, agree and document roles and responsibilities of those involved in the project
|  | 3.3 Confirm agreements in writing in accordance with organisational requirements
|  | 3.4 Identify the need for specialist advice when developing formal agreements or contracts, and seek appropriate assistance

### Foundation Skills

Performance Evidence

Evidence of the ability to:
- develop and finalise at least TWO design briefs for a specific industry purpose
- demonstrate highly-developed interpersonal skills, self-evaluation techniques and the ability to seek expert advice when required.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:
- discuss the legal issues that affect negotiations and contracts in the relevant work context
- explain the design process within the specific industry context/design discipline
- compare and contrast the scope, nature and potential variations that occur within design briefs relevant to a specific context
- identify sources of information to assist the development of design concepts within a specific industry context.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the design process field of work and include access to:
- appropriate equipment and media to communicate and present ideas and concepts
- sources of information relevant to industry context
- interaction with others to reflect the collaborative nature of the work, and communication and negotiation skills required.
Assessors must satisfy NVR/AQTF assessor requirements.

Application

This unit describes the skills and knowledge required to undertake data analysis, review website content, and update and maintain a website.

It applies to individuals who have knowledge of the relationship between a website and the core functions of an organisation. They also have working knowledge and skills to perform basic updates to website content. They may provide administrative support within an organisation or be other individuals who have been delegated this responsibility.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Unit Sector

Information and Communications Technology – E-Business

Elements and Performance Criteria

#### Makes recommendations on changes to website content
- Analyses and responds to user feedback

#### Numeracy

- Uses basic numeracy skills to determine cost implications and viability

#### Navigate the world of work

- Accepts responsibility and ownership for the task and makes decisions on completion parameters and the need to coordinate with others
- Takes personal responsibility for following security procedures and meeting organisational requirements

#### Interact with others

- Selects and uses appropriate conventions and protocols when communicating with clients and users in a range of work contexts

#### Get the work done

- Takes responsibility for planning, sequencing tasks for efficient and effective organisational outcomes
- Uses problem solving processes to identify and analyse technical issues
- Contributes to continuous improvement of website by applying basic principles of analytical thinking
- Understands the purposes, specific functions and key features of common digital systems and tools and operates them effectively to complete tasks in accordance with security requirements

Performance Evidence

Evidence of the ability to:
- analyse data to make recommendations about changes to website
- update web pages according to organisational requirements
- analyse data, identify and resolve faults, errors and/or complaints on website.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:
- identify and review knowledge of key provisions of relevant legislation, regulations, and standards and codes of practice that may affect aspects of business operations
- explain basic principles of website design and maintenance
- outline online security issues.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the information and communications technology – e-business field of work. This includes access to:
- networked computers
- computers and office equipment
- industry software packages
- documentation relating to analysis and strategies/policies for implementation.

Assessors must satisfy NVR/AQTF assessor requirements.

Application

This unit defines skills, knowledge and outcomes required to use leadership to promote team cohesion. It includes motivating, mentoring, coaching and developing the team and forming the bridge between the management of the organisation and team members.

This unit applies to team leaders, supervisors and new or emerging managers where leadership plays a role in developing and maintaining effective workplace relationships. It applies in any industry or community context.

At this level work will normally be carried out within routine and non-routine methods and procedures, which require planning and evaluation and leadership and guidance of others.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

<table>
<thead>
<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with BSB Business Services Training Package Version 1.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

Evidence of the ability to:

- access and analyse information to achieve planned outcomes
- apply techniques for resolving problems and conflicts and dealing with poor performance within organisational and legislative requirements
- review and improve workplace outcomes in consultation with relevant personnel
- adjust interpersonal style and communications to respond to cultural and social diversity
- apply relationship management and communication skills with a range of people that:
  - demonstrate integrity, respect, empathy and cultural sensitivity and promote trust
  - forge effective relationships with internal and/or external people and help to maintain these networks
  - encourage participation and foster contribution of and respect for ideas and feedback
  - provide support to colleagues to resolve difficulties.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- give examples of how work relationships, and the cultural and social environment, can support or hinder achieving planned outcomes
- explain techniques for developing positive work relationships and building trust and confidence in a team including interpersonal styles, communications, consultation, cultural and social sensitivity, networking
- explain the impact of legislation and organisational policies on workplace relationships
- describe a range of methods and techniques for communicating information and ideas to a range of stakeholders
- outline problems solving methods
- explain methods to resolve workplace conflict
- explain methods to manage poor work performance
- explain how to monitor, analyse and introduce ways to improve work relationships.

**Assessment Conditions**

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the management and leadership field of work and include access to:

- relevant legislation, regulations, standards and codes
- relevant workplace documentation and resources
- case studies and, where possible, real situations
- interaction with others.

Assessors must satisfy NVR/AQTF assessor requirements.

Application

This unit describes the skills and knowledge required to lead teams and individuals by modelling high standards of conduct to reflect the organisation's standards and values.

It applies to individuals who are making the transition from being a team member to taking responsibility for the work and performance of others and providing the first level of leadership within the organisation. These managers have a strong influence on the work culture, values and ethics of the teams they supervise.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Range of Conditions

This section specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Organisation’s standards and values must be identified by considering:

- explicitly stated values
- values that are implied by the way the organisation conducts its business.

Performance Evidence

Evidence of the ability to:

- identify the organisation’s standards and values, whether stated or implied by the way the organisation conducts its business
- evaluate own behaviour and performance against these and adjust to achieve required standards
- develop and implement performance plans and key performance indicators (KPIs) to meet organisation’s goals and objectives
- use established communication channels to raise questions about standards and values that may be damaging to the organisation
- ensure own behaviour and performance contributes to the integrity and credibility of the organisation
- facilitate processes to make decisions that are based on:
  - relevant information
  - examination of options and associated risks
  - input from relevant people
- communicate about making and implementing decisions including:
  - facilitating agreement on the preferred course of action and implementation plans
  - monitoring and feedback on the implementation and impact of decisions.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain how to identify an organisation’s standards and values when they are:
  - stated
• implied
• articulate organisational values and expectations of behaviour
• explain basic theory of group behaviour
• outline the organisation’s process for raising questions about standards and values
• give examples of behaviours and performance that would typically be considered damaging to an organisation
• explain concepts including:
  • organisational values
  • role modelling
  • integrity and credibility
  • leadership.

**Assessment Conditions**

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the management and leadership field of work and include access to:

• relevant workplace documentation and resources
• case studies and, where possible, real situations
• interaction with others.

Assessors must satisfy NVR/AQTF assessor requirements.

Performance Evidence

Evidence of the ability to:

- identify regulatory, taxation and insurance compliance requirements, and risk minimisation needs of the business
- identify, select and access sources of advice on compliance and risk minimisation procedures for the business
- complete a development and review of procedures for compliance and risk minimisation (with assistance from advisors).

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify micro business registration and licensing requirements
- list government legislative requirements relating to business operation
- categorise the nature of legal responsibility
- pinpoint relevant industry codes of practice
- list relevant WHS responsibilities and procedures
- name sources of advice and specialist services
- identify sources of information about regulatory, taxation and insurance requirements and issues
- outline taxation requirements.
Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the Management and Leadership – Small and Micro Business field of work and include access to:

- business technology including internet access for research
- relevant legislation, regulations, standards and codes
- relevant workplace documentation and resources
- case studies or where possible, real situations
- interaction with others.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

</tr>
<tr>
<td></td>
<td>1.2 Identify what licences, permits, regulations or restrictions apply to operating a home based business</td>
</tr>
</tbody>
</table>
## ELEMENT | PERFORMANCE CRITERIA
--- | ---
1.3 Identify availability of services and infrastructure to support the business  
1.4 Calculate costs of suitable fittings and equipment for the business and any modifications required to existing facilities and infrastructure in the home  
1.5 Determine access requirements of clients or delivery vehicles to the business premises  
1.6 Identify insurance requirements for operation of the business in the home

### 2. Plan workplace in a home environment
- 2.1 Prepare a floor plan or layout that meets needs of the business and home occupants  
  - 2.2 Prepare any concept plans for modifications to buildings or structures in accordance with local government requirements  
  - 2.3 Obtain approvals from relevant authorities  
  - 2.4 Identify work health and safety (WHS) issues and develop procedures to eliminate or minimise any risks  
  - 2.5 Design workplace to provide appropriate client access and facilities while retaining privacy for home occupants  
  - 2.6 Allocate adequate and secure space for business machinery, equipment and storage of materials

### 3. Minimise potential sources of conflict
- 3.1 Identify possible sources of conflict with neighbours or home occupants  
  - 3.2 Develop protocols for home occupants, visitors and clients to enable the business to successfully operate in the home environment  
  - 3.3 Prepare a work schedule that identifies business and personal activities  
  - 3.4 Establish contingency plans for unanticipated events

### Foundation Skills

</tbody>
</table>

Performance Evidence

Evidence of the ability to:

- identify practical requirements of running a home based business, including calculation of costs
- plan suitable workspace, including:
  - preparing concept plan for possible modifications to structure of building
  - obtaining relevant approvals from external sources
  - identifying and meeting required legislative requirements
- implement procedures and protocols to ensure home based business runs smoothly including:
  - creating work schedule
  - identifying and establishing contingency plans for areas of possible conflict.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- list prohibitive factors in setting up a home based business
- list commonwealth, state/territory and local government legislative requirements relating to business operation, especially for work health and safety (WHS) and environmental issues
- outline constraints of home based businesses
• summarise relevant services and available infrastructure.

**Assessment Conditions**

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the Management and Leadership – Small and Micro Business field of work and include access to:

• relevant legislation, regulations, standards and codes
• relevant workplace documentation and resources
• case studies or where possible, real situations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

Evidence of the ability to:

- demonstrate a systematic approach to identifying, managing and meeting legal and regulatory requirements, specifically in regard to WHS, business registration and environmental requirements
- ensure compliance, by:
  - following taxation and industrial relations principles
  - updating and maintaining legal documents
  - investigating areas of non-compliance
  - monitoring provision of products and services
  - taking corrective action where necessary
- negotiate and arrange contracts, including:
  - seeking legal advice
  - investigating procurement rights
  - identifying options of leasing or ownership of business premises.
- Identify, assess and treat risks specific to the business including
  - prioritising risks with highest probability of occurrence and greatest negative impact on the business
  - identifying insurance requirements

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.
Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline business registration and licensing requirements
- identify all government legislative requirements relating to the specific business operation
- explain creation and termination of relevant legal contracts
- summarise relevant cultural differences and legal implications
- describe legal rights and obligations of alternative ownership structures
- outline necessary record keeping to meet minimum legal and taxation requirements
- summarise relevant consumer legislation and industry codes of practice
- outline the key steps in the risk management process
- explain relevant insurance requirements and products.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the Management and Leadership – Small and Micro Business field of work and include access to:

- office equipment and resources
- business technology including internet access
- specialist software for analysis of data
- relevant legislation, regulations, standards and codes
- relevant workplace documentation and resources
- case studies, or where possible, real situations
- interaction with others.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

| Release 2 | This version released with BSB Business Services Training Package Version 2.0.  
             Version created to clarify intent of unit                          |
| Release 1 | This version first released with BSB Business Services Training Package Version 1.0.  |

Performance Evidence

Evidence of the ability to:

- use the business plan to:
  - determine staffing requirements
  - coordinate skill-gap training where required
  - develop human resource policies and procedures
  - develop job descriptions and selection criteria
  - determine induction processes
  - implement staff development program
  - adhere to legal requirements and codes of practice
  - develop staff records system
  - conduct ongoing performance measures
  - communicate effectively with staff members
  - develop contingency plans
  - develop strategies to review team performance
  - monitor and review staff.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- discuss all government legislative requirements relating to staffing the business operation
- explain work health and safety (WHS) responsibilities and procedures for managing hazards
- summarise relevant industry awards or enterprise agreements
- outline staff development pathways
- identify training course options for staff development
- summarise staff counselling, grievance and disciplinary procedures
- identify unfair dismissal legislation and procedures.

**Assessment Conditions**

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the Management and Leadership – Small and Micro Business field of work and include access to:

- business equipment and resources
- relevant legislation, regulations, standards and codes
- relevant workplace documentation and resources
- case studies or where possible, real situations
- interaction with others.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to effectively measure current resource use and carry out improvements, including reducing the negative environmental impact of work practices.

It applies to individuals, working under supervision or guidance, who are required to follow workplace procedures and instructions, and work in an environmentally sustainable manner within scope of competency, authority and own level of responsibility.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

Evidence of the ability to:

- locate and interpret a range of environment/sustainability legislation and procedural requirements
- participate in and support discussions for an improved resource efficiency process
- identify, document and measure usage of resources
- collaborate with team members on suggestions for improving workplace practices.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify environmental and resource hazards/risks as well as environmental or sustainability legislation, regulations and codes of practice applicable to own role
- outline sustainability requirements in the workplace
- identify reporting channels and procedures to report breaches and potential issues
- identify where to find environmental and resource efficiency systems and procedures.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the sustainability field of work and include access to:

- documentation, information and resources related to workplace environmental and resource efficiency issues
- office equipment and resources
- case studies and, where possible, real situations
• interaction with others.

Assessors must satisfy NVR/AQTF assessor requirements.

Performance Evidence

Evidence of the ability to:

- scope and develop organisational policies and procedures that comply with legislative requirements and support the organisation’s sustainability goals covering at a minimum:
  - minimising resource use
  - resource efficiency
  - reducing toxic material and hazardous chemical use
  - employing life cycle management approaches
  - continuous improvement
- plan and implement sustainability policy and procedures including:
  - agreed outcomes
  - performance indicators
  - activities to be undertaken
  - assigned responsibilities
  - record keeping, review and improvement processes
- consult and communicate with relevant stakeholders to generate engagement with sustainability policy development, implementation and continuous improvement
- review and improve sustainability policies.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline the environmental or sustainability legislation, regulations and codes of practice applicable to the organisation identify internal and external sources of information and explain how they can be used to plan and develop the organisation’s sustainability policy
• explain policy development processes and practices
• outline organisational systems and procedures that relate to sustainability
• outline typical barriers to implementing policies and procedures in an organisation and possible strategies to address them.

Assessment Conditions
Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the sustainability field of work and include access to:
• relevant legislation, regulations, standards and codes
• relevant workplace documentation and resources
• case studies and, where possible, real situations
• interaction with others.

Assessors must satisfy NVR/AQTF assessor requirements.

Performance Evidence

Evidence of the ability to:

- prepare and communicate own work plan
- schedule work objectives and tasks to support the achievement of the workgroup goals
- review own work performance against workgroup objectives through self-assessment and seeking and acting on feedback from clients and colleagues
- plan and access learning opportunities to extend personal work competencies.

Note: if a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain how business technology applications can be used to schedule tasks and plan work
- explain techniques to prepare personal plans and establish priorities
- identify methods to identify and prioritise personal learning needs
- outline a range of professional development options
- explain methods to elicit, analyse and interpret feedback
- provide a detailed explanation of methods that can be used to evaluate own performance.
Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the industry capability - workplace effectiveness field of work and include access to:

- workplace documentation including policies and procedures, and benchmarks for work group productivity and performance
- workplace equipment and resources
- case studies and, where possible, real situations
- interaction with others.

Assessors must satisfy NVR/AQTF assessor requirements.

CPCCDE3014A Remove non-friable asbestos

Modification History
New to CPC08
Replaces unit CPCCDE3012A Encapsulate and remove asbestos
Not equivalent

Unit Descriptor
This unit of competency specifies the outcomes required to remove non-friable asbestos containing material (ACM). The unit includes preparing, containing and removing non-friable ACM, and includes knowledge of decontamination and disposal requirements.

Application of the Unit
Site location for work may be either domestic or commercial, and may be a demolition site, a new work site or an existing structure being renovated, extended, restored or maintained. Project sites may be construction sites and may also include ships, soils in relation to the non-friable asbestos removal process, and fences.

Licensing/Regulatory Information
Occupational licenses are required nationally.
Work must be completed according to relevant legislative, industry, customer and organisational requirements, including work health and safety (WHS) policies and procedures.
Regulatory mechanisms apply to this unit. This unit is required for all ACM removal workers engaged in the removal of non-friable ACM. Candidates are advised to check for regulatory requirements.

Pre-Requisites
CPCCOHS1001A Work safely in the construction industry
Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

| 1 | Prepare for asbestos removal. | 1.1 Work instructions and asbestos removal control plan (ARCP) are obtained and confirmed for preparation purposes. |
|  |  | 1.2 Safety requirements and data gathered from an on-site assessment, an asbestos register where available, and other information sources are used to prepare for a safe and compliant removal process. |
|  |  | 1.3 Tools, equipment and personal protective equipment (PPE) consistent with job requirements are selected to carry out tasks and checked for serviceability; and faults are rectified or reported prior to commencement. |
|  |  | 1.4 ARCP is accessed according to legislative and company requirements, and understood. |
| 2 | Prepare asbestos removal area and removal site. | 2.1 Non-friable asbestos containing materials to be removed are identified, referring to the asbestos register or following clarification by an approved competent person as required and according to workplace procedures. |
|  |  | 2.2 Signage and barricade requirements are identified and implemented to delineate the work area. |
|  |  | 2.3 Decontamination procedure is tested according to workplace procedures. |
|  |  | 2.4 Materials and equipment required for removal of ACM |
from project sites are identified, checked and prepared for operation.

2.5 Processes are undertaken to ensure the safety of the site, including deactivating or securing utilities where necessary prior to commencing work.

3 Isolate removal site.

3.1 Requirements to isolate the removal site safely are identified from the ARCP, and implemented according to legislative and company requirements.

3.2 Boundaries of asbestos removal site are designated according to ARCP requirements.

3.3 Occupants, neighbours and other affected parties are notified according to legislation and within limits of own responsibility and the code of practice.

4 Carry out asbestos removal process.

4.1 Asbestos is removed from work area and work site as specified by the supervisor and in the appropriate manner, ensuring the safe use of tools and according to ARCP, legislative and regulatory requirements, and codes of practice.

4.2 Removed asbestos is contained, wrapped or otherwise sealed, and placed into removal bags or bins, sealed, labelled and, where loaded into a truck, the tray or skip is lined prior to removal of ACM from site according to regulatory requirements and company standards.

5 Carry out decontamination process.

5.1 Decontamination of the work area and tools is carried out according to workplace procedures, ARCP and regulatory requirements.

5.2 Decontamination of asbestos removal workers is carried out according to workplace procedures, ARCP and regulatory requirements.

5.3 Asbestos removal and decontamination equipment is removed from the area according to ARCP and regulatory requirements.
6 Clean up work site.

6.1 Work area is cleared and materials disposed of according to legislation, regulations, codes of practice and job specification.

6.2 Plant, tools and equipment are cleaned, decontaminated, checked, maintained, removed from the work area, and stored according to manufacturer recommendations and regulatory requirements.

7 Contribute to and use documentation in line with regulatory requirements.

7.1 Contribution is made within limits of own responsibility to the preparation and use of documentation for regulatory notification processes according to legislative and company requirements.

7.2 Steps are taken within limits of own responsibility to ensure clearance inspection requirements are met and clearance certificate is gained from a competent person or licensed asbestos assessor.

7.3 Contribution is made within limits of own responsibility to the preparation and use of an emergency plan according to legislative and company requirements.

**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

**Required skills**

- communication and appropriate level of language skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and apply:
    - documentation from a variety of sources
    - drawings and specifications
  - use language and concepts appropriate to cultural differences
- initiative and enterprise skills to:
  - evaluate own actions and make judgements about performance and necessary improvements
  - identify and report faults in tools, equipment and materials to appropriate personnel
- planning and organising skills to:
  - set out work
  - recognise procedures, follow instructions and contribute to workplace responsibilities, such as current environmental and safety systems and the ARCP
- teamwork skills to:
  - coordinate own work with others to action tasks
  - relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- self-management skills to:
  - work independently and in teams to read and interpret relevant documentation and to prepare for non-friable asbestos removal tasks according to the recommended safe work method and ARCP
  - set up the asbestos removal area and removal site according to the safe work method and ARCP
  - check, fit and use PPE, and hand and power tools safely
  - apply general WHS procedures for construction work, including:
    - identifying, avoiding and eliminating electrical hazards
    - working safely at heights and in confined spaces
    - applying safe work practices to the use of tools appropriate to ACM removal
    - handling hazardous materials safely
    - applying safe work methods for the removal of non-friable asbestos
  - follow correct cleaning, decontamination and disposal procedures

Required knowledge

- range of materials manufactured using asbestos, the type of asbestos used in each material, and the usual applications associated with the material, together with an understanding of:
  - health effects caused by exposure to ACM and requirement for safe handling and removal
  - health impacts on the community and requirement for safe handling and disposal
  - general WHS procedures for construction work as required, including identifying and mitigating risks
  - health hazards associated with friable ACM and circumstances that may change the nature of ACM from non-friable to friable, such as:
    - weathering
    - wear and tear
    - application of tools and equipment
    - accidental damage
• licensing requirements for the use of specific equipment, such as excavators
• safe work methods for the removal of non-friable asbestos
• requirements of current legislation and standards relating to asbestos safety, and the decontamination, transport and disposal of asbestos waste
• general construction terminology
• handling requirements of differing types of asbestos materials
• hazards associated with removal processes
• work area procedures
• job safety analysis (JSA) and safe work method statements (SWMS) if required for construction
• safety data sheets (SDS)
• materials storage and hazardous waste management
• method of operation, and cleaning, use and maintenance requirements of equipment
• plans, drawings and specifications, asbestos registers and register amendments
• quality requirements relating to the removal of non-friable asbestos
• risk assessment processes and contingency planning relating to the removal of non-friable asbestos
• techniques associated with enclosing and removing asbestos
• types, characteristics, uses and limitations of plant and equipment involved in enclosing and removing asbestos
• workplace and equipment safety requirements
• purpose and application of documentation for notification; and use of ARCP and clearance inspections

**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, providing that simulated or project-based assessment techniques fully replicate workplace conditions, materials, activities, responsibilities and procedures.</th>
</tr>
</thead>
</table>
| Critical aspects for assessment and evidence required to demonstrate competency in this unit | A person should demonstrate the ability to:  
  • obtain and apply work instructions for the safe and correct removal of non-friable asbestos  
  • set up the work area and test equipment for use in the removal process of non-friable asbestos  
  • isolate the site prior to removal, complying with regulatory requirements |
| **Context of and specific resources for assessment** | This unit is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- research resources, including industry-related systems information
- safety data sheets.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support. |
| **Method of assessment** | Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments. |
Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Safety requirements will be specified from a range of sources that include:

- asbestos removal control plan
- company policies and procedures, including:
  - accessing toilets and other amenities
  - managing work hours to minimise risk from tiredness
  - working in heat and avoiding heat stress
- JSA
- legislation and regulations, including the Code of Practice for the Safe Removal of Asbestos
- operating manuals and specifications for materials and equipment
- SWMS
- asbestos register.
**Tools and equipment** may require separate licensing for use and may include:

- high efficiency particulate air (HEPA) vacuum cleaners to comply with AS3544-1988 and AS4260-1997 as amended from time to time
- atomiser and water spray bottles (not pressurised)
- hoses and spray fittings
- barricades, including tape, para-webbing and fencing
- bars (crow and pinch)
- bolt cutters
- buckets
- cold chisels
- excavators
- hand drills (manual and low-speed only)
- fire extinguishers
- hammers
- hand tools (full kit)
- ladders conforming to construction regulations
- scaffolds
- scrapers
- shovels and spades
- staple guns.

**Personal protective equipment** will be specified to the requirements of the job and must include:

- protective clothing, such as:
  - disposable coveralls with fitted hood and cuffs
  - safety footwear (pull-on, not lace-up)
  - protective eyewear
  - disposable or protective gloves
- correct face fitting and use of respiratory protective equipment (RPE)
- respiratory protection required for the job, including class P1 and P2 face masks
- spare sets of PPE.

**Materials** may include:

- approved and branded plastic bags, including heavy-duty polythene bags (200 μm minimum thickness)
- duct tape
- foam infill spray
- acrylic paint to seal ACM
- polyvinyl alcohol (PVA) adhesive as spray to seal ACM
- rags or other material wipes (used once)
- signs
- 200 μm unused (not recycled) plastic sheeting or drop sheet.

**Non-friable asbestos containing materials**

- asbestos cement
- asbestos cement moulded guttering
- asbestos cement sheets
**may include:**

- asbestos tiles
- bitumastic felts and materials
- adhesives and glues
- compressed asbestos cement panels
- floor vinyl covering
- mortar
- resinous backing board
- sealant mastic
- tape.

**Note:**

- Non-friable asbestos is also known as bonded asbestos
- ACM notionally listed as non-friable may become friable due to weathering or damage

**Workplace procedures may include:**

- environmental requirements, such as:
  - clean-up management
  - dust and noise management
  - notification to occupants, neighbours and other affected parties
  - sedimentation control
  - vibration management
  - waste management, including the safe disposal of ACM
- quality requirements, such as:
  - internal company quality policy and standards
  - manufacturer specifications
  - relevant regulations, including Australian standards
  - workplace operations and procedures.

**Project sites may include:**

- residential, commercial, industrial and public buildings
- plant, equipment and fire boards (e.g. friction plant and gaskets)
- demolition sites
- electricity supply authority or work site
- fences
- ships and other forms of transport
- sites for new building development.

**Utilities may include:**

- air conditioning
- electricity
- water services.

**Requirements to isolate the removal site:**

- will reflect the nature of the site
- must comply with legislative requirements and the ARCP
- may include:
  - using barriers
  - using signage
  - ensuring occupants are aware of the need to stay away
Asbestos is removed in a manner that complies with legislative and company requirements, and may include:

<table>
<thead>
<tr>
<th>Action</th>
<th>Details</th>
</tr>
</thead>
<tbody>
<tr>
<td>from the removal site</td>
<td>ensuring isolation has occurred by a licensed electrician and that this is documented.</td>
</tr>
<tr>
<td>wet method (most preferred)</td>
<td>saturate material by gently spraying with water and surfactant mixture (PVA in water ratio of 5:1)</td>
</tr>
<tr>
<td>remove materials in sections with the minimum amount of cutting and separation and using hand tools as appropriate</td>
<td></td>
</tr>
<tr>
<td>place removed sections in appropriate containers or packaging</td>
<td></td>
</tr>
<tr>
<td>Note: The application of the wet asbestos removal method requires the disconnection of the building’s power supply and use of a temporary power source fitted with earth leakage and residual current device (RCD)</td>
<td></td>
</tr>
<tr>
<td>dry method (least preferred)</td>
<td>to be used only where conditions prohibit use of the wet spray method, i.e. in the vicinity of electrical conductors</td>
</tr>
<tr>
<td>fully encapsulate the work area with plastic sheeting</td>
<td>use air respirators appropriate to the job</td>
</tr>
<tr>
<td>ensure removal methods minimise the production of airborne material, for example the use of asbestos vacuum cleaners for shadow vacuuming (Note: domestic vacuum cleaners even fitted with a HEPA filter are unsuitable)</td>
<td>place removed material immediately in appropriate containers and dampen with sprayed mist.</td>
</tr>
</tbody>
</table>

Asbestos is contained and sealed using a range of techniques, including:

<table>
<thead>
<tr>
<th>Action</th>
<th>Details</th>
</tr>
</thead>
<tbody>
<tr>
<td>double-bagging</td>
<td>using heavy-duty polythene bags (200 μm minimum thickness) labelled with an appropriate warning</td>
</tr>
<tr>
<td>using drums or bins in good condition with well-fitting lids labelled with appropriate warning signage or labels.</td>
<td></td>
</tr>
</tbody>
</table>

Note: If too large for a bin or bag, a skip or vehicle tray may be used provided it is double-lined with heavy-duty thick plastic sheeting. When ACMs are loaded on a truck tray, the ACMs must be wetted down and then fully wrapped and sealed with a layer of 200 μm sheeting or bagged. Labelling must occur.

Decontamination of asbestos removal workers is carried out:

<table>
<thead>
<tr>
<th>Action</th>
<th>Details</th>
</tr>
</thead>
<tbody>
<tr>
<td>using a range of techniques, including:</td>
<td>‘buddy’ vacuuming</td>
</tr>
<tr>
<td>decontamination unit for large non-friable removals in certain circumstances</td>
<td>wet wiping.</td>
</tr>
</tbody>
</table>

Documentation may

<table>
<thead>
<tr>
<th>Action</th>
<th>Details</th>
</tr>
</thead>
<tbody>
<tr>
<td>air-monitoring results, where necessary</td>
<td></td>
</tr>
</tbody>
</table>
include:

- asbestos register
- notification to regulator of asbestos removal work
- clearance certificates
- asbestos removal control plans
- procedures for the WHS management system and the emergency plan
- equipment test reports
- health-monitoring program
- RPE face fits
- competency training certificates.

## ELEMENT PERFORMANCE CRITERIA

5.6. Defects are reported and recorded according to procedures and appropriate action is taken.

### Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- communication techniques in the workplace including whistles, hand signals and use of fixed channel two-way radios
- communication skills at a level sufficient to communicate with other site personnel
- calculate rated capacity of lifting equipment
- apply different methods for making temporary connections to loads using fibre and synthetic ropes
- ability to interpret rated capacity and working load limit tags
- hazard identification and control
- slinging techniques
- selection and inspection of lifting equipment
- directing crane operators in the moving of loads in a safe manner, using a slewing crane
- inspection and care of a wide range of lifting equipment to appropriate Australian Standards and/or manufacturer's specifications.

**Required knowledge**

Required knowledge for this unit is:

- appropriate mathematical procedures for estimation and measurement of loads
- basic knowledge of types of cranes and their functions
- Commonwealth, state or territory OHS legislation, standards and codes of practice relevant to the full range of techniques for undertaking dogging activities
- load stability and safety factors in line with manufacturer's specifications
- types of lifting equipment and slinging techniques for use, and their limitations and performance in a wide range of conditions (including but not limited to slings, beams, accessories, clamps, work-boxes, bins and pallets)
- understanding of the hierarchy of control.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Successful assessment of this unit meets the competency requirement of the National Standard for licensing Persons Performing High Risk Work. State/Territory OHS regulators have mandated the use of Assessment Instruments and Instructions for Assessment of this unit which have been endorsed by the national body responsible for OHS matters.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with Commonwealth, state or territory OHS legislation, standards relevant to safe dogging and crane operations.
- communicate and work safely with others in the work area.
- apply Hazard prevention and control measures consistent with appropriate standards.
- apply to move loads in conjunction with cranes including, the reading of tags, slinging, loading, directing and landing loads with a slewing mobile crane with a telescopic boom and a winch, in and out of sight of the crane/operator, moving four loads of varying shapes, sizes and weights.
- use fibre and/or synthetic rope as tag lines, and connecting to loads using clove hitch, rolling hitch, bowline and single sheetbend.
- conduct pre and post operational checks of the lifting equipment.
- Assessment of the safe and effective application of knowledge and skill to workplace tasks (performance) must be undertaken using the national OHS endorsed Assessment Instrument
- Assessment of performance must be
EVIDENCE GUIDE

undertaken either in the workplace or in a realistically simulated workplace setting

- Assessors must ensure that the assessment in the workplace is organised through a workplace supervisor to ensure that all the required equipment and materials and a suitable working area is made available to suit the assessment and the workplace
- Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment is to comply with the requirements of any relevant Standards or operating procedures for dogging activities
- Applicants must have access to:
  - personal protective equipment (PPE) for the purpose of the performance assessment.
  - four different loads as prescribed in the endorsed assessment instrument
  - lifting and associated equipment
  - suitable slewing crane
  - communication equipment (eg. fixed channel, two-way radios) as applicable.

Method of assessment

Assessment must be conducted using the national OHS endorsed Assessment Instrument. This Instrument provides instruction on the application of the assessment.

Assessment may be in conjunction with the assessment of other units of competency.

The use of *simulators* in the assessment of this unit of competency is not acceptable.

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.

Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.

Guidance information for assessment

Further information about endorsed Assessment Instruments may be obtained from state/territory OHS regulators.
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Site information** may include but not be limited to:
- local conditions such as access and egress
- work method statements.

**Hazards** may include but not limited to:
- ground stability (eg. ground condition, recently filled trenches, slopes)
- overhead hazards (eg. power lines, service pipes, trees, buildings, etc)
- insufficient lighting
- traffic (eg. pedestrians, vehicles, plant)
- weather (eg. wind, lightning, storms)
- other specific hazards (eg. trip hazards, heights, radio interference, etc).

**Hazard prevention/control measures**

The systematic process of eliminating or reducing the risk to personnel and property through the application of controls.

It includes the application of the hierarchy of controls, including:

1. elimination.
2. substitution.
3. isolation.
4. engineered control measures.
5. safe work practices.
6. personal protective equipment.

**Appropriate standards** may include:
- codes of practice
- legislation
- Australian Standards
- manufacturer's specifications
- industry standards.
RANGE STATEMENT

**Lifting Equipment** may include but not limited to:
- fibre ropes
- wire ropes
- chain
- wire and synthetic slings
- shackles
- eyebolts
- beam clamps
- plate clamps
- spreader beams
- lifting beams
- pallet forks and cages
- concrete kibbles
- personnel boxes.

**Communication Methods** may include but are not limited to:
- written instructions
- signage,
- hand signals
- listening
- questioning to confirm understanding
- appropriate worksite protocol.

**Cranes** may include but not limited to:
- tower cranes (including self erecting)
- portal boom cranes
- vehicle loading cranes
- slewing mobile cranes
- non-slewing cranes
- derrick cranes.

**Appropriate personnel** may include but are not limited to:
- supervisors
- colleagues
- managers who are authorised to take responsibility for the workplace or operations.

**Communication Equipment** may include but not limited to:
- fixed channel two-way radios
- whistles
- bells.

**Personal protective equipment** (PPE) may include but not limited to:
- hard hat
- safety boots
- gloves
- high visibility clothing
- reflective vest
- relevant breathing, hearing, sight, skin and sun protection.

**Load destination** may include but
RANGE STATEMENT

not limited to:
- loading platforms
- suspended floors
- vehicles.

Communication signals may include but not limited to:
- stop - hand
- stop - whistle
- hoist up - hand
- hoist up - whistle
- hoist down - hand
- hoist down - whistle
- luff boom down - hand
- luff boom down - whistle
- luff boom up - hand
- luff boom up - whistle
- telescope out - hand
- telescope out - whistle
- telescope in - hand
- telescope in - whistle
- slew left - hand
- slew left - whistle
- slew right - hand
- slew right - whistle.

Defective Equipment may include but not limited to:
- excessive wear
- damage
- stretched
- broken wires
- cut/damaged fibres.

Not Applicable

Unit Descriptor

This unit specifies the outcomes required to perform basic rigging work associated with movement of plant and equipment, steel erections, hoists (including mast climbing hoists), placement of pre-cast concrete, safety nets and static lines, perimeter safety screens and shutters; and cantilever crane loading platforms for licensing purposes.

Application of the Unit

This unit requires the applicant to be able plan the work, select and inspect equipment, set up task, erect structures and plant and dismantle structures and plant.

This unit is based upon the National Standard for Licensing Persons Performing High Risk Work.

This unit in its current form meets state and territory licensing requirements. Any alteration will result in a unit which is not acceptable to regulators for the purpose of licensing.

This unit has a pre-requisite requirement. This requirement may be met by either the successful completion of the unit CPCCLDG3001A Licence to perform dogging or holding a valid licence for dogging.

Licensing/Regulatory Information

Refer to Unit Descriptor
Pre-Requisites

Prerequisite units

CPCCLDG3001A  Licence to perform dogging

Employability Skills Information

Employability skills  This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

<table>
<thead>
<tr>

ELEMENT | PERFORMANCE CRITERIA
---|---
1.7. **Safety equipment** is identified.
1.8. Appropriate **communication methods** are identified with appropriate personnel.

2. **Select and inspect equipment.**
2.1. Rigging equipment and associated equipment are selected and inspected according to procedures and the appropriate standard.
2.2. Safety equipment is selected and inspected according to procedures.
2.3. All defective rigging equipment, associated equipment and safety equipment is isolated, reported and recorded according to procedures.
2.4. **Communication equipment** is selected and inspected for serviceability (where applicable).

3. **Set up task.**
3.1. Appropriate **hazard prevention/control measures** are applied to the work area according to procedures.
3.2. **Ground suitability** is inspected and checked (where appropriate).
3.3. Site information is reviewed, interpreted and communicated to appropriate personnel and **appropriate personnel**.
3.4. All forces and loads associated with erecting and dismantling structures and associated plant are determined in consultation with appropriate personnel.
3.5. Safety equipment is fitted and worn correctly (where appropriate).
3.6. Rigging equipment and associated plant are positioned for work application and stability according to procedures.
3.7. Methods of applying **temporary connections** using fibre rope are applied according to procedures and the appropriate standard.

4. **Erect structures and plant.**
4.1. Structures and associated plant are erected according to procedures and site information.
4.2. Stability of structures and associated plant is maintained during erection according to procedures.
4.3. Work is conducted safely at heights including safe and effective use of safety equipment.
4.4. Appropriate communication methods and communication equipment, are used to co-ordinate the tasks.
4.5. Associated plant and rigging equipment is used

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**
REQUIRED SKILLS AND KNOWLEDGE

Required skills for this unit are:

- ability to calculate Safe Working Load (SWL) and Working Load Limit (WLL)
- ability to erect and dismantle, level, plumb and stabilise associated plant and structures
- ability to work safely at heights including the correct application of safety equipment.
- accurate interpretation of basic structural charts and structural plans (site information)
- applying methods for making temporary connections of ropes using fibre and synthetic types
- apply methods of splicing and whipping fibre and synthetic ropes
- correct application and use of all rigging and associated equipment
- risk assessment and hazard control strategies
- interpersonal and communication skills at a level sufficient to site/workplace requirements. This includes the relevant communication methods and equipment.
- verify problems and equipment faults and demonstrate appropriate response.

Required knowledge

Required knowledge for this unit is:

- appropriate mathematical procedures for estimation and measurement of loads
- ability to interpret manufacturer's specifications for all plant and equipment use in rigging operations
- knowledge of principles relating to all plant, equipment and structural stability
- knowledge of the types and functions of rigging, safety and associated equipment including an understanding of their limitations.
- organisational and workplace standards, requirements, policies and procedures for rigging
- understanding of the hierarchy of hazard identification and control
- relevant Commonwealth, state or territory and local government OHS legislation, standards and codes of practice for undertaking rigging activities
- understanding of inspection and maintenance requirements of a wide range of appropriate plant and equipment in line with Australian Standards or manufacturer's specifications
- estimation of ground bearing pressures of the full range of soil types and associated ground conditions for setting up plant and equipment.
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Successful assessment of this unit meets the competency requirement of the National Standard for licensing Persons Performing High Risk Work. State/Territory OHS regulators have mandated the use of Assessment Instruments and Instructions for Assessment endorsed by the national body responsible for OHS matters for the assessment of this unit.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS licensing legislation.
- effectively communicate and work safely with others in the work area.
- effectively conduct risk assessment and management procedures.
- effectively complete the following tasks:
  - inspection of all plant and equipment, and
  - installation of a fall arrest system (Static line), and
  - use of a safety harness / fall arrest system, and
  - installation of crane loading platforms and
  - installation of a safety net, and
  - installation of a shutter and safety screen, and
  - demonstrated ability to work safely at heights, and
  - erection of structural steel, and
  - erection of precast panel, and
  - set up and operation of a winch for load movement, and
  - installation of a materials hoist, or
  - installation of a mast climber.
- effectively demonstrate the following knots,
**EVIDENCE GUIDE**

bends and hitches:-
- Sheet bend,
- Becket hitch,
- Running bowline,
- Double bowline.
- effectively demonstrate the following splices and whippings:-
  - Eye splice,
  - Back splice,
  - Short splice,
  - Sail makers whipping,
  - Common whipping,
  - West countryman's

**Context of and specific resources for assessment**

Assessment of the safe and effective application of knowledge and skill to workplace tasks (performance) must be undertaken using the National OHS endorsed Assessment Instrument.

Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace setting.

Assessors must ensure that the assessment in the workplace is organised to ensure that all the required equipment and materials and a suitable working area is made available to suit the assessment and the workplace.

Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints.

Assessment is to comply with the requirements of any relevant Standards or operating procedures for basic rigging.

Applicants must have access to:
- personal protective equipment (PPE) for the purpose of the Performance Assessment.
- appropriate safety equipment in safe condition
- appropriate rigging equipment, associated equipment associated plant in safe condition as described in the endorsed assessment instrument
- communication equipment (e.g. two-way
EVIDENCE GUIDE

radios) where applicable

- appropriate materials as required for safe erection of structures
- appropriate materials for conducting fibre rope climbing, whipping, knots, bends and hitches.

Method of assessment

Assessment must be conducted using the national OHS endorsed Assessment Instruments. These Instruments provide advice on their application.

The use of 'simulators' in the assessment of this unit of competency is not acceptable.

Assessment may be in conjunction with the assessment of other units of competency.

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.

Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.

Guidance information for assessment

Further information about endorsed Assessment Instruments may be obtained from state/territory OHS regulators.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Hazards may include but are not limited to:

- ground stability (e.g. ground condition, recently filled trenches, slopes)
- overhead hazards (e.g. power lines, service pipes) (NB: minimum clearance distance from powerlines or electrical equipment as determined by relevant state authority or...
RANGE STATEMENT

- electrical supply authority.
- traffic (e.g. pedestrians, vehicles, other plant)
- insufficient lighting
- environmental conditions (e.g. wind, lightning, storms)
- other specific hazards (e.g. dangerous materials).

Hazard control measures: Refers to the systematic process of eliminating or reducing the risk to personnel and property through the application of controls. It includes the application of the hierarchy of control, the six-step preference of control measures to manage and control risk:
- elimination
- substitution
- isolation
- engineering control measures
- using safe work practices
- personal protective equipment.

Appropriate standards may include:
- codes of practice
- legislation
- Australian Standards
- manufacturer's specifications
- industry standards (where applicable).

Site Information may include, but not limited to:
- local conditions such as access and egress,
- work method statements,
- site specific job safety analyses and other site specific documentation as required.
- task plans / Schedules and structural plans.

Forces and Loads may include, but not limited to:
- dead loads
- live loads
- static load
- dynamic loads
- wind loads.

Structures may include but are not limited to:
- structural steel
- precast panels.

Associated plant may include but not limited to:
- static lines
- safety nets
- hoists
RANGE STATEMENT

Appropriate personnel may include:

- mast climbers
- loading platforms.
- engineers
- supervisors
- colleagues
- managers who are authorised to take responsibility for the workplace or operations.

Rigging Equipment may include but is not limited to:

- scaffolds
- elevated work platforms
- personnel box
- cantilevered crane loading platforms
- mast climbers.
- safety screens and shutters
- cranes including but not limited to:
  - non-slewing cranes
  - mobile slewing cranes
  - vehicle loading cranes
  - tower cranes
  - self-erecting tower cranes
  - portal boom cranes
  - derrick cranes
  - bridge and gantry cranes.

Associated equipment may include but is not limited to:

- all types of power and manually operated lifting gear
- fibre ropes
- flexible steel wire rope (FSWR)
- chains
- wire and synthetic slings
- shackles
- terminations
- wedge sockets
- eye bolts
- beam clamps
- plate clamps
- rope grips
- tumbuckles
- rigging screws
- chain blocks
- lever blocks
- lever-action winches
RANGE STATEMENT

- sheaves
- spreader bars
- lifting beams
- jacks
- levers
- skates
- wedges
- rollers
- girder trolley

Procedures may include but is not limited to:

- manufacturer's guidelines (instructions, specifications or checklists)
- industry operating procedures, relevant codes of practice
- workplace procedures (work instructions, operating procedures, checklists).

Safety Equipment may include but not limited to:

- safety harness
- energy absorber
- lanyard
- inertia reel
- static safety lines
- safety nets.

Communication Methods may include but is not limited to:

- verbal and non-verbal language
- written instructions
- signage
- hand signals
- listening,
- questioning to confirm understanding, and appropriate worksite protocol.

NB: Mobile phones are not to be used for signalling purposes during the rigging process.

Communication equipment may include but is not limited to:

- fixed channel two-way radios

Hazard prevention/control measures may include but is not limited to:

- safety tags on electrical switches/isolators
- powerlines are insulated
- safety observer used inside exclusion zone
- power disconnected
- traffic barricades and control
- pedestrian barricades
- trench covers
RANGE STATEMENT

- movement of obstructions
- personal protective equipment
- adequate illumination
- safety shutters and screens.

*Ground suitability* may include but is not limited to:

- rough uneven ground
- backfilled ground
- soft soils
- hard compacted soil
- rock
- bitumen
- concrete
- suspended concrete floors
- building roofs
- landings
- ground bearing pressure.

*Appropriate personnel* may include but not limited to:

- other riggers
- doggers
- crane operators.

*Temporary connections* may include but not limited to:

- knots
- bends
- hitches
- spicing
- whipping.

*Flexible Steel Wire Rope (FSWR)* includes:

May include termination for:

- static lines,
- guys,
- purchase systems,
- lashing,
- cranes,
- hoist and winch ropes.

Application

This unit describes the skills and knowledge required to use digital technology to undertake workplace tasks that are simple and routine in nature. It requires the ability to identify and interpret technical instructions, and setup and apply a range of digital technologies to achieve predetermined outcomes.

An individual performing these tasks may work with an expert or mentor where support is available if requested.

This unit applies to individuals who use, or are preparing to use, digital skills to complete workplace activities. This includes existing workers and individuals preparing for employment through vocational education and training. This unit should be integrated and contextualised with vocational training to support achievement of vocational competency.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

<tr>
<th>Element</th>
<th>Performance Criteria</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
</tbody>
</table>

1. Prepare to use digital technology for routine and simple task

   1.1 Identify nature and scope of routine and simple workplace task that requires the use of digital technology
   1.2 Identify purpose of task and required outcome
   1.3 Identify, select and locate appropriate digital technology required
### Element | Performance Criteria
--- | ---
for task  | 1. Locate and identify simple workplace information and terminology associated with technology

2. Perform routine and simple workplace task using digital technology | 2.1 Interpret and follow simple instructions to access and use digital technology required for the task  
2.2 Use technology to enter, store and retrieve information relevant to the task  
2.3 Comply with workplace procedures relevant to using digital technology in completing task  
2.4 Use basic security protocols related to workplace task

3. Finalise task | 3.1 Complete use of technology for designated task in accordance with workplace procedures  
3.2 Review performance against required outcome  
3.3 Seek feedback on performance against outcomes and identify ways to improve performance

### Foundation Skills

This section describes language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

### Mapping Information

Supersedes and is equivalent to FSKDIG02 Use digital technology for simple workplace tasks.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- use digital technology to complete at least three routine and simple workplace tasks with different required outcomes and in accordance with workplace procedures.

During the above, the candidate must use the main features and functions of the selected digital technology and suitable security protocols.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements and performance criteria of this unit, including knowledge of:

- outcomes of routine and simple workplace tasks
- familiar types of digital technology commonly used in the workplace, their purposes and their uses
- familiar workplace instructions and procedures for the use of digital technology relevant to routine and simple workplace tasks
- relevant ethical and security practices applicable to workplace digital technology
- simple conventions of online etiquette
- strategies to review and improve performance.

Assessment Conditions

Competency is to be assessed in the workplace, a workplace simulated environment or a vocational training context.

Skills must be demonstrated using routine and simple tasks that reflect those typically found in a workplace.

The following resources are to be made available:
Assessors must:

- satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards, and
- have sound knowledge of the ACSF, and
- have demonstrable expertise, knowledge and skills in the vocational contextualisation and assessment of digital technology, and
- have completed the following or equivalent:
  - TAESS00009 Address Foundation Skills in Vocational Practice Skill Set; or
  - a higher level education qualification, such as:
    - TAE80113 Graduate Diploma of Adult Language, Literacy and Numeracy Practice (and its equivalent TAE70111); or
    - Bachelor of Education, Graduate Certificate or Graduate Diploma of Education, or higher. This may include qualifications relating to TESOL, adult education or vocational education.

Application

This unit describes the skills and knowledge required to use digital technology to undertake non-routine workplace tasks, such as, operating machinery with computerised settings, entering text into a scanning device, collecting data to construct tables, graphs and charts in a spreadsheet, and measuring, recording and interpreting data using digital equipment.

An individual performing these tasks works independently and uses familiar support resources as needed.

This unit applies to individuals who use, or are preparing to use, digital skills to complete workplace activities. This includes existing workers and individuals preparing for employment through vocational education and training. This unit should be integrated and contextualised with vocational training to support achievement of vocational competency.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- use digital technology to complete at least three non-routine workplace tasks with different required outcomes and in accordance with workplace procedures.

During the above, the candidate must demonstrate use of the main features and functions of selected digital technology and application of security protocols.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements and performance criteria of this unit, including knowledge of:

- outcomes of relevant non-routine workplace tasks using digital technology
- types of digital technology – software and hardware – commonly used in the workplace, their purposes and their uses
- legislation or policies relevant to the use of workplace technology
- workplace procedures for safely accessing and using digital technology
- techniques to synthesise relevant information and instructions from various sources
- relevant ethical and security practices applicable to use of digital technology for non-routine workplace tasks
- conventions of online etiquette
- strategies to review and improve performance.

Assessment Conditions

Competency is to be assessed in the workplace, a workplace simulated environment or a vocational training context.
Skills must be demonstrated using non-routine tasks that reflect those typically found in a workplace.

The following resources are to be made available:

- digital technology required to complete the performance evidence
- workplace procedures required to complete the performance evidence
- own familiar support resources.

Assessors must:

- satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards, and
- have sound knowledge of the ACSF, and
- have demonstrable expertise, knowledge and skills in the vocational contextualisation and assessment of digital technology, and
- have completed the following or equivalent:
  - TAESS00009 Address Foundation Skills in Vocational Practice Skill Set; or
  - a higher level education qualification, such as:
    - TAE80113 Graduate Diploma of Adult Language, Literacy and Numeracy Practice (and its equivalent TAE70111); or

  Revised evidence requirements, including volume and frequency of assessment. |

Application

This unit describes the skills and knowledge required to perform cardiopulmonary resuscitation (CPR) in line with the Australian Resuscitation Council (ARC) Guidelines.

This unit applies to all workers who may be required to provide CPR, in a range of situations, including community and workplace settings.

*Specific licensing /regulatory requirements relating to this competency, including requirements for refresher training should be obtained from the relevant national/state/territory Work Health and Safety Regulatory Authorities.*

Significant changes to elements and performance criteria.  
Revised evidence requirements, including volume and frequency of assessment. |

Performance Evidence

The candidate must show evidence of the ability to complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the job role.

There must be evidence that the candidate has completed the following tasks in line with state/territory regulations, first aid codes of practice, Australian Resuscitation Council (ARC) guidelines and workplace procedures:

- Followed DRSABCD in line with ARC guidelines, including:
  - performed at least 2 minutes of uninterrupted single rescuer cardiopulmonary resuscitation (CPR) (5 cycles of both compressions and ventilations) on an adult resuscitation manikin placed on the floor
• performed at least 2 minutes of uninterrupted single rescuer CPR (5 cycles both compressions and ventilations) on an infant resuscitation manikin placed on a firm surface
• responded appropriately in the event of regurgitation or vomiting
• managed the unconscious breathing casualty
• followed single rescue procedure, including the demonstration of a rotation of operators with minimal interruptions to compressions
• followed the prompts of an automated external defibrillator (AED)
• Responded to at least one simulated first aid scenario contextualised to the candidate’s workplace/community setting, including:
  • demonstrated safe manual handling techniques
  • provided an accurate verbal or written report of the incident

Knowledge Evidence

The candidate must be able to demonstrate essential knowledge required to effectively complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the work role. This includes knowledge of:

• State/Territory regulations, first aid codes of practice and workplace procedures including:
  • ARC Guidelines relevant to the provision of CPR
  • safe work practices to minimise risks and potential hazards
  • infection control principles and procedures, including use of standard precautions
  • requirements for currency of skill and knowledge
• Legal, workplace and community considerations, including:
  • awareness of potential need for stress-management techniques and available support following an emergency situation
  • duty of care requirements
  • respectful behaviour towards a casualty
  • own skills and limitations
  • consent
  • privacy and confidentiality requirements
  • importance of debriefing
• Considerations when providing CPR, including:
  • airway obstruction due to body position
  • appropriate duration and cessation of CPR
  • appropriate use of an AED
  • chain of survival
  • standard precautions
• Basic anatomy and physiology relating to:
  • how to recognise a person is not breathing normally
  • chest
• response/consciousness
• upper airway and effect of positional change

Assessment Conditions

Skills must be demonstrated working individually in an environment that provides realistic in-depth, industry-validated scenarios and simulations to assess candidates’ skills and knowledge.

Assessment resources must include:
• adult and infant resuscitation manikins in line with ARC Guidelines for the purpose of assessment of CPR procedures
• AED training device
• workplace injury, trauma and/or illness record, or other appropriate workplace incident report form

Simulated assessment environments must simulate the real-life working environment where these skills and knowledge would be performed, with all the relevant equipment and resources of that working environment.

Assessor Requirements

Assessors must satisfy the Standards for Registered Training Organisations (RTOs) 2015/AQTF mandatory competency requirements for assessors.

In addition hold current first aid certificate HLTAID003 or higher.

Removal of prerequisite unit. |

Application

This unit describes the skills and knowledge required to provide a first aid response to a casualty. The unit applies to all workers who may be required to provide a first aid response in a range of situations, including community and workplace settings.

*Specific licensing /regulatory requirements relating to this competency, including requirements for refresher training should be obtained from the relevant national/state/territory Work Health and Safety Regulatory Authorities.*
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Elements define the essential outcomes.</strong></td>
<td>Performance criteria specify the level of performance needed to demonstrate achievement of the element.</td>
</tr>
</tbody>
</table>

1. **Respond to an emergency situation**
   - 1.1 Recognise an emergency situation
   - 1.2 Identify, assess and manage immediate hazards to health and safety of self and others
   - 1.3 Assess the casualty and recognise the need for first aid response
   - 1.4 Assess the situation and seek assistance from emergency response services

2. **Apply appropriate first aid procedures**
   - 2.1 Perform cardiopulmonary resuscitation (CPR) in accordance with Australian Resuscitation Council (ARC) guidelines
   - 2.2 Provide first aid in accordance with established first aid principles
   - 2.3 Display respectful behaviour towards casualty
   - 2.4 Obtain consent from casualty where possible
   - 2.5 Use available resources and equipment to make the casualty as comfortable as possible
   - 2.6 Operate first aid equipment according to manufacturer’s instructions
   - 2.7 Monitor the casualty’s condition and respond in accordance with first aid principles

3. **Communicate details of the incident**
   - 3.1 Accurately convey incident details to emergency response services
   - 3.2 Report details of incident to workplace supervisor as appropriate
   - 3.3 Maintain confidentiality of records and information in line with statutory and/or organisational policies
ELEMENT

Elements define the essential outcomes.

PERFORMANCE CRITERIA

Performance criteria specify the level of performance needed to demonstrate achievement of the element.

4. Evaluate the incident and own performance

4.1 Recognise the possible psychological impacts on self and other rescuers involved in critical incidents

4.2 Participate in debriefing to address individual needs

Foundation Skills

The Foundation Skills describe those required skills (language, literacy, numeracy and employment skills) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

No equivalent unit.

Performance Evidence

e candidate must show evidence of the ability to complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the job role.

There must be evidence that the candidate has completed the following tasks in line with state/territory regulations, first aid codes of practice, Australian Resuscitation Council (ARC) guidelines and workplace procedures:

- Followed DRSABCD in line with ARC guidelines, including:
- performed at least 2 minutes of uninterrupted single rescuer cardiopulmonary resuscitation (CPR) (5 cycles of both compressions and ventilations) on an adult resuscitation manikin placed on the floor
- performed at least 2 minutes of uninterrupted single rescuer CPR (5 cycles both compressions and ventilations) on an infant resuscitation manikin placed on a firm surface
- responded appropriately in the event of regurgitation or vomiting
- managed the unconscious breathing casualty
- followed single rescue procedure, including the demonstration of a rotation of operators with minimal interruptions to compressions
- followed the prompts of an Automated External Defibrillator (AED)
- Responded to at least two simulated first aid scenarios contextualised to the candidate’s workplace/community setting, including:
  - conducted a visual and verbal assessment of the casualty
  - demonstrated safe manual handling techniques
  - post-incident debrief and evaluation
  - provided an accurate verbal or written report of the incident
- Applied first aid procedures for the following:
  - allergic reaction
  - anaphylaxis
  - bleeding control
  - choking and airway obstruction
  - envenomation, using pressure immobilisation
  - fractures, sprains and strains, using arm slings, roller bandages or other appropriate immobilisation techniques
  - respiratory distress, including asthma
  - shock

**Knowledge Evidence**

The candidate must be able to demonstrate essential knowledge required to effectively complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the work role. This includes knowledge of:

- State/Territory regulations, first aid codes of practice and workplace procedures including:
  - ARC Guidelines relevant to provision of CPR and first aid
  - safe work practices to minimise risks and potential hazards
  - infection control principles and procedures, including use of standard precautions
  - requirements for currency of skill and knowledge
- legal, workplace and community considerations including:
  - awareness of potential need for stress-management techniques and available support following an emergency situation
  - duty of care requirements
• respectful behaviour towards a casualty
• own skills and limitations
• consent
• privacy and confidentiality requirements
• importance of debriefing
• considerations when providing first aid including:
  • airway obstruction due to body position
  • appropriate duration and cessation of CPR
  • appropriate use of an AED
  • chain of survival
  • standard precautions
  • how to conduct a visual and verbal assessment of the casualty
• principles and procedures for first aid management of the following scenarios:
  • abdominal injuries
  • allergic reaction
  • anaphylaxis
  • basic care of a wound
  • bleeding control
  • burns
  • cardiac conditions, including chest pain
  • choking and airway obstruction
  • crush injuries
  • diabetes
  • dislocations
  • drowning
  • envenomation
  • environmental impact, including hypothermia, hyperthermia, dehydration and heat stroke
  • eye and ear injuries
  • fractures
  • febrile convulsions
  • head, neck and spinal injuries
  • minor skin injuries
  • needle stick injuries
  • poisoning and toxic substances
  • respiratory distress, including asthma
  • seizures, including epilepsy
  • shock
  • soft tissue injuries, including strains and sprains
  • stroke
• unconsciousness
• basic anatomy and physiology relating to:
  • how to recognise a person is not breathing normally
  • chest
  • response/consciousness
  • upper airway and effect of positional change
  • considerations in provision of first aid for specified conditions

**Assessment Conditions**

Skills must be demonstrated working individually in an environment that provides realistic in-depth, industry-validated scenarios and simulations to assess candidates’ skills and knowledge.

Assessment resources must include:

• adult and infant resuscitation manikins in line with ARC Guidelines for the purpose of assessment of CPR procedures
• adrenaline auto-injector training device
• AED training device
• placebo bronchodilator and spacer device
• roller bandages
• triangular bandages
• workplace First Aid kit
• workplace injury, trauma and/or illness record, or other appropriate workplace incident report form for written reports
• wound dressings

Simulated assessment environments must simulate the real-life working environment where these skills and knowledge would be performed, with all the relevant equipment and resources of that working environment.

**Assessor requirements**

Assessors must satisfy the Standards for Registered Training Organisations (RTOs) 2015/AQTF mandatory competency requirements for assessors.

<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICP Printing and Graphic Arts Training Package Version 4.0.</td>
</tr>
</tbody>
</table>

Application

This unit describes the skills and knowledge required to edit and add video to multimedia presentations.

It applies to individuals who select and use industry standard software and hardware to produce digital video sequences to meet required outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Digital media technologies

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
</tbody>
</table>

1. Prepare to incorporate digital video
   1.1 Identify job requirements and video specifications
   1.2 Identify and select digital video software
   1.3 Identify methods for saving and producing multimedia presentation

2. Design digital video
   2.1 Select digital video software
   2.2 Use digital video editing software to combine video assets
   2.3 Control variations in video frame rates
   2.4 Apply time stamping techniques to video frames
   2.5 Save digital video according to enterprise procedures

3. Edit and present digital
   3.1 Edit single and multiple video tracks
### ELEMENT | PERFORMANCE CRITERIA
---|---
video | 3.2 Join multiple tracks of digital video  
3.3 Apply digital effects to modify and integrate digital video tracks  
3.4 Apply time encoding to single and multiple edited digital video tracks  
3.5 Insert video track into multimedia production sequence  
3.6 Test and combine digital video with other digital imaging, sound and animation to create multimedia sequence  
3.7 Save and present multimedia sequence with video to client

### Foundation Skills

*This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.*

<table>
<thead>
<tr>
<th>Skill</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Reading</td>
<td>• Evaluates textual information to establish and confirm job requirements</td>
</tr>
<tr>
<td>Oral Communication</td>
<td>• Uses clear technical terminology to provide information about video to others</td>
</tr>
<tr>
<td>Numeracy</td>
<td>• Uses simple mathematical calculations to verify image quality and image size and to measure frame frequencies and track lengths</td>
</tr>
<tr>
<td>Problem Solving</td>
<td>• Determines requirements and makes routine decisions directly related to completion of tasks</td>
</tr>
<tr>
<td>Planning and Organising</td>
<td>• Plans and implements tasks required to complete jobs according to specifications</td>
</tr>
<tr>
<td>Technology</td>
<td>• Identifies the purposes, functions and features of digital systems and tools used for video recording and editing, and uses them to complete tasks</td>
</tr>
</tbody>
</table>

### Unit Mapping Information

Supersedes and is equivalent to ICPDMT346 Incorporate video into multimedia presentations.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of the unit, including evidence of the ability to:

- design, compile, edit and present at least two multimedia sequences incorporating video.

In the course of the above the candidate must respond to client requirements and modify video as required.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- factors affecting combining digital videos with other digital imaging, sound and animation in a multimedia sequence
- features and uses of current video software programs
- limiting factors of video production on computers
- methods of obtaining differences of image quality and image size
- data input, processing and output for videos
- process of combining video assets
- process for controlling variations in video frame rates
- process and reason for applying time stamping techniques to video frames.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the area of work.

This includes access to:
- video-editing software
- multimedia output devices
- materials required for construction and editing of sound files.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

</tr>
</tbody>
</table>

Application

This unit describes the skills required to manage contracts for strategic purchases, to effectively minimise risks and achieve value for money to meet an organisation’s core objectives. It includes managing the establishment, performance and evaluation of strategic contracts.

This unit applies to those working in roles that involve the acquisition of strategic assets.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Those undertaking this unit would work independently seeking advice as required, performing complex tasks in a range of familiar and unfamiliar contexts.

No licensing, legislative or certification requirements apply to unit at the time of publication.

Competency Field

Procurement
# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENTS</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section.</td>
</tr>
</tbody>
</table>

1. **Manage contract establishment**

1.1 Discuss and agree upon requirements of contracts and strategic initiatives with all parties.

1.2 Assign responsibilities for establishing and carrying out procedures to achieve contract outcomes.

1.3 Establish and implement effective communication strategies and processes to assist ongoing communication between internal and external stakeholders and contractors.

1.4 Perform relationship management with all levels of personnel involved in procurement and contract management, within probity boundaries.

1.5 Establish strategic relationships within probity boundaries to improve procurement capability and performance.

1.6 Update risk management plans.

2. **Manage contract performance**

2.1 Monitor progress of contracts against set targets and performance measures to ensure success of procurement activities.

2.2 Take action to rectify performance where set targets, performance measures and probity requirements are not being met.

2.3 Provide advice and support to solve problems, make improvements and maintain progress.

2.4 Manage disputes promptly according to contractual conditions to achieve resolution and maintain contract performance and progress.

2.5 Seek and negotiate opportunities to continuously improve procurement outcomes with contractors.

2.6 Provide or gain approvals for contract variations that are negotiated and agreed between the parties.

2.7 Provide opportunities for stakeholders and contractors to have input into and receive feedback on progress during the performance of the contract.

2.8 Engage internal and external stakeholders as necessary throughout the life of the contract to maintain progress.

3. **Manage contract evaluation**

3.1 Evaluate contract performance relative to planned performance measures and in consultation with stakeholders and contractors.

3.2 Undertake dispute resolution where stakeholders and contractors do not agree.

3.3 Detail conclusions against agreed criteria to provide a complete...
3.4 Measure performance of strategic initiatives relative to planned outcomes in consultation with industry and other stakeholders.

3.5 Document lessons learnt from evaluations of contracts and strategic initiatives and use to continuously improve future procurement activities.

3.6 Advise contractors and stakeholders of evaluation outcomes.

**Foundation Skills**

Foundation skills are embedded within the elements and performance criteria of this unit.

**Unit Mapping Information**

This unit supersedes and is equivalent to PSPPROC607A Manage strategic contracts.

</tbody>
</table>

Performance Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the candidate must demonstrate evidence of performance of the following on at least one occasion.

- **writing complex documents**
- **managing teams of expert negotiators in functions identifying and resolving strategic contract management issues**
- **identifying, assessing and implementing opportunities for performance improvement**
- **manage strategic procurement contracts, contract management plans and sub-plans**

Knowledge Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the depth of knowledge demonstrated must be appropriate to the job context of the candidate.

- **Commonwealth, state or territory, and local government legislation, policies, practices and guidelines relating to managing strategic contracts, including environmental purchasing guidance.**
- **organisational procurement policies, practices and approval processes**
- **aspects of law of contract, trade practices law, and commercial law relating to managing strategic contracts**
- **codes of conduct, codes of practice and standards of individual behaviour relating to management of contracts and relationships with contractors**
- **government procurement environment**
- **implications of particular contracting arrangements**
- **whole-of-life considerations**
- **cultural issues relating to contract management and industry development**
Assessment Conditions

This unit contains no specific industry-mandated assessment conditions. Guidance on suggested and recommended conditions and methods can be found in the Implementation Guide.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

</tbody>
</table>

Application

This unit describes a participant’s skills and knowledge required to identify, locate and protect underground services in Civil Construction.

This unit is appropriate for those working in operational roles.

Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Unit Sector

Civil construction

Elements and Performance Criteria

| 1. Plan and prepare for identify, locate and protect underground services | 1.1 Access, interpret and apply underground services documentation and ensure the work activity is compliant |
| | 1.2 Obtain, read, interpret, clarify and confirm work requirements |
| | 1.3 Identify, obtain and implement traffic signage requirements |
| | 1.4 Select, and check for faults, equipment/tools for work activities |
| | 1.5 Identify and apply environmental protection requirements |
1. Identify, locate and protect underground services

| 1.6 Obtain and prepare information for search requirements prior to making contact with the service provider (Dial Before You Dig) |
| 1.7 Determine location, alignment direction, level and grade of services and/or utilities from the plans and location details |

2. Locate underground services

| 2.1 Obtain details of services and utilities location from the site owners |
| 2.2 Determine emergency numbers, contact details and procedures for types, and owners, of the services/utilities |
| 2.3 Contact owners of the services/utilities and confirm plans and location details |
| 2.4 Select appropriate plant/equipment, and search for services/utilities on which construction may impact |
| 2.5 Use visual or physical means to search for services and/or utilities prior to commencing construction |
| 2.6 Move, protect and support services/utilities from the construction process in conjunction with the service/utility owner |
| 2.7 Report any damage to services/utilities during activity |

3. Conduct housekeeping activities

| 3.1 Clear work area and dispose of or recycle materials |
| 3.2 Clean and maintain condition of equipment, ensure suitability for use, and address/report issues |
| 3.3 Manage/report hazards, and maintain a safe working environment |
| 3.4 Process written records |

**Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit. Further information is available in the Resources and Infrastructure Industry Training Package Companion Volume.

**Unit Mapping Information**

<td>Amended Performance Evidence.</td>
</tr>
</tbody>
</table>

Performance Evidence

Evidence is required to be collected that demonstrates a candidate’s competency in this unit. Evidence must be relevant to the roles within this sector’s work operations and satisfy all of the requirements of the performance criteria of this unit and include evidence that the candidate:

- locates and applies applicable documentation, policies and procedures
- implements the requirements, procedures and techniques for the safe, effective and efficient completion of the identification, location and protection of underground services including:
  - selecting and using relevant tools and equipment
  - communicating effectively to clarify instructions/information
  - completion of housekeeping activities
- works effectively with others to undertake and complete the identification, location and protection of underground services in a way that meets all of the required outcomes:
  - using a range of communications techniques and equipment
  - complying with written and verbal reporting requirements and procedures
- demonstrates completion of identifying, locating and protecting underground services that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including:
  - identifying and locating underground services employing appropriate techniques, plant and equipment to search for services and utilities
  - identifying services and owners of services and utilities
Knowledge Evidence

The candidate must demonstrate knowledge of the following when identifying, locating and protecting underground services:

- accessing, interpreting and applying the organisation and site requirements and procedures for:
  - identifying and reporting on hazards
  - using operational tools and equipment safely and effectively
  - achieving project quality and accuracy
  - using JSA’s/JSEA/Safe work methods
  - applying site isolation and traffic control
- planning and organising work activities
- working with civil construction terminology
- identifying types of services/utilities and providers
- using construction principles
- identifying equipment types, characteristics, technical capabilities and limitations
- using safety data sheet and materials handling methods
- carrying out operational, maintenance and basic diagnostic procedures

Assessment Conditions

- An assessor of this unit must satisfy the requirements of the NVR/AQTF or their successors; and Industry regulations for certification and licensing; and,
- this unit is best assessed in the context of this sector’s work environment;
- where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of this sector’s workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills; and,
- this unit must be assessed in compliance with relevant legislation/regulation and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed; and,
- assessment may be conducted in conjunction with the assessment of other Units of Competency; and,
- assessment must confirm consistent performance can be applied in a range of relevant workplace circumstances; and,
- assessors must demonstrate the performance evidence, and knowledge evidence as outlined in this Unit of Competency, and through the minimum years of current* work experience specified below in an Industry sector relevant to the outcomes of the unit; or,
- where the assessor does not meet experience requirements a co-assessment or partnership arrangement must exist between the qualified assessor and an Industry subject matter expert. The Industry subject matter expert should hold the unit being assessed (or an equivalent unit) and/or demonstrate equivalence of skills and knowledge at the unit level. An Industry technical expert must also demonstrate skills and knowledge from the minimum years of current work experience specified below in the Industry sector, including time spent in roles related to the unit being assessed; and,
• assessor and Industry subject matter expert requirements differ depending on the Australian Qualifications Framework Level (AQF) of the qualification being assessed and/or Industry Sector as follows:

<table>
<thead>
<tr>
<th>Industry sector</th>
<th>AQF** Level</th>
<th>Required assessor or Industry subject matter expert experience</th>
</tr>
</thead>
<tbody>
<tr>
<td>Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Construction</td>
<td>1</td>
<td>1 Year</td>
</tr>
<tr>
<td></td>
<td>2</td>
<td>2 Years</td>
</tr>
<tr>
<td>Drilling, Coal Mining and Extractive (Quarrying)</td>
<td>3-6</td>
<td>3 Years</td>
</tr>
<tr>
<td>Metalliferous Mining and Civil Construction</td>
<td>3-6</td>
<td>5 Years</td>
</tr>
<tr>
<td>Other sectors</td>
<td></td>
<td>Where this Unit is being assessed outside of the Resources and Infrastructure Sectors assessor and/or Industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no Industry standard is specified should comply with any relevant regulation.</td>
</tr>
</tbody>
</table>

*Assessors can demonstrate current work experience through employment within Industry in a role relevant to the outcomes of the Unit; or, for external assessors this can be demonstrated through exposure to Industry by conducting frequent site assessments across various locations.

**Where a unit is being delivered outside of a Qualification the first numeric character in the Unit code should be considered to indicate the AQF level.

Application

This unit describes a participant’s skills and knowledge required to enter and work in confined spaces in the Resources and Infrastructure Industries.

This unit is appropriate for those working in operational roles undertaking work in confined spaces.

Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

*Note: The terms Occupational Health and Safety (OHS) and Work Health and Safety (WHS) are equivalent and generally either can be used in the workplace. In jurisdictions where the National Model WHS Legislation has not been implemented RTOs are advised to contextualise the unit of competency by referring to the existing State/Territory OHS legislative requirements.*

Elements and Performance Criteria

<p>| 1 Plan and prepare for working in confined space | 1.1 Access, interpret and apply procedures for confined space entry and the environmental management plan and ensure the work activity is compliant |
| 1.2 Obtain, confirm, clarify and apply work instructions and agreed procedure |
| 1.3 Obtain, confirm, clarify and apply safety requirements |</p>

Performance Evidence

Evidence is required to be collected that demonstrates a candidate’s competency in this unit. Evidence must be relevant to the roles within this sector’s work operations and satisfy all of the requirements of the performance criteria of this unit and include evidence that the candidate:

- locates and applies relevant documentation, policies and procedures
- demonstrates completion of entering and working in confined spaces that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including:
  - obtain appropriate entry permit and instructions for performing work in confined space
  - interpreting and applying safe work method statements
  - apply tagging and lock out
  - selecting, wearing and caring for personal protective equipment applicable to all tasks and environment identified
  - entering the confined space
  - using atmospheric monitoring devices prior to entering the confined space
  - working in the confined space
  - using atmospheric monitoring devices during confined space activity
  - applying safe materials handling methods
  - exiting the confined space
  - remove tagging and lock out
Knowledge Evidence

The candidate must demonstrate knowledge of enter and work in confined spaces through:

- identifying areas that constitute confined spaces
- complying with site and equipment safety requirements
- complying with the entry and exit procedures, risks and regulations
- types of air contaminants and toxic gases
- identifying the limitations of breathing apparatus
- identifying equipment types, characteristics, technical capabilities and limitations
- complying with site isolation and site control responsibilities and authorities
- locations of safety data sheets (SDS) information and application
- using confined space and Industry terminology

Assessment Conditions

- An assessor of this unit must satisfy the requirements of the NVR/AQTF or their successors; and Industry regulations for certification and licensing; and,
- this unit is best assessed in the context of this sector’s work environment;
- where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of this sector’s workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills; and,
- this unit must be assessed in compliance with relevant legislation/regulation and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed; and,
- assessment may be conducted in conjunction with the assessment of other Units of Competency; and,
- assessment must confirm consistent performance can be applied in a range of relevant workplace circumstances; and,
- assessors must demonstrate the performance evidence, and knowledge evidence as outlined in this Unit of Competency, and through the minimum years of current* work experience specified below in an Industry sector relevant to the outcomes of the unit; or,
- where the assessor does not meet experience requirements a co-assessment or partnership arrangement must exist between the qualified assessor and an Industry subject matter expert. The Industry subject matter expert should hold the unit being assessed (or an equivalent unit) and/or demonstrate equivalence of skills and knowledge at the unit level. An Industry technical expert must also demonstrate skills and knowledge from the minimum years of current work experience specified below in the Industry sector, including time spent in roles related to the unit being assessed; and,
- assessor and Industry subject matter expert requirements differ depending on the Australian Qualifications Framework Level (AQF) of the qualification being assessed and/or Industry Sector as follows:
<table>
<thead>
<tr>
<th>Industry sector</th>
<th>AQF** Level</th>
<th>Required assessor or Industry subject matter expert experience</th>
</tr>
</thead>
<tbody>
<tr>
<td>Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Construction</td>
<td>1</td>
<td>1 Year</td>
</tr>
<tr>
<td></td>
<td>2</td>
<td>2 Years</td>
</tr>
<tr>
<td>Drilling, Coal Mining and Extractive (Quarrying)</td>
<td>3-6</td>
<td>3 Years</td>
</tr>
<tr>
<td>Metalliferous Mining and Civil Construction</td>
<td>3-6</td>
<td>5 Years</td>
</tr>
<tr>
<td>Other sectors</td>
<td></td>
<td>Where this Unit is being assessed outside of the Resources and Infrastructure Sectors, assessor and/or Industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no Industry standard is specified should comply with any relevant regulation.</td>
</tr>
</tbody>
</table>

*Assessors can demonstrate current work experience through employment within Industry in a role relevant to the outcomes of the Unit; or, for external assessors this can be demonstrated through exposure to Industry by conducting frequent site assessments across various locations.*

**Where a unit is being delivered outside of a Qualification the first numeric character in the Unit code should be considered to indicate the AQF level.

Application

This unit describes a participant’s skills and knowledge required to work safety at heights in the Resources and Infrastructure Industries.

This unit is appropriate for those working in operational roles where they are required to perform work at heights.

Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Note: The terms Occupational Health and Safety (OHS) and Work Health and Safety (WHS) are equivalent and generally either can be used in the workplace. In jurisdictions where the National Model WHS Legislation has not been implemented RTOs are advised to contextualise the unit of competency by referring to the existing State/Territory OHS legislative requirements.

Elements and Performance Criteria

Performance Evidence

Evidence is required to be collected that demonstrates a candidate’s competency in this unit. Evidence must be relevant to the roles within this sector’s work operations and satisfy all of the requirements of the performance criteria of this unit and include evidence that the candidate:

- locates and applies relevant documentation, policies and procedures
- demonstrates completion of working safely at heights that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including:
  - accessing, interpreting and applying technical and safety information for working at heights
  - assessing hazards and risk associated with working at heights and implement control methods
  - selecting wearing and caring for personal protective equipment
  - identifying required safety systems including fall protection and associated equipment
  - checking that fitting, adjusting and anchoring of fall protection and associated equipment is correct
  - performing work safely at heights

Knowledge Evidence

The candidate must demonstrate knowledge of the following when working safely at heights:

- names and functions of equipment, components and materials
• complying with equipment manufacturer’s instructions and specifications
• safe shifting and handling of tools and materials
• adhering to statutory and regulatory authority requirements
• the nature of work undertaken at heights
• complying with heights safety systems
• the processes of providing for safe working practices
• using safety equipment/systems and considerations to facilitate working safely at heights
• complying with safe work methods

**Assessment Conditions**

• An assessor of this unit must satisfy the requirements of the NVR/AQTF or their successors; and Industry regulations for certification and licensing; and,
• this unit is best assessed in the context of this sector’s work environment;
• where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of this sector’s workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills; and,

</tr>
</tbody>
</table>

Application

This unit describes a participant’s skills and knowledge required to control traffic with stop-slow bat in the Resources and Infrastructure Industries. This unit is appropriate for those working in operational roles.

Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Note: The terms Occupational Health and Safety (OHS) and Work Health and Safety (WHS) are equivalent and generally either can be used in the workplace. In jurisdictions where the National Model WHS Legislation has not been implemented RTOs are advised to contextualise the unit of competency by referring to the existing State/Territory OHS legislative requirements.

Elements and Performance Criteria

| 1. Plan and prepare | 1.1 Access, interpret and apply site traffic plan procedures and ensure the work activity is compliant |
|                     | 1.2 Obtain, confirm, clarify and apply work instructions |
|                     | 1.3 Obtain, confirm, clarify and apply safety requirements |
|                     | 1.4 Identify, obtain and implement signage and devices |
|                     | 1.5 Select tools and equipment, check for serviceability and rectify or report any faults |
1.6 Identify, confirm, clarify and apply environmental protection requirements

2. Control traffic
2.1 Position or confirm temporary traffic signs and barriers
2.2 Direct traffic correctly
2.3 Control vehicles and pedestrian traffic and ensure safety
2.4 Monitor traffic, make adjustments for changing conditions and position waiting vehicles for smooth traffic flow
2.5 Use hand held stop/slow bats
2.6 Use visibly clear and unobstructed hand signals
2.7 Report traffic offenders

3. Operate communication devices
3.1 Adjust communication device controls for optimum reception/transmission results
3.2 Transmit messages clearly and concisely
3.3 Maintain communication device power supply
3.4 Check communications contact after nominated period of non-contact

4. Clean up
4.1 Remove or cover signs and devices sequentially to provide warning to motorists during shutdown
4.2 Clean, check, maintain and store tools and equipment

Foundation Skills
Foundation skills essential to performance are explicit in the performance criteria of this unit. Further information is available in the Resources and Infrastructure Industry Training Package Companion Volume.

</tr>
</tbody>
</table>

Performance Evidence

Evidence is required to be collected that demonstrates a candidate’s competency in this unit. Evidence must be relevant to the roles within this sector’s work operations and satisfy all of the requirements of the performance criteria of this unit and include evidence that the candidate:

- locates and applies relevant documentation, policies and procedures
- demonstrates completion of controlling traffic with a stop-slow bat that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including:
  - reading and interpreting the work instruction and planning work activity accordingly
  - positioning signage and barriers
  - directing and controlling vehicle traffic
  - directing and controlling pedestrian traffic
  - communicating to drivers and pedestrians clearly using hand signals
  - using approved communication devices such as hand held radios or phones to transmit message and report of offenders
  - removing or covering signs after work completion

Knowledge Evidence

The candidate must demonstrate knowledge of controlling traffic with stop-slow bat through:

- site and equipment safety requirements
• traffic controlling requirements and procedures
• complying with traffic management plans
• erecting traffic control signage and barricades
• communication device operations
• determine equipment types, characteristics, technical capabilities and limitations
• operational and maintenance procedures for equipment
• detailing site isolation and traffic control responsibilities and authorities
• describing the effects of travel speed and vehicle mass on stopping distances
• interpreting and implementing safe work method statement

Assessment Conditions
• An assessor of this unit must satisfy the requirements of the NVR/AQTF or their successors; and Industry regulations for certification and licensing; and,
• this unit is best assessed in the context of this sector’s work environment;
• where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of this sector’s workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills; and,
• this unit must be assessed in compliance with relevant legislation/regulation and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed; and,
• assessment may be conducted in conjunction with the assessment of other Units of Competency; and,
• assessment must confirm consistent performance can be applied in a range of relevant workplace circumstances; and,
• assessors must demonstrate the performance evidence, and knowledge evidence as outlined in this Unit of Competency, and through the minimum years of current* work experience specified below in an Industry sector relevant to the outcomes of the unit; or,
• where the assessor does not meet experience requirements a co-assessment or partnership arrangement must exist between the qualified assessor and an Industry subject matter expert. The Industry subject matter expert should hold the unit being assessed (or an equivalent unit) and/or demonstrate equivalence of skills and knowledge at the unit level. An Industry technical expert must also demonstrate skills and knowledge from the minimum years of current work experience specified below in the Industry sector, including time spent in roles related to the unit being assessed; and,
• assessor and Industry subject matter expert requirements differ depending on the Australian Qualifications Framework Level (AQF) of the qualification being assessed and/or Industry Sector as follows:

<table>
<thead>
<tr>
<th>Industry sector</th>
<th>AQF** Level</th>

Application

This unit develops a participant’s skills and knowledge required to implement a traffic management plan in Civil construction.

This unit is appropriate for those working in supervisory roles.

Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Note: The terms Occupational Health and Safety (OHS) and Work Health and Safety (WHS) are equivalent and generally either can be used in the workplace. In jurisdictions where the National Model WHS Legislation has not been implemented RTOs are advised to contextualise the unit of competency by referring to the existing State/Territory OHS legislative requirements.

<td>Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.</td>
</tr>
</tbody>
</table>

Performance Evidence

Evidence is required to be collected that demonstrates a candidate’s competency in this unit. Evidence must be relevant to the roles within this sector’s work operations and satisfy all of the requirements of the performance criteria of this unit and include evidence that the candidate:

- locates and applies relevant documentation, policies and procedures
- works effectively with others to undertake and complete the traffic management plans that meet all of the required outcomes including:
  - complying with written and verbal reporting requirements and procedures
  - communicating clearly and concisely with others to receive and clarify work instructions
  - communicating clearly and concisely with others to resolve coordination requirements prior to commencing and during work activities
- demonstrates completion of implementing traffic management plans that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including:
  - complying with State/Territory regulations on three separate live traffic projects, and
  - completing one (1) project controlling site construction vehicles
  - identify and select traffic guidance scheme according to conditions
  - identify and select traffic guidance scheme according to conditions select and implement signage and device requirements, position and display according to site plan
• monitor and adjust scheme according to variances in requirements
• apply procedures to deal with non-compliant crew and motorists

Knowledge Evidence

The candidate must demonstrate knowledge of implementing a traffic management plan through:
• accessing, interpreting and applying legislative, organization and site requirements and procedures for:
  • JSAs/JSEA/Safe work method statement
  • potential hazards and risks
  • controlling traffic
  • basic signalling
  • signs and devices
  • radio operations
• identifying equipment types, characteristics, technical capabilities and limitations
• identifying site isolation and traffic control responsibilities and authorities
• identifying quality requirements
• applying civil construction terminology

Assessment Conditions

• An assessor of this unit must satisfy the requirements of the NVR/AQTF or their successors; and Industry regulations for certification and licensing; and,
• this unit is best assessed in the context of this sector’s work environment;
• where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of this sector’s workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills; and,
• this unit must be assessed in compliance with relevant legislation/regulation and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed; and,
• assessment may be conducted in conjunction with the assessment of other Units of Competency; and,
• assessment must confirm consistent performance can be applied in a range of relevant workplace circumstances; and,
• assessors must demonstrate the performance evidence, and knowledge evidence as outlined in this Unit of Competency, and through the minimum years of current* work experience specified below in an Industry sector relevant to the outcomes of the unit; or,
- where the assessor does not meet experience requirements a co-assessment or partnership arrangement must exist between the qualified assessor and an Industry subject matter expert. The Industry subject matter expert should hold the unit being assessed (or an equivalent unit) and/or demonstrate equivalence of skills and knowledge at the unit level. An Industry technical expert must also demonstrate skills and knowledge from the minimum years of current work experience specified below in the Industry sector, including time spent in roles related to the unit being assessed; and,

- assessor and Industry subject matter expert requirements differ depending on the Australian Qualifications Framework Level (AQF) of the qualification being assessed and/or Industry Sector as follows:

<table>
<thead>
<tr>
<th>Industry sector</th>
<th>AQF** Level</th>
<th>Required assessor or Industry subject matter expert experience</th>
</tr>
</thead>
<tbody>
<tr>
<td>Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Construction</td>
<td>1</td>
<td>1 Year</td>
</tr>
<tr>
<td></td>
<td>2</td>
<td>2 Years</td>
</tr>
<tr>
<td>Drilling, Coal Mining and Extractive (Quarrying)</td>
<td>3-6</td>
<td>3 Years</td>
</tr>
<tr>
<td>Metalliferous Mining and Civil Construction</td>
<td>3-6</td>
<td>5 Years</td>
</tr>
<tr>
<td>Other sectors</td>
<td></td>
<td>Where this Unit is being assessed outside of the Resources and Infrastructure Sectors assessor and/or Industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no Industry standard is specified should comply with any relevant regulation.</td>
</tr>
</tbody>
</table>

*Assessors can demonstrate current work experience through employment within Industry in a role relevant to the outcomes of the Unit; or, for external assessors this can be demonstrated through exposure to Industry by conducting frequent site assessments across various locations.

**Where a unit is being delivered outside of a Qualification the first numeric character in the Unit code should be considered to indicate the AQF level.

SIRXCEG006 Provide online customer service

Modification History
Not applicable.

Application
This unit describes the performance outcomes, skills and knowledge required to interact with customers using online communication tools. It requires the ability to provide information to customers, handle customer difficulties, and provide customer service and support in an online environment.

It applies to individuals who interact with customers online in a diverse range of businesses with an online presence. They operate with some independence, under limited supervision and guidance from others, and within established organisational policies and procedures.

No occupational licensing, certification or specific legislative requirements apply to this unit at the time of publication.

service standards and procedures.

1.2. Communicate with customers online using appropriate communication styles and within designated response times.

1.3. Use correct spelling and grammar when communicating with customers in written form.

1.4. Identify and take opportunities to improve customer experience within scope of own responsibility.

1.5. Promote customer loyalty and repeat business when communicating with customers online.

1.6. Request referrals, ratings and user-generated content from customers.

1.7. Monitor customer demand for products and services and inform relevant personnel to ensure customer needs are met.

1.8. Record customer interactions and feedback according to organisational policies and procedures.

1.9. Make suggestions for improved customer service standards and procedures to relevant personnel.

2. Respond to customer difficulties online.

2.1. Identify customer difficulties and provide required support.

2.2. Identify customer dissatisfaction and take action to avoid escalation.

2.3. Follow organisational online customer service standards and procedures to respond to customer complaints.

2.4. Refer complex customer complaints to relevant personnel for action.

2.5. Maintain a professional manner during online customer interactions.

2.6. Identify consistent and potential customer difficulties and report to relevant personnel to minimise future customer dissatisfaction.

3. Process online refunds and exchanges.

3.1. Identify reasons for refunds and exchanges, and offer a replacement or alternative product or solution to maximise sales opportunities.

3.2. Process online refunds and exchanges according to organisational policies and procedures.
Foundation Skills

FOUNDATION SKILLS

Assessment Requirements for SIRXCEG006 Provide online customer service

Modification History
Not applicable.

Performance Evidence
Evidence of the ability to complete tasks outlined in elements and performance criteria of this unit in the context of the job role, and:
- identify customer requirements and provide online customer service to address requirements, across four different online customer interactions
- provide service to the above customers following organisational online customer service standards and procedures
- follow organisational customer service standards and procedures to:
  - resolve a customer complaint
  - resolve a customer difficulty
  - process an online refund
  - process an online exchange
- make suggestions for improved online customer service standards and procedures.

Knowledge Evidence
Demonstrated knowledge required to complete the tasks outlined in elements and performance criteria of this unit:
- key legal and ethical considerations as related to online customer service provision:
  - Australian Consumer Law
  - privacy
- organisational policies and procedures:
  - processing refunds and exchanges online
  - recording customer information
- organisational online customer service standards:
  - response times
  - communication styles
  - handling customer complaints
  - reporting customer services issues
- key aspects of online communication:
  - written communication techniques
  - appropriate communication styles
Assessment Requirements for SIRXCEG006 Provide online customer service

- role and use of tone in written communication
- maintaining brand integrity
- common causes of customer complaints and difficulties in an online environment
- online customer service provision and techniques for:
  - identifying customer dissatisfaction
  - handling customer complaints
  - handling customer difficulties
  - generating customer loyalty
  - building rapport with customers
  - seeking referrals and user generated content
- role and impact of customer feedback in an online environment:
  - positive feedback
  - negative feedback
- commercial impact of:
  - unresolved customer complaints
  - customer dissatisfaction
  - refunds and exchanges.

Assessment Conditions

Skills must be demonstrated in a service industries environment. This can be:
- an industry workplace
- a simulated industry environment.

Assessment must ensure access to:
- relevant documentation:
  - organisational policies and procedures:
    - processing refunds and exchanges online
    - recording customer information
  - organisational online customer service standards:
    - response times
    - communication styles
    - handling customer complaints
    - reporting customer service issues
  - information technology hardware and software
  - online communication tools
  - online information systems
  - online customers with whom the individual can interact. These can be:
    - individuals in an industry workplace, or
• individuals who participate in role plays or simulated activities, set up for the purpose of assessment, in a simulated industry environment.

Assessors must satisfy the Standards for Registered Training Organisations’ requirements for assessors.

SIRXMKT002 Use social media to engage customers

Modification History
Not applicable.

Application
This unit describes the performance outcomes, skills and knowledge required to manage the use of social media platforms to interact with customers and promote products and services.

It applies to individuals working in customer service management roles in a diverse range of industry sectors and business contexts that have a social media presence. They operate independently with some responsibility for decision making, and within established organisational policies and procedures.

No occupational licensing, certification or specific legislative requirements apply to this unit at the time of publication.

<table>
<thead>
<tr>
<th>ELEMENTS</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Prepare to use social media.</td>
<td>1.1. Review organisational social media requirements and policies and procedures. 1.2. Research various social media platforms, and identify and compare their audience, functionality and reach.</td>
</tr>
</tbody>
</table>
1.3. Research emerging trends in social media platform use.
1.4. Select social media platforms that meet brand needs and reach target customer.
1.5. Source information and content from internal and external sources for use on social media platforms.
1.6. Develop content in line with target audience, brand cultures and social media requirements as required.
1.7. Source or create a social media calendar.

2. Use social media to enhance customer engagement.

2.1. Create opportunities to attract and promote user-generated content.
2.2. Respond to customers in a timely manner, directing them to relevant information as required.
2.3. Identify potential brand damage, and take action to prevent escalation.
2.4. Promptly respond to customer complaints and issues according to social media policies and procedures.
2.5. Adhere to legal and ethical practices for social media use.

3. Promote products and services.

3.1. Identify social media marketing opportunities and curate and post content to promote products and services.
3.2. Use social media to promote special offers, events and promotions as required.
3.3. Post content according to social media policies and procedures.

4. Review social media use.

4.1. Track social media activity using monitoring tools.
4.2. Identify opportunities to improve customer experience, and recommend to relevant personnel.
4.3. Update the look and feel of the social media account to maximise effectiveness.
4.4. Report on social media engagement and reach to relevant personnel.

Foundation Skills

Foundation skills essential to performance in this unit, but not explicit in the performance criteria are listed here, along with a brief context statement.

SKILLS DESCRIPTION

Reading skills to: • interpret technical terminology relevant to the use of social media platforms.
Writing skills to: • use correct spelling and grammar in social media posts.

Technology skills to: • upload images, text files, PDF files, audio files, video files and link associated files
• import and export software functions
• conduct online research for appropriate content
• compare social media platform functionality.

Unit Mapping Information
No equivalent unit.

Assessment Requirements for SIRXMKT002 Use social media to engage customers

Modification History

Not applicable.

Performance Evidence

Evidence of the ability to complete tasks outlined in elements and performance criteria of this unit in the context of the job role, and:

- research four social media platforms and select two platforms for use, appropriate to business needs and target customer
- use the above two social media platforms to engage the customer by:
  - curating and posting written and visual content appropriate to the target customer
  - promote one organisational marketing activity
  - respond to two of the following types of customer social media posts:
    - customer reviews
    - user generated content
    - questions
    - complaints
    - troll
- review effectiveness of social media platform across a one month period by:
  - reporting on social media activity
  - making at least one recommendation for continuous improvement of social media use.

Knowledge Evidence

Demonstrated knowledge required to complete the tasks outlined in elements and performance criteria of this unit:

- organisational policies and procedures for social media use
- rules and regulations and terms of use of specific social media platforms:
  - privacy
  - spamming
  - copyright
  - creative commons
- social media trends:
  - trending platforms
  - consumer behaviour
  - trending content
• various social media platforms:
  • demographic of primary users
  • key features and uses
  • integration into business activity
  • useability
  • privacy and security features
  • costs
• legal and ethical practices for use of social media:
  • responsible use of platforms
  • responsible marketing practices
  • fair competition guidelines
  • duty of care
  • bullying and harassment policy
• types of social media users and their impacts:
  • troll
  • angry customer
  • misguided customer
  • unhappy customer
  • complimentary customers
  • brand advocates
• techniques for:
  • marketing the business using social media platforms:
    • promoting products
    • promoting special events
    • creating brand awareness
  • responding to customer posts on social media:
    • customer reviews
    • user generated content
    • questions
    • complaints
    • troll
• social media tools, and their use, for:
  • monitoring
  • scheduling social media content
  • capturing engagement and reach data
• commercial impact of social media platform both favourable and unfavourable:
  • importance of consumer reviews and user generated content
  • value of building a community of advocates on a social media platform
  • types of crisis issues or conflicts that can arise on social media locally, nationally and internationally
• sources and types of social media content:
  • product information
  • images and photos
  • links to other websites
  • videos
  • text and graphics
  • current trends
  • Internet.

**Assessment Conditions**

Skills must be demonstrated in:
• an industry workplace
• a simulated industry environment.

Assessment must ensure access to:
• relevant documentation:
  • organisational policies and procedures for social media use
  • legal and ethical use of social media
• social media content calendar that details:
  • key events and promotions
  • milestones and relevant dates
  • content for release
• files for use across social media platforms:
  • image files
  • text files
  • PDF files
  • audio files
  • video files
  • link associated files
• computer or mobile device with Internet access
• social media monitoring tools
• social media platforms
• customer postings on social media platforms
• assessment activities that allow the individual to work with commercial speed, timing and productivity.

Assessors must satisfy the Standards for Registered Training Organisations’ requirements for assessors.

TLID2010 Operate a forklift

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to operate a forklift in compliance with the relevant state/territory authority licence requirements and regulations, in a variety of operational contexts.

It includes checking forklift condition, driving forklift to fulfil operational requirements, and monitoring and maintaining forklift performance and site conditions.

Assessment of this unit will usually be undertaken within a licensing examination conducted by, or under the authority of, the relevant state/territory work health and safety (WHS)/occupational health and safety (OHS) authority.

Operation of a forklift is performed under some supervision, generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

D – Load Handling

Unit Sector

Not applicable.
# Elements and Performance Criteria

Elements describe the essential outcomes. Performance criteria describe the performance needed to demonstrate achievement of the element.

## 1 Check forklift condition

1.1 Condition of forklift is checked for compliance with WHS/OHS and workplace requirements for warning devices, manufacturer specifications and nature of load shifting task

1.2 Attachments are checked to ensure appropriate adjustment and operation

1.3 Mirrors and seats are adjusted for safe operation by driver

1.4 Logbooks are checked and appropriate workplace documentation is completed in accordance with workplace requirements

## 2 Drive forklift

2.1 Forklift is started, steered, manoeuvred, positioned and stopped in accordance with regulations and manufacturer instructions

2.2 Engine power is managed to ensure efficiency and performance and to minimise engine and gear damage

2.3 Operational hazards are identified and/or anticipated and avoided or controlled through defensive driving and appropriate hazard control techniques

2.4 Forklift is driven in reverse, maintaining visibility and achieving accurate positioning

2.5 Forklift is parked, shut down and secured in accordance with manufacturer specifications, regulations and workplace procedures

## 3 Operate forklift to handle loads

3.1 Lifting task to be undertaken is appropriately planned, and correct lifting truck and attachments are selected

3.2 Load is lifted, carried, lowered and set down in accordance with WHS/OHS legislation, manufacturer specifications and company procedures

## 4 Monitor site conditions

4.1 Hazards and traffic flow are identified when selecting the most efficient route and appropriate adjustments are made

4.2 Site conditions are assessed to enable safe operations and to ensure no injury to people or damage to property, equipment, loads or facilities occurs
5 Monitor and maintain forklift performance

5.1 Performance and efficiency of vehicle operation is monitored during use

5.2 Defective/irregular performance and malfunctions are reported to relevant personnel

5.3 Forklift records are maintained/updated in accordance with workplace procedures and legislative requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLID2010A Operate a forklift.

Links

Companion Volume implementation guides are found in VETNet - https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851
Assessment Requirements for TLID2010 Operate a forklift

Modification History
Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence
Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- checking and replenishing fluids, and carrying out lubrication processes
- communicating and working effectively with others
- completing relevant documentation
- ensuring forklift and its equipment are maintained in terms of service schedule and standard operating procedures
- identifying points of balance and safe lifting positions on a range of loads when operating a forklift (including accessories)
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring performance of forklift and its equipment, and taking appropriate action as required
- monitoring and prioritising work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with standard operating procedures
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment conforming to industry and WHS/OHS standards
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.
Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- efficient driving techniques
- engine power management and safe operating strategies
- forklift controls, instruments and indicators, and their use
- forklift handling procedures
- high risk work licence requirements
- operating hazards and related defensive driving and hazard control techniques
- operational emergency procedures
- pre-operational checks carried out on forklift and related action
- principles of stress management when driving a forklift
- relevant duty of care requirements for operating a forklift
- relevant WHS/OHS and environmental procedures and regulations
- site layout and obstacles
- workplace operating procedures.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

UEPOPS423 Plan a scheduled outage

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to plan for a scheduled outage of power generating plant.

A schedule is a plan of action detailing a series of tasks to be undertaken at or during a specified time. A forced outage is the shutdown of generation facility, transmission or distribution line when a generating unit is unavailable to produce power due to an unexpected breakdown.

Competency in this unit requires the ability to identify outage requirements, create outage plans, implement outage plans and complete documentation. Individuals will, in general, work as an operator with responsibility for quality control, in a power generation facility.

Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Pre-requisite Unit

There are no prerequisite units.

Competency Field

Operations

Unit Sector

Electricity generation
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENTS</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
</tbody>
</table>

### 1 Identify outage requirements

1.1 Outage requirements are identified from work orders and is clarified with the appropriate personnel or site inspection, in accordance with workplace procedures.

1.2 Safety issues are identified, in accordance with Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) and legislative requirements, industry standards and workplace procedures.

1.3 Date, time and expected duration of outage is assessed and confirmed from relevant information and statistical records in accordance with workplace procedures.

1.4 Schematic diagrams, drawings, plans or maps are consulted to determine area affected by outage, in accordance with workplace procedures.

### 2 Create outage plan

2.1 Impact of outage is ascertained, in accordance with workplace procedures.

2.2 Key stakeholders and/or equipment affected by outage are identified, in accordance with workplace procedures.

2.3 Status of plant and consumers affected by outage is identified and assessed, in accordance with workplace procedures.

2.4 Key stakeholders are consulted to determine timetable and contingency plan, in accordance with workplace procedures.

2.5 Disruptions to key consumers are minimised, in accordance with workplace procedures, by providing alternative routes of power generation supply.

2.6 Scope of work to be carried out during outage is evaluated against allocated timeframes, in accordance with workplace procedures.

2.7 Work permits required prior to and during outage are obtained, in accordance with workplace procedures.
3 Implement outage plan

3.1 Work crews are notified of outage plan through the appropriate channels, in accordance with workplace procedures.

3.2 Notification of outage is communicated to all stakeholders, in accordance with workplace procedures.

4 Complete documentation

4.1 Records are maintained, in accordance with workplace procedures.

4.2 Documentation is updated, in accordance with workplace procedures.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEPOPS423B Plan a scheduled outage.

Links

Companion Volume implementation guides are found in VETNet - https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=1715b9fa-e7bd-441c-bb8d-cf22c9c825a8
Assessment Requirements for UEPOPS423 Plan a scheduled outage

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and includes:

- advising and communicating with key stakeholders
- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) legislated requirements including:
  - emergency procedures
  - risk control measures
  - safe working practices
- communicating with personnel
- creating outage plans
- identifying outage requirements
- implementing legislation, industry standards, codes of practice and regulations
- interpreting manufacturers' specifications and manuals
- investigating implications of outage
- planning outage work
- recognising power generation plant status
- using documenting and recording procedures
- working with permit to work system

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of:

- communication and liaison techniques
- legislation, industry standards, codes of practice and regulations
- manufacturers' specifications and manuals
- outages and potential impact
- permit to work system
- power generation plant and equipment, its location and operating parameters
- power generation plant status
- scheduling methods and tools
- stakeholders
- types of schedules
- typical arrangements of power generation plant
- WHS/OHS policy and procedures including:
  - emergency procedures
  - risk control measures
  - safe working practices
- workplace documentation
- workplace policies and procedures

**Assessment Conditions**

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to:
- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDREL14A Working safely near live electrical apparatus as a non-electrical worker

Modification History
Not applicable.

Unit Descriptor

1) Scope:

1.1) Descriptor

This Competency Standard Unit covers compliance with working safely up to the defined “safe approach distance” near energised electrical apparatus (inc. electrical powerlines) for non-electrical workers. It includes work functions that may be performed, such as vegetation control, scaffolding, rigging, painting, and/or any other activity that requires working safely and complying with requirements and/or established procedures near live electrical apparatus by a non-electrical worker. Also included is the preparation of risk assessment control measures that encompass job safety assessment. It does not include any work that is or may be performed by other competent operatives within the defined “safe working zone”. The defined “safe working zone” is that so defined by relevant State or Territory regulatory agencies/bodies, local government legislation, Industry bi-partite body – Guidelines/Codes of Practices or other related requirements for Safe work and access near live Electrical and Mechanical Apparatus.

Application of the Unit

2) This competency standards unit shall apply to Transmission, Distribution, Rail Traction, Telecommunications and Vegetation Management Control industry sectors.
Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to Occupational Health and Safety, electricity/telecommunications/gas/water industry safety and compliance, industrial relations, environmental protection, anti-discrimination and training. Commonwealth, State/Territory or Local Government legislation and regulations may exist that limits the age of operating certain equipment.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

Where pre-requisite pathways have been identified. All competencies in the Common Unit Group must be have been completed plus all the competencies in one (1) of the identified Pathway Unit Group(s):

There are no prerequisite competencies to this unit.

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 “Literacy and Numeracy”.

Reading 3  Writing 3  Numeracy 3
Employability Skills Information

Employability Skills 5) The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit. Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>

## ELEMENT | PERFORMANCE CRITERIA
---|---

| | clear according to established procedures. |
| 1.6 | Scope of responsibility and process of relevant work permit(s) issue is identified, received and confirmed according to requirements and established procedures. |
| 1.7 | Relevant responsibility associated with First Aid, Safety Observers and/or other related work safety procedures at the worksite are identified in accordance with requirements and established procedures to ensure safety measures are followed in the instance of an incident. |
| 1.8 | Processes for identifying and reporting client issues to appropriate personnel in accordance with industry/acceptable /community standards are identified. |
| 1.9 | Site and the work schedule to be prepared are confirmed according to given instructions for a quality outcome and to minimise risk and damage to property, commerce, stock and individuals in accordance and established procedures. |
| 1.10 | Electricity infrastructure assets, related voltages and requirements for working safely near live electrical apparatus as non-electrical worker are identified. |
| 1.11 | Safe approach distances including any zones thereof that may apply, as defined in industry guidelines, requirements and/or established procedures for the intended work are confirmed. |
| 2.1 | OHS principles and practices to reduce the incidents of accidents are identified in accordance with given instructions, requirements and/or established procedures. |
| 2.2 | Working safely and complying with all safety requirements for working near live electrical apparatus as a non-electrical worker are followed in accordance with given instructions and |
ELEMENT | PERFORMANCE CRITERIA
--- | ---
 | established routines/procedures.

2.3 Processes for monitoring and reporting/referring hazards and OHS risks to the immediate authorised personnel for directions according to established procedures are followed.

2.4 Non-routine events are referred to the immediate authorised personnel for directions according to established procedures.

2.5 Unexpected events associated with working safely near live electrical apparatus as a non-electrical worker are responded to using acquired known solutions and skills related to routine procedures to ensure work instructions and established procedures are met.

3 Complete the work safely near live electrical apparatus as non-electrical worker.

3.1 Work schedule and anomalies for completion and checking of the work are reported to authorised personnel in accordance with established procedures.

3.2 Processes for reporting to authorised personnel accidents and/or incidents are confirmed in accordance with established procedures.

3.3 Requirements for returning work permit(s) and/or access authorisation permits are confirmed.

3.4 Appropriate personnel are notified of work completion according to established procedures.

3.5 Works completion records, report forms/data sheets are completed accurately in accordance with given instructions and established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) Essential Knowledge and Associated Skills (EKAS): This describes the essential
REQUIRED SKILLS AND KNOWLEDGE

skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of working safely near live electrical apparatus as non electrical worker.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-TEL14A Power Line Safety – Non Electrical Workers

Evidence shall show an understanding of power line safety – non electrical workers to an extent indicated by the following aspects:

T1 Basic electrical principles encompassing:

- Fundamental units - basic measurement of units
- Electrical characteristics of material: characteristics of solid materials, insulators; terms electrical charge, electrical current, electromagnetic forces
- Nature of electrical current and change - basic rules of electrical current flow
- Sources of Electricity: basic fundamentals of alternating current, direct current and single EMF source (induction)
- A simple circuit - circuit protection devices used on the network, effects of an open circuit, a closed circuit and a short circuit and earthing – using the ground as a form of conductor to return current back to a source
- Resistance - relationship between voltage and current and resistance (Ohms Law)
- Effects of current - physiological effects and protection for physiological effects; basic principle by which electrical current can result in the production of heat, light and electromagnetic fields and typical effects of current.
- Three phase and single phase power systems: star delta configurations, three phase star connections, relationship between line and phase voltages, three phase 4 wire systems - purpose of the neutral
- Consequences of short circuits - arc flash, ESI Protection schemes
- Magnetism - magnetic field patterns, concepts of electromagnetism, effects of electromagnetism and magnetic fields around straight conductors
- Hazards encountered in an ESI environment - touch and step potentials, electric shock, fire, chemicals, falls, safe use of tools and equipment.

T2 Transmission, distribution and rail power systems encompassing:

- Relationship between the transmission, distribution and rail/tram system within an overall power system - different organisations responsible for generation, transmission, distribution and rail/tram and, how they correlate and their functions
- Characteristics of a transmission, a distribution and a rail system - principal components, typical voltage levels and methods of transmission and distribution including grid type transmission systems, radial, parallel and ring main feeders
- Relationship between an overhead and underground supply systems within an overall power system - advantages/disadvantages, applications.
- Single line drawings and layouts - drawings and layouts of transmission and distribution systems including, radial, parallel and ring main feeders and the HV
REQUIRED SKILLS AND KNOWLEDGE

equipment associated with substations

T3 Fundamentals for working safely near live electrical apparatus for non-electrical worker encompassing:

- Standards, guidelines/codes of practice, State/Territory/local government legislation, supply authority regulations and or enterprise requirements including relevant certification and licensing, applicable to working safely up to the defined “safe working zone” near energised electrical apparatus (inc. electrical powerlines) for non-electrical worker

- OHS policies and procedures for working safely - duties of a safety observer, permit to work systems and isolation procedures, safe application of different types of tools and equipment and operation of mobile plant and machinery (e.g. EWP) near live electrical apparatus

- Techniques and precautions in undertaking different work functions and working safely up to the defined “safe working zone” near energised electrical apparatus (inc. electrical powerlines) for non-electrical worker (work functions that may be performed include, vegetation control, scaffolding, rigging, painting, and/or any other activity that requires working safely near live electrical apparatus by a non-electrical worker)

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the competency standard unit and must be read in conjunction with the Performance Criteria and the range statement of the competency standard unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all component parts of this unit and, performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1) Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment
intervention. It is the Industry’s preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and, Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be ‘rich’ in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the “Assessment Guidelines – UET12”. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline,
work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range; and

- Apply sustainable energy principles and practices as specified in the Performance Criteria and range; and

- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment; and

- Demonstrate an appropriate level of employability skills; and

- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures; and

- Demonstrated performance across a representative range of contexts from the prescribed items below:

<table>
<thead>
<tr>
<th>Range of tools/equipment/materials/procedures/workplaces/other variables</th>

**Context of and specific resources for assessment**

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to safely undertake actual work near live electrical apparatus.

In addition to the resources listed above, in context of and specific resources for assessment, evidence should show demonstrated
competency working below ground, in limited spaces, with different structural/construction types and method and in a variety of environments.

**Method of assessment 9.4)**

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 “Assessment Guidelines”.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and associated skills described in this unit.

**Concurrent assessment and relationship with other units 9.5)**

For optimisation of training and assessment effort, competence in this unit is not recommended to be assessed concurrently with any other unit.

**Range Statement**

**RANGE STATEMENT**

10) This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This Competency Standard Unit shall be demonstrated in relation to safe working so defined by relevant State or Territory regulatory agencies/bodies, local government legislation, Industry bi-partite body – Guidelines/Codes of Practices or other related requirements for Safe work and access near live Electrical Apparatus.

Work functions that may be performed, such as vegetation control, operation of cranes, elevating work platforms, excavators, concrete pumps etc, scaffolding,
RANGE STATEMENT

rigging, painting, and/or any other activity that requires working safely and complying with requirements and/or established procedures near live electrical apparatus by a non-electrical worker/

Working safely up to the defined “safe working zone” near energised electrical apparatus (inc. electrical powerlines) for non-electrical worker including an understanding of risk assessment control measures that encompass job safety assessment but excluding any work that is or may be performed by other competent operatives within the defined “safe working zone”.

Safe use of plant, equipment and tools within electrical environments including but not limited by the electricity supply infrastructure assets, infrastructure constructions and excavations including an understanding of safe approach distances zones/Safe Working Clearance, work permit(s) and/or access authorisation permits, technical standards and Industry Guidelines, rural applications, road construction, pavements and effect of inclement weather

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section 1 of this volume and form an integral part of the Range Statement of this unit:

- Appropriate and relevant persons
- Appropriate authorities
- Assessing risk
- Authorisation
- Drawings and specifications
- Emergency
- Established procedures
- Hazards
- Identifying hazards
- Legislation
- Notification
- OHS practices
- OHS issues
- Permits and/or permits to work
- Work clearance systems

3 qualifications:
- ICT20120 Certificate II in Applied Digital Technologies
- ICT50220 Diploma of Information Technology
- ICT60220 Advanced Diploma of Information Technology

The above three qualifications supersede a range of ICT qualifications detailed in the qualification mapping table in this guide.

Units of competency

4 non-equivalent units of competency updated to align content with industry skills needs and standards:
- ICTNWK555 Determine best-fit topologies for local networks
- ICTNWK560 Determine best-fit topologies for wide area networks
- ICTSUS811 Conduct and manage life cycle assessments for sustainability
- ICTTEN524 Diagnose and organise repair of complex equipment faults

61 equivalent units of competency updated to align content with industry skills needs and standards:
- ICTCMP502 Conduct radio communications site audits
- ICTICT531 Test network using virtual instruments
- ICTICT818 Develop knowledge management strategies
- ICTICT819 Lead analysis of information and communications technology business strategy
- ICTICT822 Manage automated ICT system applications
- ICTNPL412 Apply business acumen to network planning
- ICTNPL413 Evaluate networking regulations and legislation for the telecommunications industry
- ICTNWK561 Design enterprise wireless local area networks
- ICTOPN507 Plan and configure dense wavelength division multiplexing optical networks
- ICTOPN508 Perform acceptance and commissioning tests on optical networks
- ICTOPN509 Plan for optical system upgrades
- ICTOPN510 Test and commission dense wavelength division multiplexing transmission systems
- ICTOPN511 Test performance of specialised optical devices
- ICTOPN512 Analyse and integrate specialised optical devices
- ICTOPN605 Manage optical ethernet transmission
- ICTOPN606 Manage dense wavelength division multiplexing transmission systems
- ICTOPN607 Design dense wavelength division multiplexing systems
- ICTOPN608 Analyse optical transmission systems
- ICTPMG506 Prepare network project briefs
- ICTRFN504 Test cellular handset enhancements and international roaming agreements
- ICTRFN505 Test and measure cellular phone and network equipment performance
- ICTRFN506 Evaluate radio frequency signal coverage plots
- ICTRFN603 Monitor the capacity of and recommend changes to cellular mobile networks
- ICTRFN804 Produce radio link budgets
- ICTRFN805 Analyse cellular mobile network systems
- ICTRFN806 Analyse satellite communications systems
- ICTSUS502 Install and test virtual infrastructure
- ICTSUS603 Integrate sustainability in ICT planning and design projects
- ICTSUS604 Prepare business cases for sustainability and competitive advantage in ICT projects
- ICTSUS812 Lead applied research in ICT sustainability
- ICTTEN519 Design network building projects
- ICTTEN520 Commission network equipment
- ICTTEN521 Integrate network systems and equipment
- ICTTEN522 Cut over new and replacement network equipment
- ICTTEN523 Locate, diagnose and rectify complex system equipment faults
- ICTTEN525 Install, configure and test local area network switches
- ICTTEN526 Dimension and design a radio frequency identification system
- ICTTEN527 Plan wireless mesh networks
- ICTTEN613 Assess integration of international network equipment into Australian networks
- ICTTEN614 Conduct network system optimisation and
administration

- ICTTEN615 Manage network traffic
- ICTTEN616 Rectify client services following network outages and faults
- ICTTEN617 Manage common channel signalling networks
- ICTTEN618 Analyse and organise repair of highly complex networks
- ICTTEN619 Test new software and hardware releases
- ICTTEN620 Produce and evaluate architecture designs for convergent cellular mobile networks
- ICTTEN621 Design and configure IP-MPLS networks with virtual private network tunnelling
- ICTTEN622 Produce ICT network architecture designs
- ICTTEN623 Design and manage internet protocol TV in a service provider network
- ICTTEN817 Plan transmission networks
- ICTTEN818 Align systems with product and technology strategy
- ICTTEN819 Translate domain and solution architectures into platform requirements and designs
- ICTTEN820 Manage end to end architectural solutions across multiple domains
- ICTTEN821 Manage solution architecture and impacts
- ICTTEN822 Manage application layer solutions
- ICTTEN823 Manage voice, data and internet protocol network solutions
- ICTTEN824 Manage network testing strategies
- ICTTEN825 Investigate applications of cloud networks in network switching
- ICTTEN826 Evaluate and apply digital signal processing to communication systems
- ICTTEN827 Produce engineering solutions
- ICTTEN828 Manage development and application of testing artefacts

36 units of competency were reviewed and deleted from the *ICT Information and Communications Training Package* Version 6.1:

- ICTEDU501 Develop and deliver training associated with new and modified products
- ICTICT101 Operate a personal computer
- ICTICT102 Operate word-processing applications
- ICTICT103 Use, communicate and search securely on the internet
- ICTICT104 Use digital devices
- ICTICT105 Operate spreadsheet applications
- ICTICT106 Operate presentation packages
- ICTICT107 Use personal productivity tools
- ICTICT108 Use digital literacy skills to access the internet
- ICTICT202 Work and communicate effectively in an ICT environment
- ICTICT801 Lead research into identifying new marketplace opportunities
- ICTICT803 Endorse business plan components for a new initiative
- ICTICT811 Manage an information architecture project
- ICTICT812 Develop a business intelligence framework
- ICTNPL501 Develop planning strategies for core network design
- ICTNPL502 Develop planning strategies for access network design
- ICTNPL503 Apply service measures and demand forecasting to products and services planning
- ICTNPL504 Develop planning strategies for building environment design
- ICTNPL601 Plan the development and growth of the telecommunications network
- ICTNPL602 Forecast service demand
- ICTNPL603 Undertake network performance analysis
- ICTPMG502 Develop customer premises equipment installation project plans
- ICTPMG611 Prepare a detailed design brief
- ICTPMG801 Manage a telecommunications workplace
- ICTPMG803 Undertake a telecommunications project
- ICTPMG804 Evaluate and use telecommunications management networks
- ICTPRO501 Develop training, marketing and sales resources for telecommunications products
- ICTRFN602 Produce and evaluate architecture designs for WiMAX networks
- ICTSUS804 Use ICT to improve sustainability outcomes
- ICTSUS805 Manage improvements in ICT sustainability
- ICTTEN503 Design an electronic system for a telecommunications network
- ICTTEN510 Undertake planned outage management
- ICTTEN512 Design and implement an enterprise voice over
- ICTTEN809 Analyse business specifications to produce technical solutions
- ICTTEN815 Manage project requirements and process implementations
- ICTTEN816 Scope project requirements and process solutions
IRRC approval of the following ICT components.

### Skill sets

6 skill sets were newly created from the *ICT Information and Communications Training Package* Version 6.1:

- ICTSS00110 Radio Frequency Skill Set
- ICTSS00111 Optical Networking Skill Set
- ICTSS00112 Internet Protocol Networking Skill Set
- ICTSS00113 Telecommunications Networking Management Skill Set
- ICTSS00114 Advanced Telecommunications Networking Skill Set
- ICTSS00115 XG Cellular Network Infrastructure Rollout Skill Set

3 skill sets were deleted from the *ICT Information and Communications Training Package* Version 6.1:

- ICTSS00044 Computing and Application Fundamentals Skill Set
- ICTSS00047 Digital Literacy Skill Set
- ICTSS00046 Digital Literacy - eCitizen Skill Set

17 skill sets were updated from the *ICT Information and Communications Training Package* Version 6.1:

- ICTSS00048 Hardware Technician Skill Set
- ICTSS00077 Telecommunications Linesworker Copper Skill Set
- ICTSS00078 Telecommunications Linesworker Fibre Skill Set
- ICTSS00083 Underground Installations Skill Set
- ICTSS00084 Basic Open Cabler Registration Skill Set
- ICTSS00085 Basic Restricted Cabler Registration Skill Set
- ICTSS00086 ACMA Advanced Cabler Registration Skill Set
- ICTSS00087 Basic Technician Network Build and Operate Skill Set
- ICTSS00091 Radio Technician Skill Set
- ICTSS00092 Technical Help Desk Support Skill Set
- ICTSS00093 Telecommunications Linesworker HFC Skill Set
- ICTSS00094 Technician Fibre Skill Set
- ICTSS00095 Fibre Splicer Skill Set
- ICTSS00097 Telecommunications Customer Service Technician – HFC Technician Skill Set
- ICTSS00098 Network Technician HFC Skill Set
- ICTSS00099 Cloud Design and Configuration Skill Set
- ICTSS00116 XG Cellular Network Implementation Skill Set

| Release | October 2020 | SSO (Skills Service Organisation) upgrade. |
### Qualifications

Minor update to one ICT Information and Communications Technology Training Package version 6.0 qualification:
- ICT30120 Certificate III in Information Technology

Minor update to three ICT Information and Communications Technology Training Package version 6.0 qualifications:
- ICT40120 Certificate IV in Information Technology
- ICT50120 Diploma of Information Technology
- ICT60120 Diploma of Information Technology

### Skill sets

Two new skill sets were created:
- ICTSS00108 Digital Skills in Small Business Skill Set
- ICTSS00109 Entry to Tech Skill Set

Minor update to one ICT Information and Communications Technology Training Package version 6.0 skill set:
- ICTSS00099 Cloud Design and Configuration Skill Set

### Units of competency

Minor update to six ICT Information and Communications Technology Training Package version 6.0 units of competency:
- ICTCYS406 Respond to cyber security incidents
- ICTCYS601 Create cyber security standards for organisations
- ICTICT216 Design and create basic organisational documents
- ICTNWK544 Design and implement a security perimeter for ICT networks
- ICTPRG549 Apply intermediate object-oriented language skills
- ICTSAS210 Update and maintain hardware, software and documentation.

### Qualifications

4 qualifications:
- ICT30120 Certificate III in Information Technology
- ICT40120 Certificate IV in Information Technology
| ICT50120 Diploma of Information Technology  
| ICT60120 Advanced Diploma of Information Technology |

were updated and supersede the following 24 qualifications from the ICT Information and Communications Training Package Version 5.1 and are not equivalent to their previous versions:

- ICT30118 Certificate III in Information, Digital Media and Technology
- ICT40118 Certificate IV in Information Technology
- ICT40215 Certificate IV in Information Technology Support
- ICT40315 Certificate IV in Web-Based Technologies
- ICT40418 Certificate IV in Information Technology Networking
- ICT40518 Certificate IV in Programming
- ICT40815 Certificate IV in Digital Media Technologies
- ICT40915 Certificate IV in Digital and Interactive Games
- ICT41015 Certificate IV in Computer Systems Technology
- ICT50118 Diploma of Information Technology
- ICT50215 Diploma of Digital and Interactive Games
- ICT50318 Diploma of Information Technology Systems Administration
- ICT50418 Diploma of Information Technology Networking
- ICT50515 Diploma of Database Design and Development
- ICT50615 Diploma of Website Development
- ICT50718 Diploma of Software Development
- ICT50818 Diploma of Systems Analysis and Design
- ICT50915 Diploma of Digital Media Technologies
- ICT60115 Advanced Diploma of Information Technology
- ICT60215 Advanced Diploma of Network Security
- ICT60315 Advanced Diploma of Information Technology Business Analysis
- ICT60415 Advanced Diploma of Information Technology Project Management
- ICT60515 Advanced Diploma of Computer Systems Technology
- ICT80115 Graduate Certificate in Information Technology and Strategic Management

**Skill sets**

9 skill sets were newly created from the ICT Information and Communications Training Package Version 5.1:

- ICTSS00099 Cloud Design and Configuration Skill Set
- ICTSS00100 Cloud Implementation and Maintenance Skill Set
- ICTSS00101 Cyber Incident Response Skill Set
- ICTSS00102 Cyber Incident Threat Detection and Prevention
**Skill Set**
- ICTSS00103 Cyber Security Strategy and Governance Skill Set
- ICTSS00104 Data Analysis Skill Set
- ICTSS00105 Internet of Things Developer Skill Set
- ICTSS00106 Introductory Tools and Applications Skill Set
- ICTSS00107 Introductory Help Desk Skill Set

2 skill sets were deleted from the ICT Information and Communications Training Package Version 5.1:
- ICTSS00033 Basic Computer Hardware and System Troubleshooting Skill Set
- ICTSS00045 Computing Fundamentals Skill Set

**Units of competency**
53 new units of competency were newly created for this ICT Information and Communications Training Package Version 6.0:
- ICTCLD401 Configure cloud services
- ICTCLD501 Develop cloud disaster recovery plans
- ICTCLD502 Design and implement highly-available cloud infrastructure
- ICTCLD503 Implement web-scale cloud infrastructure
- ICTCLD504 Improve cloud-based infrastructure
- ICTCLD505 Implement cloud infrastructure with code
- ICTCLD506 Implement virtual network in cloud environments
- ICTCLD507 Build and deploy resources on cloud platforms
- ICTCLD508 Manage infrastructure in cloud environments
- ICTCYS401 Design and implement network security infrastructure for an organisation
- ICTCYS402 Identify and confirm cyber security incidents
- ICTCYS403 Plan and implement information security strategies for an organisation
- ICTCYS404 Run vulnerability test assessments for an organisation
- ICTCYS405 Develop cyber security incident response plans
- ICTCYS406 Respond to cyber security incidents
- ICTCYS407 Gather, analyse and interpret threat data
- ICTCYS601 Create cyber security standards for organisations
- ICTCYS602 Implement cyber security operations
- ICTCYS603 Undertake penetration testing for organisations
- ICTCYS604 Implement best practices for identity management
- ICTCYS606 Evaluate an organisation’s compliance with relevant
cyber security standards and law

- ICTCYS607 Acquire digital forensic data
- ICTCYS608 Perform cyber security risk assessments
- ICTCYS609 Evaluate threats and vulnerabilities of IoT devices
- ICTCYS610 Protect critical infrastructure for organisations
- ICTCYS611 Configure security devices for organisations
- ICTCYS612 Design and implement virtualised cyber security infrastructure for organisations
- ICTCYS613 Utilise design methodologies for security architecture
- ICTDAT401 Evaluate organisational compliance with data ethics legislation
- ICTDAT402 Clean and verify data
- ICTDAT501 Gather, analyse and verify data from different source inputs
- ICTDAT502 Conduct significance tests
- ICTDAT503 Use unsupervised learning for clustering
- ICTICT313 Identify IP, ethics and privacy policies in ICT environments
- ICTICT447 Work effectively in agile environments
- ICTICT448 Prepare electronic portfolios of work
- ICTICT449 Use version control systems in development environments
- ICTICT450 Identify and use applications for distributed ledgers
- ICTICT451 Comply with IP, ethics and privacy policies in ICT environments
- ICTICT527 Develop and maintain blockchain solutions
- ICTICT529 Organise and lead agile projects
- ICTICT530 Design user experience solutions
- ICTIOT501 Install IT devices and networks
- ICTIOT502 Program IoT devices
- ICTIOT503 Design and test IoT devices and networks
- ICTPMG301 Contribute as part of an IT project management team
- ICTPRG553 Create and develop REST APIs
- ICTPRG554 Manage data persistence using NoSQL data stores
- ICTPRG555 Implement object relational mapping framework for data persistence
- ICTPRG556 Implement and use a model view controller framework
- ICTSAD612 Implement and maintain uses of containerisation
- ICTSAD613 Install and configure container orchestration services

7 non-equivalent units of competency updated to align content with
industry skills needs and standards:

- ICTICT222 Research and share ICT solutions for Indigenous users
- ICTICT440 Develop service level agreements
- ICTICT532 Apply IP, ethics and privacy policies in ICT environments
- ICTSAS434 Action change requests and present updated ICT system to clients
- ICTTEN434 Install, configure and test internet protocol networks
- ICTWEB306 Develop web presence using social media
- ICTWEB444 Create responsive website layouts

255 equivalent units of competency updated to align content with industry skills needs and standards:

- ICTCLD301 Evaluate characteristics of cloud computing solutions and services
- ICTCLD601 Develop cloud computing strategies for businesses
- ICTCLD602 Manage information security compliance of cloud service deployment
- ICTDBS416 Create basic relational databases
- ICTDBS417 Identify and resolve common database performance problems
- ICTDBS418 Monitor and administer databases
- ICTDBS505 Monitor and improve knowledge management systems
- ICTDBS506 Design databases
- ICTDBS507 Integrate databases with websites
- ICTDBS604 Build data warehouses
- ICTDBS605 Develop knowledge management strategies
- ICTDBS606 Determine database functionality and scalability
- ICTDMT404 Create visual design components for digital media
- ICTDMT405 Produce interactive animations
- ICTDMT406 Produce and edit digital images
- ICTGAM420 Produce interactive games
- ICTGAM421 Identify and apply games design and game play principles
- ICTGAM422 Create design documents for interactive games
- ICTGAM423 Apply artificial intelligence in game development
- ICTGAM424 Develop story and content in digital games
- ICTGAM425 Create visual design components in interactive games
- ICTGAM426 Write scripts for interactive games
- ICTGAM427 Use 3-D software interface and toolsets
- ICTGAM428 Create 3-D characters for interactive games
- ICTGAM429 Develop 3-D components for interactive games
- ICTGAM430 Design interactive media
- ICTGAM431 Design and create 3-D digital models
- ICTGAM432 Create audio for digital games
- ICTGAM433 Prepare and complete image rendering processes
- ICTGAM532 Create design concepts for digital games and 3-D media
- ICTGAM533 Create complex 3-D interactive games
- ICTGAM534 Manage interactive media productions
- ICTGAM535 Develop complex 3-D software for games and interactive media
- ICTGAM536 Design interactive 3-D applications for scientific and mathematical modelling
- ICTGAM537 Prepare games for different platforms and delivery modes
- ICTGAM538 Manage testing of games and interactive media
- ICTGAM539 Create and implement designs for 3-D games environments
- ICTGAM540 Design and create models for 3-D and digital effects environments
- ICTGAM541 Design and create advanced particles, fluids and bodies for 3-D digital effects
- ICTGAM542 Animate 3-D characters for digital games
- ICTGAM543 Produce digital animation sequences
- ICTGAM544 Animate physical attributes of models and elements
- ICTGAM545 Manage technical art and rigging in 3-D animations
- ICTGAM546 Create and combine 3-D digital games and components
- ICTGAM547 Create interactive 3-D environments for digital games
- ICTGAM548 Complete digital editing for 3-D and digital effects environments
- ICTGAM549 Collaborate in design of 3-D game levels and environments
- ICTGAM550 Integrate multiple data sources into interactive 3-D environments
- ICTGAM551 Apply digital texturing for the 3-D environment in digital games
- ICTGAM552 Create complex 3-D characters for games
- ICTGAM553 Integrate databases with online games
- ICTGAM554 Create games for mobile devices
- ICTGAM555 Analyse business opportunities in the digital games

**Qualifications**

Six qualifications were updated from the ICT Information and Communications Technology.
Communications Technology Training Package Version 4.0 and supersede but are not equivalent to their previous versions:

- ICT20219 Certificate II in Telecommunications Network Build and Operation supersedes ICT20215 Certificate II in Telecommunications Network Build and Operate and is deemed not equivalent (updated to increase core unit requirement from five to six and to decrease elective unit requirement from seven to six; remove two elective units of competency and insert four elective units of competency; modify title, packaging rules and groups.)

- ICT20319 Certificate II in Telecommunications Technology supersedes ICT20315 Certificate II in Telecommunications Technology and is deemed not equivalent (updated to increase core unit requirement from six to seven and to decrease elective unit requirement from nine to six; insert one elective unit of competency; modify packaging rules and groups to introduce two specialisations.)

- ICT30419 Certificate III in Telecommunications Network Build and Operation supersedes ICT30415 Certificate III in Telecommunications Network Build and Operate and is deemed not equivalent (updated to increase core unit requirement from five to six and to decrease elective core unit requirement from nine to eight; remove one elective unit of competency and insert 18 elective units of competency; modify title, packaging rules and groups to introduce four specialisations.)

- ICT30519 Certificate III in Telecommunications Technology supersedes ICT30515 Certificate III in Telecommunications Technology and is deemed not equivalent (updated to decrease core unit requirement from seven to six and to increase elective unit requirement from nine to ten; remove 12 elective units of competency and insert 27 elective units of competency; modify packaging rules and groups to introduce four specialisations.)

- ICT41119 Certificate IV in Telecommunications Network Design supersedes ICT41115 Certificate IV in Telecommunications Network Design and is deemed not equivalent (updated to decrease core unit requirement from eight to six and to increase elective unit requirement from eight to 10; remove one elective unit of competency and insert nine elective units of competency; modify packaging rules and groups and introduce qualification entry requirements.)

- ICT41219 Certificate IV in Telecommunications Engineering Technology supersedes ICT41215 Certificate IV in Telecommunications Engineering Technology and is deemed not equivalent (updated to decrease core unit requirement from eight to five and increase the elective unit requirement from eight to 12; remove four elective units and insert ten elective units; modify packaging rules and groups to introduce one specialisation and
Two qualifications were deleted from the ICT Information and Communications Technology Training Package:

- ICT30215 Certificate III in Telecommunications Digital Reception Technology

Three qualifications were updated as part of an SSO upgrade to reflect changed elective units:

- ICT30118 Certificate III in Information, Digital Media and Technology
- ICT40215 Certificate IV in Information Technology Support (equivalent and non-equivalent elective units updated)
- ICT40418 Certificate IV in Information Technology Networking (non-equivalent elective unit updated).

**Units of competency**

13 new units of competency were newly created for this ICT Information and Communications Technology Training Package Version 5.0:

- ICTBWN306 Use radio frequency measuring instruments
- ICTBWN307 Use optical measuring instruments
- ICTCBL248 Install and terminate hard-line coaxial cable
- ICTCBL331 Conduct basic identification and fault-finding within cabling networks and customer equipment
- ICTCBL332 Locate, identify and rectify copper cable faults
- ICTDRE308 Install a cable broadband multi-dwelling unit system
- ICTTEN210 Install underground telecommunications infrastructure
- ICTTEN211 Work effectively in a telecommunications network environment
- ICTTEN315 Determine and apply technologies within a telecommunications system
- ICTTEN316 Conduct basic tests and analyses of telecommunications copper cabling
- ICTTEN317 Locate, identify and rectify telecommunications network faults
- ICTTEN435 Solve electrical-based telecommunications circuitry and cabling problems
- ICTWOR308 Provide customer service to telecommunications
42 units of competency were updated from the ICT Information and Communications Technology Training Package Version 4.0:

- 27 units supersede and are equivalent to their previous versions:
  - ICTCBL239 Install customer cable support systems (recoded from ICTCBL201)
  - ICTCBL240 Place and secure customer cable (recoded from ICTCBL202)
  - ICTCBL241 Terminate metallic conductor customer cable recorded from ICTCBL203
  - ICTCBL242 Install functional and protective telecommunications earthing system (recoded from ICTCBL204)
  - ICTCBL246 Install, maintain and modify customer premises communications cabling: ACMA Restricted Rule (recoded from ICTCBL236)
  - ICTCBL247 Install, maintain and modify customer premises communications cabling: ACMA Open Rule (recoded from ICTCBL237)
  - ICTCBL252 Joint and terminate coaxial cable (recoded from ICTCBL209)
  - ICTCBL253 Construct underground telecommunications infrastructure (recoded from ICTTCBL213)
  - ICTCBL254 Joint metallic conductor cable in access network (recoded from ICTCBL215)
  - ICTCBL324 Cut over new systems and equipment on customer premises (recoded from ICTCBL312)
  - ICTCBL325 Maintain cable network (recoded from ICTCBL315)
  - ICTCBL326 Cut over metallic conductor cable in the access network (recoded from ICTCBL317)
  - ICTCBL334 Install underground enclosures and conduit (recoded from ICTCBL307)
  - ICTCBL335 Construct aerial cable supports (recoded from ICTCBL309)
  - ICTCBL336 Install and cut over metallic conductor cable to access network cabinet (recoded from ICTCBL318)
  - ICTCMP203 Perform restricted customer premises broadband cabling work: ACMA Restricted Rule (recoded from ICTCMP202)
  - ICTDRE314 Design communications wiring systems for customer premises (recoded from ICTDRE304)
  - ICTOPN405 Install and test a dense wavelength division customers.
multiplexing system (recoded from ICTOPN401)

- ICTRFN407 Conduct radio frequency measurements (recoded from ICTRFN401)
- ICTTEN312 Install telecommunications network equipment (recoded from ICTTEN302).
- ICTTEN313 Work on and resolve recurrent network faults (recoded from ICTTEN303)
- ICTTEN319 Recover customer premises equipment (recoded from ICTTEN304)
- ICTTEN320 Commission an electronic unit (recoded from ICTTEN306)
- ICTTEN321 Maintain an electronic system (recoded from ICTTEN308)
- ICTTEN322 Provide infrastructure for telecommunications network customer equipment (recoded from ICTTEN309)
- ICTTEN432 Identify requirements for customer telecommunications equipment (recoded from ICTTEN401).
- ICTTEN433 Install configuration programs on PC based customer equipment (recoded from ICTTEN405)

- 15 units supersede but are not equivalent to their previous versions:
  - ICTBWN308 Work safely on live optical fibre installations (recoded from ICTBWN304)
  - ICTBWN309 Perform tests on optical communication system and components (recoded from ICTBWN301)
  - ICTCBL249 Haul underground cable for installation and maintenance work (recoded from ICTCBL207)
  - ICTCBL250 Haul and fix aerial cable (recoded from ICTCBL214)
  - ICTCBL251 Install aerial and underground cable lead-ins (recoded from ICTCBL220)
  - ICTCBL322 Install, test and terminate optical fibre cable on customer premises (recoded from ICTCBL302)
  - ICTCBL323 Test cables and systems on customer premises (recoded from ICTCBL304)
  - ICTCBL329 Install underground cable for communications applications (recoded from ICTCBL308)
  - ICTCBL330 Splice and terminate optical fibre cable for telecommunications projects (recoded from ICTCBL208)
  - ICTCBL333 Install aerial cable for communications applications (recoded from ICTCBL310)
  - ICTOPN404 Test optical communications systems and components (recoded from ICTOPN402)
• ICTTEN208 Use electrical skills when working with telecommunications networks (recoded from ICTTEN201)
• ICTTEN318 Inspect, clean and handle optical fibre cable and connectors (recoded from ICTTEN311)
• ICTWHS205 Work safely near power infrastructure at a telecommunications workplace (recoded from ICTWHS203)
• ICTWOR202 Work effectively in the digital and telecommunications industry (recoded from ICTWOR201).

Two units of competency were deleted from the ICT Information and Communications Technology Training Package Version 4.0:
• ICTBWN305 Use optical and radio frequency measuring instruments
• ICTTEN305 Refurbish customer premises equipment.

Four new skill sets were newly created from the ICT Information and Communications Technology Training Package Version 4.0:
• ICTSS00087 Basic Technician Network Build and Operate Skill Set
• ICTSS00096 Technician Hybrid Fibre Coaxial Skill Set
• ICTSS00097 Telecommunications Customer Service Technician HFC Technician Skill Set
• ICTSS00098 Network Technician HFC Skill Set.

Ten skill sets were updated and are deemed not equivalent to ICT Information and Communications Technology Training Package Version 4.0:
• ICTSS00084 Basic Open Cabler Registration Skill Set supersedes ICTSS00062 Basic Open Cabler Registration Skill Set
• ICTSS00085 Basic Restricted Cabler Registration Skill Set supersedes ICTSS00063 Basic Restricted Cabler Registration Skill Set
• ICTSS00088 Advanced Telecommunications Rigging Installation Skill Set supersedes ICTSS00060 Advanced Telecommunications Rigging Installation Skills Set
• ICTSS00089 Basic Telecommunications Rigging Installation Skill Set supersedes ICTSS00064 Basic Telecommunications Rigging Installation Skill Set
• ICTSS00090 Advanced IoT Installation Skill Set supersedes ICTSS00067 Convergent Technology Skill Set
• ICTSS00091 Radio Technician Skill Set supersedes ICTSS00074 Radio Technician Skill Set
ICTSS00092 Technical Help Desk supersedes ICTSS00075 Technical Help Skill Set
ICTSS00093 Telecommunications Linesworker HFS Skill Set supersedes ICTSS00093 Telecommunications Linesworker Skill Set
ICTSS00094 Technician Fibre Skill Set supersedes ICTSS00081 Technician Fibre Skill Set
ICTSS00095 Fibre Splicer Skill Set supersedes ICTSS00082 Fibre Splicer Skill Set.

Ten skill sets were updated to include unit code updates:
ICTSS00058 ACMA Advanced Cabler Registration Skill Set
ICTSS00065 Civil Works – Installation of Pit and Pipe and FDH Skill Set
ICTSS00066 Commercial Digital Television Antenna Systems Installation Skill Set
ICTSS00069 Domestic Digital Television Antenna Installation Skill Set
ICTSS00071 IP Convergence Installations for Home and SME Skill Set
ICTSS00076 Wireless LAN and IP Network Installation Skill Set
ICTSS00077 Telecommunications Linesworker Copper Skill Set
ICTSS00078 Telecommunications Linesworker Fibre Skill Set
ICTSS00080 Copper Cable Jointer Skill Set
ICTSS00083 Underground Installations Skill Set.

Non-endorseable units of competency
21 units of competency were updated to fix minor typographical errors and are equivalent to ICT Information and Communications Technology Training Package Version 4.0:
ICTCBL205 Joint metallic conductor cable on customer premises
ICTCBL206 Alter services to existing cable system
ICTCBL210 Install a telecommunications service to a building
ICTCBL238 Install, maintain and modify customer premises communications cabling: ACMA Lift Rule
ICTCBL301 Install, terminate and certify structured cabling installation
ICTCBL303 Install and terminate coaxial cable
ICTCBL305 Hand over cable systems and equipment
ICTCBL306 Locate and identify cable system faults
ICTCBL313 Modify and cutover cable
ICTCBL316 Install ribbon fibre cable in the FTTX distribution

**Qualifications**

Nine qualifications were updated from the ICT Information and Communications Technology Training Package Version 3.1:

- **ICT30118 Certificate III in Information, Digital Media and Technology** supersedes ICT30115 Certificate III in Information, Digital Media and Technology and is equivalent (updated to change one out of six core units of competency)
- **ICT40118 Certificate IV in Information Technology** supersedes ICT40115 Certificate IV in Information Technology and is not equivalent (updated to change three core units of competency, remove four elective units of competency, insert 17 elective units of competency, and modify the packaging rules and groups)
- **ICT40418 Certificate IV in Information Technology Networking** supersedes ICT40415 Certificate IV in Information Technology Networking and is equivalent (updated to change one out of eight core units of competency)
- **ICT40518 Certificate IV in Programming** supersedes ICT40515 Certificate IV in Programming and is equivalent (updated to change one out of ten core units of competency)
- **ICT50118 Diploma of Information Technology** supersedes ICT50115 Diploma of Information Technology and is equivalent (updated to change one out of four core units of competency)
- **ICT50318 Diploma of Information Technology Systems Administration** supersedes ICT50315 Diploma of Information Technology Systems Administration and is equivalent (updated to change one out of ten core units of competency)
- **ICT50418 Diploma of Information Technology Networking** supersedes ICT50415 Diploma of Information Technology Networking and is equivalent (updated to change one out of five core units of competency)
core units of competency)

- ICT50718 Diploma of Software Development supersedes ICT50715 Diploma of Software Development and is equivalent (updated to change one out of ten core units of competency)
- ICT50818 Diploma of Systems Analysis and Design supersedes ICT50815 Diploma of Systems Analysis and Design and is equivalent (updated to change one out of nine core units of competency).

Three qualifications were deleted from the ICT Information and Communications Technology Training Package:

- ICT40615 Certificate IV in Information Technology Testing
- ICT40715 Certificate IV in Systems Analysis and Design
- ICT80215 Graduate Certificate in Information Technology Sustainability.

Units of competency

Four units of competency were newly created:

- ICTICT424 Address cyber security requirements
- ICTICT425 Implement WHS, environmental sustainability and anti-discrimination practices in an ICT workplace
- ICTICT426 Identify and evaluate emerging technologies and practices
- ICTWEB431 Create and style simple markup language documents.

20 units of competency were updated from the ICT Information and Communications Technology Training Package version 3.1:

- ICTDBS413 Determine database requirements (updated Title, Application, Elements, and Assessment Requirements to clarify intent) (recoded from ICTDBS401)
- ICTDBS414 Complete database backup and restore (updated Application, Elements, and Assessment Requirements to clarify intent) (recoded from ICTDBS402)
- ICTDBS415 Build a database (updated Elements, and Assessment Requirements to clarify intent) (recoded from ICTDBS412)
- ICTICT427 Identify, evaluate and apply current industry-specific technologies to meet organisational needs (updated Title, Application, Elements, and Assessment Requirements to clarify intent) (recoded from ICTICT417)
- ICTICT428 Select cloud storage solutions (updated Title, Application and Element 1 to clarify intent and scope; integrated Element 3 into Element 2; and updated Foundation Skills to reflect
- ICTICT517 Match ICT needs with the strategic direction of the organisation (updated Title, Application, Elements, and Assessment Requirements to clarify intent and scope) (recoded from ICTICT511)

- ICTNWK420 Install and configure virtual machines (updated Assessment Requirements and typographical edit to title to clarify intent) (recoded from ICTNWK402)

- ICTNWK421 Install, configure and test network security (updated Application, Elements and Assessment Requirements to clarify intent and scope; and updated Foundation Skills to reflect unit content) (recoded from ICTNWK406)

- ICTNWK536 Plan, implement and test enterprise communication solutions (updated Application, Elements and Assessment Requirements to clarify intent and scope; and updated Foundation Skills to reflect unit content) (recoded from ICTNWK406)

- ICTPRG430 Apply introductory object-oriented language skills (updated Elements, Foundation Skills and Assessment Requirements to clarify intent) (recoded from ICTPRG406)

- ICTPRG531 Prepare for application development using current methods (updated Title, Application, Elements, and Assessment Requirements to modify intent and scope) (recoded from ICTPRG514)

- ICTPRG532 Apply advanced object-oriented language skills (updated Elements and Assessment Requirements to clarify intent) (recoded from ICTPRG501)

- ICTSAS308 Run standard diagnostic tests (updated Application, Elements and Assessment Requirements to clarify intent and scope) (recoded from ICTSAS301)

- ICTSAS519 Perform systems tests (updated unit of competency to incorporate relevant content from ICTSAS401) (recoded from ICTSAS503)

- ICTSAS520 Develop detailed test plans (updated unit of competency to reflect industry requirements) (recoded from ICTSAS513)

- ICTSAS521 Perform integration tests (updated unit of competency to reflect industry requirements) (recoded from ICTSAS514)

- ICTSAS522 Manage the testing process (updated unit of competency to reflect industry requirements) (recoded from ICTSAS515)

- ICTSAS523 Perform stress and load tests on integrated platforms (updated unit of competency to reflect industry requirements) (recoded from ICTSAS516)

- ICTSUS808 Plan and manage virtualisation for ICT sustainability (updated unit of competency to reflect industry requirements)
ICTWEB430 Produce server-side script for dynamic web pages
(updated unit of competency to reflect industry requirements)
(recoded from ICTWEB415).

Six units of competency were deleted from the ICT Information and
Communications Technology Training Package:

- ICTSAS401 Perform unit test for a class
- ICTSAS405 Identify and evaluate ICT industry vendor
technologies
- ICTSUS401 Install and test renewable energy system for ICT
networks
- ICTWEB301 Create a simple markup language document
- ICTWEB409 Develop cascading style sheets
- ICTWEB420 Write content for web pages.

Release 3.1

SSO (Skills Service Organisation) upgrades to correct minor mapping
errors.

Qualifications

Six qualifications were updated and equivalent to ICT Information
and Communications Technology Training Package version 3:

- ICT20215 Certificate II in Telecommunications Network Build
  and Operate (minor update to the specialist stream elective
groups)
- ICT30415 Certificate III in Telecommunications Network Build
  and Operate (packaging rules updated to require six electives,
  minor update to the specialist stream elective groups)
- ICT40815 Certificate IV in Digital Media Technologies (updated
to clarify packaging rules)
- ICT40915 Certificate IV in Digital and Interactive Games
  (updated to clarify packaging rules)
- ICT80215 Graduate Certificate in Information Technology
  Sustainability (updated qualification description).

Two qualifications were updated and equivalent to ICT Information
and Communications Technology Training Package version 3 to
reflect changes in unit of competency titles in this release:

- ICT50415 Diploma of Information Technology Networking
- ICT51015 Diploma of Telecommunications Engineering.
Skill sets

Seven new skill sets:
- ICTSS00077 Telecommunications Linesworker Copper Skill Set
- ICTSS00078 Telecommunications Linesworker Fibre Skill Set
- ICTSS00079 Telecommunications Linesworker HFC Skill Set
- ICTSS00080 Copper Cable Jointer Skill Set
- ICTSS00081 Technician Fibre Skill Set
- ICTSS00082 Fibre Splicer Skill Set
- ICTSS00083 Underground Installations Skill Set.

Three skill sets were removed:
- ICTSS00070 Installing NBN Wireless and Infrastructure Skill Set
- ICTSS00072 National Broadband Network Advanced Linesworker/Installer Skill Set
- ICTSS00073 National Broadband Network Splicer Skill Set.

Units of competency

Six units of competency were updated and equivalent to ICT Information and Communications Technology Training Package version 3:
- ICTCBL236 Install, maintain and modify customer premises communications cabling: ACMA Restricted Rule (updated to include the ACMA’s assessment standards for persons seeking registration)
- ICTCBL237 Install, maintain and modify customer premises communications cabling: ACMA Open Rule (updated to include the ACMA’s assessment standards for persons seeking registration)
- ICTNWK405 Build a small wireless local area network (updated to reinstate performance element from ICT Information and Communications Technology version 2)
- ICTTEN512 Design and implement an enterprise voice over internet protocol and a unified communications network (unit of competency title updated to correct typographical error)
- ICTWHS204 Follow work health and safety and environmental policy and procedures (updated to correct typographical errors)
- ICTWOR307 Collect and analyse technical information (updated to correct typographical errors).

**Industry Skills Council upgrades**

Unit code updates and/or modifications to elective banks in two qualifications:

- ICT20215 Certificate II in Telecommunications Network Build and Operate

**Release 2.0 January 2016**

Qualifications, skill sets and units from ICT10 Integrated Telecommunications Training Package were reviewed and updated to meet Standards for Training Packages and included in the ICT Information and Communications Technology Training Package version 2.

**Qualifications**

12 qualifications:

- ICT20215 Certificate II in Telecommunications Network Build and Operate
- ICT20315 Certificate II in Telecommunications Technology
- ICT30215 Certificate III in Telecommunications Digital Reception Technology
- ICT30315 Certificate III in Telecommunications Rigging Installation
- ICT30415 Certificate III in Telecommunications Network Build and Operate
- CT30515 Certificate III in Telecommunications Technology
- ICT41115 Certificate IV in Telecommunications Network Design
- ICT41215 Certificate IV in Telecommunications Engineering Technology
- ICT51015 Diploma of Telecommunications Engineering
- ICT51115 Diploma of Telecommunications Planning and Design
- ICT60615 Advanced Diploma of Telecommunications Network Engineering
- ICT80615 Graduate Certificate in Telecommunications Network Engineering.

**Skill sets**

19 skill sets.

**Units of competency**

239 units of competency were updated to meet the Standards for Training Packages.

One new unit of competency:
- ICTNWK617 Configure and manage a storage area network.

**Industry Skills Council upgrades**

Unit codes were corrected or updated in 26 qualifications from ICT Information and Communications Technology Training Package version 1.

Unit codes were corrected or updated in 27 skill sets from ICT Information and Communications Technology Training Package version 1.

Description

This skill set has been designed for individuals who wish to meet competency requirements for working as applications programmers and software development specialists.

Pathways Information

This skill set provides credit towards ICT50718 Diploma of Software Development.

Licensing/Regulatory Information

Not applicable.
Skill Set Requirements

ICTPRG532 Apply advanced object-oriented language skills
ICTPRG535 Build advanced user interfaces
ICTPRG536 Design application architecture
ICTPRG537 Implement security for applications
ICTPRG547 Apply advanced programming skills in another language

Target Group

This skill set is for persons who are able to work as application programmers and software developers.

Suggested words for Statement of Attainment

These units of competency from ICT Information and Communications Technology Training Package meet competency requirements for skills in working as a software development specialist.
**ICTSS00032 Basic Application Development Programmer Skill Set**

Description

This skill set provides the requirements to meet competency requirements for skills in reviewing, developing and maintaining a simple websites.

Pathways Information

This skill set provides credit towards ICT30115 Certificate III in Information, Digital Media and Technology.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

- BSBEBU401 Review and maintain a website
- ICTWEB304 Build simple web pages
- ICTWEB434 Transfer content to websites
Target Group

This skill set is for persons wanting to develop and maintain a basic website.

Suggested words for Statement of Attainment

These units of competency from ICT Information and Communications Technology and BSB Business Services Training Packages meet competency requirements for skills in developing and maintaining a simple website.

Not applicable.

Skill Set Requirements
ICTNWK538 Install and maintain valid authentication processes
ICTNWK540 Design, build and test network servers
Target Group

This skill set is for persons who are able to work as certified infrastructure configuration technicians or technology specialists.

Suggested words for Statement of Attainment

These units of competency from ICT Information and Communications Technology Training Package meet competency requirements for skills in configuring infrastructure.
ICTSS00042 Certified Technology Specialist - Graphical User Interfaces Skill Set

Description

This skill set has been designed for individuals who wish to meet competency requirements for skills as a technician specialising in the configuration and management of graphics user interfaces.

Pathways Information

This skill set provides credit towards ICT40415 Certificate IV in Information Technology Networking.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

ICTNWK423 Manage network and data integrity
ICTNWK427 Configure desktop environments
Target Group

This skill set is for persons who are able to work as graphical user interface (GUI) certified technology specialists.

Suggested words for Statement of Attainment

These units of competency from ICT Information and Communications Technology Training Package meet competency requirements for skills in developing and maintaining GUIs.

## Description

This skill set has been designed for individuals who wish to meet competency requirements for skills as a technician in the design, construction, testing and maintenance of web sites.

## Pathways Information

This skill set provides credit towards ICT40315 Certificate IV in Web-Based Technologies.

## Licensing/Regulatory Information

Not applicable.
Skill Set Requirements
ICTWEB440 Use web authoring tools
ICTWEB441 Produce basic client-side script
ICTWEB442 Produce interactive web animation
ICTWEB444 Create responsive website layouts

Target Group
This skill set is for persons who are able to work as website designers.

Suggested words for Statement of Attainment
These units of competency from ICT Information and Communications Technology Training Package meet competency requirements for skills in working as a website designer.

Description

This skill set has been designed for individuals who wish to meet competency requirements for skills as a basic technician for the installation and configuration of hardware for clients.

Pathways Information

This skill set provides credit towards ICT30118 Certificate III in Information, Digital Media and Technology.
Licensing/Regulatory Information
Not applicable.

Skill Set Requirements
ICTICT302 Install and optimise operating system software
ICTICT303 Connect internal hardware components
ICTSAS305 Provide ICT advice to clients
ICTSAS308 Run standard diagnostic tests
ICTSAS309 Maintain and repair ICT equipment and software
ICTSAS310 Install, configure and secure a small office or home office network

Target Group
This skill set is for persons who are able to work as hardware technicians, providing support in a range of ICT work areas and activities.

Suggested words for Statement of Attainment
These units of competency from ICT Information and Communications Technology Training Package meet competency requirements for support skills in hardware, software, operating systems and networks.

Description

This skill set addresses the skills and knowledge required to install telecommunications optical fibre cable. Each unit of competency includes relevant work, health and safety awareness training. Other health, safety and environment requirements, relevant to the role specified in this skill set, may be stipulated as part of workplace requirements.

Pathways Information

This skill set provides credit towards the ICT20519 Certificate II in Telecommunications Network Build and Operation.

Licensing/Regulatory Information

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the ICT Implementation Guide Companion Volume or the relevant regulator for details of licensing, legislative or certification requirements.

Skill Set Requirements

- ICTCBL249 Haul underground cable for installation and maintenance work
- ICTCBL211 Install an above ground equipment enclosure
- ICTCBL250 Haul and fix aerial cable
- ICTCBL253 Construct underground telecommunications infrastructure
ICTPMG201 Prepare site for support installation
ICTTEN310 Remove and replace electronic circuit boards in carrier equipment
ICTTEN318 Inspect, clean and handle optical fibre cable and connectors

**Target Group**

This skill set is for entry level telecommunications workers.

**Suggested words for Statement of Attainment**

These units of competency meet industry requirements for the installation of telecommunications optical fibre cable.

Description

This skill set addresses the skills and knowledge required to joint copper telecommunications cable. Each unit of competency includes relevant work, health and safety awareness training. Other health, safety and environment requirements, relevant to the role specified in this skill set, may be stipulated as part of workplace requirements.

Pathways Information

This skill set provides credit towards the ICT30419 Certificate III in Telecommunications Network Build and Operation.

Licensing/Regulatory Information

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the ICT Implementation Guide Companion Volume or the relevant regulator for details of licensing, legislative or certification requirements.

Skill Set Requirements

ICTCBL254 Joint metallic conductor cable in access network
ICTCBL326 Cut over metallic conductor cable in the access network
ICTCBL319 Rearrange large size copper cable
ICTCBL336 Install and cut over metallic conductor cable to access network cabinet
ICTTEN312 Install telecommunications network equipment
ICTTEN313 Work on and resolve recurrent network faults

Target Group
This skill set is for telecommunications workers.

Suggested words for Statement of Attainment
These units of competency meet industry requirements for the jointing of copper telecommunications cable.

Description

This skill set addresses the skills and knowledge required to install underground telecommunications cable. This Skill Set includes the requirements for the underground specialisation units for ACMA. Each unit of competency includes relevant work, health and safety awareness training. Other health, safety and environment requirements, relevant to the role specified in this skill set, may be stipulated as part of workplace requirements.

Pathways Information

This skill set provides credit towards:

- ICT20219 Certificate II in Telecommunications Network Build and Operation
- ICT30419 Certificate III in Telecommunications Network Build and Operation

Licensing/Regulatory Information

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the ICT Implementation Guide Companion Volume or the relevant regulator for details of licensing, legislative or certification requirements.

Skill Set Requirements

ICTCBL329 Install underground cable for communications applications
ICTCBL334 Install underground enclosures and conduit

Target Group
This skill set is for telecommunications workers.

Suggested words for Statement of Attainment
These units of competency meet industry requirements to install underground telecommunications cable within the ACMA Regulatory framework for Customer Premises.

**Description**

This skill set addresses the skills and knowledge required to install, maintain and modify telecommunications customer cabling in domestic and commercial premises in accordance with Australian Communications and Media Authority (ACMA) requirements.

**Pathways Information**

This skill set provides credit towards ICT30519 Certificate III in Telecommunications Technology.

**Licensing/Regulatory Information**

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the ICT Implementation Guide Companion Volume or the relevant regulator for details of licensing, legislative or certification requirements.

**Skill Set Requirements**

- ICTCBL247 Install, maintain and modify customer premises communications cabling: ACMA Open Rule
- ICTTEN208 Use electrical skills when working with telecommunications networks
- ICTTEN202 Use hand and power tools
- ICTWHS204 Follow work health and safety and environmental policy and procedures
Target Group

This skill set is for new or existing workers in the telecommunications industry who wish to be employed as open registered cablers in accordance with ACMA requirements.

Suggested words for Statement of Attainment

These units of competency contribute to the Australian Communications and Media Authority training requirements for open cabling registration.

Description

This skill set addresses the skills and knowledge required to perform a restricted range of residential and small business cabling work in accordance with Australian Communications and Media Authority (ACMA) requirements.

Pathways Information

This skill set provides credit towards ICT20319 Certificate II in Telecommunications Technology.

Licensing/Regulatory Information

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the ICT Implementation Guide Companion Volume or the relevant regulator for details of licensing, legislative or certification requirements.

Skill Set Requirements

ICTCBL246 Install, maintain and modify customer premises communications cabling: ACMA Restricted Rule

ICTCMP203 Perform restricted customer premises broadband cabling work: ACMA Restricted Rule

ICTTEN202 Use hand and power tools

ICTTEN208 Use electrical skills when working with telecommunications networks

ICTWHS204 Follow work health and safety and environmental policy and procedures
Target Group

This skill set is for new or existing workers in the telecommunications industry who wish to be employed as restricted registered cablers in accordance with ACMA requirements.

Suggested words for Statement of Attainment

These units of competency contribute to the Australian Communications and Media Authority training requirements for restricted cabling registration.

Description

This skill set covers the additional training required for an open registered cabler to install, maintain, test and certify copper, fibre and coaxial installations in customer premises in accordance with Australian Communications and Media Authority (ACMA) requirements.

Pathways Information

This skill set provides credit towards ICT30519 Certificate III in Telecommunications Technology.

Licensing/Regulatory Information

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the ICT Implementation Guide Companion Volume or the relevant regulator for details of licensing, legislative or certification requirements.

Skill Set Requirements

ICTCBL247 Install, maintain and modify customer premises communications cabling: ACMA Open Rule
ICTCBL301 Install, terminate and certify structured cabling installation
ICTCBL303 Install and terminate coaxial cable
ICTCBL322 Install, test and terminate optical fibre cable on customer premises
ICTCBL323 Test cables and systems on customer premises
ICTTEN208 Use electrical skills when working with telecommunications networks
ICTWHS204 Follow work health and safety and environmental policy and procedures

Target Group

This skill set is for ACMA open registered cablers who need additional training to carry out specialist work.

Suggested words for Statement of Attainment

These units of competency contribute to the Australian Communications and Media Authority requirements for mandatory specialist cabling endorsement of an existing open registered cabler.

Description

This skill set addresses the introductory skills and knowledge required in a range of NBN broadband industry occupations specifically for the national rollout construction and maintenance of the high-speed broadband infrastructure.

Pathways Information

This skill set provides credit towards the ICT30419 Certificate II in Telecommunications Network Build and Operation.

Licensing/Regulatory Information

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the ICT Implementation Guide Companion Volume or the relevant regulator for details of licensing, legislative or certification requirements.

Skill Set Requirements

ICTTEN208 Use electrical skills when working with telecommunications networks
ICTTEN202 Use hand and power tools
ICTWHS204 Follow work health and safety and environmental policy and procedures
ICTTEN315 Determine and apply technologies within a telecommunications system
ICTWOR308 Provide customer service to telecommunications clients
ICTTEN317 Locate, identify and rectify telecommunications network faults

**Target Group**

This skill set is for entry level workers.

**Suggested words for Statement of Attainment**

These units of competency meet industry requirements for construction and maintenance of the high-speed broadband infrastructure.

Description

This skill set addresses the advanced level skills and knowledge required to install telecommunications network infrastructure on structures. It prepares individuals to work for carriers in the practical application of network equipment on structures.

Pathways Information

This skill set provides credit towards ICT30319 Certificate III in Telecommunications Technology.

Licensing/Regulatory Information

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the ICT Implementation Guide Companion Volume or the relevant regulator for details of licensing, legislative or certification requirements.

Skill Set Requirements

ICTTTCR201 Use rigging practices and systems on telecommunications network structures
ICTTTCR202 Use operational safety in a telecommunications rigging environment
ICTTTCR203 Use safe rigging practices to climb and perform rescues on telecommunications network structures
ICTTTCR301 Build a telecommunications radio structure
ICTTTCR302 Install radio plant and equipment on telecommunications structures
ICTTTCR303 Protect against electromagnetic radiation and systems hazards when working on telecomms radio sites
Target Group
This skill set is designed for individuals who are experienced in basic rigging practices and the installation of telecommunications network infrastructure on structures.

Suggested words for Statement of Attainment
These units of competency meet the industry requirements for advanced level skills in installing telecommunications network infrastructure on structures.

Description

This skill set addresses the skills and knowledge required to use internet protocol (IP) technologies in the installation of information and communication technology (ICT) networks in homes and small to medium enterprises.

The skill set addresses all DRT delivery methods including but not limited to:

- Wireless
- Satellite
- Fibre (FTTX)
- HFC

This Skill Set is for cablers who have completed:

ICTCBL247 Install, maintain and modify customer premises communications cabling: ACMA Open Rule
ICTCBL301 Install, terminate and certify structured cabling installation

Pathways Information

This skill set provides credit towards ICT41219 Certificate IV in Telecommunications Engineering Technology.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.
Skill Set Requirements

ICTDRE302 Locate and rectify digital reception equipment faults
ICTEDU301 Train customers in new technology
ICTRFN407 Conduct radio frequency measurements
ICTTEN415 Install and configure internet protocol TV in a home network
ICTTEN425 Design, install and configure a customer smart technology network

Target Group

This skill set is for personnel who require training in the installation of ICT and convergent networks.

Suggested words for Statement of Attainment

These units of competency meet industry requirements related to the installation of information and communication technology networks in homes and small to medium enterprises.

Description

This skill set addresses the skills and knowledge required to install, modify and maintain basic radio communications networks.

Pathways Information

This skill set provides credits towards ICT41219 Certificate IV in Telecommunications Engineering Technology.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTRFN301 Install a radio communications antenna and feedline
ICTRFN304 Construct and test a radio communications device
ICTRFN407 Conduct radio frequency measurements
ICTTEN208 Use electrical skills when working with telecommunications networks
ICTTEN312 Install telecommunications network equipment
ICTTEN410 Locate, diagnose and rectify faults
ICTTEN414 Repair telecommunication system faults
ICTWHS204 Follow work health and safety and environmental policy and procedures
Target Group
This skill set is suitable for individuals with limited experience in the telecommunications industry who wish to specialise in radio communications.

Suggested words for Statement of Attainment
These units of competency meet industry requirements for working in the installation, modification and maintenance of basic radio communications networks.

This skill set addresses the skills and knowledge required to run vulnerability assessments, interpret information for threats and develop incident response plans to maintain cyber security.

Pathways Information

The units provide credit towards ICT40120 Certificate IV in Information Technology and other qualifications that allow for selection of these units.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTCYS404 Run vulnerability test assessments for an organisation
ICTCYS405 Develop cyber security incident response plans
ICTCYS407 Gather, analyse and interpret threat data

Target Group

This skill set is for network penetration testers, information and technology security consultants, and network and security consultants who work in business environments.
Suggested words for Statement of Attainment

These units of competency from ICT Information and Communications Technology Training Package meet industry requirements for cyber security threat detection and prevention in ICT contexts.
ICTSS00103 Cyber Security Strategy and Governance Skill Set

Description

This skill set addresses the skills and knowledge required to identify and implement cyber security standards within organisations.

Pathways Information

The units provide credit towards ICT60120 Advanced Diploma of Information Technology and other qualifications that allow for selection of these units.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTCYS601 Create cyber security standards for organisations
ICTCYS604 Implement best practices for identity management
ICTCYS606 Evaluate an organisation’s compliance with relevant cyber security standards and law
ICTCYS608 Perform cyber security risk assessments

Target Group

This skill set is for Information and Communications Technology security (ICT) consultants, cyber security analysts, business development managers, cyber risk and assurance managers, network security consultants and administrators, ICT risk managers, cyber security solutions architects and network engineers who implement cyber security standards within businesses.
Suggested words for Statement of Attainment

These units of competency from ICT Information and Communications Technology Training Package meet industry requirements for cyber security management in ICT contexts.
ICTSS00104 Data Analysis Skill Set

Description

This skill set addresses the skills and knowledge required to manipulate data and report data abnormalities in Information and Communication Technology (ICT) environments.

Pathways Information

The units provide credit towards ICT50120 Diploma of Information Technology and other qualifications that allow for selection of these units.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTDAT501 Gather, analyse and verify data from different source inputs
ICTDAT502 Conduct significance tests
ICTDAT503 Use unsupervised learning for clustering

Target Group

This skill set is for data analysts, data scientists, and machine learning engineers, developers and programmers who analyse and test data against business requirements.

Suggested words for Statement of Attainment

These units of competency from ICT Information and Communications Technology Training Package meet industry requirements for data analysis and management in ICT contexts.

Description

This skill set addresses the skills and knowledge required to design, program and assess Internet of Things (IoT) devices.

Pathways Information

The units provide credit towards ICT50120 Diploma of Information Technology, ICT60120 Advanced Diploma of Information Technology and other qualifications that allow for selection of these units.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTCYS609 Evaluate threats and vulnerabilities of IoT devices
ICTIOT502 Program IoT devices
ICTIOT503 Design and test IoT devices and networks

Target Group

This skill set is for software developers and programmers, IoT developers, cyber security and risk analysts, software developers, programmers and network engineers who work in businesses.
Suggested words for Statement of Attainment

These units of competency from ICT Information and Communications Technology Training Package meet industry requirements for IoT developers in ICT contexts.
ICTSS00106 Introductory Tools and Applications Skill Set

Description

This skill set addresses the skills and knowledge required to use basic computer operating systems, computer hardware, software applications and digital texts for a range of purposes required within an Information and Communications Technology (ICT) context.

Pathways Information

The units provide credit towards Certificate III in Information Technology and other qualifications that allow for selection of these units.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

BSBITU211 Produce digital text documents
ICTICT206 Install software applications
ICTICT213 Use computer operating systems and hardware
ICTICT216 Design and create basic organisational documents
ICTICT221 Identify and use specific industry standard technologies

Target Group

This skill is for individuals looking to enter the ICT industry who will use basic computing operating systems, computer hardware, software applications and digital texts for a range of purposes.
Suggested words for Statement of Attainment

These units of competency from BSB Business Services and ICT Information and Communications Technology Training Packages meet industry requirements for applying introductory computer tools and applications in ICT contexts.
ICTSS00107 Introductory Help Desk Skill Set

Description

This skill set addresses the skills and knowledge required to perform routine Information and Communications Technology (ICT) support for a range of purposes required within an ICT context.

Pathways Information

The units provide credit towards ICT 30120 Certificate III in Information Technology and other qualifications that allow for selection of these units.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTICT219 Interact and resolve queries with ICT clients
ICTSAS210 Update and maintain hardware, software and documentation inventories
ICTSAS211 Develop solutions for basic ICT malfunctions and problems
ICTSAS213 Maintain ICT system integrity

Target Group

This skill is for individuals looking to enter the ICT industry who will provide routine help desk support.
Suggested words for Statement of Attainment

These units of competency from ICT Information and Communications Technology Training Packages meet industry requirements for applying routine maintenance and troubleshooting skills in ICT contexts.

Description

This skill set addresses the skills and knowledge needed to support small businesses in building a digital presence, transitioning to online solutions and providing online customer service.

Pathways Information

These units of competency provide credit towards BSB30315 Certificate III in Micro Business Operations, ICT30120 Certificate III in Information Technology SIR30216 Certificate III in Retail and other qualifications that allow for selection of these units.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

BSBXCS303 Securely manage personally identifiable information and workplace information
ICTWEB304 Build simple web pages
SIRXCEG006 Provide online customer service
SIRXMKT002 Use social media to engage customers

Target Group

This skill set is for those working in small businesses in any industry who require the skills and knowledge to transform and transition their business models so that they can operate in an online context.
Suggested words for Statement of Attainment

These units of competency from the BSB Business Services, ICT Information and Communications Technology and SIR Retail Services Training Packages meet industry requirements for applying digital skills to help small businesses transition to an online context.

Description

This skill set addresses the skills and knowledge needed to support individuals in gaining basic technological knowledge and general ICT skills as they enter into specialised and non-specialised ICT careers.

Pathways Information

These units of competency provide credit towards ICT30120 Certificate III in Information Technology and other qualifications that allow for selection of these units.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

- BSBXCS303 Securely manage personally identifiable information and workplace information
- ICTCLD301 Evaluate characteristics of cloud computing solutions and services
- ICTICT443 Work collaboratively in the ICT industry
- ICTPRG302 Apply introductory programming techniques

Target Group

This skill set is for people in all industries who are seeking a pathway into the ICT industry and require upskilling in general ICT skills.
Suggested words for Statement of Attainment

These units of competency from the BSB Business Services and ICT Information and Communications Technology Training Packages meet industry requirements for gaining basic technological knowledge and general ICT skills.

Description

This skill set addresses the skills and knowledge required to install, modify and maintain basic radio frequency networks.

Pathways Information

This skill set provides credit towards ICT40120 Certificate IV in Information Technology and other qualifications that allow for selection of these units.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTBWN306 Use radio frequency measuring instruments
ICTRFN407 Conduct radio frequency measurements
ICTRFN506 Evaluate radio frequency signal coverage plots
ICTTEN418 Install and test a radio frequency identification system

Target Group

This skill set is for entry level radio frequency workers.

Suggested words for Statement of Attainment

These units of competency from the ICT Information and Communications Technology Training Package meet industry requirements to meet a wide range of telecommunications skills.

Description

This skill set addresses the skills and knowledge required to install, modify and maintain basic optical networks.

Pathways Information

This skill set provides credit towards ICT50220 Diploma of Information Technology and other qualifications that allow for selection of these units.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTBWN308 Work safely on live optical fibre installations
ICTOPN404 Test optical communications systems and components
ICTOPN508 Perform acceptance and commissioning tests on optical networks
ICTOPN511 Test performance of specialised optical devices

Target Group

This skill set is for entry level optical networking workers.

Suggested words for Statement of Attainment

These units of competency from the ICT Information and Communications Technology Training Package meet industry requirements to meet a wide range of telecommunications skills.

This skill set addresses the skills and knowledge required to install, modify and maintain basic internet protocol networks.

Pathways Information

This skill set provides credit towards ICT40120 Certificate IV in Information Technology and other qualifications that allow for selection of these units.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTNWK610 Design and build integrated VoIP networks
ICTTEN424 Install and configure internet protocol TV in a service provider network
ICTTEN434 Install, configure and test internet protocol networks

Target Group

This skill set is for entry level internet protocol networking workers.

Suggested words for Statement of Attainment

These units of competency from the ICT Information and Communications Technology Training Package meet industry requirements to meet a wide range of telecommunications skills.

Description

This skill set addresses the skills and knowledge required for advanced learners to manage the skills required of the broader telecommunications and ICT industry.

Pathways Information

The units provide credit towards ICT60220 Advanced Diploma of Information Technology and other qualifications that allow for selection of these units.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

- ICTICT818 Develop knowledge management strategies
- ICTICT819 Lead analysis of information and communications technology business strategy
- ICTICT822 Manage automated ICT system applications
- ICTSUS812 Lead applied research in ICT sustainability
- ICTTEN817 Plan transmission networks
- ICTTEN823 Manage voice, data and internet protocol network solutions
- ICTTEN824 Manage network testing strategies

Target Group

This skill set is for advanced or managerial workers within a telecommunications and ICT environment.
Suggested words for Statement of Attainment

These units of competency from the ICT Information and Communications Technology Training Package meet industry requirements for telecommunications network management in ICT contexts.
ICTSS00114 Advanced Telecommunications Networking Skill Set

Description

This skill set addresses the skills and knowledge for experienced leaders to acquire the required skills of the broader telecommunications and ICT industry.

Pathways Information

The units provide credit towards ICT60220 Advanced Diploma of Information Technology and other qualifications that allow for selection of these units.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTRFN804 Produce radio link budgets
ICTRFN805 Analyse cellular mobile network systems
ICTRFN806 Analyse satellite communications systems
ICTTEN823 Manage voice, data and internet protocol network solutions
ICTTEN825 Investigate applications of cloud networks in network switching
ICTTEN826 Evaluate and apply digital signal processing to communication systems

Target Group

This skill set is for experienced workers within a telecommunications and IT environment.
Suggested words for Statement of Attainment

These units of competency from the ICT Information and Communications Technology Training Package meet industry requirements for telecommunications network management in ICT contexts.

Description

This skill set addresses the skills and knowledge required to support the rollout of cellular wireless networks, including the fifth generation (5G) network and subsequent cellular network generations, in a range of telecommunications industry occupations.

Pathways Information

The units provide credit towards ICT30419 Certificate III in Telecommunications Network Build and Operation, ICT41219 Certificate IV in Telecommunications Engineering Technology and other qualifications that allow for selection of these units.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTTEN312 Install telecommunications network equipment
ICTTEN409 Commission an electronic system
ICTTEN410 Locate, diagnose and rectify faults

Target Group

This skill set is for those who work in roles that support the rollout of cellular wireless networks, including the 5G network and subsequent cellular network generations.
Suggested words for Statement of Attainment

These units of competency from the ICT Training Package meet industry requirements for supporting the rollout of cellular wireless networks.
ICTSS00116 XG Cellular Network Implementation Skill Set

Description

This skill set addresses the skills and knowledge required to integrate and maintain device connection to cellular wireless networks, including the fifth generation (5G) network and subsequent cellular network generations, in a range of telecommunications industry occupations. This skill set addresses all digital reception technology methods.

Pathways Information

The units provide credit towards ICT41219 Certificate IV in Telecommunications Engineering Technology and other qualifications that allow for selection of these units.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTDRE302 Locate and rectify digital reception equipment faults
ICTEDU301 Train customers in new technology
ICTRFN407 Conduct radio frequency measurements
ICTTEN415 Install and configure internet protocol TV in a home network
ICTTEN425 Design, install and configure a customer smart technology network

Target Group

This skill set is for those who work in roles that integrate and maintain device connection to cellular wireless networks, including the fifth generation (5G) network and subsequent cellular network generations.
Suggested words for Statement of Attainment

These units of competency from the ICT Training Package meet industry requirements for supporting the integration and maintenance of connecting devices to cellular networks.
