CONTENTS

ICT Information and Communications Technology .......................................................... 40
ICT20120 Certificate II in Applied Digital Technologies .................................................... 41
ICT20219 Certificate II in Telecommunications Network Build and Operation ................ 44
ICT20319 Certificate II in Telecommunications Technology ............................................... 49
ICT30120 Certificate III in Information Technology .......................................................... 55
ICT30419 Certificate III in Telecommunications Network Build and Operation .............. 60
ICT30519 Certificate III in Telecommunications Technology ............................................. 68
ICT40120 Certificate IV in Information Technology .......................................................... 78
ICT41119 Certificate IV in Telecommunications Network Design .................................... 88
ICT41219 Certificate IV in Telecommunications Engineering Technology .................... 94
ICT50220 Diploma of Information Technology .............................................................. 101
ICT60220 Advanced Diploma of Information Technology ................................................ 112
ICTBWN306 Use radio frequency measuring instruments .............................................. 120
Assessment Requirements for ICTBWN306 Use radio frequency measuring instruments 123
ICTBWN307 Use optical measuring instruments .............................................................. 125
Assessment Requirements for ICTBWN307 Use optical measuring instruments .......... 128
ICTBWN308 Work safely on live optical fibre installations .............................................. 130
Assessment Requirements for ICTBWN308 Work safely on live optical fibre installations 134
ICTBWN309 Perform tests on optical communication system and components .......... 136
Assessment Requirements for ICTBWN309 Perform tests on optical communication 139
system and components ................................................................................................. 140
ICTCBL206 Alter services to existing cable system ......................................................... 142
Assessment Requirements for ICTCBL206 Alter services to existing cable system ....... 145
ICTCBL210 Install a telecommunications service to a building .................................... 147
Assessment Requirements for ICTCBL210 Install a telecommunications service to a 150
building ......................................................................................................................... 151
ICTCBL239 Install customer cable support systems ......................................................... 153
Assessment Requirements for ICTCBL239 Install customer cable support systems ..... 156
ICTCBL240 Place and secure customer cable .................................................................. 158
Assessment Requirements for ICTCBL240 Place and secure customer cable .......... 161
ICTCBL241 Terminate metallic conductor customer cable ............................................. 163
Assessment Requirements for ICTCBL241 Terminate metallic conductor customer cable 166
ICTCBL242 Install functional and protective telecommunications earthing system ....... 168
Assessment Requirements for ICTCBL242 Install functional and protective 171
telecommunications earthing system ............................................................................. 171
ICTCBL246 Install, maintain and modify customer premises communications cabling: 173
ACMA Restricted Rule .................................................................................................... 173
Assessment Requirements for ICTCBL246 Install, maintain and modify customer 178
premises communications cabling: ACMA Restricted Rule ....................................... 178
ICTCBL247 Install, maintain and modify customer premises communications cabling: 181
ACMA Open Rule ......................................................................................................... 181
Assessment Requirements for ICTCBL247 Install, maintain and modify customer 187
premises communications cabling: ACMA Open Rule ............................................ 187
ICTCBL248 Install and terminate hard-line coaxial cable ............................................. 191
Assessment Requirements for ICTCBL248 Install and terminate hard-line coaxial cable 195
ICTCBL249 Haul underground cable for installation and maintenance work ............. 197
Assessment Requirements for ICTCBL249 Haul underground cable for installation and maintenance work .......................................................... 200
ICTCBL250 Haul and fix aerial cable ............................................................................... 202
Assessment Requirements for ICTCBL250 Haul and fix aerial cable ........................................206
ICTCBL251 Install aerial and underground cable lead-ins .......................................................208
Assessment Requirements for ICTCBL251 Install aerial and underground cable lead-ins ............212
ICTCBL252 Joint and terminate coaxial cable ........................................................................214
Assessment Requirements for ICTCBL252 Joint and terminate coaxial cable .........................218
ICTCBL253 Construct underground telecommunications infrastructure ................................220
Assessment Requirements for ICTCBL253 Construct underground telecommunications infrastructure .................................................................223
ICTCBL254 Joint metallic conductor cable in access network ..................................................225
Assessment Requirements for ICTCBL254 Joint metallic conductor cable in access network .................................................................228
ICTCBL313 Modify and cutover cable ....................................................................................230
Assessment Requirements for ICTCBL313 Modify and cutover cable .......................................234
ICTCBL322 Install, test and terminate optical fibre cable on customer premises .......................236
Assessment Requirements for ICTCBL322 Install, test and terminate optical fibre cable on customer premises .................................................................240
ICTCBL323 Test cables and systems on customer premises ....................................................242
Assessment Requirements for ICTCBL323 Test cables and systems on customer premises .......246
ICTCBL324 Cut over new systems and equipment on customer premises ................................248
Assessment Requirements for ICTCBL324 Cut over new systems and equipment on customer premises .................................................................251
ICTCBL325 Maintain cable network ......................................................................................253
Assessment Requirements for ICTCBL325 Maintain cable network .......................................256
ICTCBL326 Cut over metallic conductor cable in the access network ....................................258
Assessment Requirements for ICTCBL326 Cut over metallic conductor cable in the access network .................................................................261
ICTCBL329 Install underground cable for communications applications ...............................263
Assessment Requirements for ICTCBL329 Install underground cable for communications applications .................................................................267
ICTCBL330 Splice and terminate optical fibre cable for telecommunications projects ..............269
Assessment Requirements for ICTCBL330 Splice and terminate optical fibre cable for telecommunications projects .................................................................273
ICTCBL331 Conduct basic identification and fault-finding within cabling networks and customer equipment ...........................................................................275
Assessment Requirements for ICTCBL331 Conduct basic identification and fault-finding within cabling networks and customer equipment .................................................................279
ICTCBL332 Locate, identify and rectify copper cable faults .....................................................282
Assessment Requirements for ICTCBL332 Locate, identify and rectify copper cable faults .......285
ICTCBL333 Install aerial cable for communications applications .............................................288
Assessment Requirements for ICTCBL333 Install aerial cable for communications applications .................................................................292
ICTCBL334 Install underground enclosures and conduit .........................................................294
Assessment Requirements for ICTCBL334 Install underground enclosures and conduit .......297
ICTCBL335 Construct aerial cable supports ............................................................................299
Assessment Requirements for ICTCBL335 Construct aerial cable supports .............................302
ICTCBL336 Install and cut over metallic conductor cable to access network cabinet ................304
Assessment Requirements for ICTCBL336 Install and cut over metallic conductor cable to access network cabinet .................................................................308
ICTCLD301 Evaluate characteristics of cloud computing solutions and services ................310
Assessment Requirements for ICTCLD301 Evaluate characteristics of cloud computing solutions and services .................................................................313
ICTCLD401 Configure cloud services ....................................................................................315
Assessment Requirements for ICTCLD401 Configure cloud services ....................................318
ICTCLD501 Develop cloud disaster recovery plans .................................................. 321
Assessment Requirements for ICTCLD501 Develop cloud disaster recovery plans ...... 324
ICTCLD502 Design and implement highly-available cloud infrastructure .................. 326
Assessment Requirements for ICTCLD502 Design and implement highly-available cloud infrastructure .......................................................... 329
ICTCLD503 Implement web-scale cloud infrastructure .............................................. 331
Assessment Requirements for ICTCLD503 Implement web-scale cloud infrastructure .. 334
ICTCLD504 Improve cloud-based infrastructure .................................................... 336
Assessment Requirements for ICTCLD504 Improve cloud-based infrastructure ........ 339
ICTCLD505 Implement cloud infrastructure with code ....................................... 341
Assessment Requirements for ICTCLD505 Implement cloud infrastructure with code .. 344
ICTCLD506 Implement virtual network in cloud environments ............................. 346
Assessment Requirements for ICTCLD506 Implement virtual network in cloud environments .................................................................................. 349
ICTCLD507 Build and deploy resources on cloud platforms .................................... 351
Assessment Requirements for ICTCLD507 Build and deploy resources on cloud platforms 354
ICTCLD508 Manage infrastructure in cloud environments .................................... 356
Assessment Requirements for ICTCLD508 Manage infrastructure in cloud environments 359
ICTCLD601 Develop cloud computing strategies for businesses .............................. 361
Assessment Requirements for ICTCLD601 Develop cloud computing strategies for businesses ............................................................................. 364
ICTCLD602 Manage information security compliance of cloud service deployment ...... 366
Assessment Requirements for ICTCLD602 Manage information security compliance of cloud service deployment ................................................. 369
ICTCMP203 Perform restricted customer premises broadband cabling work: ACMA
Restricted Rule ........................................................................................................ 371
Assessment Requirements for ICTCMP203 Perform restricted customer premises broadband cabling work: ACMA Restricted Rule ................................................. 374
ICTCMP501 Undertake radio communications site audit ....................................... 376
Assessment Requirements for ICTCMP501 Undertake radio communications site audits 380
ICTCMP502 Conduct radio communications site audits ...................................... 382
Assessment Requirements for ICTCMP502 Conduct radio communications site audits 385
ICTCYS401 Design and implement network security infrastructure for an organisation 387
Assessment Requirements for ICTCYS401 Design and implement network security infrastructure for an organisation ................................................................. 390
ICTCYS402 Identify and confirm cyber security incidents ..................................... 392
Assessment Requirements for ICTCYS402 Identify and confirm cyber security incidents 395
ICTCYS403 Plan and implement information security strategies for an organisation .... 397
Assessment Requirements for ICTCYS403 Plan and implement information security strategies for an organisation ................................................................. 400
ICTCYS404 Run vulnerability assessments for an organisation ................................. 402
Assessment Requirements for ICTCYS404 Run vulnerability assessments for an organisation ................................................................. 405
ICTCYS405 Develop cyber security incident response plans .................................. 407
Assessment Requirements for ICTCYS405 Develop cyber security incident response plans 410
ICTCYS406 Respond to cyber security incidents .................................................... 412
Assessment Requirements for ICTCYS406 Respond to cyber security incidents .......... 415
ICTCYS407 Gather, analyse and interpret threat data ......................................... 417
Assessment Requirements for ICTCYS407 Gather, analyse and interpret threat data ... 420
ICTCYS601 Create cyber security standards for organisations .............................. 422
Assessment Requirements for ICTCYS601 Create cyber security standards for organisations ................................................................. 425
ICTCYS602 Implement cyber security operations ................................................. 427
Assessment Requirements for ICTCYS602 Implement cyber security operations ..........430
ICTCYS603 Undertake penetration testing for organisations .....................................432
Assessment Requirements for ICTCYS603 Undertake penetration testing for organisations .....................................435
ICTCYS604 Implement best practices for identity management ..................................437
Assessment Requirements for ICTCYS604 Implement best practices for identity management .....................................440
ICTCYS606 Evaluate an organisation's compliance with cyber security standards and law ..........442
Assessment Requirements for ICTCYS606 Evaluate an organisation's compliance with cyber security standards and law ..........445
ICTCYS607 Acquire digital forensic data ..............................................................447
Assessment Requirements for ICTCYS607 Acquire digital forensic data ..................450
ICTCYS608 Perform cyber security risk assessments ..............................................452
Assessment Requirements for ICTCYS608 Perform cyber security risk assessments ........455
ICTCYS609 Evaluate threats and vulnerabilities of IoT devices ................................457
Assessment Requirements for ICTCYS609 Evaluate threats and vulnerabilities of IoT devices .....................................460
ICTCYS610 Protect critical infrastructure for organisations ..................................462
Assessment Requirements for ICTCYS610 Protect critical infrastructure for organisations .....................................465
ICTCYS611 Configure security devices for organisations .....................................467
Assessment Requirements for ICTCYS611 Configure security devices for organisations ........470
ICTCYS612 Design and implement virtualised cyber security infrastructure for organisations .....................................472
Assessment Requirements for ICTCYS612 Design and implement virtualised cyber security infrastructure for organisations .....................................475
ICTCYS613 Utilise design methodologies for security architecture ..................477
Assessment Requirements for ICTCYS613 Utilise design methodologies for security architecture .....................................480
ICTDAT401 Evaluate organisational compliance with data ethics legislation ..........482
Assessment Requirements for ICTDAT401 Evaluate organisational compliance with data ethics legislation ........485
ICTDAT402 Clean and verify data ..............................................................487
Assessment Requirements for ICTDAT402 Clean and verify data ..........................490
ICTDAT501 Gather, analyse and verify data from different source inputs ........492
Assessment Requirements for ICTDAT501 Gather, analyse and verify data from different source inputs .....................................495
ICTDAT502 Conduct significance tests ..............................................................497
Assessment Requirements for ICTDAT502 Conduct significance tests ..................500
ICTDAT503 Use unsupervised learning for clustering ............................................502
Assessment Requirements for ICTDAT503 Use unsupervised learning for clustering ....505
ICTDBS416 Create basic relational databases ......................................................507
Assessment Requirements for ICTDBS416 Create basic relational databases ..........510
ICTDBS417 Identify and resolve common database performance problems ..........512
Assessment Requirements for ICTDBS417 Identify and resolve common database performance problems .....................................515
ICTDBS418 Monitor and administer databases ..................................................517
Assessment Requirements for ICTDBS418 Monitor and administer databases ..........520
ICTDBS505 Monitor and improve knowledge management systems ..................522
Assessment Requirements for ICTDBS505 Monitor and improve knowledge management systems .....................................525
ICTDBS506 Design databases ..............................................................527
Assessment Requirements for ICTDBS506 Design databases ..................................530
ICTDBS507 Integrate databases with websites .....................................................532
Assessment Requirements for ICTDBS507 Integrate databases with websites ........................................ 535
ICTDBS604 Build data warehouses ................................................................................................. 537
Assessment Requirements for ICTDBS604 Build data warehouses ............................................... 540
ICTDBS605 Develop knowledge management strategies .............................................................. 542
Assessment Requirements for ICTDBS605 Develop knowledge management strategies ................. 545
ICTDBS606 Determine database functionality and scalability ....................................................... 547
Assessment Requirements for ICTDBS606 Determine database functionality and scalability ........... 550
ICTDMT404 Create visual design components for digital media .................................................... 552
Assessment Requirements for ICTDMT404 Create visual design components for digital media ........ 555
ICTDMT405 Produce interactive animations .................................................................................. 557
Assessment Requirements for ICTDMT405 Produce interactive animations ............................... 560
ICTDMT406 Produce and edit digital images .................................................................................... 562
Assessment Requirements for ICTDMT406 Produce and edit digital images ............................... 565
ICTDRE301 Install digital reception equipment ............................................................................. 567
Assessment Requirements for ICTDRE301 Install digital reception equipment ............................. 571
ICTDRE308 Install a cable broadband multi-dwelling unit system ............................................... 573
Assessment Requirements for ICTDRE308 Install a cable broadband multi-dwelling unit system ...... 576
ICTDRE314 Design communications wiring systems for customer premises .................................. 578
Assessment Requirements for ICTDRE314 Design communications wiring systems for customer premises .......................................................... 581
ICTGAM420 Produce interactive games .......................................................................................... 583
Assessment Requirements for ICTGAM420 Produce interactive games ....................................... 587
ICTGAM421 Identify and apply games design and game play principles ...................................... 589
Assessment Requirements for ICTGAM421 Identify and apply games design and game play principles ........................................................................ 592
ICTGAM422 Create design documents for interactive games ......................................................... 594
Assessment Requirements for ICTGAM422 Create design documents for interactive games ........... 597
ICTGAM423 Apply artificial intelligence in game development ....................................................... 599
Assessment Requirements for ICTGAM423 Apply artificial intelligence in game development ........ 602
ICTGAM424 Develop story and content in digital games ................................................................. 604
Assessment Requirements for ICTGAM424 Develop story and content in digital games ................. 607
ICTGAM425 Create visual design components in interactive games ............................................... 609
Assessment Requirements for ICTGAM425 Create visual design components in interactive games ........................................................................ 613
ICTGAM426 Write narrative scripts for interactive games ............................................................... 615
Assessment Requirements for ICTGAM426 Write narrative scripts for interactive games .............. 618
ICTGAM427 Use 3-D software interface and toolsets ................................................................. 620
Assessment Requirements for ICTGAM427 Use 3-D software interface and toolsets ...................... 623
ICTGAM428 Create 3-D characters for interactive games .............................................................. 625
Assessment Requirements for ICTGAM428 Create 3-D characters for interactive games .............. 628
ICTGAM429 Develop 3-D components for interactive games ......................................................... 630
Assessment Requirements for ICTGAM429 Develop 3-D components for interactive games ........... 633
ICTGAM430 Design interactive media ............................................................................................. 635
Assessment Requirements for ICTGAM430 Design interactive media ......................................... 638
ICTGAM431 Design and create 3-D digital models ......................................................................... 640
Assessment Requirements for ICTGAM431 Design and create 3-D digital models ......................... 643
ICTGAM432 Create audio for digital games ..................................................................................... 645
Assessment Requirements for ICTGAM432 Create audio for digital games ................................................. 649
ICTGAM433 Prepare and complete image rendering processes .................................................................. 651
Assessment Requirements for ICTGAM433 Prepare and complete image rendering processes .................. 654
ICTGAM532 Create design concepts for digital games and 3-D media ...................................................... 656
Assessment Requirements for ICTGAM532 Create design concepts for digital games and 3-D media .......... 659
ICTGAM533 Create complex 3-D interactive games ..................................................................................... 661
Assessment Requirements for ICTGAM533 Create complex 3-D interactive games ................................. 665
ICTGAM534 Manage interactive media productions ................................................................................. 667
Assessment Requirements for ICTGAM534 Manage interactive media productions ............................... 670
ICTGAM535 Develop complex 3-D software for games and interactive media ......................................... 672
Assessment Requirements for ICTGAM535 Develop complex 3-D software for games and interactive media ................................................................................................................................. 675
ICTGAM536 Design interactive 3-D applications for scientific and mathematical modelling .......................... 678
Assessment Requirements for ICTGAM536 Design interactive 3-D applications for scientific and mathematical modelling ........................................................................................................................................................................ 681
ICTGAM537 Prepare games for different platforms and delivery modes ...................................................... 683
Assessment Requirements for ICTGAM537 Prepare games for different platforms and delivery modes .......... 686
ICTGAM538 Manage testing of games and interactive media ........................................................................ 688
Assessment Requirements for ICTGAM538 Manage testing of games and interactive media ..................... 691
ICTGAM539 Create and implement designs for 3-D games environments ................................................... 693
Assessment Requirements for ICTGAM539 Create and implement designs for 3-D games environments ...... 696
ICTGAM540 Design and create models for 3-D and digital effects environments ................................. 699
Assessment Requirements for ICTGAM540 Design and create models for 3-D and digital effects environments ........................................................................................................................................................................ 701
ICTGAM541 Design and create advanced particles, fluids and bodies for 3-D digital effects ....................... 703
Assessment Requirements for ICTGAM541 Design and create advanced particles, fluids and bodies for 3-D digital effects ........................................................................................................................................................................ 707
ICTGAM542 Animate 3-D characters for digital games ............................................................................... 709
Assessment Requirements for ICTGAM542 Animate 3-D characters for digital games ............................. 712
ICTGAM543 Produce digital animation sequences ......................................................................................... 714
Assessment Requirements for ICTGAM543 Produce digital animation sequences .................................... 717
ICTGAM544 Animate physical attributes of models and elements ............................................................... 719
Assessment Requirements for ICTGAM544 Animate physical attributes of models and elements ............... 722
ICTGAM545 Manage technical art and rigging in 3-D animations .............................................................. 724
Assessment Requirements for ICTGAM545 Manage technical art and rigging in 3-D animations .................. 727
ICTGAM546 Create and combine 3-D digital games and components ....................................................... 729
Assessment Requirements for ICTGAM546 Create and combine 3-D digital games and components .......... 732
ICTGAM547 Create interactive 3-D environments for digital games ......................................................... 734
Assessment Requirements for ICTGAM547 Create interactive 3-D environments for digital games ............. 737
ICTGAM548 Complete digital editing for 3-D and digital effects environments ......................................... 739
Assessment Requirements for ICTGAM548 Complete digital editing for 3-D and digital effects environments ........................................................................................................................................................................ 742
ICTGAM549 Collaborate in design of 3-D game levels and environments........................................744
Assessment Requirements for ICTGAM549 Collaborate in design of 3-D game levels and environments..............................................................................................................................747
ICTGAM550 Integrate multiple data sources into interactive 3-D environments...............................749
Assessment Requirements for ICTGAM550 Integrate multiple data sources into interactive 3-D environments..........................................................................................................................752
ICTGAM551 Apply digital texturing for the 3-D environment in digital games...............................754
Assessment Requirements for ICTGAM551 Apply digital texturing for the 3-D environment in digital games ........................................................................................................................................757
ICTGAM552 Create complex 3-D characters for games.....................................................................759
Assessment Requirements for ICTGAM552 Create complex 3-D characters for games........................762
ICTGAM553 Integrate database with online games..............................................................................764
Assessment Requirements for ICTGAM553 Integrate database with online games............................767
ICTGAM554 Create games for mobile devices....................................................................................769
Assessment Requirements for ICTGAM554 Create games for mobile devices.................................772
ICTGAM555 Analyse business opportunities in the digital games environments.............................774
Assessment Requirements for ICTGAM555 Analyse business opportunities in the digital games environments ........................................................................................................................................777
ICTGAM556 Develop and implement physics in 3-D digital games....................................................779
Assessment Requirements for ICTGAM556 Develop and implement physics in 3-D digital games........................................................................................................................................782
ICTGAM557 Complete compositing to create elements for 3-D and digital effects environments........784
Assessment Requirements for ICTGAM557 Complete compositing to create elements for 3-D and digital effects environments........................................................................................................787
ICTICT213 Use computer operating systems and hardware ..............................................................789
Assessment Requirements for ICTICT213 Use computer operating systems and hardware..............792
ICTICT214 Operate application software packages ............................................................................794
Assessment Requirements for ICTICT214 Operate application software packages............................797
ICTICT215 Operate digital media technology packages ......................................................................799
Assessment Requirements for ICTICT215 Operate digital media technology packages...................802
ICTICT216 Design and create basic organisational documents .........................................................804
Assessment Requirements for ICTICT216 Design and create basic organisational documents.........807
ICTICT219 Interact and resolve queries with ICT clients ....................................................................809
Assessment Requirements for ICTICT219 Interact and resolve queries with ICT clients..................812
ICTICT221 Identify and use specific industry standard technologies ..................................................814
Assessment Requirements for ICTICT221 Identify and use specific industry standard technologies ..........................................................................................................................817
ICTICT222 Research and share ICT solutions for Indigenous users ................................................819
Assessment Requirements for ICTICT222 Research and share ICT solutions for Indigenous users ....822
ICTICT309 Create ICT user documentation .....................................................................................824
Assessment Requirements for ICTICT309 Create ICT user documentation.......................................827
ICTICT310 Identify and use industry specific technologies .................................................................829
Assessment Requirements for ICTICT310 Identify and use industry specific technologies..............832
ICTICT311 Customise packaged software applications ......................................................................834
Assessment Requirements for ICTICT311 Customise packaged software applications.....................837
ICTICT312 Use advanced features of applications .............................................................................839
Assessment Requirements for ICTICT312 Use advanced features of applications..........................841
ICTICT313 Identify IP, ethics and privacy policies in ICT environments ...........................................843
Assessment Requirements for ICTICT313 Identify IP, ethics and privacy policies in ICT environments ........................................................................................................................845
ICTICT425 Implement WHS, environmental sustainability and anti-discrimination practices in an ICT workplace .................................................847
Assessment Requirements for ICTICT425 Implement WHS, environmental sustainability and anti-discrimination practices in an ICT workplace .................................................850
ICTICT427 Identify, evaluate and apply current industry-specific technologies to meet organisational needs.............................................852
Assessment Requirements for ICTICT427 Identify, evaluate and apply current industry-specific technologies to meet organisational needs.............................................855
ICTICT429 Determine and confirm client business requirements.............................................857
Assessment Requirements for ICTICT429 Determine and confirm client business requirements.............................................860
ICTICT430 Apply software development methodologies.............................................862
Assessment Requirements for ICTICT430 Apply software development methodologies 865
ICTICT431 Use online tools for learning ..............................................................................867
Assessment Requirements for ICTICT431 Use online tools for learning.................................870
ICTICT432 Develop detailed technical design ...........................................................................872
Assessment Requirements for ICTICT432 Develop detailed technical design.................................875
ICTICT433 Build graphical user interfaces ..............................................................................877
Assessment Requirements for ICTICT433 Build graphical user interfaces.................................880
ICTICT434 Maintain website information standards ...............................................................882
Assessment Requirements for ICTICT434 Maintain website information standards .................885
ICTICT435 Create technical documentation ........................................................................887
Assessment Requirements for ICTICT435 Create technical documentation.................................890
ICTICT436 Develop macros and templates for clients using standard products........................892
Assessment Requirements for ICTICT436 Develop macros and templates for clients using standard products .................................................................895
ICTICT437 Conduct post-implementation ICT system reviews.................................................897
Assessment Requirements for ICTICT437 Conduct post-implementation ICT system reviews .................................................................900
ICTICT438 Select, configure and deploy software and hardware testing tools.................................902
Assessment Requirements for ICTICT438 Select, configure and deploy software and hardware testing tools .................................................................905
ICTICT440 Develop service level agreements ........................................................................907
Assessment Requirements for ICTICT440 Develop service level agreements ................................910
ICTICT441 Provide one-to-one instructions ..............................................................................912
Assessment Requirements for ICTICT441 Provide one-to-one instructions ................................915
ICTICT443 Work collaboratively in the ICT industry ...............................................................917
Assessment Requirements for ICTICT443 Work collaboratively in the ICT industry .........920
ICTICT444 Develop client user interfaces ..............................................................................922
Assessment Requirements for ICTICT444 Develop client user interfaces ................................925
ICTICT445 Connect and configure devices and hardware components .........................................927
Assessment Requirements for ICTICT445 Connect and configure devices and hardware components .................................................................930
ICTICT446 Apply ICT service management principles ...........................................................932
Assessment Requirements for ICTICT446 Apply ICT service management principles ..........935
ICTICT447 Work effectively in agile environments ...............................................................937
Assessment Requirements for ICTICT447 Work effectively in agile environments ...............940
ICTICT448 Prepare electronic portfolios of work ................................................................942
Assessment Requirements for ICTICT448 Prepare electronic portfolios of work ...............945
ICTICT449 Use version control systems in development environments ....................................947
Assessment Requirements for ICTICT449 Use version control systems in development environments .................................................................950
ICTICT450 Identify and use applications for a distributed ledger .............................................952
Assessment Requirements for ICTICT450 Identify and use applications for a distributed ledger ......................................................... 955
ICTICT451 Comply with IP, ethics and privacy policies in ICT environments .......... 957
Assessment Requirements for ICTICT451 Comply with IP, ethics and privacy policies in ICT environments ........................................... 960
ICTICT518 Research and review hardware technology options for organisations ...... 962
Assessment Requirements for ICTICT518 Research and review hardware technology options for organisations ........................................................................... 965
ICTICT519 Develop detailed component specifications from project specifications ...... 967
Assessment Requirements for ICTICT519 Develop detailed component specifications from project specifications ............................................. 970
ICTICT520 Confirm transition strategy for new systems ...................................... 972
Assessment Requirements for ICTICT520 Confirm transition strategy for new systems 975
ICTICT521 Select new technology supported business model ................................ 977
Assessment Requirements for ICTICT521 Select new technology supported business model .................................................................................... 980
ICTICT522 Evaluate vendor products and equipment ........................................... 982
Assessment Requirements for ICTICT522 Evaluate vendor products and equipment ... 985
ICTICT523 Gather data to identify business requirements .................................... 987
Assessment Requirements for ICTICT523 Gather data to identify business requirements 990
ICTICT524 Determine ICT strategies and solutions for organisations .................. 992
Assessment Requirements for ICTICT524 Determine ICT strategies and solutions for organisations .................................................. 995
ICTICT525 Identify and manage the implementation of industry specific technologies .997
Assessment Requirements for ICTICT525 Identify and manage the implementation of industry specific technologies ............................................. 1000
ICTICT526 Verify client business requirements .................................................. 1002
Assessment Requirements for ICTICT526 Verify client business requirements ........ 1005
ICTICT527 Develop and maintain blockchain solutions ........................................ 1007
Assessment Requirements for ICTICT527 Develop and maintain blockchain solutions 1010
ICTICT528 Deploy smart contracts ................................................................. 1012
Assessment Requirements for ICTICT528 Deploy smart contracts ....................... 1015
ICTICT529 Organise and lead agile projects ..................................................... 1017
Assessment Requirements for ICTICT529 Organise and lead agile projects .......... 1020
ICTICT530 Design user experience solutions .................................................... 1022
Assessment Requirements for ICTICT530 Design user experience solutions .......... 1025
ICTICT531 Test network using virtual instruments ............................................ 1027
Assessment Requirements for ICTICT531 Test network using virtual instruments .... 1030
ICTICT532 Apply IP, ethics and privacy in ICT environments ............................. 1032
Assessment Requirements for ICTICT532 Apply IP, ethics and privacy in ICT environments .................................................. 1035
ICTICT611 Develop ICT strategic business plans ............................................. 1037
Assessment Requirements for ICTICT611 Develop ICT strategic business plans ...... 1040
ICTICT612 Develop contracts and manage contract performance ........................ 1042
Assessment Requirements for ICTICT612 Develop contracts and manage contract performance .................................................. 1045
ICTICT613 Manage the use of development methodologies .............................. 1047
Assessment Requirements for ICTICT613 Manage the use of development methodologies 1050
ICTICT614 Identify and implement business innovation ..................................... 1052
Assessment Requirements for ICTICT614 Identify and implement business innovation 1055
ICTICT615 Implement knowledge management strategies .................................. 1057
Assessment Requirements for ICTICT615 Implement knowledge management strategies 1060
ICTICT616 Develop communities of practice .................................................. 1062
Assessment Requirements for ICTICT616 Develop communities of practice ..........................1065
ICTICT617 Lead the evaluation and implementation of current industry specific technologies ..................................................1067
Assessment Requirements for ICTICT617 Lead the evaluation and implementation of current industry specific technologies ..................................................1067
ICTICT618 Manage IP, ethics and privacy in ICT environments ........................................1070
Assessment Requirements for ICTICT618 Manage IP, ethics and privacy in ICT environments ........................................1072
ICTICT818 Develop knowledge management strategies ..................................................1075
Assessment Requirements for ICTICT818 Develop knowledge management strategies 1080
ICTICT819 Lead analysis of information and communications technology business strategy ...............................................1082
Assessment Requirements for ICTICT819 Lead analysis of information and communications technology business strategy ...............................................1085
ICTICT822 Manage automated ICT system applications .................................................1087
Assessment Requirements for ICTICT822 Manage automated ICT system applications 1090
ICTIOT501 Install IoT devices and networks .................................................................1093
Assessment Requirements for ICTIOT501 Install IoT devices and networks ..................1096
ICTIOT502 Program IoT devices ................................................................................1098
Assessment Requirements for ICTIOT502 Program IoT devices ..................................1101
ICTIOT503 Design and test IoT devices and networks ..................................................1103
Assessment Requirements for ICTIOT503 Design and test IoT devices and networks ..1106
ICTNPL412 Apply business acumen to network planning .............................................1108
Assessment Requirements for ICTNPL412 Apply business acumen to network planning 1111
ICTNPL413 Evaluate networking regulations and legislation for the telecommunications industry ..................................................1113
Assessment Requirements for ICTNPL413 Evaluate networking regulations and legislation for the telecommunications industry ..................................................1116
ICTNWK307 Provide network systems administration ....................................................1118
Assessment Requirements for ICTNWK307 Provide network systems administration 1121
ICTNWK308 Determine and action network problems ....................................................1123
Assessment Requirements for ICTNWK308 Determine and action network problems 1126
ICTNWK309 Configure and administer network operating systems ................................1128
Assessment Requirements for ICTNWK309 Configure and administer network operating systems ..................................................1131
ICTNWK310 Administer network peripherals .................................................................1133
Assessment Requirements for ICTNWK310 Administer network peripherals .................1136
ICTNWK311 Install and test network protocols ..............................................................1138
Assessment Requirements for ICTNWK311 Install and test network protocols ...............1141
ICTNWK422 Install and manage servers ....................................................................1143
Assessment Requirements for ICTNWK422 Install and manage servers .......................1146
ICTNWK423 Manage network and data integrity ..........................................................1148
Assessment Requirements for ICTNWK423 Manage network and data integrity ........1151
ICTNWK424 Install and operate small enterprise branch networks ...............................1153
Assessment Requirements for ICTNWK424 Install and operate small enterprise branch networks ..................................................1156
ICTNWK425 Build small wireless local area networks ....................................................1158
Assessment Requirements for ICTNWK425 Build small wireless local area networks 1161
ICTNWK426 Install and configure client-server applications and services ...................1163
Assessment Requirements for ICTNWK426 Install and configure client-server applications and services ..................................................1166
ICTNWK427 Configure desktop environments ............................................................1168
Assessment Requirements for ICTNWK427 Configure desktop environments .............1171
ICTNWK428 Create scripts for networking ................................................................. 1173
Assessment Requirements for ICTNWK428 Create scripts for networking .......... 1176
ICTNWK429 Install hardware to networks ............................................................ 1178
Assessment Requirements for ICTNWK429 Install hardware to networks ........ 1181
ICTNWK430 Deploy software to networked computers ........................................ 1183
Assessment Requirements for ICTNWK430 Deploy software to networked computers 1186
ICTNWK431 Create network documentation ....................................................... 1188
Assessment Requirements for ICTNWK431 Create network documentation ....... 1191
ICTNWK432 Build an enterprise wireless network ............................................. 1193
Assessment Requirements for ICTNWK432 Build an enterprise wireless network .... 1196
ICTNWK433 Install backbone technologies in a local area network ................... 1198
Assessment Requirements for ICTNWK433 Install backbone technologies in a local area network ................................................................. 1201
ICTNWK434 Identify and implement industry standard virtualisation technologies .... 1203
Assessment Requirements for ICTNWK434 Identify and implement industry standard virtualisation technologies ............................................................... 1206
ICTNWK515 Develop configuration management protocols .............................. 1208
Assessment Requirements for ICTNWK515 Develop configuration management protocols 1212
ICTNWK537 Implement secure encryption technologies .................................... 1214
Assessment Requirements for ICTNWK537 Implement secure encryption technologies 1217
ICTNWK538 Install and maintain valid authentication processes ....................... 1219
Assessment Requirements for ICTNWK538 Install and maintain valid authentication processes ................................................................. 1222
ICTNWK539 Design and implement integrated server solutions ....................... 1224
Assessment Requirements for ICTNWK539 Design and implement integrated server solutions ................................................................. 1227
ICTNWK540 Design, build and test network servers ...................................... 1229
Assessment Requirements for ICTNWK540 Design, build and test network servers 1233
ICTNWK541 Configure, verify and troubleshoot WAN links and IP services ....... 1236
Assessment Requirements for ICTNWK541 Configure, verify and troubleshoot WAN links and IP services ................................................................. 1239
ICTNWK542 Install, operate and troubleshoot medium enterprise routers .......... 1241
Assessment Requirements for ICTNWK542 Install, operate and troubleshoot medium enterprise routers ................................................................. 1244
ICTNWK543 Install, operate and troubleshoot medium enterprise switches ....... 1246
Assessment Requirements for ICTNWK543 Install, operate and troubleshoot medium enterprise switches ................................................................. 1249
ICTNWK544 Design and implement a security perimeter for ICT networks ....... 1251
Assessment Requirements for ICTNWK544 Design and implement a security perimeter for ICT networks ................................................................. 1254
ICTNWK545 Develop, implement and evaluate systems and applications security .... 1256
Assessment Requirements for ICTNWK545 Develop, implement and evaluate systems and applications security ................................................................. 1259
ICTNWK546 Manage network security ................................................................. 1261
Assessment Requirements for ICTNWK546 Manage network security ............ 1264
ICTNWK547 Manage system security on operational systems ............................. 1266
Assessment Requirements for ICTNWK547 Manage system security on operational systems ................................................................. 1269
ICTNWK548 Model preferred system solutions ................................................. 1271
Assessment Requirements for ICTNWK548 Model preferred system solutions .... 1274
ICTNWK549 Design ICT security frameworks ................................................. 1276
Assessment Requirements for ICTNWK549 Design ICT security frameworks .... 1279
ICTNWK550 Design ICT system security controls ........................................... 1281
| Assessment Requirements for ICTNWK550 Design ICT system security controls | 1284 |
| ICTNWK551 Build decks using wireless markup language | 1286 |
| Assessment Requirements for ICTNWK551 Build decks using wireless markup language | 1289 |
| ICTNWK552 Install and configure network access storage devices | 1291 |
| Assessment Requirements for ICTNWK552 Install and configure network access storage devices | 1294 |
| ICTNWK553 Configure enterprise virtual computing environments | 1296 |
| Assessment Requirements for ICTNWK553 Configure enterprise virtual computing environments | 1299 |
| ICTNWK554 Manage enterprise virtual computing environments | 1301 |
| Assessment Requirements for ICTNWK554 Manage enterprise virtual computing environments | 1304 |
| ICTNWK555 Determine best-fit topologies for local networks | 1306 |
| Assessment Requirements for ICTNWK555 Determine best-fit topologies for local networks | 1309 |
| ICTNWK556 Identify and resolve network problems | 1312 |
| Assessment Requirements for ICTNWK556 Identify and resolve network problems | 1315 |
| ICTNWK557 Configure and manage advanced virtual computing environments | 1317 |
| Assessment Requirements for ICTNWK557 Configure and manage advanced virtual computing environments | 1320 |
| ICTNWK558 Monitor and troubleshoot virtual computing environments | 1322 |
| Assessment Requirements for ICTNWK558 Monitor and troubleshoot virtual computing environments | 1325 |
| ICTNWK559 Install an enterprise virtual computing environment | 1327 |
| Assessment Requirements for ICTNWK559 Install an enterprise virtual computing environment | 1330 |
| ICTNWK560 Determine best-fit topologies for wide area networks | 1332 |
| Assessment Requirements for ICTNWK560 Determine best-fit topologies for wide area networks | 1335 |
| ICTNWK561 Design enterprise wireless local area networks | 1338 |
| Assessment Requirements for ICTNWK561 Design enterprise wireless local area networks | 1342 |
| ICTNWK562 Design and implement wireless network security | 1344 |
| Assessment Requirements for ICTNWK562 Design and implement wireless network security | 1348 |
| ICTNWK563 Design and implement a security system | 1351 |
| Assessment Requirements for ICTNWK563 Design and implement a security system | 1355 |
| ICTNWK564 Plan, configure and test advanced server-based security | 1357 |
| Assessment Requirements for ICTNWK564 Plan, configure and test advanced server-based security | 1360 |
| ICTNWK565 Design and implement wireless network security | 1362 |
| Assessment Requirements for ICTNWK565 Design and implement wireless network security | 1366 |
| ICTNWK566 Design and implement network devices for a secure network infrastructure | 1368 |
| Assessment Requirements for ICTNWK566 Design and implement network devices for a secure network infrastructure | 1372 |
| ICTNWK567 Configure and manage intrusion prevention system on network sensors | 1374 |
| Assessment Requirements for ICTNWK567 Configure and manage intrusion prevention system on network sensors | 1377 |
| ICTNWK568 Manage ICT security | 1379 |
| Assessment Requirements for ICTNWK568 Manage ICT security | 1382 |
| ICTOPN404 Test optical communications systems and components | 1384 |
| Assessment Requirements for ICTOPN404 Test optical communications systems and components | 1388 |
ICTOPN405 Install and test a dense wavelength division multiplexing system
Assessment Requirements for ICTOPN405 Install and test a dense wavelength
division multiplexing system...........................................................................1391
ICTOPN507 Plan and configure dense wavelength division multiplexing optical networks
Assessment Requirements for ICTOPN507 Plan and configure dense wavelength
division multiplexing optical networks.................................................................1394
ICTOPN508 Perform acceptance and commissioning tests on optical networks
Assessment Requirements for ICTOPN508 Perform acceptance and commissioning
tests on optical networks......................................................................................1399
ICTOPN509 Plan for system upgrades
Assessment Requirements for ICTOPN509 Plan for system upgrades...............1401
ICTOPN510 Test and commission dense wavelength division multiplexing transmission systems
Assessment Requirements for ICTOPN510 Test and commission dense wavelength
division multiplexing transmission systems.........................................................1411
ICTOPN511 Test performance of specialised optical devices
Assessment Requirements for ICTOPN511 Test performance of specialised optical
devices ...................................................................................................................1414
ICTOPN512 Analyse and integrate specialised optical devices
Assessment Requirements for ICTOPN512 Analyse and integrate specialised optical
devices ...................................................................................................................1416
ICTOPN605 Manage optical ethernet transmission
Assessment Requirements for ICTOPN605 Manage optical ethernet transmission...1419
ICTOPN606 Manage dense wavelength division multiplexing transmission systems
Assessment Requirements for ICTOPN606 Manage dense wavelength division
multiplexing transmission systems.........................................................................1421
ICTOPN607 Design dense wavelength division multiplexing systems
Assessment Requirements for ICTOPN607 Design dense wavelength division multiplexing
systems..................................................................................................................1424
ICTOPN608 Analyse optical transmission systems
Assessment Requirements for ICTOPN608 Analyse optical transmission systems....1426
ICTPMG201 Prepare site for support installation
Assessment Requirements for ICTPMG201 Prepare site for support installation.....1429
ICTPMG301 Contribute as part of an IT project management team
Assessment Requirements for ICTPMG301 Contribute as part of an IT project
management team................................................................................................1431
ICTPMG411 Support small scale ICT projects
Assessment Requirements for ICTPMG411 Support small scale ICT projects........1436
ICTPMG505 Manage ICT projects
Assessment Requirements for ICTPMG505 Manage ICT projects.......................1439
ICTPMG506 Prepare network project briefs
Assessment Requirements for ICTPMG506 Prepare network project briefs............1441
ICTPMG612 Manage ICT project initiation
Assessment Requirements for ICTPMG612 Manage ICT project initiation............1444
ICTPMG613 Manage ICT project planning
Assessment Requirements for ICTPMG613 Manage ICT project planning............1446
ICTPMG614 Manage ICT project delivery
Assessment Requirements for ICTPMG614 Manage ICT project delivery.............1448
ICTPMG615 Manage ICT project closure
Assessment Requirements for ICTPMG615 Manage ICT project closure..............1451
ICTPMG616 Manage ICT project systems implementation
Assessment Requirements for ICTPMG616 Manage ICT project systems
implementation..................................................................................................1454
ICTPMG617 Plan and direct complex ICT projects
Assessment Requirements for ICTPMG617 Plan and direct complex ICT projects......1456
ICTPMG411 Support small scale ICT projects
Assessment Requirements for ICTPMG411 Support small scale ICT projects........1459
ICTPMG505 Manage ICT projects
Assessment Requirements for ICTPMG505 Manage ICT projects.......................1461
ICTPMG506 Prepare network project briefs
Assessment Requirements for ICTPMG506 Prepare network project briefs............1464
ICTPMG612 Manage ICT project initiation
Assessment Requirements for ICTPMG612 Manage ICT project initiation............1466
ICTPMG613 Manage ICT project planning
Assessment Requirements for ICTPMG613 Manage ICT project planning............1469
ICTPMG614 Manage ICT project delivery
Assessment Requirements for ICTPMG614 Manage ICT project delivery.............1471
ICTPMG615 Manage ICT project closure
Assessment Requirements for ICTPMG615 Manage ICT project closure..............1474
ICTPMG616 Manage ICT project systems implementation
Assessment Requirements for ICTPMG616 Manage ICT project systems
implementation..................................................................................................1476
ICTPMG617 Plan and direct complex ICT projects
Assessment Requirements for ICTPMG617 Plan and direct complex ICT projects......1479
ICTPMG614 Manage ICT project delivery
Assessment Requirements for ICTPMG614 Manage ICT project delivery.............1481
ICTPMG615 Manage ICT project closure

Assessment Requirements for ICTSAS211 Develop solutions for basic ICT malfunctions and problems ................................................................. 1834
ICTSAS212 Record the requirements of client support requests ......................................................... 1836
Assessment Requirements for ICTSAS212 Record the requirements of client support requests ................................................. 1839
ICTSAS213 Maintain the integrity of ICT systems ................................................................................. 1841
Assessment Requirements for ICTSAS213 Maintain the integrity of ICT systems .................. 1844
ICTSAS214 Protect devices from spam and destructive software .................................................. 1846
Assessment Requirements for ICTSAS214 Protect devices from spam and destructive software .................................................. 1849
ICTSAS215 Protect and secure information assets ............................................................................ 1851
Assessment Requirements for ICTSAS215 Protect and secure information assets .............. 1854
ICTSAS216 Maintain ICT equipment and replace consumables ...................................................... 1856
Assessment Requirements for ICTSAS216 Maintain ICT equipment and replace consumables .................................................. 1859
ICTSAS217 Connect a home based local wireless network ......................................................... 1861
Assessment Requirements for ICTSAS217 Connect a home based local wireless network 1864
ICTSAS309 Maintain and repair ICT equipment and software ....................................................... 1866
Assessment Requirements for ICTSAS309 Maintain and repair ICT equipment and software ................................................................................. 1869
ICTSAS310 Install, configure and secure a small office or home office network ...................... 1871
Assessment Requirements for ICTSAS310 Install, configure and secure a small office or home office network .................................................. 1874
ICTSAS422 Scope implementation requirements ......................................................................... 1876
Assessment Requirements for ICTSAS422 Scope implementation requirements ................. 1879
ICTSAS428 Hand over ICT system components to clients ........................................................ 1881
Assessment Requirements for ICTSAS428 Hand over ICT system components to clients 1884
ICTSAS432 Identify and resolve client ICT problems ................................................................. 1886
Assessment Requirements for ICTSAS432 Identify and resolve client ICT problems ......... 1889
ICTSAS433 Update ICT client support procedures and assist with policy development 1891
Assessment Requirements for ICTSAS433 Update ICT client support procedures and assist with policy development .................................................. 1894
ICTSAS434 Action change requests and present updated ICT system to clients .............. 1896
Assessment Requirements for ICTSAS434 Action change requests and present updated ICT system to clients .................................................. 1899
ICTSAS435 Resolve system faults on a live system ................................................................. 1901
Assessment Requirements for ICTSAS435 Resolve system faults on a live system .......... 1904
ICTSAS436 Evaluate ICT system status ...................................................................................... 1906
Assessment Requirements for ICTSAS436 Evaluate ICT system status .................................. 1909
ICTSAS437 Optimise ICT system performance ............................................................................. 1911
Assessment Requirements for ICTSAS437 Optimise ICT system performance ................ 1914
ICTSAS438 Implement maintenance procedures ........................................................................... 1916
Assessment Requirements for ICTSAS438 Implement maintenance procedures .................. 1919
ICTSAS439 Analyse ICT system capacity and implement enhancements .............................. 1921
Assessment Requirements for ICTSAS439 Analyse ICT system capacity and implement enhancements ................................................................................. 1924
ICTSAS440 Monitor and administer security of ICT systems .................................................... 1926
Assessment Requirements for ICTSAS440 Monitor and administer security of ICT systems .................................................. 1929
ICTSAS441 Support ICT system software ................................................................................... 1931
Assessment Requirements for ICTSAS441 Support ICT system software ................................................. 1934
ICTSAS442 Provide first-level remote help desk support .......................................................... 1936
Assessment Requirements for ICTSAS442 Provide first-level remote help desk support 1939

Special Conditions (Waiver)

For the sake of clarity, where the license refers to "the work", in addition to meaning the work in its entirety this term shall also mean "extracts of the work". Extracts of the work carry with it the respective licence, and is thus “partitioned”.

The details of the relevant licence conditions are available on the Creative Commons website (www.creativecommons.org.au) as is the full legal code. The document must be attributed as the ICT Information and Communications Technology Release 7.0.

Disclaimer

This work is the result of wide consultations with Australian industry participants. It is a collaborative view and does not necessarily represent the view of Department of Education and Training or any specific body. For the sake of brevity it may omit factors which could be pertinent in particular cases.

While care has been taken in the preparation of this Training Package, Department of Education and Training and the original developer do not warrant that any licensing or registration requirements specified here are either complete or up-to-date for your State or Territory. Department of Education and Training and the original developer do not accept any liability for any damage or loss (including indirect and consequential loss) incurred by any person as a result of relying on the information contained in this Training Package.

The Commonwealth, through the Department of Education and Training, does not accept any liability to any person for the information or advice (or the use of such information or advice) which is provided in this material or incorporated into it by reference. The information is provided on the basis that all persons accessing this material undertake responsibility for assessing the relevance and accuracy of its content. No liability is accepted for any information or services which may appear in any other format. No responsibility is taken for any information or services which may appear on any linked websites.

Qualification Description
This pathways qualification provides the foundation skills and knowledge to use basic applied digital technologies in varied contexts.

The qualification is designed for those developing the necessary digital and technology skills in preparation for work.

These individuals carry out a range of basic procedural and operational tasks that require digital and technology skills. They perform a range of mainly routine tasks using limited practical skills and knowledge in a defined context. The qualification is suitable for someone generally performing under direct supervision.

Licensing, legislative, regulatory or certification considerations
No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements
Nil

Packaging Rules
Total number of units = 12
6 core units plus
6 elective units, of which:
• at least 3 must be from Group A
• of the remaining electives:
• all may be from the electives listed below
• up to 2 may be from elsewhere in this or any other currently endorsed training package qualification or accredited course at AQF Level 1, 2 or 3.

Elective units must be relevant to the work environment and the qualification, maintain the overall integrity of the AQF alignment, not duplicate the outcome of another unit chosen for the qualification, and contribute to a valid industry-supported vocational outcome.

**Core units**

BSBSUS211 Participate in sustainable work practices  
BSBTEC202 Use digital technologies to communicate in a work environment  
BSBWHS211 Contribute to the health and safety of self and others  
ICTICT213 Use computer operating systems and hardware  
ICTICT214 Operate application software packages  
ICTICT215 Operate digital media technology packages

**Elective units**

**Group A - Digital and technology skills**

BSBTEC101 Operate digital devices  
BSBTEC201 Use business software applications  
BSBTEC203 Research using the internet  
BSBTEC301 Design and produce business documents  
BSBTEC302 Design and produce spreadsheets  
BSBTEC303 Create electronic presentations  
BSBXCS301 Protect own personal online profile from cyber security threats  
BSBXCS302 Identify and report online security threats  
BSBXCS303 Securely manage personally identifiable information and workplace information  
ICTICT206 Install software applications  
ICTICT207 Integrate commercial computing packages  
ICTICT208 Operate accounting applications  
ICTICT210 Operate database applications  
ICTICT216 Design and create basic organisational documents  
ICTICT219 Interact and resolve queries with ICT clients  
ICTICT221 Identify and use specific industry standard technologies  
ICTICT222 Research and share ICT solutions for Indigenous users  
ICTSAS203 Connect hardware peripherals  
ICTSAS210 Update and maintain hardware, software and documentation inventories  
ICTSAS211 Develop solutions for basic ICT malfunctions and problems  
ICTSAS212 Record the requirements of client support requests  
ICTSAS213 Maintain ICT system integrity
ICTSAS214 Protect devices from spam and destructive software
ICTSAS215 Protect and secure information assets
ICTSAS216 Maintain ICT equipment and replace consumables
ICTSAS217 Connect a home based local wireless network
ICTWEB306 Develop web presence using social media

**Group B - ‘Work ready’ skills**

BSBCRT201 Develop and apply thinking and problem solving skills
BSBINS201 Process and maintain workplace information
BSBOPS201 Work effectively in business environments
BSBOPS202 Engage with customers
BSBOPS203 Deliver a service to customers
BSBPREF201 Support personal wellbeing in the workplace
BSBPREF202 Plan and apply time management
BSBTWK201 Work effectively with others
CUADIG201 Maintain interactive content
CUADIG202 Develop digital imaging skills
CUADIG303 Produce and prepare photo images
CUAPOS201 Perform basic vision and sound editing
CUASOU202 Perform basic sound editing
FSKDIG002 Use digital technology for routine and simple workplace tasks
FSKDIG003 Use digital technology for non-routine workplace tasks

**Qualification Mapping Information**

No equivalent qualification. Supersedes and is not equivalent to ICT10115 Certificate I in Information, Digital Media and Technology and ICT20115 Certificate II in Information, Digital Media and Technology.

Qualification Description

This is an entry-level qualification for telecommunications linesworkers working on the construction and maintenance of high-speed national broadband network (NBN) infrastructure.

Linesworkers may:

- perform cable and infrastructure work underground, which may involve civil and construction work such as site preparation, building of enclosures, installing mounting brackets and hauling underground cables
- work above ground to install fibre or metallic aerial cable and infrastructure, which may also include installing aerial lead-in cables to customer premises and providing traffic management.

Licensing/Regulatory Information

Work functions in the occupational areas where this qualification may be used may be subject to regulatory requirements. Refer to the ICT Information and Communications Technology Companion Volume Implementation Guide or the relevant regulator for details of licensing, legislative or certification requirements.

Cabling on the customer side of the network termination device must be carried out according to requirements of the Australian Communications and Media Authority (ACMA) and relevant industry registration bodies, and in line with the specifications of the access network owner.

Entry Requirements

Nil.
Packaging Rules

Total number of units = 12

5 core units, plus

7 elective units

The elective units selected may consist of:

- up to 7 units from Group A Cabling
- up to 4 units from Group B Telecommunications
- up to 3 units from Group C General
- up to 2 units from this Training Package or any currently endorsed Training Package or accredited course where the units are packaged in an Australian Qualification Framework (AQF) level 2 or 3 qualification.

Elective units must be relevant to the work environment and the qualification, maintain the integrity of the AQF alignment and contribute to a valid, industry-supported vocational outcome. This could be achieved by selecting a specialisation (see below) or by selecting an appropriate mix of electives from Groups A, B and C.

Units selected from other training packages or accredited courses must not duplicate units selected from, or available within, the ICT Information and Communications Technology Training Package.

Core units

ICTTEN202 Use hand and power tools
ICTTEN208 Use electrical skills when working with telecommunications networks
ICTTEN211 Work effectively in a telecommunications network environment
ICTWHS204 Follow work health and safety and environmental policy and procedures
ICTWOR308 Provide customer service to telecommunications customers

Elective units

Group A Cabling

ICTCBL211 Install an above ground equipment enclosure
ICTCBL212 Erect aerial cable supports
ICTCBL248 Install and terminate hard-line coaxial cable
ICTCBL249 Haul underground cable for installation and maintenance work
ICTCBL250 Haul and fix aerial cable
ICTCBL251 Install aerial and underground cable lead-ins
ICTCBL252 Joint and terminate coaxial cable
ICTCBL253 Construct underground telecommunications infrastructure
ICTCBL254 Joint metallic conductor cable in access network
ICTPMG201 Prepare site for support installation

**Group B Telecommunications**

ICTBWN303 Install lead-in module and cable for fibre to the premises
ICTBWN306 Use radio frequency measuring instruments
ICTBWN307 Use optical measuring instruments
ICTCBL303 Install and terminate coaxial cable
ICTCBL320 Jumper metallic conductor cable in the access network
ICTCBL322 Install, test and terminate optical fibre cable on customer premises
ICTCBL329 Install underground cable for communications applications
ICTCBL330 Splice and terminate optical fibre cable for telecommunications projects
ICTCBL333 Install aerial cable for communications applications
ICTCBL334 Install underground enclosures and conduit
ICTTEN210 Install underground telecommunications infrastructure
ICTTEN310 Remove and replace electronic circuit boards in carrier equipment
ICTTEN312 Install telecommunications network equipment
ICTTEN313 Work on and resolve recurrent network faults
ICTTEN318 Inspect, clean and handle optical fibre cable and connectors

**Group C General**

BSBSUS201 Participate in environmentally sustainable work practices
CPCCCM2007 Use explosive power tools*
CPCCDE3014A Remove non-friable asbestos*
CPCCOHS1001A Work safely in the construction industry
CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry
CPCPCM2043A Carry out WHS requirements

HLTAID001 Provide cardiopulmonary resuscitation
OR
HLTAID003 Provide first aid

ICTTEN207 Install and test internet protocol devices in convergence networks
ICTWHS201 Provide telecommunications services safely on roofs

ICTWHS205 Work safely near power infrastructure at a telecommunications workplace
OR
UETTDREL14A Working safely near live electrical apparatus as a non-electrical worker

ICTWOR202 Work effectively in the digital and telecommunications industry
RIIWHSD204D Work safely at heights

*Note the following prerequisite unit requirements:

<table>
<thead>
<tr>
<th>Prerequisite unit requirements in this qualification</th>

</tr>
</tbody>
</table>

**Specialisations**

One of the following three specialisations must be undertaken to ensure worker skills meet the required safety practices for each specialisation.

Telecommunications Linesworker Hybrid Fibre Coaxial

Six of the following elective units must be selected:
- ICTBWN306 Use radio frequency measuring instruments
- ICTCBL250 Haul and fix aerial cable
- ICTCBL251 Install aerial and underground cable lead-ins
- ICTCBL252 Joint and terminate coaxial cable
- ICTPMG201 Prepare site for support installation

Plus:
- ICTWHS201 Provide telecommunications services safely on roofs
OR

- RIIWHS204D Work safely at heights

Telecommunications Linesworker Fibre

The following 7 elective units must be selected:

- ICTCBL211 Install an above ground equipment enclosure
- ICTCBL250 Haul and fix aerial cable
- ICTCBL253 Construct underground telecommunications infrastructure
- ICTCBL329 Install underground cable for communications applications
- ICTPMG201 Prepare site for support installation
- ICTTEN310 Remove and replace electronic circuit boards in carrier equipment
- ICTTEN318 Inspect, clean and handle optical fibre cable and connectors

Telecommunications Linesworker Copper

The following 6 elective units must be selected:

- ICTCBL211 Install an above ground equipment enclosure
- ICTCBL250 Haul and fix aerial cable
- ICTCBL253 Construct underground telecommunications infrastructure
- ICTCBL320 Jumper metallic conductor cable in the access network
- ICTCBL329 Install underground cable for communications applications
- ICTPMG201 Prepare site for support installation

The achievement of a specialisation will be identified on testamurs as follows:

- ICT20219 Certificate II in Telecommunications Network Build and Operation (Telecommunications Linesworker Hybrid Fibre Coaxial)
- ICT20219 Certificate II in Telecommunications Network Build and Operation (Telecommunications Linesworker Fibre)
- ICT20219 Certificate II in Telecommunications Network Build and Operation (Telecommunications Linesworker Copper)

**Qualification Mapping Information**

No equivalent qualification. Supersedes and is not equivalent to ICT20215 Certificate II in Telecommunications Network Build and Operate.

<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version released with ICT Information and Communications Technology Training Package Version 5.0.</td>
</tr>
</tbody>
</table>

Qualification Description

This is an entry-level qualification for telecommunications technology operators who may:

- install telecommunications equipment, data cabling and cabling products on customer premises
- perform fault-finding on a limited range of digital reception equipment for both cable television and free-to-air television reception, for either a customer or an enterprise
- install and maintain telecommunications radio communications equipment in base stations and connect wireless base stations
- install and maintain telecommunications equipment on high structures including radio towers or for installation and connection of wireless base stations.

The qualification is suited to an individual undertaking work experience, or in a probationary period in employment.

It is particularly applicable to school-based delivery as an entry-level pathway to employment and is suitable as an Australian traineeship or apprenticeship pathway, except for the units of competency that involve high-risk work age restrictions.

Licensing/Regulatory Information

Work functions in the occupational areas where this qualification may be used are subject to regulatory requirements. Refer to the ICT Information and Communications Technology Companion Volume Implementation Guide or the relevant regulator for details of licensing, legislative or certification requirements.

Cabling at the customer premises must be carried out according to requirements of the Australian Communications and Media Authority (ACMA) and relevant industry registration bodies, and in line with the specifications of the access network owner.

High risk work (HRW) licences are required for dogging work and rigging as outlined on the Safe Work Australia website.
The model WHS Regulations require people performing HRW to be over 18 years of age and to hold the right HRW licence. HRW licences are issued by state/territory governments: refer to the relevant body to ensure compliance with regulations.

Entry Requirements
Nil.

Packaging Rules
Total number of units = 13
7 core units, plus
6 elective units

The elective units selected may consist of:
- up to 6 units from any group of elective units listed below according to the specialisation packaging rules, outlined below, where a specialisation is the required outcome
- up to 2 units from this Training Package or any currently endorsed Training Package or accredited course where the units are packaged in an Australian Qualifications Framework (AQF) Level 2 or 3 qualification.

Elective units must be relevant to the work environment and the qualification, maintain the integrity of the AQF alignment and contribute to a valid, industry-supported vocational outcome.
Units selected from other Training Packages or accredited courses must not duplicate units selected from, or available within, the ICT Information and Communications Technology Training Package.

Core units
BSBCUS201 Deliver a service to customers
ICTTEN202 Use hand and power tools
ICTTEN207 Install and test internet protocol devices in convergence networks
ICTTEN208 Use electrical skills when working with telecommunications networks
ICTTEN211 Work effectively in a telecommunications network environment
ICTWHS204 Follow work health and safety and environmental policy and procedures
ICTWOR202 Work effectively in the digital and telecommunications industry

Elective units
Group A Cabling
ICTCBL205 Joint metallic conductor cable on customer premises
ICTCBL206 Alter services to existing cable system
ICTCBL210 Install a telecommunications service to a building
ICTCBL211 Install an above ground equipment enclosure
ICTCBL212 Erect aerial cable supports
ICTCBL219 Apply safe technical work practices for cabling registration when configuring an ADSL circuit
ICTCBL239 Install customer cable support systems
ICTCBL240 Place and secure customer cable
ICTCBL241 Terminate metallic conductor customer cable
ICTCBL242 Install functional and protective telecommunications earthing system
ICTCBL246 Install, maintain and modify customer premises communications cabling: ACMA Restricted Rule*
ICTCBL249 Haul underground cable for installation and maintenance work
ICTCBL250 Haul and fix aerial cable
ICTCBL251 Install aerial and underground cable lead-ins
ICTCBL252 Joint and terminate coaxial cable
ICTCBL253 Construct underground telecommunications infrastructure
ICTCBL254 Joint metallic conductor cable in access network
ICTCBL330 Splice and terminate optical fibre cable for telecommunications projects
ICTCMP201 Organise and monitor cabling to ensure compliance with regulatory and industry standards
ICTCMP203 Perform restricted customer premises broadband cabling work: ACMA Restricted Rule*

Group B Networking
ICTTEN203 Install and configure a home or small office network
ICTTEN204 Install and configure a small to medium business network
ICTTEN205 Build and maintain a secure network
ICTTEN206 Operate new media software packages

Group C Radio Communications
ICTRFN201 Install a satellite antenna
ICTRFN202 Install a terrestrial antenna
ICTRFN304 Construct and test a radio communications device

**Group D Rigging**
ICTTTCR201 Use rigging practices and systems on telecommunications network structures
ICTTTCR202 Use operational safety in a telecommunications rigging environment
ICTTTCR203 Use safe rigging practices to climb and perform rescues on telecommunications network structures
CPCCLDG3001A Licence to perform dogging
CPCCLRG3001A Licence to perform rigging basic level*

**Group E General**
CPCCWHS1001 Prepare to work safely in the construction industry
HLTAID001 Provide cardiopulmonary resuscitation
OR
HLTAID003 Provide first aid
ICTICT206 Install software applications
ICTPMG201 Prepare site for support installation
ICTPMG202 Plan, organise and undertake work activities
ICTSAS203 Connect hardware peripherals
ICTWHS201 Provide telecommunications services safely on roofs
ICTWHS202 Work safely in a radio frequency electromagnetic radiation environment
ICTWHS205 Work safely near power infrastructure at a telecommunications workplace
OR
UETTDREL14A Working safely near live electrical apparatus as a non-electrical worker

Specialisations

Where relevant, specialisations can be used for this qualification in:

- cabling
- networking
- radio communications
- rigging
- telecommunications cabling.

The achievement of a specialisation will be identified on testamurs as follows:

- ICT20319 Certificate II in Telecommunications Technology (Cabling)
- ICT20319 Certificate II in Telecommunications Technology (Telecommunications Cabling)
- ICT20319 Certificate II in Telecommunications Technology (Networking)
- ICT20319 Certificate II in Telecommunications Technology (Radio Communications)
- ICT20319 Certificate II in Telecommunications Technology (Rigging).

Cabling

Select 6 elective units from Group A Cabling.
Telecommunications Cabling
Select the following 2 elective units from Group A Cabling:
- ICTCBL246 Install, maintain and modify customer premises communications cabling: ACMA Restricted Rule*
- ICTCMP203 Perform restricted customer premises broadband cabling work: ACMA Restricted Rule*

Select 4 further elective units from the remaining elective units in Group A Cabling.

Networking
Select at least 4 elective units from Group B Networking.

Radio Communications
Select the 3 elective units from Group C Radio Communications.
Select at least 1 elective unit from Group D Rigging.

Rigging
Select the 5 elective units from Group D Rigging.

Note: This specialisation is not suitable for school-based delivery due to high-risk work age restrictions.

Qualification Mapping Information
No equivalent qualification. Supersedes and is not equivalent to ICT20315 Certificate II in Telecommunications Technology.

Qualification Description

This qualification reflects the role of individuals who are competent in a range of Information and Communications Technology (ICT) roles, including animation, basic cloud computing, basic cyber awareness, digital media skills, generalist IT support services, networking, programming, systems and web development.

Individuals who work in these fields apply broad sets of skills, including foundational knowledge in critical thinking and customer service skills, to support a range of technologies, processes, procedures, policies, people and clients in a variety of work contexts.

Licensing, legislative, regulatory or certification considerations

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

Nil

Packaging Rules

Total number of units = 12

6 core units plus

6 elective units, of which:

- at least 4 units must be selected from the elective units listed below
- up to 2 units may be selected from the remaining listed elective units or from this or any other currently endorsed training package qualification or accredited course at Australian Qualifications Framework (AQF) Level 2, 3 or 4.
Elective units must be relevant to the work environment and the qualification, maintain the overall integrity of the AQF alignment, and contribute to a valid, industry-supported vocational outcome.

Core units
BSBCRT301 Develop and extend critical and creative thinking skills
BSBXCS303 Securely manage personally identifiable information and workplace information
BSBXTW301 Work in a team
ICTICT313 Identify IP, ethics and privacy policies in ICT environments
ICTPRG302 Apply introductory programming techniques
ICTSAS305 Provide ICT advice to clients

Elective units

Group A Animation
CUAANM301 Create 2D digital animations
CUAANM302 Create 3D digital animations
ICTDMT405 Produce interactive animations
ICTGAM301 Apply simple modelling techniques
ICTGAM302 Design and apply simple textures to digital art
ICTGAM303 Review and apply the principles of animation

Group B Basic Cloud Computing
ICTCLD301 Evaluate characteristics of cloud computing solutions and services
ICTCLD401 Configure cloud services

Group C Basic Cyber Security Awareness
BSBXCS301 Protect own personal online profile from cyber security threats
BSBXCS302 Identify and report online security threats
BSBXCS401 Maintain security of digital devices
BSBXCS402 Promote workplace cyber security awareness and best practices
BSBXCS403 Contribute to cyber security threat assessments
BSBXCS404 Contribute to cyber security risk management
BSBXCS405 Contribute to cyber security incident responses
ICTSAS214 Protect devices from spam and destructive software
ICTSAS215 Protect and secure information assets
ICTSAS440 Monitor and administer security of ICT systems

**Group D Digital Media**
CUADIG201 Maintain interactive content
CUADIG301 Prepare video assets
CUADIG302 Author interactive sequences
CUADIG303 Produce and prepare photo images
CUADIG304 Create visual design components
CUAPOS201 Perform basic vision and sound editing
CUASOU202 Perform basic sound editing

**Group E Generalist IT Support**
BSBITU211 Produce digital text documents
ICTICT219 Interact and resolve queries with ICT clients
ICTICT221 Identify and use specific industry standard technologies
ICTICT222 Research and share ICT solutions for Indigenous users
ICTICT303 Connect internal hardware components
ICTICT310 Identify and use industry specific technologies
ICTSAS212 Record the requirements of client support requests
ICTSAS303 Care for computer hardware
ICTSAS308 Run standard diagnostic tests
ICTSAS309 Maintain and repair ICT equipment and software

**Group F IT Work Ready Skills**
ICPDMT3460 Incorporate video into multimedia presentations
ICTICT215 Operate digital media technology package
ICTICT216 Design and create basic organisational documents
ICTICT306 Migrate to new technology
ICTICT309 Create ICT user documentation
ICTICT311 Customise packaged software applications
ICTICT312 Use advanced features of applications
ICTPMG301 Contribute as part of an IT project management team
ICTWHS204 Follow work health and safety and environmental policy and procedures
Group G Networking
ICTNWK307 Provide network systems administration
ICTNWK308 Determine and action network problems
ICTNWK309 Configure and administer network operating systems
ICTNWK310 Administer network peripherals
ICTNWK311 Install and test network protocols

Group H Programming
ICTICT438 Select, configure and deploy software and hardware testing tools
ICTPRG430 Apply introductory object-oriented language skills
ICTPRG435 Write scripts for software applications

Group I Systems
ICTICT213 Use computer operating systems and hardware
ICTICT214 Operate application software packages
ICTICT302 Install and optimise operating system software
ICTICT304 Implement system software changes
ICTSAS210 Update and maintain hardware, software and documentation inventories
ICTSAS211 Develop solutions for basic ICT malfunctions and problems
ICTSAS213 Maintain ICT system integrity
ICTSAS216 Maintain ICT equipment and replace consumables
ICTSAS217 Connect a home based local wireless network
ICTSAS304 Provide basic system administration
ICTSAS310 Install, configure and secure a small office or home office network

Group J Web Development
ICTWEB304 Build simple web pages
ICTWEB305 Produce digital images for the web
ICTWEB306 Develop web presence using social media
ICTWEB431 Create and style simple markup language documents

Qualification Description

This qualification is for telecommunications operators working on the construction and maintenance of high-speed national broadband network (NBN) infrastructure, and on required technology.

Telecommunications technology operators may:

- perform equipment and system installation work on a customer network to enable efficient access and interconnection to the NBN services, including connecting and jointing of copper cable, diagnosing and rectifying copper cable system faults, and migrating, remediating and augmentation of copper services to maximise benefits of the high-speed broadband connection
- splice, test and fault-find on live fibre cable in the NBN fibre distribution network
- perform equipment and system installation work on a customer network to enable efficient access and interconnection to the NBN services, including diagnosing and rectifying fibre system faults, working with active equipment, and performing integration and commissioning activities to maximise benefits of the high-speed broadband connection
- perform underground and aerial equipment and system installations from the tap to the optical node to enable efficient access and interconnection to the NBN services, including connecting and terminating hybrid fibre coaxial (HFC) cabling, diagnosing and rectifying HFC system faults
- install, activate and assure HFC equipment and systems from the last connection point of the network to the customer premises – tap to network termination device (NTD) – to enable efficient access and interconnection to the NBN services.

Licensing/Regulatory Information

Work functions in the occupational areas where this qualification may be used are subject to regulatory requirements. Refer to the ICT Information and Communications Technology Training Package Companion Volume Implementation Guide or the relevant regulator for details of licensing, legislative or certification requirements.
Cabling at the customer premises downstream of the NTD must be carried out according to requirements of the Australian Communications and Media Authority (ACMA) and relevant industry registration bodies, and in line with the specifications of the access network owner.

**Entry Requirements**

Nil

**Packaging Rules**

Total number of units = 14  
6 core units, plus  
8 elective units

The elective units selected may consist of:
- up to 8 units from Group A Copper Cabling, or Group B Fibre Cabling, and/or Group C HFC Cabling
- up to 5 units from Group D General
- up to 2 units from this or any currently endorsed Training Package or accredited course where the units are packaged in an Australian Qualification Framework (AQF) Level 3 or 4 qualification.

Elective units must be relevant to the work environment and the qualification, maintain the integrity of the AQF alignment and contribute to a valid, industry-supported vocational outcome.

Units selected from other Training Packages or accredited courses must not duplicate units selected from, or available within, the ICT Information and Communications Technology Training Package.

**Core units**

ICTTEN202 Use hand and power tools  
ICTTEN208 Use electrical skills when working with telecommunications networks  
ICTTEN315 Determine and apply technologies within a telecommunications system  
ICTTEN317 Locate, identify and rectify telecommunications network faults  
ICTWHS204 Follow work health and safety and environmental policy and procedures  
ICTWOR308 Provide customer service to telecommunications customers

**Elective units**
**Group A Copper Cabling**
ICTCBL254 Joint metallic conductor cable in access network
ICTCBL313 Modify and cutover cable
ICTCBL319 Rearrange large size copper cable
ICTCBL320 Jumper metallic conductor cable in the access network
ICTCBL326 Cut over metallic conductor cable in the access network
ICTCBL332 Locate, identify and rectify copper cable faults
ICTCBL336 Install and cut over metallic conductor cable to access network cabinet

**Group B Fibre Cabling**
ICTBWN302 Install optical fibre splitters in fibre distribution hubs
ICTBWN309 Perform tests on optical communication system and components
ICTCBL316 Install ribbon fibre cable in the FTTX distribution network*
ICTCBL322 Install, test and terminate optical fibre cable on customer premises
ICTCBL330 Splice and terminate optical fibre cable for telecommunications projects
ICTTEN318 Inspect, clean and handle optical fibre cable and connectors
ICTTEN409 Commission an electronic system
ICTTEN416 Install, configure and test an internet protocol network

**Group C HFC Cabling**
ICTCBL248 Install and terminate hard-line coaxial cable
ICTCBL251 Install aerial and underground cable lead-ins
ICTCBL303 Install and terminate coaxial cable
ICTCBL306 Locate and identify cable system faults
ICTCBL333 Install aerial cable for communications applications
ICTCBL335 Construct aerial cable supports
ICTDRE303 Install a complex digital reception system
ICTDRE308 Install a cable broadband multi-dwelling unit system
ICTDRE314 Design communications wiring systems for customer premises*
ICTRFN406 Maintain hybrid fibre coaxial broadband cable network

**Group D General**
BSBSUS201 Participate in environmentally sustainable work practices
BSBSUS401 Implement and monitor environmentally sustainable work practices
CPCCCM2007 Use explosive power tools*
CPCCDE3014A Remove non-friable asbestos*
CPCCOHS1001A Work safely in the construction industry
CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry
CPPCPCM2043A Carry out WHS requirements
ICTBWN308 Work safely on live optical fibre installations*
ICTBWN303 Install lead-in module and cable for fibre to the premises
ICTBWN306 Use radio frequency measuring instruments
ICTBWN307 Use optical measuring instruments
HLTAID001 Provide cardiopulmonary resuscitation
ICTCBL246 Install, maintain and modify customer premises communications cabling: ACMA Restricted Rule*
ICTCBL247 Install maintain and modify customer premises communications cabling: ACMA Open Rule*
ICTCBL249 Haul underground cable for installation and maintenance work
ICTCBL254 Joint metallic conductor cable in access network
ICTCBL329 Install underground cable for communications applications
ICTCBL334 Install underground enclosures and conduit
ICTTEN207 Install and test internet protocol devices in convergence networks
ICTTEN310 Remove and replace electronic circuit boards in carrier equipment
ICTTEN312 Install telecommunications network equipment
ICTTEN313 Work on and resolve recurrent network faults

ICTWHS201 Provide telecommunications services safely on roofs

Specialisations

Where relevant, specialisations can be used for this qualification in:

- copper cable jointer
- fibre splicer
- fibre technician
- HFC technician
- telecommunications customer service technician – HFC technician.

The achievement of a specialisation will be identified on testamurs as follows:

- ICT30419 Certificate III in Telecommunications Network Build and Operation (Copper Cable Jointer)
- ICT30419 Certificate III in Telecommunications Network Build and Operation (Fibre Splicer)
- ICT30419 Certificate III in Telecommunications Network Build and Operation (Fibre Technician)
- ICT30419 Certificate III in Telecommunications Network Build and Operation (HFC Technician)

Copper Cable Jointer

Select the following 6 elective units:

- ICTCBL254 Joint metallic conductor cable in access network
- ICTCBL319 Rearrange large size copper cable
- ICTCBL326 Cut over metallic conductor cable in the access network
- ICTCBL332 Locate, identify and rectify copper cable faults
- ICTCBL336 Install and cut over metallic conductor cable to access network cabinet
- ICTTEN312 Install telecommunications network equipment

Fibre Splicer

Select the following 6 elective units:

- ICTBWN302 Install optical fibre splitters in fibre distribution hubs
- ICTBWN307 Use optical measuring instruments
- ICTBWN308 Work safely on live optical fibre installations*
- ICTCBL316 Install ribbon fibre cable in the FTTX distribution network*
- ICTCBL330 Splice and terminate optical fibre cable for carriers and service projects
- ICTTEN318 Inspect, clean and handle optical fibre cable and connectors
Technician Fibre

Select the following 7 elective units:

- ICTBWN307 Use optical measuring instruments
- ICTBWN308 Work safely on live optical fibre installations*
- ICTCBL322 Install, test and terminate optical fibre cable on customer premises
- ICTTEN310 Remove and replace electronic circuit boards in carrier equipment
- ICTTEN318 Inspect, clean and handle optical fibre cable and connectors
- ICTTEN409 Commission an electronic system
- ICTTEN416 Install, configure and test an internet protocol network

Technician Hybrid Fibre Coaxial (HFC)

Select the following 5 elective units:

- ICTBWN306 Use radio frequency measuring instruments
- ICTCBL248 Install and terminate hard-line coaxial cable
- ICTCBL333 Install aerial cable for communications applications
- ICTTEN312 Install telecommunications network equipment

Plus

- ICTWHS201 Provide telecommunications services safely on roofs
  or
- RIIWHS204D Work safely at heights

Telecommunications Customer Service Technician – HFC Technician

Select the following 8 elective units:

- ICTBWN306 Use radio frequency measuring instruments
- ICTCBL251 Install aerial and underground cable lead-ins
- ICTCBL303 Install and terminate coaxial cable
- ICTCBL306 Locate and identify cable system faults
- ICTDRE308 Install a cable broadband multi-dwelling unit system
- ICTDRE314 Design communications wiring systems for customer premises*
- ICTTEN207 Install and test internet protocol devices in convergence networks
- ICTTEN312 Install telecommunications network equipment

Qualification Mapping Information

No equivalent qualification. Supersedes and is not equivalent to ICT30415 Certificate III in Telecommunications Network Build and Operate.

Qualification Description

This qualification is for telecommunications technology operators who assess installation requirements, plan and perform installations, test installed equipment, and fault-find when issues arise with installed equipment.

Telecommunications technology operators may work on:

- customer cabling networks
- digital reception technology
- optical networks
- premises cabling
- radio communications
- rigging, which also involves installing and maintaining radio antennas on high structures such as radio towers, and building and mounting sections of radio masts for a complete radio structure
- telecommunications networking
- wireless networks.

Licensing/Regulatory Information

Work functions in the occupational areas where this qualification may be used are subject to regulatory requirements. Refer to the ICT Information and Communications Technology Training Package Companion Volume Implementation Guide or the relevant regulator for details of licensing, legislative or certification requirements.

Cabling at the customer premises must be carried out according to requirements of the Australian Communications and Media Authority (ACMA) and relevant industry registration bodies, in line with the specifications of the access network owner.

High risk work (HRW) licences are required for dogging work and rigging as outlined on the Safe Work Australia website.
The model WHS Regulations require people performing high risk work to be over 18 years of age and to hold the right HRW licence. HRW licences are issued by state/territory governments: refer to the relevant body to ensure compliance with regulations.

**Entry Requirements**

Nil

**Packaging Rules**

**Total number of units = 16**

6 core units, plus

10 elective units

The elective units selected must consist of:
- at least 1 elective unit from Group A Workplace Technical Practice.

The remaining required elective units selected may consist of:
- up to 2 elective units from Group B General Workplace
- up to 8 elective units from any of the elective groups with no more than 2 of these units from Group G Work Health and Safety
- up to 3 units from this or any currently endorsed Training Package or accredited course where the units are packaged in an Australian Qualification Framework (AQF) Level 3 or 4 qualification.

Elective units must be relevant to the work environment and the qualification, maintain the integrity of the AQF alignment and contribute to a valid, industry-supported vocational outcome.

Units selected from other Training Packages or accredited courses must not duplicate units selected from, or available within, the ICT Information and Communications Technology Training Package.

**Core units**

ICTTEN202 Use hand and power tools

ICTTEN208 Use electrical skills when working with telecommunications networks

ICTTEN315 Determine and apply technologies within a telecommunications system

ICTTEN317 Locate, identify and rectify telecommunications network faults
ICTWHS204 Follow work health and safety and environmental policy and procedures
ICTWOR308 Provide customer service to telecommunications customers

Elective units

Group A Workplace Technical Practice
ICTTEN207 Install and test internet protocol devices in convergence networks
ICTTEN312 Install telecommunications network equipment
ICTTEN313 Work on and resolve recurrent network faults
ICTTEN322 Provide infrastructure for telecommunications network customer equipment

Group B General Workplace
BSBSMB305 Comply with regulatory, taxation and insurance requirements for the micro business
BSBSMB306 Plan a home based business
BSBSUS401 Implement and monitor environmentally sustainable work practises
CPCBC4004A Identify and produce estimated costs for building and construction projects
ICTEDU301 Train customers in new technology
ICTSAS305 Provide ICT advice to clients
ICTWOR202 Work effectively in the digital and telecommunications industry
ICTWOR301 Organise resources
ICTWOR302 Organise material supply
ICTWOR303 Schedule resources
ICTWOR304 Manage spare parts
ICTWOR305 Supervise worksite activities
ICTWOR306 Resolve technical enquiries using multiple information systems
ICTWOR307 Collect and analyse technical information

Group C Telecommunications Cabling
ICTCBL238 Install, maintain and modify customer premises communications cabling: ACMA Lift Rule
ICTCBL246 Install, maintain and modify customer premises communications cabling: ACMA Restricted Rule*
ICTCBL247 Install, maintain and modify customer premises communications cabling: ACMA Open Rule*
ICTCBL301 Install, terminate and certify structured cabling installation
ICTCBL303 Install and terminate coaxial cable
ICTCBL305 Hand over cable systems and equipment
ICTCBL306 Locate and identify cable system faults
ICTCBL311 Install systems and equipment on customer premises
ICTCBL313 Modify and cutover cable
ICTCBL314 Install network cable equipment
ICTCBL316 Install ribbon fibre cable in the FTTX distribution network*
ICTCBL322 Install, test and terminate optical fibre cable on customer premises
ICTCBL323 Test cables and systems on customer premises
ICTCBL324 Cut over new systems and equipment on customer premises
ICTCBL325 Maintain cable network
ICTCBL329 Install underground cable for communications applications
ICTCBL330 Splice and terminate optical fibre cable for telecommunications projects
ICTCBL333 Install aerial cable for communications applications
ICTCBL334 Install underground enclosures and conduit
ICTCBL335 Construct aerial cable supports

**Group D Digital Reception Technology**

ICTDRE301 Install digital reception equipment
ICTDRE302 Locate and rectify digital reception equipment faults
ICTDRE303 Install a complex digital reception system
ICTDRE305 Develop integrated digital reception systems
ICTDRE314 Design communications wiring systems for customer premises*
ICTTEN402 Estimate and quote for customer telecommunications equipment installation
ICTTEN415 Install and configure internet protocol TV in a home network
ICTTEN432 Identify requirements for customer telecommunications equipment

**Group E ICT Use**

ICTICT302 Install and optimise operating system software
ICTICT303 Connect internal hardware components
ICTICT304 Implement system software changes
ICTICT306 Migrate to new technology
ICTNWK305 Install and manage network protocols
ICTNWK409 Create scripts for networking
ICTPRG301 Apply introductory programming techniques
ICTSAS303 Care for computer hardware
ICTSAS304 Provide basic system administration
ICTSAS308 Run standard diagnostic tests

**Group F Optical Networks**
ICTBWN302 Install optical fibre splitters in fibre distribution hubs
ICTBWN303 Install lead-in module and cable for fibre to the premises
ICTBWN307 Use optical measuring instruments
ICTBWN308 Work safely on live optical fibre installations*
ICTBWN309 Perform tests on optical communication system and components
ICTTEN318 Inspect, clean and handle optical fibre cable and connectors

**Group G Work Health and Safety**
CPCCDE3014A Remove non-friable asbestos*
CPCCOHS1001A Work safely in the construction industry
ICTWHS201 Provide telecommunications services safely on roofs
ICTWHS205 Work safely near power infrastructure at a telecommunications workplace
OR
UETTDREL14A Working safely near live electrical apparatus as a non-electrical worker

RIICCM202D Identify, locate and protect underground services
RIIWHS202D Enter and work in confined spaces
RIIWHS204D Work safely at heights
RIIWHS205D Control traffic with stop-slow bat
RIIWHS302D Implement traffic management plan

**Group H Radio Communications**
ICTBWN306 Use radio frequency measuring instruments
ICTRFN301 Install a radio communications antenna and feedline
ICTRFN302 Install mobile telecommunications in motor vehicles
ICTRFN303 Install WiMAX customer premises equipment broadband wireless access equipment
ICTRFN304 Construct and test a radio communications device
ICTRFN305 Operate and maintain radio communications technical instruments and field equipment
ICTRFN406 Maintain hybrid fibre coaxial broadband cable network
ICTRFN407 Conduct radio frequency measurements

**Group I Telecommunications Network**
ICTCBL331 Conduct basic identification and fault-finding within cabling networks and customer equipment
ICTTTEN301 Provide infrastructure for telecommunications network equipment
ICTTTEN307 Repair and replace telecommunications network hardware
ICTTTEN312 Install telecommunications network equipment
ICTTTEN316 Conduct basic tests and analyses of telecommunications copper cabling
ICTTTEN319 Recover customer premises equipment
ICTTTEN320 Commission an electronic unit
ICTTTEN321 Maintain an electronic system
ICTTTEN322 Provide infrastructure for telecommunications network customer equipment
ICTTTEN416 Install, configure and test an internet protocol network

**Group J Telecommunications Rigging**
ICTTCR201 Use rigging practices and systems on telecommunications network structures
ICTTCR202 Use operational safety in a telecommunications rigging environment
ICTTCR203 Use safe rigging practices to climb and perform rescues on telecommunications network structures
ICTTCR301 Build a telecommunications radio structure*
ICTTCR302 Install radio plant and equipment on telecommunications structures*
ICTTCR303 Protect against electromagnetic radiation and systems hazards when working on telecomms radio sites

Specialisations

Where relevant, specialisations can be used for this qualification in:
- digital reception technology
- optical networks
- radio communications
- telecommunications cabling
- telecommunications networks
- telecommunications rigging
- wireless networks.

The achievement of a specialisation will be identified on testamurs as follows:
- ICT30519 Certificate III in Telecommunications Technology (Digital Reception Technology)
- ICT30519 Certificate III in Telecommunications Technology (Optical Networks)
- ICT30519 Certificate III in Telecommunications Technology (Radio Communications)
- ICT30519 Certificate III in Telecommunications Technology (Telecommunications Cabling)
- ICT30519 Certificate III in Telecommunications Technology (Telecommunications Networks)
- ICT30519 Certificate III in Telecommunications Technology (Telecommunications Rigging)

Digital Reception Technology

Select the following 6 elective units from Group D Digital Reception Technology:
- ICTDRE301 Install digital reception equipment
- ICTDRE303 Install a complex digital reception system
- ICTDRE305 Develop integrated digital reception systems
- ICTDRE401 Integrate customer digital reception equipment
- ICTDRE402 Integrate data delivery modes
- ICTRFN407 Conduct radio frequency measurements

Optical Networks

Select the following 5 elective units from Group F Optical Networks:
- ICTBWN302 Install optical fibre splitters in fibre distribution hubs
- ICTBWN303 Install lead-in module and cable for fibre to the premises
- ICTBWN307 Use optical measuring instruments
- ICTBWN308 Work safely on live optical fibre installations*
- ICTBWN309 Perform tests on optical communication system and components
Radio Communications
Select at least 4 elective units from Group H Radio Communications.

Telecommunications Cabling
Select the following 4 elective units from Group C Telecommunications Cabling:
- ICTCBL247 Install, maintain and modify customer premises communications cabling: ACMA Open Rule*
- ICTCBL301 Install, terminate and certify structured cabling installation
- ICTCBL303 Install and terminate coaxial cable
- ICTCBL322 Install, test and terminate optical fibre cable on customer premises

Telecommunications Networking
Select the following 3 elective units from Group A Workplace Technical:
- ICTTEN312 Install telecommunications network equipment
- ICTTEN313 Work on and resolve recurrent network faults
- ICTTEN322 Provide infrastructure for telecommunications network customer equipment

Telecommunications Rigging
Select the 3 elective units in Group J Telecommunications Rigging.

Wireless Networks
Select the following 4 elective units from Group H Radio Communications:
- ICTRFN301 Install a radio communications antenna and feedline
- ICTRFN303 Install WiMAX customer premises equipment broadband wireless access equipment
- ICTRFN305 Operate and maintain radio communications technical instruments and field equipment
- ICTRFN407 Conduct radio frequency measurements

Qualification Mapping Information
No equivalent qualification. Supersedes and is not equivalent to ICT30515 Certificate III in Telecommunications Technology.

Qualification Description

This qualification reflects the role of individuals who are job ready and competent in a wide range of information and communications technology (ICT) roles and apply a broad range of skills in varied work contexts, using problem solving skills and effective communication with others.

The skills required for these roles may include, but are not restricted to:

- database development: interpreting specifications, technical designs and flow charts, modifying software applications, constructing technical specifications from models and testing, and writing technical documents
- database maintenance: managing, cleaning, storing and verifying organisational data, and evaluating compliance with internal and external data ethics regulations and legislation
- gaming development: creating 2D and 3D modelling and animation software through scripts and storyboards
- networking: installing, configuring and testing networks and servers in organisations
- programming: building, testing and applying basic object-oriented language skills, user interfaces and software developments
- systems administration support: implementing maintenance procedures and support to help troubleshoot system applications
- web development: designing website layouts through textual and visual content transfer, search engine optimisation and simple markup language documents.

Licensing, legislative, regulatory or certification considerations
No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

Nil

Packaging Rules

Total number of units = 20

7 core units plus

13 elective units, of which:

- at least 9 units must be selected from the elective units listed below
- up to 4 units may be selected from the remaining listed elective units or from this or any other currently endorsed training package qualification or accredited course at Australian Qualifications Framework (AQF) Level 3, 4 or 5.

Elective units must be relevant to the work environment and the qualification, maintain the overall integrity of the AQF alignment and contribute to a valid, industry-supported vocational outcome.

Units selected from other Training Packages or accredited courses must not duplicate units selected from or available within the ICT Information and Communications Technology Training Package.

Where relevant, the choice of elective units set out in the packaging rules above can serve to provide the qualification with one or more of the following specialisations. The rules to achieve a specialisation are detailed at the qualification end.

- Database development
- Database maintenance
- Gaming development
- Networking
- Programming
- Systems administration support
- Web development

Core units

BSBCRT404 Apply advanced critical thinking to work processes

BSBXCS404 Contribute to cyber security risk management

ICTICT426 Identify and evaluate emerging technologies and practices
ICTICT443 Work collaboratively in the ICT industry
ICTICT451 Comply with IP, ethics and privacy policies in ICT environments
ICTPRG302 Apply introductory programming techniques
ICTSAS432 Identify and resolve client ICT problems

**Elective units**

**Group A Database Development Specialisation**
ICTDBS407 Monitor physical database implementation
ICTDBS413 Determine database requirements
ICTDBS415 Build a database
ICTDBS416 Create basic relational databases
ICTDBS418 Monitor and administer databases

**Group B Database Maintenance Specialisation**
ICTDAT401 Evaluate organisational compliance with data ethics legislation
ICTDAT402 Clean and verify data
ICTDBS414 Complete database backup and restore
ICTDBS417 Identify and resolve common database performance problems
ICTPRG554 Manage data persistence using noSQL data stores

**Group C Gaming Development Specialisation**
ICTGAM418 Use simple modelling for animation
ICTGAM420 Produce interactive games
ICTGAM421 Identify and apply games design and gameplay principles
ICTGAM426 Write narrative scripts for interactive games
ICTGAM427 Use 3-D software interface and toolsets
ICTICT433 Build graphical user interfaces

**Group D Networking Specialisation**
ICTNWK420 Install and configure virtual machines
ICTNWK421 Install, configure and test network security
ICTNWK422 Install and manage servers
ICTNWK423 Manage network and data integrity
ICTNWK424 Install and operate small enterprise branch networks
ICTNWK429 Install hardware to networks
ICTTEN434 Install, configure and test internet protocol networks

**Group E Programming Specialisation**
ICTICT449 Use version control systems in development environments
ICTPRG430 Apply introductory object-oriented language skills
ICTPRG433 Test software developments
ICTPRG437 Build a user interface
ICTPRG440 Apply introductory programming skills in different languages

**Group F Systems Administration Support Specialisation**
ICTICT445 Connect and configure devices and hardware components
ICTSAS436 Evaluate ICT system status
ICTSAS438 Implement maintenance procedures
ICTSAS441 Support ICT system software
ICTSAS442 Provide first-level remote help desk support
ICTSAS443 Support operating system users and troubleshoot applications

**Group G Web Development Specialisation**
ICTWEB431 Create and style simple markup language documents
ICTWEB432 Design website layouts
ICTWEB433 Confirm accessibility of websites
ICTWEB434 Transfer content to websites
ICTWEB443 Implement search engine optimisations
ICTWEB450 Evaluate and select a web hosting service
ICTWEB452 Create a markup language document

**Group H General electives**

*Cloud Computing*
ICTCLD301 Evaluate characteristics of cloud computing solutions and services
ICTCLD401 Configure cloud services
ICTICT428 Select cloud storage solutions

*Cyber Security Incident Response*
ICTCYS401 Design and implement network security infrastructure for an organisation
ICTCYS402 Identify and confirm cyber security incidents
ICTCYS403 Plan and implement information security strategies for an organisation
ICTCYS404 Run vulnerability test assessments for an organisation
ICTCYS405 Develop cyber security incident response plans
ICTCYS406 Respond to cyber security incidents
ICTCYS407 Gather, analyse and interpret threat data
ICTICT424 Address cyber security requirements
ICTSAS214 Protect devices from spam and destructive software
ICTSAS440 Monitor and administer security of ICT systems

Data and Information Management
ICTDBS503 Create a data warehouse
ICTICT450 Identify and use applications for distributed ledgers
ICTPRG438 Configure and maintain databases
ICTSAS215 Protect and secure information assets

Digital Media
CUAANM402 Create digital visual effects
CUACAM301 Shoot material for screen productions
CUADIG401 Author interactive media
CUAPOS401 Edit screen content for fast turnaround
CUAPOS402 Manage media assets
CUAPPMP407 Create storyboards
CUASOU202 Perform basic sound editing
CUASOU304 Prepare audio assets
ICTDMT404 Create visual design components for digital media
ICTDMT405 Produce interactive animations
ICTDMT406 Produce and edit digital images

Gaming Art and Development
ICTGAM422 Create design documents for interactive games
ICTGAM423 Apply artificial intelligence in game development
ICTGAM424 Develop story and content in digital games
ICTGAM425 Create visual design components in interactive games  
ICTGAM428 Create 3-D characters for interactive games  
ICTGAM429 Develop 3-D components for interactive games  
ICTGAM430 Design interactive media  
ICTGAM431 Design and create 3-D digital models  
ICTGAM432 Create audio for digital games  
ICTGAM433 Prepare and complete image rendering processes

**IT Support Services**

ICTICT425 Implement WHS, environmental sustainability and anti-discrimination practices in an ICT workplace  
ICTICT427 Identify, evaluate and apply current industry-specific technologies to meet organisational needs  
ICTICT429 Determine and confirm client business requirements  
ICTICT431 Use online tools for learning  
ICTICT436 Develop macros and templates for clients using standard products  
ICTICT441 Provide one-to-one instruction  
ICTICT446 Apply ICT service management principles  
ICTSAS428 Hand over ICT system components to clients  
ICTSAS433 Update ICT client support procedures and assist with policy development  
ICTSAS434 Action change requests and present updated ICT system to clients  
ICTSAS446 Fault find and troubleshoot ICT equipment, hardware and software problems

**IT Work Ready Skills**

BSBWOR404 Develop work priorities  
ICTICT435 Create technical documentation  
ICTICT440 Develop service level agreements  
ICTICT448 Prepare electronic portfolios of work  
ICTSAD402 Develop and present ICT feasibility reports

**Networking**

ICTCLD301 Evaluate characteristics of cloud computing solutions and services  
ICTNWK416 Build security into virtual private networks  
ICTNWK425 Build small wireless local area networks
ICTNWK426 Install and configure client-server applications and services
ICTNWK427 Configure desktop environments
ICTNWK428 Create scripts for networking
ICTNWK430 Deploy software to networked computers
ICTNWK431 Create network documentation
ICTNWK432 Build an enterprise wireless network
ICTNWK433 Install backbone technologies in a local area network

**Project Management**
ICTICT447 Work effectively in agile environments
ICTPMG411 Support small scale ICT projects

**Programming**
ICTPRG429 Maintain open-source code programs
ICTPRG431 Apply query language in relational databases
ICTPRG432 Develop data-driven applications
ICTPRG434 Automate processes
ICTPRG435 Write scripts for software applications
ICTPRG436 Develop mobile applications
ICTPRG439 Use pre-existing components
ICTPRG441 Apply skills in object-oriented design
ICTPRG442 Apply mathematical techniques for software development
ICTPRG443 Apply intermediate programming skills in different languages
ICTPRG444 Analyse software requirements
ICTPRG446 Prepare software development review
ICTPRG447 Use extensible markup language
ICTSAD501 Model data objects
ICTSAD502 Model data processes

**Systems and Software Design**
ICTICT430 Apply software development methodologies
ICTICT432 Develop detailed technical design
ICTICT438 Select, configure and deploy software and hardware testing tools
ICTICT444 Develop client user interface
ICTNWK434 Identify and implement industry standard virtualisation technologies
ICTSAS445 Configure and troubleshoot operating system software
ICTTEN410 Locate, diagnose and rectify faults
ICTTEN417 Install, configure and test a router
ICTTEN418 Install and test a radio frequency identification system
ICTTEN419 Implement and troubleshoot enterprise routers and switches
ICTTEN420 Design, install and configure an internetwork
ICTTEN513 Install, configure and test a local area network switch

Systems Development and Maintenance
ICTICT434 Maintain website information standards
ICTICT437 Conduct post-implementation ICT system reviews
ICTSAS309 Maintain and repair ICT equipment and software
ICTSAS422 Scope implementation requirements
ICTSAS435 Resolve system faults on a live system
ICTSAS437 Optimise ICT system performance
ICTSAS439 Analyse ICT system capacity and implement enhancements
ICTSUS444 Repair operating systems boot up procedures
ICTSUS402 Install and test power saving hardware
ICTSUS403 Install and test power management software
ICTSUS404 Install thin client applications for power over ethernet

Web design and development
ICTWEB423 Ensure dynamic website security
ICTWEB430 Produce server-side script for dynamic web pages
ICTWEB435 Maintain website performance
ICTWEB436 Monitor traffic and compile website traffic reports
ICTWEB437 Create website testing procedures
ICTWEB438 Conduct operational acceptance tests of websites
ICTWEB439 Confirm basic website security
ICTWEB440 Use web authoring tools
ICTWEB441 Produce basic client-side script
ICTWEB442 Produce interactive web animation
ICTWEB444 Create responsive website layouts
ICTWEB445 Implement content management systems
ICTWEB446 Integrate social web technologies
ICTWEB447 Build basic website using development software and ICT tools
ICTWEB448 Confirm website content meets technical protocols and standards
ICTWEB449 Confirm website access and useability
ICTWEB451 Apply structured query language in relational databases

Specialisations

As stated above, where relevant, the choice of elective units set out in the packaging rules at qualification outset can serve to provide the qualification with one or more of the following specialisations. The rules to achieve a specialisation are detailed below.

The achievement of more than one specialisation may be indicated on the same testamur as follows:

- ICT40120 Certificate IV in Information Technology (Database Development)
- ICT40120 Certificate IV in Information Technology (Database Maintenance)
- ICT40120 Certificate IV in Information Technology (Gaming Development)
- ICT40120 Certificate IV in Information Technology (Networking)
- ICT40120 Certificate IV in Information Technology (Programming)
- ICT40120 Certificate IV in Information Technology (Systems Administration Support)
- ICT40120 Certificate IV in Information Technology (Web Development).

Packaging rules to achieve a specialisation

Database Development
- Select all 5 elective units from Group A Database Development Specialisation

Database Maintenance
- Select all 5 elective units from Group B Database Maintenance Specialisation

Gaming Development
- Select all 6 elective units from Group C Gaming Development Specialisation

Networking
- Select all 7 elective units from Group D Networking Specialisation

Programming
- Select all 5 elective units from Group E Programming Specialisation

Systems Administration Support
- Select all 6 elective units from Group F Systems Administration Support Specialisation

Web Development
Select all 7 elective units from Group G Web Development Specialisation

**Qualification Mapping Information**

No equivalent qualification. Supersedes and is not equivalent to:

- ICT40118 Certificate IV in Information Technology
- ICT40215 Certificate IV in Information Technology Support
- ICT40315 Certificate IV in Web-Based Technologies
- ICT40418 Certificate IV in Information Technology Networking
- ICT40518 Certificate IV in Programming
- ICT40815 Certificate IV in Digital Media Technologies
- ICT40915 Certificate IV in Digital and Interactive Games
- ICT41015 Certificate IV in Computer Systems Technology.

Qualification Description

This qualification reflects the role of a technician with a range of telecommunications skills and extensive knowledge of the access, building and core networks, and client capabilities of the service provider. It prepares people to work in telecommunications infrastructure network design, for network additions and implementations to accommodate network growth and new technologies within the industry.

Graduates with this qualification will be able to design:
- the customer access network
- the building network
- the core network for the service provider and asset owner
- carrier equipment infrastructure.

Licensing/Regulatory Information

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the ICT Information and Communications Technology Companion Volume Implementation Guide or the relevant regulator for details of licencing, legislative or certification requirements.

Entry Requirements

Entry into this qualification requires:
- a qualification at AQF level 2 or 3 in telecommunications from the ICT Information and Communications Technology Training Package or the ICT10 Integrated Telecommunications Training Package and certified evidence of at least 700 hours of work experience within the related scope of this qualification, which may have occurred concurrent with or after the qualification was achieved

or
• a qualification at AQF level 2 or 3 in electrotechnology from the UEE Electrotechnology Training Package and certified evidence of at least 700 hours of work experience within the related scope of this qualification, which may have occurred concurrent with or after the qualification was achieved

or

• a current unrestricted electrical licence from any Australian state or territory electrical regulator

or

• a qualification at AQF level 2 or 3 in telecommunications from the ICT Information and Communications Technology Training Package or the ICT10 Integrated Telecommunications Training Package and enrolment in this Certificate IV as part of a traineeship or apprenticeship program or concurrently employed within the ICT industry

or

• open registration as an ACMA registered cabler with certified evidence of at least 2100 hours of work experience within customer premises doing cabling or telecommunications carrier work.

**Packaging Rules**

**Total number of units = 16**

6 core units, plus

10 elective units

The elective units selected must consist of:

• up to 1 elective unit from Group A Workplace

• at least 4 elective units from Groups B Design and D Network Planning.

The remaining required elective units selected may consist of:

• up to 3 elective units from Groups C ICT Use, E Optical Networks, F Project Management, G Radio Communications, H Sustainability or I Network Engineering

• up to 4 elective units from this or any currently endorsed Training Package or accredited course where the units are packaged in an Australian Qualifications Framework (AQF) Level 4 or above qualification.

Elective units must be relevant to the work environment and the qualification, maintain the integrity of the AQF alignment and contribute to a valid, industry-supported vocational outcome.

Units selected from other Training Packages or accredited courses must not duplicate units selected from, or available within, the ICT Information and Communications Technology Training Package.
Core units

ICTICT408 Create technical documentation
ICTNPL409 Apply knowledge of regulation and legislation for the telecommunications industry
ICTTEN426 Design network projects
ICTTEN427 Conduct site surveys to identify carrier installation requirements
ICTTEN428 Prepare design drawings and specification for telecommunications installations
ICTTEN429 Estimate and quote for carrier telecommunications equipment installations

Elective units

Group A Workplace

BSBLDR402 Lead effective workplace relationships
BSBMGT401 Show leadership in the workplace
BSBSMB407 Manage a small team
ICTICT401 Determine and confirm client business requirements
ICTSMB401 Set up and operate a contractor business
ICTSMB402 Operate a contractor business with employees
ICTWOR401 Undertake a civil site survey

Group B Design

BSBDES401 Generate design solutions
BSBDES402 Interpret and respond to a design brief
BSBDES403 Develop and extend design skills and practice
BSBDES501 Implement design solutions
BSBDES502 Establish, negotiate and refine a design brief

Group C ICT Use

ICTICT405 Develop detailed technical design
ICTICT428 Select cloud storage solutions
ICTNWK409 Create scripts for networking
ICTNWK419 Identify and use current virtualisation technologies
ICTPRG301 Apply introductory programming techniques
ICTPRG430 Apply introductory object-oriented language skills
**Group D Network Planning**
ICTNPL401 Apply business acumen to network planning
ICTNPL402 Plan the deployment of access network architectures
ICTNPL403 Evaluate the capability of access networks
ICTNPL404 Evaluate the planning requirements for provisioning a telecommunications building facility
ICTNPL405 Develop provisioning of telecommunications building works project
ICTNPL406 Evaluate core network architectures
ICTNPL407 Plan the deployment of core network
ICTNPL408 Produce planning specifications for end-to-end service delivery
ICTNPL410 Plan the telecommunications access network for an estate
ICTNPL411 Apply compliance requirements to telecommunications work
ICTRFN502 Test and measure cellular phone and network equipment performance

**Group E Optical Networks**
ICTBWN307 Use optical measuring instruments
ICTOPN403 Prepare activity plans and specifications for a fibre to the x installation
ICTOPN405 Install and test a dense wavelength division multiplexing system

**Group F Project Management**
ICTPMG402 Schedule installation of customer premises equipment
ICTPMG403 Manage the delivery of network infrastructure
ICTPMG503 Prepare a project brief

**Group G Radio Communications**
ICTBWN306 Use radio frequency measuring instruments
ICTRFN402 Select antenna system for radio communications
ICTRFN404 Undertake radio communications signals monitoring
ICTRFN406 Maintain hybrid fibre coaxial broadband cable network
ICTRFN407 Conduct radio frequency measurements

**Group H Sustainability**
BSBSUS401 Implement and monitor environmentally sustainable work practices
BSBSUS402 Implement an environmental management plan

**Group I Network Engineering**

ICTBWN308 Work safely on live optical fibre installations*
ICTTEN208 Use electrical skills when working with telecommunications networks
ICTTEN402 Estimate and quote for customer telecommunications equipment installation
ICTTEN403 Assign a transmission path
ICTTEN406 Effect changes to existing customer premises equipment systems and equipment
ICTTEN407 Cut over customer premises equipment major upgrades
ICTTEN416 Install, configure and test an internet protocol network
ICTTEN417 Install, configure and test a router
ICTTEN420 Design, install and configure an internetwork
ICTTEN421 Apply advanced routing protocols to network design
ICTTEN425 Design, install and configure a customer smart technology network
ICTTEN430 Design infrastructure for telecommunications network installations
ICTTEN431 Design a dense wavelength division multiplexing system
ICTTEN432 Identify requirements for customer telecommunications equipment
ICTTEN435 Solve electrical-based telecommunications circuitry and cabling problems*

*Note the following prerequisite unit requirements:

Qualification Description

This qualification reflects the role of an advanced technician (technical officer), team leader or supervisor with a wide range of telecommunications skills. The skills required for this role may include, but are not restricted to, the ability to install and maintain:

- enterprise networks in emerging and converging technologies
- optical and wireless equipment for high speed broadband network infrastructure
- internet protocol (IP) based network telecommunications equipment
- IP based networks in home networks and small and medium enterprises
- telecommunications, data cabling and cabling products in line with the specifications of the access network owner
- telecommunications access network cabling and infrastructure, systems and customer equipment.

The qualification enables technicians to assess installation requirements of converging voice, video and data IP networks, plan and perform installations and test installed equipment and fault find.

Licensing/Regulatory Information

Work functions in the occupational areas where this qualification may be used are subject to regulatory requirements. Refer to the ICT Information and Communications Technology Training Package Companion Volume Implementation Guide or the relevant regulator for details of licensing, legislative or certification requirements.

Entry Requirements

Entry into this qualification requires:
• a qualification at AQF level 2 or 3 in telecommunications from the ICT Information and Communications Technology Training Package or the ICT10 Integrated Telecommunications Training Package and certified evidence of at least 700 hours of work experience within the related scope of the qualification, which may have occurred concurrent with or after the qualification was achieved

or

• a qualification at AQF level 2 or 3 in electrotechnology from the UEE Electrotechnology Training Package and certified evidence of at least 700 hours of work experience within the related scope of the qualification, which may have occurred concurrent with or after the qualification was achieved

or

• a current unrestricted electrical licence from any Australian State or Territory electrical regulator

or

• a qualification at AQF level 2 or 3 in telecommunications from the ICT Information and Communications Technology Training Package and enrolment in the ICT41219 Certificate IV in Telecommunications Engineering Technology as part of a traineeship or apprenticeship program or concurrently employed within the ICT industry

or

• open registration as an ACMA registered cabler with certified evidence of at least 2100 hours of work experience within the customer premises doing cabling or telecommunications carrier work.

Packaging Rules

Total number of units = 17

5 core units, plus

12 elective units

The elective units selected may consist of:

• up to 1 elective unit from Group A Workplace
• up to 12 elective units from Groups B General, C IT Use, D Network Engineering, and E Radio Communications
• up to 4 elective units from this and any currently endorsed Training Package or accredited course where the units are packaged in an Australian Qualification Framework (AQF) Level 4 or above qualification.

Elective units must be relevant to the work environment and the qualification, maintain the integrity of the AQF alignment and contribute to a valid, industry-supported vocational outcome.
Units selected from other Training Packages or accredited courses must not duplicate units selected from or available within the ICT Information and Communications Technology Training Package.

**Core units**
ICTTEN208 Use electrical skills when working with telecommunications networks  
ICTTEN410 Locate, diagnose and rectify faults  
ICTTEN414 Repair telecommunication system faults  
ICTTEN416 Install, configure and test an internet protocol network  
ICTTEN435 Solve electrical-based telecommunications circuitry and cabling problems*

**Elective units**

**Group A Workplace**
BSBCUS402 Address customer needs  
BSBSMB401 Establish legal and risk management requirements of small business  
BSBSMB405 Monitor and manage small business operations  
BSBSMB407 Manage a small team  
ICTCBL403 Supervise cabling project  
ICTICT401 Determine and confirm client business requirements  
ICTSMB401 Set up and operate a contractor business  
ICTSMB402 Operate a contractor business with employees  
ICTTEN402 Estimate and quote for customer telecommunications equipment installation

**Group B General**
BSBSUS401 Implement and monitor environmentally sustainable work practices  
BSBSUS402 Implement an environmental management plan  
ICTCBL402 Schedule and supply cabling installation  
ICTCBL405 Remotely locate and identify cable network faults  
ICTDRE302 Locate and rectify digital reception equipment faults  
ICTEDU301 Train customers in new technology  
ICTICT408 Create technical documentation  
ICTNWK410 Install hardware to a network  
ICTOPN403 Prepare activity plans and specifications for a fibre to the x installation
ICTOPN404 Test optical communications systems and components
ICTOPN405 Install and test a dense wavelength division multiplexing system
ICTPMG402 Schedule installation of customer premises equipment
ICTRFN406 Maintain hybrid fibre coaxial broadband cable network
ICTSUS402 Install and test power saving hardware
ICTSUS404 Install thin client applications for power over ethernet
ICTTEN403 Assign a transmission path
ICTTEN404 Install and configure a wireless mesh network
ICTTEN406 Effect changes to existing customer premises equipment systems and equipment
ICTTEN407 Cut over customer premises equipment major upgrades
ICTTEN408 Complete equipment and software upgrades
ICTTEN409 Commission an electronic system
ICTTEN412 Undertake routine maintenance of the telecommunications network
ICTTEN413 Undertake remote diagnosis and repair of network faults
ICTTEN415 Install and configure internet protocol TV in a home network
ICTTEN417 Install, configure and test a router
ICTTEN419 Implement and troubleshoot enterprise routers and switches
ICTTEN424 Install and configure internet protocol TV in a service provider network
ICTTEN425 Design, install and configure a customer smart technology network
ICTTEN432 Identify requirements for customer telecommunications equipment
ICTTEN433 Install configuration programs on PC based customer equipment

**Group C IT Use**
ICTICT428 Select cloud storage solutions
ICTNWK409 Create scripts for networking
ICTNWK419 Identify and use current virtualisation technologies
ICTPRG301 Apply introductory programming techniques
ICTPRG430 Apply introductory object-oriented language skills

**Group D Network Engineering**
ICTCBL401 Prepare design drawings and specification for a cable installation
ICTCBL404 Test cable bearers
ICTDRE401 Integrate customer digital reception equipment
ICTDRE402 Integrate data delivery modes
ICTICT405 Develop detailed technical design
ICTNWK411 Deploy software to networked computers
ICTNWK416 Build security into virtual private networks
ICTNWK417 Build an enterprise wireless network
ICTNWK421 Install, configure and test network security
ICTPMG403 Manage the delivery of network infrastructure
ICTSUS403 Install and test power management software
ICTTEN301 Provide infrastructure for telecommunications network equipment
ICTTEN312 Install telecommunications network equipment
ICTTEN321 Maintain an electronic system
ICTTEN411 Monitor, analyse and action telecommunications network alarms
ICTTEN420 Design, install and configure an internetwork
ICTTEN421 Apply advanced routing protocols to network design
ICTTEN422 Configure and troubleshoot advanced network switching
ICTTEN423 Install and maintain a wide area network
ICTTEN514 Install, configure and test a server

**Group E Radio Communications**

ICTCMP501 Undertake radio communications site audit
ICTRFN301 Install a radio communications antenna and feedline
ICTRFN303 Install WiMAX customer premises equipment broadband wireless access equipment
ICTRFN304 Construct and test a radio communications device
ICTRFN305 Operate and maintain radio communications technical instruments and field equipment
ICTRFN402 Select antenna system for radio communications
ICTRFN403 Test and repair cellular network equipment
ICTRFN404 Undertake radio communications signals monitoring
ICTRFN405 Install radio communications base station equipment
ICTRFN502 Test and measure cellular phone and network equipment performance
ICTRFN407 Conduct radio frequency measurements
ICTTEN418 Install and test a radio frequency identification system
ICTWOR401 Undertake a civil site survey
ICTWOR402 Schedule equipment maintenance

Specialisations
Where relevant, specialisations can be used for this qualification in:
- network engineering
- optical networks
- radio communications
- smart device installation
- telecommunications network technician – hybrid fibre coaxial.

The achievement of a specialisation will be identified on testamurs as follows:
- ICT41219 Certificate IV in Telecommunications Engineering Technology (Network Engineering)
- ICT41219 Certificate IV in Telecommunications Engineering Technology (Optical Networks)
- ICT41219 Certificate IV in Telecommunications Engineering Technology (Radio Communications)
- ICT41219 Certificate IV in Telecommunications Engineering Technology (Smart Device Installation)

Network Engineering
Select 7 elective units from Group D Network Engineering.

Optical Networks
Select the following 3 elective units from Group B General:
- ICTOPN403 Prepare activity plans and specifications for a fibre to the x installation
- ICTOPN404 Test optical communications systems and components
- ICTOPN405 Install and test a dense wavelength division multiplexing system
Radio Communications

Select the following 5 elective units:

- ICTRNFN301 Install a radio communications antenna and feedline
- ICTRNFN304 Construct and test a radio communications device
- ICTRNFN402 Select antenna system for radio communications
- ICTRNFN407 Conduct radio frequency measurements
- ICTTEN312 Install telecommunications network equipment

Smart Device Installation

Select the following 6 elective units:

- ICTDRE302 Locate and rectify digital reception equipment faults
- ICTEDU301 Train customers in new technology
- ICTICT428 Select cloud storage solutions
- ICTRNFN407 Conduct radio frequency measurements
- ICTTEN415 Install and configure internet protocol TV in a home network
- ICTTEN425 Design, install and configure a customer smart technology network

Telecommunication Network Technician – Hybrid Fibre Coaxial

Select the following 6 elective units:

- ICTRNFN406 Maintain hybrid fibre coaxial broadband cable network
- ICTRNFN407 Conduct radio frequency measurements
- ICTTEN208 Use electrical skills when working with telecommunications networks
- ICTTEN312 Install telecommunications network equipment
- ICTTEN409 Commission an electronic system
- ICTTEN410 Locate, diagnose and rectify faults

Qualification Mapping Information

No equivalent qualification. Supersedes and is not equivalent to ICT41215 Certificate IV in Telecommunications Engineering Technology.

Qualification Description

This qualification reflects the role of individuals in a variety of information and communications technology (ICT) roles who have established specialised skills in a technical ICT function.

Individuals in these roles carry out moderately complex tasks in a specialist field, working independently, as part of a team or leading a deliverable with others. They may apply their skills across a wide range of industries, business functions and departments, or as a business owner (sole trader/contractor).

The skills required for these roles may include, but are not restricted to:

- advanced networking: configuring and managing virtual computing environments, and security within ICT networks
- advanced programming: applying intermediate and advanced programming skills, managing data and building advanced user interfaces to manage organisational requirements
- back end web development: developing and maintaining website information architecture and data
- business analysis: designing and implementing technical requirements, quality assurance processes and contingency plans for businesses
- cloud architecture: developing, improving and designing cloud infrastructure, including disaster recovery plans
- cloud engineering: building, implementing and managing cloud infrastructure and virtual networks
- cyber security: protecting sensitive data and information through security architecture and developing disaster recovery and contingency plans
- database and data management: creating, designing and monitoring systems that store data and optimise organisational knowledge management
- front end web development: designing dynamic and complex websites, user experience solutions and documents using extensible mark-up languages
- game art and design: creating complex 2D and 3D modelling and animation software through scripts and storyboards
- game programming: creating complex 2D and 3D interactive games and media, building graphical user interfaces and applying artificial intelligence in game development
- systems administration: reviewing maintenance procedures and support to help troubleshoot system applications
- systems analysis: modelling and testing data objects, data processes and preferred ICT system solutions
- telecommunications network engineering: managing logistics, organisational specifications, regulations and legislative requirements across network projects.

**Licensing, legislative, regulatory or certification considerations**

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

**Entry Requirements**

Nil

**Packaging Rules**

**Total number of units = 20**

6 core units plus

14 elective units, of which:
- at least 10 units must be selected from the elective units listed below
- up to 4 units may be selected from the remaining listed elective units or from this or any currently endorsed Training Package or accredited course where the units are packaged in an Australian Qualification Framework (AQF) Level 4, 5 or 6 qualification.

Elective units must be relevant to the work environment and the qualification, maintain the integrity of the AQF alignment and contribute to a valid, industry-supported vocational outcome.

Units selected from other Training Packages or accredited courses must not duplicate units selected from or available within the ICT Information and Communications Technology Training Package.

Where relevant, the choice of elective units set out in the packaging rules above can serve to provide the qualification with one or more of the following specialisations. The rules to achieve a specialisation are detailed at the qualification end.

- Advanced networking
- Advanced programming
- Back end web development
- Business analysis
- Cloud architecture
- Cloud engineering
- Cyber security
- Database and data management
- Front end web development
- Game art and design
- Game programming
- Systems administration
- Systems analysis
- Telecommunications network engineering.

Core units
BSBCRT512 Originate and develop concepts
BSBXCS402 Promote workplace cyber security awareness and best practices
BSBXTW401 Lead and facilitate a team
ICTICT517 Match ICT needs with the strategic direction of the organisation
ICTICT532 Apply IP, ethics and privacy policies in ICT environments
ICTSAS527 Manage client problems

Elective units
Group A Advanced Networking Specialisation
ICTNWK529 Install and manage complex ICT networks
ICTNWK536 Plan, implement and test enterprise communication solutions
ICTNWK540 Design, build and test network servers
ICTNWK546 Manage network security
ICTNWK557 Configure and manage advanced virtual computing environments
ICTNWK559 Install an enterprise virtual computing environment

Group B - Advanced programming specialisation
ICTPRG535 Build advanced user interfaces
ICTPRG547 Apply advanced programming skills in another language
ICTPRG549 Apply intermediate object-oriented language skills
ICTPRG554 Manage data persistence using noSQL data stores
ICTPRG556 Implement and use a model view controller framework

Group C - Back end web development specialisation
ICTDBS507 Integrate databases with websites
ICTPRG553 Create and develop REST APIs
ICTPRG554 Manage data persistence using noSQL data stores
ICTWEB522 Develop website information architecture
ICTWEB525 Implement quality assurance process for websites
**Group D - Business analysis specialisation**
ICTSAD507 Design and implement quality assurance processes for business solutions
ICTSAD508 Develop technical requirements for business solutions
ICTSAD509 Produce ICT feasibility reports
ICTSAS502 Establish and maintain client user liaison
ICTSAS526 Review and update disaster recovery and contingency plans

**Group E - Cloud architect specialisation**
ICTCLD501 Develop cloud disaster recovery plans
ICTCLD502 Design and implement highly-available cloud infrastructure
ICTCLD503 Implement web-scale cloud infrastructure
ICTCLD504 Improve cloud-based infrastructure

**Group F - Cloud engineer specialisation**
ICTCLD505 Implement cloud infrastructure with code
ICTCLD506 Implement virtual network in cloud environments
ICTCLD507 Build and deploy resources on cloud platforms
ICTCLD508 Manage infrastructure in cloud environments

**Group G - Cyber security specialisation**
ICTCYS407 Gather, analyse and interpret threat data
ICTCYS610 Protect critical infrastructure for organisations
ICTCYS613 Utilise design methodologies for security architecture
ICTSAS524 Develop, implement and evaluate an incident response plan
ICTSAS526 Review and update disaster recovery and contingency plans

**Group H - Database and data management specialisation**
ICTDBS503 Create a data warehouse
ICTDBS505 Monitor and improve knowledge management systems
ICTDBS506 Design databases
ICTDBS507 Integrate databases with websites
ICTSAD502 Model data processes

**Group I - Front end web development specialisation**
ICTICT530 Design user experience solutions
ICTWEB513 Build dynamic websites
ICTWEB514 Create dynamic web pages
ICTWEB518 Build a document using extensible markup language
ICTWEB519 Develop complex web page layouts
ICTWEB520 Develop complex cascading style sheets

**Group J - Game art and design specialisation**
ICTGAM539 Create and implement designs for 3-D games environments
ICTGAM542 Animate 3-D characters for digital games
ICTGAM543 Produce digital animation sequences
ICTGAM545 Manage technical art and rigging in 3-D animations
ICTGAM552 Create complex 3-D characters for games

**Group K - Game programming specialisation**
ICTGAM423 Apply artificial intelligence in game development
ICTGAM533 Create complex 3-D interactive games
ICTGAM535 Develop complex 3-D software for games and interactive media
ICTGAM537 Prepare games for different platforms and delivery modes
ICTICT433 Build graphical user interfaces

**Group L - Systems administration specialisation**
ICTNWK615 Design and configure desktop virtualisation
ICTSAS512 Review and manage delivery of maintenance services
ICTSAS518 Install and upgrade operating systems
ICTSAS524 Develop, implement and evaluate an incident response plan

**Group M - Systems analysis specialisation**
ICTNWK548 Model preferred system solutions
ICTSAD501 Model data objects
ICTSAD502 Model data processes
ICTSAS506 Update ICT system operational procedures
ICTSAS520 Develop detailed test plans

**Group N - Telecommunications network engineering specialisation**
ICTICT519 Develop detailed component specifications from project specifications
ICTNPL413 Evaluate networking regulations and legislation for the telecommunications industry
ICTNWK423 Manage network and data integrity
ICTNWK541 Configure, verify and troubleshoot WAN links and IP services
ICTPMG505 Manage ICT projects
ICTTEN519 Design network building projects

**Group O - General electives**

**Advanced IT Support**
ICTICT503 Validate quality and completeness of system design specifications
ICTICT506 Implement process re-engineering strategies
ICTICT518 Research and review hardware technology options for organisations
ICTICT520 Confirm transition strategy for a new system
ICTICT521 Select new technology supported business model
ICTICT524 Determine ICT strategies and solutions for organisations
ICTICT525 Identify and manage the implementation of industry specific technologies
ICTICT526 Verify client business requirements
ICTICT528 Deploy smart contracts
ICTSAS517 Use network tools
ICTSAS519 Perform systems tests
ICTSAS521 Perform integration tests
ICTSAS523 Perform stress and load test on integrated platforms
ICTSAS522 Manage the testing process
ICTSAS528 Review and develop ICT maintenance strategy
ICTSAS529 Prioritise ICT change requests

**Blockchain Solutions**

ICTICT527 Develop and maintain blockchain solutions

**Business Management**

BSBPMG537 Manage project procurement
ICTICT435 Create technical documentation
ICTICT443 Work collaboratively in the ICT industry
ICTICT523 Gather data to identify business requirements
ICTSAD503 Minimise risk of new technologies to business solutions
PSPPCM023 Manage strategic contracts

**Data Engineering**

ICTDAT501 Gather, analyse and verify data from different source inputs
ICTDAT502 Conduct significance tests
ICTDAT503 Use unsupervised learning for clustering

**Design**

CUADIG502 Design digital applications
CUADIG503 Design e-learning resources
CUADIG507 Design digital simulations
CUAPHI514 Employ specialised imaging technologies

**Digital Media**

CUAPOS401 Edit screen content for fast turnaround
CUASOU407 Edit sound
CUASOU504 Produce sound recordings
ICTDMT501 Incorporate and edit digital video

**Gaming Development**

ICTGAM419 Build a database to support a computer game
ICTGAM532 Create design concepts for digital games and 3-D media
ICTGAM534 Manage interactive media productions
ICTGAM536 Design interactive 3-D applications for scientific and mathematical modelling
ICTGAM538 Manage testing of games and interactive media
ICTGAM540 Design and create models for 3-D and digital effects environments
ICTGAM541 Design and create advanced particles, fluids and bodies for 3-D digital effects
ICTGAM544 Animate physical attributes of models and elements
ICTGAM546 Create and combine 3-D digital games and components
ICTGAM547 Create interactive 3-D environments for digital games
ICTGAM548 Complete digital editing for 3-D and digital effects environments
ICTGAM549 Collaborate in design of 3-D game levels and environments
ICTGAM550 Integrate multiple data sources into interactive 3-D environments
ICTGAM551 Apply digital texturing for the 3-D environment in digital games
ICTGAM553 Integrate databases with online games
ICTGAM554 Create games for mobile devices
ICTGAM555 Analyse business opportunities in the digital games environments
ICTGAM556 Develop and implement physics in 3-D digital games
ICTGAM557 Complete compositing to create elements for 3-D and digital effects environments

Internet of Things
ICTIOT501 Install IT devices and networks
ICTIOT502 Program IoT devices
ICTIOT503 Design and test IoT devices and networks

Networking
ICTNWK515 Develop configuration management protocols
ICTNWK531 Configure an internet gateway
ICTNWK537 Implement secure encryption technologies
ICTNWK538 Install and maintain valid authentication processes
ICTNWK539 Design and implement integrated server solutions
ICTNWK541 Configure, verify and troubleshoot WAN links and IP services
ICTNWK542 Install, operate and troubleshoot medium enterprise routers
ICTNWK543 Install, operate and troubleshoot medium enterprise switches
ICTNWK544 Design and implement a security perimeter for ICT networks
ICTNWK545 Develop, implement and evaluate systems and applications security
ICTNWK547 Manage system security on operational systems
ICTNWK549 Design ICT security frameworks
ICTNWK550 Design ICT system security controls
ICTNWK551 Build decks using wireless markup language
ICTNWK552 Install and configure network access storage devices
ICTNWK553 Configure enterprise virtual computing environments
ICTNWK554 Manage enterprise virtual computing environments
ICTNWK556 Identify and resolve network problems
ICTNWK558 Monitor and troubleshoot virtual computing environments
ICTNWK560 Determine best-fit topologies for wide area networks
ICTNWK561 Design enterprise wireless local area networks
ICTNWK623 Manage ICT security
Programming
ICTPRG509 Build using rapid application development
ICTPRG530 Manage projects using software management tools
ICTPRG531 Prepare for application development using current methods
ICTPRG532 Apply advanced object-orientated language skills
ICTPRG533 Debug and monitor applications
ICTPRG534 Deploy applications to production environments
ICTPRG536 Design application architecture
ICTPRG537 Implement security for applications
ICTPRG538 Create mashups
ICTPRG540 Maintain custom software
ICTPRG541 Monitor and support data conversion to new ICT system
ICTPRG542 Review developed software
ICTPRG543 Develop integration blueprint for ICT systems
ICTPRG544 Install, test and evaluate pilot version of ICT systems
ICTPRG545 Monitor system pilots
ICTPRG548 Develop high-level object-oriented class specifications
ICTPRG550 Perform ICT data conversions
ICTPRG555 Implement object relational mapping framework for data persistence
ICTPRG603 Develop advanced mobile multi-touch applications

Project Management
BSBPMG532 Manage project quality
BSBPMG536 Manage project risk
BSBPMG539 Manage project governance
ICTICT529 Organise and lead agile projects
ICTPMG505 Manage ICT projects

Systems and Software Design
ICTPRG546 Validate application designs against specifications
ICTPRG551 Apply testing techniques for software development

Telecommunications Network Engineering - General
ICTICT531 Test network using virtual instruments
ICTPMG402 Schedule installation of customer premises equipment
ICTPMG506 Prepare network project briefs
ICTPRG605 Manage development of technical solutions from business specifications
ICTSAS525 Develop and conduct client acceptance test
ICTSUS502 Install and test virtual infrastructure
ICTTEN426 Design network projects
ICTTEN520 Commission network equipment
ICTTEN521 Integrate network systems and equipment
ICTTEN522 Cut over new and replacement network equipment
ICTTEN523 Locate, diagnose and rectify complex system equipment faults
ICTTEN524 Diagnose and organise repair of complex equipment faults
ICTTEN525 Install, configure and test local area network switches
ICTTEN526 Dimension and design a radio frequency identification system
ICTTEN527 Plan wireless mesh networks
UEPOPS423 Plan a scheduled outage

**Telecommunications Network Engineering - Networking**
ICTNWK555 Determine best-fit topologies for local networks
ICTNWK610 Design and build integrated VoIP networks

**Telecommunications Network Engineering – Optical Networks**
ICTOPN507 Plan and configure dense wavelength division multiplexing optical networks
ICTOPN508 Perform acceptance and commissioning tests on optical networks
ICTOPN509 Plan for optical system upgrades
ICTOPN510 Test and commission dense wavelength division multiplexing transmission systems
ICTOPN511 Test performance of specialised optical devices
ICTOPN512 Analyse and integrate specialised optical devices

**Telecommunications Network Engineering – Radio Communications**
ICTCMP502 Conduct radio communications site audits
ICTRFN504 Test cellular handset enhancements and international roaming agreements
ICTRFN505 Test and measure cellular phone and network equipment performance
ICTRFN506 Evaluate radio frequency signal coverage plots
ICTRFN603 Monitor the capacity of and recommend changes to cellular mobile networks

**Web Design and Development**
ICTWEB441 Produce basic client-side script
ICTWEB452 Create a markup language document
ICTWEB517 Create web-based programs
ICTWEB521 Customise complex ICT content management systems
ICTWEB523 Manage transactions using site server tools
ICTWEB524 Analyse information and assign meta tags
ICTWEB526 Implement and use web services
ICTWEB527 Research and apply emerging web technology trends

**Specialisations**
The achievement of a specialisation will be identified on testamurs as follows:
- ICT50220 Diploma of Information Technology (Advanced Networking)
- ICT50220 Diploma of Information Technology (Advanced Programming)
- ICT50220 Diploma of Information Technology (Back End Web Development)
- ICT50220 Diploma of Information Technology (Business Analysis)
- ICT50220 Diploma of Information Technology (Cloud Architecture)
- ICT50220 Diploma of Information Technology (Cloud Engineering)
- ICT50220 Diploma of Information Technology (Cyber Security)
- ICT50220 Diploma of Information Technology (Database and Data Management)
- ICT50220 Diploma of Information Technology (Front End Web Development)
- ICT50220 Diploma of Information Technology (Game Art and Design)
- ICT50220 Diploma of Information Technology (Game Programming)
- ICT50220 Diploma of Information Technology (Systems Administration)
- ICT50220 Diploma of Information Technology (Systems Analysis)
- ICT50220 Diploma of Information Technology (Telecommunications Network Engineering).

Packaging rules to achieve a specialisation

Advanced Networking
- Select all 6 elective units from Group A - Advanced networking specialisation

Advanced Programming
- Select all 5 elective units from Group B - Advanced programming specialisation

Back End Web Development
- Select all 5 elective units from Group C - Back end web development specialisation

Business Analysis
- Select all 5 elective units from Group D - Business analysis specialisation

Cloud Architecture
- Select all 4 elective units from Group E - Cloud architect specialisation

Cloud Engineering
- Select all 4 elective units from Group F - Cloud engineers specialisation

Cyber Security
- Select all 5 elective units from Group G - Cyber security specialisation

Database and Data Management
- Select all 5 elective units from Group H - Database and data management specialisation

Front End Web Development
- Select all 6 elective units from Group I - Front end web development specialisation

Game Art and Design
- Select all 5 elective units from Group J - Game art and design specialisation

Game Programming
- Select all 5 elective units from Group K - Game programming specialisation

Systems Administration
- Select all 4 elective units from Group L - Systems administration specialisation
**Systems Analysis**

- Select all 5 elective units from Group M - Systems analysis specialisation

**Telecommunications Network Engineering**

- Select all 6 elective units from Group N - Telecommunications network engineering specialisation.

**Qualification Mapping Information**

No equivalent qualification. Supersedes and is not equivalent to:

- ICT50120 Diploma of Information Technology
- ICT51015 Diploma of Telecommunications Engineering
- ICT51115 Diploma of Telecommunications Planning and Design.

Qualification Description

This qualification reflects the role of individuals in a variety of information and communications technology (ICT) roles who have significant experience in specialist technical skills, or managerial business and people management skills.

Individuals in these roles carry out complex tasks in a specialist field, working independently, leading a team or a strategic direction of a business. They apply their skills across a wide range of industries and business functions, or as a business owner (sole trader/contractor).

The skills required for these roles may include, but are not restricted to:

- advanced data management information: creating, designing and monitoring complex systems that store data, and optimising organisational knowledge management
- cyber security: protecting sensitive data and information through security architecture, and developing disaster recovery and contingency plans
- full stack web development: building advanced user interfaces, developing representational state transfer application program interfaces (REST APIs) and designing user experience solutions
- further programming: applying advanced ICT languages to maintain security and manage data
- IT strategy and organisational development: managing and communicating strategic ICT business solutions
- systems development and analysis: modelling and testing data objects, data processes and preferred ICT system solutions
- telecommunications network engineering: managing logistics, organisational specifications, regulations and legislative requirements across network projects.

Licensing, legislative, regulatory or certification considerations

No licensing, legislative or certification requirements apply to this qualification at the time of publication.
Entry Requirements
Nil

Packaging Rules
Total number of units = 16

6 core units plus
10 elective units, of which:

- at least 7 units must be selected from the elective units listed below
- up to 3 units may be selected from the remaining listed elective units or from this or any currently endorsed Training Package or accredited course where the units are packaged in an Australian Qualification Framework (AQF) Level 5 or 6 qualification.

Elective units must be relevant to the work environment and the qualification, maintain the integrity of the AQF alignment and contribute to a valid, industry-supported vocational outcome.

Units selected from other Training Packages or accredited courses must not duplicate units selected from or available within the ICT Information and Communications Technology Training Package.

Where relevant, the choice of elective units set out in the packaging rules above can serve to provide the qualification with one or more of the following specialisations. The rules to achieve a specialisation are detailed at the qualification end.

- Advanced data management information
- Cyber security
- Full stack web development
- Further programming
- IT strategy and organisational development
- Systems development and analysis
- Telecommunications network engineering.

Core units
BSBCRT611 Apply critical thinking for complex problem solving
BSBTWK502 Manage team effectiveness
BSBXCS402 Promote workplace cyber security awareness and best practices
ICTICT608 Interact with clients on a business level
ICTICT618 Manage IP, ethics and privacy in ICT environments
ICTSAD609 Plan and monitor business analysis activities in an ICT environment
Elective units

Group A - Advanced data management information specialisation
ICTDBS604 Build data warehouses
ICTDBS605 Develop knowledge management strategies
ICTDBS606 Determine database functionality and scalability
ICTICT523 Gather data to identify business requirements

Group B - Cyber security specialisation
ICTCYS604 Implement best practices for identity management
ICTCYS606 Evaluate an organisation’s compliance with relevant cyber security standards and law
ICTCYS608 Perform cyber security risk assessments
ICTCYS612 Design and implement virtualised cyber security infrastructure for organisations

Group C - Full stack web development specialisation
ICTICT530 Design user experience solutions
ICTPRG535 Build advanced user interfaces
ICTPRG553 Create and develop REST APIs
ICTSAD612 Implement and maintain uses of containerisation

Group D - Further programming specialisation
ICTPRG537 Implement security for applications
ICTPRG547 Apply advanced programming skills in another language
ICTPRG554 Manage data persistence using noSQL data stores

Group E - IT Strategy and organisational development specialisation
ICTICT611 Develop ICT strategic business plans
ICTSAD604 Manage and communicate ICT solutions
ICTSAD608 Perform ICT-focused enterprise analysis
ICTSAD611 Manage assessment and validation of ICT solutions

Group F - Systems development and analysis specialisation
ICTPRG605 Manage development of technical solutions from business specifications
ICTSAD610 Analyse stakeholder requirements
ICTSAD612 Implement and maintain uses of containerisation
ICTSAD613 Install and configure container orchestration services

Group G - Telecommunications network engineering specialisation
ICTNPL413 Evaluate networking regulations and legislation for the telecommunications industry
ICTNWK612 Plan and manage troubleshooting advanced integrated IP networks
ICTPMG613 Manage ICT project planning
ICTTEN615 Manage network traffic
ICTTEN622 Produce ICT network architecture designs
Group H - General electives

**Advanced Cloud Computing**
ICTCLD601 Develop cloud computing strategies for businesses
ICTCLD602 Manage information security compliance of cloud service deployment

**Advanced Cyber Security**
ICTCYS603 Undertake penetration testing for organisations
ICTCYS607 Acquire digital forensic data
ICTCYS609 Evaluate threats and vulnerabilities of IoT devices

**Application and Software Development**
ICTPRG549 Apply intermediate object-oriented language skills
ICTPRG603 Develop advanced mobile multi-touch applications
ICTPRG614 Create cloud computing services

**Cyber Security Network Operations**
ICTCYS601 Create cyber security standards for organisations
ICTCYS602 Implement cyber security operations
ICTCYS611 Configure security devices for organisations

**Data Management**
ICTDBS505 Monitor and improve knowledge management systems

**Project Management**
BSBPMG532 Manage project quality
BSBPMG536 Manage project risk
BSBPMG539 Manage project governance
ICTICT505 Determine acceptable developers for projects
ICTICT529 Organise and lead agile projects
ICTPMG612 Manage ICT project initiation
ICTPMG613 Manage ICT project planning
ICTPMG614 Manage ICT project delivery
ICTPMG615 Manage ICT project closure
ICTPMG616 Manage ICT project systems implementation
ICTPMG617 Plan and direct complex ICT projects
ICTSAS522 Manage the testing process

**IT Work Ready Skills**
ICTICT522 Evaluate vendor products and equipment
ICTICT612 Develop contracts and manage contract performance
ICTICT613 Manage the use of development methodologies
ICTICT616 Develop communities of practice
ICTICT617 Lead the evaluation and implementation of current industry specific technologies
ICTSAD602 Conduct knowledge audits
ICTSAD605 Elicit ICT requirements
ICTSUS603 Integrate sustainability in ICT planning and design projects
PSPPCM023 Manage strategic contracts

**Network Security**
CPPSEC3124 Prepare and present evidence in court
CPPSEC5003 Assess security risk management options
CPPSEC5004 Develop security risk management plans
CPPSEC5005 Implement security risk management plans
CPPSEC5006 Develop strategies to implement advanced technology security systems
ICTNWK537 Implement secure encryption technologies
ICTNWK538 Install and maintain valid authentication processes
ICTNWK539 Design and implement integrated server solutions
ICTNWK540 Design, build and test network servers
ICTNWK541 Configure, verify and troubleshoot WAN links and IP services
ICTNWK544 Design and implement a security perimeter for ICT networks
ICTNWK549 Design ICT security frameworks
ICTNWK552 Install and configure network access storage devices
ICTNWK553 Configure enterprise virtual computing environments
ICTNWK554 Manage enterprise virtual computing environments
ICTNWK556 Identify and resolve network problems
ICTNWK557 Configure and manage advanced virtual computing environments
ICTNWK558 Monitor and troubleshoot virtual computing environments
ICTNWK559 Install an enterprise virtual computing environment
ICTNWK603 Plan, configure and test advanced internetwork routing solutions
ICTNWK604 Plan and configure advanced internetwork switching solutions
ICTNWK605 Design and configure secure integrated wireless systems
ICTNWK606 Implement voice applications over secure wireless networks
ICTNWK610 Design and build integrated VoIP networks
ICTNWK611 Configure call processing network elements for secure VoIP networks
ICTNWK612 Plan and manage troubleshooting advanced integrated IP networks
ICTNWK613 Develop plans to manage structured troubleshooting process of enterprise networks
ICTNWK615 Design and configure desktop virtualisation
ICTNWK617 Configure and manage a storage area network
ICTNWK618 Design and implement a security system
ICTNWK619 Plan, configure and test advanced server-based security
ICTNWK620 Design and implement wireless network security
ICTNWK621 Configure network devices for a secure network infrastructure
ICTNWK622 Configure and manage intrusion prevention system on network sensors
ICTSAS517 Use network tools

**Strategy and Business Management**
BSBLDR601 Lead and manage organisational change
BSBSTR601 Manage innovation and continuous improvement
BSBPBMG537 Manage project procurement
ICTICT614 Identify and implement business innovation
ICTICT615 Implement knowledge management strategies
ICTSAD507 Design and implement quality assurance processes for business solutions
ICTSAD508 Develop technical requirements for business solutions
ICTSAS602 Implement change management processes

_Telecommunications Network Engineering - General_

BSBLDR523 Lead and manage effective workplace relationships
BSBPBMG530 Manage project scope
BSBPBMG430 Undertake project work
ICTICT818 Develop knowledge management strategies
ICTICT819 Lead analysis of information and communications technology business strategy
ICTICT822 Manage automated ICT system applications
ICTPMG506 Prepare network project briefs
ICTPRG605 Manage development of technical solutions from business specifications
ICTSUS604 Prepare business cases for sustainability and competitive advantage in ICT projects
ICTSUS807 Conduct and manage a life cycle assessment for sustainability
ICTSUS811 Conduct and manage life cycle assessments for sustainability
ICTSUS812 Lead applied research in ICT sustainability
ICTTEN613 Assess integration of international network equipment into Australian networks
ICTTEN614 Conduct network system optimisation and administration
ICTTEN616 Rectify client services following network outages and faults
ICTTEN617 Manage common channel signalling networks
ICTTEN618 Analyse and organise repair of highly complex networks
ICTTEN619 Test new software and hardware releases
ICTTEN620 Produce and evaluate architecture designs for convergent cellular mobile networks
ICTTEN621 Design and configure IP-MPLS networks with virtual private network tunnelling
ICTTEN623 Design and manage internet protocol TV in a service provider network
ICTTEN817 Plan transmission networks
ICTTEN818 Align systems with product and technology strategy
ICTTEN819 Translate domain and solution architectures into platform requirements and designs
ICTTEN820 Manage end to end architectural solutions across multiple domains
ICTTEN821 Manage solution architecture and impacts
ICTTEN822 Manage application layer solutions
ICTTEN823 Manage voice, data and internet protocol network solutions
ICTTEN824 Manage network testing strategies
ICTTEN825 Investigate applications of cloud networks in network switching
ICTTEN826 Evaluate and apply digital signal processing to communication systems
ICTTEN827 Produce engineering solutions
ICTTEN828 Manage development and application of testing artefacts

Telecommunications Network Engineering – Networking
ICTNPL412 Apply business acumen to network planning
ICTNWK546 Manage network security
ICTNWK560 Determine best-fit topologies for wide area networks
ICTNWK561 Design enterprise wireless local area networks

Telecommunications Network Engineering – Optical Networks
ICTOPN605 Manage optical ethernet transmission
ICTOPN606 Manage dense wavelength division multiplexing transmission systems
ICTOPN607 Design dense wavelength division multiplexing systems
ICTOPN608 Analyse optical transmission systems

Telecommunications Network Engineering – Radio Communications
ICTRFN804 Produce radio link budgets
ICTRFN805 Analyse cellular mobile network systems
ICTRFN806 Analyse satellite communications systems

Specialisations
The achievement of a specialisation will be identified on testamurs as follows:

- ICT60220 Advanced Diploma of Information Technology (Advanced Data Management Information)
- ICT60220 Advanced Diploma of Information Technology (Cyber Security)
- ICT60220 Advanced Diploma of Information Technology (Full Stack Web Development)
- ICT60220 Advanced Diploma of Information Technology (Further Programming)
- ICT60220 Advanced Diploma of Information Technology (IT Strategy and Organisational Development)
- ICT60220 Advanced Diploma of Information Technology (Systems Development and Analysis)
- ICT60220 Advanced Diploma of Information Technology (Telecommunications Network Engineering).

Packaging rules to achieve a specialisation

Advanced Data Management Information
- Select all 4 elective units from Group A - Advanced data management information specialisation
Cyber Security
- Select all 4 elective units from Group B - Cyber security specialisation

Full Stack Web Development
- Select all 4 elective units from Group C - Full stack web development specialisation

Further Programming
- Select all 3 elective units from Group D - Further programming specialisation

IT Strategy and Organisational Development
- Select all 4 elective units from Group E - IT strategy and organisational development specialisation

Systems Development and Analysis
- Select all 4 elective units from Group F - Systems development and analysis specialisation

Telecommunications Network Engineering
- Select all 5 elective units from Group G - Telecommunications network engineering specialisation.

Qualification Mapping Information
No equivalent qualification. Supersedes and is not equivalent to:
- ICT60120 Advanced Diploma of Information Technology
- ICT60615 Advanced Diploma of Telecommunications Network Engineering
- ICT80315 Graduate Certificate in Telecommunications
- ICT80415 Graduate Diploma of Telecommunications Network Engineering
- ICT80515 Graduate Diploma of Telecommunications and Strategic Management
- ICT80615 Graduate Certificate in Telecommunications Network Engineering.

Application

This unit describes the skills and knowledge required to set up and use radio frequency (RF) communications instruments to perform installations, upgrades and fault-finding on RF equipment and networks.

It applies to telecommunications lines workers who only use RF measuring instruments.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Broadband and Wireless Networks

Elements and Performance Criteria

| measurements | standards and safe industry practices  
2.2 Use appropriate testing techniques to assess overall system performance  
2.3 Record and interpret test results, and compare with standard test specifications |
| 3 Complete RF measurement process | 3.1 Make recommendations, based on test result interpretations, to achieve optimum performance  
3.2 Notify customer of work completion  
3.3 Clean work area and make safe according to enterprise procedures |

**Foundation Skills**

<table>
<thead>
<tr>
<th>Skill</th>
<th>Description</th>
</tr>
</thead>
</table>
| Reading | • Reads and interprets plans, specifications instructions and other documentation from a variety of sources and consolidates information to determine requirements  
• Interprets and consolidates test results and data from a range of sources, against defined requirements |
| Writing | • Accurately records and completes enterprise documents and correspondence using clear language and correct spelling, grammar and terminology |
| Oral Communication | • Participates in verbal exchanges with key personnel using appropriate, clear and detailed language to exchange information, ideas or solutions  
• Uses listening and questioning skills to confirm understanding of requirements |
| Numeracy | • Performs mathematical calculations to check, interpret and confirm results of system tests |
| Navigate the world of work | • Complies with explicit policies and procedures  
• Explores and implements where identified the implicit expectations of policies and procedures |
| Interact with others | • Uses a range of accepted practices for communicating in a work environment  
• Complies with work instructions and contributes effectively to work group discussions |
| Get the work done | • Plans and implements routine tasks and workload, making limited decisions on sequencing, timing and collaboration, and seeks assistance in setting priorities |
- Makes low-impact decisions within familiar situations, based on a range of predefined or routine solutions, and evaluates the effectiveness of the outcome
- Uses the main features and functions of digital tools to complete work tasks and access information

### Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. It is restricted to essential operating conditions and any other variables essential to the work environment.

| Type of RF measurement must include: | • determining relative RF power level (in dB)  
• determining relative RF voltage (in dBmV). |
|-------------------------------------|------------------------------------------------------------------------------------------------|
| Instruments must include:           | • RF signal level meter with and without tone generator  
• RF leakage detector. |

### Unit Mapping Information

No equivalent unit. New unit.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- comply with site-specific safety requirements and enterprise work health and safety (WHS) processes and procedures
- comply with all job requirements and WHS regulations, standards and work practices
- check and confirm calibration within appropriate dates of tools and instruments
- operate the following equipment:
  - radio frequency (RF) signal level meter (SLM)
  - RF leakage meter
- perform the following RF measurements:
  - determine relative RF power level (in dB)
  - determine relative RF voltage (in dBmV)
  - determine RF signal quality (MER and BER).

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- instruments used in measuring RF frequencies including:
  - RF signal level meter with and without tone generator
  - RF leakage detector
- types of RF measurements and their respective interpretation for RF frequencies including:
  - determining relative RF power level (in dB)
• determining relative RF voltage (in dBmV)
• consequences of poorly terminated RF connections
• data recording using the unit decibels (in dBmV)
• variations between RF connector adaptor types
• potential WHS hazards, risks and control measures when working with RF frequency measuring equipment
• RF industry spectrum and limits, and allocations.

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

• site/s where measuring instruments can be used
• plant, tools and equipment currently used in industry
• relevant regulatory and equipment documentation that impacts on work activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Skill | Description
---|---
Get the work done | - Plans and implements routine tasks and workload, making decisions on sequencing, timing and collaboration, and seeks assistance in setting priorities  
- Makes decisions within familiar situations, based on a range of predefined or routine solutions, and evaluates the effectiveness of the outcome  
- Uses the main features and functions of digital tools to complete work tasks and access information

**Range of Conditions**

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. It is restricted to essential operating conditions and any other variables essential to the work environment.

| Type of optical measurement must include: | • detecting the presence of an active optical network terminal (ONT)  
• determining absolute optical power (in dBm)  
• determining insertion loss (in dB)  
• determining relative optical power level (in dB) |
| Instruments must include: | • hand-held optical power meter  
• hand-held optical source  
• handheld optical fibre identifier (OFI-FTTx)  
• active optical network termination (ONT) detector  
• optical loss test set (OLTS)  
• passive optical network (PON) meter |

**Unit Mapping Information**

No equivalent unit. New unit.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- comply with all job requirements and work health and safety (WHS) regulations, standards and work practices
- confirm calibration within appropriate dates of instruments
- operate the following equipment:
  - hand-held optical power meter
  - hand-held optical source
  - handheld optical fibre identifier (OFI-FTTx)
  - active optical network termination (ONT) detector
  - optical loss test set (OLTS)
  - passive optical network (PON) meter
- perform the following optical measurements:
  - detect the presence of an active ONT
  - determine absolute optical power (in dBm)
  - determine insertion loss (in dB)
  - determine relative optical power level (in dB).

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- site-specific safety requirements and enterprise WHS processes and procedures
- instruments used in measuring optical power levels including:
• hand-held optical power meter
• hand-held optical source
• handheld OFI-FTTx
• active ONT detector
• OLTS
• PON meter
• types of measurements and their respective interpretation for optical wavelengths
• consequences of mating contaminated optical connectors
• data recording using unit decibels (dBm)
• variations between optical connector adaptor types
• optical spectrum limits and allocations
• safe handling procedures with optical fibres.

Assessment Conditions
Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:
• site/s where measuring instruments can be used
• plant, tools and equipment currently used in industry
• relevant regulatory and equipment documentation that impacts on work activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to work safely on a live optical fibre installation to test and commission a wavelength division multiplexing (WDM) system and to connect a splitter for fibre to the x (FTTx) deployment.

It applies to fibre technicians who engage in safe work practices as members of a team using emerging technologies to deliver very high-speed broadband capacity through the access network for the national broadband network (NBN) initiative.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

ICTBWN307 Use optical measuring instruments

ICTWHS204 Follow work health and safety and environmental policy and procedures

Unit Sector

Telecommunications – Broadband and Wireless Networks

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria and foundation skills, and to:

- comply with all job requirements and work health and safety (WHS) regulations, standards and work practices, and environmental requirements
- use optical power test equipment
- evaluate test results
- safely connect input and output optical fibres to the splitter
- conduct live tests measuring optical signals at three wavelength division multiplexing (WDM) wavelengths on optical devices
- conduct acceptance tests for commissioning that cover:
  - delay
  - dispersion
  - optical attenuation and loss measurements
  - optical power levels
  - phase
- complete connection recording.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- legislation, regulations, codes and standards for compliance that impact on work activities
- relevant organisational policies and procedures
- personal safety issues
• propagation of light in optical communication systems
• role of transmitters and receivers in optical communication systems
• critical aspects of site engineering
• specific WHS risks and controls relating to the handling of optical fibre and the use of laser light sources
• WDM applications.

Assessment Conditions

This unit of competency falls into the definition of high risk work and should be delivered and assessed in accordance with the national standard.

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:
• a WDM system and relevant optical splitter
• tools, equipment and personal protective equipment currently used in industry
• relevant regulatory and equipment documentation that impacts on work activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. Refer also to the Requirements for assessors of high risk units in the ICT Information and Communications Technology Training Package Companion Volume Implementation Guide.

Application

This unit describes the skills and knowledge required to test optical communication systems and components in the field using portable test instruments.

It applies to installation contractors, technical staff and field officers from telecommunications service providers or other private and public organisations or regulatory authorities.

These workers combine technical skills with organisational and administrative skills when working on broadband passive optical networks (PON), fibre to the x (FTTx) networks, hybrid fibre coaxial (HFC) networks and dense wavelength division multiplexing (DWDM) systems during installation, maintenance, commissioning and troubleshooting phases.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

1. Prepare to use optical measuring instruments

1.1 Notify client about site access, security arrangements and location details for optical system and test purpose

1.2 Identify site hazards and notify appropriate personnel to make site safe according to enterprise requirements

1.3 Devise and implement risk control and safety measures when using
high power laser test instruments and optical time-domain reflectometer (OTDR) associated with launch fibres, patch cords or enclosure adaptors

1.4 Prepare testing plan in consultation with client, indicating type of measurement at nominated wavelength, based on equipment specifications

1.5 Select appropriate tools and test instruments according to required measurement and enterprise practice

2. Conduct optical measurements

2.1 Set up test instrument according to manufacturer instructions, work health and safety (WHS) and environmental requirements

2.2 Test patch cords and/or launch/receive fibres are functional

2.3 Inspect and clean optical connectors

2.4 Use appropriate testing techniques to assess performance of optical system or component

2.5 Record test results and compare with standard test specifications according to manufacturer and enterprise guidelines

2.6 Evaluate test results and report on functionality of optical component or equipment, and performance of optical system

3. Complete optical measurement process

3.1 Make recommendations, based on test result interpretations, about optimising component and system performance

3.2 Clean work site and make safe according to enterprise requirements and customer satisfaction

3.3 Notify appropriate personnel of job completion for sign off and present test documentation, according to enterprise requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance, but not explicit in the performance criteria.

Performance Evidence

The candidate must demonstrate, on two occasions, the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- carry out work according to job specifications and work health and safety (WHS) regulations
- determine and plan optical tests and measurements
- use the following optical measuring instruments and devices:
  - laser light source including visual laser light source
  - laser power meter
  - passive optical network (PON) meter
  - optical time domain reflectometer (OTDR)
- perform and record optical measurements for:
  - optical power levels
  - insertion loss of a passive device
  - end-to-end fibre loss (bi-directional)
  - splice loss
  - distance to fault, event, end of fibre using an (OTDR)
- assess and make recommendations from the test results
- document and present test outcomes.

Knowledge Evidence

The candidate must be able to demonstrate the knowledge required for the elements, performance criteria, and foundation skills, which includes knowledge about:

- legislation, regulations, codes and standards that impact on work activities
- consequences of mating contaminated optical connectors
- downstream and upstream signals
• dense wavelength division multiplexing (DWDM) metro and long-haul system architecture
• hybrid fibre coaxial (HFC) architecture (optical section)
• logarithmic power levels (decibels and dBm)
• optical connector types
• optical fibre and laser safety, practices, handling and application
• optical spectrum limits and wavelengths used in various applications and the International Telecommunications Union (ITU) grid
• role of optical transmitters and receivers
• passive optical network (PON) architecture
• transmission system line rates:
  • optical ethernet
  • synchronous digital hierarchy (SDH)
• wavelength division multiplexing (WDM), coarse wavelength division multiplexing (CWDM) and DWDM principles, and optical multiplexers.

Assessment Conditions
Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:
• site/s where installation of supporting infrastructure can be conducted
• plant, tools and equipment currently used in industry
• relevant regulatory and equipment documentation that impacts on work activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes skills and knowledge required to alter existing services to a voice or data cable system within a client's premises and use formal documentation procedures.

It applies to technical staff who alter services to existing cable systems for indoor and outdoor installation within domestic, commercial or industrial installations of communications applications including digital and analog, telephony, data, video, digital broadcasting, computer networks, local area networks (LAN), wide area networks (WAN) and multimedia.

All client cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media Authority (ACMA) accredited registrar.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- determine alteration requirements and document specifications and cable plan
- identify conductor types in, or adjacent to, telecommunications work
- alter, restore and test cable system according to industry standards
- rectify cable faults
- complete documentation to industry and company standards
- comply with all related work health and safety (WHS) requirements and work practices.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- Australian Communications and Media Authority (ACMA) Competency Requirements for Telecommunications Cabling Provider Rules
- required legislation, codes of practice and other formal agreements that impact on the work activity
- a range of cabling options for customer premises including optical and coaxial
- features and operating requirements of test equipment
- information required to operate equipment according to a test specification
- manufacturer’s requirements for safe operation of equipment
- specific WHS requirements relating to the activity and site conditions, test methods and performance requirements
- test methods and performance requirements
- typical cable systems
- common types of alterations that can be expected for existing cable systems
- typical issues, hazards, access difficulties and challenges that occur on site.

**Assessment Conditions**

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- special purpose tools, equipment and materials
- testing equipment currently used in industry
- regulatory and equipment documentation that impacts on alteration activities.

Note: Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Refer to the ICT Implementation Guide Companion Volume for recommended assessor details.

Application

This unit describes the skills and knowledge required to install a telecommunications service to a building to provide a new service or a service upgrade.

It applies to individuals who work in technical roles that require bringing a telecommunications service from the broader network to a client’s premises using metallic or optical cable or wireless connection.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the ICT Implementation Guide Companion Volume or the relevant regulator for details of licensing, legislative or certification requirements.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- prepare and install cable and equipment to a building complying with Australian Communications and Media Authority (ACMA), enterprise and government regulations
- conduct tests related to transmission quality and continuity of cables at network entry point
- label and document installation work, complying with industry codes of practice
- comply with all related work health and safety (WHS) requirements and work practices.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- information required to operate equipment according to a test specification
- features and operating requirements of test equipment
- legislation, codes of practice and other formal agreements that impact on the work activity
- manufacturer’s requirements for safe operation of equipment
- WHS requirements and work practices associated with cable provision, including:
  - adequate warning signs
• protective clothing and personal safety items
• safety devices
• test methods and performance requirements
• typical issues and challenges that occur on site.

Assessment Conditions
Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.
This includes access to:
• sites where telecommunications services may be installed
• installation and testing equipment currently used in industry
• relevant regulatory and equipment documentation that impacts on installation activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to install support systems for cable infrastructure for new installations or upgrades to existing networks in domestic, commercial and industrial premises.

It applies to individuals who work in technical roles planning cable routes and selecting and installing support structures for communications applications including digital and analog telephony, data, video, digital broadcasting, computer networks, local area networks (LANs), wide area networks (WANs) and multimedia.

Licensing, legislative, regulatory and certification requirements apply to telecommunications systems. All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media Authority (ACMA) accredited registrar.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- interpret plans and schematic drawings to verify cable layout
- install three different support structures:
  - catenary wire
  - ducts and/or trays
  - frame back-mounts
- comply with all related work health and safety (WHS) and environmental requirements.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- building construction methods for commercial buildings as they relate to routing cables
- features and operating requirements of cable installation equipment
- services that may impact on cable installations
- cable installation support methods and their performance features
- legislation, regulations, codes, standards, rules and other formal agreements that impact on the work activity, in particular:
  - wiring rules
  - communications cabling manual
  - mandatory and voluntary technical standards
- typical safety issues and challenges that occur on a commercial installation site
- cable types – purpose, construction, characteristics
• cable screening
• recognition of colour
• basic telephony including operation.

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:
• site/s where customer cable support systems can be installed
• equipment currently used in industry
• relevant regulatory and equipment documentation that impacts on cable installation activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer also to the Requirements for assessors in the ICT Information and Communications Technology Training Package Companion Volume Implementation Guide.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- comply with all related work health and safety (WHS) requirements and work practices
- plan cable placement and discuss the installation requirements with appropriate personnel
- organise tools, equipment and materials for cable installation according to specifications
- set up cable dispensers for internal or external premises structures or aerial and underground cabling between premises
- haul and install cables on support structures and building faces for both internal and external locations, applying relevant regulations and standards
- install securing products in accordance with manufacturer specifications and industry standards
- complete records and relevant statutory forms.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in elements, performance criteria, and foundation skills, which includes knowledge about:

- legislation, regulations, codes, standards, rules and other formal agreements that impact on cable installation, in particular:
  - wiring rules
  - mandatory and voluntary technical standards
- specific WHS and environmental requirements relating to cable installation and site conditions, including typical safety issues and challenges that occur on cable installation sites.
• construction of cabling in commercial buildings
• cable and services segregation clearances to ensure cable route complies with legislation and industry codes of practice, manufacturer specifications, and enterprise requirements
• features and operating requirements of equipment required to place and secure cable
• information required to operate appropriate equipment according to specifications
• installation methods and performance requirements
• manufacturer requirements for safe operation of equipment
• common methods of hauling cable and typical damage that can occur to cable when it is hauled incorrectly
• purpose, construction, and characteristics of types of cable used in performance evidence
• cable screening types
• recognition of colour codes
• switching systems, including customer switching services, system distribution frames/test point frames, power failures and line interface requirements
• basic telephony, including operation.

**Assessment Conditions**

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

• site/s where placing and securing customer cable can be conducted
• equipment currently used in industry
• relevant regulatory and equipment documentation that impacts on cable installation activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer also to the *Requirements for assessors* in the ICT Information and Communications Technology Training Package Companion Volume Implementation Guide.

</table>

Application

This unit describes the skills and knowledge required to terminate metallic conductor cable or to join cable in a terminating block for a new cable installation or upgrade of cable capacity for an existing network or subsystem, or cabling infrastructure for convergence to next generation networks (NGNs).

It applies to individuals who work in technical roles carrying out indoor and outdoor, domestic, commercial or industrial installations for all communications applications, digital and analog, telephony, data, video, digital broadcasting, computer networks, local area networks (LANs), wide area networks (WANs) and multimedia.

Licensing, legislative, regulatory and certification requirements apply to telecommunications systems. All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media Authority (ACMA) accredited registrar.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- terminate systems at both distributor and outlet locations
- terminate one jumperable distributor (campus distributor or building distributor) with a capacity of 100 pair or greater and one non-jumperable distributor (local distributor) and a patch panel
- terminate at least one 50 pair, one 4 pair ethernet unshielded twisted pair (UTP) data cable and one ethernet shielded twisted pair (STP) data cable, and accurately complete installation records, drawing alterations and compliance forms
- comply with all related work health and safety (WHS) requirements and work practices
- use correct methods to terminate a range of cables
- conduct and interpret cable test results on a minimum of three different lead-in faults
- update records and plans to show cable locations according to industry standards.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- legislation, regulations, codes, standards and rules that impact on work, in particular:
  - AS/NZS 3000:2018 Electrical installations known as the Australian/New Zealand Wiring Rules.
  - mandatory and voluntary technical standards
- specific WHS and environmental requirements relating to the activity and site conditions, including typical safety issues and challenges that occur on site
- purpose, construction, and characteristics of types of cable used in performance evidence
• recognition of colour
• basic telephony including operations
• strategies to manage cabling infrastructure when terminating cables
• features and operating requirements of testing
• operation of termination tools to manufacturer guidelines
• procedures for installing and maintaining cabling products in line with manufacturer guidelines
• termination methods and performance requirements.

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:
• site/s where metallic conductor cable can be terminated
• colour codes for visual inspections or wire-mappers for 4 pair cable tests
• relevant regulatory and cabling documentation that impacts on cable terminating activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer also to the Requirements for assessors in the ICT Information and Communications Technology Training Package Companion Volume Implementation Guide.

Application

This unit describes the skills and knowledge required to install telecommunications earthing system to metallic frames, utilised for telecommunications systems that include digital and analog, telephony, data, video, digital broadcasting, computer networks, local area networks (LANs), wide area networks (WANs) and multimedia.

It applies to telecommunications technicians and field officers who install indoor or outdoor earthing systems for domestic, small office home office (SOHO), commercial or industrial multi-storey and multi-site locations within customer premises.

Licensing, legislative, regulatory and certification requirements apply to telecommunications earthing systems. All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media Authority (ACMA) accredited registrar.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- evaluate earthing needs for cable systems on customer premises
- determine potential earthing locations
- comply with all related work health and safety (WHS) and environmental requirements and work practices
- determine earth route and support system
- install earth to a backmount, rack or enclosure
- manage remote power feed services.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- legislation, regulations, codes, standards, rules, guidance notes and other formal agreements that impact on work, in particular:
  - wiring rules
  - mandatory and voluntary technical standards
  - Australian Communications and Media Authority (ACMA) competency requirements for Telecommunications Cabling Provider Rules
  - national and state/territory WHS requirements
  - workplace and worksite requirements
- specific WHS and environmental requirements relating to the activity and site conditions, including typical safety issues and challenges that occur on site
- features and operating requirements of test equipment
- information required to operate equipment according to a test specification
- types of location in which installations may be required
- manufacturer requirements for safe operation of equipment
- test methods and performance requirements
- purpose, construction, and characteristics of types of cable used in performance evidence
- cable screening types
- recognition of colour codes
- electrical earthing applications including electrical bonding and equipotential bonding
- earth systems with functionality including elimination of interference from electromagnetic, radio frequency (RF) and power sources, and reduction of interference from electromagnetic RF and power sources.
- switching systems earthing requirements
- basic telephony including operation.

**Assessment Conditions**

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:
- special purpose tools, equipment and materials
- a relevant telecommunications earthing system
- cable plans and records.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer also to the *Requirements for assessors* in the ICT Information and Communications Technology Training Package Companion Volume Implementation Guide.

ICTCBL246 Install, maintain and modify customer premises communications cabling: ACMA Restricted Rule

Modification History

<table>
<thead>
<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
</table>
| Release 2 | This version released with ICT Information and Communications Technology Training Package Version 6.0.  
Release 2 created for editorial corrections. |
| Release 1 | This version released with ICT Information and Communications Technology Training Package Version 5.0. |

Application

This unit describes the skills and knowledge required to safely install, maintain and modify communications cabling, according to the Australian Communications and Media Authority (ACMA) ‘restricted’ Cabling Provider Rules, on customer premises for cabling terminated on sockets and network termination devices (NTDs) of indoor and external metallic cable in either aerial or underground situations.

It applies to individuals who connect telecommunications devices including telephony systems, security alarm panels and fire control panels in either a new cable installation or upgrade of cable capacity for an existing network or subsystem for convergence to next generation network (NGN) applications.

Customer premises are typically domestic, small offices, home offices and small businesses. Large commercial and industrial premises are generally excluded, except in special circumstances where the cabling is behind a compliant device and is not via jumperable distributors or patch panels.

Licensing, legislative, regulatory and certification requirements apply to telecommunications systems. All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an ACMA accredited registrar.

Pre-requisite Unit

ICTTEN208 Use electrical skills when working with telecommunications networks  
ICTWHS204 Follow work health and safety and environmental policy and procedures
**Unit Sector**

Telecommunications – Cabling

**Elements and Performance Criteria**

</thead>
<tbody>
<tr>
<td><strong>Elements describe the essential outcomes.</strong></td>
<td><strong>Performance criteria describe the performance needed to demonstrate achievement of the element.</strong></td>
</tr>
</tbody>
</table>
| 1. Plan restricted cabling work | 1.1 Identify building infrastructure that places critical constraints on cabling  
                                   | 1.2 Apply organisational strategies to manage other infrastructure in relation to cabling  
                                   | 1.3 Notify appropriate personnel of identified safety hazards at cabling work site |
| 2. Manage remote power feed    | 2.1 Identify and avoid risks posed by contact with remote power feeding services when performing cabling activity  
                                   | 2.2 Make site safe by identifying remote power feeding services that operate at above telecommunications network voltage (TNV) inside customer premises |
| 3. Install cables and protective earth wires | 3.1 Install cables according to manufacturer application specifications, including tension and bending stress requirements  
                                   | 3.2 Identify and avoid sources of possible damage to cable, including hot pipes, sharp edges and cable burn  
                                   | 3.3 Allow sufficient excess at cable ends to facilitate termination  
                                   | 3.4 Place and secure cable to maintain safety and interference segregation according to legislative and industry standards  
                                   | 3.5 Install cable fasteners with correct tension to prevent cable sheath damage or transmission impairment and trimmed flush to prevent risk of personal damage  
                                   | 3.6 Use appropriate underground cable installation techniques associated with minimum depth of cover and segregation from hazardous electrical and other services according to current Australian Standards  
                                   | 3.7 Identify issues surrounding underground cables (excluding blown fibre tube systems) to incorporate a blocking agent within the cable to prevent the ingress of water  
<pre><code>                               | 3.8 Use appropriate aerial cable installation techniques associated with minimum clearance, segregation from hazardous electrical and other services and minimum height requirements according to current Australian Standards |

<tr>
<td>6. Create records</td>
<td>6.1 Provide customer with a job sign-off telecommunications cabling advice form at the completion of each cabling task.</td>
</tr>
<tr>
<td></td>
<td>6.2 Complete NTD record cards for work undertaken.</td>
</tr>
</tbody>
</table>
### ELEMENT | PERFORMANCE CRITERIA
---|---
7. Monitor work activity | 7.1 Supervise unregistered cablers undertaking work in line with scope of own role and organisational procedures
7.2 Ensure cabling activity is according to legislative requirements for safety and network integrity including the relevant Australian Standards

### Foundation Skills

*This section describes those language, literacy, numeracy and employment skills that are essential to performance, but not explicit in the performance criteria.*

<table>
<thead>
<tr>
<th>Skill</th>
<th>Description</th>
</tr>
</thead>
</table>
| Reading | • Recognises and responds to some conventions of complex texts  
• Recognises when unknown words are essential to meaning and uses a range of decoding strategies to identify them |
| Writing | • Uses a legible handwriting style or a computer font appropriate to the audience and purpose |
| Oral Communication | • Demonstrates awareness of choices for register, especially in situations that are familiar |
| Numeracy | • Relies substantially on hands-on (concrete) and real life materials, personal experience and prior knowledge to make estimations and check the reasonableness of processes  
• Identifies appropriate tools and uses them to take measurements  
• Interprets information based on results of technical tests |
| Navigate the world of work | • Takes personal responsibility for adherence to legal/regulatory responsibilities relevant to own work context, and draws attention to any issues that may affect self or others |
| Get the work done | • Implements actions as per plan, making slight adjustments if necessary, and addressing some unexpected issues  
• Automatically implements standard procedures for routine decisions in response to familiar problems |

### Range of Conditions

*Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. It is restricted to essential operating conditions and any other variables essential to the work environment.*
Termination systems must include:
- network termination device
- Australian modular socket
- Mode 3 alarm socket
- RJ45, RJ12 or RJ11 modular socket

(Note: jumperable distributors are not included in this requirement)

Earthing and protection must include:
- earthing for protection
- surge suppression

**Unit Mapping Information**

</table>

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- complete a cabling installation and termination for:
  - three different types of telephone sockets:
    - Australian modular socket
    - RJ45, RJ12 or RJ11 modular socket
    - Mode 3 alarm socket
  - one network termination device (NTD), including the completion of TCA1 compliance forms and NTD records
- apply cable conductor identification codes to connector pins
- conduct tests and interpret cable test results
- interpret and apply standards and regulations
- comply with all related work health and safety (WHS) requirements and work practices
- meet Australian Communications and Media Authority’s (ACMA) requirements
- install earthing to suit cabling conditions
- identify and rectify faulty cabling
- use appropriate personal protective equipment when performing cabling tasks.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.
Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- legislation, regulations, codes, standards, rules, guidance notes and other formal agreements that impact on work, in particular:
  - Australian Communications and Media Authority (ACMA) Telecommunications Cabling Provider Rules, cabling registrars, cabler registration rules, regulations and standards
  - current Australian Standards including AS/CA S009:2013 Installation requirements for customer cabling (Wiring Rules)
  - national and state/territory WHS requirements
  - workplace and worksite requirements
  - cabling environment, cable type, cable identification, termination systems, earthing and protection, records
  - ACMA certified components list
  - labelling requirements
- basic electrical principles of:
  - insulation, resistance
  - capacitance
  - impedance – as causes of, impedance, attenuation and cross-talk
- cable conductor – types of codes
- customer switching systems and services
- printed circuit boards
- cable screening types
- colour codes
- various cable types, their identifiers, termination systems, separations, support systems and fastening techniques used for communications cabling
- features and operating requirements of recognised cabling specific industry test equipment
- information required to operate equipment according to a test specification
- manufacturer requirements for safe operation of equipment
- test methods and performance requirements
- installation requirements for underground and aerial cables including:
  - minimum depth of cover (below ground)
  - segregation from hazardous electrical and other services
  - earthing requirements
- design parameters for underground cables with regards to the purpose they will serve and the prevention of water ingress.

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.
Access is required to:

- site/s on which communications cabling activities can be carried out
- cabling and field equipment currently used in industry
- licensing requirements and other site related documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. Refer also to the Requirements for assessors in the ICT Information and Communications Technology Training Package Companion Volume Implementation Guide.

</tbody>
</table>

Application

This unit describes the skills and knowledge required to safely install, maintain and modify customer premises communications cabling according to the Australian Communications and Media Authority (ACMA) ‘open’ Cabling Provider Rules for small installations connected to sockets, and larger commercial and industry installations involving many lines, multi-pair cables, backbone cabling, multi-story buildings and advanced termination modules and distributors.

It applies to individuals who provide services in telephony, carrier modems or multiplexers, private modems or data systems operating over a category one or two twisted pair metallic customer cable in a specific customer location. Individuals may install, maintain or modify new cable or upgrade cable capacity either, indoor, external, underground or aerial cabling on private and public property for an existing network or subsystem, or cabling infrastructure for convergence to next generation networks (NGNs).

Licensing, legislative, regulatory and certification requirements apply to telecommunications systems. All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an ACMA accredited registrar.

Where aerial and underground cabling are used to supply services to the public, the specialist competencies as indicated in the ACMA Cabling Provider Rules – Pathways to cabling registration publication must be attained to undertake that work.

Pre-requisite Unit

ICTTEN208 Use electrical skills when working with telecommunications networks

ICTWHS204 Follow work health and safety and environmental policy and procedures
**Unit Sector**
Telecommunications – Cabling

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- complete a cabling installation and termination for:
  - three different types of telephone sockets:
    - Australian modular socket
    - RJ45, RJ12 or RJ11 modular socket
    - Mode 3 alarm socket
  - one network termination device (NTD), including the completion of TCA1 compliance forms and NTD records
- read and interpret drawings related to cable layouts, outlet location, cable coding system, and identifiers and distributor locations
- comply with all work, health and safety (WHS) requirements and work practices
- meet Australian Communications and Media Authority (ACMA) requirements
- apply cable conductor identification codes to connector pins
- conduct tests and interpret cable test results
- identify the correct telecommunications cable by its colour identifier
- terminate systems at both distributor and outlet locations
- install and terminate two jumperable distributors (campus distributor or building distributor) with a capacity of 100 pair or greater
- terminate one non-jumperable distributor (local distributor)
- terminate both cable ends for at least one 50 pair cable, 10 or 20 pair cable and one 4 pair data cable, including accurate completion of installation records, drawing alterations and compliance forms
- place cables on support structures and building faces for both internal and external locations
- secure cables with appropriate fasteners for the above locations
- apply work practices that avoid cable damage
- install at least one common type of earthing system used in customer premises for cabling systems
- interpret and apply relevant legislation, regulations, codes, and standards
- install earthing to suit cabling conditions
- identify and rectify faulty cabling
- use appropriate personal protective equipment when performing cabling tasks.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

**Knowledge Evidence**

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- legislation, regulations, codes, standards, rules, guidance notes and other formal agreements that impact on work, in particular:
  - Australian Communications and Media Authority (ACMA) Telecommunications Cabling Provider Rules, cabling registrars, cabler registration rules, regulations and standards
  - current Australian Standards including AS/CA S009:2013 Installation requirements for customer cabling (Wiring Rules)
  - national and state/territory WHS requirements
  - workplace and worksite requirements
  - cabling environment, cable type, cable identification, termination systems, earthing and protection, records
  - ACMA certified components list
  - labelling requirements
- basic electrical principles of:
  - insulation, resistance
  - capacitance
  - impedance – as causes of, impedance, attenuation and cross-talk
- cable screening types
- colour codes
- cable conductor – types of codes
- customer switching systems and services
- printed circuit boards
- customer cabling environment for which cabling registration may be required for internal, external, above ground or below ground installation
- information required to operate equipment according to a test specification
- various cable types, their identifiers, termination systems (including jumperable and non-jumperable distributor), separations, support systems and fastening techniques used for telecommunications cabling
- documentation and records required when cabling
- manufacturer requirements for safe operation of equipment
- earthing and protection strategies and technologies relevant to different cabling applications
- test methods and performance requirements
- typical issues and challenges that occur on site
- installation requirements for underground and aerial cables including:
  - minimum depth of cover (below ground)
  - segregation from hazardous electrical and other services
  - earthing requirements
- design parameters for underground cables with regards to the purpose they will serve and the prevention of water ingress
- devices for a range of telecommunications cabling applications, including, ethernet data systems, audio and video systems, security systems and fire protection systems
- integral bearer wires and application according to current Australian Standards
- cable blocking agents used to prevent the ingress of water underground (excluding blown fibre tube systems)
- features of cables designed for underground use that may be laid in conduit trenches or directly buried
- responsibilities and process for communications installation works.

**Assessment Conditions**

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- site/s on which communications cabling activities can be carried out
- two jumperable distributors (campus distributor or building distributor) with a capacity of 100 pair or greater
- one non-jumperable distributor (LD) and a patch panel
- a 50 pair and 4 pair and one ethernet cable
- cabling and field equipment currently used in industry
- relevant regulatory and site related documentation.
Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. Refer also to the Requirements for assessors in the ICT Information and Communications Technology Training Package Companion Volume Implementation Guide.

Application

This unit describes the skills and knowledge required to install, splice and terminate hard-line coaxial cable in the customer access network (CAN) environment for emerging technologies.

It applies to technical staff who splice and terminate hard-line coaxial cable used in all telecommunications applications including convergence technologies of telephony, data, video and multimedia as part of next generation networks (NGNs).

Licensing, legislative, regulatory and certification requirements apply to telecommunications earthing systems. Refer to the ICT Information and Communications Technology Companion Volume Implementation Guide or the relevant regulator for details of licensing, legislative or certification requirements.

Unit Sector

Telecommunications – Cabling

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- determine installation requirements
- prepare site for hard-line coaxial cable installation
- identify hard-line coaxial cable types
- perform an in-line splice
- terminate hard-line coaxial cable using specialised hand or power tools and equipment
- terminate hard-line coaxial cable to network devices using:
  - a pin connector
  - 90- or 180-degree adaptors
  - housing to housing adaptor
- determine and achieve pin connector centre pin lengths on a device per device basis
- heat shrink hard-line splice or termination using the clean, abrade, flame-brush method
- waterproof jointed cable using heat shrinkage
- apply related work health and safety (WHS) requirements and work practices
- conduct continuity tests
- fit spliced coaxial cable in suitable housing (underground/aerial strand) and attach fitted off devices to:
  - pit or manhole wall, according to manufacturer specifications or carrier work instructions, taking care not to cause damage to co-located cables or joints
  - catenary according to manufacturer specifications or carrier work instructions, ensuring all clearances, separations and segregations from other cables or pole hardware is maintained
- confirm installation complies with industry and manufacturer specifications and warranties while:
  - maintaining all clearances separations and segregations from other cables or pole hardware
  - taking care not to cause damage to co-located cables or joints
• mark-up as-built plans and document work according to industry requirements.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence
The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

• RF common and RF design symbols
• RF design and other associated plans
• coaxial cables and connectors, and their application
• equipment and processes to perform a continuity test
• manufacturer requirements for safe operation of equipment and tools relevant to working with coaxial cable
• typical issues and challenges that occur on site including:
  • recycling of old connectors for use with existing devices resulting in incompatibility issues due to incorrect centre pin length leading to intermittent or ongoing faults
  • WHS requirements relating to the activity and site conditions, including site security
  • relevant legislation, codes and other formal agreements that impact on the work activity
  • updating of records to report on completed works.

Assessment Conditions
Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:
• site/s where splicing and terminating of coaxial broadband cable can be conducted
• testing equipment currently used in industry
• relevant legislation, work instructions and equipment documentation that impacts on cable splicing, terminating and testing activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- plan the works and prepare the site
- read and interpret drawings and designs to interpret installation requirements
- haul cable applying related work health and safety (WHS) requirements and work practices
- transition cable from aerial to underground or underground to aerial
- use cable dispensing equipment
- use specialised hand or power tools and equipment for hauling cable safely
- test the installation, document and escalate the test result
- prepare all reports and records to industry and enterprise standards.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- legislation, regulations, codes, standards, enterprise requirements and other formal agreements that impact on hauling cable
- specific WHS requirements and environmental procedures relating to the activity and site conditions
- Australian Communications and Media Authority (ACMA) Telecommunications Cabling Provider Rules competency requirements
- features and operating requirements of test equipment
- information required to operate equipment according to a test specification
- manufacturer recommendations for correct hauling of cables
• safety precautions when working with laser-based systems
• test methods and performance requirements
• typical issues and challenges that occur on site
• cable protection guards
• hardware to secure cables.

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:
• site/s where installation of underground cable can be conducted
• installation equipment currently used in industry
• relevant regulatory and equipment documentation that impacts on cable installation activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. Refer also to the Requirements for assessors in the ICT Information and Communications Technology Training Package Companion Volume Implementation Guide.

Application

This unit describes the skills and knowledge required to install aerial cables in customer and access networks. It involves installing, terminating and securing cables. Aerial cable installation may be for a new cable, a cable upgrade, or a cable in need of repair.

It applies to telecommunications lines workers and line installers who use support anchors and catenaries for new installations and upgrades, or to maintain existing networks in domestic, commercial and industrial installations to deliver services in x-digital subscriber line (xDSL), fibre to the X (FTTx) and hybrid fibre coaxial (HFC) networks.

Licensing, legislative, regulatory and certification requirements apply to telecommunications systems and working at heights. All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media Authority (ACMA) accredited registrar. Refer to the ICT Information and Communications Technology Training Package Companion Volume Implementation Guide or the relevant regulator for details of licensing, legislative or certification requirements.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- plan the works and prepare the site
- read and interpret drawings and construction designs to interpret installation requirements
- use cable dispensing equipment
- haul aerial cable using hauling hardware
- transition cable from aerial to underground / underground to aerial
- secure and seal aerial cable
- apply work health and safety (WHS) requirements and work practices relating to hauling and fixing the above cables, including:
  - identifying safe support structures from pole status markings, visual inspection or approved testing procedures
  - completing documentation associated with installing aerial cable pole and ladder safety
- use specialised hand or power tools and equipment for installing aerial cable safely
- test the installation, document and escalate the test result.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- legislation, regulations, codes, standards, enterprise requirements, authorisations and other formal agreements that impact on hauling and fixing aerial cables
- specific WHS requirements and environmental procedures relating to the activity and site conditions
• typical safety issues and challenges that occur on site
• features and operating requirements of cable test equipment
• information required to operate equipment according to a test specification
• procedures for installing a range of aerial cable types
• manufacturer recommendations for correct hauling of cables
• relevant licence requirements for working at heights
• manufacturer specifications and industry requirements for safe operation of equipment
• test methods and performance requirements
• required authorisations for pole access.

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:
• site/s where aerial cable can be installed
• plant, tools and equipment currently used in industry to erect aerial cable
• relevant regulatory and equipment documentation that impacts on aerial cable installation activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTCBL251 Install aerial and underground cable lead-ins

Modification History

<table>
<thead>
<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version released with ICT Information and Communications Technology Training Package Version 5.0.</td>
</tr>
</tbody>
</table>

Application

This unit describes the skills and knowledge required to install indoor and outdoor aerial and underground lead-ins for a new metallic or optical cable installation, or upgrade of an existing network or subsystem, or cabling infrastructure for convergence to next generation networks (NGN), digital reception and broadband.

Cable installation may be for a new cable, a cable upgrade or a cable in need of repair. It can be applied to new installations and upgrades of telecommunications cabling projects in domestic, commercial and industrial customer installations.

It applies to technical staff who haul underground or fixed aerial cable lead-in to deliver services in x-digital subscriber line (xDSL), fibre to the home (FTTH) and hybrid fibre coaxial (HFC) networks. This work may require the use of tension meters and hauling equipment.

Licensing, legislative, regulatory and certification requirements apply to telecommunications systems. All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media Authority (ACMA) accredited registrar. Refer to the ICT Information and Communications Technology Training Package Companion Volume Implementation Guide or the relevant regulator for details of licensing, legislative or certification requirements.

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
<tr>
<td>1. Prepare for cable</td>
<td>1.1 Obtain construction plan from appropriate personnel to scope</td>
</tr>
</tbody>
</table>
### ELEMENT | PERFORMANCE CRITERIA
---|---
installation | work and arrange for site access  
1.2 Access site according to enterprise procedure  
1.3 Inform appropriate personnel of identified hazards and safety constraints on worksite  
1.4 Obtain cable installation plan and set up installation equipment according to manufacturer requirements  
1.5 Identify existing ‘other’ services by analysing drawings and following Dial Before You Dig (DBYD) protocols  
1.6 Determine cable route and type of cable from construction plan, identifying and avoiding other services  
1.7 Select suitable protective clothing, tools and equipment, and safety equipment, and confirm support structures are safe

2 Install aerial cable lead-in | 2.1 Use safe support structures and appropriate tools  
2.2 Select required type of cable bearer and determine need for separate catenary wire or self-supporting installation  
2.3 Install and secure catenary wire, integral bearer cable (IBC) or self-supporting cable permanently to support structure using aerial fixing devices, and adjust tension to meet relevant height and minimum sag requirements to required specifications  
2.4 Secure cable safely, leaving cable loop on support structure  
2.5 Install mid-span fly offs according to cable configuration, using approved hardware  
2.6 Install cable ensuring no damage is caused  
2.7 Maintain physical characteristics of cable leaving cable loop on support structure according to cable configuration  
2.8 Terminate and test cable continuity in customer enclosure and aerial enclosure  
2.9 Label cables according to industry guidelines and authorisations

3 Install underground cable lead-in | 3.1 Ensure pipe or conduit is not blocked and is clear of debris  
3.2 Run push rod through pipe and attach cable for hauling  
3.3 Haul cable using lubricant, cable slippers or rollers to ensure no sheath damage when hauling at correct tension into and out of enclosures  
3.4 Provide sufficient cable allowance in enclosures for jointing and maintenance requirements  
3.5 Terminate cable in customer enclosure and pit enclosure
### ELEMENT | PERFORMANCE CRITERIA
--- | ---
4 Seal and secure cable | 4.1 Seal cable ends to prevent entrance of foreign material according to manufacturer specifications and industry standards  
| | 4.2 Secure cable loop on support structure to minimise damage to conductors  
| | 4.3 Weatherproof building entry points as required  
| | 4.4 Fit over voltage protection devices to all cables with metallic component as required
5 Complete tasks on site | 5.1 Record any approved alteration to original design and return to appropriate personnel  
| | 5.2 Complete appropriate records and sign reports as required according to industry policy  
| | 5.3 Restore site to original condition and dispose of waste in environmentally safe manner  
| | 5.4 Notify appropriate personnel and obtain sign-off

### Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance, but not explicit in the performance criteria.

<td>Release 1</td>
<td>This version released with ICT Information and Communications Technology Training Package Version 5.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- plan the works and prepare the site
- install at least two types of aerial cable and one type of underground cable, including placing and securing cables on support structures and building faces for both internal and external locations
- install at least one mid-span fly offs utilising industry specific/approved hardware
- haul, secure and terminate, continuity test and seal cables
- perform visual inspection to identify safe support structures from pole status markings
- use specialised hand or power tools and equipment for safely installing aerial and underground cable
- terminate cables at the customer and network ends of aerial and underground installations
- complete and provide a report, documenting the installation for the customer
- comply with all related work health and safety (WHS) requirements, industry standards, authorisations and work practices.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- legislation, codes, enterprise procedures and other formal agreements that impact on the work activity
- codes, standards, industry guidelines and authorisations for cable installation and cabling
- specific WHS requirements and environmental procedures relating to the activity and site conditions
• relevant regulatory requirements for working at heights and working underground
• common types of cable used in telecommunications
• manufacturer requirements for selection and safe operation of tools and equipment
• safety equipment, both personal and worksite related, required for safe work practices
• required fixing devices and hardware used in cable lead-in work
• termination methods and performance requirements that include cable continuity of installed cables
• typical safety issues and challenges that occur on site, including issues relating to the safe use of support structures
• purpose of records and documentation required for work activity.

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

• site/s where aerial and underground cable lead-ins can be conducted
• plant, tools, equipment and personal protective equipment currently used in industry
• special purpose tools, equipment and materials currently used in industry such as continuity testing equipment
• relevant regulatory and equipment documentation that impacts on work activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to install, joint and terminate coaxial cable in the customer access network (CAN) environment for emerging technologies using high speed broadband and the delivery of cable television services on customer premises for domestic, commercial or industrial installations.

It applies to technical staff who joint and terminate coaxial cable used in all telecommunications applications, including convergence technologies of telephony, data, video and multimedia as part of next generation networks (NGNs).

Licensing, legislative, regulatory and certification requirements apply to telecommunications systems. All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media Authority (ACMA) accredited registrar. Refer to the ICT Information and Communications Technology Training Package Companion Volume Implementation Guide or the relevant regulator for details of licensing, legislative or certification requirements.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- determine installation requirements, and check and prepare the site ready for coaxial cable installation
- perform an in-line splice
- perform jointing and termination of coaxial cable using specialised hand or power tools and equipment
- complete waterproof jointed cable using heat shrinkage
- apply related work health and safety (WHS) requirements and work practices
- conduct signal strength tests and interpret results
- fit jointed coaxial cable in suitable housing
- check and adjust cable segregations
- verify the installation complies with enterprise and manufacturer specifications and warranties
- document work according to enterprise requirements.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- relevant legislation, regulations, codes, standards, enterprise guidelines, formal agreements and contracts that impact on the work activity
- specific WHS requirements and environmental procedures relating to the activity and site conditions, including site security and typical safety issues and challenges that occur on site
• range of coaxial cables and connectors and their application
• information required to operate equipment according to a test specification
• features and operating requirements of test equipment
• manufacturer requirements for selection, installation and safe operation of equipment
• test methods and performance requirements
• impact that other services may have on installation work
• operation of tools relevant to working with coaxial cable
• environmental requirements for waste and debris disposal.

Assessment Conditions
Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:
• site/s where jointing coaxial broadband cable can be conducted
• special purpose tools, equipment and materials currently used in industry such as joint testing equipment
• relevant regulatory and equipment documentation that impacts on cable jointing and testing activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to construct underground telecommunications infrastructure, made up of conduits and enclosures, for cabling provisioning.

It applies to individuals in technical roles in civil construction who install pits and pre-built enclosures with connecting pipes for underground telecommunications infrastructure, predominantly in greenfield sites.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – cabling

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- interpret and apply design plans and prepare for construction
- install enclosures including pipe, pit and prefabricated manholes
- construct in two different soil types: sand, rock, soil or combination soil types
- shore an excavation site to meet enterprise and regulatory requirements
- use specialised hand or power tools and equipment normally used for excavation, pipe, conduit installation and site restoration safely
- complete and document specified work
- apply related work health and safety (WHS) requirements and work practices associated with excavation, enclosure installation and site restoration.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- legislation, codes, enterprise guidelines and other formal agreements that impact on the work activity, including excavation
- specific WHS requirements and environmental guidelines relating to the activity and site conditions, including typical safety issues and challenges that occur on site
- civil construction elements including:
  - operation of construction plant, tools and equipment
  - methods of enclosure construction
  - methods for laying foundations
  - construction design plans
• manufacturer requirements for safe operation of equipment
• relevant licence requirements for equipment used in constructing underground infrastructure.

Assessment Conditions
Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:
• site/s where enclosure construction can be conducted
• construction equipment currently used in industry
• relevant regulatory and equipment documentation that impacts on construction.

Application

This unit describes the skills and knowledge required to joint metallic, conductor cable on the service provider side of the network boundary in communications applications, including digital and analog, telephony, data, video, digital broadcasting, computer networks, local area networks (LANs), wide area networks (WANs) and multimedia.

It applies to individuals working in technical roles who joint metallic conductor cable for indoor and outdoor installations on new installations and cable upgrades, and maintain infrastructure in domestic, commercial and industrial situations for service providers and asset owners.

Licensing, legislative, regulatory and certification requirements apply to telecommunications systems. All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media (ACMA) accredited registrar.

Application

This unit describes the skills and knowledge required to modify an infrastructure to cutover new cables into an existing indoor and outdoor, domestic, commercial or industrial cabling installation including communications applications in telephony, broadband, data, video, radio frequency (RF) equipment, security and computer networks, including local area networks (LAN), wide area networks (WAN) and multimedia.

It applies to field officers, technicians or lineman installers from carriers, contractors or other service providers who upgrade coaxial or optical fibre cables as part of a hybrid fibre coaxial (HFC) network, a broadband access network or a large client private network.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the Implementation Guide Companion Volume or the relevant regulator for specific guidance on requirements.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- prepare for cutover
- rearrange cable
- conduct tests to determine success of cutover
- interpret results and rectify faults occurring as a result of cutover
- apply regulations and standards related to the cable rearrangement
- comply with all related health and safety requirements, work practices and service level agreements.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- cabling types, connectors and cabling structures
- legislation, codes of practice and other formal agreements that impact on the work activity
- manufacturer’s requirements for safe operation of equipment
- cutover of cable on the client's equipment
- health and safety requirements relating to the activity and site conditions
- test methods and performance requirements
- features and operating requirements of test equipment
- typical issues and challenges that occur on the worksite
- purpose of warranties and service level agreements (SLA).

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry. This includes access to:

- systems and equipment involving cutover
- installation equipment currently used in industry
- relevant regulatory and equipment documentation that impacts on work activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to install, test and terminate optical fibre cable on customer premises for communications applications using a range of terminations that may include direct termination, fusion splicing and mechanical splicing.

It applies to technical staff who place, secure and terminate optical fibre cable in new installations and upgrades or maintain existing networks in domestic, commercial and industrial installations. Communications applications include digital and analog, telephony, data, video, digital broadcasting, computer networks, local area networks (LANs), wide area networks (WANs) and multimedia.

Licensing, legislative, regulatory and certification requirements apply to telecommunications systems. All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media Authority (ACMA) accredited registrar.

</tbody>
</table>
| 1. Prepare for installation of optical fibre cable | 1.1 Access site according to enterprise procedures  
1.2 Inform appropriate personnel of identified worksite hazards  
1.3 Organise tools, cabling products, equipment and materials for given work  
1.4 Match optical fibre cable type and connectors to installation environment and customer requirements  
1.5 Check proposed route and bend ratios according to manufacturer specifications and industry standards  
1.6 Test fibres in the cable on the drum for optical continuity as required  
1.7 Use personal protective equipment, including safety glasses, when working with bare fibre stripping/cleaving and utilise sharps disposal containers for bare fibre off cuts  
1.8 Place fibre patch leads in support pathway, avoiding pressure, crushing and bending |
| 2 Clean and inspect connectors | 2.1 Test patch leads, before use, for continuity with a visible light source and inspect and clean connector end faces  
2.2 Test fibre connectors ensuring the circuit has no infra-red transmission (dark fibre)  
2.3 Ensure that associated equipment is labelled to inform others not to switch the equipment on or reconnect patch leads  
2.4 Remove connector dust cover and inspect for dust and damage using an optical microscope or video microscope  
2.5 Clean connectors with recommended cleaning tools, using wet and dry methods as required and re-inspect  
2.6 Replace connectors or patch cords when inspection reveals irreparable damage or contamination cannot be cleaned off  
2.7 Place fibre patch leads in support pathway avoiding pressure, crushing and bending |
| 3. Install indoor/outdoor cables and pigtails to an indoor enclosure | 3.1 Undertake work in a controlled environment  
3.2 Strip loose tube fibre cable and fit cable and fibres to an indoor enclosure  
3.3 Prepare pigtails on workstation in an orderly manner matching cable fibre colour codes to pigtail colour codes as required |
| 4. Terminate or fusion-splice cable | 4.1 Prepare fibre for splicing, cleaning and cleaving  
4.2 Splice prepared fibres |

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- install, terminate and test optical fibre cable, applying safety precautions when working with laser-based systems
- prepare workstation to provide for fibre preparation, cleaving, fusion splicing, enclosure fit out, cleaning pads and tools, sharps and waste disposal
- ensure workstation is located in a dust free environment with adequate ventilation, lighting and power
- install and test single mode and multimode cable
- perform direct field termination
- provide customer report documenting installation and test results
- comply with all related work health and safety (WHS) and environmental requirements and work practices
- install a mechanical splice connector and fusion splice a pigtail to cable fibre
- complete relevant documentation to manufacturer and design requirements.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:
- legislation, codes and standards for optical fibre
- specific WHS requirements and enterprise procedures relating to the activity and site conditions
- various types of optical fibre cable and associated connectors, enclosures and required equipment
- features and operating requirements of optical fibre cable test equipment
- information required to operate equipment according to a test specification
- manufacturer requirements for safe operation of optical fibre equipment
- safety precautions when working with laser-based systems
- hazards associated with working with optical cable including:
  - bare fibres
  - hazardous laser light
- test methods and performance requirements
- issues relating to environmental work practices and the disposal of waste
- techniques for types of termination, including:
  - direct termination
  - fusion splicing.

**Assessment Conditions**

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- sites where installation and termination of optical fibre cable can be conducted
- special purpose tools, equipment and materials currently used in industry such as optical fibre testing equipment
- relevant regulatory and equipment documentation that impacts on optical fibre cable installation activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. Refer also to the Requirements for assessors in the ICT Information and Communications Technology Training Package Companion Volume Implementation Guide.

Note: All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media (ACMA) accredited registrar.

Application

This unit describes the skills and knowledge required to test the performance of copper, optical fibre and telecommunications cable on customer premises for the purpose of commissioning, fault identification or routine maintenance. It includes ensuring a safe and secure work environment while work is being undertaken.

It applies to field officers, technicians or technical supervisors working for cablers, technicians, contractors or other service providers who carry out domestic, commercial or industrial installations in indoor and outdoor environments. Communications applications include digital and analog, telephony, data, video, digital broadcasting, computer networks, local area networks (LANs), wide area networks (WANs), power over ethernet (PoE) cable installations and multimedia.

Licensing, legislative, regulatory and certification requirements apply to telecommunications systems. All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media Authority (ACMA) accredited registrar.

Pre-requisite Unit

ICTCBL247 Install, maintain and modify customer premises communications cabling: ACMA Open Rule

ICTTEN208 Use electrical skills when working with telecommunications networks

ICTWHS204 Follow work health and safety and environmental policy and procedures

<tbody>
<tr>
<td><strong>Elements describe the essential outcomes.</strong></td>
<td><strong>Performance criteria describe the performance needed to demonstrate achievement of the element.</strong></td>
</tr>
</tbody>
</table>
| 1. Prepare for cable and system test | 1.1 Establish purpose of test to be conducted on cables and systems based on customer complaints of faulty or poor system performance operations  
1.2 Confirm ACMA (Australian Communications and Media Authority) requirements and methods for compliance with relevant legislation, regulations, codes and standards  
1.3 Select required tests according to site conditions, customer complaint documentation and manufacturer specifications  
1.4 Arrange access to site and confirm service is available for testing  
1.5 Select test equipment, tools and materials according to required industry testing standards |
| 2. Perform tests | 2.1 Use tools and test equipment according to manufacturer specifications and undertake tests required after initial analysis of customer complaints  
2.2 Perform work safely to remove risk of injury to operator, other users and equipment  
2.3 Perform checks and adjustments to ensure operating environmental factors will not prejudice test results  
2.4 Perform optical time domain reflectometer testing to determine fibre and event characteristics according to meet customer or enterprise specifications and manufacturer warranties  
2.5 Perform structured cabling certification testing to determine cable system characteristics according to customer or enterprise specifications and manufacturers warranties  
2.6 Evaluate PoE circuits, cable lengths, copper conductor sizes, resistance versus power losses, environmental temperatures and likely power levels to ensure circuit current, voltage and power to the receiving device |
| 3. Interpret test results and determine action | 3.1 Read test results accurately and compare with manufacturer and site specifications for cable performance  
3.2 Evaluate test results, taking into account measurement error margins against a known reference as required  
3.3 Assess test results fairly and accurately using verifiable data  
3.4 Rectify faults or escalate to appropriate person |
**ELEMENT** | **PERFORMANCE CRITERIA**
---|---
4. Complete records and clean up site | 4.1 Document test results and ensure test results remain current  
4.2 Verify test results and provide to customer as required  
4.3 Update site and installation files to ensure information on system performance is traceable including PoE standards  
4.4 Reinstall site according to customer and company requirements  
4.5 Notify customer and obtain sign-off

**Foundation Skills**

*This section describes those language, literacy, numeracy and employment skills that are essential to performance, but not explicit in the performance criteria.*

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- perform certification tests on copper ethernet cables to cover common ethernet cable faults including:
  - crosstalk, attenuation to crosstalk ratio (ACR), delays, wiremaps, attenuation, length
- perform optical time domain reflectometer (OTDR) tests on fibre cables to cover common fibre cable faults and common waveforms for standard fibre cabling events, including:
  - breaks, distance, connectors, Numerical Aperture mismatches, end of fibre, ghosts, splitters
- check capabilities of ethernet cables for power over ethernet (PoE)
- provide power calculations and evaluation of viability and safety of cables providing PoE
- interpret test results
- use appropriate methods to escalate cable faults affecting service delivery
- report on completed cable and system test.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- legislation, codes, enterprise requirements, and other formal agreements that impact on the work activity
- specific WHS requirements and environmental factors relating to the activity and site conditions
- cabling types, connectors and cabling structures
- single-mode (SM) and/or multi-mode (MM) optical fibre links in point-to-point networks
Assessment Requirements for ICTCBL323 Test cables and systems on customer premises

Date this document was generated: 19 January 2021

- connections to carrier infrastructure or equipment, such as main distribution frame (MDF) or customer interface units (CIU) or network termination device (NTD)
- electrical and/or optical properties to be measured
- PoE potential hazards and performance specifications
- remote power feed method and system
- test results derived from test equipment and interpretation of test results against expected cable system performance specifications
- typical performance parameters and faults that may be encountered in customer cabling and related connection and transmission equipment
- types of equipment and manufacturer specifications suitable for tests to be carried out.

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:
- site/s where cable and system tests can be conducted
- cable and system testing equipment currently used in industry
- relevant regulatory and cable specifications that impact on cable and system testing installation activities, including PoE on new and legacy cabling.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. Refer also to the Requirements for assessors in the ICT Information and Communications Technology Training Package Companion Volume Implementation Guide.

Application

This unit describes the skills and knowledge required to cut over new or upgraded systems and equipment on customer premises. This may include indoor or outdoor installations of communications applications in telephony, broadband, data, video, radio frequency (RF) equipment, security and computer networks, including local area networks (LANs), wide area networks (WANs) and multimedia systems.

It applies to telecommunications trade workers carrying out new installations or upgrades to domestic, commercial or industrial systems and equipment at customer premises.

Licensing, legislative, regulatory and certification requirements apply to telecommunications systems. Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media Authority (ACMA) accredited registrar. Refer to the ICT Information and Communications Technology Training Package Companion Volume Implementation Guide or the relevant regulator for specific guidance on requirements.

Application

This unit describes the skills and knowledge required to maintain indoor or outdoor, domestic, commercial or industrial cable network on customer premises or service provider access networks. This may include communications applications in telephony, broadband, data, video, radio frequency (RF) equipment, security and computer networks, including local area networks (LANs), wide area networks (WANs) and multimedia.

It applies to technicians and lines workers who install and maintain network cable equipment within the broadband infrastructure deployment. They may upgrade a coaxial or optical fibre cable as part of a hybrid fibre coaxial (HFC) network, a broadband access network or a large customer private network.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media Authority (ACMA) accredited registrar. Refer to the ICT Information and Communications Technology Training Package Companion Volume Implementation Guide or the relevant regulator for specific guidance on requirements.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- test cables and equipment and interpret results
- undertake remedial action on damages
- safely use specialised hand or power tools and equipment
- apply regulations and standards related to maintenance
- comply with all related health, safety and environmental requirements and work practices.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- relevant legislation, regulations, codes and standards
- cabling types, connectors and cabling structures
- connections to carrier infrastructure or equipment, such as main distribution frame (MDF) or customer interface units (CIU)
- maintenance requirements of equipment at customer premises
- electrical and optical properties to be measured
- health, safety and environmental considerations including:
  - electrical safety and lifting hazards
  - manufacturer requirements for safe operation of equipment
  - typical safety issues and challenges that occur on the worksite
- test methods and performance requirements for the maintenance work
- purpose of warranties and service level agreements in relation to maintenance work.
Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- site/s where maintenance of network cable can be conducted
- equipment currently used in industry
- relevant regulatory and equipment documentation that impacts on maintenance activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to cut over and rearrange new and existing distribution cables in the telecommunications access network.

It applies to lines workers, jointers or technicians working for carriers, contractors or other service providers who work on new or existing copper cables in the access network.

Licensing, legislative, regulatory and certification requirements apply to telecommunications systems. Work functions in the occupational areas where this unit may be used may be subject to regulatory requirements. All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media Authority (ACMA) accredited registrar. Refer to the ICT Information and Communications Technology Training Package Companion Volume Implementation Guide or the relevant regulator for specific guidance on requirements.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- set up the site for a cabling cut over job
- use project plan to determine cable route and necessary fittings for installation
- use project plan to prepare detailed cut over plan including any anticipated outages that may affect service level agreements (SLAs)
- follow customer practices for the placement and sealing of cables
- separate, label and joint cable units and pairs according to industry practices
- test cable, rectify faults, record results and take appropriate action
- seal all joints and cabinets according to enterprise agreements
- comply with relevant work health and safety (WHS) and environmental requirements
- place and secure cables and mark-up as-built plans
- handover completed job to customer.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- requirements of legislation, regulations, codes, standards and customer practices relevant to work activity, in particular:
  - WHS requirements and environmental requirements relating to setting up an outdoor site and accessing underground facilities
- project plans and other formal agreements that impact on the work activity
- interpretation and methods to mark-up as-built plans
common cabling types, connectors and cabling structures (including conductor identification/cable colour coding)
manufacturer jointing and sealing guidelines and practices
process of cutting over a cable for various scenarios including:
  aerial lead-in
  underground lead-in
features and operating conditions of test equipment and how the equipment is used to measure cable performance
typical issues and challenges that may cause delays in job completion, and how these could be addressed
purpose of warranties and SLAs
mark-up as-built plans.

**Assessment Conditions**

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- cable systems and jointing equipment required to cut over cable
- cabling infrastructure required for installation
- regulatory and equipment documentation that impacts on work activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to install underground cable for all communications applications in access networks or customer premises.

It applies to technical staff who install cable for new installations and upgrades to telecommunications cabling infrastructure for communications applications including broadcasting or reception (digital video broadcasting – terrestrial [DVB-T], satellite [DVB-S], long term evolution [LTE]), closed-circuit television (CCTV), digital and analog telephony, data, video, computer networks, local area networks (LANs), wide area networks (WANs), fibre optic networks and multimedia.

Licensing, legislative, regulatory and certification requirements apply to telecommunications systems. Work functions in the occupational areas where this unit may be used may be subject to regulatory requirements and/or the carrier’s guidelines. All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media Authority (ACMA) accredited registrar. Refer to the ICT Information and Communications Technology Training Package Companion Volume Implementation Guide or the relevant regulator for specific guidance on requirements.

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
<tr>
<td>1. Prepare for underground cable</td>
<td>1.1 Access site according to required enterprise procedures</td>
</tr>
</tbody>
</table>
### ELEMENT  |  PERFORMANCE CRITERIA
--- | ---
hauling | 1.2 Verify cable installation requirements from plans and recognise constraints  
 | 1.3 Identify from plans, correct duct to be hauled  
 | 1.4 Inform appropriate personnel of existing and potential worksite hazards  
 | 1.5 Obtain information about location of other services from relevant authorities  
 | 1.6 Select suitable tools, equipment and protective equipment to meet required industry standards  
 | 1.7 Check for dangerous gases and place guards around open manholes following work health and safety (WHS) and environmental requirements  
 | 1.8 Confirm correct duct/conduit to be utilised for hauling at site and access to intermediate manholes/pits along the hauling route  
 | 1.9 Rod and rope the conduit/duct to be hauled  
 | 1.10 Set-up cable installation equipment according to manufacturer requirements and enterprise guidelines  
 | 1.11 Clean debris and obstructions from conduit using appropriate mandrels  
 | 1.12 Seal cable ends to exclude entrance of foreign matter  

2. Haul underground cable | 2.1 Run hauling feeder through conduit to enable cable hauling  
 | 2.2 Use rodding techniques to prove that conduit is clear for hauling  
 | 2.3 Attach cable to hauling feeder according to manufacturer specifications  
 | 2.4 Employ cable slippers or rollers to ensure no sheath damage when hauling into and out of enclosures  
 | 2.5 Lubricate cable and haul evenly at correct tension to reduce risk of cable damage  
 | 2.6 Maintain sufficient cable length allowance for jointing and ensure cable is housed within bending radius tolerance for cable materials in an underground enclosure  
 | 2.7 Maintain cable and services separations in parallel runs and crossovers according to manufacturer and regulatory requirements  

3. Seal and secure cable and complete all documentation | 3.1 Tag all cables to enable future identification  
 | 3.2 Seal cable ends according to enterprise requirements to prevent entrance of foreign material  
 | 3.3 Place cable on supports in enclosures to reduce damage to

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- use the correct type of rope for cable hauling
- use various rodding, roping and mandrel techniques as prior requirements to hauling cable
- haul underground cable by applying work health and safety (WHS) requirements, work practices and industry standards
- use specialised hand or power tools and equipment for hauling cabling safely
- read and interpret plan drawings
- restore site and complete documentation
- comply with all related safety requirements and work practices.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- Australian Communications and Media Authority (ACMA) regulatory requirements for Telecommunications Cabling Provider Rules
- legislation, regulations, codes, standards and other formal agreements that impact on hauling
- rodding, roping and mandrel techniques
- features and operating requirements of hauling equipment
- industry and manufacturer requirements for safe operation of hauling equipment
- health, safety and environmental requirements relating to hauling and site conditions, including typical safety issues and challenges that occur on worksites
- precautions associated with over-hauling through occupied conduits.
Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- site/s where installation of underground cable can be conducted
- installation equipment currently used in industry
- relevant regulatory and equipment documentation that impacts on cable installation activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. Refer also to the Requirements for assessors in the ICT Information and Communications Technology Training Package Companion Volume Implementation Guide.

Application

This unit describes the skills and knowledge required to splice and terminate optical fibre cable within an optical telecommunications transmission environment for new installations or upgrades of an optical backbone or access network, to achieve greater bandwidth and capacity required by emerging technology convergence for next generation networks (NGNs).

It applies to technical staff who splice and terminate optical fibre cable for telecommunications projects for commercial or industrial fibre to the premises (FTTP) non-mechanical splicing installations.

Licensing, legislative, regulatory and certification requirements apply to telecommunications systems. All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media Authority (ACMA) accredited registrar. Cablers working with live optical fibre must obtain enterprise certification before commencing splicing work.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- splice, terminate and test optical fibre cable, applying safety precautions when working with laser-based systems and ensuring that required enterprise certification is first obtained if working with live fibre
- splice at least 12 fibres and house in industry recognised enclosures and underground closures according to manufacturer instructions
- install a pigtail that is fusion spliced to cable fibre
- inspect and clean optical connectors
- complete relevant documentation according to manufacturer and design requirements
- provide customer report documenting installation and test results, according to industry standards
- comply with all related work health and safety (WHS) requirements and work practices.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- specific WHS and environmental requirements relating to the activity and site conditions, including hazardous gases
- relevant safety standards applicable to the operation of laser products
- safety precautions when working with laser-based systems
- industry and enterprise policies and procedures when splicing optical fibre cable
- causes of signal strength loss in optical fibre
- colour coding of fibres
- features and operating requirements of test equipment for optical fibre cable
- information required to operate equipment according to a test specification
- optical fibre equipment and manufacturer requirement for safe operation
- techniques for types of termination, including:
  - direct termination
  - fusion splicing
  - mechanical splicing
- test methods and performance requirements
- types of optical cable
- relevant authorities that may be involved in optical fibre installations.

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:
- site/s where splicing and termination of optical fibre cable can be conducted
- special purpose tools, equipment and materials currently used in industry such as optical fibre testing equipment
- relevant regulatory and equipment documentation that impacts on optical fibre cable installation activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required for fault-finding and testing for the presence of an operational subscriber line at network termination devices (NTDs). These lines are crucial in connecting customer equipment to the carrier for the purposes of providing telephony and internet protocol (IP) data services. These network providers use convergent technologies to deliver services of next generation networks (NGNs).

It applies to technicians and cable installers who install and maintain IP-based equipment for customer and service providers for services, such as internet protocol TV (IPTV), IP security, digital home networks, IP-based cable access, TV (CATV), IP core and access networks, home automation, interactive TV, smart grids and cloud computing.

Australian Communications and Media Authority (ACMA) cabling registration applies to maintaining or installing new cable elements. Refer to the ICT Information and Communications Technology Companion Volume Implementation Guide or the relevant regulator for details of licensing, legislative or certification requirements.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to do this on at least one of the following network termination device (NTD)/customer equipment systems:

- satellite modem/ethernet/telephony
- fixed wireless modem/ethernet/telephony
- fibre optic TX-RX/ethernet/telephony
- hybrid fibre coaxial (HFC) modem/ethernet/telephony
- digital subscriber line (DSL) modem/ethernet/telephony.

Depending on the system/s the candidate works on, the candidate must demonstrate the ability to:

- connect NTDs to customer equipment
- set-up and operate test instruments
- gather appropriate instrument test cables and adaptors
- determine status of cables/equipment to be tested such as safety and live or inactive status
- identify different cable types and their association with NTD/customer equipment
- identify whether or not NTD/customer equipment is operating correctly
- search the internet for equipment user guides
- replace faulty cable or patch cords after testing or identifying damage
- replace or re-terminate faulty sockets or connectors
- perform a browser search of a web page to confirm system is working.

Knowledge Evidence

The candidate must demonstrate the knowledge required to complete the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:
• relevant legislation, regulations, codes, standards and associated industry guidelines, in particular:
  • Australian Communications and Media Authority (ACMA) regulations
  • work health and safety (WHS) regulations for electrical, fibre optic and electromagnetic telecommunications systems
• hazard identification such as laser light and safety signs used for telecommunications equipment
• typical equipment connected to NTD including:
  • personal computer devices including:
    • desktop/mobile computing devices
    • smartphone
    • printers
    • other devices
  • wi-fi modem/switch/router
  • DSL filters
  • internet service provider (ISP) gateway switch/router (ISP or retailer)
    • internet protocol TV (IPTV)
  • IP security, digital home networks
  • IP-based cable access TV (CATV)
  • IP core and access networks
  • home automation
  • interactive TV
  • smart grids
  • cloud computing
• basic interconnection concepts for NTD and customer equipment application including:
  • fibre optic
  • fixed radio
  • satellite
  • HFC
  • DSL twisted pair
• cable types used for NTD/customer equipment connections including:
  • Cat 5e unshielded twisted pair (UTP) cable
  • Cat 6 UTP cable
  • Cat 6/7 shielded twisted pair (STP) cable
  • RG6 coaxial cable (quad shielded)
  • fibre optic and other cable types for recognition/demonstration of the NTD network side
  • appropriate connectors for testing cables
  • appropriate adaptors and test leads for test instruments and cables to be tested
• common basic tests utilised with each NTD/customer equipment system using:
• structured cabling certifiers
• structured cabling verification/qualification tester
• wire mapper
• oscillator and probe
• multimeter
• RF power measurement (RX)
• time-domain reflectometer (TDR), available in SC certifiers
• ADSL/VDSL test instruments
• other appropriate test equipment
• NTD or customer equipment user guides
• purpose and use of test results
• fault escalation enterprise processes.

Assessment Conditions
Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:
• satellite modem/ethernet/telephony
• fixed wireless modem/ethernet/telephony
• fibre optic TX-RX/ethernet/telephony
• HFC modem/ethernet/telephony
• DSL modem/ethernet/telephony.

As a minimum, customer equipment may also require a portable computer, wi-fi modems, switch/router or devices that combine these parameters.

Cable segments that use passive devices will also require access to RF splitters or DSL filters.

Assessors of this unit must satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards.

</table>

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- discuss faults with customers and appropriate personnel
- identify a minimum of three different types of faults when testing telecommunications cables
- analyse test results and identify and rectify a minimum of three different types of faults
- use systematic, logical and appropriate fault-finding techniques for field-testing situations
- comply with all related work health and safety (WHS) requirements and work practices.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- WHS and environmental requirements
- basic communications testing and measuring devices and techniques including:
  - types and applications of testing/measuring devices including voltage testers, multimeters, copper time domain reflectometers (TDRs), bridge meggers, continuity testers and insulation resistance testers
  - features of testing/measuring devices including user calibration, parameter and range settings
  - safety procedures
  - circuit arrangement of test/measuring devices
  - readings
  - storage, maintenance and care of test/measuring devices
- Australian Standard quality assurance requirements for test equipment calibration certification
- carrier copper network, architecture and cable layout including:
  - seven different types of fault conditions that may affect a customer service in terms of how information is carried
  - continuity of a circuit to facilitate a customer service
  - types of network components and terminal points such as cabinets, pillars, main distribution frames, internal distribution frames, pits, manholes and joints
  - different types of joints (inline, single-ended, pressurised and unpressurised)
- performance parameters associated with copper cables including:
  - electrical circuit characteristics of voltage, current and resistance/impedance
  - open circuit, short circuit and pair continuity
  - split legs, reversed legs, contacts, earths and foreign battery
  - attenuation
  - insulation resistance (leakage)
  - loop resistance
  - characteristic impedance
- how to evaluate test results for compliance with carrier requirements for copper cables including:
  - tests required to evaluate a given performance parameter
  - test equipment and leads needed to evaluate a given performance parameter
  - operation of test equipment for correct evaluation of specific cable performance parameters and to obtain accurate and reliable results
  - transmission performance requirements
- behaviour of faulty cable network elements, including symptoms and impact on cable network
- systematic and logical fault-finding
- interpretation of test results and cable network element/system specifications
- possible fault positions in a length of cable or buried joint including:
  - joint in a pit
  - manhole
  - buried.

**Assessment Conditions**

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:
- site/s on which copper cable network testing and fault-finding can be conducted
- line transmission and measurement equipment currently used in industry
- system documentation and other site-related documentation required to conduct tests and fault-finding investigations for a minimum of three different types of faults.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to install aerial cable in domestic, commercial or industrial communications applications that include digital and analog, telephony, data, video, digital broadcasting, computer networks, local area networks (LANs), wide area networks (WANs), master antenna television (MATV), cable television (CATV), closed-circuit television (CCTV), long-term evolution (LTE) and multimedia.

It applies to technical staff installing aerial cable for customer and carrier networks. Installations are completed outdoors on customer premises using basic rigging procedures, methods and equipment for working safely at heights.

Licensing, legislative, regulatory and certification requirements apply to telecommunications systems. Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media Authority (ACMA) accredited registrar. Refer to the ICT Information and Communications Technology Training Package Companion Volume Implementation Guide or the relevant regulator for specific guidance on requirements.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria and foundation skills, and to:

- prepare site for installation, ensuring all relevant authorities have been notified and approvals obtained prior to commencement
- install various aerial cable using effective practices including:
  - integral bearer
  - self-supporting
  - stranded support (catenary)
- comply with all related health and safety requirements and work practices.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria and foundation skills, which includes knowledge about:

- legislation, regulations, codes, standards, authorisations and other formal agreements that impact on aerial cabling, in particular:
  - Australian Communications and Media Authority (ACMA) competency requirements for Telecommunications Cabling Provider Rules as they apply to aerial cable
  - minimum sag heights
  - health, safety and environmental requirements relating to aerial cabling and working at heights
  - appropriate authorisations for pole access
- features and operating requirements of equipment used for aerial cabling and rigging
Assessment Requirements for ICTBL333 Install aerial cable for communications applications

- manufacturer and industry requirements for safe operation of installation and rigging equipment
- basic traffic management plans
- typical worksite issues and challenges.

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:
- site/s where aerial cable installation can be conducted
- aerial installation equipment currently used in industry
- aerial cables including:
  - integral bearer
  - self-supporting
  - stranded support (catenary)
- relevant regulatory and equipment documentation that impacts on aerial cable installation activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. Refer also to the Requirements for assessors in the ICT Information and Communications Technology Training Package Companion Volume Implementation Guide.

Application

This unit describes the skills and knowledge required to install underground enclosures and conduit, either direct buried or in pits, for new or cable maintenance tasks in access networks for outdoor installations within customer premises or in public locations permitted by the Australian Communications and Media Authority (ACMA).

It applies to technical staff who install underground infrastructure for new and upgraded telecommunications cabling for domestic, commercial or industrial customers.

Licensing, legislative, regulatory and certification requirements apply to telecommunications systems. Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media Authority (ACMA) accredited registrar. Refer to the ICT Information and Communications Technology Training Package Companion Volume Implementation Guide or the relevant regulator for specific guidance on requirements.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria and foundation skills, and to:

- interpret and apply design plans and prepare for construction
- use specialised hand or power tools and equipment normally used for excavation, pipe, pit and conduit installation and site restoration, safely
- excavate for installation of an enclosure and conduit according to industry standards, applying related health and safety requirements and work practices
- install enclosure and conduit according to specifications and industry standards.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria and foundation skills, which includes knowledge about:

- features and operating requirements of excavation and installation to select appropriate equipment
- existing underground services
- manufacturer requirements for safe operation of equipment
- legislation, regulations, codes, standards and other formal agreements that impact on the work activity
- construction design plans
- specific work health and safety and environmental requirements relating to the activity and site conditions
- components required for enclosures, pits and conduit
- methods of installing enclosures and conduit as they apply to manufacturer specifications and regulatory requirements
• typical issues and challenges that occur on site.

**Assessment Conditions**

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

• site/s where installation of underground enclosures and conduit can be conducted
• installation pits, enclosures and conduit currently used in industry
• relevant regulatory and equipment documentation that impacts on cable installation activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. Refer also to the Requirements for assessors in the ICT Information and Communications Technology Training Package Companion Volume Implementation Guide.

Performance Evidence

The candidate must demonstrate, on two occasions, the ability to perform the tasks outlined in the elements, performance criteria and foundation skills, and to:

- prepare site for aerial cable support construction, ensuring all relevant authorities have been notified and approvals obtained prior to commencement
- install aerial support structures using pole and wall supports, applying all related health and safety requirements and work practices and manufacturer requirements

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria and foundation skills, which includes knowledge about:

- relevant legislation, regulations, codes, and standards and other formal agreements that impact on aerial cable supports, in particular:
  - Australian Communications and Media Authority (ACMA) regulatory requirements for Telecommunications Cabling Provider Rules as they apply to aerial cabling
- features and operating requirements of cable supports and installation equipment and authorisations
- requirements for safe operation of equipment
- safety precautions required when working at heights and on pole infrastructure
- other health and safety and environmental requirements relating to the activity, equipment types and site conditions
- typical worksite issues and challenges.
Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- site/s where construction of aerial cable supports can be conducted
- aerial support installation equipment currently used in industry
- relevant regulatory and equipment documentation that impacts on aerial cable installation activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. Refer also to the Requirements for assessors in the ICT Information and Communications Technology Training Package Companion Volume Implementation Guide.

<thead>
<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version released with ICT Information and Communications Technology Training Package Version 5.0.</td>
</tr>
</tbody>
</table>

Application

This unit describes the skills and knowledge required to install and cut over a new metallic conductor cable to an access network distribution cabinet. The cable types are typically up to 200 pair copper cables in the carrier access network. The cabinet types may be mixed mode bearer cabinets in the access network and cross connect units (CCUs) or pillars.

It applies to lines workers, field officers or technicians working for carriers, contractors or other service providers who install and rearrange copper cables in the carrier network.

Licensing, legislative, regulatory and certification requirements apply to telecommunications systems. Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the ICT Information and Communications Technology Training Package Companion Volume Implementation Guide or the relevant regulator for specific guidance on requirements.

• Prepares documentation and correspondence using clear language and correct spelling |
| Oral Communication | • Interacts effectively in verbal exchanges using appropriate language, listening and questioning skills to convey and clarify information |
| Numeracy | • Makes calculations required for measuring and estimating materials for construction  
• Performs mathematical calculations to check, interpret and confirm results of system tests |
| Navigate the world of work | • Complies with policies, procedures and legislative requirements relevant to own role |
| Interact with others | • Uses appropriate practices and protocols to communicate effectively with co-workers, customers and others |
| Get the work done | • Plans, sequences and carries out tasks according to meet required outcomes |
Skill Description

- Analyses task requirements to select appropriate equipment and practices
- Uses problem solving processes and standard procedures to determine solutions to less predictable problems

Unit Mapping Information

ICTCBL336 Install and cut over metallic conductor cable to access network cabinet supersedes and is equivalent to ICTCBL318 Install and cut over metallic conductor cable to access network cabinet.

</table>

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- interpret project plan to determine cable route, required plant, tools, safety equipment and materials
- communicate with other stakeholders to arrange site access and to confirm safety requirements
- prepare cabinet and cable for cable entry according to customer practices
- install cable, label and fan out for termination
- terminate pairs to termination modules following customer practices
- run jumpers and cut over services with minimum outages
- complete required documentation related to cut over
- follow and comply with WHS and environmental requirements.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- cabling types, connectors and cabling structures
- legislation, regulations, codes, standards and other formal agreements that impact on the work activity, in particular:
  - health, safety and environmental requirements relating to the activity and site conditions
- manufacturer requirements for the operation of jointing equipment
- process for the cut over of a cabinet entry cable
• features and operating conditions of test equipment and how the equipment is used to measure cable performance
• typical worksite issues and challenges that may cause delays in project construction activities, and how these could be addressed
• purpose of warranties and service level agreements (SLAs).

Assessment Conditions
Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace. Access is required to:
• systems and equipment used for cut over
• installation equipment currently used in industry
• regulatory and equipment documentation that impacts on work activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

1. Prepare to review cloud technology solutions and services

1.1 Identify data handling organisational policies and procedures required for cloud computing solutions and services
1.2 Identify cloud computing solutions and services according to organisational needs
1.3 Identify and confirm business and industry technology terminology, characteristics and concepts
1.4 Identify organisational roles affected by implementation of cloud services and solutions and their impact on cloud computing solutions and services
1.5 Identify requirements to transferring to cloud computing solutions and services according to organisational policies
| 2. Review cloud delivery and deployment models | 2.1 Identify and review capability and characteristics of different cloud service platforms and delivery models against business requirements  
2.2 Research and identify emerging cloud deployment models  
2.3 Discuss differences, advantages and disadvantages between cloud cost models and different hybrid deployment models  
2.4 Identify the most suitable cloud service and delivery platform according to organisational needs |
|---|---|
| 3. Finalise evaluation | 3.1 Identify and document benefits of adopting best cloud solutions and services according to business needs  
3.2 Identify and document challenges of adopting cloud solutions and services according to business needs  
3.3 Finalise cloud solutions and services evaluation and seek and respond to evaluation feedback according to organisational policies and procedures  
3.4 Communicate outcomes of evaluation to required personnel  
3.5 Save and lodge evaluation document to required personnel |

**Foundation Skills**

*This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.*

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, and to:

- determine at least one suitable cloud computing solution and associated services according to business needs.

In the course of the above, the candidate must:

- collate information on the business’ need for cloud technology
- articulate total cost of ownership for cloud computing solution as it applies to business needs
- document finalised evaluation findings.

Knowledge Evidence

The candidate must demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit. This includes knowledge of:

- technology trends in cloud computing
- industry technology standards used in cloud computing solutions and services
- functions and features of cloud computing solutions and services vendor products
- principles and functions of cloud computing solutions, models and technologies, including:
  - Infrastructure as a Service (IaaS)
  - Platforms as a Service (PaaS)
  - Software as a Service (SaaS)
- industry standard hardware and software products, their general features, capabilities and application
- different cost models and cloud economic theories as they apply to different cloud services, and benefits to each
- uses and different features of private, hybrid and public cloud deployment models.
Assessment Requirements for ICTCLD301 Evaluate characteristics of cloud computing solutions and services

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- organisational and industry standards, guidelines and legislation required to inform business cloud computing requirements
- information and data sources
- industry standard information and telecommunications equipment required to capture and store data
- a variety of cloud solutions and services and their specifications

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, and to:

- build at least one simple virtual network capable of supporting a workload using cloud services
- configure compute, storage, database and autoscaling resources within virtual network
- conduct simple tests to confirm access to resources.

Knowledge Evidence

The candidate must demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit. This includes knowledge of:

- industry technology standards used in cloud computing solutions and services
- industry standard hardware and software products, their general features, capabilities and application, including storage technology
- principles and functions of cloud computing solutions and technologies, including:
  - Infrastructure as a Service (IaaS)
  - Platforms as a Service (PaaS)
  - Software as a Service (SaaS)
- different cost models and cloud economic theories as they apply to different cloud services and non-cloud services, and benefits to each
- functions, features and uses of different virtual machine, networking and scaling options, including:
  - virtual machine sizing including CPU, memory, storage and network bandwidth
  - load balancing and autoscaling
  - performance monitoring and alarms
  - storage backups and lifecycle
  - virtual networks and traffic routing
- functions, benefits and differences of:
- vertical and horizontal scaling
- virtual and physical machines
- relational, data warehouse and no SQL databases
- self-hosted, managed and cloud-native database solutions
- storage options including:
  - block storage
  - object storage
  - archive storage
  - network filesystems
- user, business and vendor responsibilities according to shared security responsibility models
- user access protocols and policies according to organisation hierarchy and job function
- security policies, protocols and mechanisms as they relate to cloud technologies and methodologies including:
  - securities as it applies to limiting network traffic within virtual networks
  - security responsibilities as it applies to different work functions and user access
- purpose of domain name system (DNS) required to connect remote servers when web browsing
- functions, uses and differences of cloud models, including:
  - on-premise and private cloud
  - hybrid cloud
  - public cloud.

**Assessment Conditions**

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
- cloud vendor service provider
- cloud managed database service
- internet and web browser
- data to gather information from to determine output and user requirements, including user access and business protocols.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to develop a cloud disaster recovery plan. It involves identifying current and potential risk factors, including impact, likelihood, duration and cost of disruption in the cloud computing environment.

The unit applies to Chief Information Officers (CIOs), cloud architects, cloud network engineers, cloud consultants and those involved in cloud disaster recovery plans for a business.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Cloud computing

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, and to:

- develop and evaluate a cloud disaster recovery plan that includes at least three major risk events.

In the course of the above, the candidate must:

- determine likelihood and impact of risk event to assist in the development of one cloud disaster recovery plan
- document disaster recovery plan and ways the plan reaches Recovery Time Objective (RTO) and Recovery Point Objective (RPO) targets.

Knowledge Evidence

The candidate must demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit. This includes knowledge of:

- risk environments in cloud/ICT environment
- data analysis methodologies to determine risk environment
- disaster recovery techniques applicable to cloud environments
- ISO270001, ISO27002 and ISO 27031 standards
- Recovery Time Objective (RTO) and Recovery Point Objective (RPO) standards and techniques
- techniques and methods to monitor and create alerts in cloud environments.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• data required to assess current and future risk events in specified environment
• legislation applicable to risk type
• reporting standards for documenting and communicating disaster recovery plan.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, and to:

- design and implement at least one fault tolerant cloud infrastructure on a cloud platform resilient to networking, compute, storage, database and data centre failures
- design and deploy automated infrastructure scaling for at least one business need
- simulate failures of at least one component and demonstrate is fault tolerant.

In the course of the above, the candidate must:

- use cloud management console, software development kits or command line tools
- define, monitor and record resource availability in cloud environment, including:
  - reliability
  - recoverability
  - service levels
  - scalability.

Knowledge Evidence

The candidate must demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit. This includes knowledge of:

- industry technology standards used in cloud computing solutions and services
- current industry standard hardware and software products, their general features, capabilities and application, including storage technology
- different cloud cost models as they relate to scalability of cloud infrastructure
- definitions, functions, features and uses of different cloud infrastructure resources as they apply in cloud architecture to high availability, including:
  - fault tolerance and single points of failure
• reliability as defined by mean time to failure (MTTF), to repair (MTTR) and between failures (MTBF)
• recoverability as measured by recovery time (RTO) and recovery point (RPO) objectives
• service level agreements (SLAs)
• vertical and horizontal scalability
• testing and debugging techniques, including techniques to avoid single point failures
• tools and techniques to measure availability impact
• features of cloud services, including differences between built-in fault tolerance and infrastructure designed for fault tolerance
• purpose and features of load balancing and autoscaling as related to improve availability within cloud environment
• techniques, methods and industry standard metrics used to monitor performance of cloud resources.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• cloud vendor service provider
• cloud managed database service
• information and data sources required to design and implement cloud infrastructure
• integrated development environment (IDE)
• specific requirements and industry standards, organisational procedures and legislative requirements, including business and functionality requirements, as required
• internet and web browser
• secure shell (SSH) or remote desktop protocol (RDP) client to connect to cloud-hosted instances
• data to gather information from to determine output and user requirements, including user access and business protocols.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 6.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, and to:

- design at least one architecture that will scale networking, compute and storage for a multi-tier web application
- design at least one microservice architecture for implementing a simple web application
- deploy a microservice application utilising cloud serverless technologies.

In the course of the above, the candidate must:

- use cloud management consoles, software development kits or command line tools
- apply web-scaling principles and technologies.

Knowledge Evidence

The candidate must demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit. This includes knowledge of:

- industry technology standards used in cloud computing solutions and services
- industry standard hardware and software products, their general features, capabilities and application, including storage technology
- functions, benefits and differences of web-scale cloud components, including:
  - structured query language (SQL) and NoSQL databases
  - monolithic and microservice architectures
  - virtual, container and serverless compute models
  - content delivery networks and in-memory data stores
- definitions, functions, features and uses of web-scale cloud infrastructure, including:
  - highly cohesive and loosely coupled systems
  - database and storage services for persistent data storage
  - application program interface (API), messaging and queuing services
• testing and debugging techniques
• web-scaling principles and technologies.

**Assessment Conditions**

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

• cloud vendor service provider
• cloud managed database service
• cloud serverless environment
• pre-prepared code elements for microservice deployment
• information and data sources required to design and implement cloud infrastructure
• integrated development environment (IDE)
• specific requirements and industry standards, organisational procedures and legislative requirements, including business and functionality requirements, as required
• internet and web browser
• data to gather information from to determine output and user requirements, including user access and business protocols.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to assess, design, improve and monitor cloud architecture on a cloud platform, including security, reliability, scalability and cost optimisation impacts for a business.

The unit applies to cloud computing architects, cloud developers, cloud engineers and those engaged in gathering requirements, designing and implementing cloud computing solutions for a business.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Cloud computing

Elements and Performance Criteria

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, and to:

- assess, identify and improve cloud architecture on a cloud platform, according to design decisions
- deploy, test and measure at least one architecture design, against architecture principles, metrics and business goals.

In the course of the above, the candidate must:

- determine performance metrics and business goals
- use cloud management consoles, software development kits or command line tools
- create documentation of deployment and testing steps.

Knowledge Evidence

The candidate must demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit. This includes knowledge of:

- industry technology standards used in cloud computing solutions and services
- industry standard hardware and software products, their general features, capabilities and application
- methods and impacts of cloud adoption as they relate to IT system changes
- design principles for cloud applications
- migrating principles for cloud applications
- use of object storage for static web sites
- testing and debugging techniques, including techniques to avoid single point failures
- tools and uses of security layers and security-focused content within cloud services
- features of cloud services, including techniques to improve security, reliability, scalability and costs
• techniques, methods and industry standard metrics and business goals used to monitor performance of cloud resources.

**Assessment Conditions**

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

• cloud vendor service provider
• cloud managed database service
• cloud management console, software development kit or command line tools
• integrated development environment (IDE)
• specific requirements and industry standards, organisational procedures and legislative requirements, including business and functionality requirements, as required
• internet and web browser
• secure shell (SSH) or remote desktop protocol (RDP) client to connect to cloud-hosted instances.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, and to:

- deploy, update and remove cloud infrastructure using cloud platform templates
- create, run and update at least one own template required to deploy and modify cloud infrastructure.

In the course of the above, the candidate must:

- use cloud management console, cloud software development kits or command line tools
- create user documentation.

Knowledge Evidence

The candidate must demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit. This includes knowledge of:

- industry technology standards used in cloud computing solutions and services
- industry standard hardware and software products, their general features, capabilities and application, including storage technology
- benefits of deploying infrastructure as code compared to manual provisioning in a console
- different infrastructure as code services that can be used on a cloud platform
- syntax of selected infrastructure as code service templates
- tooling required to execute cloud infrastructure templates
- testing and debugging techniques, including common issues and errors relating to deploying cloud infrastructure as code
- parameterisation of templates to support configuration and code reuse
- industry standard practices to define infrastructure as code
- uses and methods to create, manage, provision and update cloud resources and templates
- techniques, methods and industry standard metrics used to leverage cloud platform capabilities and deploy and manage templates.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- cloud vendor service provider
- cloud vendor or 3rd party infrastructure as code service
- specific requirements and industry standards, organisational procedures and legislative requirements, including business and functionality requirements, as required
- information and data sources required to design and implement cloud infrastructure
- integrated development environment (IDE)
- internet and web browser
- secure shell (SSH) or remote desktop protocol (RDP) client to connect to cloud-hosted instances
- cloud management console, cloud software development kit or command line tools.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, and to:

- design and deploy virtual network to support a multi-tier application in a cloud environment
- modify at least one network configuration to peer with another virtual network.

In the course of the above, the candidate must:

- enable security controls and confirm that controls accurately affect network traffic as required
- use cloud management console, cloud software development kits or command line tools
- create user documentation.

Knowledge Evidence

The candidate must demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit. This includes knowledge of:

- industry technology standards used in cloud computing solutions and services
- industry standard hardware and software products, their general features, capabilities and application, including storage technology
- roles and principles of virtual networks in cloud environments
- uses and purpose of routing, routing targets, subnets, networking security controls, virtual private network (VPN) and IP address ranges
- uses of technology to connect to resources within a virtual network, including secure shell (SSH), virtual private network (VPN) and peering
- uses and differences between:
  - public and private subnets
  - networking gateways
  - routing targets
- network security controls
- testing and debugging techniques
- methodology and techniques to collect and analyse network traffic metrics and traffic logs.

**Assessment Conditions**

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- cloud vendor service provider
- information and data sources required to design and implement cloud infrastructure
- specific requirements and industry standards, organisational procedures and legislative requirements, including business and functionality requirements, as required
- internet and web browser
- secure shell (SSH) or remote desktop protocol (RDP) client to connect to cloud-hosted instances
- data to gather information from to determine output and user requirements, including user access and business protocols.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to configure, deploy and monitor a range of technology resources of core cloud computing service on a cloud platform.

The unit applies to cloud engineers, cloud systems administrators and those who work within cloud computing operations to provision, implement and maintain cloud computing solutions for a business with little guidance or supervision. These ICT professionals may work from designs developed by cloud architects and focus on operational concerns, including automation and maintaining cloud resources.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, and to:

- deploy and configure at least 6 of the following different types of cloud resources, including but not limited to
  - virtual machines
  - container services
  - load balancers and autoscaling
  - serverless functions
  - API gateways
  - block or object storage
  - managed databases
  - DNS
  - content delivery networks.

In the course of the above, the candidate must:

- use cloud management console, cloud software development kits or command line tools
- develop and execute test plans and demonstrate successful task completion
- consider procedural improvements to produce repeatable and automated deployments by reducing manual processes.

Knowledge Evidence

The candidate must demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit. This includes knowledge of:

- industry technology standards used in cloud computing solutions and services
- industry standard hardware and software products, their general features, capabilities and applications
- testing and debugging techniques of cloud resources and technologies
• purpose, benefits and features of cloud-based:
  • virtual machines and containers services
  • API gateways and serverless computing
  • load balancing and autoscaling
  • block and object storage
  • managed databases
  • DNS and content delivery networks
  • resource logging, monitoring and alerting tools
• repeatable and automated provisioning with
  • software development kits
  • command line tools
  • infrastructure as code services.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• cloud vendor service provider
• cloud managed database service
• information and data sources required to design and implement cloud infrastructure
• integrated development environment (IDE)
• specific requirements and industry standards, organisational procedures and legislative requirements, including business and functionality requirements, as required
• internet and web browser
• secure shell (SSH) or remote desktop protocol (RDP) client to connect to cloud-hosted instances
• data to gather information from to determine output and user requirements, including user access and business protocols.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to configure, monitor, maintain and update resources running in a cloud environment.

It applies to cloud engineers, cloud systems administrators and those who work within cloud computing environments and responsible for the day-to-day running of cloud resources.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Cloud computing

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, and to:

- monitor and manage inventory, changes and lifecycle of at least one cloud resource.

In the course of the above, the candidate must:

- use cloud management console, cloud software development kits or command line tools
- collect and analyse cloud and system data and adjust resources accordingly
- summarise ways system operations in cloud environments can be automated to minimise manual intervention.

Knowledge Evidence

The candidate must demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit. This includes knowledge of:

- industry technology standards used in cloud computing solutions and services
- industry standard hardware and software products, their general features, capabilities and applications
- purpose, benefits and features of cloud services that enable:
  - resource inventory and change management
  - performance, capacity and availability monitoring and alerting
  - snapshots and backups
  - user, service and resource permissions
  - access management, monitoring and auditing
  - system patching and update services
  - security mechanisms
- repeatable and automated maintenance of cloud resources with:
  - console-based management services
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- cloud vendor service provider
- cloud managed database service
- information and data sources required to design and implement cloud infrastructure
- integrated development environment (IDE)
- specific requirements and industry standards, organisational procedures and legislative requirements, including business and functionality requirements as well as retention/lifecycle business policy, as required
- retention/lifecycle policy example as it relates to managing cloud infrastructure
- internet and web browser
- data to gather information from to determine output and user requirements, including user access and business protocols.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- analyse and document a cloud computing implementation strategy that meets business needs.

In the course of the above, the candidate must:

- research cloud computing options in the marketplace according to business needs
- analyse the effectiveness of existing cloud computing deployment and delivery models.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- business processes and cloud service sources
- cloud computing concepts, processes and trends
- require business policies and legislation that impact business operations and privacy legislation
- legal, ethical and security issues relating to cloud computing
- organisational change-management theory and methods
- risk tolerance issues for developing cloud computing strategies
- methods of deploying cloud technology strategies
- security issues relevant to a business.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• a complex business environment
• required enterprise strategic documentation, including:
  • strategic planning
  • financial documentation
  • ICT infrastructure
  • business objectives and policies.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- identify, manage and implement cloud security controls and document requirements on at least one occasion.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- business and commercial issues relating cloud security management
- cloud shared security responsibility models
- legislation, organisational and jurisdictional policy and procedures that impact management areas including:
  - data privacy and sovereignty issues
  - codes of ethics and conduct
  - equal employment opportunity, equity and diversity principles
  - financial management requirements
  - governance requirements
- industry standard management tools and techniques suited to a range of complex project activities
- key organisational context, policies and procedures and required to manage information security compliance of cloud service deployment
- information security compliance standards, including ISO2700x
- information security compliance constructs, including risk, controls and risk mitigation.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- cloud information and communications technology (ICT) business specifications
- cloud ICT security assurance specifications
- cloud-focused security environment, including threats to security that are, or are held to be, present in the environment
- security environment information, including:
  - laws or legislation
  - existing enterprise security policies
  - enterprise expertise
- risk analysis tools and methodologies currently used in industry
- documented organisational work health safety (WHS) requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTCMP203 Perform restricted customer premises broadband cabling work: ACMA Restricted Rule

Modification History

<table>
<thead>
<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version released with ICT Information and Communications Technology Training Package Version 5.0.</td>
</tr>
</tbody>
</table>

Application

This unit describes the skills and knowledge required to install simple point-to-point broadband cabling on customer premises.

The unit applies to technical staff who install and terminate new installations or upgrades, or maintain existing networks in domestic premises. These may include small offices, home offices and small commercial premises that do not have a main distribution frame (MDF) or jumperable distributor as the network boundary point.

Licensing, legislative, regulatory and certification requirements apply to telecommunications systems. Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media Authority (ACMA) accredited registrar. Refer to the ICT Information and Communications Technology Training Package Companion Volume Implementation Guide or the relevant regulator for details of licensing, legislative or certification requirements.

Pre-requisite Unit

ICTCBL246 Install, maintain and modify customer premises communications cabling: ACMA Restricted Rule

OR

ICTCBL239 Install customer cable support systems

and ICTCBL240 Place and secure customer cable

and ICTCBL241 Terminate metallic conductor customer cable

and ICTCMP201 Organise and monitor cabling to ensure compliance with regulatory and industry standards

<td>3.3 Conduct verification and qualification testing of cable installation and termination with suitable tester and record results</td>
</tr>
<tr>
<td></td>
<td>3.4 Supply system performance documents to customer and outline results</td>
</tr>
<tr>
<td></td>
<td>3.5 Complete cabling records and telecommunications cabling advice forms (TCA1) according to industry standards</td>
</tr>
</tbody>
</table>

Foundation Skills
This section describes those language, literacy, numeracy and employment skills that are essential to performance, but not explicit in the performance criteria.
### Skill | Description
---|---
Reading | • Evaluates information and products from a variety of sources to ensure appropriateness to customer needs and specifications
Writing | • Prepares documentation and correspondence using clear language, correct spelling and accurate terminology
Numeracy | • Makes calculations appropriate for measuring and estimating materials for installations
Navigate the world of work | • Understands rights and responsibilities and complies with legal and regulatory requirements
Get the work done | • Plans and implements routine tasks and workload making limited decisions on sequencing, timing and collaboration, seeking assistance in setting priorities
| • Responds to predictable routine problems and implements solutions
| • Makes decisions within familiar situations, based on a range of predefined or routine solutions

### Unit Mapping Information
ICTCMP203 Perform restricted customer premises broadband cabling work: ACMA Restricted Rule supersedes and is equivalent to ICTCMP202 Perform restricted customer premises broadband cabling work: ACMA Restricted Rule.

<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version released with ICT Information and Communications Technology Training Package Version 5.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- review site and determine cable requirements for installation
- comply with all related work health and safety (WHS) requirements and work practices
- install and terminate fixed broadband cable according to industry standards and manufacturer specifications
- terminate point-to-point data and cable
- verify installed network is working and able to access the internet
- perform a data rate qualification test and record test results
- provide report to customer, documenting installation and test results, according to industry standards.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- legislation, regulations, codes, standards, rules, guidance notes and other formal agreements that impact on work, in particular:
  - Australian Communications and Media Authority (ACMA) cabling provider rules, cabler registration rules, regulations and standards
  - hazards and work health and safety (WHS) regulations and environmental requirements relating to cabling activities and site conditions
- types of cable test methods and system performance requirements
- types of cabling situations and the resultant installation requirements
• features and operating requirements of applicable test equipment
• information required to operate equipment according to a test specification
• manufacturer requirements for safe operation of equipment
• techniques for terminating data cable
• typical installation issues and challenges that may occur on cabling worksites
• tools and equipment required for cabling works
• cable separations and over-voltage protection requirements necessary for specific cable installations.

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:
• site/s where installation and termination of cabling can be conducted
• current tools, testing equipment and personal protective equipment used in industry
• relevant regulatory and equipment documentation that impact installation activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. Refer also to the Requirements for assessors in the ICT Information and Communications Technology Training Package Companion Volume Implementation Guide.

<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 2.0.</td>
</tr>
</tbody>
</table>

Application

This unit describes the skills and knowledge required to undertake a radio communications site audit regarding compliance of radio frequency (RF) transmissions with relevant transmitter licence requirements.

It applies to individuals who may be field officers from regulatory authorities or other private and public organisations. They combine technical radio communications skills with broader organisational and administrative skills to conduct audits in a range of commercial and community contexts and environments, make recommendations for improvement and follow up by monitoring resulting actions.

Work functions in occupational areas where this unit may be used are subject to regulatory requirements. Refer to the ICT Implementation Guide Companion Volume or the relevant regulator for details of licensing, legislative or certification requirements.

Unit Sector

Telecommunications – Compliance

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>Element</th>
<th>Performance Criteria</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
<tr>
<td>1. Prepare for radio</td>
<td>1.1 Confirm need for site audit through appropriate triggers and arrange formal approval for site access from authorised personnel</td>
</tr>
</tbody>
</table>
### communications site audit

1. **Clarify audit requirements according to relevant legislation, codes, regulations and standards, including safety and security arrangements, and action required to comply**

   1.2 Clarify audit requirements with client or project originator, where appropriate, and incorporate broader audit considerations

2. **Prepare a hardcopy of site information for use as an audit validation list at site**

3. **Specify staff, equipment and material resource requirements for audit, based on particular site requirements ensuring equipment has been correctly calibrated and labelled**

4. **Check industry requirements for site and obtain industry licence where appropriate**

### 2. Undertake radio communications site audit

1. **Validate specific site location according to database information**

2. ** Undertake audit tasks according to work health and safety (WHS), enterprise procedures and site specific safety requirements, and meet client or representative on site as required**

3. **Conduct transmission and radio frequency (RF) tests against approved specifications**

4. **Conduct check of transmitters for licensing conditions**

5. **Check transmission radio frequency against database list and obtain permission to check or alter transmission or radio frequency where appropriate**

6. **Confirm site meets specific RF WHS requirements and licensing requirements where appropriate**

7. **Confirm defined site equipment labelling comply with Australian Communications and Media Authority (ACMA) technical standards**

### 3. Complete audit administration tasks

1. **Update or arrange for update of required records regarding audit findings and action required, including liaison with authorised personnel as agreed**

2. **Monitor recommended actions to ensure compliance with findings**

3. **Issue enforcement actions as required**

4. **Finalise audit administration and return equipment and resources according to organisational procedures**

Performance Evidence

Evidence of ability to:

- determine the need for a site audit and gain access approvals
- conduct radio communications site audit for at least three sites with differing licensing requirements
- conduct transmission and radio frequency (RF) tests
- monitor non-compliances to ensure actions completed
- document enforcement actions.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain features and functions of test equipment including:
  - digital radio communications measuring equipment
  - modulation analyser
  - power meter
  - RF termination
  - spectrum analyser
- describe the features of licensing databases
- describe information required to prepare and conduct telecommunications audits
- explain legislation, licensing requirements for transmitters, codes of practice and other formal agreements that directly impact radio communications site audits
- give an overview of transmission lines, transmitter and receiver architecture and their impact on radio communications audits
• list required field measurements including:
  • carrier frequency
  • harmonics
  • intermodulation distortion (IMD) products
  • modulation
  • RF power
• explain specific issues related to antenna installations and their impact on radio communications interference
• explain specific work health and safety (WHS) requirements that impact the conduct of radio communications audits, including:
  • use of equipment
  • use of RF protective equipment
  • other personal protective equipment
• explain types of adjustments that need to be made to audit procedures to meet requirements of particular sites and environmental conditions
• typical issues and challenges that occur in telecommunications site audit and how these may be addressed.

Assessment Conditions
Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the Telecommunications – Compliance field of work and include access to:
• sites on which audits may be conducted
• use of field measurement equipment currently used in industry
• relevant databases, licensing requirements and other site related documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 7.0.</td>
</tr>
</tbody>
</table>

Application

This unit describes the skills and knowledge required to conduct radio communications site audits and assess compliance of radiofrequency transmissions.

It applies to individuals who are field officers from regulatory authorities and other private and public organisations. They combine technical radiocommunications skills with broader organisational and administrative skills to conduct audits in commercial and community contexts and environments, make recommendations for improvement and follow up by monitoring resulting actions.

Work functions in occupational areas where this unit may be used are subject to regulatory requirements. Refer to the required regulator for details of licensing, legislative or certification requirements.

Unit Sector

Telecommunications – Compliance

Elements and Performance Criteria

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- conduct at least three radiocommunications site audits with different licensing requirements at each site.

In the course of the above, the candidate must:

- determine the need for a site audit and gain access approvals from relevant personnel
- conduct transmission and radiofrequency tests
- monitor non-compliances to confirm actions completed
- document enforcement actions.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- features and functions of test equipment, including:
  - digital radio communications measuring equipment
  - modulation analyser
  - power meter
  - radiofrequency termination
  - spectrum analyser
  - licensing database features
  - information required to prepare and conduct network site audits
  - transmission lines, transmitter and receiver architecture and their impact on radiocommunications audits
- required field measurements, including:
  - carrier frequency
• harmonics
• intermodulation distortion products
• modulation
• radiofrequency power
• specific issues related to antenna installations and their impact on radio communications interference
• types of adjustments that need to be made to audit procedures to meet requirements of particular sites and environmental conditions
• typical issues and challenges that occur in networking site audits and how these are addressed
• legislation, codes, regulations and standards, and work health and safety (WHS) requirements for scoped work.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

• sites on which audits may be conducted
• use of field measurement equipment currently used in industry
• required databases, licensing requirements and other site related documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design and implement a network security infrastructure according to organisational requirements.

In the course of the above, the candidate must:

- identify at least three security risks and at least three threats impacting business
- identify and evaluate the advantages and disadvantages of at least two industry standard network security providers suitable to infrastructure being designed and implemented.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- network infrastructure features, including:
  - connectivity
  - routing and switching capabilities
  - network security
  - access control
- organisational business processes and applicable organisational, infrastructure, network and security requirements in each area
- organisational procedures applicable to designing and implementing network security infrastructure, including:
  - documenting established requirements, risks and work performed
  - establishing requirements and features of network security infrastructure
  - establishing maintenance and alert processes
  - conducting routine reviews of network security infrastructure
  - testing methods and procedures
- security risks, and tolerance of risk in an organisation
- industry standard network security providers
- industry standards and regulations applicable to implementing network security infrastructure in an organisation.

**Assessment Conditions**

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
- required hardware, software and its components
- organisational procedures and policies applicable to network security infrastructure
- required network security providers and solutions
- site server
- application and user security technologies.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- identify and confirm occurrence of at least:
  - one network incident
  - one system incident
  - one wireless or Wi-Fi incident
  - one application incident.

In the course of the above, the candidate must:

- discuss and contribute at least one potential change to each incident
- adhere to legislative requirements and organisational security procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- different types of cyber security incidents and attacks, including:
  - security vulnerabilities and malware
  - denial-of-service attack (DDOS)
  - SQL injection (SQLi)
  - cross-site scripting (XSS) attacks
  - scripted attacks
  - hardware attacks
  - attacks against Wi-Fi
  - cyber security risks
  - methods of testing systems, networks and applications and confirming incidents
- common procedures in:
following organisational cyber security incident response plans
responding to cyber security incidents
legislative requirements applicable to identifying and reporting cyber security incidents
organisational policies and procedures applicable to cyber security incidents, including:
  documenting established requirements, incidents and work performed
  security procedures
  obtaining and analysing system, network and application information
  cyber security incident response processes and plans
  establishing reporting procedures.

Assessment Conditions
Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
- required hardware, software and its components
- system, network and application infrastructure and logs
- the internet
- organisational security procedures including incident response plans.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to develop an information security and risk management strategy (ISRM) within an organisation that supports business processes.

It applies to individuals who work in information technology security and have the knowledge and skills in cyber security to support business functions in planning and implementing information security strategies. In this instance, the individual may work internally within an organisation, or be engaged externally in supporting organisations with their development of information security strategies.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- plan and implement an information security strategy according to organisational needs.

In the course of the above, the candidate must:

- establish at least three security baselines and at least three testing metrics
- comply with legislation and industry requirements
- follow organisational procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- function of information security strategy testing procedures, including:
  - vulnerability tests
  - basic penetration tests
- key organisational environment and business processes required to plan and implement information security strategies for an organisation
- network and cyber security features and principals
- types of data and classifications including sensitivity levels
- advantages and importance of implementing information security strategies
- organisational procedures applicable to developing information security strategies, including:
  - documentation processes
  - designing secure network infrastructure
  - establishing requirements and features of information security strategies
  - establishing baselines and metrics
• testing methodologies.

**Assessment Conditions**

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required hardware, software and its components
- information and documents applicable to organisational procedures and processes
- information security strategy testing software.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- perform at least one vulnerability test assessment
- define and run at least one basic penetration test.

In the course of the above, the candidate must:

- assess web based, network based and hardware-based vulnerabilities
- adhere to organisational procedures
- document and report activities.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- security risks and vulnerabilities in software systems
- tools used in testing a network for vulnerabilities including scanning tools
- basic level penetration testing of a system
- methods and tools used to protect data in an organisation
- risk mitigation strategies that may be used running vulnerability assessments for an organisation
- organisational procedures applicable to running vulnerability assessments, including:
  - establishing goals and objectives of vulnerability assessments
  - defining scope of testing and establishment of testing regime
  - documenting established requirements
  - establishing penetration testing procedures
  - documenting findings, threats and work performed
• key organisational environments, systems and networks required to run vulnerability assessments.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• required software testing packages
• required hardware and its components
• vulnerability scanning tools
• a server
• text-editing software
• information applicable to organisational environment, systems and network
• required organisation network, systems or applications.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to plan for and develop a response plan for cyber security incidents.

It applies to individuals who work in information technology security, including network and security specialists, and apply a range of cyber security threat skills and knowledge to support all business functions plans for incidents.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Cyber security

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop a plan in response to cyber security incidents for each of the following areas:
  - organisation’s network
  - organisation’s system
  - Wi-Fi network
  - an application
  - a human error.

In the course of the above, the candidate must:

- establish at least two test scenarios in each plan
- develop at least two test metrics and at least two baselines in each plan
- adhere to organisational procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- features and principals of networking, Wi-Fi networks and applications
- procedures in testing cyber security incident test plans
- metrics and baselines used in cyber security incident test plans
- roles and responsibilities of test committees
- organisational procedures and requirements applicable to developing cyber security incident response plans, including:
  - documenting established requirements and incident response plans
  - establishing response committees
  - testing methodologies
• establishing baselines and metrics
• cyber incidents and scenarios.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• software required in testing cyber security incident response plans
• required hardware and its components
• Wi-Fi network
• an application
• text-editing software
• information applicable to organisational environment, processes and previous cyber security incidents.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to establish and respond to cyber security incidents in an organisation, and evaluate actions performed to mitigate risk of future incidents.

It applies to individuals who work in information technology security, including network specialists and security, to support all business functions responding to cyber incidents. These individuals have a broad range of knowledge and skills in cyber security, networks and systems. In this context, the individual works as an internal function for an organisation, however, the same can be applied in the context of an external security specialist advising and implementing the response and action items of a cyber-attack to an external client.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- respond to at least two different cyber security incidents in at least two different business functions
- develop and follow a basic communications plan.

In the course of the above, the candidate must:

- comply with organisational cyber security incident response plan
- adhere to legislative requirements and organisational policies and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- key features of incident response plans
- cyber security incidents and the source and causes of these incidents
- types of attacks, including:
  - denial-of-service attack (DoS)
  - SQL injection (SQLi)
  - cross-site scripting (XSS) attacks
  - scripted attacks
  - hardware attacks
  - attacks against Wi-Fi
- cyber security incident detection methodologies
- preventative measures and mitigation methods applicable to cyber security incidents
- documentation processes that may be used in the process of responding to cyber security incidents
- organisational policies and procedures applicable to cyber security incident response, including procedures for:
  - determining nature and location of incidents
  - containing incidents, including installation of security patches and disabling network access
  - notifying and reporting to required personnel
  - encryptions
  - assessing impact on business function and other areas
- procedures in developing communications plans.

**Assessment Conditions**

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
- organisation cyber security incident response plan
- required hardware and software
- text-editing software
- legislative requirements and organisational procedures and policies applicable to cyber security incident.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to gather data from various sources, analyse, and interpret information for threats, inconsistencies and discrepancies.

It applies to individuals who work in information technology security, including network and security specialists, and gather logs from devices, check abnormalities and respond accordingly. These individuals are responsible for supporting and preventing cyber threats attacking data in all business functions and in any industry context.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence
The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- gather, log and create dataset from a single security device or whole organisation device, including:
  - basic router info
  - firewall info
  - systems
- identify and describe at least three different inconsistencies or discrepancies within data
- document finding, recommendations and outcomes.

In the course of the above, the candidate must:

- interpret meaning from dataset and suggest action items.

Knowledge Evidence
The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- data recognition software tools
- data sources, including:
  - firewalls
  - intrusion detection systems (IDS)
  - access control systems
  - security and event management systems (SIEM)
- basic troubleshooting processes related to cyber security threats
- network and cyber security features and principals
- types of attacks, including:
  - denial-of-service attack (DDOS)
- SQL injection (SQLi)
- cross-site scripting (XSS) attacks
- scripted attacks
- hardware attacks
- attacks against Wi-Fi
- legislative requirements applicable to gathering, analysing and interpreting threat data
- common cyber security threats and their impacts on business functions
- organisational policies and procedures applicable to gathering, analysing and interpreting threat data, including:
  - documentation established requirements, findings and recommendations
  - establishing security equipment and data sources
  - information collection processes
  - processes in obtaining and analysing results.

**Assessment Conditions**

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required hardware, software and digital devices
- required analytic platform and applicable user instructions
- data recognition software
- single security device and whole organisation device
- legislative requirements and organisational policies and procedures applicable to gathering, analysing and interpreting threat data.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- create, implement and monitor cyber security standards for an organisation on at least one occasion.

In the course of the above, the candidate must:

- document plans and outcomes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- advanced features of network security
- organisational business processes applicable to creating cyber security standards including:
  - documenting established standards and requirements
  - establishing requirements and features of network security infrastructure
  - establishing maintenance and alert processes
  - conducting routine reviews of network security infrastructure
  - testing methods and procedures
- security risks, and tolerance of risk in an organisation
- industry standard network security providers
- industry standards and regulations applicable to implementing network security infrastructure in an organisation
- key organisation, infrastructure and network requirements required to create cyber security standards for organisations.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- software and its components related to creating cyber security standards
- standards for Cyber security ISO/IEC 27000 series, Information security management systems standards
- network security providers and solutions required for creating cyber security standards
- application and user security technologies.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- plan and implement penetration testing and resolve queries and vulnerabilities on at least three vulnerabilities.

- In the course of the above, the candidate must:
  - identify weaknesses as part of penetration testing process.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- security risks and vulnerabilities in software systems
- tools used in testing a network for vulnerabilities including scanning tools
- advanced level penetration testing of a system
- methods and tools used to protect data in an organisation
- risk mitigation strategies
- organisational procedures applicable to undertaking penetration testing, including:
  - establishing goals and objectives of penetration testing
  - defining scope of testing and establishment of testing regime
  - documenting established requirements
  - establishing penetration testing procedures
  - documenting findings, threats and work performed
- key organisational environments, systems and networks required to undertake penetration testing for organisations.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- hardware, software and digital devices required to undertake penetration testing
- analytic platform and applicable user instructions
- data recognition software
- single security device and an organisation device
- legislative requirements and organisational policies and procedures applicable to undertaking penetrations testing.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to identify, confirm and implement best practices for identity management in the cyber environment to minimise threats, risks and cybercrime attacks.

It applies to those who work as network security specialists or administrators and are responsible for overseeing and implementing an organisation’s best practices to confirm safe cyber security management of personal and identifiable information.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Cyber security

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design, implement and analyse best practices for identity management in an organisation on at least one occasion.

In the course of the above, the candidate must:

- identify an organisation’s operating environment
- document processes and outcomes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- organisation’s operating and cyber environment applicable to identity management
- identity management methodologies required in the cyber environment
- best practices and legislation required to implement best practices for identity management
- organisational procedures applicable to implementing best practices for identity management including:
  - documentation processes
  - designing secure network infrastructure
  - establishing requirements and features of information security strategies
  - establishing baselines and metrics
  - testing methodologies.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- hardware, software and digital devices required to undertake identity management tasks
- software that identifies data categories and access privilege
- legislation and policies and procedures required to identity management best practices.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to acquire, extract and analyse data from devices and workstations, including mobile devices, networked devices, smart devices, Internet of Things (IoT) devices and microcontrollers, USBs, applications, networks and systems. It applies to skills needed to extract evidence pertaining to either a forensic investigation directly caused on a computer, or as part of evidence relating to a crime or e-crime.

It applies to those working in cyber and forensic roles including, digital forensic examiners, incident responders and corporate investigators and are responsible for forensic data retrieval.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- identify, acquire and analyse digital forensic data from at least three device types, according to a reported incident.

In the course of the above, the candidate must:

- document analysis findings
- adhere to required organisational and legislative guidelines.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard legislation and organisational procedures relating to acquiring digital forensic data, including
- privacy standards and policies
- data standards and policies
- internet and user identification protocols
- mobile technology protocols
- data extraction methodologies and seizure techniques on a variety of devices, including how not to damage or destroy digital evidence
- features and markers of hashing
- communication investigation techniques
- functions and features of computer systems and data stores
- data logs, including server, network and firewall logs
- function and features of system back ups
- data extraction and forensic copying techniques
- file formats including structures, locations and file systems
- data acquisition, identification and extraction methodologies including:
  - industry standard forensic tools
  - non-invasive and invasive methodologies.

**Assessment Conditions**

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- three or more devices with data required for data extraction tasks
- forensic software tools required to extract data from device
- legislative and organisational procedures and requirements relating to the acquisition of digital forensic data.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTCYS608 Perform cyber security risk assessments

Modification History

<table>
<thead>
<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 6.0.</td>
</tr>
</tbody>
</table>

Application

This unit describes the skills and knowledge required to conduct a risk assessment and analysis in a business environment. The risk assessment requires the identity and alignment of an organisation’s operating environment to their required risk register and the realignment of their operations.

It applies to those who work in risk functions of an organisation, including ICT risk managers, cyber security engineers, network engineers, DevOps engineers and cyber security solutions architects, and are responsible for designing security solutions.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Cyber security

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
</tbody>
</table>

1. Prepare to perform risk assessment
1.1 Analyse organisations risk culture and document findings according to organisational requirements
1.2 Research and document legislative and organisational cyber security risk requirements
1.3 Obtain and analyse organisation’s risk register and determine its currency against organisational legislative requirements
1.4 Develop and document risk assessment plan according to organisational requirements
1.5 Communicate risk assessment plan with required personnel
and seek and respond to feedback

| 2. Perform risk assessment | 2.1 Initiate risk assessment according to plan  
|                           | 2.2 Document process and outcomes of risk assessment according to organisational policies and procedures |
| 3. Finalise risk assessment | 3.1 Analyse and document findings against risk register and determine operations outside of organisation’s risk appetite  
|                           | 3.2 Develop and document operational measures to align operations against risk register requirements  
|                           | 3.3 Communicate risk assessment findings to required personnel and highlight areas of non-compliance and solutions  
|                           | 3.4 Lodge documentation according to organisational requirements |

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- conduct a cyber security risk assessment on at least one occasion.

In the course of the above, the candidate must:

- identify and analyse an organisation’s risk appetite and risk register against their daily operations
- research cyber security legislation and align organisational risk assessment to require legislation
- document processes and outcomes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- risk assessment methodologies and processes required in cyber security
- methodologies of identifying and measuring risk culture and risk appetite in the cyber environment
- sources of legislative requirements required in cyber security
- organisational procedures applicable to conducting a cyber security risk assessment including,
- documenting risk assessment processes and findings
- establishing requirements and features of cyber security risk assessment processes.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.
This includes access to:

- software required to conduct a risk assessment
- legislative documentation required to conduct a cyber security risk assessment
- information applicable to organisational environment, culture and operations required to conduct a cyber security risk assessment.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to analyse an organisation’s critical cyber operations and develop and implement a critical protection strategy that addresses the needs of the organisation.

It applies to those who work as senior network and server administrators, cyber security analysts, security engineers, network engineers other cyber security related roles and are responsible for cyber security activities, including researching, developing and implementing protection strategies.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- research, develop, implement and test an organisation’s critical protection infrastructure plan.

In the course of the above, the candidate must:

- analyse operating environment
- document processes and outcomes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- critical infrastructure sectors and assets
- cyber security methodologies required to protect infrastructure for organisations
- legislative requirements applicable to researching, analysing and developing critical infrastructure protection policies.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required hardware, software and components
- organisational operating environments, networks and systems
- organisational style guides required for presenting documented processes, procedures and findings.
Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design a security configuration plan and implement device configuration for at least three different security devices.

In the course of the above, the candidate must:

- conduct cyber security needs analysis
- document processes and outcomes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- procedures for configuring, verifying and troubleshooting security devices
- cyber security device configuration methodologies
- conducting cyber security needs analysis
- configuring security networks required to configure security devices.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required hardware, software and components
- devices required for configuration
- risk appetite of organisation required to configure security devices
- organisational operating environments, networks and systems
• organisational style guides required for presenting documented processes, procedures and findings.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design and implement cyber security infrastructure and review results against organisational needs on at least two different occasions.

In the course of the above, the candidate must:

- identify an organisation’s vulnerabilities, cyber security needs and data protection requirements
- document findings, plan and processes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- features and implementation methodologies of cyber security
- cyber security infrastructure features including:
  - application security
  - business continuity planning
  - disaster recovery planning
  - operational security (OPSEC)
  - threat vectors
- organisational business processes and applicable cyber security requirements design and implementation
- organisational procedures applicable to designing and implementing cybersecurity infrastructure, including:
  - documenting established requirements, risks and work performed
  - establishing requirements and features of cyber security infrastructure
- establishing maintenance and alert processes
- testing methods and procedures
- security risks, and tolerance of risk in an organisation
- industry standard cyber security providers
- industry standards and regulations applicable to implementing cyber security infrastructure in an organisation
- organisation, infrastructure and cyber security requirements.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- hardware, software and its components required in the design and implementation of cyber security infrastructure
- an organisation’s operational details required for determining cyber security requirements
- application and user security technologies required for the design and implementation of cyber security infrastructure
- industry standard cyber security providers.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- use methodologies to design at least one cyber security solution for an organisation on at least one occasion.

In the course of the above, the candidate must:

- research and analyse industry standard design methodologies for designing security architecture
- document finalised security solution.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard cyber security design methodologies
- principles of cyber security
- principles of security architecture
- different types of cyber security risks required to design security architecture
- presenting security architecture in document form.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- organisational data
- organisational operating structure
• organisational procedures applicable to designing security architecture including:
  • documentation processes
  • establishing requirements and features of security strategies
  • establishing baselines and metrics
  • testing methodologies.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- review and improve an organisation-wide review of data-related policies and procedures.

In the course of the above, the candidate must:

- confirm compliance with data ethics legislation
- communicate review schedule and legislative changes
- document review outcomes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- legislative requirements and standards relating to protecting data integrity, including data protection, privacy laws and regulations
- organisational policies, procedures and protocols relating to protecting data integrity including for:
  - data accuracy
  - verifying data security
  - data discrepancies between different sources
  - identifying data breaches
- ethical management and governance of data, including balancing data availability and data confidentiality
- compliance requirements and regulations relating to data loss and documentation procedures and corrective actions relating to non-compliance
- policy review procedures
- codes of practice relating to data management.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- information and data sources to inform data analysis
- information and telecommunications equipment required to analyse data
- industry standards, organisational procedures, and legislative requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- combine at least two data sets from different sources
- confirm accuracy of the two combined data sets.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- legislative requirements relating to data capture and storage, including data protection, security and privacy laws and regulations
- organisational policies, procedures and protocols relating to protecting data integrity for:
  - data accuracy
  - identification of data over-writes
  - verifying data security
  - monitoring data discrepancies between different sources
  - digital versus manual data entry
  - monitoring data integrity
  - identifying where data breaches have occurred
- ethical management and governance of data, including determining availability of data and confidentiality of data
- compliance requirements and regulations relating to data loss
- key components of policies in place for protecting confidential and private business information and intellectual property in data assets, including:
  - privacy policies
  - security policies
  - intellectual property policies
- data analytics including feature extraction procedures.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- information and data sources to inform data analysis
- information and telecommunications equipment required to analyse data
- industry standards, organisational procedures, and legislative requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to gather, analyse, test and verify data from different source inputs.

It applies to those who work in data analytics roles in the Information and Communications Technology (ICT) environment and are responsible for identifying data from a range of source inputs, analysing and investigating abnormalities and reporting against an organisation’s requirements.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- gather information from two different types of data sources in order to conduct analysis and report on at least two occasions.

In the course of the above, the candidate must:

- identify and conduct data normalising methodologies.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- data extraction methodologies
- data normalising methodologies used in data analysis and data reporting
- methodologies of securing and preparing data for data extraction
- industry standard data analysis methodologies
- technical requirements used in extracting different types of data.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the customer service field of work and include access to:

- different types of data required for extraction and analysis
- hardware and software and components required for data extraction and analysis tasks
- organisational data reporting style guide and reporting processes required for data reporting
- a site where activities can be carried out
• data required for testing.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- plan and conduct a significance test on extracted and normalised data and conclude finding on at least two occasions.

In the course of the above, the candidate must:

- identify and conduct data normalising methodologies
- develop a hypothesis used for significance testing.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- data extraction methodologies
- data normalising methodologies used in data analysis and data reporting
- methodologies of securing and preparing data for data extraction
- industry standard data analysis methodologies
- technical requirements used in extracting different types of data
- hypothesis development for significance testing
- report writing for reporting significance testing in data analytics.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the customer service field of work and include access to:

- hardware and software and components required for data analysis tasks
• organisational data reporting style guide and reporting processes required for data reporting
• a site where activities can be carried out.
• data required for testing.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- collect, prepare and cluster data using unsupervised machine learning methodologies and report on the findings on at least two occasions.

In the course of the above, the candidate must:

- research industry standard approaches and methodologies for machine learning
- evaluate and prepare data.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- methodologies for data clustering unlabelled data including intra-cluster cohesion and intra-cluster separation
- industry standard data clustering methodologies including benchmark modelling techniques for data clustering
- report writing methodologies relevant to reporting findings of data clustering activities
- industry standard machine learning methodologies relevant to unsupervised learning
- methodologies for modelling data relevant to unsupervised learning.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the customer service field of work and include access to:

- hardware and software and components required for using unsupervised learning for clustering
• organisational data reporting style guide and reporting processes required for unsupervised learning and machine learning
• a site where activities can be carried out.
• data required for clustering.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- create a database on a database server, web hosting service or file server with at least three tables, on at least one occasion.

In the course of the above, the candidate must:

- design a database that meets task requirements
- test and debug database
- save changes to database.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- processes used for creation of entities, attributes, and in populating fields, using software solutions and script-based input
- data-modelling techniques
- database design, modelling and implementation procedures
- naming conventions for database design
- security restrictions on servers, incorporating some theoretical concepts
- cyber security functions, policies and procedures according to organisation.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
- equipment, materials, hardware and industry standard software packages
- internet access including:
  - connectivity
  - different browsers
- software for creating entity-relationship (ER) diagrams
- software development environment.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- configure an optimal performance database with at least three tables for at least one occasion
- confirm at least two of the three tables have greater than one hundred rows.

In the course of the above, the candidate must:

- identify common database problems
- determine required solutions to solve problem
- implement solutions to improve database performance
- save and back up work.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- database design and structured query language (SQL)
- database administration procedures
- tools and database tuning methodologies.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- industry software packages
- diagnostic tools
• database operating on a network environment or virtual network environment.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

</table>

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- configure, monitor, update and manage a database with at least three tables.

In the course of the above, the candidate must:

- confirm data integrity
- monitor data storage requirements
- modify data access privileges
- document and save work.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- backup and recovery methodologies and procedures
- principles of relational database design
- database security concepts
- organisational procedures referring to database processes and start-up procedures
- database server management tools
- structured query language (SQL) principles
- database administration tasks and procedures
- database processes, procedures and concepts of organisations and a vendor.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.
This includes access to:

- industry standard relational database management system
- an operational database requiring authenticated and authorised access, hosted in a network environment or virtual network environment.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

1. Prepare to improve knowledge management system

1.1 Identify and document structure and operation of existing organisational knowledge management system

1.2 Determine organisational knowledge management system information requirements

1.3 Determine and document required information structure

2. Create knowledge management system improvements

2.1 Collate all required information from information repositories on the knowledge management system

2.2 Organise information according to organisational requirements

2.3 Determine and document information structure improvement plan according to organisational requirements
ELEMENT | PERFORMANCE CRITERIA
--- | ---
3. Distribute and monitor knowledge management system documentation | 3.1 Distribute knowledge management system documentation to required personnel  
3.2 Seek and respond to feedback from required personnel  
3.3 Analyse use of knowledge management system and determine its effectiveness against organisational requirements  
3.4 Implement required process improvements and confirm organisational requirements are met  
3.5 Obtain final task sign off from required personnel  

**Foundation Skills**

*This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.*

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- monitor and implement at least three improvements to an existing knowledge management system.

In the course of the above, the candidate must:

- define success metrics
- track, document and define improvements made.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- practices for information management within an organisation
- information sources available within an organisation
- industry standard knowledge management systems
- database structures and their construction
- procedures for monitoring and reviewing knowledge management systems.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- industry software packages
- organisational databases
- information requirements
- information repositories
- industry standard knowledge management systems.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design, develop and implement a simple database on at least one occasion.

In the course of the above, the candidate must:

- document the database requirements, design plan and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- process for conducting data analysis, data types and data structures, query and report design
- data modelling procedures related to conceptual data model development
- data redundancy identification methodologies
- database management system (DBMS) design phase fundamentals
- encryption and authentication database security features
- functions and features of data types and data structures, and of databases
- logical design concepts, including those for data structures, queries screens and reports
- object model design concepts, including those for data structures, queries, screens and reports
- database scalability.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- industry standard equipment and materials
• industry standard database software
• network and other systems required for remote or multi-user access
• organisational requirements and deliverables
• computer-aided software engineering (CASE) or diagramming software.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- integrate, access, connect and update a database on at least one occasion.

In the course of the above, the candidate must:

- retrieve and display web-based data on at least two different browsers.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard database structures
- industry standard internet technology for databases
- database programming control structures, object-oriented programming and database interfaces including:
  - structured query language (SQL)
  - NoSQL programming interfaces
- web programming concepts, including:
  - authentication and web security
  - hypertext transfer protocol (HTTP)
  - session management
  - principles of stateless programming.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.
This includes access to:

- industry standard hardware and software required for database integration activities
- industry standard software packages
- organisational deliverables
- organisational policies and procedures that may impact on database integration activities
- web server
- database
- web development environment
- different browsers.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design, develop, test and implement a medium sized data warehouse.

In the course of the above, the candidate must:

- document plans and processes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- business operating systems related to data sources
- database management system (DBMS) fundamentals, including data extraction facilitation
- decision-support systems and knowledge management strategies
- database encryption and authentication security features
- functions and features of dimension tables and fact tables
- process for the installation and use of proprietary software
- logical database model knowledge required to facilitate data extraction
- relationship between databases and data warehouses
- levels of technical documentation required for newly developed data management systems.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- industry standard hardware and software
• industry standard software packages
• data in a DBMS
• data-warehousing tools
• organisational documents, policies and procedures relevant to building a database.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop a complex knowledge management strategy on at least one occasion.

In the course of the above, the candidate must:

- document processes and outcomes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard knowledge management in contemporary organisations
- differentiated impacts of organisational culture and traditional business models
- database design concepts
- internal and external information sources
- legal, ethical and security issues relating to knowledge management
- records management principles
- required government legislation that may affect business operation, including:
  - workplace health and safety (WHS) policy
  - environmental issues
  - equal opportunity
  - industrial relations
  - anti-discrimination
- organisational structures and business goals.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- industry standard equipment and materials
- industry standard software packages
- sample organisations suitable for the implementation of knowledge management
- organisational deliverables and requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- determine functionality and scalability of a complex database.

In the course of the above, the candidate must:

- document database functionality and scalability system
- document business expectations and business requirements.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- architecture of database networks
- Australia code of ethics and its relation to the computing industry
- systems hardware related to the client, server and database architecture
- concept of data modelling
- functions and features of databases
- definition of data and implications for database design and functionality.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- industry standard equipment and materials that assist in the determination of suitability of database functionality and scalability
• industry standard software packages required to determine database functionality and scalability
• industry standard database management system (DBMS)
• industry standard sample database and data.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTDMT404 Create visual design components for digital media

Modification History

<table>
<thead>
<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 6.0.</td>
</tr>
</tbody>
</table>

Application

This unit describes the skills and knowledge required to create visual design components for media, using industry-standard design tools.

It applies to individuals working in digital media under supervision, in all industries as well as ICT related workplaces who are responsible for producing visual design components for digital media to industry standards. Digital media components in this instance refers to interactive or non-interactive design components for an information technology, digital environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Digital media technologies

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
</tbody>
</table>

1. Establish requirements for visual design components

1.1 Obtain project brief and documents
1.2 Identify visual design components and copyright requirements for digital media according to organisational standards
1.3 Determine design considerations for designing an interactive and non-interactive visual design component, and their purpose
1.4 Define best practice of design principles and elements of good design
### Element \ PERFORMANCE CRITERIA

<table>
<thead>
<tr>
<th>Element</th>
<th>Performance Criteria</th>
</tr>
</thead>
</table>
| 2. Identify and use software packages for creating visual design media | 2.1 Identify and review a range of industry-standard graphics software packages available  
2.2 Assess and select suitability of software package against design requirements  
2.3 Run graphics software package and become familiar with the interface  
2.4 Create new files and naming conventions according to file management and version control procedures  
2.5 Apply required tools and features used to create visual design components |
| 3. Create visual design components for visual media | 3.1 Develop design ideas and graphic components using creative approaches and principles  
3.2 Use graphics software to create visual media and required components  
3.3 Identify interactivity of required interactive components  
3.4 Communicate and confirm design with required personnel  
3.5 Save and back up work |
| 4. Demonstrate, finalise and evaluate design components | 4.1 Demonstrate implementation and interactive components to required personnel  
4.2 Articulate and justify design choices  
4.3 Evaluate usability of design components and interactivity against design brief and intended environment  
4.4 Seek and respond to feedback from required personnel |

### Foundation Skills

*This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.*

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design and produce at least one piece of digital media and its components consistent with a design brief.

In the course of the above, the candidate must:

- demonstrate original, innovative approaches to creative development according to design principles and elements
- demonstrate integrity of the design brief against specified requirements
- construct technical specifications for visual design components and overall usability
- confirm copyright and intellectual property legislation and organisational requirements are adhered to
- back up and save work.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- functions, features and uses of graphic software packages and media products, including their purpose, constraints and environments
- technical constraints that hardware imposes on software development, graphics requirements and creative visual design
- techniques for applying concept development skills and visualisation skills
- legislative and organisational requirements, policies and procedures
- design principles, processes, and elements required to create components for digital media.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry or similar.

This includes access to:

- required hardware
- software packages and application, including required digital media tools
- design brief
- file storage devices and systems
- legislative and organisational requirements applicable too creating visual design components.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

</table>

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design and create at least one piece of interactive animation, using different animation techniques
- publish animation on at least one accessible location, including a website, application or shared software
- test, debug and fix code and usability errors on at least 4 different browsers (if publishing on a website), and on at least 2 different devices.

In the course of the above, the candidate must:

- follow industry standards and procedures
- confirm, document and save work.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- internet technology used to inform choice of scripting type
- principles of analysis and design that may be used in the process of producing interactive animations
- programming control structures including buttons and scripting language
- animation programming concepts, including:
  - acceptable formats for importing assets
  - component libraries
  - cross-browser issues
  - importing and exporting libraries
• inserting published work to a hypertext markup language (HTML) or to an extensible hypertext markup language (XHTML) page
• internet animation player statistics
• masking that may be used in producing interactive animations
• movements and automated movements
• publishing finished work in applicable web format
• shape animation, manipulation, symbols, text manipulation and transparencies
• testing and debugging script techniques
• version control techniques and file naming standards.

**Assessment Conditions**

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

• animation tools, equipment and materials
• industry software packages
• the internet and browser access
• storage device or cloud system
• electronic devices, including
  • a personal computer (PC)
  • a smartphone device
  • tablet.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- identify, edit and sequence at least three digitally captured images using each of the following types of image capturing devices on at least one occasion, including:
  - mobile phone devices
  - smart devices
  - digital SLR.

In the course of the above, the candidate must:

- demonstrate the operation of a digital camera in order to capture a range of images
- assemble required tools and procedures required to produce digital images
- demonstrate using digital imaging software to prepare high quality digital images that satisfy a range of customer and business requirements
- apply copyright and IP requirements.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- functions and features of a range of delivery platforms
- digital photographic techniques
- principles of communication through visual design
- implications of technology connectivity
- work health and safety (WHS) requirements for use of cameras, and computers, and handling and disposing of lithium batteries
- procedures for customer and business liaison
- copyright and intellectual property legislation, policies and procedures
- industry standards relevant to digital images.

**Assessment Conditions**

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry. This includes access to:

- special purpose tools and equipment
- materials and industry software packages
- image capturing equipment including:
  - digital camera
  - mobile phone device with image capturing capacity
  - smart device with image capturing capacity
  - digital SLR
- industry standard graphics software
- copyright information.

Application

This unit describes the skills and knowledge required to install and configure digital reception equipment (DRE) on a customer’s premises.

It applies to individuals who install and maintain DRE in home or small business networks, and includes integration of many services such as broadband, digital TV, free to air (FTA), subscription TV (pay TV) and internet protocol TV (IPTV).

This unit should only be undertaken by experienced cablers to enhance their cabling skills.

No licensing, legislative or certification requirements apply at the time of publication.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- identify installation requirements and obtain required approvals
- install equipment applying work health and safety (WHS) requirements and work practices
- configure set equipment to customer requirements
- conduct functionality tests and interpret results
- provide customer training appropriate to equipment
- complete task and handover to customer.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- a range of products used across the industry
- contemporary equipment and connection methods
- customer service principles, including dealing with customers face to face
- enterprise or service specific knowledge of products and services supplied
- work health and safety general principles and enterprise specific job safety analysis (JSA) requirements
- an overview of:
• methods of training customer in product use
• radio frequency (RF) theory, principles and safety
• telephony principles to support return path awareness
• pre-installation enterprise specific requirements
• enterprise quality assurance requirements
• return path technology
• technology on customer premises
• test results
• reception issues.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• site for digital reception equipment installation
• digital reception equipment currently used in industry
• test equipment required for digital reception equipment installation and testing.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to install, test and commission a cable broadband system within a multi-dwelling unit (MDU).

It applies to technicians who conduct cable broadband installation and service assurance activities within commercial or MDU environments.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Digital Reception Technology

Elements and Performance Criteria

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- obtain relevant approvals for access to site and equipment
- plan, assemble and install equipment
- interpret results
- action test results to align with enterprise requirements
- perform handover with customer
- apply related work health and safety (WHS) requirements and work practices.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- legislation, regulations and codes relevant to installation of broadband systems
- procedures and equipment required for measuring:
  - radio frequency (RF) signal power forward and return
  - insertion loss
  - distance to fault
  - modulation error rate (MER) and bit error rate (BER) for purpose of signal integrity
- features of instruments, test equipment and performance requirements
- RF testing of radio communications instruments and equipment
- typical issues and challenges that occur in telecommunications broadband installations
- safety issues regarding electromagnetic radiation (EMR).
Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- site/s where broadband multi-dwelling unit (MDU) system installation can be undertaken
- hybrid fibre coaxial (HFC) equipment and devices currently used in industry
- test equipment required for HFC broadband installation and testing.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

</table>

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- capture customer functional needs for wiring system
- apply industry standards, regulations and codes of practice when designing a wiring system for a customer
- develop a detailed design in compliance with industry practices, including signal losses and/or expected measurements to be achieved at wall plates
- document the design, including a bill of materials, schedule of work and associated costs and submit to customer.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- cabling standards, regulations and codes applicable to cable design
- building regulations that apply to installation of cabling systems
- codes of practice and Australian Communications and Media Authority (ACMA) standards for home wiring
- carrier network delivery systems used in single dwelling and multi-dwelling units for:
  - fibre
  - fixed wireless
  - satellite
  - twisted copper pair
  - subscription TV
Assessment Requirements for ICTDRE314 Design communications wiring systems for customer premises

Date this document was generated: 19 January 2021

© Commonwealth of Australia, 2021

PwC’s Skills for Australia

- cabling requirements of home technology applications taking into account:
  - the user needs including age and assisted living conditions
  - communications
  - digital home health
  - energy management
  - entertainment
  - intelligent light and power
  - security and safety
- testing and commissioning methods and determine performance requirements for home technologies
- customer interface elements commonly considered when designing a wiring system
- common service providers clients may specify
- safety implications of the design for users
- design parameters for cable selection and support system of a wiring system
- documentation required when submitting a design to a customer.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the Telecommunications – Digital Reception Technology industry and include access to:

- a contemporary dwelling design
- a specification of a customer's functional requirements
- current standards, codes of practice and regulations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- create an interactive game using an industry standard game-engine software and development tools.

In the course of the above, the candidate must:

- follow applicable industry standards and organisational guidelines
- apply a variety of strategies in game trialling and testing
- implement game development and production strategies
- maintain the integrity of design brief and game design document
- save final product and obtain sign-off from required personnel.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- basic programming techniques that may be used for interactive game development
- game engine capabilities and constraints
- industry standard game-play hardware and software products
- technical constraints hardware and software impose on design and development
- risk and critical path management, applicable to interactive game development
- game production testing and trialling process
- the process of evaluating game prototypes from technical, design and game play perspectives
- industry standards and organisational guidelines applicable to game production
- game-production assets and issues with asset integration.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- project briefs
- applicable organisational documentation
- game-production assets
- technical specifications
- game production testing and trialling tools
- industry standard game-engine software and development tools
- required industry-standard hardware, software and peripheral devices.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- identify games design and game playing principles in at least two games from at least two different game genres.

In the course of the above, the candidate must:

- determine methodology used
- differentiate game genres and identify differing characteristics
- identify consumer demographic for each game product
- differentiate game design and play principles
- prepare an outline of a game design according to industry and organisational requirements.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- 3-D digital model design techniques
- procedures and processes in game development
- industry standard game-play hardware and software products
- technical constraints hardware and software impose on design and development
- industry and organisational requirements.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
- the internet
- required hardware and software required in researching games and the games industry.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to create a game concept, develop and document the game specifications.

It applies to individuals who support the design, development and programming of basic digital games and design, develop and use digital media technologies as part of a larger development team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Game development

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- create and develop game design documents for at least one interactive game according to required industry standard and consistent with client brief and specifications.

In the course of the above, the candidate must:

- develop concept art for characters, environments, splash screens, start screens and game field screens consistent with identified game genre and design specifications
- develop technical specifications in game mechanics, artificial intelligence, physics, sound, game play and overall usability
- include a list of estimated resources required and a game development schedule.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- game development processes
- basic programming techniques that may be used for interactive game development
- industry standard game-play hardware and software products
- technical constraints hardware and software impose on design and development
- techniques in applying concept development and concept visualisation skills
- industry standards applicable to creating and developing game design documentation
- organisational guidelines, documentation techniques and processes that may apply to creating design documents for interactive games.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- the internet
- client brief
- required hardware, software and peripheral devices
- games-engine.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- identify and analyse at least two artificial intelligence (AI) strategies applicable to a game development brief
- design a feasible AI game strategy
- implement at least two path finding algorithms and at least two non-player character AI strategies in a game.

In the course of the above, the candidate must:

- review and evaluate AI strategies
- comply with industry standards, client brief and game requirements.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- basic path-finding algorithms implications on game development
- major AI terms used in the game industry
- the development process of creating AI strategies in non-player characters (NPCs) in a game
- applying object-oriented programming practices
- overall architecture of a game engine
- game development testing processes
- industry standards applicable to game development.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- the internet
- research tools
- required hardware, software and its component
- path-finding libraries
- game development testing tools
- development tools to implement AI strategies
- game design specifications and documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop at least one game storyline according to industry standards.

In the course of the above, the candidate must:

- create character profiles according to game environment and storyline
- write plot synopsis with a supporting background story
- create a storyboard
- comply with copyright and intellectual property protection regulations.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- budgeting and scheduling considerations in game development
- copyright and intellectual property protection regulations applicable to written narrative and concept graphics
- different story requirements in particular game genres
- role of story writing in game development
- research methods used in observing latest changes and narrative development in games
- tools and techniques used in developing game narrative
- organisational procedures that may be used in the development of story and content in digital games.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.
This includes access to:

- a range of industry standard games across all platforms and genres
- a range of industry standard consoles and hand-held game devices
- the internet
- word processing software
- industry standard game development software
- required hardware, software and games engine
- file storage and version control environment
- copyright and intellectual property legislation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design, implement and evaluate a graphical user interface (GUI) with basic functionalities according to game and interactive media requirements.

In the course of the above, the candidate must:

- align visual design components to design brief requirements
- evaluate and select a graphics software package
- develop concept art and design specifications for splash screens, start screens and game field screens according to design brief
- create at least three visual design components and incorporate into GUI
- implement game development and production strategies
- develop technical specifications applicable to visual design components and overall usability.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- GUI design principles and related programming techniques
- human resources required in process of creating visual design components
- technology requirements and technical constraints they impose on design and development
- techniques in applying concept development skills and concept visualisation skills
- organisational procedures and documentation processes that may be used in creating visual design components in interactive games
- standards applicable to creating visual design components.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a design brief
- required hardware, software and peripheral devices applicable in games development
- games engine
- the internet
- industry standard graphics software and included tools and features
- file storage
- word processing software.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

| 1. Identify and develop story and script components | 1.1 Identify and confirm game genre and story components with required personnel  
1.2 Discuss and propose creative script concepts and ideas  
1.3 Develop a script structure consistent with game genre and game design brief  
1.4 Develop script components in the main plot, background stories and level and mission stories according to game genre and game design brief |
## ELEMENT

### PERFORMANCE CRITERIA

2. Write a draft script

| 2.1 Write a script synopsis according to game design brief |
| 2.2 Write a draft script and include main characters and their interactions, background stories and level and mission stories, according to design brief, game structure and genre |
| 2.3 Develop character and narrator dialogue |
| 2.4 Initiate storyboards for draft scripts in required format |

3. Review script according to feedback

| 3.1 Present synopsis and storyboards to required personnel and seek feedback |
| 3.2 Collate and respond to comments and feedback |
| 3.3 Revise scripts and storyboards according to feedback |
| 3.4 Undertake focus testing with intended audience |

4. Write final script

| 4.1 Collate and respond to comments and feedback from focus testing |
| 4.2 Review and rewrite script synopsis, script and dialogue where required |
| 4.3 Initiate revised storyboards where required |
| 4.4 Present final script in agreed format to required personnel and obtain sign-off |

## Foundation Skills

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- write a script according to game design brief and client requirements.

In the course of the above, the candidate must:

- identify key components of the story
- develop script structure and components
- communicate and liaise script review with required personnel
- prepare a final script and present to required personnel
- follow organisational procedures applicable to script writing and development process
- comply with copyright and intellectual property standards and legislation.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- budgeting and scheduling considerations in game development
- components that drive script narrative and engage target audiences
- the contribution of script writing to narrative development and engaging game play
- focus testing processes and procedures
- game genres and narrative structures
- industry standard game script formats
- research methods in:
  - competitors’ work in developing stories and scripts in games
  - factual information as a basis for character, location and narrative development
  - owners of copyright and intellectual property used in game development
  - script structures and character profiling in interactive games
Assessment Requirements for ICTGAM426 Write narrative scripts for interactive games

- scriptwriting techniques and interactive game requirements
- seeking permission from copyright owners for use of protected elements in scripts
- different storyboarding techniques
- copyright and intellectual property standards and legislation
- organisational procedures that may be used to write scripts for interactive games.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
- scriptwriting reference materials
- game design brief
- the internet
- a range of industry standard interactive games across all platforms and genres
- a range of industry standard games consoles and hand-held game devices
- required hardware, software and peripheral devices
- file storage
- games engine.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to investigate, customise and use 3-D animation software interfaces and toolsets.

It applies to individuals who support the design, development and programming of basic digital games as part of a larger development team and gaming environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Game development

Elements and Performance Criteria

<table>
<thead>

<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
</tbody>
</table>
| 1. Locate and identify 3-D software navigation controls | 1.1 Research and evaluate a range of industry standard 3-D modelling and animation software  
1.2 Identify task requirements and select 3-D modelling and animation software applicable to task  
1.3 Identify a range of 3-D navigation types, including panning, zooming and rotating around viewport, on chosen 3-D modelling and animation software  
1.4 Identify processes of improving user performance including navigation, keyboard hotkeys and input procedures |
<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 2. Locate and identify 3-D animation toolsets and select required menu categories | 2.1 Identify toolsets of industry standard 3-D animation software  
2.2 Identify and analyse 3-D software menus and specific category types  
2.3 Define and use 3-D software-specific transformation types and toolset types  
2.4 Associate menu categories as required according to task requirements  
2.5 Consult with required personnel and perform software interaction using application hotkeys |
| 3. Initiate and use software-support materials and customise application interface | 3.1 Identify and research range of reference material available in creating 3-D animation and digital effects  
3.2 Present reference material required in 3-D animation process to required personnel and team members  
3.3 Identify and access animation software support procedures, documents and help files, through hotkey and application menus  
3.4 Consult with required personnel and use applicable support materials |
| 4. Identify and plan 3-D application import and export procedures and use application feedback | 4.1 Discuss application file-management procedure types with required personnel, including opening, importing, saving and exporting  
4.2 Discuss and use application project configuration procedures with required personnel  
4.3 Prepare and create projects as required  
4.4 Discuss user application feedback with required personnel  
4.5 Troubleshoot error scenarios as required using application feedback  
4.6 Use feedback with inbuilt support documentation as required |
| 5. Customise application interface | 5.1 Identify variation of user interface windows and panels’ configurations  
5.2 Use custom interface according to toolset procedural needs and task requirements |
Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- interact and navigate with at least one 3-D application interface and its toolsets.

In the course of the above, the candidate must:

- manage files to protocols
- execute and use 3-D application native support
- use 3-D application user feedback
- configure custom panels and window configurations.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- 3-D animation production protocols
- industry standard 3-D modelling and animation software
- contents and application of production brief
- development process that may be used in 3-D software interface and toolsets
- protocols in filing media assets
- file management procedures and project configuration procedures that may be used in 3-D software interface and toolsets
- fundamental research principles procedures that may be used in 3-D software interface and toolsets
- principles of design and colour used in 3-D animation and digital effects environments
- procedures for producing a storyboard and script
- technical constraints that hardware and software impose on graphics requirements and creative visual design.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- reference materials applicable to creating 3-D animation and digital effects
- required hardware and software and peripheral devices
- games engine
- file storage
- required 3-D modelling and animation software.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Identify and discuss character requirements and designs | 1.1 Identify client and character requirements and environment and context of interactive game  
1.2 Discuss and determine style of characters with required personnel according to client requirements  
1.3 Determine and agree on character type, role, name and profile  
1.4 Discuss and determine character animations required in game systems implementation  
1.5 Compare animations with analysis criteria, game and client requirements |
| 2. Design characters | 2.1 Design and develop a concept character illustration according to organisational procedures and client |
2.2 Conduct focus testing of concept illustration with required personnel and representatives of target market audience

2.3 Develop character schematics with feedback incorporated and submit to required personnel for approval

3. Develop character models

3.1 Construct a 3-D character model according to character schematics and task requirements

3.2 Construct 3-D costumes, tools and accessories as required by character model

3.3 Shade, texture and light the completed character model

3.4 Implement joints, vertex weighting and character rig to 3-D character model

3.5 Develop animation blocking and in-betweens in consultation with animation personnel and seek their approval

3.6 Compare 3-D models and animations with original concept illustration and confirm quality and conformity to brief

3.7 Submit to required personnel and obtain approval

Foundation Skills

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design and develop at least three game characters using 2-D and 3-D software applications.

In the course of the above, the candidate must:

- comply with games design brief and client requirements
- follow organisational procedures
- test and seek feedback to character designs with intended audiences and act accordingly.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- features of 3-D software packages used to create 3-D character models in games
- industry standard game design briefs
- different character styles and animations
- 3-D character modelling methods, within the technical parameters and constraints of game development
- technical limitations of creating 3-D character models in games
- organisational procedures that maybe used to create 3-D character for interactive games.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• required hardware and software
• games engine
• file storage
• character reference materials including models, illustrations, art and design books and
  character photographs
• a range of industry standard games, across all platforms and genres
• a range of industry standard consoles and hand-held game devices.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational
education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- identify, design and generate at least three 3-D components.

In the course of the above, the candidate must:

- identify component integration
- establish component development pipeline
- follow game design document requirements
- use required formats and file extensions
- name and store components according to agreed methods and organisational procedures
- comply with quality assurance standards
- test and analyse component integration.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard game hardware and software products
- game-engine architecture and methods used in component importing
- 3-D components testing methods and processes
- processes and techniques applicable to:
  - the creation of 3-D objects within industry-standard modelling software
  - the use of industry formats in developing 3-D models and objects
- organisational procedures and quality assurance standards that may be used in the development of 3-D components for interactive games.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required hardware and software
- industry-standard modelling software
- client requirements documentation
- game design document
- games engine
- file storage.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- create an application, accessing and using technologies and showcasing captured events from hardware devices
- create an application using a human-computer interface devices and event-handling call-backs showcasing the captured events with GUI widgets
- design a simple application, using required hardware event handling methods, within the context of game environment
- produce a custom control.

In the course of the above, the candidate must:

- present completed project to required deadline
- comply with organisational procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- programming techniques applicable to interactive media
- specific terminology used by game developers
- hardware and software requirements in a human-computer interaction environment
- a range of human-computer interaction devices and their application
- widgets and their usage
- operations in ‘heads-up’ display environments
- technical constraints imposed by hardware and software on design and development
- file storage and organisational procedures that may be used in designing interactive media.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required hardware and software and peripheral devices
- human-computer hardware interface devices
- a range of event-handling systems
- the internet
- application libraries
- widgets
- graphical user interface software and libraries
- games engine
- a range of browsers and digital devices
- client requirements documentation
- file storage.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design, create and store at least two 3-D digital models according to work, design and production requirements.

In the course of the above, the candidate must:

- communicate with required personnel and clarify initial requirements including deadlines
- modify and amend 3-D models in response to feedback from required personnel
- comply with organisational guidelines and industry standards applicable to designing and creating 3-D models.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- 3-D digital modelling and design principles
- stages in model production process, from initial design through to finished product
- issues and challenges arising from designing and creating 3-D digital models
- roles and responsibilities of project team members in developing digital models
- features of a range of delivery platforms
- geometry as it applies to the design and creation of realistic 3-D digital models
- use of scale, form, weight and volume in the development of 3-D digital models
- organisational guidelines and procedures
- industry standards applicable to designing and creating 3-D models
- range of industry standard 3-D modelling software.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required hardware and software
- required industry standard 3-D modelling software and features
- a range of industry standard delivery platforms
- client specification documentation
- reference materials applicable to design and visualisation of 3-D models
- file storage
- 3-D product modelling software and delivery platforms.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

</tbody>
</table>

Application

This unit describes the skills and knowledge required to produce and manipulate audio assets for digital games, using a variety of tools.

It applies to individuals who support the design, development and programming of basic digital games as part of a larger development team in a game development environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Game development

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
</tbody>
</table>

1. Research and document game audio in digital games

1.1 Identify and document trends and evaluate their impact on the future of game audio
1.2 Identify and document different methods of using audio in digital games
1.3 Identify and document role of music in creating mood and atmosphere
1.4 Determine and document how sound effects and vocals are used within digital games
<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 2. Source existing sound effects, music tracks and voice recordings | 2.1 Find sources of sound effects, music tracks and voice recordings  
2.2 Create and maintain a small collection of audio assets  
2.3 Identify different audio formats in audio asset collection  
2.4 Differentiate between compressed and uncompressed audio formats  
2.5 Identify different genres of music required for digital games  
2.6 Identify audio copyright laws and royalty-free audio |
| 3. Record and manipulate game audio | 3.1 Identify game context and establish client requirements for game audio  
3.2 Evaluate a range of industry standard audio-editing software and select software applicable to game audio requirements  
3.3 Record character voices, music and sound effects according to game audio requirements  
3.4 Develop a soundtrack using audio-editing, according to game and client requirements  
3.5 Rearrange audio samples using audio-editing software and apply required audio effects  
3.6 Select required sample format and bit rate  
3.7 Normalise audio samples and make volume uniform  
3.8 Trim audio samples according to task requirements  
3.9 Export audio to required format |
| 4. Create sound effects and music for a game | 4.1 Evaluate a range of music production software and select software applicable to game and audio requirements  
4.2 Identify digital sound waveforms  
4.2 Apply basic music theory to music production software  
4.3 Determine required musical notation  
4.4 Identify and use musical tools within music production software  
4.5 Compose a simple piece of music according to game audio requirements  
4.6 Create various sound effects according to |
**ELEMENT** | **PERFORMANCE CRITERIA**
--- | ---
| | game audio requirements

5. Research audio-programming libraries and integrate sound, music and vocals into digital games

| | 5.1 Identify and compare functional capabilities of a range of industry standard audio-programming libraries
| | 5.2 Explore use of channels and mixing
| | 5.3 Play a mixture of cached and streaming audio sources
| | 5.4 Incorporate music and sound effects into different sections of digital game according to game requirements
| | 5.5 Locate and play positional audio sources
| | 5.6 Present to required personnel and confirm audio integration fulfils client and game requirements

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- source and analyse at least three audio resources from at least three different music genres
- record and manipulate at least three different pieces of audio
- generate at least three sound effects
- compose at least one simple music track
- integrate at least one simple music track and at least three different sound effects into a digital game.

In the course of the above, the candidate must:

- create audio according to game context and game environment
- evaluate, select and use audio programming libraries
- comply with copyright legislation and applicable industry standards.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard audio-editing software, music production software and tools
- different audio formats and their application to games
- capabilities of audio-programming libraries
- basic music theory relevant to audio recording for digital game development
- copyright legislation and industry standards applicable to audio recordings
- music-creation tools and their relation to music theory.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required hardware, software and peripheral devices
- specifications documentation detailing game context and environment
- digital audio editing software
- music production software
- audio-programming libraries
- games engine
- file storage
- the internet
- a range of digital games
- copyright and intellectual property legislation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- optimise and render at least three images using required rendering software, according to design brief.

In the course of the above, the candidate must:

- use and optimise rendering software components
- adhere to requirements related to file sizes and formats
- store rendered components according to requirements.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- software features used for:
  - 3-D animation
  - 3-D modelling
  - lighting
  - rendering
  - shading
  - texturing
- file format and size requirements
- system requirements
- industry standard rendering software packages
- pre-rendering optimisation techniques
- why rendering is required in 3-D modelling, animation and game development
- organisational procedures.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required hardware, software and peripheral devices
- graphic rendering software packages
- input and output devices
- models and scenes requiring rendering
- style shots
- file storage
- project and design briefs, specifications and schedules.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
</tbody>
</table>

1. Identify and analyse digital games and 3-D media design concepts
   1.1 Obtain project brief and other applicable organisational documents and procedures
   1.2 Research and identify design concepts in digital games and interactive 3-D media
   1.3 Analyse and interpret design concepts used in digital games and interactive 3-D media
   1.4 Discuss design considerations for designing digital games and interactive 3-D media concepts

2. Evaluate and select software packages
   2.1 Identify and review applicable industry-standard software available for developing design concepts
### ELEMENT | PERFORMANCE CRITERIA
--- | ---
2.2 | Assess software according to concept design process requirements
2.3 | Discuss technical specifications for development process with required personnel
2.4 | Select software package according to concept design requirements
3. Use chosen software package | 3.1 Run selected software package and navigate user interface according to vendor requirements
3.2 | Create new files and organise and develop file structure
3.3 | Identify and use tools and components required to create and develop digital games and interactive 3-D media concepts
4. Create concept components for digital game or interactive media | 4.1 Identify specific processes for heads-up display elements
4.2 | Design heads-up display for a digital game or 3-D interactive media
4.3 | Document design and programming processes and requirements applicable to implementing heads-up display according to organisational procedures
4.4 | Create and develop visual design elements and components to be used for heads-up display using chosen software package
5. Implement a design concept into a game or 3-D interactive media and evaluate implementation | 5.1 Load in required images and write code to implement heads-up display into an existing framework
5.2 | Write code and demonstrate heads-up display capabilities with implemented concepts
5.3 | Demonstrate implementation to required personnel
5.4 | Seek feedback and assess and refine concept as required
5.5 | Evaluate usability of concept’s components
5.6 | Identify and discuss possible changes to improve visual design and capabilities of components and share findings with required personnel

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop concept art and design specifications consistent with an identified game genre for at least one of each of the following:
  - heads-up display
  - splash screen
  - start screen
  - game field screen
- implement a working heads-up display with at least three basic functionalities.

In the course of the above, the candidate must:

- demonstrate original and innovative approaches to the creative development of a game
- implement game development and production strategies
- maintain integrity of design brief
- develop technical specifications for game mechanics, artificial intelligence, physics, sound, game play and overall usability
- confirm design concepts are functional on at least two different browsers and at least two different devices
- evaluate different controller designs required according to different devices digital games and 3-D media.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- basic programming techniques and language
- industry-standard software applicable to developing design concepts
• capabilities and constraints of game engines
• concept development process and visualisation skills
• game development process, including specific terminology
• key features of game-play hardware and software products
• human resources required in the process of creating games and their respective skills and technology requirements
• work health and safety (WHS) requirements relating to:
  • ergonomics
  • electrical safety
• risk and critical path management techniques
• technical constraints that hardware imposes on:
  • software development
  • graphics requirements
  • code development
  • creative visual design
• organisational procedures applicable to documenting and creating design concepts.

**Assessment Conditions**

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

• hardware and software applicable to creating design concepts for digital games and 3-D media
• games engine
• file storage
• browsers and digital devices
• the internet
• organisational procedures applicable to documenting and creating design concepts.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

2.2 Assess software and tools related to specified game concept and play requirements  
2.3 Discuss considerations for selection of game-engine software with required personnel and confirm selection will meet specified outcomes  
2.4 Select game-engine software and development tools |
| 3. Prepare required assets for a game | 3.1 Establish environment for project that supports sharing of project assets produced by team members  
3.2 Review attributes of assets required in a game project related to game engine  
3.3 Create or acquire visual assets for a games project  
3.4 Customise asset attributes according to game design and chosen game engine |
| 4. Use game-engine software and development tools | 4.1 Create, modify or access scripts or code and combine assets  
4.2 Create and check game-play elements according to creative and technical requirements  
4.3 Test and run game prototype as a presentation and confirm sequences meet creative, production and technical requirements |
| 5. Evaluate game prototype | 5.1 Demonstrate initial prototype to required personnel and seek feedback  
5.2 Evaluate prototype against criteria including achievement of a creative and user-friendly product  
5.3 Discuss and agree on required changes  
5.4 Assist if required in tests and user trials  
5.5 Evaluate feedback from user trials  
5.6 Confirm endorsement from required personnel and develop prototype into a complete product |
| 6. Transform prototype into final publication | 6.1 Make required changes as indicated by user trials  
6.2 Integrate all game elements as required by specifications  
6.3 Make final checks and confirm sequences conform to navigation design  
6.4 Obtain final sign-off from required personnel  
6.5 Assemble final publication for distribution according to organisational procedures |
Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

<table>
<thead>
<tr>
<th>SKILL</th>
<th>DESCRIPTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Reading</td>
<td>• Interprets and comprehends a large range of textual and diagrammatic information, to inform instructional, technical and conceptual requirements</td>
</tr>
<tr>
<td>Oral Communication</td>
<td>• Uses listening and open questioning techniques to obtain required information and concepts using appropriate industry language for intended audience</td>
</tr>
<tr>
<td>Numeracy</td>
<td>• Uses whole numbers, decimals and percentages when manipulating software according to technical and design component requirements</td>
</tr>
<tr>
<td></td>
<td>• Defines timeframes according to schedule requirements</td>
</tr>
<tr>

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- create a complex 3-D interactive game according to a design brief, on at least one occasion.

In the course of the above, the candidate must:

- apply a variety of strategies for game trialling and testing
- apply original and innovative approaches to creative development of a 3-D game
- collaborate in use of tools and features of software applicable to game-production process
- implement game development and production strategies
- maintain integrity of the design brief and game design document
- communicate, collaborate and participate in a team environment
- compare different controller designs required according to different devices
- confirm functionality on at least two different browsers and at least two different digital devices.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- basic programming techniques and language
- capabilities and constraints of game engines
- processes used for games development, including specific terminology
- production and testing scheduling techniques
- key features of game-play hardware and software products
- risk and critical path management techniques
- technical constraints that hardware imposes on:
• graphics requirements
• code development
• creative visual design
• creative, production and technical requirements of creating 3-D games
• asset formats and issues of game asset integration.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• hardware and software applicable to creating 3-D interactive games
• project brief
• games engine
• browsers and digital devices
• file storage
• the internet.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

</tbody>
</table>

Application

This unit describes the skills and knowledge required to prepare, manage and monitor interactive media or game production teams.

It applies to those who manage personnel in the interactive media or game development industry, including concept artists, designers, programmers, animators and others.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Game development

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
<tr>
<td>1. Prepare digital media team</td>
<td>1.1 Undertake work placement of production team according to project requirements and business need</td>
</tr>
<tr>
<td></td>
<td>1.2 Confirm team requirements according to business need</td>
</tr>
<tr>
<td></td>
<td>1.3 Confirm team expectations according to organisation policy and procedures and business need</td>
</tr>
<tr>
<td>2. Monitor workplace structure</td>
<td>2.1 Determine duties carried out by various personnel according to project requirements</td>
</tr>
<tr>
<td></td>
<td>2.2 Observe lines of reporting and communication</td>
</tr>
<tr>
<td></td>
<td>2.3 Determine responsibilities of own department</td>
</tr>
<tr>
<td>3. Identify behaviours and attitude</td>
<td>3.1 Identify and document organisational culture according to organisational requirements</td>
</tr>
</tbody>
</table>
### ELEMENT | PERFORMANCE CRITERIA
--- | ---
3.2 Determine and document model behaviour and communication methodologies  
3.3 Engage and communicate with required personnel according to project requirements  
4. Report on team workplace experience  
4.1 Record team daily activities according to organisational requirements  
4.2 Determine and document summary of team workplace experience according to organisational requirements

### Foundation Skills

*This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.*

<table>

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- plan assigned tasks and monitor team behaviours in a production environment on at least two occasions.

In the course of the above, the candidate must:

- demonstrate effective communication, listening and questioning skills with required personnel, including use of industry terminology
- operate according to the lines of reporting and required method of communication
- allocate tasks to required personnel
- document plans and outcomes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- basic 3-D techniques relating to managing interactive media production
- budgeting and scheduling considerations for 3-D design
- capabilities and constraints of 3-D packages
- key features of industry standard game-play hardware and software products
- technical constraints that hardware or software imposes on graphics and visual design
- process required to produce a 3-D animation sequence or components
- roles and responsibilities of team members producing 3-D animations and digital effects
- strategies for communicating with production teams and clients.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- an environment where interactive media production is carried out
- organisational guidelines and policies
- personnel required to managing interactive media productions.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop at least one complex 3-D software according to client specifications, on at least one occasion.

In the course of the above, the candidate must:

- employ multiple 3-D frameworks, engines and libraries
- create mesh primitives using 3-D library routines
- generate code and manipulate 3-D objects, including cameras, lights and mesh primitives
- use virtual objects in 3-D environments, including:
  - audio managers
  - cameras
  - lights
  - physics managers
  - viewports
- animate 3-D objects required by game play and:
  - include animation selection/playback for pre-constructed models
  - be based on user input
  - be driven by code
  - include dynamic camera movement as required by game play
- build a complex graphical user interface (GUI) for a 3-D environment
- select and deploy documentation tools
- create and maintain code documentation using applicable tools
- detect logical and coding errors and debug application as required
- comply with legislative and organisational standards.
Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- processes involved in complex 3-D software development
- legislative and organisational standards applicable to development of complex 3-D software
- configuration processes for 3-D environments, including:
  - device selection
  - game resolution
  - screen colour depth
  - output performance including:
    - anti-aliasing
    - level of detail
    - filtering
    - caustics and refraction
- use of scripts and library routines in 3-D software development environments
- techniques for using multiple games-oriented libraries
- environmental elements in complex 3-D software and impacts on users
- handling and debugging techniques used when developing 3-D software for games and interactive media
- documentation techniques applicable to 3-D software development process
- object-oriented 3-D programming concepts and language
- techniques for using a graphical user interface (GUI) to interact with a user.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- project brief
- software, hardware and 3-D equipment required in developing complex 3-D software for games and interactive media
- integrated development environment facilities
- integrated or third-party documentation tools
- technical manuals and materials applicable to complex 3-D software development
- existing multiple frameworks, search engines or games-oriented libraries.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- produce a cross-platform game project for delivery across, at least three different platforms, according to project requirements.

In the course of the above, the candidate must:

- identify and use cross-platform integrated development environment (IDE) libraries and installers
- use platform-specific input devices
- document issues identified and work performed for cross-platform development.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- features and functions of industry standard cross-platform software, hardware, installation methods and IDEs
- evaluation techniques for cross-platform development libraries
- research methods for cross-platform development and distribution
- different sources of cross-platform libraries
- testing and debugging procedures relating to the preparation of game packages for different platforms and delivery modes
- industry standard platform-specific input devices.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.
This includes access to:
- hardware and software applicable to preparation of game packages for different platforms and delivery modes
- project requirements
- pre-existing game package
- games engine
- file storage
- digital devices running various operating systems
- cross-platform IDEs and libraries
- installers for product distribution
- the internet.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:
- manage testing of a game or interactive media product according to quality requirements on at least one occasion.

In the course of the above, the candidate must:
- develop a quality requirements statement according to industry and organisational requirements
- define quality requirements and test plan
- identify bugs and issues and amend accordingly
- maintain ongoing management of testing process
- report on process to required personnel
- document work performed according to organisational procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:
- client requirements for platforms, hardware and software
- client system requirements, both functional and non-functional
- procedures for bug or issue management and identification
- legislative and organisational requirements, standards and procedures applicable to games and interactive media testing
- industry and organisational criteria for limited product release and complete product release
- phases of software development life cycles
- different development methodologies applicable to creating games and interactive media
- elements of a quality requirements statement and processes of development
• test reporting requirements applicable to game and interactive media testing
• test plan creation procedures applicable to game and interactive media development
• testing techniques, methods, test types, test cases, test cycles and system dissection applicable to game and interactive media development
• features and functions of industry standard test-support software
• completeness testing techniques
• installation and configuration processes for test-support software, including:
  • bug tracking processes and defining bug description fields
  • test case management software
  • test cycle management and reporting software
  • automated test tools
• bug resolution methods in game and interactive media products
• documentation techniques and processes used in product testing management.

Assessment Conditions
Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.
This includes access to:
• product undergoing development with specifications
• client requirements for product quality requirements
• testing support software
• test environment
• hardware required in product testing processes
• organisational procedures applicable to games and interactive media testing.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to create and implement designs within the context of a 3-D games environment.

It applies to individuals with highly developed communication and technical skills working as concept artists, game designers, games programmers, animators, and other personnel working in the game development industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Game development

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- create and implement at least two designs for a specified 3-D games environment.

In the course of the above, the candidate must:

- discuss and identify the most applicable technology for 3-D games development
- create and develop design documents for 3-D effects, including timelines for completion and file archiving system
- identify purpose of games design and establish target audience
- discuss and analyse design requirements for at least two different browsers and at least two different devices
- render designs on at least one small device and one large device and confirm pixels are optimised.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- concepts of animation techniques and digital effects generation relating to creating designs for 3-D game environments
- design principles applicable to 3-D game designs
- features of different 3-D game environments
- features and functions of industry standard 2-D and 3-D graphics editing software
- different modelling assets used in design creation for 3-D environments
- project development processes applicable to design creation for 3-D environments
- design functionality testing processes
- industry standard graphics formats for different 3-D games
- organisational procedures applicable to creating and implementing designs for 3-D games.
Assessment Requirements for ICTGAM539 Create and implement designs for 3-D games environments

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
</tbody>
</table>
| 1. Prepare and plan 3-D modelling process | 1.1 Obtain project brief and identify 3-D model requirements and user needs according to organisational procedures  
1.2 Research and collect portfolio of reference material according to organisational procedures  
1.3 Present portfolio of collected reference material to required personnel  
1.4 Evaluate industry standard 3-D modelling and animation software and select according to model requirements  
1.5 Develop and design a modelling plan using reference material |
<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.6 Seek feedback on modelling plan from required personnel and amend as required</td>
<td></td>
</tr>
</tbody>
</table>

2. Analyse resources and design 3-D model
2.1 Research different types of geometry and select most applicable according to 3-D model requirements
2.2 Document selected geometry choice and explain rationale according to organisational procedures
2.3 Evaluate industry standard concept development software and select software according to model requirements
2.4 Construct and test topology plan using chosen concept development software
2.5 Document and explain reasoning for choosing a particular modelling method
2.6 Assess and refine topology plan with required personnel

3. Construct 3-D model
3.1 Build 3-D model in chosen 3-D modelling and animation software according to modelling plan and specifications
3.2 Apply selected geometry choice to 3-D model
3.3 Make changes to geometry selection as required
3.4 Present near-finished product to required personnel and seek feedback
3.5 Evaluate feedback and incorporate into final design
3.6 Assess and refine model with required personnel and confirm model meets task requirements

4. Test and finalise 3-D model
4.1 Test and confirm final model functionality in 3-D and digital effects environments, according to organisational procedures
4.2 Obtain final sign-off on 3-D model from required personnel
4.3 Compose report on experience of working on a 3-D model and share findings

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- use software and construct an advanced 3-D model according to plan, on at least one occasion.

In the course of the above, the candidate must:

- prepare a topology plan for 3-D model design using:
  - applicable industry terminology
  - applicable geometry surfaces
  - concept development software
  - feedback from others to refine plan
- seek feedback from required personnel and refine model
- render designs on at least one small device and one large device and confirm pixels are optimised
- confirm functionality of model on at least two different browsers and at least two different devices
- document work performed in designing and creating models.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- methods of sourcing reference material
- key aspects of modelling plans
- features and capabilities of different geometry surfaces, including:
  - NURBS
  - Sub-D
• Polygon
• T-splines
• digital model development and testing process
• technology requirements and human resources required to create 3-D models, and their respective skills
• features and functions of box, edge-loop and patch modelling
• capabilities and constraints of 3-D modelling and animation packages and software and concept development software
• different types of geometry surfaces for models and their features
• purposes of scheduling production components in model development process
• features of topology plans and topology plan testing methods
• uses of storyboards and scripts
• organisational procedures applicable to creating 3-D models.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

• hardware and software applicable to designing and creating 3-D models
• games engine
• file storage
• project brief
• the internet
• browsers and devices
• organisational procedures applicable to creating 3-D models.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:
- develop at least three advanced simulation effects according to design brief and requirements.

In the course of the above, the candidate must:
- analyse design requirements and develop design documents according to organisational procedures
- use applicable effects including particles, fluids and rigid or soft bodies
- render digital effects on at least one small device and one large device and confirm pixels are optimised
- maintain portfolio of reference materials
- present pre-production portfolio demonstrating project research and development to required personnel
- seek evaluation and review from required personnel for finalised advanced simulation effects.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:
- programming languages and techniques required for creating 3-D digital effects
- overview of game development and production processes, including specific terminology
- design approaches to creating advanced simulated effects
- media and techniques used in designing and creating simulated effects
- key features of game-play hardware and software products
- technology requirements and human resources required in process of creating digital effects and each team member's respective skills
- methods of maintaining reference portfolios applicable in creating 3-D digital effects
- risk and critical path management techniques
- technical constraints that hardware imposes on:
  - software development
  - graphics requirements
  - code development
  - creative visual design
- techniques for applying concept development and visualisation skills
- methods of creating and testing 3-D digital effect prototypes
- documentation processes applicable in 3-D digital effects creation process
- creating and presenting pre-production portfolios demonstrating project research and development
- organisational procedures applicable to the design and creation of 3-D digital effects.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
- hardware and software applicable to designing and creating simulated effects
- games engine
- IDE
- digital devices
- file storage
- design brief
- the internet
- organisational procedures applicable to designing and creating simulated effects.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to apply animation principles to develop an animated character and export character model into a game.

It applies to those with high-level mathematical, technical and communication skills working as concept artists, game designers, games programmers, animators, and other personnel working in the game development industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
<tr>
<td>1. Determine 3-D character model for animation requirements</td>
<td>1.1 Obtain and analyse animation, storyboard and digital game requirements for 3-D character according to organisational procedures</td>
</tr>
<tr>
<td></td>
<td>1.2 Determine target environments for 3-D digital character animation according to digital game requirements</td>
</tr>
<tr>
<td></td>
<td>1.3 Establish required level of detail for 3-D character model animation</td>
</tr>
<tr>
<td></td>
<td>1.4 Determine work-flow sequences, task requirements and confirm production schedule deadlines are met</td>
</tr>
<tr>
<td></td>
<td>1.5 Research and select required games engine and platform according to digital game requirements</td>
</tr>
</tbody>
</table>
### ELEMENT | PERFORMANCE CRITERIA
---|---
1.6 Select software tools according to production pipeline and selected games engine and platform
2. Create 3-D animations
2.1 Research and determine animation methodology applicable to task requirements
2.2 Animate first pass, applying animation principles and experimenting with techniques to produce required movements
2.3 Submit first pass to required personnel for feedback and approval
2.4 Adjust as required and refine animation in passes until storyboard requirements are achieved
2.5 Animate facial features with lip-syncing to match audio and design requirements of approved storyboard
2.6 Create primary animations as required according to task requirements
3. Finalise and export animations
3.1 Submit character animations to required personnel for final check
3.2 Finalise projects according to organisational and production procedures
3.3 Export animation and 3-D character model to required game engine
3.4 Test character animations in game engine and on different devices according to organisational procedures
3.5 Evaluate results and apply changes as required
3.6 Obtain final sign-off for character animations from required personnel

### Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

<table>
<thead>
<tr>

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop at least two animated character models according to digital game requirements.

In the course of the above, the candidate must:

- select tools compatible with target game engine and platform
- render art on at least one small device and one large device and confirm pixels are optimised
- export animated character model to target game engine according to organisational procedures
- test character animations in the game engine and on at least two different devices.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- 3-D animation principles including relevance of anatomy and physical movement
- different target environments for animated 3-D digital characters
- development processes for animating 3-D characters
- capabilities and constraints of game engines
- attributes of industry standard game-play hardware and software products
- different industry standard animation methodologies
- function of a graph curve editor
- risk and critical path management techniques applicable to 3-D character animation process
- shading, texturing, weight and anticipation techniques relating to animating 3-D characters
- transfer methodology, including rotoscope, hand key and motion capture
• techniques for applying concept development and visualisation skills
• techniques for using storyboard and script production
• technology requirements and human resources required in the process of creating games
• the importance and advantages of client communication on project work
• budgeting and scheduling considerations for game design
• time management techniques in project development
• exporting and testing procedures for 3-D character animations
• organisational procedures applicable to 3-D character animation process.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• hardware, software and tools applicable to animating 3-D characters for digital games
• games engine and platform
• digital devices
• file storage
• the internet
• design brief
• organisational procedures applicable to 3-D character animation process.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- create 3-D animation sequence with at least 720 frames using 3-D modelling and animation software.

In the course of the above, the candidate must:

- develop storyboards and concept drawings for 3-D animation and models according to production plans
- apply a variety of strategies to create an animation sequence using a 3-D environment
- develop finalised frame of animation in required resolution
- render animation sequence on at least one small device and one large device and confirm pixels are optimised.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- digital editing processes and techniques relating to animation sequence production
- rendering processes and techniques applicable to animation sequence production
- capabilities of digital editing and rendering software
- features and functions of different industry standard 3-D modelling and animation software
- technology requirements and human resources required to create games, including team member’s skills

- technical constraints that hardware imposes on:
  - graphics requirements
  - code development
  - creative visual design
• storyboard development processes
• organisational procedures applicable to producing digital animation sequences.

**Assessment Conditions**

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

• hardware and software applicable to producing digital animation sequences
• animation sequence requirements brief
• games engine
• digital devices
• file storage
• the internet
• organisational procedures applicable to producing digital animation sequences.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design, implement and manage rigs for objects according to production documentation and organisational procedures on at least two occasions.

In the course of the above, the candidate must:

- use and refine skeleton/structural and animation controls for optimal performance
- construct hierarchies to formulate specific controls
- combine and refine object geometry to skeletal/structural rigs
- create 3-D digital animated sequences of a rigged model
- meet production deadlines.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- basic 3-D digital animation methodologies for managing technical art and rigging in 3-D animation
- features of a range of delivery platforms applicable to managing technical art and rigging in 3-D animation
- geometry topology analysis procedure and methodology
- procedures for identifying physical attributes to animate and manage technical art and rigging in 3-D animation
- rigged 3-D modelling techniques
- theory of anatomy and structural systems in relation to 3-D animation techniques.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- computer hardware and software
- games engine
- file storage
- organisational procedures applicable to managing technical art and rigging in 3-D animations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design, build and combine at least two 3-D models to an organisation’s specifications on at least two occasions.

- In the course of the above, the candidate must:
- combine 3-D models to build a scene that meets design requirements
- produce, circulate and store the final render of the scene.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- 3-D software interfaces for creating and combining 3-D digital games and components
- capabilities and constraints of game engines
- game-play hardware and software products
- process of computer game development applicable to creating and combining 3-D digital games and components
- application of anatomy and physical movement to 3-D components
- graph curve editor and its application to 3-D digital component design
- physical attributes required to create effects, including weight and anticipation
- risk and critical path management applicable to creating and combining 3-D digital games and components
- techniques for applying concept-development skills
- techniques for applying concept-visualisation skills
- transfer methodology, including rotoscope, hand key and motion capture
- technology requirements and human resources required in the process of creating a game, including team members’ skills
• budgeting and scheduling considerations for game design.

**Assessment Conditions**

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

• hardware and software
• design brief
• games engine
• file storage
• the internet.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to coordinate the design and technical elements of a smooth-running interactive 3-D environment.

It applies to those with high-level organisation and technical skills working as concept artists, game designers, games programmers, animators and other personnel working in the game development industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Game development

</table>
| 1. Obtain design documents for 3-D environment and select software tools | 1.1 Identify and confirm project brief, design requirements for 3-D environment and other applicable documents according to organisational procedures  
1.2 Conceptualise design requirements according to project brief and other applicable documents  
1.3 Discuss and determine design considerations and generate concept art for final environment design  
1.4 Confirm all requirements are considered and included in design according to project brief  
1.5 Identify and select applicable texturing tools, including painting, shading and texturing software according to 3-D environment requirements  
1.6 Research and select applicable audio tools  
1.7 Analyse and select 3-D modelling and animation software to be used  
1.8 Document, explain and justify design decisions according to organisational procedures |
| 2. Create 3-D environment | 2.1 Implement basic geometry, flow and layout according to design requirements  
2.2 Separate each section of environment into key parts and choose focal point for environment  
2.3 Incorporate detail into focal point of level  
2.4 Set reference for rest of environment using focal points  
2.5 Integrate geometry and texturing and place models according to project brief  
2.6 Carry out detailed pass of entire environment  
2.7 Set up exterior and interior lighting  
2.8 Incorporate sound and particle effects and perform optimisation as required  
2.9 Perform final pass and finalise elements |
| 3. Test and finalise 3-D environment | 3.1 Test and debug 3-D environment and confirm functionality on different digital devices  
3.2 Present finished 3-D environment to required personnel and amend according to feedback  
3.2 Document and report how design decisions have met 3-D environment design requirements  
3.4 Incorporate feedback in final design as required and obtain final sign-off from required personnel |

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:
- deliver a final 3-D environment for a digital game, according to project brief, including:
  - production of concept art
  - documentation justifying and explaining design decisions.

In the course of the above, the candidate must:
- implement design requirements into a working 3-D environment
- create working interactions between user and the environment
- render 3-D environment on at least one small device and one large device and confirm pixels are optimised.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:
- required budgeting and scheduling considerations for game design
- digital game development processes
- concept art generation processes for 3-D environments
- capabilities of industry standard texturing and audio tools
- features and functions of industry standard 3-D modelling and animation software
- optimisation techniques applicable to creating interactive 3-D environments for digital games
- technology requirements and human resources required to create games, including the team's respective skills
- industry standard game-play hardware and software products, including constraints that products impose on graphics and code development and creative visual design
- testing and debugging procedures applicable to 3-D environment creation process
• organisational procedures applicable to creating interactive 3-D environments for digital games.

**Assessment Conditions**

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- hardware and software required in creating interactive 3-D environments for digital games
- project and design brief
- games engine
- digital devices
- file storage
- the internet.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- edit a 3-D sequence by inserting graphics, special effects, sounds and music according to a storyboard.

In the course of the above, the candidate must:

- research and select digital editing techniques and software
- develop final version in required video format using editing software and feedback from others
- test 3-D sequence meets project requirements on at least one small device and one large device, and confirm pixels are optimised.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- digital editing and rendering processes and techniques
- capabilities and constraints of industry standard digital editing and rendering software
- technical constraints that hardware imposes on:
  - software development
  - graphics requirements
  - code development
  - creative visual design
- storyboard development process in 3-D environments
- program functions used to create and insert graphics, transitions and special effects into animation
Assessment Requirements for ICTAM548 Complete digital editing for 3-D and digital effects environments

- sound and music implementation techniques used in digital editing for 3-D and digital effects environments
- testing procedures applicable to digital editing processes
- organisational procedures applicable to digital editing for 3-D and digital effects environments.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- collaborate with others to plan and implement the design process for creating an interactive 3-D environment.

In the course of the above, the candidate must:

- produce and present draft design documents to produce an interactive 3-D environment
- gather reference materials and visualise 3-D environment, including environment profiles, game genre, game design and game-play elements
- gather feedback from peers to review and modify designs to create a finalised design for a 3-D environment
- render design on at least one small device and one large device and confirm pixels are optimised.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required budgeting and scheduling considerations for game design
- capabilities and constraints of industry standard game engines
- features and functions of industry standard 3-D modelling and animation software, and painting, shading and texturing software
- process used for digital game development
- industry standard project planning methodology and processes
- design practices and considerations applicable to designing 3-D game levels and environments
- applicable time-management principles
- 3-D environment visualisation techniques
Assessment Requirements for ICTGM549 Collaborate in design of 3-D game levels and environments

- quality assurance principles applicable to 3-D design processes
- industry standard game-play hardware and software products, together with technical constraints that products impose on graphics and code development and creative visual design
- different team member roles and responsibilities required in designing 3-D game levels and environments
- technology and human resources required in the process of creating a game, including the team’s respective skills
- organisational procedures applicable to designing 3-D game levels and environments.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- create and test prototypes that integrate at least one data source into a working interactive 3-D environment.

In the course of the above, the candidate must:

- research and obtain data sources, tools and libraries needed to integrate elements into an interactive 3-D environment
- select data sources to integrate according to the following:
  - 3-D environment
  - game design
  - game genre
  - game mechanics
  - game-play elements
  - level specifications
- test functionality of interactive 3-D environment on at least one small device and one large device and confirm pixels are optimised
- deliver 3-D environment with working interactions including all data sources and documented reasons for its implementation.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard data sources for different 3-D environments
- how game design, genre and mechanics, game-play elements and level specifications affect choice of data source
Assessment Requirements for ICTGAM550 Integrate multiple data sources into interactive 3-D environments

- key features of game-play hardware and software products used for interactive 3-D environments, including any technical constraints imposed on design and development
- technology requirements and human resources required in the process of creating a game, including team members’ respective skills
- data source creation processes applicable to interactive 3-D environments
- prototype development processes applicable to integrating elements into 3-D environments
- testing processes applicable to developing 3-D environments
- industry standard tools and libraries used to integrate elements into 3-D environments
- organisational procedures applicable to integration of multiple data sources into interactive 3-D environments.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- hardware, software, tools and libraries applicable to integrating multiple data sources into interactive 3-D environments
- digital devices
- data sources
- the internet
- 3-D environment requirements
- games engine
- file storage
- organisational procedures applicable to integration of multiple data sources into interactive 3-D environments.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to research, select techniques and apply industry standard graphic software tools to digital texturing for the 3-D environment in digital games.

The unit applies to those with high-level technical, interpretive and communication skills, working as concept artists, game designers, games programmers, animators, and other personnel working in the game development industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Game development

Elements and Performance Criteria

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- research, select and document suitable techniques and software to create texturing for a 3-D environment.

In the course of the above, the candidate must:

- use graphics software to create multiple textures for a 3-D environment
- produce a final rendered image of a 3-D environment that incorporates multiple texture effects for a single 3-D object.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- technology and human resources required in the process of creating textures for the 3-D environment
- capabilities and constraints of graphics software for texturing
- methods of texture creation and texture mapping
- design considerations for texturing including resource limitations and constraints, and target markets.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- computer hardware and software
- games engine
• file storage
• the internet for research purposes.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- plan and manage design process for creating at least two 3-D character models according required design brief.

In the course of the above, the candidate must:

- incorporate design specifications and create complex 3-D character models
- produce and deliver documentation, showing evidence of concepts creation and design decisions.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- budgeting and scheduling considerations for game design
- process used for computer game development
- industry standard game-play hardware and software products, including technical constraints imposed on design and development
- technology and human resources required in the process of creating a game and outline the team members’ respective skills.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- computer hardware and software
- games engine
- file storage.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 6.0.</td>
</tr>
</tbody>
</table>

Application

This unit describes the skills and knowledge required to integrate a database with an online game, where the relationship between the game server and the database server is also considered a client-server relationship on a local area network.

The unit applies to those with high-level technical and problem-solving skills working as programmers, analyst programmers and game programmers responsible for the development of code to connect a computer game to a database.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Game development

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>

1. Install application programming interfaces
   1.1 Research application programming interfaces (APIs) according to client requirements
   1.2 Identify specific APIs required for game architecture and data source provider
   1.3 Install nominated APIs on game development computers according to technical specifications

2. Define and use connection to data source
   2.1 Define required game data source connection parameters
   2.2 Store connection parameters in required external text-based configuration file
<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>2.3</td>
<td>Open and close connection to game data source</td>
</tr>
</tbody>
</table>
| 3. Configure and use connection pooling | 3.1 Configure connection pooling in the database management system  
3.2 Define connection pool parameters for minimum connections, maximum connections, and idle connections  
3.3 Minimise use of database resources through connection pooling  
3.4 Test and verify use of connection pooling according to organisational requirements |
| 4. Pass embedded non/structured query language (SQL) to a database | 4.1 Define database connection property  
4.2 Compose structured query language (SQL) or non-SQL statement to be passed to database  
4.3 Test, debug and execute the statement according to organisational requirements |
| 5. Execute stored procedures | 5.1 Call stored procedure on database and use command callable statement  
5.2 Define and pass parameters to stored procedure  
5.3 Test, debug and execute database stored procedure according to organisational requirements |
| 6. Modify database data | 6.1 Retrieve result sets from the database into game application domain  
6.2 Insert new records into database  
6.3 Update existing database records  
6.4 Integrate data from forward-only and read-only cursor into game application domain  
6.5 Incorporate data from updateable cursor into game application domain |
| 7. Test and debug database integration code | 7.1 Test database integration code and document results according to organisational requirements  
7.2 Determine errors and exceptions and document solutions  
7.3 Debug all errors and exceptions  
7.4 Assess data modifications, identify and fix errors  
7.5 Submit all documentation to required personnel and seek and respond to feedback |
Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- integrate, test and modify two sets of database data provided by game-play input and document all errors and solutions on at least two occasions.

In the course of the above, the candidate must:

- determine and install application programming interfaces (API) for games development
- define and add database functionality to an online game.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- relational database methodologies, including:
  - creating and testing stored procedures
  - ‘embedded’ structured query language (SQL) and assigning parameters in code for filtering
  - implementing relationships between tables
  - retrieving data from multiple tables using SQL
  - how inserts to tables in parent/child relationships can be implemented using artificial (auto-generated) primary key values
  - implementing cascading updates and deletes
- principles of game development applicable to integrating databases with online games
- principles of integrated development environments, including:
  - data access APIs and associated classes, required for the integration of a database with an online game
  - online help and documentation required for research and debugging code
Assessment Requirements for ICTGAM553 Integrate database with online games

- user authentication and authorisation management
- methodologies and techniques required for effective and well-factored object-oriented program (OOP) code, including:
  - class implementation
  - control of logic flow
  - use of collections and lists
  - use of OOP concepts, including inheritance, encapsulation and overloading
- implications of web development on games integration.

Assessment Conditions
Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
- the game design specification and requirements documentation
- a game server
- a database server
- integrated development environment software and hardware
- browsers for game engine for console-based games.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- produce and demonstrate an original working game on a mobile device.

In the course of the above, the candidate must:

- document plans and schedules applicable to game development
- implement game development and production strategies
- apply strategies for trialling and testing game prototypes
- evaluate whether games meet design brief, creative and technical requirements.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- leading industry standard mobile game devices
- leading tools and technologies needed for creating applications on mobile devices products
- technical constraints that mobile devices place on design and development of games
- suitable programming languages for mobile devices
- budgeting and scheduling considerations for game design
- importance of risk assessment and critical path planning applicable to creating games for mobile devices
- human resources required in the process of creating a game for a mobile device and outline the team members’ respective skills.
- techniques for concept visualisation and development.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- computer hardware and software
- games engine
- file storage
- integrated development environments
- mobile devices.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- research and document at least five factors when starting up and operating a small business in the digital games industry on at least one occasion.

In the course of the above, the candidate must:

- research key organisations and types of projects undertaken in the digital games industry
- document resources, roles and skills requirements of a gaming development team, and the interaction required between team members
- document business models and revenue ideas for commercial game.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- sources of information about the Australian digital games industry
- process of subcontracting
- various methods that could be used to allow interaction and collaboration between different members of a development team
- how rating standards affect digital game production and marketing
- risk and critical-path management relating to analysing business opportunities in the digital games environments
- copyright and intellectual property laws as they pertain to the development of digital games.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- computer hardware and software
- games engine
- file storage
- the internet for research purposes
- legislation, including copyright and intellectual property legislation, and work health and safety legislation applicable to analysing business opportunities in the digital games environments.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to integrate a physics, and rendering, engine into a 3-D digital game.

The unit applies to those with high-level technical and mathematical skills working as game engine developers, gameplay programmers and other personnel working in the game development industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Game development

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
<tr>
<td>1. Develop a game world system</td>
<td>1.1 Develop code and create instances of rendering engine 1.2 Develop scene manager and physics engine’s world objects 1.3 Constrain frame rate to a desired frame rate</td>
</tr>
<tr>
<td>2. Develop components</td>
<td>2.1 Create and implement game physics system requirements 2.2 Implement game object primitives 2.3 Use physics debugger and show collision frames</td>
</tr>
<tr>
<td>3. Develop constraint dynamics</td>
<td>3.1 Generate required game objects and physics bodies constrained by joints and springs 3.2 Build ragdoll using game physics system</td>
</tr>
<tr>
<td>4. Develop physics</td>
<td>4.1 Ray cast scene</td>
</tr>
</tbody>
</table>
## PERFORMANCE CRITERIA

### interactivity

4.2 Implement player-controlled model
4.3 Implement and develop required game physics system models

### 5. Develop an interactive scene

5.1 Build scene
5.2 Use trigger volumes to fire off events
5.3 Capture the collision events with call-backs
5.4 Respond to collision events

### 6. Compile a report

6.1 Build class diagrams for required objects
6.2 Document methodologies used to create interactivity
6.3 Document inventory of utilised objects and how they were used
6.4 Document libraries used
6.5 Submit documentation to required personnel and seek and respond to feedback

## Foundation Skills

*This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.*

### SKILL DESCRIPTION

**Numeracy**
- Uses complex physics to simulate the world by creating mathematical models which measure mass
- Computes algorithms to regulate time and speed
- Interprets matrix-related functions to determine rate and scale
- Completes algorithmic geometry to determine the relationship between points, angles, lines, surfaces and solids

**Reading**
- Recognises and interprets technical, manufacturer and organisational documentation to determine and confirm job requirements

**Writing**
- Creates cohesive and well-structured documents using required spelling and grammar, together with required programming code, syntax and conventions

**Planning and organising**
- Plans, organises and completes work according to defined requirements and schedules

**Problem solving**
- Uses the key features of, specific digital systems and tools, and operates them effectively to complete design tasks
- Uses creativity and initiative in the application of game physics
- Uses a systematic process to evaluate work, implement

</table>

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- identify, evaluate, and develop one interactive game that implements game physics on at least two occasions.

In the course of the above, the candidate must:

- use and document a physics library.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- basic programming techniques needed to develop game objects
- integration issues of common physics concepts in games design
- industry standard game-play hardware and software products, including any technical constraints they impose on design and development
- human resources required in the process of creating a game
- techniques for applying concept development and visualisation skills.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- suitable development environment
- physics libraries
- computer hardware and software
- games engine
- file storage.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop a compositing brief, schedule compositing work and complete compositing tasks to predetermined specifications.

In the course of the above, the candidate must:

- communicate with others to discuss requirements and technical aspects of the job
- complete compositing tasks to the required level of quality, according to the brief
- refine elements for consistency, optimal image quality and visual impact
- adhere to system requirements related to file size, format and storage.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- 3-D modelling, animation and visual effects development required to completing compositing to create elements for 3-D and digital effects environments
- aspect ratios for image output
- camera, lighting and shadow matching applicable to completing compositing to create elements for 3-D and digital effects environments
- efficient sizes and required formats for composited files
- requirements for scheduling and sequencing production and post-production tasks
- range of compositing software available
- rendering principles applicable to completing compositing to create elements for 3-D and digital effects environments.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- computer hardware and software
- games engine
- file storage
- compositing and output documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to select, install, configure and use computer operating systems and basic computer hardware. This involves configuring the operating system to work with a variety of hardware peripherals and types of information and communications technology (ICT) equipment.

It applies to those who work under supervision and provide support to others. This includes individuals who apply a range of configuration skills to use and solve issues in operating systems and hardware.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- produce three workplace documents using three different software packages including word processing, spreadsheets and one additional software application package on at least one occasion.

In the course of the above, the candidate must:

- apply workplace health and safety (WHS) principles and responsibilities
- follow organisational requirements.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- organisational application software packages
- technical terminology applicable to reading help files and responding to system help prompts
- industry standard business practices applicable to preparing reports using features and functions of commercial computing packages and of the industry standard software
- functions and features of Portable Document Formats (PDFs)
- import and export software functions
- document linking functions
- WHS principles and responsibilities
- purpose of input and output devices.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required hardware device
- industry standard software
- documents detailing organisational style guide and policy
- data required in developing software application documents.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- identify and define data set, incorporate data set into media technology package and present output on one occasion.

In the course of the above, the candidate must:

- interpret basic requirements of a design brief
- meet organisational requirements using digital media package
- apply workplace health and safety (WHS) principles and responsibilities
- use help manuals and online support.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- basic principles of visual design
- functions and features of digital media packages and technologies
- graphic design and stylistic language conventions
- WHS principles and responsibilities
- principles of digital imaging and file formats, video and sound file formats, file management and transfer systems
- vendor product directions in digital media hardware and software
- creative information, scripts (text) and images
- basic principles of legal and regulatory requirements that apply to operating digital media technology packages.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

- This includes access to:
- required industry standard hardware and software
- documents detailing organisational style guide and policy
- data required in developing software application documents.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop and produce at least two required organisational documents, with minimal design instruction.

In the course of the above, the candidate must:

- edit documents according to at least two different feedback suggestions
- save documents and back up in a different location
- comply with style guidelines and organisational procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- application software tools and features
- organisational style guidelines and procedures
- organisational storage and retrieval procedures.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- organisational guidelines
- required hardware devices, application software and its features.
Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to provide routine Information and Communications Technology (ICT) support to clients in a professional manner.

It applies to individuals who, while working under a level of supervision, have responsibility in frontline technical support. It applies to those who exercise discretion and judgement to provide assistance to clients in an ICT environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- identify, record and document at least one client query
- remediate and communicate at least one solution to a client.

In the course of the above, the candidate must:

- comply with organisational requirements
- follow escalation procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard hardware and software products and their general features and capabilities
- ICT client business domain and business critical functions
- organisational systems and working environment that may assist in interacting and resolving queries with ICT clients
- organisational policies that may assist in interacting and resolving queries with ICT clients.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required hardware devices, software and documentation
- organisational guidelines.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

**Application**

This unit describes the skills and knowledge required to research, identify and collaboratively discuss ICT solutions that meet the specific needs of Indigenous users.

It applies to Indigenous and non-Indigenous individuals who work with Indigenous individuals and communities and use a range of knowledge of Indigenous learning styles and cultural systems to provide advice on ICT solutions. ICT solutions refers to hardware and electronic resources including software applications, Wi-Fi, connected networks and online websites.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: delivery and assessment against this unit of competency must comply with Indigenous community protocols and guidelines and be supported by Elders and custodians of Country. The unit recognises that there is no single Australian Indigenous culture and emphasises the importance of culturally appropriate behaviour and local community consultation.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- assess and demonstrate use of at least three different communication technologies, software applications and hardware solutions
- Identify information for at least one Australian Indigenous user and their community, in a culturally appropriate way.

In the course of the above, the candidate must:

- identify specific Indigenous customs and practices impacting use of an ICT solution
- consult with Indigenous community members including local community organisations, including Indigenous personnel, community organisations, agencies and other required bodies
- identify Indigenous laws, family relationships and languages.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- functions, features and uses of required hardware, software products, applications and websites
- customs and practices of Indigenous users and communities Indigenous cultural communications attributes.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• required hardware device and software applications
• the internet, including connectivity, internet browser and website access.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- create a user document for an ICT system or product, including software, hardware, application or network.

In the course of the above, the candidate must:

- access and examine existing technical, design, user specification and supporting documentation
- gather and respond to feedback.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- user documentation features and requirements
- industry standard documentation requirements
- user documentation design and usability
- intent of web-based user documentation
- user documentation templates and style guides
- features of technical user documentation.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required ICT system, hardware, software program and networks
• user documentation standards
• required software tools.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- identify and determine compatibility of at least three industry specific technologies in one organisational area
- use and test features and functions of identified industry specific technologies to industry standards in one organisational area.

In the course of the above, the candidate must:

- adhere to legislative and organisational standards and requirements applicable to industry specific technologies
- evaluate capabilities of identified industry specific technologies
- assist in adapting implementation of identified industry specific technologies to organisational environment.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard technology trends in Information and Communications Technology (ICT)
- industry technology standards used in specified ICT area
- vendor product instructions applicable to specified ICT area
- general features, capabilities and application of industry standard hardware and software products
- information gathering techniques applicable to identifying industry specific technologies
- legislative and organisational procedures, standards and requirements applicable to using industry specific technologies.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- industry standard specific technologies used in industry
- documents detailing work health and safety (WHS) standards, environmental guidelines and organisational procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- customise at least two package software applications according to two different client briefs.

In the course of the above, the candidate must:

- interpret and document client requirements to customise software applications
- design, analyse, implement and review at least one packaged software applications
- produce documentation of customised software application designed above
- obtain feedback and confirm requirements have been met.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- general features and capabilities of industry standard hardware and software products
- basic functions and features of software applications applicable to client
- Information and Communications Technology (ICT) structure and system infrastructure
- organisational policy and procedures applicable to customising software
- organisational security procedures and requirements.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- industry standard customisable software applications
• client requirements documentation
• organisational and security requirements
• required hardware, software and its components.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to use computer applications employing advanced features in the preparation and presentation of data. It involves manipulating data and accessing support resources to solve routine problems.

It applies to individuals who work under minimal supervision and support information technology activities in software applications.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- use at least three different computer applications employing advanced features and import and export capacities
- solve at least three routine problems using support resources.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- advanced features and functions of applicable industry standard application software, keyboard shortcuts and features
- vendor applications, directions and their features
- methods of data transferral between applications
- organisational procedures applicable to using advanced features of applications
- available support resources for technical support and troubleshooting.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- industry standard applications with advanced features and their functions
- documents and information containing data required in demonstrating advanced features of applications
- support resources, including online, manuals and training booklets.
Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- identify at least three different types of intellectual property (IP) within the organisation
- identify and support the maintenance and improvement of organisational IP, ethics and privacy policy procedures on at least two occasions

In the course of the above, the candidate must:

- identify organisation risk assessment and identification process
- identify principles underpinning the maintenance and improvement of organisational IP, ethics and privacy policy procedures
- assist with identifying the non-compliance incidents and risks within an organisation.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- key legislation related to the use of IP in the ICT industry
- key policies, procedures and documentation in the ICT industry, including those related to:
  - organisational IP policies and procedures
  - codes of ethics pertinent to the ICT industry
  - copyright
  - privacy
- key organisational communication processes and procedures related to identifying IP, ethics and privacy policies in ICT environments.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required organisational policies, codes of practice, legislation and standards documentation
- workplace documentation and resources
- IP case studies and, where possible, real situations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT425 Implement WHS, environmental sustainability and anti-discrimination practices in an ICT workplace

Modification History

<table>
<thead>
<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 4.0.</td>
</tr>
</tbody>
</table>

Application

This unit describes the skills and knowledge required to, through communication and teamwork, implement workplace health and safety (WHS), environmental sustainability (ES), equal employment opportunity (EEO) and anti-discrimination practices in an ICT workplace within own responsibilities.

This unit applies to individuals who are required to work and participate in an ICT workplace with some supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
<tr>
<td>1. Gather and use information on ICT workplace compliance instruments and reputable resources</td>
<td>1.1 Identify legislative instruments and review reputable resources, and organisational priorities relevant to workplace health and safety (WHS), environmental sustainability (ES), equal employment opportunity (EEO) and anti-discrimination practices in ICT workplaces to determine requirements for compliance within scope of own responsibilities</td>
</tr>
</tbody>
</table>
1.2 Collect and analyse information on organisational processes and procedures relating to WHS, ES, EEO and anti-discrimination practice in an ICT workplace to develop and document an initial view of compliance gaps and opportunities

2. Participate in consultation

2.1 Consult with those involved in ICT workplace activities to collect information about the requirements and nature of WHS, ES, EEO and anti-discrimination practice in an ICT workplace, including risks and issues

2.2 Work collaboratively to identify and document compliance gaps and opportunities

2.3 Consult with those involved in ICT workplace activities to validate gaps and opportunities and finalise compliant practices for implementation

3. Improve ICT WHS and environmental sustainability compliance

3.1 Participate in the use of strategies and tools to embed compliant practices in ICT workplace activities

3.2 Monitor ICT workplace activities to measure the success of practices implemented for WHS, ES, EEO and anti-discrimination compliance in an ICT workplace

3.3 Consult with those involved in ICT workplace activities to respond to resistance and remaining risks and issues

3.4 Agree and document amendments to practices to address remaining resistance, risks and issues

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

<table>
<thead>
<tr>
<th>Skill</th>
<th>Description</th>
</tr>
</thead>
</table>
| Learning | • Identifies, plans and implements strategies to manage gaps in personal knowledge  
• Identifies reputable sources of information from which to gather resources and information |
| Reading | • Analyses and consolidates information and data from a range of sources, against defined criteria and requirements, and checks for accuracy and completeness |
| Writing | • Prepares a range of textual information appropriate for audience for informal and formal purposes |
| Oral | • Participates in verbal exchanges of information using language, tone |
| Communication | and pace appropriate to audience and environment  
|              | • Uses listening and questioning techniques to elicit the views and opinions of others and to confirm understanding |
| Navigate the world of work | • Accepts responsibility and ownership for the task and makes decisions on completion parameters and the need for coordination with others  
|              | • Takes personal responsibility for following explicit and implicit policies, procedures and legislative requirements |
| Interact with others | • Selects and uses appropriate conventions and protocols when communicating with clients and colleagues in a range of work contexts  
|              | • Recognises and accommodates basic differences and priorities of others  
|              | • Cooperates with others and contributes to work practices where joint outcomes are expected and deadlines are to be met |
| Get the work done | • Takes responsibility for planning, sequencing and prioritising tasks and own workload for efficiency and effective outcomes  
|              | • Makes routine decisions and implements standard procedures for routine tasks, using formal decision-making and problem-solving processes for more complex and non-routine situations  
|              | • Uses the main features and functions of digital tools to complete work tasks and access information |

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements and performance criteria of this unit; including evidence of the ability to:

- Implement on four occasions WHS, ES, EEO and anti-discrimination practices in own area of work, including the ability to:
  - identify, interpret and apply legislative instruments and reputable resources to organisational priorities to ensure compliance
  - undertake a risk assessment and implement a risk control utilising an evaluation procedure within own area of work
  - document responsibilities of employers, employees, contractors and agents
  - analyse existing organisational procedures, including consulting with three individuals involved with ICT workplace activities, and determining if procedures are sufficient for compliance; including:
    - individual workstation set up of desk, chair, peripherals, computer
    - technology start up and shut down
    - new technology installation
    - technology maintenance and testing
    - use of personal protective equipment (PPE)
  - respond to the resistance of an individual involved in ICT workplace activities to implement and embed compliant practices

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements and performance criteria of this unit. This includes:

- Legislative instruments and reputable resources relating to WHS, ES, EEO and anti-discrimination
• Typical organisational priorities, policies and procedures relating to WHS, ES, EEO and anti-discrimination
• Risks and issues related to WHS, ES, EEO and anti-discrimination compliance in the ICT workplace
• Options, tools, and strategies to address WHS, ES, EEO and anti-discrimination compliance gaps, risks and issues, including risk assessment approaches, risk controls and evaluation procedures
• Responsibilities of employers, employees, contractors and agents relating to WHS, ES, EEO and anti-discrimination procedures in the workplace

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in an ICT working environment or workplace. This includes access to:

• Organisational priorities relating to WHS, ES, EEO and anti-discrimination practices
• Organisational risk assessment and evaluation procedure
• Organisational risk control implementation procedure
• ICT workplace equipment including:
  • individual workstation consisting of desk, chair, peripherals, computer
  • individual users involved in ICT workplace activities to consult

Assessors of this unit must satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in elements and performance criteria of this unit; including evidence of the ability to:

- Identify, evaluate, implement and review two current industry-specific technologies and evaluate the potential benefits of these technologies to the organisation

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements and performance criteria of this unit. This includes:

- Current industry-specific technologies, trends and directions
- Methods of research
- Methods of designing indicators
- Types of indicators
- Approaches to monitoring performance against indicators
- Methods of getting user feedback
- Organisational requirements and how industry-specific technologies can assist
- Sources of industry-specific technologies detailing general features, capabilities, and compliant application of current industry-specific hardware and software products to be evaluated

Assessment Conditions

Skills must be demonstrated in a workplace or simulated environment where conditions are typical of those in an ICT working environment or workplace. This includes but is not limited to:

- Information on organisational needs for industry-specific technology
 Assessment Requirements for ICTICT427 Identify, evaluate and apply current industry-specific technologies to meet organisational needs

Date this document was generated: 19 January 2021

- A site where industry-specific technologies are used
- Current industry-specific technologies and accompanying documentation
- Organisational procurement procedure
- Information detailing workplace health and safety (WHS) compliance requirements
- Individual user to consult

Assessors of this unit must satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- obtain information and document a business system problem according to client requirements.

In the course of the above, the candidate must:

- produce a statement of business expectations, needs and critical business requirements
- perform analysis of system and physical requirements and identify new system requirements accordingly
- consult with required personnel and make applicable changes to documentation.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard data gathering and data capture techniques
- industry standard business systems and common client requirements
- client business processes
- physical requirements of client's business, including:
  - system functionality
  - geography
  - environment
  - client user
  - cost constraints
- procedures for documenting and confirming client business requirements.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a client expectations and requirements brief
- business objectives of client
- clients’ business system
- systems, data gathering tools and required software products
- hardware and its components required for confirming client business requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to apply traditional and non-traditional systems development methodologies.

It applies to individuals in senior development roles who exercise discretion and judgement to create solutions using technical knowledge and analysis skills.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- select and apply a software development methodology for at least two different subject activities according to organisational standards.

In the course of the above, the candidate must:

- produce documentation as required by chosen methodology.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- key project management skills, techniques and requirements required in applying software development methodologies, including those related to:
  - input and output parameters
  - project plan creation processes
  - task types and applicable control structures
- client business domains and organisational requirements required in applying software development methodologies
- stakeholder roles and degree of stakeholder involvement in development process
- traditional and non-traditional system development methodologies
- key organisational standards and documentation techniques required in applying software development methodologies.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.
This includes access to:

- hardware, software and its components required to apply software development methodology
- design specifications
- industry standard system development methodologies
- organisational standards
- detailed user requirements document, including model and scope for given activity.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop and implement an online learning plan using at least two different online learning tools.

In the course of the above, the candidate must:

- acquire knowledge and skills using online learning tools
- use a range of learning mediums, including coaching, mentoring and peer-to-peer interactions
- confirm learning is reinforced by application.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- learning development activities using a range of online training tools
- organisational training policies, plans and procedures applicable to organisational learning requirements and online learning
- principles and techniques of measuring performance, including self-assessment
- methods to identify and prioritise required learning needs
- processes in developing learning plans
- systems and processes used to direct learning
- required competency standards and assessment relevant to learning.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.
This includes access to:

- online learning tools
- hardware and its components required to use online tools.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- assist in developing a detailed technical design according to client requirements.

In the course of the above, the candidate must:

- define client business environment and client's critical business functions and processes
- design and prepare a best-fit technical design for a set project, incorporating:
  - changes to design model based on user requirements
  - detailed specification of modules and user authority for each module
- produce updated documentation reflecting changes made to required personnel.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- technical design project life cycle
- key principles and techniques required to develop detailed technical design, including:
  - incremental development
  - module implementation
  - documentation
  - design fundamentals and refinement
  - design quality metrics
- different client business environments and critical functions and process
- industry standard design models applicable to developing detailed technical designs
- organisational procedures and guidelines applicable to developing detailed technical designs.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- business and client requirements
- project deliverables
- required hardware and digital devices
- required software, tools and licenses
- feedback mechanisms
- industry standard ICT blueprint.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design and build a fully functional graphical user interface (GUI) according to specifications and organisational standards.

In the course of the above, the candidate must:

- demonstrate a GUI in concept and compiled form
- use applicable development tools in GUI construction
- confirm functionality of GUI on at least two different browsers and at least two different devices.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- object oriented programming concepts applicable to building graphical user interfaces
- system properties applicable to building a graphical user interface
- application development languages and prototyping tools and features included
- application programming interface (API) features
- open-source development tools
- organisational standards and codes of practice applicable to GUI building
- key testing procedures and documentation techniques required when building graphical user interfaces
- issues relating to copyright and intellectual property, privacy and data access legislation.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- GUI requirements documentation
- online tools available for prototyping and GUI design
- applicable organisational standards
- an integrated development environment (IDE) for determined language
- required hardware and its components
- required software, tools and licenses
- browsers and devices.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- apply at least three different industry standard programming practices in the preparation, maintenance and publishing of an organisation’s website.

In the course of the above, the candidate must:

- comply with organisation, legislative and industry requirements
- develop content to comply with policies applicable to cancellations, returns and refunds
- display a site accessible to a variety of customers via electronic communication
- develop and modify information to meet e-commerce interaction requirements.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- consumer protection legislation
- content features including clarity and readability
- electronic commerce modelling language
- information architecture principles required to maintain website information standards
- instructional design principles required to maintain website information standards
- obligations of merchants, service providers and customers in maintaining website information standards
- implementation and testing procedures applicable to:
  - limitations and legislative restrictions display
  - shipping information displays
  - order and cancellation capacity of website
  - client communication facilities
• organisational standards, requirements and documentation required to maintain website information standards
• privacy legislation applicable to maintaining website information standards.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• organisational policies, procedures and guidelines applicable to maintaining website information standards
• customer service manuals and general data
• information standards for legislative and organisational requirements applicable to maintaining website information standards
• software and web development tools.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to create technical documentation that is clear and understandable for the target audience and both easy to navigate and apply.

It applies to individuals working as technical writers, designers, developers and support staff, who are required to produce technical support documents of Information and Communications Technology (ICT) related work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- create at least two separate technical documents, each for different ICT products, on separate occasions.

In the course of the above, the candidate must:

- determine and comply with industry standards for technical documentation requirements
- establish customer needs
- design, and develop and write technical documentation, including system, procedures, training material and user guides, incorporating applicable standards
- gather, analyse and incorporate feedback from clients and required personnel.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- technical documentation structure, including:
  - flow of information
  - style
  - tone
  - content format
- technical documentation content features, documentation publication and distribution procedures
- principles of document design, web design and usability applicable to creating technical documentation
- functions and features of templates and style guides
- instructional design principles applicable to creating technical documentation
• organisational policies, procedures and standards that cover document design.

**Assessment Conditions**

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

• technical documentation specifications
• industry documentation standards
• organisational resources and documentation
• information about ICT system, platform, network or application being documented
• word processing software.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- plan, conduct and communicate one review of an established and operational system.

In the course of the above, the candidate must:

- document systems review plan, finalised process and results.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- key organisational policies, procedures and documentation required to conduct post-implementation ICT systems reviews, including those related to:
  - organisational business domain
  - implementation process and issues
  - project and review methodologies and deliverables
  - document lodgement standards
- industry standard hardware and software products required when conducting post-implementation ICT systems reviews.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required hardware where software installation may be performed
- use of industry standard software, including server and workstation hardware and software
- documents detailing organisational guidelines and policies for conducting post-implementation ICT system reviews
- internet connection
- operational system and specifications.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- identify agreement needs, develop and implement at least one Service Level Agreement (SLA).

In the course of the above, the candidate must:

- negotiate client requirements for support service within quality, time, target performance and cost parameters
- evaluate and document finalised process according to organisational procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard business practices, including:
  - change management
  - information gathering techniques
  - planning process, including development of Information and Communications Technology (ICT) business solutions
  - the process for the preparation of reports
- applicable features and vendor product directions of industry standard hardware and software products required when developing service level agreements
- legal principles of commercial contracts and service level agreements
- applicable organisational policies, plans and procedures including contracting
- concepts relating to negotiation and business relationships.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- applicable organisational policies, procedures and SLAs
- contexts for negotiating SLAs
- industry standard ICT hardware and software products.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- determine instructions, prepare resources and convey technical information to individual clients for their specific use on at least one occasion.

In the course of the above, the candidate must:

- empathise with learner and accommodate different cultures
- instruct in a clear, concise and coherent manner
- convey meanings of technical jargon.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard delivery and evaluation methods
- adult learning principles and styles applicable to one-to-one instructions
- communication and facilitation techniques applicable to one-to-one instructions
- critical behaviour issues and problems that can occur with one-on-one instruction
- industry standard Information and Communications Technology (ICT) terms and terminology
- organisational procedures applicable to providing one-to-one instruction.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
- client learning requirements
- documentation outlining organisation’s policies, procedures and guidelines that may impact on how instructions are delivered
- required ICT tools, hardware and software.

Application

This unit describes the skills required to work collaboratively in virtual Information and Communications (ICT) team environments to achieve organisational objectives. It includes contributing to performance and capability within teams, participating in team activities, exchanging knowledge and skills and providing support to team members.

It applies to all individuals who work in teams that utilise multiple technologies to complete a collective task.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop at least two protocols for teams working collaboratively in virtual environments that help achieve team objectives
- identify at least two communication tools and technology to support teams working collaboratively in virtual environments.

In the course of the above, the candidate must:

- review compliance of protocols to work collaboratively in a virtual environment
- seek and respond to feedback
- share knowledge and information according to work details, team objectives, organisational policies and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- legislation, codes, regulations and standards, and work health and safety requirements for collaborative work arrangements
- organisational cyber security protocols
- protocols for virtual ways of working, including:
  - virtual platforms used
  - frequency of virtual platform use
- functions and features of team communication strategies
- communication techniques in virtual teams
- methods of mediating conflicting perspectives in virtual teams
- roles and responsibilities of team members in promoting collaborative work environments
constructive feedback techniques.

**Assessment Conditions**

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- documentation of the organisation’s communication tools and technology available to support virtual, remote and collocated teams
- policies and guidelines on using collaborative communication tools
- industry standard communication tools, hardware and software
- legislative, regulatory and industry codes of practice and organisational guidelines that impact collaborative work
- industry standard ICT equipment and technology to research and analyse industry information.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design and integrate at least one client user interface prototype.

In the course of the above, the candidate must:

- determine impact of user interface design in the system environment and identify required data query and report formats
- document finalised process according to organisational procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- client business area and needs and responsibilities within area
- industry standard design principles applicable to developing client user interfaces
- general features and capabilities of industry standard hardware and software products and user interfaces
- industry standard front-end systems and applications
- GUI and web design principles applicable to developing client user interfaces
- organisational guidelines, policies and procedures applicable to developing client user interfaces.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
- design specifications
- organisational standards for documentation and version control
- project management process and hierarchy
- a usability test plan
- industry standard usability metrics.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- connect and configure at least one device and at least two related and required components.

In the course of the above, the candidate must:

- install components across at least three different situations and account for at least one unexpected contingency
- modify system’s hardware, internal hardware and peripheral hardware components according to task requirements
- plan modification and connection of hardware, internal hardware and peripheral hardware components according to vendor and technical specifications
- test components and rectify identified problems.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- different types, characteristics and functions of different devices, hardware, internal hardware and peripheral hardware components including:
  - types
  - characteristics
  - functions
- diagnostic and testing hardware and software tools, systems and functions
- operating systems (OS) related to configuration and testing
- industry standard hardware and software products
- organisational policies and procedures and manufacturer’s instructions
- installation and configuration plans for component installation.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- devices, including required hardware, internal hardware and peripheral components for installation and configuration, including:
  - a mobile smartphone
  - tablet
  - computer
- industry standard performance testing software
- technical manuals, tools and test equipment.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- apply service desk management principles in the provision of service desk support for two different services cases, on separate occasions.

In the course of the above, the candidate must:

- access, test and operate service desk systems according to organisational procedures
- investigate and confirm nature of service case and provide service desk support
- plan and document strategies to improve service desk performance.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- service management principles
- service desk procedures
- service desk system operation and testing
- service case support, management and closure procedures
- organisational guidelines, policies and procedures applicable to service desk management, including escalation policy and procedures
- industry standard practices in ICT service desk support
- basic technical service management terminology
- legislation, codes of practice and other formal agreements directly impacting resolution processes
- quality assurance applicable to service desk management.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- service management principles
- customer, client or user with service case that requires resolution
- legislation, codes of practice and other formal agreements that directly impact on resolution processes
- service logs and procedures
- service desk software and systems
- customer contact technologies.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT447 Work effectively in agile environments

Application
This unit describes the skills and knowledge required to participate in the delivery of ICT projects using industry-endorsed agile project management methodologies.

It applies to those who, whilst working under a level of supervision, work within an agile environment where the ability to deliver project increments is required. It includes ICT roles such as software, web or gaming developers within development environments, project managers, and helpdesk support officers who work with many different project management styles and environments.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Application

This unit describes the skills required to prepare, build and share electronic portfolios to display pieces of finished product and work on behalf of an individual, team or business.

It applies to individuals in multiple Information Communications and Technology (ICT) roles, including software, programming, gaming and web designers, developers, architects and business analysts, who are expected to maintain a professional online or business portfolio of work throughout their professional career at a given point in time. Portfolios, in this instance, can be used to get a job, sell work to a potential client or showcase skills, capabilities, intellectual property and product to the public.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 6.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- create at least one electronic portfolio with a minimum of three different examples of work and text.

In the course of the above, the candidate must:

- test and validate portfolio on at least two different devices and in two different browsers
- share portfolio to at least two different locations online
- save and back up portfolio to at least one location.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- functions and features of:
  - websites
  - platforms
  - software
  - hardware
  - storage units
  - design specifications
- electronic portfolio options, structures, requirements and standards
- industry standard hosting platforms
- basic scripting, testing and programming techniques and languages
- common viruses and errors and remediation processes
- processes to validate electronic portfolios
• industry standards for documentation, style and professional brand techniques
• sign-off requirements applicable to electronic portfolio work
• copyright, privacy, proprietary and intellectual property laws, legislation and policy standards
• organisational style guides and procedures applicable to preparing electronic portfolios.

Assessment Conditions
Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• industry specific platforms, hardware, devices and websites
• the internet, including connectivity and different browsers
• storage devices and industry standard services.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to use version control systems to track content, versions and maintain a code repository of work when developing in an ICT environment.

It applies to individuals who work in a development environment and create a history of changes to track multiple versions of their own or team’s work. These development environments include processes of designing, building and testing code and product.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- plan, install, create and manage a code on one repository of work on at least three occasions.

In the course of the above, the candidate must:

- communicate down time, service interruptions and installation of service
- document final outcomes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- distributed and centralised version control systems
- web-based DevOps lifecycle tools
- DevOps automation tools
- branching, pull and push commands local/remote
- key policies, procedures and documentation required to use version control systems in development environments, including those related to:
  - repositories and working copies
  - merging and merge tools
  - working and indiscriminative commits
  - resolving conflict and backout changes
- principles and techniques of creating repositories and branch workflows
- version control industry standard best practices
- distributed version control industry standard best practices
- workflow processes applicable to using version control systems.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- the internet, including connectivity
- required hardware, software and applications
- simulated work tasks and projects
- industry standard version control systems and vendor products
- organisation’s ICT policies, procedures and best practice guidelines imperative to task.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to administer and manage blockchain applications for a distributed ledger. It involves the identification of blockchain applications suitable to specified business needs, and the implementation and deployment of the application at various stages throughout the business model.

It applies to those who perform a range of administrative and project management tasks and assess and implement new technologies to business models in Information and Communications Technology (ICT) and related industries.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- set up and use at least one distributed ledger application to an organisational process.

In the course of the above, the candidate must:

- research business model and determine required distributed ledger application
- comply with blockchain best practices and guidelines.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- business models, processes and transaction types
- consensus mechanisms and protocols
- underlying distributed ledger technology functions and uses including:
  - blockchain principles, best practices and guidelines
  - cryptography
  - immutable database rules
  - transactional components
- industry standard functions and uses of distributed ledger applications, service provider platforms and their general capabilities
- industry standard uses for applications
- documentation techniques applicable to documenting DLT requirements
- research procedures and techniques used for determining DLT requirements.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- industry standard software and hardware to access internet and web delivered information
- vendor specifications
- platforms providing distributed ledger applications
- blockchain best practice guidelines.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- evaluate and implement at least three different types of intellectual property (IP) within an organisation
- assist, on at least two occasions, with the development and implementation of organisational IP, ethics and privacy policy and procedures.

In the course of the above, the candidate must:

- assist with maintenance of organisational IP, ethics and privacy policy procedures
- review potential risks and non-compliance incidents
- contribute to the development of non-compliance incident recommendations.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- key legislation required to evaluate and implement IP in the ICT industry
- key policies, procedures and documentation in the ICT industry, including those related to:
  - organisational IP policies and procedures
  - codes of ethics pertinent to the ICT industry
  - privacy
- key organisational communication processes and procedures related to identifying IP, ethics and privacy policies in ICT environments.
Assessment Requirements for ICTICT451 Comply with IP, ethics and privacy policies in ICT environments

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required organisational policies, codes of practice, legislation and standards of documentation
- workplace documentation and resources
- IP case studies and, where possible, real situations
- hardware and software applicable to applying legislative and organisational policies.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- identify hardware technology improvements for an organisation on at least one occasion, including:
  - analysing and planning approaches to technical problems and management requirements
  - accessing and conveying conceptual information regarding emerging technology in relation to organisational needs
  - forecasting future needs for planning and research purposes and recommending technology options
  - documenting findings in a report and seeking and responding to feedback.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- key features of business planning processes applicable to researching technology
- client business needs that can be satisfied by the provision of information and communications technology (ICT) products and services
- current business practices for preparing reports
- current industry and technology information sources
- general features and capabilities of current industry accepted hardware, cabling and software products, and emerging trends and product design
- equipment performance benchmarking
- industry networks, key individuals and organisations within the ICT industry that influence and report on hardware technology
- information gathering techniques required when researching and reviewing hardware technology options
- quality assurance practices that promote reliable investigation processes
• vendor product directions, including those for:
  • access and security products
  • next generation networks
  • self-configuring asymmetric digital subscriber line (ADSL) or cable modem-router-switch for the small office and home office (SOHO) market
  • wireless standards.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• network and computer layout documentation and premises plans
• network components
• equipment specifications
• organisational guidelines
• business plan or model
• journals of industry and professional associations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop component specifications for a project on at least two occasions, including:
  - identifying and document high level component specifications relevant to the project specifications
  - analysing and document component connectivity and relationships
  - documenting and review component modelling.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- component design tools, including features and capabilities
- processes for configuration management
- key features of a cost-benefit analysis
- industry accepted design methodologies and hardware and software products, including features and capabilities
- data modelling techniques
- program development methodologies
- quality assurance practices for preparing component models
- standards and organisational policies relating to component specification development
- current system functionality for analysing components.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
- technical specifications
- organisational and process goals
- standards for model development
- computer aided software engineering (CASE) tools
- project deliverables
- test plan
- project budget
- software and hardware required for performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to confirm a transition strategy for new systems based on a revised system design and newly developed change management plan.

The unit applies to those who work as part of a team in a range of information and communications technology (ICT) positions and who are required to plan for a transition to new system websites, networks or software.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- confirm new systems transition strategy for an organisation on at least one occasion, including:
  - confirming acceptance plan
  - developing and confirming data take-up plan
  - confirming cutover plan.

In the course of the above the candidate must:

- identify and liaise with required personnel
- seek and respond to feedback.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- technology transition strategies
- current business practices related to transition strategies
- phased delivery requirements
- methods of acceptance for transition strategies
- key features of data take-up, including:
  - data sources
  - integrity constraints
  - data conversion workflow
  - interface requirements
  - data take-up methods
  - data conversion contingencies
• key features of cutover plans, including:
  • conversion windows
  • dependencies
• fall-back options data conversion workflow design, including considerations for:
  • data validation
  • data clean-up
  • data loading.

Assessment Conditions
Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• ICT specifications
• change management plan
• acceptance test plan
• system design
• ICT security assurance specifications.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- propose a new technology supported business model for an organisation based on organisational requirements on at least one occasion, including:
  - identifying new approaches to technology use
  - determining the suggested focus of the selected business model according to identified performance improvement standards
  - documenting the new business model.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- procedures for benchmark selection and development
- key features of business process design, including:
  - case diagrams
  - business process modelling and notation
  - activity diagrams
- key components of business-to-business and business-to-customer interface and liaison
- copyright and intellectual property factors relating to selecting new technology models
- current organisational environment, including:
  - technological
  - client
  - supply chain
- methods for determining impact of technological change
- principles of electronic commerce modelling language (ECML)
- procedures for interpreting environmental scanning
• procedures for interpreting design specifications
• key features of modelling methodology
• key components of value and supply chain management
• key features of website architecture.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• business systems
• analysis software
• modelling software
• business requirements
• current industry news
• supply and value chain analysis.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- determine vendor products and equipment options for an organisation according to requirements on at least one occasion, including:
  - evaluating a range of vendor products and equipment against requirements
  - testing all identified product options
  - documenting the selected items and selection rationale in a report.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- relevance and application of the following for evaluating and selecting products:
  - code of ethics
  - international standards
  - vendor products
  - client business domain
  - copyright and intellectual property
  - general features and capabilities of current industry accepted hardware and software products
- current and future technical systems considerations required by business
- features and functions of relevant hardware components and software products and the interaction between them
- measures required for test regimes.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- client functional requirements
- hardware and software specifications from vendors
- test procedures and activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- determine Information and Communications Technology (ICT) systems solutions for an organisation according to client requirements on at least one occasion, including:
  - analysing the organisation’s current needs and projected ICT requirements
  - determining the impact of system changes on the organisation
  - evaluating and recommending ICT strategies and systems solutions to meet business objectives
  - developing a feasibility study and cost-benefit analysis of proposed solution
  - seeking and responding to feedback throughout the process.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- current industry systems development methodologies
- business planning process relevant to developing an ICT business solution
- current business practices for:
  - preparing business reports
  - facilitation of group interviews
- quality assurance practices for ICT solutions
- general features and capabilities of current industry accepted hardware and software products
- key components of feasibility studies and cost-benefit analyses in relation to ICT strategies and solutions
- information sources for a cost-benefit analysis
- role and degree of stakeholder involvement in developing ICT strategy
- specific client business requirements in relation to proposed ICT solutions.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
- detailed information relating to current needs and project requirements of the business
- client expectations brief
- business risks and objectives.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- implement industry specific technology for an organisation, according to organisational requirements, on at least one occasion, including:
  - analysing and critically evaluating the features and functions of identified industry specific technologies to an industry standard
  - managing the implementation process of new and emerging industry specific technology
  - reviewing the performance of the industry specific technologies for the organisation.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- trends and applications of current vendor products and technologies
- techniques for gathering information to assist in identifying and managing implementation of industry specific technologies
- current directions of information and communications technology (ICT) and specifically of the major industry technology standards used in the specified area
- general features, capabilities and application of current industry hardware and software products.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- industry specific technologies currently used in industry
documents detailing organisational requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to deal with clients at a senior level, to identify their business requirements and verify the accuracy of the information gathered.

The unit applies to senior Information and Communications Technology (ICT) personnel operating with a high degree of autonomy for managing activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- verify project specific information for a client on at least one occasion, including:
  - establishing business relationships through investigation of the organisation and interviews with client and staff
  - determining and documenting business expectations and needs, including critical business requirements
  - working with clients and staff to gather, analyse and confirm information contributions
  - reviewing and gaining approval for system specifications.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- process for communicating with client in order to gather and report data
- client business requirements relating to Information and Communications Technology (ICT) product selection
- process used to identify products related to the business
- roles and responsibilities of stakeholders.

Assessment Conditions

conditions are typical of those in a working environment in this industry.

This includes access to:

- client expectations brief
- business objectives
- systems, data gathering and appropriate software products.
Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop, implement and maintain a blockchain solution aligned to a specific organisational criterion.

In the course of the above, the candidate must:

- research and identify industry standard technology options.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- underlying blockchain principles applicable to developing and maintaining solutions
- objectives, purpose and requirements of blockchain solutions
- suitability of blockchain different transaction and data types
- transactional types and components suitable for blockchain technology
- techniques to debug, scale and test blockchain solutions
- capabilities and purpose of blockchain technology
- industry standard uses for applications.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- industry standard software to access internet and web delivered information
- industry standard hardware to access internet and web delivered information
• client deliverables that assist in information gathering
• platforms providing distributed ledger applications
• blockchain best practice guidelines.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- deploy a smart contract using blockchain technology on at least two occasions.

In the course of the above, the candidate must:

- research organisational business model and determine required distributed ledger application
- demonstrate adherence to blockchain best practices and guidelines.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- objectives, purpose and requirements of blockchain solutions
- blockchain principles that apply to deploying smart contracts
- functions and features of cryptography
- database rules relevant to deploying smart contracts
- transactional components
- industry standard uses for applications
- industry standard uses for ABI and bytecode variables
- uses and functions of Integrated Development Environment (IDE)
- libraries and languages relevant to deploying smart contracts
- security best practices and principles applicable to smart contracts.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• industry standard software to access internet and web delivered information
• industry standard hardware to access internet and web delivered information
• client deliverables that assist in information gathering
• platforms providing distributed ledger applications
• blockchain best practice guidelines.

Application

This unit describes the skills and knowledge required to lead and organise an agile team of Information and Communications Technology (ICT) and other industry professionals to deliver a project within an agile project management framework.

The unit applies to those in ‘scrum master’ roles and those responsible for leading team members within an agile project. This includes working as project leads within software, web, application and game development environments, without the function of client negotiation or overall business management of the project.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- plan, lead and evaluate at least three project sprints comprised of different project work tasks within an agile project framework.

In the course of the above, the candidate must:

- use at least one project management tool for effective team communication
- use at least two different agile methodologies for communicating with team members.
- coach team members and facilitate agile team culture and mindset
- discuss and agree on frequency of team communication, feedback and project progress
- apply agile principles and allow team to self-govern.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- agile principles, mindsets and behaviours
- agile methodologies, including:
  - project management
  - team member roles and responsibilities
  - characteristics of increments, increment timelines and stages of increment delivery
  - project work tools and platforms
  - communication tools and platforms
  - agile meetings, including huddles and scrums
  - KANBAN board tools
  - project debrief methodologies
  - work task prioritisation requirements and contingencies
• version control and progress tracking
• ICT hardware and project management software applicable to organising and managing agile projects
• communication techniques and practices required to coach others and lead meetings.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• equipment, hardware and industry software packages required for agile project work
• a range of simulated work tasks and project within agile project management teams
• project requirements and agile project team
• the internet and connectivity
• required online agile project management and communication tools.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

**Application**

This unit describes the skills and knowledge required to design solutions using a user experience (UX) methodology, with the users’ experience at the centre of design. In this unit, a user refers to a customer or client who will interact and use a product, service and/or platform.

The unit applies to those working as business and systems analysts, as well as developers of software, games, websites, applications, products and services. UX design aims to improve, optimize and add value to the users’ experience of a designed solution (product, service or platform).

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design and document at least one user experience (UX) solution for a user group of at least 3 people.

In the course of the above, the candidate must:

- undertake research and consultation
- test, adjust and improve solution to desired outcome.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- consultation and communication techniques and methodologies applicable to designing user experience solutions
- UX principles and values, including usefulness, aesthetics, desirability, useability and function
- UX methodologies and techniques, including:
  - design thinking
  - use-mapping and journey exercises
  - market segmentation
  - testing solution on user groups
  - testing function and useability
  - validating user experience of solution.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- wireframe and prototype tools and templates
- design problem or business case
- user group of at least three different people.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to apply simulation testing techniques when testing networking systems.

It applies to technical staff who work with optical communication systems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- test at least three different types of networks using at least one complex and at least one simple virtual instrument in each network.

In the course of the above, the candidate must:

- use system manuals and equipment according to manufacturer specifications.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- organisational policies and procedures, including those for:
  - obtaining work details and scope from relevant personnel
  - arranging site access
  - security arrangements
  - report sign-off procedures
  - identifying limitations of virtual instruments
  - measuring networking systems
- features and applications of:
  - simple and complex virtual instruments
  - band-limited channels
  - data buses
  - simulation algorithms
  - virtual instruments
- differences between simple and complex virtual instruments
• sampling and data conversion processes
• instrumentation principles and practices
• mathematical and problem-solving techniques of measuring networking systems using virtual instruments
• technological developments of virtual instruments
• internet support services
• modulation methods, AM, FM and digital formats
• report formats and requirements
• legislation, codes, regulations and standards and workplace health and safety requirements for scoped work.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• internet sites
• electronic workbench or similar software
• virtual instrument applications and media
• a workplace conducting operations involving virtual instruments
• support from a competent supervisor or mentor
• networking equipment that can be used for integrating projects
• industry software packages.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to maintain professional and ethical conduct, as well as to ensure that personal information of stakeholders is handled in a confidential and professional manner when dealing with stakeholders in an Information and Communications Technology (ICT) environment.

It applies to ICT personnel who are required to gather information to determine the organisation’s code of ethics and protect and maintain privacy policies and system security.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- analyse legislation and standards, and contribute to policy and procedures improvements in code of ethics and privacy policy documents in the Information and Communications Technology (ICT) industry on at least once occasion.

In the course of the above, the candidate must:

- document and communicate updates with relevant personnel.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- codes of ethics pertinent to ICT industry
- federal, state and territory legislation and policies applicable to ICT environments and relating to:
  - copyright and intellectual property
  - privacy
- organisational communication processes and procedures related to applying IP, ethics and privacy policies in ICT environments.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- industry standard organisational policies, legislation and standards documentation
- organisational style guide
• records and documentation that assists in determination of workplace adherence to organisational code of ethics
• industry codes of practice
• hardware and software applicable to applying legislative and organisational policies.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- document plan, processes and outcomes and incorporate changes on at least one occasion.

In the course of the above, the candidate must:

- develop, review and contribute to business vision statements and strategic plans.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- analysis and planning approaches to technical problems and management requirements relating to network ICT security guidelines of the organisation
- SWOT analysis methodology
- an organisation’s approach to:
  - monitoring strategic directions
  - setting objectives and targets
  - selecting hardware platform
- evaluation methods used when forecasting for planning, including:
  - system functionality, including ICT trends and developments
  - internal and external operating environments
  - operating systems supported by the organisation.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.
This includes access to:

- budget and time constraints
- business objectives
- business risks.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- evaluate and apply at least three different development methodologies and their application to a development project.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- organisational business domain and organisational requirements
- life cycle maintenance of a live system, network or website applicable to managing the use of appropriate development methodologies
- technology requirements involved for a range of development methodologies relating to managing the use of appropriate development methodologies
- industry standard development methodologies applicable to managing the use of appropriate development methodologies.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- design specifications and development methodologies
- organisational standards for documentation and version control
- detailed user requirements document, including model and scope
- a project plan.
Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to analyse traditional business processes to identify and implement business opportunities for innovation and reform.

The unit applies to those in senior Information and Communications Technology (ICT) in areas of knowledge management and systems development, who are responsible for analysing, identifying and coordinating ICT business solutions.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- define, develop and implement a complex innovation plan.

In the course of the above, the candidate must:

- define the organisation’s strategic directions
- develop innovations to assist the business
- produce a cost-benefit analysis of suggested innovations.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- organisation’s culture and traditional organisational models
- internal and external sources of information relating to identifying and implementing business innovation
- legal, ethical and security issues relating to business strategies
- records management principles and processes
- legislation from levels of government that effect business operation.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- organisational documents including mission statements and strategic directions
- an environment where business opportunities for innovation may be implemented.
Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- identify, map and facilitate a community of practice (CoP) with more than three people.

In the course of the above, the candidate must:

- facilitate effective interaction and communicate within the group
- define purpose and intent of a CoP.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- ‘communities of practice’ features and purpose
- organisational structures, goals and knowledge and how they apply to CoPs
- communications enabling technologies that apply to developing communities of practice
- group dynamics and its impact on building CoPs in an organisational setting
- methodologies to promote, market and engage with CoPs and the enabling technologies.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- an organisational structure, goals and knowledge
- a site where CoP may be developed
- personnel that forms a community
- user device.
Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

1. Evaluate existing knowledge management systems

1.1 Discuss existing knowledge management strategies with relevant personnel and identify advantages and disadvantages
1.2 Identify differences between knowledge management and information management systems within the organisation
1.3 Evaluate and confirm existing procedures and systems against organisational frameworks
1.4 Identify the need for improvements in the use of knowledge in the organisation

2. Evaluate knowledge

2.1 Investigate barriers to capturing knowledge within the
ELEMENT | PERFORMANCE CRITERIA
--- | ---
management options | organisation
2.2 Review evaluations and recommendations of knowledge management software obtained from relevant personnel
2.3 Propose software to be implemented within the organisation according to organisational requirements and procedures
2.4 Review investigations into incentives and reward systems that support knowledge management
2.5 Confirm required processes for maintaining integrated knowledge management systems are documented by the organisation
2.6 Determine the viability of selected options and present ideas to relevant personnel in a business case

3. Improve existing knowledge management systems
3.1 Implement recommended software following consultation with relevant personnel
3.2 Discuss and confirm how the improved strategy supports knowledge management and organisational needs and budget requirements with relevant personnel
3.3 Discuss and confirm whether processes for periodic reviews of knowledge management metrics are in place with relevant personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

<table>
<thead>
<tr>
<th>SKILL</th>
<th>DESCRIPTION</th>
</tr>
</thead>

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

* develop at least one knowledge management business strategy for at least one organisation.

In the course of the above, the candidate must:

* summarise management concepts, processes and trends
* apply legal, ethical and security issues relating to knowledge management
* discuss records management and database management principles as they relate to knowledge management, particularly metadata.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

* concepts, processes and trends for information and communications technology (ICT) organisational knowledge management
* advantages and disadvantages of knowledge management strategies
* differences between knowledge management and information management systems
* features of organisational knowledge management frameworks
* organisational policies, procedures, and legislation, that affect business operations
* functions and features of metadata
* legal, ethical and security issues relating to knowledge management
* organisational change-management theory and methods
* records management and database-management principles and how they relate to knowledge management, particularly metadata.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a workplace of sufficient complexity, to enable the required level of analysis to be carried out in relation to:
  - current business processes
  - existing knowledge management systems
  - the organisational culture
- relevant enterprise strategic documentation, including:
  - strategic planning
  - financial
  - ICT infrastructure
- organisational objectives and policies.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- lead analysis of at least two information and communications technology (ICT) business strategies.

In the course of the above, the candidate must:

- analyse business strategy for risk assessment procedures, including security for ICT assets, and confirm that the measures required to mitigate risk are applied
- determine whether the implementation of the required processes and procedures confirm that quality expectations are met.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- AS/NZS ISO 31000:2009 "risk management requirements"
- business factors which impact upon characteristics of ICT environments
- organisational policies and procedures, including those for:
  - ICT risk management strategies
  - addressing change requests
  - analytical project completion requirements
- frameworks used to assess ICT business strategies and role of enterprise methodology in analysing ICT business strategies
- applications of security products
- possible ICT business continuity issues and resolutions.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- strategic-level enterprise documentation required for analysis, including planning, financial and ICT infrastructure documentation
- legislative policies required for leading analysis of ICT business strategies.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- manage at least one automated information and communications technology (ICT) system application.

In the course of the above, the candidate must:

- use functions using enterprise-wide operating systems
- analyse system functions based on data
- produce at least one report that evaluates the system
- document recommendations for system improvements.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- organisational regulations and procedures, regarding:
  - obtaining work details and scope from relevant personnel
  - arranging access to ICT systems applications
  - network security arrangements
  - report sign-off procedures
  - running enterprise-wide operating systems
- functions and features of:
  - enterprise-wide operating systems
  - automated ICT systems
  - networking multi-user applications
  - networking infrastructure
  - software simulation
• multiuser networking systems
• distributed computing functions
• disk partitions
• media file systems
• system commands
• special permission modes
• ‘cron’ commands
• automated scheduling
• command line interfaces
• networking shells and commands
• text files and utilities
• data backup strategies
• unifex features
• modifying boot options
• methods to shutdown operating network systems
• system requirements for managing file commands and wildcards
• mounting and unmounting file systems
• utilising command line interfaces
• interacting with shells and network commands
• managing user and group accounts in networking applications
• scanning log files for activity
• configuring network applications
• encoding and programming techniques
• analysing and reporting on network security arrangements
• enterprise-wide operating system commands.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• a telecommunications operations site
• unix-based system
• special purpose tools, equipment and materials
• industry software packages
• enterprise objectives and policies.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- connect at least three IoT devices to an IoT network.

In the course of the above, the candidate must:

- check and test environmental factors affecting connectivity of devices.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- functions and features of industry standard network and platforms that support IoT devices and components
- language uses required for installing IoT devices and networks
- functions and uses industry standard hardware and software tools relating to installing IoT devices and networks
- different environmental impacts and contexts relating to where and how IoT devices are used
- IoT security considerations and their impact
- testing and debugging methodologies and techniques required to test software, hardware and environmental impacts.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• tools, equipment, materials, hardware required to install and test an IoT network to devices
• industry standard software packages relevant to installing IoT devices and networks
• organisational, technical and manufacturer procedures and documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- research, select and program at least one IoT device for at least two different environmental conditions.

In the course of the above, the candidate must:

- test IoT device function and environmental variables
- document programming processes and outcomes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- language used to program IoT devices
- laboratory tools including:
  - power supply
  - silla scope
  - spectrum analyser
  - signal generator
- schematic drawing documentation and reading tools
- principles of electricity, energy and electricity usage, as they relate to IoT devices
- principles and functions of sensors and wireless communication
- uses and features of microcontroller programming, microprocessors and microcontrollers
- basic principles of soldering and manufacturing processes and related electrical circuits
- basic mathematical equations, algebra, signal processing and statistics concepts and procedures
- operational procedures and safety checks for using power usage instruments
- different environments, contexts and its impact where IoT devices are used
- readings and standards of workplace electrical equipment range
- testing and troubleshooting methodologies and techniques.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
- tools, equipment, materials, hardware required to program IoT devices
- microcontroller and required text editor software
- technical and manufacturer documentation
- environment with different factors applicable for IoT use.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- research, design and test at least two IoT devices according to organisational needs.

In the course of the above, the candidate must:

- communicate advantages and disadvantages of IoT devices in specified networks
- produce design reports for the two devices.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- functions and features of industry IoT devices and networks
- types of resources available to design IoT devices
- IoT design topologies
- advantages and disadvantages of resources available to design IoT devices and networks
- methods to determine compatibility between IoT devices and networks
- characteristics of design reports for IoT devices
- organisational policies and procedures to design IoT devices and networks.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- tools, equipment, materials, hardware required to design and test IoT devices and networks
• environmental conditions and specifications required for design IoT devices and networks.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to consider business drivers in decision-making processes for network planning and investment. It prepares individuals for entry into planning and design for network additions and implementations to accommodate network growth and incorporating new technologies.

It applies to individuals with diverse telecommunications networking skills and extensive knowledge of core and access network capabilities of service providers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Network Planning

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- analyse financial, demographic, technological and usage trends and document for at least two networks.

In the course of the above, the candidate must:

- analyse forecasts using customer demand
- build models to develop business cases
- apply financial analysis
- analyse demographic trends for strategy development
- assess technology implementation
- communicate with customers
- evaluate network deployment architecture.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- methods of organising network information and usage data
- methods to determine trends in customer network demands, operating environments and markets
- emerging telecommunications and networking technologies
- principles and techniques of:
  - network planning strategies
  - analysing financial, demographic and technological trends in networks
  - constructing network models
  - financial modelling
• forecasting trends
• legislative rights of required telecommunications network carriers and service providers
• commercial considerations of implementing network plans, including:
  • capital expenditure (CAPEX)
  • operational expenditure (OPEX)
  • product revenue and demand versus network costs
  • return on investment (RoI)
  • time to market
• principles and techniques of financial investment tools, including:
  • cost-benefit analysis
  • investment management systems
  • net present value (NPV)
• legislation, codes, regulations and standards, work health and safety (WHS) requirements and organisational requirements for scoped work, including:
  • Australian competition and consumer affairs
  • telecommunications industry regulatory accounting
  • universal services obligations.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• network planning data
• relevant databases
• business and financial models
• systems and deployment rules and relevant legislation
• planning processes and regulatory frameworks.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- produce at least two comprehensive reports that evaluate the economic and political influences on the networking industry in Australia and the impact of regulations and legislation on the networking industry
- produce at least two summary reports that evaluate the impact of legislation on planning processes and accessibility to networks.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- identify economic factors that can affect growth
- functions and features of producing evaluation reports
- policies and procedures of:
  - Australian Competition and Consumer Commission (ACCC)
  - Universal Services Obligation (USO)
- the implications of Australian federal government regulation and deregulation on the networking industry
- the purpose and implementation of networking legislation.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
- legislation
- planning processes
• databases
• licensing requirements
• other related procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, and to:

- sustain the operation of at least one network and meet organisational specifications
- use diagnostic test results to maintain network’s integrity.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- network’s operating system
- key elements of a disaster recovery policy
- features of network file and folder permissions
- vendor service-level agreements
- operating systems supported by an organisation, including functions and basic features
- organisational policies and procedures including:
  - access, security and networks
  - protection against, and elimination of computer viruses
  - deleting, restoring and archiving files
  - creating logons
- personal responsibilities for software copyright.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a live network
- industry standard systems administration tools
- organisational policy and procedures
- industry standard hardware, software, tools, licenses and digital devices
- business and client requirements
- project deliverables.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, and to:

- set up and manage at least one network operating system.

In the course of the above, the candidate must:

- use network administrative tools to carry out system administration tasks
- manage the network file system
- create the network configuration required by the client
- provide user services and user accounts
- provide backup and service restoration capability.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- antivirus software, its operation, installation and update procedures
- organisational and industry standard network operating system (NOS)
- facilities available in an operating environment
- features and capabilities of networking technologies
- implementation of network security in a local area network (LAN) including:
  - file and folder permissions
  - users and group settings
- monitoring aspects of network performance or traffic including:
  - system administration tools
  - third-party tools.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- industry standard ICT blueprint
- user network requirements
- antivirus software
- network administration tools
- a live network with a representative range of networked environments and operating systems
- a server
- technical records, organisational policies, access policy and documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- install, configure and troubleshoot network peripherals to at least one network.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- network peripherals and their configuration
- organisational deliverables that may be used to administer network peripherals
- current industry standards for network peripherals
- general construction and operation of peripheral devices to facilitate troubleshooting.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a range of internal and external network peripherals including:
  - mouse
  - keyboard
  - monitor
  - printer
  - internal modem
- industry standard ICT blueprint
- network administration tools
- live network with a representative range of networked client server environments and operating systems
• technical records, organisational policies and documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to install and test network protocols in a networking environment.

It applies to individuals with Information and Communications Technology (ICT) skills, who are required to provide network support to ensure that appropriate protocols have been installed in networks to allow user functionality and maintenance.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- configure, test and validate network protocols in order to facilitate interconnectivity on at least one occasion
- install and manage network protocols in a network and troubleshoot problems on at least one occasion.

In the course of the above, the candidate must:

- adhere to work health safety (WHS) requirements according to organisational policies and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- business domains, including the organisational structure and business functionality of the network
- user needs, manufacturer specifications and organisational policies and procedures
- network protocol required to install and manage network protocols
- required communications technologies and their associated protocols
- industry accepted hardware and software products, and general features and capabilities
- network protocols currently in use in the organisation and industry, including:
  - transmission control protocol
  - internet protocol (TCP/IP)
  - OSI models
- vendor product range and development directions
- network protocols transcend organisational size and network complexity.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a live network
- application software and operating system
- networked computers
- organisational guidelines
- technical documentation and installation manuals
- vendor software
- work health and safety (WHS) guidelines, policies and procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

**Performance Evidence**

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- install and manage at least one server
- document and lodge outcomes and process.

In the course of the above, the candidate must:

- manage server operating system, including user accounts, file, network directory and print services
- perform backup and recovery
- update operating system and software
- troubleshoot server and network failures.

**Knowledge Evidence**

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard network hardware and software systems and their requirements, including:
  - network operating systems (NOS)
  - server applications including compatibility issues and resolution procedures
- desktop applications and operating systematic server installation and maintenance processes and procedures, including:
  - documentation skills for networks
  - error logging and reporting
- high availability options for file systems, including redundant array of independent disks (RAID) and replication
- network directory services and network service configuration options for performance tuning user authentication
• processes and procedures required to support and manage a server, including:
  • best practice for implementing backup and recovery procedures
  • boot process
  • operating system help and support utilities
  • operating system installation methods, including installation from CD or DVD, universal serial bus (USB) boot disk, network and script (automated install) printer management
• process and task management, including:
  • process termination
  • task scheduling utilities
• troubleshooting tools and techniques including:
  • network diagnostic utilities user account and password management.

**Assessment Conditions**

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
• a site where server installation may be conducted
• relevant server specifications including:
  • cabling
  • local area networked (LAN) computers
  • server diagnostic software
  • switch
• client requirements
• wide area network (WAN) service point of presence
• workstations
• relevant regulatory documentation that affects installation activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- maintain and manage at least one network
- maintain data integrity whilst managing at least one network
- document and lodge outcomes and process.

In the course of the above, the candidate must:

- use industry standard tools to conduct audit on system assets
- implement and test antivirus solution
- employ systems to negate environmental threats
- demonstrate features of data backup, restore and system roll back
- perform network monitoring using a variety of current standard tools
- add network controls according to network and data integrity policies.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- broad principles of current data integrity on a network, including:
  - auditing and control of user access
  - asset tracking and auditing
- industry standard antivirus solutions and techniques
- backup, restore and rollback procedures
- system and network monitoring tools and their related functions
- organisational structure and business functionality as they relate to data integrity
- tools and applications required to manage network and data integrity, including disaster recovery processes.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site or prototype where network and data integrity strategies may be implemented and managed
- use of network support tools currently used in industry
- organisational security policies, manufacturer recommendations and network and data integrity protection standards.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standard.

Performance Evidence
The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- configure, install and operate one small enterprise branch network
- identify, test and verify performance capability issues for a small enterprise branch network.

Knowledge Evidence
The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- internet protocol (IP) addressing scheme architecture
- network topologies, protocols and security solutions defined network problems
- Open Systems Interconnection (OSI) layers of networking
- Transmission Control Protocol (TCP)
- Network Address translation (NAT)
- dynamic host configuration protocol

Assessment Conditions
Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site where network installation may be conducted
- small enterprise routers and switches
- network’s design documentation
- equipment specifications
- hardware and software required to install and operate small enterprise branch networks
- organisational guidelines
• computers
• documents including policies and procedures that may affect installation and operation of a network.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- install, configure and test at least two wireless access points
- monitor and resolve wireless network issues on at least two wireless local area networks
- develop and document user training material.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- basic principles of network security, including:
  - audit and intrusion detection systems
  - auditing and penetration testing techniques
  - authentication methods
  - network protocols and operating systems
  - security protocols, standards and data encryption
- factors that impact on a small wireless network, including:
  - bandwidth and quality of service
  - factors affecting signal quality
  - layer 2 and layer 3 design issues
  - features of a small office or home office (SOHO) network
  - wireless security strategies
  - wireless topologies
  - wireless local area network (WLAN) solutions
- protocols and their application for wireless networks, including:
  - transmission control protocol (TCP)
  - internet protocol (IP).
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- site at which a small wireless network can be installed
- tools to install small wireless network
- network technical requirements
- network infrastructure, including wireless hardware and software
- documentation and guidelines that may affect wireless network installations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to install, configure, maintain and support server-side applications on network workstations, in both Windows and Linux based networks.

It applies to individuals working as network administrators and network support roles who implement the installation and configuration of client-server-based software.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

<table>

</tr>
</tbody>
</table>
### ELEMENT | PERFORMANCE CRITERIA
--- | ---
2.2 Configure client-server software according to vendor guidelines
2.3 Manage installation of upgrades and patches to client-server software environment
2.4 Backup client-server software according to technical and organisational requirements

3. Determine configuration effect on network design
3.1 Identify required utilities to monitor and determine network performance capability according to task requirements
3.2 Create network performance benchmarks
3.3 Determine performance effect on network after installation of client-server software

4. Test and finalise client-server activities
4.1 Test operation of client-server software against task requirements
4.2 Store unused ICT equipment according to manufacturer specifications and organisational procedures
4.3 Obtain sign-off from required personnel

### Foundation Skills
*This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.*

| SKILL | DESCRIPTION |
--- | --- |
**Numeracy** | • Interprets numerical information to analyse memory, hard disk and performance requirements |
**Oral communication** | • Selects appropriate form, channel and mode of communication for a specific purpose relevant to own role |
**Reading** | • Recognises and interprets technical and vendor-specific information to determine business requirements |

### Unit Mapping Information
Supersedes and is equivalent to ICTNWK407 Install and configure client-server applications and services.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- install, configure, monitor and maintain at least one server-based client software to communicate with existing server software.

In the course of the above, the candidate must:

- test operation of client-server software
- identify and implement required updates for client-server software
- monitor performance of client-server software
- backup and maintain client-server software.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- requirements for client-server applications and services, including:
  - computer hardware and software required
  - internet protocol (IP) addressing
  - networking fundamentals
  - operating systems
- operating system help and support utilities required, including:
  - procedures for implementing backup and recovery
  - software installation and configuration
  - user account and password management
  - troubleshooting tools and techniques
  - network diagnostic utilities.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- hardware and software supplies
- server and networking tools
- client-server based network
- appropriate client-server software
- ICT equipment used in industry
- relevant equipment documentation
- work health and safety guidelines
- ICT storage guidelines.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- install and configure at least one desktop operating system, including user accounts, file and print services and security
- perform backup and recovery, monitor and troubleshoot the desktop environment for one desktop operating system
- document the finalised process.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- features of desktop operating systems, applications, compatibility issues and resolution procedures
- configuration requirements of a desktop environment
- file naming conventions related to selected operating system
- network protocols and transmission control protocol or internet protocol (TCP/IP) network connectivity
- operating systems and their functions, including file system, memory management and process scheduling
- printer driver and queue management
- process or task management, including process termination
- tools available for remote assistance and administration
- troubleshooting tools and techniques, including network diagnostic utilities and remote assistance and administration tools
- user account, group and password administration and guidelines for selecting a secure password
- file system navigation and manipulation utilities
- software and hardware manufacturer and user licensing.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site where server installation may be conducted
- relevant server specifications, including:
  - cabling
  - local area network (LAN)
  - diagnostic software
  - switch
  - client requirements
  - wide area network (WAN) service point of presence
  - desktop workstations
- required regulatory documentation that affects installation activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design, document, construct and test a small single purpose operating system (OS) utility application in response to a problem description
- create a scripted program that access information stored in files on system and use system utility programs to sort and find information within files for one operating system (OS)
- document process.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- principles of algorithm design
- operating system components and processes, including:
  - command line interface
  - log files
  - program scheduling utilities
  - data types
  - operations and expressions
  - development methodologies
- tools, utilities and testing methods that may be used to create scripts for networking
- debugging for a variety of scripting scenarios
- programming structured control constructs: sequence, selection and iteration
- scripting techniques and language syntax that may be used to create scripts for networking.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- OS scheduling software
- Storage guidelines for ICT equipment
- Work health and safety requirements
- Technical requirements
- Software development environment
- Software testing environment.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- evaluate client user requirements and hardware installation for at least one network
- install a range of network hardware by planning, managing and supporting the installation of new components in a network
- document finished process.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry, data and voice networking, security products, devices and procedures, including:
  - industry accepted network protocols
  - organisational contracting procedures and responsibilities
  - system diagnostic software
  - industry accepted network hardware and software products
  - hardware and software installation procedures
  - local area network (LAN) capabilities and characteristics, such as network type, internet protocol (IP) addressing, switch or hub operation
  - various features of network connections, including types of cables, cabling distance limitations and wireless connections
  - operating systems sufficient to enable basic installation
  - set-up and configuration procedures
  - software packages supported by organisation.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- vendor hardware and software components
- application software and operating system
- hardware maintenance tools
- a live network
- networked computers
- organisational guidelines
- technical documentation and installation manuals.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, and to:

- plan and deploy automatic installation of operating system and software to at least two networked computers
- configure and test installation of automatic installation of operating system and software on at least two networked computers
- document finalised process.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- network protocols and operating systems
- transmission control protocols (TCP)
- internet protocols (IPs)
- network applications
- organisational contracting procedures and responsibilities that may be used in deploying software for networked computers
- software licensing requirements and documentation
- standards related to software deployment, including:
  - deployment software configuration
  - configuration of automated deployment processes
  - operating system deployment
  - software package deployment
  - troubleshooting deployment processes.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site or prototype where deployment processes may be implemented
- a live network
- software tools to support implementation of deployment processes
- technical documentation and installation manuals
- required regulatory documentation that affects networking activities
- organizational guidelines.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, and to:

- design and implement at least one network document and publish to its intended environment.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- open systems interconnect (OSI) layered communication model
- network requirements related to:
  - applications
  - life cycles
  - manageability
  - quality of service
  - design concepts related to:
  - financial constraints
  - network topologies
  - organisation requirements
  - physical constraints
  - security issues.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
- a site where network documentation can be carried out
- a live network
- software tools to support network documentation tasks
- relevant network documentation
- legislation and standards documentation
- industry codes of practice
- required regulatory documentation that affects networking documentation activities
- organisational guidelines.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to build an enterprise, community or mesh wireless network internally and externally to buildings.

It applies to individuals with task management, interpersonal and Information and Communications Technology (ICT) skills working in senior design roles in the networking area, who are required to develop complex wireless networks for organisations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- select, install and configure required wireless hardware on at least one occasion
- test, monitor, and administer the installation on at least one occasion
- document finalised process.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- Industry standard wireless local area network (WLAN) and wireless area network (WAN) solutions, including:
  - audit and intrusion detection systems
  - auditing and penetration testing techniques
  - bandwidth and quality of service
  - factors affecting signal quality
  - layer 2 and layer 3 design issues
  - suitability for small office home office (SOHO) and enterprise local area networks (LANs)
  - transmission control protocols or internet protocols (TCPs/IPs) and applications
  - wireless topologies
- common features of security threats and how to develop a security strategy, including:
  - security protocols
  - standards
  - data encryption
- common network protocols and operating systems.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site at which design, build and implementation of networking and ICT activities may be carried out
- industry standard ICT equipment
- network infrastructure, including wireless hardware and software
- required regulatory documentation that affects networking activities
- organisational guidelines.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to install core layer (backbone) connectivity in a local area network (LAN) for applications between floors in a multi-storey and separate buildings.

It applies to individuals who apply specialised technical knowledge and a systematic approach to installing Information and Communications Technology (ICT) technologies and backbone connectivity in a LAN.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, and to:

- install and configure backbone connectivity in a LAN on at least one occasion.
- build and test one asynchronous transfer mode (ATM) local area network (LAN) that provides the required services at the required communication standards
- document resource requirements and network performance.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- current and emerging industry standard practice associated with:
  - bandwidth limitations, measuring and testing
  - LAN and wide area network (WAN) network topologies (three-layer LAN hierarchy: core distribution and access)
  - MAC addresses, network layer protocols
  - open systems interconnect (OSI) layer modelling
  - routers virtual LANs
  - network interface cards (NICs) and switches, including:
    - fast Ethernet
    - gigabit and 10-gigabit Ethernet store-and-forward
    - fast-forward
    - fragment-free
  - internetworking protocol suites, including:
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site at which installation of backbone and ICT activities may be carried out
- required web and technical applications
- documented installation guidelines on vendor products
- local area network infrastructure
- switches with various interfaces
- network administration tools.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- identify and implement at least one major virtualisation software technologies
- test output and performance of at least one major virtualisation software technologies
- document findings.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard trends and directions in Information and Communications Technology (ICT), in major industry technology standards used in virtualisation technology
- vendor product directions relating to virtualisation technology
- industry hardware and software products, their general features, capabilities and application
- technical information-gathering techniques
- environmental and sustainability policies of workplace
- features of virtualisation technology
- current standards of testing and evaluating virtualisation technology.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site where industry-specific technologies are used
- industry-specific technologies currently used in industry
- virtualisation software.
Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standard.

Performance Evidence

Evidence of the ability to:

- develop technical and administrative procedures for use during the software life cycle, system or network reconfiguration or the upgrade process, including:
  - quality processes
  - audit trials
  - version control
  - configuration management procedures.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain benchmarking methodologies
- outline configuration management
- summarise control mechanisms, such as acceptance criteria, test and acceptance processes, and security, access and management control criteria
- explain monitoring mechanisms
- identify and describe standards, benchmarks and organisational guidelines that impact on management protocols
- outline project planning methodologies and tools
- summarise quality assurance and quality processes
- clarify safety, security and legislative requirements
- explain software development methodologies.
Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry, and include access to:

- Computer aided software engineering (CASE) tools
- Future organisational business processes
- Organisational standards for documentation and version control
- Project budget and timeframe
- Project management process and hierarchy
- Legislation and organisational guidelines
- Technical specifications
- Test plans.

Assessors must satisfy NVR/AQTF assessor requirements.

<thead>
<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 1</td>
<td>This version first released with ICT Information and Communications Technology Training Package Version 6.0.</td>
</tr>
</tbody>
</table>

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- create and document a security plan for the encryption of at least two applications or solutions.

In the course of the above, the candidate must:

- carry out and evaluate encryption of applications or solutions
- analyse enterprise data security requirements
- determine encryption methods.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard certificate related infrastructure including certificate authorities, registration authorities, repository services
- industry standard symmetric key algorithms and their usage, including:
  - advanced encryption standard (AES), data encryption standard (DES), triple data encryption algorithm (triple DES)
  - Blowfish
- industry standard encryption types, including:
  - public key, secret key, hash key
  - encryption strength
- functions and features of:
  - access control permissions
  - digital signatures and timestamps
  - symmetric encryption, asymmetric encryption and one-way encryption
- one-way message digests including:
  - message digest algorithm 5 (MD5)
  - secure hash algorithm (SHA)
- public key infrastructure (PKI), pretty good privacy (PGP) and GNU Privacy Guard (GnuPG)
- replay security processes and how to prevent them
- transmission control protocol and internet protocol (TCP/IP) protocols and applications
- wired equivalent privacy (WEP), Wi-Fi protected access (WPA) and Wi-Fi protected access 2 (WPA2).

**Assessment Conditions**

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
- a site where encryption installation may be conducted
- a live network
- servers
- industry standard encryption software
- industry standard encryption tools
- organisational security and encryption deliverables.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to design, develop, install and maintain authentication processes and reduce vulnerability of a system.

It applies to individuals working in middle management roles including information security managers, network engineers, security analysts, or similar roles who are responsible for implementing and monitoring an organisational security management system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
<tr>
<td>1. Evaluate authentication requirements</td>
<td>1.1 Determine user and organisational security requirements according to organisational security plan</td>
</tr>
<tr>
<td></td>
<td>1.2 Identify and analyse authentication options according to user and organisational requirements</td>
</tr>
<tr>
<td></td>
<td>1.3 Determine required authentication and authorisation processes according to organisational policies and procedures</td>
</tr>
<tr>
<td>2. Configure authentication system</td>
<td>2.1 Create required authentication realm and reuse according to authentication system and organisational requirements</td>
</tr>
<tr>
<td></td>
<td>2.2 Add required users and authorisation rules to new realm according to authentication system requirements</td>
</tr>
<tr>
<td></td>
<td>2.3 Determine user attributes and user attribute set-up according to</td>
</tr>
</tbody>
</table>
### ELEMENT | PERFORMANCE CRITERIA
---|---
| | authentication system requirements
| 2.4 Set up authentication filter and authorisation parameters according to authentication system requirements

3. Apply authentication methods

| 3.1 Develop and document authentication systems and protocols according to authentication system requirements
| 3.2 Develop, document and distribute user authentication system responsibilities to required personnel
| 3.3 Apply authentication system to network and user according to system product and authentication system requirements
| 3.4 Record and securely store permission and configuration information according to authentication system requirements

4. Monitor authentication system

| 4.1 Review authentication system according to user security and quality of service requirements
| 4.2 Determine and document security monitoring, incident management and reporting processes according to organisational security plan
| 4.3 Submit documentation and respond to feedback from to required personnel
| 4.4 Seek and respond to feedback from required personnel according to organisational policies and procedures

### Foundation Skills
This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

| SKILL | DESCRIPTION |
---|---|
Reading | • Interprets and analyses technical data to determine requirements according to user and organisational plans

Writing | • Prepares documentation detailing work performed according to organisational policies and procedures for a specific audience

Planning and organising | • Uses a combination of formal, logical planning processes and an increasingly intuitive knowledge of context to plan control methods and systems processes

Problem solving | • Demonstrates a high-level knowledge of ways in which digital systems and tools are used or could be used to achieve work goals and begins to recognise strategic and operational applications
| • Uses intuition to identify authentication failure and security incidents and their general problem area
| • Demonstrates an analytical thought processes to clarify goals and key

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design and deploy authentications solutions to a medium-sized business technology environment.

In the course of the above, the candidate must:

- configure authentication software and tools
- align authentication processes to organisational requirements and industry standard best practices
- document work plans and processes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- problems and challenges associated with organisational authentication issues, including resource accounting through authentication
- industry standard virtual private network (VPN) issues, including:
  - quality of service (QoS) considerations
  - bandwidth
  - dynamic security environment
  - function and operation of VPN concepts
- authentication adaptors, including biometric authentication adaptors
- digital certificates, including:
  - VeriSign
  - X.509
  - SSL
function and operation of authentication controls and protocols including:
- passwords and personal identification numbers (PINs)
- smart cards biometric devices
network authentication services including:
- Kerberos
- NT LAN Manager (NTLM)
features of common password protocols, including:
- challenge handshake authentication protocol (CHAP)
- challenge phrases
- password authentication protocol (PAP)
- remote authentication dial-in user service (RADIUS) authentication
principles of security tokens.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

- a site or prototype where network authentication may be implemented and managed
- network support tools currently used in industry
- organisational security policies related to authentication
- manufacturers recommendations
- current authentication standards, including biometric authentication adaptors.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to design and implement network authentication models that allow users to log in using the same user credentials between multiple operating system platforms and that provides a secure method of file sharing on a single, shared network.

It applies to individuals working in network or systems engineering roles, where they are required to support multiple operating systems in a complex computing environment of medium-to-large organisational settings.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- install and configure at least two integrated server solutions according to at least two produced integrated server design documents.

In the course of the above, the candidate must:

- produce design documents required to integrate multiple server operating systems for authentication, file sharing and security
- monitor and test the solution
- troubleshoot integration problems
- test and reconfigure network servers.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- authentication methods and protocols, including:
  - lightweight directory access protocol (LDAP)
  - Kerberos
- industry standard network operating systems (NOS), including:
  - operating system help and support utilities
  - network file systems and sharing
- industry standard server applications, compatibility issues and resolution procedures, including:
  - error and event logging and reporting procedures
  - file and print management
  - high availability options for servers
- network service configuration and security
- industry standard performance monitoring tools and tuning options
- process of managing a project, including:
  - process or task management
  - task scheduling utilities
- troubleshooting tools and techniques, including network diagnostic utilities
- user authentication and directory services.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
- a site where server installation may be conducted
- industry standard server specifications including:
  - multiple operating system platforms
  - cabling
  - networked (LAN) computers
  - server diagnostic software
  - switching equipment
  - client requirements
  - workstations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- produce a design report for at least one server with complex user and network service requirements
- prepare and install a network server on at least one occasion.

In the course of the above, the candidate must:

- document work plans and processes
- configure a wide range of server network and security services, including:
  - domain name system (DNS)
  - dynamic host configuration protocol (DHCP)
  - web and proxy mail
  - file transfer protocol (FTP)
  - firewall.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- features of industry standard network operating systems (NOS)
- industry standard server applications compatibility issues and resolution procedures
- industry standard network service configuration, including:
  - domain name system (DNS)
  - dynamic host configuration protocol (DHCP)
  - file transfer protocol (FTP)
  - mail
  - network time protocol (NTP)
- proxy
- server messages block (SMB)
- web
- industry standard network service management including start, stop, restart and start on boot
- network service security features, including server firewall configuration
- troubleshooting tools and techniques including network diagnostic utilities
- industry standard operating system installation and operation issues, including:
  - installation media
  - boot process and diagnosing boot failures
  - operating system rescue environment
  - operating system help and support utilities
  - performance monitoring tools and tuning options
  - compatibility issues and resolution procedures
  - high availability options for servers
  - file and print management
- data security and storage measures required on networked server, including:
  - user authentication and directory services
  - best practice procedures for implementing backup and recovery
  - error and event logging and reporting
  - storage options, including file systems and disk partitioning schemes.

**Assessment Conditions**

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
- a site where server installation may be conducted
- server specifications
- industry standard hardware
- networked (LAN) computers
- server diagnostic software
- switching equipment
- organisational deliverables relating to building network servers
- wide area network (WAN) service point of presence
- end user device.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- install, configure and test Wide Area Networks (WAN) links on at least two occasions.

In the course of the above, the candidate must:

- plan and prepare for WAN link installation
- document finalised solutions for WAN links
- secure access to network router through access control lists.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard operation and configuration of internet protocol version 6 (IPv6)
- industry standard router setup and operations, including:
  - ACLs
  - router command line interface (CLI) configuration
  - router debug commands
- industry standard problems and solutions with WAN link installations.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

- a site where network installation may be conducted
- small enterprise routers and switches
- network’s design documentation
Assessment Requirements for ICTNW541 Configure, verify and troubleshoot WAN links and IP services

- equipment specifications
- hardware and software required to install and operate small enterprise branch networks
- end user device
- policies and procedures pertaining to the installation and operation of a network.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

1. Prepare to install router

1.1 Identify and analyse existing router performance against organisational requirements
1.2 Review existing network design documentation and determine alignment to organisational requirements
1.3 Determine network element additions and upgrades according to organisational requirements
1.4 Develop and document installation plan and submit document to required personnel
1.5 Obtain installation plan sign off from required personnel

2. Configure basic

2.1 Determine basic routing requirements and operating parameters
### ELEMENT | PERFORMANCE CRITERIA
--- | ---
router operation | according to installation plan specifications
2.2 Select required media, cables, ports, connectors and connect routers to network devices and hosts according to installation plan specifications
2.3 Set basic parameters and router firmware according to installation plan specifications
2.4 Save and back up router configuration files according to installation plan specifications
2.5 Implement required router security and configure static and default routes according to installation plan specifications

3. Configure dynamic classless routing protocols
3.1 Calculate and apply required classless IP addressing scheme using variable length subnet mapping (VLSM) to a local area network (LAN) and a wide area network (WAN) environment according to router specifications
3.2 Configure and verify required classless routing protocols according to router specifications

4. Apply troubleshooting processes
4.1 Troubleshoot device configuration and network connectivity according to network specifications
4.2 Identify and correct problems with IP addressing and host configurations according to network specifications
4.3 Seek and respond to feedback from required personnel

### Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

| SKILL | DESCRIPTION |
--- | ---
Learning | • Reflects on the ways in which digital systems and tools are, or could be, used to achieve work goals and have strategic and operational applications
Numeracy | • Analyses numerical information to take measurements, interpret results and evaluate the performance and interoperability of the network
• Adds, subtracts, multiples and divides basic and complex numbers
Reading | • Gathers, interprets and analyses technical and regulatory information, to determine the requirements according to client needs
Writing | • Uses factual information and industry-related terminology, to convey information to internal and external personnel on technical, operational and business-related matters
<table>

</tr>
</tbody>
</table>

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:
- configure, install, manage and troubleshoot on medium enterprise routers on at least two occasions.

In the course of the above, the candidate must:
- apply network topologies, routing and security protocols.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:
- industry standard routing concepts for medium enterprise network switches and routers
- classless routing protocols, including:
  - open shortest path first (OSPF)
  - routing information protocol (RIPv2)
- debug commands
- internet protocol version 4 (IPv4)
- purpose and basic operation of protocols in the open system interconnection (OSI) and transmission control protocol and internet protocol (TCP/IP) models
- router command line interface (CLI) configuration.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
- a site where network installation may be conducted
- small enterprise routers and switches
- network’s design documentation
- equipment specifications
- hardware and software required to install and operate small enterprise branch networks
- end user device
- policies and procedures pertaining to the installation and operation of a router.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to use tools, equipment, software and protocols to install, operate and troubleshoot medium enterprise switches and routers. It applies to individuals working as help desk technicians, network support technicians or in similar roles. No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- prepare and install at least two medium enterprise switches
- configure and test network elements on at least two occasions.

In the course of the above, the candidate must:

- apply network topologies, protocols and security issues
- apply solutions and troubleshoot defined network problems.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- switches and their operation
- industry standard installation requirements of switches, including:
  - debug commands
  - routing between virtual local area networks (VLANs)
  - spanning tree protocol (STP)
  - switch command line interface (CLI) commands
  - switch security, including:
    - port deactivation
    - port security
    - secure shell (SSH)
  - advanced switching technologies
  - common network switching issues
  - industry standard network and related equipment.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site where network installation may be conducted
- enterprise switches and operating systems
- equipment specifications
- hardware and software required to install and operate medium enterprise switches
- end user device
- policies and procedures pertaining to the installation and operation of enterprise switches.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit describes the skills and knowledge required to build a high performance, high security, failure resistant security perimeter for an enterprise Information and Communications Technology (ICT) network.

It applies to individuals with advanced ICT expertise and work in roles including middle managers, information security managers, network engineers, network technicians, security analysts or similar.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

</table>

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design, configure and test a security perimeter and integrated VPN solution on network devices on at least one occasion.

In the course of the above, the candidate must:

- design and configure a firewall solution and network devices
- conduct testing of the performance of the perimeter of security devices
- document functionality performance results and the finalised process.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard emerging security issues and the requirement for security policies
- industry standard security perimeter issues related to networks, including:
  - security technologies according to perimeter design
  - weaknesses of installed perimeter design
- principles and techniques for designing and implementing a security perimeter, including:
  - software and hardware perimeter solutions
  - organisational network infrastructure
  - auditing and penetration testing techniques
  - logging analysis techniques.
Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- site or prototype where perimeter security may be implemented and managed
- perimeter devices
- organisational security requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence
The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- create and implement an Information and Communications Technology (ICT) system and application security plan on at least one occasion.

Knowledge Evidence
The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard programming languages
- industry standard best practices in application of language syntax rules, including:
  - data structures
  - graphical user interfaces (GUIs)
  - small-size application development
- legislation, regulations and codes of practice that impact on network security
- threats and risks to the security environment
- security assurance specifications
- risk assessment process required in evaluating system vulnerabilities, including:
  - risk mitigation
  - security control selection
  - implementation and evaluation process
  - software security standards compliance.

Assessment Conditions
Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:
- ICT business specifications
- information on security environment, including:
  - laws and legislation
  - existing organisational security policies
  - organisational expertise and knowledge
- application and system scenarios.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- evaluate security information and use it to plan control methods and countermeasures to manage prescribed network security requirements on at least one occasion.

In the course of the above, the candidate must:

- document plans, policies and processes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard ICT networks and their configuration
- network attacks, vulnerabilities and related weaknesses of installed infrastructure, including:
