ICT Information and Communications Technology

Release: 8.1

CONTENTS

ICT Information and Communications Technology	41
ICT20120 Certificate II in Applied Digital Technologies	42
ICT20219 Certificate II in Telecommunications Network Build and Operation	45
ICT20319 Certificate II in Telecommunications Technology	50
ICT30120 Certificate III in Information Technology	57
ICT30419 Certificate III in Telecommunications Network Build and Operation	62
ICT30519 Certificate III in Telecommunications Technology	69
ICT40120 Certificate IV in Information Technology	78
ICT41119 Certificate IV in Telecommunications Network Design	88
ICT41219 Certificate IV in Telecommunications Engineering Technology	94
ICT50220 Diploma of Information Technology	101
ICT60220 Advanced Diploma of Information Technology	113
ICTSS00118 User Experience Design Skill Set	122
ICTSS00119 Advanced Data Analytics Skill Set	124
ICTSS00120 Artificial Intelligence Skill Set	126
ICTSS00121 Extended Reality Skill Set	128
ICTSS00122 Industrial Automation Skill Set	130
ICTSS00123 Software Automation Skill Set	132
ICTSS00124 Cloud Infrastructure Skill Set	134
ICTSS00125 Cloud Security Skill Set	136
ICTSS00126 Advanced Cyber Incident Threat Detection and Prevention Skill Set	138
ICTSS00127 Cloud Programmer Skill Set	140
ICTSS00128 Network Security and System Protection Skill Set	142
ICTSS00129 DevOps System Administration Skill Set	144
ICTSS00130 Intermediate Digital Skills for Small Business Skill Set	146
ICTSS00131 Introduction to Assistive Technologies Skill Set	148
ICTSS00132 Core Technical IT Skills for Introductory Roles Skill Set	150
ICTSS00133 Core Transferable IT Skills for Introductory Roles Skill Set	152
ICTSS00134 Database Development for Introductory Roles Skill Set	154
ICTSS00135 Database Maintenance for Introductory Roles Skill Set	156
ICTSS00136 Gaming Development for Introductory Roles Skill Set	158
ICTSS00137 Networking for Introductory Roles Skill Set	160
ICTSS00138 Programming Skills for Introductory Roles Skill Set	162
ICTSS00139 Systems Administration Support Skills for Introductory Roles Skill Set	164
ICTSS00140 Web Development for Introductory Roles Skill Set	166
ICTSS00141 Core Technical IT Skills for Intermediate Roles Skill Set	168
ICTSS00142 Core Transferable IT Skills for Intermediate Roles Skill Set	170
ICTSS00143 Networking Skills for Intermediate Roles Skill Set	172
ICTSS00144 Programming Skills for Intermediate Roles Skill Set	174
ICTSS00145 Back End Web Development for Intermediate Roles Skill Set	176
ICTSS00146 Business Analysis for Intermediate Roles Skill Set	178
ICTSS00147 Cloud Architecture for Intermediate Roles Skill Set	180
ICTSS00148 Cloud Engineering for Intermediate Roles Skill Set	182
ICTSS00149 Cyber Security for Intermediate Roles Skill Set	184
ICTSS00150 Database and Data Management for Intermediate Roles Skill Set	186
ICTSS00151 Front End Web Development for Intermediate Roles Skill Set	188
ICTSS00152 Game Art and Design for Intermediate Roles Skill Set	190
ICTSS00153 Game Programming for Intermediate Roles Skill Set	192
ICTSS00154 Systems Administration for Intermediate Roles Skill Set	194

ICTSS00155 Systems Analysis for Intermediate ICT Roles Skill Set	196
ICTSS00156 Telecommunications Network Engineering for Intermediate Roles Skill Set.....	198
ICTSS00157 Core Technical IT Skills for Advanced Roles Skill Set.....	200
ICTSS00158 Core Transferable IT Skills for Advanced Roles Skill Set.....	202
ICTSS00159 Data Management Information Skills for Advanced Roles Skill Set.....	204
ICTSS00160 Cyber Security for Advanced Roles Skill Set	206
ICTSS00161 Full Stack Web Development for Advanced Roles Skill Set	208
ICTSS00162 Programming Skills for Advanced Roles Skill Set.....	210
ICTSS00163 IT Strategy and Organisational Development for Advanced Roles Skill Set.....	212
ICTSS00164 Systems Development and Analysis for Advanced Roles Skill Set.....	214
ICTSS00165 Telecommunications Network Engineering for Advanced Roles Skill Set ..	216
ICTSS00166 Application Development Specialist Skill Set	218
ICTSS00167 Basic Application Development Programmer Skill Set	220
ICTSS00168 Basic Web Development Specialist Skill Set.....	222
ICTSS00169 Certified Network Associate Technology Specialist Skill Set.....	224
ICTSS00170 Certified Network Professional Specialist - Voice and Wireless Skill Set ...	226
ICTSS00171 Security and Network Architect Specialist Skill Set	228
ICTSS00172 Certified Technology Specialist - Graphical User Interfaces Skill Set	230
ICTSS00173 Certified Web Design Specialist Skill Set	232
ICTSS00174 Hardware Technician Skill Set	234
ICTSS00175 Internetworking Systems Coordinator - Administrator Skill Set.....	236
ICTSS00176 Interactive Content Specialist Skill Set	238
ICTSS00177 System and Hardware Technician Skill Set.....	240
ICTSS00178 System and Network Plus Technician Skill Set	242
ICTSS00179 Virtualisation Specialist Skill Set	244
ICTSS00180 Visual Communications Specialist Skill Set	246
ICTSS00181 Website Administration Specialist Skill Set	248
ICTSS00182 Enterprise Desktop Virtualisation Specialist Skill Set.....	250
ICTSS00183 Enterprise Server Virtualisation Specialist Skill Set	252
ICTSS00184 Advanced ICT Sustainability Skill Set	254
ICTSS00185 Basic ICT Sustainability Skill Set	256
ICTSS00186 Civil Works - Installation of Pit and Pipe and FDH Skill Set.....	258
ICTSS00187 Commercial Digital Television Antenna Systems Installation Skill Set	260
ICTSS00188 Network Designer and Installation Skill Set.....	262
ICTSS00189 Digital Antenna System and Component Installation Skill Set.....	264
ICTSS00190 Convergence Installation in Small to Medium Networks Skill Set.....	266
ICTSS00191 Wireless LAN and IP Network Installation Skill Set.....	268
ICTAI401 Identify opportunities to apply artificial intelligence, machine learning and deep learning	270
Assessment Requirements for ICTAI401 Identify opportunities to apply artificial intelligence, machine learning and deep learning.....	273
ICTAI501 Automate work tasks using machine learning	275
Assessment Requirements for ICTAI501 Automate work tasks using machine learning.....	278
ICTAI502 Train and evaluate machine learning models	281
Assessment Requirements for ICTAI502 Train and evaluate machine learning models.....	284
ICTAI503 Build natural language processing models and pipelines	286
Assessment Requirements for ICTAI503 Build natural language processing models and pipelines.....	289
ICTAUT401 Design business process automation solutions	291
Assessment Requirements for ICTAUT401 Design business process automation solutions.....	294
ICTAUT402 Apply robotic desktop automation.....	297
Assessment Requirements for ICTAUT402 Apply robotic desktop automation.....	300
ICTAUT403 Conduct software quality assurance testing.....	302

Assessment Requirements for ICTAUT403 Conduct software quality assurance testing	305
ICTAUT501 Manage robotic process automation.....	307
Assessment Requirements for ICTAUT501 Manage robotic process automation.....	310
ICTAUT502 Evaluate automated industrial manufacturing processes.....	312
Assessment Requirements for ICTAUT502 Evaluate automated industrial manufacturing processes.....	315
ICTBWN306 Use radio frequency measuring instruments.....	317
Assessment Requirements for ICTBWN306 Use radio frequency measuring instruments	320
ICTBWN307 Use optical measuring instruments	322
Assessment Requirements for ICTBWN307 Use optical measuring instruments	325
ICTBWN308 Work safely on live optical fibre installations.....	327
Assessment Requirements for ICTBWN308 Work safely on live optical fibre installations	331
ICTBWN309 Perform tests on optical communication system and components	333
Assessment Requirements for ICTBWN309 Perform tests on optical communication system and components.....	337
ICTCBL206 Alter services to existing cable system.....	339
Assessment Requirements for ICTCBL206 Alter services to existing cable system.....	342
ICTCBL210 Install a telecommunications service to a building.....	344
Assessment Requirements for ICTCBL210 Install a telecommunications service to a building.....	348
ICTCBL239 Install customer cable support systems	350
Assessment Requirements for ICTCBL239 Install customer cable support systems	353
ICTCBL240 Place and secure customer cable	355
Assessment Requirements for ICTCBL240 Place and secure customer cable	358
ICTCBL241 Terminate metallic conductor customer cable	360
Assessment Requirements for ICTCBL241 Terminate metallic conductor customer cable	363
ICTCBL242 Install functional and protective telecommunications earthing system.....	365
Assessment Requirements for ICTCBL242 Install functional and protective telecommunications earthing system.....	368
ICTCBL246 Install, maintain and modify customer premises communications cabling: ACMA Restricted Rule	370
Assessment Requirements for ICTCBL246 Install, maintain and modify customer premises communications cabling: ACMA Restricted Rule.....	375
ICTCBL247 Install, maintain and modify customer premises communications cabling: ACMA Open Rule	378
Assessment Requirements for ICTCBL247 Install, maintain and modify customer premises communications cabling: ACMA Open Rule.....	384
ICTCBL248 Install and terminate hard-line coaxial cable	388
Assessment Requirements for ICTCBL248 Install and terminate hard-line coaxial cable	392
ICTCBL249 Haul underground cable for installation and maintenance work.....	394
Assessment Requirements for ICTCBL249 Haul underground cable for installation and maintenance work.....	397
ICTCBL250 Haul and fix aerial cable	399
Assessment Requirements for ICTCBL250 Haul and fix aerial cable	403
ICTCBL251 Install aerial and underground cable lead-ins	405
Assessment Requirements for ICTCBL251 Install aerial and underground cable lead-ins	409
ICTCBL252 Joint and terminate coaxial cable	411
Assessment Requirements for ICTCBL252 Joint and terminate coaxial cable.....	415
ICTCBL253 Construct underground telecommunications infrastructure	417
Assessment Requirements for ICTCBL253 Construct underground telecommunications infrastructure	420
ICTCBL254 Joint metallic conductor cable in access network	422

Assessment Requirements for ICTCBL254 Joint metallic conductor cable in access network.....	425
ICTCBL313 Modify and cutover cable	427
Assessment Requirements for ICTCBL313 Modify and cutover cable	431
ICTCBL322 Install, test and terminate optical fibre cable on customer premises.....	433
Assessment Requirements for ICTCBL322 Install, test and terminate optical fibre cable on customer premises.....	437
ICTCBL323 Test cables and systems on customer premises	439
Assessment Requirements for ICTCBL323 Test cables and systems on customer premises.....	443
ICTCBL324 Cut over new systems and equipment on customer premises.....	445
Assessment Requirements for ICTCBL324 Cut over new systems and equipment on customer premises	448
ICTCBL325 Maintain cable network	450
Assessment Requirements for ICTCBL325 Maintain cable network	453
ICTCBL326 Cut over metallic conductor cable in the access network.....	455
Assessment Requirements for ICTCBL326 Cut over metallic conductor cable in the access network.....	458
ICTCBL329 Install underground cable for communications applications	460
Assessment Requirements for ICTCBL329 Install underground cable for communications applications.....	464
ICTCBL330 Splice and terminate optical fibre cable for telecommunications projects ..	466
Assessment Requirements for ICTCBL330 Splice and terminate optical fibre cable for telecommunications projects	470
ICTCBL331 Conduct basic identification and fault-finding within cabling networks and customer equipment.....	472
Assessment Requirements for ICTCBL331 Conduct basic identification and fault-finding within cabling networks and customer equipment	476
ICTCBL332 Locate, identify and rectify copper cable faults	479
Assessment Requirements for ICTCBL332 Locate, identify and rectify copper cable faults.....	482
ICTCBL333 Install aerial cable for communications applications	485
Assessment Requirements for ICTCBL333 Install aerial cable for communications applications.....	489
ICTCBL334 Install underground enclosures and conduit	491
Assessment Requirements for ICTCBL334 Install underground enclosures and conduit.....	494
ICTCBL335 Construct aerial cable supports.....	496
Assessment Requirements for ICTCBL335 Construct aerial cable supports	499
ICTCBL336 Install and cut over metallic conductor cable to access network cabinet	501
Assessment Requirements for ICTCBL336 Install and cut over metallic conductor cable to access network cabinet.....	505
ICTCLD301 Evaluate characteristics of cloud computing solutions and services	507
Assessment Requirements for ICTCLD301 Evaluate characteristics of cloud computing solutions and services.....	510
ICTCLD401 Configure cloud services	512
Assessment Requirements for ICTCLD401 Configure cloud services.....	515
ICTCLD501 Develop cloud disaster recovery plans.....	518
Assessment Requirements for ICTCLD501 Develop cloud disaster recovery plans	521
ICTCLD502 Design and implement highly-available cloud infrastructure	523
Assessment Requirements for ICTCLD502 Design and implement highly-available cloud infrastructure	526
ICTCLD503 Implement web-scale cloud infrastructure.....	528
Assessment Requirements for ICTCLD503 Implement web-scale cloud infrastructure.....	531
ICTCLD504 Improve cloud-based infrastructure	533
Assessment Requirements for ICTCLD504 Improve cloud-based infrastructure	536

ICTCLD505 Implement cloud infrastructure with code	538
Assessment Requirements for ICTCLD505 Implement cloud infrastructure with code ..	541
ICTCLD506 Implement virtual network in cloud environments	543
Assessment Requirements for ICTCLD506 Implement virtual network in cloud environments	546
ICTCLD507 Build and deploy resources on cloud platforms.....	548
Assessment Requirements for ICTCLD507 Build and deploy resources on cloud platforms	551
ICTCLD508 Manage infrastructure in cloud environments	553
Assessment Requirements for ICTCLD508 Manage infrastructure in cloud environments	556
ICTCLD509 Manage cloud identity and access	558
Assessment Requirements for ICTCLD509 Manage cloud identity and access.....	561
ICTCLD510 Manage cloud threat detection systems.....	563
Assessment Requirements for ICTCLD510 Manage cloud threat detection systems.....	567
ICTCLD511 Protect cloud infrastructure and data	569
Assessment Requirements for ICTCLD511 Protect cloud infrastructure and data.....	572
ICTCLD512 Respond to cloud security incidents	575
Assessment Requirements for ICTCLD512 Respond to cloud security incidents	578
ICTCLD513 Develop cloud-based microservices architecture using containers.....	580
Assessment Requirements for ICTCLD513 Develop cloud-based microservices architecture using containers	583
ICTCLD514 Create and test cloud-based serverless applications	585
Assessment Requirements for ICTCLD514 Create and test cloud-based serverless applications.....	588
ICTCLD515 Build and deploy cloud-based applications using CI and CD pipelines	590
Assessment Requirements for ICTCLD515 Build and deploy cloud-based applications using CI and CD pipelines	593
ICTCLD601 Develop cloud computing strategies for businesses.....	595
Assessment Requirements for ICTCLD601 Develop cloud computing strategies for businesses.....	598
ICTCLD602 Manage information security compliance of cloud service deployment.....	600
Assessment Requirements for ICTCLD602 Manage information security compliance of cloud service deployment	603
ICTCLD603 Design hybrid cloud-based network architectures	605
Assessment Requirements for ICTCLD603 Design hybrid cloud-based network architectures.....	608
ICTCLD604 Manage data in cloud environments	610
Assessment Requirements for ICTCLD604 Manage data in cloud environments	613
ICTCMP203 Perform restricted customer premises broadband cabling work: ACMA Restricted Rule	615
Assessment Requirements for ICTCMP203 Perform restricted customer premises broadband cabling work: ACMA Restricted Rule	618
ICTCMP502 Conduct radio communications site audits	620
Assessment Requirements for ICTCMP502 Conduct radio communications site audits.....	623
ICTCYS401 Design and implement network security infrastructure for an organisation.....	625
Assessment Requirements for ICTCYS401 Design and implement network security infrastructure for an organisation.....	628
ICTCYS402 Identify and confirm cyber security incidents	630
Assessment Requirements for ICTCYS402 Identify and confirm cyber security incidents.....	633
ICTCYS403 Plan and implement information security strategies for an organisation....	635
Assessment Requirements for ICTCYS403 Plan and implement information security strategies for an organisation.....	638
ICTCYS404 Run vulnerability assessments for an organisation.....	640

Assessment Requirements for ICTCYS404 Run vulnerability assessments for an organisation.....	643
ICTCYS405 Develop cyber security incident response plans	645
Assessment Requirements for ICTCYS405 Develop cyber security incident response plans	648
ICTCYS406 Respond to cyber security incidents	650
Assessment Requirements for ICTCYS406 Respond to cyber security incidents	653
ICTCYS407 Gather, analyse and interpret threat data	655
Assessment Requirements for ICTCYS407 Gather, analyse and interpret threat data...	658
ICTCYS408 Research and source cryptocurrency technologies for organisational needs	660
Assessment Requirements for ICTCYS408 Research and source cryptocurrency technologies for organisational needs	663
ICTCYS601 Create cyber security standards for organisations.....	665
Assessment Requirements for ICTCYS601 Create cyber security standards for organisations.....	668
ICTCYS602 Implement cyber security operations.....	670
Assessment Requirements for ICTCYS602 Implement cyber security operations	673
ICTCYS603 Undertake penetration testing for organisations.....	675
Assessment Requirements for ICTCYS603 Undertake penetration testing for organisations.....	678
ICTCYS604 Implement best practices for identity management	680
Assessment Requirements for ICTCYS604 Implement best practices for identity management	683
ICTCYS606 Evaluate an organisation's compliance with cyber security standards and law	685
Assessment Requirements for ICTCYS606 Evaluate an organisation's compliance with cyber security standards and law.....	688
ICTCYS607 Acquire digital forensic data	690
Assessment Requirements for ICTCYS607 Acquire digital forensic data.....	693
ICTCYS608 Perform cyber security risk assessments	695
Assessment Requirements for ICTCYS608 Perform cyber security risk assessments	698
ICTCYS609 Evaluate threats and vulnerabilities of IoT devices	700
Assessment Requirements for ICTCYS609 Evaluate threats and vulnerabilities of IoT devices	703
ICTCYS610 Protect critical infrastructure for organisations	705
Assessment Requirements for ICTCYS610 Protect critical infrastructure for organisations	708
ICTCYS611 Configure security devices for organisations	710
Assessment Requirements for ICTCYS611 Configure security devices for organisations	713
ICTCYS612 Design and implement virtualised cyber security infrastructure for organisations.....	715
Assessment Requirements for ICTCYS612 Design and implement virtualised cyber security infrastructure for organisations.....	718
ICTCYS613 Utilise design methodologies for security architecture	720
Assessment Requirements for ICTCYS613 Utilise design methodologies for security architecture	723
ICTCYS614 Analyse cyber security insider risks and threats and devise recommendations	725
Assessment Requirements for ICTCYS614 Analyse cyber security insider risks and threats and devise recommendations	728
ICTCYS615 Detect and respond to cyber security insider risks and threats	731
Assessment Requirements for ICTCYS615 Detect and respond to cyber security insider risks and threats	734
ICTDAT401 Evaluate organisational compliance with data ethics legislation	737
Assessment Requirements for ICTDAT401 Evaluate organisational compliance with data ethics legislation.....	740
ICTDAT402 Clean and verify data.....	742

Assessment Requirements for ICTDAT402 Clean and verify data	745
ICTDAT501 Gather, analyse and verify data from different source inputs	747
Assessment Requirements for ICTDAT501 Gather, analyse and verify data from different source inputs.....	750
ICTDAT502 Conduct significance tests	752
Assessment Requirements for ICTDAT502 Conduct significance tests.....	755
ICTDAT503 Use unsupervised learning for clustering	757
Assessment Requirements for ICTDAT503 Use unsupervised learning for clustering	760
ICTDAT601 Develop data integration strategies	762
Assessment Requirements for ICTDAT601 Develop data integration strategies.....	765
ICTDAT602 Review data lifecycles	767
Assessment Requirements for ICTDAT602 Review data lifecycles	770
ICTDAT603 Assess advanced data processes	772
Assessment Requirements for ICTDAT603 Assess advanced data processes	775
ICTDBS416 Create basic relational databases.....	777
Assessment Requirements for ICTDBS416 Create basic relational databases	780
ICTDBS417 Identify and resolve common database performance problems	782
Assessment Requirements for ICTDBS417 Identify and resolve common database performance problems	785
ICTDBS418 Monitor and administer databases	787
Assessment Requirements for ICTDBS418 Monitor and administer databases	790
ICTDBS505 Monitor and improve knowledge management systems.....	792
Assessment Requirements for ICTDBS505 Monitor and improve knowledge management systems.....	795
ICTDBS506 Design databases	797
Assessment Requirements for ICTDBS506 Design databases	800
ICTDBS507 Integrate databases with websites.....	802
Assessment Requirements for ICTDBS507 Integrate databases with websites	805
ICTDBS604 Build data warehouses.....	807
Assessment Requirements for ICTDBS604 Build data warehouses	810
ICTDBS605 Develop knowledge management strategies	812
Assessment Requirements for ICTDBS605 Develop knowledge management strategies ..	815
ICTDBS606 Determine database functionality and scalability	817
Assessment Requirements for ICTDBS606 Determine database functionality and scalability.....	820
ICTDMT404 Create visual design components for digital media.....	822
Assessment Requirements for ICTDMT404 Create visual design components for digital media.....	825
ICTDMT405 Produce interactive animations.....	827
Assessment Requirements for ICTDMT405 Produce interactive animations.....	830
ICTDMT406 Produce and edit digital images.....	832
Assessment Requirements for ICTDMT406 Produce and edit digital images	835
ICTDMT407 Incorporate video assets into media presentations.....	837
Assessment Requirements for ICTDMT407 Incorporate video assets into media presentations.....	840
ICTDRE301 Install digital reception equipment.....	842
Assessment Requirements for ICTDRE301 Install digital reception equipment.....	846
ICTDRE305 Develop integrated digital reception systems.....	848
Assessment Requirements for ICTDRE305 Develop integrated digital reception systems	852
ICTDRE308 Install a cable broadband multi-dwelling unit system.....	854
Assessment Requirements for ICTDRE308 Install a cable broadband multi-dwelling unit system.....	857
ICTDRE314 Design communications wiring systems for customer premises.....	859

Assessment Requirements for ICTDRE314 Design communications wiring systems for customer premises	862
ICTDRE402 Integrate data delivery modes	864
Assessment Requirements for ICTDRE402 Integrate data delivery modes.....	868
ICTDSN401 Design digital user interfaces.....	870
Assessment Requirements for ICTDSN401 Design digital user interfaces	873
ICTDSN402 Develop digital user interfaces.....	875
Assessment Requirements for ICTDSN402 Develop digital user interfaces	878
ICTDSN403 Apply innovative thinking and practices in digital environments	880
Assessment Requirements for ICTDSN403 Apply innovative thinking and practices in digital environments	883
ICTGAM304 Develop three-dimensional (3D) models for digital games.....	885
Assessment Requirements for ICTGAM304 Develop three-dimensional (3D) models for digital games.....	888
ICTGAM305 Apply simple textures and shading to three-dimensional (3D) models for digital games.....	890
Assessment Requirements for ICTGAM305 Apply simple textures and shading to three-dimensional (3D) models for digital games	894
ICTGAM306 Review and apply traditional animation principles.....	896
Assessment Requirements for ICTGAM306 Review and apply traditional animation principles	899
ICTGAM420 Produce interactive games	901
Assessment Requirements for ICTGAM420 Produce interactive games.....	905
ICTGAM421 Identify and apply games design and game play principles.....	907
Assessment Requirements for ICTGAM421 Identify and apply games design and game play principles	910
ICTGAM422 Create design documents for interactive games	912
Assessment Requirements for ICTGAM422 Create design documents for interactive games.....	915
ICTGAM423 Apply artificial intelligence in game development.....	917
Assessment Requirements for ICTGAM423 Apply artificial intelligence in game development.....	920
ICTGAM424 Develop story and content in digital games.....	922
Assessment Requirements for ICTGAM424 Develop story and content in digital games.....	925
ICTGAM425 Create visual design components in interactive games	927
Assessment Requirements for ICTGAM425 Create visual design components in interactive games	931
ICTGAM426 Write narrative scripts for interactive games	933
Assessment Requirements for ICTGAM426 Write narrative scripts for interactive games.....	936
ICTGAM427 Use 3-D software interface and toolsets.....	938
Assessment Requirements for ICTGAM427 Use 3-D software interface and toolsets	941
ICTGAM428 Create 3-D characters for interactive games.....	943
Assessment Requirements for ICTGAM428 Create 3-D characters for interactive games.....	946
ICTGAM429 Develop 3-D components for interactive games.....	948
Assessment Requirements for ICTGAM429 Develop 3-D components for interactive games.....	951
ICTGAM430 Design interactive media.....	953
Assessment Requirements for ICTGAM430 Design interactive media	956
ICTGAM431 Design and create 3-D digital models	958
Assessment Requirements for ICTGAM431 Design and create 3-D digital models.....	961
ICTGAM432 Create audio for digital games	963
Assessment Requirements for ICTGAM432 Create audio for digital games.....	967
ICTGAM433 Prepare and complete image rendering processes.....	969

Assessment Requirements for ICTGAM433 Prepare and complete image rendering processes.....	972
ICTGAM532 Create design concepts for digital games and 3-D media	974
Assessment Requirements for ICTGAM532 Create design concepts for digital games and 3-D media	977
ICTGAM533 Create complex 3-D interactive games.....	979
Assessment Requirements for ICTGAM533 Create complex 3-D interactive games.....	983
ICTGAM534 Manage interactive media productions	985
Assessment Requirements for ICTGAM534 Manage interactive media productions.....	988
ICTGAM535 Develop complex 3-D software for games and interactive media.....	990
Assessment Requirements for ICTGAM535 Develop complex 3-D software for games and interactive media	993
ICTGAM536 Design interactive 3-D applications for scientific and mathematical modelling	996
Assessment Requirements for ICTGAM536 Design interactive 3-D applications for scientific and mathematical modelling	999
ICTGAM537 Prepare games for different platforms and delivery modes	1001
Assessment Requirements for ICTGAM537 Prepare games for different platforms and delivery modes	1004
ICTGAM538 Manage testing of games and interactive media.....	1006
Assessment Requirements for ICTGAM538 Manage testing of games and interactive media.....	1009
ICTGAM539 Create and implement designs for 3-D games environments.....	1011
Assessment Requirements for ICTGAM539 Create and implement designs for 3-D games environments	1014
ICTGAM540 Design and create models for 3-D and digital effects environments	1016
Assessment Requirements for ICTGAM540 Design and create models for 3-D and digital effects environments	1019
ICTGAM541 Design and create advanced particles, fluids and bodies for 3-D digital effects.....	1021
Assessment Requirements for ICTGAM541 Design and create advanced particles, fluids and bodies for 3-D digital effects.....	1025
ICTGAM542 Animate 3-D characters for digital games.....	1027
Assessment Requirements for ICTGAM542 Animate 3-D characters for digital games.....	1030
ICTGAM543 Produce digital animation sequences	1032
Assessment Requirements for ICTGAM543 Produce digital animation sequences.....	1035
ICTGAM544 Animate physical attributes of models and elements.....	1037
Assessment Requirements for ICTGAM544 Animate physical attributes of models and elements	1040
ICTGAM545 Manage technical art and rigging in 3-D animations	1042
Assessment Requirements for ICTGAM545 Manage technical art and rigging in 3-D animations	1045
ICTGAM546 Create and combine 3-D digital games and components	1047
Assessment Requirements for ICTGAM546 Create and combine 3-D digital games and components	1050
ICTGAM547 Create interactive 3-D environments for digital games	1052
Assessment Requirements for ICTGAM547 Create interactive 3-D environments for digital games.....	1055
ICTGAM548 Complete digital editing for 3-D and digital effects environments.....	1057
Assessment Requirements for ICTGAM548 Complete digital editing for 3-D and digital effects environments	1060
ICTGAM549 Collaborate in design of 3-D game levels and environments.....	1062

Assessment Requirements for ICTGAM549 Collaborate in design of 3-D game levels and environments	1065
ICTGAM550 Integrate multiple data sources into interactive 3-D environments.....	1067
Assessment Requirements for ICTGAM550 Integrate multiple data sources into interactive 3-D environments.....	1070
ICTGAM551 Apply digital texturing for the 3-D environment in digital games	1072
Assessment Requirements for ICTGAM551 Apply digital texturing for the 3-D environment in digital games	1075
ICTGAM552 Create complex 3-D characters for games.....	1077
Assessment Requirements for ICTGAM552 Create complex 3-D characters for games.....	1080
ICTGAM553 Integrate database with online games	1082
Assessment Requirements for ICTGAM553 Integrate database with online games.....	1085
ICTGAM554 Create games for mobile devices.....	1087
Assessment Requirements for ICTGAM554 Create games for mobile devices.....	1090
ICTGAM555 Analyse business opportunities in the digital games environments	1092
Assessment Requirements for ICTGAM555 Analyse business opportunities in the digital games environments.....	1095
ICTGAM556 Develop and implement physics in 3-D digital games.....	1097
Assessment Requirements for ICTGAM556 Develop and implement physics in 3-D digital games.....	1100
ICTGAM557 Complete compositing to create elements for 3-D and digital effects environments	1102
Assessment Requirements for ICTGAM557 Complete compositing to create elements for 3-D and digital effects environments	1105
ICTICT206 Install software applications.....	1107
Assessment Requirements for ICTICT206 Install software applications	1110
ICTICT213 Use computer operating systems and hardware	1112
Assessment Requirements for ICTICT213 Use computer operating systems and hardware	1115
ICTICT214 Operate application software packages.....	1117
Assessment Requirements for ICTICT214 Operate application software packages.....	1120
ICTICT215 Operate digital media technology packages.....	1122
Assessment Requirements for ICTICT215 Operate digital media technology packages.....	1125
ICTICT216 Design and create basic organisational documents	1127
Assessment Requirements for ICTICT216 Design and create basic organisational documents.....	1130
ICTICT219 Interact and resolve queries with ICT clients	1132
Assessment Requirements for ICTICT219 Interact and resolve queries with ICT clients	1135
ICTICT221 Identify and use specific industry standard technologies.....	1137
Assessment Requirements for ICTICT221 Identify and use specific industry standard technologies	1140
ICTICT222 Research and share ICT solutions for Indigenous users.....	1142
Assessment Requirements for ICTICT222 Research and share ICT solutions for Indigenous users	1145
ICTICT223 Install software applications.....	1147
Assessment Requirements for ICTICT223 Install software applications	1150
ICTICT224 Integrate commercial computing packages	1152
Assessment Requirements for ICTICT224 Integrate commercial computing packages	1155
ICTICT225 Operate accounting applications	1157
Assessment Requirements for ICTICT225 Operate accounting applications	1160
ICTICT226 Operate simple database applications	1162
Assessment Requirements for ICTICT226 Operate simple database applications	1165
ICTICT309 Create ICT user documentation.....	1167
Assessment Requirements for ICTICT309 Create ICT user documentation.....	1170

ICTICT310 Identify and use industry specific technologies.....	1172
Assessment Requirements for ICTICT310 Identify and use industry specific technologies	1175
ICTICT311 Customise packaged software applications.....	1177
Assessment Requirements for ICTICT311 Customise packaged software applications	1180
ICTICT312 Use advanced features of applications	1182
Assessment Requirements for ICTICT312 Use advanced features of applications.....	1184
ICTICT313 Identify IP, ethics and privacy policies in ICT environments	1186
Assessment Requirements for ICTICT313 Identify IP, ethics and privacy policies in ICT environments	1188
ICTICT314 Connect internal hardware components.....	1190
Assessment Requirements for ICTICT314 Connect internal hardware components	1193
ICTICT315 Implement system software changes.....	1195
Assessment Requirements for ICTICT315 Implement system software changes	1198
ICTICT316 Implement new technology.....	1200
Assessment Requirements for ICTICT316 Implement new technology	1203
ICTICT317 Maintain standard operating environments	1205
Assessment Requirements for ICTICT317 Maintain standard operating environments	1208
ICTICT318 Validate test cases and develop proof of concepts.....	1210
Assessment Requirements for ICTICT318 Validate test cases and develop proof of concepts	1213
ICTICT401 Determine and confirm client business requirements.....	1215
Assessment Requirements for ICTICT401 Determine and confirm client business requirements.....	1218
ICTICT405 Develop detailed technical design.....	1220
Assessment Requirements for ICTICT405 Develop detailed technical design.....	1223
ICTICT408 Create technical documentation.....	1225
Assessment Requirements for ICTICT408 Create technical documentation.....	1229
ICTICT425 Implement WHS, environmental sustainability and anti-discrimination practices in an ICT workplace	1231
Assessment Requirements for ICTICT425 Implement WHS, environmental sustainability and anti-discrimination practices in an ICT workplace	1234
ICTICT427 Identify, evaluate and apply current industry-specific technologies to meet organisational needs.....	1236
Assessment Requirements for ICTICT427 Identify, evaluate and apply current industry-specific technologies to meet organisational needs.....	1239
ICTICT429 Determine and confirm client business requirements	1241
Assessment Requirements for ICTICT429 Determine and confirm client business requirements.....	1244
ICTICT430 Apply software development methodologies.....	1246
Assessment Requirements for ICTICT430 Apply software development methodologies	1249
ICTICT431 Use online tools for learning.....	1251
Assessment Requirements for ICTICT431 Use online tools for learning.....	1254
ICTICT432 Develop detailed technical design.....	1256
Assessment Requirements for ICTICT432 Develop detailed technical design.....	1259
ICTICT433 Build graphical user interfaces.....	1261
Assessment Requirements for ICTICT433 Build graphical user interfaces	1264
ICTICT434 Maintain website information standards.....	1266
Assessment Requirements for ICTICT434 Maintain website information standards ...	1269
ICTICT435 Create technical documentation.....	1271
Assessment Requirements for ICTICT435 Create technical documentation.....	1274
ICTICT436 Develop macros and templates for clients using standard products.....	1276
Assessment Requirements for ICTICT436 Develop macros and templates for clients using standard products.....	1279

ICTICT437 Conduct post-implementation ICT system reviews	1281
Assessment Requirements for ICTICT437 Conduct post-implementation ICT system reviews	1284
ICTICT438 Select, configure and deploy software and hardware testing tools	1286
Assessment Requirements for ICTICT438 Select, configure and deploy software and hardware testing tools.....	1289
ICTICT440 Develop service level agreements.....	1291
Assessment Requirements for ICTICT440 Develop service level agreements	1294
ICTICT441 Provide one-to-one instructions.....	1296
Assessment Requirements for ICTICT441 Provide one-to-one instructions	1299
ICTICT443 Work collaboratively in the ICT industry	1301
Assessment Requirements for ICTICT443 Work collaboratively in the ICT industry ..	1304
ICTICT444 Develop client user interfaces	1306
Assessment Requirements for ICTICT444 Develop client user interfaces.....	1309
ICTICT445 Connect and configure devices and hardware components	1311
Assessment Requirements for ICTICT445 Connect and configure devices and hardware components	1314
ICTICT446 Apply ICT service management principles.....	1316
Assessment Requirements for ICTICT446 Apply ICT service management principles	1319
ICTICT447 Work effectively in agile environments	1321
Assessment Requirements for ICTICT447 Work effectively in agile environments	1324
ICTICT448 Prepare electronic portfolios of work	1326
Assessment Requirements for ICTICT448 Prepare electronic portfolios of work.....	1329
ICTICT449 Use version control systems in development environments.....	1331
Assessment Requirements for ICTICT449 Use version control systems in development environments	1334
ICTICT450 Identify and use applications for a distributed ledger	1336
Assessment Requirements for ICTICT450 Identify and use applications for a distributed ledger.....	1339
ICTICT451 Comply with IP, ethics and privacy policies in ICT environments	1341
Assessment Requirements for ICTICT451 Comply with IP, ethics and privacy policies in ICT environments.....	1344
ICTICT452 Support the implementation of assistive technologies.....	1346
Assessment Requirements for ICTICT452 Support the implementation of assistive technologies	1349
ICTICT453 Evaluate accessibility of organisational systems, programs and software ..	1351
Assessment Requirements for ICTICT453 Evaluate accessibility of organisational systems, programs and software	1354
ICTICT454 Assess organisational systems using assistive technologies.....	1357
Assessment Requirements for ICTICT454 Assess organisational systems using assistive technologies	1360
ICTICT518 Research and review hardware technology options for organisations	1362
Assessment Requirements for ICTICT518 Research and review hardware technology options for organisations.....	1365
ICTICT519 Develop detailed component specifications from project specifications	1367
Assessment Requirements for ICTICT519 Develop detailed component specifications from project specifications.....	1370
ICTICT520 Confirm transition strategy for new systems	1372
Assessment Requirements for ICTICT520 Confirm transition strategy for new systems	1375
ICTICT521 Select new technology supported business model	1377
Assessment Requirements for ICTICT521 Select new technology supported business model.....	1380
ICTICT522 Evaluate vendor products and equipment.....	1382

Assessment Requirements for ICTICT522 Evaluate vendor products and equipment..	1385
ICTICT523 Gather data to identify business requirements	1387
Assessment Requirements for ICTICT523 Gather data to identify business requirements	1390
ICTICT524 Determine ICT strategies and solutions for organisations	1392
Assessment Requirements for ICTICT524 Determine ICT strategies and solutions for organisations.....	1395
ICTICT525 Identify and manage the implementation of industry specific technologies	1397
Assessment Requirements for ICTICT525 Identify and manage the implementation of industry specific technologies.....	1400
ICTICT526 Verify client business requirements.....	1402
Assessment Requirements for ICTICT526 Verify client business requirements	1405
ICTICT527 Develop and maintain blockchain solutions.....	1407
Assessment Requirements for ICTICT527 Develop and maintain blockchain solutions	1410
ICTICT528 Deploy smart contracts	1412
Assessment Requirements for ICTICT528 Deploy smart contracts	1415
ICTICT529 Organise and lead agile projects.....	1417
Assessment Requirements for ICTICT529 Organise and lead agile projects	1420
ICTICT530 Design user experience solutions	1422
Assessment Requirements for ICTICT530 Design user experience solutions	1425
ICTICT531 Test network using virtual instruments.....	1427
Assessment Requirements for ICTICT531 Test network using virtual instruments	1430
ICTICT532 Apply IP, ethics and privacy in ICT environments.....	1432
Assessment Requirements for ICTICT532 Apply IP, ethics and privacy in ICT environments	1435
ICTICT533 Conduct quality audit of IT system design specifications	1437
Assessment Requirements for ICTICT533 Conduct quality audit of IT system design specifications.....	1440
ICTICT611 Develop ICT strategic business plans	1442
Assessment Requirements for ICTICT611 Develop ICT strategic business plans	1445
ICTICT612 Develop contracts and manage contract performance	1447
Assessment Requirements for ICTICT612 Develop contracts and manage contract performance	1450
ICTICT613 Manage the use of development methodologies	1452
Assessment Requirements for ICTICT613 Manage the use of development methodologies	1455
ICTICT614 Identify and implement business innovation	1457
Assessment Requirements for ICTICT614 Identify and implement business innovation	1460
ICTICT615 Implement knowledge management strategies	1462
Assessment Requirements for ICTICT615 Implement knowledge management strategies	1465
ICTICT616 Develop communities of practice	1467
Assessment Requirements for ICTICT616 Develop communities of practice	1470
ICTICT617 Lead the evaluation and implementation of current industry specific technologies	1472
Assessment Requirements for ICTICT617 Lead the evaluation and implementation of current industry specific technologies	1475
ICTICT618 Manage IP, ethics and privacy in ICT environments.....	1477
Assessment Requirements for ICTICT618 Manage IP, ethics and privacy in ICT environments	1480
ICTICT818 Develop knowledge management strategies.....	1482
Assessment Requirements for ICTICT818 Develop knowledge management strategies	1485
ICTICT819 Lead analysis of information and communications technology business strategy.....	1487
Assessment Requirements for ICTICT819 Lead analysis of information and communications technology business strategy.....	1490

ICTICT822 Manage automated ICT system applications	1492
Assessment Requirements for ICTICT822 Manage automated ICT system applications	1495
ICTIOT501 Install IoT devices and networks.....	1498
Assessment Requirements for ICTIOT501 Install IoT devices and networks	1501
ICTIOT502 Program IoT devices.....	1503
Assessment Requirements for ICTIOT502 Program IoT devices.....	1506
ICTIOT503 Design and test IoT devices and networks	1508
Assessment Requirements for ICTIOT503 Design and test IoT devices and networks..	1511
ICTNPL412 Apply business acumen to network planning.....	1513
Assessment Requirements for ICTNPL412 Apply business acumen to network planning	1516
ICTNPL413 Evaluate networking regulations and legislation for the telecommunications industry	1518
Assessment Requirements for ICTNPL413 Evaluate networking regulations and legislation for the telecommunications industry	1521
ICTNWK307 Provide network systems administration.....	1523
Assessment Requirements for ICTNWK307 Provide network systems administration.	1526
ICTNWK308 Determine and action network problems	1528
Assessment Requirements for ICTNWK308 Determine and action network problems.	1531
ICTNWK309 Configure and administer network operating systems.....	1533
Assessment Requirements for ICTNWK309 Configure and administer network operating systems.....	1536
ICTNWK310 Administer network peripherals.....	1538
Assessment Requirements for ICTNWK310 Administer network peripherals	1541
ICTNWK311 Install and test network protocols.....	1543
Assessment Requirements for ICTNWK311 Install and test network protocols	1546
ICTNWK409 Create scripts for networking.....	1548
Assessment Requirements for ICTNWK409 Create scripts for networking.....	1552
ICTNWK419 Identify and use current virtualisation technologies	1554
Assessment Requirements for ICTNWK419 Identify and use current virtualisation technologies	1557
ICTNWK422 Install and manage servers	1559
Assessment Requirements for ICTNWK422 Install and manage servers.....	1562
ICTNWK423 Manage network and data integrity.....	1564
Assessment Requirements for ICTNWK423 Manage network and data integrity	1567
ICTNWK424 Install and operate small enterprise branch networks	1569
Assessment Requirements for ICTNWK424 Install and operate small enterprise branch networks	1572
ICTNWK425 Build small wireless local area networks.....	1574
Assessment Requirements for ICTNWK425 Build small wireless local area networks .	1577
ICTNWK426 Install and configure client-server applications and services	1579
Assessment Requirements for ICTNWK426 Install and configure client-server applications and services.....	1582
ICTNWK427 Configure desktop environments	1584
Assessment Requirements for ICTNWK427 Configure desktop environments.....	1587
ICTNWK428 Create scripts for networking.....	1589
Assessment Requirements for ICTNWK428 Create scripts for networking.....	1592
ICTNWK429 Install hardware to networks.....	1594
Assessment Requirements for ICTNWK429 Install hardware to networks	1597
ICTNWK430 Deploy software to networked computers	1599
Assessment Requirements for ICTNWK430 Deploy software to networked computers	1602
ICTNWK431 Create network documentation	1604
Assessment Requirements for ICTNWK431 Create network documentation.....	1607
ICTNWK432 Build an enterprise wireless network.....	1609

Assessment Requirements for ICTNWK432 Build an enterprise wireless network	1612
ICTNWK433 Install backbone technologies in a local area network	1614
Assessment Requirements for ICTNWK433 Install backbone technologies in a local area network.....	1617
ICTNWK434 Identify and implement industry standard virtualisation technologies ...	1619
Assessment Requirements for ICTNWK434 Identify and implement industry standard virtualisation technologies.....	1622
ICTNWK435 Create secure virtual private networks.....	1624
Assessment Requirements for ICTNWK435 Create secure virtual private networks ...	1627
ICTNWK537 Implement secure encryption technologies	1630
Assessment Requirements for ICTNWK537 Implement secure encryption technologies	1633
ICTNWK538 Install and maintain valid authentication processes.....	1635
Assessment Requirements for ICTNWK538 Install and maintain valid authentication processes.....	1638
ICTNWK539 Design and implement integrated server solutions.....	1640
Assessment Requirements for ICTNWK539 Design and implement integrated server solutions.....	1643
ICTNWK540 Design, build and test network servers	1645
Assessment Requirements for ICTNWK540 Design, build and test network servers	1649
ICTNWK541 Configure, verify and troubleshoot WAN links and IP services.....	1652
Assessment Requirements for ICTNWK541 Configure, verify and troubleshoot WAN links and IP services.....	1655
ICTNWK542 Install, operate and troubleshoot medium enterprise routers	1657
Assessment Requirements for ICTNWK542 Install, operate and troubleshoot medium enterprise routers	1660
ICTNWK543 Install, operate and troubleshoot medium enterprise switches.....	1662
Assessment Requirements for ICTNWK543 Install, operate and troubleshoot medium enterprise switches.....	1665
ICTNWK544 Design and implement a security perimeter for ICT networks	1667
Assessment Requirements for ICTNWK544 Design and implement a security perimeter for ICT networks	1670
ICTNWK545 Develop, implement and evaluate systems and applications security	1672
Assessment Requirements for ICTNWK545 Develop, implement and evaluate systems and applications security	1675
ICTNWK546 Manage network security	1677
Assessment Requirements for ICTNWK546 Manage network security	1680
ICTNWK547 Manage system security on operational systems	1682
Assessment Requirements for ICTNWK547 Manage system security on operational systems.....	1685
ICTNWK548 Model preferred system solutions	1687
Assessment Requirements for ICTNWK548 Model preferred system solutions.....	1690
ICTNWK549 Design ICT security frameworks	1692
Assessment Requirements for ICTNWK549 Design ICT security frameworks.....	1695
ICTNWK550 Design ICT system security controls	1697
Assessment Requirements for ICTNWK550 Design ICT system security controls	1700
ICTNWK551 Build decks using wireless markup language.....	1702
Assessment Requirements for ICTNWK551 Build decks using wireless markup language	1705
ICTNWK552 Install and configure network access storage devices.....	1707
Assessment Requirements for ICTNWK552 Install and configure network access storage devices	1710
ICTNWK553 Configure enterprise virtual computing environments	1712
Assessment Requirements for ICTNWK553 Configure enterprise virtual computing environments	1715

ICTNWK554 Manage enterprise virtual computing environments	1717
Assessment Requirements for ICTNWK554 Manage enterprise virtual computing environments	1720
ICTNWK555 Determine best-fit topologies for local networks.....	1722
Assessment Requirements for ICTNWK555 Determine best-fit topologies for local networks	1725
ICTNWK556 Identify and resolve network problems.....	1728
Assessment Requirements for ICTNWK556 Identify and resolve network problems ...	1731
ICTNWK557 Configure and manage advanced virtual computing environments	1733
Assessment Requirements for ICTNWK557 Configure and manage advanced virtual computing environments.....	1736
ICTNWK558 Monitor and troubleshoot virtual computing environments	1738
Assessment Requirements for ICTNWK558 Monitor and troubleshoot virtual computing environments	1741
ICTNWK559 Install an enterprise virtual computing environment.....	1743
Assessment Requirements for ICTNWK559 Install an enterprise virtual computing environment.....	1746
ICTNWK560 Determine best-fit topologies for wide area networks	1748
Assessment Requirements for ICTNWK560 Determine best-fit topologies for wide area networks	1751
ICTNWK561 Design enterprise wireless local area networks	1754
Assessment Requirements for ICTNWK561 Design enterprise wireless local area networks	1758
ICTNWK562 Configure internet gate ways.....	1760
Assessment Requirements for ICTNWK562 Configure internet gate ways	1763
ICTNWK618 Design and implement a security system.....	1765
Assessment Requirements for ICTNWK618 Design and implement a security system.	1769
ICTNWK619 Plan, configure and test advanced server-based security	1771
Assessment Requirements for ICTNWK619 Plan, configure and test advanced server-based security	1774
ICTNWK620 Design and implement wireless network security.....	1776
Assessment Requirements for ICTNWK620 Design and implement wireless network security	1780
ICTNWK621 Configure network devices for a secure network infrastructure	1782
Assessment Requirements for ICTNWK621 Configure network devices for a secure network infrastructure	1786
ICTNWK622 Configure and manage intrusion prevention system on network sensors	1788
Assessment Requirements for ICTNWK622 Configure and manage intrusion prevention system on network sensors	1791
ICTNWK623 Manage ICT security.....	1793
Assessment Requirements for ICTNWK623 Manage ICT security	1796
ICTNWK624 Configure advanced internetwork routing solutions.....	1798
Assessment Requirements for ICTNWK624 Configure advanced internetwork routing solutions.....	1801
ICTNWK625 Plan and configure advanced internetwork switching solutions.....	1804
Assessment Requirements for ICTNWK625 Plan and configure advanced internetwork switching solutions	1807
ICTNWK627 Implement voice applications over secure wireless networks.....	1810
Assessment Requirements for ICTNWK627 Implement voice applications over secure wireless networks.....	1813
ICTNWK628 Design and build integrated VoIP networks	1815
Assessment Requirements for ICTNWK628 Design and build integrated VoIP networks	1818
ICTNWK629 Configure and manage storage area networks	1821
Assessment Requirements for ICTNWK629 Configure and manage storage area networks	1824

ICTOPN404 Test optical communications systems and components	1827
Assessment Requirements for ICTOPN404 Test optical communications systems and components	1831
ICTOPN405 Install and test a dense wavelength division multiplexing system	1834
Assessment Requirements for ICTOPN405 Install and test a dense wavelength division multiplexing system	1837
ICTOPN507 Plan and configure dense wavelength division multiplexing optical networks	1839
Assessment Requirements for ICTOPN507 Plan and configure dense wavelength division multiplexing optical networks	1842
ICTOPN508 Perform acceptance and commissioning tests on optical networks	1844
Assessment Requirements for ICTOPN508 Perform acceptance and commissioning tests on optical networks	1847
ICTOPN509 Plan for optical system upgrades	1849
Assessment Requirements for ICTOPN509 Plan for optical system upgrades	1852
ICTOPN510 Test and commission dense wavelength division multiplexing transmission systems	1854
Assessment Requirements for ICTOPN510 Test and commission dense wavelength division multiplexing transmission systems	1857
ICTOPN511 Test performance of specialised optical devices	1859
Assessment Requirements for ICTOPN511 Test performance of specialised optical devices	1862
ICTOPN512 Analyse and integrate specialised optical devices	1864
Assessment Requirements for ICTOPN512 Analyse and integrate specialised optical devices	1867
ICTOPN605 Manage optical ethernet transmission	1869
Assessment Requirements for ICTOPN605 Manage optical ethernet transmission	1872
ICTOPN606 Manage dense wavelength division multiplexing transmission systems	1874
Assessment Requirements for ICTOPN606 Manage dense wavelength division multiplexing transmission systems	1877
ICTOPN607 Design dense wavelength division multiplexing systems	1879
Assessment Requirements for ICTOPN607 Design dense wavelength division multiplexing systems	1882
ICTOPN608 Analyse optical transmission systems	1884
Assessment Requirements for ICTOPN608 Analyse optical transmission systems	1887
ICTPMG201 Prepare site for support installation	1889
Assessment Requirements for ICTPMG201 Prepare site for support installation	1892
ICTPMG301 Contribute as part of an IT project management team	1894
Assessment Requirements for ICTPMG301 Contribute as part of an IT project management team	1897
ICTPMG411 Support small scale ICT projects	1899
Assessment Requirements for ICTPMG411 Support small scale ICT projects	1902
ICTPMG505 Manage ICT projects	1904
Assessment Requirements for ICTPMG505 Manage ICT projects	1907
ICTPMG506 Prepare network project briefs	1909
Assessment Requirements for ICTPMG506 Prepare network project briefs	1912
ICTPMG612 Manage ICT project initiation	1914
Assessment Requirements for ICTPMG612 Manage ICT project initiation	1917
ICTPMG613 Manage ICT project planning	1919
Assessment Requirements for ICTPMG613 Manage ICT project planning	1922
ICTPMG614 Manage ICT project delivery	1924
Assessment Requirements for ICTPMG614 Manage ICT project delivery	1927
ICTPMG615 Manage ICT project closure	1929
Assessment Requirements for ICTPMG615 Manage ICT project closure	1932
ICTPMG616 Manage ICT project systems implementation	1934

Assessment Requirements for ICTPMG616 Manage ICT project systems implementation	1937
ICTPMG617 Plan and direct complex ICT projects	1939
Assessment Requirements for ICTPMG617 Plan and direct complex ICT projects	1942
ICTPRG302 Apply introductory programming techniques	1944
Assessment Requirements for ICTPRG302 Apply introductory programming techniques	1947
ICTPRG429 Maintain open-source code programs	1949
Assessment Requirements for ICTPRG429 Maintain open-source code programs	1952
ICTPRG431 Apply query language in relational databases	1954
Assessment Requirements for ICTPRG431 Apply query language in relational databases	1957
ICTPRG432 Develop data-driven applications	1959
Assessment Requirements for ICTPRG432 Develop data-driven applications	1962
ICTPRG433 Test software developments	1964
Assessment Requirements for ICTPRG433 Test software developments	1967
ICTPRG434 Automate processes	1969
Assessment Requirements for ICTPRG434 Automate processes	1972
ICTPRG435 Write scripts for software applications	1974
Assessment Requirements for ICTPRG435 Write scripts for software applications	1977
ICTPRG436 Develop mobile applications	1979
Assessment Requirements for ICTPRG436 Develop mobile applications	1982
ICTPRG437 Build a user interface	1984
Assessment Requirements for ICTPRG437 Build a user interface	1987
ICTPRG438 Configure and maintain databases	1989
Assessment Requirements for ICTPRG438 Configure and maintain databases	1992
ICTPRG439 Use pre-existing components	1994
Assessment Requirements for ICTPRG439 Use pre-existing components	1997
ICTPRG440 Apply introductory programming skills in different languages	1999
Assessment Requirements for ICTPRG440 Apply introductory programming skills in different languages	2002
ICTPRG441 Apply skills in object-oriented design	2004
Assessment Requirements for ICTPRG441 Apply skills in object-oriented design	2006
ICTPRG442 Apply mathematical techniques for software development	2008
Assessment Requirements for ICTPRG442 Apply mathematical techniques for software development	2011
ICTPRG443 Apply intermediate programming skills in different languages	2013
Assessment Requirements for ICTPRG443 Apply intermediate programming skills in different languages	2016
ICTPRG444 Analyse software requirements	2018
Assessment Requirements for ICTPRG444 Analyse software requirements	2021
ICTPRG446 Prepare software development review	2023
Assessment Requirements for ICTPRG446 Prepare software development review	2026
ICTPRG447 Use extensible markup language	2028
Assessment Requirements for ICTPRG447 Use extensible markup language	2031
ICTPRG530 Manage projects using software management tools	2033
Assessment Requirements for ICTPRG530 Manage projects using software management tools	2036
ICTPRG533 Debug and monitor applications	2038
Assessment Requirements for ICTPRG533 Debug and monitor applications	2040
ICTPRG534 Deploy applications to production environments	2042
Assessment Requirements for ICTPRG534 Deploy applications to production environments	2045
ICTPRG535 Build advanced user interfaces	2047
Assessment Requirements for ICTPRG535 Build advanced user interfaces	2050
ICTPRG536 Design application architecture	2052

Assessment Requirements for ICTPRG536 Design application architecture	2055
ICTPRG537 Implement security for applications.....	2057
Assessment Requirements for ICTPRG537 Implement security for applications	2060
ICTPRG538 Create mashups	2062
Assessment Requirements for ICTPRG538 Create mashups	2065
ICTPRG540 Maintain custom software	2067
Assessment Requirements for ICTPRG540 Maintain custom software	2070
ICTPRG541 Monitor and support data conversion to new ICT systems	2072
Assessment Requirements for ICTPRG541 Monitor and support data conversion to new ICT systems	2075
ICTPRG542 Review developed software	2077
Assessment Requirements for ICTPRG542 Review developed software	2080
ICTPRG543 Develop integration blueprint for ICT systems	2082
Assessment Requirements for ICTPRG543 Develop integration blueprint for ICT systems	2085
ICTPRG544 Install, test and evaluate pilot version of ICT systems.....	2087
Assessment Requirements for ICTPRG544 Install, test and evaluate pilot version of ICT systems.....	2090
ICTPRG545 Monitor system pilots.....	2092
Assessment Requirements for ICTPRG545 Monitor system pilots	2095
ICTPRG546 Validate application designs against specifications.....	2097
Assessment Requirements for ICTPRG546 Validate application designs against specifications.....	2100
ICTPRG547 Apply advanced programming skills in another language.....	2102
Assessment Requirements for ICTPRG547 Apply advanced programming skills in another language	2105
ICTPRG548 Develop high-level object-oriented class specifications.....	2107
Assessment Requirements for ICTPRG548 Develop high-level object-oriented class specifications.....	2110
ICTPRG549 Apply intermediate object-oriented language skills.....	2112
Assessment Requirements for ICTPRG549 Apply intermediate object-oriented language skills.....	2115
ICTPRG550 Perform ICT data conversions	2117
Assessment Requirements for ICTPRG550 Perform ICT data conversions.....	2120
ICTPRG551 Apply testing techniques for software development	2122
Assessment Requirements for ICTPRG551 Apply testing techniques for software development.....	2125
ICTPRG553 Create and develop REST APIs	2127
Assessment Requirements for ICTPRG553 Create and develop REST APIs.....	2130
ICTPRG554 Manage data persistence using noSQL data stores.....	2132
Assessment Requirements for ICTPRG554 Manage data persistence using noSQL data stores	2136
ICTPRG555 Implement Object Relational Mapping Framework for data persistence.	2138
Assessment Requirements for ICTPRG555 Implement Object Relational Mapping Framework for data persistence	2141
ICTPRG556 Implement and use a model view controller framework.....	2143
Assessment Requirements for ICTPRG556 Implement and use a model view controller framework	2146
ICTPRG557 Develop applications using agile methods	2148
Assessment Requirements for ICTPRG557 Develop applications using agile methods .	2151
ICTPRG603 Develop advanced mobile multi-touch applications.....	2153
Assessment Requirements for ICTPRG603 Develop advanced mobile multi-touch applications.....	2156
ICTPRG605 Manage development of technical solutions from business specifications .	2158

Assessment Requirements for ICTPRG605 Manage development of technical solutions from business specifications	2161
ICTPRG614 Create cloud computing services.....	2163
Assessment Requirements for ICTPRG614 Create cloud computing services	2166
ICTRFN406 Maintain hybrid fibre coaxial broadband cable network	2168
Assessment Requirements for ICTRFN406 Maintain hybrid fibre coaxial broadband cable network.....	2172
ICTRFN407 Conduct radio frequency measurements	2175
Assessment Requirements for ICTRFN407 Conduct radio frequency measurements...	2178
ICTRFN504 Test cellular handset enhancements and international roaming agreements	2180
Assessment Requirements for ICTRFN504 Test cellular handset enhancements and international roaming agreements	2183
ICTRFN505 Test and measure cellular phone and network equipment performance ..	2185
Assessment Requirements for ICTRFN505 Test and measure cellular phone and network equipment performance	2188
ICTRFN506 Evaluate radio frequency signal coverage plots	2190
Assessment Requirements for ICTRFN506 Evaluate radio frequency signal coverage plots	2193
ICTRFN603 Monitor the capacity of and recommend changes to cellular mobile networks	2195
Assessment Requirements for ICTRFN603 Monitor the capacity of and recommend changes to cellular mobile networks.....	2198
ICTRFN804 Produce radio link budgets	2200
Assessment Requirements for ICTRFN804 Produce radio link budgets	2203
ICTRFN805 Analyse cellular mobile network systems	2205
Assessment Requirements for ICTRFN805 Analyse cellular mobile network systems ..	2208
ICTRFN806 Analyse satellite communications systems	2210
Assessment Requirements for ICTRFN806 Analyse satellite communications systems.	2213
ICTSAD402 Develop and present ICT feasibility reports	2215
Assessment Requirements for ICTSAD402 Develop and present ICT feasibility reports	2218
ICTSAD507 Design and implement quality assurance processes for business solutions	2220
Assessment Requirements for ICTSAD507 Design and implement quality assurance processes for business solutions.....	2224
ICTSAD508 Develop technical requirements for business solutions	2226
Assessment Requirements for ICTSAD508 Develop technical requirements for business solutions.....	2229
ICTSAD509 Produce ICT feasibility reports	2231
Assessment Requirements for ICTSAD509 Produce ICT feasibility reports.....	2234
ICTSAD510 Manage risks when implementing new technologies.....	2236
Assessment Requirements for ICTSAD510 Manage risks when implementing new technologies	2239
ICTSAD608 Perform ICT-focused enterprise analysis	2241
Assessment Requirements for ICTSAD608 Perform ICT-focused enterprise analysis..	2244
ICTSAD609 Plan and monitor business analysis activities in an ICT environment	2246
Assessment Requirements for ICTSAD609 Plan and monitor business analysis activities in an ICT environment	2250
ICTSAD610 Analyse stakeholder requirements	2252
Assessment Requirements for ICTSAD610 Analyse stakeholder requirements	2255
ICTSAD611 Manage assessment and validation of ICT solutions	2257
Assessment Requirements for ICTSAD611 Manage assessment and validation of ICT solutions.....	2260
ICTSAD612 Implement and maintain uses of containerisation.....	2262
Assessment Requirements for ICTSAD612 Implement and maintain uses of containerisation	2266
ICTSAD613 Install and configure container orchestration services.....	2268

Assessment Requirements for ICTSAD613 Install and configure container orchestration services	2271
ICTSAD614 Lead ICT requirements elicitation	2274
Assessment Requirements for ICTSAD614 Lead ICT requirements elicitation	2277
ICTSAS210 Update and maintain hardware, software and documentation inventories	2279
Assessment Requirements for ICTSAS210 Update and maintain hardware, software and documentation inventories	2282
ICTSAS211 Develop solutions for basic ICT malfunctions and problems	2284
Assessment Requirements for ICTSAS211 Develop solutions for basic ICT malfunctions and problems	2287
ICTSAS212 Record the requirements of client support requests	2289
Assessment Requirements for ICTSAS212 Record the requirements of client support requests	2292
ICTSAS213 Maintain the integrity of ICT systems	2294
Assessment Requirements for ICTSAS213 Maintain the integrity of ICT systems	2297
ICTSAS214 Protect devices from spam and destructive software	2299
Assessment Requirements for ICTSAS214 Protect devices from spam and destructive software	2302
ICTSAS215 Protect and secure information assets	2304
Assessment Requirements for ICTSAS215 Protect and secure information assets	2307
ICTSAS216 Maintain ICT equipment and replace consumables	2309
Assessment Requirements for ICTSAS216 Maintain ICT equipment and replace consumables	2312
ICTSAS217 Connect a home based local wireless network	2314
Assessment Requirements for ICTSAS217 Connect a home based local wireless network	2317
ICTSAS218 Obtain and connect hardware peripherals	2319
Assessment Requirements for ICTSAS218 Obtain and connect hardware peripherals	2322
ICTSAS309 Maintain and repair ICT equipment and software	2324
Assessment Requirements for ICTSAS309 Maintain and repair ICT equipment and software	2327
ICTSAS310 Install, configure and secure a small office or home office network	2329
Assessment Requirements for ICTSAS310 Install, configure and secure a small office or home office network	2332
ICTSAS311 Maintain computer hardware	2334
Assessment Requirements for ICTSAS311 Maintain computer hardware	2337
ICTSAS312 Provide basic system administration	2339
Assessment Requirements for ICTSAS312 Provide basic system administration	2342
ICTSAS428 Hand over ICT system components to clients	2344
Assessment Requirements for ICTSAS428 Hand over ICT system components to clients	2347
ICTSAS432 Identify and resolve client ICT problems	2349
Assessment Requirements for ICTSAS432 Identify and resolve client ICT problems	2352
ICTSAS433 Update ICT client support procedures and assist with policy development	2354
Assessment Requirements for ICTSAS433 Update ICT client support procedures and assist with policy development	2357
ICTSAS434 Action change requests and present updated ICT system to clients	2359
Assessment Requirements for ICTSAS434 Action change requests and present updated ICT system to clients	2362
ICTSAS435 Resolve system faults on a live system	2364
Assessment Requirements for ICTSAS435 Resolve system faults on a live system	2367
ICTSAS436 Evaluate ICT system status	2369
Assessment Requirements for ICTSAS436 Evaluate ICT system status	2372
ICTSAS437 Optimise ICT system performance	2374
Assessment Requirements for ICTSAS437 Optimise ICT system performance	2377

ICTSAS438 Implement maintenance procedures	2379
Assessment Requirements for ICTSAS438 Implement maintenance procedures	2382
ICTSAS439 Analyse ICT system capacity and implement enhancements.....	2384
Assessment Requirements for ICTSAS439 Analyse ICT system capacity and implement enhancements	2387
ICTSAS440 Monitor and administer security of ICT systems	2389
Assessment Requirements for ICTSAS440 Monitor and administer security of ICT systems.....	2392
ICTSAS441 Support ICT system software.....	2394
Assessment Requirements for ICTSAS441 Support ICT system software	2397
ICTSAS442 Provide first-level remote help desk support.....	2399
Assessment Requirements for ICTSAS442 Provide first-level remote help desk support.....	2402
ICTSAS443 Support operating system users and troubleshoot applications.....	2404
Assessment Requirements for ICTSAS443 Support operating system users and troubleshoot applications.....	2407
ICTSAS444 Repair operating systems boot up procedures.....	2409
Assessment Requirements for ICTSAS444 Repair operating systems boot up procedures.....	2412
ICTSAS445 Configure and troubleshoot operating system software	2414
Assessment Requirements for ICTSAS445 Configure and troubleshoot operating system software	2417
ICTSAS446 Fault find and troubleshoot ICT equipment, hardware and software problems.....	2419
Assessment Requirements for ICTSAS446 Fault find and troubleshoot ICT equipment, hardware and software problems.....	2422
ICTSAS506 Update ICT system operational procedures	2424
Assessment Requirements for ICTSAS506 Update ICT system operational procedures.....	2427
ICTSAS521 Perform integration tests	2429
Assessment Requirements for ICTSAS521 Perform integration tests.....	2432
ICTSAS523 Perform stress and load tests on integrated platforms	2434
Assessment Requirements for ICTSAS523 Perform stress and load tests on integrated platforms	2437
ICTSAS524 Develop, implement and evaluate an incident response plan.....	2439
Assessment Requirements for ICTSAS524 Develop, implement and evaluate an incident response plan	2442
ICTSAS525 Develop and conduct client acceptance tests.....	2444
Assessment Requirements for ICTSAS525 Develop and conduct client acceptance tests.....	2447
ICTSAS526 Review and update disaster recovery and contingency plans	2449
Assessment Requirements for ICTSAS526 Review and update disaster recovery and contingency plans.....	2452
ICTSAS527 Manage client problems	2454
Assessment Requirements for ICTSAS527 Manage client problems.....	2457
ICTSAS528 Review and develop ICT maintenance strategies	2459
Assessment Requirements for ICTSAS528 Review and develop ICT maintenance strategies.....	2462
ICTSAS529 Prioritise ICT change requests.....	2464
Assessment Requirements for ICTSAS529 Prioritise ICT change requests	2467
ICTSAS530 Use network tools.....	2469
Assessment Requirements for ICTSAS530 Use network tools	2472
ICTSAS602 Implement change management processes.....	2474
Assessment Requirements for ICTSAS602 Implement change management processes.....	2477
ICTSUS502 Install and test virtual infrastructure	2479
Assessment Requirements for ICTSUS502 Install and test virtual infrastructure	2482
ICTSUS603 Integrate sustainability in ICT planning and design projects	2484

Assessment Requirements for ICTSUS603 Integrate sustainability in ICT planning and design projects	2487
ICTSUS604 Prepare business cases for sustainability and competitive advantage in ICT projects.....	2489
Assessment Requirements for ICTSUS604 Prepare business cases for sustainability and competitive advantage in ICT projects.....	2492
ICTSUS811 Conduct and manage life cycle assessments for sustainability.....	2494
Assessment Requirements for ICTSUS811 Conduct and manage life cycle assessments for sustainability.....	2497
ICTSUS812 Lead applied research in ICT sustainability.....	2499
Assessment Requirements for ICTSUS812 Lead applied research in ICT sustainability.....	2502
ICTTEN202 Use hand and power tools.....	2504
Assessment Requirements for ICTTEN202 Use hand and power tools	2507
ICTTEN208 Use electrical skills when working with telecommunications networks.....	2509
Assessment Requirements for ICTTEN208 Use electrical skills when working with telecommunications networks.....	2512
ICTTEN210 Install underground telecommunications infrastructure	2514
Assessment Requirements for ICTTEN210 Install underground telecommunications infrastructure	2517
ICTTEN211 Work effectively in a telecommunications network environment.....	2519
Assessment Requirements for ICTTEN211 Work effectively in a telecommunications network environment.....	2521
ICTTEN312 Install telecommunications network equipment.....	2523
Assessment Requirements for ICTTEN312 Install telecommunications network equipment.....	2527
ICTTEN313 Work on and resolve recurrent network faults.....	2529
Assessment Requirements for ICTTEN313 Work on and resolve recurrent network faults.....	2532
ICTTEN315 Determine and apply technologies within a telecommunications system.....	2534
Assessment Requirements for ICTTEN315 Determine and apply technologies within a telecommunications system.....	2537
ICTTEN316 Conduct basic tests and analyses of telecommunications copper cabling.....	2539
Assessment Requirements for ICTTEN316 Conduct basic tests and analyses of telecommunications copper cabling	2542
ICTTEN317 Locate, identify and rectify telecommunications network faults.....	2546
Assessment Requirements for ICTTEN317 Locate, identify and rectify telecommunications network faults.....	2549
ICTTEN318 Inspect, clean and handle optical fibre cable and connectors	2552
Assessment Requirements for ICTTEN318 Inspect, clean and handle optical fibre cable and connectors	2555
ICTTEN320 Commission an electronic unit	2557
Assessment Requirements for ICTTEN320 Commission an electronic unit.....	2561
ICTTEN321 Maintain an electronic system.....	2563
Assessment Requirements for ICTTEN321 Maintain an electronic system.....	2566
ICTTEN322 Provide infrastructure for telecommunications network customer equipment.....	2568
Assessment Requirements for ICTTEN322 Provide infrastructure for telecommunications network customer equipment.....	2572
ICTTEN416 Install, configure and test an internet protocol network.....	2574
Assessment Requirements for ICTTEN416 Install, configure and test an internet protocol network.....	2578
ICTTEN428 Prepare design drawings and specification for telecommunications installations.....	2580
Assessment Requirements for ICTTEN428 Prepare design drawings and specification for telecommunications installations.....	2584
ICTTEN432 Identify requirements for customer telecommunications equipment.....	2586

Assessment Requirements for ICTTEN432 Identify requirements for customer telecommunications equipment.....	2589
ICTTEN433 Install configuration programs on PC based customer equipment	2591
Assessment Requirements for ICTTEN433 Install configuration programs on PC based customer equipment.....	2594
ICTTEN434 Install, configure and test internet protocol networks	2596
Assessment Requirements for ICTTEN434 Install, configure and test internet protocol networks	2599
ICTTEN435 Solve electrical-based telecommunications circuitry and cabling problems.....	2601
Assessment Requirements for ICTTEN435 Solve electrical-based telecommunications circuitry and cabling problems	2604
ICTTEN519 Design network building projects.....	2607
Assessment Requirements for ICTTEN519 Design network building projects	2610
ICTTEN520 Commission network equipment.....	2612
Assessment Requirements for ICTTEN520 Commission network equipment.....	2615
ICTTEN521 Integrate network systems and equipment	2617
Assessment Requirements for ICTTEN521 Integrate network systems and equipment.....	2620
ICTTEN522 Cut over new and replacement network equipment.....	2622
Assessment Requirements for ICTTEN522 Cut over new and replacement network equipment.....	2625
ICTTEN523 Locate, diagnose and rectify complex system equipment faults	2627
Assessment Requirements for ICTTEN523 Locate, diagnose and rectify complex system equipment faults	2630
ICTTEN524 Diagnose and organise repair of complex equipment faults.....	2632
Assessment Requirements for ICTTEN524 Diagnose and organise repair of complex equipment faults	2635
ICTTEN525 Install, configure and test local area network switches.....	2637
Assessment Requirements for ICTTEN525 Install, configure and test local area network switches.....	2640
ICTTEN526 Dimension and design a radio frequency identification system.....	2642
Assessment Requirements for ICTTEN526 Dimension and design a radio frequency identification system	2645
ICTTEN527 Plan wireless mesh networks	2647
Assessment Requirements for ICTTEN527 Plan wireless mesh networks.....	2650
ICTTEN613 Assess integration of international network equipment into Australian networks	2652
Assessment Requirements for ICTTEN613 Assess integration of international network equipment into Australian networks	2655
ICTTEN614 Conduct network system optimisation and administration	2657
Assessment Requirements for ICTTEN614 Conduct network system optimisation and administration	2660
ICTTEN615 Manage network traffic.....	2662
Assessment Requirements for ICTTEN615 Manage network traffic	2666
ICTTEN616 Rectify client services following network outages and faults	2668
Assessment Requirements for ICTTEN616 Rectify client services following network outages and faults	2671
ICTTEN617 Manage common channel signalling networks	2673
Assessment Requirements for ICTTEN617 Manage common channel signalling networks.....	2676
ICTTEN618 Analyse and organise repair of highly complex networks.....	2678
Assessment Requirements for ICTTEN618 Analyse and organise repair of highly complex networks	2681
ICTTEN619 Test new software and hardware releases	2683
Assessment Requirements for ICTTEN619 Test new software and hardware releases	2686

ICTTEN620 Produce and evaluate architecture designs for convergent cellular mobile networks	2688
Assessment Requirements for ICTTEN620 Produce and evaluate architecture designs for convergent cellular mobile networks.....	2691
ICTTEN621 Design and configure IP-MPLS networks with virtual private network tunnelling.....	2693
Assessment Requirements for ICTTEN621 Design and configure IP-MPLS networks with virtual private network tunnelling	2696
ICTTEN622 Produce ICT network architecture designs	2698
Assessment Requirements for ICTTEN622 Produce ICT network architecture designs.....	2701
ICTTEN623 Design and manage internet protocol TV in a service provider network ..	2703
Assessment Requirements for ICTTEN623 Design and manage internet protocol TV in a service provider network	2706
ICTTEN817 Plan transmission networks	2708
Assessment Requirements for ICTTEN817 Plan transmission networks	2711
ICTTEN818 Align systems with product and technology strategy	2713
Assessment Requirements for ICTTEN818 Align systems with product and technology strategy.....	2716
ICTTEN819 Translate domain and solution architectures into platform requirements and designs	2718
Assessment Requirements for ICTTEN819 Translate domain and solution architectures into platform requirements and designs.....	2721
ICTTEN820 Manage end to end architectural solutions across multiple domains	2723
Assessment Requirements for ICTTEN820 Manage end to end architectural solutions across multiple domains.....	2726
ICTTEN821 Manage solution architecture and impacts	2728
Assessment Requirements for ICTTEN821 Manage solution architecture and impacts.....	2731
ICTTEN822 Manage application layer solutions	2733
Assessment Requirements for ICTTEN822 Manage application layer solutions	2736
ICTTEN823 Manage voice, data and internet protocol network solutions.....	2738
Assessment Requirements for ICTTEN823 Manage voice, data and internet protocol network solutions	2741
ICTTEN824 Manage network testing strategies	2743
Assessment Requirements for ICTTEN824 Manage network testing strategies.....	2746
ICTTEN825 Investigate applications of cloud networks in network switching	2748
Assessment Requirements for ICTTEN825 Investigate applications of cloud networks in network switching	2751
ICTTEN826 Evaluate and apply digital signal processing to communication systems ..	2753
Assessment Requirements for ICTTEN826 Evaluate and apply digital signal processing to communication systems	2756
ICTTEN827 Produce engineering solutions	2758
Assessment Requirements for ICTTEN827 Produce engineering solutions	2761
ICTTEN828 Manage development and application of testing artefacts	2763
Assessment Requirements for ICTTEN828 Manage development and application of testing artefacts.....	2766
ICTWEB304 Build simple web pages	2768
Assessment Requirements for ICTWEB304 Build simple web pages.....	2771
ICTWEB305 Produce digital images for the web.....	2773
Assessment Requirements for ICTWEB305 Produce digital images for the web	2775
ICTWEB306 Develop web presence using social media.....	2777
Assessment Requirements for ICTWEB306 Develop web presence using social media.....	2780
ICTWEB432 Design website layouts.....	2782
Assessment Requirements for ICTWEB432 Design website layouts	2785

ICTWEB433 Confirm accessibility of websites.....	2787
Assessment Requirements for ICTWEB433 Confirm accessibility of websites	2790
ICTWEB434 Transfer content to websites.....	2792
Assessment Requirements for ICTWEB434 Transfer content to websites.....	2795
ICTWEB435 Maintain website performance	2797
Assessment Requirements for ICTWEB435 Maintain website performance	2800
ICTWEB436 Monitor traffic and compile website traffic reports.....	2802
Assessment Requirements for ICTWEB436 Monitor traffic and compile website traffic reports	2804
ICTWEB437 Create website testing procedures.....	2806
Assessment Requirements for ICTWEB437 Create website testing procedures.....	2809
ICTWEB438 Conduct operational acceptance tests of websites.....	2811
Assessment Requirements for ICTWEB438 Conduct operational acceptance tests of websites.....	2814
ICTWEB439 Confirm basic website security.....	2816
Assessment Requirements for ICTWEB439 Confirm basic website security	2819
ICTWEB440 Use web authoring tools	2821
Assessment Requirements for ICTWEB440 Use web authoring tools	2824
ICTWEB441 Produce basic client-side script.....	2826
Assessment Requirements for ICTWEB441 Produce basic client-side script.....	2829
ICTWEB442 Produce interactive web animation	2831
Assessment Requirements for ICTWEB442 Produce interactive web animation.....	2834
ICTWEB443 Implement search engine optimisations.....	2836
Assessment Requirements for ICTWEB443 Implement search engine optimisations ...	2839
ICTWEB444 Create responsive website layouts	2841
Assessment Requirements for ICTWEB444 Create responsive website layouts	2844
ICTWEB445 Implement content management systems	2846
Assessment Requirements for ICTWEB445 Implement content management systems.....	2849
ICTWEB446 Integrate social web technologies	2851
Assessment Requirements for ICTWEB446 Integrate social web technologies	2854
ICTWEB447 Build basic website using development software and ICT tools.....	2856
Assessment Requirements for ICTWEB447 Build basic website using development software and ICT tools.....	2859
ICTWEB448 Confirm website content meets technical protocols and standards	2861
Assessment Requirements for ICTWEB448 Confirm website content meets technical protocols and standards	2864
ICTWEB449 Confirm website access and useability.....	2866
Assessment Requirements for ICTWEB449 Confirm website access and useability	2869
ICTWEB450 Evaluate and select a web hosting service.....	2871
Assessment Requirements for ICTWEB450 Evaluate and select a web hosting service	2874
ICTWEB451 Apply structured query language in relational databases.....	2876
Assessment Requirements for ICTWEB451 Apply structured query language in relational databases	2879
ICTWEB452 Create a markup language document.....	2881
Assessment Requirements for ICTWEB452 Create a markup language document.....	2884
ICTWEB453 Optimise websites for mobile devices	2886
Assessment Requirements for ICTWEB453 Optimise websites for mobile devices	2889
ICTWEB513 Build dynamic websites.....	2891
Assessment Requirements for ICTWEB513 Build dynamic websites.....	2894
ICTWEB514 Create dynamic web pages.....	2896
Assessment Requirements for ICTWEB514 Create dynamic web pages.....	2899
ICTWEB517 Create web-based programs.....	2901
Assessment Requirements for ICTWEB517 Create web-based programs	2903

ICTWEB518 Build a document using extensible markup language	2905
Assessment Requirements for ICTWEB518 Build a document using extensible markup language.....	2908
ICTWEB519 Develop complex web page layouts.....	2910
Assessment Requirements for ICTWEB519 Develop complex web page layouts	2913
ICTWEB520 Develop complex cascading style sheets.....	2915
Assessment Requirements for ICTWEB520 Develop complex cascading style sheets ...	2918
ICTWEB521 Customise complex ICT content management systems.....	2920
Assessment Requirements for ICTWEB521 Customise complex ICT content management systems.....	2923
ICTWEB522 Develop website information architecture	2925
Assessment Requirements for ICTWEB522 Develop website information architecture	2928
ICTWEB523 Manage transactions using site server tools.....	2930
Assessment Requirements for ICTWEB523 Manage transactions using site server tools	2933
ICTWEB524 Analyse information and assign meta tags.....	2935
Assessment Requirements for ICTWEB524 Analyse information and assign meta tags	2938
ICTWEB525 Implement quality assurance process for websites	2940
Assessment Requirements for ICTWEB525 Implement quality assurance process for websites.....	2943
ICTWEB526 Implement and use web services.....	2945
Assessment Requirements for ICTWEB526 Implement and use web services	2948
ICTWEB527 Research and apply emerging web technology trends	2950
Assessment Requirements for ICTWEB527 Research and apply emerging web technology trends.....	2953
ICTWHS205 Work safely near power infrastructure at a telecommunications workplace	2955
Assessment Requirements for ICTWHS205 Work safely near power infrastructure at a telecommunications workplace	2959
ICTWOR202 Work effectively in the digital and telecommunications industry.....	2962
Assessment Requirements for ICTWOR202 Work effectively in the digital and telecommunications industry	2965
ICTWOR308 Provide customer service to telecommunications customers	2967
Assessment Requirements for ICTWOR308 Provide customer service to telecommunications customers.....	2971
ICTXRE401 Apply augmented reality solutions in organisations	2973
Assessment Requirements for ICTXRE401 Apply augmented reality solutions in organisations.....	2976
ICTXRE402 Apply virtual reality solutions in organisations	2979
Assessment Requirements for ICTXRE402 Apply virtual reality solutions in organisations	2982
ICTXRE403 Design mixed reality solutions.....	2984
Assessment Requirements for ICTXRE403 Design mixed reality solutions	2987
BSBCRT201 Develop and apply thinking and problem solving skills	2989
Assessment Requirements for BSB CRT201 Develop and apply thinking and problem solving skills.....	2991
BSBCRT301 Develop and extend critical and creative thinking skills	2993
Assessment Requirements for BSB CRT301 Develop and extend critical and creative thinking skills	2997
BSBCRT404 Apply advanced critical thinking to work processes.....	2999
Assessment Requirements for BSB CRT404 Apply advanced critical thinking to work processes.....	3003
BSBCRT411 Apply critical thinking to work practices.....	3005
Assessment Requirements for BSB CRT411 Apply critical thinking to work practices	3008
BSBCRT512 Originate and develop concepts	3010
Assessment Requirements for BSB CRT512 Originate and develop concepts.....	3013

BSBCRT611 Apply critical thinking for complex problem solving.....	3015
Assessment Requirements for BSBCRT611 Apply critical thinking for complex problem solving.....	3018
BSBESB301 Investigate business opportunities	3020
Assessment Requirements for BSBESB301 Investigate business opportunities.....	3023
BSBESB305 Address compliance requirements for new business ventures.....	3025
Assessment Requirements for BSBESB305 Address compliance requirements for new business ventures	3028
BSBESB402 Establish legal and risk management requirements of new business ventures	3030
Assessment Requirements for BSBESB402 Establish legal and risk management requirements of new business ventures	3033
BSBESB406 Establish operational strategies and procedures for new business ventures	3035
Assessment Requirements for BSBESB406 Establish operational strategies and procedures for new business ventures	3038
BSBINS201 Process and maintain workplace information	3040
Assessment Requirements for BSBINS201 Process and maintain workplace information	3042
BSBITU211 Produce digital text documents	3044
Assessment Requirements for BSBITU211 Produce digital text documents.....	3047
BSBLDR414 Lead team effectiveness	3049
Assessment Requirements for BSBLDR414 Lead team effectiveness	3052
BSBLDR523 Lead and manage effective workplace relationships	3054
Assessment Requirements for BSBLDR523 Lead and manage effective workplace relationships	3057
BSBLDR601 Lead and manage organisational change	3059
Assessment Requirements for BSBLDR601 Lead and manage organisational change ..	3062
BSBOPS201 Work effectively in business environments.....	3064
Assessment Requirements for BSBOPS201 Work effectively in business environments	3067
BSBOPS202 Engage with customers.....	3069
Assessment Requirements for BSBOPS202 Engage with customers	3072
BSBOPS203 Deliver a service to customers	3074
Assessment Requirements for BSBOPS203 Deliver a service to customers	3077
BSBOPS404 Implement customer service strategies.....	3079
Assessment Requirements for BSBOPS404 Implement customer service strategies.....	3082
BSBPEF201 Support personal wellbeing in the workplace.....	3084
Assessment Requirements for BSBPEF201 Support personal wellbeing in the workplace	3086
BSBPEF202 Plan and apply time management.....	3088
Assessment Requirements for BSBPEF202 Plan and apply time management.....	3091
BSBPEF402 Develop personal work priorities.....	3093
Assessment Requirements for BSBPEF402 Develop personal work priorities	3096
BSBPMG430 Undertake project work.....	3098
Assessment Requirements for BSBPMG430 Undertake project work	3101
BSBPMG530 Manage project scope	3103
Assessment Requirements for BSBPMG530 Manage project scope	3106
BSBPMG532 Manage project quality	3108
Assessment Requirements for BSBPMG532 Manage project quality	3111
BSBPMG536 Manage project risk.....	3113
Assessment Requirements for BSBPMG536 Manage project risk	3116
BSBPMG537 Manage project procurement	3118
Assessment Requirements for BSBPMG537 Manage project procurement.....	3121
BSBPMG539 Manage project governance	3123
Assessment Requirements for BSBPMG539 Manage project governance	3126
BSBSMB407 Manage a small team.....	3128
Assessment Requirements for BSBSMB407 Manage a small team	3133

BSBSTR601 Manage innovation and continuous improvement.....	3135
Assessment Requirements for BSBSTR601 Manage innovation and continuous improvement.....	3139
BSBSUS211 Participate in sustainable work practices.....	3141
Assessment Requirements for BSBSUS211 Participate in sustainable work practices ..	3143
BSBSUS401 Implement and monitor environmentally sustainable work practices.....	3145
Assessment Requirements for BSBSUS401 Implement and monitor environmentally sustainable work practices	3149
BSBSUS402 Implement an environmental management plan.....	3151
Assessment Requirements for BSBSUS402 Implement an environmental management plan.....	3154
BSBSUS411 Implement and monitor environmentally sustainable work practices.....	3156
Assessment Requirements for BSBSUS411 Implement and monitor environmentally sustainable work practices	3159
BSBSUS511 Develop workplace policies and procedures for sustainability	3161
Assessment Requirements for BSBSUS511 Develop workplace policies and procedures for sustainability	3164
BSBTEC101 Operate digital devices.....	3166
Assessment Requirements for BSBTEC101 Operate digital devices	3169
BSBTEC201 Use business software applications.....	3171
Assessment Requirements for BSBTEC201 Use business software applications	3173
BSBTEC202 Use digital technologies to communicate in a work environment.....	3175
Assessment Requirements for BSBTEC202 Use digital technologies to communicate in a work environment.....	3178
BSBTEC203 Research using the internet.....	3180
Assessment Requirements for BSBTEC203 Research using the internet	3182
BSBTEC301 Design and produce business documents	3184
Assessment Requirements for BSBTEC301 Design and produce business documents ..	3187
BSBTEC302 Design and produce spreadsheets	3189
Assessment Requirements for BSBTEC302 Design and produce spreadsheets	3192
BSBTEC303 Create electronic presentations	3194
Assessment Requirements for BSBTEC303 Create electronic presentations	3196
BSBTEC405 Review and maintain organisation's digital presence.....	3198
Assessment Requirements for BSBTEC405 Review and maintain organisation's digital presence	3201
BSBTEC501 Develop and implement an e-commerce strategy	3203
Assessment Requirements for BSBTEC501 Develop and implement an e-commerce strategy	3206
BSBTWK201 Work effectively with others.....	3208
Assessment Requirements for BSBTWK201 Work effectively with others	3211
BSBTWK502 Manage team effectiveness	3213
Assessment Requirements for BSBTWK502 Manage team effectiveness.....	3216
BSBWH5211 Contribute to the health and safety of self and others	3218
Assessment Requirements for BSBWH5211 Contribute to the health and safety of self and others	3221
BSBXCS301 Protect own personal online profile from cyber security threats	3223
Assessment Requirements for BSBXCS301 Protect own personal online profile from cyber security threats	3226
BSBXCS302 Identify and report online security threats.....	3228
Assessment Requirements for BSBXCS302 Identify and report online security threats	3230
BSBXCS303 Securely manage personally identifiable information and workplace information.....	3232

Assessment Requirements for BSBXCS303 Securely manage personally identifiable information and workplace information	3235
BSBXCS401 Maintain security of digital devices.....	3237
Assessment Requirements for BSBXCS401 Maintain security of digital devices	3239
BSBXCS402 Promote workplace cyber security awareness and best practices	3241
Assessment Requirements for BSBXCS402 Promote workplace cyber security awareness and best practices.....	3244
BSBXCS403 Contribute to cyber security threat assessments	3246
Assessment Requirements for BSBXCS403 Contribute to cyber security threat assessments	3249
BSBXCS404 Contribute to cyber security risk management	3251
Assessment Requirements for BSBXCS404 Contribute to cyber security risk management	3254
BSBXCS405 Contribute to cyber security incident responses.....	3256
Assessment Requirements for BSBXCS405 Contribute to cyber security incident responses.....	3259
BSBXTW301 Work in a team.....	3261
Assessment Requirements for BSBXTW301 Work in a team	3264
BSBXTW401 Lead and facilitate a team.....	3266
Assessment Requirements for BSBXTW401 Lead and facilitate a team.....	3269
CPCCBC4004 Identify and produce estimated costs for building and construction projects	3271
Assessment Requirements for CPCCBC4004 Identify and produce estimated costs for building and construction projects.....	3274
CPCCCM2007 Use explosive power tools	3276
Assessment Requirements for CPCCCM2007 Use explosive power tools.....	3279
CPCCDE3014 Remove non-friable asbestos.....	3281
Assessment Requirements for CPCCDE3014 Remove non-friable asbestos.....	3285
CPCCDE3014A Remove non-friable asbestos	3287
CPCCLDG3001 Licence to perform dogging.....	3299
Assessment Requirements for CPCCLDG3001 Licence to perform dogging	3303
CPCCLRG3001 Licence to perform rigging basic level.....	3308
Assessment Requirements for CPCCLRG3001 Licence to perform rigging basic level.....	3312
CPCCOHS1001A Work safely in the construction industry	3318
CPCCWHS1001 Prepare to work safely in the construction industry	3329
Assessment Requirements for CPCCWHS1001 Prepare to work safely in the construction industry	3333
CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry	3337
Assessment Requirements for CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry.....	3340
CPCPCM2043A Carry out WHS requirements.....	3342
CPPSEC3124 Prepare and present evidence in court	3352
Assessment Requirements for CPPSEC3124 Prepare and present evidence in court	3355
CPPSEC5003 Assess security risk management options	3358
Assessment Requirements for CPPSEC5003 Assess security risk management options.....	3361
CPPSEC5004 Develop security risk management plans	3364
Assessment Requirements for CPPSEC5004 Develop security risk management plans	3368
CPPSEC5005 Implement security risk management plans	3371
Assessment Requirements for CPPSEC5005 Implement security risk management plans.....	3374
CPPSEC5006 Develop strategies to implement advanced technology security systems.....	3377
Assessment Requirements for CPPSEC5006 Develop strategies to implement advanced technology security systems	3380
CUAANM301 Create 2D digital animations	3383
Assessment Requirements for CUAANM301 Create 2D digital animations.....	3387

CUAANM302 Create 3D digital animations	3389
Assessment Requirements for CUAANM302 Create 3D digital animations	3393
CUAANM412 Create digital visual effects	3395
Assessment Requirements for CUAANM412 Create digital visual effects	3398
CUACAM311 Shoot material for screen productions	3400
Assessment Requirements for CUACAM311 Shoot material for screen productions	3404
CUADIG211 Maintain interactive content	3406
Assessment Requirements for CUADIG211 Maintain interactive content	3409
CUADIG212 Develop digital imaging skills	3411
Assessment Requirements for CUADIG212 Develop digital imaging skills	3414
CUADIG301 Prepare video assets	3416
Assessment Requirements for CUADIG301 Prepare video assets	3419
CUADIG302 Author interactive sequences	3421
Assessment Requirements for CUADIG302 Author interactive sequences	3424
CUADIG303 Produce and prepare photo images	3426
Assessment Requirements for CUADIG303 Produce and prepare photo images	3430
CUADIG304 Create visual design components	3432
Assessment Requirements for CUADIG304 Create visual design components	3435
CUADIG311 Prepare video assets	3437
Assessment Requirements for CUADIG311 Prepare video assets	3440
CUADIG312 Author interactive sequences	3442
Assessment Requirements for CUADIG312 Author interactive sequences	3445
CUADIG401 Author interactive media	3447
Assessment Requirements for CUADIG401 Author interactive media	3451
CUADIG512 Design digital applications	3453
Assessment Requirements for CUADIG512 Design digital applications	3456
CUADIG513 Design e-learning resources	3458
Assessment Requirements for CUADIG513 Design e-learning resources	3461
CUADIG517 Design digital simulations	3463
Assessment Requirements for CUADIG517 Design digital simulations	3466
CUAPHI524 Prepare digital images for pre-press processing	3468
Assessment Requirements for CUAPHI524 Prepare digital images for pre-press processing	3471
CUAPOS211 Perform basic vision and sound editing	3473
Assessment Requirements for CUAPOS211 Perform basic vision and sound editing	3476
CUAPOS411 Edit digital content for fast turnaround	3478
Assessment Requirements for CUAPOS411 Edit digital content for fast turnaround	3481
CUAPOS412 Manage media assets	3483
Assessment Requirements for CUAPOS412 Manage media assets	3486
CUAPPM417 Create storyboards	3488
Assessment Requirements for CUAPPM417 Create storyboards	3491
CUASOU212 Perform basic sound editing	3493
Assessment Requirements for CUASOU212 Perform basic sound editing	3496
CUASOU304 Prepare audio assets	3498
Assessment Requirements for CUASOU304 Prepare audio assets	3501
CUASOU417 Edit sound	3503
Assessment Requirements for CUASOU417 Edit sound	3506
CUASOU504 Produce sound recordings	3508
Assessment Requirements for CUASOU504 Produce sound recordings	3512
ICTBWN302 Install optical fibre splitters in fibre distribution hubs	3514
Assessment Requirements for ICTBWN302 Install optical fibre splitters in fibre distribution hubs	3518
ICTBWN303 Install lead-in module and cable for fibre to the premises	3520

Assessment Requirements for ICTBWN303 Install lead-in module and cable for fibre to the premises	3524
ICTCBL205 Joint metallic conductor cable on customer premises	3526
Assessment Requirements for ICTCBL205 Joint metallic conductor cable on customer premises	3529
ICTCBL211 Install an above ground equipment enclosure	3531
Assessment Requirements for ICTCBL211 Install an above ground equipment enclosure	3534
ICTCBL212 Erect aerial cable supports	3536
Assessment Requirements for ICTCBL212 Erect aerial cable supports	3539
ICTCBL219 Apply safe technical work practices for cabling registration when configuring an ADSL circuit	3541
Assessment Requirements for ICTCBL219 Apply safe technical work practices for cabling registration when configuring an ADSL circuit	3545
ICTCBL238 Install, maintain and modify customer premises communications cabling: ACMA Lift Rule	3547
Assessment Requirements for ICTCBL238 Install, maintain and modify customer premises communications cabling: ACMA Lift Rule	3553
ICTCBL301 Install, terminate and certify structured cabling installation	3555
Assessment Requirements for ICTCBL301 Install, terminate and certify structured cabling installation	3559
ICTCBL303 Install and terminate coaxial cable	3561
Assessment Requirements for ICTCBL303 Install and terminate coaxial cable	3565
ICTCBL305 Hand over cable systems and equipment	3567
Assessment Requirements for ICTCBL305 Hand over cable systems and equipment	3570
ICTCBL306 Locate and identify cable system faults	3572
Assessment Requirements for ICTCBL306 Locate and identify cable system faults	3576
ICTCBL311 Install systems and equipment on customer premises	3578
Assessment Requirements for ICTCBL311 Install systems and equipment on customer premises	3582
ICTCBL314 Install network cable equipment	3584
Assessment Requirements for ICTCBL314 Install network cable equipment	3588
ICTCBL316 Install ribbon fibre cable in the FTTX distribution network	3590
Assessment Requirements for ICTCBL316 Install ribbon fibre cable in the FTTX distribution network	3594
ICTCBL319 Rearrange large size copper cable	3597
Assessment Requirements for ICTCBL319 Rearrange large size copper cable	3601
ICTCBL320 Jumper metallic conductor cable in the access network	3603
Assessment Requirements for ICTCBL320 Jumper metallic conductor cable in the access network	3607
ICTCBL401 Prepare design drawings and specification for a cable installation	3609
Assessment Requirements for ICTCBL401 Prepare design drawings and specification for a cable installation	3612
ICTCBL403 Supervise cabling project	3614
Assessment Requirements for ICTCBL403 Supervise cabling project	3618
ICTCBL404 Test cable bearers	3620
Assessment Requirements for ICTCBL404 Test cable bearers	3624
ICTCBL405 Remotely locate and identify cable network faults	3626
Assessment Requirements for ICTCBL405 Remotely locate and identify cable network faults	3629
ICTCMP201 Organise and monitor cabling to ensure compliance with regulatory and industry standards	3631
Assessment Requirements for ICTCMP201 Organise and monitor cabling to ensure compliance with regulatory and industry standards	3634

ICTDBS407 Monitor physical database implementation	3636
Assessment Requirements for ICTDBS407 Monitor physical database implementation	3639
ICTDBS413 Determine database requirements	3641
Assessment Requirements for ICTDBS413 Determine database requirements	3644
ICTDBS414 Complete database backup and restore	3646
Assessment Requirements for ICTDBS414 Complete database backup and restore	3649
ICTDBS415 Build a database	3651
Assessment Requirements for ICTDBS415 Build a database	3654
ICTDBS503 Create a data warehouse	3656
Assessment Requirements for ICTDBS503 Create a data warehouse	3660
ICTDRE302 Locate and rectify digital reception equipment faults	3662
Assessment Requirements for ICTDRE302 Locate and rectify digital reception equipment faults	3666
ICTDRE303 Install a complex digital reception system	3668
Assessment Requirements for ICTDRE303 Install a complex digital reception system	3672
ICTDRE401 Integrate customer digital reception equipment	3674
Assessment Requirements for ICTDRE401 Integrate customer digital reception equipment	3678
ICTEDU301 Train customers in new technology	3680
Assessment Requirements for ICTEDU301 Train customers in new technology	3683
ICTGAM418 Use simple modelling for animation	3685
Assessment Requirements for ICTGAM418 Use simple modelling for animation	3689
ICTICT424 Address cyber security requirements	3691
Assessment Requirements for ICTICT424 Address cyber security requirements	3694
ICTICT426 Identify and evaluate emerging technologies and practices	3696
Assessment Requirements for ICTICT426 Identify and evaluate emerging technologies and practices	3699
ICTICT428 Select cloud storage solutions	3701
Assessment Requirements for ICTICT428 Select cloud storage solutions	3704
ICTICT517 Match ICT needs with the strategic direction of the organisation	3706
Assessment Requirements for ICTICT517 Match ICT needs with the strategic direction of the organisation	3709
ICTICT608 Interact with clients on a business level	3711
Assessment Requirements for ICTICT608 Interact with clients on a business level	3715
ICTNPL401 Apply business acumen to network planning	3717
Assessment Requirements for ICTNPL401 Apply business acumen to network planning	3721
ICTNPL402 Plan the deployment of access network architectures	3723
Assessment Requirements for ICTNPL402 Plan the deployment of access network architectures	3727
ICTNPL409 Apply knowledge of regulation and legislation for the telecommunications industry	3729
Assessment Requirements for ICTNPL409 Apply knowledge of regulation and legislation for the telecommunications industry	3733
ICTNPL410 Plan the telecommunications access network for an estate	3735
Assessment Requirements for ICTNPL410 Plan the telecommunications access network for an estate	3739
ICTNWK420 Install and configure virtual machines	3741
Assessment Requirements for ICTNWK420 Install and configure virtual machines	3744
ICTNWK421 Install, configure and test network security	3746
Assessment Requirements for ICTNWK421 Install, configure and test network security	3749
ICTNWK529 Install and manage complex ICT networks	3752
Assessment Requirements for ICTNWK529 Install and manage complex ICT networks	3756
ICTNWK536 Plan, implement and test enterprise communication solutions	3758

Assessment Requirements for ICTNWK536 Plan, implement and test enterprise communication solutions.....	3761
ICTNWK612 Plan and manage troubleshooting advanced integrated IP networks.....	3763
Assessment Requirements for ICTNWK612 Plan and manage troubleshooting advanced integrated IP networks.....	3766
ICTNWK615 Design and configure desktop virtualisation.....	3768
Assessment Requirements for ICTNWK615 Design and configure desktop virtualisation.....	3771
ICTOPN403 Prepare activity plans and specifications for a fibre to the x installation..	3773
Assessment Requirements for ICTOPN403 Prepare activity plans and specifications for a fibre to the x installation.....	3777
ICTPMG202 Plan, organise and undertake work activities	3779
Assessment Requirements for ICTPMG202 Plan, organise and undertake work activities.....	3782
ICTPMG402 Schedule installation of customer premises equipment.....	3784
Assessment Requirements for ICTPMG402 Schedule installation of customer premises equipment.....	3787
ICTPMG403 Manage the delivery of network infrastructure	3789
Assessment Requirements for ICTPMG403 Manage the delivery of network infrastructure	3793
ICTPMG503 Prepare a project brief.....	3795
Assessment Requirements for ICTPMG503 Prepare a project brief.....	3799
ICTPRG301 Apply introductory programming techniques.....	3801
Assessment Requirements for ICTPRG301 Apply introductory programming techniques.....	3804
ICTPRG430 Apply introductory object-oriented language skills.....	3806
Assessment Requirements for ICTPRG430 Apply introductory object-oriented language skills.....	3809
ICTPRG531 Prepare for application development using current methods	3811
Assessment Requirements for ICTPRG531 Prepare for application development using current methods.....	3814
ICTPRG532 Apply advanced object-oriented language skills.....	3816
Assessment Requirements for ICTPRG532 Apply advanced object-oriented language skills.....	3819
ICTRFN201 Install a satellite antenna.....	3822
Assessment Requirements for ICTRFN201 Install a satellite antenna	3826
ICTRFN202 Install a terrestrial antenna.....	3828
Assessment Requirements for ICTRFN202 Install a terrestrial antenna	3831
ICTRFN301 Install a radio communications antenna and feedline.....	3833
Assessment Requirements for ICTRFN301 Install a radio communications antenna and feedline	3837
ICTRFN304 Construct and test a radio communications device.....	3839
Assessment Requirements for ICTRFN304 Construct and test a radio communications device.....	3842
ICTRFN305 Operate and maintain radio communications technical instruments and field equipment.....	3844
Assessment Requirements for ICTRFN305 Operate and maintain radio communications technical instruments and field equipment.....	3848
ICTRFN402 Select antenna system for radio communications	3850
Assessment Requirements for ICTRFN402 Select antenna system for radio communications	3853
ICTRFN405 Install radio communications base station equipment	3855
Assessment Requirements for ICTRFN405 Install radio communications base station equipment.....	3859
ICTRFN502 Test and measure cellular phone and network equipment performance ..	3861

Assessment Requirements for ICTRFN502 Test and measure cellular phone and network equipment performance	3865
ICTSAD501 Model data objects	3867
Assessment Requirements for ICTSAD501 Model data objects	3870
ICTSAD502 Model data processes.....	3872
Assessment Requirements for ICTSAD502 Model data processes	3875
ICTSAD604 Manage and communicate ICT solutions.....	3877
Assessment Requirements for ICTSAD604 Manage and communicate ICT solutions ..	3881
ICTSAS305 Provide ICT advice to clients	3883
Assessment Requirements for ICTSAS305 Provide ICT advice to clients	3887
ICTSAS308 Run standard diagnostic tests	3889
Assessment Requirements for ICTSAS308 Run standard diagnostic tests	3892
ICTSAS502 Establish and maintain client user liaison.....	3894
Assessment Requirements for ICTSAS502 Establish and maintain client user liaison..	3897
ICTSAS512 Review and manage delivery of maintenance services.....	3899
Assessment Requirements for ICTSAS512 Review and manage delivery of maintenance services	3902
ICTSAS518 Install and upgrade operating systems	3904
Assessment Requirements for ICTSAS518 Install and upgrade operating systems.....	3907
ICTSAS519 Perform systems tests.....	3909
Assessment Requirements for ICTSAS519 Perform systems tests	3912
ICTSAS520 Develop detailed test plans	3914
Assessment Requirements for ICTSAS520 Develop detailed test plans.....	3917
ICTSAS522 Manage the testing process	3919
Assessment Requirements for ICTSAS522 Manage the testing process.....	3922
ICTSMB401 Set up and operate a contractor business.....	3924
Assessment Requirements for ICTSMB401 Set up and operate a contractor business..	3928
ICTSUS402 Install and test power saving hardware	3930
Assessment Requirements for ICTSUS402 Install and test power saving hardware	3933
ICTSUS403 Install and test power management software	3935
Assessment Requirements for ICTSUS403 Install and test power management software	3938
ICTSUS404 Install thin client applications for power over ethernet	3940
Assessment Requirements for ICTSUS404 Install thin client applications for power over ethernet.....	3943
ICTTCR203 Use safe rigging practices to climb and perform rescues on telecommunications network structures.....	3945
Assessment Requirements for ICTTCR203 Use safe rigging practices to climb and perform rescues on telecommunications network structures.....	3949
ICTTEN203 Install and configure a home or small office network.....	3952
Assessment Requirements for ICTTEN203 Install and configure a home or small office network.....	3955
ICTTEN204 Install and configure a small to medium business network.....	3957
Assessment Requirements for ICTTEN204 Install and configure a small to medium business network.....	3960
ICTTEN205 Build and maintain a secure network.....	3962
Assessment Requirements for ICTTEN205 Build and maintain a secure network.....	3965
ICTTEN206 Operate new media software packages.....	3967
Assessment Requirements for ICTTEN206 Operate new media software packages	3970
ICTTEN207 Install and test internet protocol devices in convergence networks.....	3972
Assessment Requirements for ICTTEN207 Install and test internet protocol devices in convergence networks	3976
ICTTEN301 Provide infrastructure for telecommunications network equipment	3978

Assessment Requirements for ICTTEN301 Provide infrastructure for telecommunications network equipment.....	3982
ICTTEN310 Remove and replace electronic circuit boards in carrier equipment.....	3984
Assessment Requirements for ICTTEN310 Remove and replace electronic circuit boards in carrier equipment.....	3988
ICTTEN402 Estimate and quote for customer telecommunications equipment installation.....	3990
Assessment Requirements for ICTTEN402 Estimate and quote for customer telecommunications equipment installation.....	3993
ICTTEN403 Assign a transmission path.....	3995
Assessment Requirements for ICTTEN403 Assign a transmission path.....	3998
ICTTEN404 Install and configure a wireless mesh network.....	4000
Assessment Requirements for ICTTEN404 Install and configure a wireless mesh network.....	4004
ICTTEN406 Effect changes to existing customer premises equipment systems and equipment.....	4006
Assessment Requirements for ICTTEN406 Effect changes to existing customer premises equipment systems and equipment.....	4010
ICTTEN408 Complete equipment and software upgrades.....	4012
Assessment Requirements for ICTTEN408 Complete equipment and software upgrades.....	4016
ICTTEN409 Commission an electronic system.....	4018
Assessment Requirements for ICTTEN409 Commission an electronic system.....	4022
ICTTEN410 Locate, diagnose and rectify faults.....	4024
Assessment Requirements for ICTTEN410 Locate, diagnose and rectify faults.....	4027
ICTTEN411 Monitor, analyse and action telecommunications network alarms.....	4029
Assessment Requirements for ICTTEN411 Monitor, analyse and action telecommunications network alarms.....	4033
ICTTEN412 Undertake routine maintenance of the telecommunications network.....	4035
Assessment Requirements for ICTTEN412 Undertake routine maintenance of the telecommunications network.....	4039
ICTTEN413 Undertake remote diagnosis and repair of network faults.....	4041
Assessment Requirements for ICTTEN413 Undertake remote diagnosis and repair of network faults.....	4045
ICTTEN414 Repair telecommunication system faults.....	4047
Assessment Requirements for ICTTEN414 Repair telecommunication system faults.....	4051
ICTTEN415 Install and configure internet protocol TV in a home network.....	4053
Assessment Requirements for ICTTEN415 Install and configure internet protocol TV in a home network.....	4057
ICTTEN417 Install, configure and test a router.....	4059
Assessment Requirements for ICTTEN417 Install, configure and test a router.....	4063
ICTTEN418 Install and test a radio frequency identification system.....	4065
Assessment Requirements for ICTTEN418 Install and test a radio frequency identification system.....	4069
ICTTEN419 Implement and troubleshoot enterprise routers and switches.....	4071
Assessment Requirements for ICTTEN419 Implement and troubleshoot enterprise routers and switches.....	4075
ICTTEN420 Design, install and configure an internetwork.....	4077
Assessment Requirements for ICTTEN420 Design, install and configure an internetwork.....	4081
ICTTEN421 Apply advanced routing protocols to network design.....	4083
Assessment Requirements for ICTTEN421 Apply advanced routing protocols to network design.....	4087
ICTTEN422 Configure and troubleshoot advanced network switching.....	4089
Assessment Requirements for ICTTEN422 Configure and troubleshoot advanced network switching.....	4093
ICTTEN423 Install and maintain a wide area network.....	4095

Assessment Requirements for ICTTEN423 Install and maintain a wide area network	4099
ICTTEN425 Design, install and configure a customer smart technology network	4101
Assessment Requirements for ICTTEN425 Design, install and configure a customer smart technology network	4105
ICTTEN426 Design network projects	4107
Assessment Requirements for ICTTEN426 Design network projects	4111
ICTTEN427 Conduct site surveys to identify carrier installation requirements	4113
Assessment Requirements for ICTTEN427 Conduct site surveys to identify carrier installation requirements	4117
ICTTEN429 Estimate and quote for carrier telecommunications equipment installations	4119
Assessment Requirements for ICTTEN429 Estimate and quote for carrier telecommunications equipment installations	4123
ICTWEB430 Produce server-side script for dynamic web pages	4125
Assessment Requirements for ICTWEB430 Produce server-side script for dynamic web pages	4128
ICTWEB431 Create and style simple markup language documents	4130
Assessment Requirements for ICTWEB431 Create and style simple markup language documents	4133
ICTWHS201 Provide telecommunications services safely on roofs	4135
Assessment Requirements for ICTWHS201 Provide telecommunications services safely on roofs	4139
ICTWHS202 Work safely in a radio frequency electromagnetic radiation environment	4142
Assessment Requirements for ICTWHS202 Work safely in a radio frequency electromagnetic radiation environment	4145
ICTWHS204 Follow work health and safety and environmental policy and procedures	4147
Assessment Requirements for ICTWHS204 Follow work health and safety and environmental policy and procedures	4152
ICTWOR301 Organise resources	4156
Assessment Requirements for ICTWOR301 Organise resources	4159
ICTWOR302 Organise material supply	4161
Assessment Requirements for ICTWOR302 Organise material supply	4164
ICTWOR303 Schedule resources	4166
Assessment Requirements for ICTWOR303 Schedule resources	4169
ICTWOR304 Manage spare parts	4171
Assessment Requirements for ICTWOR304 Manage spare parts	4175
ICTWOR305 Supervise worksite activities	4177
Assessment Requirements for ICTWOR305 Supervise worksite activities	4180
ICTWOR306 Resolve technical enquiries using multiple information systems	4182
Assessment Requirements for ICTWOR306 Resolve technical enquiries using multiple information systems	4186
ICTWOR307 Collect and analyse technical information	4188
Assessment Requirements for ICTWOR307 Collect and analyse technical information	4192
ICTWOR401 Undertake a civil site survey	4194
Assessment Requirements for ICTWOR401 Undertake a civil site survey	4197
BSBCUS201 Deliver a service to customers	4199
Assessment Requirements for BSBCUS201 Deliver a service to customers	4202
BSBDES401 Generate design solutions	4204
Assessment Requirements for BSBDES401 Generate design solutions	4208
BSBDES402 Interpret and respond to a design brief	4210
Assessment Requirements for BSBDES402 Interpret and respond to a design brief	4214

ICT20120 Certificate II in Applied Digital Technologies

Modification History

Release	Comments
Release 2	This version first released with ICT Information and Communications Technology Training Package Version 8.0. 9 units of competency have been replaced with their relevant superseding unit.
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Qualification Description

This pathways qualification provides the foundation skills and knowledge to use basic applied digital technologies in varied contexts.

The qualification is designed for those developing the necessary digital and technology skills in preparation for work.

These individuals carry out a range of basic procedural and operational tasks that require digital and technology skills. They perform a range of mainly routine tasks using limited practical skills and knowledge in a defined context. The qualification is suitable for someone generally performing under direct supervision.

Licensing, legislative, regulatory or certification considerations

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

Nil

Packaging Rules

Total number of units = 12

6 core units plus

6 elective units, of which:

- at least 3 must be from Group A
- of the remaining electives:
 - all may be from the electives listed below
 - up to 2 may be from elsewhere in this or any other currently endorsed training package qualification or accredited course at AQF Level 1, 2 or 3.

Elective units must be relevant to the work environment and the qualification, maintain the integrity of the AQF alignment, not duplicate the outcome of another unit chosen for the qualification, and contribute to a valid industry-supported vocational outcome.

Core units

BSBSUS211 Participate in sustainable work practices

BSBTEC202 Use digital technologies to communicate in a work environment

BSBWH211 Contribute to the health and safety of self and others

ICTICT213 Use computer operating systems and hardware

ICTICT214 Operate application software packages

ICTICT215 Operate digital media technology packages

Elective units**Group A - Digital and technology skills**

BSBTEC101 Operate digital devices

BSBTEC201 Use business software applications

BSBTEC203 Research using the internet

BSBTEC301 Design and produce business documents

BSBTEC302 Design and produce spreadsheets

BSBTEC303 Create electronic presentations

BSBXCS301 Protect own personal online profile from cyber security threats

BSBXCS302 Identify and report online security threats

BSBXCS303 Securely manage personally identifiable information and workplace information

ICTICT216 Design and create basic organisational documents

ICTICT219 Interact and resolve queries with ICT clients

ICTICT221 Identify and use specific industry standard technologies

ICTICT222 Research and share ICT solutions for Indigenous users

ICTICT223 Install software applications

ICTICT224 Integrate commercial computing packages

ICTICT225 Operate accounting applications

ICTICT226 Operate simple database applications

ICTSAS210 Update and maintain hardware, software and documentation inventories

ICTSAS211 Develop solutions for basic ICT malfunctions and problems
ICTSAS212 Record the requirements of client support requests
ICTSAS213 Maintain the integrity of ICT systems
ICTSAS214 Protect devices from spam and destructive software
ICTSAS215 Protect and secure information assets
ICTSAS216 Maintain ICT equipment and replace consumables
ICTSAS217 Connect a home based local wireless network
ICTSAS218 Obtain and connect hardware peripherals
ICTWEB306 Develop web presence using social media

Group B - 'Work ready' skills

BSBCRT201 Develop and apply thinking and problem solving skills
BSBINS201 Process and maintain workplace information
BSBOPS201 Work effectively in business environments
BSBOPS202 Engage with customers
BSBOPS203 Deliver a service to customers
BSBPEF201 Support personal wellbeing in the workplace
BSBPEF202 Plan and apply time management
BSBTWK201 Work effectively with others
CUADIG211 Maintain interactive content
CUADIG212 Develop digital imaging skills
CUADIG303 Produce and prepare photo images
CUAPOS211 Perform basic vision and sound editing
CUASOU212 Perform basic sound editing
FSKDIG002 Use digital technology for routine and simple workplace tasks
FSKDIG003 Use digital technology for non-routine workplace tasks

Qualification Mapping Information

No equivalent qualification. Supersedes and is not equivalent to ICT10115 Certificate I in Information, Digital Media and Technology and ICT20115 Certificate II in Information, Digital Media and Technology.

ICT20219 Certificate II in Telecommunications Network Build and Operation

Modification History

Release	Comments
Release 2	<p>This version first released with the Information and Communications Technology Training Package Version 8.0.</p> <p>The following units of competency were replaced with the relevant superseding unit of competency as requested by the Department of Education, Skills and Employment:</p> <ul style="list-style-type: none">• HLTAID003 Provide First Aid updated to HLTAID011 Provide First Aid• HLTAID001 Provide cardiopulmonary resuscitation updated to HLTAID009 Provide cardiopulmonary resuscitation
Release 1	<p>This version released with ICT Information and Communications Technology Training Package Version 5.0.</p>

Qualification Description

This is an entry-level qualification for telecommunications linesworkers working on the construction and maintenance of high-speed national broadband network (NBN) infrastructure.

Linesworkers may:

- perform cable and infrastructure work underground, which may involve civil and construction work such as site preparation, building of enclosures, installing mounting brackets and hauling underground cables
- work above ground to install fibre or metallic aerial cable and infrastructure, which may also include installing aerial lead-in cables to customer premises and providing traffic management.

Licensing/Regulatory Information

Work functions in the occupational areas where this qualification may be used may be subject to regulatory requirements. Refer to the ICT Information and Communications Technology Companion Volume Implementation Guide or the relevant regulator for details of licensing, legislative or certification requirements.

Cabling on the customer side of the network termination device must be carried out according to requirements of the Australian Communications and Media Authority (ACMA) and relevant industry registration bodies, and in line with the specifications of the access network owner.

Entry Requirements

Nil.

Packaging Rules

Total number of units = 12

5 core units, plus

7 elective units

The elective units selected may consist of:

- up to 7 units from Group A Cabling
- up to 4 units from Group B Telecommunications
- up to 3 units from Group C General
- up to 2 units from this Training Package or any currently endorsed Training Package or accredited course where the units are packaged in an Australian Qualification Framework (AQF) level 2 or 3 qualification.

Elective units must be relevant to the work environment and the qualification, maintain the integrity of the AQF alignment and contribute to a valid, industry-supported vocational outcome. This could be achieved by selecting a specialisation (see below) or by selecting an appropriate mix of electives from Groups A, B and C.

Units selected from other training packages or accredited courses must not duplicate units selected from, or available within, the ICT Information and Communications Technology Training Package.

Core units

ICTTEN202 Use hand and power tools

ICTTEN208 Use electrical skills when working with telecommunications networks

ICTTEN211 Work effectively in a telecommunications network environment

ICTWHS204 Follow work health and safety and environmental policy and procedures

ICTWOR308 Provide customer service to telecommunications customers

Elective units

Group A Cabling

ICTCBL211 Install an above ground equipment enclosure
ICTCBL212 Erect aerial cable supports
ICTCBL248 Install and terminate hard-line coaxial cable
ICTCBL249 Haul underground cable for installation and maintenance work
ICTCBL250 Haul and fix aerial cable
ICTCBL251 Install aerial and underground cable lead-ins
ICTCBL252 Joint and terminate coaxial cable
ICTCBL253 Construct underground telecommunications infrastructure
ICTCBL254 Joint metallic conductor cable in access network
ICTPMG201 Prepare site for support installation

Group B Telecommunications

ICTBWN303 Install lead-in module and cable for fibre to the premises
ICTBWN306 Use radio frequency measuring instruments
ICTBWN307 Use optical measuring instruments
ICTCBL303 Install and terminate coaxial cable
ICTCBL320 Jumper metallic conductor cable in the access network
ICTCBL322 Install, test and terminate optical fibre cable on customer premises
ICTCBL329 Install underground cable for communications applications
ICTCBL330 Splice and terminate optical fibre cable for telecommunications projects
ICTCBL333 Install aerial cable for communications applications
ICTCBL334 Install underground enclosures and conduit
ICTTEN210 Install underground telecommunications infrastructure
ICTTEN310 Remove and replace electronic circuit boards in carrier equipment
ICTTEN312 Install telecommunications network equipment
ICTTEN313 Work on and resolve recurrent network faults
ICTTEN318 Inspect, clean and handle optical fibre cable and connectors

Group C General

BSBSUS201 Participate in environmentally sustainable work practices
CPCCCM2007 Use explosive power tools*
CPCCDE3014A Remove non-friable asbestos*
CPCCOHS1001A Work safely in the construction industry
CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry
CPCPCM2043A Carry out WHS requirements

HLTAID009 Provide cardiopulmonary resuscitation

OR

HLTAID011 Provide first aid

ICTTEN207 Install and test internet protocol devices in convergence networks

ICTWHS201 Provide telecommunications services safely on roofs

ICTWHS205 Work safely near power infrastructure at a telecommunications workplace
OR

UETTDREL14A Working safely near live electrical apparatus as a non-electrical worker

ICTWOR202 Work effectively in the digital and telecommunications industry

RIIWHS204D Work safely at heights

*Note the following prerequisite unit requirements:

Prerequisite unit requirements in this qualification	
Unit in this qualification	Prerequisite unit
CPCCCM2007 Use explosive power tools	CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry
CPCCDE3014A Remove non-friable asbestos	CPCCOHS1001A Work safely in the construction industry

Specialisations

One of the following three specialisations must be undertaken to ensure worker skills meet the required safety practices for each specialisation.

Telecommunications Linesworker Hybrid Fibre Coaxial

Six of the following elective units must be selected:

- ICTBWN306 Use radio frequency measuring instruments
- ICTCBL250 Haul and fix aerial cable
- ICTCBL251 Install aerial and underground cable lead-ins
- ICTCBL252 Joint and terminate coaxial cable
- ICTPMG201 Prepare site for support installation

Plus:

- ICTWHS201 Provide telecommunications services safely on roofs

OR

- RIIWHS204D Work safely at heights

Telecommunications Linesworker Fibre

The following 7 elective units must be selected:

- ICTCBL211 Install an above ground equipment enclosure
- ICTCBL250 Haul and fix aerial cable
- ICTCBL253 Construct underground telecommunications infrastructure

- ICTCBL329 Install underground cable for communications applications
- ICTPMG201 Prepare site for support installation
- ICTTEN310 Remove and replace electronic circuit boards in carrier equipment
- ICTTEN318 Inspect, clean and handle optical fibre cable and connectors

Telecommunications Linesworker Copper

The following 6 elective units must be selected:

- ICTCBL211 Install an above ground equipment enclosure
- ICTCBL250 Haul and fix aerial cable
- ICTCBL253 Construct underground telecommunications infrastructure
- ICTCBL320 Jumper metallic conductor cable in the access network
- ICTCBL329 Install underground cable for communications applications
- ICTPMG201 Prepare site for support installation

The achievement of a specialisation will be identified on testamurs as follows:

- ICT20219 Certificate II in Telecommunications Network Build and Operation (Telecommunications Linesworker Hybrid Fibre Coaxial)
- ICT20219 Certificate II in Telecommunications Network Build and Operation (Telecommunications Linesworker Fibre)
- ICT20219 Certificate II in Telecommunications Network Build and Operation (Telecommunications Linesworker Copper)

Qualification Mapping Information

No equivalent qualification. Supersedes and is not equivalent to ICT20215 Certificate II in Telecommunications Network Build and Operate.

Release 1	<p>This version released with ICT Information and Communications Technology Training Package Version 5.0.</p>

Qualification Description

This is an entry-level qualification for telecommunications technology operators who may:

- install telecommunications equipment, data cabling and cabling products on customer premises
- perform fault-finding on a limited range of digital reception equipment for both cable television and free-to-air television reception, for either a customer or an enterprise
- install and maintain telecommunications radio communications equipment in base stations and connect wireless base stations
- install and maintain telecommunications equipment on high structures including radio towers or for installation and connection of wireless base stations.

The qualification is suited to an individual undertaking work experience, or in a probationary period in employment.

It is particularly applicable to school-based delivery as an entry-level pathway to employment and is suitable as an Australian traineeship or apprenticeship pathway, except for the units of competency that involve high-risk work age restrictions.

Licensing/Regulatory Information

Work functions in the occupational areas where this qualification may be used are subject to regulatory requirements. Refer to the ICT Information and Communications Technology Companion Volume Implementation Guide or the relevant regulator for details of licensing, legislative or certification requirements.

Cabling at the customer premises must be carried out according to requirements of the Australian Communications and Media Authority (ACMA) and relevant industry registration bodies, and in line with the specifications of the access network owner.

High risk work (HRW) licences are required for dogging work and rigging as outlined on the Safe Work Australia website.

The model WHS Regulations require people performing HRW to be over 18 years of age and to hold the right HRW licence. HRW licences are issued by state/territory governments: refer to the relevant body to ensure compliance with regulations.

Entry Requirements

Nil.

Packaging Rules

Total number of units = 13

7 core units, plus

6 elective units

The elective units selected may consist of:

- up to 6 units from any group of elective units listed below according to the specialisation packaging rules, outlined below, where a specialisation is the required outcome
- up to 2 units from this Training Package or any currently endorsed Training Package or accredited course where the units are packaged in an Australian Qualifications Framework (AQF) Level 2 or 3 qualification.

Elective units must be relevant to the work environment and the qualification, maintain the integrity of the AQF alignment, not duplicate the outcome of another unit chosen for the qualification, and contribute to a valid, industry-supported vocational outcome.

Units selected from other Training Packages or accredited courses must not duplicate units selected from, or available within, the ICT Information and Communications Technology Training Package.

Core units

BSBCUS201 Deliver a service to customers

ICTTEN202 Use hand and power tools

ICTTEN207 Install and test internet protocol devices in convergence networks

ICTTEN208 Use electrical skills when working with telecommunications networks

ICTTEN211 Work effectively in a telecommunications network environment

ICTWHS204 Follow work health and safety and environmental policy and procedures

ICTWOR202 Work effectively in the digital and telecommunications industry

Elective units

Group A Cabling

ICTCBL205 Joint metallic conductor cable on customer premises

ICTCBL206 Alter services to existing cable system

ICTCBL210 Install a telecommunications service to a building

ICTCBL211 Install an above ground equipment enclosure

ICTCBL212 Erect aerial cable supports

ICTCBL219 Apply safe technical work practices for cabling registration when configuring an ADSL circuit

ICTCBL239 Install customer cable support systems

ICTCBL240 Place and secure customer cable

ICTCBL241 Terminate metallic conductor customer cable

ICTCBL242 Install functional and protective telecommunications earthing system

ICTCBL246 Install, maintain and modify customer premises communications cabling:
ACMA Restricted Rule*

ICTCBL249 Haul underground cable for installation and maintenance work
ICTCBL250 Haul and fix aerial cable
ICTCBL251 Install aerial and underground cable lead-ins
ICTCBL252 Joint and terminate coaxial cable
ICTCBL253 Construct underground telecommunications infrastructure
ICTCBL254 Joint metallic conductor cable in access network
ICTCBL330 Splice and terminate optical fibre cable for telecommunications projects
ICTCMP201 Organise and monitor cabling to ensure compliance with regulatory and industry standards
ICTCMP203 Perform restricted customer premises broadband cabling work: ACMA
Restricted Rule*

Group B Networking

ICTTEN203 Install and configure a home or small office network
ICTTEN204 Install and configure a small to medium business network
ICTTEN205 Build and maintain a secure network
ICTTEN206 Operate new media software packages

Group C Radio Communications

ICTRFN201 Install a satellite antenna
ICTRFN202 Install a terrestrial antenna
ICTRFN304 Construct and test a radio communications device

Group D Rigging

CPCCLDG3001 Licence to perform dogging
CPCCLRG3001 Licence to perform rigging basic level*
ICTTCR203 Use safe rigging practices to climb and perform rescues on telecommunications network structures

Group E General

CPCCWHS1001 Prepare to work safely in the construction industry
HLTAID009 Provide cardiopulmonary resuscitation
OR
HLTAID011 Provide First Aid
ICTICT223 Install software applications
ICTPMG201 Prepare site for support installation
ICTPMG202 Plan, organise and undertake work activities
ICTSAS218 Obtain and connect hardware peripherals
ICTWHS201 Provide telecommunications services safely on roofs
ICTWHS202 Work safely in a radio frequency electromagnetic radiation environment

ICTWHS205 Work safely near power infrastructure at a telecommunications workplace
OR

UETDREL006 Work safely in the vicinity of live electrical apparatus as a non-electrical worker

*Note the following prerequisite unit requirements:

Prerequisite unit requirements in this qualification	
Unit in this qualification	Prerequisite unit
CPCCLRG3001 Licence to perform rigging basic level	CPCCLDG3001 Licence to perform dogging
ICTCBL246 Install, maintain and modify customer premises communications cabling: ACMA Restricted Rule	ICTTEN208 Use electrical skills when working with telecommunications networks ICTWHS204 Follow work health and safety and environmental policy and procedures
ICTCMP203 Perform restricted customer premises broadband cabling work: ACMA Restricted Rule	ICTCBL246 Install, maintain and modify customer premises communications cabling: ACMA Restricted Rule OR ICTCBL239 Install customer cable support systems and ICTCBL240 Place and secure customer cable and ICTCBL241 Terminate metallic conductor customer cable and ICTCMP201 Organise and monitor cabling to ensure compliance with regulatory and industry standards

Specialisations

Where relevant, specialisations can be used for this qualification in:

- cabling
- networking
- radio communications
- rigging
- telecommunications cabling.

The achievement of a specialisation will be identified on testamurs as follows:

- ICT20319 Certificate II in Telecommunications Technology (Cabling)
- ICT20319 Certificate II in Telecommunications Technology (Telecommunications Cabling)
- ICT20319 Certificate II in Telecommunications Technology (Networking)
- ICT20319 Certificate II in Telecommunications Technology (Radio Communications)
- ICT20319 Certificate II in Telecommunications Technology (Rigging).

Cabling

Select 6 elective units from Group A Cabling.

Telecommunications Cabling

Select the following 2 elective units from Group A Cabling:

- ICTCBL246 Install, maintain and modify customer premises communications cabling: ACMA Restricted Rule*
- ICTCMP203 Perform restricted customer premises broadband cabling work: ACMA Restricted Rule*

Select 4 further elective units from the remaining elective units in Group A Cabling.

Networking

Select the 4 elective units from Group B Networking.

Radio Communications

Select the 4 elective units from Group C Radio Communications.

Select at least 1 elective unit from Group D Rigging.

Rigging

Select the 3 elective units from Group D Rigging.

Note: This specialisation is not suitable for school-based delivery due to high-risk work age restrictions.

Qualification Mapping Information

No equivalent qualification. Supersedes and is not equivalent to ICT20315 Certificate II in Telecommunications Technology.

Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Qualification Description

This qualification reflects the role of individuals who are competent in a range of Information and Communications Technology (ICT) roles, including animation, basic cloud computing, basic cyber awareness, digital media skills, generalist IT support services, networking, programming, systems and web development.

Individuals who work in these fields apply broad sets of skills, including foundational knowledge in critical thinking and customer service skills, to support a range of technologies, processes, procedures, policies, people and clients in a variety of work contexts.

Licensing, legislative, regulatory or certification considerations

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

Nil

Packaging Rules

Total number of units = 12

6 core units plus

6 elective units, of which:

- at least 4 units must be selected from the elective units listed below
- up to 2 units may be selected from the remaining listed elective units or from this or any other currently endorsed training package qualification or accredited course at Australian Qualifications Framework (AQF) Level 2, 3 or 4.

Elective units must be relevant to the work environment and the qualification, maintain the integrity of the AQF alignment, not duplicate the outcome of another unit chosen for the qualification and contribute to a valid, industry-supported vocational outcome.

Core units

BSBCRT301 Develop and extend critical and creative thinking skills

BSBXCS303 Securely manage personally identifiable information and workplace information

BSBXTW301 Work in a team

ICTICT313 Identify IP, ethics and privacy policies in ICT environments

ICTPRG302 Apply introductory programming techniques

ICTSAS305 Provide ICT advice to clients

Elective units

Group A Animation

CUAANM301 Create 2D digital animations

CUAANM302 Create 3D digital animations

ICTDMT405 Produce interactive animations

ICTGAM304 Develop three-dimensional (3D) models for digital games

ICTGAM305 Apply simple textures and shading to three-dimensional (3D) models for digital games

ICTGAM306 Review and apply traditional animation principles

Group B Basic Cloud Computing

ICTCLD301 Evaluate characteristics of cloud computing solutions and services

ICTCLD401 Configure cloud services

Group C Basic Cyber Security Awareness

BSBXCS301 Protect own personal online profile from cyber security threats
BSBXCS302 Identify and report online security threats
BSBXCS401 Maintain security of digital devices
BSBXCS402 Promote workplace cyber security awareness and best practices
BSBXCS403 Contribute to cyber security threat assessments
BSBXCS404 Contribute to cyber security risk management
BSBXCS405 Contribute to cyber security incident responses
ICTSAS214 Protect devices from spam and destructive software
ICTSAS215 Protect and secure information assets
ICTSAS440 Monitor and administer security of ICT systems

Group D Digital Media

CUADIG211 Maintain interactive content
CUADIG303 Produce and prepare photo images
CUADIG304 Create visual design components
CUADIG311 Prepare video assets
CUADIG312 Author interactive sequences
CUAPOS211 Perform basic vision and sound editing
CUASOU212 Perform basic sound editing

Group E Generalist IT Support

BSBTEC201 Use business software applications
ICTICT219 Interact and resolve queries with ICT clients
ICTICT221 Identify and use specific industry standard technologies
ICTICT222 Research and share ICT solutions for Indigenous users
ICTICT310 Identify and use industry specific technologies
ICTICT314 Connect internal hardware components
ICTSAS212 Record the requirements of client support requests
ICTSAS308 Run standard diagnostic tests
ICTSAS309 Maintain and repair ICT equipment and software
ICTSAS311 Maintain computer hardware

Group F IT Work Ready Skills

ICPDMT3460 Incorporate video into multimedia presentations
ICTICT215 Operate digital media technology packages
ICTICT216 Design and create basic organisational documents
ICTICT309 Create ICT user documentation
ICTICT311 Customise packaged software applications

ICTICT312 Use advanced features of applications
ICTICT316 Implement new technology
ICTICT318 Validate test cases and develop proof of concepts
ICTPMG301 Contribute as part of an IT project management team
ICTWHS204 Follow work health and safety and environmental policy and procedures

Group G Networking

ICTNWK307 Provide network systems administration
ICTNWK308 Determine and action network problems
ICTNWK309 Configure and administer network operating systems
ICTNWK310 Administer network peripherals
ICTNWK311 Install and test network protocols

Group H Programming

ICTICT438 Select, configure and deploy software and hardware testing tools
ICTPRG430 Apply introductory object-oriented language skills
ICTPRG435 Write scripts for software applications

Group I Systems

ICTICT213 Use computer operating systems and hardware
ICTICT214 Operate application software packages
ICTICT315 Implement system software changes
ICTICT317 Maintain standard operating environments
ICTSAS210 Update and maintain hardware, software and documentation inventories
ICTSAS211 Develop solutions for basic ICT malfunctions and problems
ICTSAS213 Maintain the integrity of ICT systems
ICTSAS216 Maintain ICT equipment and replace consumables
ICTSAS217 Connect a home based local wireless network
ICTSAS310 Install, configure and secure a small office or home office network
ICTSAS312 Provide basic system administration

Group J Web Development

ICTWEB304 Build simple web pages
ICTWEB305 Produce digital images for the web
ICTWEB306 Develop web presence using social media
ICTWEB431 Create and style simple markup language documents

Qualification Mapping Information

No equivalent qualification. Supersedes and is not equivalent to:

- ICT30118 Certificate III in Information, Digital Media and Technology.

ICT30419 Certificate III in Telecommunications Network Build and Operation

Modification History

Release	Comments
Release 2	<p>This version first released with the Information and Communications Technology Training Package Version 8.0.</p> <p>The following units of competency were replaced with the relevant superseding unit of competency as requested by the Department of Education, Skills and Employment:</p> <ul style="list-style-type: none">HLTAID001 Provide cardiopulmonary resuscitation updated to HLTAID009 Provide cardiopulmonary resuscitation
Release 1	<p>This version released with ICT Information and Communications Technology Training Package Version 5.0.</p>

Qualification Description

This qualification is for telecommunications operators working on the construction and maintenance of high-speed national broadband network (NBN) infrastructure, and on required technology.

Telecommunications technology operators may:

- perform equipment and system installation work on a customer network to enable efficient access and interconnection to the NBN services, including connecting and jointing of copper cable, diagnosing and rectifying copper cable system faults, and migrating, remediating and augmentation of copper services to maximise benefits of the high-speed broadband connection
- splice, test and fault-find on live fibre cable in the NBN fibre distribution network
- perform equipment and system installation work on a customer network to enable efficient access and interconnection to the NBN services, including diagnosing and rectifying fibre system faults, working with active equipment, and performing integration and commissioning activities to maximise benefits of the high-speed broadband connection
- perform underground and aerial equipment and system installations from the tap to the optical node to enable efficient access and interconnection to the NBN services, including connecting and terminating hybrid fibre coaxial (HFC) cabling, diagnosing and rectifying HFC system faults
- install, activate and assure HFC equipment and systems from the last connection point of the network to the customer premises – tap to network termination device (NTD) – to enable efficient access and interconnection to the NBN services.

Licensing/Regulatory Information

Work functions in the occupational areas where this qualification may be used are subject to regulatory requirements. Refer to the ICT Information and Communications Technology Training Package Companion Volume Implementation Guide or the relevant regulator for details of licensing, legislative or certification requirements.

Cabling at the customer premises downstream of the NTD must be carried out according to requirements of the Australian Communications and Media Authority (ACMA) and relevant industry registration bodies, and in line with the specifications of the access network owner.

Entry Requirements

Nil

Packaging Rules

Total number of units = 14

6 core units, plus

8 elective units

The elective units selected may consist of:

- up to 8 units from Group A Copper Cabling, or Group B Fibre Cabling, and/or Group C HFC Cabling
- up to 5 units from Group D General
- up to 2 units from this or any currently endorsed Training Package or accredited course where the units are packaged in an Australian Qualification Framework (AQF) Level 3 or 4 qualification.

Elective units must be relevant to the work environment and the qualification, maintain the integrity of the AQF alignment and contribute to a valid, industry-supported vocational outcome.

Units selected from other Training Packages or accredited courses must not duplicate units selected from, or available within, the ICT Information and Communications Technology Training Package.

Core units

ICTTEN202 Use hand and power tools

ICTTEN208 Use electrical skills when working with telecommunications networks

ICTTEN315 Determine and apply technologies within a telecommunications system

ICTTEN317 Locate, identify and rectify telecommunications network faults

ICTWHS204 Follow work health and safety and environmental policy and procedures

ICTWOR308 Provide customer service to telecommunications customers

Elective units

Group A Copper Cabling

ICTCBL254 Joint metallic conductor cable in access network

ICTCBL313 Modify and cutover cable

ICTCBL319 Rearrange large size copper cable

ICTCBL320 Jumper metallic conductor cable in the access network

ICTCBL326 Cut over metallic conductor cable in the access network

ICTCBL332 Locate, identify and rectify copper cable faults

ICTCBL336 Install and cut over metallic conductor cable to access network cabinet

Group B Fibre Cabling

ICTBWN302 Install optical fibre splitters in fibre distribution hubs

ICTBWN309 Perform tests on optical communication system and components

ICTCBL316 Install ribbon fibre cable in the FTTX distribution network*

ICTCBL322 Install, test and terminate optical fibre cable on customer premises

ICTCBL330 Splice and terminate optical fibre cable for telecommunications projects

ICTTEN318 Inspect, clean and handle optical fibre cable and connectors

ICTTEN409 Commission an electronic system

ICTTEN416 Install, configure and test an internet protocol network

Group C HFC Cabling

ICTCBL248 Install and terminate hard-line coaxial cable

ICTCBL251 Install aerial and underground cable lead-ins

ICTCBL303 Install and terminate coaxial cable

ICTCBL306 Locate and identify cable system faults

ICTCBL333 Install aerial cable for communications applications

ICTCBL335 Construct aerial cable supports

ICTDRE303 Install a complex digital reception system

ICTDRE308 Install a cable broadband multi-dwelling unit system

ICTDRE314 Design communications wiring systems for customer premises*

ICTRFN406 Maintain hybrid fibre coaxial broadband cable network

Group D General

BSBSUS201 Participate in environmentally sustainable work practices

BSBSUS401 Implement and monitor environmentally sustainable work practices

CPCCCM2007 Use explosive power tools*

CPCCDE3014A Remove non-friable asbestos*

CPCCOHS1001A Work safely in the construction industry

CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry

CPCPCM2043A Carry out WHS requirements

ICTBWN308 Work safely on live optical fibre installations*

ICTBWN303 Install lead-in module and cable for fibre to the premises

ICTBWN306 Use radio frequency measuring instruments

ICTBWN307 Use optical measuring instruments

HLTAID009 Provide cardiopulmonary resuscitation

ICTCBL246 Install, maintain and modify customer premises communications cabling: ACMA Restricted Rule*

ICTCBL247 Install maintain and modify customer premises communications cabling: ACMA Open Rule*

ICTCBL249 Haul underground cable for installation and maintenance work

ICTCBL254 Joint metallic conductor cable in access network

ICTCBL329 Install underground cable for communications applications

ICTCBL334 Install underground enclosures and conduit

ICTTEN207 Install and test internet protocol devices in convergence networks

ICTTEN310 Remove and replace electronic circuit boards in carrier equipment

ICTTEN312 Install telecommunications network equipment

ICTTEN313 Work on and resolve recurrent network faults

ICTWHS201 Provide telecommunications services safely on roofs

OR

RIIWHS204D Work safely at heights

ICTWHS205 Work safely near power infrastructure at a telecommunications workplace

OR

UETTDREL14A Working safely near live electrical apparatus as a non-electrical worker

ICTWOR202 Work effectively in the digital and telecommunications industry

ICTWOR305 Supervise worksite activities

RIICCM202D Identify, locate and protect underground services

RIIWHS202D Enter and work in confined spaces

RIIWHS205D Control traffic with stop-slow bat

RIIWHS302D Implement traffic management plan

TLID2010 Operate a forklift

*Note the following prerequisite unit requirements:

Prerequisite unit requirements in this qualification	
Unit in this qualification	Prerequisite unit
CPCCCM2007 Use explosive power tools	CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry
CPCCDE3014A Remove non-friable asbestos	CPCCOHS1001A Work safely in the construction industry
ICTBWN308 Work safely on live optical fibre installations	ICTBWN307 Use optical measuring instruments ICTWHS204 Follow work health and safety and environmental policy and procedures
ICTCBL246 Install, maintain and modify customer premises communications cabling: ACMA Restricted Rule	ICTTEN208 Use electrical skills when working with telecommunications networks ICTWHS204 Follow work health and safety and environmental policy and procedures
ICTCBL247 Install, maintain and modify customer premises communications cabling: ACMA Open Rule	ICTTEN208 Use electrical skills when working with telecommunications networks ICTWHS204 Follow work health and safety and environmental policy and procedures
ICTCBL316 Install ribbon fibre cable in the FTTX distribution network	ICTCBL330 Splice and terminate optical fibre cable for telecommunications projects
ICTDRE314 Design communications wiring systems for customer premises	ICTCBL247 Install, maintain and modify customer premises communications cabling: ACMA Open Rule

Specialisations

Where relevant, specialisations can be used for this qualification in:

- copper cable jointer
- fibre splicer
- fibre technician
- HFC technician
- telecommunications customer service technician – HFC technician.

The achievement of a specialisation will be identified on testamurs as follows:

- ICT30419 Certificate III in Telecommunications Network Build and Operation (Copper Cable Joiner)
- ICT30419 Certificate III in Telecommunications Network Build and Operation (Fibre Splicer)
- ICT30419 Certificate III in Telecommunications Network Build and Operation (Fibre Technician)
- ICT30419 Certificate III in Telecommunications Network Build and Operation (HFC Technician)
- ICT30419 Certificate III in Telecommunications Network Build and Operation (Telecommunications Customer Service Technician – HFC Technician).

Copper Cable Joiner

Select the following 6 elective units:

- ICTCBL254 Joint metallic conductor cable in access network
- ICTCBL319 Rearrange large size copper cable
- ICTCBL326 Cut over metallic conductor cable in the access network
- ICTCBL332 Locate, identify and rectify copper cable faults
- ICTCBL336 Install and cut over metallic conductor cable to access network cabinet
- ICTTEN312 Install telecommunications network equipment

Fibre Splicer

Select the following 6 elective units:

- ICTBWN302 Install optical fibre splitters in fibre distribution hubs
- ICTBWN307 Use optical measuring instruments
- ICTBWN308 Work safely on live optical fibre installations*
- ICTCBL316 Install ribbon fibre cable in the FTTX distribution network*
- ICTCBL330 Splice and terminate optical fibre cable for carriers and service projects
- ICTTEN318 Inspect, clean and handle optical fibre cable and connectors

Technician Fibre

Select the following 7 elective units:

- ICTBWN307 Use optical measuring instruments
- ICTBWN308 Work safely on live optical fibre installations*
- ICTCBL322 Install, test and terminate optical fibre cable on customer premises
- ICTTEN310 Remove and replace electronic circuit boards in carrier equipment
- ICTTEN318 Inspect, clean and handle optical fibre cable and connectors
- ICTTEN409 Commission an electronic system

- ICTTEN416 Install, configure and test an internet protocol network

Technician Hybrid Fibre Coaxial (HFC)

Select the following 5 elective units:

- ICTBWN306 Use radio frequency measuring instruments
- ICTCBL248 Install and terminate hard-line coaxial cable
- ICTCBL333 Install aerial cable for communications applications
- ICTTEN312 Install telecommunications network equipment

Plus

- ICTWHS201 Provide telecommunications services safely on roofs

or

- RIIWHS204D Work safely at heights

Telecommunications Customer Service Technician – HFC Technician

Select the following 8 elective units:

- ICTBWN306 Use radio frequency measuring instruments
- ICTCBL251 Install aerial and underground cable lead-ins
- ICTCBL303 Install and terminate coaxial cable
- ICTCBL306 Locate and identify cable system faults
- ICTDRE308 Install a cable broadband multi-dwelling unit system
- ICTDRE314 Design communications wiring systems for customer premises*
- ICTTEN207 Install and test internet protocol devices in convergence networks
- ICTTEN312 Install telecommunications network equipment

Qualification Mapping Information

No equivalent qualification. Supersedes and is not equivalent to ICT30415 Certificate III in Telecommunications Network Build and Operate.

Release 1	<p>This version released with ICT Information and Communications Technology Training Package Version 5.0.</p>

Qualification Description

This qualification is for telecommunications technology operators who assess installation requirements, plan and perform installations, test installed equipment, and fault-find when issues arise with installed equipment.

Telecommunications technology operators may work on:

- customer cabling networks
- digital reception technology
- optical networks
- premises cabling
- radio communications
- rigging, which also involves installing and maintaining radio antennas on high structures such as radio towers, and building and mounting sections of radio masts for a complete radio structure
- telecommunications networking
- wireless networks.

Licensing/Regulatory Information

Work functions in the occupational areas where this qualification may be used are subject to regulatory requirements. Refer to the ICT Information and Communications Technology Training Package Companion Volume Implementation Guide or the relevant regulator for details of licensing, legislative or certification requirements.

Cabling at the customer premises must be carried out according to requirements of the Australian Communications and Media Authority (ACMA) and relevant industry registration bodies, in line with the specifications of the access network owner.

High risk work (HRW) licences are required for dogging work and rigging as outlined on the Safe Work Australia website.

The model WHS Regulations require people performing high risk work to be over 18 years of age and to hold the right HRW licence. HRW licences are issued by state/territory governments: refer to the relevant body to ensure compliance with regulations.

Entry Requirements

Nil

Packaging Rules

Total number of units = 16

6 core units, plus

10 elective units

The elective units selected must consist of:

- at least 1 elective unit from Group A Workplace Technical Practice.

The remaining required elective units selected may consist of:

- up to 2 elective units from Group B General Workplace
- up to 8 elective units from any of the elective groups with no more than 2 of these units from Group G Work Health and Safety
- up to 3 units from this or any currently endorsed Training Package or accredited course where the units are packaged in an Australian Qualification Framework (AQF) Level 3 or 4 qualification.

Elective units must be relevant to the work environment and the qualification, maintain the integrity of the AQF alignment, not duplicate the outcome of another unit chosen for the qualification and contribute to a valid, industry-supported vocational outcome.

Units selected from other Training Packages or accredited courses must not duplicate units selected from, or available within, the ICT Information and Communications Technology Training Package.

Core units

ICTTEN202 Use hand and power tools

ICTTEN208 Use electrical skills when working with telecommunications networks

ICTTEN315 Determine and apply technologies within a telecommunications system

ICTTEN317 Locate, identify and rectify telecommunications network faults

ICTWHS204 Follow work health and safety and environmental policy and procedures

ICTWOR308 Provide customer service to telecommunications customers

Elective units

Group A Workplace Technical Practice

ICTTEN207 Install and test internet protocol devices in convergence networks

ICTTEN312 Install telecommunications network equipment

ICTTEN313 Work on and resolve recurrent network faults

ICTTEN322 Provide infrastructure for telecommunications network customer equipment

Group B General Workplace

BSBESB301 Investigate business opportunities

BSBESB305 Address compliance requirements for new business ventures

BSBSUS411 Implement and monitor environmentally sustainable work practices

CPCCBC4004 Identify and produce estimated costs for building and construction projects

ICTEDU301 Train customers in new technology
ICTSAS305 Provide ICT advice to clients
ICTWOR202 Work effectively in the digital and telecommunications industry
ICTWOR301 Organise resources
ICTWOR302 Organise material supply
ICTWOR303 Schedule resources
ICTWOR304 Manage spare parts
ICTWOR305 Supervise worksite activities
ICTWOR306 Resolve technical enquiries using multiple information systems
ICTWOR307 Collect and analyse technical information

Group C Telecommunications Cabling

ICTCBL238 Install, maintain and modify customer premises communications cabling:
ACMA Lift Rule
ICTCBL246 Install, maintain and modify customer premises communications cabling:
ACMA Restricted Rule*
ICTCBL247 Install, maintain and modify customer premises communications cabling:
ACMA Open Rule*
ICTCBL301 Install, terminate and certify structured cabling installation
ICTCBL303 Install and terminate coaxial cable
ICTCBL305 Hand over cable systems and equipment
ICTCBL306 Locate and identify cable system faults
ICTCBL311 Install systems and equipment on customer premises
ICTCBL313 Modify and cutover cable
ICTCBL314 Install network cable equipment
ICTCBL316 Install ribbon fibre cable in the FTTX distribution network*
ICTCBL322 Install, test and terminate optical fibre cable on customer premises
ICTCBL323 Test cables and systems on customer premises
ICTCBL324 Cut over new systems and equipment on customer premises
ICTCBL325 Maintain cable network
ICTCBL329 Install underground cable for communications applications
ICTCBL330 Splice and terminate optical fibre cable for telecommunications projects
ICTCBL333 Install aerial cable for communications applications
ICTCBL334 Install underground enclosures and conduit
ICTCBL335 Construct aerial cable supports

Group D Digital Reception Technology

ICTDRE301 Install digital reception equipment
ICTDRE302 Locate and rectify digital reception equipment faults
ICTDRE303 Install a complex digital reception system

ICTDRE305 Develop integrated digital reception systems
ICTDRE314 Design communications wiring systems for customer premises*
ICTTEN402 Estimate and quote for customer telecommunications equipment installation
ICTTEN415 Install and configure internet protocol TV in a home network
ICTTEN432 Identify requirements for customer telecommunications equipment

Group E ICT Use

ICTICT314 Connect internal hardware components
ICTICT315 Implement system software changes
ICTICT316 Implement new technology
ICTICT317 Maintain standard operating environments
ICTNWK311 Install and test network protocols
ICTNWK428 Create scripts for networking
ICTPRG302 Apply introductory programming techniques
ICTSAS308 Run standard diagnostic tests
ICTSAS311 Maintain computer hardware
ICTSAS312 Provide basic system administration

Group F Optical Networks

ICTBWN302 Install optical fibre splitters in fibre distribution hubs
ICTBWN303 Install lead-in module and cable for fibre to the premises
ICTBWN307 Use optical measuring instruments
ICTBWN308 Work safely on live optical fibre installations*
ICTBWN309 Perform tests on optical communication system and components
ICTTEN318 Inspect, clean and handle optical fibre cable and connectors

Group G Work Health and Safety

CPCCDE3014 Remove non-friable asbestos*
CPCCWHS1001 Prepare to work safely in the construction industry
ICTWHS201 Provide telecommunications services safely on roofs
ICTWHS205 Work safely near power infrastructure at a telecommunications workplace
OR
RIICCM202E Identify, locate and protect underground services
RIIWHS202E Enter and work in confined spaces
RIIWHS204E Work safely at heights
RIIWHS205E Control traffic with stop-slow bat
RIIWHS302E Implement traffic management plans
UETDREL006 Work safely in the vicinity of live electrical apparatus as a non-electrical worker

Group H Radio Communications

ICTBWN306 Use radio frequency measuring instruments

ICTRFN301 Install a radio communications antenna and feedline

ICTRFN304 Construct and test a radio communications device

ICTRFN305 Operate and maintain radio communications technical instruments and field equipment

ICTRFN406 Maintain hybrid fibre coaxial broadband cable network

ICTRFN407 Conduct radio frequency measurements

Group I Telecommunications Network

ICTCBL331 Conduct basic identification and fault-finding within cabling networks and customer equipment

ICTTEN301 Provide infrastructure for telecommunications network equipment

ICTTEN312 Install telecommunications network equipment

ICTTEN316 Conduct basic tests and analyses of telecommunications copper cabling

ICTTEN320 Commission an electronic unit

ICTTEN321 Maintain an electronic system

ICTTEN322 Provide infrastructure for telecommunications network customer equipment

ICTTEN434 Install, configure and test internet protocol networks

Group J Telecommunications Rigging

ICTTCR203 Use safe rigging practices to climb and perform rescues on telecommunications network structures

*Note the following prerequisite unit requirements:

Prerequisite unit requirements in this qualification	
Unit in this qualification	Prerequisite unit
CPCCDE3014 Remove non-friable asbestos	CPCCWHS1001 Prepare to work safely in the construction industry
ICTBWN308 Work safely on live optical fibre installations	ICTBWN307 Use optical measuring instruments ICTWHS204 Follow work health and safety and environmental policy and procedures
ICTCBL246 Install, maintain and modify customer premises communications cabling: ACMA Restricted Rule	ICTTEN208 Use electrical skills when working with telecommunications networks ICTWHS204 Follow work health and safety and environmental policy and procedures
ICTCBL247 Install, maintain and modify customer premises communications cabling:	ICTTEN208 Use electrical skills when working with telecommunications networks

ACMA Open Rule	ICTWHS204 Follow work health and safety and environmental policy and procedures
ICTCBL316 Install ribbon fibre cable in the FTTX distribution network	ICTCBL330 Splice and terminate optical fibre cable for telecommunications projects
ICTDRE314 Design communications wiring systems for customer premises	ICTCBL247 Install, maintain and modify customer premises communications cabling: ACMA Open Rule

Specialisations

Where relevant, specialisations can be used for this qualification in:

- digital reception technology
- optical networks
- radio communications
- telecommunications cabling
- telecommunications networks
- telecommunications rigging
- wireless networks.

The achievement of a specialisation will be identified on testamurs as follows:

- ICT30519 Certificate III in Telecommunications Technology (Digital Reception Technology)
- ICT30519 Certificate III in Telecommunications Technology (Optical Networks)
- ICT30519 Certificate III in Telecommunications Technology (Radio Communications)
- ICT30519 Certificate III in Telecommunications Technology (Telecommunications Cabling)
- ICT30519 Certificate III in Telecommunications Technology (Telecommunications Networks)
- ICT30519 Certificate III in Telecommunications Technology (Telecommunications Rigging)
- ICT30519 Certificate III in Telecommunications Technology (Wireless Networks).

Digital Reception Technology

Select the following 4 elective units from Group D Digital Reception Technology:

- ICTDRE301 Install digital reception equipment
- ICTDRE303 Install a complex digital reception system
- ICTDRE401 Integrate customer digital reception equipment
- ICTRFN407 Conduct radio frequency measurements

Optical Networks

Select the following 5 elective units from Group F Optical Networks:

- ICTBWN302 Install optical fibre splitters in fibre distribution hubs
- ICTBWN303 Install lead-in module and cable for fibre to the premises
- ICTBWN307 Use optical measuring instruments
- ICTBWN308 Work safely on live optical fibre installations*
- ICTBWN309 Perform tests on optical communication system and components

Radio Communications

Select at least 4 elective units from Group H Radio Communications.

Telecommunications Cabling

Select the following 4 elective units from Group C Telecommunications Cabling:

- ICTCBL247 Install, maintain and modify customer premises communications cabling: ACMA Open Rule*
- ICTCBL301 Install, terminate and certify structured cabling installation
- ICTCBL303 Install and terminate coaxial cable
- ICTCBL322 Install, test and terminate optical fibre cable on customer premises

Telecommunications Networking

Select the following 3 elective units from Group A Workplace Technical:

- ICTTEN312 Install telecommunications network equipment
- ICTTEN313 Work on and resolve recurrent network faults
- ICTTEN322 Provide infrastructure for telecommunications network customer equipment

Telecommunications Rigging

Select the 3 elective units in Group J Telecommunications Rigging.

Wireless Networks

Select the following 3 elective units from Group H Radio Communications:

- ICTRFN301 Install a radio communications antenna and feedline
- ICTRFN305 Operate and maintain radio communications technical instruments and field equipment
- ICTRFN407 Conduct radio frequency measurements
-

Qualification Mapping Information

No equivalent qualification. Supersedes and is not equivalent to ICT30515 Certificate III in Telecommunications Technology.

Qualification Description

This qualification reflects the role of individuals who are job ready and competent in a wide range of information and communications technology (ICT) roles and apply a broad range of skills in varied work contexts, using problem solving skills and effective communication with others.

The skills required for these roles may include, but are not restricted to:

- database development: interpreting specifications, technical designs and flow charts, modifying software applications, constructing technical specifications from models and testing, and writing technical documents
- database maintenance: managing, cleaning, storing and verifying organisational data, and evaluating compliance with internal and external data ethics regulations and legislation
- gaming development: creating 2D and 3D modelling and animation software through scripts and storyboards
- networking: installing, configuring and testing networks and servers in organisations
- programming: building, testing and applying basic object-oriented language skills, user interfaces and software developments
- systems administration support: implementing maintenance procedures and support to help troubleshoot system applications
- web development: designing website layouts through textual and visual content transfer, search engine optimisation and simple markup language documents.

Licensing, legislative, regulatory or certification considerations

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

Nil

Packaging Rules

Total number of units = 20

7 core units plus

13 elective units, of which:

- at least 9 units must be selected from the elective units listed below
- up to 4 units may be selected from the remaining listed elective units or from this or any other currently endorsed training package qualification or accredited course at Australian Qualifications Framework (AQF) Level 3, 4 or 5.

Elective units must be relevant to the work environment and the qualification, maintain the integrity of the AQF alignment, not duplicate the outcome of another unit chosen for the qualification and contribute to a valid, industry-supported vocational outcome.

Units selected from other Training Packages or accredited courses must not duplicate units selected from or available within the ICT Information and Communications Technology Training Package.

Where relevant, the choice of elective units set out in the packaging rules above can serve to provide the qualification with one or more of the following specialisations. The rules to achieve a specialisation are detailed at the qualification end.

- Database development
- Database maintenance
- Gaming development
- Networking
- Programming
- Systems administration support
- Web development

Core units

BSBCRT404 Apply advanced critical thinking to work processes

BSBXCS404 Contribute to cyber security risk management

ICTICT426 Identify and evaluate emerging technologies and practices

ICTICT443 Work collaboratively in the ICT industry

ICTICT451 Comply with IP, ethics and privacy policies in ICT environments

ICTPRG302 Apply introductory programming techniques

ICTSAS432 Identify and resolve client ICT problems

Elective units

Group A Database Development Specialisation

ICTDBS407 Monitor physical database implementation

ICTDBS413 Determine database requirements

ICTDBS415 Build a database

ICTDBS416 Create basic relational databases

ICTDBS418 Monitor and administer databases

Group B Database Maintenance Specialisation

ICTDAT401 Evaluate organisational compliance with data ethics legislation

ICTDAT402 Clean and verify data

ICTDBS414 Complete database backup and restore

ICTDBS417 Identify and resolve common database performance problems

ICTPRG554 Manage data persistence using noSQL data stores

Group C Gaming Development Specialisation

ICTGAM418 Use simple modelling for animation

ICTGAM420 Produce interactive games

ICTGAM421 Identify and apply games design and game play principles

ICTGAM426 Write narrative scripts for interactive games

ICTGAM427 Use 3-D software interface and toolsets

ICTICT433 Build graphical user interfaces

Group D Networking Specialisation

ICTNWK420 Install and configure virtual machines

ICTNWK421 Install, configure and test network security

ICTNWK422 Install and manage servers

ICTNWK423 Manage network and data integrity

ICTNWK424 Install and operate small enterprise branch networks

ICTNWK429 Install hardware to networks

ICTTEN434 Install, configure and test internet protocol networks

Group E Programming Specialisation

ICTICT449 Use version control systems in development environments

ICTPRG430 Apply introductory object-oriented language skills

ICTPRG433 Test software developments

ICTPRG437 Build a user interface

ICTPRG440 Apply introductory programming skills in different languages

Group F Systems Administration Support Specialisation

ICTICT445 Connect and configure devices and hardware components

ICTSAS436 Evaluate ICT system status

ICTSAS438 Implement maintenance procedures

ICTSAS441 Support ICT system software

ICTSAS442 Provide first-level remote help desk support

ICTSAS443 Support operating system users and troubleshoot applications

Group G Web Development Specialisation

ICTWEB431 Create and style simple markup language documents

ICTWEB432 Design website layouts

ICTWEB433 Confirm accessibility of websites

ICTWEB434 Transfer content to websites

ICTWEB443 Implement search engine optimisations

ICTWEB450 Evaluate and select a web hosting service

ICTWEB452 Create a markup language document

Group H General electives

Artificial Intelligence

ICTAII401 Identify opportunities to apply artificial intelligence, machine learning and deep learning

ICTAII501 Automate work tasks using machine learning

ICTAII502 Train and evaluate machine learning models

ICTAII503 Build natural language processing models and pipelines

Assistive Technologies

ICTICT452 Support the implementation of assistive technologies

ICTICT453 Evaluate accessibility of organisational systems, programs and software

ICTICT454 Assess organisational systems using assistive technologies

Automation

ICTAUT401 Design business process automation solutions

ICTAUT402 Apply robotic desktop automation

ICTAUT403 Conduct software quality assurance testing

ICTAUT502 Evaluate automated industrial manufacturing processes

Cloud Computing

ICTCLD301 Evaluate characteristics of cloud computing solutions and services

ICTCLD401 Configure cloud services

ICTICT428 Select cloud storage solutions

Cyber Security Incident Response

ICTCYS401 Design and implement network security infrastructure for an organisation

ICTCYS402 Identify and confirm cyber security incidents

ICTCYS403 Plan and implement information security strategies for an organisation

ICTCYS404 Run vulnerability assessments for an organisation

ICTCYS405 Develop cyber security incident response plans

ICTCYS406 Respond to cyber security incidents

ICTCYS407 Gather, analyse and interpret threat data

ICTICT424 Address cyber security requirements

ICTSAS214 Protect devices from spam and destructive software

ICTSAS440 Monitor and administer security of ICT systems

Data and Information Management

ICTDBS503 Create a data warehouse
ICTICT450 Identify and use applications for a distributed ledger
ICTPRG438 Configure and maintain databases
ICTSAS215 Protect and secure information assets

Design Thinking

ICTDSN401 Design digital user interfaces
ICTDSN402 Develop digital user interfaces
ICTDSN403 Apply innovative thinking and practices in digital environments

Digital Media

CUAANM412 Create digital visual effects
CUACAM311 Shoot material for screen productions
CUAPOS411 Edit digital content for fast turnaround
CUAPOS412 Manage media assets
CUAPPM417 Create storyboards
CUASOU212 Perform basic sound editing
CUASOU304 Prepare audio assets
ICTDMT404 Create visual design components for digital media
ICTDMT405 Produce interactive animations
ICTDMT406 Produce and edit digital images

Extended Reality

ICTXRE401 Apply augmented reality solutions in organisations
ICTXRE402 Apply virtual reality solutions in organisations
ICTXRE403 Design mixed reality solutions

Gaming Art and Development

ICTGAM422 Create design documents for interactive games
ICTGAM423 Apply artificial intelligence in game development
ICTGAM424 Develop story and content in digital games
ICTGAM425 Create visual design components in interactive games
ICTGAM428 Create 3-D characters for interactive games
ICTGAM429 Develop 3-D components for interactive games
ICTGAM430 Design interactive media
ICTGAM431 Design and create 3-D digital models
ICTGAM432 Create audio for digital games
ICTGAM433 Prepare and complete image rendering processes

IT Support Services

- ICTICT425 Implement WHS, environmental sustainability and anti-discrimination practices in an ICT workplace
- ICTICT427 Identify, evaluate and apply current industry-specific technologies to meet organisational needs
- ICTICT429 Determine and confirm client business requirements
- ICTICT431 Use online tools for learning
- ICTICT436 Develop macros and templates for clients using standard products
- ICTICT441 Provide one-to-one instructions
- ICTICT446 Apply ICT service management principles
- ICTSAS428 Hand over ICT system components to clients
- ICTSAS433 Update ICT client support procedures and assist with policy development
- ICTSAS434 Action change requests and present updated ICT system to clients
- ICTSAS446 Fault find and troubleshoot ICT equipment, hardware and software problems

IT Work Ready Skills

- BSBPEF402 Develop personal work priorities
- ICTCYS408 Research and source cryptocurrency technologies for organisational needs
- ICTICT435 Create technical documentation
- ICTICT440 Develop service level agreements
- ICTICT448 Prepare electronic portfolios of work
- ICTSAD402 Develop and present ICT feasibility reports

Networking

- ICTCLD301 Evaluate characteristics of cloud computing solutions and services
- ICTNWK425 Build small wireless local area networks
- ICTNWK426 Install and configure client-server applications and services
- ICTNWK427 Configure desktop environments
- ICTNWK428 Create scripts for networking
- ICTNWK430 Deploy software to networked computers
- ICTNWK431 Create network documentation
- ICTNWK432 Build an enterprise wireless network
- ICTNWK433 Install backbone technologies in a local area network
- ICTNWK435 Create secure virtual private networks

Project Management

- ICTICT447 Work effectively in agile environments
- ICTPMG411 Support small scale ICT projects

Programming

ICTPRG429 Maintain open-source code programs
ICTPRG431 Apply query language in relational databases
ICTPRG432 Develop data-driven applications
ICTPRG434 Automate processes
ICTPRG435 Write scripts for software applications
ICTPRG436 Develop mobile applications
ICTPRG439 Use pre-existing components
ICTPRG441 Apply skills in object-oriented design
ICTPRG442 Apply mathematical techniques for software development
ICTPRG443 Apply intermediate programming skills in different languages
ICTPRG444 Analyse software requirements
ICTPRG446 Prepare software development review
ICTPRG447 Use extensible markup language
ICTSAD501 Model data objects
ICTSAD502 Model data processes

Systems and Software Design

ICTICT430 Apply software development methodologies
ICTICT432 Develop detailed technical design
ICTICT438 Select, configure and deploy software and hardware testing tools
ICTICT444 Develop client user interfaces
ICTNWK434 Identify and implement industry standard virtualisation technologies
ICTSAS445 Configure and troubleshoot operating system software
ICTTEN410 Locate, diagnose and rectify faults
ICTTEN417 Install, configure and test a router
ICTTEN418 Install and test a radio frequency identification system
ICTTEN419 Implement and troubleshoot enterprise routers and switches
ICTTEN420 Design, install and configure an internetwork
ICTTEN525 Install, configure and test a local area network switch

Systems Development and Maintenance

ICTICT434 Maintain website information standards
ICTICT437 Conduct post-implementation ICT system reviews
ICTSAS309 Maintain and repair ICT equipment and software
ICTSAS435 Resolve system faults on a live system
ICTSAS437 Optimise ICT system performance
ICTSAS439 Analyse ICT system capacity and implement enhancements
ICTSAS444 Repair operating systems boot up procedures
ICTSUS402 Install and test power saving hardware

ICTSUS403 Install and test power management software

ICTSUS404 Install thin client applications for power over ethernet

Web design and development

ICTWEB430 Produce server-side script for dynamic web pages

ICTWEB435 Maintain website performance

ICTWEB436 Monitor traffic and compile website traffic reports

ICTWEB437 Create website testing procedures

ICTWEB438 Conduct operational acceptance tests of websites

ICTWEB439 Confirm basic website security

ICTWEB440 Use web authoring tools

ICTWEB441 Produce basic client-side script

ICTWEB442 Produce interactive web animation

ICTWEB444 Create responsive website layouts

ICTWEB445 Implement content management systems

ICTWEB446 Integrate social web technologies

ICTWEB447 Build basic website using development software and ICT tools

ICTWEB448 Confirm website content meets technical protocols and standards

ICTWEB449 Confirm website access and useability

ICTWEB451 Apply structured query language in relational databases

ICTWEB453 Optimise websites for mobile devices

Specialisations

As stated above, where relevant, the choice of elective units set out in the packaging rules at qualification outset can serve to provide the qualification with one or more of the following specialisations. The rules to achieve a specialisation are detailed below.

The achievement of more than one specialisation may be indicated on the same testamur as follows:

- ICT40120 Certificate IV in Information Technology (Database Development)
- ICT40120 Certificate IV in Information Technology (Database Maintenance)
- ICT40120 Certificate IV in Information Technology (Gaming Development)
- ICT40120 Certificate IV in Information Technology (Networking)
- ICT40120 Certificate IV in Information Technology (Programming)
- ICT40120 Certificate IV in Information Technology (Systems Administration Support)
- ICT40120 Certificate IV in Information Technology (Web Development).

Packaging rules to achieve a specialisation

Database Development

- Select all 5 elective units from Group A Database Development Specialisation

Database Maintenance

- Select all 5 elective units from Group B Database Maintenance Specialisation

Gaming Development

- Select all 6 elective units from Group C Gaming Development Specialisation

Networking

- Select all 7 elective units from Group D Networking Specialisation

Programming

- Select all 5 elective units from Group E Programming Specialisation

Systems Administration Support

- Select all 6 elective units from Group F Systems Administration Support Specialisation

Web Development

- Select all 7 elective units from Group G Web Development Specialisation

Qualification Mapping Information

No equivalent qualification. Supersedes and is not equivalent to:

- ICT40118 Certificate IV in Information Technology
- ICT40215 Certificate IV in Information Technology Support
- ICT40315 Certificate IV in Web-Based Technologies
- ICT40418 Certificate IV in Information Technology Networking
- ICT40518 Certificate IV in Programming
- ICT40815 Certificate IV in Digital Media Technologies
- ICT40915 Certificate IV in Digital and Interactive Games
- ICT41015 Certificate IV in Computer Systems Technology.

ICT41119 Certificate IV in Telecommunications Network Design

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.
Release 2	<p>This version released with ICT Information and Communications Technology Training Package Version 7.1.</p> <p>The following elective units of competency have been deleted as directed by the AISC:</p> <ul style="list-style-type: none">• ICTNPL403 Evaluate the capability of access networks• ICTNPL404 Evaluate the planning requirements for provisioning a telecommunications building facility• ICTNPL405 Develop provisioning of telecommunications building works project• ICTNPL406 Evaluate core network architectures• ICTNPL407 Plan the deployment of core network• ICTNPL408 Produce planning specifications for end-to-end service delivery• ICTNPL411 Apply compliance requirements to telecommunications work• ICTRFN404 Undertake radio communications signals monitoring• ICTSMB402 Operate a contractor business with employees• ICTTEN407 Cut over customer premises equipment major upgrades• ICTTEN430 Design infrastructure for telecommunications network installations• ICTTEN431 Design a dense wavelength division multiplexing system. <p>The above training products were identified as having zero enrolments over a three year period.</p>

Qualification Description

This qualification reflects the role of a technician with a range of telecommunications skills and extensive knowledge of the access, building and core networks, and client capabilities of the service provider. It prepares people to work in telecommunications infrastructure network design, for network additions and implementations to accommodate network growth and new technologies within the industry.

Graduates with this qualification will be able to design:

- the customer access network
- the building network
- the core network for the service provider and asset owner
- carrier equipment infrastructure.

Licensing/Regulatory Information

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the ICT Information and Communications Technology Companion Volume Implementation Guide or the relevant regulator for details of licencing, legislative or certification requirements.

Entry Requirements

Entry into this qualification requires:

- a qualification at AQF level 2 or 3 in telecommunications from the ICT Information and Communications Technology Training Package or the ICT10 Integrated Telecommunications Training Package and certified evidence of at least 700 hours of work experience within the related scope of this qualification, which may have occurred concurrent with or after the qualification was achieved

or

- a qualification at AQF level 2 or 3 in electrotechnology from the UEE Electrotechnology Training Package and certified evidence of at least 700 hours of work experience within the related scope of this qualification, which may have occurred concurrent with or after the qualification was achieved

or

- a current unrestricted electrical licence from any Australian state or territory electrical regulator

or

- a qualification at AQF level 2 or 3 in telecommunications from the ICT Information and Communications Technology Training Package or the ICT10 Integrated Telecommunications Training Package and enrolment in this Certificate IV as part of a traineeship or apprenticeship program or concurrently employed within the ICT industry

or

- open registration as an ACMA registered cabler with certified evidence of at least 2100 hours of work experience within customer premises doing cabling or telecommunications carrier work.

Packaging Rules

Total number of units = 16

6 core units, plus

10 elective units

The elective units selected must consist of:

- up to 1 elective unit from Group A Workplace
- at least 4 elective units from Groups B Design and D Network Planning.

The remaining required elective units selected may consist of:

- up to 3 elective units from Groups C ICT Use, E Optical Networks, F Project Management, G Radio Communications, H Sustainability or I Network Engineering
- up to 4 elective units from this or any currently endorsed Training Package or accredited course where the units are packaged in an Australian Qualifications Framework (AQF) Level 4 or above qualification.

Elective units must be relevant to the work environment and the qualification, maintain the integrity of the AQF alignment and contribute to a valid, industry-supported vocational outcome.

Units selected from other Training Packages or accredited courses must not duplicate units selected from, or available within, the ICT Information and Communications Technology Training Package.

Core units

ICTICT408 Create technical documentation

ICTNPL409 Apply knowledge of regulation and legislation for the telecommunications industry

ICTTEN426 Design network projects

ICTTEN427 Conduct site surveys to identify carrier installation requirements

ICTTEN428 Prepare design drawings and specification for telecommunications installations

ICTTEN429 Estimate and quote for carrier telecommunications equipment installations

Elective units

Group A Workplace

BSBLDR402 Lead effective workplace relationships

BSBMGT401 Show leadership in the workplace

BSBSMB407 Manage a small team

ICTICT401 Determine and confirm client business requirements

ICTSMB401 Set up and operate a contractor business

ICTWOR401 Undertake a civil site survey

Group B Design

BSBDES401 Generate design solutions

BSBDES402 Interpret and respond to a design brief

BSBDES403 Develop and extend design skills and practice

BSBDES501 Implement design solutions

BSBDES502 Establish, negotiate and refine a design brief

Group C ICT Use

ICTICT405 Develop detailed technical design

ICTICT428 Select cloud storage solutions

ICTNWK409 Create scripts for networking

ICTNWK419 Identify and use current virtualisation technologies

ICTPRG301 Apply introductory programming techniques

ICTPRG430 Apply introductory object-oriented language skills

Group D Network Planning

ICTNPL401 Apply business acumen to network planning

ICTNPL402 Plan the deployment of access network architectures

ICTNPL410 Plan the telecommunications access network for an estate

ICTRFN502 Test and measure cellular phone and network equipment performance

Group E Optical Networks

ICTBWN307 Use optical measuring instruments

ICTOPN403 Prepare activity plans and specifications for a fibre to the x installation

ICTOPN405 Install and test a dense wavelength division multiplexing system

Group F Project Management

ICTPMG402 Schedule installation of customer premises equipment

ICTPMG403 Manage the delivery of network infrastructure

ICTPMG503 Prepare a project brief

Group G Radio Communications

ICTBWN306 Use radio frequency measuring instruments

ICTRFN402 Select antenna system for radio communications

ICTRFN406 Maintain hybrid fibre coaxial broadband cable network

ICTRFN407 Conduct radio frequency measurements

Group H Sustainability

BSBSUS401 Implement and monitor environmentally sustainable work practices

BSBSUS402 Implement an environmental management plan

Group I Network Engineering

ICTBWN308 Work safely on live optical fibre installations*

ICTTEN208 Use electrical skills when working with telecommunications networks

ICTTEN402 Estimate and quote for customer telecommunications equipment installation

ICTTEN403 Assign a transmission path

ICTTEN406 Effect changes to existing customer premises equipment systems and equipment

ICTTEN416 Install, configure and test an internet protocol network

ICTTEN417 Install, configure and test a router

ICTTEN420 Design, install and configure an internetwork

ICTTEN421 Apply advanced routing protocols to network design

ICTTEN425 Design, install and configure a customer smart technology network

ICTTEN432 Identify requirements for customer telecommunications equipment

ICTTEN435 Solve electrical-based telecommunications circuitry and cabling problems*

*Note the following prerequisite unit requirements:

Prerequisite unit requirements in this qualification	
Unit in this qualification	Prerequisite unit
ICTBWN308 Work safely on live optical fibre installations	ICTBWN307 Use optical measuring instruments ICTWHS204 Follow work health and safety and environmental policy and procedures
ICTTEN435 Solve electrical-based telecommunications circuitry and cabling problems	ICTTEN208 Use electrical skills when working with telecommunications networks

Qualification Mapping Information

No equivalent qualification. Supersedes and is not equivalent to ICT41115 Certificate IV in Telecommunications Network Design.

ICT41219 Certificate IV in Telecommunications Engineering Technology

Modification History

Release	Comments
Release 3	<p>This version released with ICT Information and Communications Technology Training Package Version 8.0.</p> <p>19 units of competency have been replaced with their relevant superseding unit.</p>
Release 2	<p>This version released with ICT Information and Communications Technology Training Package Version 7.1.</p> <p>The following elective units of competency have been deleted as directed by the AISC:</p> <ul style="list-style-type: none">• ICTCBL402 Schedule and supply cabling installation• ICTDRE402 Integrate data delivery modes• ICTRFN303 Install WiMAX customer premises equipment broadband wireless access equipment• ICTRFN403 Test and repair cellular network equipment• ICTRFN404 Undertake radio communications signals monitoring• ICTSMB402 Operate a contractor business with employees• ICTTEN407 Cut over customer premises equipment major upgrades• ICTTEN424 Install and configure internet protocol TV in a service provider network• ICTWOR402 Schedule equipment maintenance. <p>The above training products were identified as having zero enrolments over a three year period.</p>
Release 1	<p>This version released with ICT Information and Communications Technology Training Package Version 5.0.</p>

Qualification Description

This qualification reflects the role of an advanced technician (technical officer), team leader or supervisor with a wide range of telecommunications skills. The skills required for this role may include, but are not restricted to, the ability to install and maintain:

- enterprise networks in emerging and converging technologies
- optical and wireless equipment for high speed broadband network infrastructure

- internet protocol (IP) based network telecommunications equipment
- IP based networks in home networks and small and medium enterprises
- telecommunications, data cabling and cabling products in line with the specifications of the access network owner
- telecommunications access network cabling and infrastructure, systems and customer equipment.

The qualification enables technicians to assess installation requirements of converging voice, video and data IP networks, plan and perform installations and test installed equipment and fault find.

Licensing/Regulatory Information

Work functions in the occupational areas where this qualification may be used are subject to regulatory requirements. Refer to the ICT Information and Communications Technology Training Package Companion Volume Implementation Guide or the relevant regulator for details of licensing, legislative or certification requirements.

Entry Requirements

Entry into this qualification requires:

- a qualification at AQF level 2 or 3 in telecommunications from the ICT Information and Communications Technology Training Package or the ICT10 Integrated Telecommunications Training Package and certified evidence of at least 700 hours of work experience within the related scope of the qualification, which may have occurred concurrent with or after the qualification was achieved

or

- a qualification at AQF level 2 or 3 in electrotechnology from the UEE Electrotechnology Training Package and certified evidence of at least 700 hours of work experience within the related scope of the qualification, which may have occurred concurrent with or after the qualification was achieved

or

- a current unrestricted electrical licence from any Australian State or Territory electrical regulator

or

- a qualification at AQF level 2 or 3 in telecommunications from the ICT Information and Communications Technology Training Package and enrolment in the ICT41219 Certificate IV in Telecommunications Engineering Technology as part of a traineeship or apprenticeship program or concurrently employed within the ICT industry

or

- open registration as an ACMA registered cabler with certified evidence of at least 2100 hours of work experience within the customer premises doing cabling or telecommunications carrier work.

Packaging Rules

Total number of units = 17

5 core units, plus

12 elective units

The elective units selected may consist of:

- up to 1 elective unit from Group A Workplace
- up to 12 elective units from Groups B General, C IT Use, D Network Engineering, and E Radio Communications
- up to 4 elective units from this and any currently endorsed Training Package or accredited course where the units are packaged in an Australian Qualification Framework (AQF) Level 4 or above qualification.

Elective units must be relevant to the work environment and the qualification, maintain the integrity of the AQF alignment, not duplicate the outcome of another unit chosen for the qualification and contribute to a valid, industry-supported vocational outcome.

Units selected from other Training Packages or accredited courses must not duplicate units selected from or available within the ICT Information and Communications Technology Training Package.

Core units

ICTTEN208 Use electrical skills when working with telecommunications networks

ICTTEN410 Locate, diagnose and rectify faults

ICTTEN414 Repair telecommunication system faults

ICTTEN416 Install, configure and test an internet protocol network

ICTTEN435 Solve electrical-based telecommunications circuitry and cabling problems*

Elective units

Group A Workplace

BSBESB402 Establish legal and risk management requirements of new business ventures

BSBESB406 Establish operational strategies and procedures for new business ventures

BSBLDR414 Lead team effectiveness

BSBOPS404 Implement customer service strategies

ICTCBL403 Supervise cabling project

ICTICT429 Determine and confirm client business requirements

ICTSMB401 Set up and operate a contractor business

ICTTEN402 Estimate and quote for customer telecommunications equipment installation

Group B General

BSBSUS411 Implement and monitor environmentally sustainable work practices
ICTCBL405 Remotely locate and identify cable network faults
ICTDRE302 Locate and rectify digital reception equipment faults
ICTDRE402 Integrate data delivery modes
ICTEDU301 Train customers in new technology
ICTICT435 Create technical documentation
ICTNWK429 Install hardware to networks
ICTOPN403 Prepare activity plans and specifications for a fibre to the x installation
ICTOPN404 Test optical communications systems and components
ICTOPN405 Install and test a dense wavelength division multiplexing system
ICTPMG402 Schedule installation of customer premises equipment
ICTRFN406 Maintain hybrid fibre coaxial broadband cable network
ICTSUS402 Install and test power saving hardware
ICTSUS404 Install thin client applications for power over ethernet
ICTTEN403 Assign a transmission path
ICTTEN404 Install and configure a wireless mesh network
ICTTEN406 Effect changes to existing customer premises equipment systems and equipment
ICTTEN408 Complete equipment and software upgrades
ICTTEN409 Commission an electronic system
ICTTEN412 Undertake routine maintenance of the telecommunications network
ICTTEN413 Undertake remote diagnosis and repair of network faults
ICTTEN415 Install and configure internet protocol TV in a home network
ICTTEN417 Install, configure and test a router
ICTTEN419 Implement and troubleshoot enterprise routers and switches
ICTTEN425 Design, install and configure a customer smart technology network
ICTTEN432 Identify requirements for customer telecommunications equipment
ICTTEN433 Install configuration programs on PC based customer equipment

Group C IT Use

ICTICT428 Select cloud storage solutions
ICTNWK428 Create scripts for networking
ICTNWK434 Identify and implement industry standard virtualisation technologies
ICTPRG302 Apply introductory programming techniques
ICTPRG430 Apply introductory object-oriented language skills

Group D Network Engineering

ICTCBL401 Prepare design drawings and specification for a cable installation
ICTCBL404 Test cable bearers
ICTDRE401 Integrate customer digital reception equipment
ICTICT432 Develop detailed technical design

ICTNWK421 Install, configure and test network security
ICTNWK430 Deploy software to networked computers
ICTNWK432 Build an enterprise wireless network
ICTNWK435 Create secure virtual private networks
ICTNWK540 Design, build and test network servers
ICTPMG403 Manage the delivery of network infrastructure
ICTSUS403 Install and test power management software
ICTTEN301 Provide infrastructure for telecommunications network equipment
ICTTEN312 Install telecommunications network equipment
ICTTEN321 Maintain an electronic system
ICTTEN411 Monitor, analyse and action telecommunications network alarms
ICTTEN420 Design, install and configure an internetwork
ICTTEN421 Apply advanced routing protocols to network design
ICTTEN422 Configure and troubleshoot advanced network switching
ICTTEN423 Install and maintain a wide area network

Group E Radio Communications

ICTCMP502 Conduct radio communications site audit
ICTRFN301 Install a radio communications antenna and feedline
ICTRFN304 Construct and test a radio communications device
ICTRFN305 Operate and maintain radio communications technical instruments and field equipment
ICTRFN402 Select antenna system for radio communications
ICTRFN405 Install radio communications base station equipment
ICTRFN407 Conduct radio frequency measurements
ICTRFN505 Test and measure cellular phone and network equipment performance
ICTTEN418 Install and test a radio frequency identification system
ICTWOR401 Undertake a civil site survey

*Note the following prerequisite unit requirements:

Prerequisite unit requirements in this qualification	
Unit in this qualification	Prerequisite unit
ICTTEN435 Solve electrical-based telecommunications circuitry and cabling problems	ICTTEN208 Use electrical skills when working with telecommunications networks

Specialisations

Where relevant, specialisations can be used for this qualification in:

- network engineering
- optical networks
- radio communications
- smart device installation
- telecommunications network technician – hybrid fibre coaxial.

The achievement of a specialisation will be identified on testamurs as follows:

- ICT41219 Certificate IV in Telecommunications Engineering Technology (Network Engineering)
- ICT41219 Certificate IV in Telecommunications Engineering Technology (Optical Networks)
- ICT41219 Certificate IV in Telecommunications Engineering Technology (Radio Communications)
- ICT41219 Certificate IV in Telecommunications Engineering Technology (Smart Device Installation)
- ICT41219 Certificate IV in Telecommunications Engineering Technology (Telecommunications Network Technician – Hybrid Fibre Coaxial).

Network Engineering

Select 7 elective units from Group D Network Engineering.

Optical Networks

Select the following 3 elective units from Group B General:

- ICTOPN403 Prepare activity plans and specifications for a fibre to the x installation
- ICTOPN404 Test optical communications systems and components
- ICTOPN405 Install and test a dense wavelength division multiplexing system

Radio Communications

Select the following 5 elective units:

- ICTRFN301 Install a radio communications antenna and feedline
- ICTRFN304 Construct and test a radio communications device
- ICTRFN402 Select antenna system for radio communications
- ICTRFN407 Conduct radio frequency measurements
- ICTTEN312 Install telecommunications network equipment

Smart Device Installation

Select the following 6 elective units:

- ICTDRE302 Locate and rectify digital reception equipment faults
- ICTEDU301 Train customers in new technology
- ICTICT428 Select cloud storage solutions
- ICTRFN407 Conduct radio frequency measurements
- ICTTEN415 Install and configure internet protocol TV in a home network
- ICTTEN425 Design, install and configure a customer smart technology network

Telecommunication Network Technician – Hybrid Fibre Coaxial

Select the following 6 elective units:

- ICTRFN406 Maintain hybrid fibre coaxial broadband cable network
- ICTRFN407 Conduct radio frequency measurements
- ICTTEN208 Use electrical skills when working with telecommunications networks
- ICTTEN312 Install telecommunications network equipment
- ICTTEN409 Commission an electronic system
- ICTTEN410 Locate, diagnose and rectify faults

Qualification Mapping Information

No equivalent qualification. Supersedes and is not equivalent to ICT41215 Certificate IV in Telecommunications Engineering Technology.

ICT50220 Diploma of Information Technology

Modification History

Release	Comments
Release 2	<p>This version first released with ICT Information and Communications Technology Training Package Version 8.0.</p> <ul style="list-style-type: none">12 newly created units of competency were added to <i>Group O General Electives</i>.16 units of competency have been replaced with their relevant superseding unit. <p>The following unit of competency was updated with minor editorial corrections:</p> <ul style="list-style-type: none">ICTWEB433 Confirm accessibility of websites.
Release 1	<p>This version first released with ICT Information and Communications Technology Training Package Version 7.0.</p>

Qualification Description

This qualification reflects the role of individuals in a variety of information and communications technology (ICT) roles who have established specialised skills in a technical ICT function.

Individuals in these roles carry out moderately complex tasks in a specialist field, working independently, as part of a team or leading a deliverable with others. They may apply their skills across a wide range of industries, business functions and departments, or as a business owner (sole trader/contractor).

The skills required for these roles may include, but are not restricted to:

- advanced networking: configuring and managing virtual computing environments, and security within ICT networks
- advanced programming: applying intermediate and advanced programming skills, managing data and building advanced user interfaces to manage organisational requirements
- back end web development: developing and maintaining website information architecture and data
- business analysis: designing and implementing technical requirements, quality assurance processes and contingency plans for businesses
- cloud architecture: developing, improving and designing cloud infrastructure, including disaster recovery plans

- cloud engineering: building, implementing and managing cloud infrastructure and virtual networks
- cyber security: protecting sensitive data and information through security architecture and developing disaster recovery and contingency plans
- database and data management: creating, designing and monitoring systems that store data and optimise organisational knowledge management
- front end web development: designing dynamic and complex websites, user experience solutions and documents using extensible mark-up languages
- game art and design: creating complex 2D and 3D modelling and animation software through scripts and storyboards
- game programming: creating complex 2D and 3D interactive games and media, building graphical user interfaces and applying artificial intelligence in game development
- systems administration: reviewing maintenance procedures and support to help troubleshoot system applications
- systems analysis: modelling and testing data objects, data processes and preferred ICT system solutions
- telecommunications network engineering: managing logistics, organisational specifications, regulations and legislative requirements across network projects.

Licensing, legislative, regulatory or certification considerations

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

Nil

Packaging Rules

Total number of units = 20

6 core units plus

14 elective units, of which:

- at least 10 units must be selected from the elective units listed below
- up to 4 units may be selected from the remaining listed elective units or from this or any currently endorsed Training Package or accredited course where the units are packaged in an Australian Qualification Framework (AQF) Level 4, 5 or 6 qualification.

Elective units must be relevant to the work environment and the qualification, maintain the integrity of the AQF alignment, not duplicate the outcome of another unit chosen for the qualification, and contribute to a valid, industry-supported vocational outcome.

Units selected from other Training Packages or accredited courses must not duplicate units selected from or available within the ICT Information and Communications Technology Training Package.

Where relevant, the choice of elective units set out in the packaging rules above can serve to provide the qualification with one or more of the following specialisations. The rules to achieve a specialisation are detailed at the qualification end.

- Advanced networking
- Advanced programming
- Back end web development
- Business analysis
- Cloud architecture
- Cloud engineering
- Cyber security
- Database and data management
- Front end web development
- Game art and design
- Game programming
- Systems administration
- Systems analysis
- Telecommunications network engineering.

Core units

BSBCRT512 Originate and develop concepts

BSBXCS402 Promote workplace cyber security awareness and best practices

BSBXTW401 Lead and facilitate a team

ICTICT517 Match ICT needs with the strategic direction of the organisation

ICTICT532 Apply IP, ethics and privacy in ICT environments

ICTSAS527 Manage client problems

Elective units

Group A Advanced Networking Specialisation

ICTNWK529 Install and manage complex ICT networks

ICTNWK536 Plan, implement and test enterprise communication solutions

ICTNWK540 Design, build and test network servers

ICTNWK546 Manage network security

ICTNWK557 Configure and manage advanced virtual computing environments

ICTNWK559 Install an enterprise virtual computing environment

Group B Advanced programming specialisation

ICTPRG535 Build advanced user interfaces

ICTPRG547 Apply advanced programming skills in another language

ICTPRG549 Apply intermediate object-oriented language skills

ICTPRG554 Manage data persistence using noSQL data stores

ICTPRG556 Implement and use a model view controller framework

Group C Back end web development specialisation

ICTDBS507 Integrate databases with websites

ICTPRG553 Create and develop REST APIs

ICTPRG554 Manage data persistence using noSQL data stores

ICTWEB522 Develop website information architecture

ICTWEB525 Implement quality assurance process for websites

Group D Business analysis specialisation

ICTSAD507 Design and implement quality assurance processes for business solutions

ICTSAD508 Develop technical requirements for business solutions

ICTSAD509 Produce ICT feasibility reports

ICTSAS502 Establish and maintain client user liaison

ICTSAS526 Review and update disaster recovery and contingency plans

Group E Cloud architect specialisation

ICTCLD501 Develop cloud disaster recovery plans

ICTCLD502 Design and implement highly-available cloud infrastructure

ICTCLD503 Implement web-scale cloud infrastructure

ICTCLD504 Improve cloud-based infrastructure

Group F Cloud engineer specialisation

ICTCLD505 Implement cloud infrastructure with code

ICTCLD506 Implement virtual network in cloud environments

ICTCLD507 Build and deploy resources on cloud platforms

ICTCLD508 Manage infrastructure in cloud environments

Group G Cyber security specialisation

ICTCYS407 Gather, analyse and interpret threat data

ICTCYS610 Protect critical infrastructure for organisations

ICTCYS613 Utilise design methodologies for security architecture

ICTSAS524 Develop, implement and evaluate an incident response plan

ICTSAS526 Review and update disaster recovery and contingency plans

Group H Database and data management specialisation

ICTDBS503 Create a data warehouse

ICTDBS505 Monitor and improve knowledge management systems

ICTDBS506 Design databases

ICTDBS507 Integrate databases with websites

ICTSAD502 Model data processes

Group I Front end web development specialisation

ICTICT530 Design user experience solutions

ICTWEB513 Build dynamic websites

ICTWEB514 Create dynamic web pages

ICTWEB518 Build a document using extensible markup language

ICTWEB519 Develop complex web page layouts

ICTWEB520 Develop complex cascading style sheets

Group J Game art and design specialisation

ICTGAM539 Create and implement designs for 3-D games environments

ICTGAM542 Animate 3-D characters for digital games

ICTGAM543 Produce digital animation sequences

ICTGAM545 Manage technical art and rigging in 3-D animations

ICTGAM552 Create complex 3-D characters for games

Group K Game programming specialisation

ICTGAM423 Apply artificial intelligence in game development

ICTGAM533 Create complex 3-D interactive games

ICTGAM535 Develop complex 3-D software for games and interactive media

ICTGAM537 Prepare games for different platforms and delivery modes

ICTICT433 Build graphical user interfaces

Group L Systems administration specialisation

ICTNWK615 Design and configure desktop virtualisation

ICTSAS512 Review and manage delivery of maintenance services

ICTSAS518 Install and upgrade operating systems

ICTSAS524 Develop, implement and evaluate an incident response plan

Group M Systems analysis specialisation

ICTNWK548 Model preferred system solutions

ICTSAD501 Model data objects

ICTSAD502 Model data processes

ICTSAS506 Update ICT system operational procedures

ICTSAS520 Develop detailed test plans

Group N Telecommunications network engineering specialisation

ICTICT519 Develop detailed component specifications from project specifications

ICTNPL413 Evaluate networking regulations and legislation for the telecommunications industry

ICTNWK423 Manage network and data integrity

ICTNWK541 Configure, verify and troubleshoot WAN links and IP services

ICTPMG505 Manage ICT projects

ICTTEN519 Design network building projects

Group O General electives

Advanced IT Support

ICTICT518 Research and review hardware technology options for organisations

ICTICT520 Confirm transition strategy for new systems

ICTICT521 Select new technology supported business model

ICTICT524 Determine ICT strategies and solutions for organisations

ICTICT525 Identify and manage the implementation of industry specific technologies

ICTICT526 Verify client business requirements

ICTICT528 Deploy smart contracts

ICTICT533 Conduct quality audit of IT system design specifications

ICTSAS519 Perform systems tests

ICTSAS521 Perform integration tests

ICTSAS522 Manage the testing process

ICTSAS523 Perform stress and load tests on integrated platforms

ICTSAS528 Review and develop ICT maintenance strategies

ICTSAS529 Prioritise ICT change requests

ICTSAS530 Use network tools

Artificial Intelligence

ICTAII401 Identify opportunities to apply artificial intelligence, machine learning and deep learning

ICTAII501 Automate work tasks using machine learning

ICTAII502 Train and evaluate machine learning models

ICTAII503 Build natural language processing models and pipelines

Automation

ICTAUT501 Manage robotic process automation

Blockchain Solutions

ICTICT527 Develop and maintain blockchain solutions

Business Management

BSBPMG537 Manage project procurement

ICTICT435 Create technical documentation
ICTICT443 Work collaboratively in the ICT industry
ICTICT523 Gather data to identify business requirements
PSPPCM023 Manage strategic contracts
ICTSAD510 Manage risks when implementing new technologies

Cloud Computing

ICTCLD509 Manage cloud identity and access
ICTCLD510 Manage cloud threat detection systems
ICTCLD511 Protect cloud infrastructure and data
ICTCLD512 Respond to cloud security incidents
ICTCLD513 Develop cloud-based microservices architecture using containers
ICTCLD514 Create and test cloud-based serverless applications
ICTCLD515 Build and deploy cloud-based applications using CI and CD pipelines

Data Engineering

ICTDAT501 Gather, analyse and verify data from different source inputs
ICTDAT502 Conduct significance tests
ICTDAT503 Use unsupervised learning for clustering

Design

CUADIG512 Design digital applications
CUADIG513 Design e-learning resources
CUADIG517 Design digital simulations
CUAPHI524 Prepare digital images

Digital Media

CUAPOS411 Edit digital content for fast turnaround
CUASOU417 Edit sound
CUASOU504 Produce sound recordings
ICTDMT407 Incorporate video assets into media presentations

Gaming Development

ICTGAM532 Create design concepts for digital games and 3-D media
ICTGAM534 Manage interactive media productions
ICTGAM536 Design interactive 3-D applications for scientific and mathematical modelling
ICTGAM538 Manage testing of games and interactive media
ICTGAM540 Design and create models for 3-D and digital effects environments
ICTGAM541 Design and create advanced particles, fluids and bodies for 3-D digital effects
ICTGAM544 Animate physical attributes of models and elements

ICTGAM546 Create and combine 3-D digital games and components
ICTGAM547 Create interactive 3-D environments for digital games
ICTGAM548 Complete digital editing for 3-D and digital effects environments
ICTGAM549 Collaborate in design of 3-D game levels and environments
ICTGAM550 Integrate multiple data sources into interactive 3-D environments
ICTGAM551 Apply digital texturing for the 3-D environment in digital games
ICTGAM553 Integrate databases with online games
ICTGAM554 Create games for mobile devices
ICTGAM555 Analyse business opportunities in the digital games environments
ICTGAM556 Develop and implement physics in 3-D digital games
ICTGAM557 Complete compositing to create elements for 3-D and digital effects environments

Internet of Things

ICTIOT501 Install IT devices and networks
ICTIOT502 Program IoT devices
ICTIOT503 Design and test IoT devices and networks

Networking

ICTNWK537 Implement secure encryption technologies
ICTNWK538 Install and maintain valid authentication processes
ICTNWK539 Design and implement integrated server solutions
ICTNWK541 Configure, verify and troubleshoot WAN links and IP services
ICTNWK542 Install, operate and troubleshoot medium enterprise routers
ICTNWK543 Install, operate and troubleshoot medium enterprise switches
ICTNWK544 Design and implement a security perimeter for ICT networks
ICTNWK545 Develop, implement and evaluate systems and applications security
ICTNWK547 Manage system security on operational systems
ICTNWK549 Design ICT security frameworks
ICTNWK550 Design ICT system security controls
ICTNWK551 Build decks using wireless markup language
ICTNWK552 Install and configure network access storage devices
ICTNWK553 Configure enterprise virtual computing environments
ICTNWK554 Manage enterprise virtual computing environments
ICTNWK556 Identify and resolve network problems
ICTNWK558 Monitor and troubleshoot virtual computing environments
ICTNWK560 Determine best-fit topologies for wide area networks
ICTNWK561 Design enterprise wireless local area networks
ICTNWK562 Configure internet gateways
ICTNWK623 Manage ICT security

Programming

ICTPRG530 Manage projects using software management tools
ICTPRG531 Prepare for application development using current methods
ICTPRG532 Apply advanced object-oriented language skills
ICTPRG533 Debug and monitor applications
ICTPRG534 Deploy applications to production environments
ICTPRG536 Design application architecture
ICTPRG537 Implement security for applications
ICTPRG538 Create mashups
ICTPRG540 Maintain custom software
ICTPRG541 Monitor and support data conversion to new ICT systems
ICTPRG542 Review developed software
ICTPRG543 Develop integration blueprint for ICT systems
ICTPRG544 Install, test and evaluate pilot version of ICT systems
ICTPRG545 Monitor system pilots
ICTPRG548 Develop high-level object-oriented class specifications
ICTPRG550 Perform ICT data conversions
ICTPRG555 Implement object relational mapping framework for data persistence
ICTPRG557 Develop applications using agile methods
ICTPRG603 Develop advanced mobile multi-touch applications

Project Management

BSBPMG532 Manage project quality
BSBPMG536 Manage project risk
BSBPMG539 Manage project governance
ICTICT529 Organise and lead agile projects
ICTPMG505 Manage ICT projects

Systems and Software Design

ICTPRG546 Validate application designs against specifications
ICTPRG551 Apply testing techniques for software development

Telecommunications Network Engineering General

ICTICT531 Test network using virtual instruments
ICTPMG402 Schedule installation of customer premises equipment
ICTPMG506 Prepare network project briefs
ICTPRG605 Manage development of technical solutions from business specifications
ICTSAS525 Develop and conduct client acceptance tests
ICTSUS502 Install and test virtual infrastructure

ICTTEN426 Design network projects
ICTTEN520 Commission network equipment
ICTTEN521 Integrate network systems and equipment
ICTTEN522 Cut over new and replacement network equipment
ICTTEN523 Locate, diagnose and rectify complex system equipment faults
ICTTEN524 Diagnose and organise repair of complex equipment faults
ICTTEN525 Install, configure and test local area network switches
ICTTEN526 Dimension and design a radio frequency identification system
ICTTEN527 Plan wireless mesh networks
UEPOPS423 Plan a scheduled outage

Telecommunications Network Engineering Networking

ICTNWK555 Determine best-fit topologies for local networks
ICTNWK628 Design and build integrated VoIP networks

Telecommunications Network Engineering Optical Networks

ICTOPN507 Plan and configure dense wavelength division multiplexing optical networks
ICTOPN508 Perform acceptance and commissioning tests on optical networks
ICTOPN509 Plan for optical system upgrades
ICTOPN510 Test and commission dense wavelength division multiplexing transmission systems
ICTOPN511 Test performance of specialised optical devices
ICTOPN512 Analyse and integrate specialised optical devices

Telecommunications Network Engineering Radio Communications

ICTCMP502 Conduct radio communications site audits
ICTRFN504 Test cellular handset enhancements and international roaming agreements
ICTRFN505 Test and measure cellular phone and network equipment performance
ICTRFN506 Evaluate radio frequency signal coverage plots
ICTRFN603 Monitor the capacity of and recommend changes to cellular mobile networks

Web Design and Development

ICTWEB441 Produce basic client-side script
ICTWEB452 Create a markup language document
ICTWEB517 Create web-based programs
ICTWEB521 Customise complex ICT content management systems
ICTWEB523 Manage transactions using site server tools
ICTWEB524 Analyse information and assign meta tags
ICTWEB526 Implement and use web services
ICTWEB527 Research and apply emerging web technology trends

Specialisations

As stated above, where relevant, the choice of elective units set out in the packaging rules at qualification outset can serve to provide the qualification with one or more of the following specialisations. The rules to achieve a specialisation are detailed below.

The achievement of more than one specialisation may be indicated on the same testamur as follows:

- ICT50220 Diploma of Information Technology (Advanced Networking)
- ICT50220 Diploma of Information Technology (Advanced Programming)
- ICT50220 Diploma of Information Technology (Back End Web Development)
- ICT50220 Diploma of Information Technology (Business Analysis)
- ICT50220 Diploma of Information Technology (Cloud Architecture)
- ICT50220 Diploma of Information Technology (Cloud Engineering)
- ICT50220 Diploma of Information Technology (Cyber Security)
- ICT50220 Diploma of Information Technology (Database and Data Management)
- ICT50220 Diploma of Information Technology (Front End Web Development)
- ICT50220 Diploma of Information Technology (Game Art and Design)
- ICT50220 Diploma of Information Technology (Game Programming)
- ICT50220 Diploma of Information Technology (Systems Administration)
- ICT50220 Diploma of Information Technology (Systems Analysis)
- ICT50220 Diploma of Information Technology (Telecommunications Network Engineering).

Packaging rules to achieve a specialisation

Advanced Networking

- Select all 6 elective units from Group A Advanced networking specialisation

Advanced Programming

- Select all 5 elective units from Group B Advanced programming specialisation

Back End Web Development

- Select all 5 elective units from Group C Back end web development specialisation

Business Analysis

- Select all 5 elective units from Group D Business analysis specialisation

Cloud Architecture

- Select all 4 elective units from Group E Cloud architect specialisation

Cloud Engineering

- Select all 4 elective units from Group F Cloud engineers specialisation

Cyber Security

- Select all 5 elective units from Group G Cyber security specialisation

Database and Data Management

- Select all 5 elective units from Group H Database and data management specialisation

Front End Web Development

- Select all 6 elective units from Group I Front end web development specialisation

Game Art and Design

- Select all 5 elective units from Group J Game art and design specialisation

Game Programming

- Select all 5 elective units from Group K Game programming specialisation

Systems Administration

- Select all 4 elective units from Group L Systems administration specialisation

Systems Analysis

- Select all 5 elective units from Group M Systems analysis specialisation

Telecommunications Network Engineering

- Select all 6 elective units from Group N Telecommunications network engineering specialisation.
-

Qualification Mapping Information

No equivalent qualification. Supersedes and is not equivalent to:

- ICT50120 Diploma of Information Technology
- ICT51015 Diploma of Telecommunications Engineering
- ICT51115 Diploma of Telecommunications Planning and Design.

Qualification Description

This qualification reflects the role of individuals in a variety of information and communications technology (ICT) roles who have significant experience in specialist technical skills, or managerial business and people management skills.

Individuals in these roles carry out complex tasks in a specialist field, working independently, leading a team or a strategic direction of a business. They apply their skills across a wide range of industries and business functions, or as a business owner (sole trader/contractor).

The skills required for these roles may include, but are not restricted to:

- advanced data management information: creating, designing and monitoring complex systems that store data, and optimising organisational knowledge management

- cyber security: protecting sensitive data and information through security architecture, and developing disaster recovery and contingency plans
- full stack web development: building advanced user interfaces, developing representational state transfer application program interfaces (REST APIs) and designing user experience solutions
- further programming: applying advanced ICT languages to maintain security and manage data
- IT strategy and organisational development: managing and communicating strategic ICT business solutions
- systems development and analysis: modelling and testing data objects, data processes and preferred ICT system solutions
- telecommunications network engineering: managing logistics, organisational specifications, regulations and legislative requirements across network projects.

Licensing, legislative, regulatory or certification considerations

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

Entry Requirements

Nil

Packaging Rules

Total number of units = 16

6 core units plus

10 elective units, of which:

- at least 7 units must be selected from the elective units listed below
- up to 3 units may be selected from the remaining listed elective units or from this or any currently endorsed Training Package or accredited course where the units are packaged in an Australian Qualification Framework (AQF) Level 5 or 6 qualification.

Elective units must be relevant to the work environment and the qualification, maintain the integrity of the AQF alignment, not duplicate the outcome of another unit chosen for the qualification, and contribute to a valid, industry-supported vocational outcome.

Units selected from other Training Packages or accredited courses must not duplicate units selected from or available within the ICT Information and Communications Technology Training Package.

Where relevant, the choice of elective units set out in the packaging rules above can serve to provide the qualification with one or more of the following specialisations. The rules to achieve a specialisation are detailed at the qualification end.

- Advanced data management information
- Cyber security
- Full stack web development
- Further programming
- IT strategy and organisational development
- Systems development and analysis
- Telecommunications network engineering.

Core units

BSBCRT611 Apply critical thinking for complex problem solving

BSBTWK502 Manage team effectiveness

BSBXCS402 Promote workplace cyber security awareness and best practices

ICTICT608 Interact with clients on a business level

ICTICT618 Manage IP, ethics and privacy in ICT environments

ICTSAD609 Plan and monitor business analysis activities in an ICT environment

Elective units

Group A Advanced data management information specialisation

ICTDBS604 Build data warehouses

ICTDBS605 Develop knowledge management strategies

ICTDBS606 Determine database functionality and scalability

ICTICT523 Gather data to identify business requirements

Group B Cyber security specialisation

ICTCYS604 Implement best practices for identity management

ICTCYS606 Evaluate an organisation's compliance with cyber security standards and law

ICTCYS608 Perform cyber security risk assessments

ICTCYS612 Design and implement virtualised cyber security infrastructure for organisations

Group C Full stack web development specialisation

ICTICT530 Design user experience solutions

ICTPRG535 Build advanced user interfaces

ICTPRG553 Create and develop REST APIs

ICTSAD612 Implement and maintain uses of containerisation

Group D Further programming specialisation

ICTPRG537 Implement security for applications

ICTPRG547 Apply advanced programming skills in another language

ICTPRG554 Manage data persistence using noSQL data stores

Group E IT Strategy and organisational development specialisation

ICTICT611 Develop ICT strategic business plans

ICTSAD604 Manage and communicate ICT solutions

ICTSAD608 Perform ICT-focused enterprise analysis

ICTSAD611 Manage assessment and validation of ICT solutions

Group F Systems development and analysis specialisation

ICTPRG605 Manage development of technical solutions from business specifications

ICTSAD610 Analyse stakeholder requirements

ICTSAD612 Implement and maintain uses of containerisation

ICTSAD613 Install and configure container orchestration services

Group G Telecommunications network engineering specialisation

ICTNPL413 Evaluate networking regulations and legislation for the telecommunications industry

ICTNWK612 Plan and manage troubleshooting advanced integrated IP networks

ICTPMG613 Manage ICT project planning

ICTTEN615 Manage network traffic

ICTTEN622 Produce ICT network architecture designs

Group H General electives

Advanced Cloud Computing

ICTCLD601 Develop cloud computing strategies for businesses

ICTCLD602 Manage information security compliance of cloud service deployment

ICTCLD603 Design hybrid cloud-based network architectures

ICTCLD604 Manage data in cloud environments

Advanced Cyber Security

ICTCYS603 Undertake penetration testing for organisations

ICTCYS607 Acquire digital forensic data

ICTCYS609 Evaluate threats and vulnerabilities of IoT devices

ICTCYS614 Analyse cyber security insider risks and threats and devise recommendations

ICTCYS615 Detect and respond to cyber security insider risks and threats

Application and Software Development

ICTPRG549 Apply intermediate object-oriented language skills

ICTPRG603 Develop advanced mobile multi-touch applications

ICTPRG614 Create cloud computing services

Cyber Security Network Operations

ICTCYS601 Create cyber security standards for organisations

ICTCYS602 Implement cyber security operations

ICTCYS611 Configure security devices for organisations

Data Management

ICTDAT601 Develop data integration strategies

ICTDAT602 Review data lifecycles

ICTDAT603 Assess advanced data processes

ICTDBS505 Monitor and improve knowledge management systems

Project Management

BSBPMG532 Manage project quality

BSBPMG536 Manage project risk

BSBPMG539 Manage project governance

ICTICT529 Organise and lead agile projects

ICTPMG612 Manage ICT project initiation

ICTPMG614 Manage ICT project delivery

ICTPMG615 Manage ICT project closure

ICTPMG616 Manage ICT project systems implementation

ICTPMG617 Plan and direct complex ICT projects

ICTSAS522 Manage the testing process

IT Work Ready Skills

ICTICT522 Evaluate vendor products and equipment

ICTICT612 Develop contracts and manage contract performance

ICTICT613 Manage the use of development methodologies

ICTSAD614 Lead ICT requirements elicitation

ICTICT616 Develop communities of practice

ICTICT617 Lead the evaluation and implementation of current industry specific technologies

ICTSUS603 Integrate sustainability in ICT planning and design projects

PSPPCM023 Manage strategic contracts

Network Security

CPPSEC3124 Prepare and present evidence in court

CPPSEC5003 Assess security risk management options

CPPSEC5004 Develop security risk management plans

CPPSEC5005 Implement security risk management plans

CPPSEC5006 Develop strategies to implement advanced technology security systems

ICTNWK537 Implement secure encryption technologies
ICTNWK538 Install and maintain valid authentication processes
ICTNWK539 Design and implement integrated server solutions
ICTNWK540 Design, build and test network servers
ICTNWK541 Configure, verify and troubleshoot WAN links and IP services
ICTNWK544 Design and implement a security perimeter for ICT networks
ICTNWK549 Design ICT security frameworks
ICTNWK552 Install and configure network access storage devices
ICTNWK553 Configure enterprise virtual computing environments
ICTNWK554 Manage enterprise virtual computing environments
ICTNWK556 Identify and resolve network problems
ICTNWK557 Configure and manage advanced virtual computing environments
ICTNWK558 Monitor and troubleshoot virtual computing environments
ICTNWK559 Install an enterprise virtual computing environment
ICTNWK612 Plan and manage troubleshooting advanced integrated IP networks
ICTNWK615 Design and configure desktop virtualisation
ICTNWK618 Design and implement a security system
ICTNWK619 Plan, configure and test advanced server-based security
ICTNWK620 Design and implement wireless network security
ICTNWK621 Configure network devices for a secure network infrastructure
ICTNWK622 Configure and manage intrusion prevention system on network sensors
ICTNWK624 Configure advanced internetwork routing solutions
ICTNWK625 Plan and configure advanced internetwork switching solutions
ICTNWK627 Implement voice applications over secure wireless networks
ICTNWK628 Design and build integrated VoIP networks
ICTNWK629 Configure and manage storage area networks
ICTSAS530 Use network tools

Strategy and Business Management

BSBLDR601 Lead and manage organisational change
BSBSTR601 Manage innovation and continuous improvement
BSBPMG537 Manage project procurement
ICTICT614 Identify and implement business innovation
ICTICT615 Implement knowledge management strategies
ICTSAD507 Design and implement quality assurance processes for business solutions
ICTSAD508 Develop technical requirements for business solutions
ICTSAS602 Implement change management processes

Telecommunications Network Engineering General

BSBLDR523 Lead and manage effective workplace relationships

BSBPMG530 Manage project scope
BSBPMG430 Undertake project work
ICTICT818 Develop knowledge management strategies
ICTICT819 Lead analysis of information and communications technology business strategy
ICTICT822 Manage automated ICT system applications
ICTPMG506 Prepare network project briefs
ICTPRG605 Manage development of technical solutions from business specifications
ICTSUS604 Prepare business cases for sustainability and competitive advantage in ICT projects
ICTSUS811 Conduct and manage life cycle assessments for sustainability
ICTSUS812 Lead applied research in ICT sustainability
ICTTEN613 Assess integration of international network equipment into Australian networks
ICTTEN614 Conduct network system optimisation and administration
ICTTEN616 Rectify client services following network outages and faults
ICTTEN617 Manage common channel signalling networks
ICTTEN618 Analyse and organise repair of highly complex networks
ICTTEN619 Test new software and hardware releases
ICTTEN620 Produce and evaluate architecture designs for convergent cellular mobile networks
ICTTEN621 Design and configure IP-MPLS networks with virtual private network tunnelling
ICTTEN623 Design and manage internet protocol TV in a service provider network
ICTTEN817 Plan transmission networks
ICTTEN818 Align systems with product and technology strategy
ICTTEN819 Translate domain and solution architectures into platform requirements and designs
ICTTEN820 Manage end to end architectural solutions across multiple domains
ICTTEN821 Manage solution architecture and impacts
ICTTEN822 Manage application layer solutions
ICTTEN823 Manage voice, data and internet protocol network solutions
ICTTEN824 Manage network testing strategies
ICTTEN825 Investigate applications of cloud networks in network switching
ICTTEN826 Evaluate and apply digital signal processing to communication systems
ICTTEN827 Produce engineering solutions
ICTTEN828 Manage development and application of testing artefacts

Telecommunications Network Engineering Networking

ICTNPL412 Apply business acumen to network planning
ICTNWK546 Manage network security
ICTNWK560 Determine best-fit topologies for wide area networks
ICTNWK561 Design enterprise wireless local area networks

Telecommunications Network Engineering Optical Networks

ICTOPN605 Manage optical ethernet transmission

ICTOPN606 Manage dense wavelength division multiplexing transmission systems

ICTOPN607 Design dense wavelength division multiplexing systems

ICTOPN608 Analyse optical transmission systems

Telecommunications Network Engineering Radio Communications

ICTRFN804 Produce radio link budgets

ICTRFN805 Analyse cellular mobile network systems

ICTRFN806 Analyse satellite communications systems

Specialisations

As stated above, where relevant, the choice of elective units set out in the packaging rules at qualification outset can serve to provide the qualification with one or more of the following specialisations. The rules to achieve a specialisation are detailed below.

The achievement of more than one specialisation may be indicated on the same testamur as follows:

- ICT60220 Advanced Diploma of Information Technology (Advanced Data Management Information)
- ICT60220 Advanced Diploma of Information Technology (Cyber Security)
- ICT60220 Advanced Diploma of Information Technology (Full Stack Web Development)
- ICT60220 Advanced Diploma of Information Technology (Further Programming)
- ICT60220 Advanced Diploma of Information Technology (IT Strategy and Organisational Development)
- ICT60220 Advanced Diploma of Information Technology (Systems Development and Analysis)
- ICT60220 Advanced Diploma of Information Technology (Telecommunications Network Engineering).

Packaging rules to achieve a specialisation**Advanced Data Management Information**

- Select all 4 elective units from Group A - Advanced data management information specialisation

Cyber Security

- Select all 4 elective units from Group B - Cyber security specialisation

Full Stack Web Development

- Select all 4 elective units from Group C - Full stack web development specialisation

Further Programming

- Select all 3 elective units from Group D - Further programming specialisation

IT Strategy and Organisational Development

- Select all 4 elective units from Group E - IT strategy and organisational development specialisation

Systems Development and Analysis

- Select all 4 elective units from Group F - Systems development and analysis specialisation

Telecommunications Network Engineering

- Select all 5 elective units from Group G - Telecommunications network engineering specialisation.

Qualification Mapping Information

No equivalent qualification. Supersedes and is not equivalent to:

- ICT60120 Advanced Diploma of Information Technology
- ICT60615 Advanced Diploma of Telecommunications Network Engineering
- ICT80315 Graduate Certificate in Telecommunications
- ICT80415 Graduate Diploma of Telecommunications Network Engineering
- ICT80515 Graduate Diploma of Telecommunications and Strategic Management
- ICT80615 Graduate Certificate in Telecommunications Network Engineering.

ICTSS00118 User Experience Design Skill Set

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created to equip learners with skills across in-demand technologies

Description

This skill set addresses the skills and knowledge required to design and create user interfaces (UIs) in digital environments, and promote innovative thinking and practices to enhance the user experience (UX) across workplace contexts.

Pathways Information

The units provide credit towards ICT40120 Certificate IV in Information Technology and other qualifications that allow for selection of these units.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTDSN401 Design digital user interfaces

ICTDSN402 Develop digital user interfaces

ICTDSN403 Apply innovative thinking and practices in digital environments

ICTICT530 Design user experience solutions

Target Group

This skill set is for individuals who work in UI and UX roles, including information technology strategy developers, and other related roles responsible designing the user experience and related components to innovate workplace contexts.

Suggested words for Statement of Attainment

These units of competency from the ICT Information and Communications Technology Training Package meet industry requirements for designing, developing, and applying components of user experience and innovation in ICT contexts.

ICTSS00119 Advanced Data Analytics Skill Set

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created to equip learners with skills across in-demand technologies.

Description

This skill set addresses the skills and knowledge required to manage and contextualise large volumes of data to be applied in a range of workplace contexts.

Pathways Information

The units provide credit towards ICT60220 Advanced Diploma of Information Technology and other qualifications that allow for selection of these units.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTDAT601 Develop data integration strategies

ICTDAT602 Review data lifecycles

ICTDAT603 Assess advanced data processes

Target Group

This skill set is for individuals who independently work in information technology data roles, including experienced data analysts, strategy managers and other related roles responsible for developing data integration strategies, reviewing data lifecycles and assessing advanced data processes.

Suggested words for Statement of Attainment

These units of competency from the ICT Information and Communications Technology Training Package meet industry requirements for developing, reviewing and assessing data integration strategies, lifecycles and processes in ICT contexts.

ICTSS00120 Artificial Intelligence Skill Set

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created to equip learners with skills across in-demand technologies.

Description

This skill set addresses the skills and knowledge required to identify opportunities to implement artificial intelligence (AI) technologies, and to develop components of AI and AI subsets to improve workplace productivity. This includes AI that use machine learning (ML) and deep learning (DL) technologies.

Pathways Information

The units provide credit towards ICT40120 Certificate IV in Information Technology and ICT50220 Diploma of Information Technology and other qualifications that allow for selection of these units.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTAII401 Identify opportunities to apply artificial intelligence, machine learning and deep learning

ICTAII501 Automate work tasks using machine learning

ICTAII502 Train and evaluate machine learning models

Target Group

This skill set is for individuals who work in artificial intelligence, including support technicians, programmers, and cloud computing engineers, and other related roles responsible for reviewing artificial intelligence, machine learning and deep learning models and processes to improve workplace productivity.

Suggested words for Statement of Attainment

These units of competency from the ICT Information and Communications Technology Training Package meet industry requirements for identifying opportunities where artificial intelligence (AI) can be implemented, and for developing components of AI and AI subsets in a range of workplace contexts.

ICTSS00121 Extended Reality Skill Set

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created to equip learners with skills across in-demand technologies.

Description

This skill set addresses the skills and knowledge required to identify and apply extended reality solutions to improve a variety of information and communications technology (ICT) functions and processes.

Pathways Information

The units provide credit towards ICT40120 Certificate IV in Information Technology and other qualifications that allow for selection of these units.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTXRE401 Apply augmented reality solutions in organisations

ICTXRE402 Apply virtual reality solutions in organisations

ICTXRE403 Design mixed reality solutions

Target Group

This skill set is for individuals who work in information and communications technology (ICT) roles, such as software developers and designers, who contribute to activities required for implementing extended reality solutions and building virtual workplaces in workplace contexts.

Suggested words for Statement of Attainment

These units of competency from the ICT Information and Communications Technology Training Package meet industry requirements for designing and applying augmented, virtual and mixed reality solutions in a range of workplace contexts.

ICTSS00122 Industrial Automation Skill Set

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created to equip learners with skills across in-demand technologies.

Description

This skill set addresses the skills and knowledge required to implement change management processes into organisations and identify opportunities where robotic and procedural automation can be applied.

Pathways Information

The units provide credit towards ICT40120 Certificate IV in Information Technology, ICT50220 Diploma of Information Technology, ICT60220 Advanced Diploma of Information Technology, and other qualifications that allow for selection of these units.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTAIL502 Train and evaluate machine learning models

ICTAUT501 Manage robotic process automation

ICTAUT502 Evaluate automated industrial manufacturing processes

ICTSAS602 Implement change management processes

Target Group

This skill set is for individuals who work in industrial automation roles, including systems engineers, automation technicians and automation mechatronics, and related roles responsible for evaluating, managing and implementing solutions to automate industrial manufacturing processes.

Suggested words for Statement of Attainment

These units of competency from the ICT Information and Communications Technology Training Package meet industry requirements for supporting the automation of industrial manufacturing processes in a range of workplace contexts.

ICTSS00123 Software Automation Skill Set

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created to equip learners with skills across in-demand technologies.

Description

This skill set addresses the skills and knowledge required to identify opportunities where automation can be applied to improve procedural processes, activities, transitions and tasks in workplace contexts.

Pathways Information

The units provide credit towards ICT40120 Certificate IV in Information Technology, and other qualifications from the ICP Printing and Graphic Arts and ICT Information and Communications Technology Training Packages that allow for selection of these units.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICPPRP4840 Set up and operate automated workflow

ICTAUT401 Design business process automation solutions

ICTAUT402 Apply robotic desktop automation

ICTAUT403 Conduct software quality assurance testing

Target Group

This skill set is for individuals who work in supervised software automation roles, including programming and systems administration support personnel who assist workflow automation engineers, automation test engineers and software engineers, and other related roles responsible for setting up, designing, applying and assuring the quality of software automation solutions.

Suggested words for Statement of Attainment

These units of competency from the ICP Printing and Graphic Arts and ICT Information and Communications Technology Training Packages meet industry requirements for designing and applying software automation solutions and for conducting software quality assurance testing in a range of workplace contexts.

ICTSS00124 Cloud Infrastructure Skill Set

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created to equip learners with skills across in-demand technologies.

Description

This skill set addresses the skills and knowledge required to design hybrid networks, manage diverse data security controls, and maintain privacy and legal compliance when implementing cloud services across information and communications technology (ICT) environments.

Pathways Information

The units provide credit towards ICT60220 Advanced Diploma of Information Technology and other qualifications that allow for selection of these units.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTCLD602 Manage information security compliance of cloud service deployment

ICTCLD603 Design hybrid cloud-based network architectures

ICTCLD604 Manage data in cloud environments

Target Group

This skill set is for individuals who work in cloud development roles, including cloud architects, network architects, specialist solution architects and other related roles responsible for designing hybrid networks, managing data and deploying secure services in cloud environments.

Suggested words for Statement of Attainment

These units of competency from the ICT Information and Communications Technology Training Package meet industry requirements for managing compliance, hybrid networks, and data in cloud environments in a range of workplace contexts.

ICTSS00125 Cloud Security Skill Set

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created to equip learners with skills across in-demand technologies.

Description

This skill set addresses the skills and knowledge required to manage the integrity of cloud services and to protect cloud infrastructure through monitoring threat detection systems and responding to information and communications technology (ICT) incidents in workplace contexts.

Pathways Information

The units provide credit towards ICT50220 Diploma of Information Technology and other qualifications that allow for selection of these units.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTCLD509 Manage cloud identity and access

ICTCLD510 Manage cloud threat detection systems

ICTCLD511 Protect cloud infrastructure and data

ICTCLD512 Respond to cloud security incidents

Target Group

This skill set is for individuals who work in cloud security roles, including security engineers, cloud developers and architects, information security officers and other related roles responsible for managing threat detection systems to protect cloud infrastructure and respond to cloud incidents.

Suggested words for Statement of Attainment

These units of competency from the ICT Information and Communications Technology Training Package meet industry requirements for managing and protecting the security of cloud infrastructure in a range of workplace contexts.

ICTSS00126 Advanced Cyber Incident Threat Detection and Prevention Skill Set

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created to equip learners with skills across in-demand technologies.

Description

This skill set addresses the skills and knowledge required to respond to complex cyber security risks in organisations in information and communications technology (ICT) environments.

Pathways Information

The units provide credit towards ICT40120 Certificate IV in Information Technology, ICT60220 Advanced Diploma of Information Technology, and other qualifications that allow for selection of these units.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTCYS406 Respond to cyber security incidents
ICTCYS602 Implement cyber security operations
ICTCYS603 Undertake penetration testing for organisations
ICTCYS607 Acquire digital forensic data
ICTCYS608 Perform cyber security risk assessments

Target Group

This skill set is for individuals who work in cyber security roles, including network and server administrators, cyber security architects, network security specialists, cyber security engineers, and other related roles responsible for maintaining cyber security and responding to cyber incidents.

Suggested words for Statement of Attainment

These units of competency from the ICT Information and Communications Technology Training Package meet industry requirements for advanced cyber incident threat detection and prevention in ICT contexts.

ICTSS00127 Cloud Programmer Skill Set

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created to equip learners with skills across in-demand technologies.

Description

This skill set addresses the skills and knowledge required to develop and manage cloud-based microservices, serverless applications, and data persistence; and to deploy continuous pipelines across information and communications technology (ICT) environments using virtual networks.

Entry Requirements

Entry to this skill set is limited to those who have completed the following or equivalent units of competency or who are able to demonstrate equivalent competence.

ICTCLD501 Develop cloud disaster recovery plans

ICTCLD502 Design and implement highly-available cloud infrastructure

ICTCLD503 Implement web-scale cloud infrastructure

ICTCLD504 Improve cloud-based infrastructure

Pathways Information

The units provide credit towards ICT50220 Diploma of Information Technology, ICT60220 Advanced Diploma of Information Technology, and other qualifications that allow for selection of these units.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTCLD513 Develop cloud-based microservices architecture using containers

ICTCLD514 Create and test cloud-based serverless applications

ICTCLD515 Build and deploy cloud-based applications using CI and CD pipelines

ICTPRG554 Manage data persistence using noSQL data stores

ICTPRG614 Create cloud computing services

Target Group

This skill set is for individuals who work in cloud programmer roles, including software engineers, DevOps engineers, solution architects, cloud engineers, and other related roles responsible for programming cloud-based applications.

Suggested words for Statement of Attainment

These units of competency from the ICT Information and Communications Technology Training Package meet industry requirements for programming cloud-based applications in ICT contexts.

ICTSS00128 Network Security and System Protection Skill Set

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created to equip learners with skills across in-demand technologies.

Description

This skill set addresses the skills and knowledge required to protect, configure and design critical cyber security processes and network infrastructure in organisations.

Pathways Information

The units provide credit towards ICT50220 Diploma of Information Technology, ICT60220 Advanced Diploma of Information Technology and other qualifications that allow for selection of these units.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTCYS610 Protect critical infrastructure for organisations

ICTCYS611 Configure security devices for organisations

ICTCYS612 Design and implement virtualised cyber security infrastructure for organisations

Target Group

This skill set is for individuals who work in network security and system protection roles, including cyber security analysts, security engineers, network engineers, and other related roles responsible for maintaining network security.

Suggested words for Statement of Attainment

These units of competency from the ICT Information and Communications Technology Training Package meet industry requirements for managing network security and systems protection in ICT contexts.

ICTSS00129 DevOps System Administration Skill Set

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created to equip learners with skills across in-demand technologies.

Description

This skill set addresses the skills and knowledge required to install, configure, implement and maintain container orchestration services, microservices, and lifecycles in information and communications technology (ICT) environments.

Pathways Information

The units provide credit towards ICT60220 Advanced Diploma of Information Technology and other qualifications that allow for selection of these units.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTSAD612 Implement and maintain uses of containerisation

ICTSAD613 Install and configure container orchestration services

Target Group

This skill set is for individuals who work in DevOps roles, including senior software developers, computer system architects, senior system administrators, and other related roles responsible for administering DevOps systems.

Suggested words for Statement of Attainment

These units of competency from the ICT Information and Communications Technology Training Package meet industry requirements for administering DevOps systems in ICT contexts.

ICTSS00130 Intermediate Digital Skills for Small Business Skill Set

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created to equip learners with skills across in-demand technologies.

Description

This skill set addresses the skills and knowledge required to support the digital capabilities of small businesses, through evaluating and implementing a variety of strategies, technologies, and practices while maintaining security.

Pathways Information

The units provide credit towards BSB50120 Diploma of Business, ICT30120 Certificate III in Information Technology, ICT40120 Certificate IV in Information Technology, and other qualifications that allow for selection of these units.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

BSBTEC501 Develop and implement an e-commerce strategy

BSBXCS402 Promote workplace cyber security awareness and best practices

ICTICT318 Validate test cases and develop proof of concepts

ICTICT426 Identify and evaluate emerging technologies and practices

ICTICT452 Support the implementation of assistive technologies

Target Group

This skill set is for individuals who work in small businesses, including small business operators and other related roles responsible for applying practices to manage digital operations in small workplace contexts.

Suggested words for Statement of Attainment

These units of competency from the BSB Business Services and ICT Information and Communications Technology Training Packages meet industry requirements for supporting and improving the digital capabilities of small businesses in ICT contexts.

ICTSS00131 Introduction to Assistive Technologies Skill Set

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created to equip learners with skills across in-demand technologies.

Description

This skill set addresses the skills and knowledge required to identify, implement, evaluate and improve assistive technologies and related components to enhance organisational capabilities that support inclusion and accessibility for all stakeholders, including persons with disabilities.

Pathways Information

The units provide credit towards ICT40120 Certificate IV in Information Technology and other qualifications that allow for selection of these units.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTICT452 Support the implementation of assistive technologies

ICTICT453 Evaluate accessibility of organisational systems, programs and software

ICTICT454 Assess organisational systems using assistive technologies

Target Group

This skill set is for individuals who work in a range of roles across all industries, including inclusion officers, disability access officers, and other related roles responsible for improving organisational inclusion and accessibility capabilities across learning, working and operational functions for persons with disabilities.

Suggested words for Statement of Attainment

These units of competency from the ICT Information and Communications Technology Training Package meet industry requirements for evaluating and enabling organisational inclusion and accessibility through supporting the advancement of assistive technologies in workplace contexts.

ICTSS00132 Core Technical IT Skills for Introductory Roles Skill Set

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created to serve as a stackable skill set that builds towards attaining ICT40120 Certificate IV in Information Technology. The units in this skill set comprise some of the core units of ICT40120 Certificate IV in Information Technology.

Description

This skill set addresses the core technical skills and knowledge required to maintain workplace compliance, enhance workplace processes and support introductory technical capabilities in information and communications technology (ICT) contexts.

Pathways Information

The units provide credit towards ICT40120 Certificate IV in Information Technology and other qualifications that allow for selection of these units. The units in this skill set comprise some of the core units of ICT40120 Certificate IV in Information Technology. Users are advised to consult the skill set pathways section of the current version of ICT Companion Volume Implementation Guide to confirm the currency of this information and for further guidance.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

BSBXCS404 Contribute to cyber security risk management

ICTICT426 Identify and evaluate emerging technologies and practices

ICTICT451 Comply with IP, ethics and privacy policies in ICT environments

ICTPRG302 Apply introductory programming techniques

Target Group

This skill set is for individuals who work in technical support roles, including administrators, and other related introductory roles, who are responsible for applying and maintaining ICT systems and components.

Suggested words for Statement of Attainment

These units of competency from the BSB Business Services and ICT Information and Communications Technology Training Packages meet industry requirements to support the introductory technical capabilities of workplaces in ICT contexts.

ICTSS00133 Core Transferable IT Skills for Introductory Roles Skill Set

Modification History

Release	Comments
Release 1	<p>This version first released with the Information and Communications Technology Training Package Version 8.0.</p> <p>Newly created to serve as a stackable skill set that builds towards attaining <i>ICT40120 Certificate IV in Information Technology</i>. The units in this skill set comprise some of the core units of <i>ICT40120 Certificate IV in Information Technology</i>.</p>

Description

This skill set addresses the core transferable skills and knowledge required to improve client-based workplace processes and solve a range of introductory problems in information and communications technology (ICT) contexts.

Pathways Information

The units provide credit towards ICT40120 Certificate IV in Information Technology and other qualifications that allow for selection of these units. The units in this skill set comprise some of the core units of ICT40120 Certificate IV in Information Technology. Users are advised to consult the skill set pathways section of the current version of ICT Companion Volume Implementation Guide to confirm the currency of this information and for further guidance.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

BSBCRT411 Apply critical thinking to work practices

ICTICT443 Work collaboratively in the ICT industry

ICTSAS432 Identify and resolve client ICT problems

Target Group

This skill set is for individuals who work in a variety of client-based ICT support roles, including administrators, end user technicians, and other related introductory roles, who are responsible for solving client-based problems, using a variety of transferable ICT skills, techniques, practices and procedures.

Suggested words for Statement of Attainment

These units of competency from the BSB Business Services and ICT Information and Communications Technology Training Packages meet industry requirements for supporting clients using transferable skills in introductory ICT contexts.

ICTSS00134 Database Development for Introductory Roles Skill Set

Modification History

Release	Comments
Release 1	<p>This version first released with the Information and Communications Technology Training Package Version 8.0.</p> <p>Newly created to serve as a stackable skill set that builds towards attaining <i>ICT40120 Certificate IV in Information Technology</i>. The units in this skill set comprise the mandatory units required for a specialisation in Database development in <i>ICT40120 Certificate IV in Information Technology</i>.</p>

Description

This skill set addresses the skills and knowledge required to create and monitor databases and components to be applied in a range of introductory information and communications technology (ICT) workplace contexts.

Pathways Information

The units provide credit towards ICT40120 Certificate IV in Information Technology and other qualifications that allow for selection of these units. The units in this skill set comprise the mandatory units required for a specialisation in database development in ICT40120 Certificate IV in Information Technology. Users are advised to consult the skill set pathways section of the current version of ICT Companion Volume Implementation Guide to confirm the currency of this information and for further guidance.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTDBS407 Monitor physical database implementation

ICTDBS413 Determine database requirements

ICTDBS415 Build a database

ICTDBS416 Create basic relational databases

ICTDBS418 Monitor and administer databases

Target Group

This skill set is for individuals who work in information technology database development roles, including data analysts, and other related introductory roles, who are responsible for developing databases, monitoring database functions and adjusting databases to enhance data processes.

Suggested words for Statement of Attainment

These units of competency from the ICT Information and Communications Technology Training Package meet industry requirements for developing and monitoring databases in introductory ICT contexts.

ICTSS00135 Database Maintenance for Introductory Roles Skill Set

Modification History

Release	Comments
Release 1	<p>This version first released with the Information and Communications Technology Training Package Version 8.0.</p> <p>Newly created to serve as a stackable skill set that builds towards attaining <i>ICT40120 Certificate IV in Information Technology</i>. The units in this skill set comprise the mandatory units required for a specialisation in Database maintenance in <i>ICT40120 Certificate IV in Information Technology</i>.</p>

Description

This skill set addresses the skills and knowledge required to iteratively clean, protect, monitor and maintain database functionality and compliance in a range of introductory roles in a range of workplace contexts.

Pathways Information

The units provide credit towards ICT40120 Certificate IV in Information Technology and other qualifications that allow for selection of these units. The units in this skill set comprise the mandatory units required for a specialisation in database maintenance in ICT40120 Certificate IV in Information Technology. Users are advised to consult the skill set pathways section of the current version of ICT Companion Volume Implementation Guide to confirm the currency of this information and for further guidance.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTDAT401 Evaluate organisational compliance with data ethics legislation

ICTDAT402 Clean and verify data

ICTDBS414 Complete database backup and restore

ICTDBS417 Identify and resolve common database performance problems

ICTPRG554 Manage data persistence using noSQL data stores

Target Group

This skill set is for individuals who work in information technology data maintenance roles, including data maintenance officers, and other related introductory roles, who are responsible for cleaning, protecting and monitoring databases, to maintain database functionality and compliance.

Suggested words for Statement of Attainment

These units of competency from the ICT Information and Communications Technology Training Package meet industry requirements for maintaining compliant and secure databases, including evaluating organisational compliance with data ethics legislation; cleaning, verifying and backing up data; resolving common database performance problems; and managing data persistence using noSQL data stores in introductory ICT contexts.

ICTSS00136 Gaming Development for Introductory Roles Skill Set

Modification History

Release	Comments
Release 1	<p>This version first released with the Information and Communications Technology Training Package Version 8.0.</p> <p>Newly created to serve as a stackable skill set that builds towards attaining <i>ICT40120 Certificate IV in Information Technology</i>. The units in this skill set comprise the mandatory units required for a specialisation in Gaming development in <i>ICT40120 Certificate IV in Information Technology</i>.</p>

Description

This skill set addresses the skills and knowledge required to develop and produce digital games containing models contextualised for three-dimensional (3D) environments in a range of introductory roles in information and communications technology (ICT) workplace contexts.

Pathways Information

The units provide credit towards ICT40120 Certificate IV in Information Technology and other qualifications that allow for selection of these units. The units in this skill set comprise the mandatory units required for a specialisation in gaming development in ICT40120 Certificate IV in Information Technology. Users are advised to consult the skill set pathways section of the current version of ICT Companion Volume Implementation Guide to confirm the currency of this information and for further guidance.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

ICTGAM418 Use simple modelling for animation

ICTGAM420 Produce interactive games

ICTGAM421 Identify and apply games design and game play principles

ICTGAM426 Write narrative scripts for interactive games

ICTGAM427 Use 3-D software interface and toolsets

ICTICT433 Build graphical user interfaces

Target Group

This skill set is for individuals who work in game development roles, including concept artists, and other related introductory roles, who are responsible for designing, programming and building content that supports the production of interactive games.

Suggested words for Statement of Attainment

These units of competency from the ICT Information and Communications Technology Training Package meet industry requirements for developing digital games and models contextualised for three-dimensional (3D) environments in a range of introductory ICT workplace contexts.

ICTSS00137 Networking for Introductory Roles Skill Set

Modification History

Release	Comments
Release 1	<p>This version first released with the Information and Communications Technology Training Package Version 8.0.</p> <p>Newly created to serve as a stackable skill set that builds towards attaining <i>ICT40120 Certificate IV in Information Technology</i>. The units in this skill set comprise the mandatory units required for a specialisation in Networking in <i>ICT40120 Certificate IV in Information Technology</i>.</p>

Description

This skill set addresses the skills and knowledge required to install, configure, manage and test networks in a range of introductory roles in information and communications technology (ICT) workplace contexts.

Pathways Information

The units provide credit towards ICT40120 Certificate IV in Information Technology and other qualifications that allow for selection of these units. The units in this skill set comprise the mandatory units required for a specialisation in networking in ICT40120 Certificate IV in Information Technology. Users are advised to consult the skill set pathways section of the current version of ICT Companion Volume Implementation Guide to confirm the currency of this information and for further guidance.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTNWK420 Install and configure virtual machines

ICTNWK421 Install, configure and test network security

ICTNWK422 Install and manage servers

ICTNWK423 Manage network and data integrity

ICTNWK424 Install and operate small enterprise branch networks

ICTNWK429 Install hardware to networks

ICTTEN434 Install, configure and test internet protocol networks

Target Group

This skill set is for individuals who work in networking roles, including computer system and network support technicians, and other related introductory roles, who are responsible for installing, configuring, managing and testing secure networks.

Suggested words for Statement of Attainment

These units of competency from the ICT Information and Communications Technology Training Package meet industry requirements for supporting the development of secure networks in introductory ICT contexts.

ICTSS00138 Programming Skills for Introductory Roles Skill Set

Modification History

Release	Comments
Release 1	<p>This version first released with the Information and Communications Technology Training Package Version 8.0.</p> <p>Newly created to serve as a stackable skill set that builds towards attaining <i>ICT40120 Certificate IV in Information Technology</i>. The units in this skill set comprise the mandatory units required for a specialisation in Programming in <i>ICT40120 Certificate IV in Information Technology</i>.</p>

Description

This skill set addresses the skills and knowledge required to build interfaces and applications using basic programming languages in a range of introductory roles in information and communications technology (ICT) workplace contexts.

Pathways Information

The units provide credit towards ICT40120 Certificate IV in Information Technology and other qualifications that allow for selection of these units. The units in this skill set comprise the mandatory units required for a specialisation in programming in ICT40120 Certificate IV in Information Technology. Users are advised to consult the skill set pathways section of the current version of ICT Companion Volume Implementation Guide to confirm the currency of this information and for further guidance.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTICT449 Use version control systems in development environments

ICTPRG430 Apply introductory object-oriented language skills

ICTPRG433 Test software developments

ICTPRG437 Build a user interface

ICTPRG440 Apply introductory programming skills in different languages

Target Group

This skill set is for individuals who work in programming roles, including application programmers, and other related introductory roles, who are responsible for supporting the building and testing activities for programming components using basic programming languages.

Suggested words for Statement of Attainment

These units of competency from the ICT Information and Communications Technology Training Package meet industry requirements for supporting programming activities using basic programming languages in introductory ICT contexts.

ICTSS00139 Systems Administration Support Skills for Introductory Roles Skill Set

Modification History

Release	Comments
Release 1	<p>This version first released with the Information and Communications Technology Training Package Version 8.0.</p> <p>Newly created to serve as a stackable skill set that builds towards attaining <i>ICT40120 Certificate IV in Information Technology</i>. The units in this skill set comprise the mandatory units required for a specialisation in Systems administration support in <i>ICT40120 Certificate IV in Information Technology</i>.</p>

Description

This skill set addresses the skills and knowledge required to connect, configure and implement technical components in simple systems in a range of introductory roles in information and communications technology (ICT) workplace contexts.

Pathways Information

The units provide credit towards ICT40120 Certificate IV in Information Technology and other qualifications that allow for selection of these units. The units in this skill set comprise the mandatory units required for a specialisation in systems administration support in ICT40120 Certificate IV in Information Technology. Users are advised to consult the skill set pathways section of the current version of ICT Companion Volume Implementation Guide to confirm the currency of this information and for further guidance.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTICT445 Connect and configure devices and hardware components

ICTSAS436 Evaluate ICT system status

ICTSAS438 Implement maintenance procedures

ICTSAS441 Support ICT system software

ICTSAS442 Provide first-level remote help desk support

ICTSAS443 Support operating system users and troubleshoot applications

Target Group

This skill set is for individuals who work in system administration roles, including technical administrators, help desk technicians, and other related introductory roles, who are responsible for supporting administration activities to maintain ICT systems.

Suggested words for Statement of Attainment

These units of competency from the ICT Information and Communications Technology Training Package meet industry requirements for supporting system administration in introductory ICT contexts.

ICTSS00140 Web Development for Introductory Roles Skill Set

Modification History

Release	Comments
Release 1	<p>This version first released with the Information and Communications Technology Training Package Version 8.0.</p> <p>Newly created to serve as a stackable skill set that builds towards attaining <i>ICT40120 Certificate IV in Information Technology</i>. The units in this skill set comprise the mandatory units required for a specialisation in Web development in <i>ICT40120 Certificate IV in Information Technology</i>.</p>

Description

This skill set addresses the skills and knowledge required design, create, and transfer content to websites in a range of introductory roles in information and communications technology (ICT) workplace contexts.

Pathways Information

The units provide credit towards ICT40120 Certificate IV in Information Technology and other qualifications that allow for selection of these units. The units in this skill set comprise the mandatory units required for a specialisation in web development in ICT40120 Certificate IV in Information Technology. Users are advised to consult the skill set pathways section of the current version of ICT Companion Volume Implementation Guide to confirm the currency of this information and for further guidance.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTWEB431 Create and style simple markup language documents

ICTWEB432 Design website layouts

ICTWEB433 Confirm accessibility of websites

ICTWEB434 Transfer content to websites

ICTWEB443 Implement search engine optimisations

ICTWEB450 Evaluate and select a web hosting service

ICTWEB452 Create a markup language document

Target Group

This skill set is for individuals who work in website development roles, including website administrators, and other related introductory roles, who are responsible for evaluating, developing, and maintaining simple websites to enable optimal functionality and accessibility.

Suggested words for Statement of Attainment

These units of competency from the ICT Information and Communications Technology Training Package meet industry requirements for developing simple websites and related components in introductory ICT contexts.

ICTSS00141 Core Technical IT Skills for Intermediate Roles Skill Set

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created to serve as a stackable skill set that builds towards attaining <i>ICT50220 Diploma of Information Technology</i> . The units in this skill set comprise some of the core units of <i>ICT50220 Diploma in Information Technology</i> .

Description

This skill set addresses the core technical skills and knowledge required to develop and apply concepts to maintain security, privacy and ethics in intermediate roles across a range of workplace environments.

Pathways Information

The units provide credit towards ICT50220 Diploma in Information Technology and other qualifications that allow for selection of these units. The units in this skill set comprise some of the core technical units of ICT50220 Diploma in Information Technology. Users are advised to consult the skill set pathways section of the current version of ICT Companion Volume Implementation Guide to confirm the currency of this information and for further guidance.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

BSBCRT512 Originate and develop concepts

BSBXCS402 Promote workplace cyber security awareness and best practices

ICTICT532 Apply IP, ethics and privacy policies in ICT environments

Target Group

This skill set is for individuals who work in technical support roles, including network administrators, digital media technicians, and other related intermediate roles, who are responsible for independently producing concepts to maintain and promote security, privacy and ethics across information and communications technology (ICT) systems and components.

Suggested words for Statement of Attainment

These units of competency from the BSB Business Services and ICT Information and Communications Technology Training Packages meet industry requirements for a range of intermediate roles that maintain security, privacy and ethics to create secure digital environments in workplace contexts.

ICTSS00142 Core Transferable IT Skills for Intermediate Roles Skill Set

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created to serve as a stackable skill set that builds towards attaining <i>ICT50220 Diploma of Information Technology</i> . The units in this skill set comprise some of the core units of <i>ICT50220 Diploma in Information Technology</i> .

Description

This skill set addresses the core transferable skills and knowledge required in intermediate roles to lead workplace teams, manage and devise strategies, and solve organisational and client-based needs.

Pathways Information

The units provide credit towards ICT50220 Diploma in Information Technology and other qualifications that allow for selection of these units. The units in this skill set comprise some of the core units of ICT50220 Diploma in Information Technology. Users are advised to consult the skill set pathways section of the current version of ICT Companion Volume Implementation Guide to confirm the currency of this information and for further guidance.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

BSBXTW401 Lead and facilitate a team

ICTICT517 Match ICT needs with the strategic direction of the organisation

ICTSAS527 Manage client problems

Target Group

This skill set is for individuals who work in a variety of intermediate ICT support roles, including technical strategy managers, and other related roles, who are responsible for independently leading teams in strategically solving ICT problems.

Suggested words for Statement of Attainment

These units of competency from the BSB Business Services and ICT Information and Communications Technology Training Packages meet industry requirements for a range of intermediate roles that manage teams and client expectations in ICT contexts.

ICTSS00143 Networking Skills for Intermediate Roles Skill Set

Modification History

Release	Comments
Release 1	<p>This version first released with the Information and Communications Technology Training Package Version 8.0.</p> <p>Newly created to serve as a stackable skill set that builds towards attaining <i>ICT50220 Diploma of Information Technology</i>. The units in this skill set comprise the mandatory units required for a specialisation in Advanced networking in <i>ICT50220 Diploma in Information Technology</i>.</p>

Description

This skill set addresses the skills and knowledge required to install, configure, manage and test networks in intermediate roles to ensure secure virtual computing environments for enterprises.

Pathways Information

The units provide credit towards ICT50220 Diploma in Information Technology and other qualifications that allow for selection of these units. The units in this skill set comprise the mandatory units required for a specialisation in advanced networking in ICT50220 Diploma in Information Technology. Users are advised to consult the skill set pathways section of the current version of ICT Companion Volume Implementation Guide to confirm the currency of this information and for further guidance.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTNWK529 Install and manage complex ICT networks

ICTNWK536 Plan, implement and test enterprise communication solutions

ICTNWK540 Design, build and test network servers

ICTNWK546 Manage network security

ICTNWK557 Configure and manage advanced virtual computing environments

ICTNWK559 Install an enterprise virtual computing environment

Target Group

This skill set is for individuals who work in intermediate networking roles, including senior network technicians, and other related roles, who are responsible for independently completing advanced networking activities, including installing, configuring, managing and testing virtual computing environments across complex networks.

Suggested words for Statement of Attainment

These units of competency from the ICT Information and Communications Technology Training Package meet industry requirements for a range of intermediate roles that install, configure, manage and test networks to ensure secure virtual computing environments in ICT contexts.

ICTSS00144 Programming Skills for Intermediate Roles Skill Set

Modification History

Release	Comments
Release 1	<p>This version first released with the Information and Communications Technology Training Package Version 8.0.</p> <p>Newly created to serve as a stackable skill set that builds towards attaining <i>ICT50220 Diploma of Information Technology</i>. The units in this skill set comprise the mandatory units required for a specialisation in Advanced programming in <i>ICT50220 Diploma in Information Technology</i>.</p>

Description

This skill set addresses the skills and knowledge required to build interfaces and models using a diverse range of programming languages in intermediate roles.

Pathways Information

The units provide credit towards ICT50220 Diploma in Information Technology and other qualifications that allow for selection of these units. The units in this skill set comprise the mandatory units required for a specialisation in advanced programming in ICT50220 Diploma in Information Technology. Users are advised to consult the skill set pathways section of the current version of ICT Companion Volume Implementation Guide to confirm the currency of this information and for further guidance.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTPRG535 Build advanced user interfaces

ICTPRG547 Apply advanced programming skills in another language

ICTPRG549 Apply intermediate object-oriented language skills

ICTPRG554 Manage data persistence using noSQL data stores

ICTPRG556 Implement and use a model view controller framework

Target Group

This skill set is for individuals who work in intermediate programming roles, including advanced application programmers, and other related roles, who are responsible for independently completing advanced programming activities using a diverse range of programming languages.

Suggested words for Statement of Attainment

These units of competency from the ICT Information and Communications Technology Training Package meet industry requirements for a range of intermediate roles that conduct programming activities using diverse programming languages in ICT contexts.

ICTSS00145 Back End Web Development for Intermediate Roles Skill Set

Modification History

Release	Comments
Release 1	<p>This version first released with the Information and Communications Technology Training Package Version 8.0.</p> <p>Newly created to serve as a stackable skill set that builds towards attaining <i>ICT50220 Diploma of Information Technology</i>. The units in this skill set comprise the mandatory units required for a specialisation in Back end web development in <i>ICT50220 Diploma in Information Technology</i>.</p>

Description

This skill set addresses the skills and knowledge required to develop and integrate databases, information architecture, and interface components for websites in intermediate roles.

Pathways Information

The units provide credit towards ICT50220 Diploma in Information Technology and other qualifications that allow for selection of these units. The units in this skill set comprise the mandatory units required for a specialisation in back end web development in ICT50220 Diploma in Information Technology. Users are advised to consult the skill set pathways section of the current version of ICT Companion Volume Implementation Guide to confirm the currency of this information and for further guidance.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTDBS507 Integrate databases with websites

ICTPRG553 Create and develop REST APIs

ICTPRG554 Manage data persistence using noSQL data stores

ICTWEB522 Develop website information architecture

ICTWEB525 Implement quality assurance process for websites

Target Group

This skill set is for individuals who work in intermediate website development roles, including senior website developers, and other related roles, who are responsible for independently completing back end web development activities for a variety of websites.

Suggested words for Statement of Attainment

These units of competency from the ICT Information and Communications Technology Training Package meet industry requirements for a range of intermediate roles that develop back end components for websites in ICT contexts.

ICTSS00146 Business Analysis for Intermediate Roles Skill Set

Modification History

Release	Comments
Release 1	<p>This version first released with the Information and Communications Technology Training Package Version 8.0.</p> <p>Newly created to serve as a stackable skill set that builds towards attaining ICT50220 Diploma of Information Technology. The units in this skill set comprise the mandatory units required for a specialisation in Business analysis in ICT50220 Diploma in Information Technology.</p>

Description

This skill set addresses the skills and knowledge required to analyse, identify and coordinate ICT business analysis activities in intermediate roles.

Pathways Information

The units provide credit towards ICT50220 Diploma in Information Technology and other qualifications that allow for selection of these units. The units in this skill set comprise the mandatory units required for a specialisation in business analysis in ICT50220 Diploma in Information Technology. Users are advised to consult the skill set pathways section of the current version of ICT Companion Volume Implementation Guide to confirm the currency of this information and for further guidance.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTSAD507 Design and implement quality assurance processes for business solutions

ICTSAD508 Develop technical requirements for business solutions

ICTSAD509 Produce ICT feasibility reports

ICTSAS502 Establish and maintain client user liaison

ICTSAS526 Review and update disaster recovery and contingency plans

Target Group

This skill set is for individuals who work in business analytic roles, including business relationship managers, and other related intermediate roles, who are responsible for leading business analysis activities in various ICT-enabled workplace contexts.

Suggested words for Statement of Attainment

These units of competency from the ICT Information and Communications Technology Training Package meet industry requirements for a range of intermediate roles that produce and interpret analysis insights for business activities in ICT contexts.

ICTSS00147 Cloud Architecture for Intermediate Roles Skill Set

Modification History

Release	Comments
Release 1	<p>This version first released with the Information and Communications Technology Training Package Version 8.0.</p> <p>Newly created to serve as a stackable skill set that builds towards attaining <i>ICT50220 Diploma of Information Technology</i>. The units in this skill set comprise the mandatory units required for a specialisation in Cloud architecture in <i>ICT50220 Diploma in Information Technology</i>.</p>

Description

This skill set addresses the skills and knowledge required to design, develop and iteratively maintain cloud architecture to support secure and scalable workloads in high availability cloud environments in intermediate roles.

Pathways Information

The units provide credit towards ICT50220 Diploma in Information Technology and other qualifications that allow for selection of these units. The units in this skill set comprise the mandatory units required for a specialisation in cloud architecture in ICT50220 Diploma in Information Technology. Users are advised to consult the skill set pathways section of the current version of ICT Companion Volume Implementation Guide to confirm the currency of this information and for further guidance.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTCLD501 Develop cloud disaster recovery plans

ICTCLD502 Design and implement highly-available cloud infrastructure

ICTCLD503 Implement web-scale cloud infrastructure

ICTCLD504 Improve cloud-based infrastructure

Target Group

This skill set is for individuals who work in cloud development roles, including cloud architects, cloud engineers and other related intermediate roles, who are responsible for independently developing and maintaining cloud environments using a variety of cloud platforms.

Suggested words for Statement of Attainment

These units of competency from the ICT Information and Communications Technology Training Package meet industry requirements for a range of intermediate roles that develop and maintain cloud architecture in a range of workplace contexts.

ICTSS00148 Cloud Engineering for Intermediate Roles Skill Set

Modification History

Release	Comments
Release 1	<p>This version first released with the Information and Communications Technology Training Package Version 8.0.</p> <p>Newly created to serve as a stackable skill set that builds towards attaining <i>ICT50220 Diploma of Information Technology</i>. The units in this skill set comprise the mandatory units required for a specialisation in Cloud engineering in <i>ICT50220 Diploma in Information Technology</i>.</p>

Description

This skill set addresses the skills and knowledge required to use code to build, implement, and maintain cloud-based platforms and environments across virtual networks in intermediate roles.

Pathways Information

The units provide credit towards ICT50220 Diploma in Information Technology and other qualifications that allow for selection of these units. The units in this skill set comprise the mandatory units required for a specialisation in cloud engineering in ICT50220 Diploma in Information Technology. Users are advised to consult the skill set pathways section of the current version of ICT Companion Volume Implementation Guide to confirm the currency of this information and for further guidance.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTCLD505 Implement cloud infrastructure with code

ICTCLD506 Implement virtual network in cloud environments

ICTCLD507 Build and deploy resources on cloud platforms

ICTCLD508 Manage infrastructure in cloud environments

Target Group

This skill set is for individuals who work in cloud engineering roles, including cloud architecture engineers, cloud technicians, and other related intermediate roles, who are responsible for implementing and maintaining cloud-based infrastructure and virtual networks, as well as building and deploying resources on cloud platforms.

Suggested words for Statement of Attainment

These units of competency from the ICT Information and Communications Technology Training Package meet industry requirements for a range of intermediate cloud engineering roles in workplace contexts.

ICTSS00149 Cyber Security for Intermediate Roles Skill Set

Modification History

Release	Comments
Release 1	<p>This version first released with the Information and Communications Technology Training Package Version 8.0.</p> <p>Newly created to serve as a stackable skill set that builds towards attaining <i>ICT50220 Diploma of Information Technology</i>. The units in this skill set comprise the mandatory units required for a specialisation in Cloud security in <i>ICT50220 Diploma in Information Technology</i>.</p>

Description

This skill set addresses the skills and knowledge required to evaluate threat data, develop security architecture and iteratively update incident response plans to protect organisational infrastructure in intermediate roles.

Pathways Information

The units provide credit towards ICT50220 Diploma in Information Technology and other qualifications that allow for selection of these units. The units in this skill set comprise the mandatory units required for a specialisation in cloud security in ICT50220 Diploma in Information Technology. Users are advised to consult the skill set pathways section of the current version of ICT Companion Volume Implementation Guide to confirm the currency of this information and for further guidance.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTCYS407 Gather, analyse and interpret threat data

ICTCYS610 Protect critical infrastructure for organisations

ICTCYS613 Utilise design methodologies for security architecture

ICTSAS524 Develop, implement and evaluate an incident response plan

ICTSAS526 Review and update disaster recovery and contingency plans

Target Group

This skill set is for individuals who work in intermediate cyber security roles, including senior cyber security architects, network security specialists, and other related intermediate roles, who are responsible for independently supporting the evaluation of cyber security threats and developing response plans to protect critical infrastructure.

Suggested words for Statement of Attainment

These units of competency from the ICT Information and Communications Technology Training Package meet industry requirements for a range of intermediate roles that support cyber security incident threat response in workplace contexts.

ICTSS00150 Database and Data Management for Intermediate Roles Skill Set

Modification History

Release	Comments
Release 1	<p>This version first released with the Information and Communications Technology Training Package Version 8.0.</p> <p>Newly created to serve as a stackable skill set that builds towards attaining <i>ICT50220 Diploma of Information Technology</i>. The units in this skill set comprise the mandatory units required for a specialisation in Database and data management in <i>ICT50220 Diploma in Information Technology</i>.</p>

Description

This skill set addresses the skills and knowledge required to create, design, and model data processes and components to improve knowledge management systems in intermediate roles.

Pathways Information

The units provide credit towards ICT50220 Diploma in Information Technology and other qualifications that allow for selection of these units. The units in this skill set comprise the mandatory units required for a specialisation in database and data management in ICT50220 Diploma in Information Technology. Users are advised to consult the skill set pathways section of the current version of ICT Companion Volume Implementation Guide to confirm the currency of this information and for further guidance.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTDBS503 Create a data warehouse

ICTDBS505 Monitor and improve knowledge management systems

ICTDBS506 Design databases

ICTDBS507 Integrate databases with websites

ICTSAD502 Model data processes

Target Group

This skill set is for individuals who work in systems administration roles, including database integration officers, and other related intermediate roles, who are responsible for independently creating, designing and modelling data processes and components, and iteratively maintaining knowledge management systems.

Suggested words for Statement of Attainment

These units of competency from the ICT Information and Communications Technology Training Package meet industry requirements for a range of intermediate roles that create, design and model data processes and components to improve knowledge management systems in workplace contexts.

ICTSS00151 Front End Web Development for Intermediate Roles Skill Set

Modification History

Release	Comments
Release 1	<p>This version first released with the Information and Communications Technology Training Package Version 8.0.</p> <p>Newly created to serve as a stackable skill set that builds towards attaining <i>ICT50220 Diploma of Information Technology</i>. The units in this skill set comprise the mandatory units required for a specialisation in Front end web development in <i>ICT50220 Diploma in Information Technology</i>.</p>

Description

This skill set addresses the skills and knowledge required develop, create, and transfer content to websites with complex styles and page layouts in intermediate roles.

Pathways Information

The units provide credit towards ICT50220 Diploma in Information Technology and other qualifications that allow for selection of these units. The units in this skill set comprise the mandatory units required for a specialisation in front end web development in ICT50220 Diploma in Information Technology. Users are advised to consult the skill set pathways section of the current version of ICT Companion Volume Implementation Guide to confirm the currency of this information and for further guidance.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTICT530 Design user experience solutions

ICTWEB513 Build dynamic websites

ICTWEB514 Create dynamic web pages

ICTWEB518 Build a document using extensible markup language

ICTWEB519 Develop complex web page layouts

ICTWEB520 Develop complex cascading style sheets

Target Group

This skill set is for individuals who work in complex website development roles, including website developers, and other related intermediate roles, who are responsible for independently developing content to improve and maintain user experiences through complex websites.

Suggested words for Statement of Attainment

These units of competency from the ICT Information and Communications Technology Training Package meet industry requirements for a range of intermediate roles that develop complex front-end components for websites in ICT contexts.

ICTSS00152 Game Art and Design for Intermediate Roles Skill Set

Modification History

Release	Comments
Release 1	<p>This version first released with the Information and Communications Technology Training Package Version 8.0.</p> <p>Newly created to serve as a stackable skill set that builds towards attaining <i>ICT50220 Diploma of Information Technology</i>. The units in this skill set comprise the mandatory units required for a specialisation in Game art and design in <i>ICT50220 Diploma in Information Technology</i>.</p>

Description

This skill set addresses the skills and knowledge required to produce intricate game art, designs and complex characters to develop advanced three-dimensional (3D) digital games in intermediate roles.

Pathways Information

The units provide credit towards ICT50220 Diploma in Information Technology and other qualifications that allow for selection of these units. The units in this skill set comprise the mandatory units required for a specialisation in game art and design in ICT50220 Diploma in Information Technology. Users are advised to consult the skill set pathways section of the current version of ICT Companion Volume Implementation Guide to confirm the currency of this information and for further guidance.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTGAM539 Create and implement designs for 3-D games environments

ICTGAM542 Animate 3-D characters for digital games

ICTGAM543 Produce digital animation sequences

ICTGAM545 Manage technical art and rigging in 3-D animations

ICTGAM552 Create complex 3-D characters for games

Target Group

This skill set is for individuals who work in game design and production roles, including senior concept artists, and other related intermediate roles, who are responsible for independently completing art and design activities to produce advanced digital games.

Suggested words for Statement of Attainment

These units of competency from the ICT Information and Communications Technology Training Package meet industry requirements for a range of intermediate roles that produce and manage game art and design components for complex three-dimensional (3D) environments in ICT contexts.

ICTSS00153 Game Programming for Intermediate Roles Skill Set

Modification History

Release	Comments
Release 1	<p>This version first released with the Information and Communications Technology Training Package Version 8.0.</p> <p>Newly created to serve as a stackable skill set that builds towards attaining <i>ICT50220 Diploma of Information Technology</i>. The units in this skill set comprise the mandatory units required for a specialisation in Game programming in <i>ICT50220 Diploma in Information Technology</i>.</p>

Description

This skill set addresses the skills and knowledge required to develop artificial intelligence and three-dimensional (3D) software for interactive games in intermediate roles.

Pathways Information

The units provide credit towards ICT50220 Diploma in Information Technology and other qualifications that allow for selection of these units. The units in this skill set comprise the mandatory units required for a specialisation in game programming in ICT50220 Diploma in Information Technology. Users are advised to consult the skill set pathways section of the current version of ICT Companion Volume Implementation Guide to confirm the currency of this information and for further guidance.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

ICTGAM423 Apply artificial intelligence in game development

ICTGAM533 Create complex 3-D interactive games

ICTGAM535 Develop complex 3-D software for games and interactive media

ICTGAM537 Prepare games for different platforms and delivery modes

ICTICT433 Build graphical user interfaces

Target Group

This skill set is for individuals who work in game programming roles, including senior concept technicians, and other related intermediate roles, who are responsible for independently completing complex programming activities for multifaceted digital games.

Suggested words for Statement of Attainment

These units of competency from the ICT Information and Communications Technology Training Package meet industry requirements for a range of intermediate roles that apply complex programming techniques across gaming platforms in ICT contexts.

ICTSS00154 Systems Administration for Intermediate Roles Skill Set

Modification History

Release	Comments
Release 1	<p>This version first released with the Information and Communications Technology Training Package Version 8.0.</p> <p>Newly created to serve as a stackable skill set that builds towards attaining <i>ICT50220 Diploma of Information Technology</i>. The units in this skill set comprise the mandatory units required for a specialisation in Systems administration in <i>ICT50220 Diploma in Information Technology</i>.</p>

Description

This skill set addresses the skills and knowledge required to develop, install, and manage technical components of multifaceted systems, including their servers, in intermediate roles.

Pathways Information

The units provide credit towards ICT50220 Diploma in Information Technology and other qualifications that allow for selection of these units. The units in this skill set comprise the mandatory units required for a specialisation in systems administration in ICT50220 Diploma in Information Technology. Users are advised to consult the skill set pathways section of the current version of ICT Companion Volume Implementation Guide to confirm the currency of this information and for further guidance.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTNWK615 Design and configure desktop virtualisation

ICTSAS512 Review and manage delivery of maintenance services

ICTSAS518 Install and upgrade operating systems

ICTSAS524 Develop, implement and evaluate an incident response plan

Target Group

This skill set is for individuals who work in intermediate systems administration roles, including senior technical administrators, help desk technicians, and other related intermediate roles, who are responsible for independently completing administration activities to maintain ICT systems and servers.

Suggested words for Statement of Attainment

These units of competency from the ICT Information and Communications Technology Training Package meet industry requirements for a range of intermediate roles that develop, install and manage multifaceted systems and their servers.

ICTSS00155 Systems Analysis for Intermediate ICT Roles Skill Set

Modification History

Release	Comments
Release 1	<p>This version first released with the Information and Communications Technology Training Package Version 8.0.</p> <p>Newly created to serve as a stackable skill set that builds towards attaining <i>ICT50220 Diploma of Information Technology</i>. The units in this skill set comprise the mandatory units required for a specialisation in Systems analysis in <i>ICT50220 Diploma in Information Technology</i>.</p>

Description

This skill set addresses the skills and knowledge required to model and update content for complex Information and Communications Technology (ICT) systems analysis activities in intermediate ICT roles.

Pathways Information

The units provide credit towards ICT50220 Diploma in Information Technology and other qualifications that allow for selection of these units. The units in this skill set comprise the mandatory units required for a specialisation in systems analysis in ICT50220 Diploma in Information Technology. Users are advised to consult the skill set pathways section of the current version of ICT Companion Volume Implementation Guide to confirm the currency of this information and for further guidance.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTNWK548 Model preferred system solutions

ICTSAD501 Model data objects

ICTSAD502 Model data processes

ICTSAS506 Update ICT system operational procedures

ICTSAS520 Develop detailed test plans

Target Group

This skill set is for individuals who work in systems analysis roles, including system technicians, and in other related intermediate roles, who are responsible for independently completing analysis activities for complex systems in ICT-enabled workplace contexts.

Suggested words for Statement of Attainment

These units of competency from the ICT Information and Communications Technology Training Package meet industry requirements for a range of intermediate roles that model and update content for complex ICT systems analysis activities.

ICTSS00156 Telecommunications Network Engineering for Intermediate Roles Skill Set

Modification History

Release	Comments
Release 1	<p>This version first released with the Information and Communications Technology Training Package Version 8.0.</p> <p>Newly created to serve as a stackable skill set that builds towards attaining <i>ICT50220 Diploma of Information Technology</i>. The units in this skill set comprise the mandatory units required for a specialisation in Telecommunications network engineering in <i>ICT50220 Diploma in Information Technology</i>.</p>

Description

This skill set addresses the skills and knowledge required to produce and manage network telecommunications components for ICT projects in intermediate roles.

Pathways Information

The units provide credit towards ICT50220 Diploma in Information Technology and other qualifications that allow for selection of these units. The units in this skill set comprise the mandatory units required for a specialisation in telecommunications network engineering in ICT50220 Diploma in Information Technology. Users are advised to consult the skill set pathways section of the current version of ICT Companion Volume Implementation Guide to confirm the currency of this information and for further guidance.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTICT519 Develop detailed component specifications from project specifications

ICTNPL413 Evaluate networking regulations and legislation for the telecommunications industry

ICTNWK423 Manage network and data integrity

ICTNWK541 Configure, verify and troubleshoot WAN links and IP services

ICTPMG505 Manage ICT projects

ICTTEN519 Design network building projects

Target Group

This skill set is for individuals who work in telecommunication roles, including senior network specialists, and other related intermediate roles, who are responsible for independently supporting telecommunications network engineering activities when managing ICT projects in workplace environments.

Suggested words for Statement of Attainment

These units of competency from the ICT Information and Communications Technology Training Package meet industry requirements for a range of intermediate ICT roles that complete diverse telecommunications network engineering activities for ICT projects.

ICTSS00157 Core Technical IT Skills for Advanced Roles Skill Set

Modification History

Release	Comments
Release 1	<p>This version first released with the Information and Communications Technology Training Package Version 8.0.</p> <p>Newly created to serve as a stackable skill set that builds towards attaining <i>ICT60220 Advanced Diploma of Information Technology</i>. The units in this skill set comprise some of the core units of <i>ICT60220 Advanced Diploma in Information Technology</i>.</p>

Description

This skill set addresses the core technical skills and knowledge required to lead intellectual property (IP), ethics and privacy procedures, promote cyber security awareness, and manage business analysis activities in advanced roles within information and communications technology (ICT) contexts.

Pathways Information

The units provide credit towards ICT60220 Advanced Diploma in Information Technology and other qualifications that allow for selection of these units. The units in this skill set comprise some of the core units of ICT60220 Advanced Diploma in Information Technology. Users are advised to consult the skill set pathways section of the current version of ICT Companion Volume Implementation Guide to confirm the currency of this information and for further guidance.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

BSBXCS402 Promote workplace cyber security awareness and best practices
ICTICT618 Manage IP, ethics and privacy in ICT environments

ICTSAD609 Plan and monitor business analysis activities in an ICT environment

Target Group

This skill set is for individuals who work in advanced technical leadership roles, including senior security technicians, and other related roles, who are responsible for independently leading and maintaining best practices to secure ICT systems and components.

Suggested words for Statement of Attainment

These units of competency from the BSB Business Services and ICT Information and Communications Technology Training Packages meet industry requirements for a range of advanced ICT roles that lead the secure management of systems and components stored across complex environments in ICT contexts.

ICTSS00158 Core Transferable IT Skills for Advanced Roles Skill Set

Modification History

Release	Comments
Release 1	<p>This version first released with the Information and Communications Technology Training Package Version 8.0.</p> <p>Newly created to serve as a stackable skill set that builds towards attaining <i>ICT60220 Advanced Diploma of Information Technology</i>. The units in this skill set comprise some of the core units of <i>ICT60220 Advanced Diploma in Information Technology</i>.</p>

Description

This skill set addresses the core transferable skills and knowledge required to manage teams and clients to apply critical thinking, manage team effectiveness, and interact with clients within information and communications technology (ICT) contexts.

Pathways Information

The units provide credit towards ICT60220 Advanced Diploma in Information Technology and other qualifications that allow for selection of these units. The units in this skill set comprise some of the core units of ICT60220 Advanced Diploma in Information Technology. Users are advised to consult the skill set pathways section of the current version of ICT Companion Volume Implementation Guide to confirm the currency of this information and for further guidance.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

BSBCRT611 Apply critical thinking for complex problem solving

BSBTWK502 Manage team effectiveness

ICTICT608 Interact with clients on a business level

Target Group

This skill set is for individuals who work in advanced roles managing ICT clients, including senior technicians, and other related roles, who are responsible for independently leading teams to interact and solve client-based ICT problems in diverse business environments.

Suggested words for Statement of Attainment

These units of competency from the BSB Business Services and ICT Information and Communications Technology Training Packages meet industry requirements for a range of advanced ICT roles that solve complex problems by managing teams and clients in ICT workplace contexts.

ICTSS00159 Data Management Information Skills for Advanced Roles Skill Set

Modification History

Release	Comments
Release 1	<p>This version first released with the Information and Communications Technology Training Package Version 8.0.</p> <p>Newly created to serve as a stackable skill set that builds towards attaining <i>ICT60220 Advanced Diploma of Information Technology</i>. The units in this skill set comprise the mandatory units required for a specialisation in Advanced data management information in <i>ICT60220 Advanced Diploma in Information Technology</i>.</p>

Description

This skill set addresses the skills and knowledge required to evaluate data insights and lead data management activities to determine business requirements, build data warehouses, and develop scalable knowledge management strategies in advanced roles.

Pathways Information

The units provide credit towards ICT60220 Advanced Diploma in Information Technology and other qualifications that allow for selection of these units. The units in this skill set comprise the mandatory units required for a specialisation in advanced data management information in ICT60220 Advanced Diploma in Information Technology. Users are advised to consult the skill set pathways section of the current version of ICT Companion Volume Implementation Guide to confirm the currency of this information and for further guidance.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTDBS604 Build data warehouses

ICTDBS605 Develop knowledge management strategies

ICTDBS606 Determine database functionality and scalability

ICTICT523 Gather data to identify business requirements

Target Group

This skill set is for individuals who work in advanced systems operations roles, including senior database managers, line managers, and other related roles, who are responsible for independently leading activities to ensure compliance with database standards, evaluating business requirements, and producing effective knowledge management strategies for workplaces.

Suggested words for Statement of Attainment

These units of competency from the ICT Information and Communications Technology Training Package meet industry requirements for a range of advanced ICT roles that evaluate data insights and lead data management activities to determine business requirements, build data warehouses, and develop scalable knowledge management strategies in advanced roles.

ICTSS00160 Cyber Security for Advanced Roles Skill Set

Modification History

Release	Comments
Release 1	<p>This version first released with the Information and Communications Technology Training Package Version 8.0.</p> <p>Newly created to serve as a stackable skill set that builds towards attaining <i>ICT60220 Advanced Diploma of Information Technology</i>. The units in this skill set comprise the mandatory units required for a specialisation in Cyber security in <i>ICT60220 Advanced Diploma in Information Technology</i>.</p>

Description

This skill set addresses the skills and knowledge required to manage threat response activities, manage cyber security protection, and review organisational cyber security compliance across virtual infrastructure in advanced roles.

Pathways Information

The units provide credit towards ICT60220 Advanced Diploma in Information Technology and other qualifications that allow for selection of these units. The units in this skill set comprise the mandatory units required for a specialisation in cyber security in ICT60220 Advanced Diploma in Information Technology. Users are advised to consult the skill set pathways section of the current version of ICT Companion Volume Implementation Guide to confirm the currency of this information and for further guidance.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTCYS604 Implement best practices for identity management

ICTCYS606 Evaluate an organisation's compliance with cyber security standards and law

ICTCYS608 Perform cyber security risk assessments

ICTCYS612 Design and implement virtualised cyber security infrastructure for organisations

Target Group

This skill set is for individuals who work in cyber security management roles, including senior cyber security architects, cyber security managers, and other related advanced roles, who are responsible for independently managing cyber security protection activities and safeguarding cyber security compliance.

Suggested words for Statement of Attainment

These units of competency from the ICT Information and Communications Technology Training Package meet industry requirements for a range of advanced ICT roles that manage cyber security protection and compliance in virtual infrastructure.

ICTSS00161 Full Stack Web Development for Advanced Roles Skill Set

Modification History

Release	Comments
Release 1	<p>This version first released with the Information and Communications Technology Training Package Version 8.0.</p> <p>Newly created to serve as a stackable skill set that builds towards attaining <i>ICT60220 Advanced Diploma of Information Technology</i>. The units in this skill set comprise the mandatory units required for a specialisation in Full stack web development in <i>ICT60220 Advanced Diploma in Information Technology</i>.</p>

Description

This skill set addresses the skills and knowledge required to develop user experience (UX) solutions and user interfaces (UIs), create representational state transfer (REST) application program interfaces (APIs) and use containerisation practices in advanced roles in ICT environments.

Pathways Information

The units provide credit towards ICT60220 Advanced Diploma in Information Technology and other qualifications that allow for selection of these units. The units in this skill set comprise the mandatory units required for a specialisation in full stack web development in ICT60220 Advanced Diploma in Information Technology. Users are advised to consult the skill set pathways section of the current version of ICT Companion Volume Implementation Guide to confirm the currency of this information and for further guidance.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTICT530 Design user experience solutions

ICTPRG535 Build advanced user interfaces

ICTPRG553 Create and develop REST APIs

ICTSAD612 Implement and maintain uses of containerisation

Target Group

This skill set is for individuals who work in advanced computer systems architect roles, including senior software developers, and other related roles, who are responsible for independently creating sustainable, flexible and cost-efficient ICT environments using a range of programming, DevOps, and systems analysis and design practices.

Suggested words for Statement of Attainment

These units of competency from the ICT Information and Communications Technology Training Package meet industry requirements for a range of advanced ICT roles that develop user experience (UX) solutions and user interfaces (UIs), create representational state transfer (REST) application program interfaces (APIs) and use containerisation practices in advanced roles in ICT environments.

ICTSS00162 Programming Skills for Advanced Roles Skill Set

Modification History

Release	Comments
Release 1	<p>This version first released with the Information and Communications Technology Training Package Version 8.0.</p> <p>Newly created to serve as a stackable skill set that builds towards attaining <i>ICT60220 Advanced Diploma of Information Technology</i>. The units in this skill set comprise the mandatory units required for a specialisation in Further programming in <i>ICT60220 Advanced Diploma in Information Technology</i>.</p>

Description

This skill set addresses the skills and knowledge required to manage data persistence and complex programming activities using a diverse range of programming languages in advanced roles.

Pathways Information

The units provide credit towards ICT60220 Advanced Diploma in Information Technology and other qualifications that allow for selection of these units. The units in this skill set comprise the mandatory units required for a specialisation in further programming in ICT60220 Advanced Diploma in Information Technology. Users are advised to consult the skill set pathways section of the current version of ICT Companion Volume Implementation Guide to confirm the currency of this information and for further guidance.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTPRG537 Implement security for applications

ICTPRG547 Apply advanced programming skills in another language

ICTPRG554 Manage data persistence using noSQL data stores

Target Group

This skill set is for individuals who work in advanced programming roles, including advanced application programmers, and other related roles, who are responsible for independently leading advanced programming activities and implementing security controls, using a diverse range of programming languages.

Suggested words for Statement of Attainment

These units of competency from the ICT Information and Communications Technology Training Package meet industry requirements for a range of advanced ICT roles that manage data persistence and complex programming activities using a diverse range of programming languages.

ICTSS00163 IT Strategy and Organisational Development for Advanced Roles Skill Set

Modification History

Release	Comments
Release 1	<p>This version first released with the Information and Communications Technology Training Package Version 8.0.</p> <p>Newly created to serve as a stackable skill set that builds towards attaining <i>ICT60220 Advanced Diploma of Information Technology</i>. The units in this skill set comprise the mandatory units required for a specialisation in IT strategy and organisational development in <i>ICT60220 Advanced Diploma in Information Technology</i>.</p>

Description

This skill set addresses the skills and knowledge required to manage the development, review, communication and validation of ICT strategic business plans and solutions in advanced roles.

Pathways Information

The units provide credit towards ICT60220 Advanced Diploma in Information Technology and other qualifications that allow for selection of these units. The units in this skill set comprise the mandatory units required for a specialisation in IT strategy and organisational development in ICT60220 Advanced Diploma in Information Technology. Users are advised to consult the skill set pathways section of the current version of ICT Companion Volume Implementation Guide to confirm the currency of this information and for further guidance.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTICT611 Develop ICT strategic business plans
 ICTSAD604 Manage and communicate ICT solutions
 ICTSAD608 Perform ICT-focused enterprise analysis

ICTSAD611 Manage assessment and validation of ICT solutions

Target Group

This skill set is for individuals who work in advanced ICT management roles, including senior strategic planners, and other related roles, who are responsible for independently managing the development and validation of strategic plans and ICT solutions.

Suggested words for Statement of Attainment

These units of competency from the ICT Information and Communications Technology Training Package meet industry requirements for a range of advanced ICT roles that manage ICT solutions in workplace contexts.

ICTSS00164 Systems Development and Analysis for Advanced Roles Skill Set

Modification History

Release	Comments
Release 1	<p>This version first released with the Information and Communications Technology Training Package Version 8.0.</p> <p>Newly created to serve as a stackable skill set that builds towards attaining <i>ICT60220 Advanced Diploma of Information Technology</i>. The units in this skill set comprise the mandatory units required for a specialisation in Systems development and analysis in <i>ICT60220 Advanced Diploma in Information Technology</i>.</p>

Description

This skill set addresses the skills and knowledge required to analyse stakeholder requirements, manage the development of technical solutions, and manage the lifecycle of containers and related systems analysis activities in dynamic environments in advanced roles.

Pathways Information

The units provide credit towards ICT60220 Advanced Diploma in Information Technology and other qualifications that allow for selection of these units. The units in this skill set comprise the mandatory units required for a specialisation in systems development and analysis in ICT60220 Advanced Diploma in Information Technology. Users are advised to consult the skill set pathways section of the current version of ICT Companion Volume Implementation Guide to confirm the currency of this information and for further guidance.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTPRG605 Manage development of technical solutions from business specifications
ICTSAD610 Analyse stakeholder requirements

ICTSAD612 Implement and maintain uses of containerisation

ICTSAD613 Install and configure container orchestration services

Target Group

This skill set is for individuals who work in advanced systems analysis and design roles, including senior software developers, and other related roles, who are responsible for independently managing stakeholder requirements, and systems analysis and development activities in dynamic environments.

Suggested words for Statement of Attainment

These units of competency from the ICT Information and Communications Technology Training Package meet industry requirements for a range of advanced ICT roles that manage advanced systems analysis and design activities in workplace contexts.

ICTSS00165 Telecommunications Network Engineering for Advanced Roles Skill Set

Modification History

Release	Comments
Release 1	<p>This version first released with the Information and Communications Technology Training Package Version 8.0.</p> <p>Newly created to serve as a stackable skill set that builds towards attaining <i>ICT60220 Advanced Diploma of Information Technology</i>. The units in this skill set comprise the mandatory units required for a specialisation in Telecommunications network engineering in <i>ICT60220 Advanced Diploma in Information Technology</i>.</p>

Description

This skill set addresses the skills and knowledge required to manage telecommunications, evaluate the applicability of regulations and legislation to work activities, and troubleshoot advanced integrated IP networks across diverse ICT projects in advanced roles.

Pathways Information

The units provide credit towards ICT60220 Advanced Diploma in Information Technology and other qualifications that allow for selection of these units. The units in this skill set comprise the mandatory units required for a specialisation in telecommunications network engineering in ICT60220 Advanced Diploma in Information Technology. Users are advised to consult the skill set pathways section of the current version of ICT Companion Volume Implementation Guide to confirm the currency of this information and for further guidance.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTNPL413 Evaluate networking regulations and legislation for the telecommunications industry

ICTNWK612 Plan and manage troubleshooting advanced integrated IP networks

ICTPMG613 Manage ICT project planning

ICTTEN615 Manage network traffic

ICTTEN622 Produce ICT network architecture designs

Target Group

This skill set is for individuals who work in telecommunication management roles, including senior network designers, and other related advanced roles, who are responsible for independently supporting telecommunications network engineering activities when managing ICT projects in workplace environments.

Suggested words for Statement of Attainment

These units of competency from the ICT Information and Communications Technology Training Package meet industry requirements for a range of advanced ICT roles that manage telecommunications network engineering activities in diverse ICT contexts.

ICTSS00166 Application Development Specialist Skill Set

Modification History

Release	Comments
Release 2	This version first released with the Information and Communications Technology Training Package Version 8.1. Correction to Skill Set Mapping.
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Supersedes and is not equivalent to ICTSS00031 Commercial Digital Television Antenna Systems Installation Skill Set.

Description

This skill set addresses the skills and knowledge required to perform specialist application development activities, including applying various programming languages, interfaces and applications to develop user interfaces.

Pathways Information

This skill set provides credit towards ICT50220 Diploma of Information Technology and other qualifications that allow for selection of these units.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTPRG532 Apply advanced object-oriented language skills

ICTPRG535 Build advanced user interfaces

ICTPRG536 Design application architecture

ICTPRG537 Implement security for applications

ICTPRG547 Apply advanced programming skills in another language

Target Group

This skill set is for individuals who work in application development roles, including application programmers, software developers, and other related roles, who are responsible for designing, building and implementing programming components.

Suggested words for Statement of Attainment

These units of competency from the ICT Information and Communications Technology Training Package meet industry requirements for working as software development specialists.

ICTSS00167 Basic Application Development Programmer Skill Set

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Supersedes and is not equivalent to ICTSS00032 Basic Application Development Programmer Skill Set.

Description

This skill set addresses the skills and knowledge required to use basic programming applications and a range of programming languages.

Pathways Information

This skill set provides credit towards ICT40120 Certificate IV in Information Technology, ICT50220 Diploma of Information Technology, and other qualifications that allow for selection of these units.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTPRG430 Apply introductory object-oriented language skills

ICTPRG439 Use pre-existing components

ICTPRG440 Apply introductory programming skills in different languages

ICTPRG443 Apply intermediate programming skills in different languages

ICTPRG549 Apply intermediate object-oriented language skills

Target Group

This skill set is for individuals who work in application programming roles, including basic application programmers, and other related roles, who are responsible for using and applying programming components and languages.

Suggested words for Statement of Attainment

These units of competency from the ICT Information and Communications Technology Training Package meet competency requirements for basic application programmers.

ICTSS00168 Basic Web Development Specialist Skill Set

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Supersedes and is not equivalent to ICTSS00034 Basic Web Development Specialist Skill Set.

Description

This skill set addresses the skills and knowledge required to develop and maintain simple websites.

Pathways Information

This skill set provides credit towards BSB40320 Certificate IV in Entrepreneurship and New Business, ICT30120 Certificate III in Information Technology, ICT40120 Certificate IV in Information Technology, and other qualifications that allow for selection of these units.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

BSBTEC405 Review and maintain organisation's digital presence

ICTWEB304 Build simple web pages

ICTWEB434 Transfer content to websites

ICTWEB453 Optimise websites for mobile devices

Target Group

This skill set is for individuals who work in basic web development roles, including website developers and other related roles, who are responsible for reviewing digital activities, building web pages, and transferring web content to maintain simple websites.

Suggested words for Statement of Attainment

These units of competency from BSB Business Services and ICT Information and Communications Technology Training Packages meet industry requirements for skills in developing and maintaining a simple website in a variety of workplace contexts.

ICTSS00169 Certified Network Associate Technology Specialist Skill Set

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Supersedes and is not equivalent to ICTSS00036 Certified Network Associate Technology Specialist Skill Set.

Description

This skill set addresses the skills and knowledge required at an associate level to manage and troubleshoot networks, routers and switches.

Pathways Information

This skill set provides credit towards ICT50120 Diploma of Information Technology and other qualifications that allow for selection of these units.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTNWK529 Install and manage complex ICT networks

ICTNWK541 Configure, verify and troubleshoot WAN links and IP services

ICTNWK542 Install, operate and troubleshoot medium enterprise routers

ICTNWK543 Install, operate and troubleshoot medium enterprise switches

Target Group

This skill set is for individuals who work in IT support desk roles, including help desk technicians, network support technicians, and other related roles, who are responsible for configuring, installing, operating and troubleshooting networks, routers and switches.

Suggested words for Statement of Attainment

These units of competency from the ICT Information and Communications Technology Training Package meet competency requirements for associate level skills in networking contexts.

ICTSS00170 Certified Network Professional Specialist - Voice and Wireless Skill Set

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Supersedes and is not equivalent to ICTSS00037 Certified Network Professional Specialist - Voice and Wireless Skill Set.

Description

This skill set addresses the skills and knowledge required for network professionals specialising in wireless and voice networks.

Pathways Information

This skill set provides credit towards ICT60220 Advanced Diploma of Information Technology and other qualifications that allow for selection of these units.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTNWK620 Design and implement wireless network security

ICTNWK624 Configure advanced internetwork routing solutions

ICTNWK627 Implement voice applications over secure wireless networks

Target Group

This skill set is for individuals who work in specialist networking roles, including voice and wireless certified network professional specialists, and other related roles, who are responsible for designing, configuring and implementing applications over wireless networks.

Suggested words for Statement of Attainment

These units of competency from the ICT Information and Communications Technology Training Package meet competency requirements for skills working as network professionals specialising in voice and wireless networks.

ICTSS00171 Security and Network Architect Specialist Skill Set

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Supersedes and is not equivalent to ICTSS00040 Certified Security and Architect Specialist Skill Set.

Description

This skill set addresses the skills and knowledge required to manage complex ICT security and network architecture solutions.

Pathways Information

This skill set provides credit towards ICT50220 Diploma of Information Technology and other qualifications that allow for selection of these units.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTNWK529 Install and manage complex ICT networks

ICTNWK538 Install and maintain valid authentication processes

ICTNWK546 Manage network security

Target Group

This skill set is for individuals who work in specialist networking roles, including security and network architect technology specialists, and other related roles, who are responsible for installing, maintaining and managing network security.

Suggested words for Statement of Attainment

These units of competency from the ICT Information and Communications Technology Training Package meet competency requirements for skills working as security and network architect technology specialists and other related roles.

ICTSS00172 Certified Technology Specialist - Graphical User Interfaces Skill Set

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Supersedes and is not equivalent to ICTSS00042 Certified Technology Specialist - Graphical User Interfaces Skill Set.

Description

This skill set addresses the skills and knowledge required to configure and manage user interface graphics.

Pathways Information

This skill set provides credit towards ICT40120 Certificate IV in Information Technology and other qualifications that allow for selection of these units.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTNWK423 Manage network and data integrity

ICTNWK427 Configure desktop environments

Target Group

This skill set is for individuals who work in certified technology specialist roles, including graphical user interface specialists, and other related roles, who are responsible for configuring and managing desktop network and data integrity.

Suggested words for Statement of Attainment

These units of competency from the ICT Information and Communications Technology Training Package meet competency requirements for skills working as certified technology professionals, including graphical user interface specialists.

ICTSS00173 Certified Web Design Specialist Skill Set

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Supersedes and is not equivalent to ICTSS00043 Certified Web Design Specialist Skill Set.

Description

This skill set addresses the skills and knowledge required for skills in the designing websites using a variety of scripts, tools and equipment.

Pathways Information

This skill set provides credit towards ICT40120 Certificate IV in Information Technology and other qualifications that allow for selection of these units.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTWEB440 Use web authoring tools

ICTWEB441 Produce basic client-side script

ICTWEB442 Produce interactive web animation

ICTWEB444 Create responsive website layouts

Target Group

This skill set is for individuals who work in website maintenance roles, including website animators, website developers, and other related roles, who are responsible for designing websites and related components.

Suggested words for Statement of Attainment

These units of competency from the ICT Information and Communications Technology Training Package meet competency requirements for skills working as website designers.

ICTSS00174 Hardware Technician Skill Set

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Supersedes and is not equivalent to ICTSS00048 Hardware Technician Skill Set.

Description

This skill set addresses the skills and knowledge required to install and configure client hardware.

Pathways Information

This skill set provides credit towards ICT30120 Certificate III in Information Technology and other qualifications that allow for selection of these units.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTICT314 Connect internal hardware components

ICTICT317 Maintain standard operating environments

ICTSAS305 Provide ICT advice to clients

ICTSAS308 Run standard diagnostic tests

ICTSAS309 Maintain and repair ICT equipment and software

ICTSAS310 Install, configure and secure a small office or home office network

Target Group

This skill set is for individuals who work in technology support roles, including hardware technicians, ICT advisors, and other related roles, who are responsible for installing and configuring ICT hardware.

Suggested words for Statement of Attainment

These units of competency from the ICT Information and Communications Technology Training Package meet competency requirements for skills in installing and configuring hardware.

ICTSS00175 Internetworking Systems Coordinator - Administrator Skill Set

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Supersedes and is not equivalent to ICTSS00049 Internetworking Systems Coordinator - Administrator Skill Set.

Description

This skill set addresses the skills and knowledge required to coordinate and administer internetworking systems and solutions.

Pathways Information

This skill set provides credit towards ICT60120 Advanced Diploma of Information Technology and other qualifications that allow for selection of these units.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTNWK612 Plan and manage troubleshooting advanced integrated IP networks

ICTNWK624 Configure advanced internetwork routing solutions

ICTNWK628 Design and build integrated VoIP networks

Target Group

This skill set is for individuals who work in internetworking support roles, including internetworking systems administrators and coordinators, and other related roles, who are responsible for designing, configuring, and troubleshooting internetworking components and solutions.

Suggested words for Statement of Attainment

These units of competency from the ICT Information and Communications Technology Training Package meet competency requirements for skills in coordinating and administering internetworking solutions.

ICTSS00176 Interactive Content Specialist Skill Set

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Supersedes and is not equivalent to ICTSS00050 Rich Interactive Content Specialist Skill Set.

Description

This skill set addresses the skills and knowledge required to design and apply interactive digital media, including three-dimensional (3D) models and components.

Pathways Information

This skill set provides credit towards CUA31120 Certificate III in Visual Arts, ICT30120 Certificate III in Information Technology, and other qualifications that allow for selection of these units.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

CUADIG304 Create visual design components

ICTGAM304 Develop three-dimensional (3D) models for digital games

ICTGAM305 Apply simple textures and shading to three-dimensional (3D) models for digital games

Target Group

This skill set is for individuals who work in digital media roles, including digital component and model designers, and other related roles, who are responsible for designing digital media models and applying components.

Suggested words for Statement of Attainment

These units of competency from the CUA Creative Arts and Culture and ICT Information and Communications Technology training packages meet competency requirements for skills in interactive digital media in a variety of workplace contexts.

ICTSS00177 System and Hardware Technician Skill Set

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Supersedes and is not equivalent to ICTSS00051 System and Hardware Plus Technician Skill Set.

Description

This skill set addresses the skills and knowledge required to administer technical support to a variety of systems and hardware.

Pathways Information

This skill set provides credit towards BSB40120 Certificate IV in Business, ICT30120 Certificate III in Information Technology, ICT40120 Certificate IV in Information Technology, and other qualifications that allow for selection of these units.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

BSBSUS411 Implement and monitor environmentally sustainable work practices

ICTICT429 Determine and confirm client business requirements

ICTICT445 Connect and configure devices and hardware components

ICTSAS310 Install, configure and secure a small office or home office network

ICTSAS445 Configure and troubleshoot operating system software

ICTSAS446 Fault find and troubleshoot ICT equipment, hardware and software problems

Target Group

This skill set is for individuals who work in ICT support roles, including computer system and hardware technicians, and other related roles, who are responsible for maintaining, configuring, troubleshooting and monitoring computer systems and hardware.

Suggested words for Statement of Attainment

These units of competency from the BSB Business Services and ICT Information and Communications Technology Training Packages meet competency requirements for skills in computer system and hardware support in a variety of workplace contexts.

ICTSS00178 System and Network Plus Technician Skill Set

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Supersedes and is not equivalent to ICTSS00052 System and Network Plus Technician Skill Set.

Description

This skill set addresses the skills and knowledge required to configure, operate and maintain systems and networks.

Pathways Information

This skill set provides credit towards ICT30120 Certificate III in Information Technology, ICT40120 Certificate IV in Information Technology, and other qualifications that allow for selection of these units.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTNWK421 Install, configure and test network security

ICTNWK422 Install and manage servers

ICTNWK424 Install and operate small enterprise branch networks

ICTSAS310 Install, configure and secure a small office or home office network

Target Group

This skill set is for individuals who work in ICT support roles, including computer system and network support technicians, and other related roles, who are responsible for installing, configuring, and securing computer systems and networks.

Suggested words for Statement of Attainment

These units of competency from the ICT Information and Communications Technology Training Package meet competency requirements for skills in technical computer system and network support.

ICTSS00179 Virtualisation Specialist Skill Set

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Supersedes and is not equivalent to ICTSS00053 Virtualisation Specialist Skill Set.

Description

This skill set addresses the skills and knowledge required to configure virtualisation components in virtual computing environments.

Pathways Information

This skill set provides credit towards ICT50220 Diploma of Information Technology and other qualifications that allow for selection of these units.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTNWK553 Configure enterprise virtual computing environments

ICTNWK554 Manage enterprise virtual computing environments

ICTNWK559 Install an enterprise virtual computing environment

Target Group

This skill set is for individuals who work in virtualisation roles, including senior networkers, and other related roles, who are responsible for configuring, managing and installing virtual computing environments.

Suggested words for Statement of Attainment

These units of competency from the ICT Information and Communications Technology Training Package meet competency requirements for skills in configuring, managing and installing virtual computing environments.

ICTSS00180 Visual Communications Specialist Skill Set

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Supersedes and is not equivalent to ICTSS00054 Visual Communications Specialist Skill Set.

Description

This skill set addresses the skills and knowledge required to develop visual communications content, specialising in video and digital image components.

Pathways Information

This skill set provides credit towards CUA31120 Certificate III in Visual Arts, ICT30120 Certificate III in Information Technology, and other qualifications that allow for selection of these units.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

CUADIG304 Create visual design components

CUADIG311 Prepare video assets

ICTWEB305 Produce digital images for the web

Target Group

This skill set is for individuals who work in virtualisation roles, including visual content specialists, and other related roles, who are responsible for developing video assets and digital images for web purposes.

Suggested words for Statement of Attainment

These units of competency from the CUA Creative Arts and Culture and ICT Information and Communications Technology Training Packages meet competency requirements for skills in developing visual components for websites.

ICTSS00181 Website Administration Specialist Skill Set

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Supersedes and is not equivalent to ICTSS00055 Website Administration Specialist Skill Set.

Description

This skill set addresses the skills and knowledge required to complete and monitor specialist administrative activities for a variety of websites.

Pathways Information

This skill set provides credit towards ICT40120 Certificate IV in Information Technology and other qualifications that allow for selection of these units.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTNWK428 Create scripts for networking

ICTWEB435 Maintain website performance

ICTWEB436 Monitor traffic and compile website traffic reports

ICTWEB437 Create website testing procedures

ICTWEB438 Conduct operational acceptance tests of websites

ICTWEB439 Confirm basic website security

Target Group

This skill set is for individuals who work in website administration roles, including website developers, website maintenance technicians, and other related roles, who are responsible for completing administrative tasks to secure and maintain websites.

Suggested words for Statement of Attainment

These units of competency from the ICT Information and Communications Technology Training Package meet competency requirements for specialist skills in website administration.

ICTSS00182 Enterprise Desktop Virtualisation Specialist Skill Set

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Supersedes and is not equivalent to ICTSS00056 Enterprise Desktop Virtualisation Specialist Skill Set.

Description

This skill set addresses the skills and knowledge required to manage a range of complex desktop virtualisation activities for enterprise desktop technologies.

Pathways Information

This skill set provides credit towards ICT60220 Advanced Diploma of Information Technology and other qualifications that allow for selection of these units.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTCLD602 Manage information security compliance of cloud service deployment
ICTICT617 Lead the evaluation and implementation of current industry specific technologies
ICTPRG605 Manage development of technical solutions from business specifications
ICTNWK615 Design and configure desktop virtualisation

Target Group

This skill set is for individuals who work in desktop virtualisation roles, including professional desktop virtualisation technology specialists, and other related roles, who are responsible for developing and monitoring the operations and security of desktop virtualisation technologies in enterprise environments.

Suggested words for Statement of Attainment

These units of competency from the ICT Information and Communications Technology Training Package meet competency requirements as network professionals specialising in virtualisation technology.

ICTSS00183 Enterprise Server Virtualisation Specialist Skill Set

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Supersedes and is not equivalent to ICTSS00057 Enterprise Server Virtualisation Specialist Skill Set.

Description

This skill set addresses the skills and knowledge required to configure specialist enterprise servers and computers when managing virtualisation activities.

Pathways Information

This skill set provides credit towards ICT50220 Diploma of Information Technology and other qualifications that allow for selection of these units.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTNWK552 Install and configure network access storage devices

ICTNWK553 Configure enterprise virtual computing environments

ICTNWK554 Manage enterprise virtual computing environments

ICTNWK557 Configure and manage advanced virtual computing environments

ICTNWK558 Monitor and troubleshoot virtual computing environments

ICTNWK559 Install an enterprise virtual computing environment

Target Group

This skill set is for individuals who work in server virtualisation roles, including professional server virtualisation technology specialists, and other related roles, who are responsible for leading the deployment and maintenance of virtual computing environments using virtualisation servers.

Suggested words for Statement of Attainment

These units of competency from the ICT Information and Communications Technology Training Package meet competency requirements as network professionals specialising in virtualisation technology.

ICTSS00184 Advanced ICT Sustainability Skill Set

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Supersedes and is not equivalent to ICTSS00059 Advanced ICT Sustainability Skill Set.

Description

This skill set addresses the skills and knowledge required to use internet protocol convergence and virtualisation technologies for the safe and sustainable maintenance of advanced ICT networks.

Pathways Information

This skill set provides credit towards BSB51319 Diploma of Work Health and Safety, ICT41219 Certificate IV in Telecommunications Engineering Technology, ICT50220 Diploma of Information Technology, and other qualifications that allow for selection of these units.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

BSBSUS511 Develop workplace policies and procedures for sustainability

ICTSUS404 Install thin client applications for power over ethernet

ICTSUS502 Install and test virtual infrastructure

Target Group

This skill set is for individuals who work in telecommunication roles, including network specialists, and other related roles, who are responsible for maintaining sustainable ICT networks in workplace environments.

Suggested words for Statement of Attainment

These units of competency from the BSB Business Services and ICT Information and Communications Technology Training Packages meet competency requirements for the sustainable maintenance of networks.

ICTSS00185 Basic ICT Sustainability Skill Set

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Supersedes and is not equivalent to ICTSS00061 Basic ICT Sustainability Skill Set.

Description

This skill set addresses the skills and knowledge required to use energy conservation technologies for the safe and sustainable maintenance of basic ICT networks.

Pathways Information

This skill set provides credit towards ICT40120 Certificate IV in Information Technology, ICT41219 Certificate IV in Telecommunications Engineering Technology, and other qualifications that allow for selection of these units.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTSUS402 Install and test power saving hardware

ICTSUS403 Install and test power management software

Target Group

This skill set is for individuals who work in telecommunication roles, including network technicians, and other related roles, who are responsible for deploying and testing technologies that reduce energy consumption in workplace environments.

Suggested words for Statement of Attainment

These units of competency from the ICT Information and Communications Technology Training Package meet competency requirements for basic sustainable maintenance of energy conservation technologies.

ICTSS00186 Civil Works - Installation of Pit and Pipe and FDH Skill Set

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Supersedes and is not equivalent to ICTSS00065 Civil Works - Installation of Pit and Pipe and FDH Skill Set.

Description

This skill set addresses the skills and knowledge required to construct and maintain National Broadband Network (NBN) technologies and related components.

Pathways Information

This skill set provides credit towards CPC10120 Certificate I in Construction, ICT20219 Certificate II in Telecommunications Network Build and Operation, ICT20319 Certificate II in Telecommunications Technology, and other qualifications that allow for selection of these units.

Licensing/Regulatory Information

Work functions in the occupational areas where this skill set may be used are subject to regulatory requirements. Refer to the ICT Implementation Guide Companion Volume or the relevant regulator for details of licensing, legislative or certification requirements.

Skill Set Requirements

CPCCWHS1001 Prepare to work safely in the construction industry

HLTAID009 Provide cardiopulmonary resuscitation

ICTCBL211 Install an above ground equipment enclosure

ICTCBL253 Construct underground telecommunications infrastructure

ICTPMG201 Prepare site for support installation

ICTTEN202 Use hand and power tools

ICTWHS204 Follow work health and safety and environmental policy and procedures

Target Group

This skill set is for individuals who work in National Broadband Network (NBN) construction roles, including network developers, and other related roles, who are responsible for safely deploying NBN technologies and components.

Suggested words for Statement of Attainment

These units of competency from the CPC Construction, Plumbing and Services, HLT Health and ICT Information and Communications Technology Training Packages meet competency requirements for constructing and maintaining National Broadband Network technologies and components in various workplace contexts.

ICTSS00187 Commercial Digital Television Antenna Systems Installation Skill Set

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Supersedes and is not equivalent to ICTSS00066 Commercial Digital Television Antenna Systems Installation Skill Set.

Description

This skill set addresses the skills and knowledge required to install commercial digital television systems and their components; and operate and maintain complex antennas, including Master Antenna TV (MATV) and Communal Antenna TV (CATV) systems.

Pathways Information

This skill set provides credit towards ICT20219 Certificate II in Telecommunications Network Build and Operation, ICT30519 Certificate III in Telecommunications Technology and other qualifications that allow for selection of these units.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTCBL206 Alter services to existing cable system

ICTCBL306 Locate and identify cable system faults

ICTDRE303 Install a complex digital reception system

ICTRFN407 Conduct radio frequency measurements

ICTWHS204 Follow work health and safety and environmental policy and procedures

Target Group

This skill set is for individuals who work in digital television reception roles, including domestic antenna installation programmers, and other related roles, who are responsible for installing complex commercial antenna systems and components.

Suggested words for Statement of Attainment

These units of competency from the ICT Information and Communications Technology Training Package meet competency requirements for installing complex commercial digital television antennas in telecommunications contexts.

ICTSS00188 Network Designer and Installation Skill Set

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Supersedes and is not equivalent to ICTSS00068 Designer Skill Set.

Description

This skill set addresses the skills and knowledge required to design and install components to develop ICT access networks.

Pathways Information

This skill set provides credit towards ICT20219 Certificate II in Telecommunications Network Build and Operation, ICT30519 Certificate III in Telecommunications Technology, ICT41119 Certificate IV in Telecommunications Network Design, ICT50220 Diploma of Information Technology, and other qualifications that allow for selection of these units.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTBWN303 Install lead-in module and cable for fibre to the premises

ICTCBL253 Construct underground telecommunications infrastructure

ICTCBL333 Install aerial cable for communications applications

ICTICT519 Develop detailed component specifications from project specifications

ICTNPL402 Plan the deployment of access network architectures

Target Group

This skill set is for individuals who work in telecommunication design roles, including access network designers, and other related roles, who are responsible for designing and installing telecommunication components for access networks.

Suggested words for Statement of Attainment

These units of competency from the ICT Information and Communications Technology Training Package meet competency requirements for designing and installing telecommunications components for access networks.

ICTSS00189 Digital Antenna System and Component Installation Skill Set

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Supersedes and is not equivalent to ICTSS00069 Domestic Digital Television Antenna Installation Skill Set.

Description

This skill set addresses the skills and knowledge required to install and maintain terrestrial antenna systems and components.

Pathways Information

This skill set provides credit towards ICT20219 Certificate II in Telecommunications Network Build and Operation, ICT30519 Certificate III in Telecommunications Technology, ICT41119 Certificate IV in Telecommunications Network Design, and other qualifications that allow for selection of these units.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTCBL303 Install and terminate coaxial cable

ICTDRE301 Install digital reception equipment

ICTRFN202 Install a terrestrial antenna

ICTRFN407 Conduct radio frequency measurements

ICTTEN202 Use hand and power tools

ICTWHS204 Follow work health and safety and environmental policy and procedures

Target Group

This skill set is for individuals who work in telecommunication roles, including digital receptionists, and other related roles, who are responsible for installing and maintaining terrestrial antenna systems and associated digital reception equipment.

Suggested words for Statement of Attainment

These units of competency from the ICT Information and Communications Technology Training Package meet competency requirements for installing and maintaining terrestrial antenna systems and their components.

ICTSS00190 Convergence Installation in Small to Medium Networks Skill Set

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Supersedes and is not equivalent to ICTSS00071 IP Convergence Installations for Home and SME Skill Set.

Description

This skill set addresses the skills and knowledge required to operate and install internet protocol (IP) convergence technologies in small-to-medium enterprises and home networks.

Pathways Information

This skill set provides credit towards ICT20319 Certificate II in Telecommunications Technology and other qualifications that allow for selection of these units.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTTEN203 Install and configure a home or small office network

ICTTEN204 Install and configure a small to medium business network

ICTTEN205 Build and maintain a secure network

ICTTEN206 Operate new media software packages

ICTTEN207 Install and test internet protocol devices in convergence networks

Target Group

This skill set is for individuals who work in telecommunication roles, including telecommunication network installers, and other related roles, who are responsible for operating and installing IP convergence technologies in small-to-medium enterprises and home networks.

Suggested words for Statement of Attainment

These units of competency from the ICT Information and Communications Technology Training Package meet competency requirements for installing, securing and maintaining telecommunication networks in small to medium enterprise and home networks.

ICTSS00191 Wireless LAN and IP Network Installation Skill Set

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Supersedes and is not equivalent to ICTSS00076 Wireless LAN and IP Network Installation Skill Set.

Description

This skill set addresses the skills and knowledge required to install secure wireless local access networks (LAN) and associated networking elements.

Pathways Information

This skill set provides credit towards ICT20319 Certificate II in Telecommunications Technology, ICT30419 Certificate III in Telecommunications Network Build and Operation, ICT41219 Certificate IV in Telecommunications Engineering Technology, and other qualifications that allow for selection of these units.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

ICTNWK421 Install, configure and test network security

ICTNWK432 Build an enterprise wireless network

ICTTEN312 Install telecommunications network equipment

ICTTEN417 Install, configure and test a router

ICTTEN434 Install, configure and test internet protocol networks

ICTWHS202 Work safely in a radio frequency electromagnetic radiation environment

Target Group

This skill set is for individuals who work in networking roles, including network designers, technicians, field officers, and other related roles, who are responsible for installing equipment including cable, optical fibre, radio, microwave, satellite telecommunications and associated networking components to configure and maintain wireless enterprise networks.

Suggested words for Statement of Attainment

These units of competency from the ICT Information and Communications Technology Training Package meet competency requirements for installing equipment including cable, optical fibre, radio, microwave, satellite telecommunications, and associated networking components to configure and maintain wireless enterprise networks.

ICTAI401 Identify opportunities to apply artificial intelligence, machine learning and deep learning

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created unit of competency to address in-demand skills needs.

Application

This unit describes the skills and knowledge required to identify opportunities where artificial intelligence (AI), machine learning (ML) and deep learning (DL) can be applied to support the automation of work tasks and improve organisational productivity.

The unit applies to individuals who may work across a wide range of information and communications technology (ICT) roles, including support technicians, system administrators, programmers and cloud systems administration support workers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Artificial intelligence

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Establish organisational AI, ML and DL objectives	1.1 Confirm work brief and tasks according to organisational policies and procedures 1.2 Confirm organisational goals for automating work tasks and improving productivity with required

ELEMENT	PERFORMANCE CRITERIA
	<p>personnel</p> <p>1.3 Identify existing organisational AI, ML and DL technologies and processes</p> <p>1.4 Research and confirm application procedures for AI, ML and DL technologies according to work brief</p>
2. Develop organisational recommendations for AI, ML and DL	<p>2.1 Document AI, ML and DL options according to organisational requirements</p> <p>2.2 Document advantages and disadvantages of AI, ML and DL technologies according to work brief</p> <p>2.3 Identify and document implementation risks for AI, ML and DL technologies in consultation with required personnel</p> <p>2.4 Explicitly reference selected AI, ML and DL technologies in required documentation</p>
3. Finalise recommendations	<p>3.1 Seek feedback from required supervisor on recommendations</p> <p>3.2 Record and implement feedback across recommendations where required</p> <p>3.3 Submit final recommendations to required personnel</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interprets information in a range of workplace procedures essential to identifying organisational automation opportunities
Writing	<ul style="list-style-type: none"> Completes required documentation using organisational formats
Oral communication	<ul style="list-style-type: none"> Discusses ideas with required supervisors using appropriate language and responds clearly to enquiries
Problem solving	<ul style="list-style-type: none"> Applies problem-solving processes to identify actions required to support resolution of organisational problems
Initiative and enterprise	<ul style="list-style-type: none"> Identifies and follows organisational protocols and procedures

Unit Mapping Information

No equivalent unit. Newly created unit.

<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=a53af4e4-b400-484e-b778-71c9e9d6aff2>

Assessment Requirements for ICTAI401 Identify opportunities to apply artificial intelligence, machine learning and deep learning

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created unit of competency to address in-demand skills needs.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- report on at least one opportunity for each of the following technologies that may be applied in a workplace or organisation:
 - artificial intelligence (AI) technologies
 - machine learning (ML) technologies
 - deep learning (DL) technologies.

In the course of the above, the candidate must:

- make comparisons between the AI, ML and DL technologies
- apply required organisational policies and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- functions and features of industry-recognised AI, ML and DL technologies used in organisations
- tasks and processes commonly automated in similar organisations, including:
 - creating and managing email campaigns
 - using chatbots and automated messaging platforms
 - analysing trends within datasets
 - hiring and recruitment

- employee help desk support services
- generating customer support logs and tickets
- key advantages and disadvantages of AI, ML and DL technologies
- key implementation risks for AI, ML and DL technologies
- organisational formats for documentation and reports
- organisational policies and procedures, and legislative requirements relating to work tasks.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- industry-recognised AI, ML and DL technologies that may be implemented
- opportunities for interaction with others
- work brief and organisational policies and procedures required to demonstrate the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTAI501 Automate work tasks using machine learning

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created unit of competency to address in-demand skills needs.

Application

This unit describes the skills and knowledge required to use machine learning (ML) principles and techniques to support the automation of procedural tasks and improve organisational productivity.

The unit applies to individuals who may work across a wide range of information and communications technology (ICT) roles, including support technicians, system administrators, programmers and cloud computing engineers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Artificial intelligence

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Organise required ML dataset	1.1 Confirm ML work brief and tasks according to organisational policies and procedures 1.2 Compare structured, unstructured, labelled and unlabelled machine training data according to work brief 1.3 Randomise, deduplicate and check machine training data for

ELEMENT	PERFORMANCE CRITERIA
	imbalances and biases 1.4 Analyse unbiased and biased dataset considerations according to work brief 1.5 Divide data into training subset and evaluation subset according to work brief
2. Review data algorithms	2.1 Confirm that data is correctly grouped as labelled or unlabelled 2.2 Analyse regression algorithms, decision trees or neural net algorithms for labelled data, where required 2.3 Analyse clustering, association, instance-based or neural network algorithms for unlabelled data, where required 2.4 Document analysis findings according to organisational policies and procedures 2.5 Select algorithm for dataset according to analysis findings
3. Create ML model	3.1 Confirm expected ML outputs with required personnel 3.2 Run variables through selected algorithm according to work brief 3.3 Compare expected and actual ML outputs 3.4 Adjust algorithm and re-run variables through selected algorithm according to work brief 3.5 Confirm that new algorithm outputs yield accurate output results 3.6 Compare expected and final outputs with required personnel
4. Use ML model for scoring	4.1 Configure ML model into existing systems according to organisational policies and procedures 4.2 Run organisational data through algorithm according to work brief 4.3 Secure and save ML model according to organisational policies and procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interprets meaning from a range of texts to assist in promoting work-related ML

Writing	<ul style="list-style-type: none">• Uses appropriate vocabulary, grammatical structure and conventions when developing documentation
Oral communication	<ul style="list-style-type: none">• Asks questions and actively listens to share and compare outputs with others• Explains information using structure and language appropriate to audience
Problem solving	<ul style="list-style-type: none">• Applies problem-solving processes to identify actions required to support organisational productivity

Unit Mapping Information

No equivalent unit. Newly created unit.

Assessment Requirements for ICTAIL501 Automate work tasks using machine learning

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created unit of competency to address in-demand skills needs.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop at least one machine learning (ML) model to automate organisational work task
- use an algorithm to produce variable outputs on at least two occasions.

In the course of the above, the candidate must:

- adapt ML principles and techniques to suit specific organisational problems
- apply required organisational policies and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- tasks and processes commonly automated in similar organisations, including:
 - creating and managing email campaigns
 - using chatbots and automated messaging platforms
 - analysing trends within datasets
 - hiring and recruitment
 - employee help desk support services
 - generating customer support logs and tickets
- common organisational processes and technologies where ML principles can be applied to improve productivity
- industry-recognised ML principles and techniques

- functions and features of machine training datasets in relation to automating work tasks
- characteristics and functions of structured, unstructured, labelled and unlabelled data
- characteristics of unbiased and biased datasets
- processes for generating randomised, deduplicated and unbiased data
- differences between training subsets and evaluation subsets
- key algorithms used to run labelled data, including:
 - regression algorithms
 - decision trees
 - instance-based algorithms
 - neural network algorithms
- key algorithms used to run unlabelled data, including:
 - clustering algorithms
 - association algorithms
 - neural network algorithms
- processes for operating and running variables through algorithms
- characteristics of semi-supervised, supervised, unsupervised and reinforcement learning
- basic functions and operations of common programming languages for algorithms
- characteristics of key logic in algorithms
- method to compare expected and actual ML outputs
- secure and safe practices to develop ML models in organisational contexts
- key methods to determine ML deployment requirements for end users, including:
 - cross-industry standard process for data mining (CRISP-DM) methodology
 - software development methodology
- organisational policies and procedures, legislative requirements and frameworks relating to work tasks, including:
 - behavioural science
 - data governance
 - ethics
 - human rights
 - Australia's Artificial Intelligence Ethics Framework.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- organisational processes and technologies where ML principles can be applied to improve productivity
- work brief, organisational policies and procedures, legislative requirements and frameworks required to demonstrate the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTAI502 Train and evaluate machine learning models

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created unit of competency to address in-demand skills needs.

Application

This unit describes the skills and knowledge required to train and evaluate the operations of machine learning (ML) models when processing previously unseen data.

The unit applies to individuals who may work across a wide range of information and communications technology (ICT) roles, including support technicians, system administrators, programmers and cloud computing engineers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Artificial intelligence

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Evaluate data requirements	1.1 Confirm work brief and tasks according to organisational policies and procedures 1.2 Analyse ML requirements according to cross-industry standard process for data mining (CRISP-DM) methodology, where required 1.3 Confirm input machine training data source according to

ELEMENT	PERFORMANCE CRITERIA
	<p>work brief</p> <p>1.4 Confirm that data attribute names contain target according to work brief</p> <p>1.5 Review data transformation instructions according to work brief</p> <p>1.6 Confirm that default and non-default training parameters control required learning algorithm according to work brief</p>
2. Arrange machine training datasets	<p>2.1 Set machine training data parameters according to work brief</p> <p>2.2 Select model size according to work brief</p> <p>2.3 Use selected parameter and feature engineering on required training data</p> <p>2.4 Finalise machine training data procedures according to work brief</p>
3. Arrange validation datasets	<p>3.1 Set validation data parameters according to work brief</p> <p>3.2 Select model size according to work brief</p> <p>3.3 Use selected parameter and feature engineering on required validation data</p> <p>3.4 Identify any functionality issues of parameters</p> <p>3.5 Refine ML parameters according to work brief</p>
4. Arrange test datasets	<p>4.1 Set test data parameters according to work brief</p> <p>4.2 Select model size according to work brief</p> <p>4.3 Use selected parameter and feature engineering on required test data</p> <p>4.4 Identify and rectify any functionality issues in test dataset</p> <p>4.5 Finalise test data procedures according to work brief</p>
5. Finalise ML evaluations	<p>5.1 Review target data outputs according to work brief</p> <p>5.2 Adjust model based on any discrepancies of outputs, where required</p> <p>5.3 Record predictive accuracy of ML model according to work brief</p> <p>5.4 Run variables through ML model and record outputs</p> <p>5.5 Compare outputs returned by ML model against target data outputs</p> <p>5.6 Document metrics and accuracy of ML data predictions according to organisational policies and procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Numeracy	<ul style="list-style-type: none">Extracts, interprets and comprehends statistical data in the context of training and evaluating ML modelsCalculates data inputs and outputs to interpret metric results and outputs and evaluate accuracy
Reading	<ul style="list-style-type: none">Interprets technical information presented in graphic, diagrammatic and visual formInterprets information from tables and charts
Writing	<ul style="list-style-type: none">Compiles documentation with input from a range of data sources and outputs
Problem solving	<ul style="list-style-type: none">Applies problem-solving processes to identify actions required to support resolution of organisational problems
Initiative and enterprise	<ul style="list-style-type: none">Identifies and follows organisational protocols and procedures

Unit Mapping Information

No equivalent unit. Newly created unit.

Assessment Requirements for ICTAI502 Train and evaluate machine learning models

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created unit of competency to address in-demand skills needs.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- train at least one machine learning (ML) model, where the work must include one of the following:
 - training using unsupervised ML techniques
 - training using supervised ML techniques
- evaluate the operations of at least one the above trained ML models, where the evaluation must include one of the following:
 - unsupervised ML techniques
 - supervised ML techniques.

In the course of the above, the candidate must:

- produce documentation of all performed work tasks in required organisational formats
- apply required organisational policies and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- key features and functions of supervised and unsupervised ML techniques
- key features and functions of ML, including:
 - data sources
 - training, validation and test data

- attribute names
- target data
- default and non-default parameters
- feature engineering
- learning algorithms
- model sizes
- metrics
- procedures for training, testing and validating data parameters
- key methods to determine ML deployment requirements for end users, including:
 - cross-industry standard process for data mining (CRISP-DM) methodology
 - software development methodology
- method to determine predictive accuracy of ML models using target data
- method to compare predictions returned by ML models against known target values
- key features and functions of industry-recognised ML models that may be trained and evaluated
- organisational formats used for documenting ML model evaluations
- organisational policies and procedures, and legislative requirements relating to work tasks.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- industry-recognised ML models that may be trained and evaluated
- software in which ML models can be trained, validated, tested and evaluated
- work brief and organisational policies and procedures required to demonstrate the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTAH503 Build natural language processing models and pipelines

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created unit of competency to address in-demand skills needs.

Application

This unit describes the skills and knowledge required to develop and apply routine natural language processing (NLP) pipelines to support the configuration of organisational computers to decode, interpret and manipulate human speech and text.

The unit applies to individuals who work across a wide range of information and communications technology (ICT) roles, including support technicians, system administrators, programmers and cloud computing engineers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Artificial intelligence

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to create NLP process	1.1 Confirm work brief and tasks according to organisational policies and procedures 1.2 Establish requirements for morphological, lexical, syntactic and semantic analysis, disclosure integration and pragmatic analysis

ELEMENT	PERFORMANCE CRITERIA
	1.3 Obtain human language data sources according to work brief
2. Extract, model and predict language tokens	2.1 Identify fields and blocks of language content 2.2 Source tokenizer according to organisational policies and procedures 2.3 Identify and mark sentence, phrase and paragraph boundaries 2.4 Normalise and tag acronyms in document according to work brief 2.5 Predict parts of speech for each generated token
3. Process texts and pipeline tokens	3.1 Lemmatise text in required document according to work brief 3.2 Identify and filter out stop words in document 3.3 Assign grammatical components with dependency parsing tags 3.4 Define relationships between parent words and other words in required document 3.5 Identify noun phrases according to work brief 3.6 Conduct named entity recognition (NER) and label nouns with real-world concepts 3.7 Create pipeline and run each token through NER tagging model 3.8 Run coreference algorithm on each token
4. Finalise NLP pipeline and required documentation	4.1 Review and apply security classifications and required security level in consultation with required personnel 4.2 Secure and save NLP pipeline according to organisational policies and procedures 4.3 Seek and implement feedback on processes from required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Numeracy	<ul style="list-style-type: none"> Extracts, interprets and comprehends statistical data in the context of developing NLP pipelines Calculates data inputs and outputs to interpret metric results

Skill	Description
	and outputs and evaluate accuracy
Reading	<ul style="list-style-type: none">Interprets technical information presented in graphic, diagrammatic and visual form
Writing	<ul style="list-style-type: none">Compiles reports with input from a range of sources
Problem solving	<ul style="list-style-type: none">Applies problem-solving processes to identify actions required to support resolution of organisational problems
Initiative and enterprise	<ul style="list-style-type: none">Identifies and follows organisational protocols and procedures

Unit Mapping Information

No equivalent unit. Newly created unit.

Assessment Requirements for ICTAIL503 Build natural language processing models and pipelines

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created unit of competency to address in-demand skills needs.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- build at least two natural language processing (NLP) models and pipelines.

In the course of the above, the candidate must:

- produce documentation for all performed work tasks in required organisational formats
- apply required organisational policies and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- requirements and techniques for analysing NLP models and pipelines, including:
 - natural language understanding (NLU)
 - natural language generation (NLG)
- key functions and features of components used to build NLP models and pipelines, including:
 - tagging
 - data sources
 - tokenizers
 - boundaries
 - language fields and blocks
 - acronyms

- speech prediction
- parameters
- common types of morphological, lexical, syntactic and semantic analysis, disclosure integration and pragmatic analysis
- key techniques and features of text processing, including:
 - filtering stop words
 - lemmatising texts
- procedures for securing and saving NLP pipelines
- industry-recognised software and resources required to build NLP pipelines
- organisational formats for documentation and reports
- organisational policies and procedures, and legislative requirements relating to work tasks.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- software and resources required to build NLP pipelines
- opportunities for interaction with others
- work brief and organisational policies and procedures required to demonstrate the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTAUT401 Design business process automation solutions

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created unit of competency to address in-demand skills needs.

Application

This unit describes the skills and knowledge required to design scalable, business process automation (BPA) solutions to enhance organisational efficiency. It includes designing and recommending workflow automation solutions to create, improve, and integrate business processes across multiple departments.

The unit applies to individuals working in information and communications technology (ICT) roles who contribute to design activities required for automating processes across a range of workplace departments.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Automation

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to design BPA solutions	1.1 Confirm work brief and tasks according to organisational policies and procedures 1.2 Identify opportunities where processes and organisational areas can be automated, in consultation with required personnel 1.3 Evaluate existing organisational workflows and determine

ELEMENT	PERFORMANCE CRITERIA
	<p>suitability for BPA according to work brief</p> <p>1.4 Research BPA advantages and disadvantages</p> <p>1.5 Select organisational process-mapping software according to work brief</p> <p>1.6 Create process map of tasks and events according to work brief</p>
2. Plan and prepare BPA components	<p>2.1 Review business objectives for workflow automation in consultation with required personnel</p> <p>2.2 Confirm business expectations for workflow automation in consultation with required personnel</p> <p>2.3 Document workflow automation plan according to work brief</p> <p>2.4 Develop timeline according to work brief</p> <p>2.5 Confirm that timeline aligns with business priorities, resource availability, and process map</p>
3. Research and develop BPA strategies	<p>3.1 Research automated workflow system configuration procedures and automation impacts on key personnel</p> <p>3.2 Identify integration points for workflow automation systems and legacy systems</p> <p>3.3 Research BPA configuration tools for workflow automation according to organisational policies and procedures</p> <p>3.4 Select workflow automation systems according to findings</p> <p>3.5 Report on selected workflow automation system according to organisational policies and procedures</p> <p>3.6 Confirm that BPA stages, strategies, systems and organisational impacts are documented in required format</p>
4. Make BPA recommendations	<p>4.1 Compile required documentation to guide BPA recommendations</p> <p>4.2 Confirm that BPA recommendations include sound rationale on how the solution will create, improve, and integrate business processes</p> <p>4.3 Present recommended BPA solution and seek feedback from required personnel</p> <p>4.4 Review and implement feedback from required personnel</p> <p>4.5 Gain final approval from required personnel</p> <p>4.6 Develop implementation guide for recommended BPA solution and finalise required documentation</p> <p>4.7 Submit required documentation</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Oral communication	<ul style="list-style-type: none">• Uses developed listening, observational and questioning skills to understand stakeholder perspectives and clarify requirements
Reading	<ul style="list-style-type: none">• Interprets documentation, guidelines and specifications to determine and confirm requirements
Writing	<ul style="list-style-type: none">• Prepares workplace documentation in correct format according to organisational requirements
Problem solving	<ul style="list-style-type: none">• Initiates standard procedures when responding to problems in the immediate context
Technology	<ul style="list-style-type: none">• Considers the strategic and operational potential of current and emerging digital trends• Implements measures to monitor and control access to digitally stored and transmitted information

Unit Mapping Information

No equivalent unit. Newly created unit.

Assessment Requirements for ICTAUT401 Design business process automation solutions

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created unit of competency to address in-demand skills needs.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- select and recommend at least one business process automation (BPA) solution to enhance organisational efficiency, where the work must include one of the following for each solution:
 - workflow automation plan
 - BPA strategy
 - BPA implementation guide.

In the course of the above, the candidate must:

- distinguish between different BPA solutions, components and strategies
- apply required organisational policies and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- types and features of BPA solutions, including:
 - BPA components
 - BPA strategies
 - BPA systems
- advantages and disadvantages of BPA
- integration points for workflow automation systems and legacy systems

- functions and features of workflow automation software tools, including:
 - data connections
 - events
 - executes
 - inputs and outputs
 - formats
- workflow automation design considerations, including:
 - commission sign-off
 - process mapping
 - service quote approvals
 - review procedures
 - leave request approvals
- common types of documents that may be automated in different workplace departments
- key organisational areas that are commonly automated, including:
 - inventory management
 - billing and credit services
 - courier services
 - human resources
 - internal operations
 - customer relationship management (CRM) services
- types of web service integrations, including:
 - enterprise resource planning (ERP) systems
 - ecommerce platforms
 - CRM systems maps
- organisational formats for documentation and reports
- organisational policies and procedures, and legislative requirements relating to work tasks.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- BPA software, tools, and information
- opportunities for interaction with others
- work brief and organisational policies and procedures required to demonstrate the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTAUT402 Apply robotic desktop automation

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created unit of competency to address in-demand skills needs.

Application

This unit describes the skills and knowledge required to automate single server processes, activities, transactions and tasks through hybrid robotic processing and human intervention strategies. It includes reviewing automation parameters to configure robotic desktop automation (RDA) in organisations.

The unit applies to individuals working in information and communications technology (ICT) roles who may contribute to configuration activities required for workplace automation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Automation

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for RDA	1.1 Confirm work brief and tasks according to organisational policies and procedures 1.2 Identify required single server procedural processes and roles according to work brief 1.3 Document required hybrid automation tasks according to work brief 1.4 Select and obtain required RDA software in consultation

ELEMENT	PERFORMANCE CRITERIA
	with technical personnel 1.5 Select and source required service deployment components
2. Review automation parameters	2.1 Analyse legacy systems and compatibility matrix 2.2 Configure single server authentication requirements according to analysis 2.3 Create operator account and apply prerequisites according to work brief 2.4 Review and update required employee and RDA software integration strategy components with required personnel according to work brief 2.5 Confirm that integration strategy aligns with employee needs 2.6 Seek and implement feedback from required personnel
3. Configure RDA	3.1 Confirm work brief hardware and software requirements 3.2 Program defined set of tasks on RDA software 3.3 Deploy single server RDA software on single machine 3.4 Confirm single user access according to organisational policies and procedures 3.5 Run required command line arguments
4. Finalise RDA	4.1 Test RDA software functionality and rectify any faults 4.2 Seek and implement feedback from required personnel 4.3 Document changes and actions completed 4.4 Gain final approval from required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Oral communication	<ul style="list-style-type: none"> Uses developed listening, observational and questioning skills to understand others' perspectives and clarify requirements
Reading	<ul style="list-style-type: none"> Interprets documentation, guidelines and specifications to determine and confirm requirements
Writing	<ul style="list-style-type: none"> Prepares workplace documentation that incorporates an evaluation of work tasks in a format appropriate to organisational requirements
Planning and	<ul style="list-style-type: none"> Plans tasks and strategies in detail, regularly reviewing

Skill	Description
organising	priorities and performance during RDA development and implementation
Problem solving	<ul style="list-style-type: none">• Determines a range of solutions when responding to sometimes complex problems
Technology	<ul style="list-style-type: none">• Considers the strategic and operational potential of current and emerging digital trends• Implements measures to monitor and control access to digitally stored and transmitted information

Unit Mapping Information

No equivalent unit. Newly created unit.

Assessment Requirements for ICTAUT402 Apply robotic desktop automation

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created unit of competency to address in-demand skills needs.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- deploy at least two robotic desktop automation (RDA) software programs for a single server.

In the course of the above, the candidate must:

- distinguish between different types of RDA software in work environments
- apply required organisational policies and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- key functions and features of RDA software and systems
- key types, operations and processes of robotic automation and components
- key considerations when implementing RDA into daily activities, operations and processes
- types of installation methods and components, including:
 - server configuration
 - cloud instance
 - virtual machine
 - compatibility matrices
- industry-recognised methods for configuring single server authentication
- types of web service integrations, including:

- enterprise resource planning (ERP) systems
- ecommerce platforms
- customer relationship management (CRM) systems
- organisational areas and tasks applicable for hybrid RDA, including:
 - billing, accounting and credit services
 - reporting and file transformation
 - customer service
 - call centres
 - courier services
 - human resources
 - internal operations
- organisational formats for documentation and reports
- organisational policies and procedures, and legislative requirements relating to work tasks.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- procedural processes where RDA may be implemented
- required automation and deployment components, equipment and tools
- opportunities for interaction with others
- work brief and organisational policies and procedures required to demonstrate the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTAUT403 Conduct software quality assurance testing

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created unit of competency to address in-demand skills needs.

Application

This unit describes the skills and knowledge required to create software quality assurance (SQA) test plans and to troubleshoot organisational software as part of the software development lifecycle. It includes troubleshooting software development methods, processes, technologies and tools.

The unit applies to individuals working in information and communications technology (ICT) roles, such as SQA testers and assistants to software engineers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Automation

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for SQA testing	1.1 Confirm work brief and tasks according to organisational policies and procedures 1.2 Obtain and analyse software lifecycle documentation in the context of organisational requirements 1.3 Create software test script according to vendor specifications and work brief 1.4 Create software test case according to vendor specifications

ELEMENT	PERFORMANCE CRITERIA
	and work brief 1.5 Seek approval on test script and case from authorising personnel
2. Develop test environments	2.1 Execute test script and test case, and document results in required format 2.2 Research and report on automatic SQA testing 2.3 Analyse organisational hardware, software and operating system 2.4 Select and source continuous integration tools 2.5 Configure test environment according to analysis
3. Conduct SQA testing	3.1 Create software issues register according to organisational policies and procedures 3.2 Create SQA test plan according to analysis 3.3 Troubleshoot software according to test plan 3.4 Document any issues in register 3.5 Consult with software developers, and identify and record potential solutions 3.6 Confirm that test results and proposed solutions are documented in required location and format
4. Finalise SQA testing	4.1 File and store SQA test results in required location 4.2 Present SQA test plan and seek feedback from required personnel 4.3 Implement feedback and document changes, where required

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none">Interprets a range of technical specifications and other information and determines solutions according to requirements
Writing	<ul style="list-style-type: none">Creates files, scripts and plans using software and applicable technical language
Initiative and enterprise	<ul style="list-style-type: none">Identifies concepts, principles and features of approaches in other contexts and redesigns them according to situation
Planning and	<ul style="list-style-type: none">Uses systematic processes for goal setting and information gathering and evaluates options against agreed criteria

Skill	Description
organising	
Problem solving	<ul style="list-style-type: none">• Contributes to continuous improvement of digital processes by applying basic principles of analytical thinking
Self-management	<ul style="list-style-type: none">• Makes some critical and non-critical decisions to develop and test, functional processes and procedures according to requirements
Technology	<ul style="list-style-type: none">• Identifies and confirms purposes, specific functions and key features of common digital systems and tools• Applies principles, concepts, language and practices applicable to digital world

Unit Mapping Information

No equivalent unit. Newly created unit.

Assessment Requirements for ICTAUT403 Conduct software quality assurance testing

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created unit of competency to address in-demand skills needs.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- create at least two software quality assurance (SQA) test plans
- troubleshoot at least one type of organisational software using created SQA test plan.

In the course of the above, the candidate must:

- update and adhere to SQA test plans
- apply required organisational policies and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry-recognised automatic and manual SQA processes
- key functions and features of software development lifecycles and documentation, including:
 - test cases
 - test scripts
- functions and features of test environments
- types of continuous integration tools
- troubleshooting procedures required when conducting SQA testing
- functions and features of SQA test plans
- key stages of SQA testing procedures, including:

- unit testing
- integration testing
- function testing
- system testing
- acceptance testing
- installation testing
- functions and features of software issue registers
- organisational formats for documentation and reports
- organisational policies and procedures, and legislative requirements relating to work tasks.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- software, tools and equipment to enable SQA to be conducted
- opportunities for interaction with others
- work brief and organisational policies and procedures required to demonstrate the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTAUT501 Manage robotic process automation

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created unit of competency to address in-demand skills need

Application

This unit describes the skills and knowledge required to manage the autonomous transformation of preconfigured organisational processes, activities, transactions, tasks and areas by limiting human intervention through the implementation of robotic process automation (RPA).

The unit applies to individuals who may independently be working in roles such as digital migration engineers, design transformation technicians and automation engineers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Automation

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan for RPA	1.1 Confirm work brief and tasks according to organisational policies and procedures 1.2 Identify and document procedural tasks, processes and organisational areas that may require RPA 1.3 Identify web service integrations according to work brief

ELEMENT	PERFORMANCE CRITERIA
	1.4 Select RPA method and plan stages according to work brief 1.5 Select and source software deployment components according to organisational policies and procedures 1.6 Confirm software deployment component serviceability
2. Automate organisational systems	2.1 Analyse legacy systems and support matrix 2.2 Configure authentication requirements according to analysis 2.3 Create operator account and apply prerequisites 2.4 Authenticate user access and permissions 2.5 Install RPA software in operational applications according to organisational policies and procedures
3. Implement RPA into ways of working	3.1 Deploy RPA software according to work brief 3.2 Program defined set of tasks on RPA software 3.3 Test RPA software according to organisational policies and procedures 3.4 Rectify any RPA software functionality issues
4. Finalise RPA	4.1 Seek feedback on RPA implementation from required personnel 4.2 Implement and document feedback from required personnel 4.3 Gain final approval from required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Oral communication	<ul style="list-style-type: none"> Uses highly developed listening, observational and questioning skills to understand others' perspectives and clarify requirements
Reading	<ul style="list-style-type: none"> Interprets specialised documentation, guidelines and specifications to determine and confirm requirements
Writing	<ul style="list-style-type: none"> Prepares workplace documentation in a format appropriate to organisational requirements
Initiative and enterprise	<ul style="list-style-type: none"> Follows established protocols in changing contexts
Planning and organising	<ul style="list-style-type: none"> Plans work stages in detail, regularly reviewing priorities and performance during implementation

Skill	Description
Problem solving	<ul style="list-style-type: none">• Uses analytical thinking to investigate complex issues and determine appropriate solutions
Technology	<ul style="list-style-type: none">• Investigates the strategic and operational potential of digital trends to achieve work goals, enhance work processes, create opportunities and enhance or reduce risks• Troubleshoots technology for functionality and serviceability

Assessment Requirements for ICTAUT501 Manage robotic process automation

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created unit of competency to address in-demand skills need

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- implement at least one robotic process automation (RPA) software into at least one organisation or work area
- confirm RPA software functionality for at least two different organisational processes.

In the course of the above, the candidate must:

- select reliable sources of information to identify automation opportunities
- apply required organisational policies and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- functions and features of RPA software, systems and components
- considerations when applying automation of cross-department applications, including:
 - server configuration
 - cloud instance
 - virtual machines
 - compatibility matrix
- functions and features of authentication and prerequisites
- key types of web service integrations, including:
 - enterprise resource planning (ERP) systems

- ecommerce platforms
- customer relationship management (CRM) systems
- types of processes, activities and transactions that can be automated with RPA
- key industrial manufacturing tasks applicable for RPA, including:
 - machine tool tending
 - material handling and removal
 - welding and gas metal arc welding
 - assembly
- key organisational areas applicable for RPA, including:
 - inventory management
 - back office operations
 - CRM services
 - claim and invoice processing
- organisational policies and procedures and legislative requirements relating to work tasks.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required RPA hardware, software, deployment components, equipment and tools as outlined in work brief
- opportunities for interaction with others
- work brief and organisational policies and procedures required to demonstrate the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTAUT502 Evaluate automated industrial manufacturing processes

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created unit of competency to address in-demand skills needs.

Application

This unit describes the skills and knowledge required to analyse automated industrial manufacturing processes to solve operational problems and increase industrial efficiency. It includes identifying automated industrial manufacturing processes, reviewing organisational specifications and delivering recommended solutions to improve procedural processes.

The unit applies to individuals who may work as automation technicians supporting the automation of industrial manufacturing processes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Automation

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify automated industrial manufacturing process solutions	1.1 Confirm work brief and tasks according to organisational policies and procedures 1.2 Analyse existing industrial manufacturing processes potentially suitable for automation according to work brief

ELEMENT	PERFORMANCE CRITERIA
	1.3 Document manufacturing processes suitable for automation according to analysis 1.4 Research automated industrial manufacturing processes according to work brief 1.5 Identify and document industrial automation considerations
2. Review organisational specifications	2.1 Evaluate organisational scalability requirements according to work brief 2.2 Research requirements for organisational process volume and variety 2.3 Evaluate organisational facility layout according to work brief 2.4 Analyse and document findings in required format
3. Develop organisational recommendations	3.1 Select automated industrial manufacturing process solution according to documented research findings 3.2 Analyse potential implementation risks according to work brief 3.3 Assess potential solutions to identified risks 3.4 Document implementation recommendations according to work brief 3.5 Confirm that recommendations report contains rationale, research findings and risk analyses
4. Deliver organisational recommendations	4.1 Present recommendations to required personnel 4.2 Seek feedback from required personnel 4.3 Apply feedback and implement required changes 4.4 Obtain approval on recommendations from required personnel 4.5 Distribute approved recommendations to required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Oral communication	<ul style="list-style-type: none">Presents recommendations and issues according to organisational requirements and uses required conventions, protocols, and language appropriate to audience

Skill	Description
Reading	<ul style="list-style-type: none">Interprets a range of technical information and determines solutions according to organisational requirements
Writing	<ul style="list-style-type: none">Documents recommendations using industry-specific and technical language
Problem solving	<ul style="list-style-type: none">Applies principles of analytical thinking to identify organisational issues and select appropriate solutions
Self-management	<ul style="list-style-type: none">Makes some critical and non-critical decisions to develop recommendations
Technology	<ul style="list-style-type: none">Identifies and confirms purposes, specific functions and key features of common digital systems and toolsApplies principles, concepts, language and practices applicable to automated industrial manufacturing processes

Unit Mapping Information

No equivalent unit. Newly created unit.

Links

Companion Volume Implementation Guide is found on VETNet - -

Assessment Requirements for ICTAUT502 Evaluate automated industrial manufacturing processes

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created unit of competency to address in-demand skills needs.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- recommend at least two automated industrial manufacturing process solutions to streamline two different organisational processes.

In the course of the above, the candidate must:

- document research findings and recommendations in required styles, formats and layouts
- select reliable sources of information to synthesise information and suggest recommendations
- apply required organisational policies and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- functions and features of industry-recognised automated and procedural industrial manufacturing processes
- functions and features of automation tools and techniques in industrial manufacturing processes
- advantages and disadvantages of automated industrial manufacturing process solutions
- key types and characteristics of automated industrial manufacturing processes, including:
 - process scalability
 - process volume and variety
 - organisational facility layouts

- key implementation considerations required when automating manufacturing processes
- functions and features of risk analyses
- methodologies used to identify and mitigate risks when automating manufacturing processes
- features of documentation and recommendation reports
- organisational policies and procedures, and legislative requirements relating to work tasks.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required industrial manufacturing processes and automated solutions as outlined in work brief
- opportunities for interaction with others
- work brief and organisational policies and procedures required to demonstrate the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTBWN306 Use radio frequency measuring instruments

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Application

This unit describes the skills and knowledge required to set up and use radio frequency (RF) communications instruments to perform installations, upgrades and fault-finding on RF equipment and networks.

It applies to telecommunications lines workers who **only** use RF measuring instruments.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Broadband and Wireless Networks

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1 Prepare to use RF measuring instruments	1.1 Obtain approval for site access with customer or site owner prior to site entry 1.2 Identify purpose of test and type of RF measurement required 1.3 Select industry standard/approved tools and instruments according to required measurement 1.4 Check test instruments to ensure calibration is within acceptable time frames 1.5 Identify safety hazards, assess risks and implement risk control measures in consultation with appropriate personnel
2 Conduct RF	2.1 Set-up test equipment according to manufacturer instructions, industry

Elements	Performance Criteria
measurements	standards and safe industry practices 2.2 Use appropriate testing techniques to assess overall system performance 2.3 Record and interpret test results, and compare with standard test specifications
3 Complete RF measurement process	3.1 Make recommendations, based on test result interpretations, to achieve optimum performance 3.2 Notify customer of work completion 3.3 Clean work area and make safe according to enterprise procedures

Foundation Skills

Skill	Description
Reading	<ul style="list-style-type: none"> Reads and interprets plans, specifications instructions and other documentation from a variety of sources and consolidates information to determine requirements Interprets and consolidates test results and data from a range of sources, against defined requirements
Writing	<ul style="list-style-type: none"> Accurately records and completes enterprise documents and correspondence using clear language and correct spelling, grammar and terminology
Oral Communication	<ul style="list-style-type: none"> Participates in verbal exchanges with key personnel using appropriate, clear and detailed language to exchange information, ideas or solutions Uses listening and questioning skills to confirm understanding of requirements
Numeracy	<ul style="list-style-type: none"> Performs mathematical calculations to check, interpret and confirm results of system tests
Navigate the world of work	<ul style="list-style-type: none"> Complies with explicit policies and procedures Explores and implements where identified the implicit expectations of policies and procedures
Interact with others	<ul style="list-style-type: none"> Uses a range of accepted practices for communicating in a work environment Complies with work instructions and contributes effectively to work group discussions
Get the work done	<ul style="list-style-type: none"> Plans and implements routine tasks and workload, making limited decisions on sequencing, timing and collaboration, and seeks assistance in setting priorities

	<ul style="list-style-type: none">• Makes low-impact decisions within familiar situations, based on a range of predefined or routine solutions, and evaluates the effectiveness of the outcome• Uses the main features and functions of digital tools to complete work tasks and access information
--	--

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. It is restricted to essential operating conditions and any other variables essential to the work environment.

Type of RF measurement must include:	<ul style="list-style-type: none">• determining relative RF power level (in dB)• determining relative RF voltage (in dBmV).
Instruments must include:	<ul style="list-style-type: none">• RF signal level meter with and without tone generator• RF leakage detector.

Unit Mapping Information

No equivalent unit. New unit.

Assessment Requirements for ICTBWN306 Use radio frequency measuring instruments

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- comply with site-specific safety requirements and enterprise work health and safety (WHS) processes and procedures
- comply with all job requirements and WHS regulations, standards and work practices
- check and confirm calibration within appropriate dates of tools and instruments
- operate the following equipment:
 - radio frequency (RF) signal level meter (SLM)
 - RF leakage meter
- perform the following RF measurements:
 - determine relative RF power level (in dB)
 - determine relative RF voltage (in dBmV)
 - determine RF signal quality (MER and BER).

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- instruments used in measuring RF frequencies including:
 - RF signal level meter with and without tone generator
 - RF leakage detector
- types of RF measurements and their respective interpretation for RF frequencies including:
 - determining relative RF power level (in dB)

- determining relative RF voltage (in dBmV)
- consequences of poorly terminated RF connections
- data recording using the unit decibels (in dBmV)
- variations between RF connector adaptor types
- potential WHS hazards, risks and control measures when working with RF frequency measuring equipment
- RF industry spectrum and limits, and allocations.

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- site/s where measuring instruments can be used
- plant, tools and equipment currently used in industry
- relevant regulatory and equipment documentation that impacts on work activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for ICTBWN307 Use optical measuring instruments

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- comply with all job requirements and work health and safety (WHS) regulations, standards and work practices
- confirm calibration within appropriate dates of instruments
- operate the following equipment:
 - hand-held optical power meter
 - hand-held optical source
 - handheld optical fibre identifier (OFI-FTTx)
 - active optical network termination (ONT) detector
 - optical loss test set (OLTS)
 - passive optical network (PON) meter
- perform the following optical measurements:
 - detect the presence of an active ONT
 - determine absolute optical power (in dBm)
 - determine insertion loss (in dB)
 - determine relative optical power level (in dB).

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- site-specific safety requirements and enterprise WHS processes and procedures
- instruments used in measuring optical power levels including:

- hand-held optical power meter
- hand-held optical source
- handheld OFI-FTTx
- active ONT detector
- OLTS
- PON meter
- types of measurements and their respective interpretation for optical wavelengths
- consequences of mating contaminated optical connectors
- data recording using unit decibels (dBm)
- variations between optical connector adaptor types
- optical spectrum limits and allocations
- safe handling procedures with optical fibres.

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- site/s where measuring instruments can be used
- plant, tools and equipment currently used in industry
- relevant regulatory and equipment documentation that impacts on work activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTBWN308 Work safely on live optical fibre installations

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Release 5.0.

Application

This unit describes the skills and knowledge required to work safely on a live optical fibre installation to test and commission a wavelength division multiplexing (WDM) system and to connect a splitter for fibre to the x (FTTx) deployment.

It applies to fibre technicians who engage in safe work practices as members of a team using emerging technologies to deliver very high-speed broadband capacity through the access network for the national broadband network (NBN) initiative.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

ICTBWN307 Use optical measuring instruments

ICTWHS204 Follow work health and safety and environmental policy and procedures

Unit Sector

Telecommunications – Broadband and Wireless Networks

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Set up and prepare to work with live fibre	1.1 Scope work by obtaining project plan from appropriate personnel, and arrange for site access to comply with security arrangements 1.2 Identify hazards, assess work health and safety (WHS) risks, and

Elements	Performance Criteria
	<p>implement control measures according to workplace procedures</p> <p>1.3 Notify appropriate personnel of identified worksite safety hazards</p> <p>1.4 Determine FTTx equipment, components of optical distribution network (ODN) and WDM components, from project plan, for testing and commissioning</p> <p>1.5 Obtain required tools, safety equipment and materials to perform tasks safely and efficiently</p> <p>1.6 Select and use required personal protective equipment, and make site safe and secure for commissioning work</p>
2. Connect splitter input fibre to feeder cable	<p>2.1 Identify and avoid disconnection of other services</p> <p>2.2 Monitor implementation of control measures and revise as necessary</p> <p>2.3 Locate feeder fibre port to be connected</p> <p>2.4 Ensure power is turned off at source</p> <p>2.5 Connect connectorised splitter input fibres according to manufacturer specifications</p> <p>2.6 Arrange for power to be turned back on to newly connected feeder port</p>
3. Perform live WDM commission testing of ODN installation used in FTTx network	<p>3.1 Locate appropriate test points in ODN from manufacturer instructions for WDM testing</p> <p>3.2 Test live wavelengths for WDM tests according to safety precautions</p> <p>3.3 Test optical signal strengths for operating wavelengths incoming into optical network termination (ONT) and determine if signal strengths are within range of acceptable power levels</p> <p>3.4 Test losses between WDM outputs and individual line multiplexers (LM) for each wavelength, and determine if within maximum and minimum power losses</p> <p>3.5 Conduct all manufacturer specified acceptance tests</p> <p>3.6 Record and tabulate all test results for commissioning requirements</p>
4. Complete installation process	<p>4.1 Seal and secure any enclosures and cabinets</p> <p>4.2 Remove waste and debris from worksite and dispose of according to environmental requirements</p> <p>4.3 Notify appropriate personnel of job completion and obtain sign-off</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance, but not explicit in the performance criteria.

Skill	Description
Oral Communication	<ul style="list-style-type: none"> Participates in verbal exchanges with key personnel using appropriate, clear and detailed language to exchange information, ideas or solutions
Numeracy	<ul style="list-style-type: none"> Performs mathematical calculations to check, interpret and confirm results of system tests
Navigate the world of work	<ul style="list-style-type: none"> Complies with explicit policies and procedures
Interact with others	<ul style="list-style-type: none"> Complies with work instructions and contributes to work group discussions using accepted conventions Supervises other cablers in training
Get the work done	<ul style="list-style-type: none"> Plans and implements routine tasks and workload, making limited decisions on sequencing, timing and collaboration, and seeks assistance in setting priorities Uses the main features and functions of digital tools to complete work tasks and access information

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. It is restricted to essential operating conditions and any other variables essential to the work environment.

Operating wavelengths must include:	<ul style="list-style-type: none"> 1310 nm 1490 nm 1550 nm.
Range of acceptable power levels must include:	<ul style="list-style-type: none"> -20 to +2 dBm @ 1310 nm -26 to -6 dBm @ 1490 nm -11.5 to +5 dBm @ 1550 nm.
Maximum and minimum power losses must include:	<ul style="list-style-type: none"> 23.3 dB to 15.0 dB @ 1310 nm 21.6 dB to 8.0 dB @ 1490 nm 20.9 dB to 9.5 dB @ 1550 nm.
Acceptance tests must include:	<ul style="list-style-type: none"> delay dispersion

	<ul style="list-style-type: none">• optical attenuation and loss measurements• optical power levels• phase.
--	---

Unit Mapping Information

No equivalent unit. Supersedes and is not equivalent to ICTBWN304 Work safely with live fibre to test the x installation.

Links

Companion Volume Implementation Guides are available from VETNet -

Assessment Requirements for ICTBN308 Work safely on live optical fibre installations

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Release 5.0.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria and foundations skills, and to:

- comply with all job requirements and work health and safety (WHS) regulations, standards and work practices, and environmental requirements
- use optical power test equipment
- evaluate test results
- safely connect input and output optical fibres to the splitter
- conduct live tests measuring optical signals at three wavelength division multiplexing (WDM) wavelengths on optical devices
- conduct acceptance tests for commissioning that cover:
 - delay
 - dispersion
 - optical attenuation and loss measurements
 - optical power levels
 - phase
- complete connection recording.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- legislation, regulations, codes and standards for compliance that impact on work activities
- relevant organisational policies and procedures
- personal safety issues

- propagation of light in optical communication systems
- role of transmitters and receivers in optical communication systems
- critical aspects of site engineering
- specific WHS risks and controls relating to the handling of optical fibre and the use of laser light sources
- WDM applications.

Assessment Conditions

This unit of competency falls into the definition of high risk work and should be delivered and assessed in accordance with the national standard.

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- a WDM system and relevant optical splitter
- tools, equipment and personal protective equipment currently used in industry
- relevant regulatory and equipment documentation that impacts on work activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. Refer also to the *Requirements for assessors* of high risk units in the ICT Information and Communications Technology Training Package Companion Volume Implementation Guide.

ICTBWN309 Perform tests on optical communication system and components

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Application

This unit describes the skills and knowledge required to test optical communication systems and components in the field using portable test instruments.

It applies to installation contractors, technical staff and field officers from telecommunications service providers or other private and public organisations or regulatory authorities.

These workers combine technical skills with organisational and administrative skills when working on broadband passive optical networks (PON), fibre to the x (FTTx) networks, hybrid fibre coaxial (HFC) networks and dense wavelength division multiplexing (DWDM) systems during installation, maintenance, commissioning and troubleshooting phases.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Broadband and Wireless Networks

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to use optical measuring instruments	1.1 Notify client about site access, security arrangements and location details for optical system and test purpose 1.2 Identify site hazards and notify appropriate personnel to make site safe according to enterprise requirements 1.3 Devise and implement risk control and safety measures when using

	<p>high power laser test instruments and optical time-domain reflectometer (OTDR) associated with launch fibres, patch cords or enclosure adaptors</p> <p>1.4 Prepare testing plan in consultation with client, indicating type of measurement at nominated wavelength, based on equipment specifications</p> <p>1.5 Select appropriate tools and test instruments according to required measurement and enterprise practice</p>
2. Conduct optical measurements	<p>2.1 Set up test instrument according to manufacturer instructions, work health and safety (WHS) and environmental requirements</p> <p>2.2 Test patch cords and/or launch/receive fibres are functional</p> <p>2.3 Inspect and clean optical connectors</p> <p>2.4 Use appropriate testing techniques to assess performance of optical system or component</p> <p>2.5 Record test results and compare with standard test specifications according to manufacturer and enterprise guidelines</p> <p>2.6 Evaluate test results and report on functionality of optical component or equipment, and performance of optical system</p>
3. Complete optical measurement process	<p>3.1 Make recommendations, based on test result interpretations, about optimising component and system performance</p> <p>3.2 Clean work site and make safe according to enterprise requirements and customer satisfaction</p> <p>3.3 Notify appropriate personnel of job completion for sign off and present test documentation, according to enterprise requirements</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance, but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none">Interprets information from relevant sources to plan and identify all job requirements
Writing	<ul style="list-style-type: none">Accurately completes relevant reports and documentation using clear and technically specific language
Oral Communication	<ul style="list-style-type: none">Uses listening and questioning skills to confirm understanding of requirements, and participates in a verbal exchange of ideas and solutionsUses appropriate, detailed and clear language to address key

	personnel and clients
Numeracy	<ul style="list-style-type: none"> Performs mathematical calculations to check, interpret and confirm results of system tests
Navigate the world of work	<ul style="list-style-type: none"> Complies with explicit policies and procedures, and explores and implements, where identified, the implicit expectations of policies and procedures Understands roles and responsibilities for task and makes basic decisions about work completion parameters
Interact with others	<ul style="list-style-type: none"> Uses a limited range of accepted practices for communicating in a work environment Recognises common cultural and other differences of people in the work context and accommodates these differences appropriately
Get the work done	<ul style="list-style-type: none"> Takes responsibility for planning, sequencing and prioritising tasks and own workload for efficiency and effective outcomes Makes low-impact decisions within familiar situations, based on a range of predefined or routine solutions and evaluates the effectiveness of the outcome

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. It is restricted to essential operating conditions and any other variables essential to the work environment.

Instruments/devices to be used must include:	<ul style="list-style-type: none"> laser light source including visual laser light source laser power meter passive optical network (PON) meter optical time domain reflectometer (OTDR)
Optical measurements to be taken and recorded must include:	<ul style="list-style-type: none"> optical power levels insertion loss of a passive device end-to-end fibre loss (bi-directional) splice loss distance to fault, event, end of fibre using an (OTDR)

Unit Mapping Information

No equivalent unit. Supersedes and is not equivalent to ICTBWN301 Perform tests on optical communication system and components.

Assessment Requirements for ICTBN309 Perform tests on optical communication system and components

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Performance Evidence

The candidate must demonstrate, on two occasions, the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- carry out work according to job specifications and work health and safety (WHS) regulations
- determine and plan optical tests and measurements
- use the following optical measuring instruments and devices:
 - laser light source including visual laser light source
 - laser power meter
 - passive optical network (PON) meter
 - optical time domain reflectometer (OTDR)
- perform and record optical measurements for:
 - optical power levels
 - insertion loss of a passive device
 - end-to-end fibre loss (bi-directional)
 - splice loss
 - distance to fault, event, end of fibre using an (OTDR)
- assess and make recommendations from the test results
- document and present test outcomes.

Knowledge Evidence

The candidate must be able to demonstrate the knowledge required for the elements, performance criteria, and foundation skills, which includes knowledge about:

- legislation, regulations, codes and standards that impact on work activities
- consequences of mating contaminated optical connectors
- downstream and upstream signals

- dense wavelength division multiplexing (DWDM) metro and long-haul system architecture
- hybrid fibre coaxial (HFC) architecture (optical section)
- logarithmic power levels (decibels and dBm)
- optical connector types
- optical fibre and laser safety, practices, handling and application
- optical spectrum limits and wavelengths used in various applications and the International Telecommunications Union (ITU) grid
- role of optical transmitters and receivers
- passive optical network (PON) architecture
- transmission system line rates:
 - optical ethernet
 - synchronous digital hierarchy (SDH)
- wavelength division multiplexing (WDM), coarse wavelength division multiplexing (CWDM) and DWDM principles, and optical multiplexers.

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- site/s where installation of supporting infrastructure can be conducted
- plant, tools and equipment currently used in industry
- relevant regulatory and equipment documentation that impacts on work activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTCBL206 Alter services to existing cable system

Modification History

Release	Comments
Release 2	This version released with ICT Information and Communications Technology Training Package Version 5.0.
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 2.0.

Application

This unit describes skills and knowledge required to alter existing services to a voice or data cable system within a client's premises and use formal documentation procedures.

It applies to technical staff who alter services to existing cable systems for indoor and outdoor installation within domestic, commercial or industrial installations of communications applications including digital and analog, telephony, data, video, digital broadcasting, computer networks, local area networks (LAN), wide area networks (WAN) and multimedia.

All client cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media Authority (ACMA) accredited registrar.

Unit Sector

Telecommunications – cabling

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to alter services to existing cable	1.1 Arrange access to site according to client instructions and required procedures

ELEMENT	PERFORMANCE CRITERIA
system	1.2 Survey site to determine system alteration requirements to existing cable system 1.3 Inform appropriate personnel of identified hazards on worksite 1.4 Organise equipment and materials to meet required industry standards and ensure compatibility with existing system
2. Alter cable system	2.1 Follow work health and safety (WHS) and environmental requirements for given work and according to industry standards 2.2 Alter cabling system, conforming to client system specifications and according to industry standards and relevant legislation, codes, regulations and standards
3. Restore and test cable system	3.1 Confirm compatibility of alterations with existing cabling systems and client equipment 3.2 Test new work in isolation and when integrated with existing cabling systems and client equipment 3.3 Rectify any cabling faults or escalate client equipment faults to authorised person
4. Complete records and clean up site	4.1 Update plans and documents to show revised cabling systems accurately and clearly, or create new plans as appropriate 4.2 Remove installation waste and debris from worksite and dispose of according to environmental requirements to maintain safe worksite conditions 4.3 Reinstate site according to client and company requirements 4.4 Complete requisite Telecommunications Advice Form and sign off with client to record satisfaction

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Recognises when unknown words are essential to meaning and uses a range of decoding strategies to identify them
Writing	<ul style="list-style-type: none"> Uses a legible handwriting style or a computer font appropriate to the audience and purpose

Oral Communication	<ul style="list-style-type: none"> • Demonstrates awareness of choices for register, especially in situations that are familiar
Navigate the world of work	<ul style="list-style-type: none"> • Takes personal responsibility for adherence to legal and regulatory responsibilities relevant to own work context, and draws attention to any issues that may affect self or others • Recognises and follows explicit and implicit protocols and meets expectations associated with own role
Get the work done	<ul style="list-style-type: none"> • Implements actions as per plan, making slight adjustments if necessary, and addressing some unexpected terms • Automatically implements standard procedures for routine decisions

Unit Mapping Information

Assessment Requirements for ICTCBL206 Alter services to existing cable system

Modification History

Release	Comments
Release 2	This version released with ICT Information and Communications Technology Training Package Version 5.0.
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 2.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- determine alteration requirements and document specifications and cable plan
- identify conductor types in, or adjacent to, telecommunications work
- alter, restore and test cable system according to industry standards
- rectify cable faults
- complete documentation to industry and company standards
- comply with all related work health and safety (WHS) requirements and work practices.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- Australian Communications and Media Authority (ACMA) Competency Requirements for Telecommunications Cabling Provider Rules
- required legislation, codes of practice and other formal agreements that impact on the work activity
- a range of cabling options for customer premises including optical and coaxial
- features and operating requirements of test equipment

- information required to operate equipment according to a test specification
- manufacturer's requirements for safe operation of equipment
- specific WHS requirements relating to the activity and site conditions, test methods and performance requirements
- test methods and performance requirements
- typical cable systems
- common types of alterations that can be expected for existing cable systems
- typical issues, hazards, access difficulties and challenges that occur on site.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- special purpose tools, equipment and materials
- testing equipment currently used in industry
- regulatory and equipment documentation that impacts on alteration activities.

Note: Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Refer to the ICT Implementation Guide Companion Volume for recommended assessor details.

ICTCBL210 Install a telecommunications service to a building

Modification History

Release	Comments
Release 2	This version released with ICT Information and Communications Technology Training Package Version 5.0.
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 2.0.

Application

This unit describes the skills and knowledge required to install a telecommunications service to a building to provide a new service or a service upgrade.

It applies to individuals who work in technical roles that require bringing a telecommunications service from the broader network to a client's premises using metallic or optical cable or wireless connection.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the ICT Implementation Guide Companion Volume or the relevant regulator for details of licensing, legislative or certification requirements.

Unit Sector

Telecommunications – cabling

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare service installation	1.1 Arrange access to site with client and obtain job specifications 1.2 Notify supervisor of identified safety hazards at worksite

ELEMENT	PERFORMANCE CRITERIA
	<p>according to work health and safety (WHS) and environmental requirements</p> <p>1.3 Use installation specifications to determine type of services, network cables and equipment required for installation</p> <p>1.4 Select cables and equipment that comply with functionality and compatibility of existing installation</p> <p>1.5 Select and obtain tools and equipment to carry out installation activity</p>
2. Install cable and equipment to building	<p>2.1 Locate, connect and check cables at entry into network for transmission quality and continuity where service to building exists</p> <p>2.2 Install cable and equipment, and seal cable entry to building in safe manner according to installation plans and Australian Communications and Media Authority (ACMA) standards</p> <p>2.3 Test overall functionality of new service to meet installation specifications</p> <p>2.4 Rectify faults if required and minimise interruption to existing service in agreement with client</p> <p>2.5 Install lightning protection, where required, according to enterprise guidelines and industry practice</p>
3. Complete records and clean up site	<p>3.1 Label cable pairs clearly to provide accurate identification according to manufacturer's, industry and client standards</p> <p>3.2 Update records and plans with installation details to provide accurate record according to industry codes of practice and current Australian Standards</p> <p>3.3 Remove installation waste and debris from worksite and dispose of according to environmental requirements to maintain safe worksite conditions</p> <p>3.4 Complete Telecommunications Cabling Advice (TCA) forms and present to client to obtain sign off</p>

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Description
-------	-------------

Reading	<ul style="list-style-type: none"> Interprets textual information from relevant sources to identify relevant and key information
Writing	<ul style="list-style-type: none"> Uses clear, specific and industry related terminology to complete workplace documentation
Oral Communication	<ul style="list-style-type: none"> Articulates clearly using appropriate language for the environment Uses listening and questioning techniques to confirm understanding
Numeracy	<ul style="list-style-type: none"> Takes readings and measurements and interprets results
Navigate the world of work	<ul style="list-style-type: none"> Complies with explicit policies, procedures and legislative requirements relevant to own role
Interact with others	<ul style="list-style-type: none"> Identifies and follows accepted communication practices and protocols when liaising with clients, internal and external personnel on technical and operational matters
Get the work done	<ul style="list-style-type: none"> Determines job sequence and works logically and systematically to undertake clearly defined tasks Analyses task requirements to decide on appropriate equipment and practices Applies standard diagnostic practices to identify and rectify faults

Assessment Requirements for ICTCBL210 Install a telecommunications service to a building

Modification History

Release	Comments
Release 2	This version released with ICT Information and Communications Technology Training Package Version 5.0.
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 2.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- prepare and install cable and equipment to a building complying with Australian Communications and Media Authority (ACMA), enterprise and government regulations
- conduct tests related to transmission quality and continuity of cables at network entry point
- label and document installation work, complying with industry codes of practice
- comply with all related work health and safety (WHS) requirements and work practices.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- information required to operate equipment according to a test specification
- features and operating requirements of test equipment
- legislation, codes of practice and other formal agreements that impact on the work activity
- manufacturer's requirements for safe operation of equipment
- WHS requirements and work practices associated with cable provision, including:
 - adequate warning signs

- protective clothing and personal safety items
- safety devices
- test methods and performance requirements
- typical issues and challenges that occur on site.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- sites where telecommunications services may be installed
- installation and testing equipment currently used in industry
- relevant regulatory and equipment documentation that impacts on installation activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTCBL239 Install customer cable support systems

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Application

This unit describes the skills and knowledge required to install support systems for cable infrastructure for new installations or upgrades to existing networks in domestic, commercial and industrial premises.

It applies to individuals who work in technical roles planning cable routes and selecting and installing support structures for communications applications including digital and analog, telephony, data, video, digital broadcasting, computer networks, local area networks (LANs), wide area networks (WANs) and multimedia.

Licensing, legislative, regulatory and certification requirements apply to telecommunications systems. All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media Authority (ACMA) accredited registrar.

Unit Sector

Telecommunications – Cabling

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare cable support installation	1.1 Access site according to customer requirements, required procedures and site security arrangements 1.2 Confirm site capacities for storage and location of cable feeders or establish alternative methods 1.3 Determine customer specifications, and manufacturer and enterprise requirements for cable support 1.4 Notify appropriate personnel of identified safety hazards at cabling

ELEMENT	PERFORMANCE CRITERIA
	<p>worksite</p> <p>1.5 Plan cable route, identifying and avoiding other services and remote power feeding services operating at above telecommunications network voltage (TNV) on site in commercial buildings</p> <p>1.6 Select tools and materials for installation of support system from work specifications and schedules</p>
2. Determine cable routes	<p>2.1 Review relevant plans and verify cable locations</p> <p>2.2 Select cable routes appropriate to location of building services, providing access to all outlets and enabling cable to be supported to outlet point</p> <p>2.3 Plan safe and efficient installation by accurately identifying structural building requirements and site constraints</p> <p>2.4 Identify cable and services segregation clearances to ensure cable route complies with manufacturer specifications, enterprise and legislative requirements, and industry codes of practice</p>
3. Determine support method	<p>3.1 Select appropriate support system for planned cable route and identified site constraints</p> <p>3.2 Prepare support system for capability to meet planned concentration of cable in any location to facilitate ready access for maintenance and to allow for future expansion</p>
4. Mark out and install fixings and support structure	<p>4.1 Mark out and install fixings and structures securely in a safe manner to manufacturer specifications, ensuring cable weight can be supported in all operating conditions</p> <p>4.2 Align support structure correctly to enable cable to be installed evenly, in sequence and without damage</p> <p>4.3 Install protective earthing to industry standards</p> <p>4.4 Conduct work with minimal disruption to ongoing customer activity</p>
5. Complete support installation	<p>5.1 Check and adjust installed supports to ensure cable will not be exposed to damage during installation and operation</p> <p>5.2 Remove installation waste and debris from worksite and dispose of according to environmental requirements to maintain safe worksite conditions</p> <p>5.3 Complete enterprise documentation to record work completed</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance, but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none">Interprets textual information from relevant sources to identify relevant and key information
Writing	<ul style="list-style-type: none">Uses clear, specific and industry-related terminology to complete workplace documentation
Oral Communication	<ul style="list-style-type: none">Uses clear language and concepts, and tone and pace appropriate for the audience and purpose
Numeracy	<ul style="list-style-type: none">Takes readings and measurements and interprets results
Navigate the world of work	<ul style="list-style-type: none">Complies with explicit policies, procedures and legislative requirements relevant to own role
Interact with others	<ul style="list-style-type: none">Identifies and follows accepted communication practices and protocols when liaising with internal and external personnel on technical and operational matters
Get the work done	<ul style="list-style-type: none">Determines job sequence and works logically and systematically to undertake clearly defined tasksAnalyses task requirements to decide on appropriate equipment and practicesSelects and uses appropriate tools and equipment to perform tasks

Unit Mapping Information

ICTCBL239 Install customer cable support systems supersedes and is equivalent to ICTCBL201 Install customer cable support systems.

Links

Companion Volume Implementation Guides are available from VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=a53af4e4-b400-484e-b778-71c9e9d6aff2>

Assessment Requirements for ICTCBL239 Install customer cable support systems

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- interpret plans and schematic drawings to verify cable layout
- install three different support structures:
 - catenary wire
 - ducts and/or trays
 - frame back-mounts
- comply with all related work health and safety (WHS) and environmental requirements.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- building construction methods for commercial buildings as they relate to routing cables
- features and operating requirements of cable installation equipment
- services that may impact on cable installations
- cable installation support methods and their performance features
- legislation, regulations, codes, standards, rules and other formal agreements that impact on the work activity, in particular:
 - wiring rules
 - communications cabling manual
 - mandatory and voluntary technical standards
- typical safety issues and challenges that occur on a commercial installation site
- cable types – purpose, construction, characteristics

- cable screening
- recognition of colour
- basic telephony including operation.

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- site/s where customer cable support systems can be installed
- equipment currently used in industry
- relevant regulatory and equipment documentation that impacts on cable installation activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer also to the *Requirements for assessors* in the ICT Information and Communications Technology Training Package Companion Volume Implementation Guide.

ICTCBL240 Place and secure customer cable

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Application

This unit describes the skills and knowledge required to install customer cable infrastructure. It involves selecting cable route, setting up cable dispensers, and placing and securing cable.

It applies to individuals who work in technical roles and who may be required to do new installations or to upgrade existing networks in domestic, commercial and industrial premises. Communications applications include digital and analog, telephony, data, video, digital broadcasting, computer networks, local area networks (LANs), wide area networks (WANs) and multimedia.

Licensing, legislative, regulatory and certification requirements apply to telecommunications systems. All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media Authority (ACMA) accredited registrar.

Unit Sector

Telecommunications – Cabling

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for task and identify cable route	1.1 Arrange access to site according to customer instructions, required procedures and site security arrangements 1.2 Notify appropriate personnel of identified safety hazards at cabling worksite 1.3 Plan cable route, identifying and avoiding other services and remote power feeding services operating at above telecommunications network voltage (TNV) on site in commercial buildings

ELEMENT	PERFORMANCE CRITERIA
	1.4 Select cable route to maintain required clearances and segregations according to cable plan and relevant industry standards 1.5 Confirm cable route and requirements with customer 1.6 Select tools, equipment and cables for installation of support system from work specifications and schedules
2. Set-up cable dispensers	2.1 Determine feeder locations to minimise wastage of cable and efficiency 2.2 Set-up feeders in locations that provide ease of access during hauling of cable 2.3 Secure feeder locations to minimise safety risks during installation 2.4 Label hauling end of cable with unique identifier prior to placement
3. Install cable	3.1 Haul and place cable in safe manner within clearances required by industry standards, and manufacturer and work specifications 3.2 Place cable in neat, orderly and methodical manner, allowing sufficient excess at cable ends to facilitate termination 3.3 Inspect cable to maintain separations according to regulations 3.4 Install barriers to achieve separations where sufficient spatial separation cannot be met with other services 3.5 Install and trim, securing anchors promptly to restrain cable movement according to manufacturer specifications
4. Complete cable installation	4.1 Update records and cable plans promptly and accurately 4.2 Store records and plans according to customer and enterprise requirements 4.3 Remove installation waste and debris from worksite and dispose of according to environmental requirements to maintain safe worksite conditions

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance, but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interprets textual information from relevant sources to identify relevant and key information

	<ul style="list-style-type: none">• Reads and interprets plans to help to determine cable layout
Writing	<ul style="list-style-type: none">• Uses clear, specific and industry related terminology to complete workplace documentation
Oral Communication	<ul style="list-style-type: none">• Provides information using appropriate language for the environment and purpose• Uses listening and questioning techniques to confirm understanding
Numeracy	<ul style="list-style-type: none">• Takes readings and measurements and interprets results
Navigate the world of work	<ul style="list-style-type: none">• Complies with explicit policies, procedures and legislative requirements relevant to own role
Interact with others	<ul style="list-style-type: none">• Identifies and follows accepted communication practices and protocols when liaising with internal and external personnel on technical and operational matters
Get the work done	<ul style="list-style-type: none">• Determines job sequence and works logically and systematically to undertake clearly defined tasks• Analyses task requirements to decide on appropriate equipment and practices

Unit Mapping Information

ICTCBL240 Place and secure customer cable supersedes and is equivalent to ICTCBL202 Place and secure customer cable.

Assessment Requirements for ICTCBL240 Place and secure customer cable

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- comply with all related work health and safety (WHS) requirements and work practices
- plan cable placement and discuss the installation requirements with appropriate personnel
- organise tools, equipment and materials for cable installation according to specifications
- set up cable dispensers for internal or external premises structures or aerial and underground cabling between premises
- haul and install cables on support structures and building faces for both internal and external locations, applying relevant regulations and standards
- install securing products in accordance with manufacturer specifications and industry standards
- complete records and relevant statutory forms.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in elements, performance criteria, and foundation skills, which includes knowledge about:

- legislation, regulations, codes, standards, rules and other formal agreements that impact on cable installation, in particular:
 - wiring rules
 - mandatory and voluntary technical standards
- specific WHS and environmental requirements relating to cable installation and site conditions, including typical safety issues and challenges that occur on cable installation sites

- construction of cabling in commercial buildings
- cable and services segregation clearances to ensure cable route complies with legislation and industry codes of practice, manufacturer specifications, and enterprise requirements
- features and operating requirements of equipment required to place and secure cable
- information required to operate appropriate equipment according to specifications
- installation methods and performance requirements
- manufacturer requirements for safe operation of equipment
- common methods of hauling cable and typical damage that can occur to cable when it is hauled incorrectly
- purpose, construction, and characteristics of types of cable used in performance evidence
- cable screening types
- recognition of colour codes
- switching systems, including customer switching services, system distribution frames/test point frames, power failures and line interface requirements
- basic telephony, including operation.

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- site/s where placing and securing customer cable can be conducted
- equipment currently used in industry
- relevant regulatory and equipment documentation that impacts on cable installation activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer also to the *Requirements for assessors* in the ICT Information and Communications Technology Training Package Companion Volume Implementation Guide.

ICTCBL241 Terminate metallic conductor customer cable

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Application

This unit describes the skills and knowledge required to terminate metallic conductor cable or to join cable in a terminating block for a new cable installation or upgrade of cable capacity for an existing network or subsystem, or cabling infrastructure for convergence to next generation networks (NGNs).

It applies to individuals who work in technical roles carrying out indoor and outdoor, domestic, commercial or industrial installations for all communications applications, digital and analog, telephony, data, video, digital broadcasting, computer networks, local area networks (LANs), wide area networks (WANs) and multimedia.

Licensing, legislative, regulatory and certification requirements apply to telecommunications systems. All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media Authority (ACMA) accredited registrar.

Unit Sector

Telecommunications – Cabling

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare cable termination	1.1 Access site according to customer and worksite requirements 1.2 Prepare for cable terminating work according to regulatory environment, cabling environment, cable type, cable identification, termination systems, earthing and protection, and records 1.3 Select correct termination tools and materials for installation 1.4 Notify appropriate personnel of identified safety hazards at

ELEMENT	PERFORMANCE CRITERIA
	<p>cabling worksite</p> <p>1.5 Identify remote power feeding services that operate at above telecommunications network voltage (TNV) inside customer premises</p> <p>1.6 Contact customer where risks with remote power feed are identified</p> <p>1.7 Remove all contaminants from worksite that may adversely affect termination and prepare worksite to ensure adequate visibility to minimise errors and to reduce eye strain</p> <p>1.8 Design cable and block location within frame, with capacity for expansion where possible</p> <p>1.9 Segregate incoming and outgoing cables for ease of access and to minimise overlaying and backtracking of cable</p>
2. Terminate cable	<p>2.1 Remove cable sheath to allow for conductor length and installation requirements</p> <p>2.2 Fan out cable pair groups to manufacturer coding system to ensure correct terminating sequence and unique identification as required</p> <p>2.3 Install over-voltage protection devices to all cables with metallic component as required</p> <p>2.4 Install terminating modules to frame according to manufacturer specifications</p> <p>2.5 Fan cable pairs neatly to termination equipment to facilitate accurate termination</p> <p>2.6 Terminate cable using correct tool, according to work health and safety (WHS) and environmental requirements, and manufacturer specifications</p> <p>2.7 Earth cable shield to manufacturer specifications and industry standards</p>
3. Test termination	<p>3.1 Conduct visual inspection to confirm termination colour code sequence has been followed</p> <p>3.2 Test termination to satisfy performance specifications and record results as required</p>
4. Complete records and clean-up site	<p>4.1 Label cable pairs clearly to provide an accurate identification according to manufacturer specifications, industry standards and customer requirements</p> <p>4.2 Update records and plans with cabling details to provide accurate record according to industry codes of practice and current Australian</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>Standards</p> <p>4.3 Complete telecommunications cabling advice (TCA) forms</p> <p>4.4 Remove installation waste and debris from worksite and dispose of according to environmental requirements to maintain safe worksite conditions</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance, but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interprets textual information from relevant sources to identify relevant and key information
Writing	<ul style="list-style-type: none"> Uses clear, specific and industry related terminology to complete workplace documentation
Numeracy	<ul style="list-style-type: none"> Takes readings and measurements and interprets results
Navigate the world of work	<ul style="list-style-type: none"> Complies with explicit policies, procedures and legislative requirements relevant to own role
Interact with others	<ul style="list-style-type: none"> Identifies and follows accepted communication practices and protocols when liaising with customers, colleagues or supervisors
Get the work done	<ul style="list-style-type: none"> Determines job sequence and works logically and systematically to undertake clearly defined tasks Analyses task requirements to decide on appropriate equipment and practices

Unit Mapping Information

ICTCBL241 Terminate metallic conductor customer cable supersedes and is equivalent to ICTCBL203 Terminate metallic conductor customer cable.

Assessment Requirements for ICTCBL241 Terminate metallic conductor customer cable

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- terminate systems at both distributor and outlet locations
- terminate one jumperable distributor (campus distributor or building distributor) with a capacity of 100 pair or greater and one non-jumperable distributor (local distributor) and a patch panel
- terminate at least one 50 pair, one 4 pair ethernet unshielded twisted pair (UTP) data cable and one ethernet shielded twisted pair (STP) data cable, and accurately complete installation records, drawing alterations and compliance forms
- comply with all related work health and safety (WHS) requirements and work practices
- use correct methods to terminate a range of cables
- conduct and interpret cable test results on a minimum of three different lead-in faults
- update records and plans to show cable locations according to industry standards.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- legislation, regulations, codes, standards and rules that impact on work, in particular:
 - AS/NZS 3000:2018 Electrical installations known as the Australian/New Zealand Wiring Rules.
 - mandatory and voluntary technical standards
- specific WHS and environmental requirements relating to the activity and site conditions, including typical safety issues and challenges that occur on site
- purpose, construction, and characteristics of types of cable used in performance evidence

- recognition of colour
- basic telephony including operations
- strategies to manage cabling infrastructure when terminating cables
- features and operating requirements of testing
- operation of termination tools to manufacturer guidelines
- procedures for installing and maintaining cabling products in line with manufacturer guidelines
- termination methods and performance requirements.

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- site/s where metallic conductor cable can be terminated
- colour codes for visual inspections or wire-mappers for 4 pair cable tests
- relevant regulatory and cabling documentation that impacts on cable terminating activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer also to the *Requirements for assessors* in the ICT Information and Communications Technology Training Package Companion Volume Implementation Guide.

ICTCBL242 Install functional and protective telecommunications earthing system

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Application

This unit describes the skills and knowledge required to install telecommunications earthing system to metallic frames, utilised for telecommunications systems that include digital and analog, telephony, data, video, digital broadcasting, computer networks, local area networks (LANs), wide area networks (WANs) and multimedia.

It applies to telecommunications technicians and field officers who install indoor or outdoor earthing systems for domestic, small office home office (SOHO), commercial or industrial multi-storey and multi-site locations within customer premises.

Licensing, legislative, regulatory and certification requirements apply to telecommunications earthing systems. All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media Authority (ACMA) accredited registrar.

Unit Sector

Telecommunications – Cabling

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to install telecommunications earthing system	1.1 Access site according to customer and individual site requirements 1.2 Select earth wire for purpose intended according to specifications and current Australian Standards 1.3 Establish location of earthing applications, eliminating risks posed by contact with remote power feeding services

ELEMENT	PERFORMANCE CRITERIA
	1.4 Select route to minimise interference to system performance and according to safe work practices 1.5 Select earthing materials to comply with relevant industry standards
2. Install and secure earth cable	2.1 Maintain cable separations to meet performance requirements of application environment 2.2 Check earth cable insulation is undamaged to ensure integrity of earth provided 2.3 Connect the main protective earth (PE) cable to the nearest electrical switch board then isolate PE cable, beyond the main distribution frame (MDF) link bar from functional earth and telecommunication reference conductors (TRC) at all times to ensure operation according to industry standards 2.4 Install and secure cable according to work health and safety (WHS) and environmental requirements, manufacturer specifications and industry standards
3. Terminate and test earth cable installation	3.1 Terminate earth with connectors recommended by manufacturer and according to industry standards 3.2 Maintain earth continuity at all times to ensure safe and reliable system operation 3.3 Maintain correct interface requirements with electrical systems according to industry standards 3.4 Test earthing system according to ACMA wiring rules in safe manner 3.5 Rectify earth system faults, as required, prior to re-testing
4. Complete task and documentation	4.1 Label earthing systems according to industry regulations 4.2 Complete documentation, including test records 4.3 Clean up and restore worksite 4.4 Notify customer and obtain sign-off

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance, but not explicit in the performance criteria.

Skill	Description
-------	-------------

Skill	Description
Reading	<ul style="list-style-type: none">• Recognises when unknown words are essential to meaning and uses a range of decoding strategies to identify them• Recognises the structures and distinguishing features of a range of text types
Writing	<ul style="list-style-type: none">• Produces a range of text types (familiar and some unfamiliar) with appropriate structures
Oral Communication	<ul style="list-style-type: none">• Demonstrates awareness of choices for register, especially in situations that are familiar
Navigate the world of work	<ul style="list-style-type: none">• Takes personal responsibility for adherence to legal and regulatory responsibilities relevant to own work context, and draws attention to any issues that may affect self or others• Recognises and follows explicit and implicit protocols and meets expectations associated with own role
Get the work done	<ul style="list-style-type: none">• Automatically implements standard procedures for routine decisions• Initiates standard procedures when responding to familiar problems within immediate context

Unit Mapping Information

ICTCBL242 Install functional and protective telecommunications earthing system supersedes and is equivalent to ICTCBL204 Install functional and protective telecommunications earthing system.

Links

Assessment Requirements for ICTCBL242 Install functional and protective telecommunications earthing system

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- evaluate earthing needs for cable systems on customer premises
- determine potential earthing locations
- comply with all related work health and safety (WHS) and environmental requirements and work practices
- determine earth route and support system
- install earth to a backmount, rack or enclosure
- manage remote power feed services.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- legislation, regulations, codes, standards, rules, guidance notes and other formal agreements that impact on work, in particular:
 - wiring rules
 - mandatory and voluntary technical standards
 - Australian Communications and Media Authority (ACMA) competency requirements for Telecommunications Cabling Provider Rules
 - national and state/territory WHS requirements
 - workplace and worksite requirements
- specific WHS and environmental requirements relating to the activity and site conditions, including typical safety issues and challenges that occur on site

- features and operating requirements of test equipment
- information required to operate equipment according to a test specification
- types of location in which installations may be required
- manufacturer requirements for safe operation of equipment
- test methods and performance requirements
- purpose, construction, and characteristics of types of cable used in performance evidence
- cable screening types
- recognition of colour codes
- electrical earthing applications including electrical bonding and equipotential bonding
- earth systems with functionality including elimination of interference from electromagnetic, radio frequency (RF) and power sources, and reduction of interference from electromagnetic RF and power sources.
- switching systems earthing requirements
- basic telephony including operation.

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- special purpose tools, equipment and materials
- a relevant telecommunications earthing system
- cable plans and records.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer also to the *Requirements for assessors* in the ICT Information and Communications Technology Training Package Companion Volume Implementation Guide.

ICTCBL246 Install, maintain and modify customer premises communications cabling: ACMA Restricted Rule

Modification History

Release	Comments
Release 2	This version released with ICT Information and Communications Technology Training Package Version 6.0. Release 2 created for editorial corrections.
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Application

This unit describes the skills and knowledge required to safely install, maintain and modify communications cabling, according to the Australian Communications and Media Authority (ACMA) 'restricted' Cabling Provider Rules, on customer premises for cabling terminated on sockets and network termination devices (NTDs) of indoor and external metallic cable in either aerial or underground situations.

It applies to individuals who connect telecommunications devices including telephony systems, security alarm panels and fire control panels in either a new cable installation or upgrade of cable capacity for an existing network or subsystem for convergence to next generation network (NGN) applications.

Customer premises are typically domestic, small offices, home offices and small businesses. Large commercial and industrial premises are generally excluded, except in special circumstances where the cabling is behind a compliant device and is not via jumperable distributors or patch panels.

Licensing, legislative, regulatory and certification requirements apply to telecommunications systems. All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an ACMA accredited registrar.

Pre-requisite Unit

ICTTEN208 Use electrical skills when working with telecommunications networks

ICTWHS204 Follow work health and safety and environmental policy and procedures

Unit Sector

Telecommunications – Cabling

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan restricted cabling work	<p>1.1 Identify building infrastructure that places critical constraints on cabling</p> <p>1.2 Apply organisational strategies to manage other infrastructure in relation to cabling</p> <p>1.3 Notify appropriate personnel of identified safety hazards at cabling work site</p>
2. Manage remote power feed	<p>2.1 Identify and avoid risks posed by contact with remote power feeding services when performing cabling activity</p> <p>2.2 Make site safe by identifying remote power feeding services that operate at above telecommunications network voltage (TNV) inside customer premises</p>
3. Install cables and protective earth wires	<p>3.1 Install cables according to manufacturer application specifications, including tension and bending stress requirements</p> <p>3.2 Identify and avoid sources of possible damage to cable, including hot pipes, sharp edges and cable burn</p> <p>3.3 Allow sufficient excess at cable ends to facilitate termination</p> <p>3.4 Place and secure cable to maintain safety and interference segregation according to legislative and industry standards</p> <p>3.5 Install cable fasteners with correct tension to prevent cable sheath damage or transmission impairment and trimmed flush to prevent risk of personal damage</p> <p>3.6 Use appropriate underground cable installation techniques associated with minimum depth of cover and segregation from hazardous electrical and other services according to current Australian Standards</p> <p>3.7 Identify issues surrounding underground cables (excluding blown fibre tube systems) to incorporate a blocking agent within the cable to prevent the ingress of water</p> <p>3.8 Use appropriate aerial cable installation techniques associated with minimum clearance, segregation from hazardous electrical and other services and minimum height requirements according to current</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>Australian Standards</p> <p>3.9 Install over-voltage protection devices to all cable pairs according to Australian Standards, as required, to suppress voltage surges and protect from earth potential rise (EPR) hazards and protectively earth the devices</p> <p>3.10 Protect earth wire insulation against damage and segregate protective earths according to relevant legislative and industry standards</p>
4. Terminate and test cables and earth wires	<p>4.1 Remove cable sheath to allow for correct termination length and without damage to underlying conductors and their insulation</p> <p>4.2 Install cable modules according to manufacturer specifications, and cable pairs neatly and sequentially fan for termination</p> <p>4.3 Terminate conductors according to recommended colour code sequence using appropriate termination tools according to manufacturer specifications</p> <p>4.4 Earth cable shield, as required, according to manufacturer specifications, relevant industry codes of practice and Australian Standards</p> <p>4.5 Conduct visual inspection to confirm termination colour code sequence has been followed prior to end-to-end testing of wire and pair termination integrity</p> <p>4.6 Terminate earth wire according to industry codes of practice and Australian Standards</p> <p>4.7 Ensure earth wire continuity throughout and observe interface requirements with electrical systems</p> <p>4.8 Test earthing installation for continuity, insulation resistance and conductive resistance according to industry standards and Australian Standards</p> <p>4.9 Confirm compatibility of alterations with existing systems and test new work both in isolation and when integrated with existing systems</p>
5. Inspect cable route to ensure correct separations	<p>5.1 Inspect separations along the entirety of the cable route and rectify separations that do not comply with regulations</p> <p>5.2 Install barriers to achieve separations where sufficient spatial separation cannot be met</p>
6. Create records	<p>6.1 Provide customer with a job sign-off telecommunications cabling advice form at the completion of each cabling task</p> <p>6.2 Complete NTD record cards for work undertaken</p>

ELEMENT	PERFORMANCE CRITERIA
7. Monitor work activity	<p>7.1 Supervise unregistered cablers undertaking work in line with scope of own role and organisational procedures</p> <p>7.2 Ensure cabling activity is according to legislative requirements for safety and network integrity including the relevant Australian Standards</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance, but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Recognises and responds to some conventions of complex texts Recognises when unknown words are essential to meaning and uses a range of decoding strategies to identify them
Writing	<ul style="list-style-type: none"> Uses a legible handwriting style or a computer font appropriate to the audience and purpose
Oral Communication	<ul style="list-style-type: none"> Demonstrates awareness of choices for register, especially in situations that are familiar
Numeracy	<ul style="list-style-type: none"> Relies substantially on hands-on (concrete) and real life materials, personal experience and prior knowledge to make estimations and check the reasonableness of processes Identifies appropriate tools and uses them to take measurements Interprets information based on results of technical tests
Navigate the world of work	<ul style="list-style-type: none"> Takes personal responsibility for adherence to legal/regulatory responsibilities relevant to own work context, and draws attention to any issues that may affect self or others
Get the work done	<ul style="list-style-type: none"> Implements actions as per plan, making slight adjustments if necessary, and addressing some unexpected issues Automatically implements standard procedures for routine decisions in response to familiar problems

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. It is restricted to essential operating conditions and any other variables essential to the work environment.

Termination systems must include:	<ul style="list-style-type: none">• network termination device• Australian modular socket• Mode 3 alarm socket• RJ45, RJ12 or RJ11 modular socket (Note: jumperable distributors are not included in this requirement)
Earthing and protection must include:	<ul style="list-style-type: none">• earthing for protection• surge suppression

Unit Mapping Information

ICTCBL246 Install, maintain and modify customer premises communications cabling: ACMA Restricted Rule supersedes and is equivalent to ICTCBL236 Install, maintain and modify customer premises communications cabling: ACMA Restricted Rule.

Links

Companion Volume Implementation Guides are available from VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=a53af4e4-b400-484e-b778-71c9e9d6aff2>

Assessment Requirements for ICTCB246 Install, maintain and modify customer premises communications cabling: ACMA Restricted Rule

Modification History

Release	Comments
Release 2	This version released with ICT Information and Communications Technology Training Package Version 6.0. Release 2 created for editorial corrections.
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- complete a cabling installation and termination for:
 - three different types of telephone sockets:
 - Australian modular socket
 - RJ45, RJ12 or RJ11 modular socket
 - Mode 3 alarm socket
 - one network termination device (NTD), including the completion of TCA1 compliance forms and NTD records
- apply cable conductor identification codes to connector pins
- conduct tests and interpret cable test results
- interpret and apply standards and regulations
- comply with all related work health and safety (WHS) requirements and work practices
- meet Australian Communications and Media Authority's (ACMA) requirements
- install earthing to suit cabling conditions
- identify and rectify faulty cabling
- use appropriate personal protective equipment when performing cabling tasks.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- legislation, regulations, codes, standards, rules, guidance notes and other formal agreements that impact on work, in particular:
 - Australian Communications and Media Authority (ACMA) Telecommunications Cabling Provider Rules, cabling registrars, cabler registration rules, regulations and standards
 - current Australian Standards including AS/CA S009:2013 Installation requirements for customer cabling (Wiring Rules)
 - national and state/territory WHS requirements
 - workplace and worksite requirements
 - cabling environment, cable type, cable identification, termination systems, earthing and protection, records
 - ACMA certified components list
 - labelling requirements
- basic electrical principles of:
 - insulation, resistance
 - capacitance
 - impedance – as causes of, impedance, attenuation and cross-talk
- cable conductor – types of codes
- customer switching systems and services
- printed circuit boards
- cable screening types
- colour codes
- various cable types, their identifiers, termination systems, separations, support systems and fastening techniques used for communications cabling
- features and operating requirements of recognised cabling specific industry test equipment
- information required to operate equipment according to a test specification
- manufacturer requirements for safe operation of equipment
- test methods and performance requirements
- installation requirements for underground and aerial cables including:
 - minimum depth of cover (below ground)
 - segregation from hazardous electrical and other services
 - earthing requirements
- design parameters for underground cables with regards to the purpose they will serve and the prevention of water ingress.

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- site/s on which communications cabling activities can be carried out
- cabling and field equipment currently used in industry
- licensing requirements and other site related documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. Refer also to the *Requirements for assessors* in the ICT Information and Communications Technology Training Package Companion Volume Implementation Guide.

Links

Companion Volume Implementation Guides are available from VETNet -

ICTCBL247 Install, maintain and modify customer premises communications cabling: ACMA Open Rule

Modification History

Release	Comments
Release 2	This version released with ICT Information and Communications Technology Training Package Version 6.0. Release 2 created for editorial corrections.
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Application

This unit describes the skills and knowledge required to safely install, maintain and modify customer premises communications cabling according to the Australian Communications and Media Authority (ACMA) 'open' Cabling Provider Rules for small installations connected to sockets, and larger commercial and industry installations involving many lines, multi-pair cables, backbone cabling, multi-story buildings and advanced termination modules and distributors.

It applies to individuals who provide services in telephony, carrier modems or multiplexers, private modems or data systems operating over a category one or two twisted pair metallic customer cable in a specific customer location. Individuals may install, maintain or modify new cable or upgrade cable capacity either, indoor, external, underground or aerial cabling on private and public property for an existing network or subsystem, or cabling infrastructure for convergence to next generation networks (NGNs).

Licensing, legislative, regulatory and certification requirements apply to telecommunications systems. All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an ACMA accredited registrar.

Where aerial and underground cabling are used to supply services to the public, the specialist competencies as indicated in the *ACMA Cabling Provider Rules – Pathways to cabling registration* publication must be attained to undertake that work.

Pre-requisite Unit

ICTTEN208 Use electrical skills when working with telecommunications networks

ICTWHS204 Follow work health and safety and environmental policy and procedures

Unit Sector

Telecommunications – Cabling

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1 Plan open cabling work	<p>1.1 Identify building infrastructure that places critical constraints on cabling</p> <p>1.2 Apply organisational strategies to manage other infrastructure in relation to cabling</p> <p>1.3 Notify appropriate personnel of identified safety hazards at cabling worksite</p>
2 Manage remote power feed	<p>2.1 Identify and avoid risks posed by contact with remote power feeding services when performing cabling activity</p> <p>2.2 Make site safe by identifying remote power feeding services that operate at above telecommunications network voltage (TNV) inside customer premises</p>
3 Install and modify cable support, earthing and termination infrastructure	<p>3.1 Install fixings and cable support structures of adequate strength, safely and aligned with the environment according to manufacturer and customer specifications</p> <p>3.2 Secure catenary supports to building structure and tension, as required, to ensure cable weight can be carried in operating conditions with interference and safety segregation maintained according to current Australian Standards</p> <p>3.3 Install protective earthing of metal work to industry standards, as required</p> <p>3.4 Inspect installed support structure to ensure cable will not be exposed to damage during installation and general operation</p> <p>3.5 Position terminating equipment and fixing according to industry codes of practice, standards and customer requirements</p> <p>3.6 Inspect back-mount and outlet layout for compliance to manufacturer specifications, and allow adequate work space for ease of access and avoid overlaying</p> <p>3.7 Segregate incoming and outgoing cables for ease of access and</p>

ELEMENT	PERFORMANCE CRITERIA
	avoid overlaying
4 Install cables and earth wires	<p>4.1 Install cables according to manufacturer specifications, including tension and bending stress requirements</p> <p>4.2 Identify and avoid sources of possible damage to cable, including hot pipes, sharp edges, cable burn, kinks, crushing or stretching</p> <p>4.3 Allow sufficient excess at cable ends to facilitate termination</p> <p>4.4 Label telecommunication outlet ends of cable uniquely to match identifier at originating location</p> <p>4.5 Place and secure cable to maintain safety and interference segregation according to legislative and industry standards</p> <p>4.6 Install cable fasteners with correct tension, and trim or fit them flush to prevent cable sheath damage, transmission impairment or risk of personal damage</p> <p>4.7 Use appropriate aerial cable installation techniques associated with supported catenaries in external environment to meet minimum above ground clearances and segregation from hazardous electrical services, according to current Australian Standards</p> <p>4.8 Use appropriate underground cable installation techniques associated with minimum depth of cover and segregation from hazardous electrical and other services, according to current Australian Standards</p> <p>4.9 Identify issues surrounding underground cables (excluding blown fibre tube systems) to incorporate a blocking agent within the cable to prevent the ingress of water</p> <p>4.10 Install over-voltage protection devices to all cable pairs according to current Australian Standards, as required, to suppress voltage surges with the over-voltage devices connected to protective earth</p> <p>4.11 Conduct a visual inspection to verify telecommunications reference conductor (TRC) / communications earthing system (CES)/earth wire insulation is protected against damage and is segregated according to relevant industry, legislative and Australian Standards</p>
5 Terminate and test cables and earth wires	<p>5.1 Remove cable sheath to allow for correct termination length without damage to underlying conductors and their insulation</p> <p>5.2 Install terminating modules to different telecommunications cables according to manufacturer specifications, and cable pairs neatly and sequentially fan for termination</p> <p>5.3 Terminate conductors according to recommended colour code sequence using appropriate termination tools according to manufacturer</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>specifications</p> <p>5.4 Earth cable shield, as required, according to manufacturer specifications, relevant industry codes of practice and current Australian Standards</p> <p>5.5 Conduct visual inspection to confirm termination colour code sequence has been followed prior to end-to-end testing of wire and pair termination integrity</p> <p>5.6 Terminate earth wires with connectors recommended by manufacturer according to industry codes of practice and current Australian Standards</p> <p>5.7 Ensure earth wire continuity throughout and observe interface requirements with electrical systems</p> <p>5.8 Test earthing installation for continuity and conductive resistance according to industry standards</p> <p>5.9 Confirm compatibility of alterations with existing systems and test new work both in isolation and when integrated with existing systems</p> <p>5.10 Conduct testing of installed cable continuity after termination</p>
6 Inspect cable route to ensure correct separations	<p>6.1 Inspect separations along the entirety of the cable route and rectify separations that do not comply with regulations</p> <p>6.2 Install barriers to achieve separations where sufficient spatial separation cannot be met</p>
7 Evaluate earthing needs for cable systems on customer premises	<p>7.1 Locate existing earthing systems in customer premises and analyse earthing needs of cable products</p> <p>7.2 Calculate upper and lower limits of resistance for a variety of cable system earths using relevant cable characteristics</p>
8 Label earthing systems	<p>8.1 Identify label requirements for telecommunications earthing systems</p> <p>8.2 Attach label to earthing systems according to industry regulations</p>
9 Create or update cable plans and records	<p>9.1 Document installation details on record sheets and plans, and store according to customer requirements</p> <p>9.2 Label cable pairs clearly as required to provide an accurate identification according to manufacturer specifications, industry standards and customer requirements</p> <p>9.3 Record cabling details in cable pair record books to provide an accurate record, according to industry codes of practice and current Australian Standards</p>

ELEMENT	PERFORMANCE CRITERIA
	9.4 Complete telecommunications cabling advice (TCA) forms
10 Monitor work activity	<p>10.1 Supervise unregistered cablers undertaking work in line with scope of own role and organisational procedures</p> <p>10.2 Ensure installation and maintenance activity comply with legislative requirements and industry standards for safety and network integrity</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance, but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Recognises the structures and distinguishing features of a range of familiar text types
Writing	<ul style="list-style-type: none"> Sequences writing to produce cohesive text and uses layout consistent with text type
Oral Communication	<ul style="list-style-type: none"> Demonstrates awareness of choices for register, especially in situations that are familiar
Numeracy	<ul style="list-style-type: none"> Interprets and comprehends whole and familiar or routine fractions, decimals and percentages when measuring and preparing cables for installation
Navigate the world of work	<ul style="list-style-type: none"> Takes personal responsibility for adherence to legal/regulatory responsibilities relevant to own work context, and draws attention to any issues that may affect self or others
Get the work done	<ul style="list-style-type: none"> Implements actions as per plan, making slight adjustments if necessary, and addressing some unexpected issues Automatically implements standard procedures for routine decisions in response to familiar problems

Unit Mapping Information

ICTCBL247 Install, maintain and modify customer premises communications cabling:
ACMA Open Rule supersedes and is equivalent to ICTCBL237 Install, maintain and modify customer premises communications cabling: ACMA Open Rule.

Assessment Requirements for ICTCB247 Install, maintain and modify customer premises communications cabling: ACMA Open Rule

Modification History

Release	Comments
Release 2	This version released with ICT Information and Communications Technology Training Package Version 6.0. Release 2 created for editorial corrections.
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- complete a cabling installation and termination for:
 - three different types of telephone sockets:
 - Australian modular socket
 - RJ45, RJ12 or RJ11 modular socket
 - Mode 3 alarm socket
 - one network termination device (NTD), including the completion of TCA1 compliance forms and NTD records
- read and interpret drawings related to cable layouts, outlet location, cable coding system, and identifiers and distributor locations
- comply with all work, health and safety (WHS) requirements and work practices
- meet Australian Communications and Media Authority (ACMA) requirements
- apply cable conductor identification codes to connector pins
- conduct tests and interpret cable test results
- identify the correct telecommunications cable by its colour identifier
- terminate systems at both distributor and outlet locations
- install and terminate two jumperable distributors (campus distributor or building distributor) with a capacity of 100 pair or greater
- terminate one non-jumperable distributor (local distributor)

- terminate both cable ends for at least one 50 pair cable, 10 or 20 pair cable and one 4 pair data cable, including accurate completion of installation records, drawing alterations and compliance forms
- place cables on support structures and building faces for both internal and external locations
- secure cables with appropriate fasteners for the above locations
- apply work practices that avoid cable damage
- install at least one common type of earthing system used in customer premises for cabling systems
- interpret and apply relevant legislation, regulations, codes, and standards
- install earthing to suit cabling conditions
- identify and rectify faulty cabling
- use appropriate personal protective equipment when performing cabling tasks.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- legislation, regulations, codes, standards, rules, guidance notes and other formal agreements that impact on work, in particular:
 - Australian Communications and Media Authority (ACMA) Telecommunications Cabling Provider Rules, cabling registrars, cabler registration rules, regulations and standards
 - current Australian Standards including AS/CA S009:2013 Installation requirements for customer cabling (Wiring Rules)
 - national and state/territory WHS requirements
 - workplace and worksite requirements
 - cabling environment, cable type, cable identification, termination systems, earthing and protection, records
 - ACMA certified components list
 - labelling requirements
- basic electrical principles of:
 - insulation, resistance
 - capacitance
 - impedance – as causes of, impedance, attenuation and cross-talk
- cable screening types
- colour codes
- cable conductor – types of codes
- customer switching systems and services

- printed circuit boards
- customer cabling environment for which cabling registration may be required for internal, external, above ground or below ground installation
- information required to operate equipment according to a test specification
- various cable types, their identifiers, termination systems (including jumperable and non-jumperable distributor), separations, support systems and fastening techniques used for telecommunications cabling
- documentation and records required when cabling
- manufacturer requirements for safe operation of equipment
- earthing and protection strategies and technologies relevant to different cabling applications
- test methods and performance requirements
- typical issues and challenges that occur on site
- installation requirements for underground and aerial cables including:
 - minimum depth of cover (below ground)
 - segregation from hazardous electrical and other services
 - earthing requirements
- design parameters for underground cables with regards to the purpose they will serve and the prevention of water ingress
- devices for a range of telecommunications cabling applications, including, ethernet data systems, audio and video systems, security systems and fire protection systems
- integral bearer wires and application according to current Australian Standards
- cable blocking agents used to prevent the ingress of water underground (excluding blown fibre tube systems)
- features of cables designed for underground use that may be laid in conduit trenches or directly buried
- responsibilities and process for communications installation works.

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- site/s on which communications cabling activities can be carried out
- two jumperable distributors (campus distributor or building distributor) with a capacity of 100 pair or greater
- one non-jumperable distributor (LD) and a patch panel
- a 50 pair and 4 pair and one ethernet cable
- cabling and field equipment currently used in industry
- relevant regulatory and site related documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. Refer also to the *Requirements for assessors* in the ICT Information and Communications Technology Training Package Companion Volume Implementation Guide.

ICTCBL248 Install and terminate hard-line coaxial cable

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Application

This unit describes the skills and knowledge required to install, splice and terminate hard-line coaxial cable in the customer access network (CAN) environment for emerging technologies.

It applies to technical staff who splice and terminate hard-line coaxial cable used in all telecommunications applications including convergence technologies of telephony, data, video and multimedia as part of next generation networks (NGNs).

Licensing, legislative, regulatory and certification requirements apply to telecommunications earthing systems. Refer to the ICT Information and Communications Technology Companion Volume Implementation Guide or the relevant regulator for details of licensing, legislative or certification requirements.

Unit Sector

Telecommunications – Cabling

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to install and splice hard-line coaxial cable	<p>1.1 Confirm site access approval prior to site entry and comply with site security arrangements</p> <p>1.2 Read and interpret installation specifications and physical conditions at site to determine job layout</p> <p>1.3 Locate and identify adjoining other services according to industry guidelines, and work health and safety (WHS) practices</p> <p>1.4 Test for and respond to presence of dangerous gases in underground enclosures according to industry guidelines</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>1.5 Test relevant aerial metallic fittings for live voltage and respond according to industry guidelines</p> <p>1.6 Install equipotential bonding according to design</p> <p>1.7 Undertake approved alterations to design, as required, according to industry guidelines</p> <p>1.8 Select appropriate hard-line coaxial cable type according to installation requirements</p> <p>1.9 Select and obtain all materials required for cable termination including passive and active devices and connectors</p>
2. Verify placement and secure coaxial cable	<p>2.1 Use safety equipment to protect self and public according to industry guidelines and WHS requirements</p> <p>2.2 Protect integrity of coaxial cable (sheath, shield and centre conductor) to ensure no loss of performance</p> <p>2.3 Form cable into position with sufficient lengths by using approved forming tools that allow termination and maintain minimum bend radius according to manufacturer specifications</p> <p>2.4 Follow installation design to install cable safely without damage to cable and ensure cable flow in pits and manholes is according to carrier standards and work instructions</p> <p>2.5 Maintain radio frequency (RF) signal strength by installing cable lengths within manufacturer or design specifications</p> <p>2.6 Locate securing hardware to reduce cumulative effect on cable wave shape properties</p> <p>2.7 Use correct lashing machine and techniques to attach aerial cable to catenary wire</p>
3. Splice coaxial cable	<p>3.1 Strip and core hard-line coaxial cable, according to specifications, to required length using appropriate tools</p> <p>3.2 Select appropriate kit to match type of hard-line coaxial cable in use and splice according to manufacturer recommendations</p> <p>3.3 Seal all splices according to industry specifications</p>
4. Terminate coaxial cable	<p>4.1 Prepare coaxial cable for termination, according to specifications, using appropriate tools</p> <p>4.2 Select connectors to match type of coaxial cable in use and terminate according to industry standards</p> <p>4.3 Install network device chassis/housing in correct orientation according to design</p> <p>4.4 Prepare centre pins of cable and connector, and cut according to</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>vendor specifications</p> <p>4.5 Terminate connectors to torque according to manufacturer recommendations to prevent RF leakage, and ensure seizure screws are tightened</p> <p>4.6 Seal all terminations according to industry specifications</p>
5. Complete installation operation	<p>5.1 Place cables in pit and/or mount on aerial strand according to manufacturer instructions and industry guidelines, and check that no safety hazards are evident</p> <p>5.2 Attach fitted off device aerially or underground according to manufacturer specifications or work instructions</p> <p>5.3 Reinstall site, and remove waste and debris for disposal according to environmental requirements and maintain safe worksite conditions</p>
6. Complete installation administration	<p>6.1 Complete reports according to telecommunications carrier network policy</p> <p>6.2 Update plans and records using appropriate symbols with details of installation</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance, but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Reads familiar texts fluently, automatically recognising most everyday words and some specialised vocabulary
Writing	<ul style="list-style-type: none"> Sequences writing to produce cohesive text and uses layout consistent with text type
Oral Communication	<ul style="list-style-type: none"> Demonstrates awareness of choices for register, especially in situations that are familiar
Numeracy	<ul style="list-style-type: none"> Interprets and comprehends whole numbers and familiar or routine fractions, decimals and percentages Selects and uses appropriate tools, hand-held devices, computers and technological processes
Navigate the world of work	<ul style="list-style-type: none"> Takes responsibility for decisions regarding when and how to complete tasks, and coordinate with or delegate to others Takes personal responsibility for adherence to legal and regulatory responsibilities relevant to own work context, and draws attention to any

Skill	Description
	issues that may affect self or others
Get the work done	<ul style="list-style-type: none">• Implements actions as per plan, makes slight adjustments if necessary, and addresses unexpected issues• Automatically implements standard procedures for routine decisions

Unit Mapping Information

No equivalent unit. New unit.

Assessment Requirements for ICTCBL248 Install and terminate hard-line coaxial cable

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- determine installation requirements
- prepare site for hard-line coaxial cable installation
- identify hard-line coaxial cable types
- perform an in-line splice
- terminate hard-line coaxial cable using specialised hand or power tools and equipment
- terminate hard-line coaxial cable to network devices using:
 - a pin connector
 - 90- or 180-degree adaptors
 - housing to housing adaptor
- determine and achieve pin connector centre pin lengths on a device per device basis
- heat shrink hard-line splice or termination using the clean, abrade, flame-brush method
- waterproof jointed cable using heat shrinkage
- apply related work health and safety (WHS) requirements and work practices
- conduct continuity tests
- fit spliced coaxial cable in suitable housing (underground/aerial strand) and attach fitted off devices to:
 - pit or manhole wall, according to manufacturer specifications or carrier work instructions, taking care not to cause damage to co-located cables or joints
 - catenary according to manufacturer specifications or carrier work instructions, ensuring all clearances, separations and segregations from other cables or pole hardware is maintained
- confirm installation complies with industry and manufacturer specifications and warranties while:
 - maintaining all clearances separations and segregations from other cables or pole hardware
 - taking care not to cause damage to co-located cables or joints

- mark-up as-built plans and document work according to industry requirements.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- RF common and RF design symbols
- RF design and other associated plans
- coaxial cables and connectors, and their application
- equipment and processes to perform a continuity test
- manufacturer requirements for safe operation of equipment and tools relevant to working with coaxial cable
- typical issues and challenges that occur on site including:
 - recycling of old connectors for use with existing devices resulting in incompatibility issues due to incorrect centre pin length leading to intermittent or ongoing faults
- WHS requirements relating to the activity and site conditions, including site security
- relevant legislation, codes and other formal agreements that impact on the work activity
- updating of records to report on completed works.

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- site/s where splicing and terminating of coaxial broadband cable can be conducted
- testing equipment currently used in industry
- relevant legislation, work instructions and equipment documentation that impacts on cable splicing, terminating and testing activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTCBL249 Haul underground cable for installation and maintenance work

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Application

This unit describes the skills and knowledge required to haul underground cable for maintenance, new installations or upgrades in access networks or customer premises.

It applies to technicians who install and recover cables, including multi-pair, coaxial and optical fibre for domestic, commercial or industrial situations.

Licensing, legislative, regulatory and certification requirements apply to telecommunications systems. All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media Authority (ACMA) accredited registrar.

Unit Sector

Telecommunications – Cabling

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1 Prepare for safe underground cable hauling	1.1 Arrange access to site according to required procedure 1.2 Inform appropriate personnel of identified hazards on worksite 1.3 Confirm hauling location of proposed cable according to appropriate plan specifications obtained from authorised personnel 1.4 Obtain information about proposed locations of other services from relevant authorities 1.5 Set up tools and equipment required for safe work practice according to enterprise guidelines

ELEMENT	PERFORMANCE CRITERIA
	1.6 Check for dangerous gases and place guards around open manholes according to work health and safety (WHS) and environmental requirements
2 Construct aerial to underground transition	2.1 Install cable protection on pole for transition using approved hardware according to industry standards and asset owner requirements 2.2 Connect conduit to pits or manholes as designed according to industry standards and asset owner requirements
3 Haul cable	3.1 Handle existing cables in a way that avoids cable damage 3.2 Use roping techniques to prove that underground conduit is clear for hauling 3.3 Attach cable to rope for hauling, lubricate cable as required and haul at correct tension, maintaining smooth passage between dispenser and hauler 3.4 Haul cable through conduit to facilitate aerial to underground transition /underground to aerial transition, as required by the design 3.5 Maintain cable and services separations in parallel runs and crossovers to meet manufacturer and regulatory requirements 3.6 Maintain sufficient cable length allowance for jointing and ensure cable is laid up and bent within bending radius tolerance for cable materials in underground enclosure
4 Terminate, seal and test cable	4.1 Seal cables according to enterprise requirements to ensure no sheath damage 4.2 Tag cable for future identification 4.3 Test cable for continuity 4.4 Record and report test results for escalation
5 Complete works on site	5.1 Record any approved alteration to original design using correct symbols and return to appropriate personnel 5.2 Complete and sign reports, as required, according to enterprise policy 5.3 Reinstatement site to customer satisfaction and dispose of waste in an environmentally safe manner 5.4 Notify appropriate personnel about job completion and obtain sign-off

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance, but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none">Interprets textual information from relevant sources to identify relevant and key information
Writing	<ul style="list-style-type: none">Uses clear, specific and industry related terminology to complete workplace documentation
Oral Communication	<ul style="list-style-type: none">Uses language and non-verbal features appropriate to context
Numeracy	<ul style="list-style-type: none">Takes readings and measurements and interprets results
Navigate the world of work	<ul style="list-style-type: none">Complies with explicit policies, procedures and legislative requirements relevant to own role
Interact with others	<ul style="list-style-type: none">Identifies and follows accepted communication practices and protocols when liaising with clients, internal and external personnel on technical and operational matters
Get the work done	<ul style="list-style-type: none">Determines job sequence and works logically and systematically to undertake clearly defined tasksAnalyses task requirements to decide on appropriate equipment and practices

Unit Mapping Information

No equivalent unit. Supersedes and is not equivalent to ICTCBL207 Haul underground cable.

Links

Assessment Requirements for ICTCBL249 Haul underground cable for installation and maintenance work

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- plan the works and prepare the site
- read and interpret drawings and designs to interpret installation requirements
- haul cable applying related work health and safety (WHS) requirements and work practices
- transition cable from aerial to underground or underground to aerial
- use cable dispensing equipment
- use specialised hand or power tools and equipment for hauling cable safely
- test the installation, document and escalate the test result
- prepare all reports and records to industry and enterprise standards.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- legislation, regulations, codes, standards, enterprise requirements and other formal agreements that impact on hauling cable
- specific WHS requirements and environmental procedures relating to the activity and site conditions
- Australian Communications and Media Authority (ACMA) Telecommunications Cabling Provider Rules competency requirements
- features and operating requirements of test equipment
- information required to operate equipment according to a test specification
- manufacturer recommendations for correct hauling of cables

- safety precautions when working with laser-based systems
- test methods and performance requirements
- typical issues and challenges that occur on site
- cable protection guards
- hardware to secure cables.
-

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- site/s where installation of underground cable can be conducted
- installation equipment currently used in industry
- relevant regulatory and equipment documentation that impacts on cable installation activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. Refer also to the *Requirements for assessors* in the ICT Information and Communications Technology Training Package Companion Volume Implementation Guide.

ICTCBL250 Haul and fix aerial cable

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Application

This unit describes the skills and knowledge required to install aerial cables in customer and access networks. It involves installing, terminating and securing cables. Aerial cable installation may be for a new cable, a cable upgrade, or a cable in need of repair.

It applies to telecommunications lines workers and line installers who use support anchors and catenaries for new installations and upgrades, or to maintain existing networks in domestic, commercial and industrial installations to deliver services in x-digital subscriber line (xDSL), fibre to the X (FTTx) and hybrid fibre coaxial (HFC) networks.

Licensing, legislative, regulatory and certification requirements apply to telecommunications systems and working at heights. All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media Authority (ACMA) accredited registrar. Refer to the ICT Information and Communications Technology Training Package Companion Volume Implementation Guide or the relevant regulator for details of licensing, legislative or certification requirements.

Unit Sector

Telecommunications – Cabling

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for aerial cable installation	1.1 Obtain construction plan from appropriate personnel to scope work and arrange for site access 1.2 Notify appropriate personnel of identified hazards at cabling

ELEMENT	PERFORMANCE CRITERIA
	<p>worksite</p> <p>1.3 Determine cable route and type of cable from construction plan, identifying and avoiding other services</p> <p>1.4 Obtain plant, tools, safety equipment and material to perform tasks safely and efficiently</p> <p>1.5 Perform pole inspection before climbing and/or making attachment according to industry standards and asset owner requirements</p>
2. Construct aerial to underground transition	<p>2.1 Install cable protection on pole for transition, using approved hardware according to industry standards and asset owner requirements</p> <p>2.2 Connect conduit to pits or manholes as designed according to telecommunications industry standards and asset owner requirements</p>
3. Install aerial cable	<p>3.1 Use tools according to enterprise guidelines and work health and safety (WHS) regulations</p> <p>3.2 Install catenary wire, gantry wire or integral bearer cable (IBC) and tension to required specifications</p> <p>3.3 Position hauling hardware including rollers, hauling guides to ensure no damage is caused and that physical characteristics of cable are maintained</p> <p>3.4 Haul cable at correct tension according to current Australian Standards and enterprise guidelines, ensuring that no damage is caused and that physical characteristics of cable are maintained</p> <p>3.5 Secure cable permanently to support structure using aerial fixing devices according to manufacturer specifications and enterprise guidelines</p>
4. Terminate, seal and secure aerial cable	<p>4.1 Terminate, seal and label cables according to manufacturer specifications and enterprise guidelines</p> <p>4.2 Loop and secure cable on support structure adhering to h bend radius tolerances to reduce damage likelihood or to prevent damage</p> <p>4.3 Test cable for continuity</p> <p>4.4 Record and report test results for escalation to other team members or supervisors as required</p>
5. Complete project	<p>5.1 Complete reports about installation and design amendments and file according to enterprise requirements</p> <p>5.2 Recover obsolete materials and equipment, and return to appropriate point for disposal</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>5.3 Restore site according to requirements of enterprise or approving authority and to customer satisfaction</p> <p>5.4 Notify appropriate personnel about job completion and obtain sign-off</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance, but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interprets information from technical sources to identify relevant and key information
Writing	<ul style="list-style-type: none"> Documents outcomes and changes to designs using industry relevant terminology
Oral Communication	<ul style="list-style-type: none"> Uses language and non-verbal features appropriate to context
Numeracy	<ul style="list-style-type: none"> Interprets scales and ratios on plans Performs basic calculations required to take accurate measurements
Navigate the world of work	<ul style="list-style-type: none"> Takes personal responsibility for adherence to legal, regulatory and enterprise requirements relevant to own work context
Interact with others	<ul style="list-style-type: none"> Identifies and follows accepted communication practices and protocols when liaising with customers and internal and external personnel on technical and operational matters
Get the work done	<ul style="list-style-type: none"> Determines job sequence and works logically and systematically to undertake clearly defined tasks Analyses task requirements to decide on appropriate equipment and practices Implements actions according to plan, making slight adjustments if necessary, and addressing some unexpected issues Automatically implements standard procedures for routine decisions in response to familiar problems Determines and uses appropriate equipment

Assessment Requirements for ICTCBL250 Haul and fix aerial cable

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- plan the works and prepare the site
- read and interpret drawings and construction designs to interpret installation requirements
- use cable dispensing equipment
- haul aerial cable using hauling hardware
- transition cable from aerial to underground /underground to aerial
- secure and seal aerial cable
- apply work health and safety (WHS) requirements and work practices relating to hauling and fixing the above cables, including:
 - identifying safe support structures from pole status markings, visual inspection or approved testing procedures
 - completing documentation associated with installing aerial cable pole and ladder safety
- use specialised hand or power tools and equipment for installing aerial cable safely
- test the installation, document and escalate the test result.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- legislation, regulations, codes, standards, enterprise requirements, authorisations and other formal agreements that impact on hauling and fixing aerial cables
- specific WHS requirements and environmental procedures relating to the activity and site conditions

- typical safety issues and challenges that occur on site
- features and operating requirements of cable test equipment
- information required to operate equipment according to a test specification
- procedures for installing a range of aerial cable types
- manufacturer recommendations for correct hauling of cables
- relevant licence requirements for working at heights
- manufacturer specifications and industry requirements for safe operation of equipment
- test methods and performance requirements
- required authorisations for pole access.

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- site/s where aerial cable can be installed
- plant, tools and equipment currently used in industry to erect aerial cable
- relevant regulatory and equipment documentation that impacts on aerial cable installation activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTCBL251 Install aerial and underground cable lead-ins

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Application

This unit describes the skills and knowledge required to install indoor and outdoor aerial and underground lead-ins for a new metallic or optical cable installation, or upgrade of an existing network or subsystem, or cabling infrastructure for convergence to next generation networks (NGN), digital reception and broadband.

Cable installation may be for a new cable, a cable upgrade or a cable in need of repair. It can be applied to new installations and upgrades of telecommunications cabling projects in domestic, commercial and industrial customer installations.

It applies to technical staff who haul underground or fixed aerial cable lead-in to deliver services in x-digital subscriber line (xDSL), fibre to the home (FTTH) and hybrid fibre coaxial (HFC) networks. This work may require the use of tension meters and hauling equipment.

Licensing, legislative, regulatory and certification requirements apply to telecommunications systems. All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media Authority (ACMA) accredited registrar. Refer to the ICT Information and Communications Technology Training Package Companion Volume Implementation Guide or the relevant regulator for details of licensing, legislative or certification requirements.

Unit Sector

Telecommunications – Cabling

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for cable	1.1 Obtain construction plan from appropriate personnel to scope

ELEMENT	PERFORMANCE CRITERIA
installation	<p>work and arrange for site access</p> <p>1.2 Access site according to enterprise procedure</p> <p>1.3 Inform appropriate personnel of identified hazards and safety constraints on worksite</p> <p>1.4 Obtain cable installation plan and set up installation equipment according to manufacturer requirements</p> <p>1.5 Identify existing 'other' services by analysing drawings and following Dial Before You Dig (DBYD) protocols</p> <p>1.6 Determine cable route and type of cable from construction plan, identifying and avoiding other services</p> <p>1.7 Select suitable protective clothing, tools and equipment, and safety equipment, and confirm support structures are safe</p>
2 Install aerial cable lead-in	<p>2.1 Use safe support structures and appropriate tools</p> <p>2.2 Select required type of cable bearer and determine need for separate catenary wire or self-supporting installation</p> <p>2.3 Install and secure catenary wire, integral bearer cable (IBC) or self-supporting cable permanently to support structure using aerial fixing devices, and adjust tension to meet relevant height and minimum sag requirements to required specifications</p> <p>2.4 Secure cable safely, leaving cable loop on support structure</p> <p>2.5 Install mid-span fly offs according to cable configuration, using approved hardware</p> <p>2.6 Install cable ensuring no damage is caused</p> <p>2.7 Maintain physical characteristics of cable leaving cable loop on support structure according to cable configuration</p> <p>2.8 Terminate and test cable continuity in customer enclosure and aerial enclosure</p> <p>2.9 Label cables according to industry guidelines and authorisations</p>
3 Install underground cable lead-in	<p>3.1 Ensure pipe or conduit is not blocked and is clear of debris</p> <p>3.2 Run push rod through pipe and attach cable for hauling</p> <p>3.3 Haul cable using lubricant, cable slippers or rollers to ensure no sheath damage when hauling at correct tension into and out of enclosures</p> <p>3.4 Provide sufficient cable allowance in enclosures for jointing and maintenance requirements</p> <p>3.5 Terminate cable in customer enclosure and pit enclosure</p>

ELEMENT	PERFORMANCE CRITERIA
4 Seal and secure cable	<p>4.1 Seal cable ends to prevent entrance of foreign material according to manufacturer specifications and industry standards</p> <p>4.2 Secure cable loop on support structure to minimise damage to conductors</p> <p>4.3 Weatherproof building entry points as required</p> <p>4.4 Fit over voltage protection devices to all cables with metallic component as required</p>
5 Complete tasks on site	<p>5.1 Record any approved alteration to original design and return to appropriate personnel</p> <p>5.2 Complete appropriate records and sign reports as required according to industry policy</p> <p>5.3 Restore site to original condition and dispose of waste in environmentally safe manner</p> <p>5.4 Notify appropriate personnel and obtain sign-off</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance, but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Uses a range of strategies to facilitate comprehension
Writing	<ul style="list-style-type: none"> Completes records according to enterprise requirements
Oral Communication	<ul style="list-style-type: none"> Use language and non-verbal features appropriate to context
Numeracy	<ul style="list-style-type: none"> Interprets and comprehends a range of everyday mathematical information that is embedded in familiar and routine texts
Navigate the world of work	<ul style="list-style-type: none"> Takes personal responsibility for adherence to legal and regulatory responsibilities relevant to own work context, and draws attention to any issues that may affect self or others
Get the work done	<ul style="list-style-type: none"> Implements actions as per plan, making slight adjustments if necessary, and addressing some unexpected issues Automatically implements standard procedures for routine decisions in response to familiar problems

Unit Mapping Information

No equivalent unit. Supersedes and is not equivalent to ICTCBL220 Install a cable lead-in.

Links

Companion Volume Implementation Guides are available from VETNet -

Assessment Requirements for ICTCBL251 Install aerial and underground cable lead-ins

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- plan the works and prepare the site
- install at least two types of aerial cable and one type of underground cable, including placing and securing cables on support structures and building faces for both internal and external locations
- install at least one mid-span fly offs utilising industry specific/approved hardware
- haul, secure and terminate, continuity test and seal cables
- perform visual inspection to identify safe support structures from pole status markings
- use specialised hand or power tools and equipment for safely installing aerial and underground cable
- terminate cables at the customer and network ends of aerial and underground installations
- complete and provide a report, documenting the installation for the customer
- comply with all related work health and safety (WHS) requirements, industry standards, authorisations and work practices.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- legislation, codes, enterprise procedures and other formal agreements that impact on the work activity
- codes, standards, industry guidelines and authorisations for cable installation and cabling
- specific WHS requirements and environmental procedures relating to the activity and site conditions

- relevant regulatory requirements for working at heights and working underground
- common types of cable used in telecommunications
- manufacturer requirements for selection and safe operation of tools and equipment
- safety equipment, both personal and worksite related, required for safe work practices
- required fixing devices and hardware used in cable lead-in work
- termination methods and performance requirements that include cable continuity of installed cables
- typical safety issues and challenges that occur on site, including issues relating to the safe use of support structures
- purpose of records and documentation required for work activity.
-

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- site/s where aerial and underground cable lead-ins can be conducted
- plant, tools, equipment and personal protective equipment currently used in industry
- special purpose tools, equipment and materials currently used in industry such as continuity testing equipment
- relevant regulatory and equipment documentation that impacts on work activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTCBL252 Joint and terminate coaxial cable

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Application

This unit describes the skills and knowledge required to install, joint and terminate coaxial cable in the customer access network (CAN) environment for emerging technologies using high speed broadband and the delivery of cable television services on customer premises for domestic, commercial or industrial installations.

It applies to technical staff who joint and terminate coaxial cable used in all telecommunications applications, including convergence technologies of telephony, data, video and multimedia as part of next generation networks (NGNs).

Licensing, legislative, regulatory and certification requirements apply to telecommunications systems. All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media Authority (ACMA) accredited registrar. Refer to the ICT Information and Communications Technology Training Package Companion Volume Implementation Guide or the relevant regulator for details of licensing, legislative or certification requirements.

Unit Sector

Telecommunications – Cabling

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to install and joint coaxial cable	1.1 Confirm approval for site access with customer prior to site entry 1.2 Read and interpret customer installation specifications and physical conditions at site to determine layout of job 1.3 Locate and identify adjoining other services according to

ELEMENT	PERFORMANCE CRITERIA
	<p>enterprise guidelines and work health and safety (WHS) practices</p> <p>1.4 Test for and respond to presence of dangerous gases in underground enclosures according to enterprise guidelines</p> <p>1.5 Undertake approved alterations to design according to enterprise guidelines</p>
2. Verify placement and secure coaxial cable	<p>2.1 Use safety equipment to protect self and public</p> <p>2.2 Maintain coaxial cable segregation to industry standard requirements</p> <p>2.3 Protect integrity of coaxial shield cable to ensure no loss of performance</p> <p>2.4 Place cable in position with sufficient slack to allow termination and maintain minimum bend radius according to manufacturer specifications</p> <p>2.5 Follow installation designs to install cable safely without damage to cable or customer premises</p> <p>2.6 Maintain radio frequency (RF) signal strength by installing cable lengths within manufacturer or design specifications</p> <p>2.7 Locate securing hardware to reduce cumulative effect on cable wave shape properties and attach cable ties to minimise cable damage</p>
3. Joint coaxial cable	<p>3.1 Strip coaxial cable, according to specifications, to required length using appropriate tools</p> <p>3.2 Select appropriate kit to match type of coaxial cable in use and jointing method according to manufacturer recommendations</p> <p>3.3 Joint cable and ensure jointing fitting retains segregation of conductor and shield</p> <p>3.4 Seal all joints according to manufacturer specifications</p>
4. Terminate coaxial cable	<p>4.1 Prepare coaxial cable for termination according to specifications using appropriate tool</p> <p>4.2 Select connectors to match type of coaxial cable in use and use terminating method recommended by manufacturer</p> <p>4.3 Verify connector fitting retains segregation of conductor and shield</p> <p>4.4 Terminate connectors to torque as recommended by manufacturer to prevent RF leakage</p> <p>4.5 Test connectors to mating specifications using gauge tester</p> <p>4.6 Maintain continuous ground on terminations and waterproof seal</p>

ELEMENT	PERFORMANCE CRITERIA
	to preserve cable integrity
5. Complete installation operation	5.1 Place cables in enclosure and lay up according to manufacturer instructions and enterprise guidelines, and check that no safety hazards are evident 5.2 Place other services including cables according to enterprise guidelines 5.3 Reinstall site, remove waste and debris for disposal, and maintain safe worksite conditions
6. Complete installation administration	6.1 Complete reports according to enterprise policy 6.2 Note alterations to plans using appropriate symbols

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance, but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Reads familiar texts fluently, automatically recognising most everyday words and some specialised vocabulary
Writing	<ul style="list-style-type: none"> Sequences writing to produce cohesive text and uses layout consistent with text type
Oral Communication	<ul style="list-style-type: none"> Demonstrates awareness of choices for register, especially in situations that are familiar
Numeracy	<ul style="list-style-type: none"> Interprets and comprehends whole numbers and familiar or routine fractions, decimals and percentages Selects and uses appropriate tools, hand-held devices, computers and technological processes
Navigate the world of work	<ul style="list-style-type: none"> Takes responsibility for decisions regarding when and how to complete tasks, and coordinate with or delegate to others Takes personal responsibility for adherence to legal and regulatory responsibilities relevant to own work context, and draws attention to any issues that may affect self or others
Get the work done	<ul style="list-style-type: none"> Implements actions as per plan, makes slight adjustments if necessary, and addresses unexpected issues Automatically implements standard procedures for routine decisions

Unit Mapping Information

ICTCBL252 Joint and terminate coaxial cable supersedes and is equivalent to ICTCBL209 Joint and terminate coaxial cable.

Links

Companion Volume Implementation Guides are available from VETNet -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=a53af4e4-b400-484e-b778-71c9e9d6aff2>

Assessment Requirements for ICTCB252 Joint and terminate coaxial cable

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- determine installation requirements, and check and prepare the site ready for coaxial cable installation
- perform an in-line splice
- perform jointing and termination of coaxial cable using specialised hand or power tools and equipment
- complete waterproof jointed cable using heat shrinkage
- apply related work health and safety (WHS) requirements and work practices
- conduct signal strength tests and interpret results
- fit jointed coaxial cable in suitable housing
- check and adjust cable segregations
- verify the installation complies with enterprise and manufacturer specifications and warranties
- document work according to enterprise requirements.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- relevant legislation, regulations, codes, standards, enterprise guidelines, formal agreements and contracts that impact on the work activity
- specific WHS requirements and environmental procedures relating to the activity and site conditions, including site security and typical safety issues and challenges that occur on site

- range of coaxial cables and connectors and their application
- information required to operate equipment according to a test specification
- features and operating requirements of test equipment
- manufacturer requirements for selection, installation and safe operation of equipment
- test methods and performance requirements
- impact that other services may have on installation work
- operation of tools relevant to working with coaxial cable
- environmental requirements for waste and debris disposal.

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- site/s where jointing coaxial broadband cable can be conducted
- special purpose tools, equipment and materials currently used in industry such as joint testing equipment
- relevant regulatory and equipment documentation that impacts on cable jointing and testing activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTCBL253 Construct underground telecommunications infrastructure

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Application

This unit describes the skills and knowledge required to construct underground telecommunications infrastructure, made up of conduits and enclosures, for cabling provisioning.

It applies to individuals in technical roles in civil construction who install pits and pre-built enclosures with connecting pipes for underground telecommunications infrastructure, predominantly in greenfield sites.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – cabling

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to construct underground work	<p>1.1 Obtain construction design plan from appropriate personnel to scope work and arrange for site access</p> <p>1.2 Notify appropriate personnel of identified safety hazards and other services that will need to be considered</p> <p>1.3 Obtain plant, tools and safety equipment to perform tasks safely and efficiently</p> <p>1.4 Determine type of underground pit/manhole required for project as specified in construction design plan</p>

ELEMENT	PERFORMANCE CRITERIA
2. Install enclosure	<p>2.1 Use tools according to enterprise guidelines and work health and safety (WHS) regulations</p> <p>2.2 Determine excavation meets specification of design plan</p> <p>2.3 Place foundation of suitable material to provide safe and stable footing prior to installing underground enclosure in excavation</p> <p>2.4 Place recognised barrier over construction where enclosure is to be installed over power cables according to enterprise requirements or agreements with other authorities</p> <p>2.5 Install earth mat facility under enclosure as required by enterprise</p> <p>2.6 Install enclosure specified in construction design plan according to manufacturer specifications using specified materials</p>
3. Install connecting pipe works	<p>3.1 Install conduit in trench to enterprise specifications</p> <p>3.2 Connect conduit to enclosure according to manufacturer specifications and industry practice</p>
4. Complete project	<p>4.1 Complete reports and record alterations to plans using appropriate symbols, according to enterprise policy</p> <p>4.2 Complete all labelling requirements according to industry standard</p> <p>4.3 Recover obsolete materials and equipment, and return to appropriate point for disposal</p> <p>4.4 Restore site according to enterprise or approving authority requirements and to customer satisfaction</p> <p>4.5 Notify appropriate personnel of job completion and obtain sign-off</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance, but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none">Interprets information from technical sources to identify relevant and key information
Writing	<ul style="list-style-type: none">Documents outcomes and changes to plans using industry relevant terminology and recognised plan symbols
Numeracy	<ul style="list-style-type: none">Interprets scales and ratios on plansPerforms basic calculations appropriate to measuring and estimating size

Skill	Description
Navigate the world of work	<ul style="list-style-type: none">• Takes personal responsibility for adherence to legal and regulatory responsibilities relevant to own work context, and draws attention to any issues that may affect self or others
Interact with others	<ul style="list-style-type: none">• Identifies and follows accepted communication practices and protocols when liaising with clients, internal and external personnel on technical and operational matters
Get the work done	<ul style="list-style-type: none">• Determines job sequence and works logically and systematically to undertake clearly defined tasks• Analyses task requirements to decide on appropriate equipment and practices• Implements actions as per plan, making slight adjustments if necessary, and addressing some unexpected issues• Automatically implements standard procedures for routine decisions in response to familiar problems

Unit Mapping Information

ICTCBL253 Construct underground telecommunications infrastructure supersedes and is equivalent to ICTCBL213 Construct underground telecommunications infrastructure.

Assessment Requirements for ICTCBL253 Construct underground telecommunications infrastructure

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- interpret and apply design plans and prepare for construction
- install enclosures including pipe, pit and prefabricated manholes
- construct in two different soil types: sand, rock, soil or combination soil types
- shore an excavation site to meet enterprise and regulatory requirements
- use specialised hand or power tools and equipment normally used for excavation, pipe, conduit installation and site restoration safely
- complete and document specified work
- apply related work health and safety (WHS) requirements and work practices associated with excavation, enclosure installation and site restoration.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- legislation, codes, enterprise guidelines and other formal agreements that impact on the work activity, including excavation
- specific WHS requirements and environmental guidelines relating to the activity and site conditions, including typical safety issues and challenges that occur on site
- civil construction elements including:
 - operation of construction plant, tools and equipment
 - methods of enclosure construction
 - methods for laying foundations
 - construction design plans

- manufacturer requirements for safe operation of equipment
- relevant licence requirements for equipment used in constructing underground infrastructure.

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- site/s where enclosure construction can be conducted
- construction equipment currently used in industry
- relevant regulatory and equipment documentation that impacts on construction.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTCBL254 Joint metallic conductor cable in access network

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Application

This unit describes the skills and knowledge required to joint metallic, conductor cable on the service provider side of the network boundary in communications applications, including digital and analog, telephony, data, video, digital broadcasting, computer networks, local area networks (LANs), wide area networks (WANs) and multimedia.

It applies to individuals working in technical roles who joint metallic conductor cable for indoor and outdoor installations on new installations and cable upgrades, and maintain infrastructure in domestic, commercial and industrial situations for service providers and asset owners.

Licensing, legislative, regulatory and certification requirements apply to telecommunications systems. All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media (ACMA) accredited registrar.

Unit Sector

Telecommunications – Cabling

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for jointing metallic conductor cable for access network	1.1 Prepare for given work according to relevant legislation, regulations, codes, and standards 1.2 Arrange access to site according to required procedure 1.3 Inform appropriate personnel of existing and potential worksite hazards

ELEMENT	PERFORMANCE CRITERIA
	1.4 Review site plans and documentation 1.5 Select cable type and appropriate connectors for cable joint 1.6 Set up tools, equipment and materials required for safe work practice 1.7 Obtain information about location of other services from relevant authorities
2. Joint metallic conductor cable for access network	2.1 Joint metallic cable following work health and safety (WHS) and environmental requirements 2.2 Ensure joint is sealed to industry specifications 2.3 Perform relevant cable tests to ensure joint complies with site specifications, manufacturer specifications, and relevant legislation, regulations, codes and standards 2.4 Rectify cable faults 2.5 Record cable tests and required modifications 2.6 Label and tag cable joint according to enterprise guidelines and industry practice
3. Protect and alarm cable	3.1 Pressurise cable and check for leakage 3.2 Reconnect alarms, as required, according to enterprise guidelines 3.3 Remove waste and debris from worksite and dispose of according to environmental requirements, to maintain safe worksite conditions
4. Complete records and clean-up site	4.1 Complete required records including alterations and notify customer 4.2 Clean-up and reinstate site according to customer and company requirements 4.3 Present all records to appropriate personnel and obtain sign-off

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance, but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interprets information from technical sources to identify relevant and key information

Skill	Description
Writing	<ul style="list-style-type: none">Documents outcomes and changes to records using industry relevant terminology
Numeracy	<ul style="list-style-type: none">Takes measurements and interprets results
Navigate the world of work	<ul style="list-style-type: none">Takes personal responsibility for adherence to legal, regulatory and enterprise requirements relevant to own work context
Interact with others	<ul style="list-style-type: none">Identifies and follows accepted communication practices and protocols when liaising with clients and internal and external personnel on technical and operational matters
Get the work done	<ul style="list-style-type: none">Determines job sequence and works logically and systematically to undertake clearly defined tasksAnalyses task requirements to decide on appropriate equipment and practicesImplements actions as per plan, making slight adjustments if necessary, and addressing some unexpected issuesAutomatically implements standard procedures for routine decisions in response to familiar problems

Unit Mapping Information

ICTCBL254 Joint metallic conductor cable in access network supersedes and is equivalent to ICTCBL215 Joint metallic conductor cable in access network.

Links

Companion Volume Implementation Guides are available from VETNet -

Assessment Requirements for ICTCBL254 Joint metallic conductor cable in access network

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- joint cable with appropriate connectors and according to specifications
- apply work health and safety (WHS) requirements and work practices associated with the jointing of metallic cable, including documentation.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- legislation, codes, enterprise guidelines and other formal agreements that impact on the work activity, in particular:
 - Australian Communications and Media Authority (ACMA) competency requirements for Telecommunications Cabling Provider Rules
- features and operating requirements of test equipment
- information required to operate equipment according to a test specification
- manufacturer requirements for safe operation of equipment
- safety precautions when working with cables
- specific WHS and environmental requirements relating to the activity and site conditions
- test methods and performance requirements
- typical issues and challenges that occur on site.

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- site/s where jointing metallic conductor cable can be performed
- cable testing equipment currently used in industry
- relevant regulatory and equipment documentation that impacts on cable jointing activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. Refer also to the *Requirements for assessors* in the ICT Information and Communications Technology Training Package Companion Volume Implementation Guide.

ICTCBL313 Modify and cutover cable

Modification History

Release	Comments
Release 2	This version released with ICT Information and Communications Technology Training Package Version 5.0.
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 2.0.

Application

This unit describes the skills and knowledge required to modify an infrastructure to cutover new cables into an existing indoor and outdoor, domestic, commercial or industrial cabling installation including communications applications in telephony, broadband, data, video, radio frequency (RF) equipment, security and computer networks, including local area networks (LAN), wide area networks (WAN) and multimedia.

It applies to field officers, technicians or lineman installers from carriers, contractors or other service providers who upgrade coaxial or optical fibre cables as part of a hybrid fibre coaxial (HFC) network, a broadband access network or a large client private network.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the Implementation Guide Companion Volume or the relevant regulator for specific guidance on requirements.

Unit Sector

Telecommunications – cabling

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for cable modification and cutover	<p>1.1 Obtain relevant legislation, codes, regulations and standards for given work</p> <p>1.2 Scope work by obtaining project plan from appropriate personnel and arrange for site access to comply with security arrangements</p> <p>1.3 Notify appropriate personnel of identified safety hazards at worksite</p> <p>1.4 Determine cable route and type of cable from project plan, and identify and avoid other services</p> <p>1.5 Obtain plant, tools and safety equipment and material to perform tasks safely and efficiently</p> <p>1.6 Prepare implementation plan with cutover tasks based on identified nature of job and seek client approval</p> <p>1.7 Notify client and network carrier of proposed cutover details and proposed disruption to services</p> <p>1.8 Undertake additional preparatory non-jointing work, as required, according to enterprise guidelines and site conditions</p> <p>1.9 Select labour support required according to cutover tasks and available skills</p> <p>1.10 Select technical equipment for cutover to suit materials being used, cable type and joint enclosure</p>
2. Joint and cutover cable	<p>2.1 Follow work health and safety (WHS) and environmental requirements for given work</p> <p>2.2 Joint cable according to sequencing plan, materials, joint type, location, and enterprise and manufacturer's guidelines</p> <p>2.3 Test cable for performance and rectify any faults relating to cutover according to location, materials available and industry practice</p> <p>2.4 Seal all joints according to cable type, location, and enterprise and manufacturer's guidelines</p>
3. Complete project documentation	<p>3.1 Record test results for future reference, complete reports on cutover installation and design amendments to reflect existing cable layout according to enterprise requirements</p> <p>3.2 Recover obsolete materials and return to appropriate point for disposal</p> <p>3.3 Restore site according to requirements of enterprise or approving authority and to client satisfaction</p> <p>3.4 Notify appropriate personnel completion of cutover and obtain</p>

ELEMENT	PERFORMANCE CRITERIA
	sign off

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Analyses and consolidates test results and data from a range of sources, against defined criteria and requirements Reads and interprets plans, specifications and other documentation from a variety of sources and consolidates information to determine requirements
Writing	<ul style="list-style-type: none"> Documents outcomes and changes to plans using industry relevant terminology and recognised plan symbols Prepares documentation and correspondence using clear language and correct spelling and terminology
Oral Communication	<ul style="list-style-type: none"> Interacts effectively in verbal exchanges using active listening, questioning and reading of verbal and non-verbal signals to convey and clarify information
Numeracy	<ul style="list-style-type: none"> Make calculations appropriate for measuring and estimating materials for construction Performs mathematical calculations to check, interpret and confirm results of system tests
Navigate the world of work	<ul style="list-style-type: none"> Takes personal responsibility for following explicit and implicit policies, procedures and legislative requirements Identifies and acts on issues that contravene relevant policies, procedures and legal requirements
Interact with others	<ul style="list-style-type: none"> Uses a range of strategies to establish a sense of connection and build rapport with clients and co-workers
Get the work done	<ul style="list-style-type: none"> Takes responsibility for planning, sequencing and prioritising tasks and own workload for efficiency and effective outcomes Addresses less predictable problems and initiates standard procedures in response, applying problem solving processes in determining a solution

Assessment Requirements for ICTCBL313 Modify and cutover cable

Modification History

Release	Comments
Release 2	This version released with ICT Information and Communications Technology Training Package Version 5.0.
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 2.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- prepare for cutover
- rearrange cable
- conduct tests to determine success of cutover
- interpret results and rectify faults occurring as a result of cutover
- apply regulations and standards related to the cable rearrangement
- comply with all related health and safety requirements, work practices and service level agreements.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- cabling types, connectors and cabling structures
- legislation, codes of practice and other formal agreements that impact on the work activity
- manufacturer's requirements for safe operation of equipment
- cutover of cable on the client's equipment
- health and safety requirements relating to the activity and site conditions

- test methods and performance requirements
- features and operating requirements of test equipment
- typical issues and challenges that occur on the worksite
- purpose of warranties and service level agreements (SLA).

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- systems and equipment involving cutover
- installation equipment currently used in industry
- relevant regulatory and equipment documentation that impacts on work activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTCBL322 Install, test and terminate optical fibre cable on customer premises

Modification History

Release	Comments
Release 2	This version released with ICT Information and Communications Technology Training Package Version 6.0. Release 2 created for editorial corrections.
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Application

This unit describes the skills and knowledge required to install, test and terminate optical fibre cable on customer premises for communications applications using a range of terminations that may include direct termination, fusion splicing and mechanical splicing.

It applies to technical staff who place, secure and terminate optical fibre cable in new installations and upgrades or maintain existing networks in domestic, commercial and industrial installations. Communications applications include digital and analog, telephony, data, video, digital broadcasting, computer networks, local area networks (LANs), wide area networks (WANs) and multimedia.

Licensing, legislative, regulatory and certification requirements apply to telecommunications systems. All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media Authority (ACMA) accredited registrar.

Unit Sector

Telecommunications – Cabling

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for installation of optical fibre cable	1.1 Access site according to enterprise procedures 1.2 Inform appropriate personnel of identified worksite hazards 1.3 Organise tools, cabling products, equipment and materials for given work 1.4 Match optical fibre cable type and connectors to installation environment and customer requirements 1.5 Check proposed route and bend ratios according to manufacturer specifications and industry standards 1.6 Test fibres in the cable on the drum for optical continuity as required 1.7 Use personal protective equipment, including safety glasses, when working with bare fibre stripping/cleaving and utilise sharps disposal containers for bare fibre off cuts 1.8 Place fibre patch leads in support pathway, avoiding pressure, crushing and bending
2 Clean and inspect connectors	2.1 Test patch leads, before use, for continuity with a visible light source and inspect and clean connector end faces 2.2 Test fibre connectors ensuring the circuit has no infra-red transmission (dark fibre) 2.3 Ensure that associated equipment is labelled to inform others not to switch the equipment on or reconnect patch leads 2.4 Remove connector dust cover and inspect for dust and damage using an optical microscope or video microscope 2.5 Clean connectors with recommended cleaning tools, using wet and dry methods as required and re-inspect 2.6 Replace connectors or patch cords when inspection reveals irreparable damage or contamination cannot be cleaned off 2.7 Place fibre patch leads in support pathway avoiding pressure, crushing and bending
3. Install indoor/outdoor cables and pigtails to an indoor enclosure	3.1 Undertake work in a controlled environment 3.2 Strip loose tube fibre cable and fit cable and fibres to an indoor enclosure 3.3 Prepare pigtails on workstation in an orderly manner matching cable fibre colour codes to pigtail colour codes as required
4. Terminate or fusion-splice cable	4.1 Prepare fibre for splicing, cleaning and cleaving 4.2 Splice prepared fibres

ELEMENT	PERFORMANCE CRITERIA
	4.3 Shrink splice protective sleeve to spliced fibres and allow to cool
5. Terminate fibre using direct connectorisation	5.1 Prepare fibre (250 um and/or 900 um fibres) for mechanical splicing, cleaning and cleaving 5.2 Connect mechanical splice connector
6. Test circuit joints	6.1 Use visible light sources safely to determine continuity of patch cords and fusion/mechanical splices 6.2 Test each fibre circuit joint for transmission loss with a light source and power meter, and re-terminate joint or connector when transmission loss exceeds industry standards and manufacturer specifications 6.3 Record all measurements in dBm for customer handover
7. Remove fibre hazards from work area	7.1 Clean work area thoroughly to minimise risk of injury from glass fibre off-cuts 7.2 Dispose of waste safely according to relevant environmental requirements 7.3 Restore worksite to customer satisfaction
8. Document installation	8.1 Update plans and records with details of installation and test results 8.2 Notify customer of work completion and obtain sign-off

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance, but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Recognises the structures and distinguishing features of a range of familiar text types
Writing	<ul style="list-style-type: none"> Chooses appropriate text type to communicate relevant information and/or ideas effectively
Oral Communication	<ul style="list-style-type: none"> Demonstrates awareness of choices in register, especially in situations that are familiar
Numeracy	<ul style="list-style-type: none"> Interprets and comprehends whole numbers and familiar or routine fractions, decimals and percentages
Navigate the world of	<ul style="list-style-type: none"> Takes personal responsibility for adherence to legal and regulatory responsibilities relevant to own work context, and draws attention to

Skill	Description
work	any issues that may affect self or others
Get the work done	<ul style="list-style-type: none">• Implements actions as per plan, making slight adjustments if necessary, and addressing some unexpected issues• Automatically implements standard procedures for routine decisions in response to familiar problems• Understands when to take responsibility and when to notify others

Unit Mapping Information

No equivalent unit. Supersedes and is not equivalent to ICTCBL302 Install and terminate optical fibre cable on customer premises.

Assessment Requirements for ICTCBL322 Install, test and terminate optical fibre cable on customer premises

Modification History

Release	Comments
Release 2	This version released with ICT Information and Communications Technology Training Package Version 6.0. Release 2 created for editorial corrections.
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- install, terminate and test optical fibre cable, applying safety precautions when working with laser-based systems
- prepare workstation to provide for fibre preparation, cleaving, fusion splicing, enclosure fit out, cleaning pads and tools, sharps and waste disposal
- ensure workstation is located in a dust free environment with adequate ventilation, lighting and power
- install and test single mode and multimode cable
- perform direct field termination
- provide customer report documenting installation and test results
- comply with all related work health and safety (WHS) and environmental requirements and work practices
- install a mechanical splice connector and fusion splice a pigtail to cable fibre
- complete relevant documentation to manufacturer and design requirements.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- legislation, codes and standards for optical fibre
- specific WHS requirements and enterprise procedures relating to the activity and site conditions
- various types of optical fibre cable and associated connectors, enclosures and required equipment
- features and operating requirements of optical fibre cable test equipment
- information required to operate equipment according to a test specification
- manufacturer requirements for safe operation of optical fibre equipment
- safety precautions when working with laser-based systems
- hazards associated with working with optical cable including:
 - bare fibres
 - hazardous laser light
- test methods and performance requirements
- issues relating to environmental work practices and the disposal of waste
- techniques for types of termination, including:
 - direct termination
 - fusion splicing.

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- site/s where installation and termination of optical fibre cable can be conducted
- special purpose tools, equipment and materials currently used in industry such as optical fibre testing equipment
- relevant regulatory and equipment documentation that impacts on optical fibre cable installation activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. Refer also to the *Requirements for assessors* in the ICT Information and Communications Technology Training Package Companion Volume Implementation Guide.

Note: All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media (ACMA) accredited registrar.

ICTCBL323 Test cables and systems on customer premises

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Release 5.0.

Application

This unit describes the skills and knowledge required to test the performance of copper, optical fibre and telecommunications cable on customer premises for the purpose of commissioning, fault identification or routine maintenance. It includes ensuring a safe and secure work environment while work is being undertaken.

It applies to field officers, technicians or technical supervisors working for cablers, technicians, contractors or other service providers who carry out domestic, commercial or industrial installations in indoor and outdoor environments. Communications applications include digital and analog, telephony, data, video, digital broadcasting, computer networks, local area networks (LANs), wide area networks (WANs), power over ethernet (PoE) cable installations and multimedia.

Licensing, legislative, regulatory and certification requirements apply to telecommunications systems. All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media Authority (ACMA) accredited registrar.

Pre-requisite Unit

ICTCBL247 Install, maintain and modify customer premises communications cabling:
ACMA Open Rule

ICTTEN208 Use electrical skills when working with telecommunications networks

ICTWHS204 Follow work health and safety and environmental policy and procedures

Unit Sector

Telecommunications – Cabling

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for cable and system test	<p>1.1 Establish purpose of test to be conducted on cables and systems based on customer complaints of faulty or poor system performance operations</p> <p>1.2 Confirm ACMA (Australian Communications and Media Authority) requirements and methods for compliance with relevant legislation, regulations, codes and standards</p> <p>1.3 Select required tests according to site conditions, customer complaint documentation and manufacturer specifications</p> <p>1.4 Arrange access to site and confirm service is available for testing</p> <p>1.5 Select test equipment, tools and materials according to required industry testing standards</p>
2. Perform tests	<p>2.1 Use tools and test equipment according to manufacturer specifications and undertake tests required after initial analysis of customer complaints</p> <p>2.2 Perform work safely to remove risk of injury to operator, other users and equipment</p> <p>2.3 Perform checks and adjustments to ensure operating environmental factors will not prejudice test results</p> <p>2.4 Perform optical time domain reflectometer testing to determine fibre and event characteristics according to meet customer or enterprise specifications and manufacturer warranties</p> <p>2.5 Perform structured cabling certification testing to determine cable system characteristics according to customer or enterprise specifications and manufacturers warranties</p> <p>2.6 Evaluate PoE circuits, cable lengths, copper conductor sizes, resistance versus power losses, environmental temperatures and likely power levels to ensure circuit current, voltage and power to the receiving device</p>
3. Interpret test results and determine action	<p>3.1 Read test results accurately and compare with manufacturer and site specifications for cable performance</p> <p>3.2 Evaluate test results, taking into account measurement error margins against a known reference as required</p> <p>3.3 Assess test results fairly and accurately using verifiable data</p> <p>3.4 Rectify faults or escalate to appropriate person</p>

ELEMENT	PERFORMANCE CRITERIA
4. Complete records and clean up site	4.1 Document test results and ensure test results remain current 4.2 Verify test results and provide to customer as required 4.3 Update site and installation files to ensure information on system performance is traceable including PoE standards 4.4 Reinstate site according to customer and company requirements 4.5 Notify customer and obtain sign-off

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance, but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Reads, analyses and interprets plans, specifications and other documentation relevant to cable and systems testing
Writing	<ul style="list-style-type: none"> Prepares written technical reports and documentation for test results Records notes on communications and provides written feedback to customers
Oral Communication	<ul style="list-style-type: none"> Discuss parameters for the tests and provide oral feedback on results as required, using language appropriate to the understanding of the customer
Numeracy	<ul style="list-style-type: none"> Carries out calculations and analyses results as appropriate for the tests being performed
Navigate the world of work	<ul style="list-style-type: none"> Takes personal responsibility for implementing implicit policies, procedures and legislative requirements, particularly as they apply to safety
Interact with others	<ul style="list-style-type: none"> Selects and uses appropriate conventions and protocols when communicating with customers and co-workers
Get the work done	<ul style="list-style-type: none"> Takes responsibility for planning, sequencing and prioritising tasks and own workload for efficiency and effective outcomes

Unit Mapping Information

No equivalent unit. Supersedes and is not equivalent to ICTCBL304 Perform cable and system test on customer premises.

Links

Companion Volume Implementation Guides are available from VETNet -

Assessment Requirements for ICTCBL323 Test cables and systems on customer premises

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Release 5.0.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- perform certification tests on copper ethernet cables to cover common ethernet cable faults including:
 - crosstalk, attenuation to crosstalk ratio (ACR), delays, wiremaps, attenuation, length
- perform optical time domain reflectometer (OTDR) tests on fibre cables to cover common fibre cable faults and common waveforms for standard fibre cabling events, including:
 - breaks, distance, connectors, Numerical Aperture mismatches, end of fibre, ghosts, splitters
- check capabilities of ethernet cables for power over ethernet (PoE)
- provide power calculations and evaluation of viability and safety of cables providing PoE
- interpret test results
- use appropriate methods to escalate cable faults affecting service delivery
- report on completed cable and system test.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- legislation, codes, enterprise requirements, and other formal agreements that impact on the work activity
- specific WHS requirements and environmental factors relating to the activity and site conditions
- cabling types, connectors and cabling structures
- single-mode (SM) and/or multi-mode (MM) optical fibre links in point-to-point networks

- connections to carrier infrastructure or equipment, such as main distribution frame (MDF) or customer interface units (CIU) or network termination device (NTD)
- electrical and/or optical properties to be measured
- PoE potential hazards and performance specifications
- remote power feed method and system
- test results derived from test equipment and interpretation of test results against expected cable system performance specifications
- typical performance parameters and faults that may be encountered in customer cabling and related connection and transmission equipment
- types of equipment and manufacturer specifications suitable for tests to be carried out.
-

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- site/s where cable and system tests can be conducted
- cable and system testing equipment currently used in industry
- relevant regulatory and cable specifications that impact on cable and system testing installation activities, including PoE on new and legacy cabling.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. Refer also to the *Requirements for assessors* in the ICT Information and Communications Technology Training Package Companion Volume Implementation Guide.

ICTCBL324 Cut over new systems and equipment on customer premises

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Application

This unit describes the skills and knowledge required to cut over new or upgraded systems and equipment on customer premises. This may include indoor or outdoor installations of communications applications in telephony, broadband, data, video, radio frequency (RF) equipment, security and computer networks, including local area networks (LANs), wide area networks (WANs) and multimedia systems.

It applies to telecommunications trade workers carrying out new installations or upgrades to domestic, commercial or industrial systems and equipment at customer premises.

Licensing, legislative, regulatory and certification requirements apply to telecommunications systems. Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media Authority (ACMA) accredited registrar. Refer to the ICT Information and Communications Technology Training Package Companion Volume Implementation Guide or the relevant regulator for specific guidance on requirements.

Unit Sector

Telecommunications – Cabling

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare system and equipment cut over	1.1 Scope work by obtaining project plan from appropriate personnel and arrange for site access according to security arrangements

ELEMENT	PERFORMANCE CRITERIA
	<p>1.2 Notify appropriate personnel of identified worksite hazards</p> <p>1.3 Determine cable route, and type of cable and equipment required from project plan, and identify and avoid other services</p> <p>1.4 Obtain plant, tools, safety equipment and materials to perform tasks safely and efficiently</p> <p>1.5 Prepare implementation plan with cut over tasks based on identified nature of job, and seek customer approval</p> <p>1.6 Notify customer and network carrier of proposed cut over details and arrange for customer representation and agreement</p>
2. Cut over system or equipment into service	<p>2.1 Perform cut over tasks and connect network facilities according to approved plan</p> <p>2.2 Test all cable connections, equipment and facilities according to technical manuals and specifications</p> <p>2.3 Evaluate test results to ensure proper system operation and performance, and rectify as required</p>
3. Complete project documentation	<p>3.1 Record test results for future reference, complete reports on cut over installation and design amendments according to enterprise requirements</p> <p>3.2 Recover obsolete materials and equipment, and return to customer or appropriate point for disposal</p> <p>3.3 Restore site according to enterprise or approving authority requirements and customer satisfaction</p> <p>3.4 Notify appropriate personnel of job completion and obtain sign-off</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance, but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none">Reads and interprets plans, specifications and other documentation from a variety of sources and consolidates information to determine requirementsAnalyses and consolidates test results and data from a range of sources, against defined criteria and requirements
Writing	<ul style="list-style-type: none">Prepares documentation and correspondence using clear language and correct spelling and terminology

Skill	Description
	<ul style="list-style-type: none"> Documents outcomes of tests and changes to plans using industry relevant terminology and recognised plan symbols
Oral Communication	<ul style="list-style-type: none"> Interacts effectively in verbal exchanges using active listening, questioning and reading of verbal and non-verbal signals to convey and clarify information Interacts effectively in verbal exchanges, using active listening and questioning to convey and clarify information
Numeracy	<ul style="list-style-type: none"> Makes calculations appropriate for measuring and estimating materials for construction Performs mathematical calculations to check, interpret and confirm results of system tests
Navigate the world of work	<ul style="list-style-type: none"> Takes personal responsibility for following explicit and implicit policies, procedures and legislative requirements Identifies and acts on issues that contravene relevant policies, procedures and legal requirements
Interact with others	<ul style="list-style-type: none"> Selects and uses appropriate conventions and protocols when communicating with customers and co-workers in a range of work contexts Uses a range of strategies to establish a sense of connection and build rapport with customers and co-workers
Get the work done	<ul style="list-style-type: none"> Takes responsibility for planning, sequencing and prioritising tasks and own workload for efficiency and effective outcomes Makes decisions and implements standard procedures for routine tasks, using formal decision-making processes for more complex and non-routine situations Applies problem solving processes for determining solutions

Unit Mapping Information

ICTCBL324 Cut over new systems and equipment on customer premises supersedes and is equivalent to ICTCBL312 Cutover new systems and equipment on customer premises.

Assessment Requirements for ICTCB324 Cut over new systems and equipment on customer premises

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- read and interpret project plans and specifications
- develop and implement a cut over work plan
- install customer premises equipment and cabling
- configure and test cabling systems and equipment
- apply relevant regulations and standards.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- legislation, regulations, codes, standards and other formal agreements that impact on the work activity
- health, safety and environmental requirements relating to the activity and site conditions
- cabling types, connectors and cabling structures
- manufacturer requirements for safe operation of equipment
- equipment requiring cut over at customer premises
- selection of test methods and performance requirements
- features and operating requirements of test equipment for cut over.

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- site/s where installation of systems and equipment can be conducted
- plant, tools and equipment currently used in industry
- relevant regulatory and equipment documentation that impacts on work activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTCBL325 Maintain cable network

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Application

This unit describes the skills and knowledge required to maintain indoor or outdoor, domestic, commercial or industrial cable network on customer premises or service provider access networks. This may include communications applications in telephony, broadband, data, video, radio frequency (RF) equipment, security and computer networks, including local area networks (LANs), wide area networks (WANs) and multimedia.

It applies to technicians and lines workers who install and maintain network cable equipment within the broadband infrastructure deployment. They may upgrade a coaxial or optical fibre cable as part of a hybrid fibre coaxial (HFC) network, a broadband access network or a large customer private network.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media Authority (ACMA) accredited registrar. Refer to the ICT Information and Communications Technology Training Package Companion Volume Implementation Guide or the relevant regulator for specific guidance on requirements.

Unit Sector

Telecommunications – Cabling

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1 Prepare for cable maintenance	1.1 Scope work by obtaining project plan from appropriate personnel and arrange for site access according to security arrangements 1.2 Notify appropriate personnel of identified worksite hazards

ELEMENT	PERFORMANCE CRITERIA
	<p>1.3 Determine cable route and type of cable from schedule, and identify and avoid other services</p> <p>1.4 Obtain plant, tools, safety equipment and material to perform tasks safely and efficiently</p>
2 Maintain cables, cable supports and enclosures	<p>2.1 Clean area of debris, vegetation and foreign matter as required</p> <p>2.2 Conduct visual inspections of cable infrastructure, enclosures and carrier interfaces for assessment of evident damages according to enterprise guidelines, and notify appropriate personnel</p> <p>2.3 Check customer interface units for correct operation and rectify identified faults</p> <p>2.4 Undertake remedial action on damages according to warranties and service level agreements, prior to maintenance routine</p> <p>2.5 Perform maintenance tasks and tests in a safe manner and note activities on maintenance schedule</p>
3 Complete maintenance documentation	<p>3.1 Record test results, maintenance activities and corrective actions for future reference and complete maintenance schedule attendance chart according to enterprise requirements</p> <p>3.2 Recover obsolete materials and return to appropriate point for disposal</p> <p>3.3 Restore site according to enterprise or approving authority requirements and customer satisfaction</p> <p>3.4 Notify appropriate personnel of job completion and obtain sign-off</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance, but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Reads and interprets plans, specifications and other documentation from a variety of sources and consolidates information to determine requirements Analyses and consolidates test results and data from a range of sources, against defined criteria and requirements
Writing	<ul style="list-style-type: none"> Prepares documentation and correspondence using clear language and correct spelling and terminology

Skill	Description
	<ul style="list-style-type: none"> Documents outcomes and changes to plans using industry relevant terminology and recognised plan symbols
Oral Communication	<ul style="list-style-type: none"> Conveys and clarifies information effectively to a range of personnel using collaborative techniques, including active listening and questioning Presents complex information in formal situations using clear and convincing language, tone and pace appropriate for the audience and purpose
Numeracy	<ul style="list-style-type: none"> Makes calculations appropriate for measuring and estimating materials for maintenance works Performs mathematical calculations to check, interpret and confirm results of system tests
Navigate the world of work	<ul style="list-style-type: none"> Takes personal responsibility for following explicit and implicit policies, procedures and legislative requirements Identifies and acts on issues that contravene relevant policies, procedures and legal requirements
Interact with others	<ul style="list-style-type: none"> Uses a range of strategies, reads verbal and non-verbal signals, establishes a sense of connection and builds rapport with customers and co-workers
Get the work done	<ul style="list-style-type: none"> Takes responsibility for planning, sequencing and prioritising tasks and own workload for efficiency and effective outcomes Addresses less predictable problems and initiates standard procedures in response, applying problem solving processes in determining solutions

Assessment Requirements for ICTCBL325 Maintain cable network

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- test cables and equipment and interpret results
- undertake remedial action on damages
- safely use specialised hand or power tools and equipment
- apply regulations and standards related to maintenance
- comply with all related health, safety and environmental requirements and work practices.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- relevant legislation, regulations, codes and standards
- cabling types, connectors and cabling structures
- connections to carrier infrastructure or equipment, such as main distribution frame (MDF) or customer interface units (CIU)
- maintenance requirements of equipment at customer premises
- electrical and optical properties to be measured
- health, safety and environmental considerations including:
 - electrical safety and lifting hazards
 - manufacturer requirements for safe operation of equipment
 - typical safety issues and challenges that occur on the worksite
- test methods and performance requirements for the maintenance work
- purpose of warranties and service level agreements in relation to maintenance work.

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- site/s where maintenance of network cable can be conducted
- equipment currently used in industry
- relevant regulatory and equipment documentation that impacts on maintenance activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTCBL326 Cut over metallic conductor cable in the access network

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Application

This unit describes the skills and knowledge required to cut over and rearrange new and existing distribution cables in the telecommunications access network.

It applies to lines workers, jointers or technicians working for carriers, contractors or other service providers who work on new or existing copper cables in the access network.

Licensing, legislative, regulatory and certification requirements apply to telecommunications systems. Work functions in the occupational areas where this unit may be used may be subject to regulatory requirements. All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media Authority (ACMA) accredited registrar. Refer to the ICT Information and Communications Technology Training Package Companion Volume Implementation Guide or the relevant regulator for specific guidance on requirements.

Unit Sector

Telecommunications – Cabling

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1 Prepare for cable modification and cut over	1.1 Obtain project plan from appropriate personnel and use plan to scope work for job 1.2 Arrange for access to worksite, according to local government or other authority requirements 1.3 Inspect site to develop a work health and safety (WHS) plan and

ELEMENT	PERFORMANCE CRITERIA
	<p>notify appropriate personnel of identified safety hazards</p> <p>1.4 Determine cable route and type of cable from project plan, taking into account the location of other services</p> <p>1.5 Obtain required plant, tools, safety equipment and materials</p> <p>1.6 Prepare detailed plan of cut over tasks according to project plan, job scope, legislative and other requirements, and obtain necessary approvals</p> <p>1.7 Notify customer and network carrier of proposed cut over activity and proposed disruption to services that may impact on their service level agreements (SLAs)</p> <p>1.8 Undertake additional preparatory non-jointing work, as required, according to customer practices and site conditions</p>
2 Joint and cut over cable	<p>2.1 Prepare cabinet, joint enclosure and jointing chambers for cable handling, entry and sealing requirements</p> <p>2.2 Joint cable according to manufacturer guidelines</p> <p>2.3 Test cable for performance and rectify cut over faults relating to cut over according to location, materials available and customer practices</p> <p>2.4 Record test results for future reference</p> <p>2.5 Seal all joints according to cable type, location, customer practices and manufacturer guidelines</p>
3 Clean-up worksite and complete documentation	<p>3.1 Complete reports on cut over installation and design amendments to reflect existing cable layout and according to enterprise requirements</p> <p>3.2 Place and secure correctly labelled cables to supports in jointing chamber or cabinet according to customer practices</p> <p>3.3 Mark-up as-built plans for return to customer for their records</p> <p>3.4 Recover obsolete materials and return to appropriate point for disposal</p> <p>3.5 Notify appropriate personnel about completion of cut over and obtain sign-off</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance, but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none">• Interprets plans, specifications and other documentation from various sources• Consolidates information to determine requirements

Assessment Requirements for ICTCBL326 Cut over metallic conductor cable in the access network

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- set up the site for a cabling cut over job
- use project plan to determine cable route and necessary fittings for installation
- use project plan to prepare detailed cut over plan including any anticipated outages that may affect service level agreements (SLAs)
- follow customer practices for the placement and sealing of cables
- separate, label and joint cable units and pairs according to industry practices
- test cable, rectify faults, record results and take appropriate action
- seal all joints and cabinets according to enterprise agreements
- comply with relevant work health and safety (WHS) and environmental requirements
- place and secure cables and mark-up as-built plans
- handover completed job to customer.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- requirements of legislation, regulations, codes, standards and customer practices relevant to work activity, in particular:
 - WHS requirements and environmental requirements relating to setting up an outdoor site and accessing underground facilities
- project plans and other formal agreements that impact on the work activity
- interpretation and methods to mark-up as-built plans

- common cabling types, connectors and cabling structures (including conductor identification/cable colour coding)
- manufacturer jointing and sealing guidelines and practices
- process of cutting over a cable for various scenarios including:
 - aerial lead-in
 - underground lead-in
- features and operating conditions of test equipment and how the equipment is used to measure cable performance
- typical issues and challenges that may cause delays in job completion, and how these could be addressed
- purpose of warranties and SLAs
- mark-up as-built plans.
-

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- cable systems and jointing equipment required to cut over cable
- cabling infrastructure required for installation
- regulatory and equipment documentation that impacts on work activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTCBL329 Install underground cable for communications applications

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Application

This unit describes the skills and knowledge required to install underground cable for all communications applications in access networks or customer premises.

It applies to technical staff who install cable for new installations and upgrades to telecommunications cabling infrastructure for communications applications including broadcasting or reception (digital video broadcasting – terrestrial [DVB-T], satellite [DVB-S], long term evolution [LTE]), closed-circuit television (CCTV), digital and analog, telephony, data, video, computer networks, local area networks (LANs), wide area networks (WANs), fibre optic networks and multimedia.

Licensing, legislative, regulatory and certification requirements apply to telecommunications systems. Work functions in the occupational areas where this unit may be used may be subject to regulatory requirements and/or the carrier's guidelines. All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media Authority (ACMA) accredited registrar. Refer to the ICT Information and Communications Technology Training Package Companion Volume Implementation Guide or the relevant regulator for specific guidance on requirements.

Unit Sector

Telecommunications – Cabling

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for underground cable	1.1 Access site according to required enterprise procedures

ELEMENT	PERFORMANCE CRITERIA
hauling	<p>1.2 Verify cable installation requirements from plans and recognise constraints</p> <p>1.3 Identify from plans, correct duct to be hauled</p> <p>1.4 Inform appropriate personnel of existing and potential worksite hazards</p> <p>1.5 Obtain information about location of other services from relevant authorities</p> <p>1.6 Select suitable tools, equipment and protective equipment to meet required industry standards</p> <p>1.7 Check for dangerous gases and place guards around open manholes following work health and safety (WHS) and environmental requirements</p> <p>1.8 Confirm correct duct/conduit to be utilised for hauling at site and access to intermediate manholes/pits along the hauling route</p> <p>1.9 Rod and rope the conduit/duct to be hauled</p> <p>1.10 Set-up cable installation equipment according to manufacturer requirements and enterprise guidelines</p> <p>1.11 Clean debris and obstructions from conduit using appropriate mandrels</p> <p>1.12 Seal cable ends to exclude entrance of foreign matter</p>
2. Haul underground cable	<p>2.1 Run hauling feeder through conduit to enable cable hauling</p> <p>2.2 Use rodding techniques to prove that conduit is clear for hauling</p> <p>2.3 Attach cable to hauling feeder according to manufacturer specifications</p> <p>2.4 Employ cable slippers or rollers to ensure no sheath damage when hauling into and out of enclosures</p> <p>2.5 Lubricate cable and haul evenly at correct tension to reduce risk of cable damage</p> <p>2.6 Maintain sufficient cable length allowance for jointing and ensure cable is housed within bending radius tolerance for cable materials in an underground enclosure</p> <p>2.7 Maintain cable and services separations in parallel runs and crossovers according to manufacturer and regulatory requirements</p>
3. Seal and secure cable and complete all documentation	<p>3.1 Tag all cables to enable future identification</p> <p>3.2 Seal cable ends according to enterprise requirements to prevent entrance of foreign material</p> <p>3.3 Place cable on supports in enclosures to reduce damage to</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>conductors and enable ease of access for maintenance</p> <p>3.4 Fit voltage protection devices to all cables with metallic component as required</p> <p>3.5 Complete installation reports and design amendments accurately, and file promptly according to customer requirements</p> <p>3.6 Reinstall site to customer satisfaction and dispose of waste in environmentally safe manner as required</p> <p>3.7 Notify appropriate personnel and obtain sign-off</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance, but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interprets textual information from plans, specifications, standards and regulations to identify relevant and key information
Writing	<ul style="list-style-type: none"> Documents outcomes and changes to plans using industry relevant terminology and recognised plan symbols Prepares documentation and correspondence using clear language and correct spelling and terminology
Oral Communication	<ul style="list-style-type: none"> Uses collaborative and inclusive techniques, including active listening and questioning, to convey and clarify information and to confirm understanding Clearly explains detailed information using language, tone and pace appropriate to the audience
Numeracy	<ul style="list-style-type: none"> Makes calculations appropriate for measuring and estimating materials for hauling
Navigate the world of work	<ul style="list-style-type: none"> Accepts responsibility and ownership for the task, and makes decisions on completion parameters and the need for coordination with others Identifies and acts on issues that contravene relevant policies, procedures and legal requirements
Interact with others	<ul style="list-style-type: none"> Uses a range of strategies and reads verbal and non-verbal signals, establishes a sense of connection and builds rapport with clients and workmates
Get the work done	<ul style="list-style-type: none"> Takes responsibility for planning, sequencing and prioritising tasks and own workload for efficiency and effective outcomes Accepts responsibility for addressing less predictable problems and

Skill	Description
	initiates procedures in response, applying problem solving processes in determining a solution

Unit Mapping Information

No equivalent unit. Supersedes and is not equivalent to ICTCBL308 Install underground cable.

Assessment Requirements for ICTCBL329 Install underground cable for communications applications

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- use the correct type of rope for cable hauling
- use various rodding, roping and mandrel techniques as prior requirements to hauling cable
- haul underground cable by applying work health and safety (WHS) requirements, work practices and industry standards
- use specialised hand or power tools and equipment for hauling cabling safely
- read and interpret plan drawings
- restore site and complete documentation
- comply with all related safety requirements and work practices.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- Australian Communications and Media Authority (ACMA) regulatory requirements for Telecommunications Cabling Provider Rules
- legislation, regulations, codes, standards and other formal agreements that impact on hauling
- rodding, roping and mandrel techniques
- features and operating requirements of hauling equipment
- industry and manufacturer requirements for safe operation of hauling equipment
- health, safety and environmental requirements relating to hauling and site conditions, including typical safety issues and challenges that occur on worksites
- precautions associated with over-hauling through occupied conduits.

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- site/s where installation of underground cable can be conducted
- installation equipment currently used in industry
- relevant regulatory and equipment documentation that impacts on cable installation activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. Refer also to the *Requirements for assessors* in the ICT Information and Communications Technology Training Package Companion Volume Implementation Guide.

ICTCBL330 Splice and terminate optical fibre cable for telecommunications projects

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Application

This unit describes the skills and knowledge required to splice and terminate optical fibre cable within an optical telecommunications transmission environment for new installations or upgrades of an optical backbone or access network, to achieve greater bandwidth and capacity required by emerging technology convergence for next generation networks (NGNs).

It applies to technical staff who splice and terminate optical fibre cable for telecommunications projects for commercial or industrial fibre to the premises (FTTP) non-mechanical splicing installations.

Licensing, legislative, regulatory and certification requirements apply to telecommunications systems. All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media Authority (ACMA) accredited registrar. Cablers working with live optical fibre must obtain enterprise certification before commencing splicing work.

Unit Sector

Telecommunications – Cabling

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for splicing	1.1 Select safety equipment to protect self and public according to industry guidelines and work health and safety (WHS) practices 1.2 Confirm layout of installation according to physical conditions at

ELEMENT	PERFORMANCE CRITERIA
	<p>site and relevant legislation, regulations, codes and standards</p> <p>1.3 Inform appropriate personnel of identified worksite hazards</p> <p>1.4 Locate other services from relevant authorities according to industry guidelines and safe practices</p> <p>1.5 Test for dangerous gases and place guards around open manholes according to WHS and environmental requirements</p> <p>1.6 Obtain approval for alterations to design according to industry guidelines</p>
2. Check existing optical fibre cable	<p>2.1 Verify that cable is installed according to installation plan</p> <p>2.2 Visually inspect cable for signs of sheath damage and seek instructions from service provider when damage is identified</p> <p>2.2 Maintain minimum bend ratios according to manufacturer specifications to prevent cable damage and signal degradation</p> <p>2.3 Secure cable according to safe industry practice to avoid cable and sheath damage</p>
3. Splice optical fibre cable	<p>3.1 Maintain safe work practices when using equipment to identify and verify fibre is not live before commencing splicing</p> <p>3.2 Seek instructions from service provider where fibre is live and, on receipt of required enterprise certification, follow service provider instructions accordingly</p> <p>3.3 Prepare cable end to expose optical fibres according to splicing method and manufacturer specifications</p> <p>3.4 Prepare and splice fibres using safe industry practice according to industry specifications</p> <p>3.5 Install and clean optical connectors with recommended cleaning material and re-inspect</p> <p>3.6 Test completed links for proof of performance according to industry standards</p>
4. Terminate optical fibre cable	<p>4.1 Select connector unit to suit terminating frame according to design specifications</p> <p>4.2 Terminate cable according to design method and manufacturer specifications</p> <p>4.3 Test termination for transmission loss and light levels, and re-terminate if transmission loss exceeds industry standard</p> <p>4.4 Install protection devices on connectors to protect from exposure and contaminants</p> <p>4.5 Label and lay up cables in enclosure according to manufacturer</p>

ELEMENT	PERFORMANCE CRITERIA
	instructions and industry guidelines
5. Finish job and report	5.1 Remove waste and reinstate site according to industry guidelines 5.2 Prepare reports, including test results and alterations to plans, according to telecommunications industry or enterprise policies 5.3 Notify appropriate personnel of work completion and obtain sign-off

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance, but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Understands familiar texts of limited complexity that may incorporate graphs, tables and charts Recognises the structures and distinguishing features of a range of familiar text types
Writing	<ul style="list-style-type: none"> Interrelates ideas and information and some support material when writing about familiar topics
Oral Communication	<ul style="list-style-type: none"> Demonstrates an awareness of the need to vary structure, style, tone and vocabulary to meet the requirements of the audience, context and purpose
Numeracy	<ul style="list-style-type: none"> Interprets and comprehends whole numbers and familiar or routine fractions, decimals and percentages
Navigate the world of work	<ul style="list-style-type: none"> Takes responsibility for decisions about when and how to complete tasks and coordinate with others Takes personal responsibility for adherence to legal and regulatory responsibilities relevant to own work context, and draws attention to any issues that may affect self or others
Get the work done	<ul style="list-style-type: none"> Implements actions as per plan, making slight adjustments if necessary, and addressing some unexpected issues Initiates standard procedures when responding to familiar problems within immediate context
Interacts with others	<ul style="list-style-type: none"> Takes responsibility to obtain customer sign-off for work completed

Unit Mapping Information

No equivalent unit. Supersedes and is not equivalent to ICTCBL208 Splice and terminate optical fibre cable for carriers and service providers.

Links

Companion Volume Implementation Guides are available from VETNet -

Assessment Requirements for ICTCBL330 Splice and terminate optical fibre cable for telecommunications projects

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- splice, terminate and test optical fibre cable, applying safety precautions when working with laser-based systems and ensuring that required enterprise certification is first obtained if working with live fibre
- splice at least 12 fibres and house in industry recognised enclosures and underground closures according to manufacturer instructions
- install a pigtail that is fusion spliced to cable fibre
- inspect and clean optical connectors
- complete relevant documentation according to manufacturer and design requirements
- provide customer report documenting installation and test results, according to industry standards
- comply with all related work health and safety (WHS) requirements and work practices.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- specific WHS and environmental requirements relating to the activity and site conditions, including hazardous gases
- relevant safety standards applicable to the operation of laser products
- safety precautions when working with laser-based systems
- industry and enterprise policies and procedures when splicing optical fibre cable
- causes of signal strength loss in optical fibre
- colour coding of fibres

- features and operating requirements of test equipment for optical fibre cable
- information required to operate equipment according to a test specification
- optical fibre equipment and manufacturer requirement for safe operation
- techniques for types of termination, including:
 - direct termination
 - fusion splicing
 - mechanical splicing
- test methods and performance requirements
- types of optical cable
- relevant authorities that may be involved in optical fibre installations.
-

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- site/s where splicing and termination of optical fibre cable can be conducted
- special purpose tools, equipment and materials currently used in industry such as optical fibre testing equipment
- relevant regulatory and equipment documentation that impacts on optical fibre cable installation activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTCBL331 Conduct basic identification and fault-finding within cabling networks and customer equipment

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Application

This unit describes the skills and knowledge required for fault-finding and testing for the presence of an operational subscriber line at network termination devices (NTDs). These lines are crucial in connecting customer equipment to the carrier for the purposes of providing telephony and internet protocol (IP) data services. These network providers use convergent technologies to deliver services of next generation networks (NGNs).

It applies to technicians and cable installers who install and maintain IP-based equipment for customer and service providers for services, such as internet protocol TV (IPTV), IP security, digital home networks, IP-based cable access, TV (CATV), IP core and access networks, home automation, interactive TV, smart grids and cloud computing

Australian Communications and Media Authority (ACMA) cabling registration applies to maintaining or installing new cable elements. Refer to the ICT Information and Communications Technology Companion Volume Implementation Guide or the relevant regulator for details of licensing, legislative or certification requirements.

Unit Sector

Telecommunications – Cabling

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan to locate and rectify basic faults	1.1 Arrange site access according to enterprise procedures and customer requirements 1.2 Obtain information from customer about nature of the fault

ELEMENT	PERFORMANCE CRITERIA
	<p>1.3 Obtain suitable tools and test equipment</p> <p>1.4 Obtain appropriate personal protective equipment (PPE)</p> <p>1.5. Identify requirements for basic identification and fault-finding of cabling from network termination device (NTD) to customer equipment and seek assistance as required</p>
2. Identify and confirm customer and NTD equipment in place	<p>2.1 Identify type of NTD used and its application to satellite, fibre, fixed radio, hybrid fibre coaxial (HFC) or digital subscriber line (DSL) telecommunications network/s</p> <p>2.2 Identify and document typical equipment connected to NTD</p> <p>2.3 Confirm correct equipment is being used for installed NTD</p>
3. Identify and inspect NTD and customer equipment cables and patch cords	<p>3.1 Check that NTD equipment and customer equipment are interconnected utilising cables and patch cords</p> <p>3.2 Ensure all cabling sockets are visually intact and undamaged</p> <p>3.3 Ensure all patch cords are visually intact and undamaged</p> <p>3.4 Complete wire mapping to ensure new work is completed correctly and is in good working order</p> <p>3.5 Ensure all cable, patch cords and cabling products are of the same signal bandwidth category</p> <p>3.6 Obtain NTD and customer equipment user guides</p> <p>3.7 Utilise NTD and customer equipment user guides to determine correct light-emitting diode (LED) status that indicates the equipment is operating correctly</p> <p>3.8 Identify and record visual status of all customer equipment and NTD equipment prior to any investigative process</p>
4. Repair faults found in NTD and customer equipment	<p>4.1 Follow appropriate user guide fault tables to remedy equipment status according to equipment manufacturer guidelines</p> <p>4.2 Conduct basic fault-finding using methodical and safe practices suitable for system and problem type</p> <p>4.3 Ensure cabling or patch cord elements are correctly terminated utilising wire mapping testers according to industry standards</p> <p>4.4 Correct faulty cabling by re-terminating sockets, replacing sockets and re-terminating cable or replacing damaged cable elements</p> <p>4.5 Correct faulty patch cords by re-terminating plugs or replacing with new patch cords</p> <p>4.6 Power down equipment for 30 seconds and reboot equipment as</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>a remedy to problem/s</p> <p>4.7 Report failure of equipment to obtain normal working status to customer/supervisor and/or NTD owner for a determination to replace faulty equipment or to have equipment repaired</p> <p>4.8 Ensure test equipment power adaptors are providing correct voltage to equipment, using an appropriate test device, and replace power adaptors as required</p> <p>4.9 Ensure NTD equipment and customer equipment is communicating with internet by exploring internet with a computer browser gaining correct page displays from a website</p> <p>4.10 Ensure customer device is connected to a wi-fi modem using service set identifier (SSID) and password</p>
5. Complete documentation and clean-up worksite	<p>5.1 Advise customer of successful fault clearance and obtain sign-off for customer agreement once fault is resolved and for invoicing purposes</p> <p>5.2 Complete all records as required</p> <p>5.3 Complete reports to justify fault diagnosis and rectification methodology as required</p> <p>5.4 Remove all waste and debris from worksite and dispose of according to environmental requirements</p> <p>5.5 Restore changes made to worksite during fault repair, according to industry standards</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance, but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Identifies, plans and implements strategies to manage gaps in technical knowledge
Writing	<ul style="list-style-type: none"> Recognises when unknown words are essential to meaning and uses a range of decoding strategies to identify them Interprets textual information from relevant sources to identify relevant and key information
Oral Communication	<ul style="list-style-type: none"> Uses clear language and concepts, and tone and pace appropriate for the audience and purpose

Skill	Description
Numeracy	<ul style="list-style-type: none">• Articulates information clearly, using specific and relevant language suitable to audience to convey recommendations and provide verbal reports• Uses listening and questioning techniques to confirm understanding
Navigate the world of work	<ul style="list-style-type: none">• Takes readings and measurements and interprets results
Interact with others	<ul style="list-style-type: none">• Takes personal responsibility for adherence to legal and regulatory responsibilities relevant to own work context, and draws attention to any issues that may affect self or others• Recognises and follows explicit and implicit protocols and meets expectations associated with own role
Get the work done	<ul style="list-style-type: none">• Identifies and follows accepted communication practices and protocols when liaising with internal and external personnel on technical and operational matters

Unit Mapping Information

No equivalent unit. New unit.

Assessment Requirements for ICTCB31 Conduct basic identification and fault-finding within cabling networks and customer equipment

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to do this on at least one of the following network termination device (NTD)/customer equipment systems:

- satellite modem/ethernet/telephony
- fixed wireless modem/ethernet/telephony
- fibre optic TX-RX/ethernet/telephony
- hybrid fibre coaxial (HFC) modem/ethernet/telephony
- digital subscriber line (DSL) modem/ethernet/telephony.

Depending on the system/s the candidate works on, the candidate must demonstrate the ability to:

- connect NTDs to customer equipment
- set-up and operate test instruments
- gather appropriate instrument test cables and adaptors
- determine status of cables/equipment to be tested such as safety and live or inactive status
- identify different cable types and their association with NTD/customer equipment
- identify whether or not NTD/customer equipment is operating correctly
- search the internet for equipment user guides
- replace faulty cable or patch cords after testing or identifying damage
- replace or re-terminate faulty sockets or connectors
- perform a browser search of a web page to confirm system is working.

Knowledge Evidence

The candidate must demonstrate the knowledge required to complete the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- relevant legislation, regulations, codes, standards and associated industry guidelines, in particular:
 - Australian Communications and Media Authority (ACMA) regulations
 - work health and safety (WHS) regulations for electrical, fibre optic and electromagnetic telecommunications systems
- hazard identification such as laser light and safety signs used for telecommunications equipment
- typical equipment connected to NTD including:
 - personal computer devices including:
 - desktop/mobile computing devices
 - smartphone
 - printers
 - other devices
 - wi-fi modem/switch/router
 - DSL filters
 - internet service provider (ISP) gateway switch/router (ISP or retailer)
 - internet protocol TV (IPTV)
 - IP security, digital home networks
 - IP-based cable access TV (CATV)
 - IP core and access networks
 - home automation
 - interactive TV
 - smart grids
 - cloud computing
- basic interconnection concepts for NTD and customer equipment application including:
 - fibre optic
 - fixed radio
 - satellite
 - HFC
 - DSL twisted pair
- cable types used for NTD/customer equipment connections including:
 - Cat 5e unshielded twisted pair (UTP) cable
 - Cat 6 UTP cable
 - Cat 6/7 shielded twisted pair (STP) cable
 - RG6 coaxial cable (quad shielded)
 - fibre optic and other cable types for recognition/demonstration of the NTD network side
 - appropriate connectors for testing cables
 - appropriate adaptors and test leads for test instruments and cables to be tested
- common basic tests utilised with each NTD/customer equipment system using:

- structured cabling certifiers
- structured cabling verification/qualification tester
- wire mapper
- oscillator and probe
- multimeter
- RF power measurement (RX)
- time-domain reflectometer (TDR), available in SC certifiers
- ADSL/VDSL test instruments
- other appropriate test equipment
- NTD or customer equipment user guides
- purpose and use of test results
- fault escalation enterprise processes.

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- satellite modem/ethernet/telephony
- fixed wireless modem/ethernet/telephony
- fibre optic TX-RX/ethernet/telephony
- HFC modem/ethernet/telephony
- DSL modem/ethernet/telephony.

As a minimum, customer equipment may also require a portable computer, wi-fi modems, switch/router or devices that combine these parameters

Cable segments that use passive devices will also require access to RF splitters or DSL filters.

Assessors of this unit must satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards.

ICTCBL332 Locate, identify and rectify copper cable faults

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Application

This unit describes the skills and knowledge required to use systematic and logical fault-finding techniques according to all safety requirements and work practices commonly used in fault remediation.

It applies to copper cable jointers who install and maintain telecommunications cable networks.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Cabling

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for fault-finding activity	1.1 Determine, from documentation or discussion with appropriate personnel, work to be undertaken, including reported fault location 1.2 Access site according to workplace and/or enterprise procedures 1.3 Identify existing and potential site hazards, assess risks and implement risk control measures 1.4 Prepare testing in consultation with others affected by the proposed work and sequence work appropriately 1.5 Obtain required materials for testing, reporting and rectification work according to enterprise procedures and job/work ticket requirements

ELEMENT	PERFORMANCE CRITERIA
	1.6 Obtain required tools, equipment and testing devices according to enterprise procedures and check for correct operation and safety
2. Conduct activities to test and locate cable faults	<p>2.1 Establish nature of fault through analysis of source, history and available information</p> <p>2.2 Select and use appropriate test equipment to locate, diagnose and analyse fault</p> <p>2.3 Conduct tests according to selected test equipment operating instructions and safety requirements, and ensure diagnostic process aligns to customer service requirements</p> <p>2.4 Identify and test for fault efficiently and sustainably</p> <p>2.5 Evaluate test results to determine cause of fault/s using appropriate methods and processes</p>
3. Rectify fault	<p>3.1 Carry out work health and safety (WHS) activities prior to entering a pit or manhole and protect underground assets prior to excavation</p> <p>3.2 Physically locate fault position in a length of cable or buried joint</p> <p>3.3 Rectify fault or escalate to appropriate level</p> <p>3.4 Discuss and document established methods for dealing with unexpected situations with appropriate personnel</p> <p>3.5 Confirm that current standard of performance for copper cables will be viable after fault remediation work</p> <p>3.6 Confirm integrity of repaired fault using appropriate carrier testing processes</p>
4. Report fault-findings and rectification	<p>4.1 Report fault identification and fault clearance</p> <p>4.2 Update fault records</p> <p>4.3 Restore worksite to customer satisfaction and acceptable industry standards</p> <p>4.4 Notify customer and/or relevant parties to obtain sign-off</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance, but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Recognises and interprets technical documentation to determine important information
Writing	<ul style="list-style-type: none"> Uses clear, specific and industry-related terminology to develop basic reports and in all written tasks
Oral Communication	<ul style="list-style-type: none"> Liaises with customers about technical requirements using specific and relevant language Uses listening and questioning techniques to confirm understanding
Numeracy	<ul style="list-style-type: none"> Evaluates and reviews technical data for specifications
Navigate the world of work	<ul style="list-style-type: none"> Appreciates implications of legal and regulatory responsibilities related to own role Seeks advice about expectations when preparing for work
Get the work done	<ul style="list-style-type: none"> Determines job priorities and works logically and systematically to undertake clearly defined and familiar tasks Implements actions according to a predetermined plan, making slight adjustments if necessary and addressing some unexpected issues Takes responsibility for routine decision-making by selecting from a range of predetermined options in routine situations, identifying and taking some situational factors into account Diagnoses and implements standard solutions to for routine problems, seeking assistance from more experienced colleagues when required Understands purposes and specific functions of common fault location equipment and uses them effectively to complete routine tasks

Unit Mapping Information

No equivalent unit. New unit.

Assessment Requirements for ICTCBL332 Locate, identify and rectify copper cable faults

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- discuss faults with customers and appropriate personnel
- identify a minimum of three different types of faults when testing telecommunications cables
- analyse test results and identify and rectify a minimum of three different types of faults
- use systematic, logical and appropriate fault-finding techniques for field-testing situations
- comply with all related work health and safety (WHS) requirements and work practices.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- WHS and environmental requirements
- basic communications testing and measuring devices and techniques including:
 - types and applications of testing/measuring devices including voltage testers, multimeters, copper time domain reflectometers (TDRs), bridge meggers, continuity testers and insulation resistance testers
 - features of testing/measuring devices including user calibration, parameter and range settings
 - safety procedures
 - circuit arrangement of test/measuring devices
 - readings
 - storage, maintenance and care of test/measuring devices

- Australian Standard quality assurance requirements for test equipment calibration certification
- carrier copper network, architecture and cable layout including:
 - seven different types of fault conditions that may affect a customer service in terms of how information is carried
 - continuity of a circuit to facilitate a customer service
 - types of network components and terminal points such as cabinets, pillars, main distribution frames, internal distribution frames, pits, manholes and joints
 - different types of joints (inline, single-ended, pressurised and unpressurised)
- performance parameters associated with copper cables including:
 - electrical circuit characteristics of voltage, current and resistance/impedance
 - open circuit, short circuit and pair continuity
 - split legs, reversed legs, contacts, earths and foreign battery
 - attenuation
 - insulation resistance (leakage)
 - loop resistance
 - characteristic impedance
- how to evaluate test results for compliance with carrier requirements for copper cables including:
 - tests required to evaluate a given performance parameter
 - test equipment and leads needed to evaluate a given performance parameter
 - operation of test equipment for correct evaluation of specific cable performance parameters and to obtain accurate and reliable results
 - transmission performance requirements
- behaviour of faulty cable network elements, including symptoms and impact on cable network
- systematic and logical fault-finding
- interpretation of test results and cable network element/system specifications
- possible fault positions in a length of cable or buried joint including:
 - joint in a pit
 - manhole
 - buried.

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- site/s on which copper cable network testing and fault-finding can be conducted
- line transmission and measurement equipment currently used in industry

- system documentation and other site-related documentation required to conduct tests and fault-finding investigations for a minimum of three different types of faults.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTCBL333 Install aerial cable for communications applications

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Application

This unit describes the skills and knowledge required to install aerial cable in domestic, commercial or industrial communications applications that include digital and analog, telephony, data, video, digital broadcasting, computer networks, local area networks (LANs), wide area networks (WANs), master antenna television (MATV), cable television (CATV), closed-circuit television (CCTV), long-term evolution (LTE) and multimedia.

It applies to technical staff installing aerial cable for customer and carrier networks. Installations are completed outdoors on customer premises using basic rigging procedures, methods and equipment for working safely at heights.

Licensing, legislative, regulatory and certification requirements apply to telecommunications systems. Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media Authority (ACMA) accredited registrar. Refer to the ICT Information and Communications Technology Training Package Companion Volume Implementation Guide or the relevant regulator for specific guidance on requirements.

Unit Sector

Telecommunications – Cabling

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for aerial cable installation	1.1 Access site according to required procedures 1.2 Verify location, cable bearer type and specific requirements of the proposed aerial cable installation according to appropriate plans and

ELEMENT	PERFORMANCE CRITERIA
	<p>recognised constraints</p> <p>1.3 Obtain information about location of other services from relevant authorities</p> <p>1.4 Inform appropriate personnel of existing and potential worksite hazards</p> <p>1.5 Select tools and equipment required for safe work practice</p> <p>1.6 Erect barriers according to safety requirements</p> <p>1.7 Assess support structure safety according to standard working conditions and proceed according to this assessment</p> <p>1.8 Identify and set up traffic management plan as required</p> <p>1.9 Set-up cable installation equipment according to manufacturer requirements and enterprise guidelines</p>
2. Attach aerial cable to catenary	<p>2.1 Select type of cable bearer</p> <p>2.2 Use basic rigging procedures, methods and equipment for working safely at heights</p> <p>2.3 Secure pole hardware permanently to support structure using safe installation practices, according to specifications</p> <p>2.4 Haul and secure cable following health and safety requirements, manufacturer specifications and environmental requirements</p> <p>2.5 Ensure minimum sag heights are achieved</p>
3. Install self-supporting aerial cable	<p>3.1 Select type of cable for installation</p> <p>3.2 Use basic rigging procedures, methods and equipment for working safely at heights</p> <p>3.3 Secure pole hardware permanently to support structure using safe installation practices according to specifications</p> <p>3.4 Haul and secure cable following health and safety requirements, manufacturer specifications and environmental requirements</p> <p>3.5 Ensure minimum sag heights are achieved</p>
4. Seal and secure aerial cable	<p>4.1 Seal cable ends to prevent entrance of foreign material</p> <p>4.2 Secure cable loop, as required, on support structure and ensure equipment is left in a tidy manner to reduce damage to conductors or fibres and to enable ease of access for effective maintenance</p> <p>4.3 Weatherproof building entry points, as required</p> <p>4.4 Fit over-voltage protection devices to all cables with metallic component as required</p>

ELEMENT	PERFORMANCE CRITERIA
	4.5 Complete installation reports and design amendments accurately and file promptly according to industry requirements
5. Restore site and complete documentation	5.1 Restore worksite to customer satisfaction 5.2 Complete reports on installation work and provide to appropriate personnel 5.3 Notify customer and obtain sign-off

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance, but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Analyses plans, regulations and other documentation from a variety of sources and consolidates information to determine requirements
Writing	<ul style="list-style-type: none"> Prepares documentation and correspondence using clear language and correct spelling and terminology Documents outcomes and changes to plans using industry relevant terminology and recognised plan symbols
Oral Communication	<ul style="list-style-type: none"> Interacts effectively in verbal exchanges using active listening, questioning and reading of verbal and non-verbal signals to convey and clarify information
Numeracy	<ul style="list-style-type: none"> Makes calculations appropriate for measuring and estimating materials for construction
Navigate the world of work	<ul style="list-style-type: none"> Accepts responsibility and ownership for the task and makes decisions on completion parameters and the need for coordination with others Takes personal responsibility for following explicit and implicit policies, procedures and legislative requirements
Interact with others	<ul style="list-style-type: none"> Uses a range of strategies to establish a sense of connection and build rapport with clients and workmates
Get the work done	<ul style="list-style-type: none"> Takes responsibility for planning, sequencing and prioritising tasks and own workload for efficiency and effective outcomes Makes routine decisions and implements procedures for routine tasks, using formal decision making processes for more complex and non-routine situations

Unit Mapping Information

No equivalent unit. Supersedes and is not equivalent to ICTCBL310 Install aerial cable.

Assessment Requirements for ICTCBL333 Install aerial cable for communications applications

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria and foundation skills, and to:

- prepare site for installation, ensuring all relevant authorities have been notified and approvals obtained prior to commencement
- install various aerial cable using effective practices including:
 - integral bearer
 - self-supporting
 - stranded support (catenary)
- comply with all related health and safety requirements and work practices.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria and foundation skills, which includes knowledge about:

- legislation, regulations, codes, standards, authorisations and other formal agreements that impact on aerial cabling, in particular:
 - Australian Communications and Media Authority (ACMA) competency requirements for Telecommunications Cabling Provider Rules as they apply to aerial cable
 - minimum sag heights
 - health, safety and environmental requirements relating to aerial cabling and working at heights
 - appropriate authorisations for pole access
- features and operating requirements of equipment used for aerial cabling and rigging

- manufacturer and industry requirements for safe operation of installation and rigging equipment
- basic traffic management plans
- typical worksite issues and challenges.

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- site/s where aerial cable installation can be conducted
- aerial installation equipment currently used in industry
- aerial cables including:
 - integral bearer
 - self-supporting
 - stranded support (catenary)
- relevant regulatory and equipment documentation that impacts on aerial cable installation activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. Refer also to the *Requirements for assessors* in the ICT Information and Communications Technology Training Package Companion Volume Implementation Guide.

ICTCBL334 Install underground enclosures and conduit

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Application

This unit describes the skills and knowledge required to install underground enclosures and conduit, either direct buried or in pits, for new or cable maintenance tasks in access networks for outdoor installations within customer premises or in public locations permitted by the Australian Communications and Media Authority (ACMA).

It applies to technical staff who install underground infrastructure for new and upgraded telecommunications cabling for domestic, commercial or industrial customers.

Licensing, legislative, regulatory and certification requirements apply to telecommunications systems. Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media Authority (ACMA) accredited registrar. Refer to the ICT Information and Communications Technology Training Package Companion Volume Implementation Guide or the relevant regulator for specific guidance on requirements.

Unit Sector

Telecommunications – Cabling

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for installation of underground enclosure and conduit	1.1 Obtain construction design plan from appropriate personnel and determine and obtain type of underground enclosure specified 1.2 Arrange access to site according to required enterprise procedure 1.3 Inform appropriate personnel of existing and potential worksite

ELEMENT	PERFORMANCE CRITERIA
	<p>hazards</p> <p>1.4 Verify location of proposed installation according to appropriate plans obtained from authorised personnel</p> <p>1.5 Obtain information about location of other services from relevant authorities</p> <p>1.6 Organise plant, tools and equipment for given work and safe work practice</p> <p>1.7 Place recognised barriers during construction according to safety and enterprise requirements</p>
2. Install enclosure and conduit	<p>2.1 Excavate site, maintaining stability and allowing ease of access</p> <p>2.2 Install enclosure or pit according to design specifications, and work health and safety (WHS) and environmental requirements</p> <p>2.3 Install conduit according to specifications and manufacturer requirements, ensuring internal surfaces are free from impediments and sharp edges for cable hauling</p> <p>2.4 Seal conduit entry into enclosure against foreign matter</p> <p>2.5 Install cable support structure and access facilities in pits according to specifications</p>
3. Restore site and complete documentation	<p>3.1 Complete backfill safely using suitable soil and materials that ensure conduit protection</p> <p>3.2 Recover obsolete materials and equipment and return to appropriate point for disposal</p> <p>3.3 Restore site according to requirements of enterprise or approving authority and customer satisfaction</p> <p>3.4 Complete reports on installation and design amendments accurately and file promptly according to enterprise requirements</p> <p>3.5 Notify appropriate personnel of job completion and obtain sign-off</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance, but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Critically analyses plans and other documentation from a variety of sources and consolidates information to determine requirements

Skill	Description
Writing	<ul style="list-style-type: none"> Prepares documentation and correspondence using clear language and correct spelling and terminology Accurately records and completes information in enterprise systems
Oral Communication	<ul style="list-style-type: none"> Interacts effectively in verbal exchanges using active listening, questioning and reading of verbal and non-verbal signals to convey and clarify information Clearly explains detailed information using language, tone and pace appropriate to the audience
Numeracy	<ul style="list-style-type: none"> Takes measurements and uses them for work layout and construction Makes calculations appropriate for measuring and estimating materials for construction
Navigate the world of work	<ul style="list-style-type: none"> Takes personal responsibility for following explicit and implicit policies, procedures and legislative requirements Identifies and acts on issues that contravene relevant policies, procedures and legal requirements
Interact with others	<ul style="list-style-type: none"> Uses a range of strategies to establish a sense of connection and build rapport with customers and workmates Identifies and explores differences in a diverse range of people in the work context and makes adjustments to communication in recognition of these differences
Get the work done	<ul style="list-style-type: none"> Takes responsibility for planning, sequencing and prioritising tasks and own workload for efficiency and effective outcomes Makes routine decisions and implements standard procedures for routine tasks, using formal decision making processes for more complex and non-routine situations

Unit Mapping Information

ICTCBL334 Install underground enclosures and conduit supersedes and is equivalent to ICTCBL307 Install underground enclosures and conduit.

Links

Companion Volume Implementation Guides are available from VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=a53af4e4-b400-484e-b778-71c9e9d6aff2>

Assessment Requirements for ICTCBL334 Install underground enclosures and conduit

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria and foundation skills, and to:

- interpret and apply design plans and prepare for construction
- use specialised hand or power tools and equipment normally used for excavation, pipe, pit and conduit installation and site restoration, safely
- excavate for installation of an enclosure and conduit according to industry standards, applying related health and safety requirements and work practices
- install enclosure and conduit according to specifications and industry standards.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria and foundation skills, which includes knowledge about:

- features and operating requirements of excavation and installation to select appropriate equipment
- existing underground services
- manufacturer requirements for safe operation of equipment
- legislation, regulations, codes, standards and other formal agreements that impact on the work activity
- construction design plans
- specific work health and safety and environmental requirements relating to the activity and site conditions
- components required for enclosures, pits and conduit
- methods of installing enclosures and conduit as they apply to manufacturer specifications and regulatory requirements

- typical issues and challenges that occur on site.

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- site/s where installation of underground enclosures and conduit can be conducted
- installation pits, enclosures and conduit currently used in industry
- relevant regulatory and equipment documentation that impacts on cable installation activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. Refer also to the *Requirements for assessors* in the ICT Information and Communications Technology Training Package Companion Volume Implementation Guide.

Assessment Requirements for ICTCBL335 Construct aerial cable supports

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Performance Evidence

The candidate must demonstrate, on two occasions, the ability to perform the tasks outlined in the elements, performance criteria and foundation skills, and to:

- prepare site for aerial cable support construction, ensuring all relevant authorities have been notified and approvals obtained prior to commencement
- install aerial support structures using pole and wall supports, applying all related health and safety requirements and work practices and manufacturer requirements

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria and foundation skills, which includes knowledge about:

- relevant legislation, regulations, codes, and standards and other formal agreements that impact on aerial cable supports, in particular:
 - Australian Communications and Media Authority (ACMA) regulatory requirements for Telecommunications Cabling Provider Rules as they apply to aerial cabling
- features and operating requirements of cable supports and installation equipment and authorisations
- requirements for safe operation of equipment
- safety precautions required when working at heights and on pole infrastructure
- other health and safety and environmental requirements relating to the activity, equipment types and site conditions
- typical worksite issues and challenges.

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- site/s where construction of aerial cable supports can be conducted
- aerial support installation equipment currently used in industry
- relevant regulatory and equipment documentation that impacts on aerial cable installation activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. Refer also to the *Requirements for assessors* in the ICT Information and Communications Technology Training Package Companion Volume Implementation Guide.

ICTCBL336 Install and cut over metallic conductor cable to access network cabinet

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Application

This unit describes the skills and knowledge required to install and cut over a new metallic conductor cable to an access network distribution cabinet. The cable types are typically up to 200 pair copper cables in the carrier access network. The cabinet types may be mixed mode bearer cabinets in the access network and cross connect units (CCUs) or pillars.

It applies to lines workers, field officers or technicians working for carriers, contractors or other service providers who install and rearrange copper cables in the carrier network.

Licensing, legislative, regulatory and certification requirements apply to telecommunications systems. Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the ICT Information and Communications Technology Training Package Companion Volume Implementation Guide or the relevant regulator for specific guidance on requirements.

Unit Sector

Telecommunications – Cabling

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for installation	1.1 Obtain project plan to scope work and gain approval from customer on key features of installation 1.2 Arrange access to site according to required enterprise procedure 1.3 Inspect site to develop work health and safety (WHS) plan and notify appropriate personnel of identified safety hazards

ELEMENT	PERFORMANCE CRITERIA
	<p>1.4 Determine cable route and type of network cable equipment from project plan, considering the location of other services</p> <p>1.5 Obtain required plant, tools, safety equipment and materials for cabinet entry</p> <p>1.6 Coordinate with other parties to minimise disruption to services and down time</p> <p>1.7 Segregate incoming and outgoing cables to facilitate access and avoid overlaying and backtracking of cable</p> <p>1.8 Notify stakeholders of proposed cut over details and proposed disruption to services</p> <p>1.9 Undertake additional preparatory non-jointing work, as required, according to customer practices and site conditions</p>
2. Install required cable and termination modules	<p>2.1 Evaluate existing termination module type and capacity</p> <p>2.2 Install additional termination modules, as required, and modify existing housing capacity according to manufacturer specifications and industry practice</p> <p>2.3 Determine cable route between parent jointing chamber and cable termination blocks according to customer practices, site limitations, equipment specifications and regulations</p> <p>2.4 Select entry port and sealing arrangements</p> <p>2.5 Install cable to cabinet</p> <p>2.6 Arrange and distribute cable fan out and routing according to industry practice</p> <p>2.7 Label cabinets, cables and joints according to industry standards</p>
3. Joint, jumper and cut over cable	<p>3.1 Joint cable according to jointing standards, materials, joint type, location, customer practices and manufacturer guidelines</p> <p>3.2 Install jumpers and cut away tails according to industry practice and to minimise service outages</p> <p>3.3 Test cable for performance and rectify faults relating to cut over according to location, materials available and industry practice</p> <p>3.4 Seal all joints and cabinet according to cable type, location, customer practices and manufacturer guidelines</p>
4. Perform tests	<p>4.1 Visually check that all connections and interconnections are firm and sound</p> <p>4.2 Electrically test all terminations for continuity according to customer practices</p>

ELEMENT	PERFORMANCE CRITERIA
	4.3 Reseal and pressurise cables
5. Complete site restoration and project documentation	5.1 Supply test results to customer for future reference 5.2 Complete cut over report and design amendments report that shows final cable layout as part of as-built documentation 5.3 Recover obsolete materials and return to appropriate point for disposal 5.4 Restore site according to customer practices or approving authority requirements 5.5 Notify appropriate personnel about completion of cut over and obtain sign-off

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance, but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interprets plans, specifications and other documentation from various sources Consolidates information to determine requirements
Writing	<ul style="list-style-type: none"> Documents outcomes and changes to plans using industry relevant terminology and recognised plan symbols Prepares documentation and correspondence using clear language and correct spelling
Oral Communication	<ul style="list-style-type: none"> Interacts effectively in verbal exchanges using appropriate language, listening and questioning skills to convey and clarify information
Numeracy	<ul style="list-style-type: none"> Makes calculations required for measuring and estimating materials for construction Performs mathematical calculations to check, interpret and confirm results of system tests
Navigate the world of work	<ul style="list-style-type: none"> Complies with policies, procedures and legislative requirements relevant to own role
Interact with others	<ul style="list-style-type: none"> Uses appropriate practices and protocols to communicate effectively with co-workers, customers and others
Get the work done	<ul style="list-style-type: none"> Plans, sequences and carries out tasks according to meet required outcomes

Skill	Description
	<ul style="list-style-type: none">Analyses task requirements to select appropriate equipment and practicesUses problem solving processes and standard procedures to determine solutions to less predictable problems

Unit Mapping Information

ICTCBL336 Install and cut over metallic conductor cable to access network cabinet supersedes and is equivalent to ICTCBL318 Install and cut over metallic conductor cable to access network cabinet.

Assessment Requirements for ICTCBL336 Install and cut over metallic conductor cable to access network cabinet

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- interpret project plan to determine cable route, required plant, tools, safety equipment and materials
- communicate with other stakeholders to arrange site access and to confirm safety requirements
- prepare cabinet and cable for cable entry according to customer practices
- install cable, label and fan out for termination
- terminate pairs to termination modules following customer practices
- run jumpers and cut over services with minimum outages
- complete required documentation related to cut over
- follow and comply with WHS and environmental requirements.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- cabling types, connectors and cabling structures
- legislation, regulations, codes, standards and other formal agreements that impact on the work activity, in particular:
 - health, safety and environmental requirements relating to the activity and site conditions
- manufacturer requirements for the operation of jointing equipment
- process for the cut over of a cabinet entry cable

- features and operating conditions of test equipment and how the equipment is used to measure cable performance
- typical worksite issues and challenges that may cause delays in project construction activities, and how these could be addressed
- purpose of warranties and service level agreements (SLAs).
-

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- systems and equipment used for cut over
- installation equipment currently used in industry
- regulatory and equipment documentation that impacts on work activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTCLD301 Evaluate characteristics of cloud computing solutions and services

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to undertake a basic review and analysis of cloud computing delivery and deployment models to support the needs of a business.

The unit applies to individuals engaged in the basic review of a cloud computing solutions for a business or enterprise.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Cloud computing

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to review cloud technology solutions and services	<ul style="list-style-type: none">1.1 Identify data handling organisational policies and procedures required for cloud computing solutions and services1.2 Identify cloud computing solutions and services according to organisational needs1.3 Identify and confirm business and industry technology terminology, characteristics and concepts1.4 Identify organisational roles affected by implementation of cloud services and solutions and their impact on cloud computing solutions and services1.5 Identify requirements to transferring to cloud computing solutions and services according to organisational policies

	and procedures
2. Review cloud delivery and deployment models	<p>2.1 Identify and review capability and characteristics of different cloud service platforms and delivery models against business requirements</p> <p>2.2 Research and identify emerging cloud deployment models</p> <p>2.3 Discuss differences, advantages and disadvantages between cloud cost models and different hybrid deployment models</p> <p>2.4 Identify the most suitable cloud service and delivery platform according to organisational needs</p>
3. Finalise evaluation	<p>3.1 Identify and document benefits of adopting best cloud solutions and services according to business needs</p> <p>3.2 Identify and document challenges of adopting cloud solutions and services according to business needs</p> <p>3.3 Finalise cloud solutions and services evaluation and seek and respond to evaluation feedback according to organisational policies and procedures</p> <p>3.4 Communicate outcomes of evaluation to required personnel</p> <p>3.5 Save and lodge evaluation document to required personnel</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Analyses and consolidates information and data from a range of sources against defined criteria and requirements, and checks for accuracy and completeness
Writing	<ul style="list-style-type: none"> Records required information and prepares documentation outlining findings and analysis succinctly
Oral communications	<ul style="list-style-type: none"> Obtains and responds to information and feedback from required personnel using succinct verbal language
Learning	<ul style="list-style-type: none"> Identifies ideas for other applications and considers them in current contexts
Planning and organising	<ul style="list-style-type: none"> Plans and implements routine tasks and workload, making limited decisions on sequencing, timing and collaboration, and seeks assistance in setting priorities
Self-management skills	<ul style="list-style-type: none"> Makes low-impact decisions within familiar situations, based on a range of predefined or routine solutions and evaluates effectiveness of outcome

Unit Mapping Information

Supersedes and is equivalent to ICTNWK306 Evaluate characteristics of cloud computing solutions and services.

Assessment Requirements for ICTCLD301 Evaluate characteristics of cloud computing solutions and services

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, and to:

- determine at least one suitable cloud computing solution and associated services according to business needs.

In the course of the above, the candidate must:

- collate information on the business' need for cloud technology
- articulate total cost of ownership for cloud computing solution as it applies to business needs
- document finalised evaluation findings.

Knowledge Evidence

The candidate must demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit. This includes knowledge of:

- technology trends in cloud computing
- industry technology standards used in cloud computing solutions and services
- functions and features of cloud computing solutions and services vendor products
- principles and functions of cloud computing solutions, models and technologies, including:
 - Infrastructure as a Service (IaaS)
 - Platforms as a Service (PaaS)
 - Software as a Service (SaaS)
- industry standard hardware and software products, their general features, capabilities and application
- different cost models and cloud economic theories as they apply to different cloud services, and benefits to each
- uses and different features of private, hybrid and public cloud deployment models.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- organisational and industry standards, guidelines and legislation required to inform business cloud computing requirements
- information and data sources
- industry standard information and telecommunications equipment required to capture and store data
- a variety of cloud solutions and services and their specifications

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTCLD401 Configure cloud services

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to configure core cloud services including compute, storage, databases and autoscaling according to business needs and workload.

The unit applies to cloud computing architects, developers and cloud engineers utilising cloud services and those engaged in deploying cloud computing solutions for a business.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Cloud computing

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Select and secure access to cloud environment	1.1 Discuss and compare different cloud computing solutions, models and services according to business requirements and needs 1.2 Identify impact of shared security responsibility models 1.3 Select best cloud computing solution and service according to business requirements and needs 1.4 Access account on cloud platform according to business requirements and needs 1.5 Identify user access protocols and policies according to business requirements and needs 1.6 Configure access functions within cloud environment

ELEMENT	PERFORMANCE CRITERIA
	according to users, groups and required permissions 1.7 Identify and assign security responsibilities according to security policies, business protocols and work function 1.8 Define workload according to business requirements and needs
2. Deploy virtual network	2.1 Create users and groups to create and manage infrastructure according to business requirements and needs 2.2 Create virtual multi-tier network to support core services and autoscaling 2.3 Create virtual machine according to business processing and operating system requirements 2.4 Define, add and expand storage on virtual machine according to business requirements and needs 2.5 Deploy a managed database within virtual network according to business requirements and needs 2.6 Test external network access and access between resources within virtual network and fix errors
3. Set up automatic scaling	3.1 Configure and apply autoscaling to virtual machines to scale according to business defined metrics 3.2 Test automatic scaling and fix errors as required
4. Finalise virtual network infrastructure	4.1 Document and communicate work to required personnel 4.2 Seek and respond to feedback as required 4.3 Save and store user documentation according to organisational policies and procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none">Analyses and consolidates information and data from a range of sources against defined criteria and requirements, and checks for accuracy and completeness
Writing	<ul style="list-style-type: none">Records required information and prepares documentation outlining work performed using appropriate language
Learning	<ul style="list-style-type: none">Identifies ideas for other applications and considers them in current contexts

SKILL	DESCRIPTION
Planning and organising	<ul style="list-style-type: none">Plans and implements routine tasks and workload, making limited decisions on sequencing, timing and collaboration, and seeks assistance in setting priorities
Self-management skills	<ul style="list-style-type: none">Makes low-impact decisions within familiar situations, based on a range of predefined or routine solutions, and evaluates effectiveness of outcome

Unit Mapping Information

No equivalent unit. New unit.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTCLD401 Configure cloud services

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, and to:

- build at least one simple virtual network capable of supporting a workload using cloud services
- configure compute, storage, database and autoscaling resources within virtual network
- conduct simple tests to confirm access to resources.

Knowledge Evidence

The candidate must demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit. This includes knowledge of:

- industry technology standards used in cloud computing solutions and services
- industry standard hardware and software products, their general features, capabilities and application, including storage technology
- principles and functions of cloud computing solutions and technologies, including:
 - Infrastructure as a Service (IaaS)
 - Platforms as a Service (PaaS)
 - Software as a Service (SaaS)
- different cost models and cloud economic theories as they apply to different cloud services and non-cloud services, and benefits to each
- functions, features and uses of different virtual machine, networking and scaling options, including:
 - virtual machine sizing including CPU, memory, storage and network bandwidth
 - load balancing and autoscaling
 - performance monitoring and alarms
 - storage backups and lifecycle
 - virtual networks and traffic routing
- functions, benefits and differences of:

- vertical and horizontal scaling
- virtual and physical machines
- relational, data warehouse and no SQL databases
- self-hosted, managed and cloud-native database solutions
- storage options including:
 - block storage
 - object storage
 - archive storage
 - network filesystems
- user, business and vendor responsibilities according to shared security responsibility models
- user access protocols and policies according to organisation hierarchy and job function
- security policies, protocols and mechanisms as they relate to cloud technologies and methodologies including:
 - securities as it applies to limiting network traffic within virtual networks
 - security responsibilities as it applies to different work functions and user access
- purpose of domain name system (DNS) required to connect remote servers when web browsing
- functions, uses and differences of cloud models, including:
 - on-premise and private cloud
 - hybrid cloud
 - public cloud.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- cloud vendor service provider
- cloud managed database service
- internet and web browser
- data to gather information from to determine output and user requirements, including user access and business protocols.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTCLD501 Develop cloud disaster recovery plans

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to develop a cloud disaster recovery plan. It involves identifying current and potential risk factors, including impact, likelihood, duration and cost of disruption in the cloud computing environment.

The unit applies to Chief Information Officers (CIOs), cloud architects, cloud network engineers, cloud consultants and those involved in cloud disaster recovery plans for a business.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Cloud computing

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to develop plan	1.1 Identify disaster recovery plan requirements according to business needs and requirements 1.2 Determine existing organisational recovery plans 1.3 Identify vendor disaster recovery plan and service level agreements
2. Conduct impact analysis	2.1 Determine time and recovery point objectives according to business needs 2.2 Assess potential risks plan exclusions according to business requirements 2.3 Estimate amount of data and security level of data managed

ELEMENTS	PERFORMANCE CRITERIA
	2.4 Evaluate severity of impact and disruption of risk events 2.5 Document outcomes of impact analysis according to organisational policies and procedures
3. Develop disaster recovery solutions	3.1 Develop range of disaster recovery solutions according to business requirements 3.2 Determine vendor protections and prioritise risks 3.3 Assess external insurance protection levels and their suitability requirements 3.4 Identify other disaster recovery solution components
4. Finalise disaster recovery plan	4.1 Align disaster recovery risk potential according to business requirements 4.2 Outline steps of disaster recovery plan including timelines, key features, service providers and any other aspect 4.3 Document disaster recovery plan according to business needs and requirements
5. Test cloud disaster recovery plan	5.1 Conduct verbal walkthrough of cloud disaster recovery plan with required personnel 5.2 Seek and respond to feedback as required 5.3 Lodge cloud disaster recovery plan according to organisation and legislative protocol 5.4 Obtain final sign off from required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Interprets complex technical and operational documentation to determine and confirm job requirements
Oral communication	<ul style="list-style-type: none"> Uses listening and questioning techniques to articulate complex concepts and requirements using industry language in cloud computing and risk environment
Self-management	<ul style="list-style-type: none"> Demonstrates a sophisticated knowledge of principles, concepts, language and practices associated with the cloud and digital world and uses them to troubleshoot and understand the uses and potential of new technology
Planning and	<ul style="list-style-type: none"> Uses a broad range of strategies to evaluate and resolve risk events in cloud and technical environment and demonstrates the knowledge that

SKILL	DESCRIPTION
organising	design choices will influence the security of virtually stored information
Problem solving	<ul style="list-style-type: none">• Uses a mix of intuitive and formal processes to identify key information and issues, evaluate alternative strategies, anticipate consequences and consider implementation issues and contingencies• Uses knowledge of context to address common threats in the cloud and technical environment

Unit Mapping Information

No equivalent unit. New unit.

Assessment Requirements for ICTCLD501 Develop cloud disaster recovery plans

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, and to:

- develop and evaluate a cloud disaster recovery plan that includes at least three major risk events.

In the course of the above, the candidate must:

- determine likelihood and impact of risk event to assist in the development of one cloud disaster recovery plan
- document disaster recovery plan and ways the plan reaches Recovery Time Objective (RTO) and Recovery Point Objective (RPO) targets.

Knowledge Evidence

The candidate must demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit. This includes knowledge of:

- risk environments in cloud/ICT environment
- data analysis methodologies to determine risk environment
- disaster recovery techniques applicable to cloud environments
- ISO270001, ISO27002 and ISO 27031 standards
- Recovery Time Objective (RTO) and Recovery Point Objective (RPO) standards and techniques
- techniques and methods to monitor and create alerts in cloud environments.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- data required to assess current and future risk events in specified environment
- legislation applicable to risk type
- reporting standards for documenting and communicating disaster recovery plan.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTCLD502 Design and implement highly-available cloud infrastructure

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to design and implement fault tolerant and scalable workloads to achieve high availability in a cloud environment.

The unit applies to cloud computing architects, cloud developers, cloud engineers and those engaged in designing and implementing cloud computing solutions for a business. It applies to individuals in Information Communications Technology (ICT) professions involved in systems design and systems architecture.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Cloud computing

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify high-availability requirements	1.1 Determine reliability, recoverability and service levels required for application 1.2 Determine cloud infrastructure according to business needs 1.3 Identify level of shared security responsibility models according to business needs
2. Evaluate architecture availability	2.1 Review architecture of traditional multi-tier web application in non-cloud environment and identify high availability requirements 2.2 Identify any single points of failure

ELEMENTS	PERFORMANCE CRITERIA
	2.3 Estimate recovery objectives for multi-tier web components and for overall architecture 2.4 Determine components that must scale vertically and the potential impact on system availability 2.5 Document architecture review findings according to business needs
3. Design cloud-based architecture for high availability	3.1 Design equivalent architecture for high availability using cloud services 3.2 Identify and remove single points of failure as required 3.3 Estimate recovery objectives for each component and overall architecture 3.4 Determine components that must scale vertically and the potential impact on system availability 3.5 Document architecture design according to business needs
4. Implement cloud-based architecture for high availability	4.1 Implement architecture design in cloud environment 4.2 Demonstrate connectivity between resources at all tiers 4.3 Monitor and measure availability of resources 4.4 Simulate failures of component and confirm that infrastructure is fault tolerant 4.5 Simulate resizing components likely to impact performance and measure availability impact 4.6 Compare and document simulation findings according to documented design
5. Finalise cloud infrastructure	5.1 Adjust and improve availability of architecture according to simulations as required 5.2 Confirm, seek and respond to feedback with required personnel 5.3 Obtain final sign off from required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Oral communication	<ul style="list-style-type: none">Uses listening and questioning techniques to articulate complex concepts and requirements using industry language for intended audience

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none">Interprets complex technical and operational documentation to determine and confirm job requirements
Problem solving	<ul style="list-style-type: none">Uses a mix of intuitive and formal processes to identify key information and issues, evaluates alternative strategies, anticipates consequences and considers implementation issues and contingenciesUses knowledge of context to address common problems in cloud computing applications and cloud-based environments
Self-management	<ul style="list-style-type: none">Demonstrates a sophisticated knowledge of principles, concepts, language and practices associated with cloud computing and the digital world and uses them to troubleshoot and understand the uses and potential of new technology

Unit Mapping Information

No equivalent unit. New unit.

Assessment Requirements for ICTCLD502 Design and implement highly-available cloud infrastructure

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, and to:

- design and implement at least one fault tolerant cloud infrastructure on a cloud platform resilient to networking, compute, storage, database and data centre failures
- design and deploy automated infrastructure scaling for at least one business need
- simulate failures of at least one component and demonstrate is fault tolerant.

In the course of the above, the candidate must:

- use cloud management console, software development kits or command line tools
- define, monitor and record resource availability in cloud environment, including:
 - reliability
 - recoverability
 - service levels
 - scalability.

Knowledge Evidence

The candidate must demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit. This includes knowledge of:

- industry technology standards used in cloud computing solutions and services
- current industry standard hardware and software products, their general features, capabilities and application, including storage technology
- different cloud cost models as they relate to scalability of cloud infrastructure
- definitions, functions, features and uses of different cloud infrastructure resources as they apply in cloud architecture to high availability, including:
 - fault tolerance and single points of failure

- reliability as defined by mean time to failure (MTTF), to repair (MTTR) and between failures (MTBF)
- recoverability as measured by recovery time (RTO) and recovery point (RPO) objectives
- service level agreements (SLAs)
- vertical and horizontal scalability
- testing and debugging techniques, including techniques to avoid single point failures
- tools and techniques to measure availability impact
- features of cloud services, including differences between built-in fault tolerance and infrastructure designed for fault tolerance
- purpose and features of load balancing and autoscaling as related to improve availability within cloud environment
- techniques, methods and industry standard metrics used to monitor performance of cloud resources.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- cloud vendor service provider
- cloud managed database service
- information and data sources required to design and implement cloud infrastructure
- integrated development environment (IDE)
- specific requirements and industry standards, organisational procedures and legislative requirements, including business and functionality requirements, as required
- internet and web browser
- secure shell (SSH) or remote desktop protocol (RDP) client to connect to cloud-hosted instances
- data to gather information from to determine output and user requirements, including user access and business protocols.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTCLD503 Implement web-scale cloud infrastructure

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to design and deploy cloud infrastructure to support highly-scalable web applications.

The unit applies to cloud computing architects, cloud developers, cloud engineers and those engaged in designing and implementing cloud computing solutions for a business.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Cloud computing

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Design scalable web-application cloud infrastructure	<ul style="list-style-type: none">1.1 Determine and confirm cloud web-scaling needs1.2 Review architecture for web application according to business needs1.3 Identify cloud services required to scale web application1.4 Design architecture changes using cloud services and check design scales network, compute and storage as utilisation increases1.5 Determine architecture changes to scale for a global user base1.6 Check availability and security of application is maintained with design changes and review design as required

ELEMENTS	PERFORMANCE CRITERIA
	1.7 Document and justify architecture changes
2. Design scalable microservice architecture for a simple application	2.1 Identify microservices and data transactions required to meet business needs 2.2 Determine cloud services to support microservice architecture 2.3 Design microservice architecture using cloud services 2.4 Document and justify architecture design
3. Implement scalable microservice using cloud services	3.1 Review microservice design and code components for application 3.2 Deploy and configure cloud services to implement the application 3.3 Test microservice components and confirm that the application is functioning 3.4 Troubleshooting and fix errors as required
4. Finalise cloud infrastructure	4.1 Set up metrics and trigger scaling alarms according to design specifications 4.2 Confirm, seek and respond to feedback with required personnel 4.3 Obtain final sign off from required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none">Interprets complex technical and operational documentation to determine and confirm job requirements
Writing	<ul style="list-style-type: none">Develops complex documentation in required formats using clear and detailed language to convey explicit information, requirements and recommendationsWrites and edits code, and technical data in a logical manner using required syntax and ensuring flow
Problem solving	<ul style="list-style-type: none">Uses a mix of intuitive and formal processes to identify key information and issues, evaluates alternative strategies, anticipates consequences and considers implementation issues and contingenciesUses knowledge of context to address common problems in cloud computing applications and cloud-based environments

SKILL	DESCRIPTION
Self-management	<ul style="list-style-type: none">Demonstrates a sophisticated knowledge of principles, concepts, language and practices associated with cloud computing and the digital world and uses them to troubleshoot and understand the uses and potential of new technology

Unit Mapping Information

No equivalent unit. New unit.

Assessment Requirements for ICTCLD503 Implement web-scale cloud infrastructure

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, and to:

- design at least one architecture that will scale networking, compute and storage for a multi-tier web application
- design at least one microservice architecture for implementing a simple web application
- deploy a microservice application utilising cloud serverless technologies.

In the course of the above, the candidate must:

- use cloud management consoles, software development kits or command line tools
- apply web-scaling principles and technologies.

Knowledge Evidence

The candidate must demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit. This includes knowledge of:

- industry technology standards used in cloud computing solutions and services
- industry standard hardware and software products, their general features, capabilities and application, including storage technology
- functions, benefits and differences of web-scale cloud components, including:
 - structured query language (SQL) and NoSQL databases
 - monolithic and microservice architectures
 - virtual, container and serverless compute models
 - content delivery networks and in-memory data stores
- definitions, functions, features and uses of web-scale cloud infrastructure, including:
 - highly cohesive and loosely coupled systems
 - database and storage services for persistent data storage
 - application program interface (API), messaging and queuing services

- testing and debugging techniques
- web-scaling principles and technologies.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- cloud vendor service provider
- cloud managed database service
- cloud serverless environment
- pre-prepared code elements for microservice deployment
- information and data sources required to design and implement cloud infrastructure
- integrated development environment (IDE)
- specific requirements and industry standards, organisational procedures and legislative requirements, including business and functionality requirements, as required
- internet and web browser
- data to gather information from to determine output and user requirements, including user access and business protocols.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to assess, design, improve and monitor cloud architecture on a cloud platform, including security, reliability, scalability and cost optimisation impacts for a business.

The unit applies to cloud computing architects, cloud developers, cloud engineers and those engaged in gathering requirements, designing and implementing cloud computing solutions for a business.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Cloud computing

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Analyse cloud architecture on a cloud platform	1.1 Identify and review business's cloud architecture design 1.2 Evaluate cloud architecture and identify business impact of design decisions 1.3 Identify design patterns and architectural options 1.4 Determine and assess benefits and differences of cloud computing and architectural design against current business model and needs 1.5 Confirm system design decisions according to business needs 1.6 Set business goals as they relate to security, reliability, high-performance and cost efficiencies of cloud architecture

ELEMENTS	PERFORMANCE CRITERIA
	according to business requirements and needs
2. Design and improve architecture on a cloud platform	<ul style="list-style-type: none">2.1 Evaluate and confirm performance metrics for business applications according to business needs2.2 Select and improve compute, storage, database and network resources according to business needs2.3 Review and improve architecture required to enhance security, reliability, scalability and cost optimisation2.4 Document and present proposed architecture for review to required personnel2.5 Obtain sign off to proceed to deployment with required personnel
3. Deploy, monitor and test architecture on cloud platform	<ul style="list-style-type: none">3.1 Deploy approved architecture on cloud platform3.2 Monitor and measure architecture against performance metrics and business goals3.3 Test and demonstrate security, reliability, scalability and cost optimisation of deployed resources3.4 Apply short-term refinements to deployed resources according to test results
4. Finalise improvements on a cloud platform	<ul style="list-style-type: none">4.1 Document as-deployed architecture and test results, and highlight changes and improvements from approved design4.2 Describe long-term improvement strategies and their benefits as applied to deployed resources4.3 Obtain final sign off from required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Oral communication	<ul style="list-style-type: none">• Uses listening and questioning techniques to confirm requirements and articulate complex concepts• Presents proposed solutions to required personnel using appropriate industry language
Reading	<ul style="list-style-type: none">• Interprets complex technical and operational documentation to determine and confirm job requirements
Writing	<ul style="list-style-type: none">• Writes and edits code and technical data in a logical manner using required syntax and language

SKILL	DESCRIPTION
Problem solving	<ul style="list-style-type: none">• Uses a mix of intuitive and formal processes to identify key information and issues, evaluates alternative strategies, anticipates consequences and considers implementation issues and contingencies• Uses knowledge of context to address common problems in cloud computing applications and cloud-based environments
Self-management	<ul style="list-style-type: none">• Demonstrates a sophisticated knowledge of principles, concepts, language and practices associated with cloud computing and the digital world and uses them to troubleshoot and understand the uses and potential of new technology

Unit Mapping Information

No equivalent unit. New unit.

Assessment Requirements for ICTCLD504 Improve cloud-based infrastructure

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, and to:

- assess, identify and improve cloud architecture on a cloud platform, according to design decisions
- deploy, test and measure at least one architecture design, against architecture principles, metrics and business goals.

In the course of the above, the candidate must:

- determine performance metrics and business goals
- use cloud management consoles, software development kits or command line tools
- create documentation of deployment and testing steps.

Knowledge Evidence

The candidate must demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit. This includes knowledge of:

- industry technology standards used in cloud computing solutions and services
- industry standard hardware and software products, their general features, capabilities and application
- methods and impacts of cloud adoption as they relate to IT system changes
- design principles for cloud applications
- migrating principles for cloud applications
- use of object storage for static web sites
- testing and debugging techniques, including techniques to avoid single point failures
- tools and uses of security layers and security-focused content within cloud services
- features of cloud services, including techniques to improve security, reliability, scalability and costs

- techniques, methods and industry standard metrics and business goals used to monitor performance of cloud resources.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- cloud vendor service provider
- cloud managed database service
- cloud management console, software development kit or command line tools
- integrated development environment (IDE)
- specific requirements and industry standards, organisational procedures and legislative requirements, including business and functionality requirements, as required
- internet and web browser
- secure shell (SSH) or remote desktop protocol (RDP) client to connect to cloud-hosted instances.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTCLD505 Implement cloud infrastructure with code

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to create and implement cloud infrastructure as code using cloud platform templates. This includes creating templates, then using the templates to create and update cloud infrastructure.

The unit applies to cloud engineers, cloud systems administrators and those who work within cloud computing operations to program, implement and maintain cloud computing solutions for a business.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Cloud computing

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to update cloud infrastructure as code	1.1 Identify and review benefits of infrastructure as code according to business needs 1.2 Determine ways automation leverages cloud platforms according to business needs 1.3 Determine and assess potential issues and errors when implementing infrastructure as code 1.4 Evaluate and select infrastructure as code service compatible with selected cloud platform and business requirements
2. Deploy cloud infrastructure as code templates	2.1 Learn template syntax of selected cloud infrastructure as code service

ELEMENTS	PERFORMANCE CRITERIA
	<p>2.2 Review pre-defined templates and determine what resources they create and any dependencies</p> <p>2.3 Utilise the cloud infrastructure as code service tools to deploy, update and delete resources using predefined templates as required</p> <p>2.4 Confirm deployments of cloud resources and configure resources using cloud platform console or command line tools</p> <p>2.5 Remove deployed resources using cloud infrastructure as code tools and delete templates as required</p> <p>2.6 Test and troubleshoot template errors as required</p>
3. Develop and update infrastructure as code templates	<p>3.1 Learn template syntax of selected cloud infrastructure as code service</p> <p>3.2 Create and deploy template to provision a set of related cloud resources according to business needs</p> <p>3.3 Update and redeploy template to modify previously deployed resources and add new resources</p> <p>3.4 Confirm deployment of cloud resources and configure resources using the cloud platform console or command line tools</p> <p>3.5 Parameterise and deploy template to reuse configuration with a modified resource configuration</p> <p>3.6 Remove deployed resources using cloud infrastructure as code tools and delete templates as required</p> <p>3.7 Test and troubleshoot template errors</p>
4. Finalise cloud infrastructure as code	<p>4.1 Create user documentation including cloud infrastructure as code templates</p> <p>4.2 Obtain final sign off from required personnel</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Oral communication	<ul style="list-style-type: none"> Uses listening and questioning techniques to confirm requirements and articulate complex concepts and matters using relevant industry for intended audience
Reading	<ul style="list-style-type: none"> Interprets complex technical and operational documentation to determine and confirm job requirements

SKILL	DESCRIPTION
Writing	<ul style="list-style-type: none">• Prepares user documentation detailing developed cloud infrastructure in a logical manner using required syntax and language
Problem solving	<ul style="list-style-type: none">• Uses a mix of intuitive and formal processes to identify key information and issues, evaluates alternative strategies, anticipates consequences and considers implementation issues and contingencies• Uses knowledge of context to address common problems in cloud computing applications and cloud-based environments
Self-management	<ul style="list-style-type: none">• Demonstrates a sophisticated knowledge of principles, concepts, language and practices associated with cloud computing and the digital world and uses them to troubleshoot and understand the uses and potential of new technology

Unit Mapping Information

No equivalent unit. New unit.

Assessment Requirements for ICTCLD505 Implement cloud infrastructure with code

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, and to:

- deploy, update and remove cloud infrastructure using cloud platform templates
- create, run and update at least one own template required to deploy and modify cloud infrastructure.

In the course of the above, the candidate must:

- use cloud management console, cloud software development kits or command line tools
- create user documentation.

Knowledge Evidence

The candidate must demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit. This includes knowledge of:

- industry technology standards used in cloud computing solutions and services
- industry standard hardware and software products, their general features, capabilities and application, including storage technology
- benefits of deploying infrastructure as code compared to manual provisioning in a console
- different infrastructure as code services that can be used on a cloud platform
- syntax of selected infrastructure as code service templates
- tooling required to execute cloud infrastructure templates
- testing and debugging techniques, including common issues and errors relating to deploying cloud infrastructure as code
- parameterisation of templates to support configuration and code reuse
- industry standard practices to define infrastructure as code
- uses and methods to create, manage, provision and update cloud resources and templates
- techniques, methods and industry standard metrics used to leverage cloud platform capabilities and deploy and manage templates.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- cloud vendor service provider
- cloud vendor or 3rd party infrastructure as code service
- specific requirements and industry standards, organisational procedures and legislative requirements, including business and functionality requirements, as required
- information and data sources required to design and implement cloud infrastructure
- integrated development environment (IDE)
- internet and web browser
- secure shell (SSH) or remote desktop protocol (RDP) client to connect to cloud-hosted instances
- cloud management console, cloud software development kit or command line tools.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTCLD506 Implement virtual network in cloud environments

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to design and configure a virtual network according to networking requirements for a multi-tiered application on a cloud platform.

The unit applies to cloud engineers, cloud systems administrators and those who work within cloud computing operations to program, implement and maintain cloud computing solutions to support a business.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Cloud computing

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to design and configure virtual networks	1.1 Gather multi-tier application networking requirements according to business needs 1.2 Identify business and industry requirements for virtual network in cloud environment 1.3 Research and identify available security options for virtual network
2. Design and configure virtual networks	2.1 Design virtual network according to networking and business requirements for a multi-tier application 2.2 Allocate virtual network and subnets for documented IP ranges

ELEMENTS	PERFORMANCE CRITERIA
	2.3 Enable network gateways and its service as required 2.4 Configure route tables and routing targets as required 2.5 Configure security controls to support test environment 2.6 Check expected network traffic is permitted into, through and out of virtual network 2.7 Collect and monitor network traffic logs and metrics 2.8 Test external connectivity to a resource within virtual network and demonstrate only permitted traffic reaches the resource 2.9 Troubleshoot and fix errors as required
3. Configure virtual network peering	3.1 Establish peering connection between two virtual networks 3.2 Adjust routing tables to direct traffic between both networks 3.3 Demonstrate network connectivity between hosts in each network 3.4 Test and troubleshoot network peering configuration
4. Document virtual networks	4.1 Document work, including a network diagram, and submit to required personnel as required 4.2 Obtain final task sign off from required personnel as required

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none">Interprets complex technical and operational documentation to determine and confirm job requirements
Writing	<ul style="list-style-type: none">Prepares user documentation detailing work in a logical manner using required syntax and language
Problem solving	<ul style="list-style-type: none">Uses a mix of intuitive and formal processes to identify key information and issues, evaluates alternative strategies, anticipates consequences and considers implementation issues and contingenciesUses knowledge of context to address common problems in cloud computing applications and cloud-based environments
Self-management	<ul style="list-style-type: none">Demonstrates a sophisticated knowledge of principles, concepts, language and practices associated with cloud computing and the digital world and uses them to troubleshoot and understand the uses and potential of new technology

Unit Mapping Information

No equivalent unit. New unit.

Assessment Requirements for ICTCLD506 Implement virtual network in cloud environments

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, and to:

- design and deploy virtual network to support a multi-tier application in a cloud environment
- modify at least one network configuration to peer with another virtual network.

In the course of the above, the candidate must:

- enable security controls and confirm that controls accurately affect network traffic as required
- use cloud management console, cloud software development kits or command line tools
- create user documentation.

Knowledge Evidence

The candidate must demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit. This includes knowledge of:

- industry technology standards used in cloud computing solutions and services
- industry standard hardware and software products, their general features, capabilities and application, including storage technology
- roles and principles of virtual networks in cloud environments
- uses and purpose of routing, routing targets, subnets, networking security controls, virtual private network (VPN) and IP address ranges
- uses of technology to connect to resources within a virtual network, including secure shell (SSH), virtual private network (VPN) and peering
- uses and differences between:
 - public and private subnets
 - networking gateways
 - routing targets

- network security controls
- testing and debugging techniques
- methodology and techniques to collect and analyse network traffic metrics and traffic logs.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- cloud vendor service provider
- information and data sources required to design and implement cloud infrastructure
- specific requirements and industry standards, organisational procedures and legislative requirements, including business and functionality requirements, as required
- internet and web browser
- secure shell (SSH) or remote desktop protocol (RDP) client to connect to cloud-hosted instances
- data to gather information from to determine output and user requirements, including user access and business protocols.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTCLD507 Build and deploy resources on cloud platforms

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to configure, deploy and monitor a range of technology resources of core cloud computing service on a cloud platform.

The unit applies to cloud engineers, cloud systems administrators and those who work within cloud computing operations to provision, implement and maintain cloud computing solutions for a business with little guidance or supervision. These ICT professionals may work from designs developed by cloud architects and focus on operational concerns, including automation and maintaining cloud resources.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Cloud computing

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to deploy a cloud resource	1.1 Review and confirm deploying and configuring a cloud resource task according to business needs 1.2 Determine cloud computing technology resources according to business needs 1.3 Identify organisational policies and procedures required for cloud technology resources 1.4 Identify and confirm business purpose, use and plan of different cloud resources according to business needs
2. Deploy and configure the	2.1 Identify interfaces and tools required to perform task that is

ELEMENTS	PERFORMANCE CRITERIA
cloud resource	repeatable and automatable 2.2 Define steps required to provision resource 2.3 Confirm and document testing required to demonstrate successful completion of task 2.4 Deploy and configure cloud resource 2.5 Configure required monitoring for cloud resource
3. Test the cloud resource	3.1 Execute test plan and demonstrate cloud resource meets task requirements and business need 3.2 Troubleshoot and resolve issues as required
4. Document and finalise task	4.1 Document procedure and results 4.2 Recommend further steps to reduce manual elements of the procedure through automation 4.3 Submit to required personnel 4.4 Communicate outcomes and obtain final task sign off from required personnel as required

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Interprets complex technical and operational documentation to determine and confirm job requirements
Writing	<ul style="list-style-type: none"> Prepares and develops complex documentation in required formats using clear succinct and detailed language to convey explicit information, requirements and recommendations Writes and edits code and technical data in a logical manner using required syntax and language and ensuring flow
Problem solving	<ul style="list-style-type: none"> Uses a mix of intuitive and formal processes to identify key information and issues, evaluates alternative strategies, anticipates consequences and considers implementation issues and contingencies Uses knowledge of context to address common problems in cloud computing applications and cloud-based environments
Self-management	<ul style="list-style-type: none"> Demonstrates a sophisticated knowledge of principles, concepts, language and practices associated with cloud computing and the digital world and uses them to troubleshoot and understand the uses and potential of new technology

Unit Mapping Information

No equivalent unit. New unit.

Assessment Requirements for ICTCLD507 Build and deploy resources on cloud platforms

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, and to:

- deploy and configure at least 6 of the following different types of cloud resources, including but not limited to
- virtual machines
- container services
- load balancers and autoscaling
- serverless functions
- API gateways
- block or object storage
- managed databases
- DNS
- content delivery networks.

In the course of the above, the candidate must:

- use cloud management console, cloud software development kits or command line tools
- develop and execute test plans and demonstrate successful task completion
- consider procedural improvements to produce repeatable and automated deployments by reducing manual processes.

Knowledge Evidence

The candidate must demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit. This includes knowledge of:

- industry technology standards used in cloud computing solutions and services
- industry standard hardware and software products, their general features, capabilities and applications
- testing and debugging techniques of cloud resources and technologies

- purpose, benefits and features of cloud-based:
 - virtual machines and containers services
 - API gateways and serverless computing
 - load balancing and autoscaling
 - block and object storage
 - managed databases
 - DNS and content delivery networks
 - resource logging, monitoring and alerting tools
- repeatable and automated provisioning with
- software development kits
- command line tools
- infrastructure as code services.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- cloud vendor service provider
- cloud managed database service
- information and data sources required to design and implement cloud infrastructure
- integrated development environment (IDE)
- specific requirements and industry standards, organisational procedures and legislative requirements, including business and functionality requirements, as required
- internet and web browser
- secure shell (SSH) or remote desktop protocol (RDP) client to connect to cloud-hosted instances
- data to gather information from to determine output and user requirements, including user access and business protocols.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTCLD508 Manage infrastructure in cloud environments

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to configure, monitor, maintain and update resources running in a cloud environment.

It applies to cloud engineers, cloud systems administrators and those who work within cloud computing environments and responsible for the day-to-day running of cloud resources.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Cloud computing

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to manage cloud resources	1.1 Determine complex cloud computing technology resources according to business requirements, needs and cloud environment 1.2 Identify and confirm business purpose, use and plan of different cloud resources according to business needs and efficiencies
2. Inventory and change management of cloud resources	2.1 Identify tagging policy and categorise resources according to business needs 2.2 Update resources according to tagging policy and build and maintain inventory of cloud resources 2.3 Generate report of resources based on category 2.4 Conduct maintenance with resources in specific category

ELEMENTS	PERFORMANCE CRITERIA
	2.5 Document resource tagging and inventory management according to business needs
3. Audit and change management of cloud resources	3.1 Identify configuration policy for cloud resources according to business needs 3.2 Enable logging of cloud-based events 3.3 Collect and track changes to cloud resource configuration 3.4 Apply configuration policy to resource and alert for non-conformance 3.5 Utilise audit logs and determine details and changes from configuration 3.6 Document cloud audit and change management configuration
4. Monitoring, logging and alarming	4.1 Define capacity limits for cloud resources according to business needs 4.2 Configure metrics and alarm when limits are exceeded 4.3 Capture and store resource and system logs 4.4 Test capacity to trigger alarms and review logs of incident 4.5 Manage capacity of resource to remove alarm 4.6 Document run book for actions according to configured alarm
5. Manage storage lifecycle	5.1 Identify data retention policy according to business needs and cloud resource 5.2 Configure storage to automatically comply with retention policy 5.3 Confirm that retention policy is applied to target storage 5.4 Document storage configuration according to business needs
6. Monitor and track complex cloud resources	6.1 Document mechanisms to automate tasks as required 6.2 Finalise user documentation and submit to required personnel as required

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Analyses and synthesises highly embedded mathematical

SKILL	DESCRIPTION
	information in a broad range of tasks and texts
Reading	<ul style="list-style-type: none">Organises, evaluates and critiques ideas and information from a range of complex texts
Writing	<ul style="list-style-type: none">Prepares complex documentation detailing analysis, work performed and results using succinct language and logical structure
Planning and organising	<ul style="list-style-type: none">Identifies the key factors that impact on decisions and their outcomes, drawing on experience, competing priorities, and decision-making strategies, where appropriatePlans strategic priorities and outcomes within a flexible, efficient and effective context, in a diverse environment exposed to competing demands
Self-management	<ul style="list-style-type: none">Develops and implements strategies that confirms that the organisational policies, procedures and regulatory requirements are being met

Unit Mapping Information

No equivalent unit. New unit.

Assessment Requirements for ICTCLD508 Manage infrastructure in cloud environments

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, and to:

- monitor and manage inventory, changes and lifecycle of at least one cloud resource.

In the course of the above, the candidate must:

- use cloud management console, cloud software development kits or command line tools
- collect and analyse cloud and system data and adjust resources accordingly
- summarise ways system operations in cloud environments can be automated to minimise manual intervention.

Knowledge Evidence

The candidate must demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit. This includes knowledge of:

- industry technology standards used in cloud computing solutions and services
- industry standard hardware and software products, their general features, capabilities and applications
- purpose, benefits and features of cloud services that enable:
 - resource inventory and change management
 - performance, capacity and availability monitoring and alerting
 - snapshots and backups
 - user, service and resource permissions
 - access management, monitoring and auditing
 - system patching and update services
 - security mechanisms
- repeatable and automated maintenance of cloud resources with:
 - console-based management services

- software development kits
- command line tools.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- cloud vendor service provider
- cloud managed database service
- information and data sources required to design and implement cloud infrastructure
- integrated development environment (IDE)
- specific requirements and industry standards, organisational procedures and legislative requirements, including business and functionality requirements as well as retention/lifecycle business policy, as required
- retention/lifecycle policy example as it relates to managing cloud infrastructure
- internet and web browser
- data to gather information from to determine output and user requirements, including user access and business protocols.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTCLD509 Manage cloud identity and access

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created unit of competency to address in-demand skills needs.

Application

This unit describes the skills and knowledge required to securely authenticate and maintain cloud-based identity and access management (IAM) systems in organisations. It includes developing, implementing and evaluating secure cloud computing solutions.

The unit applies to individuals who may work in roles such as security engineers, cloud developers and architects, and information security officers. It also includes individuals responsible for managing operational concerns across cloud environments.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Cloud computing

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to manage cloud identity and access	1.1 Confirm work brief and tasks according to organisational policies and procedures 1.2 Identify required protocols, platforms and networks in cloud-based infrastructure and confirm interoperability with organisational systems

ELEMENT	PERFORMANCE CRITERIA
	<ul style="list-style-type: none">1.3 Review password and multi-factor authentication requirements1.4 Discuss limitations of existing cloud-based IAM configuration with required personnel1.5 Confirm new IAM entities that will be required to complete work brief1.6 Identify required protocols, platforms and networks in cloud-based infrastructure and confirm interoperability with organisational systems
2. Create and secure new IAM users	<ul style="list-style-type: none">2.1 Authenticate cloud-based IAM service used by organisation according to work brief2.2 Modify password policy and enforce password complexity and expiry according to work brief2.2 Define updated security policies and roles according to work brief2.3 Create user accounts and associate with required permissions following organisational naming conventions2.4 Securely share user access credentials with organisational staff2.5 Enforce multi-factor authentication according to work brief2.6 Confirm that required staff can access specified account and reset credentials according to organisational processes and procedures
3. Configure machine resource permissions	<ul style="list-style-type: none">3.1 Identify cloud-based machine resources requiring IAM permissions according to work brief3.2 Define and confirm required security policies meet organisational needs3.3 Check that machine resources have required permissions3.4 Apply permissions to identified machine resources according to work brief3.5 Confirm that machine can be accessed by other resources and services as per work brief3.6 Document changes according to organisational policies and procedures
4. Periodically review IAM configuration	<ul style="list-style-type: none">4.1 Track members, activities and permissions in centralised location4.2 Review activity and recommend permission changes4.3 Delete permissions and entities that are no longer required4.4 Document changes according to organisational policies and procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none">Organises, evaluates and critiques ideas and information from a range of complex texts
Writing	<ul style="list-style-type: none">Prepares documentation using succinct language and logical structure
Planning and organising	<ul style="list-style-type: none">Identifies key factors that impact on decisions and their outcomes, drawing on experience, competing priorities, and decision-making strategies
Self-management	<ul style="list-style-type: none">Develops and implements strategies that confirm that organisational policies and procedures are being met

Assessment Requirements for ICTCLD509 Manage cloud identity and access

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created unit of competency to address in-demand skills needs.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- manage cloud identity and access for at least five different users.

In the course of the above, the candidate must:

- review cyber security requirements
- use cloud management consoles, software development kits and command line tools
- reduce unused privileges
- apply legislative requirements; governance, risk and compliance (GRC) measures; and organisational policies and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- features and functions of identity and access management (IAM) systems and GRC measures
- industry technology standards used in cloud computing solutions and services
- tools and functions of security layers and security-focused content in cloud services
- principle and implementation of least privilege
- differences in management of human and machine identities
- advantages of centralised identity providers in organisational environments
- applications of user authentication methods and technologies, including:
 - multi-factor authentication (MFA)

- password-based authentication
- certificate-based authentication
- security assertion markup language (SAML)
- single sign-on (SSO)
- security benefits of using temporary rather than permanent credentials
- best practices for storage, rotation and audit of permanent credentials
- IAM and resource policy definitions for granting or removing permissions, including:
 - role-based access controls (RBACs)
 - attribute-based access controls (ABACs)
 - permission boundaries to delegate maximum set of permissions
 - cross-account, project, subscription, third-party and public access
- organisational policies and procedures, and legislative requirements relating to work tasks.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- IAM systems and user accounts that may be managed
- cloud-based applications, software and hardware
- work brief and organisational policies and procedures required to demonstrate the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTCLD510 Manage cloud threat detection systems

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created unit of competency to address in-demand skills needs.

Application

This unit describes the skills and knowledge required to configure, detect and investigate unexpected or unwanted behaviour and changes in cloud-based systems that may threaten organisational security.

The unit applies to individuals who may work in roles such as security engineers, cloud developers and architects, and information security officers. It also includes individuals responsible for managing operational concerns across cloud environments.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Cloud computing

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Organise data sources and data collection methods	1.1 Confirm work brief and tasks according to organisational policies and procedures 1.2 Confirm organisational security strategies and cloud security requirements 1.3 Identify and review existing cloud security strategies 1.4 Identify and analyse data sources with highest value and

ELEMENT	PERFORMANCE CRITERIA
	<p>cost-benefit ratios</p> <p>1.5 Select required data collection methods according to analysis findings</p> <p>1.6 Document selected methods and findings according to organisational policies and procedures</p>
2. Set up resource configuration policies	<p>2.1 Identify organisational resource configuration policies</p> <p>2.2 Enable resource configuration monitoring and implement organisational policies</p> <p>2.3 Enable resources out of compliance and confirm resources are identified</p> <p>2.4 Reconfigure resources to meet organisational policies and confirm compliance</p> <p>2.5 Document configuration according to organisational policies and procedures</p>
3. Set up intrusion detection controls	<p>3.1 Identify cloud-based intrusion detection system (IDS)</p> <p>3.2 Deploy security sensors if required by IDS and monitor organisational resources</p> <p>3.3 Enable IDS and configure controls as defined in work brief</p> <p>3.4 Generate activity and test IDS according to work brief</p> <p>3.5 Confirm that activity is detected by IDS</p> <p>3.6 Document configuration according to organisational policies and procedures</p>
4. Centralise security logs and configure analytics	<p>4.1 Identify logs sources that may include security-related activity as specified in work brief</p> <p>4.2 Configure centralised collection of logs and identify latest updates</p> <p>4.3 Review log formats and define patterns to match and extract relevant metrics as per work brief</p> <p>4.4 Test log analytics according to work brief</p> <p>4.5 Analyse event management, alerting processes, dashboards, graphs and tables specified in work brief</p> <p>4.6 Configure required event management, and analysis and alerting processes according to work brief</p> <p>4.7 Confirm functionality of event management, and analysis and alerting processes</p>
5. Configure monitoring dashboard	<p>5.1 Identify cloud-based dashboard service</p> <p>5.2 Identify relevant metrics and alerts from resource configuration, intrusion detection and log analysis tools</p> <p>5.3 Configure dashboard and display metrics in required formats</p>

ELEMENT	PERFORMANCE CRITERIA
	5.4 Share dashboard with required personnel and collect feedback according to organisational policies and procedures 5.5 Update and improve dashboard based on feedback, where required 5.6 Document configuration according to organisational policies and procedures
6. Configure alerts for security events	6.1 Identify required personnel and alert method according to work brief 6.2 Implement alarm for resource configurations and confirm alert is received for a misconfigured cloud resource 6.3 Implement alarm for IDS and confirm alert is received for a relevant event in cloud environment 6.4 Implement alarm for log metrics that reach a threshold defined in work brief, and confirm alert is received 6.5 Rectify any issues encountered in implementing and testing alerts 6.6 Document configuration according to organisational policies and procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Numeracy	<ul style="list-style-type: none"> Analyses and synthesises highly embedded mathematical information in a broad range of tasks and texts
Reading	<ul style="list-style-type: none"> Organises, evaluates and critiques ideas and information from a range of complex texts
Writing	<ul style="list-style-type: none"> Prepares technical documentation detailing analysis, work performed and results using succinct language and logical structure
Planning and organising	<ul style="list-style-type: none"> Identifies key factors that impact on decisions and their outcomes, drawing on experience, competing priorities, and decision-making strategies
Self-management	<ul style="list-style-type: none"> Develops and implements strategies that confirm that organisational policies and procedures are being met
Technology	<ul style="list-style-type: none"> Demonstrates skills that reflect sophisticated knowledge of principles, concepts, language and practices associated with

Skill	Description
	cloud computing and cloud-based threats

Unit Mapping Information

No equivalent unit. Newly created unit.

Assessment Requirements for ICTCLD510 Manage cloud threat detection systems

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created unit of competency to address in-demand skills needs.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- implement at least one configuration management service to enforce organisational security controls on resources created in cloud environments
- configure at least one intrusion detection system (IDS) that monitors cloud-based resources for unexpected or unwanted behaviour and changes
- centralise collection and analysis of logs from at least one cloud service, at least one network, at least one operating system and at least one application.

In the course of the above, the candidate must:

- use cloud management console, cloud software development kits and command line tools
- collect and analyse data and adjust processes as required
- produce repeatable and automated system deployments
- disseminate important information and its severity
- test log analytics by generating an event, and triggering a rule and a metric
- rectify issues according to organisational policies and procedures
- apply legislative requirements; governance, risk and compliance (GRC) measures; and organisational policies and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- common threats in cloud-based organisations

- methods for collecting, analysing and extracting meaningful findings from logs from industry-recognised sources
- common procedures for presenting metrics in dashboards and reports based on log findings
- common methods to generate automated alarms based on metrics from log findings
- functions and features of cloud-based:
 - configuration management services
 - IDS
 - security information and event management (SIEM) tools
- tools for vulnerability scanning cloud-based resources
- methods for integrating third-party threat detection tools and sensors in a cloud environment
- functions and features of GRC measures
- organisational policies and procedures, and legislative requirements relating to work tasks.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- cloud-based systems that may be monitored for threats
- required software and hardware to configure cloud threat detection systems
- opportunities for interaction with others
- work brief, security strategy, and organisational policies and procedures required to demonstrate the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTCLD511 Protect cloud infrastructure and data

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created unit of competency to address in-demand skills needs.

Application

This unit describes the skills and knowledge required to protect networks and resources, and compute both at rest and in transit data in cloud environments.

The unit applies to individuals who may work in roles such as security engineers, cloud developers and architects, and information security officers. It also includes individuals responsible for managing operational concerns, including automation and maintaining cloud resources.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Cloud computing

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Review cloud usage and risks	1.1 Confirm work brief and tasks according to organisational policies and procedures 1.2 Locate sensitive and regulated data identified in work brief 1.3 Assess data sensitivity and potential risk to organisation 1.4 Review existing data processing services and assess

ELEMENT	PERFORMANCE CRITERIA
	<p>potential risk to organisation</p> <p>1.5 Review data processing service configuration and identify opportunities to improve security and reduce risk to organisation</p> <p>1.6 Document findings according to organisational policies and procedures, and prioritise recommendations.</p>
2. Implement resource protection controls	<p>2.1 Confirm work brief for network security controls</p> <p>2.2 Access cloud platform and implement change to environment</p> <p>2.3 Test security controls and confirm resources are being protected as expected</p> <p>2.4 Confirm functionality of network resources and rectify any issues</p> <p>2.5 Document configuration changes according to organisational policies and procedures</p>
3. Implement data encryption at rest	<p>3.1 Confirm work brief for data encryption controls</p> <p>3.2 Generate and secure encryption key in cloud platform according to organisational policies and procedures</p> <p>3.3 Encrypt sensitive data with encryption key</p> <p>3.4 Where practical, demonstrate that data is unreadable without access and use of encryption key</p> <p>3.5 Demonstrate that encryption key is only accessible by required personnel and services in cloud environment</p> <p>3.6 Document configuration changes according to organisational policies and procedures</p>
4. Implement data protection controls	<p>4.1 Confirm work brief related to data protection controls</p> <p>4.2 Identify cloud-based data loss protection (DLP) service</p> <p>4.3 Enable and configure DLP across organisation's storage and identify sensitive information</p> <p>4.4 Review DLP reports, document findings and recommend system improvements</p> <p>4.5 Document configuration changes according to organisational policies and procedures</p>
5. Recommend updates to organisational policies and procedures	<p>5.1 Summarise required changes for organisational policies and procedures</p> <p>5.2 Present summary to required personnel</p> <p>5.3 Obtain approval from required personnel</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none">Organises, evaluates and critiques ideas and information from a range of complex texts
Writing	<ul style="list-style-type: none">Prepares technical documentation detailing analysis, work performed and results using succinct language and logical structure
Planning and organising	<ul style="list-style-type: none">Identifies key factors that impact on decisions and their outcomes, drawing on experience, competing priorities, and decision-making strategiesPlans strategic priorities and outcomes in a flexible, efficient and effective context and diverse environment exposed to competing demands
Self-management	<ul style="list-style-type: none">Develops and implements strategies that confirm that organisational policies and procedures and regulatory requirements are being met
Technology	<ul style="list-style-type: none">Demonstrates skills that reflect sophisticated knowledge of principles, concepts, language and practices associated with cloud computing and cloud-based threats

Assessment Requirements for ICTCLD511 Protect cloud infrastructure and data

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created unit of competency to address in-demand skills needs.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- configure at least three network controls to protect a web-based application running in a cloud environment, which must include at least one of the following types of controls:
 - web application firewall
 - content delivery network
 - load balancer
 - network access control lists
 - host-based firewalls
- generate and securely manage at least one encryption key used to encrypt data at rest in the cloud
- implement at least one data loss prevention (DLP) system to identify and provide visibility to sensitive data

In the course of the above, the candidate must:

- use cloud management console, cloud software development kits and command line tools
- collect and analyse cloud data and adjust resources as required
- consider procedural improvements to produce repeatable and automated deployments by reducing manual processes
- report unusual cloud-based activities within required timeframes
- apply legislative requirements; governance, risk and compliance (GRC) measures; and organisational policies and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- functions and features of GRC measures
- methods to create and defend network layers between resources, including:
 - distributed denial of service (DDoS) protection
 - content distribution networks (CDNs)
- types of network security controls to manage inbound and outbound network traffic and service endpoints
- functions and features of firewalls
- common processes to harden virtual machine images and containers prior to deployment
- common processes to manage vulnerabilities of live resources through patching and configuration rules
- common patterns and services to minimise interactive access to compute resources, including bastion hosts
- common types and key characteristics of sensitive and regulated data
- functions and capabilities of data loss protection (DLP) systems
- methods to implement attribute-based access controls (ABACs) for different data classifications
- data retention policies and how they can be implemented
- methods for managing encryption keys generated by cloud providers
- storage services that support encryption at rest and how this can be monitored and enforced
- services for tracking and auditing access to sensitive data and encryption keys
- secure certificate management and deployment on external network resources, including CDNs, load balancers and application programming interface (API) gateways
- methods to configure networks and application to enforce data encryption in transit
- methods to conduct risk assessments and compliance assessments
- organisational policies and procedures, and legislative requirements relating to work tasks.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- cloud infrastructure and data that must be protected
- required software and hardware to configure cloud systems
- work brief, resources, and organisational policies and procedures required to demonstrate the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTCLD512 Respond to cloud security incidents

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created unit of competency to address in-demand skills needs.

Application

This unit describes the skills and knowledge required to respond to a range of security incidents in cloud-based environments. It includes defining response objectives and simulating security incidents.

The unit applies to individuals who may work in roles such as security engineers, cloud developers and architects, and information security officers. It also includes individuals responsible for managing operational concerns, including automation and maintaining cloud resources.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Cloud computing

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to respond to cloud security incident	1.1 Confirm work brief, risk framework and work tasks according to organisational policies and procedures 1.2 Identify organisational IT assets, host and network security, and related risk assessments 1.3 Identify domains exposed to potential security incident according to work brief 1.4 Confirm attack vector and impact of incident in consultation with required personnel 1.5 Create cloud incident plan according to work brief
2. Detect and analyse cloud security incident	2.1 Simulate security incident according to work brief 2.2 Confirm incident detection by monitoring systems 2.3 Record security incident information according to organisational policies and procedures 2.4 Review cloud incident findings according to organisational policies and procedures 2.5 Implement log capture and replication of relevant data to secure repository with appropriate retention policy 2.6 Determine functional impact, information impact and recoverability from incident 2.7 Notify required organisational personnel of incident
3. Contain, eradicate and recover from cloud security incident	3.1 Implement containment strategy to minimise impact according to cloud incident plan 3.2 Identify and document source and method of attack 3.3 Implement plan to eradicate security threat 3.4 Confirm recovery plan, impact to services and loss of data with required personnel 3.5 Implement recovery plan for resources and data 3.6 Build automated mechanisms for programmed cloud incident triage and response
4. Complete post-incident activities	4.1 Conduct review of incident with required personnel 4.2 Identify and document opportunities for improving automated detection, containment, eradication and/or recovery for security incident 4.3 Update cloud incident response document and store in required location according to organisational policies and procedures 4.4 Recommend updates to organisational policies and procedures to reflect best practice cloud incident response methods 4.5 Present recommendations for improving organisational policies and procedures to required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none">Organises, evaluates and critiques ideas and information from a range of complex texts
Writing	<ul style="list-style-type: none">Prepares technical documentation detailing analysis, work performed and results using succinct language and logical structure
Planning and organising	<ul style="list-style-type: none">Identifies key factors that impact on decisions and their outcomes, drawing on experience, competing priorities, and decision-making strategiesPlans strategic priorities and outcomes in a flexible, efficient and effective context and diverse environment exposed to competing demands
Self-management	<ul style="list-style-type: none">Develops and implements strategies that confirm that organisational policies and procedures and regulatory requirements are being met
Technology	<ul style="list-style-type: none">Demonstrates skills that reflect sophisticated knowledge of principles, concepts, language and practices associated with cloud computing and cloud-based threats

Assessment Requirements for ICTCLD512 Respond to cloud security incidents

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created unit of competency to address in-demand skills needs.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- respond to at least three different cloud security incidents and update a cloud incident response document for at least one of those incidents.

In the course of the above, the candidate must:

- collect and analyse cloud and system data
- consider procedural improvements to produce repeatable and automated deployments and reduce manual processes
- report unusual cloud-based activities within required timeframes
- apply legislative requirements; governance, risk and compliance (GRC) measures; and organisational policies and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- NIST 800-61 Computer Security Incident Handling Guide
- common causes and impacts of cloud incidents in organisations
- key components of cloud security incident response documentation
- common goals of responding to cloud incident response objectives in organisations, including:
 - recovering affected resources
 - preserving data for forensics

- data attribution
- methods to prepare for cloud security incidents, including:
 - identifying key personnel and supporting resources
 - developing incident response plans
 - granting provisional access
 - using incident response tools
- best practices for regularly simulating security incidents to train staff, and improve configurations and operating procedures
- methods for automating containment of a cloud security incidents and/or affected resources
- functions and features of GRC measures
- types of evidence used in cloud incident investigations, including:
 - cloud service, network, operating system and application logs
 - storage snapshots
 - resource configuration changes
- methods to apply redeployment mechanisms in response to cloud security incidents
- techniques to automate triage and response mechanisms for cloud security incidents
- key information and data required to summarise cloud incident responses
- organisational policies and procedures, and legislative requirements relating to work tasks.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- cloud infrastructure that has been exposed to at least three different types of incidents and requires protection controls
- software and hardware required to demonstrate the performance evidence
- opportunities for interaction with stakeholders
- work brief, resources, and organisational policies and procedures required to demonstrate the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTCLD513 Develop cloud-based microservices architecture using containers

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created unit of competency to address in-demand skills needs.

Application

This unit describes the skills and knowledge required to develop cloud-based microservices architecture using containers. It includes using software composed of small independent services that communicate over well-defined application programming interfaces (APIs).

The unit applies to individuals who may work in roles such as software engineers, DevOps engineers and solution architects. It also applies to individuals responsible for making organisational applications accelerated and scalable.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Cloud computing

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to build cloud-based microservices architecture	1.1 Confirm work brief and tasks for microservices architecture according to organisational policies and procedures 1.2 Confirm organisation's container technology for use in cloud environments 1.3 Establish organisational API preferences, semantics and versioning schemes 1.4 Obtain required application documentation and source code

ELEMENT	PERFORMANCE CRITERIA
	according to organisational policies and procedures
2. Identify required services	2.1 Review application documentation and source code, and determine microservice candidates 2.2 Select independent services to avoid duplication of business logic across multiple services
3. Prepare APIs	3.1 Define suitable API for each microservice 3.2 Use API gateways in microservices according to work brief 3.3 Adjust service code as needed to support defined API 3.4 Adjust application code to call service APIs according to work brief
4. Build and deploy cloud-based microservices architecture	4.1 Define and build containers for each service using modified source code 4.2 Deploy containers in cloud-based platform 4.3 Configure cloud environment components 4.4 Confirm that applications and services can communicate according to work brief
5. Test and document cloud-based microservice architecture	5.1 Test application and demonstrate working functionality 5.2 Troubleshoot problems in testing and update services until application is functioning as expected 5.3 Update application documentation according to organisational requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Organises, evaluates and critiques ideas and information from a range of complex texts
Planning and organising	<ul style="list-style-type: none"> Identifies key factors that impact on decisions and their outcomes, drawing on experience, competing priorities, and decision-making strategies Plans strategic priorities and outcomes in a flexible, efficient and effective context and diverse environment exposed to competing demands
Self-management	<ul style="list-style-type: none"> Develops and implements strategies that confirm that

Skill	Description
	organisational policies and procedures, and regulatory requirements are being met

Unit Mapping Information

No equivalent unit. Newly created unit.

Assessment Requirements for ICTCLD513 Develop cloud-based microservices architecture using containers

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created unit of competency to address in-demand skills needs.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop an application with at least two cloud-based microservices using containers
- extract and deploy services from a monolithic application using containers.

In the course of the above, the candidate must:

- build and deploy containers using application code provided in work brief
- demonstrate that services and applications are communicating and working as intended
- troubleshoot and rectify issues across deployed services
- apply required organisational policies and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- characteristics of cloud-based microservices architecture, including:
 - smart endpoints and dumb pipes
 - decentralised governance
 - decentralised data management
 - design for failure
 - infrastructure automation
- advantages and disadvantages of microservices compared to monolithic architectures
- benefits of using containers in microservices architecture

- industry-standard tools for building and deploying containers in a cloud environment
- common methods of defining application programming interfaces (APIs) for a service endpoint
- industry-recognised software and hardware required to configure cloud-based microservices architecture, including container technology
- methods for migrating monolithic application to a microservice architecture
- organisational policies and procedures, and legislative requirements relating to work tasks.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- code, software and hardware required to configure cloud-based microservices architecture, including container technology
- work brief, resources, and organisational policies and procedures required to demonstrate the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTCLD514 Create and test cloud-based serverless applications

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created unit of competency to address in-demand skills needs.

Application

This unit describes the skills and knowledge required to create and test cloud-based serverless applications. It includes the preparation required to create, test and update serverless applications.

The unit applies to individuals who may work in roles that include cloud computing operators, product managers, software engineers and DevOps engineers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Cloud computing

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Confirm work tasks and set up serverless functions	1.1 Confirm work brief and tasks according to organisational policies and procedures 1.2 Confirm that application software is appropriate for selected cloud platform according to work brief 1.3 Identify serverless function event triggers and predict serverless application behaviour 1.4 Package application software in correct cloud platform format 1.5 Create serverless functions in cloud platform 1.6 Configure event triggers and invoke required serverless functions

ELEMENT	PERFORMANCE CRITERIA
	according to work brief 1.7 Upload and deploy packaged software into serverless functions
2. Test serverless functions	2.1 Define test events for required serverless functions 2.2 Execute test events and confirm functionality 2.3 Rectify any functionality issues
3. Test serverless application	3.1 Configure event trigger for serverless functions 3.2 Execute event trigger for serverless functions 3.3 Analyse application responses, persistent data stores and function logs for accuracy, where required 3.4 Troubleshoot any application issues 3.5 Confirm application functionality according to analysis findings
4. Update application	4.1 Review application update requirements for serverless functions according to work brief 4.2 Deploy update to cloud platform according to work brief 4.3 Predict and test application behaviour change 4.4 Troubleshoot any function issues
5. Finalise documentation	5.1 Complete required documentation according to work brief and organisational policies and procedures 5.2 Save serverless applications in required location according to work brief and organisational policies and procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Organises, evaluates and critiques ideas and information from a range of complex texts
Planning and organising	<ul style="list-style-type: none"> Identifies key factors that impact on decisions and their outcomes, drawing on experience, competing priorities, and decision-making strategies Plans strategic priorities and outcomes in a flexible, efficient and effective context and diverse environment exposed to competing demands
Self-management	<ul style="list-style-type: none"> Develops and implements strategies that confirm that organisational policies and procedures and regulatory requirements are being met

Unit Mapping Information

No equivalent unit. Newly created unit.

Assessment Requirements for ICTCLD514 Create and test cloud-based serverless applications

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created unit of competency to address in-demand skills needs.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- create and test at least two different serverless applications using different event triggers.

In the course of the above, the candidate must:

- report unusual serverless application activities within required timeframes
- apply required organisational policies and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- functions and features of serverless applications technologies, including:
 - application programming interfaces (APIs)
 - event-driven architectures and applications
 - programming languages
 - software development kits
 - hypertext transfer protocols (HTTPs)
 - uniform resource identifiers (URIs)
- functions and features of event triggers supported by cloud platforms, including:
 - API gateways
 - data streams
 - message queues

- notifications and alarms
- object storage
- methods to configure, test and manage serverless applications
- types of serverless packaging and deployment tools supported by cloud platforms
- methods to operate serverless packaging and deployment tools
- types of software and related requirements for serverless applications, including:
 - cloud platform concurrency
 - execution limits
 - functionality and performance review
 - cost models
 - log monitoring
- organisational policies and procedures, and legislative requirements relating to work tasks.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a platform where serverless applications may be created and deployed
- work brief, resources, and organisational policies and procedures required to demonstrate the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTCLD515 Build and deploy cloud-based applications using CI and CD pipelines

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created unit of competency to address in-demand skills needs.

Application

This unit describes the skills and knowledge required to build and deploy cloud-based applications using continuous integration (CI) and continuous delivery (CD) pipelines in a range of contexts. It includes using each stage of the CI/CD automation process to build, test and merge applications, specifically in cloud-based environments.

The unit applies to individuals who may work in a variety of roles, including software engineers, cloud engineers and test automation engineers responsible for automatically delivering code changes to customers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Cloud computing

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for deployment	1.1 Confirm work brief and tasks according to organisational policies and procedures 1.2 Identify source repository according to work brief

ELEMENT	PERFORMANCE CRITERIA
	1.3 Assess and source deployment code according to work brief 1.4 Review build and deployment procedures defined in work brief
2. Develop and run CI phase	2.1 Review pipeline requirements according to work brief 2.2 Configure pipeline and related components according to organisational policies and procedures 2.3 Pull code from source repository using pipeline according to work brief 2.4 Build software using pipeline according to work brief 2.5 Run pipeline and analyse outcomes 2.6 Rectify any issues and confirm pipeline can store build artefacts according to work brief 2.7 Manually deploy build artefacts and confirm functionality
3. Configure feature branch	3.1 Identify features in source repository according to work brief 3.2 Create branch for new features and update code according to work brief 3.3 Update CI pipeline set-up to build from new feature branch 3.4 Discuss build errors with development team and identify root cause, where required 3.5 Rectify any build errors 3.6 Repeat CI pipeline with code updates and confirm any build issues are rectified, according to work brief 3.7 Manually deploy build artefacts and confirm new feature functionality in application
4. Develop and run CD phase	4.1 Configure CD pipeline for artefact deployment according to organisational policies and procedures 4.2 Run CD pipeline and analyse artefact deployment outcomes 4.3 Rectify any deployment issues and confirm application is working in target environment according to work brief 4.4 Repeat CD pipeline using a feature branch and confirm any deployment issues are rectified, according to work brief 4.5 Confirm new feature functionality in target environment 4.6 Complete required documentation according to work brief and organisational policies and procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none">Organises, evaluates and critiques ideas and information from a range of complex texts
Writing	<ul style="list-style-type: none">Writes clear, sequenced instructions for using CI and CD technologies
Oral Communication	<ul style="list-style-type: none">Participates in discussions using listening and questioning to elicit the views of others and to clarify or confirm understanding
Planning and organising	<ul style="list-style-type: none">Identifies key factors that impact on decisions and their outcomes, drawing on experience, competing priorities, and decision-making strategiesPlans strategic priorities and outcomes in a flexible, efficient and effective context and diverse environment exposed to competing demands

Unit Mapping Information

No equivalent unit. Newly created unit.

Assessment Requirements for ICTCLD515 Build and deploy cloud-based applications using CI and CD pipelines

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created unit of competency to address in-demand skills needs.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- use at least one continuous integration (CI) pipeline to build a cloud-based application
- use at least one continuous delivery (CD) pipeline to deploy the above cloud-based application.

In the course of the above, the candidate must:

- consider procedural improvements to CI and CD pipelines
- report unusual CI and CD activities within required timeframes
- apply required organisational policies and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- key functions and features of CI and CD pipelines, including:
 - integration of building and testing software
 - delivery of packaged software
 - deployment of packaged software into production environments
 - source and artefact repositories
 - manual and automated triggers
 - approval processes
- functions and features of:

- new branches and branch pipelines
- source control mains
- build archetypes
- CI and CD platforms, tools, technologies and components required in work brief
- characteristics and common types of application malfunctions
- common methods to identify and rectify application errors
- methods to integrate security tools into CI and CD pipelines
- techniques to detect and respond to build errors in consultation with development teams
- organisational formats for documentation and reports
- organisational policies and procedures, and legislative requirements relating to work tasks.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- CI and CD platforms, tools, technologies and components required in work brief
- opportunities for interaction with others
- work brief, software, hardware, and organisational policies and procedures required to demonstrate the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTCLD601 Develop cloud computing strategies for businesses

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to develop a cloud computing strategy to establish cloud computing services to improve a business.

It applies to those who work in senior management, including strategic business analysts and chief information officers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Cloud computing

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Analyse existing business ICT system assets	1.1 Review business assets and identify required assets for cloud deployment 1.2 Evaluate each asset's risk tolerance according to business needs
2. Select deployment and delivery model	2.1 Map assets to required cloud deployment models 2.2 Review and select required delivery model for each asset according to business needs 2.3 Document business security risks for business
3. Develop cloud implementation strategy	3.1 Develop a cloud implementation plan, and confirm that deployment and delivery models are in line with business requirements

ELEMENT	PERFORMANCE CRITERIA
	<p>3.2 Develop costing for technology requirements implementation proposal</p> <p>3.3 Develop processes for the periodic review of cloud service metrics according to implementation proposal and business need</p> <p>3.4 Submit documentation to required personnel and seek and respond to feedback</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Numeracy	<ul style="list-style-type: none">Analyses and synthesises highly embedded mathematical information in a broad range of tasks and texts
Reading	<ul style="list-style-type: none">Organises, evaluates and critiques ideas and information from a range of complex texts
Writing	<ul style="list-style-type: none">Prepares complex documentation detailing analysis and recommended cloud computing implementation strategy using succinct language and logical structure
Planning and organising	<ul style="list-style-type: none">Identifies the key factors that impact on decisions and their outcomes, drawing on experience, competing priorities, and decision-making strategies, where appropriatePlans strategic priorities and outcomes within a flexible, efficient and effective context, in a diverse environment exposed to competing demands
Self-management	<ul style="list-style-type: none">Develops and implements strategies that confirms that the organisational policies, procedures and regulatory requirements are being met
Technology	<ul style="list-style-type: none">Uses digital technologies to manage business operations and actively investigates new technologies, for strategic and operational purposes

Unit Mapping Information

Supersedes and is equivalent to ICTICT814 Develop cloud computing strategies for a business.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTCLD601 Develop cloud computing strategies for businesses

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- analyse and document a cloud computing implementation strategy that meets business needs.

In the course of the above, the candidate must:

- research cloud computing options in the marketplace according to business needs
- analyse the effectiveness of existing cloud computing deployment and delivery models.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- business processes and cloud service sources
- cloud computing concepts, processes and trends
- require business policies and legislation that impact business operations and privacy legislation
- legal, ethical and security issues relating to cloud computing
- organisational change-management theory and methods
- risk tolerance issues for developing cloud computing strategies
- methods of deploying cloud technology strategies
- security issues relevant to a business.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a complex business environment
- required enterprise strategic documentation, including:
 - strategic planning
 - financial documentation
 - ICT infrastructure
 - business objectives and policies.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTCLD602 Manage information security compliance of cloud service deployment

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to manage cloud security controls, privacy and legal compliance when implementing cloud services for an enterprise.

It applies to those with managerial responsibility of a business' IT infrastructure, including cloud engineers, systems engineers and experienced security technical specialists, security analysts, security consultants.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Cloud computing

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify information security risks for cloud service	1.1 Identify cloud security risks for different cloud delivery and deployment models 1.2 Identify and review legal, privacy and contractual issues, organisational policies, procedures and requirements 1.3 Map responsibilities between organisation and cloud vendor 1.4 Review compliance controls of cloud vendor 1.5 Identify risks and identify risks that are organisation's responsibility

ELEMENT	PERFORMANCE CRITERIA
2. Manage cloud security controls	<ul style="list-style-type: none">2.1 Identify security controls provided by the cloud vendor for cloud service2.2 Map security controls to organisation risks2.3 Configure security controls to mitigate risk according to business needs2.4 Document configuration of security control and risk mitigation
3. Manage cloud privacy compliance	<ul style="list-style-type: none">3.1 Identify required data storage compliance regulations3.2 Determine data privacy risks associated with cloud service3.3 Determine and implement business continuity and data recovery plan requirements3.4 Review user access policies and configuration to data3.5 Identify, secure and maintain, logs and audit trails according to business requirements3.6 Document data privacy risk mitigation
4. Implement information security compliance enhancements	<ul style="list-style-type: none">4.1 Implement and integrate required changes into organisations risk register and business continuity plans (BCP)4.2 Establish and document performance measurement program and evaluate security effectiveness of implemented security controls4.3 Submit documentation changes to required personnel4.4 Obtain final task sign off from required personnel

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none">• Explores and incubates, new and innovative ideas, through unconstrained analysis and critical thinking, to develop and improve the organisation's goals
Oral communication	<ul style="list-style-type: none">• Articulates requirements and complex concepts using industry standard technical language intended for audience and environment
Reading	<ul style="list-style-type: none">• Organises, evaluates and critiques ideas, and information, from a wide range of complex texts
Writing	<ul style="list-style-type: none">• Prepares complex documentation detailing cloud security control and privacy mitigation and recommended enhancements using

SKILL	DESCRIPTION
	succinct language and logical structure
Planning and organising	<ul style="list-style-type: none">Plans strategic priorities and outcomes within a flexible, efficient and effective context, in a diverse environment, exposed to competing demandsGathers and analyses data, and seeks feedback to improve plans and processes
Problem solving	<ul style="list-style-type: none">Makes high-impact decisions in a complex and diverse environment, using input from a range of sourcesIdentifies the key factors that impact on decisions and their outcomes, drawing on experience, competing priorities, and decision-making strategies, where appropriate
Self-management	<ul style="list-style-type: none">Works autonomously making high-level decisions to achieve, and improve, organisational goalsDevelops and implements strategies, that confirms that organisational policies, procedures and regulatory requirements are being met
Technology	<ul style="list-style-type: none">Demonstrates a sophisticated knowledge of principles, concepts, language and practices associated with the digital world

Unit Mapping Information

Supersedes and is equivalent to ICTNWK616 Manage security, privacy and compliance of cloud service deployment.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTCLD602 Manage information security compliance of cloud service deployment

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- identify, manage and implement cloud security controls and document requirements on at least one occasion.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- business and commercial issues relating cloud security management
- cloud shared security responsibility models
- legislation, organisational and jurisdictional policy and procedures that impact management areas including:
 - data privacy and sovereignty issues
 - codes of ethics and conduct
 - equal employment opportunity, equity and diversity principles
 - financial management requirements
 - governance requirements
- industry standard management tools and techniques suited to a range of complex project activities
- key organisational context, policies and procedures and required to manage information security compliance of cloud service deployment
- information security compliance standards, including ISO2700x
- information security compliance constructs, including risk, controls and risk mitigation.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- cloud information and communications technology (ICT) business specifications
- cloud ICT security assurance specifications
- cloud-focused security environment, including threats to security that are, or are held to be, present in the environment
- security environment information, including:
 - laws or legislation
 - existing enterprise security policies
 - enterprise expertise
- risk analysis tools and methodologies currently used in industry
- documented organisational work health safety (WHS) requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTCLD603 Design hybrid cloud-based network architectures

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created unit of competency to address in-demand skills needs.

Application

This unit describes the skills and knowledge required to plan the connection of traditional on-premises infrastructure to resources in specified vendor programs, through developing hybrid cloud-based network architectures. It includes designing a hybrid network architecture and selecting appropriate hybrid network solutions to support a cloud-based computing environment.

The unit applies to individuals who may work in a variety of roles, including hybrid cloud architects, network architects and specialist solution architects who independently design hybrid network architectures in various contexts.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Cloud computing

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Create network integration plan	1.1 Confirm work brief and tasks according to organisational policies and procedures 1.2 Identify existing and proposed on-premises and cloud-based

ELEMENT	PERFORMANCE CRITERIA
	resources in consultation with required personnel 1.3 Research vendor and hybrid network technologies 1.4 Record research findings in network integration plan according to work brief 1.5 Select and source hybrid network technologies according to work brief and organisational policies and procedures 1.6 Record functions and features of hybrid network architectures in network integration plan
2. Set up on-premise hybrid connectivity	2.1 Identify advantages and disadvantages of extension program options 2.2 Select preferred option according to work brief in consultation with required personnel 2.3 Review program components according to work brief 2.4 Determine reference architecture 2.5 Confirm required network configurations 2.6 Outline procedures to confirm connection between on-premise network and selected program
3. Finalise documentation	3.1 Document capability matrix according to organisational policies and procedures 3.2 Save applications in required locations according to organisational policies and procedures 3.3 Confirm that documentation includes required components according to work brief 3.4 Securely file documentation according to organisational policies and procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Numeracy	<ul style="list-style-type: none">Analyses hybrid network architecture diagrams and uses advanced numeracy to calculate capability matrix components
Reading	<ul style="list-style-type: none">Interprets a range of specialised documentation and diagrams, and identifies solutions according to requirements
Writing	<ul style="list-style-type: none">Completes workplace records, documentation and forms accurately and legibly using correct technical and enterprise-specific vocabulary

Skill	Description
Planning and organising	<ul style="list-style-type: none">Plans strategic priorities and outcomes in a flexible, efficient and effective context and diverse environment exposed to competing demands

Unit Mapping Information

No equivalent unit. Newly created unit.

Links

Companion Volume Implementation Guide is found on VETNet - -

Assessment Requirements for ICTCLD603 Design hybrid cloud-based network architectures

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created unit of competency to address in-demand skills needs.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design at least two hybrid network architectures.

In the course of the above, the candidate must:

- research and compare available hybrid network architecture options
- apply required organisational policies and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- functions and features of integration plans and capability matrices
- methods to design hybrid network architecture and integration plans
- key functions and features of hybrid network architectures, including:
 - virtual machine connections
 - bandwidth requirements
 - computers, hardware and hybrid topologies
 - network traffic
 - private connections and reference architecture
 - virtual private network (VPN) configurations and gateways
 - system and custom routing tables
- key types of industry-recognised network topologies, including:

- site-to-site
- multi-site
- point-to-site
- network-to-network
- methods to calculate bandwidth
- industry-recognised technologies and resources used in designing hybrid network architectures
- industry-recognised hybrid network architecture vendors
- types of communication methods between resources and datacentres
- types of extension programs to extend on-premise network over private connections
- methods to establish dedicated, high-speed connection between networks and programs
- methods to secure and save applications
- organisational formats for documentation and reports
- organisational policies and procedures, and legislative requirements relating to work tasks.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- technologies and resources to design hybrid network architectures
- work brief and organisational policies and procedures required to demonstrate the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTCLD604 Manage data in cloud environments

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created unit of competency to address in-demand skills needs.

Application

This unit describes the skills and knowledge required to carry out best practice data integration activities to effectively manage data in cloud environments. It includes preparing data infrastructure and managing datasets with project teams.

The unit applies to individuals who may work in a variety of roles, including senior data engineers and infrastructure engineers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Cloud computing

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Organise task requirements and prepare data	1.1 Confirm work brief and tasks according to organisational policies and procedures 1.2 Establish structure and purpose of data in specified cloud environment 1.3 Confirm data consistency across required platforms 1.4 Consult with required personnel and confirm data management objectives

ELEMENT	PERFORMANCE CRITERIA
2. Prepare infrastructure	2.1 Select data integration method according to work brief 2.2 Identify and source data integration tools according to work brief and organisational policies and procedures 2.3 Configure infrastructure according to according to selected data integration method 2.4 Confirm that cloud environment is connected as required in work brief 2.5 Validate data quality, data speeds, and master and metadata
3. Supervise data integration technologies to service data	3.1 Check data staging and landing processes according to work brief 3.2 Confirm that data management toolset supports protocols and interfaces of major cloud-based platforms and applications 3.3 Check on-demand and real-time data processes according to work brief 3.4 Distribute serviced data integration technologies to project team
4. Update data management policies and procedures	4.1 Review related data management policies and procedures and recommend suitable updates to articulate best practice 4.2 Seek and integrate input from project team into recommended updates 4.3 Obtain any required approval to implement recommendations 4.4 Make required amendments to data management policies and procedures 4.5 Distribute and store amended data management policies and procedures according to organisational requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Numeracy	<ul style="list-style-type: none"> Analyses and synthesises embedded mathematical information in a broad range of tasks and texts
Oral communication	<ul style="list-style-type: none"> Leads discussions to explore data management policies and procedures and iteratively confirms team member understanding

Skill	Description
	<ul style="list-style-type: none">• Uses developed listening, observational and questioning skills to communicate ideas and understand others' perspectives
Reading	<ul style="list-style-type: none">• Organises, evaluates and critiques ideas and information from a range of complex texts
Planning and organising	<ul style="list-style-type: none">• Identifies key factors that impact decisions and their outcomes, drawing on experience, competing priorities, and decision-making strategies• Plans strategic priorities and outcomes in a flexible, efficient and effective context and diverse environment exposed to competing demands
Self-management	<ul style="list-style-type: none">• Develops and implements strategies that confirm that organisational policies and procedures and regulatory requirements are being met

Unit Mapping Information

No equivalent unit. Newly created unit.

Assessment Requirements for ICTCLD604 Manage data in cloud environments

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created unit of competency to address in-demand skills needs.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- implement and manage the servicing of at least two different datasets in a cloud environment
- update at least one data management policy and one data management procedure as a result of above servicing.

In the course of the above, the candidate must:

- research industry-recognised data management processes and procedures
- apply required organisational policies and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- functions and features of data components, including:
 - data quality
 - data speeds
 - master and metadata
 - data volume
- uses of cloud technologies in storing data
- types and applications of data integration technologies
- methods to identify risks in data management
- types of industry-recognised:

- data management processes and procedures
- information and communications technology (ICT) controls, infrastructure and tools used to integrate data in cloud environments
- functions and features of integration tools
- methods to prepare cloud infrastructure
- methods to update and finalise documentation, including organisational policies and procedures
- organisational policies and procedures, and legislative requirements relating to work tasks.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- cloud environments where data may be managed
- opportunities for interaction with others
- work brief and organisational policies and procedures required to demonstrate the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTCMP203 Perform restricted customer premises broadband cabling work: ACMA Restricted Rule

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Application

This unit describes the skills and knowledge required to install simple point-to-point broadband cabling on customer premises.

The unit applies to technical staff who install and terminate new installations or upgrades, or maintain existing networks in domestic premises. These may include small offices, home offices and small commercial premises that do not have a main distribution frame (MDF) or jumperable distributor as the network boundary point.

Licensing, legislative, regulatory and certification requirements apply to telecommunications systems. Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media Authority (ACMA) accredited registrar. Refer to the ICT Information and Communications Technology Training Package Companion Volume Implementation Guide or the relevant regulator for details of licensing, legislative or certification requirements.

Pre-requisite Unit

ICTCBL246 Install, maintain and modify customer premises communications cabling:
ACMA Restricted Rule

OR

ICTCBL239 Install customer cable support systems

and ICTCBL240 Place and secure customer cable

and ICTCBL241 Terminate metallic conductor customer cable

and ICTCMP201 Organise and monitor cabling to ensure compliance with regulatory and industry standards

Unit Sector

Telecommunications – Compliance

Elements and Performance Criteria

Element	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for installation	1.1 Access site according to enterprise procedures 1.2 Organise tools and equipment for specialised broadband cabling for restricted cabling work 1.3 Review site according to work health and safety (WHS) and environmental requirements and identify hazards 1.4 Determine cable route and cabling environment meet manufacturer specifications, industry standards and regulatory requirements
2. Install broadband cable	2.1 Place and secure correct cable type according to accepted industry practice, relevant regulations and standards 2.2 Maintain cable and service separations in runs and crossovers to meet manufacturer specifications and relevant legislation, regulations, codes and standards 2.3 Fit over-voltage protection devices to cables and metallic components as required
3. Terminate and test broadband cable	3.1 Terminate cable according to accepted industry practice and relevant legislation, regulations, codes and standards 3.2 Maintain correct twist ratio to optimise system performance at rated level 3.3 Conduct verification and qualification testing of cable installation and termination with suitable tester and record results 3.4 Supply system performance documents to customer and outline results 3.5 Complete cabling records and telecommunications cabling advice forms (TCA1) according to industry standards

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance, but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none">Evaluates information and products from a variety of sources to ensure appropriateness to customer needs and specifications
Writing	<ul style="list-style-type: none">Prepares documentation and correspondence using clear language, correct spelling and accurate terminology
Numeracy	<ul style="list-style-type: none">Makes calculations appropriate for measuring and estimating materials for installations
Navigate the world of work	<ul style="list-style-type: none">Understands rights and responsibilities and complies with legal and regulatory requirements
Get the work done	<ul style="list-style-type: none">Plans and implements routine tasks and workload making limited decisions on sequencing, timing and collaboration, seeking assistance in setting prioritiesResponds to predictable routine problems and implements solutionsMakes decisions within familiar situations, based on a range of predefined or routine solutions

Unit Mapping Information

ICTCMP203 Perform restricted customer premises broadband cabling work: ACMA Restricted Rule supersedes and is equivalent to ICTCMP202 Perform restricted customer premises broadband cabling work: ACMA Restricted Rule.

Assessment Requirements for ICTCMP203 Perform restricted customer premises broadband cabling work: ACMA Restricted Rule

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- review site and determine cable requirements for installation
- comply with all related work health and safety (WHS) requirements and work practices
- install and terminate fixed broadband cable according to industry standards and manufacturer specifications
- terminate point-to-point data and cable
- verify installed network is working and able to access the internet
- perform a data rate qualification test and record test results
- provide report to customer, documenting installation and test results, according to industry standards.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- legislation, regulations, codes, standards, rules, guidance notes and other formal agreements that impact on work, in particular:
 - Australian Communications and Media Authority (ACMA) cabling provider rules, cabler registration rules, regulations and standards
 - hazards and work health and safety (WHS) regulations and environmental requirements relating to cabling activities and site conditions
- types of cable test methods and system performance requirements
- types of cabling situations and the resultant installation requirements

- features and operating requirements of applicable test equipment
- information required to operate equipment according to a test specification
- manufacturer requirements for safe operation of equipment
- techniques for terminating data cable
- typical installation issues and challenges that may occur on cabling worksites
- tools and equipment required for cabling works
- cable separations and over-voltage protection requirements necessary for specific cable installations.

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- site/s where installation and termination of cabling can be conducted
- current tools, testing equipment and personal protective equipment used in industry
- relevant regulatory and equipment documentation that impact installation activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. Refer also to the *Requirements for assessors* in the ICT Information and Communications Technology Training Package Companion Volume Implementation Guide.

ICTCMP502 Conduct radio communications site audits

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to conduct radio communications site audits and assess compliance of radiofrequency transmissions.

It applies to individuals who are field officers from regulatory authorities and other private and public organisations. They combine technical radiocommunications skills with broader organisational and administrative skills to conduct audits in commercial and community contexts and environments, make recommendations for improvement and follow up by monitoring resulting actions.

Work functions in occupational areas where this unit may be used are subject to regulatory requirements. Refer to the required regulator for details of licensing, legislative or certification requirements.

Unit Sector

Telecommunications – Compliance

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for radio communications site audit	<p>1.1 Discuss need for site audit, arrange approval for formal site access with relevant personnel and determine audit requirements according to required legislation, safety and security arrangements, organisational standards and procedures</p> <p>1.2 Access existing knowledge management systems that contain required site information</p> <p>1.3 Prepare documents that contains audit site information and validation lists to be used at the audit site</p> <p>1.4 Identify staff, equipment and material resource requirements for</p>

ELEMENT	PERFORMANCE CRITERIA
	audit 1.5 Confirm that equipment has been correctly calibrated and labelled for site audit
2. Execute radio communications site audit	2.1 Validate specific site location according to database information 2.2 Perform audit tasks according to organisational policies and procedures and meet authorised personnel on site during agreed timeframes 2.3 Perform transmission and radiofrequency tests against approved specifications 2.4 Check transmitters for licensing conditions 2.5 Check transmission radiofrequency against database list 2.6 Obtain permission to check and alter transmission and radiofrequency 2.7 Determine whether defined site equipment labelling complies with Australian legislation, standards and regulations for conducting radio communications site audits
3. Complete radio communications site audit	3.1 Discuss audit findings with authorised personnel 3.2 Discuss recommended actions that help promote audit compliance 3.3 Issue enforcement actions as required 3.4 Finalise audit administration according to organisational policies and procedures 3.5 Return equipment and resources according to organisational policies and procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Critically analyses documentation from a variety of sources and records, and consolidates information to determine requirements
Writing	<ul style="list-style-type: none"> Records and completes organisational documents and correspondence using clear language and correct spelling, grammar and terminology
Oral communication	<ul style="list-style-type: none"> Presents complex information in formal situations using clear language, tone and pace required for the audience and purpose
Numeracy	<ul style="list-style-type: none"> Performs mathematical calculations to interpret complex tests results and information

SKILL	DESCRIPTION
	<ul style="list-style-type: none">Analyses and synthesises highly embedded mathematical information in a broad range of tasks and texts
Self-management	<ul style="list-style-type: none">Takes responsibility for following policies, procedures and legislative requirements and identifies organisational implications of new legislation and regulationsIdentifies and resolves key business issues, processes and practices that may have legal implications
Teamwork	<ul style="list-style-type: none">Selects, implements and seeks to improve protocols governing communications to clients and co-workers in a range of work contexts
Initiative and enterprise	<ul style="list-style-type: none">Monitors progress of plans and schedules and reviews and changes them to meet new demands and prioritiesApplies systematic and analytical decision-making processes for complex and non-routine situationsResponds intuitively to problems requiring immediate resolution, drawing on past experiences to focus on the cause of a problem rather than the symptom

Unit Mapping Information

Supersedes and is equivalent to ICTCMP501 Undertake radio communications site audit.

Assessment Requirements for ICTCMP502 Conduct radio communications site audits

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- conduct at least three radiocommunications site audits with different licensing requirements at each site.

In the course of the above, the candidate must:

- determine the need for a site audit and gain access approvals from relevant personnel
- conduct transmission and radiofrequency tests
- monitor non-compliances to confirm actions completed
- document enforcement actions.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- features and functions of test equipment, including:
 - digital radio communications measuring equipment
 - modulation analyser
 - power meter
 - radiofrequency termination
 - spectrum analyser
- licensing database features
- information required to prepare and conduct network site audits
- transmission lines, transmitter and receiver architecture and their impact on radiocommunications audits
- required field measurements, including:
 - carrier frequency

- harmonics
- intermodulation distortion products
- modulation
- radiofrequency power
- specific issues related to antenna installations and their impact on radio communications interference
- types of adjustments that need to be made to audit procedures to meet requirements of particular sites and environmental conditions
- typical issues and challenges that occur in networking site audits and how these are addressed
- legislation, codes, regulations and standards, and work health and safety (WHS) requirements for scoped work.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- sites on which audits may be conducted
- use of field measurement equipment currently used in industry
- required databases, licensing requirements and other site related documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTCYS401 Design and implement network security infrastructure for an organisation

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to set up network security infrastructure scalable to a medium to large organisation.

It applies to individuals who work as networking engineers and cloud engineers and specialise in cyber security in an Information and Communications Technology (ICT) and digital team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Cyber security

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to design and implement network security infrastructure	1.1 Obtain work details and scope from required personnel and arrange for site access in compliance with required security arrangements, legislation, codes, regulations and standards 1.2 Establish security threats impacting organisation with required personnel and assess its likelihood 1.3 Confirm and document established requirements and risks according to organisational procedures
2. Design network security infrastructure	2.1 Establish requirements and features of network security infrastructure 2.2 Identify and evaluate a range of industry standard network

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	security providers 2.3 Discuss and confirm selected network security provider with required personnel according to infrastructure requirements
3. Implement network security infrastructure	3.1 Establish and create secure network boundaries 3.2 Implement server, application and user security technologies according to network security requirements 3.3 Confirm required levels of user access throughout organisation 3.4 Establish maintenance and alert processes for risk and security threats according to organisational procedures
4. Finalise and monitor network security infrastructure	4.1 Test deployment of network security infrastructure and its components according to organisational testing procedures 4.2 Gather and review test results and logs and adjust accordingly 4.3 Confirm completion of requirements with required personnel 4.4 Document work performed and results according to organisational procedures 4.5 Conduct routine reviews of network security infrastructure according to organisational procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none"> Identifies and gathers information applicable to business, infrastructure and network
Reading	<ul style="list-style-type: none"> Selects and applies network infrastructure features and procedures suited to job requirements and system design from range of routine texts
Writing	<ul style="list-style-type: none"> Uses required and industry specific terminology in documenting research findings and network security policies
Technology	<ul style="list-style-type: none"> Uses required technological tools and software in designing and implementing network security infrastructure Applies skills in systems administration, network security, applications and programming

Unit Mapping Information

No equivalent unit. New unit.

Assessment Requirements for ICTCYS401 Design and implement network security infrastructure for an organisation

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design and implement a network security infrastructure according to organisational requirements.

In the course of the above, the candidate must:

- identify at least three security risks and at least three threats impacting business
- identify and evaluate the advantages and disadvantages of at least two industry standard network security providers suitable to infrastructure being designed and implemented.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- network infrastructure features, including:
 - connectivity
 - routing and switching capabilities
 - network security
 - access control
- organisational business processes and applicable organisational, infrastructure, network and security requirements in each area
- organisational procedures applicable to designing and implementing network security infrastructure, including:
 - documenting established requirements, risks and work performed
 - establishing requirements and features of network security infrastructure
 - establishing maintenance and alert processes
 - conducting routine reviews of network security infrastructure
 - testing methods and procedures

- security risks, and tolerance of risk in an organisation
- industry standard network security providers
- industry standards and regulations applicable to implementing network security infrastructure in an organisation.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required hardware, software and its components
- organisational procedures and policies applicable to network security infrastructure
- required network security providers and solutions
- site server
- application and user security technologies.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTCYS402 Identify and confirm cyber security incidents

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to identify, confirm and report cyber security incidents in an organisation.

It applies to individuals who work in information technology security, and gather logs from systems, networks and applications to identify the occurrence of incidents in any business environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Cyber security

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify cyber security incidents	1.1 Identify and review legislative requirements and organisational procedures and policies applicable to cyber security incidents and incident response plans 1.2 Obtain and analyse system, network and application infrastructure and logs according to organisational security procedures 1.3 Analyse and test application and confirm assumptions of incidents according to organisational security procedures 1.4 Discuss differences between network and systems incidents with required personnel
2. Confirm cyber	2.1 Confirm whether incidents are network or systems related

ELEMENT	PERFORMANCE CRITERIA
security incidents	2.2 Discuss and confirm incident with required personnel 2.3 Identify and discuss potential changes required to system, network and application
3. Report and document cyber security incidents	3.1 Report cyber security incident to required personnel, according to legislative requirements and organisational policies and procedures 3.2 Document exposed vulnerability and changes, solutions and actions discussed according to organisational policies and procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none"> Identifies and gathers information applicable to business, systems, network and infrastructure
Oral communication	<ul style="list-style-type: none"> Uses effective communication techniques to discuss details of cyber security incidents using industry standard technical language intended for audience and environment
Reading	<ul style="list-style-type: none"> Interprets information in a range of formats when identifying cyber security incidents Reads and applies information of relevance to cyber security incident and suggests potential changes
Writing	<ul style="list-style-type: none"> Uses required and industry specific terminology in documenting cyber security incidents and proposed actions and solutions
Technology	<ul style="list-style-type: none"> Uses required technological tools and software in identifying and confirming cyber security incidents

Unit Mapping Information

No equivalent unit. New unit.

Links

Assessment Requirements for ICTCYS402 Identify and confirm cyber security incidents

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- identify and confirm occurrence of at least:
 - one network incident
 - one system incident
 - one wireless or Wi-Fi incident
 - one application incident.

In the course of the above, the candidate must:

- discuss and contribute at least one potential change to each incident
- adhere to legislative requirements and organisational security procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- different types of cyber security incidents and attacks, including:
 - security vulnerabilities and malware
 - denial-of-service attack (DDOS)
 - SQL injection (SQLi)
 - cross-site scripting (XSS) attacks
 - scripted attacks
 - hardware attacks
 - attacks against Wi Fi
- cyber security risks
- methods of testing systems, networks and applications and confirming incidents
- common procedures in:

- following organisational cyber security incident response plans
- responding to cyber security incidents
- legislative requirements applicable to identifying and reporting cyber security incidents
- organisational policies and procedures applicable to cyber security incidents, including:
 - documenting established requirements, incidents and work performed
 - security procedures
 - obtaining and analysing system, network and application information
 - cyber security incident response processes and plans
 - establishing reporting procedures.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required hardware, software and its components
- system, network and application infrastructure and logs
- the internet
- organisational security procedures including incident response plans.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTCYS403 Plan and implement information security strategies for an organisation

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to develop an information security and risk management strategy (ISRM) within an organisation that supports business processes.

It applies to individuals who work in information technology security and have the knowledge and skills in cyber security to support business functions in planning and implementing information security strategies. In this instance, the individual may work internally within an organisation, or be engaged externally in supporting organisations with their development of information security strategies.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Cyber security

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan information security strategies	1.1 Discuss implementation opportunities for organisational information security strategies with required personnel 1.2 Gain management buy in and approval in planning and implementing information security strategy 1.3 Identify and confirm organisational policies including password policies, bring your own device (BYOD) and on boarding processes with required personnel 1.4 Analyse organisational environments, processes and risk

ELEMENT	PERFORMANCE CRITERIA
	profile requirements 1.5 Identify legislation and industry requirements to implement information security strategies in an organisation
2. Design and implement information security strategy	2.1 Develop action plan with specific goals and objectives of information security strategy according to organisational needs 2.2 Design secure network infrastructure and security strategy according to organisational needs 2.3 Analyse data classifications and levels of access in operational processes and integrate with strategy 2.4 Document designed information security strategy according to organisational procedures 2.5 Implement information security strategy according to design and organisational needs
3. Test and finalise information security strategy	3.1 Establish security baselines and metrics according to organisational needs 3.2 Perform testing procedures and confirm information security strategy addresses organisational needs 3.3 Record and compare test results to established metrics and benchmarks 3.4 Finalise documentation and report information security strategy outcomes to required personnel 3.5 Obtain feedback from required personnel and amend information security strategy accordingly 3.6 Review final information security strategy and obtain sign-off from required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none"> Identifies and gathers information applicable to business, organisational security and environment
Numeracy	<ul style="list-style-type: none"> Uses tools when developing security baselines and metrics
Reading	<ul style="list-style-type: none"> Selects and applies procedures and strategies required in developing information security strategies after reading required texts
Writing	<ul style="list-style-type: none"> Uses required and industry specific terminology in documenting action plans and information security strategies

SKILL	DESCRIPTION
Teamwork	<ul style="list-style-type: none">• Works collaboratively with required personnel and interdisciplinary teams in developing information security strategies
Planning and organising	<ul style="list-style-type: none">• Manages development of information security strategies using logical sequencing
Technology	<ul style="list-style-type: none">• Uses required technological tools and software in planning and implementing information security strategies• Applies skills in systems administration, network security, applications and programming

Unit Mapping Information

No equivalent unit. New unit.

Assessment Requirements for ICTCYS403 Plan and implement information security strategies for an organisation

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- plan and implement an information security strategy according to organisational needs.

In the course of the above, the candidate must:

- establish at least three security baselines and at least three testing metrics
- comply with legislation and industry requirements
- follow organisational procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- function of information security strategy testing procedures, including:
 - vulnerability tests
 - basic penetration tests
- key organisational environment and business processes required to plan and implement information security strategies for an organisation
- network and cyber security features and principals
- types of data and classifications including sensitivity levels
- advantages and importance of implementing information security strategies
- organisational procedures applicable to developing information security strategies, including:
 - documentation processes
 - designing secure network infrastructure
 - establishing requirements and features of information security strategies
 - establishing baselines and metrics

- testing methodologies.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required hardware, software and its components
- information and documents applicable to organisational procedures and processes
- information security strategy testing software.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTCYS404 Run vulnerability assessments for an organisation

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to run vulnerability assessments and basic penetration tests to identify potential threats to an organisation. It includes the ability to minimise risk and remediate vulnerabilities to confirm that the security of an organisation is maintained.

It applies to individuals who work as penetration tester and security consultants in any business environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Cyber security

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to run vulnerability assessment	1.1 Obtain work details and scope from required personnel and arrange for site access in compliance with required security arrangements, legislation, codes, regulations and standards 1.2 Discuss and evaluate scanning tools and select according to vulnerability assessment requirements 1.3 Establish testing regime and schedule, and documentation requirements according to organisational needs
2. Run vulnerability assessment and penetration test	2.1 Perform vulnerability assessment according to organisational procedures 2.2 Identify and document vulnerabilities arising from vulnerability

	<p>assessment according to organisational procedures</p> <p>2.3 Run a simple penetration test according to organisational procedures</p> <p>2.4 Identify and document potential threats arising from penetration test according to organisational procedures</p> <p>2.5 Contribute and develop ideas in addressing vulnerabilities</p>
3. Finalise vulnerability assessment process	<p>3.1 Discuss vulnerabilities identified in vulnerability assessment and penetration testing with required personnel</p> <p>3.2 Contribute ideas with required personnel and remediate vulnerabilities identified according to organisational procedures</p> <p>3.3 Escalate unresolved vulnerabilities to required personnel</p> <p>3.4 Document identified vulnerabilities and work performed according to organisational procedures</p> <p>3.5 Report to management and confirm vulnerability assessment with required personnel</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none"> Identifies and gathers information applicable to business, systems and network
Numeracy	<ul style="list-style-type: none"> Measure and record data and interpret testing results using tools
Reading	<ul style="list-style-type: none"> Interprets information from a range of sources when establishing vulnerability assessment procedures
Writing	<ul style="list-style-type: none"> Prepares documentation detailing vulnerability assessments according to organisational requirements using concise industry specific terminology applicable to cyber security
Planning and organising	<ul style="list-style-type: none"> Prepares and manages vulnerability assessment process logically and sequentially
Problem solving	<ul style="list-style-type: none"> Uses problem solving skills when interpreting the nature and threat of vulnerabilities identified
Technology	<ul style="list-style-type: none"> Uses required technological tools and software in identifying potential threats in an organisation

Unit Mapping Information

No equivalent unit. New unit.

Assessment Requirements for ICTCYS404 Run vulnerability assessments for an organisation

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- perform at least one vulnerability test assessment
- define and run at least one basic penetration test.

In the course of the above, the candidate must:

- assess web based, network based and hardware-based vulnerabilities
- adhere to organisational procedures
- document and report activities.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- security risks and vulnerabilities in software systems
- tools used in testing a network for vulnerabilities including scanning tools
- basic level penetration testing of a system
- methods and tools used to protect data in an organisation
- risk mitigation strategies that may be used running vulnerability assessments for an organisation
- organisational procedures applicable to running vulnerability assessments, including:
 - establishing goals and objectives of vulnerability assessments
 - defining scope of testing and establishment of testing regime
 - documenting established requirements
 - establishing penetration testing procedures
 - documenting findings, threats and work performed

- key organisational environments, systems and networks required to run vulnerability assessments.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required software testing packages
- required hardware and its components
- vulnerability scanning tools
- a server
- text-editing software
- information applicable to organisational environment, systems and network
- required organisation network, systems or applications.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTCYS405 Develop cyber security incident response plans

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to plan for and develop a response plan for cyber security incidents.

It applies to individuals who work in information technology security, including network and security specialists, and apply a range of cyber security threat skills and knowledge to support all business functions plans for incidents.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Cyber security

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan incident response plans	1.1 Identify and gather information on organisational environment, procedures and processes and cyber security threats 1.2 Discuss and confirm ideas and plans with management and gain approval in developing response plans 1.3 Establish response committee and roles and responsibilities of each individual according to organisational procedures 1.4 Identify required services and assets in developing test plans
2. Develop and confirm incident response plans	2.1 Establish and confirm recovery time objective (RTO) and recovery point objective (RPO) in disaster recovery according to organisational requirements 2.2 Discuss and establish test scenarios

ELEMENT	PERFORMANCE CRITERIA
	<p>2.3 Establish and confirm test frequency according to organisational requirements</p> <p>2.4 Develop test baselines and metrics according to organisational procedures</p> <p>2.5 Confirm and document draft test plans with required personnel and respond to feedback accordingly</p> <p>2.6 Test cyber security incident response plan according to testing procedures</p> <p>2.7 Identify, address and report errors noted in testing phase, within scope of own role</p>
3. Finalise incident response plans	<p>3.1 Discuss lessons learnt in testing response plans and adjust test plans accordingly</p> <p>3.2 Obtain sign-off with required personnel according to organisational policies and procedures</p> <p>3.3 Record, document and store test plans according to organisational procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none">Identifies and gathers information applicable to organisational procedures and developing response plans
Numeracy	<ul style="list-style-type: none">Uses tools to measure and record data and interpret test plan results
Reading	<ul style="list-style-type: none">Identifies and analyses information from a broad range of sources in determining required incident response plans suited to an organisation
Writing	<ul style="list-style-type: none">Prepares complex workplace documentation detailing response plans using required structure, layout and technical programming language
Technology	<ul style="list-style-type: none">Uses required technology tools and software in testing cyber security response plans

Unit Mapping Information

No equivalent unit. New unit.

Assessment Requirements for ICTCYS405 Develop cyber security incident response plans

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop a plan in response to cyber security incidents for each of the following areas:
 - organisation's network
 - organisation's system
 - Wi-Fi network
 - an application
 - a human error.

In the course of the above, the candidate must:

- establish at least two test scenarios in each plan
- develop at least two test metrics and at least two baselines in each plan
- adhere to organisational procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- features and principals of networking, Wi-Fi networks and applications
- procedures in testing cyber security incident test plans
- metrics and baselines used in cyber security incident test plans
- roles and responsibilities of test committees
- organisational procedures and requirements applicable to developing cyber security incident response plans, including:
 - documenting established requirements and incident response plans
 - establishing response committees
 - testing methodologies

- establishing baselines and metrics
- cyber incidents and scenarios.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- software required in testing cyber security incident response plans
- required hardware and its components
- Wi-Fi network
- an application
- text-editing software
- information applicable to organisational environment, processes and previous cyber security incidents.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTCYS406 Respond to cyber security incidents

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.
Release 2	Correcting an error in the Knowledge Evidence.

Application

This unit describes the skills and knowledge required to establish and respond to cyber security incidents in an organisation, and evaluate actions performed to mitigate risk of future incidents.

It applies to individuals who work in information technology security, including network specialists and security, to support all business functions responding to cyber incidents. These individuals have a broad range of knowledge and skills in cyber security, networks and systems. In this context, the individual works as an internal function for an organisation, however, the same can be applied in the context of an external security specialist advising and implementing the response and action items of a cyber-attack to an external client.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Cyber security

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Establish cyber security incident	1.1 Establish and confirm occurrence and nature of cyber security incident 1.2 Identify legislative requirements, organisational policies and procedures and cyber security incident response plans 1.3 Analyse and assess source, impact and consequences of incident according to organisational response plans

ELEMENT	PERFORMANCE CRITERIA
	1.4 Notify and explain cyber incident to required personnel according to legislative requirements and communications plans
2. Activate cyber security incident response plan	2.1 Activate incident response plan and confirm cyber incident is contained 2.2 Escalate and involve third party services and specialists as required according to organisational policies and procedures 2.3 Confirm no further risks exist according to legislative requirements and organisational response procedures 2.4 Discuss solutions with required personnel and action accordingly 2.5 Test solution implemented, and escalate as required according to organisational security procedures
3. Perform post cyber security incident response procedures	3.1 Evaluate actions taken and confirm incident is fixed and secure according to organisational procedures 3.2 Document cyber security incident, actions performed and solution, according to organisational policies and procedures 3.3 Discuss and document lessons learnt with required personnel 3.4 Discuss and implement preventative measures and mitigation methods as required 3.5 Amend incident response plan accordingly 3.6 Share documentation and communicate with required personnel according to organisational communications plan

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none"> Identifies and gathers information applicable to organisational procedures and incident response procedures
Numeracy	<ul style="list-style-type: none"> Measures and records mathematical data and uses tools when interpreting results
Reading	<ul style="list-style-type: none"> Identifies and interprets information from incident response plans, and extracts applicable areas when dealing with cyber security incidents

SKILL	DESCRIPTION
Writing	<ul style="list-style-type: none">• Uses required industry specific terminology when documenting cyber security incidents and solutions
Problem solving	<ul style="list-style-type: none">• Uses problem solving skills when identifying the nature and impact of cyber security incidents
Technology	<ul style="list-style-type: none">• Uses required technological tools and software in responding to cyber security incidents• Applies skills in systems administration, network security, applications and programming

Unit Mapping Information

No equivalent unit. New unit.

Assessment Requirements for ICTCYS406 Respond to cyber security incidents

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.
Release 2	Correcting an error in the Knowledge Evidence.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- respond to at least two different cyber security incidents in at least two different business functions
- develop and follow a basic communications plan.

In the course of the above, the candidate must:

- comply with organisational cyber security incident response plan
- adhere to legislative requirements and organisational policies and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- key features of incident response plans
- cyber security incidents and the source and causes of these incidents
- types of attacks, including:
 - denial-of-service attack (DoS)
 - SQL injection (SQLi)
 - cross-site scripting (XSS) attacks
 - scripted attacks
 - hardware attacks
 - attacks against Wi Fi
- cyber security incident detection methodologies
- preventative measures and mitigation methods applicable to cyber security incidents

- documentation processes that may be used in the process of responding to cyber security incidents
- organisational policies and procedures applicable to cyber security incident response, including procedures for:
 - determining nature and location of incidents
 - containing incidents, including installation of security patches and disabling network access
 - notifying and reporting to required personnel
 - encryptions
 - assessing impact on business function and other areas
- procedures in developing communications plans.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- organisation cyber security incident response plan
- required hardware and software
- text-editing software
- legislative requirements and organisational procedures and policies applicable to cyber security incident.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTCYS407 Gather, analyse and interpret threat data

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to gather data from various sources, analyse, and interpret information for threats, inconsistencies and discrepancies.

It applies to individuals who work in information technology security, including network and security specialists, and gather logs from devices, check abnormalities and respond accordingly. These individuals are responsible for supporting and preventing cyber threats attacking data in all business functions and in any industry context.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Cyber security

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Gather threat data	1.1 Identify legislative requirements and organisational policies and procedures to gather, analyse and interpret threat data 1.2 Identify security equipment on network and data sources 1.3 Discuss and confirm data log requirements and strategy to process data with required personnel 1.4 Collect information from alerts, logs and reported events and create a dataset according to organisational policies and procedures
2. Analyse threat data	2.1 Ingest data logs into analytic platform according to user instructions

ELEMENT	PERFORMANCE CRITERIA
	2.2 Obtain and analyse results for reliability and consistency 2.3 Check for false positives and false negative results 2.4 Detect and describe discrepancies and inconsistencies in data
3. Interpret and finalise threat data	3.1 Discuss and review threat data and results with required personnel 3.2 Discuss and assess identified threats, risks and their likelihood of occurrence and impacts of risks, 3.3 Suggest and confirm lessons learnt, action steps, recommendations and mitigation strategies with required personnel 3.4 Document results, findings and recommendations into report according to organisational procedures 3.5 Distribute documentation to required personnel and store according to organisational policies and procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none">Identifies and gathers information applicable to organisational procedures and threat data
Numeracy	<ul style="list-style-type: none">Uses tools when measuring and recording data, and interprets results through mathematical data
Reading	<ul style="list-style-type: none">Interprets information from different sources in a range of formats when identifying threat data
Writing	<ul style="list-style-type: none">Prepares complex workplace documentation detailing research findings and recommendations using required structure, layout and technical language
Planning and organising	<ul style="list-style-type: none">Uses problem solving skills when interpreting the nature and impact of threat data
Technology	<ul style="list-style-type: none">Uses required technological tools and software in gathering, analysing and interpreting threat data

Unit Mapping Information

No equivalent unit. New unit.

Assessment Requirements for ICTCYS407 Gather, analyse and interpret threat data

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- gather, log and create dataset from a single security device or whole organisation device, including:
 - basic router info
 - firewall info
 - systems
- identify and describe at least three different inconsistencies or discrepancies within data
- document finding, recommendations and outcomes.

In the course of the above, the candidate must:

- interpret meaning from dataset and suggest action items.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- data recognition software tools
- data sources, including:
 - firewalls
 - intrusion detection systems (IDS)
 - access control systems
 - security and event management systems (SIEM)
- basic troubleshooting processes related to cyber security threats
- network and cyber security features and principals
- types of attacks, including:
 - denial-of-service attack (DDOS)

- SQL injection (SQLi)
- cross-site scripting (XSS) attacks
- scripted attacks
- hardware attacks
- attacks against Wi Fi
- legislative requirements applicable to gathering, analysing and interpreting threat data
- common cyber security threats and their impacts on business functions
- organisational policies and procedures applicable to gathering, analysing and interpreting threat data, including:
 - documentation established requirements, findings and recommendations
 - establishing security equipment and data sources
 - information collection processes
 - processes in obtaining and analysing results.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required hardware, software and digital devices
- required analytic platform and applicable user instructions
- data recognition software
- single security device and whole organisation device
- legislative requirements and organisational policies and procedures applicable to gathering, analysing and interpreting threat data.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTCYS408 Research and source cryptocurrency technologies for organisational needs

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created unit of competency to address in-demand skills needs.

Application

This unit describes the skills and knowledge required to research cryptocurrency technologies, such as blockchain. It includes researching and identifying the advantages and disadvantages of industry-recognised cryptocurrency technologies in meeting organisational requirements. It also includes sourcing cryptocurrency technologies from required third-party vendors.

The unit applies to individuals who may work in a variety of entry-level cryptocurrency roles across multiple industries, including as assistants to cyber security technicians, cryptocurrency developers, analysts, traders and brokers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Cyber security

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Establish organisational cryptocurrency technology requirements	1.1 Confirm work brief and tasks according to organisational policies and procedures 1.2 Confirm available research platforms and methods for identifying potential cryptocurrency technologies

ELEMENT	PERFORMANCE CRITERIA
	1.3 Inspect existing organisational software, financial and accounting records, asset registers, and information technology (IT) controls according to work brief, and confirm cryptocurrency needs
2. Review and report on cryptocurrency technologies	2.1 Research available cryptocurrency technologies and compare their advantages and disadvantages 2.2 Summarise characteristics of cryptocurrency platforms across selected cryptocurrency technologies according to work brief 2.3 Summarise advantages, disadvantages and risks of using researched cryptocurrencies according to work brief 2.4 Present summary report to required personnel and seek feedback 2.5 Implement required feedback in summary report as required 2.6 Select and recommend required cryptocurrency technologies according to organisational policies and procedures
3. Source cryptocurrency technologies	3.1 Seek approval of recommended cryptocurrency technologies according to procurement policies and procedures 3.2 Request selected cryptocurrency technologies from required third-party vendors according to organisational policies and procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Numeracy	<ul style="list-style-type: none"> Analyses and synthesises basic information about cryptocurrencies
Oral communication	<ul style="list-style-type: none"> Uses effective listening and questioning techniques and technical terminology to elicit information and make the correct component selection
Reading	<ul style="list-style-type: none"> Identifies, interprets and evaluates documentation containing some complex IT-related concepts
Writing	<ul style="list-style-type: none"> Uses correct spelling, grammar and plain English together with ICT-specific terminology and diagrams to convey recommendations and requirements and complete organisational documentation

Unit Mapping Information

No equivalent unit. Newly created unit.

Assessment Requirements for ICTCYS408 Research and source cryptocurrency technologies for organisational needs

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created unit of competency to address in-demand skills needs.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- research, select and source at least two different industry-recognised cryptocurrency technologies for two separate organisations.

In the course of the above, the candidate must:

- research cryptocurrency options in the marketplace according to organisational needs
- apply required organisational policies and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- common types and characteristics of industry-recognised cryptocurrency technologies
- common sources of cryptocurrency technologies
- characteristics of blockchain and how it enables the existence of cryptocurrency
- methods for inspecting organisational platforms and records, including:
 - operating software
 - financial and accounting records
 - asset registers
 - information technology (IT) controls
- key characteristics, advantages and disadvantages of third-party cryptocurrency technologies, including:

- platform security
- vendor authenticity
- customer-support services
- fees and charges
- coin options
- local and international exchange rates
- spreads
- liquidity
- key risks and methods of using and sourcing third-party cryptocurrency technologies
- basic methods to compare cryptocurrency transactions
- organisational formats for documentation and reports
- organisational policies and procedures, and legislative requirements relating to work tasks.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a platform to research industry-recognised cryptocurrency technologies
- opportunities for simulated or in-person interaction with others
- work brief and organisational policies and procedures required to demonstrate the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTCYS601 Create cyber security standards for organisations

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.
Release 2	Correcting an error in the Assessment Conditions.

Application

This unit describes the skills and knowledge required to research, plan and implement cyber security standards for an organisation.

It applies to those who work in information technology security in roles including cyber security analysts and specialists, business development managers, cyber risk and assurance managers responsible for creating cyber security standards for an organisation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Cyber security

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine cyber security needs	1.1 Identify and document organisational cyber security needs 1.2 Identify existing organisational cyber security standards framework 1.3 Identify external cyber security standards according to organisational requirements 1.4 Identify core components and implementation tiers of framework according to organisational requirements 1.5 Identify and document cyber security framework profile according to organisational policies and procedures

2. Create standards framework	2.1 Determine and document objectives of standards framework 2.2 Document standards framework according to organisational and cyber security standards requirements 2.3 Submit documentation to required personnel and respond to required changes
3. Implement cyber security standards	3.1 Distribute cyber security framework to required personnel 3.2 Lodge documentation according to organisational policies and procedures
4. Finalise and monitor cyber security standards	4.1 Analyse organisation's adherence to cyber security standards 4.2 Detect areas of non-compliance and resolve according to organisational requirements 4.3 Analyse recovery strategies according to cyber standards requirements 4.4 Confirm completion of requirements from required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Interprets information from technical, manufacturer and organisational documentation to determine and confirm job requirements
Writing	<ul style="list-style-type: none"> Prepares complex workplace documentation detailing processes and outcomes using required structure, layout and applicable language
Planning and organising	<ul style="list-style-type: none"> Operates from a broad conceptual plan, developing the operational detail in stages, regularly reviewing priorities and performance during implementation, and identifying and addressing issues
Problem solving	<ul style="list-style-type: none"> Uses provided context to identify recognise anomalies and subtle deviations to normal expectations, focusing attention and remedying problems as they arise
Self-management	<ul style="list-style-type: none"> Uses systematic processes, setting goals, gathering required information and identifying and evaluating options against agreed criteria

Unit Mapping Information

No equivalent unit. New unit.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTCYS601 Create cyber security standards for organisations

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.
Release 2	Correcting an error in the Assessment Conditions.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- create, implement and monitor cyber security standards for an organisation on at least one occasion.

In the course of the above, the candidate must:

- document plans and outcomes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- advanced features of network security
- organisational business processes applicable to creating cyber security standards including:
 - documenting established standards and requirements
 - establishing requirements and features of network security infrastructure
 - establishing maintenance and alert processes
 - conducting routine reviews of network security infrastructure
 - testing methods and procedures
- security risks, and tolerance of risk in an organisation
- industry standard network security providers
- industry standards and regulations applicable to implementing network security infrastructure in an organisation
- key organisation, infrastructure and network requirements required to create cyber security standards for organisations.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- software and its components related to creating cyber security standards
- standards for Cyber security ISO/IEC 27000 series, Information security management systems standards
- network security providers and solutions required for creating cyber security standards
- application and user security technologies.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTCYS602 Implement cyber security operations

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to research, implement and monitor cyber security operations.

It applies to those in cyber security roles including network and server administrators and cyber security architects working in security operations within an organisation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Cyber security

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Assess organisational cyber security operations	1.1 Identify existing organisational cyber security operations 1.2 Identify organisational cyber security requirements 1.3 Analyse effectiveness of organisations existing cyber operations against organisational requirements 1.4 Document findings of analysis according to organisational requirements
2. Determine and document organisational operations	2.1 Determine and document required updates to existing organisational operation 2.2 Determine and document service disruption and task requirements for implementing cyber operations 2.3 Distribute document to required personnel in preparation for required implementation

3. Implement organisational cyber security operations	<ul style="list-style-type: none">3.1 Initiate implementation of cyber security operations according to task requirements3.2 Implement required operational and analytical processes3.3 Implement personnel requirements according to task requirements3.4 Implement incident reporting and escalating procedures3.5 Implement required hardware and software support requirements
4. Test and finalise	<ul style="list-style-type: none">4.1 Test operational processes of cyber security operations and determine alignment to requirements4.2 Analyse performance and document required operational changes4.3 Update cyber security operations according to analysis results and determine required alignment to task requirements4.4 Review final cyber security strategy and document and lodge document according to organisational procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none">• Interprets information from technical, manufacturer and organisational documentation to determine and confirm job requirements
Writing	<ul style="list-style-type: none">• Prepares complex workplace documentation detailing analysis, findings and recommendations using required structure, layout and technical programming language
Planning and organising	<ul style="list-style-type: none">• Develops information security strategies using logical sequencing
Problem solving	<ul style="list-style-type: none">• Identifies context to recognise anomalies and subtle deviations to normal expectations, focusing attention and remedying problems as they arise
Self-management	<ul style="list-style-type: none">• Takes full responsibility for identifying and considering organisational protocols and requirements
Technology	<ul style="list-style-type: none">• Identifies principles, concepts, language and practices associated with the digital and cyber world

Unit Mapping Information

No equivalent unit. New unit.

Assessment Requirements for ICTCYS602 Implement cyber security operations

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- plan, implement and test cyber security operations on at least one occasion.

In the course of the above, the candidate must:

- establish existing operational environment within organisation
- analyse effectiveness of existing operations.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- inherent requirements of cyber security operations environment
- organisational procedures applicable to implementing cyber security operations, including:
- documentation processes
- establishing requirements and features of cyber security operations strategies
- testing methodologies.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- software and its components applicable to implementing cyber security operations
- network security providers and solutions required to implement cyber security operations
- site server

- standards for Cyber security ISO/IEC 27000 series, Information security management systems standards
- application and user security technologies.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTCYS603 Undertake penetration testing for organisations

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to use a range of methodologies to simulate an attack on an organisation's information and security systems and report the results back to the organisation.

It applies to those who work as network security specialists or administrators and conduct a simulated attack on an organisation's cyber assets to determine the effectiveness of the organisation's cyber security measures.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Cyber security

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for penetration testing	<ul style="list-style-type: none">1.1 Analyse organisation's existing cyber security environment, systems and network requirements1.2 Identify individual data types and level of security requirements1.3 Establish and outline goal and objectives of performing penetration testing1.4 Evaluate scanning tools and select according to vulnerability assessment requirements1.5 Establish and document testing regime and schedule, and requirements according to organisational procedures

2. Conduct penetration tests	<p>2.1 Perform penetration test according to testing plan and procedures</p> <p>2.2 Identify and document vulnerabilities arising from vulnerability assessment</p> <p>2.3 Identify and document potential threats arising from penetration test according to organisational and testing procedures</p>
3. Conduct follow up activities	<p>3.1 Remediate identified vulnerabilities according to testing procedures</p> <p>3.2 Determine and document improvement plan</p> <p>3.3 Evaluate penetration testing effectiveness against testing plan and procedures</p> <p>3.4 Escalate unresolved vulnerabilities to required personnel</p> <p>3.5 Submit documentation to required personnel and seek and respond to feedback</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none">• Uses mathematical formulae to determine requirements for penetration testing
Reading	<ul style="list-style-type: none">• Identifies information from technical, manufacturer and organisational documentation to determine and confirm job requirements
Writing	<ul style="list-style-type: none">• Prepares complex workplace documentation findings, threats and work performed using required structure, layout and required language
Planning and organising	<ul style="list-style-type: none">• Operates from a broad conceptual plan, developing the operational detail in stages, regularly reviewing priorities and performance during implementation, and identifying and addressing issues
Problem solving	<ul style="list-style-type: none">• Identifies context to recognise anomalies and subtle deviations to normal expectations, focusing attention and remedying problems as they arise
Self-management	<ul style="list-style-type: none">• Takes full responsibility for identifying and considering organisational protocols and requirements
Technology	<ul style="list-style-type: none">• Identifies principles, concepts, language and practices associated with the digital and cyber world

Unit Mapping Information

No equivalent unit. New unit.

Assessment Requirements for ICTCY5603 Undertake penetration testing for organisations

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- plan and implement penetration testing and resolve queries and vulnerabilities on at least three vulnerabilities.
- In the course of the above, the candidate must:
- identify weaknesses as part of penetration testing process.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- security risks and vulnerabilities in software systems
- tools used in testing a network for vulnerabilities including scanning tools
- advanced level penetration testing of a system
- methods and tools used to protect data in an organisation
- risk mitigation strategies
- organisational procedures applicable to undertaking penetration testing, including:
- establishing goals and objectives of penetration testing
- defining scope of testing and establishment of testing regime
- documenting established requirements
- establishing penetration testing procedures
- documenting findings, threats and work performed
- key organisational environments, systems and networks required to undertake penetration testing for organisations.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- hardware, software and digital devices required to undertake penetration testing
- analytic platform and applicable user instructions
- data recognition software
- single security device and an organisation device
- legislative requirements and organisational policies and procedures applicable to undertaking penetrations testing.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTCYS604 Implement best practices for identity management

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to identify, confirm and implement best practices for identity management in the cyber environment to minimise threats, risks and cybercrime attacks.

It applies to those who work as network security specialists or administrators and are responsible for overseeing and implementing an organisation's best practices to confirm safe cyber security management of personal and identifiable information.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Cyber security

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Analyse organisation's identity management best practices	1.1 Identify and summarise organisation's identity management practices 1.2 Analyse organisation's identity management environment, processes and requirements 1.3 Identify legislation and industry requirements required to implementing best practices for identity management
2. Design and implement best practices	2.1 Develop and document strategy for identity management best practices plan 2.2 Develop and document implementation strategy in consideration of technical, personnel, performance

ELEMENT	PERFORMANCE CRITERIA
	benchmarks and timeline requirements, according to organisational policies and procedures 2.3 Distribute documents to required personnel in preparation for implementation 2.4 Conduct implementation of best practices strategy according to organisational requirements and implementation plan
3. Finalise implementation of strategy	3.1 Analyse organisation's performance against best practices benchmark 3.2 Summarise outcomes of analysis and identify areas risk and high vulnerability 3.3 Update plan with suggested remediation strategy for identified areas of risk and vulnerability 3.4 Submit finalised documentation to required personnel and seek and respond to feedback 3.5 Lodge all documentation according to organisational policies and procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none">Obtains information applicable to organisational procedures and identity management standards and principlesMonitors outcomes of decisions, considering results and identifying key concepts and principles that may be adaptable in the future
Reading	<ul style="list-style-type: none">Interprets information from different sources in a range of formats when identifying best practices and interpreting how these standards apply to the organisation
Writing	<ul style="list-style-type: none">Prepares complex workplace documentation detailing processes and outcomes using required structure, layout and required language
Planning and organising	<ul style="list-style-type: none">Uses problem solving skills to identify anomalies and subtle deviations to normal expectations, focusing attention and remedying problems as they arise

Unit Mapping Information

No equivalent unit. New unit.

Assessment Requirements for ICTCYS604 Implement best practices for identity management

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design, implement and analyse best practices for identity management in an organisation on at least one occasion.

In the course of the above, the candidate must:

- identify an organisation's operating environment
- document processes and outcomes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- organisation's operating and cyber environment applicable to identity management
- identity management methodologies required in the cyber environment
- best practices and legislation required to implement best practices for identity management
- organisational procedures applicable to implementing best practices for identity management including:
 - documentation processes
 - designing secure network infrastructure
 - establishing requirements and features of information security strategies
 - establishing baselines and metrics
 - testing methodologies.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- hardware, software and digital devices required to undertake identity management tasks
- software that identifies data, categorise and access privilege
- legislation and policies and procedures required to identity management best practices.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTCYS606 Evaluate an organisation's compliance with cyber security standards and law

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to identify cyber security standards and laws and evaluate an organisation's working practices and compliance to these standards and laws as well as determine changes required to continue compliance.

It applies to those who work in an internal audit function, including those who specialise in cyber security and compliance and are responsible for implementing and monitoring an organisation's compliance to cyber security standards and laws both locally and internationally.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Cyber security

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Research existing security standards and laws	1.1 Identify standards and laws required for organisations cyber security operations and summarise findings 1.2 Analyse and align required laws and standards to organisational cyber operations 1.3 Obtain and analyse organisation's existing cyber security compliance strategies and document outcomes according to organisational policies and procedures 1.4 Determine time periods and benchmarking of compliance

	evaluation requirements
2. Analyse compliance activities	2.1 Conduct compliance assessment according to organisational and legislative requirements 2.2 Document assessment findings according to organisational policies and procedures 2.3 Identify and document areas of non-compliance and near misses
3. Align organisation's activities to required standards	3.1 Develop and document all compliance requirements 3.2 Distribute requirements to required personnel in preparation to realign business activities to requirements 3.3 Develop an evaluation strategy according to organisational policies and procedures 3.4 Submit all documents to required personnel and seek and respond to feedback

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none"> Obtains information applicable to legislative requirements and organisational procedures and identity management standards and principles Monitors outcomes of decisions, considering results and identifying key concepts and principles that may be adaptable in the future
Reading	<ul style="list-style-type: none"> Interprets information from different sources in a range of formats when identifying best practices and interpreting how these standards apply to the organisation
Writing	<ul style="list-style-type: none"> Uses industry specific terminology in documenting research findings, recommendations and best practice implementation
Planning and organising	<ul style="list-style-type: none"> Uses problem solving skills to identify anomalies and subtle deviations to normal expectations, focusing attention and remedying problems as they arise

Unit Mapping Information

Assessment Requirements for ICTCY606 Evaluate an organisation's compliance with cyber security standards and law

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- identify cyber security standards and laws and analyse an organisation's operations and compliance to required laws and standards on at least one occasion.

In the course of the above, the candidate must:

- document processes and summarise findings.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- security risks, and tolerance of risk in an organisation
- cyber security standards, regulations and laws applicable to the organisation
- organisational business processes and applicable cyber security requirements in each area
- principles of cyber security
- methods of identifying cyber security incidents
- different types of cyber security incidents including security vulnerabilities and malware.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- standards outlining cyber security standards and laws applicable to the organisation
- software required to implement cyber security standards and laws.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTCYS607 Acquire digital forensic data

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to acquire, extract and analyse data from devices and workstations, including mobile devices, networked devices, smart devices, Internet of Things (IoT) devices and microcontrollers, USBs, applications, networks and systems. It applies to skills needed to extract evidence pertaining to either a forensic investigation directly caused on a computer, or as part of evidence relating to a crime or e-crime.

It applies to those working in cyber and forensic roles including, digital forensic examiners, incident responders and corporate investigators and are responsible for forensic data retrieval.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Cyber security

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Confirm incident and prepare to acquire data	1.1 Confirm and gather initial information on reported incident according to organisational policies and procedures 1.2 Research and assess occurrence according to organisational forensic data extraction requirements 1.3 Research and identify all laws and legislation required for data extraction tasks 1.4 Discuss and confirm if acquisition is required with required personnel

ELEMENT	PERFORMANCE CRITERIA
	<p>1.5 Consult and gather key incident information from required personnel</p> <p>1.6 Identify device and components pertaining to incident according to task requirements</p> <p>1.7 Develop and document data extraction plan and information gathered according to organisational requirements</p> <p>1.8 Submit documentation to required personnel and seek and respond to feedback</p>
2. Acquire forensic data	<p>2.1 Contact and gather information from required personnel</p> <p>2.2 Seize device pertaining to incident according to incident and legislation</p> <p>2.3 Access and open device according to data extraction task requirements</p> <p>2.4 Secure device's networks, data logs, firewalls and hashing according to task requirements</p> <p>2.5 Initiate data extraction according to task requirements and confirm that no data is tampered or deleted</p> <p>2.6 Confirm completion of retrieval according to task requirements</p> <p>2.7 Verify the hash according to task requirements</p> <p>2.8 Document observations and findings and methodology</p>
3. Analyse forensic data	<p>3.1 Analyse data and verify against incident scope, information, devices and evidence</p> <p>3.2 Document findings and analysis and submit to required personnel</p> <p>3.3 Discuss abnormalities and confirm further evidence, devices and information needed</p> <p>3.4 Make additional extractions according to task and technical requirements</p> <p>3.5 Analyse network conversations according to task requirements</p> <p>3.6 Verify chain of custody according to hash according to task requirements</p> <p>3.7 Update findings and methodology in documentation according to organisational needs</p>
4. Finalise data acquisition	<p>4.1 Prepare data extracts and documentation for submission according to organisational and legislative requirements</p> <p>4.2 Submit data extracts and analysis according to organisational and legislative requirements</p> <p>4.3 Retrieve sign off from required personnel and gather feedback according to organisational policies and procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none">Interprets information from technical, manufacturer, organisational and legislative documentation to determine and confirm job requirements
Writing	<ul style="list-style-type: none">Develops workplace and legislative documentation for a specific audience, using detailed language to convey explicit information, requirements and recommendations
Planning and organising	<ul style="list-style-type: none">Develops a strategic plan from task specification that include developing the operational detail in stages, regularly reviewing priorities and performance during data extraction tasks, and identifying and addressing issues as they arise
Problem solving	<ul style="list-style-type: none">Initiates ways to engage in strategic problem-solving approaches that incorporates linear and non-linear methodologies
Self-management	<ul style="list-style-type: none">Uses systematic processes, setting goals, gathering required information and identifying and evaluating options against agreed criteria
Technology	<ul style="list-style-type: none">Demonstrates a sophisticated understanding of principles, concepts, language and practices associated with the digital world

Unit Mapping Information

No equivalent unit. New unit.

Assessment Requirements for ICTCYS607 Acquire digital forensic data

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- identify, acquire and analyse digital forensic data from at least three device types, according to a reported incident.

In the course of the above, the candidate must:

- document analysis findings
- adhere to required organisational and legislative guidelines.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard legislation and organisational procedures relating to acquiring digital forensic data, including
- privacy standards and policies
- data standards and policies
- internet and user identification protocols
- mobile technology protocols
- data extraction methodologies and seizure techniques on a variety of devices, including how not to damage or destroy digital evidence
- features and markers of hashing
- communication investigation techniques
- functions and features of computer systems and data stores
- data logs, including server, network and firewall logs
- function and features of system back ups
- data extraction and forensic copying techniques
- file formats including structures, locations and file systems

- data acquisition, identification and extraction methodologies including:
 - industry standard forensic tools
 - non-invasive and invasive methodologies.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- three or more devices with data required for data extraction tasks
- forensic software tools required to extract data from device
- legislative and organisational procedures and requirements relating to the acquisition of digital forensic data.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTCYS608 Perform cyber security risk assessments

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to conduct a risk assessment and analysis in a business environment. The risk assessment requires the identity and alignment of an organisation's operating environment to their required risk register and the realignment of their operations.

It applies to those who work in risk functions of an organisation, including ICT risk managers, cyber security engineers, network engineers, DevOps engineers and cyber security solutions architects, and are responsible for designing security solutions.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Cyber security

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to perform risk assessment	1.1 Analyse organisations risk culture and document findings according to organisational requirements 1.2 Research and document legislative and organisational cyber security risk requirements 1.3 Obtain and analyse organisation's risk register and determine its currency against organisational legislative requirements 1.4 Develop and document risk assessment plan according to organisational requirements 1.5 Communicate risk assessment plan with required personnel

	and seek and respond to feedback
2. Perform risk assessment	2.1 Initiate risk assessment according to plan 2.2 Document process and outcomes of risk assessment according to organisational policies and procedures
3. Finalise risk assessment	3.1 Analyse and document findings against risk register and determine operations outside of organisation's risk appetite 3.2 Develop and document operational measures to align operations against risk register requirements 3.3 Communicate risk assessment findings to required personnel and highlight areas of non-compliance and solutions 3.4 Lodge documentation according to organisational requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Interprets and applies technical, legislative and organisational documentation to determine and confirm compliance and job requirements and compliance
Writing	<ul style="list-style-type: none"> Develops workplace and legal documentation for a specific audience, using detailed language to convey explicit information, requirements and recommendations
Planning and organising	<ul style="list-style-type: none"> Develops the operational detail in stages, regularly reviewing priorities and performance during assessment procedure, and identifies and addresses issues of non-compliance
Problem solving	<ul style="list-style-type: none"> Demonstrates an understanding of context to recognise anomalies and subtle deviations to normal expectations, focusing attention and remedying problems as they arise

Unit Mapping Information

No equivalent unit. New unit.

Assessment Requirements for ICTCYS608 Perform cyber security risk assessments

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- conduct a cyber security risk assessment on at least one occasion.

In the course of the above, the candidate must:

- identify and analyse an organisation's risk appetite and risk register against their daily operations
- research cyber security legislation and align organisational risk assessment to require legislation
- document processes and outcomes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- risk assessment methodologies and processes required in cyber security
- methodologies of identifying and measuring risk culture and risk appetite in the cyber environment
- sources of legislative requirements required in cyber security
- organisational procedures applicable to conducting a cyber security risk assessment including,
- documenting risk assessment processes and findings
- establishing requirements and features of cyber security risk assessment processes.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- software required to conduct a risk assessment
- legislative documentation required to conduct a cyber security risk assessment
- information applicable to organisational environment, culture and operations required to conduct a cyber security risk assessment.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTCYS609 Evaluate threats and vulnerabilities of IoT devices

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to gather Internet of Things (IoT) devices and data from various sources and evaluate and identify threats and vulnerabilities.

It applies to those who work as IoT developers or cyber security and risk analysts and are responsible for cyber security activities including the evaluating IoT devices for threats and vulnerabilities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Cyber security

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Develop evaluation strategy	1.1 Research and determine an organisation's requirements for evaluation of IoT devices 1.2 Research organisational operations, environment and culture and determine perceived threats and vulnerabilities 1.3 Develop and document evaluation strategy according to organisational requirements, policies and procedures 1.4 Submit evaluation strategy to required personnel and seek and respond to feedback
2. Prepare to evaluate IoT devices	2.1 Prepare devices for evaluation according to technical specifications 2.2 Secure data and networks according to technical specifications

3. Conduct evaluation	<p>3.1 Run evaluation according to documented strategy and organisational policies and procedures</p> <p>3.2 Confirm and document identified vulnerabilities and threats according to organisational policies and procedures</p> <p>3.3 Document evaluation results according to organisational guidelines and requirements</p>
4. Interpret and finalise findings	<p>4.1 Analyse evaluation findings and determine completeness and accuracy</p> <p>4.2 Categorise negative findings into threats and vulnerability and determine level of potential impact to operational activities</p> <p>4.3 Develop and document recommendations to remediate threat potential and lessen vulnerabilities</p> <p>4.4 Document finalised results and recommendations according to organisational requirements</p> <p>4.5 Lodge documentation according to organisational policies and procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Uses mathematical formulae to determine requirements for evaluating quantitative findings
Reading	<ul style="list-style-type: none"> Identifies technical, manufacturer and organisational from documentation to determine and confirm job requirements
Writing	<ul style="list-style-type: none"> Prepares complex workplace documentation detailing processes and outcomes using required structure, layout and required language
Planning and organising	<ul style="list-style-type: none"> Develops the operational detail in stages, regularly reviewing priorities and performance during assessment procedure, and identifies and addresses issues of non-compliance
Problem solving	<ul style="list-style-type: none"> Identifies context to recognise anomalies and subtle deviations to normal expectations, focusing attention and remedying problems as they arise
Self-management	<ul style="list-style-type: none"> Takes full responsibility for identifying and considering organisational protocols and requirements
Technology	<ul style="list-style-type: none"> Identifies principles, concepts, language and practices associated with the digital and cyber world

Assessment Requirements for ICTCY609 Evaluate threats and vulnerabilities of IoT devices

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- research and analyse an organisation's internal and external operating culture, systems and networks to evaluate threats and vulnerabilities of IoT devices and interpret findings from at least three different IoT devices.

In the course of the above, the candidate must:

- document processes and outcomes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- security risks and vulnerabilities in software systems
- security risks and vulnerabilities of IoT devices
- tools used in testing a network for vulnerabilities of IoT devices
- tools used in testing a network for threats and vulnerabilities
- penetration testing methodologies required to evaluate threats and vulnerabilities of IoT devices
- risk mitigation strategies
- organisational procedures applicable to running vulnerability and threat assessments for IoT devices, including:
 - establishing goals and objectives of vulnerability assessments
 - defining scope of testing and establishment of testing regime
 - documenting established requirements
 - establishing penetration testing procedures
 - documenting findings, threats and work performed

- key organisational environments, systems and networks required to evaluate threats and vulnerabilities of IoT devices.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required hardware, software and IoT devices required to evaluate threats and vulnerabilities
- required analytic platform and applicable user instructions
- data recognition software required to evaluate threats and vulnerabilities
- organisational policies and procedures applicable to gathering, analysing and interpreting threat data.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTCYS610 Protect critical infrastructure for organisations

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to analyse an organisation's critical cyber operations and develop and implement a critical protections strategy that addresses the needs of the organisation.

It applies to those who work as senior network and server administrators, cyber security analysts, security engineers, network engineers other cyber security related roles and are responsible for cyber security activities, including researching, developing and implementing protection strategies.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Cyber security

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Research critical infrastructure need for an organisation	1.1 Research organisation's need for critical infrastructure protection and document findings according to organisational requirements 1.2 Analyse organisation's existing critical infrastructure protection plan 1.3 Determine effectiveness and alignment of existing plan to organisational requirements 1.4 Identify operational systems, critical assets, segmentation and legislative requirements

ELEMENT	PERFORMANCE CRITERIA
	1.5 Determine level of protection, vulnerability, risk and mitigation according to organisational requirements
2. Develop protection strategy	2.1 Consolidate research findings and map critical processes according to organisational requirements 2.2 Develop and document critical infrastructure protection plan according to organisational policies and procedures 2.3 Submit protection plan to required personnel and seek and respond to feedback
3. Implement protection strategy	3.1 Backup data according to organisational policies and procedures 3.2 Secure devices according to protection plan and technical requirements 3.3 Implement network segmentation according to protection plan and technical requirements 3.4 Apply software patches according to technical requirements 3.5 Implement additional protection plan requirements and asset management processes
4. Test implementation outcomes	4.1 Test deployment of protection plan according to organisational policies and procedures 4.2 Obtain and analyse results according to organisational policies and procedures 4.3 Determine and document additional protection methods for critical infrastructure protection 4.4 Submit documentation to required personnel and seek and respond to feedback

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Identifies technical, manufacturer and organisational from documentation to determine and confirm job requirements
Writing	<ul style="list-style-type: none"> Prepares complex workplace documentation detailing processes and outcomes using required structure, layout and required language
Planning and organising	<ul style="list-style-type: none"> Develops the operational detail in stages, regularly reviewing priorities and performance during strategy development and

Assessment Requirements for ICTCY610 Protect critical infrastructure for organisations

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- research, develop, implement and test an organisation's critical protection infrastructure plan.

In the course of the above, the candidate must:

- analyse operating environment
- document processes and outcomes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- critical infrastructure sectors and assets
- cyber security methodologies required to protect infrastructure for organisations
- legislative requirements applicable to researching, analysing and developing critical infrastructure protection policies.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required hardware, software and components
- organisational operating environments, networks and systems
- organisational style guides required for presenting documented processes, procedures and findings.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTCYS611 Configure security devices for organisations

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to implement the device security configuration on WAN links and DMZs for a medium to large size organisation.

It applies to those who work in senior cyber security roles including, senior network and senior server administrators, network engineers and security architects, and are responsible for the configuration and implementation of security for required devices.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Cyber security

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare configuration of security devices	1.1 Conduct a needs analysis and determine organisation's needs to configure security devices 1.2 Determine devices required for configuration according to organisational requirements 1.3 Determine network and system security requirements 1.4 Obtain and review manufacturing and technical requirements for devices 1.5 Research and document device risk threats and vulnerabilities according to organisational requirements
2. Design configuration plan	2.1 Develop and document configuration plan according to organisational requirements

ELEMENT	PERFORMANCE CRITERIA
	2.2 Submit plan to required personnel and seek and respond to feedback 2.3 Finalise plan and communicate to required personnel in preparation for configuration
3. Configure security devices	3.1 Isolate devices according to technical specification and configuration plan 3.2 Configure virtual networks according to specifications and plan 3.3 Configure secure site-to-site connectivity and VPN requirements 3.4 Implement required encryption according to specifications and plan 3.5 Implement a DMZ according to specifications and plan
4. Test configured devices	4.1 Test configuration capabilities against requirements 4.2 Conduct penetration test and record outcomes according to organisational requirements 4.3 Document and communicate test findings to required personnel and implement any required configuration changes 4.4 Lodge documentation according to organisational policies and procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Organises, evaluates and critiques ideas and information from a range of complex texts Uses a range of strategies to build and maintain understanding throughout complex texts
Writing	<ul style="list-style-type: none"> Prepares complex workplace documentation detailing processes and outcomes using required structure, layout and required language
Planning and organising	<ul style="list-style-type: none"> Develops the operational detail in stages, regularly reviewing priorities and performance during strategy development and implementation, and identifies and addresses issues challenges as they arise
Problem solving	<ul style="list-style-type: none"> Identifies context to recognise anomalies and subtle deviations to normal expectations, focusing attention and remedying problems as they arise

SKILL	DESCRIPTION
Technology	<ul style="list-style-type: none">Demonstrates a sophisticated understanding of principles, concepts, language and practices associated with the digital world and uses these to troubleshoot and understand the uses and potential of new technology

Unit Mapping Information

No equivalent unit. New unit.

Assessment Requirements for ICTCYS611 Configure security devices for organisations

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design a security configuration plan and implement device configuration for at least three different security devices.

In the course of the above, the candidate must:

- conduct cyber security needs analysis
- document processes and outcomes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- procedures for configuring, verifying and troubleshooting security devices
- cyber security device configuration methodologies
- conducting cyber security needs analysis
- configuring security networks required to configure security devices.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required hardware, software and components
- devices required for configuration
- risk appetite of organisation required to configure security devices
- organisational operating environments, networks and systems

- organisational style guides required for presenting documented processes, procedures and findings.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTCYS612 Design and implement virtualised cyber security infrastructure for organisations

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to research, design, implement and test virtualised cyber security infrastructure in a small to medium sized organisation.

It applies to those who work in senior systems administrator roles including, network engineers and systems engineers, and are responsible for the design and implementation of virtualised cyber security infrastructures.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Cyber security

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to design infrastructure	1.1 Analyse organisation's operations to determine cyber security needs 1.2 Research and identify industry standard network security options and security technologies 1.3 Determine data types, security levels, mission-critical network servers and secure boundary requirements
2. Design and plan infrastructure	2.1 Design and document infrastructure requirements according to organisational requirements 2.2 Determine and document implementation plan and timeframes 2.3 Obtain tools, network access and data according to

	<p>organisational requirements</p> <p>2.4 Plan and document network security monitoring strategy according to organisational requirements</p> <p>2.5 Distribute documentation to required personnel and seek and respond to feedback</p>
3. Implement infrastructure	<p>3.1 Establish and create network boundaries according to infrastructure plan requirements</p> <p>3.2 Implement network and server technologies according to infrastructure plan requirements</p> <p>3.3 Implement user security technologies according to infrastructure plan requirements</p> <p>3.4 Set security levels and user access according to organisational requirements</p> <p>3.5 Establish network security monitoring strategy according to plan requirements</p>
4. Test infrastructure	<p>4.1 Test deployment of security infrastructure and its components according to technical specifications and infrastructure plan requirements</p> <p>4.2 Obtain and analyse test results, logs and user feedback</p> <p>4.3 Adjust implemented technologies according to organisational requirements and user feedback</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none"> Monitors outcomes of decisions, considering results and identifying key concepts and principles that may be adaptable in the future
Oral communication	<ul style="list-style-type: none"> Uses listening and questioning techniques to articulate information and requirements using industry standard technical language intended for audience and environment
Reading	<ul style="list-style-type: none"> Interprets technical, manufacturer and organisational documentation to determine and confirm job requirements
Writing	<ul style="list-style-type: none"> Prepares complex workplace documentation detailing processes and findings using required structure, layout and required language
Planning and organising	<ul style="list-style-type: none"> Develops the operational detail of an activity in stages, regularly reviewing priorities and performance during implementation, and identifying and addressing issues

SKILL	DESCRIPTION
Problem solving	<ul style="list-style-type: none">• Uses a developed understanding of context to recognise anomalies and subtle deviations to normal expectations, focusing attention and remedying problems as they arise
Self-management	<ul style="list-style-type: none">• Takes responsibility for identifying and considering organisational protocols and requirements• Uses systematic processes, setting goals, gathering required information and identifying and evaluating options against agreed criteria
Technology	<ul style="list-style-type: none">• Demonstrates an understanding of principles, concepts, language and practices associated with the digital world

Unit Mapping Information

No equivalent unit. New unit.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTCYS612 Design and implement virtualised cyber security infrastructure for organisations

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design and implement cyber security infrastructure and review results against organisational needs on at least two different occasions.

In the course of the above, the candidate must:

- identify an organisation's vulnerabilities, cyber security needs and data protection requirements
- document findings, plan and processes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- features and implementation methodologies of cyber security
- cyber security infrastructure features including:
 - application security
 - business continuity planning
 - disaster recovery planning
 - operational security (OPSEC)
 - threat vectors
- organisational business processes and applicable cyber security requirements design and implementation
- organisational procedures applicable to designing and implementing cybersecurity infrastructure, including:
 - documenting established requirements, risks and work performed
 - establishing requirements and features of cyber security infrastructure

- establishing maintenance and alert processes
- testing methods and procedures
- security risks, and tolerance of risk in an organisation
- industry standard cyber security providers
- industry standards and regulations applicable to implementing cyber security infrastructure in an organisation
- organisation, infrastructure and cyber security requirements.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- hardware, software and its components required in the design and implementation of cyber security infrastructure
- an organisation's operational details required for determining cyber security requirements
- application and user security technologies required for the design and implementation of cyber security infrastructure
- industry standard cyber security providers.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTCYS613 Utilise design methodologies for security architecture

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to design security architecture to organisation requirements, utilising specific design methodologies.

It applies to those who work in roles as senior network systems and server administrators, cyber security engineers, DevOps engineers and cyber security solutions architects and are responsible for designing security solutions.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Cyber security

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to design security infrastructure	1.1 Analyse an organisation's operation and infrastructure to identify security requirements 1.2 Research and identify industry standard design methodologies utilised in security architecture design 1.3 Determine required security level and perimeters, security features and security mode 1.4 Establish all data types to be included in security architecture 1.5 Document all security architecture findings and confirm with required personnel
2. Design security	2.1 Establish and document specific requirements and features

architecture	of security requirements 2.2 Design and document security solution according to organisational requirements 2.3 Submit documentation to required personnel for initial feedback
3. Finalise security architecture	3.1 Demonstrate security design utilises major industry standard design methodologies 3.2 Demonstrate security design addresses organisational cyber security requirements 3.3 Submit documentation to required personnel and seek and respond to feedback

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none"> Monitors outcomes of decisions, considering results and identifying key concepts and principles that may be adaptable in the future
Reading	<ul style="list-style-type: none"> Interprets technical, manufacturer and organisational documentation to determine and confirm job requirements
Writing	<ul style="list-style-type: none"> Prepares complex workplace documentation detailing findings and solutions using required structure, layout and required language
Planning and organising	<ul style="list-style-type: none"> Develops the operational detail in stages, regularly reviewing priorities and performance during implementation, and identifying and addressing issues
Problem solving	<ul style="list-style-type: none"> Uses understanding of context to recognise anomalies and subtle deviations to normal expectations, focusing attention and remedying problems as they arise
Self-management	<ul style="list-style-type: none"> Takes responsibility for identifying and considering organisational protocols and requirements Uses systematic processes, setting goals, gathering required information and identifying and evaluating options against agreed criteria
Technology	<ul style="list-style-type: none"> Demonstrates an understanding of principles, concepts, language and practices associated with the digital world

Assessment Requirements for ICTCY613 Utilise design methodologies for security architecture

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- use methodologies to design at least one cyber security solution for an organisation on at least one occasion.

In the course of the above, the candidate must:

- research and analyse industry standard design methodologies for designing security architecture
- document finalised security solution.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard cyber security design methodologies
- principles of cyber security
- principles of security architecture
- different types of cyber security risks required to design security architecture
- presenting security architecture in document form.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- organisational data
- organisational operating structure

- organisational procedures applicable to designing security architecture including:
 - documentation processes
 - establishing requirements and features of security strategies
 - establishing baselines and metrics
 - testing methodologies.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTCYS614 Analyse cyber security insider risks and threats and devise recommendations

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.2.

Application

This unit describes the skills and knowledge required to analyse intentional and unintentional cyber security insider risks and threats, devise recommendations to minimise those risks and threats, and recommend organisational training responses to them.

The unit applies to those who work in information technology security roles, including cyber security analysts and specialists, cyber risk and assurance managers, and other related roles that are responsible for analysing cyber security insider risks and threats.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Cyber security

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine cyber security insider risks and threats in organisation or workplace context	1.1 Obtain work details and scope from required personnel and arrange for access to required technology in compliance with organisational security arrangements and required legislation, codes, regulations and standards 1.2 Evaluate and apply privacy requirements according to organisational policies and procedures 1.3 Identify systems of critical nature to business and key data logs for detection of cyber security insider risk and threat activity 1.4 Determine high-risk data using organisational risk framework 1.5 Monitor organisational behaviour patterns to identify cyber

ELEMENT	PERFORMANCE CRITERIA
	security insider risks and threats
2. Complete model-based analysis of cyber security insider risks and threats	2.1 Identify model required to analyse cyber security insider risks and threats 2.2 Analyse sensors and data logs and perform risk assessment to identify high-risk users and behaviours 2.3 Perform a model-based analysis of cyber security insider risks and threats
3. Devise and distribute recommendations arising from analysis	3.1 Prioritise risks and threats based on analysis according to organisational policies and procedures 3.2 Develop recommendations to minimise or eliminate insider risks and threats based on analysis findings 3.3 Seek and integrate feedback of required personnel on draft recommendations 3.4 Distribute information and documentation to required personnel according to legislative requirements and organisational policies and procedures
4. Review organisational training response to cyber security insider risks and threats	4.1 Review identified cyber security insider risks and threats to identify training requirements 4.2 Develop recommendations for training to address cyber security insider risks and threats 4.3 Seek feedback on training recommendations from required personnel 4.4 Finalise and distribute training recommendations according to organisational policies and procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Interprets information from technical, manufacturer and organisational documentation
Writing	<ul style="list-style-type: none"> Prepares complex workplace documentation detailing processes and outcomes using required structure, layout and applicable language
Oral communication	<ul style="list-style-type: none"> Presents information in a clear manner using language appropriate to target audience
Problem solving	<ul style="list-style-type: none"> Uses understanding of context to recognise anomalies and subtle deviations to normal expectations

Self-management	<ul style="list-style-type: none">• Takes responsibility for identifying and considering organisational policies, procedures, protocols and requirements
Technology	<ul style="list-style-type: none">• Demonstrates an understanding of digital principles, concepts, language and practices

Unit Mapping Information

No equivalent unit. Newly created unit.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTCY614 Analyse cyber security insider risks and threats and devise recommendations

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.2.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- perform one model-based analysis of cyber security insider risks and threats within an organisation or workplace context.

In the course of the above, the candidate must:

- document analysis findings that identify at least two intentional and two unintentional cyber security insider risks and threats
- devise and distribute recommendations that minimise workplace vulnerability
- recommend organisational training response relating to the findings of the above cyber security insider risk and threat analysis.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- key requirements of legislation, codes, regulations and standards relating to analysing cyber security insider risks and threats
- organisational policies and procedures, including:
 - data loss mitigation controls
 - risk framework
 - security arrangements
 - security control standards
- types of cyber security insider risks and threats, including:
 - careless insiders
 - compromised insiders
 - expired users with valid credentials

- malicious insiders
- misinformed insiders
- key intentional and unintentional cyber security insider risks and threats
- key organisational behavioural patterns that indicate cyber security insider risks and threats
- key features of different data classifications, including:
 - classified
 - confidential
 - private
 - protected
 - public
 - secret
 - sensitive
 - strictly for internal use
 - top secret
- key data loss mitigation controls
- key types of model-based insider risk and threat analysis and tools
- sensitive locations containing data logs and sensors at risk of cyber security insider risks and threats
- strategies for minimising and eliminating cyber security insider risks and threats in an organisation
- procedures for assessing risks, including for identifying different types of high-risk users
- technology protocols used for user identification.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- legislative, regulatory and contractual requirements and organisational policies and procedures applicable to cyber security insider risks and threats, including organisational security procedures
- organisational framework to guide analysis of high-risk sensitive data
- required hardware and software.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Links

ICTCYS615 Detect and respond to cyber security insider risks and threats

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.2.

Application

This unit describes the skills and knowledge required to detect and respond to intentional and unintentional cyber security insider risks and threats, including the configuration of tools.

The unit applies to those who work in information technology security roles, including cyber security analysts and specialists, cyber risk and assurance managers, and other related roles that are responsible for detecting and responding to cyber security insider risks and threats.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Cyber security

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to detect organisational cyber security insider risks and threats	<ul style="list-style-type: none">1.1 Obtain work details from required personnel1.2 Evaluate and apply privacy requirements according to organisational policies and procedures, legislation, codes, regulations, standards and security arrangements1.3 Analyse type of behaviours that indicate cyber security insider risks and threats1.4 Analyse sources of sensitive data and business processes that are vulnerable to cyber security insider risks and threats1.5 Select required cyber security insider risk and threat detection tools according to organisational policies and procedures

ELEMENT	PERFORMANCE CRITERIA
2. Configure and monitor cyber security insider risk and threat detection tools	2.1 Configure cyber security insider risk and threat detection tools into organisation's operations and infrastructure 2.2 Use behavioural analysis and cyber security insider risk and threat detection tools 2.3 Monitor potential breaches identified by tool and abnormal outputs from behavioural analysis 2.4 Locate source of breaches and determine extent of cyber security insider risks, threats and their organisational impact 2.5 Maintain custody chain according to legislative requirements and organisational security procedures
3. Respond to cyber security insider risks and threats	3.1 Consult with required personnel to determine suitable course of action to mitigate identified risks and threats, and restrict user access where required 3.2 Implement determined course of action according to organisational policies and procedures 3.3 Test course of action according to organisational security procedures and escalate test findings to required personnel, where required
4. Finalise response to cyber security insider risks and threats	4.1 Evaluate course of action taken and confirm that risks and threats have been contained 4.2 Document exposed data and implemented course of action according to organisational requirements 4.3 Gather feedback on risk and threat detection and response process from personnel involved in the incident 4.4 Develop and submit report on threat detection and response according to legislative requirements and organisational policies and procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Interprets information from technical, manufacturer and organisational documentation
Writing	<ul style="list-style-type: none"> Prepares complex workplace documentation detailing processes and outcomes using required structure, layout and applicable language
Oral communication	<ul style="list-style-type: none"> Presents information in a clear manner using language appropriate

SKILL	DESCRIPTION
	to target audience
Problem solving	<ul style="list-style-type: none">• Uses understanding of context to recognise anomalies and subtle deviations to normal expectations
Self-management	<ul style="list-style-type: none">• Takes responsibility for identifying and considering organisational policies, procedures, protocols and requirements
Technology	<ul style="list-style-type: none">• Demonstrates an understanding of digital principles, concepts, language and practices

Unit Mapping Information

Assessment Requirements for ICTCY615 Detect and respond to cyber security insider risks and threats

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.2.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- detect and respond to at least three different insider cyber security risks and/or threats in an organisation or workplace context.

In the course of the above, the candidate must:

- select and configure a cyber security insider risk and threat detection tool suited to the detected risk or threat
- report on detected insider cyber security risks and threats.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- key requirements of legislation, codes, regulations, standards and security arrangements relating to detecting and responding to cyber security insider risks and threats
- key security controls
- organisational policies and procedures applicable to cyber security insider risk and threat detection and response, including those for:
 - assessing impact and rectifying damage imposed by insider risks and threats
 - containing risks and threats, including disabling user access and maintaining custody chain
 - determining nature of detected risks and threats
 - determining user identification protocols
 - identifying location of sensitive data
 - reporting risks and threats to required personnel
- types of cyber security insider risks and threats, including:

- careless insiders
- compromised insiders
- expired users with valid credentials
- malicious insiders
- misinformed insiders
- key intentional and unintentional cyber security insider risks and threats
- key behavioural patterns that indicate cyber security insider risks and threats
- causes and sources of cyber security insider risks and threats
- strengths and limitations of cyber security insider risk and threat detection methodologies and tools
- key information in data logs, including server, network and firewall information
- key features of different data classifications, including:
 - classified
 - confidential
 - private
 - protected
 - public
 - secret
 - sensitive
 - strictly for internal use
 - top secret
- technology protocols used for user identification
- strategies for minimising and eliminating cyber security insider risks and threats in an organisation
- methods to configure cyber security insider risk and threat detection tools.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- cyber security insider risk and threat detection tools required for configuration
- legislative, regulatory and contractual requirements and organisational policies and procedures applicable to cyber security insider risks and threats, including organisational security procedures
- required hardware and software.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTDAT401 Evaluate organisational compliance with data ethics legislation

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to evaluate and confirm that an organisation meets the legal obligations of data ethics legislation.

It applies to data analytics specialists who work in higher-level positions within in a broad range of industries and are responsible for ethical and legal aspects of data handling.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Data analytics

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Confirm required data ethics legislation	1.1 Identify data ethics legislation according to industry legal requirements 1.2 Identify voluntary codes and industry standard best practices according to organisational requirements 1.3 Document all identified regulations that impact organisation's operations according to organisational policies and procedures
2. Review organisation's compliance to identified legislation	2.1 Review and determine organisational compliance with required data-related legislation, policies and procedures 2.2 Document compliance review findings of non-compliance according to organisational policies and

	procedures 2.3 Develop and document non-compliance corrective action plan according to organisational policies and procedures
3. Finalise organisation's evaluation	3.1 Submit non-compliance corrective action plan to required personnel 3.2 Seek and respond to non-compliance corrective action plan 3.3 Communicate review schedule and legislative changes to required personnel 3.4 Present documented review findings to required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none"> Modifies behaviour following exposure to new information
Oral communication	<ul style="list-style-type: none"> Uses listening and questioning techniques to confirm task requirements and articulate complex concepts using relevant industry for intended audience
Reading	<ul style="list-style-type: none"> Interprets information from relevant sources to determine organisational impacts relating to data ethics legislation
Writing	<ul style="list-style-type: none"> Prepares documentation using industry-related terminology
Planning and organising	<ul style="list-style-type: none"> Takes responsibility for planning, sequencing stages in modifying standards relating to data ethics Prioritises tasks and own workload for required outcomes
Self-management	<ul style="list-style-type: none"> Implements standard procedures and makes decisions for routine tasks Uses formal decision-making processes for more complex and non-routine situations

Unit Mapping Information

No equivalent unit. New unit.

Assessment Requirements for ICTDAT401 Evaluate organisational compliance with data ethics legislation

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- review and improve an organisation-wide review of data-related policies and procedures.

In the course of the above, the candidate must:

- confirm compliance with data ethics legislation
- communicate review schedule and legislative changes
- document review outcomes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- legislative requirements and standards relating to protecting data integrity, including data protection, privacy laws and regulations
- organisational policies, procedures and protocols relating to protecting data integrity including for:
 - data accuracy
 - verifying data security
 - data discrepancies between different sources
 - identifying data breaches
- ethical management and governance of data, including balancing data availability and data confidentiality
- compliance requirements and regulations relating to data loss and documentation procedures and corrective actions relating to non-compliance
- policy review procedures
- codes of practice relating to data management.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- information and data sources to inform data analysis
- information and telecommunications equipment required to analyse data
- industry standards, organisational procedures, and legislative requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTDAT402 Clean and verify data

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to clean and verify data obtained from a variety of sources. It involves the use of analytics and review to ensure data quality for an organisation is according to industry practices and organisational policies, procedures and protocols.

It applies to data analytics specialists who work within in a broad range of industries and are responsible for processing data sets for a business.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Data analytics

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare data sets	1.1 Identify data sets and establish task requirements according to business needs 1.2 Unify data from different sets according to task requirements 1.3 Review data and confirm accuracy of input and restriction to numerical values
2. Review and clean data set	2.1 Identify and remove incorrect data input and formulate data according to task requirements 2.2 Confirm required data set parameter range according to task requirements 2.3 Run analytics and confirm that data set consistency according

ELEMENT	PERFORMANCE CRITERIA
	to task requirements 2.4 Remove any data values that are outside upper and lower threshold of acceptable range
3. Verify data set	3.1 Confirm consistency between digitally entered data and manually entered data 3.2 Identify and review over-writes according to organisational requirements 3.3 Review data set and confirm analytical suitability according to task requirements 3.4 Store data set securely according to organisational procedures, legislative requirements and industry standard practices 3.5 Obtain final task sign off from required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none">Modifies behaviour following exposure to new information
Numeracy	<ul style="list-style-type: none">Interprets mathematical data and applies interpretation to task outcomesCompletes complex calculations and records mathematical data
Planning and organising	<ul style="list-style-type: none">Sequences stages in cleaning and verifying data efficiently and logicallyPrioritises tasks and own workload for required outcomes
Problem solving	<ul style="list-style-type: none">Identifies and resolves barriers to successful delivery of cyber security infrastructureDemonstrates an understanding of how to address less predictable problems and initiates standard procedures in response
Self-management	<ul style="list-style-type: none">Implements standard procedures and makes decisions for routine tasks
Technology	<ul style="list-style-type: none">Uses technology platforms to assist with data analysis

Unit Mapping Information

No equivalent unit. New unit.

Assessment Requirements for ICTDAT402 Clean and verify data

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- combine at least two data sets from different sources
- confirm accuracy of the two combined data sets.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- legislative requirements relating to data capture and storage, including data protection, security and privacy laws and regulations
- organisational policies, procedures and protocols relating to protecting data integrity for:
 - data accuracy
 - identification of data over-writes
 - verifying data security
 - monitoring data discrepancies between different sources
 - digital versus manual data entry
 - monitoring data integrity
 - identifying where data breaches have occurred
- ethical management and governance of data, including determining availability of data and confidentiality of data
- compliance requirements and regulations relating to data loss
- key components of policies in place for protecting confidential and private business information and intellectual property in data assets, including:
 - privacy policies
 - security policies
 - intellectual property policies
- data analytics including feature extraction procedures.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- information and data sources to inform data analysis
- information and telecommunications equipment required to analyse data
- industry standards, organisational procedures, and legislative requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTDAT501 Gather, analyse and verify data from different source inputs

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to gather, analyse, test and verify data from different source inputs.

It applies to those who work in data analytics roles in the Information and Communications Technology (ICT) environment and are responsible for identifying data from a range of source inputs, analysing and investigating abnormalities and reporting against an organisation's requirements.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Data analytics

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan for data extraction and gathering	<ul style="list-style-type: none">1.1 Analyse organisation's structure, operations and data, and identify need for data analysis1.2 Determine required data sources, data types and extraction techniques1.3 Plan and document data extraction methods according to task requirements1.4 Determine and document organisational impact of data gathering1.5 Communicate data extraction activities to required personnel

ELEMENT	PERFORMANCE CRITERIA
2. Gather and prepare data for analysis	2.1 Secure data and prepare for extraction according to task requirements 2.2 Initiate data extraction on required data sources 2.3 Extract data according to task requirements 2.4 Determine completeness of data extraction according to task requirements
3. Analyse and verify data	3.1 Normalise data according to analysis requirements 3.2 Conduct analysis according to task requirements 3.3 Obtain analysis results and collate information according to task requirements 3.4 Compare results to analysis specifications and requirements and conduct any further data extraction and analysis requirements
4. Finalise reporting activities	4.1 Determine organisation's reporting format and structure 4.2 Report details on analysis activities and results according to task requirements 4.3 Submit report to required personnel and seek and respond to feedback

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none"> Monitors outcomes of decisions, considering results and identifying key concepts and principles that may be adaptable in the future
Oral communication	<ul style="list-style-type: none"> Uses listening and questioning techniques to confirm requirements and articulate complex concepts using relevant industry for intended audience
Reading	<ul style="list-style-type: none"> Interprets technical, manufacturer and organisational documentation to determine and confirm job requirements
Writing	<ul style="list-style-type: none"> Develops documentation conveying explicit information, requirements and recommendations for a specific audience, using clear and detailed language
Planning and organising	<ul style="list-style-type: none"> Uses a formal, logical planning processes together with an increasingly intuitive understanding of context
Problem solving	<ul style="list-style-type: none"> Analyses context to recognise anomalies and subtle deviations to normal expectations, focusing attention and remedying problems as

SKILL	DESCRIPTION
	they arise
Self-management	<ul style="list-style-type: none">• Takes end-to-end responsibility for identifying and considering relevant organisational protocols and requirements• Uses systematic processes, setting goals, gathering required information and identifying and evaluating options against agreed criteria
Technology	<ul style="list-style-type: none">• Identifies principles, concepts, language and articulates associated with the digital world

Unit Mapping Information

No equivalent unit. New unit.

Assessment Requirements for ICTDAT501 Gather, analyse and verify data from different source inputs

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- gather information from two different types of data sources in order to conduct analysis and report on at least two occasions.

In the course of the above, the candidate must:

- identify and conduct data normalising methodologies.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- data extraction methodologies
- data normalising methodologies used in data analysis and data reporting
- methodologies of securing and preparing data for data extraction
- industry standard data analysis methodologies
- technical requirements used in extracting different types of data.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the customer service field of work and include access to:

- different types of data required for extraction and analysis
- hardware and software and components required for data extraction and analysis tasks
- organisational data reporting style guide and reporting processes required for data reporting
- a site where activities can be carried out

- data required for testing.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTDAT502 Conduct significance tests

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to prepare and test data against an organisation's requirements.

It applies to individuals who work in roles including, data analysts and data scientists, and run hypothesis testing on big data in a medium or large sized organisation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Data analytics

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to conduct significance test	1.1 Analyse organisational requirements for significance testing and determine hypothesis for testing 1.2 Determine testing boundaries and data validation methods 1.3 Select all required data and its sources 1.4 Plan and document data extraction procedure 1.5 Plan and document significance testing activities according to organisational requirements
2. Conduct testing	2.1 Extract and secure data according to task requirements 2.2 Normalise and structure data according task requirements 2.3 Initiate data analysis and determine correct progression 2.4 Manipulate variables within data according to task

ELEMENT	PERFORMANCE CRITERIA
	requirements 2.5 Obtain testing results from required sources
3. Report test findings	3.1 Analyse test findings and determine testing has been completed according to test plan and task requirements 3.2 Analyse test findings and conclude hypothesis 3.3 Document testing activities and findings according to task requirements 3.4 Communicate findings with required personnel and seek and respond to feedback 3.5 Lodge documents according to organisational requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Oral communication	<ul style="list-style-type: none"> Uses listening and questioning techniques to seek and respond to feedback
Reading	<ul style="list-style-type: none"> Analyses technical, manufacturer and organisational documentation to determine and confirm job requirements
Writing	<ul style="list-style-type: none"> Prepares required documentation conveying explicit information, requirements and recommendations according to organisational requirements
Planning and organising	<ul style="list-style-type: none"> Uses a formal, logical planning processes together with an increasingly intuitive understanding of context
Problem solving	<ul style="list-style-type: none"> Uses nuanced understanding of context to recognise anomalies and subtle deviations to normal expectations, focusing attention and remedying problems as they arise
Self-management	<ul style="list-style-type: none"> Takes full responsibility for identifying and considering relevant organisational protocols and requirements Uses systematic processes, setting goals, gathering required information and identifying and evaluating options against agreed criteria
Technology	<ul style="list-style-type: none"> Demonstrates an understanding of principles, concepts, language and practices associated with the digital world

Unit Mapping Information

No equivalent unit. New unit.

Assessment Requirements for ICTDAT502 Conduct significance tests

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- plan and conduct a significance test on extracted and normalised data and conclude finding on at least two occasions.

In the course of the above, the candidate must:

- identify and conduct data normalising methodologies
- develop a hypothesis used for significance testing.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- data extraction methodologies
- data normalising methodologies used in data analysis and data reporting
- methodologies of securing and preparing data for data extraction
- industry standard data analysis methodologies
- technical requirements used in extracting different types of data
- hypothesis development for significance testing
- report writing for reporting significance testing in data analytics.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the customer service field of work and include access to:

- hardware and software and components required for data analysis tasks

- organisational data reporting style guide and reporting processes required for data reporting
- a site where activities can be carried out.
- data required for testing.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTDAT503 Use unsupervised learning for clustering

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to cluster data extracts from big data following unsupervised machine learning methodologies and report on the findings.

It applies to individuals who work in roles including, data analysts, data scientists, machine learning engineers, developers and programmers, and are responsible for data mining and machine learning activities with big data within medium to large organisations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Data analytics

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1.Determine data clustering requirements	1.1 Research organisation's need for data clustering and define problem, objective and outputs 1.2 Determine required machine and input data set according to task requirements 1.3 Define evaluation protocol and accepted measure of success 1.4 Develop and document required benchmark model
2. Prepare data	2.1 Collect data according to task requirements 2.2 Evaluate data quantity, completeness and alignment according to task requirements 2.3 Transform and format data according to specifications

ELEMENT	PERFORMANCE CRITERIA
	2.4 Finalise data preparation according to task requirements
3. Cluster data	3.1 Input raw data according to task requirements 3.2 Run required algorithm and adhere to required processing time frame 3.3 Obtain output reports and determine completeness of task according requirements
4. Finalise data clustering tasks	4.1 Analyse data report and determine clustering tasks have been completed according to task requirements 4.2 Interpret, summarise and document findings 4.3 Communicate findings to required personnel and seek and respond to feedback 4.4 Lodge documentation according to task requirements and finalise task activities according to organisational requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Uses mathematical formulae to calculate required measurements, determine values and articulate numerical findings
Oral communication	<ul style="list-style-type: none"> Uses listening and questioning techniques to seek and respond to feedback
Reading	<ul style="list-style-type: none"> Analyses technical, manufacturer and organisational documentation to determine and confirm job requirements
Writing	<ul style="list-style-type: none"> Prepares complex documentation detailing benchmark model and findings using relevant language to convey explicit information, requirements and recommendations
Planning and organising	<ul style="list-style-type: none"> Uses a formal, logical planning processes together with an increasingly intuitive understanding of context
Problem solving	<ul style="list-style-type: none"> Uses nuanced understanding of context to recognise anomalies and subtle deviations to normal expectations, focusing attention and remedying problems as they arise
Self-management	<ul style="list-style-type: none"> Takes full responsibility for identifying and considering relevant organisational protocols and requirements Uses systematic processes, setting goals, gathering required information and identifying and evaluating options against agreed

SKILL	DESCRIPTION

Assessment Requirements for ICTDAT503 Use unsupervised learning for clustering

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- collect, prepare and cluster data using unsupervised machine learning methodologies and report on the findings on at least two occasions.

In the course of the above, the candidate must:

- research industry standard approaches and methodologies for machine learning
- evaluate and prepare data.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- methodologies for data clustering unlabelled data including intra-cluster cohesion and intra-cluster separation
- industry standard data clustering methodologies including benchmark modelling techniques for data clustering
- report writing methodologies relevant to reporting findings of data clustering activities
- industry standard machine learning methodologies relevant to unsupervised learning
- methodologies for modelling data relevant to unsupervised learning.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the customer service field of work and include access to:

- hardware and software and components required for using unsupervised learning for clustering

- organisational data reporting style guide and reporting processes required for unsupervised learning and machine learning
- a site where activities can be carried out.
- data required for clustering.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTDAT601 Develop data integration strategies

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created unit of competency to address in-demand skills needs.

Application

This unit describes the skills and knowledge required to analyse complex data in workplace contexts to inform data integration strategies. It includes analysing data trends and contextualising insights according to industry and organisational requirements.

The unit applies to individuals who may work in a variety of roles across a range of industries such as professional, scientific and technical services, who independently analyse complex data in workplace contexts.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Data analytics

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to contextualise data insights	1.1 Confirm work brief and tasks according to organisational policies and procedures 1.2 Evaluate data analysis objectives according to work brief 1.3 Analyse circumstances where complex organisational data must be interpreted, processed and shared 1.4 Source analysis documentation for cleansed data from

ELEMENT	PERFORMANCE CRITERIA
	required personnel
2. Analyse data and contextualise insights	2.1 Analyse cleansed data according to work brief 2.2 Finalise data analysis according to organisational policies and procedures 2.3 Assess reliability, accuracy and validity of data analysis 2.4 Identify trends and patterns in data analysis insights 2.5 Align analysis insights with objectives of specific industries according to work brief
3. Build data integration strategy based on contextualised insights	3.1 Confirm that analysis insights are contextualised appropriately according to work brief 3.2 Produce data integration strategy using contextualised insights for required industry 3.3 Confirm that data integration strategy meets organisational policies and procedures 3.4 Finalise required documentation according to work brief 3.5 Distribute data integration strategy to required industry personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Oral communication	<ul style="list-style-type: none"> Uses active listening and questioning to convey and clarify information and to confirm understanding
Reading	<ul style="list-style-type: none"> Critically analyses complex documentation from a variety of sources and consolidates information in work tasks
Writing	<ul style="list-style-type: none"> Develops material for a specific audience using clear and detailed language in order to convey explicit information, requirements and recommendations
Planning and organising	<ul style="list-style-type: none"> Takes responsibility for planning, sequencing and prioritising tasks and own workload for efficient and effective outcomes
Problem solving	<ul style="list-style-type: none"> Develops solutions for advanced data problems in complex and sometimes changing contexts

Unit Mapping Information

No equivalent unit. Newly created unit.

Links

Companion Volume Implementation Guide is found on VETNet - -

Assessment Requirements for ICTDAT601 Develop data integration strategies

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created unit of competency to address in-demand skills needs.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- contextualise at least one data analysis for at least two different industries or workplace contexts
- create at least one data integration strategy for an organisation or work area from that analysis.

In the course of the above, the candidate must:

- distribute data integration strategy to required work area
- apply required organisational policies and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- functions and features of complex data components, including data:
 - quality
 - speeds
 - volume
 - sources
- industry-recognised methods to reliably research industry trends and data requirements
- common types of analysis technologies and resources for advanced data
- industry-recognised data lifecycle stages
- characteristics of reliable, accurate and valid data analysis

- key methods of identifying trends and patterns in advanced datasets
- advanced data validity and capture methods
- common methods for evaluating the reliability of data sources
- characteristics of advanced data integration strategies
- methods to contextualise data analysis insights to industry and organisational requirements
- methods and technologies used to store organisational data
- organisational formats for documentation and reports
- organisational policies and procedures, and legislative requirements relating to work tasks.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- technology and resources to analyse advanced data
- organisational data storage technologies
- work brief and organisational policies and procedures required to demonstrate the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTDAT602 Review data lifecycles

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created unit of competency to address in-demand skills needs.

Application

This unit describes the skills and knowledge required to review large volumes of advanced data from multiple sources as part of data lifecycles. It includes confirming workplace needs, assessing information and communications technology (ICT) controls, and maintaining security in organisations.

The unit applies to individuals who may work in a variety of ICT management roles who review data lifecycles in diverse workplace contexts.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Data analytics

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to evaluate data lifecycles	1.1 Confirm work brief and tasks according to organisational policies and procedures 1.2 Source data documentation according to organisational policies and procedures 1.3 Confirm data documentation access and rectify any authentication issues with required personnel

ELEMENT	PERFORMANCE CRITERIA
2. Evaluate data controls	2.1 Analyse data documentation according to work brief 2.2 Identify data controls in organisation or work area 2.3 Check data lifecycle documentation process and validate against required evaluation framework 2.4 Check that archived data management processes align with organisational requirements 2.5 Check that disposal procedures for redundant data align with organisational requirements 2.6 Validate checked controls according to work brief
3. Finalise evaluation	3.1 Consult with required personnel on any data lifecycle compliance issues 3.2 Report any recommendations for improvements in workplace documentation 3.3 Approve organisational data lifecycle documentation 3.4 Finalise required documentation according to work brief

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Oral communication	<ul style="list-style-type: none"> Uses active listening and questioning to convey and clarify information and to confirm understanding
Reading	<ul style="list-style-type: none"> Critically analyses complex documentation from a variety of sources and consolidates information in work tasks
Writing	<ul style="list-style-type: none"> Develops material for a specific audience using clear and detailed language in order to convey explicit information, requirements and recommendations
Planning and organising	<ul style="list-style-type: none"> Takes responsibility for planning, sequencing and prioritising tasks and own workload for efficient and effective outcomes
Problem solving	<ul style="list-style-type: none"> Initiates proactive procedures when determining solutions in complex contexts, and designs implementation strategies for those solutions
Technology	<ul style="list-style-type: none"> Uses technologies and systems to access, enter, present and communicate data and information

Unit Mapping Information

No equivalent unit. Newly created unit.

Assessment Requirements for ICTDAT602 Review data lifecycles

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created unit of competency to address in-demand skills needs.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- review at least two different data lifecycle processes in an organisation or work area.

In the course of the above, the candidate must:

- detect and report issues in organisational data lifecycle processes
- document and make recommendations to support processes and outcomes
- apply required organisational policies and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- key functions and features of advanced data documentation, including compliance requirements
- key stages of a data lifecycle, including:
 - creating data
 - storing data
 - using data
 - archiving data
 - disposing of data
- functions and features of data controls
- methods to evaluate data controls
- methods to safely and securely create, store, use, archive and dispose of data

- industry-recognised information and communications technology (ICT) controls
- organisational formats for documentation and reports
- organisational policies and procedures, and legislative requirements relating to work tasks.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- an established organisational data lifecycle that may be reviewed
- organisational data storing technologies and data lifecycle documentation
- opportunities for interaction with others.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTDAT603 Assess advanced data processes

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created unit of competency to address in-demand skills needs.

Application

This unit describes the skills and knowledge required to assess processes and strategies for managing large volumes of advanced data from multiple sources. It includes identifying and recommending strategic improvements in existing data management processes.

The unit applies to individuals who may work in a variety of information and communications technology (ICT) management roles who apply judgement to improve organisational processes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Data analytics

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Review data management processes	1.1 Confirm work brief and tasks according to organisational policies and procedures 1.2 Request and confirm access to data storing technologies according to work brief

ELEMENT	PERFORMANCE CRITERIA
	<p>1.3 Identify and obtain required confidentiality and security clearances according to organisational policies and procedures</p> <p>1.4 Analyse advantages and limitations of existing data management processes</p> <p>1.5 Report on strengths and limitations of existing data management processes in required format</p> <p>1.6 Evaluate effectiveness of existing data hygiene principles</p>
2. Research and consolidate findings on data improvements	<p>2.1 Research and consult on data process improvement options</p> <p>2.2 Research and summarise improvements to data hygiene principles</p> <p>2.3 Select preferred data process improvement option according to work brief</p> <p>2.4 Document potential data process improvements as rationale for data process improvement option</p> <p>2.5 Record and store findings in required format</p>
3. Develop recommendations for data improvements	<p>3.1 Distribute findings to required project team personnel and seek input according to work brief</p> <p>3.2 Coordinate development of recommendations for data process improvements</p> <p>3.3 Present recommendations to required personnel according to work brief and organisational policies and procedures</p>
4. Coordinate implementation of recommendations	<p>4.1 Seek approval of recommendation report from required personnel</p> <p>4.2 Design implementation strategies for recommended updates and document options</p> <p>4.3. Develop implementation instructions for options according to work brief</p> <p>4.4 Advise required personnel of recommended implementation timelines according to designed implementation strategy</p> <p>4.5 Finalise required documentation according to work brief</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Oral communication	<ul style="list-style-type: none">• Uses active listening, clear language and questioning to delegate tasks and confirm team member understanding
Reading	<ul style="list-style-type: none">• Critically analyses complex documentation from a variety of sources and consolidates information in work tasks
Writing	<ul style="list-style-type: none">• Develops material for a specific audience using clear and detailed language in order to convey explicit information, requirements and recommendations
Planning and organising	<ul style="list-style-type: none">• Takes responsibility for planning, sequencing and prioritising tasks and own workload for efficient and effective outcomes
Problem solving	<ul style="list-style-type: none">• Initiates proactive procedures when determining solutions in vast contexts and designing implementation strategies for solutions
Technology	<ul style="list-style-type: none">• Uses technologies and systems to access, enter, present and communicate data and information

Unit Mapping Information

No equivalent unit. Newly created unit.

Assessment Requirements for ICTDAT603 Assess advanced data processes

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created unit of competency to address in-demand skills needs.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- recommend at least two strategic improvements to an organisation or work area's advanced data process
- design the implementation of at least one of the above recommendations, where the work must include implementing:
 - options
 - instructions
 - timelines.

In the course of the above, the candidate must:

- comply with required confidentiality and security clearances
- develop recommendations and contribute to the implementation of strategic improvements
- apply required organisational policies and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- functions and features of complex data components, including data:
 - quality
 - speeds
 - volume

- sources
- methods to evaluate and improve data hygiene principles, including:
 - eliminate redundant data
 - consolidate duplicate data
 - identify and scrub structural errors
 - identify missing data
 - standardise data
 - validate data cleansing processes
 - follow standard practices when adding or removing data
 - review third-party data integration tools
- types of technical requirements and data extraction methodologies for different data types
- methods to assess data processes and strategies
- functions and features of common organisational data storing technologies and techniques
- data normalising methodologies used in data analysis and data reporting
- methods for securing and preparing data for data extraction
- common methods for analysing data
- confidentiality and security clearance policies related to handling data
- features of data management processes
- common strategic improvements for data management processes
- methods to update and finalise data management documentation
- organisational policies and procedures and legislative requirements relating to work tasks.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- organisational data storing technologies and data management documentation
- opportunities for interaction with others.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTDBS416 Create basic relational databases

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to design, develop and test relational databases to meet specifications.

It applies to individuals who are database support staff, application programmers and web designers who are required to create a simple database to store information for an online, desktop, web or mobile device application, using a simple entity relational database on a web or database server environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Database

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to create relational database	1.1 Determine organisational database functionality requirements 1.2 Document organisational database requirements 1.3 Gather required data according to task requirements 1.4 Submit document to required personnel and according to organisational policies and procedures 1.5 Seek and respond to documentation feedback according to organisational policies and procedures
2. Design relational database	2.1 Design entity-relationship (ER) diagram to model relationships between entities, including entity attributes according to functionality requirements

ELEMENT	PERFORMANCE CRITERIA
	2.2 Define primary and foreign keys and implement relationships 2.3 Normalise database model 2.4 Develop data dictionary and detail entity attributes according to functionality requirements 2.5 Document ER diagram and data dictionary, including data model, and submit to required personnel 2.6 Seek feedback from required personnel, and update data model according to feedback
3. Create relational database	3.1 Use required language on web and database server to create relational database according to confirmed task design 3.2 Create tables according to required language and ER diagram 3.3 Populate database fields according to task requirements 3.4 Test and fix database problems on web and database server
4. Finalise relational database and required documentation	4.1 Determine alignment between represented information and task requirements 4.2 Confirm and submit all task documentation to required personnel 4.3 Seek and respond to feedback on task delivery and documentation 4.4 Save changes and obtain final task signoff from required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Oral communication	<ul style="list-style-type: none"> Obtains and responds to information and feedback from required personnel using succinct verbal language
Reading	<ul style="list-style-type: none"> Analyses textual information to establish requirements
Writing	<ul style="list-style-type: none"> Prepares required documentation detailing requirements, ER diagram and data dictionary using required format and cohesive and language
Teamwork	<ul style="list-style-type: none"> Applies protocols governing what to communicate, with whom and how, in a range of work contexts
Planning and organising	<ul style="list-style-type: none"> Plans a range of routine, and some non-routine, tasks, accepting stated goals and required outcomes

Skill	Description
Problem solving	<ul style="list-style-type: none">• Uses formal decision-making process, setting and clarifying goals, gathering information and identifying and evaluating several choices against a limited set of criteria• Applies formal problem-solving processes when tackling unfamiliar problems, breaking complex issues into manageable parts and identifying and evaluating options for action
Self-management	<ul style="list-style-type: none">• Follows explicit and implicit procedures and meets expectations associated with own role when submitting documentation for approval and completing task requirements
Technology	<ul style="list-style-type: none">• Demonstrates an understanding of key principles and concepts underpinning design and operation of digital systems and tools and applies these when designing and creating a database• Uses basic cyber security procedures and techniques to maintain database, hardware, software and internet integrity

Unit Mapping Information

Supersedes and is equivalent to ICTDBS403 Create basic databases.

Assessment Requirements for ICTDBS416 Create basic relational databases

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- create a database on a database server, web hosting service or file server with at least three tables, on at least one occasion.

In the course of the above, the candidate must:

- design a database that meets task requirements
- test and debug database
- save changes to database.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- processes used for creation of entities, attributes, and in populating fields, using software solutions and script-based input
- data-modelling techniques
- database design, modelling and implementation procedures
- naming conventions for database design
- security restrictions on servers, incorporating some theoretical concepts
- cyber security functions, policies and procedures according to organisation.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- equipment, materials, hardware and industry standard software packages
- internet access including:
 - connectivity
 - different browsers
- software for creating entity-relationship (ER) diagrams
- software development environment.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTDBS417 Identify and resolve common database performance problems

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to diagnose database problems and to configure and tune the database in order to maintain consistent and optimised performance.

It applies to individuals who are experienced technical support personnel, including help-desk supervisors, database support technicians, Information and Communications Technology (ICT) support technicians, and user-support specialists, who are responsible for maintaining the performance of a database.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Database

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Diagnose and resolve database problems	<ul style="list-style-type: none">1.1 Determine database performance diagnostic tool, according to organisational database requirements and vendor recommendations1.2 Run diagnostic test and identify database performance degradation issues1.3 Determine and record misuse of database and temporary table spaces1.4 Carry out required fixes according to diagnostic results1.5 Record issues and actions taken and escalate unresolved issues to required personnel

ELEMENT	PERFORMANCE CRITERIA
2. Configure database	2.1 Utilise database (DBMS) tools and design structures to minimise i/o contention according to task requirements 2.2 Apply database backup procedures according to method of data storage 2.3 Reconfigure rollback segments according to task requirements 2.4 Configure database and test performance according to task requirements
3. Optimise the database	3.1 Track module performance according to specifications 3.2 Monitor and tune efficiency of structured query language (SQL) according to task requirements 3.3 Monitor and measure performance of shared pool, blocks and buffers 3.4 Detect, identify and resolve contentions that arise in real-time operation of database 3.5 Reconfigure database according to specifications

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Oral communication	<ul style="list-style-type: none"> Uses effective listening and questioning techniques to confirm requirements and information using relevant industry for intended audience
Reading	<ul style="list-style-type: none"> Demonstrates analysis and interpretation of textual information in order to establish performance issues and their corresponding solutions
Writing	<ul style="list-style-type: none"> Writes and edits code and technical data in a logical manner using required syntax and language
Planning and organising	<ul style="list-style-type: none"> Uses a formal, logical planning processes together with an increasingly intuitive understanding of context Uses formal, logical process to identify relevant information and risks and to identify and evaluate alternative strategies and resources
Problem solving	<ul style="list-style-type: none"> Uses analytical processes to decide on a course of action, establishing criteria for deciding between options
Self-management	<ul style="list-style-type: none"> Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering relevant information and identifying and evaluating options against the agreed criteria

SKILL	DESCRIPTION
Technology	<ul style="list-style-type: none">• Uses familiar digital technologies and systems to access information, search and enter data, code, present information and communicate with others, while maintaining data security and safety at all times

Unit Mapping Information

Supersedes and is equivalent to ICTDBS404 Identify and resolve common database performance problems.

Assessment Requirements for ICTDBS417 Identify and resolve common database performance problems

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- configure an optimal performance database with at least three tables for at least one occasion
- confirm at least two of the three tables have greater than one hundred rows.

In the course of the above, the candidate must:

- identify common database problems
- determine required solutions to solve problem
- implement solutions to improve database performance
- save and back up work.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- database design and structured query language (SQL)
- database administration procedures
- tools and database tuning methodologies.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- industry software packages
- diagnostic tools

- database operating on a network environment or virtual network environment.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTDBS418 Monitor and administer databases

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to monitor and manage databases including selecting the required database according to organisational requirements. It involves the operation, testing, monitoring and maintenance of a database, in accordance with organisational requirements.

It applies to individuals employed as database support staff who are required to maintain a database, monitor its performance as well as access and administer its security and varying levels of access to users.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Database

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Select and start database	1.1 Identify and select database according to organisational requirements 1.2 Configure database system start-up according to organisational requirements and required vendor guidelines 1.3 Monitor database start-up and operation and check for irregularities according to task requirements
2. Administer database	2.1 Create and document data dictionary and implement data structures according to task requirements 2.2 Maintain data integrity constraints according to organisational

ELEMENT	PERFORMANCE CRITERIA
	<p>requirements</p> <p>2.3 Create and design indexes, locking options and multiple-field keys according to organisational requirements</p> <p>2.4 Confirm database backups have been stored and can be accessed by required personnel</p> <p>2.5 Monitor and update ongoing viability of data storage and resize according to organisational requirements</p>
3. Manage database access	<p>3.1 Allocate and remove access privileges according to user status and organisational requirements</p> <p>3.2 Monitor network server log-in log file and prevent illegal log-in attempts and security breaches according to organisational policies and procedures</p> <p>3.3 Manage system and database administration resources according to task requirements</p>
4. Record and store database maintenance tasks	<p>4.1 Document changes to database processes and start-up procedures according to organisational requirements</p> <p>4.2 Itemise database management structures and file access authorisations</p> <p>4.3 Detail required log file monitoring procedures</p> <p>4.4 Record the procedures to manage systems resources</p> <p>4.5 Save, back-up and close documentation and database resources</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Oral communication	<ul style="list-style-type: none"> Uses active listening and questioning skills to confirm information and task requirements
Reading	<ul style="list-style-type: none"> Analyses textual information to determine start-up and operation irregularities
Writing	<ul style="list-style-type: none"> Prepares required technical and business documentation conveying changes to database processes and start-up procedures using detailed language
Teamwork	<ul style="list-style-type: none"> Requests feedback and provides feedback to others in order to improve self or workgroup behaviors Demonstrates professional and respectful behavior with team members and supervisors

SKILL	DESCRIPTION
Planning and organising	<ul style="list-style-type: none">• Responds to stated goals during compilation of data dictionary and data structures, and when managing a database, according to business requirements, including deadlines• Uses a formal decision-making process, setting or clarifying goals, gathering information, and identifying, and evaluating several choices against a limited set of criteria and deadlines
Self-management	<ul style="list-style-type: none">• Identifies and adheres to organisational requirements and vendor guidelines
Technology	<ul style="list-style-type: none">• Demonstrates interpretation of key principles and concepts underpinning the design, and operation of digital systems and tools

Unit Mapping Information

Supersedes and is equivalent to ICTDBS409 Monitor and administer a database.

Assessment Requirements for ICTDBS418 Monitor and administer databases

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- configure, monitor, update and manage a database with at least three tables.

In the course of the above, the candidate must:

- confirm data integrity
- monitor data storage requirements
- modify data access privileges
- document and save work.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- backup and recovery methodologies and procedures
- principles of relational database design
- database security concepts
- organisational procedures referring to database processes and start-up procedures
- database server management tools
- structured query language (SQL) principles
- database administration tasks and procedures
- database processes, procedures and concepts of organisations and a vendor.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- industry standard relational database management system
- an operational database requiring authenticated and authorised access, hosted in a network environment or virtual network environment.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTDBS505 Monitor and improve knowledge management systems

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to create improvements to knowledge management systems, as well as distribute and monitor them.

It applies to those who are employed as database or systems administrators and are required to support and maintain existing knowledge management systems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Database

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to improve knowledge management system	1.1 Identify and document structure and operation of existing organisational knowledge management system 1.2 Determine organisational knowledge management system information requirements 1.3 Determine and document required information structure
2. Create knowledge management system improvements	2.1 Collate all required information from information repositories on the knowledge management system 2.2 Organise information according to organisational requirements 2.3 Determine and document information structure improvement plan according to organisational requirements

ELEMENT	PERFORMANCE CRITERIA
3. Distribute and monitor knowledge management system documentation	3.1 Distribute knowledge management system documentation to required personnel 3.2 Seek and respond to feedback from required personnel 3.3 Analyse use of knowledge management system and determine its effectiveness against organisational requirements 3.4 Implement required process improvements and confirm organisational requirements are met 3.5 Obtain final task sign off from required personnel

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Oral communication	<ul style="list-style-type: none"> Uses listening and questioning techniques to articulate information and requirements using detailed language
Reading	<ul style="list-style-type: none"> Recognises and interprets textual information to determine client information requirements
Writing	<ul style="list-style-type: none"> Prepares documentation detailing gathered information and proposed improvements using instructional language
Teamwork	<ul style="list-style-type: none"> Participates in complex formal and informal conversations relevant to own role, initiating and taking the lead where appropriate in the context of gathering information and feedback from the client and staff
Planning and organising	<ul style="list-style-type: none"> Takes responsibility for planning and sequencing complex tasks and workload, negotiating key aspects with others
Problem solving	<ul style="list-style-type: none"> Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering relevant information, and identifying and evaluating options against the agreed criteria
Technology	<ul style="list-style-type: none"> Identifies key principles and concepts underpinning the design and operation of digital systems and tools

Unit Mapping Information

Supersedes and is equivalent to ICTDBS501 Monitor and improve knowledge management system.

Assessment Requirements for ICTDBS505 Monitor and improve knowledge management systems

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- monitor and implement at least three improvements to an existing knowledge management system.

In the course of the above, the candidate must:

- define success metrics
- track, document and define improvements made.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- practices for information management within an organisation
- information sources available within an organisation
- industry standard knowledge management systems
- database structures and their construction
- procedures for monitoring and reviewing knowledge managements systems.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- industry software packages
- organisational databases
- information requirements

- information repositories
- industry standard knowledge management systems.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTDBS506 Design databases

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to establish client needs and technical requirements and to design a database that meets identified requirements.

It applies to those who are employed in roles including database administrators or designers who are required to design databases.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Database

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine database requirements	1.1 Conduct user-needs analysis with required personnel and determine database functionality requirements 1.2 Determine user-needs analysis technical requirements 1.3 Develop conceptual model of database according to organisational requirements 1.4 Submit conceptual model to required personnel 1.5 Seek and respond to feedback and make required changes
2. Develop logical data model	2.1 Identify attributes and determine data types 2.2 Undertake normalisation of attributes 2.3 Develop entity-relationship (ER) diagram and clarify cardinality of relationships

ELEMENT	PERFORMANCE CRITERIA
	2.4 Document attributes, normalised data and ER diagram 2.5 Submit documentation to required personnel and seek and respond to feedback
3. Design data structures	3.1 Confirm primary and foreign keys according to technical requirements 3.2 Identify referential integrity constraints and organisational business rules 3.3 Establish database management system constraints and incorporate into database design 3.4 Design and develop data validation rules, indexes and data dictionary 3.5 Document database design according to organisational policies and procedures
4. Design queries, screens and reports	4.1 Design database according to organisational requirements 4.2 Design required queries and output reports 4.3 Compare physical design against conceptual model and user-needs analysis 4.4 Incorporate all required changes into database design
5. Design access and security systems	5.1 Review existing business security plan and use as design base 5.2 Design database password and access system 5.3 Identify multiple-user requirements 5.4 Develop required organisational access profiles
6. Confirm database design	6.1 Determine database backup and recovery requirements 6.2 Develop and document database backup and restore procedures 6.3 Submit database and documentation to required personnel 6.4 Seek and respond to feedback from required personnel 6.5 Obtain final task sign off from required personnel

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Makes measurements and performs calculations for work layout, determine field lengths and table size and estimate database size

SKILL	DESCRIPTION
Oral communication	<ul style="list-style-type: none">• Uses listening and questioning techniques to confirm information and requirements using industry language for intended audience
Reading	<ul style="list-style-type: none">• Interprets textual information obtained from a range of sources and determines how content may be applied to requirements
Writing	<ul style="list-style-type: none">• Develops documentation detailing data model and design using appropriate structure, layout and specialised technical and programming language
Planning and organising	<ul style="list-style-type: none">• Uses a combination of formal, logical planning processes and an increasingly intuitive understanding of context to identify relevant information and risks, identify and evaluate alternative strategies and resources
Problem solving	<ul style="list-style-type: none">• Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering relevant information, and identifying and evaluating options against the agreed criteria
Technology	<ul style="list-style-type: none">• Identifies key principles and concepts underpinning the design, and operation, of digital systems and tools

Unit Mapping Information

Supersedes and is equivalent to ICTDBS502 Design a database.

Assessment Requirements for ICTDBS506 Design databases

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design, develop and implement a simple database on at least one occasion.

In the course of the above, the candidate must:

- document the database requirements, design plan and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- process for conducting data analysis, data types and data structures, query and report design
- data modelling procedures related to conceptual data model development
- data redundancy identification methodologies
- database management system (DBMS) design phase fundamentals
- encryption and authentication database security features
- functions and features of data types and data structures, and of databases
- logical design concepts, including those for data structures, queries screens and reports
- object model design concepts, including those for data structures, queries, screens and reports
- database scalability.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- industry standard equipment and materials

- industry standard database software
- network and other systems required for remote or multi-user access
- organisational requirements and deliverables
- computer-aided software engineering (CASE) or diagramming software.

ICTDBS507 Integrate databases with websites

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to integrate a database with a website.

It applies to those employed as web software and database developers and responsible for creating data-driven web applications.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Database

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1.Prepare to connect database	1.1 Determine organisational and user input database data requirements 1.2 Identify technical upgrades and requirements 1.3 Determine and document database integration plan according to organisational requirements 1.4 Submit documentation to required personnel and seek and respond to feedback
2. Connect to the database	2.1 Setup database credentials and establish database connection 2.2 Connect to database from web application using web development language 2.3 Transfer data according to database integration plan 2.4 Test database connection according to organisation and technical

ELEMENT	PERFORMANCE CRITERIA
	requirements
3. Retrieve and display data	3.1 Retrieve data and use structured query language (SQL) 3.2 Display data using required control 3.3 Format data according to organisational requirements
4. Update database data	4.1 Update existing user input data 4.2 Insert data in the database with user-supplied input 4.3 Identify and delete data stored in database 4.4 Validate data and check for errors

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Oral communication	<ul style="list-style-type: none"> Articulates requirements and responsibilities clearly and distinctively, using industry standard technical language intended for audience and environment
Reading	<ul style="list-style-type: none"> Interprets textual information from the sources in order to identify relevant and key information
Writing	<ul style="list-style-type: none"> Writes and edits code and technical data in a logical manner using correct syntax and accuracy
Planning and organising	<ul style="list-style-type: none"> Operates from a broad conceptual plan, developing the operational detail in stages, regularly reviewing priorities and performance during implementation, and identifying and addressing issues
Problem solving	<ul style="list-style-type: none"> Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering relevant information, and identifying, and evaluating options against agreed criteria Uses analytical processes to decide on a course of action, and establishes the criteria for deciding between different options
Self-management	<ul style="list-style-type: none"> Takes full responsibility for identifying and considering relevant organisational protocols and requirements
Technology	<ul style="list-style-type: none"> Identifies principles, concepts, language and practices associated with the digital world, and uses these to connect to a database from a web application, retrieving, displaying and updating data

Unit Mapping Information

Supersedes and is equivalent to ICTDBS504 Integrate database with a website.

Assessment Requirements for ICTDBS507 Integrate databases with websites

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- integrate, access, connect and update a database on at least one occasion.

In the course of the above, the candidate must:

- retrieve and display web-based data on at least two different browsers.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard database structures
- industry standard internet technology for databases
- database programming control structures, object-oriented programming and database interfaces including:
 - structured query language (SQL)
 - NoSQL programming interfaces
- web programming concepts, including:
 - authentication and web security
 - hypertext transfer protocol (HTTP)
 - session management
 - principles of stateless programming.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- industry standard hardware and software required for database integration activities
- industry standard software packages
- organisational deliverables
- organisational policies and procedures that may impact on database integration activities
- web server
- database
- web development environment
- different browsers.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTDBS604 Build data warehouses

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to design, develop and implement a data warehouse within an organisation.

It applies to those who manage knowledge management teams or work in a team based senior role and has line management responsibility, looking after data warehouses.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Database

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Establish database design requirements	1.1 Review organisational database design document, data structures, queries, reports and user interface 1.2 Review organisation business security plan and determine level of alignment to organisational requirements 1.3 Identify big data applications 1.4 Determine database technical specifications 1.5 Design and document database according to technical specifications and organisational requirements
2. Identify data and sources	2.1 Identify enterprise's knowledge management strategy data requirements 2.2 Identify subject areas for business processes and data

ELEMENT	PERFORMANCE CRITERIA
	requirements 2.3 Analyse and document operational data and define warehouse sources 2.4 Develop warehouse source specifications with reference to existing data tables and files
3. Manage warehouse operational steps and processes	3.1 Develop warehouse targets and align to business processes and data requirements 3.2 Identify system configuration warehouse agents 3.3 Determine and document warehouse steps and processes according to organisational requirements
4. Design and develop warehouse features	4.1 Determine and document warehouse user interface 4.2 Develop and implement warehouse security strategy according to organisational security plan 4.3 Identify dimension tables and fact tables 4.4 Determine technology costs for the implementation of warehouse security strategy 4.5 Develop and document warehouse information catalogue according to organisational requirements
5. Test and implement data warehouse	5.1 Test data warehouse against business and align to organisational requirements 5.2 Recommend changes to business processes, according to compatibility with the data warehouse and the knowledge management strategy 5.3 Implement data warehouse according to organisational requirements 5.4 Benchmark and document performance level of data warehouse 5.5 Develop and document maintenance schedule according to organisational requirements 5.6 Submit all documentation to required personnel

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none"> Monitors outcomes of decisions, considering results and identifying key concepts and principles that may be adaptable in the future

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none">• Uses relevant information in completing cost benefit analyses
Oral communication	<ul style="list-style-type: none">• Uses listening, questioning and summarising techniques to identify needs and articulate complex concepts
Reading	<ul style="list-style-type: none">• Interprets the textual information obtained from a range of sources, and determines how the content may be applied to the requirements
Writing	<ul style="list-style-type: none">• Develops documentation detailing plans and processes using appropriate structure, layout and technical programming language
Planning and organising	<ul style="list-style-type: none">• Develops plans to manage relatively complex, non-routine tasks, with an awareness of how they may contribute to longer-term operational and strategic goals
Problem solving	<ul style="list-style-type: none">• Develops and implements strategies that ensure that the organisational policies, procedures and regulatory requirements are being met• Makes a range of critical and non-critical decisions in relatively complex situations, taking a range of constraints into account• Uses systematic, analytical processes in complex non-routine situations, setting goals, gathering relevant information, and identifying and evaluating options, against the agreed criteria• Uses a systematic process to identify possible solutions to a difficult problem
Self-management	<ul style="list-style-type: none">• Works autonomously, making high-level decisions to achieve, and improve, organisational goals• Takes a lead role in the development of organisational goals, roles and responsibilities• Monitors and reviews the organisation's policies, procedures, and adherence to legislative requirements, in order to implement and manage change
Technology	<ul style="list-style-type: none">• Identifies principles, concepts, language and practices associated with the digital world, and uses these to build a data warehouse

Unit Mapping Information

Supersedes and is equivalent to ICTDBS601 Build a data warehouse.

Assessment Requirements for ICTDBS604 Build data warehouses

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design, develop, test and implement a medium sized data warehouse.

In the course of the above, the candidate must:

- document plans and processes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- business operating systems related to data sources
- database management system (DBMS) fundamentals, including data extraction facilitation
- decision-support systems and knowledge management strategies
- database encryption and authentication security features
- functions and features of dimension tables and fact tables
- process for the installation and use of proprietary software
- logical database model knowledge required to facilitate data extraction
- relationship between databases and data warehouses
- levels of technical documentation required for newly developed data management systems.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- industry standard hardware and software

- industry standard software packages
- data in a DBMS
- data-warehousing tools
- organisational documents, policies and procedures relevant to building a database.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTDBS605 Develop knowledge management strategies

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to develop knowledge management strategies for an organisation. It includes analysing existing systems, determining requirements, and developing a strategy to meet those requirements.

It applies to those who manage a knowledge management team, or who are working as a senior IT professional with line management responsibilities or similar.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Database

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Analyse existing knowledge management arrangements	1.1 Identify existing arrangements for capture and use of internal and external sources of knowledge and information 1.2 Determine organisational knowledge management concept requirements 1.3 Evaluate alignment of existing procedures and systems against organisational requirements 1.4 Determine and document knowledge management improvement and upgrade requirements
2. Evaluate knowledge management options	2.1 Investigate industry methods for capturing and using knowledge 2.2 Determine and document organisational benefit of industry

ELEMENT	PERFORMANCE CRITERIA
	<p>standard knowledge management software</p> <p>2.3 Investigate knowledge managements incentives and reward systems</p> <p>2.4 Determine non-technical knowledge database maintenance and access requirements</p>
3. Develop knowledge management strategy	<p>3.1 Design and document knowledge management executive and user strategy and support processes according to organisational requirements</p> <p>3.2 Determine and document implementation strategy technology requirements costs</p> <p>3.3 Determine and document required periodic review processes</p> <p>3.4 Submit documentation to required personnel</p> <p>3.5 Seek and respond to feedback and obtain final task sign off from required personnel</p>

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Uses mathematical formulas and calculations to perform a cost-benefit analysis
Oral communication	<ul style="list-style-type: none"> Uses listening, questioning and summarising techniques to identify needs and articulate complex concepts
Reading	<ul style="list-style-type: none"> Interprets textual information obtained from a range of sources, and determines how this content may be applied to requirements
Writing	<ul style="list-style-type: none"> Develops documentation detailing requirements, strategy and implementation plan using appropriate structure, layout and technical programming language
Teamwork	<ul style="list-style-type: none"> Uses analytical processes to decide on a course of action, establishing criteria for deciding between options, and seeking input and advice from others before acting
Planning and organising	<ul style="list-style-type: none"> Operates from a broad conceptual plan, developing the operational detail in stages, regularly reviewing priorities and performance during implementation, and identifying and addressing issues
Problem solving	<ul style="list-style-type: none"> Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering relevant information, and identifying and evaluating options against agreed criteria

SKILL	DESCRIPTION
Self-management	<ul style="list-style-type: none">• Uses a mix of intuitive and formal processes to identify key information and issues, evaluate alternative strategies, anticipate consequences, and consider implementation issues and contingencies
Technology	<ul style="list-style-type: none">• Experiments with the possibilities of new systems, devices, and applications before conducting a more sophisticated analysis of benefits, costs and risks

Unit Mapping Information

Supersedes and is equivalent to ICTDBS602 Develop a knowledge management strategy.

Assessment Requirements for ICTDBS605 Develop knowledge management strategies

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop a complex knowledge management strategy on at least one occasion.

In the course of the above, the candidate must:

- document processes and outcomes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard knowledge management in contemporary organisations
- differentiated impacts of organisational culture and traditional business models
- database design concepts
- internal and external information sources
- legal, ethical and security issues relating to knowledge management
- records management principles
- required government legislation that may affect business operation, including:
 - workplace health and safety (WHS) policy
 - environmental issues
 - equal opportunity
 - industrial relations
 - anti-discrimination
- organisational structures and business goals.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- industry standard equipment and materials
- industry standard software packages
- sample organisations suitable for the implementation of knowledge management
- organisational deliverables and requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTDBS606 Determine database functionality and scalability

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to identify and determine use of industry standard business requirements for a database.

It applies to those in senior system-operations, senior database managers or line manager roles.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Database

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine database requirements	1.1 Determine organisational database outcome requirements and database problem from organisational specifications 1.2 Analyse existing database and identify business rules, entities and relationships 1.3 Identify existing and proposed organisational business models 1.4 Identify required big data applications
2. Determine database functionality	2.1 Document existing database and environment according to organisational requirements 2.2 Identify and document database functionality requirements
3. Identify scalability and	3.1 Identify reserve and long-term capacity of the database

ELEMENT	PERFORMANCE CRITERIA
functionality	3.2 Identify implications of systems architecture, data models, data structures, hardware and software 3.3 Identify organisation and user requirements for scalability 3.4 Compare and document functionality and scalability features of database
4. Prepare database functionality and scalability report	4.1 Document functionality and scalability of database according to organisational requirements 4.2 Submit finalised document to required personnel and seek and respond to feedback 4.3 Obtain final task sign off from required personnel

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none"> Gathers and analyses data, and seeks feedback, to improve plans and processes Explores and incubates new and innovative ideas through unconstrained analysis, and critical thinking, to develop and improve the organisation's goals
Oral communication	<ul style="list-style-type: none"> Uses listening and questioning techniques and effective mode of communication to articulate complex concepts and requirements using industry language for intended audience
Reading	<ul style="list-style-type: none"> Critically analyses complex documentation from a variety of sources, and consolidates information relating to specific criteria, to determine the requirements
Writing	<ul style="list-style-type: none"> Develops documentation detailing database functionality and scalability system, business expectations and requirements using appropriate structure, layout and technical programming language
Planning and organising	<ul style="list-style-type: none"> Plans strategic priorities and outcomes within a flexible, efficient and effective context, in a diverse environment exposed to competing demands
Problem solving	<ul style="list-style-type: none"> Makes high-impact decisions in a complex and diverse environment, using input from a range of sources Identifies the key factors that impact on decisions and their outcomes, drawing on experience, competing priorities and decision-making strategies, where appropriate

SKILL	DESCRIPTION
Self-management	<ul style="list-style-type: none">• Takes full responsibility for identifying and considering relevant organisational protocols and requirements
Technology	<ul style="list-style-type: none">• Uses digital technologies to manage business operations, and actively investigates new technologies for strategic and operational purposes

Unit Mapping Information

Supersedes and is equivalent to ICTDBS603 Determine suitability of database functionality and scalability.

Assessment Requirements for ICTDBS606 Determine database functionality and scalability

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- determine functionality and scalability of a complex database.

In the course of the above, the candidate must:

- document database functionality and scalability system
- document business expectations and business requirements.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- architecture of database networks
- Australia code of ethics and its relation to the computing industry
- systems hardware related to the client, server and database architecture
- concept of data modelling
- functions and features of databases
- definition of data and implications for database design and functionality.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- industry standard equipment and materials that assist in the determination of suitability of database functionality and scalability

- industry standard software packages required to determine database functionality and scalability
- industry standard database management system (DBMS)
- industry standard sample database and data.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTDMT404 Create visual design components for digital media

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to create visual design components for media, using industry-standard design tools.

It applies to individuals working in digital media under supervision, in all industries as well as ICT related workplaces who are responsible for producing visual design components for digital media to industry standards. Digital media components in this instance refers to interactive or non-interactive design components for an information technology, digital environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Digital media technologies

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Establish requirements for visual design components	<ul style="list-style-type: none">1.1 Obtain project brief and documents1.2 Identify visual design components and copyright requirements for digital media according to organisational standards1.3 Determine design considerations for designing an interactive and non-interactive visual design component, and their purpose1.4 Define best practice of design principles and elements of good design

ELEMENT	PERFORMANCE CRITERIA
2. Identify and use software packages for creating visual design media	2.1 Identify and review a range of industry-standard graphics software packages available 2.2 Assess and select suitability of software package against design requirements 2.3 Run graphics software package and become familiar with the interface 2.4 Create new files and naming conventions according to file management and version control procedures 2.5 Apply required tools and features used to create visual design components
3. Create visual design components for visual media	3.1 Develop design ideas and graphic components using creative approaches and principles 3.2 Use graphics software to create visual media and required components 3.3 Identify interactivity of required interactive components 3.4 Communicate and confirm design with required personnel 3.5 Save and back up work
4. Demonstrate, finalise and evaluate design components	4.1 Demonstrate implementation and interactive components to required personnel 4.2 Articulate and justify design choices 4.3 Evaluate usability of design components and interactivity against design brief and intended environment 4.4 Seek and respond to feedback from required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Oral Communication	<ul style="list-style-type: none"> Articulates complex designs and graphical requirements using listening and questioning techniques to confirm and evaluate design requirements Responds to feedback and criticism with a professional manner
Reading	<ul style="list-style-type: none"> Analyses documentation, images, briefs, instructions, technical and conceptual information from a range of sources, in order to

	inform the implementation of visual design components for interactive media
Writing	<ul style="list-style-type: none">Records technical information and prepares required documentation according to organisational standards
Teamwork	<ul style="list-style-type: none">Selects and uses conventions and protocols to communicate with co-workers and others in a range of work contexts
Planning and organising	<ul style="list-style-type: none">Takes responsibility for planning and organising own workload
Problem solving	<ul style="list-style-type: none">Analyses available information and makes informed decisions on routine and non-routine tasks
Self-management	<ul style="list-style-type: none">Identifies and implements improvement opportunities
Technology	<ul style="list-style-type: none">Interprets the purposes, specific functions and key features of common digital systems and tools, and operates them effectively to complete routine tasks

Unit Mapping Information

Supersedes and is equivalent to ICTDMT401 Create visual design components for digital media.

Links

Companion Volume Implementation Guide is found on VETNet -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=a53af4e4-b400-484e-b778-71c9e9d6aff2>

Assessment Requirements for ICTDMT404 Create visual design components for digital media

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design and produce at least one piece of digital media and its components consistent with a design brief.

In the course of the above, the candidate must:

- demonstrate original, innovative approaches to creative development according to design principles and elements
- demonstrate integrity of the design brief against specified requirements
- construct technical specifications for visual design components and overall usability
- confirm copyright and intellectual property legislation and organisational requirements are adhered to
- back up and save work.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- functions, features and uses of graphic software packages and media products, including their purpose, constraints and environments
- technical constraints that hardware imposes on software development, graphics requirements and creative visual design
- techniques for applying concept development skills and visualisation skills
- legislative and organisational requirements, policies and procedures
- design principles, processes, and elements required to create components for digital media.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry or similar.

This includes access to:

- required hardware
- software packages and application, including required digital media tools
- design brief
- file storage devices and systems
- legislative and organisational requirements applicable too creating visual design components.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTDMT405 Produce interactive animations

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to create interactive animation for a range of applications, including web pages, e-learning, simulations and advertisements.

It applies to individuals who possess a sound knowledge of digital media and provide support within a team and are independently responsible for the design and development of animations in multiple environments, including graphic design, software, application and website design, as well as multi-media projects.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Digital media technologies

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Analyse project requirements	1.1 Determine task requirements for dynamic functionality of animation 1.2 Determine required language to achieve functionality 1.3 Determine and evaluate current requirements for specified application
2. Design animations	2.1 Design animation according to task requirements 2.2 Design animation to meet specifications of sound and interactive functions 2.3 Design animation that enhances the purpose, clarity or useability according to intended audience and context of

ELEMENT	PERFORMANCE CRITERIA
	animation 2.4 Confirm design specifications with required personnel
3. Produce animations	3.1 Create animation according to task requirements 3.2 Research and experiment with a range of animation techniques to enhance user experience 3.3 Test and debug scripts and demonstrate required functionality 3.4 Test and debug scripts on different browsers, operating systems and devices
4. Publish animations	4.1 Publish animation in an acceptable format 4.2 Incorporate animations on required platform or location, including hypertext markup language (HTML) page, application or software 4.3 Document work and confirm function with appropriate personnel 4.4 Save and back up work

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Oral Communication	<ul style="list-style-type: none"> Uses listening and questioning techniques to confirm requirements and articulate complex concepts and matters using relevant industry for intended audience
Reading	<ul style="list-style-type: none"> Researches technical and conceptual information from a range of sources to identify and evaluate appropriate design elements and animation techniques for a specific audience
Writing	<ul style="list-style-type: none"> Prepares complex documentation design and work performed using applicable language, layout, format and structure for a specific audience
Teamwork	<ul style="list-style-type: none"> Selects and uses appropriate conventions, and protocols, when communicating with co-workers and others in a range of work contexts
Planning and organising	<ul style="list-style-type: none"> Accepts responsibility for planning and sequencing complex tasks and workload, negotiating key aspects with others taking into account capabilities, efficiencies and effectiveness Uses a logical sequence of steps to identify and solve functional problems relating to animation

Problem solving	<ul style="list-style-type: none">• Addresses less predictable problems and applies problem-solving processes in determining a solution• Uses a logical sequence of steps to identify and solve functional problems relating to animation
Self-management	<ul style="list-style-type: none">• Makes routine decisions and implements standard procedures for routine tasks, using formal decision-making processes for more complex and non-routine situations
Technology	<ul style="list-style-type: none">• Interprets the purposes, specific functions and key features of common digital systems and tools, and operates them effectively to complete routine tasks

Unit Mapping Information

Supersedes and is equivalent to ICTDMT402 Produce interactive animation.

Assessment Requirements for ICTDMT405 Produce interactive animations

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design and create at least one piece of interactive animation, using different animation techniques
- publish animation on at least one accessible location, including a website, application or shared software
- test, debug and fix code and usability errors on at least 4 different browsers (if publishing on a website), and on at least 2 different devices.

In the course of the above, the candidate must:

- following industry standards and procedures
- confirm, document and save work.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- internet technology used to inform choice of scripting type
- principles of analysis and design that may be used in the process of producing interactive animations
- programming control structures including buttons and scripting language
- animation programming concepts, including:
 - acceptable formats for importing assets
 - component libraries
 - cross-browser issues
 - importing and exporting libraries

- inserting published work to a hypertext markup language (HTML) or to an extensible hypertext markup language (XHTML) page
- internet animation player statistics
- masking that may be used in producing interactive animations
- movements and automated movements
- publishing finished work in applicable web format
- shape animation, manipulation, symbols, text manipulation and transparencies
- testing and debugging script techniques
- version control techniques and file naming standards.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- animation tools, equipment and materials
- industry software packages
- the internet and browser access
- storage device or cloud system
- electronic devices, including
 - a personal computer (PC)
 - a smartphone device
 - tablet.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTDMT406 Produce and edit digital images

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to produce and edit digital images using a range of digital media technologies.

It applies to individuals who possess knowledge of digital media and technologies and may provide support within a team or be independently responsible for producing editing, enhancing and manipulating digital images in any industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Digital media technologies

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare digital imaging work	1.1 Identify type of image required and environmental considerations 1.2 Identify and address intellectual property requirements 1.3 Determine image capturing device and imaging software requirements 1.4 Prepare plan of digital image capturing steps and equipment according to task requirements 1.5 Set up image capturing device according to task requirements
2. Capture digital image	2.1 Check image capturing device, environmental and other factors are as required and adjust where needed 2.2 Operate image capturing device and capture images according

ELEMENT	PERFORMANCE CRITERIA
	to manufacturer specifications and task requirements 2.3 Save required and delete non required images according to device specifications
3. Finalise digital image editing task	3.1 Download digital images to digital editing platform and save according to task requirements 3.2 Enhance, crop and alter digital images to task requirements 3.3 Combine and integrate digital images into required designated interactive sequence 3.4 Submit digital images to required personnel and seek feedback 3.5 Respond to feedback and obtain final sign off from required personnel

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Description
Numeracy	<ul style="list-style-type: none"> Demonstrates an understanding of numeracy to identify required technical specifications to achieve the desired digital image outcomes Uses a combination of both formal and informal mathematical language involving knowledge of unity, scale, perspective and balance when considering creating graphics
Oral communication	<ul style="list-style-type: none"> Uses listening and questioning techniques to confirm task requirements and articulate information using relevant industry for intended audience
Reading	<ul style="list-style-type: none"> Interprets and analyses complex information in a range of texts and critically evaluates numerical and textual information Identifies compatibility and compares technical specifications and solutions to new and emerging issues
Planning and organising	<ul style="list-style-type: none"> Takes responsibility for planning, sequencing and prioritising tasks and own workload for required outcomes
Problem solving	<ul style="list-style-type: none"> Demonstrates an understanding of how to address less predictable problems and initiates standard procedures in response Applies problem-solving processes in determining a solution
Self-management	<ul style="list-style-type: none"> Implements standard procedures and makes decisions for routine tasks Uses formal decision-making processes for more complex and

Skill	Description
	non-routine situations
Technology	<ul style="list-style-type: none">• Demonstrates an understanding of purposes, functions and key features of digital systems and tools, and operates them to complete routine tasks

Unit Mapping Information

Supersedes and is equivalent to ICTDMT403 Produce and edit digital images.

Assessment Requirements for ICTDMT406 Produce and edit digital images

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- identify, edit and sequence at least three digitally captured images using each of the following types of image capturing devices on at least one occasion, including:
 - mobile phone devices
 - smart devices
 - digital SLR.

In the course of the above, the candidate must:

- demonstrate the operation of a digital camera in order to capture a range of images
- assemble required tools and procedures required to produce digital images
- demonstrate using digital imaging software to prepare high quality digital images that satisfy a range of customer and business requirements
- apply copyright and IP requirements.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- functions and features of a range of delivery platforms
- digital photographic techniques
- principles of communication through visual design
- implications of technology connectivity
- work health and safety (WHS) requirements for use of cameras, and computers, and handling and disposing of lithium batteries
- procedures for customer and business liaison
- copyright and intellectual property legislation, policies and procedures

- industry standards relevant to digital images.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- special purpose tools and equipment
- materials and industry software packages
- image capturing equipment including:
 - digital camera
 - mobile phone device with image capturing capacity
 - smart device with image capturing capacity
 - digital SLR
- industry standard graphics software
- copyright information.

ICTDMT407 Incorporate video assets into media presentations

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Supersedes and is equivalent to ICTDMT501 Incorporate and edit digital video.

Application

This unit describes the skills and knowledge required to interpret video-formatting and media presentation specifications to incorporate videos into interactive media presentations. It includes designing, editing and configuring video assets.

The unit applies to individuals who may work in roles such as digital media developers and content designers, who may provide support and supervision within a team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Digital media technologies

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to incorporate videos into media presentations	1.1 Confirm work brief and tasks according to organisational policies and procedures 1.2 Analyse advantages and disadvantages of available video-formatting software and media presentation technology 1.3 Identify and source required video assets according to work brief 1.4 Select and source video-formatting and media presentation hardware, software and components

ELEMENT	PERFORMANCE CRITERIA
2. Design videos	2.1 Combine video assets using video-editing software 2.2 Control variations in video frame rates according to work brief 2.3 Apply asset time stamping according to organisational requirements 2.4 Save video assets according to organisational policies and procedures
3. Edit videos	3.1 Edit single and multiple video tracks according to work brief 3.2 Join multiple video tracks according to video-formatting and media presentation specifications 3.3 Integrate video tracks with digital effects 3.4 Apply time encoding to single and multiple edited video tracks 3.5 Export video tracks in required media presentation format
4. Add videos to media presentations	4.1 Test edited videos and rectify any issues within scope of own role 4.2 Combine audio, visual and textual effects 4.3 Seek and apply feedback for incorporated video assets from required personnel 4.4 Save media presentation according to organisational policies and procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Oral communication	<ul style="list-style-type: none"> Listens and clarifies instructions and requirements Participates in verbal exchanges to share ideas and express opinions
Reading	<ul style="list-style-type: none"> Evaluates and integrates textual information to establish and confirm job requirements
Planning and organising	<ul style="list-style-type: none"> Sequences video tasks, tracks and frames according to work brief and job requirements
Problem solving	<ul style="list-style-type: none"> Responds to problems requiring resolution, drawing on past experiences to focus on the cause of a problem rather than the

Skill	Description
	symptom

Unit Mapping Information

Supersedes and is equivalent to ICTDMT501 Incorporate and edit digital video

Links

Companion Volume Implementation Guide is found on VETNet - -

Assessment Requirements for ICTDMT407 Incorporate video assets into media presentations

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Supersedes and is equivalent to ICTDMT501 Incorporate and edit digital video.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- prepare at least two video assets and incorporate them into at least two different interactive media presentations.

In the course of the above, the candidate must:

- prepare video sequences within production deadlines
- interpret, visualise and produce creative concepts
- apply required organisational policies and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- functions and features of video-editing software and hardware
- common types of media presentation technology
- features of video assets, including:
 - audio effects
 - visual effects
 - textual effects
- techniques to safely export and save video assets
- key techniques for video editing, including:
 - cutting

- time stamping
- sequencing
- montaging
- controlling video frame rates
- functions and features of single and multiple edited video tracks
- key electronic and digital language and terminology
- key copyright considerations associated with designing and creating video assets
- organisational policies and procedures, and legislative requirements relating to work tasks.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- video-editing and media presentation software, hardware, components and resources
- video-formatting and media presentation specifications
- opportunities for interaction with others
- work brief and organisational policies and procedures required to demonstrate the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTDRE301 Install digital reception equipment

Modification History

Release	Comments
Release 2	This version released with ICT Information and Communications Technology Training Package Version 5.0.
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 2.0.

Application

This unit describes the skills and knowledge required to install and configure digital reception equipment (DRE) on a customer's premises.

It applies to individuals who install and maintain DRE in home or small business networks, and includes integration of many services such as broadband, digital TV, free to air (FTA), subscription TV (pay TV) and internet protocol TV (IPTV).

This unit should only be undertaken by experienced cablers to enhance their cabling skills.

No licensing, legislative or certification requirements apply at the time of publication.

Unit Sector

Telecommunications – Digital Reception Technology

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for installation	1.1 Obtain relevant legislation, codes, regulations and standards for compliance when conducting work 1.2 Notify customer to verify installation order and arrange for site access to comply with security arrangements

ELEMENT	PERFORMANCE CRITERIA
	<p>1.3 Notify supervisor of identified safety hazards at the worksite and complete a job safety analysis (JSA) before commencing work</p> <p>1.4 Confirm location of digital reception equipment and fittings with customer</p> <p>1.5 Identify barriers to installation and develop strategies to overcome them within time and budget restrictions</p> <p>1.6 Select and obtain tools and materials appropriate for the work order</p>
2. Install hardware and equipment	<p>2.1 Measure signal level at wall plate to ensure received signal strength is adequate</p> <p>2.2 Test customer's existing equipment for operational condition and reception quality</p> <p>2.3 Notify customer of detected problems and record remedial actions if required</p> <p>2.4 Identify interconnection cabling requirements and prepare cables for job requirements</p> <p>2.5 Affix wall plate to agreed position on wall and secure cable according to specification</p> <p>2.6 Connect set top unit to customer equipment and connect cabling between wall plate and set top unit following work health and safety (WHS) and environmental requirements</p> <p>2.7 Power up set top unit and configure it to customer requirements</p> <p>2.8 Activate customer services to complete hardware installation where required</p>
3. Commission and test installation	<p>3.1 Conduct functional test to assess transmission signal quality</p> <p>3.2 Conduct tests to ensure quality of all services are being delivered against enterprise quality standards</p> <p>3.3 Check all interconnected equipment is functional</p>
4. Finalise installation and handover to customer	<p>4.1 Restore site to original condition and customer satisfaction</p> <p>4.2 Assess damages that may have occurred during installation and arrange with customer for repair or replacement of damaged components</p> <p>4.3 Remove waste and debris from site and dispose of in a safe and environmentally appropriate manner</p> <p>4.4 Conduct customer training appropriate to equipment, services and vendor literature</p>

ELEMENT	PERFORMANCE CRITERIA
5. Complete contract documentation	<p>5.1 Provide warranties to customer in required format where work and equipment are subject to warranty</p> <p>5.2 Prepare invoices and other financial documentation, where required, and present to customer</p> <p>5.3 Obtain authorised signatures on required documentation to confirm acceptance of completed work</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interprets textual information from relevant sources to identify key information
Writing	<ul style="list-style-type: none"> Uses clear, specific and industry-related terminology to complete workplace documentation
Oral Communication	<ul style="list-style-type: none"> Articulates clearly using appropriate language for environment and uses listening techniques to confirm understanding
Numeracy	<ul style="list-style-type: none"> Takes readings and measurements and interprets results
Navigate the world of work	<ul style="list-style-type: none"> Takes responsibility for following safe, sustainable, appropriate and efficient workplace procedures
Interact with others	<ul style="list-style-type: none"> Liaises with customer Signs-off work when completed to customer's satisfaction
Get the work done	<ul style="list-style-type: none"> Plans, organises and implements tasks efficiently to meet customer requirements Resolves any problems arising from installation

Assessment Requirements for ICTDRE301 Install digital reception equipment

Modification History

Release	Comments
Release 2	This version released with ICT Information and Communications Technology Training Package Version 5.0.
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 2.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- identify installation requirements and obtain required approvals
- install equipment applying work health and safety (WHS) requirements and work practices
- configure set equipment to customer requirements
- conduct functionality tests and interpret results
- provide customer training appropriate to equipment
- complete task and handover to customer.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- a range of products used across the industry
- contemporary equipment and connection methods
- customer service principles, including dealing with customers face to face
- enterprise or service specific knowledge of products and services supplied
- work health and safety general principles and enterprise specific job safety analysis (JSA) requirements
- an overview of:

- methods of training customer in product use
- radio frequency (RF) theory, principles and safety
- telephony principles to support return path awareness
- pre-installation enterprise specific requirements
- enterprise quality assurance requirements
- return path technology
- technology on customer premises
- test results
- reception issues.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- site for digital reception equipment installation
- digital reception equipment currently used in industry
- test equipment required for digital reception equipment installation and testing.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTDRE305 Develop integrated digital reception systems

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 2.0.

Application

This unit describes the skills and knowledge required to develop integrated digital reception system applications, topologies, devices and capabilities, and system programming methods; as well as use diagnostic tools and documentation of developed systems.

It applies to cablers who install emerging digital reception equipment and cabling systems for domestic and small to medium enterprise information technologies.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Digital Reception Technology

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to develop an integrated system	1.1 Determine types and location of loads and control devices from project specifications and customer requirements 1.2 Determine number of control bus networks and current requirements from load calculations for devices on the system 1.3 Determine appropriate placement of system devices to optimise bus network power and load parameters, and maintain system stability 1.4 Develop an integrated system to comply with regulator, safety and

ELEMENT	PERFORMANCE CRITERIA
	<p>manufacturer requirements</p> <p>1.5 Document take-off of the number of devices and accessories required for the system, using manufacturer's title and ID for each</p> <p>1.6 Download required programming and diagnostic tools to a compatible PC and check for correct operation and safety</p>
2. Program integrated system devices	<p>2.1 Follow work health and safety (WHS) risk control measures and procedures</p> <p>2.2 Apply correct modes of programming to develop an integrated system according to manufacturer's programming software instructions</p> <p>2.3 Follow manufacturer's instructions and recommendations when programming system devices to project requirements</p> <p>2.4 Program parameters for operation of loads to project requirements and within manufacturer's designated range</p> <p>2.5 Save and backup the programmed system database according to manufacturer instructions</p>
3. Load and test integrated system	<p>3.1 Follow WHS risk control work measures and procedures</p> <p>3.2 Transfer database of integrated system program to network</p> <p>3.3 Test all functions of the integrated system for compliance with project requirements and manufacturer specifications</p> <p>3.4 Use diagnostic tools to locate system faults, defects and anomalies</p> <p>3.5 Correct defects and anomalies to comply with project requirements and manufacturer specifications</p> <p>3.6 Provide copy of documentation of integrated system at handover to customer</p>

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.1, 1.3-1.5, 2.2, 2.3, 3.3	<ul style="list-style-type: none"> Reads and interprets plans, specifications, computer program interface, and other documentation from a variety of sources, and consolidates information to determine requirements

Writing	1.5, 2.4, 3.2	<ul style="list-style-type: none"> Develops procedural material for a specific audience using clear and detailed language to convey explicit information, requirements and recommendations
Oral Communication	1.1	<ul style="list-style-type: none"> Effectively participates in verbal exchanges using collaborative and inclusive techniques including active listening and questioning, and reading of verbal and non-verbal signals to convey and clarify information
Numeracy	1.1-1.3	<ul style="list-style-type: none"> Calculations required for determining design specifications Performs mathematical calculations to check, interpret and confirm results of system tests
Navigate the world of work	1.4, 2.1, 3.1	<ul style="list-style-type: none"> Understands rights and responsibilities in complying with standards and regulatory requirements
Get the work done	1.3, 1.6, 2.2-2.5, 3.2-3.4	<ul style="list-style-type: none"> Takes responsibility for planning, sequencing and prioritising tasks and own workload for efficiency and effective outcomes Makes routine decisions and implements standard procedures for routine tasks, using formal decision-making processes for more complex and non-routine situations Addresses less predictable problems and initiates standard procedures in response, applying problem-solving processes in determining a solution Uses familiar digital technologies and systems to access information, search and enter data and code, present information and communicate with others, cognisant of data security and safety

Assessment Requirements for ICTDRE305 Develop integrated digital reception systems

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 2.0.

Performance Evidence

Evidence of ability to:

- Comply with standards, regulations and work health and safety (WHS) procedures and practices when developing an integrated system
- communicate with customers
- determine the full scope of specifications for an integrated digital reception system
- use calculations to correctly determine the number of network and current requirements
- place system devices appropriately in system scheme
- apply and check appropriate modes of programming and diagnostic tools in the design
- program devices and set load operating parameters according to manufacturer specifications
- use diagnostic tools to locate and correct system defects, faults and anomalies
- document and backup system during appropriate stages of the project.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the applications and advantages of integrated systems
- identify the bus system cable type, polarity, length and acceptable topologies
- describe the process of controlling digital system integration (DSI) and communicating with digital addressable lighting interface (DALI) electronic ballasts
- identify factors that affect control bus stability, including number of units on a network, and current drawn by devices in relation to current output of power supplies
- define the operating parameters of integrated systems and programming to an extent indicated by:
 - importance of project documentation and backup

- importance of location of output and input devices and control bus power supplies
- describe lighting dimmer capabilities and selection
- determine the low voltage (LV) supply overcurrent and surge protection
- describe multiple network connectivity
- identify the software used for system and device programming, monitoring and control
- explain system and device programming, encompassing:
 - addressing conventions for networks, devices, applications, output groups, types of control and outputs, which include 'on', 'off', a specific level, and over a specific time
 - PC programming tools and methods (programming includes configuring network database using addressing tools and objects, function objects, editing, altering and transferring the database to network)
- identify and describe system fault-finding processes
- determine the system components, encompassing:
 - support devices for control bus supply and control
 - support devices for programming, interconnection between networks and integration with third party systems
- describe the types and capabilities of input and output devices.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the Telecommunications – Digital Reception Technology industry and include access to:

- a typical contemporary dwelling into which a digital system will be developed
- availability of all functional requirements of a modern home
- access to contemporary digital equipment
- access to all current standards, codes and regulations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTDRE308 Install a cable broadband multi-dwelling unit system

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Release 5.0.

Application

This unit describes the skills and knowledge required to install, test and commission a cable broadband system within a multi-dwelling unit (MDU).

It applies to technicians who conduct cable broadband installation and service assurance activities within commercial or MDU environments.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Digital Reception Technology

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan installation of a broadband service to an end user within an MDU	1.1 Notify customer to arrange access to site and identify customer equipment 1.2 Assess existing design, infrastructure and constraints on installation according to enterprise requirements and customer specifications 1.3 Complete a job safety and environmental analysis (JSEA) by identifying work health and safety (WHS) issues 1.4 Prepare for installation according to relevant legislation, regulations, codes and standards
2. Assemble equipment	2.1 Select and obtain materials, tools and equipment for installation

ELEMENT	PERFORMANCE CRITERIA
and tools for installation	2.2 Identify cable access and select suitable cable pathway 2.3 Install cable according to enterprise design requirements 2.4 Install equipment and devices to operate according to design and manufacturer specifications 2.5 Terminate cables according to design and manufacturer specifications
3. Test and commission system	3.1 Conduct proof of performance testing at required specified locations according to commissioning documentation 3.2 Conduct radio frequency (RF) signal measurement using test equipment 3.3 Record and analyse initial test results for quality of service according to design specifications 3.4 Rectify identified faults and adjust system for optimal operation 3.5 Conduct final RF signal measurement using test equipment to optimise performance
4. Complete administrative tasks	4.1 Record final RF test results and settings according to enterprise requirements 4.2 Complete appropriate records and file according to enterprise policy and procedures 4.3 Inform customer of work completion and obtain sign-off

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance, but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interprets text from relevant sources to identify key information
Writing	<ul style="list-style-type: none"> Uses clear, specific and industry related terminology to complete workplace documentation
Oral Communication	<ul style="list-style-type: none"> Communicates clearly, using appropriate language for environment and uses listening techniques to confirm understanding
Numeracy	<ul style="list-style-type: none"> Obtains readings and measurements and interprets results
Navigate the world of	<ul style="list-style-type: none"> Takes responsibility for adhering to safe, sustainable, appropriate and efficient workplace procedures

work	
Interact with others	<ul style="list-style-type: none">• Communicates effectively with customers, stakeholders and -team members
Get the work done	<ul style="list-style-type: none">• Plans, organises and implements tasks efficiently to meet customer requirements• Identifies and resolves problems

Unit Mapping Information

No equivalent unit. New unit.

Assessment Requirements for ICTDRE308 Install a cable broadband multi-dwelling unit system

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Release 5.0.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- obtain relevant approvals for access to site and equipment
- plan, assemble and install equipment
- interpret results
- action test results to align with enterprise requirements
- perform handover with customer
- apply related work health and safety (WHS) requirements and work practices.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- legislation, regulations and codes relevant to installation of broadband systems
- procedures and equipment required for measuring:
 - radio frequency (RF) signal power forward and return
 - insertion loss
 - distance to fault
 - modulation error rate (MER) and bit error rate (BER) for purpose of signal integrity
- features of instruments, test equipment and performance requirements
- RF testing of radio communications instruments and equipment
- typical issues and challenges that occur in telecommunications broadband installations
- safety issues regarding electromagnetic radiation (EMR).

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- site/s where broadband multi-dwelling unit (MDU) system installation can be undertaken
- hybrid fibre coaxial (HFC) equipment and devices currently used in industry
- test equipment required for HFC broadband installation and testing.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTDRE314 Design communications wiring systems for customer premises

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Application

This unit describes the skills and knowledge required to design a smart cable wiring system on customer premises.

It applies to individuals employed in a technical capacity for the emerging information technologies and applications in domestic and small to medium enterprises.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the ICT Implementation Guide Companion Volume or the relevant regulator for details of licensing, legislative or certification requirements.

Pre-requisite Unit

ICTCBL247 Install, maintain and modify customer premises communications cabling:
ACMA Open Rule

Unit Sector

Telecommunications – Digital Reception Technology

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to design a wiring system for premises	1.1 Consult customer and visit worksite to determine immediate and future functional needs of the cabling system 1.2 Identify and document immediate and future location of cabling system customer interface elements, and seek confirmation from

ELEMENT	PERFORMANCE CRITERIA
	appropriate persons 1.3 Review technology used to deliver functional needs 1.4 Identify specific service provider requirements and requirements of applicable standards, codes and regulations
2. Design a wiring system for premises	2.1 Follow work health and safety (WHS) procedures when carrying out work 2.2 Transfer functional needs of customer to architectural plans 2.3 Determine size and location of home distributor, security system, carrier and carriage service facilities, antennas and switch boards 2.4 Identify cable pathways and cable support systems 2.5 Select appropriate cable types to meet functional needs 2.6 Develop cable identification method to aid installation
3. Document cable wiring system design	3.1 Document customer interface elements room by room 3.2 Document requirements for home distributor, security system, carrier and carriage service facilities, antennas and switch boards 3.3 Document testing and commissioning requirements 3.4 Specify user documentation required after completion of installation 3.5 Provide customer quote that includes a bill of materials and a project schedule

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance, but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none">Reads and interprets plans, specifications and other documentation from a variety of sources and consolidates information to determine requirementsAnalyses and consolidates test results and data from a range of sources, against defined criteria and requirements
Writing	<ul style="list-style-type: none">Develops procedural material for a specific audience using clear and detailed language to convey explicit information, requirements and recommendationsProduces plans and specifications to industry standards conveying design function and operation

Skill	Description
Oral Communication	<ul style="list-style-type: none">Effectively participates in verbal exchanges using collaborative and inclusive techniques including active listening and questioning and reading of verbal and non-verbal signals to convey and clarify information
Numeracy	<ul style="list-style-type: none">Makes calculations appropriate for measuring and estimating materials and costingPerforms mathematical calculations to establish scale and dimensions of design plans
Navigate the world of work	<ul style="list-style-type: none">Accepts responsibility and ownership for tasks and makes decisions on completion parameters and need for coordination with othersExplores and implements, where identified, implicit expectations of policies, procedures and regulatory requirements
Interact with others	<ul style="list-style-type: none">Identifies and takes steps to follow accepted communication practices and protocolsRecognises common cultural and other differences of people in the work context and makes adjustments in addressing differences
Get the work done	<ul style="list-style-type: none">Takes responsibility for planning, sequencing and prioritising tasks and own workload for efficiency, and effective outcomesMakes routine decisions and implements standard procedures for routine tasks, using formal decision-making processes for more complex and non-routine situationsIdentifies ideas for applications and considers them in current contexts

Unit Mapping Information

ICTDRE314 Design communications wiring systems for customer premises supersedes and is equivalent to ICTDRE304 Design communications wiring systems for customer premises.

Assessment Requirements for ICTDRE314 Design communications wiring systems for customer premises

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- capture customer functional needs for wiring system
- apply industry standards, regulations and codes of practice when designing a wiring system for a customer
- develop a detailed design in compliance with industry practices, including signal losses and/or expected measurements to be achieved at wall plates
- document the design, including a bill of materials, schedule of work and associated costs and submit to customer.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- cabling standards, regulations and codes applicable to cable design
- building regulations that apply to installation of cabling systems
- codes of practice and Australian Communications and Media Authority (ACMA) standards for home wiring
- carrier network delivery systems used in single dwelling and multi-dwelling units for:
 - fibre
 - fixed wireless
 - satellite
 - twisted copper pair
 - subscription TV

- cabling requirements of home technology applications taking into account:
 - the user needs including age and assisted living conditions
 - communications
 - digital home health
 - energy management
 - entertainment
 - intelligent light and power
 - security and safety
- testing and commissioning methods and determine performance requirements for home technologies
- customer interface elements commonly considered when designing a wiring system
- common service providers clients may specify
- safety implications of the design for users
- design parameters for cable selection and support system of a wiring system
- documentation required when submitting a design to a customer.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the Telecommunications – Digital Reception Technology industry and include access to:

- a contemporary dwelling design
- a specification of a customer's functional requirements
- current standards, codes of practice and regulations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTDRE402 Integrate data delivery modes

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 2.0.

Application

This unit describes the skills and knowledge required to connect and configure a media centre that integrates signal for distribution.

It applies to individuals working as installers in the digital reception sector integrating services from multiple sources and in multiple formats (radio frequency, digital, data, and voice) for both inward and outbound signals into complex customer systems.

No licensing, legislative or certification requirements apply at the time of publication.

Unit Sector

Telecommunications – Digital Reception Technology

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Evaluate existing customer equipment	1.1 Obtain relevant legislation, codes, regulations and standards for compliance when conducting work 1.2 Notify customer to verify installation order and arrange for site access to comply with security arrangements 1.3 Notify supervisor of identified safety hazards at worksite and complete job safety analysis (JSA) before commencing work 1.4 Use test equipment to verify customer equipment is operational

ELEMENT	PERFORMANCE CRITERIA
	<p>prior to installation</p> <p>1.5 Assess equipment capabilities and connection types against customer requirements for suitability</p> <p>1.6 Assess customer premises against installation plan according to client specifications and by-laws, standards and regulations</p> <p>1.7 Produce an installation diagram using appropriate drawing symbols to indicate connection details of customer system</p>
2. Design and build a multiple service customer system solution	<p>2.1 Determine connection requirements and pathways for each service to be connected and locate a signal source for each service</p> <p>2.2 Confirm compatibility for proposed pathway options connections to existing system and for optimal performance</p> <p>2.3 Produce preliminary connection plan with block diagrams and specifications to optimise system performance</p> <p>2.4 Evaluate connection plan design to determine any local spectrum management issues arising from multiple services</p> <p>2.5 Produce final connection design with amendments to eliminate local spectrum management contentions, if required</p> <p>2.6 Select and connect cables according to connection plan using appropriate materials</p> <p>2.7 Activate equipment to check network operation</p> <p>2.8 Resolve connection issues that arise during build phase and modify connection plan</p>
3. Provide enterprise equipment with multiple services	<p>3.1 Determine optimal method of connection to each service source according to client specifications</p> <p>3.2 Connect service to system following work health and safety (WHS) and environmental requirements, and test to identify and rectify connection issues</p> <p>3.3 Notify service provider if problems cannot be rectified locally, and escalate unresolvable connection issues accordingly</p>
4. Configure services and optimise customer system across multiple services	<p>4.1 Conduct client specific and customer set-up operations for each service</p> <p>4.2 Test performance of enterprise and customer equipment across a range of settings</p> <p>4.3 Test integrated performance of system across multiple services</p> <p>4.4 Record and evaluate test results to satisfy manufacturer's operational margins</p> <p>4.5 Tune customer equipment for optimal integrated performance</p>

ELEMENT	PERFORMANCE CRITERIA
	across multiple services 4.6 Restore site to original condition and customer satisfaction
5. Train customer and complete contract documentation	5.1 Conduct customer training appropriate to equipment, services and vendor literature 5.2 Complete appropriate records and update administration systems according to enterprise policy 5.3 Record and store test results in appropriate database, leaving copies on site according to enterprise policy 5.4 Provide warranties to customer in required format where work and equipment are subject to warranty 5.5 Prepare invoices and other financial documentation where required and present to customer 5.6 Obtain authorised signatures on required documentation to confirm acceptance of completed work

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.1, 1.4-1.6, 2.4, 3.1, 4.2, 5.1	<ul style="list-style-type: none"> Interprets textual information from appropriate sources to identify relevant and key information
Writing	1.3, 1.7, 2.3, 2.5, 4.4, 5.2, 5.3, 5.5	<ul style="list-style-type: none"> Uses clear, specific and industry-related terminology to complete workplace documentation
Oral Communication	1.2, 1.3, 3.3, 5.1	<ul style="list-style-type: none"> Articulates clearly using appropriate language for environment, and uses listening techniques to confirm understanding
Numeracy	4.3, 5.5	<ul style="list-style-type: none"> Takes readings and measurements and interprets results Uses simple calculations to prepare financial documentation
Navigate the world of work	1.1, 5.4,	<ul style="list-style-type: none"> Takes responsibility for following safe, sustainable, appropriate, and efficient workplace procedures

Interact with others	5.6	<ul style="list-style-type: none">• Liaises with customer to sign-off on completed work when completed to customer's requirements
Get the work done	1.3, 2.1, 2.2, 2.6-2.8, 3.2, 3.3, 4.1, 4.3, 4.5, 4.6	<ul style="list-style-type: none">• Plans, organises and implements tasks efficiently to meet customer requirements• Makes decisions on technical requirements• Advises service provider of any problems that cannot be resolved locally

Assessment Requirements for ICTDRE402 Integrate data delivery modes

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 2.0.

Performance Evidence

Evidence of ability to:

- identify service requirements of a range of contemporary products
- design and build a multiple service customer system solution
- install and integrate at least two services to a customer system comprised of at least three equipment components applying all related work health and safety (WHS) requirements and work practices
- activate and optimise customer equipment using two or more signal sources
- configure services and optimise customer system across multiple services
- conduct functionality tests and interpret results
- provide customer training appropriate to the equipment.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- list contemporary equipment and connection methods
- outline customer service principles, particularly dealing with customers face to face
- discuss enterprise or service specific knowledge of products and services supplied
- describe equipment types:
 - amplifiers
 - couplers
 - taps
 - splitters
- describe home automation
- identify functions of home theatre system components

- explain modulation techniques
- discuss WHS general principles and enterprise specific job safety analysis (JSA) requirements
- assess performance adjustments for tuning, balancing and replacing components
- summarise quality assurance of enterprise requirements
- evaluate security systems
- review test analysis and diagnosis (enterprise diagnosis methods)
- identify test equipment and signal measurement and other enterprise-specific tools
- explain principles of video and audio technologies
- explain wireless local area networks (WLANs)
- explain wireless technology.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the Telecommunications – Digital Reception Technology industry and include access to:

- a site for data delivery modes integration
- equipment currently used in industry
- test equipment required for data delivery integration.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTDSN401 Design digital user interfaces

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created unit of competency to address in-demand skills needs.

Application

This unit describes the skills and knowledge required to design user interfaces (UIs) for a wide range of devices and interactive multimedia in digital environments. It includes identifying user requirements, developing UI prototypes and testing UI designs.

The unit applies to individuals who may work in UI and user experience (UX) design roles who apply information and communications technology (ICT) skills and knowledge to produce UI prototypes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Design thinking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Establish user requirements	1.1 Confirm work brief and tasks according to organisational policies and procedures 1.2 Review technical parameters for interactive media products and delivery platforms according to work brief 1.3 Identify user characteristics and system architecture specifications

ELEMENT	PERFORMANCE CRITERIA
	1.4 Create UI mood board according to work brief
2. Produce concept designs	2.1 Select and source required sketching software and tools 2.2 Develop preliminary concept sketches according to work brief 2.3 Source and confirm sketching component serviceability according to work brief 2.4 Obtain sketch components and sketch screen layouts according to organisational policies and procedures 2.5 Develop final concept sketches according to work brief 2.6 Seek feedback from required personnel 2.7 Document UI design specifications according to work brief
3. Develop UI workspaces	3.1 Assess staging relationships in specified digital environment 3.2 Analyse UI toolkits and workspaces 3.3 Confirm and document required UI toolkits according to work brief 3.4 Create UI workspace according to work brief 3.5 Confirm that UI workspace aligns with user requirements and UI concept designs
4. Finalise UI designs	4.1 Develop UI prototype according to work brief 4.2 Plan testing procedures with sample users 4.3 Test UI prototype according to work brief 4.4 Evaluate results of testing and adjust design specifications according to work brief 4.5 Seek and integrate feedback on adjusted UI prototype 4.6 Present final UI prototype to required personnel according to organisational policies and procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interprets technical information and guidelines to determine work requirements
Writing	<ul style="list-style-type: none"> Uses specific technical, diagrammatic and visual textual language appropriate to environment to prepare prototype designs

Skill	Description
Planning and organising	<ul style="list-style-type: none">• Uses a range of processes to identify key information and issues, evaluate alternative strategies, anticipate consequences and consider implementation issues and contingencies
Oral communication	<ul style="list-style-type: none">• Uses clear language, listening and questioning techniques to confirm and clarify design, technical and user information

Unit Mapping Information

No equivalent unit. Newly created unit.

Assessment Requirements for ICTDSN401 Design digital user interfaces

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created unit of competency to address in-demand skills needs.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- produce at least two different user interface (UI) designs.

In the course of the above, the candidate must:

- comply with technical and creative parameters
- safely and securely store UIs in required locations
- apply required organisational policies and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- functions and features of industry-recognised UI components and operations
- functions, features and specifications of common system architectures for UIs
- key characteristics of UIs, including:
 - concept sketches
 - screen layouts
 - design specifications
 - staging relationships
 - toolkits
 - workspaces
 - prototypes

- delivery platforms
- principles of digital accessibility
- key technical parameters of interactive media products
- applications of concept design briefs in designing UIs
- key tools and technical parameters required in designing UI components, including:
 - interactive multimedia products
 - delivery platforms
- industry-recognised tools and techniques to develop UI mood boards, concept sketches and workspaces
- industry-specific considerations required when developing UI prototypes
- UI prototype testing tools and techniques
- organisational policies and procedures and legislative requirements relating to work tasks.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required technologies and resources to design UIs
- opportunities for interaction with others
- work brief, design specifications, and organisational policies and procedures required to demonstrate the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for ICTDSN402 Develop digital user interfaces

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created unit of competency to address in-demand skills needs.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- create at least two different digital user interfaces (UIs) with at least two interactive graphic components in each.

In the course of the above, the candidate must:

- comply with technical and creative parameters
- safely and securely store digital assets in required locations
- apply required organisational policies and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- features, specifications and requirements of interactive multimedia products, including:
 - target user
 - audience
 - purpose of products
- industry-recognised UI designs
- common types of text and presentation styles used when developing UIs, including:
 - style sheets
 - templates
 - themes

- functions, features and applications of UI principles, including:
 - communication principles
 - visual design principles
 - user-centred design principles
- functions and features of trademarks and logos in developing UI design ideas
- key tools and technical parameters for developing UI components, including:
 - interactive multimedia products
 - delivery platforms
 - file output formats
- tools and techniques to develop UI structures
- functions, features and applications of industry-standard graphics software
- procedures to evaluate technical feasibility of a prototype
- required compliance processes, including adherence to copyright clearance procedures
- organisational policies and procedures and legislative requirements relating to work tasks.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required technologies, design specifications, graphic software and resources to create UIs
- opportunities for interaction with others

ICTDSN403 Apply innovative thinking and practices in digital environments

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created unit of competency to address in-demand skills needs.

Application

This unit describes the skills and knowledge required to generate digital solutions to implement innovative thinking and practices in digital environments. It includes identifying strategies, selecting techniques and designing approaches to promote innovation in workplace contexts.

The unit applies to individuals who may work in roles such as information technology (IT) strategist, who contribute to innovating digital workplace contexts.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Design thinking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Review workplace needs	1.1 Confirm work brief and tasks according to organisational policies and procedures 1.2 Evaluate digital needs and workplace limitations with required personnel 1.3 Identify and analyse conditions that impact innovation in

ELEMENT	PERFORMANCE CRITERIA
	<p>workplace contexts</p> <p>1.4 Research and report on techniques that remove or minimise conditions that inhibit innovation in workplace contexts according to work brief</p> <p>1.5 Research and report on workplace innovation drivers and enablers according to work brief</p>
2. Define client needs and problems	<p>2.1 Identify core client problems according to work brief</p> <p>2.2 Develop human-centred problem statement according to work brief</p> <p>2.3 Storyboard client needs, experiences, behaviours and goals according to work brief</p>
3. Evaluate digital solutions to meet identified needs	<p>3.1 Confirm required ideation technique according to organisational policies and procedures</p> <p>3.2 Implement required ideation technique and brainstorm digital solutions</p> <p>3.3 Document innovative ideas and practices according to selected ideation technique</p>
4. Prototype digital solutions	<p>4.1 Create scaled-down versions of specified digital solutions according to budget requirements and work brief</p> <p>4.2 Seek feedback from required personnel</p> <p>4.3 Review and implement required feedback according to organisational policies and procedures</p>
5. Implement prototyped digital solutions	<p>5.1 Develop digital solution selection criteria according to work brief</p> <p>5.2 Test digital solutions and assess against selection criteria</p> <p>5.3 Select digital solution scoring highest against selection criteria</p> <p>5.4 Confirm required implementation and risk mitigation processes</p> <p>5.5 Integrate digital solution into workplace context according to organisational policies and procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
-------	-------------

Skill	Description
Reading	<ul style="list-style-type: none">Identifies, analyses and interprets visual and textual information from a range of sources and texts
Writing	<ul style="list-style-type: none">Develops a broad range of materials using clear language in order to convey specialised information and requirements
Planning and organising	<ul style="list-style-type: none">Uses a variety of processes to identify risks, design solutions and consider implementation issues
Problem solving	<ul style="list-style-type: none">Uses formal analytical techniques to identify issues and implement solutions
Technology	<ul style="list-style-type: none">Uses a broad range of strategies to store, access and organise virtual information, recognising that design choices will influence what information is retrieved and how it may be interpreted and used

Assessment Requirements for ICTDSN403 Apply innovative thinking and practices in digital environments

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created unit of competency to address in-demand skills needs.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- prototype and test at least two different innovative digital solutions for a workplace
- implement the above solutions into the workplace context.

In the course of the above, the candidate must:

- tailor work tasks to be applied within the parameters of digital environments
- iterate, alter and refine prototypes according to feedback from required personnel
- apply required organisational policies and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry-recognised in-person and virtual ideation techniques
- industry-recognised collaboration tools and techniques that enhance innovative thinking
- organisational conditions that impact innovative thinking and creativity
- types of innovation drivers and enablers
- reliable methods to research organisational trends and digital insights
- characteristics of human-centred problem statements
- functions and features of:
 - digital prototypes
 - digital solution selection criteria

- principles of digital accessibility
- methods to identify and mitigate implementation risks for digital solutions
- organisational policies and procedures, budget requirements and legislative requirements relating to work tasks.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- opportunities for interaction with others
- work brief, and organisational policies, procedures and financial budget required to demonstrate the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTGAM304 Develop three-dimensional (3D) models for digital games

Modification History

Release	Comments
Release 1	<p>This version first released with the Information and Communications Technology Training Package Version 8.0.</p> <p>Supersedes and is equivalent to ICTGAM301 Apply simple modelling techniques.</p> <p>Updated title to better reflect unit scope.</p>

Application

This unit describes the skills and knowledge required to prototype and refine three-dimensional (3D) object designs for a variety of digital games, using simple modelling techniques and software.

The unit applies to individuals who may work in roles such as digital media developers and content designers, who support the design and development stages of basic digital games.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Game development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to apply 3D modelling techniques	<p>1.1 Confirm work brief and tasks according to organisational policies and procedures</p> <p>1.2 Identify work-flow sequences and production timelines</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>according to work brief</p> <p>1.3 Select software and resources required to model 3D objects</p> <p>1.4 Identify and document digital asset management processes and requirements of 3D modelling for digital games</p>
2. Prototype 3D digital models	<p>2.1 Model 3D object prototype according to work brief</p> <p>2.2 Manipulate software features according to work brief</p> <p>2.3 Confirm that model topology allows for required deformation</p> <p>2.4 Check and refine model for integrity</p> <p>2.5 Confirm that model meets design requirements</p> <p>2.6 Seek feedback on model from required personnel</p> <p>2.7 Make adjustments to model, where required</p>
3. Finalise 3D digital models	<p>3.1 Export digital 3D model in required gaming format</p> <p>3.2 Submit model to required personnel</p> <p>3.3 Save and store model according to organisational policies and procedures</p> <p>3.4 Complete workplace documentation according to organisational requirements</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Numeracy	<ul style="list-style-type: none"> • Uses foundational arithmetic when interpreting integers and decimals and when manipulating measurement, scale, and ratio
Oral communication	<ul style="list-style-type: none"> • Listens and responds to instructions and questions and clarifies requirements
Reading	<ul style="list-style-type: none"> • Interprets documentation, diagrams, designs, objects and images to identify required information • Identifies and comprehends signs, symbols, pictures, jargon, abbreviations, computer-generated text, numbers and letters to operate modelling application software
Planning and organising	<ul style="list-style-type: none"> • Develops plans for completion with sequenced, prioritised steps and timeframes
Technology	<ul style="list-style-type: none"> • Uses key features of specific digital systems and tools to complete routine tasks

Unit Mapping Information

Supersedes and is equivalent to ICTGAM301 Apply simple modelling techniques.

Assessment Requirements for ICTGAM304 Develop three-dimensional (3D) models for digital games

Modification History

Release	Comments
Release 1	<p>This version first released with the Information and Communications Technology Training Package Version 8.0.</p> <p>Supersedes and is equivalent to ICTGAM301 Apply simple modelling techniques.</p> <p>Updated title to better reflect unit scope.</p>

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop at least two different three-dimensional (3D) objects for a digital game.

In the course of the above, the candidate must:

- meet production documentation requirements within production deadlines
- apply required organisational policies and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- functions and features of 3D digital modelling tools and techniques
- methods of prototyping, designing, producing and delivering digital 3D models
- functions and features of 3D digital model development software, hardware and components
- techniques to safely save and store 3D digital models
- concepts of geometry that apply to the creation of realistic 3D digital models for digital games
- key processes and requirements to create 3D digital gaming models
- relevance of scale, form, weight and volume to prototyping 3D digital models for digital games
- key copyright considerations associated with designing and creating 3D digital models

- organisational formats for documentation
- organisational policies and procedures, and legislative requirements relating to work tasks.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- digital model production hardware, components and resources
- industry software packages and game engines
- opportunities for interaction with others
- work brief and organisational policies and procedures required to demonstrate the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTGAM305 Apply simple textures and shading to three-dimensional (3D) models for digital games

Modification History

Release	Comments
Release 1	<p>This version first released with the Information and Communications Technology Training Package Version 8.0.</p> <p>Supersedes and is equivalent to ICTGAM302 Design and apply simple textures to digital art.</p> <p>Updated title to better reflect unit scope.</p>

Application

This unit describes the skills and knowledge required to assess and select simple textures and shaders to be applied to three-dimensional (3D) models for digital games. It includes designing, sourcing and configuring simple textures and shaders according to model requirements.

The unit applies to individuals who may work in roles such as digital media developers and content designers, who support the development and refinement stages of basic digital games.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Game development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to apply simple textures and shading to 3D models	<p>1.1 Confirm work brief and tasks according to organisational policies and procedures</p> <p>1.2 Identify design and technical constraints in consultation with required personnel</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>1.3 Identify game engine, software and hardware according to work brief</p> <p>1.4 Analyse media and file formats for digital imagery, texture production and manipulation</p> <p>1.5 Document and sequence digital texturing activities in production</p> <p>1.6 Document production pipeline according to work brief</p>
2. Use shaders and textures	<p>2.1 Identify underlying surface characteristics of 3D digital models for gaming to be textured and shaded according to work brief</p> <p>2.2 Identify shaders and textures with surface characteristics, where required</p> <p>2.3 Confirm texture libraries with required personnel and identify suitable textures</p> <p>2.5 Select shaders and textures suitable for the game engine according to work brief</p> <p>2.6 Confirm that selected shaders and textures are consistent with design requirements in work brief</p>
3. Assign shader attributes to 3D models	<p>3.1 Identify and select shader attributes according to work brief</p> <p>3.2 Confirm lighting and rendering requirements in consultation with required personnel</p> <p>3.3 Use design methods and techniques to achieve shading outcomes according to work brief</p>
4. Acquire textures and shaders	<p>4.1 Identify required resolution for textures according to work brief</p> <p>4.2 Source textures and shaders from available online libraries according to organisational policies and procedures</p> <p>4.3 Confirm that resolution of acquired textures and shaders meets design requirements</p>
5. Design application process and methods	<p>5.1 Identify and assess nature of surface topology and determine suitable 3D projections</p> <p>5.2 Simulate natural patterns</p> <p>5.3 Determine texture-mapping process according to work brief</p> <p>5.4 Confirm projection-mapping method according to work brief</p> <p>5.5 Adjust parameters to achieve desired effects according to organisational policies and procedures</p>
6. Apply textures	<p>6.1 Use textures for model according to texture-mapping process</p> <p>6.2 Layer model textures and apply lighting</p>

ELEMENT	PERFORMANCE CRITERIA
	6.3 Test reaction of textures and adjust, where required 6.4 Complete test renders in consultation with required personnel
7. Finalise 3D models	7.1 Present test renders to required personnel for approval 7.2 Make adjustments consistent with feedback from required personnel 7.3 Save and archive files in agreed formats and repository

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Numeracy	<ul style="list-style-type: none"> Uses foundational arithmetic when interpreting integers and decimals and when manipulating measurement, scale, ratio, colour, and shading in the application of texture
Oral communication	<ul style="list-style-type: none"> Uses questioning and listening techniques, translating digital gaming terminology to plain English Listens, responds to instructions and feedback to ensure that finished results meet design requirements
Reading	<ul style="list-style-type: none"> Interprets and comprehends information in diagrams, designs, objects and images Identifies and comprehends signs, symbols, pictures, jargon, abbreviations, computer-generated text, numbers and letters to operate digital gaming software
Initiative and enterprise	<ul style="list-style-type: none"> Uses creativity and initiative in design
Planning and organising	<ul style="list-style-type: none"> Makes decisions and implements standard procedures for routine tasks
Technology	<ul style="list-style-type: none"> Uses key features of digital systems and tools to complete routine tasks

Unit Mapping Information

Supersedes and is equivalent to ICTGAM302 Design and apply simple textures to digital art.

Links

Companion Volume Implementation Guide is found on VETNet - -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=a53af4e4-b400-484e-b778-71c9e9d6aff2>

Assessment Requirements for ICTGAM305 Apply simple textures and shading to three-dimensional (3D) models for digital games

Modification History

Release	Comments
Release 1	<p>This version first released with the Information and Communications Technology Training Package Version 8.0.</p> <p>Supersedes and is equivalent to ICTGAM302 Design and apply simple textures to digital art.</p> <p>Updated title to better reflect unit scope.</p>

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- apply at least two simple textures to one 3D model for a digital game
- apply at least two simple shaders to one 3D model for a digital game.

In the course of the above, the candidate must:

- adhere to gaming requirements related to file sizes and formats
- store completed file components according to organisational policies and procedures
- apply required organisational policies and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- types of textures and filters for shading and texturing effects in digital games
- features and functions of key game engines, software, and hardware, including:
 - media and file formats for digital imagery
 - texture production and manipulation
- types of shader attributes
- functions of texture mapping and projection
- types of techniques used to apply shading and texturing to 3D models for digital games, including:

- digital image manipulation
- lighting
- rendering
- scanning
- techniques to interpret design, texturing, and shading briefs
- functions of digital image capture
- functions and features of key models, processes and methods used in digital games, including:
 - surface topology and nature
 - 3D projections
 - natural pattern simulation
 - texture mapping
 - projection mapping
- key copyright considerations associated with designing 3D digital models
- organisational formats for documentation
- work brief and organisational policies and procedures required to demonstrate the performance evidence.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- digital model production hardware, components and resources, including peripheral devices
- models and scenes to be shaded and textured, including style shots
- opportunities for interaction with others
- work brief and organisational policies and procedures required to demonstrate the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTGAM306 Review and apply traditional animation principles

Modification History

Release	Comments
Release 1	<p>This version first released with the Information and Communications Technology Training Package Version 8.0.</p> <p>Supersedes and is equivalent to ICTGAM303 Review and apply the principles of animation.</p> <p>Updated title to better reflect unit scope.</p>

Application

This unit describes the skills and knowledge required to evaluate existing animation processes, design three-dimensional (3D) animated sequences and apply sequences in short animation, using a variety of modelling and animation software.

The unit applies to individuals who may work in roles such as digital media developers and content designers, who may contribute to the maintenance and development stages of basic digital games.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Game development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to review animation processes and components	<p>1.1 Confirm work brief and tasks according to organisational policies and procedures</p> <p>1.2 Identify design requirements according to work brief</p> <p>1.3 Research and document traditional animation processes in the production of quality 3D animation</p>

ELEMENT	PERFORMANCE CRITERIA
	1.4 Analyse the twelve principles of animation in the production of quality 3D animation 1.5 Document 3D animation components according to analysis and work brief
2. Prepare scene layout and storyboarding	2.1 Identify existing scene layout techniques used in traditional animation 2.2 Research improvements to existing scene layout processes 2.3 Identify existing storyboarding techniques used in traditional animation 2.4 Research improvements to existing storyboarding processes
3. Establish animation sequencing	3.1 Analyse traditional animation processes and sequencing according to work brief 3.2 Research sample key poses 3.3 Create sample key poses according to work brief 3.4 Select animation keys for animation sequence according to work brief 3.5 Document animation sequencing decision rationale
4. Apply animated sequences to short animations	4.1 Develop short animation key poses according to design requirements 4.2 Incorporate animated sequence into short animation 4.3 Submit short animations to required personnel 4.4 Save and store short animation in game engine according to organisational requirements 4.5 Complete workplace documentation according to organisational requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Numeracy	<ul style="list-style-type: none"> Uses foundational arithmetic when interpreting integers and decimals and when manipulating measurement, scale, and ratio
Oral communication	<ul style="list-style-type: none"> Uses industry-specific terminology to describe animation principles and processes
Reading	<ul style="list-style-type: none"> Identifies and comprehends a large range of signs, symbols, pictures, jargon, abbreviations, computer-generated text, numbers and letters to operate complex animation software

Skill	Description
Problem solving	<ul style="list-style-type: none">Makes routine decisions and implements standard procedures for routine tasks
Self-management	<ul style="list-style-type: none">Follows clearly defined instructions, monitors own progress and seeks assistance, when necessary
Technology	<ul style="list-style-type: none">Uses key features of specific digital systems and tools to complete routine tasks

Unit Mapping Information

Supersedes and is equivalent to ICTGAM303 Review and apply the principles of animation.

Assessment Requirements for ICTGAM306 Review and apply traditional animation principles

Modification History

Release	Comments
Release 1	<p>This version first released with the Information and Communications Technology Training Package Version 8.0.</p> <p>Supersedes and is equivalent to ICTGAM303 Review and apply the principles of animation.</p> <p>Updated title to better reflect unit scope.</p>

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- create at least two short animations using traditional animation principles.

In the course of the above, the candidate must:

- use a range of 3D modelling and animation software sufficient to meet work brief
- apply required organisational policies and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- functions and features of short animation components, including:
 - traditional animation principles
 - animation keys
 - key poses
 - scene layouts
 - storyboarding animation
 - animation sequencing
- techniques to develop animation ideas and concepts
- functions and features of key game engines, software and hardware
- techniques to safely save and store short animation

- methods of storyboard development
- types of production scheduling components
- key copyright considerations associated with designing and applying animation principles
- organisational formats for documentation
- organisational policies and procedures, and legislative requirements relating to work tasks.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- animation design briefs and production documentation
- digital model and animation production hardware, components and resources
- opportunities for interaction with others
- work brief and organisational policies and procedures required to demonstrate the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTGAM420 Produce interactive games

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to produce interactive games using an industry standard authoring tool.

It applies to individuals who work in the game development industry and support the design, development and programming of basic digital games as part of a larger development team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Game development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify game requirements and component assets	<ul style="list-style-type: none">1.1 Obtain project brief and documents1.2 Identify industry standards and organisational guidelines applicable to game production1.3 Identify technical specifications and game-production assets needed according to creative and production requirements1.4 Discuss and evaluate asset formats and issues of asset integration with required personnel1.5 Select and save all digital assets in required format and store according to organisational procedures1.6 Determine development sequence of a beta version prototype

ELEMENT	PERFORMANCE CRITERIA
	<p>1.7 Create a production and testing schedule according to organisational procedures</p> <p>1.8 Determine strategies in monitoring production progress against schedule</p>
<p>2. Identify, evaluate and select game-engine software and tools</p>	<p>2.1 Identify and review a range of industry standard game-engine software and development tools available</p> <p>2.2 Assess and evaluate game-engine software and tools applicable to specified game concepts and play requirements with required personnel</p> <p>2.3 Select the game-engine software and tools according to game and production requirements</p>
<p>3. Create a game-play sequence and prototype using game-engine software</p>	<p>3.1 Load a game engine including sound and game play</p> <p>3.2 Create and name a new file according to specified task</p> <p>3.3 Display and use software tools and features required in game production process</p> <p>3.4 Achieve a unique function using a custom created code</p> <p>3.5 Import and assemble game-play assets in required sequence, according to creative and technical requirements</p> <p>3.6 Create and check game-play elements according to creative and technical requirements</p> <p>3.7 Test and run game-play sequence as a presentation and confirm sequence meets creative, production and technical requirements</p> <p>3.8 Export to game engine and create a prototype</p> <p>3.9 Save in required file formats according to organisational procedures</p>
<p>4. Evaluate and reiterate game prototype</p>	<p>4.1 Demonstrate and present initial prototype to required personnel</p> <p>4.2 Evaluate against criteria including achievement of a creative and user-friendly product</p> <p>4.3 Discuss and agree on required changes and amend prototype accordingly</p> <p>4.4 Assist in tests and user trials</p> <p>4.5 Evaluate feedback from user trials</p> <p>4.6 Confirm endorsement from required personnel to develop the prototype into a complete product</p>

ELEMENT	PERFORMANCE CRITERIA
5. Transform prototype into a final proof-of-concept prototype	5.1 Make required changes as indicated by user trials and develop prototype into complete product 5.2 Integrate all game elements as required by specifications 5.3 Review and perform final checks, confirming all sequences conform to the navigation design 5.4 Save into specified storage systems according to organisational procedures 5.5 Obtain final sign-off from required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Uses positive and negative whole numbers, decimals, degrees and percentages when setting measurement, scale, coordinates, colour, shading, timing and other parameters in development of interactive games
Oral communication	<ul style="list-style-type: none"> Uses listening and questioning techniques to elicit views, obtain information and presenting solutions using industry language for intended audience
Reading	<ul style="list-style-type: none"> Interprets and comprehends information in diagrams, storyboards, objects and images and identifies required software, resources, assets and user needs Identifies signs, symbols, pictures, jargon, abbreviations, computer generated text, numbers, letters and coding syntax required in operating game engines
Writing	<ul style="list-style-type: none"> Prepares documentation expressing strategies and game design using appropriate structure, layout and technical programming language
Teamwork	<ul style="list-style-type: none"> Cooperates with others and contributes to work practices where joint outcomes are required
Initiative and enterprise	<ul style="list-style-type: none"> Uses creativity and initiative in design
Problem solving	<ul style="list-style-type: none"> Assesses, tests and modifies product according to client and technical requirements
Self-management	<ul style="list-style-type: none"> Makes routine decisions and implements standard procedures in routine tasks

SKILL	DESCRIPTION
	<ul style="list-style-type: none">• Uses formal decision-making processes in more complex and non-routine situations• Identifies importance of secure information in relation to own work and takes responsibility for data integrity, storage and management
Technology	<ul style="list-style-type: none">• Uses digital systems and tools and completes routine tasks

Unit Mapping Information

Supersedes and is equivalent to ICTGAM401 Produce an interactive game.

Assessment Requirements for ICTGAM420 Produce interactive games

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- create an interactive game using an industry standard game-engine software and development tools.

In the course of the above, the candidate must:

- follow applicable industry standards and organisational guidelines
- apply a variety of strategies in game trialling and testing
- implement game development and production strategies
- maintain the integrity of design brief and game design document
- save final product and obtain sign-off from required personnel.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- basic programming techniques that may be used for interactive game development
- game engine capabilities and constraints
- industry standard game-play hardware and software products
- technical constraints hardware and software impose on design and development
- risk and critical path management, applicable to interactive game development
- game production testing and trialling process
- the process of evaluating game prototypes from technical, design and game play perspectives
- industry standards and organisational guidelines applicable to game production
- game-production assets and issues with asset integration.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- project briefs
- applicable organisational documentation
- game-production assets
- technical specifications
- game production testing and trialling tools
- industry standard game-engine software and development tools
- required industry-standard hardware, software and peripheral devices.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTGAM421 Identify and apply games design and game play principles

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to identify and apply principles of games design and game playing.

It applies to individuals who support the design, development and programming of basic digital games as part of a larger development team in the game development industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Game development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Analyse and document characteristics of various game genres	1.1 Identify and review game-play elements in various game genres 1.2 Identify objectives of game play in various game genres 1.3 Document findings from game genre analysis
2. Interpret consumer demographics in various games products	2.1 Identify target markets in various types of games 2.2 Interpret choices and patterns of buyers and players 2.3 Review social, emotional and cognitive aspects of contemporary interactive game play
3. Review historical aspects of	3.1 Review and describe history of the games industry

ELEMENT	PERFORMANCE CRITERIA
game play and game design	3.2 Review game play and design in non-computer-based games 3.3 Identify uses of games in commercial, industrial, education, military training and therapeutic and assessment contexts
4. Identify industry game-design principles	4.1 Research and identify industry game-design principles 4.2 Identify game-design principles in various games
5. Outline development of games	5.1 Identify and outline game design and play strategies 5.2 Outline technical limitations and constraints of industry hardware and software

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Interprets numerical and statistical information applicable to target markets and the games industry
Oral communication	<ul style="list-style-type: none"> Uses listening and questioning techniques to obtain required information using appropriate industry language for intended audience
Reading	<ul style="list-style-type: none"> Interprets and comprehends technical documentation, specifications, market information, statistics, diagrams, objects and images Analyses various aspects of game play and game design and identifies target markets and interprets consumer demographics
Writing	<ul style="list-style-type: none"> Produces documentation outlining analysis and game design as required using accurate spelling, grammar and specific technical language
Technology	<ul style="list-style-type: none"> Uses a range of digitally based technologies and accesses, extracts and shares applicable information

Unit Mapping Information

Supersedes and is equivalent to ICTGAM402 Identify and apply principles of games design and game playing.

Assessment Requirements for ICTGAM421 Identify and apply games design and game play principles

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- identify games design and game playing principles in at least two games from at least two different game genres.

In the course of the above, the candidate must:

- determine methodology used
- differentiate game genres and identify differing characteristics
- identify consumer demographic for each game product
- differentiate game design and play principles
- prepare an outline of a game design according to industry and organisational requirements.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- 3-D digital model design techniques
- procedures and processes in game development
- industry standard game-play hardware and software products
- technical constraints hardware and software impose on design and development
- industry and organisational requirements.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- the internet
- required hardware and software required in researching games and the games industry.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTGAM422 Create design documents for interactive games

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to create a game concept, develop and document the game specifications.

It applies to individuals who support the design, development and programming of basic digital games and design, develop and use digital media technologies as part of a larger development team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Game development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Research, create and document game concept	1.1 Obtain client brief and identify applicable industry standards 1.2 Research, identify and describe target market, the game genre and its working title according to client brief 1.3 Identify game platform, game engine and operating system according to game requirements 1.4 Prepare initial concept art and establish look and feel of characters, environment and game play according to organisational guidelines 1.5 Document research, ideas and initial concept art according to organisational guidelines
2. Create and document	2.1 Develop storylines and levels

ELEMENT	PERFORMANCE CRITERIA
game design specifications	2.2 Develop characters and environment artwork 2.3 Identify game-play elements 2.4 Develop graphical user interface (GUI) 2.5 Identify sounds and music applicable to game 2.6 Document game design specifications according to organisational guidelines
3. Create and document technical game specifications	3.1 Determine game mechanics 3.2 Finalise platform, game engine and operating system 3.3 Specify source and purpose of code required including level-specific code 3.4 Determine game physics and artificial intelligence 3.5 Identify sound engineering requirements 3.6 Determine and document game prototype testing procedures
4. Collate game design document	4.1 Define proposed game features in comparison to existing games 4.2 List estimated resources required in game development 4.3 Prepare estimated schedule for game development 4.4 Finalise documentation and collate design information, estimates and proposals into a comprehensive game design document according to organisational guidelines 4.5 Present and obtain sign off on documents to required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> • Outlines parameters and attributes in a wide range of technical specifications using whole numbers, decimals and percentages • Interprets financial and statistical information and adds, subtracts, multiplies and divides whole numbers and decimals when researching target market and estimating resources and schedules
Oral communication	<ul style="list-style-type: none"> • Uses listening and questioning techniques to obtain required information and elicit views and opinions of others using appropriate industry language for intended audience
Reading	<ul style="list-style-type: none"> • Interprets and comprehends technical documentation, financial information and statistical data

SKILL	DESCRIPTION
	<ul style="list-style-type: none">Investigates target market and identifies applicable resources
Writing	<ul style="list-style-type: none">Prepares documents detailing research and design using appropriate layout and required descriptive language in a cohesive and well-structured manner
Initiative and enterprise	<ul style="list-style-type: none">Uses creativity and initiative in design
Planning and organising	<ul style="list-style-type: none">Takes responsibility in planning, sequencing and prioritising tasks
Self-management	<ul style="list-style-type: none">Makes routine decisions and implements standard procedures in routine tasksUses formal decision-making processes in more complex and non-routine situationsIdentifies importance of secure information in relation to own work and takes responsibility in data integrity and management
Technology	<ul style="list-style-type: none">Completes routine tasks using specific digital systems, applications and tools

Unit Mapping Information

Supersedes and is equivalent to ICTGAM403 Create design documents for interactive games.

Assessment Requirements for ICTGAM422 Create design documents for interactive games

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- create and develop game design documents for at least one interactive game according to required industry standard and consistent with client brief and specifications.

In the course of the above, the candidate must:

- develop concept art for characters, environments, splash screens, start screens and game field screens consistent with identified game genre and design specifications
- develop technical specifications in game mechanics, artificial intelligence, physics, sound, game play and overall usability
- include a list of estimated resources required and a game development schedule.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- game development processes
- basic programming techniques that may be used for interactive game development
- industry standard game-play hardware and software products
- technical constraints hardware and software impose on design and development
- techniques in applying concept development and concept visualisation skills
- industry standards applicable to creating and developing game design documentation
- organisational guidelines, documentation techniques and processes that may apply to creating design documents for interactive games.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- the internet
- client brief
- required hardware, software and peripheral devices
- games-engine.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTGAM423 Apply artificial intelligence in game development

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to research, develop and implement artificial intelligence (AI) solutions in games.

It applies to individuals who contribute to the creation of system-controlled objects in games and who support the design, development and programming of basic digital games as part of a larger development team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Game development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Conduct research on AI strategies	<ul style="list-style-type: none">1.1 Research and identify terminology involved in AI applicable to games and its industry1.2 Identify and analyse range of AI path-finding strategies including required genres and environments and how they influence design and development1.3 Discuss AI strategies and ideas with required personnel1.4 Organise research and findings during development process and update required personnel1.5 Identify industry standards applicable to using AI strategies in game development

ELEMENT	PERFORMANCE CRITERIA
2. Design, implement and test AI game strategy	2.1 Generate a range of goals and actions and other factors in design of an AI non-player character (NPC) 2.2 Select technically feasible AI strategies in designing NPCs according to brief and provide creative solutions to design issues 2.3 Design and customise AI strategy according to client brief and game requirements 2.4 Reflect on and assess implications in AI strategies regarding budget, timeline, technical feasibility and user suitability according to brief 2.5 Implement a path-finding algorithm and a NPI AI strategy in a game 2.6 Test implementation of AI strategy and amend as required
3. Evaluate game and confirm with required personnel	3.1 Review game design and AI strategies and confirm design brief is fulfilled 3.2 Discuss, seek feedback and confirm additional requirements and modifications to game design with required personnel 3.3 Apply required amendments according to discussions with required personnel and feedback 3.4 Obtain final sign-off from required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> • Outlines parameters using whole numbers and decimals • Interprets budgets and adds, subtracts, multiplies and divides whole numbers and decimals and confirms budget, timelines and other brief requirements are met
Oral communication	<ul style="list-style-type: none"> • Obtains information and facilitates discussions using listening and open questioning techniques and relevant industry language
Reading	<ul style="list-style-type: none"> • Investigates, interprets and comprehends technical documentation, diagrams, icons, symbols, text, numbers and letters when determining AI strategies
Writing	<ul style="list-style-type: none"> • Records research findings and documents solutions and process using relevant programming language, and required code layout, code, diagrams and syntax

SKILL	DESCRIPTION
Initiative and enterprise	<ul style="list-style-type: none">• Uses creativity and initiative in design
Self-management	<ul style="list-style-type: none">• Makes routine decisions and implements standard procedures in routine tasks• Uses formal decision-making and analytical processes in more complex and non-routine situations
Technology	<ul style="list-style-type: none">• Completes routine tasks using specific digital systems and tools

Unit Mapping Information

Supersedes and is equivalent to ICTGAM404 Apply artificial intelligence in game development.

Assessment Requirements for ICTGAM423 Apply artificial intelligence in game development

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- identify and analyse at least two artificial intelligence (AI) strategies applicable to a game development brief
- design a feasible AI game strategy
- implement at least two path finding algorithms and at least two non-player character AI strategies in a game.

In the course of the above, the candidate must:

- review and evaluate AI strategies
- comply with industry standards, client brief and game requirements.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- basic path-finding algorithms implications on game development
- major AI terms used in the game industry
- the development process of creating AI strategies in non-player characters (NPCs) in a game
- applying object-oriented programming practices
- overall architecture of a game engine
- game development testing processes
- industry standards applicable to game development.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- the internet
- research tools
- required hardware, software and its component
- path-finding libraries
- game development testing tools
- development tools to implement AI strategies
- game design specifications and documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTGAM424 Develop story and content in digital games

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to identify and develop storylines, write plot synopses and background stories and develop story components for interactive digital games.

It applies to individuals who are game concept developers, script writers, storyboard artists, game designers, technical designers and other IT professionals working in the game development environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Game development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify and develop storylines with game potential	1.1 Identify potential storylines in game development and applicable industry standards and regulations 1.2 Discuss, modify and enhance storylines with required personnel according to game environment 1.3 Determine applicable game genre 1.4 Establish and document draft storyline according to game requirements 1.5 Confirm storyline complies with copyright and intellectual property protection regulations
2. Write plot synopsis and	2.1 Determine and create character profiles

ELEMENT	PERFORMANCE CRITERIA
background story	2.2 Develop environment profiles consistent with storyline 2.3 Develop and document background story and initial plot profile 2.4 Write and develop plot synopsis and options and link to specific game levels
3. Develop story components	3.1 Source initial concept artwork according to game environment and specifications 3.2 Develop level specifications and storylines 3.3 Initiate development of storyboards showing plot development, cinematic and level outlines according to organisational procedures
4. Finalise story components and obtain sign-off	4.1 Seek and respond to feedback on story and concept with required personnel and apply required changes 4.2 Finalise story concept, profiles and other specifications according to organisational procedures and game requirements 4.3 Obtain sign-off from required personnel and confirm inclusion of final story components in game design brief

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Oral communication	<ul style="list-style-type: none"> Obtains views, information and feedback and presents concepts and storyline using listening, open questioning and other communication techniques
Reading	<ul style="list-style-type: none"> Identifies and evaluates a variety of texts in aiding concept development
Writing	<ul style="list-style-type: none"> Develops storylines and plot synopses using appropriate layout and required descriptive language in a cohesive and well-structured manner
Initiative and enterprise	<ul style="list-style-type: none"> Uses creativity and initiative in the story and visual design
Self-management	<ul style="list-style-type: none"> Identifies and complies with industry and regulatory requirements Makes routine decisions and implements standard procedures in routine tasks Uses formal decision-making processes in more complex and

SKILL	DESCRIPTION
	non-routine situations
Technology	<ul style="list-style-type: none">Conducts research, designs work processes and completes work tasks using information and communications technology (ICT) based tools

Unit Mapping Information

Supersedes and is equivalent to ICTGAM405 Write story and content for digital games.

Assessment Requirements for ICTGAM424 Develop story and content in digital games

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop at least one game storyline according to industry standards.

In the course of the above, the candidate must:

- create character profiles according to game environment and storyline
- write plot synopsis with a supporting background story
- create a storyboard
- comply with copyright and intellectual property protection regulations.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- budgeting and scheduling considerations in game development
- copyright and intellectual property protection regulations applicable to written narrative and concept graphics
- different story requirements in particular game genres
- role of story writing in game development
- research methods used in observing latest changes and narrative development in games
- tools and techniques used in developing game narrative
- organisational procedures that may be used in the development of story and content in digital games.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a range of industry standard games across all platforms and genres
- a range of industry standard consoles and hand-held game devices
- the internet
- word processing software
- industry standard game development software
- required hardware, software and games engine
- file storage and version control environment
- copyright and intellectual property legislation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTGAM425 Create visual design components in interactive games

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to create visual design components for games and interactive media using industry standard authoring tools.

It applies to individuals who contribute and support the design, development and programming of digital games as part of a larger development team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Game development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify industry standard visual design components in games and interactive media	1.1 Obtain project brief and documents and standards applicable to creating visual design components 1.2 Research and identify features of visual design components in games and interactive media 1.3 Discuss design considerations made in interactive visual design components with required personnel

ELEMENT	PERFORMANCE CRITERIA
2. Identify, select and use graphics software packages in creating visual design components	<ul style="list-style-type: none">2.1 Identify and review range of industry-standard graphics software available2.2 Assess software applicable to visual design component requirements2.3 Discuss technical specifications applicable to rendering and editing processes with required personnel2.4 Select graphics software package according to project brief and visual design component requirements2.5 Run graphics software and become familiar with interface2.6 Create and name new files and organise a file structure according to organisational procedures2.7 Learn tools and features within graphics software package used in creating visual design components
3. Create visual design components for games and interactive media	<ul style="list-style-type: none">3.1 Design a basic graphical user interface (GUI) according to game and interactive media requirements3.2 Identify and describe interaction processes of GUI elements3.3 Document design and programming requirements needed in GUI implementation3.4 Create visual design components for use in GUI using graphics software
4. Evaluate implementation	<ul style="list-style-type: none">4.1 Present and demonstrate visual design component to required personnel4.2 Assess and evaluate usability of design components and confirm project brief and requirements have been fulfilled4.3 Seek feedback from required personnel and identify changes in improving visual design and interactivity of components4.4 Apply changes to visual design components as required and obtain final sign-off

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none"> Identifies, investigates and applies information from a variety of texts containing highly technical language and expands own knowledge of chosen graphics software programs
Numeracy	<ul style="list-style-type: none"> Uses whole numbers, decimals and percentages applicable to measurement, font size, scale, ratio, coordinates, colour, shading and other attributes and variables in developing design specifications and GUI components
Oral communication	<ul style="list-style-type: none"> Uses listening and questioning techniques and effective mode of communication to articulate complex concepts and present design using industry language for intended audience
Reading	<ul style="list-style-type: none"> Identifies and interprets a range of documents containing complex terminology, and applies the information in selecting software and designing the GUI Interprets and comprehends diagrams, icons, symbols, text, numbers and letters necessary to design a GUI
Writing	<ul style="list-style-type: none"> Prepares documentation detailing GUI design and programming requirements using comprehensive structure, layout and complex industry language
Teamwork	<ul style="list-style-type: none"> Cooperates with others as part of routine activities applicable to gaming design concepts
Initiative and enterprise	<ul style="list-style-type: none"> Uses a high level of creativity, innovation and initiative in interactive game design
Planning and organising	<ul style="list-style-type: none"> Plans, organises and completes work according to defined requirements and schedules Takes responsibility in making decisions and task sequencing
Self-management	<ul style="list-style-type: none"> Makes decisions and implements procedures in both routine and non-routine tasks using formal decision-making processes Identifies importance of secure information applicable to own work and takes responsibility for data structure, format and management
Technology	<ul style="list-style-type: none"> Completes tasks using digital systems and tools

Unit Mapping Information

Assessment Requirements for ICTGAM425 Create visual design components in interactive games

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design, implement and evaluate a graphical user interface (GUI) with basic functionalities according to game and interactive media requirements.

In the course of the above, the candidate must:

- align visual design components to design brief requirements
- evaluate and select a graphics software package
- develop concept art and design specifications for splash screens, start screens and game field screens according to design brief
- create at least three visual design components and incorporate into GUI
- implement game development and production strategies
- develop technical specifications applicable to visual design components and overall usability.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- GUI design principles and related programming techniques
- human resources required in process of creating visual design components
- technology requirements and technical constraints they impose on design and development
- techniques in applying concept development skills and concept visualisation skills
- organisational procedures and documentation processes that may be used in creating visual design components in interactive games
- standards applicable to creating visual design components.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a design brief
- required hardware, software and peripheral devices applicable in games development
- games engine
- the internet
- industry standard graphics software and included tools and features
- file storage
- word processing software.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTGAM426 Write narrative scripts for interactive games

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to develop, write and test scripts and related content for interactive games.

It applies to individuals who contribute and support the design, development, and programming of digital games as part of a larger development team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Game development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify and develop story and script components	<ul style="list-style-type: none">1.1 Identify and confirm game genre and story components with required personnel1.2 Discuss and propose creative script concepts and ideas1.3 Develop a script structure consistent with game genre and game design brief1.4 Develop script components in the main plot, background stories and level and mission stories according to game genre and game design brief

ELEMENT	PERFORMANCE CRITERIA
2. Write a draft script	2.1 Write a script synopsis according to game design brief 2.2 Write a draft script and include main characters and their interactions, background stories and level and mission stories, according to design brief, game structure and genre 2.3 Develop character and narrator dialogue 2.4 Initiate storyboards for draft scripts in required format
3. Review script according to feedback	3.1 Present synopsis and storyboards to required personnel and seek feedback 3.2 Collate and respond to comments and feedback 3.3 Revise scripts and storyboards according to feedback 3.4 Undertake focus testing with intended audience
4. Write final script	4.1 Collate and respond to comments and feedback from focus testing 4.2 Review and rewrite script synopsis, script and dialogue where required 4.3 Initiate revised storyboards where required 4.4 Present final script in agreed format to required personnel and obtain sign-off

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Oral communication	<ul style="list-style-type: none"> Uses listening and questioning techniques and effective mode of communication to articulate complex concepts and requirements using industry language for intended audience Presents script using persuasive presentation techniques, plain English (translating games specific terminology where required)
Reading	<ul style="list-style-type: none"> Interprets and comprehends a range organisational and client documentation and identifies aim of proposed games Reviews feedback containing a wide range of vocabulary and terminology ranging from simple to highly technical depending on source of feedback
Writing	<ul style="list-style-type: none"> Creates a cohesive and well-structured game script, plot, characters, environment and elements using required spelling and grammar, together with descriptive language
Teamwork	<ul style="list-style-type: none"> Cooperates with others as part of routine activities through the

SKILL	DESCRIPTION
	explanation and testing of gaming scripts
Initiative and enterprise	<ul style="list-style-type: none">• Uses a high level of creativity and initiative in writing scripts
Planning and organising	<ul style="list-style-type: none">• Plans, organises and completes work according to defined requirements and schedules
Self-management	<ul style="list-style-type: none">• Makes decisions and implements procedures in routine and non-routine tasks using formal decision-making processes• Identifies importance of secure information applicable to own work and takes responsibility in data management
Technology	<ul style="list-style-type: none">• Writes, sources and analyses information using information and communications technology (ICT) based tools

Unit Mapping Information

Supersedes and is equivalent to ICTGAM407 Write scripts for interactive games.

Assessment Requirements for ICTGAM426 Write narrative scripts for interactive games

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- write a script according to game design brief and client requirements.

In the course of the above, the candidate must:

- identify key components of the story
- develop script structure and components
- communicate and liaise script review with required personnel
- prepare a final script and present to required personnel
- follow organisational procedures applicable to script writing and development process
- comply with copyright and intellectual property standards and legislation.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- budgeting and scheduling considerations in game development
- components that drive script narrative and engage target audiences
- the contribution of script writing to narrative development and engaging game play
- focus testing processes and procedures
- game genres and narrative structures
- industry standard game script formats
- research methods in:
 - competitors' work in developing stories and scripts in games
 - factual information as a basis for character, location and narrative development
 - owners of copyright and intellectual property used in game development
 - script structures and character profiling in interactive games

- scriptwriting techniques and interactive game requirements
- seeking permission from copyright owners for use of protected elements in scripts
- different storyboarding techniques
- copyright and intellectual property standards and legislation
- organisational procedures that may be used to write scripts for interactive games.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- scriptwriting reference materials
- game design brief
- the internet
- a range of industry standard interactive games across all platforms and genres
- a range of industry standard games consoles and hand-held game devices
- required hardware, software and peripheral devices
- file storage
- games engine.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTGAM427 Use 3-D software interface and toolsets

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to investigate, customise and use 3-D animation software interfaces and toolsets.

It applies to individuals who support the design, development and programming of basic digital games as part of a larger development team and gaming environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Game development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Locate and identify 3-D software navigation controls	<ul style="list-style-type: none">1.1 Research and evaluate a range of industry standard 3-D modelling and animation software1.2 Identify task requirements and select 3-D modelling and animation software applicable to task1.3 Identify a range of 3-D navigation types, including panning, zooming and rotating around viewport, on chosen 3-D modelling and animation software1.4 Identify processes of improving user performance including navigation, keyboard hotkeys and input procedures

ELEMENT	PERFORMANCE CRITERIA
2. Locate and identify 3-D animation toolsets and select required menu categories	2.1 Identify toolsets of industry standard 3-D animation software 2.2 Identify and analyse 3-D software menus and specific category types 2.3 Define and use 3-D software-specific transformation types and toolset types 2.4 Associate menu categories as required according to task requirements 2.5 Consult with required personnel and perform software interaction using application hotkeys
3. Initiate and use software-support materials and customise application interface	3.1 Identify and research range of reference material available in creating 3-D animation and digital effects 3.2 Present reference material required in 3-D animation process to required personnel and team members 3.3 Identify and access animation software support procedures, documents and help files, through hotkey and application menus 3.4 Consult with required personnel and use applicable support materials
4. Identify and plan 3-D application import and export procedures and use application feedback	4.1 Discuss application file-management procedure types with required personnel, including opening, importing, saving and exporting 4.2 Discuss and use application project configuration procedures with required personnel 4.3 Prepare and create projects as required 4.4 Discuss user application feedback with required personnel 4.5 Troubleshoot error scenarios as required using application feedback 4.6 Use feedback with inbuilt support documentation as required
5. Customise application interface	5.1 Identify variation of user interface windows and panels configurations 5.2 Use custom interface according to toolset procedural needs and task requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none">• Uses whole numbers, decimals and percentages applicable to measurement, font size, scale, ratio, coordinates, colour, shading and other attributes and variables in developing animations
Oral communication	<ul style="list-style-type: none">• Uses effective listening, questioning and summarising techniques to obtain and present information and solutions using industry language for intended audience
Reading	<ul style="list-style-type: none">• Identifies and interprets information from texts containing complex terminology, acronyms and jargon• Interprets and comprehends generated text, diagrams, icons, symbols, numbers and letters required in using 3-D animation software
Teamwork	<ul style="list-style-type: none">• Cooperates and collaborates with others as part of routine activities and elicits support
Self-management	<ul style="list-style-type: none">• Makes routine decisions and implements standard procedures in routine tasks• Uses formal decision making processes in more broad and non-routine situations
Technology	<ul style="list-style-type: none">• Completes routine tasks using digital systems and tools

Unit Mapping Information

Supersedes and is equivalent to ICTGAM408 Use 3-D animation interface and toolsets.

Assessment Requirements for ICTGAM427 Use 3-D software interface and toolsets

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- interact and navigate with at least one 3-D application interface and its toolsets.

In the course of the above, the candidate must:

- manage files to protocols
- execute and use 3-D application native support
- use 3-D application user feedback
- configure custom panels and window configurations.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- 3-D animation production protocols
- industry standard 3-D modelling and animation software
- contents and application of production brief
- development process that may be used in 3-D software interface and toolsets
- protocols in filing media assets
- file management procedures and project configuration procedures that may be used in 3-D software interface and toolsets
- fundamental research principles procedures that may be used in 3-D software interface and toolsets
- principles of design and colour used in 3-D animation and digital effects environments
- procedures for producing a storyboard and script
- technical constraints that hardware and software impose on graphics requirements and creative visual design.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- reference materials applicable to creating 3-D animation and digital effects
- required hardware and software and peripheral devices
- games engine
- file storage
- required 3-D modelling and animation software.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTGAM428 Create 3-D characters for interactive games

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to design and build 3-D characters for commercial interactive games.

It applies to individuals who support the design, development and implementation of the 3D characters of digital games, as part of a larger development team and gaming environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Game development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify and discuss character requirements and designs	1.1 Identify client and character requirements and environment and context of interactive game 1.2 Discuss and determine style of characters with required personnel according to client requirements 1.3 Determine and agree on character type, role, name and profile 1.4 Discuss and determine character animations required in game systems implementation 1.5 Compare animations with analysis criteria, game and client requirements
2. Design characters	2.1 Design and develop a concept character illustration according to organisational procedures and client

	<p>requirements</p> <p>2.2 Conduct focus testing of concept illustration with required personnel and representatives of target market audience</p> <p>2.3 Develop character schematics with feedback incorporated and submit to required personnel for approval</p>
3. Develop character models	<p>3.1 Construct a 3-D character model according to character schematics and task requirements</p> <p>3.2 Construct 3-D costumes, tools and accessories as required by character model</p> <p>3.3 Shade, texture and light the completed character model</p> <p>3.4 Implement joints, vertex weighting and character rig to 3-D character model</p> <p>3.5 Develop animation blocking and in-betweens in consultation with animation personnel and seek their approval</p> <p>3.6 Compare 3-D models and animations with original concept illustration and confirm quality and conformity to brief</p> <p>3.7 Submit to required personnel and obtain approval</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Numeracy	<ul style="list-style-type: none"> Uses whole numbers, decimals and percentages applicable to measurement, font size, scale, ratio, coordinates, colour, shading and other attributes and variables, in developing animations
Oral communication	<ul style="list-style-type: none"> Uses listening and questioning techniques to obtain information and present ideas and solutions using industry language for intended audience
Reading	<ul style="list-style-type: none"> Identifies and interprets design briefs and related technical documentation, containing complex animation-specific terminology and acronyms Interprets and comprehends computer-generated text, diagrams, icons, symbols, numbers and letters required in using 3-D animation software
Writing	<ul style="list-style-type: none"> Uses simple and cohesive English when developing focus testing documentation

Skill	Description
Teamwork	<ul style="list-style-type: none">Cooperates with others as part of familiar routine activities and confirms agreement
Initiative and enterprise	<ul style="list-style-type: none">Uses creativity and initiative in character design
Planning and organising	<ul style="list-style-type: none">Plans, organises and completes work according to defined requirements and schedules
Self-management	<ul style="list-style-type: none">Makes decisions and implements procedures in both routine and non-routine tasks, using formal decision-making processes
Technology	<ul style="list-style-type: none">Completes required tasks using digital systems and tools

Unit Mapping Information

Supersedes and is equivalent to ICTGAM409 Create 3-D characters for interactive games.

Assessment Requirements for ICTGAM428 Create 3-D characters for interactive games

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design and develop at least three game characters using 2-D and 3-D software applications.

In the course of the above, the candidate must:

- comply with games design brief and client requirements
- follow organisational procedures
- test and seek feedback to character designs with intended audiences and act accordingly.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- features of 3-D software packages used to create 3-D character models in games
- industry standard game design briefs
- different character styles and animations
- 3-D character modelling methods, within the technical parameters and constraints of game development
- technical limitations of creating 3-D character models in games
- organisational procedures that maybe used to create 3-D character for interactive games.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required hardware and software
- games engine
- file storage
- character reference materials including models, illustrations, art and design books and character photographs
- a range of industry standard games, across all platforms and genres
- a range of industry standard consoles and hand-held game devices.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTGAM429 Develop 3-D components for interactive games

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to design and to create, 3-D components within a game environment.

It applies to individuals who support the design, development and programming of basic digital games as part of a larger development team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Game development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify and confirm 3-D component requirements within game context	<ul style="list-style-type: none">1.1 Obtain game design document and identify definition and purpose of 3-D components, with examples1.2 Identify context of 3-D component design according to game design document1.3 Create a list of required 3-D components1.4 Establish methods of 3-D component loading and usage1.5 Identify quality assurance standards, evaluation methods and organisational procedures applicable in developing 3-D components

ELEMENT	PERFORMANCE CRITERIA
2. Establish content creation pipeline and integration methods within game architecture	2.1 Finalise required 3-D component list 2.2 Discuss 3-D component formats, file extensions and ramifications of choice with required personnel 2.3 Discuss and select hardware and software required in creating 3-D components and assets 2.4 Discuss methods of naming 3-D components and assets and file archiving 2.5 Establish schedule and deadlines in 3-D component creation process
3. Create, integrate and test required 3-D components	3.1 Create required 3-D components and assets according to organisational procedures and client requirements 3.2 Name 3-D components and assets according to methodology discussed 3.3 Confirm 3-D components and assets are in required format and file extensions 3.4 Test and confirm produced 3-D components meet established quality and client requirements 3.5 Seek feedback from required personnel and make changes to 3-D components and assets as required 3.6 Submit finalised assets with required archiving format outlined in the assignment brief and obtain sign-off

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Numeracy	<ul style="list-style-type: none"> Uses whole numbers, decimals and percentages applicable to file size, software and hardware specifications, measurement, font size, scale, ratio, coordinates, colour, shading and other attributes and variables in developing 3-D components and timelines Defines timeframes in accordance with schedule requirements
Oral communication	<ul style="list-style-type: none"> Obtains information and expresses ideas and solutions by employing listening and open questioning techniques using plain English and games development terminology
Reading	<ul style="list-style-type: none"> Identifies and interprets briefs and applicable technical documentation

Skill	Description
	<ul style="list-style-type: none">containing complex task-specific terminologyInterprets and comprehends computer generated text, diagrams, icons, symbols, numbers and letters required in using 3-D application software
Self-management	<ul style="list-style-type: none">Makes routine decisions and implements standard procedures in routine tasksUses formal decision-making processes in more complex and non-routine situationsEvaluates work and implements improvements using a systematic processIdentifies importance of file format and takes responsibility in data integrity and management
Technology	<ul style="list-style-type: none">Completes routine tasks using specific digital systems and tools

Unit Mapping Information

Supersedes and is equivalent to ICTGAM410 Develop 3-D components for interactive games.

Assessment Requirements for ICTGAM429 Develop 3-D components for interactive games

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- identify, design and generate at least three 3-D components.

In the course of the above, the candidate must:

- identify component integration
- establish component development pipeline
- follow game design document requirements
- use required formats and file extensions
- name and store components according to agreed methods and organisational procedures
- comply with quality assurance standards
- test and analyse component integration.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard game hardware and software products
- game-engine architecture and methods used in component importing
- 3-D components testing methods and processes
- processes and techniques applicable to:
 - the creation of 3-D objects within industry-standard modelling software
 - the use of industry formats in developing 3-D models and objects
- organisational procedures and quality assurance standards that may be used in the development of 3-D components for interactive games.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required hardware and software
- industry-standard modelling software
- client requirements documentation
- game design document
- games engine
- file storage.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTGAM430 Design interactive media

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to design and implement technologies relating to human-computer interaction.

It applies to individuals who support the design, development and programming of basic digital games as part of a larger development team and gaming environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Game development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify and research human-computer hardware interface devices, event-handling systems and graphical user interface (GUI) widget sets	1.1 Identify standard and game-specific human-computer interaction devices and controls used in their implementation 1.2 Identify and review industry-standard event-handling systems used in application libraries 1.3 Identify human-computer interaction device selection 1.4 Identify widgets and their usage within an application environment 1.5 Identify and review industry-standard

ELEMENT	PERFORMANCE CRITERIA
	<p>graphical user interface libraries and their use within game engine</p> <p>1.6 Analyse selection of widgets within a game heads-up display (HUD)</p>
2. Design a simple media software device	<p>2.1 Identify task requirements and design a prototype required in developing a custom user interface widget according to organisational procedures</p> <p>2.2 Confirm custom user interface widget can be used within a game heads up display environment</p> <p>2.3 Select GUI software required in implementation and discuss ramifications of selection with required personnel</p>
3. Build and implement a simple media software device	<p>3.1 Create and develop a custom user interface widget according to organisational procedures and task requirements</p> <p>3.2 Integrate all custom widget elements as required by prototype specifications</p> <p>3.3 Test and confirm interactive media is functional on multiple browsers and digital devices</p> <p>3.4 Perform final checks and confirm functionality conforms to original design</p> <p>3.5 Seek feedback from required personnel and incorporate changes as required</p> <p>3.6 Save into specified storage systems and locations according to organisational procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
-------	-------------

Skill	Description
Numeracy	<ul style="list-style-type: none">• Uses whole numbers, decimals and percentages applicable to file size, software and hardware specifications, measurement, font size, scale, ratio, colour, shading and other attributes and variables in developing interactive media
Oral communication	<ul style="list-style-type: none">• Obtains information and expresses ideas and solutions by employing listening and open questioning techniques using plain English and interactive media terminology
Reading	<ul style="list-style-type: none">• Identifies and evaluates online documentation containing complex technical terminology when conducting research into hardware, existing interactive media and industry standards• Interprets and comprehends computer-generated text, code, diagrams, icons, symbols, numbers and letters required in using applicable software
Writing	<ul style="list-style-type: none">• Identifies and uses technical terminology, code, syntax and labelling when conducting research and developing interactive media
Problem solving	<ul style="list-style-type: none">• Uses systematic processes in complex, non-routine situations, setting goals, gathering required information and identifies and evaluates options against agreed criteria• Uses analytical processes in deciding on a course of action, establishing criteria for deciding between options and seeking input and advice from others before taking action, when required
Self-management	<ul style="list-style-type: none">• Identifies importance of file integrity and management
Technology	<ul style="list-style-type: none">• Completes routine tasks using specific digital systems and tools

Unit Mapping Information

Supersedes and is equivalent to ICTGAM412 Design interactive media.

Assessment Requirements for ICTGAM430 Design interactive media

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- create an application, accessing and using technologies and showcasing captured events from hardware devices
- create an application using a human-computer interface devices and event-handling call-backs showcasing the captured events with GUI widgets
- design a simple application, using required hardware event handling methods, within the context of game environment
- produce a custom control.

In the course of the above, the candidate must:

- present completed project to required deadline
- comply with organisational procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- programming techniques applicable to interactive media
- specific terminology used by game developers
- hardware and software requirements in a human-computer interaction environment
- a range of human-computer interaction devices and their application
- widgets and their usage
- operations in 'heads-up' display environments
- technical constraints imposed by hardware and software on design and development
- file storage and organisational procedures that may be used in designing interactive media.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required hardware and software and peripheral devices
- human-computer hardware interface devices
- a range of event-handling systems
- the internet
- application libraries
- widgets
- graphical user interface software and libraries
- games engine
- a range of browsers and digital devices
- client requirements documentation
- file storage.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTGAM431 Design and create 3-D digital models

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to design and create 3-D models.

It applies to individuals who design, develop and use digital media technologies, working independently and as part of a larger development team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Game development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify and clarify work requirements	1.1 Identify requirements and purpose of designing and creating 3-D digital models with reference to production documentation 1.2 Clarify organisational guidelines, workflow sequences and industry standards applicable to designing and creating 3-D models 1.3 Discuss production schedule deadlines and confirm they are feasible and can be met with required personnel 1.4 Research and select software applicable to type of production and delivery platform of 3-D digital models 1.5 Gather and analyse reference materials applicable to design and visualisation of 3-D models 1.6 Identify and establish documentation requirements according to industry and organisational procedures and guidelines

2. Design 3-D digital models	<p>2.1 Design and sketch concept drafts of a 3-D model according to task requirements</p> <p>2.2 Create concept art of required 3-D models</p> <p>2.3 Create prototypes of 3-D models according to organisational guidelines and task requirements</p> <p>2.4 Discuss prototypes and seek feedback from required personnel</p> <p>2.5 Apply required changes to prototypes according to feedback</p>
3. Create 3-D digital models	<p>3.1 Confirm topology of models aligns to task requirements</p> <p>3.2 Block out models and apply shaders using software features and determine required model proportions</p> <p>3.3 Manipulate software features and apply basic lighting as required</p> <p>3.4 Refine and check integrity of models until design requirements are met</p> <p>3.5 Submit models to required personnel and seek comments and feedback on whether production requirements have been met</p>
4. Finalise 3-D digital models	<p>4.1 Respond to feedback from required personnel</p> <p>4.2 Render and output models in required format and submit them to required personnel by agreed deadlines</p> <p>4.3 Make backup copies of the files, store in required location and complete workplace documentation according to organisational procedures</p> <p>4.4 Obtain final sign off from required personnel</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Numeracy	<ul style="list-style-type: none"> Uses whole numbers, decimals and percentages applicable to file size, software and hardware specifications, measurement, scale, form, weight, volume, colour, shading and other attributes and variables in developing 3-D models
Oral communication	<ul style="list-style-type: none"> Employs listening and open-questioning techniques to clarify design requirements, project scheduling and obtain feedback
Reading	<ul style="list-style-type: none"> Identifies and evaluates documentation containing complex technical terminology when interpreting the design brief Conducts research into the design and visualisation of 3-D models Interprets and comprehends computer-generated text, diagrams, icons, symbols, numbers and letters required in using applicable

Skill	Description
	software
Planning and organising	<ul style="list-style-type: none">• Takes responsibility in planning tasks required in achieving outcomes and negotiates key aspects with others
Problem solving	<ul style="list-style-type: none">• Make decisions directly related to tasks using analytical processes
Self-management	<ul style="list-style-type: none">• Implements actions as per plan, making slight adjustments as required and addresses unexpected issues• Evaluates outcomes of design solutions and improves future responses• Selects and supports new ideas on the basis of their contribution to achievement of broader goals
Technology	<ul style="list-style-type: none">• Completes routine tasks using specific digital systems and tools• Manages and maintains files in a variety of storage media and formats

Unit Mapping Information

Supersedes and is equivalent to ICTGAM413 Design and create 3-D digital models.

Assessment Requirements for ICTGAM431 Design and create 3-D digital models

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design, create and store at least two 3-D digital models according to work, design and production requirements.

In the course of the above, the candidate must:

- communicate with required personnel and clarify initial requirements including deadlines
- modify and amend 3-D models in response to feedback from required personnel
- comply with organisational guidelines and industry standards applicable to designing and creating 3-D models.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- 3-D digital modelling and design principles
- stages in model production process, from initial design through to finished product
- issues and challenges arising from designing and creating 3-D digital models
- roles and responsibilities of project team members in developing digital models
- features of a range of delivery platforms
- geometry as it applies to the design and creation of realistic 3-D digital models
- use of scale, form, weight and volume in the development of 3-D digital models
- organisational guidelines and procedures
- industry standards applicable to designing and creating 3-D models
- range of industry standard 3-D modelling software.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required hardware and software
- required industry standard 3-D modelling software and features
- a range of industry standard delivery platforms
- client specification documentation
- reference materials applicable to design and visualisation of 3-D models
- file storage
- 3-D product modelling software and delivery platforms.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTGAM432 Create audio for digital games

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to produce and manipulate audio assets for digital games, using a variety of tools.

It applies to individuals who support the design, development and programming of basic digital games as part of a larger development team in a game development environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Game development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Research and document game audio in digital games	<ul style="list-style-type: none">1.1 Identify and document trends and evaluate their impact on the future of game audio1.2 Identify and document different methods of using audio in digital games1.3 Identify and document role of music in creating mood and atmosphere1.4 Determine and document how sound effects and vocals are used within digital games

ELEMENT	PERFORMANCE CRITERIA
2. Source existing sound effects, music tracks and voice recordings	2.1 Find sources of sound effects, music tracks and voice recordings 2.2 Create and maintain a small collection of audio assets 2.3 Identify different audio formats in audio asset collection 2.4 Differentiate between compressed and uncompressed audio formats 2.5 Identify different genres of music required for digital games 2.6 Identify audio copyright laws and royalty-free audio
3. Record and manipulate game audio	3.1 Identify game context and establish client requirements for game audio 3.2 Evaluate a range of industry standard audio-editing software and select software applicable to game audio requirements 3.3 Record character voices, music and sound effects according to game audio requirements 3.4 Develop a soundtrack using audio-editing, according to game and client requirements 3.5 Rearrange audio samples using audio-editing software and apply required audio effects 3.6 Select required sample format and bit rate 3.7 Normalise audio samples and make volume uniform 3.8 Trim audio samples according to task requirements 3.9 Export audio to required format
4. Create sound effects and music for a game	4.1 Evaluate a range of music production software and select software applicable to game and audio requirements 4.2 Identify digital sound waveforms 4.2 Apply basic music theory to music production software 4.3 Determine required musical notation 4.4 Identify and use musical tools within music production software 4.5 Compose a simple piece of music according to game audio requirements 4.6 Create various sound effects according to

ELEMENT	PERFORMANCE CRITERIA
	game audio requirements
5. Research audio-programming libraries and integrate sound, music and vocals into digital games	5.1 Identify and compare functional capabilities of a range of industry standard audio-programming libraries 5.2 Explore use of channels and mixing 5.3 Play a mixture of cached and streaming audio sources 5.4 Incorporate music and sound effects into different sections of digital game according to game requirements 5.5 Locate and play positional audio sources 5.6 Present to required personnel and confirm audio integration fulfils client and game requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Numeracy	<ul style="list-style-type: none"> Uses whole numbers, decimals and percentages applicable to file size, software and hardware specifications, measurement, pitch, speed, tempo, time, frequency, amplification and other attributes and variables in developing audio
Oral communication	<ul style="list-style-type: none"> Uses listening and questioning techniques to gather information and requirements using industry language for intended audience
Reading	<ul style="list-style-type: none"> Identifies and evaluates documentation containing complex technical and audio terminology Researches use of audio in games and identifies required hardware, software and assets Interprets and comprehends computer-generated text, audio tracks, abbreviations, symbols, icons, numbers and letters required in using audio-editing software
Writing	<ul style="list-style-type: none"> Prepares documentation detailing research and sound effects

Skill	Description
	according to organisational requirements
Planning and organising	<ul style="list-style-type: none">Plans, organises and implements tasks required and achieves required outcomes
Self-management	<ul style="list-style-type: none">Takes personal responsibility and adheres to legal and regulatory responsibilities applicable to own work context and copyright lawsImplements actions as per plan, making slight adjustments as requiredIdentifies new ideas and adapts existing ideas to applicable context using exploration, analytical and lateral thinking
Technology	<ul style="list-style-type: none">Creates and saves files in required formats using digital systems and tools

Unit Mapping Information

Supersedes and is equivalent to ICTGAM414 Create audio for digital games.

Assessment Requirements for ICTGAM432 Create audio for digital games

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- source and analyse at least three audio resources from at least three different music genres
- record and manipulate at least three different pieces of audio
- generate at least three sound effects
- compose at least one simple music tracks
- integrate at least one simple music track and at least three different sound effects into a digital game.

In the course of the above, the candidate must:

- create audio according to game context and game environment
- evaluate, select and use audio programming libraries
- comply with copyright legislation and applicable industry standards.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard audio-editing software, music production software and tools
- different audio formats and their application to games
- capabilities of audio-programming libraries
- basic music theory relevant to audio recording for digital game development
- copyright legislation and industry standards applicable to audio recordings
- music-creation tools and their relation to music theory.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required hardware, software and peripheral devices
- specifications documentation detailing game context and environment
- digital audio editing software
- music production software
- audio-programming libraries
- games engine
- file storage
- the internet
- a range of digital games
- copyright and intellectual property legislation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTGAM433 Prepare and complete image rendering processes

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to select applicable rendering software packages and prepare and optimise rendering for 3-D modelling, animation and game development.

It applies to individuals who support the design, development and programming of basic digital games as part of a larger development team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Game development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify and analyse rendering requirements and select rendering software	<ul style="list-style-type: none">1.1 Identify project requirements and applicable equipment and media1.2 Identify and evaluate features of rendering software packages used in the film and games industries1.3 Analyse design brief and other reference sources and plan and determine rendering requirements1.4 Select rendering software according to timeframe and budget requirements1.5 Confirm selection according to brief, system limitations and requirements

ELEMENT	PERFORMANCE CRITERIA
2. Prepare rendering software and check render integrity and quality	2.1 Select and apply required image resolutions, image aspect ratio and pixel ratio according to project requirements 2.2 Adjust renderer attributes and obtain required anti-aliasing and other visual effects 2.3 Refine render integrity 2.4 Re-link any missing images and textures 2.5 Test render times for optimising process 2.6 Determine alpha channels and opacity matts 2.7 Identify render layers and passes
3. Optimise images prior to render processes	3.1 Complete pre-rendering optimisation tasks 3.2 Adjust and refine renderer attributes required in optimising render times 3.3 Select required file output format according to project brief 3.4 Identify and determine applicable filenames and output destinations according to organisational procedures
4. Render images and save files according to organisational procedures	4.1 Test and perform rendering processes according to project brief 4.2 Seek feedback from required personnel on rendered images, and amend accordingly 4.3 Store and archive files according to organisational procedures 4.4 Review completed render and confirm compliance with system and brief 4.5 Confirm final rendered image with required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Numeracy	<ul style="list-style-type: none"> Uses whole numbers, decimals and percentages applicable to measurement, resolution aspect ratio, pixel ratio, scale, coordinates, colour, shading and other attributes and variables in rendering processes Interprets numerical information and applies basic mathematical

Skill	Description
	calculations applicable to timelines and budgetary information
Oral communication	<ul style="list-style-type: none"> Uses listening and questioning techniques to obtain information about design brief, system limitations, software capabilities and requirements Presents rendering outcomes using industry-specific terminology
Reading	<ul style="list-style-type: none"> Interprets a design brief containing complex games-design terminology Interprets and comprehends a large range of diagrams, icons, symbols, text and letters required in using complex rendering software
Teamwork	<ul style="list-style-type: none"> Collaborates with others as required and confirms required rendering output
Self-management	<ul style="list-style-type: none"> Applies formal processes when planning rendering requirements, producing plans with logically sequenced steps with awareness of time and resource constraints Implements actions as per plans, making slight adjustments as required Recognises and takes responsibility in addressing predictable and some less predictable problems in familiar work contexts Identifies key principles and concepts underpinning design and operation of digital systems and tools
Technology	<ul style="list-style-type: none"> Manages and maintains files securely in a variety of storage media and formats

Unit Mapping Information

Supersedes and is equivalent to ICTGAM416 Prepare and complete image rendering processes.

Assessment Requirements for ICTGAM433 Prepare and complete image rendering processes

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- optimise and render at least three images using required rendering software, according to design brief.

In the course of the above, the candidate must:

- use and optimise rendering software components
- adhere to requirements related to file sizes and formats
- store rendered components according to requirements.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- software features used for:
 - 3-D animation
 - 3-D modelling
 - lighting
 - rendering
 - shading
 - texturing
- file format and size requirements
- system requirements
- industry standard rendering software packages
- pre-rendering optimisation techniques
- why rendering is required in 3-D modelling, animation and game development
- organisational procedures.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required hardware, software and peripheral devices
- graphic rendering software packages
- input and output devices
- models and scenes requiring rendering
- style shots
- file storage
- project and design briefs, specifications and schedules.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTGAM532 Create design concepts for digital games and 3-D media

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to work innovatively in game development, using thoughtful strategies and well-developed technical skills to accommodate specified design briefs.

It applies to those who support the design, development and programming of interactive 3-D media and digital games as part of a larger development team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Game development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify and analyse digital games and 3-D media design concepts	1.1 Obtain project brief and other applicable organisational documents and procedures 1.2 Research and identify design concepts in digital games and interactive 3-D media 1.3 Analyse and interpret design concepts used in digital games and interactive 3-D media 1.4 Discuss design considerations for designing digital games and interactive 3-D media concepts
2. Evaluate and select software packages	2.1 Identify and review applicable industry-standard software available for developing design concepts

ELEMENT	PERFORMANCE CRITERIA
	2.2 Assess software according to concept design process requirements 2.3 Discuss technical specifications for development process with required personnel 2.4 Select software package according to concept design requirements
3. Use chosen software package	3.1 Run selected software package and navigate user interface according to vendor requirements 3.2 Create new files and organise and develop file structure 3.3 Identify and use tools and components required to create and develop digital games and interactive 3-D media concepts
4. Create concept components for digital game or interactive media	4.1 Identify specific processes for heads-up display elements 4.2 Design heads-up display for a digital game or 3-D interactive media 4.3 Document design and programming processes and requirements applicable to implementing heads-up display according to organisational procedures 4.4 Create and develop visual design elements and components to be used for heads-up display using chosen software package
5. Implement a design concept into a game or 3-D interactive media and evaluate implementation	5.1 Load in required images and write code to implement heads-up display into an existing framework 5.2 Write code and demonstrate heads-up display capabilities with implemented concepts 5.3 Demonstrate implementation to required personnel 5.4 Seek feedback and assess and refine concept as required 5.5 Evaluate usability of concept's components 5.6 Identify and discuss possible changes to improve visual design and capabilities of components and share findings with required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Learning	<ul style="list-style-type: none"> Acquires knowledge needed to use tools and other components for digital games and 3-D media production using a range of investigative and analysis techniques
Reading	<ul style="list-style-type: none"> Interprets and comprehends a large range of textual and diagrammatic information to inform instructional, technical, and conceptual requirements
Oral Communication	<ul style="list-style-type: none"> Elicits information using listening and open questioning techniques Speaks clearly and concisely, converting highly technical language and terminology into plain English when providing information
Numeracy	<ul style="list-style-type: none"> Uses whole numbers, decimals and percentages, when manipulating software to achieve required technical and design components
Teamwork	<ul style="list-style-type: none"> Cooperates and collaborates with others as part of routine activities and elicits support and feedback
Initiative and enterprise	<ul style="list-style-type: none"> Uses creativity and initiative in 3-D design
Self-management	<ul style="list-style-type: none"> Plans, organises and completes work according to defined requirements and schedules, taking responsibility for decisions, and sequencing tasks to achieve required outcomes Sources, analyses and evaluates applications with potential to meet 3-D design requirements Evaluates work and implements improvements using a systematic process
Technology	<ul style="list-style-type: none"> Defines purpose and uses key features of specific digital systems and tools and operates them to complete design tasks Identifies importance of file structure and takes responsibility for data integrity and management

Unit Mapping Information

Supersedes and is equivalent to ICTGAM501 Create design concepts for digital games and 3-D media.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTGAM532 Create design concepts for digital games and 3-D media

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop concept art and design specifications consistent with an identified game genre for at least one of each of the following:
 - heads-up display
 - splash screen
 - start screen
 - game field screen
- implement a working heads-up display with at least three basic functionalities.

In the course of the above, the candidate must:

- demonstrate original and innovative approaches to the creative development of a game
- implement game development and production strategies
- maintain integrity of design brief
- develop technical specifications for game mechanics, artificial intelligence, physics, sound, game play and overall usability
- confirm design concepts are functional on at least two different browsers and at least two different devices
- evaluate different controller designs required according to different devices digital games and 3-D media.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- basic programming techniques and language
- industry-standard software applicable to developing design concepts

- capabilities and constraints of game engines
- concept development process and visualisation skills
- game development process, including specific terminology
- key features of game-play hardware and software products
- human resources required in the process of creating games and their respective skills and technology requirements
- work health and safety (WHS) requirements relating to:
 - ergonomics
 - electrical safety
- risk and critical path management techniques
- technical constraints that hardware imposes on:
 - software development
 - graphics requirements
 - code development
 - creative visual design
- organisational procedures applicable to documenting and creating design concepts.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- hardware and software applicable to creating design concepts for digital games and 3-D media
- games engine
- file storage
- browsers and digital devices
- the internet
- organisational procedures applicable to documenting and creating design concepts.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTGAM533 Create complex 3-D interactive games

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to use original and innovative ideas and industry-standard production techniques, to create functional games according to specific design briefs.

It applies to those who support the design, development and programming of interactive 3-D media, and digital games as part of a larger development team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Game development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to create game	1.1 Obtain project brief and other required documents and organisational procedures 1.2 Identify game production assets required to meet creative and production requirements and technical specifications 1.3 Discuss formats of assets and issues of asset integration with required personnel 1.4 Determine sequence for development of beta-version prototype for testing game play 1.5 Create schedule for production and testing 1.6 Determine strategies for monitoring production progress against schedule

ELEMENT	PERFORMANCE CRITERIA
2. Evaluate capability of game-engine software and tools	2.1 Identify and review range of industry-standard game-engine software and development tools available 2.2 Assess software and tools related to specified game concept and play requirements 2.3 Discuss considerations for selection of game-engine software with required personnel and confirm selection will meet specified outcomes 2.4 Select game-engine software and development tools
3. Prepare required assets for a game	3.1 Establish environment for project that supports sharing of project assets produced by team members 3.2 Review attributes of assets required in a game project related to game engine 3.3 Create or acquire visual assets for a games project 3.4 Customise asset attributes according to game design and chosen game engine
4. Use game-engine software and development tools	4.1 Create, modify or access scripts or code and combine assets 4.2 Create and check game-play elements according to creative and technical requirements 4.3 Test and run game prototype as a presentation and confirm sequences meet creative, production and technical requirements
5. Evaluate game prototype	5.1 Demonstrate initial prototype to required personnel and seek feedback 5.2 Evaluate prototype against criteria including achievement of a creative and user-friendly product 5.3 Discuss and agree on required changes 5.4 Assist if required in tests and user trials 5.5 Evaluate feedback from user trials 5.6 Confirm endorsement from required personnel and develop prototype into a complete product
6. Transform prototype into final publication	6.1 Make required changes as indicated by user trials 6.2 Integrate all game elements as required by specifications 6.3 Make final checks and confirm sequences conform to navigation design 6.4 Obtain final sign-off from required personnel 6.5 Assemble final publication for distribution according to organisational procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Interprets and comprehends a large range of textual and diagrammatic information, to inform instructional, technical and conceptual requirements
Oral Communication	<ul style="list-style-type: none"> Uses listening and open questioning techniques to obtain required information and concepts using appropriate industry language for intended audience
Numeracy	<ul style="list-style-type: none"> Uses whole numbers, decimals and percentages when manipulating software according to technical and design component requirements Defines timeframes according to schedule requirements
Teamwork	<ul style="list-style-type: none"> Cooperates and collaborates with others as part of routine activities to achieve team results, and to confirm that outcomes meet requirements
Initiative and enterprise	<ul style="list-style-type: none"> Uses creativity and initiative in game design
Planning and organising	<ul style="list-style-type: none"> Plans, organises, and completes work according to defined requirements and schedules, taking responsibility for decisions, and sequencing tasks to achieve efficient outcomes Plans, organises, and completes work according to defined requirements and schedules, taking responsibility for decisions and sequencing tasks
Self-management	<ul style="list-style-type: none"> Sources, analyses and evaluates applications, tools and assets for their potential to meet creative requirements Uses a systematic process to evaluate work and to implement improvements
Technology	<ul style="list-style-type: none"> Identifies purposes, and uses key features, of specific digital systems and tools, and operates them in order to complete design tasks

Unit Mapping Information

Supersedes and is equivalent to ICTGAM503 Create a complex 3-D interactive computer game.

Assessment Requirements for ICTGAM533 Create complex 3-D interactive games

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- create a complex 3-D interactive game according to a design brief, on at least one occasion.

In the course of the above, the candidate must:

- apply a variety of strategies for game trialling and testing
- apply original and innovative approaches to creative development of a 3-D game
- collaborate in use of tools and features of software applicable to game-production process
- implement game development and production strategies
- maintain integrity of the design brief and game design document
- communicate, collaborate and participate in a team environment
- compare different controller designs required according to different devices
- confirm functionality on at least two different browsers and at least two different digital devices.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- basic programming techniques and language
- capabilities and constraints of game engines
- processes used for games development, including specific terminology
- production and testing scheduling techniques
- key features of game-play hardware and software products
- risk and critical path management techniques
- technical constraints that hardware imposes on:

- graphics requirements
- code development
- creative visual design
- creative, production and technical requirements of creating 3-D games
- asset formats and issues of game asset integration.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- hardware and software applicable to creating 3-D interactive games
- project brief
- games engine
- browsers and digital devices
- file storage
- the internet.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTGAM534 Manage interactive media productions

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to prepare, manage and monitor interactive media or game production teams.

It applies to those who manage personnel in the interactive media or game development industry, including concept artists, designers, programmers, animators and others.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Game development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare digital media team	1.1 Undertake work placement of production team according to project requirements and business need 1.2 Confirm team requirements according to business need 1.3 Confirm team expectations according to organisation policy and procedures and business need
2. Monitor workplace structure	2.1 Determine duties carried out by various personnel according to project requirements 2.2 Observe lines of reporting and communication 2.3 Determine responsibilities of own department
3. Identify behaviours and attitude	3.1 Identify and document organisational culture according to organisational requirements

ELEMENT	PERFORMANCE CRITERIA
	3.2 Determine and document model behaviour and communication methodologies 3.3 Engage and communicate with required personnel according to project requirements
4. Report on team workplace experience	4.1 Record team daily activities according to organisational requirements 4.2 Determine and document summary of team workplace experience according to organisational requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Learning	<ul style="list-style-type: none">Draws on a repertoire of experience to facilitate understanding of the culture and the environment
Oral communication	<ul style="list-style-type: none">Uses listening and open questioning techniques to obtain required information and concepts using appropriate industry language for intended audience
Reading	<ul style="list-style-type: none">Interprets and comprehends instructions, including textual and diagrammatic information to inform job requirements
Teamwork	<ul style="list-style-type: none">Cooperates and collaborates with others as part of routine activities, and to elicit support and feedbackCollaborates with others sharing information to build strong connections, demonstrating behaviours reflective of organisational culture
Planning and organising	<ul style="list-style-type: none">Plans, organises and completes work according to defined requirements and schedules, taking responsibility for decisions, and scheduling tasks to achieve efficient outcomes
Problem solving	<ul style="list-style-type: none">Responds intuitively to problems requiring immediate resolution, drawing on past experiences to focus on the cause of a problem rather than the symptom

Unit Mapping Information

Supersedes and is equivalent to ICTGAM504 Manage interactive media production.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTGAM534 Manage interactive media productions

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- plan assigned tasks and monitor team behaviours in a production environment on at least two occasions.

In the course of the above, the candidate must:

- demonstrate effective communication, listening and questioning skills with required personnel, including use of industry terminology
- operate according to the lines of reporting and required method of communication
- allocate tasks to required personnel
- document plans and outcomes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- basic 3-D techniques relating to managing interactive media production
- budgeting and scheduling considerations for 3-D design
- capabilities and constraints of 3-D packages
- key features of industry standard game-play hardware and software products
- technical constraints that hardware or software imposes on graphics and visual design
- process required to produce a 3-D animation sequence or components
- roles and responsibilities of team members producing 3-D animations and digital effects
- strategies for communicating with production teams and clients.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- an environment where interactive media production is carried out
- organisational guidelines and policies
- personnel required to managing interactive media productions.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTGAM535 Develop complex 3-D software for games and interactive media

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to employ multiple 3-D frameworks and libraries, build a graphical user interface (GUI) and develop complex 3-D software with documentation generated using applicable tools.

It applies to programmers who support the design, development and programming of 3-D media and digital games as part of a larger development team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Game development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Define 3-D software requirements and prepare to develop software	1.1 Establish complex 3-D software requirements and applicable legislative and organisational standards 1.2 Employ integrated development environment facilities and include existing 3-D, audio and physics libraries applicable to games or interactive media production 1.3 Configure a 3-D environment compatible with specified platform using existing library facilities and applicable language 1.4 Research and select applicable frameworks or games engine applicable to complex 3-D software requirements

ELEMENT	PERFORMANCE CRITERIA
2. Use multiple frameworks provided or engines	2.1 Instantiate virtual objects in complex 3-D environment 2.2 Import complex pre-constructed models retrieved from persistent storage into 3-D environment using scripts and library routines 2.3 Animate 3-D objects required by game play and handle collisions between objects in 3-D environment using code 2.4 Generate code and manipulate 3-D objects texturing and other attributes of models during run-time execution 2.5 Incorporate environmental elements and enhance user experience according to project requirements 2.6 Apply functionality to 3D game objects by modifying or extending existing classes 2.7 Select and use exception handling techniques and confirm program stability in complex 3-D environment that uses multiple libraries
3. Create complex GUI for 3-D environment	3.1 Employ integrated development environment facilities and include existing 3-D compatible GUI controls applicable to complex games or interactive media production 3.2 Combine predefined GUI elements and create complex interface for 3-D environment according to project requirements 3.3 Modify scripts and code and customise existing GUI elements according to project requirements 3.4 Write code that processes events raised by complex GUI in 3-D environment 3.5 Create GUI events and modify configuration of complex 3-D environment
4. Debug and finalise complex 3-D software	4.1 Use stand-alone debugging tools and tools provided by integrated development environment and examine variables and trace running code across multiple libraries 4.2 Employ debugging facilities according to organisational procedures 4.3 Seek feedback from required personnel and amend as required 4.4 Identify and choose applicable integrated or third-party documentation tools 4.5 Create and maintain code documentation for complex 3-D project using selected integrated or third-party tools 4.6 Obtain final sign-off from required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none">Interprets and comprehends instructions, briefs, technical and conceptual information to inform job requirements
Writing	<ul style="list-style-type: none">Writes and customises precise code using specialised language, industry-approved coding techniques and programming practices
Numeracy	<ul style="list-style-type: none">Uses whole numbers, decimals and percentages when manipulating measurement, scale, ratio, coordinates, colour, shading and other variables
Planning and organising	<ul style="list-style-type: none">Plans, organises and completes work according to defined requirements and schedules taking responsibility for decisions and sequencing tasks
Self-management	<ul style="list-style-type: none">Sources, analyses and evaluates applications and tools with potential to meet development and coding requirementsTakes responsibility for data integrity and management
Technology	<ul style="list-style-type: none">Identifies purposes and uses key features of specific digital systems and tools and operates them to complete complex development tasks

Unit Mapping Information

Supersedes and is equivalent to ICTGAM507 Develop intermediate 3-D software for games and interactive media and ICTGAM508 Develop complex 3-D software for games and interactive media.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTGAM535 Develop complex 3-D software for games and interactive media

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop at least one complex 3-D software according to client specifications, on at least one occasion.

In the course of the above, the candidate must:

- employ multiple 3-D frameworks, engines and libraries
- create mesh primitives using 3-D library routines
- generate code and manipulate 3-D objects, including cameras, lights and mesh primitives
- use virtual objects in 3-D environments, including:
 - audio managers
 - cameras
 - lights
 - physics managers
 - viewports
- animate 3-D objects required by game play and:
 - include animation selection/playback for pre-constructed models
 - be based on user input
 - be driven by code
 - include dynamic camera movement as required by game play
- build a complex graphical user interface (GUI) for a 3-D environment
- select and deploy documentation tools
- create and maintain code documentation using applicable tools
- detect logical and coding errors and debug application as required
- comply with legislative and organisational standards.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- processes involved in complex 3-D software development
- legislative and organisational standards applicable to development of complex 3-D software
- configuration processes for 3-D environments, including:
 - device selection
 - game resolution
 - screen colour depth
 - output performance including:
 - anti-aliasing
 - level of detail
 - filtering
 - caustics and refraction
- use of scripts and library routines in 3-D software development environments
- techniques for using multiple games-oriented libraries
- environmental elements in complex 3-D software and impacts on users
- handling and debugging techniques used when developing 3-D software for games and interactive media
- documentation techniques applicable to 3-D software development process
- object-oriented 3-D programming concepts and language
- techniques for using a graphical user interface (GUI) to interact with a user.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- project brief
- software, hardware and 3-D equipment required in developing complex 3-D software for games and interactive media
- integrated development environment facilities
- integrated or third-party documentation tools
- technical manuals and materials applicable to complex 3-D software development
- existing multiple frameworks, search engines or games-oriented libraries.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to design interactive 3-D applications with applicable environments for scientific and mathematical modelling, according to specifications.

It applies to those with object-oriented programming skills working in any industrial context that requires 3-D computer simulation of a well-defined environment, system or set of relationships.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Game development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine and confirm business expectations and needs	1.1 Identify business requirements and verify accuracy of gathered information 1.2 Determine task and user requirements according to business needs 1.3 Determine critical environmental and systemic relationships requiring simulation in 3-D environments 1.4 Identify critical data sources required by simulations or modelling

ELEMENT	PERFORMANCE CRITERIA
	1.5 Document critical environmental and systemic relationships and data sources requiring simulation in 3-D environments
2. Design interactive 3-D applications for scientific and mathematical modelling	2.1 Provide proof of concept for environmental and systemic relationships using prototyping tools 2.2 Identify, analyse and select technologies and platforms suitable for deployment of scientific or mathematical modelling 2.3 Design algorithms according to requirements of scientific or mathematical modelling in interactive 3-D environments
3. Design 3-D environment that simulates a scientific and mathematical model	3.1 Select applicable visual representation for elements of a 3-D scientific or mathematical model according to task requirements 3.2 Analyse required interaction between user and 3-D environment according to task requirements 3.3 Design a graphical user interface (GUI) and support required interaction between user and 3-D environment
4. Test and finalise scientific and mathematical model	4.1 Develop and document testing procedures and standards and verify modelling integrity 4.2 Perform testing and evaluate results and confirm model meets task requirements 4.3 Seek feedback from required personnel and amend model as required 4.4 Document work performed and obtain final sign-off according to organisational procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interprets, analyses and comprehends instructions, briefs, technical and conceptual information to inform job requirements.
Writing	<ul style="list-style-type: none"> Writes and customises precise code using specialised language, industry-approved coding techniques and programming practices Prepares documentation detailing testing procedures and standards

Skill	Description
Numeracy	<ul style="list-style-type: none">• Uses whole numbers, decimals and percentages when manipulating measurement, scale, ratio, coordinates, colour, shading and other variables during application phase• Designs complex algorithms
Get the work done	<ul style="list-style-type: none">• Plans, organises and completes work according to defined requirements and schedules taking responsibility for decisions and sequencing tasks• Takes responsibility for decisions regarding end-product evaluation, data integrity and management• Identifies purposes and uses key features of specific digital systems and tools and operates them to complete development tasks

Unit Mapping Information

Supersedes and is equivalent to ICTGAM509 Design interactive 3-D applications for scientific and mathematical modelling.

Assessment Requirements for ICTGAM536 Design interactive 3-D applications for scientific and mathematical modelling

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design an interactive 3-D application according to scientific and mathematical modelling requirements on at least one occasion.

In the course of the above, the candidate must:

- comply with task and user requirements and organisational procedures
- confirm interactive 3-D environment reflects scientific and mathematical modelling requirements
- confirm functionality of 3-D application for scientific and mathematical modelling on at least two different browsers and at least two different devices.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- documentation techniques applicable to documenting work performed and testing procedures
- object-oriented 3-D programming design methodologies and principles
- features and functions of different prototyping tools applicable to designing interactive 3-D applications
- data sources and business expectations and needs applicable to designing interactive 3-D applications
- different interactions between users and 3-D environments
- techniques for designing and using a graphical user interface (GUI) to interact with users
- organisational and testing procedures applicable to 3-D application design process
- procedures for using 3-D technologies to simulate scientific or mathematical models.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- applicable 3-D equipment, software and hardware
- prototyping tools applicable to designing interactive 3-D applications
- technical manuals
- examples of scientific or mathematical models
- organisational procedures applicable to designing 3-D applications.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTGAM537 Prepare games for different platforms and delivery modes

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to prepare game packages for delivery across multiple system platforms using applicable cross-platform software and hardware.

It applies to those with games programming skills and other personnel working in the game development industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Game development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare game package for multiple platforms	1.1 Establish project requirements for pre-existing game according to organisational procedures 1.2 Obtain pre-existing game package 1.3 Research and identify cross-platform specific installation methods and applicable software and hardware according to business needs 1.4 Select and confirm cross-platform specific installation methods according to project requirements 1.5 Package game for multiple platforms using selected installation methods according to vendor requirements
2. Develop cross-platform	2.1 Compare and select industry standard cross-platform

ELEMENT	PERFORMANCE CRITERIA
project	integrated development environments (IDE) according to project requirements 2.2 Identify cross-platform renderer libraries, physics libraries, audio libraries and network libraries applicable to project requirements 2.3 Source and compile cross-platform libraries 2.4 Compile project for multiple platforms 2.5 Test and debug cross-platform project and evaluate results 2.6 Apply changes to cross-platform project as required according to test results
3. Finalise cross-platform project	3.1 Identify and document issues and resolutions in cross-platform development 3.2 Submit cross-platform project to required personnel and obtain final sign-off

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Learning	<ul style="list-style-type: none">Extends knowledge of delivery modes and platforms by incorporating results of trialling and testing
Reading	<ul style="list-style-type: none">Interprets, analyses and comprehends complex instructions, briefs, numerical code, technical data and conceptual information to inform job requirements
Writing	<ul style="list-style-type: none">Produces documentation detailing issues identified and work performed as required using specific technical language
Planning and organising	<ul style="list-style-type: none">Plans, organises and completes work according to defined requirements and schedules
Problem solving	<ul style="list-style-type: none">Uses systematic and analytical processes in complex, routine and non-routine situations gathering information, identifying potential solutions and evaluating options
Self-management	<ul style="list-style-type: none">Takes responsibility for decisions regarding end-product testing and data integrity and management
Technology	<ul style="list-style-type: none">Sources applications or tools with the potential to meet development requirements

Unit Mapping Information

Supersedes and is equivalent to ICTGAM510 Prepare games for different platforms and delivery modes.

Assessment Requirements for ICTGAM537 Prepare games for different platforms and delivery modes

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- produce a cross-platform game project for delivery across, at least three different platforms, according to project requirements.

In the course of the above, the candidate must:

- identify and use cross-platform integrated development environment (IDE) libraries and installers
- use platform-specific input devices
- document issues identified and work performed for cross-platform development.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- features and functions of industry standard cross-platform software, hardware, installation methods and IDEs
- evaluation techniques for cross-platform development libraries
- research methods for cross-platform development and distribution
- different sources of cross-platform libraries
- testing and debugging procedures relating to the preparation of game packages for different platforms and delivery modes
- industry standard platform-specific input devices.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- hardware and software applicable to preparation of game packages for different platforms and delivery modes
- project requirements
- pre-existing game package
- games engine
- file storage
- digital devices running various operating systems
- cross-platform IDEs and libraries
- installers for product distribution
- the internet.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTGAM538 Manage testing of games and interactive media

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to define requirements and procedures and manage testing of games and interactive media to enable timely product release.

It applies to those who ensure the delivery of well-tested, quality software products in the marketplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Game development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine quality requirements statement that will enable product release	1.1 Review product in market and determine high-level requirements provided by product for expected clients 1.2 Define releasable product enable limited release and complete product release according to industry requirements 1.3 Summarise findings into quality requirements statement, according to industry and organisational requirements 1.4 Confirm client requirements and development specifications align with product release requirements
2. Define product test plan according to quality requirements statement	2.1 Identify expected test cycles during software development life cycle according to development methodology in use and product release quality

ELEMENT	PERFORMANCE CRITERIA
	<p>requirements</p> <p>2.2 Determine types of testing to be performed during test cycles according to quality requirements</p> <p>2.3 Determine testing methods to be used to implement testing types defined for identified test cycles</p> <p>2.4 Define testing technique to be used and determine test cases and analyse results</p> <p>2.5 Perform test cycle and determine acceptable balances of cost, quality and risk, and confirm with upper management and development team</p> <p>2.6 Select test-support software according to testing requirements</p> <p>2.7 Define implementation details for agreed testing and team responsible for testing management</p> <p>2.8 Define reporting details for testing throughout product life cycle</p> <p>2.9 Confirm test plan completeness using available completeness techniques</p> <p>2.10 Document defined testing procedures and plan according to industry and organisational standards</p> <p>2.11 Confirm test plan with development team and management</p>
3. Manage testing processes	<p>3.1 Install and configure selected test-support software according to vendor requirements</p> <p>3.2 Perform product testing according to defined test plan and organisational procedures</p> <p>3.3 Manage and report on development of test cases, test cycle status and outstanding bug status</p> <p>3.4 Report on status of product testing</p> <p>3.5 Update test plan and schedule according to changing development conditions and notify management as required</p> <p>3.6 Evaluate results and handle and resolve bugs as required</p> <p>3.7 Manage test environment, including setup, receipt of test builds and clean-up according to organisational procedures</p>
4. Finalise testing for release	<p>4.1 Document and produce testing results for management review prior to release</p> <p>4.2 Manage test product freeze for final release and final test run</p> <p>4.3 Confirm product quality and product release</p>

ELEMENT	PERFORMANCE CRITERIA
	requirements have been met

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none">Interprets, analyses and comprehends product expectations and conceptual information to inform job requirements
Writing	<ul style="list-style-type: none">Produces documentation detailing testing plan and procedures as required using specific technical language in order to convey explicit information
Oral Communication	<ul style="list-style-type: none">Uses listening and questioning techniques to obtain required information using appropriate industry language for intended audience
Numeracy	<ul style="list-style-type: none">Interprets budgetary information to enable decision-making during product test-cycle
Planning and organising	<ul style="list-style-type: none">Plans, organises and completes work according to defined requirements and schedules, sequencing tasks to achieve efficient outcomes
Problem solving	<ul style="list-style-type: none">Makes critical decisions systematically in complex situations, taking into consideration a range of variables, including outcomes of previous decisions
Self-management	<ul style="list-style-type: none">Evaluates effectiveness of products to inform strategic decisions

Unit Mapping Information

Supersedes and is equivalent to ICTGAM511 Manage testing of games and interactive media.

Assessment Requirements for ICTGAM538 Manage testing of games and interactive media

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- manage testing of a game or interactive media product according to quality requirements on at least one occasion.

In the course of the above, the candidate must:

- develop a quality requirements statement according to industry and organisational requirements
- define quality requirements and test plan
- identify bugs and issues and amend accordingly
- maintain ongoing management of testing process
- report on process to required personnel
- document work performed according to organisational procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- client requirements for platforms, hardware and software
- client system requirements, both functional and non-functional
- procedures for bug or issue management and identification
- legislative and organisational requirements, standards and procedures applicable to games and interactive media testing
- industry and organisational criteria for limited product release and complete product release
- phases of software development life cycles
- different development methodologies applicable to creating games and interactive media
- elements of a quality requirements statement and processes of development

- test reporting requirements applicable to game and interactive media testing
- test plan creation procedures applicable to game and interactive media development
- testing techniques, methods, test types, test cases, test cycles and system dissection applicable to game and interactive media development
- features and functions of industry standard test-support software
- completeness testing techniques
- installation and configuration processes for test-support software, including:
 - bug tracking processes and defining bug description fields
 - test case management software
 - test cycle management and reporting software
 - automated test tools
- bug resolution methods in game and interactive media products
- documentation techniques and processes used in product testing management.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- product undergoing development with specifications
- client requirements for product quality requirements
- testing support software
- test environment
- hardware required in product testing processes
- organisational procedures applicable to games and interactive media testing.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTGAM539 Create and implement designs for 3-D games environments

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to create and implement designs within the context of a 3-D games environment.

It applies to individuals with highly developed communication and technical skills working as concept artists, game designers, games programmers, animators, and other personnel working in the game development industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Game development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1.Prepare to create designs	1.1 Establish task, design and user requirements and analyse game environment according to organisational procedures 1.2 Discuss and select 3-D modelling software for production of designs, and ramifications of using selected software with required personnel 1.3 Discuss and select 2-D image-editing software for textures with required personnel according to task requirements

ELEMENT	PERFORMANCE CRITERIA
	1.4 Determine and document 3-D production considerations for available hardware 1.5 Create file archiving system for storing 3-D components, models and versions according to organisational procedures 1.6 Establish project development pipeline and production deadlines, according to task requirements
2. Develop designs for 3-D games	2.1 Establish design theme and determine required modelling assets according to design requirements 2.2 Prioritise design components according to task requirements 2.3 Produce new document and create designs according to production pipeline, theme, and deadlines
3. Implement and finalise designs	3.1 Test functionality of designs on different browsers and devices 3.2 Confirm design meets task and user requirements 3.3 Implement design into applicable game environment, according to organisational procedures 3.4 Document work performed according to organisational procedures 3.5 Obtain final sign-off from required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interprets, analyses and comprehends conceptual information to inform job requirements
Writing	<ul style="list-style-type: none"> Prepares documents detailing findings and work performed using appropriate layout and required descriptive language in a cohesive and well-structured manner Develops material regarding the advantages, and limitations of, different technologies using explicit language to convey information and requirements
Oral Communication	<ul style="list-style-type: none"> Uses listening and questioning techniques to obtain required information using appropriate industry language for intended audience
Initiative and enterprise	<ul style="list-style-type: none"> Uses creativity and initiative in 3-D game design
Planning and	<ul style="list-style-type: none"> Plans, organises and completes work according to defined

Skill	Description
organising	requirements and schedules taking responsibility for decisions and sequencing tasks
Self-management	<ul style="list-style-type: none">• Sources, analyses, and evaluates applications with potential to meet 3-D game design requirements• Uses a systematic process to evaluate work and implement improvements
Technology	<ul style="list-style-type: none">• Completes design tasks using key features of specific digital systems and tools• Identifies importance of file structure and takes responsibility for data integrity and management

Unit Mapping Information

Supersedes and is equivalent to ICTGAM512 Create and implement designs for a 3-D games environment.

Assessment Requirements for ICTGAM539 Create and implement designs for 3-D games environments

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- create and implement at least two designs for a specified 3-D games environment.

In the course of the above, the candidate must:

- discuss and identify the most applicable technology for 3-D games development
- create and develop design documents for 3-D effects, including timelines for completion and file archiving system
- identify purpose of games design and establish target audience
- discuss and analyse design requirements for at least two different browsers and at least two different devices
- render designs on at least one small device and one large device and confirm pixels are optimised.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- concepts of animation techniques and digital effects generation relating to creating designs for 3-D game environments
- design principles applicable to 3-D game designs
- features of different 3-D game environments
- features and functions of industry standard 2-D and 3-D graphics editing software
- different modelling assets used in design creation for 3-D environments
- project development processes applicable to design creation for 3-D environments
- design functionality testing processes
- industry standard graphics formats for different 3-D games
- organisational procedures applicable to creating and implementing designs for 3-D games.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- project brief
- hardware and software required to create and implement designs
- games engine
- file storage
- browsers and devices
- organisational procedures applicable to creating and implementing designs for 3-D games.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTGAM540 Design and create models for 3-D and digital effects environments

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to design and create models for a 3-D and digital effects environment using complex topology, specified geometry surfaces and advanced model builds.

It applies to those with high-level mathematical, technical and communication skills working as concept artists, game designers, games programmers, animators and other personnel working in the game development industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Game development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare and plan 3-D modelling process	<ul style="list-style-type: none">1.1 Obtain project brief and identify 3-D model requirements and user needs according to organisational procedures1.2 Research and collect portfolio of reference material according to organisational procedures1.3 Present portfolio of collected reference material to required personnel1.4 Evaluate industry standard 3-D modelling and animation software and select according to model requirements1.5 Develop and design a modelling plan using reference material

ELEMENT	PERFORMANCE CRITERIA
	1.6 Seek feedback on modelling plan from required personnel and amend as required
2. Analyse resources and design 3-D model	2.1 Research different types of geometry and select most applicable according to 3-D model requirements 2.2 Document selected geometry choice and explain rationale according to organisational procedures 2.3 Evaluate industry standard concept development software and select software according to model requirements 2.4 Construct and test topology plan using chosen concept development software 2.5 Document and explain reasoning for choosing a particular modelling method 2.6 Assess and refine topology plan with required personnel
3. Construct 3-D model	3.1 Build 3-D model in chosen 3-D modelling and animation software according to modelling plan and specifications 3.2 Apply selected geometry choice to 3-D model 3.3 Make changes to geometry selection as required 3.4 Present near-finished product to required personnel and seek feedback 3.5 Evaluate feedback and incorporate into final design 3.6 Assess and refine model with required personnel and confirm model meets task requirements
4. Test and finalise 3-D model	4.1 Test and confirm final model functionality in 3-D and digital effects environments, according to organisational procedures 4.2 Obtain final sign-off on 3-D model from required personnel 4.3 Compose report on experience of working on a 3-D model and share findings

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interprets, analyses, and comprehends conceptual and specification information to inform job requirements Organises, evaluates and critiques ideas and information from a range of complex texts to determine which geometry and topology will suit 3-D model

Skill	Description
Writing	<ul style="list-style-type: none">Prepares documents detailing advantages and limitations of different technologies using appropriate layout and required descriptive language in a cohesive and well-structured mannerDevelops material about the advantages and limitations of different technologies, using clear language to convey information and requirements
Oral Communication	<ul style="list-style-type: none">Uses listening and open questioning techniques to obtain required information using appropriate industry language for intended audience
Numeracy	<ul style="list-style-type: none">Develops mathematical representations of three-dimensional surface of objects using whole numbers, decimals and percentages when manipulating measurement, scale, ratio, coordinates, colour, shading and other 3-D modelling elementsInterprets numerical data and deciphers technical charts, diagrams and other specifications
Planning and organising	<ul style="list-style-type: none">Sequences and schedules complex activities, monitors implementation and manages communication
Problem solving	<ul style="list-style-type: none">Makes a range of critical and non-critical decisions in relatively complex situations, taking a range of factors into account
Self-management	<ul style="list-style-type: none">Implements actions as per plan, making slight adjustments if necessary, and addressing some unexpected issuesUses feedback and evaluation of results to inform decisions about future improvement
Technology	<ul style="list-style-type: none">Uses a broad range of features in digital applications for specific purposes

Unit Mapping Information

Supersedes and is equivalent to ICTGAM514 Design and create models for a 3-D and digital effects environment.

Assessment Requirements for ICTGAM540 Design and create models for 3-D and digital effects environments

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- use software and construct an advanced 3-D model according to plan, on at least one occasion.

In the course of the above, the candidate must:

- prepare a topology plan for 3-D model design using:
 - applicable industry terminology
 - applicable geometry surfaces
 - concept development software
 - feedback from others to refine plan
- seek feedback from required personnel and refine model
- render designs on at least one small device and one large device and confirm pixels are optimised
- confirm functionality of model on at least two different browsers and at least two different devices
- document work performed in designing and creating models.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- methods of sourcing reference material
- key aspects of modelling plans
- features and capabilities of different geometry surfaces, including:
 - NURBS
 - Sub-D

- Polygon
- T-splines
- digital model development and testing process
- technology requirements and human resources required to create 3-D models, and their respective skills
- features and functions of box, edge-loop and patch modelling
- capabilities and constraints of 3-D modelling and animation packages and software and concept development software
- different types of geometry surfaces for models and their features
- purposes of scheduling production components in model development process
- features of topology plans and topology plan testing methods
- uses of storyboards and scripts
- organisational procedures applicable to creating 3-D models.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- hardware and software applicable to designing and creating 3-D models
- games engine
- file storage
- project brief
- the internet
- browsers and devices
- organisational procedures applicable to creating 3-D models.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTGAM541 Design and create advanced particles, fluids and bodies for 3-D digital effects

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to design and create, advanced simulated effects in a 3-D and digital effects environment.

It applies to those with high-level mathematical, technical and communication skills working as concept artists, game designers, games programmers, animators and other personnel working in the game development industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Game development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to create advanced simulated effects	1.1 Obtain design brief and requirements from required personnel according to organisational procedures 1.2 Analyse design requirements for particle systems, fluids and bodies according to brief and organisational documents 1.3 Identify where advanced simulated effects will fit into production pipeline 1.4 Identify factors influencing design approach to creating advanced simulated effects 1.5 Source and gather reference materials and maintain portfolio of references according to organisational procedures 1.6 Review and analyse media and techniques and gather ideas for simulated effects 1.7 Discuss solutions and approaches to creation of advanced simulated effects for 3-D environments according to design brief and organisational documents 1.8 Present design ideas and design considerations, with justification of choice of advanced simulated effects to required personnel
2. Finalise designs and plan approach to simulated effects	2.1 Adapt and finalise design according to feedback from required personnel 2.2 Identify skills and processes required for creating advanced simulated effects systems according to organisational procedures 2.3 Plan timeline to create advanced simulated effects according to design brief and requirements
3. Produce particles, fluids and bodies	3.1 Assist in production of advanced simulated effects using applicable programming languages and created code 3.2 Create prototype of advanced simulated effects according to finalised design using toolsets 3.3 Discuss implementation of effects with required personnel according to design requirements 3.4 Implement physics and forces to the advanced simulated effects according to design brief and requirements 3.5 Conduct testing of prototype according to organisational procedures 3.6 Review testing results and amend as required 3.7 Present created effects to required personnel for feedback
4. Finalise advanced simulated effects	4.1 Adapt advanced simulated effects and design as required, according to feedback 4.2 Refine advanced simulated effects according to design requirements

ELEMENT	PERFORMANCE CRITERIA
	<p>4.3 Document work and testing performed in development process according to organisational procedures</p> <p>4.4 Present finalised advanced simulation effects in requested form, according to organisational procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Interprets, analyses and comprehends briefs, documents and conceptual information to inform job requirements
Writing	<ul style="list-style-type: none"> Creates a cohesive and well-structured advanced simulation effects and documentation detailing work and testing performed using descriptive language
Oral Communication	<ul style="list-style-type: none"> Uses listening and questioning techniques and effective mode of communication to articulate complex concepts and requirements using industry language for intended audience Presents finalised advanced simulation effects using persuasive presentation techniques, plain English (translating games specific terminology where required)
Numeracy	<ul style="list-style-type: none"> Manipulates measurement, scale, ratio, coordinates, colour, shading and other elements of radical 3-D effects using whole numbers, decimals and percentages
Problem solving	<ul style="list-style-type: none"> Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering required information and identifying and evaluating options against agreed criteria Deals with complex issues using intuition to identify general problem area and switching to analytical processes to clarify goals and key issues Generates possible solutions using lateral thinking processes Develops and shapes several options before making final choice, using a combination of lateral and analytical thinking to tailor and strengthen ideas according to needs, resources and constraints
Self-management	<ul style="list-style-type: none"> Takes responsibility for own workload and negotiates some key aspects with others Sequences and schedules complex activities, monitors implementation, and manages required communication Implements actions according to plan, making slight adjustments if necessary and addressing some unexpected issues

SKILL	DESCRIPTION
	<ul style="list-style-type: none"> Identifies value of continuous improvement in own work context
Technology	<ul style="list-style-type: none"> Improves personal productivity and optimises software functions for specific purposes using a broad range of application features Manages and maintains files in a variety of storage media and formats and is beginning to establish, maintain and monitor electronic paper trails

Unit Mapping Information

Supersedes and is equivalent to ICTGAM515 Design and create advanced particles, fluids and bodies for 3-D digital effects.

Assessment Requirements for ICTGAM541 Design and create advanced particles, fluids and bodies for 3-D digital effects

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop at least three advanced simulation effects according to design brief and requirements.

In the course of the above, the candidate must:

- analyse design requirements and develop design documents according to organisational procedures
- use applicable effects including particles, fluids and rigid or soft bodies
- render digital effects on at least one small device and one large device and confirm pixels are optimised
- maintain portfolio of reference materials
- present pre-production portfolio demonstrating project research and development to required personnel
- seek evaluation and review from required personnel for finalised advanced simulation effects.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- programming languages and techniques required for creating 3-D digital effects
- overview of game development and production processes, including specific terminology
- design approaches to creating advanced simulated effects
- media and techniques used in designing and creating simulated effects
- key features of game-play hardware and software products
- technology requirements and human resources required in process of creating digital effects and each team member's respective skills

- methods of maintaining reference portfolios applicable in creating 3-D digital effects
- risk and critical path management techniques
- technical constraints that hardware imposes on:
 - software development
 - graphics requirements
 - code development
 - creative visual design
- techniques for applying concept development and visualisation skills
- methods of creating and testing 3-D digital effect prototypes
- documentation processes applicable in 3-D digital effects creation process
- creating and presenting pre-production portfolios demonstrating project research and development
- organisational procedures applicable to the design and creation of 3-D digital effects.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- hardware and software applicable to designing and creating simulated effects
- games engine
- IDE
- digital devices
- file storage
- design brief
- the internet
- organisational procedures applicable to designing and creating simulated effects.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTGAM542 Animate 3-D characters for digital games

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to apply animation principles to develop an animated character and export character model into a game.

It applies to those with high-level mathematical, technical and communication skills working as concept artists, game designers, games programmers, animators, and other personnel working in the game development industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Game development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine 3-D character model for animation requirements	<ul style="list-style-type: none">1.1 Obtain and analyse animation, storyboard and digital game requirements for 3-D character according to organisational procedures1.2 Determine target environments for 3-D digital character animation according to digital game requirements1.3 Establish required level of detail for 3-D character model animation1.4 Determine work-flow sequences, task requirements and confirm production schedule deadlines are met1.5 Research and select required games engine and platform according to digital game requirements

ELEMENT	PERFORMANCE CRITERIA
	1.6 Select software tools according to production pipeline and selected games engine and platform
2. Create 3-D animations	2.1 Research and determine animation methodology applicable to task requirements 2.2 Animate first pass, applying animation principles and experimenting with techniques to produce required movements 2.3 Submit first pass to required personnel for feedback and approval 2.4 Adjust as required and refine animation in passes until storyboard requirements are achieved 2.5 Animate facial features with lip-syncing to match audio and design requirements of approved storyboard 2.6 Create primary animations as required according to task requirements
3. Finalise and export animations	3.1 Submit character animations to required personnel for final check 3.2 Finalise projects according to organisational and production procedures 3.3 Export animation and 3-D character model to required game engine 3.4 Test character animations in game engine and on different devices according to organisational procedures 3.5 Evaluate results and apply changes as required 3.6 Obtain final sign-off for character animations from required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Interprets, analyses and comprehends workplace documentation and images to aid implementation of job requirements
Writing	<ul style="list-style-type: none"> Creates required documents outlining complex design information according to industry standards and required formats
Oral Communication	<ul style="list-style-type: none"> Uses listening and questioning techniques and effective mode of communication to articulate complex concepts and information using industry language for intended audience

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Applies numerical skills to develop applications using whole numbers, decimals and percentages when manipulating measurement, scale, ratio, coordinates, colour, shading and other 3-D elements
Teamwork	<ul style="list-style-type: none"> Implements strategies for a diverse range of colleagues and clients to build rapport and foster strong relationships
Initiative and enterprise	<ul style="list-style-type: none"> Investigates new and innovative ideas to continuously improve work practices and processes
Planning and organising	<ul style="list-style-type: none"> Accepts responsibility for planning and sequencing complex tasks and workload, negotiating key aspects with others, including required capabilities, efficiencies and effectiveness Monitors progress of plans and schedules, reviews and changes these according to new demands and priorities
Problem solving	<ul style="list-style-type: none"> Makes critical decisions quickly and intuitively in complex situations, taking into consideration a range of variables, including outcomes of previous decisions Applies systematic and analytical decision-making processes for complex and non-routine situations
Self-management	<ul style="list-style-type: none"> Selects, implements and seeks to improve protocols governing communications to clients and co-workers in a range of work contexts Elicits feedback and provides feedback to others to improve self and workgroup behaviours
Technology	<ul style="list-style-type: none"> Uses and investigates new digital technologies and applications to manage and manipulate data and communicate with others in a secure and stable digital environment

Unit Mapping Information

Supersedes and is equivalent to ICTGAM516 Animate a 3-D character for digital games.

Assessment Requirements for ICTGAM542 Animate 3-D characters for digital games

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop at least two animated character models according to digital game requirements.

In the course of the above, the candidate must:

- select tools compatible with target game engine and platform
- render art on at least one small device and one large device and confirm pixels are optimised
- export animated character model to target game engine according to organisational procedures
- test character animations in the game engine and on at least two different devices.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- 3-D animation principles including relevance of anatomy and physical movement
- different target environments for animated 3-D digital characters
- development processes for animating 3-D characters
- capabilities and constraints of game engines
- attributes of industry standard game-play hardware and software products
- different industry standard animation methodologies
- function of a graph curve editor
- risk and critical path management techniques applicable to 3-D character animation process
- shading, texturing, weight and anticipation techniques relating to animating 3-D characters
- transfer methodology, including rotoscope, hand key and motion capture

- techniques for applying concept development and visualisation skills
- techniques for using storyboard and script production
- technology requirements and human resources required in the process of creating games
- the importance and advantages of client communication on project work
- budgeting and scheduling considerations for game design
- time management techniques in project development
- exporting and testing procedures for 3-D character animations
- organisational procedures applicable to 3-D character animation process.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- hardware, software and tools applicable to animating 3-D characters for digital games
- games engine and platform
- digital devices
- file storage
- the internet
- design brief
- organisational procedures applicable to 3-D character animation process.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTGAM543 Produce digital animation sequences

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to produce a digital animation sequence for the 3-D and digital effects environment and complete a digital editing project.

It applies to those with high-level mathematical, technical and communication skills working as concept artists, game designers, games programmers, animators, and other personnel working in the game development industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Game development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Develop and source story and concept	1.1 Establish digital animation sequence requirements and applicable documentation for 3-D and digital effects requirements according to organisational procedures 1.2 Research and gather ideas for animation sequence according to organisational procedures 1.3 Produce treatment of an animation sequence according to established requirements
2. Develop plan and determine components required for animation sequence	2.1 Discuss and create production plan with required personnel according to digital animation sequence requirements 2.2 Develop storyboard detailing 3-D animation according to

ELEMENT	PERFORMANCE CRITERIA
	animation sequence requirements 2.3 Create concept drawings and sketches for 3-D models 2.4 Gather and present evidence of reference material used for storyboard and concept drawings to required personnel and seek feedback 2.5 Adjust storyboard and concept drawings as required
3. Produce animation sequence using 3-D software	3.1 Research and select 3-D modelling and animation software according to digital animation sequence requirements 3.2 Create 3-D animation according to production plan 3.3 Select frames per second to use for animation according to animation sequence requirements 3.4 Create assets using references 3.5 Animate components of 3-D environment according to planned animation sequence 3.6 Using 3-D modelling and animation software, produce high-end lighting techniques
4. Render and finalise 3-D animation sequence	4.1 Select required resolution and aspect ratio according to animation sequence requirements 4.2 Render animated sequence using 3-D modelling software 4.3 Review rendered frames against initial storyboard concept and animation sequence requirements 4.4 Present rendered frames to required personnel and seek feedback 4.5 Apply changes as required and obtain final sign-off

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Interprets, analyses and comprehends workplace documentation and images to inform job requirements
Writing	<ul style="list-style-type: none"> Creates required documents incorporating complex design information and ideas according to industry standards and required formats
Numeracy	<ul style="list-style-type: none"> Applies numerical skills to develop sequences using whole numbers, decimals and percentages when manipulating measurement, scale, ratio, coordinates, colour, shading, and other 3-D elements

SKILL	DESCRIPTION
Problem solving	<ul style="list-style-type: none">• Makes a range of critical and non-critical decisions in relatively complex situations, analysing information and taking a range of factors into account• Identifies and applies some basic principles of analytical and lateral thinking
Self-management	<ul style="list-style-type: none">• Takes responsibility for planning, organising and implementing tasks required to achieve outcomes• Implements actions as per plan, making slight adjustments if necessary, and addressing some unexpected issues
Technology	<ul style="list-style-type: none">• Improves personal productivity and optimises software functions for specific purposes using a broad range of 3-D software application features• Manages and maintains files in a variety of storage media and formats

Unit Mapping Information

Supersedes and is equivalent to ICTGAM517 Produce a digital animation sequence.

Assessment Requirements for ICTGAM543 Produce digital animation sequences

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- create 3-D animation sequence with at least 720 frames using 3-D modelling and animation software.

In the course of the above, the candidate must:

- develop storyboards and concept drawings for 3-D animation and models according to production plans
- apply a variety of strategies to create an animation sequence using a 3-D environment
- develop finalised frame of animation in required resolution
- render animation sequence on at least one small device and one large device and confirm pixels are optimised.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- digital editing processes and techniques relating to animation sequence production
- rendering processes and techniques applicable to animation sequence production
- capabilities of digital editing and rendering software
- features and functions of different industry standard 3-D modelling and animation software
- technology requirements and human resources required to create games, including team member's skills
- technical constraints that hardware imposes on:
 - graphics requirements
 - code development
 - creative visual design

- storyboard development processes
- organisational procedures applicable to producing digital animation sequences.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- hardware and software applicable to producing digital animation sequences
- animation sequence requirements brief
- games engine
- digital devices
- file storage
- the internet
- organisational procedures applicable to producing digital animation sequences.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTGAM544 Animate physical attributes of models and elements

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to animate the required physical attributes of models and elements using 3-D modelling and animation software tools.

It applies to those with high-level mathematical, technical and communication skills working as concept artists, game designers, games programmers, animators, and other personnel working in the game development industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Game development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Establish project requirements and collect and use reference material	1.1 Establish project and animation requirements of models and elements, according to organisational procedures 1.2 Create storyboard sequence of required animation according to organisational procedures 1.3 Determine animation attribute sequence of objects according to created storyboard 1.4 Identify type of production and target platform for which 3-D digital animations are being created and select applicable 3-D modelling and animation software tools 1.5 Research and gather reference material applicable to animation requirements

ELEMENT	PERFORMANCE CRITERIA
2. Prepare 3-D digital models using a variety of manipulating techniques	2.1 Research and select applicable animation methodology for required models 2.2 Confirm models' topology allows required deformation of objects and their parts, according to storyboard animation brief 2.3 Apply a variety of manipulation techniques according to model and element requirements 2.4 Refine animation attributes and confirm integrity of models and elements until storyboard requirements are met 2.5 Submit pre-model animation to required personnel for feedback and confirm storyboard objectives have been met 2.6 Make final adjustments as required according to feedback
3. Create required animations using a variety of animation tools	3.1 Animate object, applying animation principles and techniques to produce required motions 3.2 Submit animation to required personnel for approval 3.3 Make adjustments as required and refine animation in passes until storyboard requirements are achieved
4. Test and render 3-D digital model	4.1 Research and select applicable render engine according to project requirements 4.2 Render component for testing purposes using nominal lighting 4.3 Test against production plan and evaluate results 4.4 Continue manipulation process according to meet required effects 4.5 Evaluate final render, and confirm further client requirements are met 4.6 Prepare required render passes according to animation requirements 4.7 Render required component
5. Evaluate and finalise animation	5.1 Present edited material to required personnel, in applicable format for evaluation 5.2 Obtain final sign-off from required personnel 5.3 Make backup copies of files and complete workplace documentation, according to organisational procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Interprets and analyses reference sources and applies knowledge to project work
Writing	<ul style="list-style-type: none"> Communicates complex relationships between ideas and information, matching style of writing to purpose and audience when creating storyboard and workplace documentation
Numeracy	<ul style="list-style-type: none"> Applies manipulation techniques, animates objects and makes adjustments using mathematical and problem-solving strategies
Oral communication	<ul style="list-style-type: none"> Uses listening and questioning techniques to determine client requirements and articulate ideas using specific language applicable to audience
Planning and organising	<ul style="list-style-type: none"> Plans a range of routine and non-routine tasks, including collecting resources, determining storyboard sequences and selecting software tools
Problem solving	<ul style="list-style-type: none"> Makes a range of critical and non-critical decisions in relatively complex situations, taking a range of factors into account
Self-management	<ul style="list-style-type: none"> Implements actions as per plans, making slight adjustments if necessary and addressing some unexpected issues
Technology	<ul style="list-style-type: none"> Uses a broad range of features of software applications for specific purposes Manages and maintains files in a variety of storage media and formats

Unit Mapping Information

Supersedes and is equivalent to ICTGAM518 Animate physical attributes of models and elements.

Links

Assessment Requirements for ICTGAM544 Animate physical attributes of models and elements

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- create at least two animated models using animation and rendering software, according to animation principles and storyboard requirements.

In the course of the above, the candidate must:

- prepare pre-model animation for approval using created storyboard sequence
- evaluate texture, quality and performance of models using lighting
- render 3-D digital models on at least one small device and one large device and confirm pixels are optimised
- present final 3-D digital models, together with supporting documentation including project brief, documents and concept art for approval
- comply with organisational procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- principles and techniques of 3-D animation, lighting and modelling
- features and functions of industry standard 3-D modelling and animation software tools and render engines
- types of production and target platforms for which 3-D digital animations are created for
- industry standard animation methodology and processes
- how anatomy and physical movement is applicable to animation
- the importance and advantages of client communication when working on projects
- required budgeting and scheduling considerations during animation projects
- storyboard creation techniques
- script production techniques

- manipulation techniques relating to animating models and elements
- application of industry standard game-play hardware and software products
- purpose of dope sheets
- principles of the graph curve editor for smooth animation
- physical attributes that create effects, including weight and anticipation
- purpose of rendering
- shading and texturing techniques applicable to animating physical attributes of models and elements
- transfer methodology, including rotoscoping hand key and motion capture
- 3-D digital model testing procedures
- organisational procedures applicable to animating models and elements.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- project brief
- hardware and software relating to animating physical attributes of models and elements
- games engine
- digital devices
- file storage
- the internet
- organisational procedures applicable to animating models and elements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTGAM545 Manage technical art and rigging in 3-D animations

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to design, implement, and manage 3-D animation rigs for objects using structural controls and construct hierarchies to formulate object geometry and skeletal rigs to a defined project brief.

The unit applies to those with high-level mathematical, technical and communication skills working as concept artists, game designers, games programmers, animators, and other personnel working in the game development industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Game development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Assess rig requirements	1.1 Determine and document model rigging requirements according to organisational requirements 1.2 Develop portfolio of reference materials according to rigging requirements 1.3 Determine and document range of model rigging software features 1.4 Submit documentation to required personnel and seek and respond to feedback
2. Plan rig	2.1 Analyse inner workings of object and select required skeletal and structural systems

ELEMENT	PERFORMANCE CRITERIA
	2.2 Analyse bones and joints behaviours and select orientations 2.3 Examine object geometry topologies and select required bone and joint placement 2.4 Analyse critical object movement and select required kinematics and hybrid solution 2.5 Record results for use in rigging implementation phase
3. Implement character skeleton requirements	3.1 Use 3-D software to place and orientate bones and joints according to rigging plan 3.2 Construct FK and IK requirements according to rigging plan 3.3 Construct required hierarchies and pivotal sets 3.4 Trial and refine rotations and movement attributes
4. Employ and implement character attributes and control handles	4.1 Construct specific driven attributes for manipulation purposes 4.2 Create and place control handles with required attributes, link control handles and improve animation procedures 4.3 Trial and refine controls and attributes and negotiate modifications 4.4 Skin and bind object geometry to created skeletal systems and mechanical structures
5. Test and refine rig integrity	5.1 Test and refine, object rig interaction 3 5.2 Test and refine geometry skeleton systems and mechanical structure interaction 5.3 Negotiate modifications with required personnel and action modifications
6. Produce animated sequences	6.1 Create 3-D animations of rigged models according to rigging requirements 6.2 Render completed animated sequences 6.3 Save and store animated sequences and use output file formats, standard naming conventions, and version-control protocols 6.4 Present 3-D animated sequences of rigged models to required personnel for evaluation by agreed deadlines

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Undertakes geometric calculations to deduce measurements, relationships between points, lines, angles and figures in space by using assumed properties of space
Oral communication	<ul style="list-style-type: none"> Uses listening and questioning techniques and effective mode of communication to articulate complex concepts and present design using industry language for intended audience
Reading	<ul style="list-style-type: none"> Interprets, analyses and comprehends briefs, documents and conceptual information to inform job requirements
Writing	<ul style="list-style-type: none"> Transforms creative ideas and develops required documentation for specific audiences, using clear and detailed language
Teamwork	<ul style="list-style-type: none"> Demonstrates an understanding and applies protocols governing what to communicate, with whom and how, when presenting work for evaluation, and negotiating modifications
Planning and organising	<ul style="list-style-type: none"> Sequences and schedules complex activities, monitors implementation and manages communication Implements actions as per the plan, making slight adjustments if necessary, and addressing some unexpected issues Manages and maintains files securely in a variety of storage media and formats
Problem solving	<ul style="list-style-type: none"> Makes a range of critical and non-critical decisions in relatively complex situations, taking a range of factors into account when planning, testing and refining rigs
Self-management	<ul style="list-style-type: none"> Improves personal productivity and optimises software functions for specific purposes using a broad range of application features

Unit Mapping Information

Supersedes and is equivalent to ICTGAM519 Manage technical art and rigging in 3-D animation.

Links

Assessment Requirements for ICTGAM545 Manage technical art and rigging in 3-D animations

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design, implement and manage rigs for objects according to production documentation and organisational procedures on at least two occasions.

In the course of the above, the candidate must:

- use and refine skeleton/structural and animation controls for optimal performance
- construct hierarchies to formulate specific controls
- combine and refine object geometry to skeletal/structural rigs
- create 3-D digital animated sequences of a rigged model
- meet production deadlines.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- basic 3-D digital animation methodologies for managing technical art and rigging in 3-D animation
- features of a range of delivery platforms applicable to managing technical art and rigging in 3-D animation
- geometry topology analysis procedure and methodology
- procedures for identifying physical attributes to animate and manage technical art and rigging in 3-D animation
- rigged 3-D modelling techniques
- theory of anatomy and structural systems in relation to 3-D animation techniques.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- computer hardware and software
- games engine
- file storage
- organisational procedures applicable to managing technical art and rigging in 3-D animations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to create compound models using industry software applicable to animation production process, according to a defined set of parameters.

It applies to those with high-level technical and analytical skills working as modellers or artists, in the game development industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Game development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine model creation requirements	1.1 Identify, analyse and follow design and model creation requirements, production documentation and organisational guidelines 1.2 Determine type of production for which 3-D digital models are being created 1.3 Research and select 3-D modelling software tools according to type of production for which 3-D digital models are being created
2. Research and create 3-D digital models using a variety of	2.1 Research and determine applicable modelling methodology

ELEMENT	PERFORMANCE CRITERIA
modelling techniques	2.2 Apply a variety of modelling techniques according to model creation requirements 2.3 Create 3-D digital models according to model creation requirements 2.4 Seek feedback on 3-D digital models from required personnel and amend as required 2.4 Refine and confirm integrity of models according to organisational procedures
3. Combine 3-D models to create a scene	3.1 Combine 3-D models and create a scene according to design requirements 3.2 Submit models to required personnel and seek and respond to feedback
4. Render and finalise 3-D digital models using applicable render engine	4.1 Test rendering scene and adjust settings according to task requirements 4.2 Render final 3-D scene 4.3 Submit finalised model to required personnel and seek and respond to feedback
5. Back up work	5.1 Make required backup copies of files 5.2 Complete and lodge workplace documentation according to organisational policies and procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Uses whole numbers, decimals and percentages when manipulating measurement, scale, ratio, coordinates, colour, shading and other elements of 3-D animation
Oral Communication	<ul style="list-style-type: none"> Uses listening and questioning techniques and effective mode of communication to articulate complex concepts and present information using industry language for intended audience
Reading	<ul style="list-style-type: none"> Interprets, analyses and comprehends briefs, documents and conceptual information Analyses texts and images to inform implementation of specifications
Writing	<ul style="list-style-type: none"> Develops workplace documentation using industry specific language
Planning and	<ul style="list-style-type: none"> Takes responsibility for planning and organising tasks required to

SKILL	DESCRIPTION
organising	meet required outcomes
Problem solving	<ul style="list-style-type: none">• Makes a range of critical and non-critical decisions in relatively complex situations, taking a range of factors into account• Analyses and applies some basic principles of analytical and lateral thinking when creating a concept
Self-management	<ul style="list-style-type: none">• Implements actions as per plan, making slight adjustments if necessary and addressing some unexpected issues
Technology	<ul style="list-style-type: none">• Uses a broad range of features in 3-D software applications for specific purposes• Manages and maintains files in a variety of storage media and formats

Unit Mapping Information

Supersedes and is equivalent to ICTGAM520 Create and combine 3-D digital games and components.

Assessment Requirements for ICTGAM546 Create and combine 3-D digital games and components

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design, build and combine at least two 3-D models to an organisation's specifications on at least two occasions.
- In the course of the above, the candidate must:
- combine 3-D models to build a scene that meets design requirements
- produce, circulate and store the final render of the scene.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- 3-D software interfaces for creating and combining 3-D digital games and components
- capabilities and constraints of game engines
- game-play hardware and software products
- process of computer game development applicable to creating and combining 3-D digital games and components
- application of anatomy and physical movement to 3-D components
- graph curve editor and its application to 3-D digital component design
- physical attributes required to create effects, including weight and anticipation
- risk and critical path management applicable to creating and combining 3-D digital games and components
- techniques for applying concept-development skills
- techniques for applying concept-visualisation skills
- transfer methodology, including rotoscope, hand key and motion capture
- technology requirements and human resources required in the process of creating a game, including team members' skills

- budgeting and scheduling considerations for game design.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- hardware and software
- design brief
- games engine
- file storage
- the internet.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTGAM547 Create interactive 3-D environments for digital games

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to coordinate the design and technical elements of a smooth-running interactive 3-D environment.

It applies to those with high-level organisation and technical skills working as concept artists, game designers, games programmers, animators and other personnel working in the game development industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Game development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>

ELEMENT	PERFORMANCE CRITERIA
1. Obtain design documents for 3-D environment and select software tools	1.1 Identify and confirm project brief, design requirements for 3-D environment and other applicable documents according to organisational procedures 1.2 Conceptualise design requirements according to project brief and other applicable documents 1.3 Discuss and determine design considerations and generate concept art for final environment design 1.4 Confirm all requirements are considered and included in design according to project brief 1.5 Identify and select applicable texturing tools, including painting, shading and texturing software according to 3-D environment requirements 1.6 Research and select applicable audio tools 1.7 Analyse and select 3-D modelling and animation software to be used 1.8 Document, explain and justify design decisions according to organisational procedures
2. Create 3-D environment	2.1 Implement basic geometry, flow and layout according to design requirements 2.2 Separate each section of environment into key parts and choose focal point for environment 2.3 Incorporate detail into focal point of level 2.4 Set reference for rest of environment using focal points 2.5 Integrate geometry and texturing and place models according to project brief 2.6 Carry out detailed pass of entire environment 2.7 Set up exterior and interior lighting 2.8 Incorporate sound and particle effects and perform optimisation as required 2.9 Perform final pass and finalise elements
3. Test and finalise 3-D environment	3.1 Test and debug 3-D environment and confirm functionality on different digital devices 3.2 Present finished 3-D environment to required personnel and amend according to feedback 3.2 Document and report how design decisions have met 3-D environment design requirements 3.4 Incorporate feedback in final design as required and obtain final sign-off from required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none">Interprets, analyses and comprehends briefs, documents and conceptual information to inform job requirements
Writing	<ul style="list-style-type: none">Prepares documentation detailing process and final design using comprehensive structure, layout and complex industry language
Oral Communication	<ul style="list-style-type: none">Uses listening and questioning techniques and effective mode of communication to articulate complex concepts and present design using industry language for intended audience
Numeracy	<ul style="list-style-type: none">Undertakes geometric calculations to deduce measurements, relationships between points, lines, angles and figures in space by using assumed properties of space
Planning and organising	<ul style="list-style-type: none">Takes responsibility for planning, organising and implementing tasks required to achieve outcomes
Problem solving	<ul style="list-style-type: none">Makes a range of critical and non-critical decisions in relatively complex situations, taking a range of factors into accountIdentifies and applies some basic principles of analytical and lateral thinking
Self-management	<ul style="list-style-type: none">Implements actions as per the plan, making slight adjustments if necessary and addressing some unexpected issues
Technology	<ul style="list-style-type: none">Uses a broad range of features in 3-D software applications for specific purposesManages and maintains files in a variety of storage media and formats

Assessment Requirements for ICTGAM547 Create interactive 3-D environments for digital games

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- deliver a final 3-D environment for a digital game, according to project brief, including:
 - production of concept art
 - documentation justifying and explaining design decisions.

In the course of the above, the candidate must:

- implement design requirements into a working 3-D environment
- create working interactions between user and the environment
- render 3-D environment on at least one small device and one large device and confirm pixels are optimised.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required budgeting and scheduling considerations for game design
- digital game development processes
- concept art generation processes for 3-D environments
- capabilities of industry standard texturing and audio tools
- features and functions of industry standard 3-D modelling and animation software
- optimisation techniques applicable to creating interactive 3-D environments for digital games
- technology requirements and human resources required to create games, including the team's respective skills
- industry standard game-play hardware and software products, including constraints that products impose on graphics and code development and creative visual design
- testing and debugging procedures applicable to 3-D environment creation process

- organisational procedures applicable to creating interactive 3-D environments for digital games.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- hardware and software required in creating interactive 3-D environments for digital games
- project and design brief
- games engine
- digital devices
- file storage
- the internet.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTGAM548 Complete digital editing for 3-D and digital effects environments

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to edit a sequence in a 3-D environment and finalise the edit in required video format.

It applies to those with high-level technical and communication skills working as concept artists, game designers, games programmers, animators, and other personnel working in the game development industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Game development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Research digital editing techniques and software	1.1 Research industry-standard digital editing techniques according to organisational requirements 1.2 Determine required techniques applying in various scenarios 1.3 Research industry standard digital editing software 1.4 Identify and document technical limitations and constraints of rendering and editing processes
2. Prepare to perform digital editing for 3-D environment	2.1 Identify and confirm project requirements according to research and organisational requirements

ELEMENT	PERFORMANCE CRITERIA
	2.2 Obtain or develop storyboard for sequence 2.3 Obtain or create 3-D animation sequence in frames according to project requirements 2.4 Use suitable naming scheme for rendered frames and organise files into applicable folder structure
3. Apply digital editing techniques	3.1 Edit rendered frames and additional graphics into sequence outlined in storyboard 3.2 Apply program functions to create and insert graphics, transitions and special effects into animation 3.3 Implement sounds and music at required frame locations 3.4 Confirm file management process and requirements are maintained during editing process
4. Finalise digitally edited production	4.1 Resolve sound and transition errors using editing software 4.2 Test and evaluate final edit, and amend as required according to organisational procedures 4.3 Confirm production meets project requirements on different digital devices 4.4 Present finalised edit to required personnel in applicable video format 4.5 Receive and incorporate feedback as required 4.6 Obtain final sign-off from required personnel according to organisational procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Interprets, analyses and comprehends briefs, documents and conceptual information to inform job requirements
Writing	<ul style="list-style-type: none"> Prepares documentation detailing process and work performed using comprehensive structure, layout and complex industry language
Oral Communication	<ul style="list-style-type: none"> Uses listening and questioning techniques and effective mode of communication to articulate complex concepts and present finalised edit using industry language for intended audience
Numeracy	<ul style="list-style-type: none"> Uses whole numbers, decimals and percentages when manipulating measurement, scale, ratio, coordinates, colour, shading and other

SKILL	DESCRIPTION
	elements of a 3-D environment

Assessment Requirements for ICTGAM548 Complete digital editing for 3-D and digital effects environments

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- edit a 3-D sequence by inserting graphics, special effects, sounds and music according to a storyboard.

In the course of the above, the candidate must:

- research and select digital editing techniques and software
- develop final version in required video format using editing software and feedback from others
- test 3-D sequence meets project requirements on at least one small device and one large device, and confirm pixels are optimised.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- digital editing and rendering processes and techniques
- capabilities and constraints of industry standard digital editing and rendering software
- technical constraints that hardware imposes on:
 - software development
 - graphics requirements
 - code development
 - creative visual design
- storyboard development process in 3-D environments
- program functions used to create and insert graphics, transitions and special effects into animation

- sound and music implementation techniques used in digital editing for 3-D and digital effects environments
- testing procedures applicable to digital editing processes
- organisational procedures applicable to digital editing for 3-D and digital effects environments.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- hardware and software applicable to digital editing for 3-D and digital effects environments
- project brief
- games engine
- digital devices
- file storage
- the internet.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTGAM549 Collaborate in design of 3-D game levels and environments

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to plan and implement the design of an interactive 3-D game in a team environment.

It applies to those with high-level technical and communication skills working as concept artists, game designers, games programmers, animators and other personnel working in the game development industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Game development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Research and plan design process	<ul style="list-style-type: none">1.1 Establish project and 3-D game design requirements according to organisational needs1.2 Research and select project planning methodology according to project requirements1.3 Discuss and identify design practices and considerations in collaboration with other team members1.4 Identify team roles and responsibilities applicable to level creation and design processes1.5 Plan and implement a design process using time-management principles

ELEMENT	PERFORMANCE CRITERIA
	1.6 Document stages of design process according to organisational procedures
2. Conceptualise 3-D environment design in collaboration with team	2.1 Identify key level specifications and purpose of 3-D environment 2.2 Gather and analyse reference materials in collaboration, and assist with visualisation of 3-D environment 2.3 Catalogue required objects of level environment 2.4 Research and select 3-D modelling and animation software, and painting, shading and texturing software required to create 3-D environment 2.5 Document design decisions made before and during design conceptualisation, according to organisational procedures 2.6 Produce concept art of designed environment according to project brief
3. Present conceptualised environment to peers and finalise project	3.1 Present conceptualised environment to peers and receive feedback 3.2 Report on how design decisions have met requirements for game-play elements 3.3 Justify why certain design decisions were made to required personnel 3.4 Evaluate and incorporate peer feedback to design as required 3.5 Implement and apply quality assurance principles to design according to organisational procedures 3.6 Finalise design decision documents in preparation for creating 3-D environment

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Interprets, analyses and comprehends briefs, instructions and conceptual information to inform job requirements
Writing	<ul style="list-style-type: none"> Prepares documentation detailing decision-making process, design and instruction for specific audiences, using clear and detailed language
Oral	<ul style="list-style-type: none"> Uses listening and questioning techniques and effective mode of

SKILL	DESCRIPTION
Communication	communication to articulate complex concepts and present conceptualised environment to peers using relevant industry language
Teamwork	<ul style="list-style-type: none">• Cooperates and collaborates with others to achieve shared outcomes
Planning and organising	<ul style="list-style-type: none">• Takes responsibility for planning and organising tasks required to achieve outcomes, including coordinating tasks with others
Problem solving	<ul style="list-style-type: none">• Makes a range of critical and non-critical decisions in relatively complex situations, using analytical processes to evaluate and choose applicable options• Analyses and applies some basic principles of analytical and lateral thinking
Technology	<ul style="list-style-type: none">• Identifies ways in which digital systems and tools are used, or could be used, to achieve work goals for modelling and animation• Manages and maintains files in a variety of storage media and formats

Unit Mapping Information

Supersedes and is equivalent to ICTGAM523 Collaborate in the design of 3-D game levels and environments.

Assessment Requirements for ICTGAM549 Collaborate in design of 3-D game levels and environments

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- collaborate with others to plan and implement the design process for creating an interactive 3-D environment.

In the course of the above, the candidate must:

- produce and present draft design documents to produce an interactive 3-D environment
- gather reference materials and visualise 3-D environment, including environment profiles, game genre, game design and game-play elements
- gather feedback from peers to review and modify designs to create a finalised design for a 3-D environment
- render design on at least one small device and one large device and confirm pixels are optimised.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required budgeting and scheduling considerations for game design
- capabilities and constraints of industry standard game engines
- features and functions of industry standard 3-D modelling and animation software, and painting, shading and texturing software
- process used for digital game development
- industry standard project planning methodology and processes
- design practices and considerations applicable to designing 3-D game levels and environments
- applicable time-management principles
- 3-D environment visualisation techniques

- quality assurance principles applicable to 3-D design processes
- industry standard game-play hardware and software products, together with technical constraints that products impose on graphics and code development and creative visual design
- different team member roles and responsibilities required in designing 3-D game levels and environments
- technology and human resources required in the process of creating a game, including the team's respective skills
- organisational procedures applicable to designing 3-D game levels and environments.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- hardware and software applicable to designing 3-D game levels and environments
- project and design brief
- games engine
- digital devices
- file storage
- the internet
- organisational procedures applicable to designing 3-D game levels and environments.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTGAM550 Integrate multiple data sources into interactive 3-D environments

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to integrate multiple data sources into interactive 3-D environments.

It applies to those with high-level technical and communication skills, working as concept artists, game designers, games programmers, animators, and other personnel working in the game development industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Game development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to integrate elements into interactive 3-D environment	1.1 Identify and confirm interactive 3-D environment requirements 1.2 Research and identify data sources that can be integrated into interactive 3-D environments according to organisational procedures 1.3 Obtain or create data sources according to interactive 3-D environment requirements 1.4 Identify tools and libraries required for integration of identified elements into 3-D environment 1.5 Research, review and document how tools work

ELEMENT	PERFORMANCE CRITERIA
	according to organisational procedures
2. Integrate sources into interactive 3-D environment	<ul style="list-style-type: none">2.1 Create prototypes and integrate elements into interactive 3-D environment using identified tools2.2 Test integration of elements according to organisational procedures2.3 Test functionality of 3-D environment on different digital devices2.4 Review test results and amend interactive 3-D environment as required2.5 Confirm elements' integrity is maintained during implementation
3. Evaluate and finalise completed 3-D environment	<ul style="list-style-type: none">3.1 Present interactive 3-D environment to required personnel3.2 Review feedback from presentation and adjust interactive 3-D environment as required3.3 Evaluate and justify implementation and document use of data sources, tools and libraries according to organisational procedures3.4 Obtain final sign-off from required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none">• Interprets, analyses and comprehends briefs, instructions and conceptual information to inform job requirements
Writing	<ul style="list-style-type: none">• Documents tools functionality according to organisational procedures using required language for specific audiences

SKILL	DESCRIPTION
Oral Communication	<ul style="list-style-type: none">• Uses listening and questioning techniques and effective mode of communication to articulate complex concepts and present conceptualised environment to peers using relevant industry language
Initiative and enterprise	<ul style="list-style-type: none">• Uses creativity and initiative in 3D design
Planning and organising	<ul style="list-style-type: none">• Evaluates work and implements improvements using a systematic process
Self-management	<ul style="list-style-type: none">• Plans, organises and completes work according to defined requirements and takes responsibility for decisions and sequencing tasks• Sources, analyses and evaluates data sources with potential to meet 3D design requirements
Technology	<ul style="list-style-type: none">• Uses key features of specific digital systems and tools to complete design tasks

Unit Mapping Information

Supersedes and is equivalent to ICTGAM524 Integrate multiple data sources into interactive 3-D environments.

Assessment Requirements for ICTGAM550 Integrate multiple data sources into interactive 3-D environments

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- create and test prototypes that integrate at least one data source into a working interactive 3-D environment.

In the course of the above, the candidate must:

- research and obtain data sources, tools and libraries needed to integrate elements into an interactive 3-D environment
- select data sources to integrate according to the following:
 - 3-D environment
 - game design
 - game genre
 - game mechanics
 - game-play elements
 - level specifications
- test functionality of interactive 3-D environment on at least one small device and one large device and confirm pixels are optimised
- deliver 3-D environment with working interactions including all data sources and documented reasons for its implementation.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard data sources for different 3-D environments
- how game design, genre and mechanics, game-play elements and level specifications affect choice of data source

- key features of game-play hardware and software products used for interactive 3-D environments, including any technical constraints imposed on design and development
- technology requirements and human resources required in the process of creating a game, including team members' respective skills
- data source creation processes applicable to interactive 3-D environments
- prototype development processes applicable to integrating elements into 3-D environments
- testing processes applicable to developing 3-D environments
- industry standard tools and libraries used to integrate elements into 3-D environments
- organisational procedures applicable to integration of multiple data sources into interactive 3-D environments.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- hardware, software, tools and libraries applicable to integrating multiple data sources into interactive 3-D environments
- digital devices
- data sources
- the internet
- 3-D environment requirements
- games engine
- file storage
- organisational procedures applicable to integration of multiple data sources into interactive 3-D environments.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTGAM551 Apply digital texturing for the 3-D environment in digital games

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to research, select techniques and apply industry standard graphic software tools to digital texturing for the 3-D environment in digital games.

The unit applies to those with high-level technical, interpretive and communication skills, working as concept artists, game designers, games programmers, animators, and other personnel working in the game development industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Game development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Research industry practices	1.1 Research and identify methods of texture creation and texture mapping according to organisational requirements 1.2 Select graphics software to create textures according to organisational requirements 1.3 Document design considerations for texturing a 3-D environment according to organisational requirements
2. Create 3-D environments	2.1 Use 3-D modelling and animation software according to task requirements 2.2 Create simple 3-D objects

ELEMENT	PERFORMANCE CRITERIA
	2.3 Place objects in a 3-D environment 2.4 Apply inbuilt lighting effects to 3-D environment
3. Create multiple textures	3.1 Create textures according to task requirements 3.2 Establish the look and the feel of the 3-D environment 3.3 Seek and respond to feedback from required personnel
4. Apply multiple texture effects	4.1 Load textures into 3-D animation and modelling software according to task requirements 4.2 Colour 3-D objects and environment 4.3 Create multiple texture effects for single 3-D object 4.4 Render image of 3-D environment according to task requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none">• Uses whole numbers, decimals and percentages applicable to measurement, resolution aspect ratio, pixel ratio, scale, coordinates, colour, shading, and other attributes/variables in the application of digital effects
Oral communication	<ul style="list-style-type: none">• Articulates requirements and responsibilities clearly and distinctively, using industry standard technical language intended for audience and environment
Reading	<ul style="list-style-type: none">• Researches common industry practices to interpret technical design terminology• Interprets and comprehends a large range of diagrams, icons, symbols, text, numbers and letters, necessary to use complex design software
Writing	<ul style="list-style-type: none">• Uses applicable spelling and grammar, plain English, specific terminology and required document layout when documenting methodologies and design considerations
Planning and organising	<ul style="list-style-type: none">• Plans, organises and completes tasks according to defined requirements and schedules
Problem solving	<ul style="list-style-type: none">• Makes decisions directly related to completion of required tasks• Uses creativity and initiative to visualise concepts• Sources, analyses and evaluates methodologies and software with the potential to meet 3-D texturing requirements

SKILL	DESCRIPTION
Technology	<ul style="list-style-type: none">• Uses key features of specific digital systems and software to complete

Unit Mapping Information

Supersedes and is equivalent to ICTGAM525 Apply digital texturing for the 3-D environment in digital games.

Assessment Requirements for ICTGAM551 Apply digital texturing for the 3-D environment in digital games

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- research, select and document suitable techniques and software to create texturing for a 3-D environment.

In the course of the above, the candidate must:

- use graphics software to create multiple textures for a 3-D environment
- produce a final rendered image of a 3-D environment that incorporates multiple texture effects for a single 3-D object.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- technology and human resources required in the process of creating textures for the 3-D environment
- capabilities and constraints of graphics software for texturing
- methods of texture creation and texture mapping
- design considerations for texturing including resource limitations and constraints, and target markets.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- computer hardware and software
- games engine

- file storage
- the internet for research purposes.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTGAM552 Create complex 3-D characters for games

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to plan, and implement, a design for complex 3-D characters for games.

The unit applies to those with high-level technical, interpretive and communication skills, working as concept artists, game designers, games programmers, animators and other personnel working in the game development industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Game development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Clarify work requirements	1.1 Identify design requirements according to project brief and documents 1.2 Conceptualise game environment characters, design, level specifications and genre according to project brief 1.3 Gather and analyse materials required to design and visualisation of 3-D character models 1.4 Identify texturing tools, including painting, shading and texturing software and 3-D modelling tools
2. Conceptualise 3-D character design	2.1 Determine and document design decisions according to project requirements 2.2 Determine and document key attributes of characters

ELEMENT	PERFORMANCE CRITERIA
	2.3 Examine design considerations and generate 3-D characters concept art
3. Create complex 3-D characters	3.1 Create base 3-D character models according to design specifications 3.2 Refine and polish character models 3.3 Create and map 3-D character models textures 3.4 Refine textures and apply shaders according to design specifications 3.5 Check integrity and modify 3-D characters according to design specifications
4. Finalise 3-D character creation tasks	4.1 Present finished 3-D characters to required personnel and seek and respond to feedback 4.2 Report on how design decisions have met 3-D character's design requirements 4.3 Present 3-D model to required personnel and seek and respond to feedback

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Uses whole numbers, decimals and percentages applicable to measurement, resolution aspect ratio, pixel ratio, scale, coordinates, colour, shading, and other attributes/variables in the application of digital effects
Oral communication	<ul style="list-style-type: none"> Articulates requirements and responsibilities clearly and distinctively, using industry standard technical language intended for audience and environment
Reading	<ul style="list-style-type: none"> Interprets, analyses and comprehends briefs, instructions and conceptual information, to inform the design of environment specifications Interprets large range of diagrams, icons, symbols, text, numbers and letters necessary to use complex design software
Writing	<ul style="list-style-type: none"> Communicates software and graphics requirements and code development to others, using applicable spelling and grammar, plain English, and industry terminology
Planning and	<ul style="list-style-type: none"> Plans, organises and completes work according to project brief and schedules, sequencing tasks to achieve efficient outcomes

SKILL	DESCRIPTION
organising	<ul style="list-style-type: none">• Sources and analyses reference materials to support 3-D character design
Problem solving	<ul style="list-style-type: none">• Uses creativity and initiative in 3D character design and creation• Uses systematic, analytical processes in routine and non-routine

Assessment Requirements for ICTGAM552 Create complex 3-D characters for games

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- plan and manage design process for creating at least two 3-D character models according required design brief.

In the course of the above, the candidate must:

- incorporate design specifications and create complex 3-D character models
- produce and deliver documentation, showing evidence of concepts creation and design decisions.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- budgeting and scheduling considerations for game design
- process used for computer game development
- industry standard game-play hardware and software products, including technical constraints imposed on design and development
- technology and human resources required in the process of creating a game and outline the team members' respective skills.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- computer hardware and software
- games engine

- file storage.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTGAM553 Integrate database with online games

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to integrate a database with an online game, where the relationship between the game server and the database server is also considered a client-server relationship on a local area network.

The unit applies to those with high-level technical and problem-solving skills working as programmers, analyst programmers and game programmers responsible for the development of code to connect a computer game to a database.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Game development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Install application programming interfaces	1.1 Research application programming interfaces (APIs) according to client requirements 1.2 Identify specific APIs required for game architecture and data source provider 1.3 Install nominated APIs on game development computers according to technical specifications
2. Define and use connection to data source	2.1 Define required game data source connection parameters 2.2 Store connection parameters in required external text-based configuration file

ELEMENT	PERFORMANCE CRITERIA
	2.3 Open and close connection to game data source
3. Configure and use connection pooling	3.1 Configure connection pooling in the database management system 3.2 Define connection pool parameters for minimum connections, maximum connections, and idle connections 3.3 Minimise use of database resources through connection pooling 3.4 Test and verify use of connection pooling according to organisational requirements
4. Pass embedded non/structured query language (SQL) to a database	4.1 Define database connection property 4.2 Compose structured query language (SQL) or non-SQL statement to be passed to database 4.3 Test, debug and execute the statement according to organisational requirements
5. Execute stored procedures	5.1 Call stored procedure on database and use command callable statement 5.2 Define and pass parameters to stored procedure 5.3 Test, debug and execute database stored procedure according to organisational requirements
6. Modify database data	6.1 Retrieve result sets from the database into game application domain 6.2 Insert new records into database 6.3 Update existing database records 6.4 Integrate data from forward-only and read-only cursor into game application domain 6.5 Incorporate data from updateable cursor into game application domain
7. Test and debug database integration code	7.1 Test database integration code and document results according to organisational requirements 7.2 Determine errors and exceptions and document solutions 7.3 Debug all errors and exceptions 7.4 Assess data modifications, identify and fix errors 7.5 Submit all documentation to required personnel and seek and respond to feedback

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Oral communication	<ul style="list-style-type: none">• Articulates requirements and responsibilities distinctively using industry standard technical language intended for audience and environment
Reading	<ul style="list-style-type: none">• Identifies and evaluates documents containing complex technical terminology to identify which APIs are suited to the game application domain and the game architecture
Writing	<ul style="list-style-type: none">• Uses programming code, syntax and conventions to update, test and de-bug the database integration code• Documents test results and technical solutions, using applicable industry terminology
Planning and organising	<ul style="list-style-type: none">• Plans, organises and completes work according to project brief and schedules, sequencing tasks to achieve efficient outcome
Problem solving	<ul style="list-style-type: none">• Sources and analyses reference materials related to database integration• Uses creativity and initiative in database assessment and design• Uses systematic, analytical processes in complex, routine and non-routine situations, gathering information, evaluating options, and identifying solutions to coding problems
Technology	<ul style="list-style-type: none">• Uses key features, of specific digital systems and software effectively to complete defined tasks

Unit Mapping Information

Supersedes and is equivalent to ICTGAM527 Integrate database with online game.

Links

Companion Volume Implementation Guide is found on VETNet -

<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=a53af4e4-b400-484e-b778-71c9e9d6aff2>

Assessment Requirements for ICTGAM553 Integrate database with online games

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- integrate, test and modify two sets of database data provided by game-play input and document all errors and solutions on at least two occasions.

In the course of the above, the candidate must:

- determine and install application programming interfaces (API) for games development
- define and add database functionality to an online game.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- relational database methodologies, including;
 - creating and testing stored procedures
 - 'embedded' structured query language (SQL) and assigning parameters in code for filtering
 - implementing relationships between tables
 - retrieving data from multiple tables using SQL
 - how inserts to tables in parent/child relationships can be implemented using artificial (auto-generated) primary key values
 - implementing cascading updates and deletes
- principles of game development applicable to integrating databases with online games
- principles of integrated development environments, including:
 - data access APIs and associated classes, required for the integration of a database with an online game
 - online help and documentation required for research and debugging code

- user authentication and authorisation management
- methodologies and techniques required for effective and well-factored object-oriented program (OOP) code, including:
 - class implementation
 - control of logic flow
 - use of collections and lists
 - use of OOP concepts, including inheritance, encapsulation and overloading
- implications of web development on games integration.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- the game design specification and requirements documentation
- a game server
- a database server
- integrated development environment software and hardware
- browsers for game engine for console-based games.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTGAM554 Create games for mobile devices

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to use innovative game development strategies to create games for mobile devices.

The unit applies to those with high-level technical, creative and communication skills working as concept artists, games designers, games programmers, animators, and other personnel working in the game development industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Game development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Research and document mobile gaming device technologies	1.1 Research and document mobile devices suitable for games 1.2 Identify required mobile device according to project requirements 1.3 Identify technical limitations and constraints of the mobile gaming device 1.4 Research and identify tools and technology for creating applications for the mobile device 1.5 Identify a suitable tool for the mobile gaming device
2. Plan project	2.1 Determine requirements from organisational project brief and documents

ELEMENT	PERFORMANCE CRITERIA
	2.2 Identify game production assets according to creative and production requirements and technical specifications 2.3 Define and document developer roles and skills according to project requirements 2.4 Create and document schedule for production and testing 2.5 Determine and document strategies for monitoring production progress against schedule
3. Develop a game prototype	3.1 Create graphics, music and sound assets 3.2 Develop game prototype according to technical specifications 3.3 Create and check game-play elements, according to creative and technical requirements 3.4 Test and run game play on mobile devices and determine alignment to plans 3.4 Identify whether game meets creative, production and technical requirements
4. Evaluate game prototype	4.1 Demonstrate initial prototype to required personnel 4.2 Evaluate prototype performance against criteria 4.3 Seek and respond to user feedback 4.4 Confirm endorsement from required personnel to develop the prototype into complete product
5. Transform prototype into a final proof-of-concept prototype	5.1 Make finalised changes to prototype according to evaluation and feedback 5.2 Integrate all game elements as required by specifications 5.3 Polish the game according to project requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Oral communication	<ul style="list-style-type: none"> Uses listening and questioning techniques and effective mode of communication to articulate complex ideas using industry language for intended audience

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none">• Interprets and analyses briefs, instructions, and conceptual information to inform design specifications• Interprets large range of diagrams, icons, symbols, text, numbers, and letters necessary to use complex programming software
Writing	<ul style="list-style-type: none">• Uses plain English and industry terminologies when documenting plans and schedules• Develops an interactive product using complex programming language
Teamwork	<ul style="list-style-type: none">• Collaborates with others as part of familiar routine activities to achieve requirements
Planning and organising	<ul style="list-style-type: none">• Plans work schedules and organises and completes tasks required to achieve outcomes
Problem solving	<ul style="list-style-type: none">• Uses creativity and initiative in game design• Uses systematic, analytical processes in routine and non-routine situations, conducting evaluations, gathering information and assessing potential solutions
Self-management	<ul style="list-style-type: none">• Sources information, applications and tools with the potential to meet the development requirements
Technology	<ul style="list-style-type: none">• Demonstrates a sophisticated understanding of principles, concepts, language and practices associated with the digital world

Unit Mapping Information

Supersedes and is equivalent to ICTGAM528 Create games for mobile devices.

Assessment Requirements for ICTGAM554 Create games for mobile devices

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- produce and demonstrate an original working game on a mobile device.

In the course of the above, the candidate must:

- document plans and schedules applicable to game development
- implement game development and production strategies
- apply strategies for trialling and testing game prototypes
- evaluate whether games meet design brief, creative and technical requirements.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- leading industry standard mobile game devices
- leading tools and technologies needed for creating applications on mobile devices products
- technical constraints that mobile devices place on design and development of games
- suitable programming languages for mobile devices
- budgeting and scheduling considerations for game design
- importance of risk assessment and critical path planning applicable to creating games for mobile devices
- human resources required in the process of creating a game for a mobile device and outline the team members' respective skills.
- techniques for concept visualisation and development.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- computer hardware and software
- games engine
- file storage
- integrated development environments
- mobile devices.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTGAM555 Analyse business opportunities in the digital games environments

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to research the digital games industry climate and analyse business opportunities.

The unit applies to those with high-level technical, creative and communication skills working as concept artists, games designers, games programmers, animators and other personnel working in the game development industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Game development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine Australian digital games industry	1.1 Identify large and small organisations in Australian digital games industry and their recent projects 1.2 Identify target market and determine key traits and habits of users 1.3 Identify methods of marketing to identified target market 1.3 Identify resources required to produce a digital game in a small business environment 1.4 Determine process of subcontracting production

ELEMENT	PERFORMANCE CRITERIA
	elements to other small businesses according to organisational policies and procedures
2. Determine structure game-development team	2.1 Identify roles of engineers, artists, game designers, producers and personnel requirements 2.2 Identify required skill set to occupy each role in game development team 2.3 Determine interaction and collaboration between identified roles
3. Investigate process of starting an independent game development business	3.1 Identify major factors involved in starting a small business in the digital games industry 3.2 Identify legal requirements, environmental impact, sustainability considerations and financial management of operating a small business 3.3 Identify legal protection of small business operator and dissolution procedures for a small business
4. Evaluate role of government and organisations related to digital game production	4.1 Identify role of Australian government and other organisations affecting the digital games industry 4.2 Identify influence of Australian government in game production and marketing 4.3 Determine effect of rating standards on digital game production and marketing
5. Review and document copyright and intellectual property laws	5.1 Determine copyright and intellectual property laws related to digital game development 5.2 Review and determine state of national and international copyright pertaining to digital game assets 5.3 Incorporate conventions of copyright related to production of a digital game project 5.4 Lodge all documentation according to organisational policies and procedures, as required

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none">Identifies, confirms and incorporates legislative requirements of business operationsInvestigates new and innovative ideas to identify business

SKILL	DESCRIPTION
	opportunities
Numeracy	<ul style="list-style-type: none">Analyses the budgetary requirements for the creation of a digital game in a small business environment
Reading	<ul style="list-style-type: none">Interprets and analyses information from a range of relatively complex sources, including legislation
Writing	<ul style="list-style-type: none">Documents results of research, analysis and reviews to inform analysis of business opportunities and requirements
Planning and organising	<ul style="list-style-type: none">Systematically plans tasks to gather required information to build understanding of the digital games environment
Problem solving	<ul style="list-style-type: none">Makes critical decisions in complex situations, taking a range of variables into consideration
Technology	<ul style="list-style-type: none">Demonstrates a sophisticated understanding of principles, concepts, language and practices associated with the digital world

Unit Mapping Information

Supersedes and is equivalent to ICTGAM529 Analyse business opportunities in the digital games environment.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTGAM555 Analyse business opportunities in the digital games environments

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- research and document at least five factors when starting up and operating a small business in the digital games industry on at least one occasion.

In the course of the above, the candidate must:

- research key organisations and types of projects undertaken in the digital games industry
- document resources, roles and skills requirements of a gaming development team, and the interaction required between team members
- document business models and revenue ideas for commercial game.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- sources of information about the Australian digital games industry
- process of subcontracting
- various methods that could be used to allow interaction and collaboration between different members of a development team
- how rating standards affect digital game production and marketing
- risk and critical-path management relating to analysing business opportunities in the digital games environments
- copyright and intellectual property laws as they pertain to the development of digital games.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- computer hardware and software
- games engine
- file storage
- the internet for research purposes
- legislation, including copyright and intellectual property legislation, and work health and safety legislation applicable to analysing business opportunities in the digital games environments.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTGAM556 Develop and implement physics in 3-D digital games

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to integrate a physics, and rendering, engine into a 3-D digital game.

The unit applies to those with high-level technical and mathematical skills working as game engine developers, gameplay programmers and other personnel working in the game development industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Game development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Develop a game world system	1.1 Develop code and create instances of rendering engine 1.2 Develop scene manager and physics engine's world objects 1.3 Constrain frame rate to a desired frame rate
2. Develop components	2.1 Create and implement game physics system requirements 2.2 Implement game object primitives 2.3 Use physics debugger and show collision frames
3. Develop constraint dynamics	3.1 Generate required game objects and physics bodies constrained by joints and springs 3.2 Build ragdoll using game physics system
4. Develop physics	4.1 Ray cast scene

ELEMENT	PERFORMANCE CRITERIA
interactivity	4.2 Implement player-controlled model 4.3 Implement and develop required game physics system models
5. Develop an interactive scene	5.1 Build scene 5.2 Use trigger volumes to fire off events 5.3 Capture the collision events with call-backs 5.4 Respond to collision events
6. Compile a report	6.1 Build class diagrams for required objects 6.2 Document methodologies used to create interactivity 6.3 Document inventory of utilised objects and how they were used 6.4 Document libraries used 6.5 Submit documentation to required personnel and seek and respond to feedback

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> • Uses complex physics to simulate the world by creating mathematical models which measure mass • Computes algorithms to regulate time and speed • Interprets matrix-related functions to determine rate and scale • Completes algorithmic geometry to determine the relationship between points, angles, lines, surfaces and solids
Reading	<ul style="list-style-type: none"> • Recognises and interprets technical, manufacturer and organisational documentation to determine and confirm job requirements
Writing	<ul style="list-style-type: none"> • Creates cohesive and well-structured documents using required spelling and grammar, together with required programming code, syntax and conventions
Planning and organising	<ul style="list-style-type: none"> • Plans, organises and completes work according to defined requirements and schedules
Problem solving	<ul style="list-style-type: none"> • Uses the key features of, specific digital systems and tools, and operates them effectively to complete design tasks • Uses creativity and initiative in the application of game physics • Uses a systematic process to evaluate work, implement

SKILL	DESCRIPTION
	improvements and solve problems
Self-management	<ul style="list-style-type: none">• Takes full responsibility for identifying and considering organisational protocols and requirements

Unit Mapping Information

Supersedes and is equivalent to ICTGAM530 Develop and implement physics in a 3-D digital game.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTGAM556 Develop and implement physics in 3-D digital games

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- identify, evaluate, and develop one interactive game that implements game physics on at least two occasions.

In the course of the above, the candidate must:

- use and document a physics library.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- basic programming techniques needed to develop game objects
- integration issues of common physics concepts in games design
- industry standard game-play hardware and software products, including any technical constraints they impose on design and development
- human resources required in the process of creating a game
- techniques for applying concept development and visualisation skills.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- suitable development environment
- physics libraries
- computer hardware and software

- games engine
- file storage.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTGAM557 Complete compositing to create elements for 3-D and digital effects environments

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to determine design requirements, plan, create and store composite photographic and 3-D digital effects elements.

The unit applies to those with high-level information technology skills working as compositors, matte painters, concept artists, modellers, animators, game designers, directors and other personnel working in the film, television and game development industries.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Game development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Confirm compositing requirements	1.1 Determine and document compositing brief from organisational specifications and requirements 1.2 Plan and schedule compositing work according to design requirements 1.3 Identify software tools, equipment and media required for compositing work 1.4 Determine and document technical aspects of proposed compositing 1.5 Submit documentation to required personnel and obtain conformation of specifications

ELEMENT	PERFORMANCE CRITERIA
2. Prepare elements for compositing	2.1 Select resolution and aspect ratio for final composited output according to design requirements 2.2 Identify and obtain source plates and layers, images and other elements required for compositing 2.3 Modify elements and create additional elements, as required 2.4 Generate mattes according to design requirements
3. Composite images	3.1 Track and stabilise required images 3.2 Match cameras, lighting and shadows, and add motion blur to composite 3.3 Integrate plates, layers, elements and incorporate grain 3.4 Present test composites to required personnel and seek and respond to feedback
4. Finalise composite image tasks	4.1 Optimise composited images and complete rendering 4.2 Store rendered files in specified output format 4.3 Review completed render and align quality and compliance with system 4.4 Present final composited images to required personnel and seek and respond to feedback

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Determines the proportional relationship between the width, height and ratio of the final output
Oral communication	<ul style="list-style-type: none"> Uses listening and questioning techniques and effective mode of communication to articulate complex concepts and requirements using industry language for intended audience
Reading	<ul style="list-style-type: none"> Interprets and analyses brief, instructions, technical and conceptual documentation and images to a 3-D and digital games environment
Writing	<ul style="list-style-type: none"> Prepares documentation expressing work performed using appropriate structure, layout and technical programming language
Teamwork	<ul style="list-style-type: none"> Negotiates in a variety of contexts, with suppliers, colleagues or clients
Planning and organising	<ul style="list-style-type: none"> Plans, organises and completes work according to defined brief and schedules

SKILL	DESCRIPTION
Problem solving	<ul style="list-style-type: none">• Uses creativity and initiative in compositing• Uses a systematic process to evaluate work, implement improvements and solve problems
Self-management	<ul style="list-style-type: none">• Sources, analyses and evaluates applications, tools and media with the potential to meet compositing requirements
Technology	<ul style="list-style-type: none">• Uses key features of specific digital systems and tools to complete compositing tasks

Unit Mapping Information

Supersedes and is equivalent to ICTGAM531 Complete compositing to create elements for the 3-D and digital effects environment.

Assessment Requirements for ICTGAM557 Complete compositing to create elements for 3-D and digital effects environments

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop a compositing brief, schedule compositing work and complete compositing tasks to predetermined specifications.

In the course of the above, the candidate must:

- communicate with others to discuss requirements and technical aspects of the job
- complete compositing tasks to the required level of quality, according to the brief
- refine elements for consistency, optimal image quality and visual impact
- adhere to system requirements related to file size, format and storage.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- 3-D modelling, animation and visual effects development required to completing compositing to create elements for 3-D and digital effects environments
- aspect ratios for image output
- camera, lighting and shadow matching applicable to completing compositing to create elements for 3-D and digital effects environments
- efficient sizes and required formats for composited files
- requirements for scheduling and sequencing production and post-production tasks
- range of compositing software available
- rendering principles applicable to completing compositing to create elements for 3-D and digital effects environments.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- computer hardware and software
- games engine
- file storage
- compositing and output documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT206 Install software applications

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to select, install or upgrade basic commercial software applications.

It applies to individuals who require basic information and communications technology (ICT) skills to undertake related tasks under supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine software or software upgrade requirements	1.1 Document client requirements and report to appropriate person 1.2 Act on instructions to meet client requirements, according to organisational requirements
2. Obtain software or software upgrade	2.1 Investigate and select a software application program that best conforms to requirements and organisational policies 2.2 Obtain application program under instruction from appropriate person

ELEMENT	PERFORMANCE CRITERIA
	<p>2.3 Determine licensing requirements and record, according to organisational guidelines</p> <p>2.4 Ensure target computer conforms to the minimum hardware and operating system requirements of the application program</p>
3. Install or upgrade software	<p>3.1 Install new or upgraded software application program according to appropriate person or organisational instructions</p> <p>3.2 Complete the installation process efficiently and effectively to minimise disruption</p> <p>3.3 Carry out testing and acceptance, according to organisational guidelines, paying particular attention to possible effect on other systems</p> <p>3.4 Ensure client requirements are satisfied</p> <p>3.5 Refer outstanding client issues to appropriate person as necessary</p>

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	2.1, 2.3	<ul style="list-style-type: none"> Uses available literature to appropriately address requirements Interprets and responds to complex text to ascertain and confirm requirements
Writing	1.1, 2.3	<ul style="list-style-type: none"> Records key information relevant to requirements, using basic punctuation, text and correct spelling
Oral Communication	1.1, 2.2, 3.1, 3.4, 3.5	<ul style="list-style-type: none"> Uses listening and questioning techniques to confirm understanding of requirements Uses clear and specific language to convey requirements
Navigate the world of work	2.1	<ul style="list-style-type: none"> Takes some personal responsibility for adherence to organisational requirements
Get the work done	1.2, 2.1, 2.2, 2.4, 3.1-3.3	<ul style="list-style-type: none"> Follows routine procedures for using digital technology to enter, store and retrieve information directly relevant to role Understands purposes, specific functions and key

		features of common digital systems and tools, and operates them effectively to complete routine tasks <ul style="list-style-type: none">Plans routine tasks with familiar goals and outcomes, taking some limited responsibility for decisions regarding sequencing
--	--	---

Assessment Requirements for ICTICT206 Install software applications

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- install software applications through operating system instructions
- configure computer to accept new software or upgrade
- carry out testing and acceptance according to organisational guidelines.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe a typical client business domain
- identify typical hardware storage devices
- identify typical input and output devices
- describe key licensing arrangements and responsibilities to ensure they are adhered to
- identify operating systems supported by the organisation
- describe the organisational guidelines for purchasing
- identify the installation requirements for key software application packages
- describe typical software copyright responsibilities.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

- a personal computer (PC) where software installation may be performed

- application software currently used in industry
- documents detailing organisational testing and acceptance policy and procedures.

Assessors must satisfy NVR/AQTF assessor requirements.

ICTICT213 Use computer operating systems and hardware

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to select, install, configure and use computer operating systems and basic computer hardware. This involves configuring the operating system to work with a variety of hardware peripherals and types of information and communications technology (ICT) equipment.

It applies to those who work under supervision and provide support to others. This includes individuals who apply a range of configuration skills to use and solve issues in operating systems and hardware.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify operating system and hardware components	1.1 Identify and discuss differences between industry standard computer operating systems 1.2 Determine ICT organisational requirements and specifications 1.3 Identify and select operating system and application software according to required task 1.4 Identify internal and external hardware components
2. Install and configure operating system,	2.1 Identify relationship between application software, operating system and hardware

ELEMENT	PERFORMANCE CRITERIA
application software and hardware components	2.2 Install and configure operating system according to organisational requirements 2.3 Identify functions associated with operating system and associated boot process 2.4 Use graphical user interface and command line interface and perform basic tasks according to task requirements 2.5 Install and configure application software on operating system 2.6 Configure operating system to work with required hardware components according to organisational procedures
3. Optimise operating system and hardware components and seek feedback	3.1 Optimise operating system using tools and vendor utilities 3.2 Customise graphical user interface and command line interface using command line techniques 3.3 Install identified hardware drivers and check functionality 3.4 Seek review and feedback from required personnel and confirm actions were completed

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Identifies and reviews both on-line and hard-copy text with terminology applicable to ICT industry and applies this knowledge in using and configuring computer operating systems Interprets and comprehends diagrams, icons, symbols, text, numbers and letters required in installing and configuring operating systems, software and hardware
Writing	<ul style="list-style-type: none"> Inputs commands using systems related syntax, text and numbers Uses required terminology, text, letters and numbers in responding to computer generated prompts
Planning and organising	<ul style="list-style-type: none"> Plans routine tasks with goals and outcomes, taking limited responsibility in decisions regarding sequencing and timing
Technology	<ul style="list-style-type: none"> Identifies purposes and uses specific functions and key features of basic digital systems and tools

Unit Mapping Information

Supersedes and is equivalent to ICTICT201 Use computer operating systems and hardware.

Assessment Requirements for ICTICT213 Use computer operating systems and hardware

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- select, install, configure and use a computer operating system
- install, configure and run at least one application software and at least one supporting hardware component
- optimise at least one operating system using tools, drivers and vendor utilities.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- basic specifications of operating systems, hardware and applications software products
- compatibility and functions of operating systems, in respect to other versions
- operating system optimisation tools and vendor utilities
- functions and features of boot process
- command line techniques
- vendor utilities
- organisational guidelines, procedures requirements and specifications.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- hardware components including required software and drivers
- industry standard operating system and application software
- software configuration guides.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT214 Operate application software packages

Modification History

Release	Comments
Release 2	This version first released with the Information and Communications Technology Training Package Version 8.0. Minor typographical correction in Knowledge Evidence.
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to identify, select and operate commercial software packages, including a word-processing and a spreadsheet application package.

It applies to individuals who utilise different software applications within a small to large office environment to produce diverse documents.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to operate software packages	1.1 Set up workstation according to work health and safety standards and organisational requirements 1.2 Determine word-processing software task requirements 1.3 Determine spreadsheet software task requirements 1.4 Determine software application according to task

ELEMENT	PERFORMANCE CRITERIA
	requirements 1.5 Identify document purpose, audience and presentation requirements and clarify with required personnel
2. Use word-processing software	2.1 Identify document purpose, audience and presentation requirements and clarify with required personnel 2.2 Determine text-based business document style guide requirements 2.3 Finalise documents using software and technical functions and formatting according to task requirements 2.4 Name, save and print to a Portable Document Format (PDF) according to task requirements
3. Use spreadsheet software	3.1 Identify document purpose, audience and presentation requirements and clarify with personnel as required 3.2 Enter formulas and functions and customise spreadsheet settings according to task requirements 3.3 Name, save and print to PDF document according to task requirements
4. Use third application software package	4.1 Select software application package according to task requirements 4.2 Determine purpose, audience and presentation requirements 4.3 Use technical functions, other data and formatting to finalise document 4.4 Name, save and print to PDF document according to task requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Numeracy	<ul style="list-style-type: none"> Adds, subtracts, multiplies and divides whole numbers and decimals, identifying and selecting formulas and functions to use Applies order of operations in calculations
Oral communication	<ul style="list-style-type: none"> Clarifies work requirements using required language, questioning and active listening techniques
Reading	<ul style="list-style-type: none"> Interprets textual information and determines organisational standards and job requirements Identifies and applies symbols, icons and text associated with

Skill	Description
	applications software
Writing	<ul style="list-style-type: none">Enters both written and verbally received information and data into a format applicable to software applicationSelects vocabulary, syntax, terminology, labelling and naming conventions applicable to program
Planning and organising	<ul style="list-style-type: none">Plans routine tasks with goals and outcomes, taking some limited responsibility in decisions regarding sequencing
Self-management	<ul style="list-style-type: none">Follows routine procedures in using digital technology and enters, stores and retrieves information directly applicable to own role
Technology	<ul style="list-style-type: none">Identifies and evaluates purposes, specific functions and key features of basic digital systems and toolsOperates digital systems and tools in completing routine tasks and adapting some functions

Unit Mapping Information

Supersedes and is equivalent to ICTICT203 Operate application software packages.

Assessment Requirements for ICTICT214 Operate application software packages

Modification History

Release	Comments
Release 2	This version first released with the Information and Communications Technology Training Package Version 8.0. Minor typographical correction in Knowledge Evidence.
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- produce three workplace documents using three different software packages including word processing, spreadsheets and one additional software application package on at least one occasion.

In the course of the above, the candidate must:

- apply workplace health and safety (WHS) principles and responsibilities
- follow organisational requirements.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- organisational application software packages
- technical terminology applicable to reading help files and responding to system help prompts
- industry standard business practices applicable to preparing reports
- features and functions of commercial computing packages and of the industry standard software
- functions and features of Portable Document Formats (PDFs)
- import and export software functions
- document linking functions
- WHS principles and responsibilities

- purpose of input and output devices.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required hardware device
- industry standard software
- documents detailing organisational style guide and policy
- data required in developing software application documents.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT215 Operate digital media technology packages

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to identify, select and use a digital media package and supporting technologies to produce a variety of media rich documents.

It applies to individuals who work under supervision within a small to large office environment and have responsibility in completing designated tasks, using a range of practical skills and basic technical knowledge.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to operate a digital media package	1.1 Set up workstation according to work health and safety standards and organisational requirements 1.2 Identify requirements of design brief and user environment 1.3 Determine required digital media package 1.4 Determine required data set according to task requirements
2. Operate digital media package	2.1 Manipulate and adapt data according to task requirements 2.2 Incorporate graphics, moving images and sound according to task requirements 2.3 Name and save document in file and folder
3. Review digital media	3.1 Test digital media presentation incorporated graphics,

ELEMENT	PERFORMANCE CRITERIA
design	<p>moving images and sound</p> <p>3.2 Present digital media package to required personnel</p> <p>3.3 Seek and respond to digital media package presentation feedback from required personnel</p> <p>3.4 Review final product against design brief and obtain final sign off from required personnel</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Numeracy	<ul style="list-style-type: none"> Adds and subtracts whole numbers, fractions and decimals in calculating time, audio output, graphic dimensions and file size
Oral communication	<ul style="list-style-type: none"> Uses plain English, listening and questioning techniques Presents information to audience using tone, grammar and syntax
Reading	<ul style="list-style-type: none"> Interprets textual and diagrammatic information Interprets systems related icons, text and diagrams
Writing	<ul style="list-style-type: none"> Enters written and verbally received information and data into a format required by digital media package Selects vocabulary, syntax, terminology, labelling and naming conventions in program and design requirements
Planning and organising	<ul style="list-style-type: none"> Plans routine tasks with goals and outcomes, taking some limited responsibility in decisions regarding sequencing
Self-management	<ul style="list-style-type: none"> Takes personal responsibility in adhering to legal and regulatory requirements Follows routine procedures in using digital technology and enters, stores and retrieves information directly applicable to own role
Technology	<ul style="list-style-type: none"> Identifies and evaluates purposes, specific functions and key features of basic digital systems and tools Operates basic digital systems and tools in completing routine tasks and adapting some functions

Unit Mapping Information

Supersedes and is equivalent to ICTICT204 Operate a digital media technology package.

Assessment Requirements for ICTICT215 Operate digital media technology packages

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- identify and define data set, incorporate data set into media technology package and present output on one occasion.

In the course of the above, the candidate must:

- interpret basic requirements of a design brief
- meet organisational requirements using digital media package
- apply workplace health and safety (WHS) principles and responsibilities
- use help manuals and online support.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- basic principles of visual design
- functions and features of digital media packages and technologies
- graphic design and stylistic language conventions
- WHS principles and responsibilities
- principles of digital imaging and file formats, video and sound file formats, file management and transfer systems
- vendor product directions in digital media hardware and software
- creative information, scripts (text) and images
- basic principles of legal and regulatory requirements that apply to operating digital media technology packages.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

- This includes access to:
- required industry standard hardware and software
- documents detailing organisational style guide and policy
- data required in developing software application documents.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT216 Design and create basic organisational documents

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.
Release 2	Correcting an error in Performance Criteria 2.1.

Application

This unit describes the skills and knowledge required to design, create and produce basic organisational documents using application software according to organisational guidelines and procedures.

It applies to those who use foundation information and communications technology (ICT) skills to produce documents in a wide range of varying industry occupations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to develop organisational documents	1.1 Establish and confirm document requirements according to business need 1.2 Determine applicable organisational document and style guidelines and procedures 1.3 Research and select application software according to organisational procedures
2. Develop organisational	2.1 Design and configure document template using application software according to task specifications

documents	2.2 Create organisational document using a range of features from application software 2.3 Edit and amend document design according to business need 2.4 Finalise, save and back up document according to organisational procedures
3. Evaluate organisational documents and incorporate feedback	3.1 Review document and obtain feedback from required personnel 3.2 Incorporate feedback and update document according to business need 3.3 Save and close working documents and tools according to organisational procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Takes measurements and performs calculations for document layout
Oral communication	<ul style="list-style-type: none"> Clarifies work requirements and obtains feedback using required language, questioning and active listening techniques
Reading	<ul style="list-style-type: none"> Identifies and interprets text in determining organisational guidelines and requirements and application software specifications
Writing	<ul style="list-style-type: none"> Uses required language and organisational procedures when designing required workplace documents
Planning and organising	<ul style="list-style-type: none"> Plans routine tasks with goals and outcomes, taking some limited responsibility in decisions regarding sequencing
Technology	<ul style="list-style-type: none"> Follows routine procedures in using digital technology and enters, stores and retrieves information directly applicable to own role Interprets purposes, specific functions and key features of basic digital systems and tools and operates them in completing routine tasks and adapting functions Completes work tasks and accesses information using the main features and functions of digital tools

Unit Mapping Information

Supersedes and is equivalent to ICTICT205 Design basic organisational documents using computing packages.

Assessment Requirements for ICTICT216 Design and create basic organisational documents

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.
Release 2	Correcting an error in Performance Criteria 2.1.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop and produce at least two required organisational documents, with minimal design instruction.

In the course of the above, the candidate must:

- edit documents according to at least two different feedback suggestions
- save documents and back up in a different location
- comply with style guidelines and organisational procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- application software tools and features
- organisational style guidelines and procedures
- organisational storage and retrieval procedures.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- organisational guidelines
- required hardware devices, application software and its features.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT219 Interact and resolve queries with ICT clients

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to provide routine Information and Communications Technology (ICT) support to clients in a professional manner.

It applies to individuals who, while working under a level of supervision, have responsibility in frontline technical support. It applies to those who exercise discretion and judgement to provide assistance to clients in an ICT environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to interact with clients	1.1 Determine ICT clients and communication methods according to organisational requirements 1.2 Establish and confirm nature of client's ICT query 1.3 Lodge client query according to organisational requirements 1.4 Determine query and complaint management process 1.5 Determine remediation options according to organisational requirements
2. Respond to client queries	2.1 Determine required remediation actions according to task requirements 2.2 Refer and escalate client query to required personnel

ELEMENT	PERFORMANCE CRITERIA
	2.3 Plan resolution process according to task requirements 2.4 Seek and respond to resolution process plan feedback from required personnel
3. Finalise client query process	3.1 Document and record resolution process according to organisational requirements 3.2 Communicate client query resolution with client according to task requirements 3.3 Respond and rectify client feedback 3.4 Seek final sign-off from required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Oral communication	<ul style="list-style-type: none">• Uses active listening and questioning techniques to elicit information and clarify client queries, concerns and complaints
Reading	<ul style="list-style-type: none">• Evaluates textual information containing ICT specific terminology to establish proactive training needs
Writing	<ul style="list-style-type: none">• Prepare documentation outlining client query and resolution process according to organisational requirements using required grammar and language and applicable ICT terminology
Planning and organising	<ul style="list-style-type: none">• Plans a range of routine and some non-routine tasks, accepting stated goals and aiming to achieve them on time
Problem solving	<ul style="list-style-type: none">• Recognises and responds to predictable routine problems
Self-management	<ul style="list-style-type: none">• Follows explicit protocols immediately related to own role
Technology	<ul style="list-style-type: none">• Uses main features and functions of basic digital tools

Unit Mapping Information

Supersedes and is equivalent to ICTICT209 Interact with ICT clients.

Assessment Requirements for ICTICT219 Interact and resolve queries with ICT clients

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- identify, record and document at least one client query
- remediate and communicate at least one solution to a client.

In the course of the above, the candidate must:

- comply with organisational requirements
- follow escalation procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard hardware and software products and their general features and capabilities
- ICT client business domain and business critical functions
- organisational systems and working environment that may assist in interacting and resolving queries with ICT clients
- organisational policies that may assist in interacting and resolving queries with ICT clients.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required hardware devices, software and documentation

- organisational guidelines.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT221 Identify and use specific industry standard technologies

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to engage in a basic ongoing review and research of industry specific technologies in order to identify and apply these technologies and techniques to improve aspects of an organisation's activities.

It applies to individuals who work under supervision and are involved in ensuring that the quality of business processes are maintained at a high level through application of industry specific technologies.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to use industry specific technologies	1.1 Identify organisational technology upgrades and advancement requirements 1.2 Identify technologies required to meet organisational requirements 1.3 Classify industry specific technologies according to organisational requirements
2. Implement industry specific technologies	2.1 Implement and test industry specific technologies according to task requirements 2.2 Use features and functions of industry specific technologies

ELEMENT	PERFORMANCE CRITERIA
	<p>according to task requirements</p> <p>2.3 Access and use sources of information according to task requirements</p>
3. Evaluate performance of basic industry specific technology	<p>3.1 Evaluate performance, usability and benefit to organisation of implemented technologies</p> <p>3.2 Determine and document environmental considerations of implemented technologies</p> <p>3.3 Seek and respond to user according to organisational requirements</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none"> Investigates, evaluates and applies information from a range of technical texts to expand own knowledge and identify industry specific technologies
Oral communication	<ul style="list-style-type: none"> Uses listening and questioning techniques to obtain information and feedback and identify and evaluate industry specific technologies
Reading	<ul style="list-style-type: none"> Interprets technical online and hard copy documentation containing complex terminology and diagrams Interprets technical information to identify industry specific technologies and determines environmental considerations
Self-management	<ul style="list-style-type: none"> Organises own workload aligned to organisational expectations and follows explicit protocols and procedures Identifies priorities and sequences involved in defined tasks and assembles required resources
Technology	<ul style="list-style-type: none"> Identifies purposes, specific functions and key features of basic digital systems and tools and operates them

Unit Mapping Information

Supersedes and is equivalent to ICTICT211 Identify and use basic current industry specific technologies.

Assessment Requirements for ICTICT221 Identify and use specific industry standard technologies

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- identify, implement and evaluate at least three industry standard technologies
- use at least one feature and at least one function of each industry standard technology above.

In the course of the above, the candidate must:

- comply with task and organisational requirements.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard technology trends and directions in Information and Communications Technology (ICT), and major industry technology standards used in specified area
- vendor product directions
- industry standard hardware and software products and their general features and capabilities
- information gathering methodologies.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required industry standard technologies, features and functions that may assist in identifying and using specific industry standard technologies
- required hardware, software and its components.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT222 Research and share ICT solutions for Indigenous users

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to research, identify and collaboratively discuss ICT solutions that meet the specific needs of Indigenous users.

It applies to Indigenous and non-Indigenous individuals who work with Indigenous individuals and communities and use a range of knowledge of Indigenous learning styles and cultural systems to provide advice on ICT solutions. ICT solutions refers to hardware and electronic resources including software applications, Wi-Fi, connected networks and online websites.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: delivery and assessment against this unit of competency must comply with Indigenous community protocols and guidelines and be supported by Elders and custodians of Country. The unit recognises that there is no single Australian Indigenous culture and emphasises the importance of culturally appropriate behaviour and local community consultation.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify uses of ICT systems and resources for Indigenous users	1.1 Identify Indigenous user requirements 1.2 Confirm industry standard communication technologies, software applications and hardware solutions used with required Indigenous users and community stakeholders

ELEMENT	PERFORMANCE CRITERIA
2. Identify and review uses of specific ICT resources required for Indigenous users	2.1 Identify a range of methods of accessing electronic resources for an Indigenous user 2.2 Identify alternative electronic resources, software and hardware solutions 2.3 Review and confirm a range of electronic resources and solutions
3. Share ICT solutions that meets needs of Indigenous users	3.1 Discuss required ICT solutions with Indigenous user according to task requirements 3.2 Communicate and demonstrate function and use of an ICT solution to Indigenous user 3.3 Communicate purpose and intent of ICT solutions in Indigenous contexts 3.4 Seek and respond to feedback from required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none">Identifies culturally specific information and applies information to benefit Indigenous users
Oral communication	<ul style="list-style-type: none">Uses active listening and questioning techniques to clarify and present information using culturally appropriate communication skills and language
Reading	<ul style="list-style-type: none">Identifies and interprets hard copy and on-line texts from Indigenous and non-Indigenous sources
Planning and organising	<ul style="list-style-type: none">Identifies and assembles resources required in undertaking tasks
Technology	<ul style="list-style-type: none">Interprets purposes, specific functions and key features of basic digital systems and tools and operates them in completing routine tasks

Unit Mapping Information

Supersedes and is equivalent to ICTICT212 Incorporate Indigenous needs and perspectives into ICT environment.

Assessment Requirements for ICTICT222 Research and share ICT solutions for Indigenous users

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- assess and demonstrate use of at least three different communication technologies, software applications and hardware solutions
- Identify information for at least one Australian Indigenous user and their community, in a culturally appropriate way.

In the course of the above, the candidate must:

- identify specific Indigenous customs and practices impacting use of an ICT solution
- consult with Indigenous community members including local community organisations, including Indigenous personnel, community organisations, agencies and other required bodies
- identify Indigenous laws, family relationships and languages.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- functions, features and uses of required hardware, software products, applications and websites
- customs and practices of Indigenous users and communities Indigenous cultural communications attributes.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required hardware device and software applications
- the internet, including connectivity, internet browser and website access.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT223 Install software applications

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Supersedes and is equivalent to ICTICT206 Install software applications.

Application

This unit describes the skills and knowledge required to select and install basic software applications on systems. It includes identifying software requirements, integrating applications and developing testing schedules.

The unit applies to individuals who may work in roles such as digital developers and support desk technicians and who contribute to the installation of software applications.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to install software applications	1.1 Confirm work brief and tasks according to organisational policies and procedures 1.2 Identify installation, workflow and delivery requirements according to work brief 1.3 Identify software application constraints in consultation with required personnel
2. Obtain installation	2.1 Investigate software application options applicable for

ELEMENT	PERFORMANCE CRITERIA
software	system 2.2 Select software application option according to work brief 2.3 Source software application components 2.4 Record application licensing requirements according to organisational policies and procedures 2.5 Confirm that system conforms with minimum hardware and operating system requirements of software application
3. Integrate and test software	3.1 Incorporate software application into system according to installation requirements outlined in work brief 3.2 Confirm that installation process is compliant according to organisational policies and procedures 3.3 Test system application and raise any issues with required personnel 3.4 Document any outstanding issues and distribute to required personnel 3.5 Complete workplace documentation according to organisational requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Oral communication	<ul style="list-style-type: none"> • Uses listening and questioning techniques to identify requirements • Uses clear language to convey ideas and questions
Reading	<ul style="list-style-type: none"> • Uses available literature to appropriately address requirements • Interprets and responds to texts to determine and confirm requirements
Writing	<ul style="list-style-type: none"> • Records key information using basic punctuation and grammar
Initiative and enterprise	<ul style="list-style-type: none"> • Takes some personal responsibility for meeting organisational requirements
Planning and organising	<ul style="list-style-type: none"> • Plans some routine tasks with familiar goals and outcomes
Technology	<ul style="list-style-type: none"> • Follows routine procedures for using digital technology to enter, store and retrieve information directly relevant to role

Unit Mapping Information

Supersedes and is equivalent to ICTICT206 Install software applications.

Assessment Requirements for ICTICT223 Install software applications

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Supersedes and is equivalent to ICTICT206 Install software applications.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- install at least two different software applications, where each application must be installed on a different computer system.

In the course of the above, the candidate must:

- configure systems to accept new or upgraded application software
- apply required organisational policies and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- functions and features of basic hardware and software applications in relation to computer systems and other common system components
- standard software application requirements for hardware and operating systems
- methods to incorporate applications into systems
- configuration instructions and techniques for software application operations, including:
 - installation
 - workflow
 - delivery
- testing and acceptance procedures for systems
- common types of software application constraints
- types of operating systems supported by the organisation

- organisational formats for documentation
- organisational procedures relating to work tasks.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a computer and additional system on which software can be installed
- software applications to be installed
- opportunities for interaction with others
- work brief and organisational procedures required to demonstrate the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT224 Integrate commercial computing packages

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Supersedes and is equivalent to ICTICT207 Integrate commercial computing packages.

Application

This unit describes the skills and knowledge required to manipulate and convert data into a secure format that can be integrated between multiple software applications contained in commercial computing packages.

The unit applies to individuals who may work in roles such as digital developers and support desk technicians and who contribute to the integration of computing packages.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to modify data for commercial computing packages	1.1 Confirm work brief and tasks according to organisational policies and procedures 1.2 Identify data integration, workflow and delivery requirements according to work brief 1.3 Identify data manipulation, conversion and integration constraints in consultation with required personnel 1.4 Select software and file formats according to work brief

ELEMENT	PERFORMANCE CRITERIA
2. Modify data and integrate computing packages	2.1 Create mail merge list for packages according to work brief 2.2 Source software application package and configuration components 2.3 Convert data file format and save according to work brief 2.4 Import and modify original software application objects according to work brief 2.5 Export modified software application objects into computing package 2.6 Document link between the original and new software application package according to work brief
3. Securely store modified data	3.1 Save data in required location according to work brief 3.2 Review modified data contained in required location and escalate any access issues to required personnel 3.3 Safely close stored data according to organisational policies and procedures 3.4 Complete workplace documentation according to organisational requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interprets and responds to texts to determine and confirm requirements
Writing	<ul style="list-style-type: none"> Records key information using basic punctuation and grammar
Planning and organising	<ul style="list-style-type: none"> Follows protocols and sequences steps involved in clearly defined and familiar tasks
Problem solving	<ul style="list-style-type: none"> Identifies and responds to predictable routine issues and problems Accesses user help documentation to rectify basic difficulties with software application packages
Technology	<ul style="list-style-type: none"> Follows routine procedures for using digital technology to enter, store and retrieve information

Unit Mapping Information

Supersedes and is equivalent to ICTICT207 Integrate commercial computing packages.

Links

Companion Volume Implementation Guide is found on VETNet - -

Assessment Requirements for ICTICT224 Integrate commercial computing packages

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Supersedes and is equivalent to ICTICT207 Integrate commercial computing packages.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- integrate data between at least two different commercial computing packages.

In the course of the above, the candidate must:

- apply required organisational policies and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- functions and features of:
 - commercial computing packages in relation to computer systems
 - computer software components in commercial computing packages
 - common data storage locations
- methods and techniques to incorporate computing packages into computer systems, including:
 - database comparisons
 - mail-merge list development technologies
 - document linking technologies
 - import and export software application objects
- types of file formats and conversion activities
- configuration instructions and techniques for computing package operations, including:

- installation
- workflow
- delivery
- types of software and systems supported by the organisation
- types of software application constraints
- organisational formats for documentation
- organisational policies and procedures relating to work tasks.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a computer on which commercial computing packages can be integrated
- commercial computing packages
- opportunities for interaction with others
- work brief and organisational policies and procedures required to demonstrate the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT225 Operate accounting applications

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Supersedes and is equivalent to ICTICT208 Operate accounting applications.

Application

This unit describes the skills and knowledge required to automate financial operations using accounting software packages. It involves applying accounting applications to organise and secure financial records in organisations, while complying with required procedures that reflect international and domestic accounting standards.

The unit applies to individuals who may work in roles such as assistants of financial accountants and auditors, who contribute to financial statement preparation and audit compliance.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Review financial information and software	1.1 Confirm work brief and tasks according to organisational policies and procedures 1.2 Review general ledger account codes and titles in financial documents for accuracy according to organisational requirements 1.3 Check that customers, suppliers, inventory items, and

ELEMENT	PERFORMANCE CRITERIA
	<p>processes are disclosed in financial statements</p> <p>1.4 Confirm that information is exportable in secured formats for use by internal and external personnel and escalate any issues to required personnel</p>
2. Set up information technology (IT) controls	<p>2.1 Analyse available and existing IT controls according to work brief</p> <p>2.2 Identify constraints in existing IT controls according to policies and procedures</p> <p>2.3 Identify options for new IT controls according to work brief</p> <p>2.4 Select and apply new IT controls according to policies and procedures</p> <p>2.5 Test new IT controls and rectify any issues within scope of own role, or escalate as required</p> <p>2.6 Seek approval of new IT controls with required personnel</p>
3. Apply accounting application to transactions	<p>3.1 Generate invoices using accounting application according to organisational requirements</p> <p>3.2 Update customer details according to work brief</p> <p>3.3 Check tracked customer purchases according to work brief</p> <p>3.4 Identify and report any discrepancies in transactions in accounting application according to work brief</p>
4. Secure accounting application platform	<p>4.1 Save reviewed financial information to required platform</p> <p>4.2 Document location of accounting application platform</p> <p>4.3 Confirm that required personnel can access accounting applications using required platform</p> <p>4.4 Report any access issues to required personnel</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Identifies and interprets textual and numerical financial information
Writing	<ul style="list-style-type: none"> Creates workplace documentation to capture financial information
Problem solving	<ul style="list-style-type: none"> Makes routine decisions and implements standard procedures for routine tasks

Skill	Description
Technology	<ul style="list-style-type: none">Identifies purpose, specific functions and key features of common digital systems and tools, and operates them effectively to complete routine tasksUses familiar digital systems and tools to access, organise, analyse and display information relevant to role

Unit Mapping Information

Supersedes and is equivalent to ICTICT208 Operate accounting applications.

Links

Companion Volume Implementation Guide is found on VETNet - -

Assessment Requirements for ICTICT225 Operate accounting applications

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Supersedes and is equivalent to ICTICT208 Operate accounting applications.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- review at least three different types of financial transactions
- implement at least three information technology (IT) controls
- generate at least one document using an accounting application.

In the course of the above, the candidate must:

- create and maintain financial records according to organisational and legislative requirements
- apply required organisational policies and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- basic accounting concepts involved in payment processes
- common types of basic accounting devices, including:
 - accounts
 - general ledgers
 - trial balances
 - invoices
 - transaction and purchase journals
- functions and features of financial reports, including:

- balance sheet
- statement of comprehensive income
- statement of cash flows
- statement of changes in equity
- business activity statements
- operations of accounting software
- organisational formats for documentation
- organisational policies, procedures and standards relating to work tasks.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- device, software, accounting application and platform for producing financial reports
- financial information, data and documentation from the organisation
- work brief and organisational procedures required to demonstrate the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT226 Operate simple database applications

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Supersedes and is equivalent to ICTICT210 Operate database applications. Updated title to better reflect unit scope.

Application

This unit describes the skills and knowledge required to set up, customise and review relational databases using pre-existing data. It includes performing simple data operations to document insights in the form of a data report.

The unit applies to individuals who may work in roles such as support desk technicians, who use simple database applications in established contexts.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Set up database settings	1.1 Confirm work brief and tasks according to organisational policies and procedures 1.2 Adjust page layout to meet user requirements 1.3 Identify and compare different toolbar options

ELEMENT	PERFORMANCE CRITERIA
	1.4 Format font for the purpose of database entries
2. Prepare forms	2.1 Confirm type of form, field lists, design and layouts 2.2 Create simple form according to work brief 2.3 Open database and modify records through the simple form 2.4 Rearrange objects in simple form according to work brief
3. Execute and evaluate database queries	3.1 Run database query according to work brief 3.2 Review query outputs according to work brief 3.3 Confirm that outputs present data in logical sequences
4. Retrieve information	4.1 Locate required database records according to work brief 4.2 Run database applications and document outputs 4.3 Display outputs as required according to work brief 4.4 Save outputs in secure location according to organisational requirements
5. Create and store data reports	5.1 Develop report from outputs according to work brief 5.2 Confirm that data report contains required information according to work brief 5.3 Confirm that report presents data in logical sequences 5.4 Format and distribute reports to required personnel 5.5 Seek and implement feedback from required personnel 5.6 Finalise and store data report according to organisational requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Identifies and analyses a wide range of forms and reports
Writing	<ul style="list-style-type: none"> Uses database-related terminology and protocols when designing tables, queries, reports and forms Uses clear plain English appropriate for end users
Initiative and enterprise	<ul style="list-style-type: none"> Takes responsibility for routine, low-impact decisions in familiar situations
Planning and organising	<ul style="list-style-type: none"> Selects the appropriate form, channel and mode of communication for a specific purpose relevant to own role

Skill	Description
	<ul style="list-style-type: none">Plans a range of routine tasks
Problem solving	<ul style="list-style-type: none">Identifies and implements standard solutions for routine problems
Technology	<ul style="list-style-type: none">Identifies purposes and specific functions of common digital tools used in work contextsFollows routine procedures for using digital technology to enter, store and retrieve information directly relevant to role

Unit Mapping Information

Supersedes and is equivalent to ICTICT210 Operate database applications.

Assessment Requirements for ICTICT226 Operate simple database applications

Modification History

Release	Comments
Release 1	<p>This version first released with the Information and Communications Technology Training Package Version 8.0.</p> <p>Supersedes and is equivalent to ICTICT210 Operate database applications.</p> <p>Updated title to better reflect unit scope.</p>

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- evaluate and customise at least two components of a database
- create at least one data report.

In the course of the above, the candidate must:

- select, input, and customise data to gather meaningful outputs
- apply required organisational policies and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- functions and features of simple database applications and components, including:
 - basic database design principles
 - database reports
 - database forms
 - data queries
- types of layouts for databases and pages
- methods of logically sequencing data
- functions and features of simple forms with multiple criteria, including:
 - field lists

- design requirements
- layout options
- methods for adding, modifying, deleting and rearranging database records and objects
- types of relationships between tables in databases
- common types of database software
- organisational formats for documentation and reports
- organisational procedures relating to work tasks.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a device that can operate simple database applications and software
- cleansed data suitable for database applications
- work brief and organisational procedures required to demonstrate the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT309 Create ICT user documentation

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to create clear and coherent user documentation that is easy to navigate and apply.

It applies to individuals who work under supervision with responsibilities for the development of Information and Communications Technology (ICT) user documentation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to produce user documentation	<ul style="list-style-type: none">1.1 Discuss and determine user documentation requirements with required personnel1.2 Investigate and determine industry standard user documentation requirements applicable to task1.3 Identify the required ICT system, software, hardware and application or network to be documented with required personnel1.4 Design and develop user documentation template using required software, according to applicable industry standards1.5 Submit user documentation requirements and template to required personnel, according to organisational procedures1.6 Obtain approval from required personnel and action required

ELEMENT	PERFORMANCE CRITERIA
	changes according to feedback
2. Produce user documentation	<ul style="list-style-type: none">2.1 Conduct a review of the required ICT system, hardware, software program and network2.2 Document characteristics and functions of applicable components in ICT system, according to user documentation requirements2.3 Access and examine applicable technical, design, user specification and supporting documentation2.4 Design draft user documentation and obtain internal feedback from required personnel2.5 Create user documentation according to template and operation of applicable components in ICT system
3. Review user documentation and obtain sign-off	<ul style="list-style-type: none">3.1 Submit user documentation to target audience and seek feedback3.2 Gather and respond to feedback3.3 Implement user documentation changes and improvements3.4 Submit user documentation to required personnel and obtain approval and sign-off
4. Finalise user documentation creation procedures	<ul style="list-style-type: none">4.1 Confirm all documentation and approval procedures have been performed4.2 Review and assess impact of implementing user documentation4.3 Evaluate and report on user documentation creation procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none">Identifies and interprets textual, numeric and diagrammatic information with ICT specific syntax, terminology and formatting in determining job requirements
Writing	<ul style="list-style-type: none">Develops user and supporting documentation using appropriate structure, layout and technical programming language in required format
Oral Communication	<ul style="list-style-type: none">Uses listening and questioning techniques to obtain and confirm information, feedback and requirements

Initiative and Enterprise	<ul style="list-style-type: none">• Takes some personal responsibility and adheres to legal and regulatory requirements
Self-management	<ul style="list-style-type: none">• Plans routine tasks with familiar goals and outcomes, taking some limited responsibility in decisions regarding sequencing and timing
Technology	<ul style="list-style-type: none">• Identifies purpose, specific functions and key features of industry standard digital systems and tools and operates them in completing routine tasks

Unit Mapping Information

Supersedes and is equivalent to ICTICT301 Create user documentation.

Assessment Requirements for ICTICT309 Create ICT user documentation

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- create a user document for an ICT system or product, including software, hardware, application or network.

In the course of the above, the candidate must:

- access and examine existing technical, design, user specification and supporting documentation
- gather and respond to feedback.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- user documentation features and requirements
- industry standard documentation requirements
- user documentation design and usability
- intent of web-based user documentation
- user documentation templates and style guides
- features of technical user documentation.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required ICT system, hardware, software program and networks

- user documentation standards
- required software tools.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT310 Identify and use industry specific technologies

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to identify, research and apply industry specific technologies, and assist in enhancing and maintaining an end-to-end business process at its highest quality possible.

It applies to individuals who work under minimal supervision and support information technology activities in the workplace across a wide range of Information and Communications Technology (ICT) areas, including technical support, network administration, web technologies, software applications and digital media technologies.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to use technologies	1.1 Identify and evaluate industry specific technologies, according to organisational procedures 1.2 Determine required industry specific technologies according to task requirements 1.3 Develop implementation plan for industry specific technology, detailing process and expected outcomes according to required specifications
2. Implement and test technologies	2.1 Test industry specific technologies according to plan and task requirements

ELEMENT	PERFORMANCE CRITERIA
	2.2 Implement industry specific technology according to task requirements 2.3 Use features and functions of industry specific technology according to task requirements
3. Evaluate industry specific technology performance	3.1 Evaluate and document performance, usability and benefit of industry standard specific technologies according to organisational procedures 3.2 Seek and respond to performance and usability feedback from required personnel, according to organisational procedures 3.3 Lodge document according to organisational procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none"> Investigates, evaluates and applies information from a range of complex and technical texts and expands own knowledge
Oral communication	<ul style="list-style-type: none"> Requests information and feedback using listening and questioning techniques and identifies and evaluates industry specific technologies
Reading	<ul style="list-style-type: none"> Identifies and interprets technical online and hard copy documentation containing complex terminology and diagrams Identifies industry specific technologies that will benefit organisation and determines environmental impacts
Planning and organising	<ul style="list-style-type: none"> Takes responsibility for planning and organising own workload, identifying ways of sequencing and combining elements Initiates standard procedures when responding to familiar problems within immediate context
Self-management	<ul style="list-style-type: none"> Takes personal responsibility in adhering to legal and regulatory responsibilities applicable to own work context
Technology	<ul style="list-style-type: none"> Identifies and applies general design and operating principles of digital tools

Unit Mapping Information

Supersedes and is equivalent to ICTICT305 Identify and use current industry specific technologies.

Assessment Requirements for ICTICT310 Identify and use industry specific technologies

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- identify and determine compatibility of at least three industry specific technologies in one organisational area
- use and test features and functions of identified industry specific technologies to industry standards in one organisational area.

In the course of the above, the candidate must:

- adhere to legislative and organisational standards and requirements applicable to industry specific technologies
- evaluate capabilities of identified industry specific technologies
- assist in adapting implementation of identified industry specific technologies to organisational environment.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard technology trends in Information and Communications Technology (ICT)
- industry technology standards used in specified ICT area
- vendor product instructions applicable to specified ICT area
- general features, capabilities and application of industry standard hardware and software products
- information gathering techniques applicable to identifying industry specific technologies
- legislative and organisational procedures, standards and requirements applicable to using industry specific technologies.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- industry standard specific technologies used in industry
- documents detailing work health and safety (WHS) standards, environmental guidelines and organisational procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT311 Customise packaged software applications

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to analyse, design, implement and review the customisation of packaged software applications delivered to clients, using features and plugins of the packaged software applications.

It applies to those who work under minimal supervision as Information and Communications Technology (ICT) users and support personnel for software application activities in the workplace. Clients, in this instance, refers to internal as well as external teams and projects.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Confirm client requirements	1.1 Discuss and determine client requirements according to organisational procedures 1.2 Confirm and document client and technical specifications with required personnel, according to organisational procedures 1.3 Determine level of user and technical documentation needed to meet client requirements
2. Develop and apply customisation to packaged software	2.1 Design packaged software application according to client requirements given system limitations 2.2 Customise software applications using simple programming

ELEMENT	PERFORMANCE CRITERIA
applications	constructs 2.3 Obtain feedback from required personnel and amend accordingly 2.4 Apply and implement customised packaged software applications 2.5 Document changes according to organisational procedures
3. Provide support for customised applications	3.1 Review work and finalise documentation according to organisational procedures 3.2 Produce documentation and user guides and submit to required personnel 3.3 Obtain client evaluation and feedback on supporting documentation 3.4 Evaluate work with required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none">Identifies and interprets various sources of technical information
Oral communication	<ul style="list-style-type: none">Elicits and evaluates information using listening and questioning techniquesIdentifies and confirms requirements, liaises with clients and obtains feedback using simple and required language
Reading	<ul style="list-style-type: none">Identifies and interprets text and determines organisational and security requirements
Writing	<ul style="list-style-type: none">Develops documentation detailing customised software application designed using appropriate structure, layout and technical programming language according to organisational procedures
Planning and organising	<ul style="list-style-type: none">Takes responsibility in planning and organising own workload and identifies ways of sequencing and combining elements
Self-management	<ul style="list-style-type: none">Takes responsibility in outcomes of routine decisions applicable to own role
Technology	<ul style="list-style-type: none">Identifies purposes, specific functions and key features of industry standard digital systems and toolsTests and operates industry standard digital tools and systems and

SKILL	DESCRIPTION
	completes routine tasks

Unit Mapping Information

Supersedes and is equivalent to ICTICT307 Customise packaged software applications for clients.

Assessment Requirements for ICTICT311 Customise packaged software applications

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- customise at least two package software applications according to two different client briefs.

In the course of the above, the candidate must:

- interpret and document client requirements to customise software applications
- design, analyse, implement and review at least one packaged software applications
- produce documentation of customised software application designed above
- obtain feedback and confirm requirements have been met.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- general features and capabilities of industry standard hardware and software products
- basic functions and features of software applications applicable to client
- Information and Communications Technology (ICT) structure and system infrastructure
- organisational policy and procedures applicable to customising software
- organisational security procedures and requirements.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- industry standard customisable software applications

- client requirements documentation
- organisational and security requirements
- required hardware, software and its components.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT312 Use advanced features of applications

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to use computer applications employing advanced features in the preparation and presentation of data. It involves manipulating data and accessing support resources to solve routine problems.

It applies to individuals who work under minimal supervision and support information technology activities in software applications.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to use advanced features	1.1 Establish required computer application and task requirements 1.2 Identify advanced features required and confirm with required personnel 1.3 Access vendor documentation for computer applications
2. Manipulate data using advanced features	2.1 Transfer data between applications, linking and embedding required data files 2.2 Create and employ objects and templates in routine activities 2.3 Use keyboard shortcuts and features in computer applications
3. Confirm application	3.1 Review and establish whether use of advanced features are

features are used to full capability	applicable according to task requirements 3.2 Seek feedback on use of application according to task requirements
4. Access and use support resources	4.1 Solve task problems using support resources including online help, manuals and training booklets 4.4 Access and apply technical support in addressing system problems, using troubleshooting results and alert messages

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Oral communication	<ul style="list-style-type: none"> Uses listening and questioning techniques to confirm information and discussed identified problems
Reading	<ul style="list-style-type: none"> Identifies and interprets a variety of hard copy, online and software generated technical information Interprets software specific language, syntax and code and applies features and functions of applications when solving problems
Self-management	<ul style="list-style-type: none"> Interprets key principles and concepts underpinning the design and operation of digital systems and tools and applies these when troubleshooting existing technology
Problem-solving	<ul style="list-style-type: none"> Uses problem-solving techniques to overcome routine problems

Unit Mapping Information

Supersedes and is equivalent to ICTICT308 Use advanced features of computer applications.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTICT312 Use advanced features of applications

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- use at least three different computer applications employing advanced features and import and export capacities
- solve at least three routine problems using support resources.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- advanced features and functions of applicable industry standard application software, keyboard shortcuts and features
- vendor applications, directions and their features
- methods of data transferral between applications
- organisational procedures applicable to using advanced features of applications
- available support resources for technical support and troubleshooting.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- industry standard applications with advanced features and their functions
- documents and information containing data required in demonstrating advanced features of applications
- support resources, including online, manuals and training booklets.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT313 Identify IP, ethics and privacy policies in ICT environments

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to assist with the protection and lawful use of intellectual property (IP) and observing relevant organisational ethics and privacy policies.

It applies to individuals who are required to use intellectual property held by other people or organisations, to assist with the maintenance of organisational ethics and privacy policies and procedures.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify principles underpinning organisational IP, ethics and privacy policy procedures	1.1 Locate and access the organisations IP, ethics and privacy policy and procedures 1.2 Identify own role in observing and adhering to organisation's IP, ethics and privacy policy and procedures to avoid IP and privacy infringement 1.3 Determine the purpose and intention of organisation's IP, ethics and privacy policy and procedures 1.4 Identify and understand different ethical theories

ELEMENT	PERFORMANCE CRITERIA
	and approaches
2. Understand and apply principles underpinning organisational IP, ethics and privacy policy procedures	2.1 Identify the purpose in developing and implementing organisational IP, ethics and privacy policy procedures to prevent IP infringement 2.2 Determine the principles applied in the organisational IP, ethics and privacy policy procedures
3. Assist with non-compliance incident identification and recommendations	3.1 Identify organisational risk assessment and identification process 3.2 Assist with identifying and observing internal and external non-compliance infringements of the organisations IP, ethics and privacy policy procedures 3.3 Identify principles that could assist with overcoming non-compliance incidents with relevant personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Oral communication	<ul style="list-style-type: none"> Provides information using language and terminology required for audience Obtains information from others by listening and questioning
Reading	<ul style="list-style-type: none"> Interprets and comprehends organisational texts required for IP requirements

Unit Mapping Information

New unit.

Assessment Requirements for ICTICT313 Identify IP, ethics and privacy policies in ICT environments

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- identify at least three different types of intellectual property (IP) within the organisation
- identify and support the maintenance and improvement of organisational IP, ethics and privacy policy procedures on at least two occasions

In the course of the above, the candidate must:

- identify organisation risk assessment and identification process
- identify principles underpinning the maintenance and improvement of organisational IP, ethics and privacy policy procedures
- assist with identifying the non-compliance incidents and risks within an organisation.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- key legislation related to the use of IP in the ICT industry
- key policies, procedures and documentation in the ICT industry, including those related to:
 - organisational IP policies and procedures
 - codes of ethics pertinent to the ICT industry
 - copyright
 - privacy
- key organisational communication processes and procedures related to identifying IP, ethics and privacy policies in ICT environments.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required organisational policies, codes of practice, legislation and standards documentation
- workplace documentation and resources
- IP case studies and, where possible, real situations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT314 Connect internal hardware components

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Supersedes and is equivalent to ICTICT303 Connect internal hardware components.

Application

This unit describes the skills and knowledge required to install and configure internal hardware components and evaluate the modified system according to client and user requirements.

The unit applies to individuals who may work in responsible roles such as support desk technicians and who provide assistance in configuring internal hardware components in devices.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to install internal hardware components	1.1 Confirm work brief and tasks according to organisational policies and procedures 1.2 Identify hardware installation requirements according to work brief 1.3 Categorise device types requiring installation by characteristics according to work brief 1.4 Determine suitability of devices aligned with hardware

ELEMENT	PERFORMANCE CRITERIA
	components according to work brief
2. Organise components	2.1 Analyse existing internal hardware components 2.2 Confirm user component requirements with required personnel 2.3 Obtain technical vendor specifications for hardware components according to organisational policies and procedures 2.4 Analyse component options according to work brief 2.5 Select and source components according to policies and procedures 2.6 Prepare components for installation according to organisational policies and procedures
3. Install components	3.1 Plan for installation of components with minimum disruption to existing systems 3.2 Confirm that plan includes prioritised tasks and contingency arrangements 3.3 Seek approval for installation plan according to organisational requirements 3.4 Configure hardware components according to plan 3.5 Test components for functionality and document issues 3.6 Identify solutions and rectify any issues within scope of own role and according to work brief 3.7 Test system performance against organisational benchmarks
4. Evaluate modified system	4.1 Review evaluation criteria for internal hardware components according to organisational requirements 4.2 Seek feedback from required personnel on modified components 4.3 Implement feedback from required personnel 4.4 Complete workplace documentation according to organisational requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Oral communication	<ul style="list-style-type: none"> Converts technical language and terminology into plain English to communicate ideas and plans, and gather feedback from

Skill	Description
	<ul style="list-style-type: none">required personnel• Uses active listening, questioning techniques and technical terminology to elicit information and make decisions
Reading	<ul style="list-style-type: none">• Identifies, interprets and evaluates documentation containing complex terminology, acronyms and concepts
Writing	<ul style="list-style-type: none">• Uses correct spelling, grammar, plain English, information and communications technology (ICT)-specific terminology and diagrams to convey recommendations and requirements, and complete organisational documentation
Initiative and enterprise	<ul style="list-style-type: none">• Identifies and follows established protocols, and meets expectations associated with own role
Problem solving	<ul style="list-style-type: none">• Initiates standard procedures when responding to familiar problems in immediate context
Technology	<ul style="list-style-type: none">• Understands some general design and operating principles of digital tools and uses knowledge to support modification and troubleshooting of systems

Unit Mapping Information

Supersedes and is equivalent to ICTICT303 Connect internal hardware components.

Links

Companion Volume Implementation Guide is found on VETNet - -

Assessment Requirements for ICTICT314 Connect internal hardware components

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Supersedes and is equivalent to ICTICT303 Connect internal hardware components.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- connect at least one device with at least two newly configured internal hardware components.

In the course of the above, the candidate must:

- configure devices to accept newly connected internal hardware components
- document installation process for each configured component
- apply required organisational policies and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- functions and features of:
 - common internal hardware components
 - technical vendor specifications for internal hardware components
 - hardware configuration and installation plans
- methods to prepare required internal hardware components for configuration
- configuration instructions and techniques for connecting and operating internal hardware components on devices
- types of devices and their suitability for different internal hardware components
- common methods to test system performance against organisational benchmarks
- common methods to review evaluation criteria for internal hardware components

- common types of hardware constraints
- organisational formats for documentation and reports
- organisational policies and procedures, and legislative requirements relating to work tasks.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a device on which internal hardware components are to be installed
- technical specifications and tools for installation and configuration
- opportunities for interaction with others
- work brief and organisational policies and procedures required to demonstrate the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT315 Implement system software changes

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Supersedes and is equivalent to ICTICT304 Implement system software changes.

Application

This unit describes the skills and knowledge required to apply system software changes and deliver modified systems to a variety of operational areas.

The unit applies to individuals who may work in roles such as digital maintenance technicians who monitor operating systems on client computers and conduct various technology fixes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for system changes	1.1 Confirm work brief and tasks according to organisational policies and procedures 1.2 Identify system changes and update requirements according to work brief 1.3 Evaluate impact of changing system software according to work brief 1.4 Complete required documentation for system software changes according to maintenance methodologies 1.5 Obtain technical data from required personnel and request other resources required to complete system software

ELEMENT	PERFORMANCE CRITERIA
	changes
2. Carry out system changes	2.1 Plan procedure to execute required system changes according to organisational policies and procedures 2.2 Consult with required personnel and users involved in the proposed changes and agree on a mutually acceptable timeline and implementation method 2.3 Copy initialisation and configuration files prior to implementation according to organisational requirements 2.4 Create a roll-back path in the event of failure according to work brief 2.5 Test system and confirm changes have been made according to organisational policies and procedures
3. Finalise system changes	3.1 Document process used for system software changes and record impact to systems according to work brief 3.2 Distribute document and seek feedback from required personnel 3.3 Implement feedback on system software 3.4 Update documentation and repositories according to organisational policies and procedures 3.5 Update modifications in the change management system
4. Perform handover to required personnel	4.1 Recommend updates to organisational policies and procedures to reflect implemented changes 4.2 Obtain sign-off on recommendations from required personnel 4.3 Review operational areas impacted by updated system and notify required personnel according to work brief 4.4 Facilitate handover of modified system to operational areas

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Oral communication	<ul style="list-style-type: none"> Converts technical language and terminology to plain English to communicate changes and gather feedback Asks questions and actively listens to gather information about job requirements and software systems

Skill	Description
Reading	<ul style="list-style-type: none">Identifies and interprets a variety of texts, and numerical and diagrammatic informationReviews a range of organisational documents to identify organisational requirements
Writing	<ul style="list-style-type: none">Uses correct spelling, grammar and plain English to complete documentation
Initiative and enterprise	<ul style="list-style-type: none">Identifies and follows established protocols and meets expectations associated with own roleInitiates standard procedures when responding to familiar problems in immediate context
Planning and organising	<ul style="list-style-type: none">Takes responsibility for planning and organising own workload, identifying ways of sequencing for greater efficiency
Problem solving	<ul style="list-style-type: none">Understands some general design and operating principles of digital tools to help with modifying systems and when troubleshooting
Technology	<ul style="list-style-type: none">Identifies purpose and specific functions of system software used in work contexts

Unit Mapping Information

Supersedes and is equivalent to ICTICT304 Implement system software changes.

Assessment Requirements for ICTICT315 Implement system software changes

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Supersedes and is equivalent to ICTICT304 Implement system software changes.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- complete at least two different types of system software changes.

In the course of the above, the candidate must:

- test and evaluate the impact of system software changes
- consult with required personnel and users from impacted organisational areas
- hand over system software changes with instructions and updated documentation to organisational areas
- configure computers to accept new or upgraded application software
- apply required organisational policies and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- functions and features of:
 - basic software applications in relation to computer systems
 - roll-back paths in the event of system failure
 - maintenance methodologies
- methods to monitor system software updates and advances
- impact of software changes, updates and advances on computer systems
- types of technical data required for making changes to software

- configuration instructions, plans and techniques for software updates
- types of initialisation and configuration files
- methods to update repositories after software updates and changes occur
- types of organisational documents and formats used to record system software updates and changes
- functions and features of change management systems
- types of operational areas that may be impacted by software changes
- methods to facilitate the handover of modified systems
- testing procedures for computer systems
- organisational scheduling requirements
- industry-accepted hardware and software products
- vendor software service specifications regarding system software changes
- organisational policies and procedures, and legislative requirements relating to work tasks.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a computer on which system software changes are to be applied
- software applications to be updated or changed
- opportunities for interaction with others
- work brief and organisational policies and procedures required to demonstrate the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT316 Implement new technology

Modification History

Release	Comments
Release 1	<p>This version first released with the Information and Communications Technology Training Package Version 8.0.</p> <p>Supersedes and is equivalent to ICTICT306 Migrate to new technology.</p> <p>Updated title to better reflect unit scope.</p>

Application

This unit describes the skills and knowledge required to research, source, evaluate and apply new technologies to improve operational performance in a variety of contexts.

The unit applies to individuals who may work in roles such as support desk technicians, who are engaged in improving organisational processes, systems and technologies.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to implement new technology	<p>1.1 Confirm work brief and tasks according to organisational policies and procedures</p> <p>1.2 Review operational goals according to work brief</p> <p>1.3 Research new operational technology options</p> <p>1.4 Prepare evaluation checklist according to organisational requirements</p> <p>1.5 Evaluate and select technologies according to work brief and prepared checklist</p>

ELEMENT	PERFORMANCE CRITERIA
	1.6 Source selected technologies according to organisational policies and procedures
2. Integrate new technology	2.1 Confirm technology implementation requirements and specifications in consultation with required personnel 2.2 Prepare configuration components 2.3 Configure technology according to work brief 2.4 Test new technology according to policies and procedures and rectify any issues within scope of own role
3. Evaluate integrated technology	3.1 Assess extent to which newly integrated technology has met organisational goals and activities against evaluation checklist 3.2 Determine environmental impact of new equipment 3.3 Complete workplace documentation of technology implementation and evaluation outcomes according to organisational requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Learning	<ul style="list-style-type: none"> Investigates, evaluates and applies information from a range of complex and technical texts to expand own knowledge and identify new technologies that will benefit the organisation
Oral communication	<ul style="list-style-type: none"> Converts technical language and terminology to plain English to communicate changes Asks questions and actively listens to gather information about job requirements and software systems
Reading	<ul style="list-style-type: none"> Identifies and interprets a variety of numerical and diagrammatic information with terminology unique to job requirements Reviews a range of documents to identify organisational requirements
Writing	<ul style="list-style-type: none"> Uses correct spelling, grammar and plain English to complete documentation
Planning and organising	<ul style="list-style-type: none"> Takes responsibility for planning and organising own workload, identifying ways of sequencing for greater efficiency

Skill	Description
Technology	<ul style="list-style-type: none">• Tests and operates common digital tools and systems to effectively complete routine tasks

Unit Mapping Information

Assessment Requirements for ICTICT316 Implement new technology

Modification History

Release	Comments
Release 1	<p>This version first released with the Information and Communications Technology Training Package Version 8.0.</p> <p>Supersedes and is equivalent to ICTICT306 Migrate to new technology.</p> <p>Updated title to better reflect unit scope.</p>

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- implement at least two different technologies into an organisation or work area
- evaluate impact of implemented new technology on at least one occasion.

In the course of the above, the candidate must:

- apply required organisational policies and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- functions and features of hardware and software used in organisations
- common types of emerging technologies suitable for organisational processes and systems
- technology trends and forecasted demand for information and communications technology (ICT), including:
 - hardware
 - protocols
 - services
 - software
- methods to:
 - identify how operational goals can be actualised with emerging technology

- evaluate implementation constraints of technologies
- configuration instructions, plans and techniques for new technology to be implemented
- types of environmental considerations for new equipment
- functions and features of evaluation checklists, including environmental considerations associated with technology options
- methods to:
 - configure new technologies in different organisational contexts
 - review and test the implementation of new technologies
- vendor software service specifications regarding system software changes
- organisational formats for reporting documentation
- organisational policies and procedures, and legislative requirements relating to work tasks.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- new technologies, equipment and software being used in industry
- work brief and organisational policies and procedures required to demonstrate the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT317 Maintain standard operating environments

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Supersedes and is equivalent to ICTICT302 Install and optimise operating system software. Updated title to better reflect unit scope.

Application

This unit describes the skills and knowledge required to configure and monitor standard operating environments (SOEs) in organisations. It includes assessing organisational infrastructure, evaluating SOE deployment methods, and deploying SOEs and applications to end-user devices.

The unit applies to individuals who may work in roles such as support desk technicians, information technology (IT) support engineers, system administrators and SOE engineers who contribute to the maintenance of SOEs.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Assess organisational infrastructure	1.1 Confirm work brief and tasks according to organisational policies and procedures 1.2 Identify existing operating system (OS) functions according

ELEMENT	PERFORMANCE CRITERIA
	<p>to work brief</p> <p>1.3 Review required SOE improvements according to work brief</p> <p>1.4 Determine SOE objectives in consultation with required personnel</p> <p>1.5 Analyse centrally managed end-user devices according to work brief</p> <p>1.6 Report on required SOE applications, drivers and hardware options according to analysis findings</p> <p>1.7 Select required options according to SOE objectives</p>
2. Evaluate SOE deployment methods	<p>2.1 Research OS deployment software and deployment options required in centrally managed end-user devices</p> <p>2.2 Compare deployment options according to work brief</p> <p>2.3 Identify advantages and disadvantages of compared deployment options</p> <p>2.4 Select required SOE deployment method according to organisational system requirements</p>
3. Apply SOE deployment methods	<p>3.1 Select and source required deployment configuration components</p> <p>3.2 Configure required SOE and applications on existing operating system user interface</p> <p>3.3 Test required SOE deployment onto a centrally managed end-user device according to organisational requirements</p> <p>3.4 Apply automatic patching over required network</p> <p>3.5 Confirm deployment success and rectify any issues</p> <p>3.6 Save and secure systems according to organisational policies and procedures</p>
4. Finalise SOE documentation	<p>4.1 Create SOE deployment plan with scheduled updates and record maintenance measures</p> <p>4.2 Obtain and review SOE deployment evaluation from required personnel</p> <p>4.3 Seek and obtain deployment plan approval from required personnel</p> <p>4.4 Distribute and store approved deployment plan according to organisational policies and procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Oral communication	<ul style="list-style-type: none">Elicits and evaluates information using OS-related terminology and effective listening and questioning techniquesUses simple and relevant language to liaise with required personnel, present information and obtain feedback
Reading	<ul style="list-style-type: none">Identifies, analyses and evaluates a range of complex texts and applies the information to OS selection, installation, configuration and SOE deploymentInterprets and comprehends a large range of diagrams, icons, symbols, text, numbers and letters to install and configure SOEs
Writing	<ul style="list-style-type: none">Uses the correct spelling and grammar, clear plain English and systems-related text to document recommendations, plans, schedules, and processes, and to develop feedback tools
Planning and organising	<ul style="list-style-type: none">Takes responsibility for planning and organising own workload, identifying ways of sequencing and combining elements for greater efficiency
Problem solving	<ul style="list-style-type: none">Identifies and implements solutions for routine problems
Technology	<ul style="list-style-type: none">Identifies the purposes, specific functions and key features of common digital systems and tools, and operates them effectively to complete routine tasks

Unit Mapping Information

Supersedes and is equivalent to ICTICT302 Install and optimise operating system software.

Assessment Requirements for ICTICT317 Maintain standard operating environments

Modification History

Release	Comments
Release 1	<p>This version first released with the Information and Communications Technology Training Package Version 8.0.</p> <p>Supersedes and is equivalent to ICTICT302 Install and optimise operating system software.</p> <p>Updated title to better reflect unit scope.</p>

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- maintain at least two standard operating environments (SOEs) for an organisation
- deploy SOE and applications to at least one centrally managed end-user device
- create at least one deployment plan for automatic SOE and applications.

In the course of the above, the candidate must:

- review organisational system requirements
- apply required organisational policies and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- methods for configuring and deploying SOEs and applications
- functions and features of deployment plans, including:
 - scheduling updates
 - maintenance measures
- types of automatic deployment components, software and hardware
- functions and features of diagnostic testing software configuration components and equipment
- types of testing procedures for automatic SOE and applications

- key functions and features of centrally managed end-user devices, including:
 - kiosks
 - laptops
 - desktops
 - thin clients
 - virtualised workstations
- key operating system (OS) functions used in organisations, including:
 - file systems
 - memory management
 - process scheduling
- types of OS user interfaces and networks
- required types of SOE applications, drivers and hardware options
- methods of identifying SOE limitations and improvements
- types of industry accepted hardware and software for maintaining SOEs and applications
- functions and features of OS functions used in organisations
- functions and features of SOE infrastructure
- types of organisational requirements for OS
- functions and applications of automatic patching
- organisational formats for documentation and reports
- organisational policies and procedures, and legislative requirements relating to work tasks.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a centrally managed end-user device where SOE deployment is required
- diagnostic testing software, configuration components and equipment
- work brief and organisational policies and procedures required to demonstrate the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT318 Validate test cases and develop proof of concepts

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created unit of competency to address in-demand skills needs.

Application

This unit describes the skills and knowledge required to validate the feasibility of information and communications technology (ICT) concepts in a variety of workplace contexts. It includes identifying concept technologies, evaluating factors that contribute to concepts, and applying strategies to mitigate risks associated with those factors.

The unit applies to individuals who may work under direct supervision as technical support staff, and concept developers, who support the development and validation of concepts across ICT environments.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to develop proof of ICT concepts	1.1 Confirm work brief and tasks according to organisational policies and procedures 1.2 Review costs, timelines, operational capacities and resources in work brief 1.3 Develop ICT concepts according to work brief 1.4 Review test cases and document any limitations according to

ELEMENT	PERFORMANCE CRITERIA
	work brief
2. Evaluate and recommend technologies	2.1 Research ICT components and technologies according to work brief 2.2 Evaluate suitable technologies required in ICT concept according to work brief 2.3 Report on advantages and disadvantages of required technologies 2.4 Analyse research findings and develop technologies recommendations according to work brief
3. Evaluate contributing factors and risks associated with ICT concept	3.1 Research environmental and organisational factors that impact concepts 3.2 Conduct market and competitor analysis according to work brief 3.3 Analyse concept risks 3.4 Create risk register according to work brief 3.5 Identify and document risk mitigation strategies
4. Validate test cases for proof of concepts	4.1 Use technological recommendations and analysis findings to validate a test case according to work brief 4.2 Confirm test case is valid 4.3 Seek and implement feedback on test case validation from required personnel 4.4 Document and securely store validation output in required location according to organisational policies and procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Oral communication	<ul style="list-style-type: none"> Presents recommendations and issues according to organisational requirements and using standard conventions and protocols and language appropriate to audience
Reading	<ul style="list-style-type: none"> Interprets a variety of technical information and texts
Writing	<ul style="list-style-type: none"> Creates workplace documentation using required technical language
Planning and organising	<ul style="list-style-type: none"> Uses systematic processes for information gathering and evaluates options against agreed criteria
Problem solving	<ul style="list-style-type: none"> Applies principles of logical thinking to identify organisational

Skill	Description
	issues and select appropriate solutions

Unit Mapping Information

No equivalent unit. Newly created unit.

Assessment Requirements for ICTICT318 Validate test cases and develop proof of concepts

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created unit of competency to address in-demand skills needs.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop at least one proof of concept to validate an information and communications technology (ICT) concept, where the work must include:
 - the validation of at least one test case
 - at least two recommended technologies to actualise the above proof of concept.

In the course of the above, the candidate must:

- report on and present ICT-specific information, recommendations and ideas
- securely store documents in required locations
- apply required organisational policies and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- methods to validate test cases
- functions and features of proof of concept documentation and briefs, including:
 - costs
 - timelines
 - operational capacities
 - resources
- features, advantages and disadvantages of concept technologies and components

- common types of factors that impact proof of concept briefs, including:
 - external environmental factors
 - internal organisational factors
- methods to identify and analyse contributing factors and risks, including:
 - market analyses
 - competitor analyses
 - risk analyses
- industry-recognised methods to mitigate risks, including developing risk registers
- methods to validate test cases
- organisational policies and procedures, and legislative requirements relating to work tasks.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required resources to validate and develop proof of concepts
- opportunities for interaction with others
- work brief and organisational policies and procedures required to demonstrate the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT401 Determine and confirm client business requirements

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to determine client business system requirements and verify the accuracy of the information gathered.

It applies to information and communications technology (ICT) personnel who are required to analyse client expectations and needs, and recommend business system changes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine context of business need or problem	1.1 Establish the business problem to be investigated, including determining system boundaries, scope and the development methodology to be used 1.2 Choose information gathering method and develop questions appropriate to business problem 1.3 Develop objectives and identify expected outcomes to be achieved 1.4 Document the business problem

ELEMENT	PERFORMANCE CRITERIA
	1.5 Submit documentation to appropriate person for substantiation
2. Gather information	2.1 Use chosen information gathering method to identify clients of the system and problems they encounter 2.2 Record client responses 2.3 Analyse gathered information to identify new system requirements and establish problem specifications 2.4 Document system requirements and problems 2.5 Analyse physical requirements and identify changes required to implement new systems
3. Confirm system specifications	3.1 Check documentation to ensure it meets client business needs 3.2 Submit documentation to the client for verification of accuracy and approval 3.3 Make changes to the documentation as necessary and indicated by the client 3.4 Submit documentation to client for final approval or sign-off

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.1, 2.3, 2.5, 3.1	<ul style="list-style-type: none"> Identifies, analyses and evaluates information from a variety of sources containing complex systems related terminology to determine system performance requirements and establish solutions
Writing	1.2-1.4, 2.2, 2.4, 3.3	<ul style="list-style-type: none"> Uses the correct spelling and grammar, plain English and, when necessary, systems related text and terminology to develop information gathering tools and document recommendations
Oral Communication	1.1, 2.1, 2.5, 3.2, 3.4	<ul style="list-style-type: none"> Uses plain English, effective listening and questioning techniques and, where necessary, systems related terminology to elicit information

		<ul style="list-style-type: none"> • Uses plain English and relevant terminology to liaise with clients, present information and obtain feedback
Get the work done	1.1-1.3, 2.1, 2.3, 2.5	<ul style="list-style-type: none"> • Takes responsibility for planning and organising own workload, identifying ways of sequencing and combining elements so work is undertaken methodically • Recognises and takes responsibility for addressing predictable and some less predictable problems in familiar work contexts • Understands the purposes, specific functions and key features of common digital systems and tools to provide current advice on systems and data gathering products

Assessment Requirements for ICTICT401 Determine and confirm client business requirements

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- use investigative techniques to obtain information and document the business system problem
- produce a clear statement of business expectations and needs, including critical business requirements.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe a variety of data gathering techniques
- describe areas related to the client business in detail
- interpret functional organisational charts
- outline physical requirements of the client's business, taking into account current system functionality, geography, environment, client user and cost constraints
- describe products related to data capture
- discuss the role of stakeholders and the degree of stakeholder involvement.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

- current business needs
- a client expectations brief

- business objectives
- systems, data gathering and appropriate software products.

Assessors must satisfy NVR/AQTF assessor requirements.

ICTICT405 Develop detailed technical design

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to assist in the development of a detailed technical design.

It applies to individuals performing systems design tasks who are required to review and update technical design documents.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Assist in selecting technical design features	1.1 Select and revise design model based on iteration and design changes 1.2 Incorporate outstanding design points according to acceptance criteria 1.3 Distribute reports identifying changes and implications to appropriate person for review
2. Contribute to design review	2.1 Compare design against requirements and fix as necessary

ELEMENT	PERFORMANCE CRITERIA
	2.2 Confirm design with appropriate person 2.3 Use feedback mechanisms to gather information on design changes from client 2.4 Incorporate design changes where required
3. Contribute to development of program specifications	3.1 Implement modules by incremental development techniques 3.2 Identify user authority for each module 3.3 Prepare detailed specifications of module implementation for each module that will not be incrementally built 3.4 Prepare documentation according to requirements of the project

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.1, 2.1, 2.3	<ul style="list-style-type: none"> Identifies, analyses and evaluates a range of online and hard copy text containing complex systems design terminology, syntax and diagrams, and applies the information to the task
Writing	1.1, 1.2, 2.3, 2.4, 3.3, 3.4	<ul style="list-style-type: none"> Uses correct spelling and grammar, plain English, systems design related terminology and diagrams to obtain feedback, document recommendations and prepare final project specifications
Oral Communication	1.1, 1.3, 2.2, 2.3	<ul style="list-style-type: none"> Elicits and evaluates information using project related terminology and effective listening and questioning techniques Uses plain English and, where necessary, project related terminology to liaise with clients, present information and obtain feedback
Interact with Others	1.3, 2.2, 2.3	<ul style="list-style-type: none"> Selects and uses appropriate conventions and protocols when communicating with clients and co-workers in a range of work contexts Uses a range of strategies to establish a sense of connection and build rapport with clients and co-workers

Get the work done	1.1-1.3, 2.1, 2.4, 3.1-3.3	<ul style="list-style-type: none"> • Uses familiar digital systems and tools to incorporate required changes to model • Applies formal processes when developing strategic initiatives, and plans tasks with logically sequenced steps • Initiates standard procedures when responding to familiar problems within immediate context • Uses familiar digital technologies and systems to access information, search and enter data and code, present information and communicate with others, cognisant of data security and safety

Assessment Requirements for ICTICT405 Develop detailed technical design

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- define the client business domain and client's critical business functions and processes
- design and prepare a clear and best-fit technical design for a set project, incorporating:
 - changes to design model based on user requirements
 - detailed specification of modules
- produce updated documentation to reflect changes.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain various life cycle options
- describe design fundamentals and refinement
- discuss design quality metrics.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

- requirements model
- business requirements
- project deliverables
- acceptance criteria

- current ICT blueprint.

Assessors must satisfy NVR/AQTF assessor requirements.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify and analyse documentation requirements and client needs	1.1 Consult with client to identify documentation requirements 1.2 Interpret and evaluate documentation requirements and confirm details with client 1.3 Investigate industry and documentation standards for requirements 1.4 Define and document the scope of work to be produced 1.5 Consult with client to validate and confirm the scope of work

ELEMENT	PERFORMANCE CRITERIA
2. Design documentation	<p>2.1 Identify information requirements with reference to layout and document structure</p> <p>2.2 Create document templates and style guides consistent with information requirements</p> <p>2.3 Conduct a review of the system in order to understand its functionality</p> <p>2.4 Extract content that meets information requirements according to copyright restrictions</p> <p>2.5 Develop the structure of the technical documentation, giving focus to the flow of information, style, tone and content format</p> <p>2.6 Validate the technical documentation structure with the client</p>
3. Develop documentation	<p>3.1 Write technical documentation based on the template and scope of work using the information gathered</p> <p>3.2 Translate technical terminology into plain English where appropriate</p> <p>3.3 Apply content format and style according to documentation standards and templates</p>
4. Evaluate and edit documentation	<p>4.1 Submit technical documentation to appropriate person for review</p> <p>4.2 Gather and analyse feedback</p> <p>4.3 Incorporate alterations into the technical documentation</p> <p>4.4 Edit the technical documentation for technical and grammatical accuracy</p>
5. Prepare documentation for publication	<p>5.1 Check that the completed technical documentation meets client requirements and scope of work</p> <p>5.2 Submit the technical documentation to appropriate person for approval</p> <p>5.3 Prepare the technical documentation for publication and distribution using appropriate channels</p>

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.2, 1.3, 2.3, 2.4, 4.2, 4.4, 5.1	<ul style="list-style-type: none"> Identifies and evaluates organisational documentation and standards, and a range of online and hard copy text containing technical project related terminology and diagrams, then applies the information to the development of appropriate technical documentation Interprets and comprehends a large range of diagrams, icons, and computer generated text
Writing	1.4, 2.2, 2.5, 3.1-3.3, 4.3, 4.4, 5.3	<ul style="list-style-type: none"> Uses correct spelling and grammar, plain English and specific terminology relevant to the project Uses organisational naming conventions, terminology, style and format to develop technical documents to organisational standards
Oral communication	1.1, 1.3-1.5, 2.1, 2.3, 2.6, 4.1, 4.2	<ul style="list-style-type: none"> Elicits and evaluates information using effective listening and questioning techniques Uses simple and relevant language to confirm understanding of requirements, present information and obtain feedback
Interact with others	5.2	<ul style="list-style-type: none"> Selects the appropriate form, channel and mode of communication for a specific purpose relevant to own role
Navigate the world of work	1.3, 2.4	<ul style="list-style-type: none"> Appreciates the implications of legal and regulatory responsibilities related to own work and is beginning to recognise some general legal principles applicable across work contexts
Get the work done	1.4, 2.1, 2.2, 2.5, 3.3, 4.2	<ul style="list-style-type: none"> Takes responsibility for planning and organising own workload, identifying ways of sequencing and combining elements for greater efficiency Uses familiar digital systems and tools to access, organise, analyse and display information relevant to role Automatically implements standard procedures for routine decisions

Assessment Requirements for ICTICT408 Create technical documentation

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- establish customer needs
- design and develop technical documentation, such as system, procedures, training material and user guides, incorporating appropriate standards
- update document with client feedback
- prepare documentation for publication.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe content features, such as clarity and readability
- outline the principles of document design, web design and usability
- explain the functions and features of templates and style guides
- explain instructional design principles
- list organisational policies, procedures and standards that cover document design.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

- technical specifications
- documentation standards

- organisational resources and documentation
- information about system, platform, network or application being documented
- relevant standards
- appropriate word processing software.

Assessors must satisfy NVR/AQTF assessor requirements.

ICTICT425 Implement WHS, environmental sustainability and anti-discrimination practices in an ICT workplace

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 4.0.

Application

This unit describes the skills and knowledge required to, through communication and teamwork, implement workplace health and safety (WHS), environmental sustainability (ES), equal employment opportunity (EEO) and anti-discrimination practices in an ICT workplace within own responsibilities.

This unit applies to individuals who are required to work and participate in an ICT workplace with some supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Gather and use information on ICT workplace compliance instruments and reputable resources	1.1 Identify legislative instruments and review reputable resources, and organisational priorities relevant to workplace health and safety (WHS), environmental sustainability (ES), equal employment opportunity (EEO) and anti-discrimination practices in ICT workplaces to determine requirements for compliance within scope of own responsibilities

	1.2 Collect and analyse information on organisational processes and procedures relating to WHS, ES, EEO and anti-discrimination practice in an ICT workplace to develop and document an initial view of compliance gaps and opportunities
2. Participate in consultation	<p>2.1 Consult with those involved in ICT workplace activities to collect information about the requirements and nature of WHS, ES, EEO and anti-discrimination practice in an ICT workplace, including risks and issues</p> <p>2.2 Work collaboratively to identify and document compliance gaps and opportunities</p> <p>2.3 Consult with those involved in ICT workplace activities to validate gaps and opportunities and finalise compliant practices for implementation</p>
3. Improve ICT WHS and environmental sustainability compliance	<p>3.1 Participate in the use of strategies and tools to embed compliant practices in ICT workplace activities</p> <p>3.2 Monitor ICT workplace activities to measure the success of practices implemented for WHS, ES, EEO and anti-discrimination compliance in an ICT workplace</p> <p>3.3 Consult with those involved in ICT workplace activities to respond to resistance and remaining risks and issues</p> <p>3.4 Agree and document amendments to practices to address remaining resistance, risks and issues</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Learning	<ul style="list-style-type: none"> Identifies, plans and implements strategies to manage gaps in personal knowledge Identifies reputable sources of information from which to gather resources and information
Reading	<ul style="list-style-type: none"> Analyses and consolidates information and data from a range of sources, against defined criteria and requirements, and checks for accuracy and completeness
Writing	<ul style="list-style-type: none"> Prepares a range of textual information appropriate for audience for informal and formal purposes
Oral	<ul style="list-style-type: none"> Participates in verbal exchanges of information using language, tone

Communication	<p>and pace appropriate to audience and environment</p> <ul style="list-style-type: none"> • Uses listening and questioning techniques to elicit the views and opinions of others and to confirm understanding
Navigate the world of work	<ul style="list-style-type: none"> • Accepts responsibility and ownership for the task and makes decisions on completion parameters and the need for coordination with others • Takes personal responsibility for following explicit and implicit policies, procedures and legislative requirements
Interact with others	<ul style="list-style-type: none"> • Selects and uses appropriate conventions and protocols when communicating with clients and colleagues in a range of work contexts • Recognises and accommodates basic differences and priorities of others • Cooperates with others and contributes to work practices where joint outcomes are expected and deadlines are to be met
Get the work done	<ul style="list-style-type: none"> • Takes responsibility for planning, sequencing and prioritising tasks and own workload for efficiency and effective outcomes • Makes routine decisions and implements standard procedures for routine tasks, using formal decision-making and problem-solving processes for more complex and non-routine situations • Uses the main features and functions of digital tools to complete work tasks and access information

Assessment Requirements for IC TICT425 Implement WHS, environmental sustainability and anti-discrimination practices in an ICT workplace

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 4.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements and performance criteria of this unit; including evidence of the ability to:

- Implement on four occasions WHS, ES, EEO and anti-discrimination practices in own area of work, including the ability to:
 - identify, interpret and apply legislative instruments and reputable resources to organisational priorities to ensure compliance
 - undertake a risk assessment and implement a risk control utilising an evaluation procedure within own area of work
 - document responsibilities of employers, employees, contractors and agents
 - analyse existing organisational procedures, including consulting with three individuals involved with ICT workplace activities, and determining if procedures are sufficient for compliance; including:
 - individual workstation set up of desk, chair, peripherals, computer
 - technology start up and shut down
 - new technology installation
 - technology maintenance and testing
 - use of personal protective equipment (PPE)
 - respond to the resistance of an individual involved in ICT workplace activities to implement and embed compliant practices
-

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements and performance criteria of this unit. This includes:

- Legislative instruments and reputable resources relating to WHS, ES, EEO and anti-discrimination

- Typical organisational priorities, policies and procedures relating to WHS, ES, EEO and anti-discrimination
- Risks and issues related to WHS, ES, EEO and anti-discrimination compliance in the ICT workplace
- Options, tools, and strategies to address WHS, ES, EEO and anti-discrimination compliance gaps, risks and issues, including risk assessment approaches, risk controls and evaluation procedures
- Responsibilities of employers, employees, contractors and agents relating to WHS, ES, EEO and anti-discrimination procedures in the workplace
-

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in an ICT working environment or workplace. This includes access to:

- Organisational priorities relating to WHS, ES, EEO and anti-discrimination practices
- Organisational risk assessment and evaluation procedure
- Organisational risk control implementation procedure
- ICT workplace equipment including:
 - individual workstation consisting of desk, chair, peripherals, computer
 - individual users involved in ICT workplace activities to consult

Assessors of this unit must satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT427 Identify, evaluate and apply current industry-specific technologies to meet organisational needs

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 4.0.

Application

This unit describes the skills and knowledge required to identify, evaluate and implement industry-specific technologies to address organisational needs. It involves acquiring industry-specific technologies and obtaining user feedback.

It applies to individuals who support information and communications technology (ICT) activities in the workplace across a wide range of ICT areas, including technical support, network administration, programming, testing, web technologies, software applications and digital media technologies.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify and select industry-specific technologies	1.1 Interpret organisational needs to design indicators against which industry technologies will be evaluated to determine suitability to the organisation including performance, useability and sustainability indicators 1.2 Research current industry-specific technologies to meet

	<p>organisational needs</p> <p>1.3 Evaluate and compare industry-specific technologies against indicators to the potential benefits of industry-specific technologies to the organisation against indicators</p> <p>1.4 Select industry-specific technologies to address organisational needs</p> <p>1.5 Acquire industry-specific technologies on the basis of the evaluation and in accordance with organisational procurement procedure</p>
2. Implement industry-specific technologies	<p>2.1 Consult with user to plan and evaluate the implementation of the industry-specific-technologies</p> <p>2.2 Implement industry-specific technologies to address organisational needs</p> <p>2.3 Check and adjust implementation of the industry-specific technologies to meet organisational needs and organisational workplace health and safety (WHS) compliance requirements</p>
3. Obtain user feedback and evaluate industry-specific technologies	<p>3.1 Seek and document user feedback on industry-specific technologies</p> <p>3.2 Evaluate industry-specific technologies against indicators</p> <p>3.3 Adjust industry specific technologies in response to user feedback and evaluation</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Learning	<ul style="list-style-type: none"> Investigates, evaluates and applies information from a range of complex and technical texts to expand own knowledge and identify industry-specific technologies that will benefit the organisation
Reading	<ul style="list-style-type: none"> Identifies and interprets technical online and hard copy documentation containing complex terminology and diagrams to identify industry-specific technologies that will benefit the organisation
Oral Communication	<ul style="list-style-type: none"> Elicits information and feedback by using effective listening and questioning techniques to identify and evaluate industry-specific technologies Uses clear, easy-to-understand language and translates industry-specific terminology into plain English when talking to users

Numeracy	<ul style="list-style-type: none"> • Uses numerical information to compare the value of products with regard to quantity, price and quality
Navigate the world of work	<ul style="list-style-type: none"> • Recognises and responds to both explicit and implicit protocols within familiar work contexts and appreciates the importance of identifying and responding to protocols in new situations • Recognises and addresses WHS compliance issues
Get the work done	<ul style="list-style-type: none"> • Uses key principles and concepts underpinning the design and operation of digital systems and tools, and applies these when evaluating and implementing new industry-specific technologies • Develops plans with an awareness of how they may contribute to meeting organisational needs

Unit Mapping Information

Assessment Requirements for ICTICT427 Identify, evaluate and apply current industry-specific technologies to meet organisational needs

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 4.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in elements and performance criteria of this unit; including evidence of the ability to:

- Identify, evaluate, implement and review two current industry-specific technologies and evaluate the potential benefits of these technologies to the organisation
-

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements and performance criteria of this unit. This includes:

- Current industry-specific technologies, trends and directions
- Methods of research
- Methods of designing indicators
- Types of indicators
- Approaches to monitoring performance against indicators
- Methods of getting user feedback
- Organisational requirements and how industry-specific technologies can assist
- Sources of industry-specific technologies detailing general features, capabilities, and compliant application of current industry-specific hardware and software products to be evaluated
-

Assessment Conditions

Skills must be demonstrated in a workplace or simulated environment where conditions are typical of those in an ICT working environment or workplace. This includes but is not limited to:

- Information on organisational needs for industry-specific technology

- A site where industry-specific technologies are used
- Current industry-specific technologies and accompanying documentation
- Organisational procurement procedure
- Information detailing workplace health and safety (WHS) compliance requirements
- Individual user to consult

Assessors of this unit must satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT429 Determine and confirm client business requirements

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to determine client business system requirements and verify the accuracy of information gathered.

It applies to Information and Communications Technology (ICT) personnel who are required to analyse client expectations and needs, as well as recommending business system changes. Clients can be internal and external and include a range of team members and staff.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine context of business needs and problems	1.1 Identify business problem to be investigated, including determining system boundaries, scope and development methodology to be used 1.2 Choose information gathering method and develop questions according to business problem 1.3 Develop objectives, prioritise activities and discuss expected outcomes to be achieved with required personnel 1.4 Document business problem, chosen information gathering method, objectives and expected outcomes according to organisational procedures 1.5 Submit documentation to required personnel

ELEMENT	PERFORMANCE CRITERIA
2. Gather information	2.1 Use chosen information gathering methods and identify users of system and problems they encounter 2.2 Consult, record and confirm business system requirements with client according to organisational procedures 2.3 Analyse gathered information and establish problem specifications 2.5 Identify and document new system requirements and problems 2.4 Analyse physical requirements and identify changes required to implement new systems
3. Confirm system specifications	3.1 Check system requirements documentation and confirm it meets client business needs with required personnel 3.2 Submit documentation for client review and verification 3.3 Make changes to documentation as required and indicated by client 3.4 Submit documentation to client and required personnel for final approval and sign-off

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Identifies, analyses and evaluates information from a variety of sources containing complex systems related terminology Interprets a range of texts to determine system performance requirements and establish solutions
Writing	<ul style="list-style-type: none"> Uses spelling and grammar, plain English and systems related text and terminology to develop information gathering tools and document recommendations
Oral Communication	<ul style="list-style-type: none"> Uses listening and questioning techniques and systems related terminology to elicit information and liaise with clients
Planning and organising	<ul style="list-style-type: none"> Takes responsibility for planning and organising own workload and identifies ways of sequencing and combining elements
Problem-solving	<ul style="list-style-type: none"> Identifies and takes responsibility for addressing predictable and some less predictable problems in familiar work contexts
Technology	<ul style="list-style-type: none"> Identifies the purposes, specific functions and key features of common digital systems and tools and provides advice on systems

	and data gathering products
--	-----------------------------

Unit Mapping Information

Supersedes and is equivalent to ICTICT401 Determine and confirm client business requirements.

Assessment Requirements for ICTICT429 Determine and confirm client business requirements

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- obtain information and document a business system problem according to client requirements.

In the course of the above, the candidate must:

- produce a statement of business expectations, needs and critical business requirements
- perform analysis of system and physical requirements and identify new system requirements accordingly
- consult with required personnel and make applicable changes to documentation.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard data gathering and data capture techniques
- industry standard business systems and common client requirements
- client business processes
- physical requirements of client's business, including:
 - system functionality
 - geography
 - environment
 - client user
 - cost constraints
- procedures for documenting and confirming client business requirements.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a client expectations and requirements brief
- business objectives of client
- clients' business system
- systems, data gathering tools and required software products
- hardware and its components required for confirming client business requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT430 Apply software development methodologies

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to apply traditional and non-traditional systems development methodologies.

It applies to individuals in senior development roles who exercise discretion and judgement to create solutions using technical knowledge and analysis skills.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine methodology	1.1 Determine and define subject activity 1.2 Define selection criteria for development methodology 1.3 Review and evaluate a range of traditional and non-traditional system development methodologies 1.4 Select system development methodology for required activity
2. Apply selected development methodology	2.1 Create initial project plan according to organisational standards 2.2 Identify applicable task types according to development methodology 2.3 Describe and articulate task types 2.4 Define applicable control structures to be created according

ELEMENT	PERFORMANCE CRITERIA
	to task type execution requirements 2.5 Associate each task type with a set of input and output parameters
3. Adjust project according to methodology	3.1 Identify resources to support methodology selection 3.2 Solve tasks using selected methodology 3.3 Monitor project flow and record effectiveness against project plan 3.4 Review and document opportunities for improvement, lessons learned and recommendations for future projects 3.5 Submit results to required personnel for approval

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none">Identifies, analyses and evaluates a range of textual information containing complex systems development specific terminology, syntax and diagrams
Writing	<ul style="list-style-type: none">Uses applicable spelling and grammar and technical terminology to document project plans, recommendations, processes and reports in required format
Planning and organising	<ul style="list-style-type: none">Applies formal processes when planning more complex tasks, producing plans with logically sequenced steps, reflecting an awareness of time and resource constraints and the needs of others
Self-management	<ul style="list-style-type: none">Analyses project methodologies and identifies some key principles that may be applicable in future situations
Technology	<ul style="list-style-type: none">Uses digital systems and tools to access, organise, analyse and display information applicable to the role

Unit Mapping Information

Supersedes and is equivalent to ICTICT403 Apply software development methodologies.

Assessment Requirements for ICTICT430 Apply software development methodologies

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- select and apply a software development methodology for at least two different subject activities according to organisational standards.

In the course of the above, the candidate must:

- produce documentation as required by chosen methodology.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- key project management skills, techniques and requirements required in applying software development methodologies, including those related to:
 - input and output parameters
 - project plan creation processes
 - task types and applicable control structures
- client business domains and organisational requirements required in applying software development methodologies
- stakeholder roles and degree of stakeholder involvement in development process
- traditional and non-traditional system development methodologies
- key organisational standards and documentation techniques required in applying software development methodologies.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- hardware, software and its components required to apply software development methodology
- design specifications
- industry standard system development methodologies
- organisational standards
- detailed user requirements document, including model and scope for given activity.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT431 Use online tools for learning

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to identify current and future skill and knowledge gaps and use the internet as a resource to acquire knowledge and skills to meet organisational requirements.

It applies to individuals who use the internet to develop new workplace skills.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify learning requirements	1.1 Identify current and future learning requirements and skill gaps according to organisational needs 1.2 Seek advice from required personnel on current and future learning requirements and skill gaps 1.3 Identify opportunities for learning development activities using online learning tools 1.4 Develop learning plan according to identified learning requirements and organisational training policies, plans and procedures
2. Research learning tools available online	2.1 Identify existing online learning tools applicable to learning plan objectives 2.2 Research and evaluate online learning tool in achieving

ELEMENT	PERFORMANCE CRITERIA
	learning plan outcomes
3. Undertake online learning	3.1 Implement learning plan using identified online learning tools 3.2 Identify opportunities in the workplace to apply new learning 3.3 Follow coaching or mentoring advice in work activities
4. Monitor learning effectiveness	4.1 Determine mode for assessing effectiveness of online learning 4.2 Perform assessment and review outcomes 4.3 Undertake peer assessment and review feedback from peers 4.4 Identify further learning requirements from assessment review and feedback with required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none"> Investigates and evaluates information from a range of sources to select online learning development activities to meet skills gaps and future learning needs
Reading	<ul style="list-style-type: none"> Identifies, analyses and compares information gathered from a large range of both online and hard copy texts to inform current and future learning needs, and to develop and execute a learning plan
Writing	<ul style="list-style-type: none"> Uses required language including referencing and web links to document findings, develop learning plan, undertake assessment and complete online learning
Oral Communication	<ul style="list-style-type: none"> Elicits and evaluates information using listening and questioning techniques to identify skills gaps and future skills needs, and undertake online learning, assessment and feedback process
Teamwork	<ul style="list-style-type: none"> Cooperates with others and contributes to work practices where joint learnings can be applied
Self-management	<ul style="list-style-type: none"> Analyses assessment outcomes and identifies some key principles that may be applicable in future situations Takes responsibility for defining key aspects of own workload and managing own learning related activities
Technology	<ul style="list-style-type: none"> Identifies purposes, specific functions and key features of common digital systems and tools, and complete routine tasks

Unit Mapping Information

Supersedes and is equivalent to ICTICT404 Use online learning tools.

Assessment Requirements for ICTICT431 Use online tools for learning

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop and implement an online learning plan using at least two different online learning tools.

In the course of the above, the candidate must:

- acquire knowledge and skills using online learning tools
- use a range of learning mediums, including coaching, mentoring and peer-to-peer interactions
- confirm learning is reinforced by application.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- learning development activities using a range of online training tools
- organisational training policies, plans and procedures applicable to organisational learning requirements and online learning
- principles and techniques of measuring performance, including self-assessment
- methods to identify and prioritise required learning needs
- processes in developing learning plans
- systems and processes used to direct learning
- required competency standards and assessment relevant to learning.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- online learning tools
- hardware and its components required to use online tools.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT432 Develop detailed technical design

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to assist in the development of a detailed technical design.

It applies to individuals performing systems design tasks as part of a team who are required to review and update technical design documents according to client requirements.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Assist in selecting technical design features	1.1 Establish business environment and client requirements 1.2 Select and revise design model based on iteration and design changes 1.3 Incorporate outstanding design points according to client requirements 1.4 Distribute reports identifying changes and implications to required personnel for review
2. Review designs	2.1 Compare design against technical requirements and amend as required 2.2 Confirm design with required personnel 2.3 Gather information and client feedback on design changes

ELEMENT	PERFORMANCE CRITERIA
	and respond accordingly 2.4 Incorporate required design changes
3. Contribute to development of program specifications	3.1 Implement modules using incremental development techniques 3.2 Identify user authority for each module 3.3 Prepare detailed specifications of module implementation for each module 3.4 Prepare documentation according to project requirements and organisational procedures and guidelines

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Identifies, analyses and evaluates a range of online and hard copy text containing complex systems design terminology, syntax and diagrams, and applies information to task
Writing	<ul style="list-style-type: none"> Uses spelling and grammar, plain English, systems design related terminology and diagrams to obtain feedback, document recommendations and prepare final project specifications
Oral Communication	<ul style="list-style-type: none"> Uses listening and questioning techniques and, where applicable, project related terminology to liaise with clients, present information and obtain feedback
Teamwork	<ul style="list-style-type: none"> Selects and uses required conventions and protocols when communicating with clients and co-workers in a range of work contexts Uses strategies to establish a sense of connection and build rapport with clients and co workers
Planning and organising	<ul style="list-style-type: none"> Applies formal processes when developing strategic initiatives, and plans tasks with logically sequenced steps
Problem-solving	<ul style="list-style-type: none"> Initiates standard procedures when responding to familiar problems within immediate context
Technology	<ul style="list-style-type: none"> Uses digital systems and tools to incorporate required changes to model Uses digital technologies and systems to access information, search and enter data and code, present information and communicate with others, cognisant of data security and safety

Unit Mapping Information

Supersedes and is equivalent to ICTICT405 Develop detailed technical design.

Assessment Requirements for ICTICT432 Develop detailed technical design

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- assist in developing a detailed technical design according to client requirements.

In the course of the above, the candidate must:

- define client business environment and client's critical business functions and processes
- design and prepare a best-fit technical design for a set project, incorporating:
 - changes to design model based on user requirements
 - detailed specification of modules and user authority for each module
- produce updated documentation reflecting changes made to required personnel.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- technical design project life cycle
- key principles and techniques required to develop detailed technical design, including:
 - incremental development
 - module implementation
 - documentation
 - design fundamentals and refinement
 - design quality metrics
- different client business environments and critical functions and process
- industry standard design models applicable to developing detailed technical designs
- organisational procedures and guidelines applicable to developing detailed technical designs.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- business and client requirements
- project deliverables
- required hardware and digital devices
- required software, tools and licenses
- feedback mechanisms
- industry standard ICT blueprint.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT433 Build graphical user interfaces

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to design, build and test a graphical user interface (GUI) to specification.

It applies to individuals employed as programmers and user interface designers in a variety of fields and provide Information and Communications Technology (ICT) support in small to medium enterprises (SMEs).

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine specification of GUI and develop GUI prototype	1.1 Establish GUI requirements according to organisational requirements 1.2 Identify organisational standards applicable to GUI 1.3 Determine front and back-end for interfacing with GUI 1.4 Define required functionality of GUI 1.5 Determine application development language for writing GUI 1.6 Build prototype using tools available in determined language 1.7 Determine type and level of documentation required

ELEMENT	PERFORMANCE CRITERIA
2. Design and build GUI according to specification	<ul style="list-style-type: none">2.1 Design GUI components and incorporate required functionality2.2 Define GUI actions and itemise UI events2.3 Document design outcomes according to specification and organisational procedures2.4 Build GUI using toolkit's classes or widgets, containers and other pertinent features according to specification
3. Test and document GUI according to specification	<ul style="list-style-type: none">3.1 Test GUI and confirm overall functionality according to requirements3.2 Iterate GUI design and build until test results meet requirements3.3 Document GUI user requirements according to specification and organisational procedures3.4 Produce GUI technical documentation according to specification and organisational procedures3.5 Obtain client sign-off according to organisational procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none">Identifies and interprets a range of online and hard copy text containing complex ICT and programming specific terminologyInterprets and comprehends a large range of syntax, diagrams, icons, symbols, text, numbers and letters required to develop a GUI
Writing	<ul style="list-style-type: none">Uses spelling and grammar, plain English and specific terminology to produce documents to organisational guidelines as required by the job roleDevelops GUI using programming syntax and conventions to develop GUIUses plain English, labels and terminology on the actual interface display
Self-management	<ul style="list-style-type: none">Identifies and follows explicit protocols and meets expectations applicable to own role

	<ul style="list-style-type: none">• Develops plans to manage relatively complex tasks with an awareness of how they may contribute to longer term operational and strategic goals• Takes responsibility for the outcomes of routine decisions related directly to own role
Problem-solving	<ul style="list-style-type: none">• Identifies and anticipates an increasing range of familiar problems, their symptoms and causes, and implements contingency plans
Technology	<ul style="list-style-type: none">• Identifies purpose, needs and limitations when selecting devices and applications for different tasks

Unit Mapping Information

Supersedes and is equivalent to ICTICT406 Build a graphical user interface.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTICT433 Build graphical user interfaces

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design and build a fully functional graphical user interface (GUI) according to specifications and organisational standards.

In the course of the above, the candidate must:

- demonstrate a GUI in concept and compiled form
- use applicable development tools in GUI construction
- confirm functionality of GUI on at least two different browsers and at least two different devices.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- object oriented programming concepts applicable to building graphical user interfaces
- system properties applicable to building a graphical user interface
- application development languages and prototyping tools and features included
- application programming interface (API) features
- open-source development tools
- organisational standards and codes of practice applicable to GUI building
- key testing procedures and documentation techniques required when building graphical user interfaces
- issues relating to copyright and intellectual property, privacy and data access legislation.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- GUI requirements documentation
- online tools available for prototyping and GUI design
- applicable organisational standards
- an integrated development environment (IDE) for determined language
- required hardware and its components
- required software, tools and licenses
- browsers and devices.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT434 Maintain website information standards

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to publish new content and establish and maintain accuracy and usability of industry standard content on client websites.

It applies to individuals working in web development and who provide support to small to medium enterprises (SMEs).

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare and publish organisational content and information	1.1 Identify organisational content and information publishing requirements according to organisational requirements 1.2 Plan publishing process including privacy, security and liability statements according to organisational requirements 1.3 Seek plan approval from required personnel 1.4 Publish organisational content and information according to plan
2. Provide navigation links and payment information	2.1 Determine and provide applicable users with access to required information and navigation links 2.2 Determine and list required payment options on

ELEMENT	PERFORMANCE CRITERIA
	website according to organisational requirements
3. Present and test disclosure of policies and services	3.1 Present website statement outlining charges according to organisational requirements 3.2 Present warranty information on required screen according to organisational requirements 3.3 Provide after-sales support to required users according to organisational requirements 3.4 Test website cancellations, returns and refunds policy listing and accessibility, and amend as required 3.5 Implement and test product and service notifications
4. Provide customer service support systems	4.1 Determine and implement customer service standards guidelines on website according to organisational requirements 4.2 Test website users have accessible website feedback facility method according to organisational requirements 4.3 Test complaints facility receives, records and response 4.4 Document and finalise process according to organisational requirements

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Reviews a range of documentation of varying quality to identify information relating to the organisation, organisational responsibilities and legislative requirements
Writing	<ul style="list-style-type: none"> Uses spelling and grammar, plain English, a consistent writing style and industry specific terminology to produce web content to organisational guidelines and to web development standards Uploads content onto the web and modifies existing web content using required syntax and conventions
Problem solving	<ul style="list-style-type: none"> Applies methodical processes to collect and evaluate organisational information for web publication
Self-management	<ul style="list-style-type: none"> Demonstrates personal responsibility for adherence to legal/regulatory responsibilities applicable to own work context

SKILL	DESCRIPTION
Technology	<ul style="list-style-type: none">• Uses digital systems and tools to access websites, publish on a website and write hypertext mark-up language (HTML) code

Unit Mapping Information

Supersedes and is equivalent to ICTICT407 Maintain website information standards.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTICT434 Maintain website information standards

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- apply at least three different industry standard programming practices in the preparation, maintenance and publishing of an organisation's website.

In the course of the above, the candidate must:

- comply with organisation, legislative and industry requirements
- develop content to comply with policies applicable to cancellations, returns and refunds
- display a site accessible to a variety of customers via electronic communication
- develop and modify information to meet e-commerce interaction requirements.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- consumer protection legislation
- content features including clarity and readability
- electronic commerce modelling language
- information architecture principles required to maintain website information standards
- instructional design principles required to maintain website information standards
- obligations of merchants, service providers and customers in maintaining website information standards
- implementation and testing procedures applicable to:
 - limitations and legislative restrictions display
 - shipping information displays
 - order and cancellation capacity of website
 - client communication facilities

- organisational standards, requirements and documentation required to maintain website information standards
- privacy legislation applicable to maintaining website information standards.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- organisational policies, procedures and guidelines applicable to maintaining website information standards
- customer service manuals and general data
- information standards for legislative and organisational requirements applicable to maintaining website information standards
- software and web development tools.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT435 Create technical documentation

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to create technical documentation that is clear and understandable for the target audience and both easy to navigate and apply.

It applies to individuals working as technical writers, designers, developers and support staff, who are required to produce technical support documents of Information and Communications Technology (ICT) related work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to produce technical documentation	1.1 Identify and evaluate technical documentation requirements and confirm details with client 1.2 Investigate and determine industry standards for technical documentation requirements 1.3 Define and document scope of work to be produced 1.4 Validate and confirm scope of work with client
2. Design and develop technical documentation	2.1 Identify technical documentation information requirements 2.2 Create document templates and style guides consistent with information requirements

ELEMENT	PERFORMANCE CRITERIA
	2.2 Assess and document ICT system functionality 2.3 Extract content that meets information requirements according to copyright restrictions 2.4 Develop structure of technical documentation and validate with client 2.5 Write technical documentation based on template and scope of work using information gathered 2.6 Apply content format and style according to documentation standards and templates
3. Finalise technical documentation and prepare for publication	3.1 Submit technical documentation to required personnel for review 3.2 Gather and analyse feedback and implement required changes and improvements to technical documentation 3.3 Review and edit technical documentation and confirm technical and grammatical accuracy 3.4 Confirm completed technical documentation meets client requirements and scope of work 3.5 Submit to required personnel for final sign off and approval to prepare publication 3.6 Prepare technical documentation for publication and distribution using applicable channels
4. Finalise technical documentation production	4.1 Confirm all technical documentation and approval procedures have been performed 4.2 Review and assess impact of technical documentation creation 4.3 Evaluate and report on technical documentation creation procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Identifies and evaluates organisational documentation and standards, and a range of online and hard copy text containing technical project related terminology and diagrams, then applies information to the development of technical documentation Interprets and comprehends a large range of diagrams,

	icons and computer-generated text
Writing	<ul style="list-style-type: none"> • Translates technical terminology into plain English and confirms viewers have a complete understanding of requirements • Develops technical documents to organisational standards using organisational naming conventions, terminology, style and format
Oral communication	<ul style="list-style-type: none"> • Confirms understanding of requirements, presents information and obtains feedback using applicable language
Teamwork	<ul style="list-style-type: none"> • Selects form, channel and mode of communication for a specific purpose applicable to own role, when communicating with others
Initiative and Enterprise	<ul style="list-style-type: none"> • Identifies implications of legal and regulatory responsibilities applicable to own work and general legal principles applicable across work contexts • Automatically implements standard procedures for routine decisions
Self-management	<ul style="list-style-type: none"> • Takes responsibility for planning and organising own workload, identifying ways of sequencing and combining elements for greater efficiency
Technology	<ul style="list-style-type: none"> • Uses digital systems and tools to access, organise, analyse and display information applicable to role

Unit Mapping Information

Supersedes and is equivalent to ICTICT408 Create technical documentation.

Assessment Requirements for IC TICT435 Create technical documentation

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- create at least two separate technical documents, each for different ICT products, on separate occasions.

In the course of the above, the candidate must:

- determine and comply with industry standards for technical documentation requirements
- establish customer needs
- design, and develop and write technical documentation, including system, procedures, training material and user guides, incorporating applicable standards
- gather, analyse and incorporate feedback from clients and required personnel.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- technical documentation structure, including:
 - flow of information
 - style
 - tone
 - content format
- technical documentation content features, documentation publication and distribution procedures
- principles of document design, web design and usability applicable to creating technical documentation
- functions and features of templates and style guides
- instructional design principles applicable to creating technical documentation

- organisational policies, procedures and standards that cover document design.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- technical documentation specifications
- industry documentation standards
- organisational resources and documentation
- information about ICT system, platform, network or application being documented
- word processing software.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT436 Develop macros and templates for clients using standard products

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to develop macros and templates for clients using industry recognised software applications.

It applies to individuals working in an office environment, who achieve a degree of self-sufficiency as an advanced Information and Communications technology (ICT) user, and who support software applications activities in the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine macro and template requirements	1.1 Identify organisational macro and template requirements according to organisational policies and guidelines 1.2 Determine macro and template specifications for software application use 1.3 Determine documentation requirements 1.4 Confirm macro and template specifications align to organisational requirements, policies and procedures with required personnel
2. Develop macro and template	2.1 Create macro and template using required software application according to specifications

ELEMENT	PERFORMANCE CRITERIA
	2.2 Present macro and template to required personnel 2.3 Seek feedback from required personnel 2.4 Update and amend macro and template as required
3. Finalise macro and template	3.1 Document support and instruction requirements according to organisational requirements and guidelines 3.2 Provide documentation to required personnel 3.3 Obtain final task sign off from required personnel

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Oral communication	<ul style="list-style-type: none"> Articulates using industry standard, technical language and plain English to convey ideas and seek feedback
Reading	<ul style="list-style-type: none"> Reviews a range of written and online texts to identify organisational guidelines and requirements applicable to job role
Writing	<ul style="list-style-type: none"> Develops macros using industry standard macro terminology, syntax and conventions Develops templates using organisational guidelines for terminology, to address format, logos and document structure Uses plain English and technical terminology to comply with documentation requirements and develop support documentation
Teamwork	<ul style="list-style-type: none"> Identifies requirements of communication exchanges, selecting channels, format, tone and content to suit purpose and audience
Planning and organising	<ul style="list-style-type: none"> Demonstrates responsibility for planning and organising own workload, identifying ways of sequencing and combining elements for greater efficiency
Problem solving	<ul style="list-style-type: none"> Demonstrates responsibility for addressing predictable problems in familiar work contexts
Self-management	<ul style="list-style-type: none"> Follows explicit and implicit protocols and meets expectations applicable to own role
Technology	<ul style="list-style-type: none"> Identifies purposes, specific functions and key features of common digital systems and tools, and operates them to complete routine tasks

Unit Mapping Information

Supersedes and is equivalent to ICTICT409 Develop macros and templates for clients using standard products.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTICT436 Develop macros and templates for clients using standard products

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop at least two macros and two templates using at least two industry recognised software application packages.

In the course of the above, the candidate must:

- determine client needs and specifications
- document process according to organisational procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- features and functions of industry standard categories of commercial computing packages, including procedures for:
 - creating macros and using default templates supplied by the software application package
 - creating new macros and templates
- features and functions of software and hardware used for developing macros and templates supported by the organisation
- organisational procedures applicable to developing macros and templates.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- documents detailing organisational policies
- internet connection
- workstation hardware and software
- style guides and design brief
- technical documentation
- use of industry standard software applicable to developing macros and templates.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT437 Conduct post-implementation ICT system reviews

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to plan and execute Information and Communications Technology (ICT) system reviews following implementation at a point where the system has been operational for some time.

It applies to individuals working in a range of ICT development roles in small to medium enterprises (SMEs) and who are required to review the success of a project with a view to contributing to best practice for future projects.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to review ICT system	1.1 Identify criteria procedures and system implementation results according to organisational guidelines 1.2 Determine review method according to organisational requirements 1.3 Determine time frame of review and communicate with required personnel 1.4 Prepare work schedule for review according to organisational requirements

ELEMENT	PERFORMANCE CRITERIA
2. Document and conduct systems review	2.1 Document review purpose and process according to organisational requirements 2.2 Distribute document to required personnel 2.3 Conduct systems review according to systems review plan 2.4 Implement data retrieval methods according to systems review plan
3. Document and publish review findings	3.1 Document systems review findings according to organisational requirements 3.2 Distribute review results to required personnel 3.3 Seek and respond to feedback 3.4 Obtain final review sign off from required personnel 3.5 Lodge finalised review document according to organisational policies and procedures

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Oral communication	<ul style="list-style-type: none"> • Uses listening and questioning techniques to elicit data, articulate review and scheduling requirements and obtain feedback
Reading	<ul style="list-style-type: none"> • Identifies and analyses system specific data, output and feedback containing technical terminology to identify system implementation results
Writing	<ul style="list-style-type: none"> • Uses vocabulary, grammatical structures, applicable terminology, formatting and structure applicable to specific task and organisation to develop review criteria, create a schedule and produce reports
Teamwork	<ul style="list-style-type: none"> • Uses required form, channel and mode of communication for a specific purpose applicable to own role
Planning and organising	<ul style="list-style-type: none"> • Takes responsibility for planning and organising own workload and identifying ways of sequencing and combining elements
Problem solving	<ul style="list-style-type: none"> • Initiates standard diagnostic procedures when responding to familiar and unfamiliar problems within immediate context
Self-management	<ul style="list-style-type: none"> • Complies with explicit organisational policies and procedures
Technology	<ul style="list-style-type: none"> • Identifies purposes, specific functions and key features of common digital systems and tools, and operates them to complete

SKILL	DESCRIPTION
	routine tasks

Unit Mapping Information

Supersedes and is equivalent to ICTICT410 Conduct post-implementation ICT system reviews.

Assessment Requirements for IC TICT437 Conduct post-implementation ICT system reviews

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- plan, conduct and communicate one review of an established and operational system.

In the course of the above, the candidate must:

- document systems review plan, finalised process and results.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- key organisational policies, procedures and documentation required to conduct post-implementation ICT systems reviews, including those related to:
 - organisational business domain
 - implementation process and issues
 - project and review methodologies and deliverables
 - document lodgement standards
- industry standard hardware and software products required when conducting post-implementation ICT systems reviews.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required hardware where software installation may be performed
- use of industry standard software, including server and workstation hardware and software

- documents detailing organisational guidelines and policies for conducting post-implementation ICT system reviews
- internet connection
- operational system and specifications.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to identify required software and hardware and deploy as diagnostic and testing tools.

It applies to individuals in a wide range of Information and Communications Technology (ICT) areas who are required to test software and hardware.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify process operational requirements	1.1 Identify testing process requirements according to organisational requirements 1.2 Identify any process conflicts and overlapping according to organisational requirements 1.3 Document and validate functional requirements according to organisational policies and procedures 1.4 Identify and confirm required resources, budget and manpower according to organisational requirements
2. Select hardware and software	2.1 Identify required hardware and software tools according to resource and budget requirements 2.2 Identify and analyse required products and equipment

ELEMENT	PERFORMANCE CRITERIA
	<p>interdependencies</p> <p>2.3 Document products, equipment, hardware and software requirements according to organisational policies and procedures</p>
3. Configure and test hardware and software	<p>3.1 Install and configure required hardware and software tools according to vendor guidelines and organisational requirements</p> <p>3.2 Configure systems architecture according to vendor guidelines</p> <p>3.3 Prepare, schedule and execute functionality tests and record outcomes according to organisational procedures</p> <p>3.4 Track, interpret and correct functionality errors, as required</p> <p>3.5 Document and lodge finalised hardware and software configuration according to organisational requirements and procedures</p>

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Description
Numeracy	<ul style="list-style-type: none"> Performs mathematical calculations and interprets complex financial information
Reading	<ul style="list-style-type: none"> Demonstrates comprehension of a large range of complex textual and diagrammatic information with systems related terminology Determines organisational requirements and standards and selects applicable tools and processes
Writing	<ul style="list-style-type: none"> Uses spelling and grammar together with applicable systems related terminology to document progress and results and develop user documentation Converts jargon, terminology and acronyms into plain English Uses specific scripting and syntax to install, configure and program system to user requirements
Teamwork	<ul style="list-style-type: none"> Communicates information and resources, provides training voluntarily and feedback to client when required
Planning and organising	<ul style="list-style-type: none"> Takes responsibility for planning and organising own workload, identifying ways of sequencing and combining elements for greater efficiency

Skill	Description
Problem solving	<ul style="list-style-type: none">• Initiates standard diagnostic procedures when responding to familiar and unfamiliar problems within immediate context
Self-management	<ul style="list-style-type: none">• Implements explicit and implicit protocols and meets expectations applicable to own role
Technology	<ul style="list-style-type: none">• Identifies purposes, specific functions and key features of common digital systems and tools, and operates them to complete routine tasks

Unit Mapping Information

Supersedes and is equivalent to ICTICT411 Select and employ software and hardware testing tools.

Assessment Requirements for ICTICT438 Select, configure and deploy software and hardware testing tools

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- identify and configure hardware and software tools to test one required environment.

In the course of the above, the candidate must:

- evaluate hardware and software that meet functional requirements
- select and use applicable automating tools
- develop automating process and produce a measurable outcome according to specified requirements
- validate hardware and software performance against client usage requirements
- document functional requirements and finalised process

Knowledge Evidence

To The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- batch scripting of nominated automating software routines
- applicable aspects of the client business domain applicable to using software and hardware testing tools
- vendor product directions
- industry standard hardware and software products, and their features and capabilities including:
 - development tools, including animation development tools
 - development package automating options
 - third-party tools for automating a range of software applications
 - media management tools
 - interaction between applicable hardware and software products.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- industry standard hardware and software
- industry standard automating vendor products
- client requirements documentation
- organisational requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT440 Develop service level agreements

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to formulate, implement, monitor and adjust service level agreements (SLAs).

It applies to individuals who work in the Information and Communications Technologies (ICT) industry and provide ICT support to small to medium enterprises (SMEs).

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for development of service level agreements (SLAs)	1.1 Determine organisational service standards, values and culture 1.2 Identify and categorise goods and service offerings provided by the organisation 1.3 Identify and determine existing SLAs
2. Develop SLA for consultation	2.1 Identify service needs and service level according to organisational requirements 2.2 Identify any other SLA requirements 2.3 Develop and document draft SLA according to organisational policies, procedures and guidelines
3. Negotiate client support service	3.1 Seek and respond to draft SLA feedback from

ELEMENT	PERFORMANCE CRITERIA
	<p>required personnel</p> <p>3.2 Present proposed cost and timeframes and respond to feedback from required personnel</p> <p>3.3 Negotiate terms of proposed SLA and respond to feedback from required personnel</p> <p>3.4 Document and lodge SLA agreement according to organisational policies and procedures</p>
4. Adjust and finalise SLA procedures	<p>4.1 Determine compatibility of SLA to organisational requirements, policies and procedures</p> <p>4.2 Seek and respond to SLA compatibility feedback from required personnel</p> <p>4.3 Determine and implement any adjustments to organisational support according to organisational requirements</p> <p>4.4 Document any changes to SLA and lodge document according to organisational policies and procedures</p>

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Oral communication	<ul style="list-style-type: none"> Uses listening and questioning techniques to elicit client requirements, organisational information and obtain feedback Presents information and negotiates SLAs using reflective responses
Reading	<ul style="list-style-type: none"> Identifies and evaluates complex business documentation in a variety of formats containing technical terminology and financial information Identifies organisational standards, SLA requirements and client feedback from technically written, complex documentation
Writing	<ul style="list-style-type: none"> Uses plain English, spelling, applicable grammatical structures and terminology, numerical and financial information Uses required formatting and document structure applicable to job role and organisation to develop SLAs
Teamwork	<ul style="list-style-type: none"> Identifies requirements of important communication exchanges, selecting applicable channels, format, tone and content according to purpose and audience
Planning and	<ul style="list-style-type: none"> Develops plans and manages relatively complex tasks with an

SKILL	DESCRIPTION
organising	awareness of how they may contribute to longer term operational and strategic goals
Self-management	<ul style="list-style-type: none">• Responds to both explicit and implicit protocols within familiar work contexts• Manages outcomes of routine decisions directly applicable to own role

Unit Mapping Information

Supersedes and is not equivalent to ICTICT413 Relate to clients on a business level.

Assessment Requirements for ICTICT440 Develop service level agreements

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- identify agreement needs, develop and implement at least one Service Level Agreement (SLA).

In the course of the above, the candidate must:

- negotiate client requirements for support service within quality, time, target performance and cost parameters
- evaluate and document finalised process according to organisational procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard business practices, including:
 - change management
 - information gathering techniques
 - planning process, including development of Information and Communications Technology (ICT) business solutions
 - the process for the preparation of reports
- applicable features and vendor product directions of industry standard hardware and software products required when developing service level agreements
- legal principles of commercial contracts and service level agreements
- applicable organisational policies, plans and procedures including contracting
- concepts relating to negotiation and business relationships.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- applicable organisational policies, procedures and SLAs
- contexts for negotiating SLAs
- industry standard ICT hardware and software products.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT441 Provide one-to-one instructions

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to convey technical information to an individual client for their specific use.

It applies to individuals who are competent in a wide range of general Information and Communications Technologies (ICT), and support clients in technical areas, including instructing others on an individual basis.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine client needs	1.1 Identify learning needs of one-to-one instruction according to client requirements 1.2 Define required one-to-one method of instruction delivery 1.3 Determine any additional factors for one-to-one instruction delivery according to learning needs
2. Organise instruction resources and plan	2.1 Determine required instruction resources according to instruction requirements 2.2 Prepare and document instruction session according to learning needs and instruction requirements 2.3 Provide instruction plan document to required personnel and seek and respond to feedback

ELEMENT	PERFORMANCE CRITERIA
3. Provide instruction	3.1 Gather required resources according to instruction plan 3.2 Provide instruction session according to instruction plan 3.3 Document instruction session outcomes according to organisational guidelines and procedures 3.4 Identify and refer further instruction requirements and training needs for client
4. Obtain client feedback	4.1 Write and distribute evaluation feedback mechanism to client 4.2 Retrieve, review and identify how client feedback can be incorporated for future instructions 4.3 Report on instruction and client feedback evaluation and submit to required personnel

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Reviews documentation to identify information relating to learning needs and delivery method requirements
Writing	<ul style="list-style-type: none"> Translates technical terminology in order to convey and obtain explicit information for a specific audience
Teamwork	<ul style="list-style-type: none"> Demonstrates an understanding of requirements of important communication exchanges, selecting applicable channels, format, tone and content according to purpose and audience
Planning and organising	<ul style="list-style-type: none"> Uses a combination of planning processes and an increasingly intuitive understanding of context to identify applicable information, including required resources and time required to undertake tasks
Self-management	<ul style="list-style-type: none"> Analyses explicit and implicit protocols within familiar work contexts Manages outcomes of routine decisions directly applicable to own role

Unit Mapping Information

Supersedes and is equivalent to ICTICT415 Provide one-to-one instruction.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTICT441 Provide one-to-one instructions

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- determine instructions, prepare resources and convey technical information to individual clients for their specific use on at least one occasion.

In the course of the above, the candidate must:

- empathise with learner and accommodate different cultures
- instruct in a clear, concise and coherent manner
- convey meanings of technical jargon.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard delivery and evaluation methods
- adult learning principles and styles applicable to one-to-one instructions
- communication and facilitation techniques applicable to one-to-one instructions
- critical behaviour issues and problems that can occur with one-on-one instruction
- industry standard Information and Communications Technology (ICT) terms and terminology
- organisational procedures applicable to providing one-to-one instruction.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- client learning requirements
- documentation outlining organisation's policies, procedures and guidelines that may impact on how instructions are delivered
- required ICT tools, hardware and software.

ICTICT443 Work collaboratively in the ICT industry

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills required to work collaboratively in virtual Information and Communications (ICT) team environments to achieve organisational objectives. It includes contributing to performance and capability within teams, participating in team activities, exchanging knowledge and skills and providing support to team members.

It applies to all individuals who work in teams that utilise multiple technologies to complete a collective task.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify team protocols requirements for working collaboratively in a virtual environment	1.1 Identify team protocols for virtual ways of working, including cyber safety protocol 1.2 Identify communication tools and technology available to support teams working collaboratively in virtual environments 1.3 Determine roles and responsibilities of team members according to team communication protocols 1.4 Determine areas to improve team protocols for working collaboratively in a virtual environment
2. Develop protocols to	2.1 Review technology utilised to support teams working

ELEMENT	PERFORMANCE CRITERIA
work collaboratively in a virtual environment	collaboratively in virtual environments 2.2 Develop protocols to share knowledge collaboratively in a virtual environment according to work details and team objectives 2.3 Develop cyber security protocols in accordance with organisational cyber security procedures
3. Review compliance with protocols to work collaboratively in a virtual environment	3.1 Review protocols utilised to support teams working collaboratively in virtual environments 3.2 Seek feedback from relevant personnel on team communication practices according to working collaboratively in virtual environments protocols 3.3 Determine improvements to future work protocols in virtual environments

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Description
Oral communication	<ul style="list-style-type: none"> Uses listening and questioning techniques and project specific terminology to liaise with team members, present information and obtain feedback
Teamwork	<ul style="list-style-type: none"> Collaborates with others to achieve joint outcomes, playing an active role in facilitating group interaction, influencing direction and occasionally taking a leadership role
Problem solving	<ul style="list-style-type: none"> Responds intuitively to problems requiring immediate attention, drawing on past experience to devise solutions
Technology	<ul style="list-style-type: none"> Uses a range of digitally based technology and applications to access and filter data, extract, organise, integrate and share information

Unit Mapping Information

Supersedes and is equivalent to ICTICT419 Work effectively in the digital media industry.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTICT443 Work collaboratively in the ICT industry

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop at least two protocols for teams working collaboratively in virtual environments that help achieve team objectives
- identify at least two communication tools and technology to support teams working collaboratively in virtual environments.

In the course of the above, the candidate must:

- review compliance of protocols to work collaboratively in a virtual environment
- seek and respond to feedback
- share knowledge and information according to work details, team objectives, organisational policies and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- legislation, codes, regulations and standards, and work health and safety requirements for collaborative work arrangements
- organisational cyber security protocols
- protocols for virtual ways of working, including:
 - virtual platforms used
 - frequency of virtual platform use
- functions and features of team communication strategies
- communication techniques in virtual teams
- methods of mediating conflicting perspectives in virtual teams
- roles and responsibilities of team members in promoting collaborative work environments

- constructive feedback techniques.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- documentation of the organisation's communication tools and technology available to support virtual, remote and colocated teams
- policies and guidelines on using collaborative communication tools
- industry standard communication tools, hardware and software
- legislative, regulatory and industry codes of practice and organisational guidelines that impact collaborative work
- industry standard ICT equipment and technology to research and analyse industry information.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT444 Develop client user interfaces

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to design and document a client user interface that integrates with front-end applications.

It applies to individuals who work in small-to-medium enterprises (SMEs) as software designers and developers and have achieved a degree of autonomy.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare design for interface	1.1 Identify user needs from existing documentation and organisational requirements 1.2 Determine impact of user interface design according to system environment 1.3 Determine and review organisational goals and consistency to organisational styles 1.4 Define user interface design from data query and report formats 1.5 Document needs and findings and obtain approval for proposed interface from required personnel
2. Design and document user interface	2.1 Design menu structures according to acceptance criteria and organisational requirements

ELEMENT	PERFORMANCE CRITERIA
	2.2 Design screen dialogues according to acceptance criteria and organisational requirements 2.3 Design batch procedures where required according to technical specifications and acceptance criteria 2.4 Design online help and prototype tutorials according to organisational requirements
3. Finalise client user interface process	3.1 Document prototype according to organisational policies and procedures 3.2 Seek and respond to prototype feedback from required organisational personnel 3.3 Submit prototype document and obtain final sign off from required personnel and task requirements

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Description
Oral communication	<ul style="list-style-type: none"> Uses listening and questioning techniques and applicable language to gather information, confirm understanding of requirements, liaise with the client and obtain feedback
Reading	<ul style="list-style-type: none"> Interprets a variety of hard copy and online technical and design information to identify system environment, organisational requirements and clarify user requirements
Writing	<ul style="list-style-type: none"> Uses spelling and grammar, plain English and specific terminology to produce documents and tutorials to organisational guidelines and user requirements Uses applicable programming syntax and conventions to perform job role Uses concise, plain English and identifies and applies organisational designs, styles, interface and writing principles consistently on titles, text links, buttons, error messages and other interface objects
Planning and organising	<ul style="list-style-type: none"> Analyses implications of organisational policies and procedures when planning and undertaking work Develops plans to manage relatively complex, non-routine tasks with an awareness of how they may contribute to longer term operational and strategic goals
Self-management	<ul style="list-style-type: none"> Identifies requirements of important communication exchanges, selecting applicable channels, format, tone and content according

Skill	Description
	to purpose and audience
Technology	<ul style="list-style-type: none">Uses a range of digitally based technology and applications to access and filter data, extract, organise, integrate and share information

Unit Mapping Information

Supersedes and is equivalent to ICTICT420 Develop client user interface.

Assessment Requirements for ICTICT444 Develop client user interfaces

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design and integrate at least one client user interface prototype.

In the course of the above, the candidate must:

- determine impact of user interface design in the system environment and identify required data query and report formats
- document finalised process according to organisational procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- client business area and needs and responsibilities within area
- industry standard design principles applicable to developing client user interfaces
- general features and capabilities of industry standard hardware and software products and user interfaces
- industry standard front-end systems and applications
- GUI and web design principles applicable to developing client user interfaces
- organisational guidelines, policies and procedures applicable to developing client user interfaces.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- design specifications
- organisational standards for documentation and version control
- project management process and hierarchy
- a usability test plan
- industry standard usability metrics.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT445 Connect and configure devices and hardware components

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to install and configure devices and hardware components including mobile devices.

It applies to individuals who use a range of technical skills to configure and connect a device to other devices and maintain system components in a home or workplace environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify devices and hardware components	1.1 Identify and categorise types of devices, including their components and characteristics that require installation and configuration 1.2 Identify and categorise peripheral hardware components that require installation and configuration 1.3 Define purpose, characteristics and suitability of device types and peripheral hardware components according to installation and configuration requirements
2. Plan and configure device components	2.1 Develop and document installation and configuration plan, with prioritised task and contingency arrangements, according to installation and configuration requirements

	2.2 Obtain approval for plan from required personnel 2.3 Install and configure components according to plan, installation procedures and technical specifications 2.4 Test components and confirms error-free, enhanced performance
3. Evaluate modified system	3.1 Evaluate device connectivity according to vendor and technical specifications 3.2 Seek and respond to user feedback and update any identified performance issues 3.3 Evaluate and confirm device changes with client and required personnel 3.4 Document finalised process and outcomes and submit to required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Learning	<ul style="list-style-type: none"> Uses each experience to reflect on ways in which variables impact on outcomes and to gain insights into what constitute effective strategies and practices for future work
Numeracy	<ul style="list-style-type: none"> Identifies and interprets numerical data associated with device and component specifications
Reading	<ul style="list-style-type: none"> Interprets and analyses online and hard copy documentation containing complex Information Communications Technology (ICT) related terminology, acronyms and concepts
Writing	<ul style="list-style-type: none"> Uses spelling, grammar and plain English to articulate to audience Uses ICT specific terminology, diagrams and syntax to convey explicit recommendations, requirements and information
Initiative and enterprise	<ul style="list-style-type: none"> Develops strategies to manage relatively complex, non-routine tasks with an awareness of how they contribute to longer term operational and organisational goals
Planning and organising	<ul style="list-style-type: none"> Identifies implications of organisational policies and procedures when negotiating, planning and undertaking work
Problem solving	<ul style="list-style-type: none"> Responds to familiar problems requiring immediate attention, quickly drawing on past experience to devise solutions
Self-management	<ul style="list-style-type: none"> Keeps up to date with organisational policies and procedures applicable to own rights and responsibilities

Skill	Description
Technology	<ul style="list-style-type: none">Interprets purpose, needs and limitations when selecting devices and applications for different tasks

Unit Mapping Information

Supersedes and is equivalent to ICTICT421 Connect, maintain and configure hardware components.

Assessment Requirements for ICTICT445 Connect and configure devices and hardware components

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- connect and configure at least one device and at least two related and required components.

In the course of the above, the candidate must:

- install components across at least three different situations and account for at least one unexpected contingency
- modify system's hardware, internal hardware and peripheral hardware components according to task requirements
- plan modification and connection of hardware, internal hardware and peripheral hardware components according to vendor and technical specifications
- test components and rectify identified problems.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- different types, characteristics and functions of different devices, hardware, internal hardware and peripheral hardware components including:
 - types
 - characteristics
 - functions
- diagnostic and testing hardware and software tools, systems and functions
- operating systems (OS) related to configuration and testing
- industry standard hardware and software products
- organisational policies and procedures and manufacturer's instructions
- installation and configuration plans for component installation.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- devices, including required hardware, internal hardware and peripheral components for installation and configuration, including:
 - a mobile smartphone
 - tablet
 - computer
- industry standard performance testing software
- technical manuals, tools and test equipment.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT446 Apply ICT service management principles

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to apply the principles of service management when supporting and resolving Information and Communications Technology (ICT) service desk cases.

It applies to individuals who work in ICT service roles and are responsible for providing ICT service desk support.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to work on service desk	1.1 Identify organisational policies and procedures of service desk quality 1.2 Identify service management principles 1.3 Access and prepare service desk environment according to organisational procedures 1.4 Test service desk systems are working to function according to organisational procedures
2. Support service desk	2.1 Operate service desk systems to open a new service case 2.2 Investigate and confirm nature of service case 2.3 Inform customer of service case progression according

ELEMENT	PERFORMANCE CRITERIA
	<p>to service management principles</p> <p>2.4 Escalate service case according to service management principles, when required</p> <p>2.5 Confirm service case is resolved</p> <p>2.6 Implement service desk closure principles</p> <p>2.7 Seek client feedback on closure of service case</p>
3. Apply continuous improvement to service desk	<p>3.1 Review service desk records according to service management principles</p> <p>3.2 Identify potential service desk areas for improvement</p> <p>3.3 Plan implementation of service desk performance improvement</p> <p>3.4 Document proposed improvements and submit to required personnel</p>
4. Finalise service desk procedures	<p>4.1 Confirm all service desk and management procedures have been performed</p> <p>4.2 Review and assess impact of service desk support according to service management principles</p> <p>4.3 Evaluate and report on service desk procedures according to service management principles</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Identifies and interprets textual and organisational documentation containing ICT specific terminology to service desk quality and review records
Writing	<ul style="list-style-type: none"> Uses language, spelling and grammar and applicable ICT terminology to obtain feedback and document proposed improvements
Oral Communication	<ul style="list-style-type: none"> Uses listening and questioning techniques together with reflective responses to elicit customer information and give and receive feedback
Teamwork	<ul style="list-style-type: none"> Identifies requirements of important communication exchanges, selecting applicable channels, format, tone and content according to purpose and audience
Self-management	<ul style="list-style-type: none"> Takes responsibility for defining key aspects of own workload, balancing own needs and priorities with customers' needs

Technology	<ul style="list-style-type: none">• Interprets principles, concepts, language and practices associated with the digital world and uses these to troubleshoot and understand uses and potential of new technology
------------	--

Unit Mapping Information

Supersedes and is equivalent to ICTICT422 Participate in ICT services.

Assessment Requirements for ICTICT446 Apply ICT service management principles

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- apply service desk management principles in the provision of service desk support for two different services cases, on separate occasions.

In the course of the above, the candidate must:

- access, test and operate service desk systems according to organisational procedures
- investigate and confirm nature of service case and provide service desk support
- plan and document strategies to improve service desk performance.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- service management principles
- service desk procedures
- service desk system operation and testing
- service case support, management and closure procedures
- organisational guidelines, policies and procedures applicable to service desk management, including escalation policy and procedures
- industry standard practices in ICT service desk support
- basic technical service management terminology
- legislation, codes of practice and other formal agreements directly impacting resolution processes
- quality assurance applicable to service desk management.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- service management principles
- customer, client or user with service case that requires resolution
- legislation, codes of practice and other formal agreements that directly impact on resolution processes
- service logs and procedures
- service desk software and systems
- customer contact technologies.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT447 Work effectively in agile environments

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to participate in the delivery of ICT projects using industry-endorsed agile project management methodologies.

It applies to those who, whilst working under a level of supervision, work within an agile environment where the ability to deliver project increments is required. It includes ICT roles such as software, web or gaming developers within development environments, project managers, and helpdesk support officers who work with many different project management styles and environments.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Set up agile projects	1.1 Identify project characteristics and confirm agile project management methodology and timelines 1.2 Gather project requirements and confirm with client 1.3 Discuss and define team member roles and responsibilities and confirm own work role within agile project 1.4 Confirm minimal viable increments according to project requirements and define definition of done 1.5 Determine increment timelines and stages of increment delivery

	1.6 Determine and implement communication tools with team
2. Deliver agile project increments	2.1 Determine and contribute towards progress trackers and version control procedures for agile project 2.2 Initiate project increment work according to agile methodologies and version control procedures 2.3 Complete project increment according to agile methodologies 2.4 Commit project work to online environment and confirm project progression with team and project manager
3. Finalise agile project	3.1 Confirm all increments have been completed according to project requirements 3.2 Review and assess impact of contributions to agile project and team performance 3.3 Report on contributions and discuss with team 3.4 Participate in agile project debrief and document outcomes and lessons learnt

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Writing	<ul style="list-style-type: none"> Produces materials and written updates using agile communication tools
Teamwork	<ul style="list-style-type: none"> Selects the required form, channel and mode of communication for a specific purpose to own role, when communicating with others
Planning and organising	<ul style="list-style-type: none"> Plans routine tasks with familiar goals and outcomes, taking some limited responsibility for decisions regarding sequencing and timing Participates in team planning of agile increments
Self-management	<ul style="list-style-type: none"> Evaluates task completion and the impact of such completions
Technology	<ul style="list-style-type: none"> Interprets the purposes, specific functions and key features of digital systems and tools, and operates them effectively to complete routine agile project tasks

Unit Mapping Information

No equivalent unit. New unit.

Assessment Requirements for ICTICT447 Work effectively in agile environments

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- participate in the delivery of at least two ICT project using the agile project management methodology.

In the course of the above, the candidate must:

- utilise project and communication work tools and platforms
- participate in agile meetings
- uphold communication channels according to agile methodologies and team agreement.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- agile methodologies, including:
 - project management
 - team member roles and responsibilities
 - characteristics of increments, increment timelines and stages of increment delivery
 - project work tools and platforms
 - communication tools and platforms
 - agile meetings, including:
 - huddles
 - KANBAN
 - scrums
 - sprints
 - project debrief
 - work task prioritisation requirements and contingencies

- version control and progress tracking systems and processes.
- functions and features of ICT hardware and project management software required for managing agile projects.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- equipment, hardware and industry software packages required for agile project work
- a range of simulated work tasks and project within agile project management teams
- simulated working environment and agile project team
- the internet
- online agile project management tools
- communication tools
- agile methodology documentation and guiding information.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT448 Prepare electronic portfolios of work

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills required to prepare, build and share electronic portfolios to display pieces of finished product and work on behalf of an individual, team or business.

It applies to individuals in multiple Information Communications and Technology (ICT) roles, including software, programming, gaming and web designers, developers, architects and business analysts, who are expected to maintain a professional online or business portfolio of work throughout their professional career at a given point in time. Portfolios, in this instance, can be used to get a job, sell work to a potential client or showcase skills, capabilities, intellectual property and product to the public.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to create portfolios	1.1 Research and identify industry electronic portfolio options and standards 1.2 Assess and select hosting platform according to portfolio requirements 1.3 Identify required sections and elements of electronic portfolio 1.4 Gather documentation and examples of work according to portfolio requirements

2. Create portfolios to specifications	2.1 Create portfolio structure according to portfolio specifications 2.2 Upload work and match design specification according to portfolio specifications 2.3 Style electronic portfolio pages according to specifications 2.4 Add accompanying explanatory text and annotations according to portfolio specifications
3. Finalise portfolios in required format	3.1 Test electronic portfolio on required browsers and devices and remediate viruses and errors 3.2 Validate electronic portfolio against industry standards 3.3 Update, save and back up electronic portfolio to required storage units 3.4 Share electronic portfolio according to industry standards 3.5 Submit portfolio and obtain final task sign off from required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Analyses and evaluates textual information and user guides to integrate ideas and meet technical requirements
Writing	<ul style="list-style-type: none"> Uses required programming syntax, language and conventions to create portfolio
Planning and organising	<ul style="list-style-type: none"> Articulates and selects bodies of work and communication that reflect professional brand and depth and breadth of capability
Problem solving	<ul style="list-style-type: none"> Applies problem-solving processes and scripting techniques to resolve less predictable problems
Self-management	<ul style="list-style-type: none"> Takes responsibility for outcomes and maintenance of live product Uses exploration, analytical and lateral thinking to identify new ideas and adapt existing ideas to context
Technology	<ul style="list-style-type: none"> Interprets purposes, specific functions and key features of common digital systems and tools, websites and systems Uses digital systems and tools to create and save files in required formats including applicable website hosts, saving locations and required hardware functions Uses cyber safe techniques and hygiene to maintain portfolio integrity

Unit Mapping Information

No equivalent unit. New unit.

Assessment Requirements for IC TICT448 Prepare electronic portfolios of work

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- create at least one electronic portfolio with a minimum of three different examples of work and text.

In the course of the above, the candidate must:

- test and validate portfolio on at least two different devices and in two different browsers
- share portfolio to at least two different locations online
- save and back up portfolio to at least one location.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- functions and features of:
 - websites
 - platforms
 - software
 - hardware
 - storage units
 - design specifications
- electronic portfolio options, structures, requirements and standards
- industry standard hosting platforms
- basic scripting, testing and programming techniques and languages
- common viruses and errors and remediation processes
- processes to validate electronic portfolios

- industry standards for documentation, style and professional brand techniques
- sign-off requirements applicable to electronic portfolio work
- copyright, privacy, proprietary and intellectual property laws, legislation and policy standards
- organisational style guides and procedures applicable to preparing electronic portfolios.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- industry specific platforms, hardware, devices and websites
- the internet, including connectivity and different browsers
- storage devices and industry standard services.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT449 Use version control systems in development environments

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to use version control systems to track content, versions and maintain a code repository of work when developing in an ICT environment.

It applies to individuals who work in a development environment and create a history of changes to track multiple versions of their own or team's work. These development environments include processes of designing, building and testing code and product.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to use version control systems (VCS)	1.1 Research and choose version control system (VCS) according to organisational requirements 1.2 Identify required subversion and VCS pre-installation factors 1.3 Determine and communicate installation disruption to required personnel according to organisational policies and procedures 1.4 Install VCS and create personal account and push changes from branch according to VCS service provider and organisational requirements 1.5 Configure tools and user interface of VCS according to

	organisational requirements
2. Build files in VCS	2.1 Create local repository according to service provider procedures 2.2 Create required directory according to service provider procedures and organisational requirements 2.3 Create and access required staging environment structures and branches 2.4 Create and access files in the repository according to service provider procedures
3. Test VCS	3.1 Add and commit files to staging environment 3.2 Commit required files to local repository 3.3 Locate track of initial version change and confirm new status according to service provider procedures 3.4 Respond to remote pull requests according to service provider procedures 3.5 Retrieve remote commits and locally merge according to service provider procedures
4. Finalise use of VCS	4.1 Document VCS test outcomes according to organisational requirements 4.2 Submit documented outcomes to required personnel 4.3 Respond to feedback on documented outcomes from required personnel 4.4 Obtain final task sign off from required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria

SKILL	DESCRIPTION
Oral communication	<ul style="list-style-type: none"> Uses listening and questioning techniques and effective mode of communication to confirm requirements and negotiate outcomes using required language
Reading	<ul style="list-style-type: none"> Analyses textual information to establish requirements
Writing	<ul style="list-style-type: none"> Prepares documentation for final outcomes using comprehensive structure, layout and complex industry language
Teamwork	<ul style="list-style-type: none"> Applies protocols governing what to communicate, with whom and how, in a range of work contexts
Planning and	<ul style="list-style-type: none"> Plans a range of routine, and some non-routine, tasks, accepting stated goals and required outcomes

SKILL	DESCRIPTION
organising	
Problem solving	<ul style="list-style-type: none">• Gathers information and identifies and evaluates several choices against a limited set of criteria• Applies formal problem-solving processes when tackling unfamiliar problems, breaking complex issues into manageable parts and identifying and evaluating options for action
Self-management	<ul style="list-style-type: none">• Follows explicit and implicit procedures and meets expectations associated with own role when submitting documentation for approval and completing organisational requirements
Technology	<ul style="list-style-type: none">• Uses procedures and techniques to maintain articulation of version control systems

Unit Mapping Information

No equivalent unit. New unit.

Assessment Requirements for ICTICT449 Use version control systems in development environments

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- plan, install, create and manage a code on one repository of work on at least three occasions.

In the course of the above, the candidate must:

- communicate down time, service interruptions and installation of service
- document final outcomes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- distributed and centralised version control systems
- web-based DevOps lifecycle tools
- DevOps automation tools
- branching, pull and push commands local/remote
- key policies, procedures and documentation required to use version control systems in development environments, including those related to:
 - repositories and working copies
 - merging and merge tools
 - working and indiscriminative commits
 - resolving conflict and backout changes
- principles and techniques of creating repositories and branch workflows
- version control industry standard best practices
- distributed version control industry standard best practices
- workflow processes applicable to using version control systems.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- the internet, including connectivity
- required hardware, software and applications
- simulated work tasks and projects
- industry standard version control systems and vendor products
- organisation's ICT policies, procedures and best practice guidelines imperative to task.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT450 Identify and use applications for a distributed ledger

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to administer and manage blockchain applications for a distributed ledger. It involves the identification of blockchain applications suitable to specified business needs, and the implementation and deployment of the application at various stages throughout the business model.

It applies to those who perform a range of administrative and project management tasks and assess and implement new technologies to business models in Information and Communications Technology (ICT) and related industries.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine distributed ledger technology (DLT) application suitability	1.1 Identify purpose and benefit of industry standard DLT applications according to business needs 1.2 Identify business processes and transaction types suitable for DLT application 1.3 Identify business use-case according to business needs 1.4 Determine consensus mechanism and protocols according to business needs 1.5 Identify required DLT service provider platform

	according to business needs
2. Set up DLT application	2.1 Document DLT requirements and submit to required personnel 2.2 Initiate account according to vendor specifications and business needs 2.3 Generate required accounts according to vendor specifications 2.4 Create and save genesis block 2.5 Initiate required instance according to vendor specifications 2.6 Test DLT solution against business needs 2.7 Document and confirm DLT meets business needs
3. Use distributed ledger application	3.1 Initiate required transaction from application 3.2 Confirm transaction completion with required personnel 3.3 Document back-end technical transaction process 3.4 Obtain final task sign off from required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none"> Modifies behaviour following exposure to new information
Reading	<ul style="list-style-type: none"> Interprets information from relevant sources to determine organisational impacts relating to data ethics legislation
Writing	<ul style="list-style-type: none"> Prepares documentation outlining technical specifications and process according to specified requirements
Planning and organising	<ul style="list-style-type: none"> Takes responsibility for planning own workload and prioritising tasks for required outcomes
Self-management	<ul style="list-style-type: none"> Implements standard procedures and makes decisions for routine tasks Uses formal decision-making processes for more complex situations

Unit Mapping Information

No equivalent unit. New unit.

Assessment Requirements for ICTICT450 Identify and use applications for a distributed ledger

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- set up and use at least one distributed ledger application to an organisational process.

In the course of the above, the candidate must:

- research business model and determine required distributed ledger application
- comply with blockchain best practices and guidelines.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- business models, processes and transaction types
- consensus mechanisms and protocols
- underlying distributed ledger technology functions and uses including:
 - blockchain principles, best practices and guidelines
 - cryptography
 - immutable database rules
 - transactional components
- industry standard functions and uses of distributed ledger applications, service provider platforms and their general capabilities
- industry standard uses for applications
- documentation techniques applicable to documenting DLT requirements
- research procedures and techniques used for determining DLT requirements.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- industry standard software and hardware to access internet and web delivered information
- vendor specifications
- platforms providing distributed ledger applications
- blockchain best practice guidelines.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT451 Comply with IP, ethics and privacy policies in ICT environments

Modification History

Release	Comments
Release 2	This version first released with the Information and Communications Technology Training Package Version 8.0. Minor update of unit of competency. Amendments made to wording of PE to better reflect intent.
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to comply with the protection and lawful use of intellectual property (IP) and to implement relevant organisational ethics and privacy policies.

It applies to individuals who are required to use IP owned by other persons and organisations, and to support organisations and stakeholders with the compliance of organisational ethics, and privacy policies.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Establish organisational requirements to comply with IP, ethics and privacy policy	1.1 Locate types of existing and potential IP, ethics and privacy policy and procedures within the organisation 1.2 Determine and access the organisation's IP, ethics

ELEMENT	PERFORMANCE CRITERIA
procedures	<p>and privacy policy and procedures</p> <p>1.3 Identify own role in protecting and fulfilling the requirements of the organisations IP, ethics and privacy policy and procedures to avoid infringement of IP and privacy requirements</p> <p>1.4 Provide support and advice to relevant personnel about the operations of the organisation's IP, ethics and privacy policy and procedures</p>
2. Evaluate and implement organisational IP, ethics and privacy policy procedures	<p>2.1 Monitor whether required personnel are abiding by organisational IP, ethics and privacy policy and procedures</p> <p>2.2 Evaluate whether implemented IP, ethics and privacy policy and procedures help prevent IP and privacy infringement</p> <p>2.3 Assist with the maintenance, development and implementation of IP, ethics and privacy policy and procedures</p> <p>2.4 Communicate potential risks and opportunities for improvement of IP, ethics and privacy policy and procedures to relevant personnel</p>
3. Contribute to non-compliance incident identification and recommendations	<p>3.1 Contribute to organisational risk assessment and identification process</p> <p>3.2 Review internal and external non-compliance and intellectual property infringement incidents</p> <p>3.3 Recommend actions to overcome non-compliance incidents to relevant personnel</p> <p>3.4 Determine and report areas of potential risk and non-compliance to relevant personnel</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Oral communication	<ul style="list-style-type: none"> Provides information using language and terminology required for audience Obtains information from others by listening and questioning
Reading	<ul style="list-style-type: none"> Selects, interprets, synthesises and critically analyses information required for compliance with IP, ethics and privacy policies

Skill	Description
Writing	<ul style="list-style-type: none">Records information in accordance with requirementsDevelops texts using language required for audience needs
Planning and organising	<ul style="list-style-type: none">Plans and implements a range of tasks directly related to own role, seeking assistance where required
Self-management	<ul style="list-style-type: none">Takes responsibility for adhering to legal and regulatory compliance with respect to own work

Unit Mapping Information

New unit.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTICT451 Comply with IP, ethics and privacy policies in ICT environments

Modification History

Release	Comments
Release 2	This version first released with the Information and Communications Technology Training Package Version 8.0. Minor update of unit of competency. Amendments made to wording of PE to better reflect intent.
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- evaluate at least three different types of intellectual property (IP) within an organisation and implement processes to protect them
- assist, on at least two occasions, with the development and implementation of organisational IP, ethics and privacy policy and procedures.

In the course of the above, the candidate must:

- assist with maintenance of organisational IP, ethics and privacy policy procedures
- review potential risks and non-compliance incidents
- contribute to the development of non-compliance incident recommendations.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- key legislation required to evaluate and implement IP in the ICT industry
- key policies, procedures and documentation in the ICT industry, including those related to:
 - organisational IP policies and procedures
 - codes of ethics pertinent to the ICT industry
 - privacy

- key organisational communication processes and procedures related to identifying IP, ethics and privacy policies in ICT environments.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required organisational policies, codes of practice, legislation and standards of documentation
- workplace documentation and resources
- IP case studies and, where possible, real situations
- hardware and software applicable to applying legislative and organisational policies.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT452 Support the implementation of assistive technologies

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created unit of competency to address in-demand skills needs.

Application

This unit describes the skills and knowledge required to identify opportunities where assistive devices, systems and services can be implemented in organisations and workplace contexts to improve digital capabilities that support inclusion and accessibility for persons with disabilities.

The unit applies to individuals working in information and communications technology (ICT) roles, including inclusion officers, human resource generalists and disability access officers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Review assistive technologies in organisational accessibility plan (OAP)	1.1 Confirm work brief and tasks according to organisational policies and procedures 1.2 Analyse and discuss the organisational accessibility plan (OAP) and its objectives with required personnel according to work brief

ELEMENT	PERFORMANCE CRITERIA
	1.3 Evaluate budget for assistive technologies with required personnel according to work brief 1.4 Identify and discuss potential deficiencies in OAP with disability specialists and other required personnel
2. Recommend assistive technologies	2.1 Research physical environment considerations for human interaction with assistive technologies 2.2 Document characteristics of observed interactions according to work brief 2.3 Research options for assistive programs and technologies 2.4 Confirm that implementation costs of assistive programs and technologies are within budget according to work brief 2.5 Analyse and compare options according to work brief 2.6 Develop recommendations and rationale for proposed implementation of selected assistive technologies according to analysis findings
3. Present recommendations	3.1 Seek and integrate disability specialist feedback on draft recommendations according to organisational policies and procedures 3.2 Seek and implement feedback from required personnel on updated recommendations, where required and according to organisational policies and procedures 3.3 Submit final proposed recommendations to workplace diversity and inclusion personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Identifies and interprets technical documentation containing industry-specific terminology
Writing	<ul style="list-style-type: none"> Uses technical vocabulary, grammatical structures and appropriate terminology in organisational documents
Oral communication	<ul style="list-style-type: none"> Uses listening and questioning techniques for seeking and responding to feedback
Planning and	<ul style="list-style-type: none"> Develops plans to manage relatively complex, non-routine tasks with an awareness of how they may contribute to longer

Skill	Description
organising	term operational and strategic goals
Technology	<ul style="list-style-type: none">• Demonstrates an understanding of principles, concepts, language and practices associated with the digital world and uses them to troubleshoot and understand the uses and potential of new assistive technologies

Unit Mapping Information

No equivalent unit. Newly created unit.

Assessment Requirements for ICT452 Support the implementation of assistive technologies

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created unit of competency to address in-demand skills needs.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- identify and recommend at least three different types of assistive technologies that can be applied in an organisational accessibility plan (OAP)
- provide a sound rationale for each of the three recommended assistive technologies.

In the course of the above, the candidate must:

- apply required organisational policies and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- functions and features of an OAP
- industry practices and costs related to implementing assistive technologies
- considerations for implementing assistive technologies in different physical environments
- methods to improve workplace digital capabilities to support inclusion and accessibility
- functions, features, capabilities and applications of assistive technologies, including assistive devices, systems and services
- key types of assistive systems, programs and software used in organisations, including:
 - aids, including mobility aids
 - augmentative communication
 - computer access aids
 - sensory aids for individuals with vision impairment and hearing impairment

- Job Access With Speech (JAWS)
- ZoomText
- Dragon Naturally Speaking
- VoiceOver
- Non-Visual Desktop Access (NVDA)
- semantic hypertext markup language (HTML)
- common methods to identify assistive technologies in organisations
- organisational formats and features of recommendation proposals
- organisational policies and procedures, legislative requirements and guidelines relating to OAP and work tasks, including:
 - privacy
 - discrimination
 - human rights
 - national disability strategy and frameworks.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- industry-recognised assistive technologies
- OAP strategy and objectives
- opportunities for interaction with others
- work brief and organisational policies and procedures required to demonstrate the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT453 Evaluate accessibility of organisational systems, programs and software

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created unit of competency to address in-demand skills needs.

Application

This unit describes the skills and knowledge required to evaluate the effectiveness of organisational assistive technologies according to benchmark requirements. It includes developing an evaluation framework to analyse organisational systems, programs and software and make recommendations for improvement.

The unit applies to individuals working in information and communications technology (ICT) roles, including support technicians, user-experience researchers, inclusion officers, human resource generalists and disability access officers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Analyse organisational systems, programs and software	1.1 Confirm work brief and tasks according to organisational policies and procedures 1.2 Obtain access to required organisational systems, programs and software according to work brief

ELEMENT	PERFORMANCE CRITERIA
	<p>1.3 Source feedback, complaints and existing data on organisational systems, programs and software</p> <p>1.4 Analyse and discuss the organisational accessibility plan (OAP) and objectives with required personnel according to work brief</p> <p>1.5 Identify and discuss potential deficiencies in OAP with disability specialists and other required personnel</p>
2. Create evaluation criteria	<p>2.1 Analyse required organisational tasks, data collection methods, outcomes and key performance indicators according to work brief</p> <p>2.2 Identify gaps to fulfilling assistive technology benchmark requirements according to work brief</p> <p>2.3 Analyse feedback, complaints and existing data on organisational systems, programs and software</p> <p>2.4 Document analysis findings and develop framework for evaluation according to work brief</p>
3. Apply evaluation criteria	<p>3.1 Compare organisational systems, programs and software to evaluation framework's benchmark requirements</p> <p>3.2 Evaluate organisational policies and procedures against evaluation framework</p> <p>3.3 Document findings according to work brief</p> <p>3.4 Identify and document opportunities to improve accessibility of organisational systems, programs and software</p> <p>3.5 Summarise organisational recommendations based on evaluation findings</p>
4. Finalise accessibility evaluation	<p>4.1 Submit evaluation findings and recommendations to workplace diversity and inclusion personnel and any other required personnel</p> <p>4.2 Discuss evaluation findings with required personnel</p> <p>4.3 Store completed accessibility evaluation according to organisational policies and procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
-------	-------------

Skill	Description
Reading	<ul style="list-style-type: none">Identifies and interprets technical documentation containing industry-specific terminology
Writing	<ul style="list-style-type: none">Uses technical vocabulary, grammatical structures and appropriate terminology in organisational documents
Oral communication	<ul style="list-style-type: none">Uses listening and questioning techniques for seeking and responding to feedback
Planning and organising	<ul style="list-style-type: none">Develops plans to manage tasks with an awareness of how they may contribute to longer term operational objectivesUses systematic, analytical processes in sometimes complex and changing contexts
Technology	<ul style="list-style-type: none">Demonstrates an understanding of principles, concepts, language and practices associated with the digital world and uses them to troubleshoot and understand the uses and potential of new assistive technologies

Unit Mapping Information

No equivalent unit. Newly created unit.

Assessment Requirements for ICTICT453 Evaluate accessibility of organisational systems, programs and software

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created unit of competency to address in-demand skills needs.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop at least one evaluation framework for an organisation or work area, where the work must include:
 - an independent evaluation of each of the following:
 - at least one organisational system
 - at least one organisational program
 - at least one organisational software
 - recommendations for at least one improvement to the evaluated organisational system, program and software.

In the course of the above, the candidate must:

- develop evaluation criteria and benchmark requirements for the evaluation framework
- apply required organisational policies and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- functions, features, and capabilities and application of assistive technology benchmark requirements and standards
- key types of assistive systems, programs and software used in organisations, including:
 - aids, including:
 - mobility aids

- augmentative communication
- computer access aids
- sensory aids for individuals with vision and hearing impairment
- Job Access With Speech (JAWS)
- ZoomText
- Dragon Naturally Speaking
- VoiceOver
- NonVisual Desktop Access (NVDA)
- semantic hypertext markup language (HTML)
- features of and processes for developing evaluation criteria and frameworks to evaluate organisational systems, programs and software
- benchmark requirements and techniques required for reviewing and evaluating assistive technologies
- sources and types of feedback, complaints and data relevant to organisational systems, programs and software, including:
 - user feedback and complaints
 - human resource data
 - organisational feedback
- methods to compare organisational systems, programs and software
- functions and features of an organisational accessibility plan (OAP)
- organisational requirements for reporting evaluation findings
- organisational policies and procedures and legislative requirements relating to work tasks.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- organisational systems, programs and software to be evaluated
- OAP, strategy and objectives
- opportunities for interaction with others
- work brief and organisational policies and procedures required to demonstrate the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT454 Assess organisational systems using assistive technologies

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created unit of competency to address in-demand skills needs.

Application

This unit describes the skills and knowledge required to assess the digital capabilities of organisational systems to support accessibility for persons with disabilities, and trial recommended system improvements.

The unit applies to individuals working in a range of roles across all industries, including support technicians, user-experience researchers, inclusion officers, human resource generalists and disability access officers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to test capability of organisational systems using assistive technologies	1.1 Confirm work brief, tasks and in-scope organisational systems according to organisational policies and procedures 1.2 Clarify user needs and work health and safety (WHS) requirements in consultation with required personnel 1.3 Identify assistive technologies used in the organisation

ELEMENT	PERFORMANCE CRITERIA
	1.4 Analyse vendor specifications and testing resources according to work brief 1.5 Organise test site, assistive technologies and required resources according to work brief
2. Evaluate capability of organisational systems using assistive technologies	2.1 Select quantitative and qualitative system testing methods according to organisational policies and procedures 2.2 Identify ethical considerations and any inherent biases in data collection methods 2.3 Conduct quantitative and qualitative testing on specified organisational systems according to work brief 2.4 Document quantitative and qualitative data according to organisational policies and procedures 2.5 Restore test site to pre-assessment state
3. Present assessment findings	3.1 Analyse patterns and trends in data and document insights 3.2 Evaluate areas for improvement in organisational systems using assistive technologies 3.3 Develop recommendations to improve existing organisational systems 3.4 Report on findings and recommendations according to work brief and in required format 3.5 Seek feedback on recommendations from required personnel
4. Finalise assessment documentation	4.1 Integrate recommendations feedback from required personnel 4.2 Present final recommendations to required personnel 4.3 Store assessment findings and recommendations in required location according to organisational policies and procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Oral communication	<ul style="list-style-type: none"> Asks questions and actively listens to gather information Provides information during and after assessing organisational systems using a structure and language appropriate to audience
Reading	<ul style="list-style-type: none"> Interprets and critically analyses texts when assessing organisational systems

Skill	Description
Writing	<ul style="list-style-type: none">• Uses technical vocabulary, grammatical structures and appropriate terminology in organisational documents
Planning and organising	<ul style="list-style-type: none">• Identifies requirements for effective communication exchanges when planning channels, formats and tone for communicating• Develops plans to manage tasks with an awareness of how they may contribute to longer term operational objectives
Technology	<ul style="list-style-type: none">• Demonstrates an understanding of principles, concepts, language and practices associated with the digital world and uses them to understand the uses and potential of new assistive technologies

Unit Mapping Information

No equivalent unit. Newly created unit.

Assessment Requirements for ICTICT454 Assess organisational systems using assistive technologies

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Newly created unit of competency to address in-demand skills needs.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- assess the capability of at least two different organisational systems using assistive technologies.

In the course of the above, the candidate must:

- apply required organisational policies and procedures, and work health and safety (WHS) legislative requirements.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- functions, features, and application of key assistive technology standards
- key types of assistive technologies and aids used in organisations, including:
 - augmentative communication
 - computer access aids
 - mobility aids
 - sensory aids for individuals with vision and hearing impairment
- methods to improve organisational digital capabilities to support accessibility
- key qualitative assessment methods, including:
 - interviews
 - focus groups

- participant observation
- case studies
- surveys
- key quantitative testing methods, including:
 - questionnaires
 - computerised analysis
 - counting and sampling
- methods to identify patterns and trends in data
- types of ethical considerations and inherent biases in data collection methods
- techniques to compare organisational systems using assistive technologies
- organisational formats for documenting findings and recommendations
- organisational policies and procedures and legislative requirements relating to work tasks, including WHS requirements.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- organisational systems that may be assessed
- assistive technologies to assess accessibility capabilities of organisational systems
- opportunities for interaction with others
- work brief
- organisational policies and procedures and legislative requirements relating to work tasks, including WHS requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT518 Research and review hardware technology options for organisations

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to research and evaluate existing and emerging technologies and hardware solutions to support organisational strategic goals.

The unit applies to those in senior roles who administer and manage information and communications technology (ICT) support in small-to-medium enterprises (SMEs) using a wide range of general ICT technologies.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine organisational needs	1.1 Establish organisational requirements and selection criteria for new technology 1.2 Review strategic goals and determine future requirements 1.3 Assess physical infrastructure and financial parameters against strategic goals 1.4 Determine and document organisational technology requirements
2. Research vendors and suppliers	2.1 Identify supplier and vendor options according to organisational technology requirements

ELEMENT	PERFORMANCE CRITERIA
	2.2 Source information from suppliers and vendors 2.3 Assess vendor information against industry standards 2.4 Review emerging standards and applications for compatibility with supplier and vendor information 2.5 Select suppliers and vendors according to organisational requirements
3. Evaluate and report on hardware technology options	3.1 Review and test hardware and confirm it meets organisational requirements 3.2 Identify project risks associated with identified hardware 3.3 Document findings in a report and present to required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Identifies, interprets and evaluates technical online and hard copy documentation containing complex terminology and diagrams to identify hardware technology that will benefit the organisation
Writing	<ul style="list-style-type: none"> Uses specialised, cohesive language to present an evaluation of hardware technology to a specific audience
Numeracy	<ul style="list-style-type: none"> Interprets financial information and applies mathematical calculations relating to time constraints and budgetary information
Self-management	<ul style="list-style-type: none"> Recognises and identifies the implications of organisational policies and procedures when planning and undertaking work
Teamwork	<ul style="list-style-type: none"> Identifies the requirements of important communication exchanges, selecting channels, format, tone and content according to purpose and audience
Planning and organising	<ul style="list-style-type: none"> Applies formal processes when planning more complex tasks, producing plans with logically sequenced steps and reflecting some awareness of resource constraints
Technology	<ul style="list-style-type: none"> Demonstrates a sophisticated understanding of principles, concepts, language and practices associated with the digital world and uses these to troubleshoot and understand the uses and potential of new technology

Unit Mapping Information

Supersedes and is equivalent to ICTICT501 Research and review hardware technology options for organisations.

Links

Companion Volume Implementation Guide is found on VETNet -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=a53af4e4-b400-484e-b778-71c9e9d6aff2>

Assessment Requirements for ICTICT518 Research and review hardware technology options for organisations

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- identify hardware technology improvements for an organisation on at least one occasion, including:
 - analysing and planning approaches to technical problems and management requirements
 - accessing and conveying conceptual information regarding emerging technology in relation to organisational needs
 - forecasting future needs for planning and research purposes and recommending technology options
 - documenting findings in a report and seeking and responding to feedback.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- key features of business planning processes applicable to researching technology
- client business needs that can be satisfied by the provision of information and communications technology (ICT) products and services
- current business practices for preparing reports
- current industry and technology information sources
- general features and capabilities of current industry accepted hardware, cabling and software products, and emerging trends and product design
- equipment performance benchmarking
- industry networks, key individuals and organisations within the ICT industry that influence and report on hardware technology
- information gathering techniques required when researching and reviewing hardware technology options
- quality assurance practices that promote reliable investigation processes

- vendor product directions, including those for:
 - access and security products
 - next generation networks
 - self-configuring asymmetric digital subscriber line (ADSL) or cable modem-router-switch for the small office and home office (SOHO) market
 - wireless standards.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- network and computer layout documentation and premises plans
- network components
- equipment specifications
- organisational guidelines
- business plan or model
- journals of industry and professional associations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT519 Develop detailed component specifications from project specifications

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to analyse requirements of the project specifications in order to produce a set of high-level component specifications.

The unit applies to systems designers who are required to produce component specifications for programmers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare components	1.1 Document behaviour scenarios according to documentation standards 1.2 Identify and develop components according to project specifications 1.3 Prepare diagrams according to required standards
2. Prepare schema	2.1 Analyse and document component connectivity 2.2 Identify and incorporate data flow iteration 2.3 Prepare component action diagrams according to required standards
3. Prepare component	3.1 Review and update functional requirements

ELEMENT	PERFORMANCE CRITERIA
model	3.2 Specify interface components and component relationships 3.3 Prepare interaction diagrams according to standards
4. Iterate and review model	4.1 Conduct walk-through of current model and review functionality 4.2 Identify relationships and confirm integration of model 4.3 Review class service requirements 4.4 Prepare initial test criteria 4.5 Implement process for incremental testing

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none">Interprets and analyses text with complex terminology, diagrams, code, syntax, icons and symbols to evaluate current system functionality and technical requirements
Writing	<ul style="list-style-type: none">Uses task related terminology and a formal document structure, choosing format and style according to document audience and organisational requirementsUses required vocabulary, terminology, labelling and naming conventions to develop diagrams using industry specific design tools
Numeracy	<ul style="list-style-type: none">Interprets numerical information and applies basic mathematical calculations relating to time durations and budgetary information
Self-management	<ul style="list-style-type: none">Identifies and follows explicit and implicit protocols and meets expectations associated with own role
Planning and organising	<ul style="list-style-type: none">Takes responsibility for planning and organising own workload, identifying ways of sequencing and combining elements for efficiency
Problem solving	<ul style="list-style-type: none">Responds intuitively to problems in familiar contexts requiring immediate attention
Technology	<ul style="list-style-type: none">Recognises and identifies purpose, needs and limitations when selecting devices and applications for different tasks

Unit Mapping Information

Supersedes and is equivalent to ICTICT502 Develop detailed component specifications from project specifications and ICTPMG504 Prepare project specifications.

Links

Companion Volume Implementation Guide is found on VETNet -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=a53af4e4-b400-484e-b778-71c9e9d6aff2>

Assessment Requirements for ICTICT519 Develop detailed component specifications from project specifications

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop component specifications for a project on at least two occasions, including:
 - identifying and document high level component specifications relevant to the project specifications
 - analysing and document component connectivity and relationships
 - documenting and review component modelling.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- component design tools, including features and capabilities
- processes for configuration management
- key features of a cost-benefit analysis
- industry accepted design methodologies and hardware and software products, including features and capabilities
- data modelling techniques
- program development methodologies
- quality assurance practices for preparing component models
- standards and organisational policies relating to component specification development
- current system functionality for analysing components.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- technical specifications
- organisational and process goals
- standards for model development
- computer aided software engineering (CASE) tools
- project deliverables
- test plan
- project budget
- software and hardware required for performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT520 Confirm transition strategy for new systems

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to confirm a transition strategy for new systems based on a revised system design and newly developed change management plan.

The unit applies to those who work as part of a team in a range of information and communications technology (ICT) positions and who are required to plan for a transition to new system websites, networks or software.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Confirm delivery and acceptance plan	1.1 Evaluate revised system design and change management plan 1.2 Confirm phased delivery with client and project team 1.3 Confirm method of acceptance and acceptance criteria 1.4 Confirm that acceptance test plan is in place and agreed
2. Develop and confirm data take-up plan	2.1 Identify data source for each database 2.2 Analyse potential integrity constraints 2.3 Design data conversion workflow 2.4 Identify interface requirements, data take-up method, complexity and effort required 2.5 Develop required data conversion contingencies and confirm

ELEMENT	PERFORMANCE CRITERIA
	with required personnel
3. Confirm cutover plan	3.1 Agree on conversion window in operational timescale with required personnel 3.2 Plan and confirm parallel running with required personnel 3.3 Determine and confirm approval of dependencies with required personnel 3.4 Determine and confirm approval of fall-back options with required personnel 3.5 Confirm approval of checkpoints, tests and responsibilities with required personnel 3.6 Confirm approval of resources, tasks and timescales with required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Identifies and analyses complex electronic and hard copy documentation, information and data containing specific terminology, diagrams and numerical information to organise conversion and identify data convention contingencies
Writing	<ul style="list-style-type: none"> Applies formal labels, logos, formatting and document structure required by the organisation to ensure signoff obtained is valid
Oral Communication	<ul style="list-style-type: none"> Articulates strategies clearly and distinctively, based on techniques and language specific to audience and environment, and uses probing, clarifying questions to ensure strategies are understood
Numeracy	<ul style="list-style-type: none"> Interprets and analyses numerical and financial information and applies mathematical calculations and financial functions related to timeframe, logistics and budgets
Planning and organising	<ul style="list-style-type: none"> Applies formal processes when planning more complex tasks, producing plans with logically sequenced steps and reflecting some awareness of resource constraints Uses analytical processes in a variety of situations, setting goals, gathering relevant information and identifying and evaluating options against agreed criteria
Technology	<ul style="list-style-type: none"> Demonstrates a sophisticated understanding of principles, concepts, language and practices associated with the digital

SKILL	DESCRIPTION
	world and uses these to troubleshoot

Unit Mapping Information

Supersedes and is equivalent to ICTICT504 Confirm transition strategy for a new system.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTICT520 Confirm transition strategy for new systems

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- confirm new systems transition strategy for an organisation on at least one occasion, including:
 - confirming acceptance plan
 - developing and confirming data take-up plan
 - confirming cutover plan.

In the course of the above the candidate must:

- identify and liaise with required personnel
- seek and respond to feedback.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- technology transition strategies
- current business practices related to transition strategies
- phased delivery requirements
- methods of acceptance for transition strategies
- key features of data take-up, including:
 - data sources
 - integrity constraints
 - data conversion workflow
 - interface requirements
 - data take-up methods
 - data conversion contingencies

- key features of cutover plans, including:
 - conversion windows
 - dependencies
- fall-back options data conversion workflow design, including considerations for:
 - data validation
 - data clean-up
 - data loading.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- ICT specifications
- change management plan
- acceptance test plan
- system design
- ICT security assurance specifications.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT521 Select new technology supported business model

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to identify opportunities for using new technology to support and enable efficient business models.

The unit applies to senior Information and Communications Technology (ICT) staff in a range of areas who are required to research innovative approaches to meeting organisational requirements.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Evaluate current state	1.1 Map existing ICT process flow against performance standards and identify areas that may benefit from improvement 1.2 Evaluate existing business models and processes 1.3 Identify and analyse changes in technological, client and supply chain environments 1.4 Document factors identified and submit to required personnel for review
2. Research business models	2.1 Investigate alternative business models in use in similar businesses 2.2 Identify and determine relevance of business models in use

ELEMENT	PERFORMANCE CRITERIA
	<p>and under development in other industry sectors</p> <p>2.3 Investigate and evaluate new business models</p> <p>2.4 Evaluate opportunities identified against business requirements</p> <p>2.5 Prioritise and document identified opportunities</p>
3. Propose new business model	<p>3.1 Select new business model according to organisational requirements</p> <p>3.2 Develop performance benchmarks for chosen business model</p> <p>3.3 Determine and model new business processes</p> <p>3.4 Document proposed business model according to organisational procedures</p> <p>3.5 Submit documentation to required personnel for sign-off</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Identifies, analyses and evaluates complex text, diagrams, business models and statistical and financial information
Writing	<ul style="list-style-type: none"> Integrates information and ideas from a number of sources, utilising information ICT modelling tools, and specialised and cohesive language and document structures
Numeracy	<ul style="list-style-type: none"> Interprets and analyses a range of statistical and financial data relating to business models to analyse the current model, identify current and future needs, and develop new technology models
Self-management	<ul style="list-style-type: none"> Identifies and responds to explicit and implicit protocols in familiar work contexts Uses systematic analytical processes in complex, non-routine situations, setting goals, gathering relevant information and identifying and evaluating options against organisational requirements
Teamwork	<ul style="list-style-type: none"> Identifies the requirements of important communication exchanges, selecting appropriate channels, format, tone and content to suit purpose and audience, and monitoring impact
Technology	<ul style="list-style-type: none"> Uses and investigates new digital technologies and applications to manage and manipulate data, and communicate effectively with others in a secure and stable digital environment

Unit Mapping Information

Supersedes and is equivalent to ICTICT507 Select new technology models for business.

Assessment Requirements for ICTICT521 Select new technology supported business model

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- propose a new technology supported business model for an organisation based on organisational requirements on at least one occasion, including:
 - identifying new approaches to technology use
 - determining the suggested focus of the selected business model according to identified performance improvement standards
 - documenting the new business model.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- procedures for benchmark selection and development
- key features of business process design, including:
 - case diagrams
 - business process modelling and notation
 - activity diagrams
- key components of business-to-business and business-to-customer interface and liaison
- copyright and intellectual property factors relating to selecting new technology models
- current organisational environment, including:
 - technological
 - client
 - supply chain
- methods for determining impact of technological change
- principles of electronic commerce modelling language (ECML)
- procedures for interpreting environmental scanning

- procedures for interpreting design specifications
- key features of modelling methodology
- key components of value and supply chain management
- key features of website architecture.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- business systems
- analysis software
- modelling software
- business requirements
- current industry news
- supply and value chain analysis.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT522 Evaluate vendor products and equipment

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to evaluate and test a range of vendor products and equipment against a client's organisational requirements.

The unit applies to those in a range of information and communications technology (ICT) areas who are required to assess hardware and software products.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Establish project parameters	1.1 Evaluate and prioritise business requirements 1.2 Identify conflicting and overlapping business requirements 1.3 Confirm budget and available resources 1.4 Validate business requirements, budget and resource needs with client
2. Identify vendor products and equipment	2.1 Investigate a representative range of vendor products and equipment 2.2 Identify and document interdependencies 2.3 Specify and document technical alternatives available to business 2.4 Determine and document availability of products and

ELEMENT	PERFORMANCE CRITERIA
	equipment 2.5 Confirm vendor products and equipment meet Australian and other required standards
3. Test vendor products and services	3.1 Develop valid and reliable test regime 3.2 Establish test environment and calibrate measuring equipment 3.3 Undertake testing of products and equipment and document results 3.4 Undertake revised testing where initial tests are inconclusive or where alternative product configuration may meet business requirements
4. Evaluate vendor products, services and equipment	4.1 Rate vendor products for quality, performance and support 4.2 Rate vendor products for fit with client needs 4.3 Establish product limitations, performance, integration capabilities and costs, and compare with established business requirements 4.4 Prepare cost-benefit analysis
5. Prepare evaluation report	5.1 Document product information in order of preference 5.2 Produce a report specifying preferred product and provide rationale for recommendations 5.3 Submit report to client for approval

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Identifies, analyses and evaluates highly technical documents, diagrams, business strategies and statistical and financial information
Writing	<ul style="list-style-type: none"> Integrates information and ideas from a number of sources using specialised and cohesive language and formal document structures
Numeracy	<ul style="list-style-type: none"> Interprets and analyses a range of statistical and financial data relating to products, equipment and integration costs Uses a range of software tools to apply statistical and financial functions and prepare a cost-benefit analysis
Self-management	<ul style="list-style-type: none"> Identifies the legal and regulatory responsibilities related to own work and recognises some legal principles across work contexts

Skill	Description
Teamwork	<ul style="list-style-type: none">Identifies the requirements of important communication exchanges, selecting channels, format, tone and content according to purpose and audience
Planning and organising	<ul style="list-style-type: none">Develops plans to manage relatively complex non-routine tasks and demonstrates an understanding of how they may contribute to longer term operational and strategic goalsUses systematic, analytical processes in complex non-routine situations, setting goals, gathering relevant information and identifying and evaluating options against agreed criteria

Unit Mapping Information

Supersedes and is equivalent to ICTICT508 Evaluate vendor products and equipment.

Assessment Requirements for IC TICT522 Evaluate vendor products and equipment

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- determine vendor products and equipment options for an organisation according to requirements on at least one occasion, including:
 - evaluating a range of vendor products and equipment against requirements
 - testing all identified product options
 - documenting the selected items and selection rationale in a report.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- relevance and application of the following for evaluating and selecting products:
 - code of ethics
 - international standards
 - vendor products
 - client business domain
 - copyright and intellectual property
 - general features and capabilities of current industry accepted hardware and software products
- current and future technical systems considerations required by business
- features and functions of relevant hardware components and software products and the interaction between them
- measures required for test regimes.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- client functional requirements
- hardware and software specifications from vendors
- test procedures and activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT523 Gather data to identify business requirements

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to identify, analyse and document business requirements.

The unit applies to systems analyst developers and project team leaders and managers who are responsible for gathering data to identify business requirements.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify information sources	1.1 Determine information required according to project requirements 1.2 Evaluate available information against project requirements 1.3 Identify addition information sources based on evaluation of information 1.4 Develop critical questions to elicit information from key stakeholders using a mixture of open and closed questions
2. Gather data	2.1 Review current organisational documentation and identify data required for project 2.1 Use a wide range of information gathering techniques according to project requirements 2.2 Review reports and other data sources for business

ELEMENT	PERFORMANCE CRITERIA
	information 2.3 Confirm with stakeholders business critical factors relating to current and future directions of organisation
3. Prepare data analysis for review	3.1 Analyse group and individual responses to clearly define business priorities 3.2 Document data analysis for review according to organisational standards

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

• Skill	Description
Reading	<ul style="list-style-type: none"> Identifies, analyses, evaluates and applies complex online and hard copy documentation containing specific terminology, diagrams and numerical information to identify business requirements
Writing	<ul style="list-style-type: none"> Uses plain English and appropriate questioning strategies, avoiding loaded or leading questions, when developing information gathering documentation Uses vocabulary, grammatical structures, terminology, diagrams, numerical information, formatting and structure relevant to the job role and organisation to document the analysis
Oral Communication	<ul style="list-style-type: none"> Articulates research and resource requirements clearly and directs discussions to elicit the views and opinions of others by using effective listening and open questioning techniques
Numeracy	<ul style="list-style-type: none"> Interprets numerical information and applies mathematical calculations and financial functions to analyse financial information
Self-management	<ul style="list-style-type: none"> Identifies and responds to explicit and implicit protocols in familiar work contexts and articulates the importance of identifying and responding to protocols in new situations Uses a mix of intuitive and formal processes to identify key information and issues, evaluate alternative strategies, anticipate consequences and consider implementation issues

Unit Mapping Information

Supersedes and is equivalent to ICTICT509 Gather data to identify business requirements.

Assessment Requirements for ICTICT523 Gather data to identify business requirements

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- identify sources and gather information pertinent to the business requirements
- review and analyse business requirements based on business strategy and current and future directions
- confirm the business-critical factors with stakeholders
- prepare data and document data analysis for review according to organisational standards.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- features of client business domain that inform project team and client understanding of business needs
- industry accepted hardware and software products, general features and capabilities considerations when determining business functions
- role of stakeholders and degree of their involvement in the process
- quality assurance practices required when determining business requirements.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- project brief
- business documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT524 Determine ICT strategies and solutions for organisations

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to analyse Information and Communications Technology (ICT) goals, objectives and future requirements for an organisation and determine the best ICT systems solution.

The unit applies to those who administer and manage ICT support and participate in the development of strategic initiatives in small-to-medium enterprises (SMEs).

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Evaluate ICT needs of the organisation	1.1 Analyse organisation's current needs and projected ICT requirements 1.2 Review organisational environment and relevant industry changes and trends 1.3 Determine ICT goals, objectives and future requirements 1.4 Document outcomes and submit to required personnel and seek and respond to feedback
2. Determine project goals and objectives	2.1 Confirm project scope with required personnel 2.2 Evaluate organisational impact of changes

ELEMENT	PERFORMANCE CRITERIA
	2.3 Document project, goals and impact of changes according to requirements
3. Determine best ICT systems solution	3.1 Evaluate a range of ICT systems solutions according to project goals 3.2 Define high-level hardware, software and communications environment required for proposed systems solution 3.3 Develop a feasibility study and a cost-benefit analysis for proposed solution 3.4 Confirm that proposed solution aligns with organisation's strategic plan 3.5 Submit feasibility study and cost-benefit analysis document to required personnel for approval and sign-off

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Identifies, interprets and evaluates a wide range of organisational documentation, financial and statistical data, and technical documentation containing complex terminology and diagrams
Writing	<ul style="list-style-type: none"> Uses ICT specific terminology and structures document according to documentation purpose
Numeracy	<ul style="list-style-type: none"> Interprets and analyses a range of statistical and financial data relating to products, equipment and integration costs Uses a range of software tools to apply statistical and financial functions and prepare a cost-benefit analysis
Self-management	<ul style="list-style-type: none"> Takes responsibility for high-impact decisions in complex situations involving many variables and constraints
Teamwork	<ul style="list-style-type: none"> Identifies the requirements of important communication exchanges, selecting channels, format, tone and content according to purpose and audience
Planning and organising	<ul style="list-style-type: none"> Uses a combination of formal and logical planning processes and an increasingly intuitive understanding of context to evaluate cost benefits and appropriate solutions
Technology	<ul style="list-style-type: none"> Recognises and identifies the strategic and operational potential of digital trends to achieve work goals, enhance work processes, create opportunities and reduce risks

Unit Mapping Information

Supersedes and is equivalent to ICTICT510 Determine appropriate ICT strategies and solutions.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTICT524 Determine ICT strategies and solutions for organisations

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- determine Information and Communications Technology (ICT) systems solutions for an organisation according to client requirements on at least one occasion, including:
 - analysing the organisation's current needs and projected ICT requirements
 - determining the impact of system changes on the organisation
 - evaluating and recommending ICT strategies and systems solutions to meet business objectives
 - developing a feasibility study and cost-benefit analysis of proposed solution
 - seeking and responding to feedback throughout the process.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- current industry systems development methodologies
- business planning process relevant to developing an ICT business solution
- current business practices for:
 - preparing business reports
 - facilitation of group interviews
- quality assurance practices for ICT solutions
- general features and capabilities of current industry accepted hardware and software products
- key components of feasibility studies and cost-benefit analyses in relation to ICT strategies and solutions
- information sources for a cost-benefit analysis
- role and degree of stakeholder involvement in developing ICT strategy
- specific client business requirements in relation to proposed ICT solutions.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- detailed information relating to current needs and project requirements of the business
- client expectations brief
- business risks and objectives.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT525 Identify and manage the implementation of industry specific technologies

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to identify, plan and manage the implementation of industry specific technologies at an identified industry standard.

The unit applies to those engaged in ongoing review and research to identify, manage and evaluate the implementation of industry technologies or techniques to improve aspects of the organisation's activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Analyse and plan implementation of industry specific technologies	1.1 Identify technologies specific to industry sector 1.2 Evaluate relevance of industry specific technologies to organisational requirements 1.3 Plan implementation of industry specific technologies to meet organisational requirements
2. Manage application of industry specific technology	2.1 Coordinate testing of industry specific technology 2.2 Implement specific features and functions of industry specific technology to provide a suitable solution to an identified problem 2.3 Access and use sources of information relating to

ELEMENT	PERFORMANCE CRITERIA
	industry specific technology
3. Review, analyse and evaluate industry specific technology performance	3.1 Analyse implementation of industry specific technology for performance and usability 3.2 Review and evaluate benefits of implemented technology to organisation 3.3 Determine environmental considerations involved with the use of new technology 3.4 Seek feedback from users where appropriate

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Identifies and interprets technical online and hard copy documentation containing complex terminology and diagrams to identify industry specific technologies that will benefit the organisation
Writing	<ul style="list-style-type: none"> Uses vocabulary, grammatical structures and terminology and document structure relevant to the job role and organisation Uses questioning strategies, when developing feedback gathering documentation
Oral Communication	<ul style="list-style-type: none"> Uses listening and questioning techniques for seeking and responding to feedback
Self-management	<ul style="list-style-type: none"> Identifies legislation and regulations relevant to own rights and responsibilities and demonstrates understanding of the implications of these when planning work Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering relevant information and identifying and evaluating options against agreed criteria
Planning and organising	<ul style="list-style-type: none"> Develops plans to manage relatively complex, non-routine tasks with an awareness of how they may contribute to longer term operational and strategic goals
Technology	<ul style="list-style-type: none"> Demonstrates a sophisticated understanding of principles, concepts, language and practices associated with the digital world and uses these to troubleshoot and understand the uses and potential of new technology

Unit Mapping Information

Supersedes and is equivalent to ICTICT514 Identify and manage the implementation of current industry specific technologies.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTICT525 Identify and manage the implementation of industry specific technologies

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- implement industry specific technology for an organisation, according to organisational requirements, on at least one occasion, including:
 - analysing and critically evaluating the features and functions of identified industry specific technologies to an industry standard
 - managing the implementation process of new and emerging industry specific technology
 - reviewing the performance of the industry specific technologies for the organisation.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- trends and applications of current vendor products and technologies
- techniques for gathering information to assist in identifying and managing implementation of industry specific technologies
- current directions of information and communications technology (ICT) and specifically of the major industry technology standards used in the specified area
- general features, capabilities and application of current industry hardware and software products.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- industry specific technologies currently used in industry

- documents detailing organisational requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT526 Verify client business requirements

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to deal with clients at a senior level, to identify their business requirements and verify the accuracy of the information gathered.

The unit applies to senior Information and Communications Technology (ICT) personnel operating with a high degree of autonomy for managing activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Establish business relationship	1.1 Identify organisational structure, culture and politics in relation to support requirements 1.2 Identify internal and external organisational stakeholders 1.3 Develop business relationship with client 1.4 Schedule regular liaisons with client to manage relationship
2. Determine context of business need or problem	2.1 Work with client to define business problem to be investigated 2.2 Establish system boundaries and scope according to business requirements 2.3 Manage preparation of required information

ELEMENT	PERFORMANCE CRITERIA
	gathering 2.4 Confirm that project objectives and outcomes are documented 2.5 Work with client to substantiate documentation
3. Source and analyse information	3.1 Supervise information gathering from identified clients of system 3.2 Analyse gathered client responses according to business information needs 3.3 Analyse new system requirements according to business information needs 3.4 Confirm that new system requirements and problems have been documented
4. Confirm system specifications	4.1 Review system specifications documentation with client 4.2 Work with client to verify system specifications, updating documentation as required 4.3 Obtain final approval and sign-off from client

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Identifies, analyses and evaluates complex and technical online and hard copy documentation containing specific terminology, diagrams and numerical information to identify organisational requirements, analyse business problems and identify solutions
Writing	<ul style="list-style-type: none"> Uses questioning strategies, avoiding loaded or leading questions, when developing information gathering documentation Uses grammatical structures and terminology, diagrams and flow charts, numerical information, and formatting and document structure relevant to the job role and organisation to record new system requirements and associated risks
Oral Communication	<ul style="list-style-type: none"> Participates in a verbal exchange of ideas and solutions and uses detailed and clear language to clarify and present information according to requirements and audience
Numeracy	<ul style="list-style-type: none"> Interprets numerical information and applies mathematical calculations relating to time durations and budgetary information
Planning and	<ul style="list-style-type: none"> Uses a combination of formal and logical planning processes and an

Skill	Description
organising	increasingly intuitive understanding of context to evaluate appropriate solutions
Self-management	<ul style="list-style-type: none">• Takes responsibility for high-impact decisions in complex situations involving many variables and constraints
Technology	<ul style="list-style-type: none">• Recognises and identifies the strategic and operational potential of digital trends to achieve work goals, enhance work processes, create opportunities and reduce risks

Unit Mapping Information

Supersedes and is equivalent to ICTICT515 Verify client business requirements.

Assessment Requirements for ICTICT526 Verify client business requirements

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- verify project specific information for a client on at least one occasion, including:
 - establishing business relationships through investigation of the organisation and interviews with client and staff
 - determining and documenting business expectations and needs, including critical business requirements
 - working with clients and staff to gather, analyse and confirm information contributions
 - reviewing and gaining approval for system specifications.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- process for communicating with client in order to gather and report data
- client business requirements relating to Information and Communications Technology (ICT) product selection
- process used to identify products related to the business
- roles and responsibilities of stakeholders.

Assessment Conditions

conditions are typical of those in a working environment in this industry.

This includes access to:

- client expectations brief
- business objectives
- systems, data gathering and appropriate software products.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT527 Develop and maintain blockchain solutions

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to identify, develop and maintain blockchain solutions to specified business needs.

It applies to those in roles, including senior software developers or blockchain developers, who perform the planning, development and implementation of new and existing technologies to business models in the Information and Communications Technology (ICT) and related industries.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine blockchain solution requirements	1.1 Establish blockchain objectives, purpose and requirements according to organisational needs 1.2 Identify organisational processes and transactional types suitable for blockchain technology 1.3 Identify organisational use-case according to organisational needs 1.4 Determine legislation and organisational policies and procedures for blockchain and determine impact on solution
2. Design blockchain solution components	2.1 Gather data according to organisational needs 2.2 Design integration workflow according to organisational

	<p>need</p> <p>2.3 Determine security and platform for blockchain solution</p> <p>2.4 Document design plan according to organisational needs</p>
3. Implement blockchain solution	<p>3.1 Set up required platform according to design plan</p> <p>3.2 Initialise blockchain solution according to vendor specifications</p> <p>3.3 Implement required consensus portal</p> <p>3.4 Execute smart command in required platform according to blockchain solution</p> <p>3.5 Debug and scale blockchain solution</p>
4. Maintain blockchain solution	<p>4.1 Test performance against organisational needs and requirements</p> <p>4.2 Determine and conduct maintenance tests</p> <p>4.3 Determine and document maintenance schedule</p> <p>4.4 Submit documentation to required personnel and seek and respond to feedback</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none"> Monitors outcomes of decisions, considering results and identifying key concepts and principles that may be adaptable in the future
Numeracy	<ul style="list-style-type: none"> Uses mathematical formulae to calculate required equipment, undertake measurements and determine response times
Oral communication	<ul style="list-style-type: none"> Obtains information to confirm requirements and responsibilities distinctively using appropriate industry language
Reading	<ul style="list-style-type: none"> Recognises and interprets technical, manufacturer and organisational documentation to determine and confirm job requirements
Writing	<ul style="list-style-type: none"> Prepares documentation outlining maintenance schedule according to specified requirements
Planning and organising	<ul style="list-style-type: none"> Operates from a broad conceptual plan, developing the operational detail in stages, regularly reviewing priorities and performance during implementation, and identifying and addressing issues
Problem solving	<ul style="list-style-type: none"> Uses nuanced understanding of context to recognise anomalies and subtle deviations to normal expectations, focusing attention and remedying problems as they arise

SKILL	DESCRIPTION
Self-management	<ul style="list-style-type: none">• Takes full responsibility for identifying and considering relevant organisational protocols and requirements• Uses systematic processes, setting goals, gathering required information and identifying and evaluating options against agreed criteria
Technology	<ul style="list-style-type: none">• Demonstrates a sophisticated understanding of principles, concepts, language and practices associated with the digital world

Unit Mapping Information

No equivalent unit. New unit.

Assessment Requirements for ICTICT527 Develop and maintain blockchain solutions

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop, implement and maintain a blockchain solution aligned to a specific organisational criterion.

In the course of the above, the candidate must:

- research and identify industry standard technology options.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- underlying blockchain principles applicable to developing and maintaining solutions
- objectives, purpose and requirements of blockchain solutions
- suitability of blockchain different transaction and data types
- transactional types and components suitable for blockchain technology
- techniques to debug, scale and test blockchain solutions
- capabilities and purpose of blockchain technology
- industry standard uses for applications.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- industry standard software to access internet and web delivered information
- industry standard hardware to access internet and web delivered information

- client deliverables that assist in information gathering
- platforms providing distributed ledger applications
- blockchain best practice guidelines.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT528 Deploy smart contracts

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to administer and manage smart contracts as a blockchain application. It involves the research, planning and deployment of blockchain applications for smart contracts suitable to specified business need.

It applies to those who work as senior software developers, blockchain developers, or those who are responsible for undertaking the assessment and implementation of new technologies to business models in the Information and Communications Technology (ICT) and related industries.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT
