<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to deploy blockchain technology	1.1 Establish organisational requirements for blockchain technology and contracts 1.2 Determine existing blockchain infrastructure 1.3 Identify data based on existing infrastructure and organisational requirements 1.4 Determine platform and security requirements
2. Plan deployment strategy	2.1 Determine and document deployment plan according to organisational requirements 2.2 Determine and document deployment timelines

	2.3 Determine and document impact on organisational operations
3. Implement smart contracts technology	3.1 Deploy technology according to deployment plan 3.2 Determine alignment of technological capabilities against deployment plan 3.3 Determine and apply methods to align smart contract capability against deployment plan 3.4 Create documentation and seek and respond to feedback from required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none"> Monitors outcomes of decisions, considering results and identifying key concepts and principles that may be adaptable in the future
Numeracy	<ul style="list-style-type: none"> Uses mathematical formulae to calculate required equipment, undertake measurements and determine response times
Oral communication	<ul style="list-style-type: none"> Obtains information to articulate requirements and responsibilities distinctively using appropriate industry language intended for audience and environment
Reading	<ul style="list-style-type: none"> Recognises and interprets technical, manufacturer and organisational documentation to determine and confirm job requirements
Writing	<ul style="list-style-type: none"> Prepares documentation detailing deployment plan, timelines and impact on organisational operations using appropriate language for intended audience
Planning and organising	<ul style="list-style-type: none"> Operates from a broad conceptual plan, developing the operational detail in stages, regularly reviewing priorities and performance during implementation, and identifying and addressing issues
Problem solving	<ul style="list-style-type: none"> Uses nuanced understanding of context to recognise anomalies and subtle deviations to normal expectations, focusing attention and remedying problems as they arise
Self-management	<ul style="list-style-type: none"> Takes full responsibility for identifying and considering relevant organisational protocols and requirements Uses systematic processes, setting goals, gathering required information and identifying and evaluating options against agreed criteria
Technology	<ul style="list-style-type: none"> Demonstrates a sophisticated understanding of principles, concepts, language and practices associated with the digital world

Unit Mapping Information

No equivalent unit. New unit.

Assessment Requirements for ICTICT528 Deploy smart contracts

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- deploy a smart contract using blockchain technology on at least two occasions.

In the course of the above, the candidate must:

- research organisational business model and determine required distributed ledger application
- demonstrate adherence to blockchain best practices and guidelines.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- objectives, purpose and requirements of blockchain solutions
- blockchain principles that apply to deploying smart contracts
- functions and features of cryptography
- database rules relevant to deploying smart contracts
- transactional components
- industry standard uses for applications
- industry standard uses for ABI and bytecode variables
- uses and functions of Integrated Development Environment (IDE)
- libraries and languages relevant to deploying smart contracts
- security best practices and principles applicable to smart contracts.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- industry standard software to access internet and web delivered information
- industry standard hardware to access internet and web delivered information
- client deliverables that assist in information gathering
- platforms providing distributed ledger applications
- blockchain best practice guidelines.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT529 Organise and lead agile projects

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to lead and organise an agile team of Information and Communications Technology (ICT) and other industry professionals to deliver a project within an agile project management framework.

The unit applies to those in 'scrum master' roles and those responsible for leading team members within an agile project. This includes working as project leads within software, web, application and game development environments, without the function of client negotiation or overall business management of the project.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Establish agile project and team	1.1 Identify and confirm project requirements, outcomes and client expectations with required personnel 1.2 Confirm agile project management methodology and timelines according to project requirements 1.3 Consolidate and confirm prioritisation of tasks according to project timelines 1.4 Confirm project scope, budget and key dates with required personnel 1.5 Negotiate and facilitate team members choosing roles and

ELEMENT	PERFORMANCE CRITERIA
	responsibilities with required personnel
2. Coordinate effective team communication	2.1 Discuss, confirm and implement ways and forms of communicating through tools and meetings with required personnel 2.2 Facilitate and manage agile meeting and encourage others to share feedback and progress 2.3 Check alignment of tasks, progress and timelines match communication and meeting agendas 2.4 Manage work progress and update communication tools according to project progress
3. Prioritise and manage backlog	3.1 Identify and prioritise work backlog according to client requirements 3.2 Determine increment timelines and stages of incremental delivery according to project requirements 3.3 Select range of backlog items to work on in first sprint 3.4 Communicate and coach team to self-select backlog streams and confirm with required personnel 3.5 Manage project work and track progress against project requirements 3.6 Coach and seek feedback from team members 3.7 Raise and action feedback outcomes according to project requirements and personnel feedback 3.8 Re-prioritise deliverables and backlog for next sprint according to client requirements
4. Finalise agile project	4.1 Collate project deliverables and prepare to present to client according to project requirements 4.2 Review and discuss project outcomes, agile effectiveness and team performance with required personnel 4.3 Lead agile project debrief and document outcomes and lessons learnt

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Uses a wide range of mathematical calculations to interpret numerical information and to prepare/reconcile financial data

SKILL	DESCRIPTION
Oral communication	<ul style="list-style-type: none">Actively listens and contributes to discussions to confirm requirements and discusses solutions to identified problemsApplies coaching techniques to encourage and support team members to achieve potential in team environment
Reading	<ul style="list-style-type: none">Interprets complex text in order to address the project requirements
Writing	<ul style="list-style-type: none">Prepares complex documents using required language and grammar to present ideas, options and recommendations in a logical sequence
Teamwork	<ul style="list-style-type: none">Fosters a collaborative culture within own sphere of influence, facilitating a sense of commitment and cohesion, and highlighting and using the strengths of those involved when establishing the project teamActively builds formal and informal networks to include key people/communities with expert skills and knowledge
Problem solving	<ul style="list-style-type: none">Makes a range of decisions in relatively complex situations, taking a range of constraints into account when monitoring the project and system testingUses systematic, analytical processes in complex, non-routine situations, setting goals, gathering required information, and identifying and evaluating options against agreed criteria when conducting post project reviews
Self-management	<ul style="list-style-type: none">Recognises and follows explicit and implicit protocols and meets expectations associated with own role and business deadlines

Unit Mapping Information

No equivalent unit. New unit.

Assessment Requirements for ICTICT529 Organise and lead agile projects

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- plan, lead and evaluate at least three project sprints comprised of different project work tasks within an agile project framework.

In the course of the above, the candidate must:

- use at least one project management tool for effective team communication
- use at least two different agile methodologies for communicating with team members.
- coach team members and facilitate agile team culture and mindset
- discuss and agree on frequency of team communication, feedback and project progress
- apply agile principles and allow team to self-govern.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- agile principles, mindsets and behaviours
- agile methodologies, including:
 - project management
 - team member roles and responsibilities
 - characteristics of increments, increment timelines and stages of increment delivery
 - project work tools and platforms
 - communication tools and platforms
 - agile meetings, including huddles and scrums
 - KANBAN board tools
 - project debrief methodologies
 - work task prioritisation requirements and contingencies

- version control and progress tracking
- ICT hardware and project management software applicable to organising and managing agile projects
- communication techniques and practices required to coach others and lead meetings.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- equipment, hardware and industry software packages required for agile project work
- a range of simulated work tasks and project within agile project management teams
- project requirements and agile project team
- the internet and connectivity
- required online agile project management and communication tools.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT530 Design user experience solutions

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to design solutions using a user experience (UX) methodology, with the users' experience at the centre of design. In this unit, a user refers to a customer or client who will interact and use a product, service and/or platform.

The unit applies to those working as business and systems analysts, as well as developers of software, games, websites, applications, products and services. UX design aims to improve, optimize and add value to the users' experience of a designed solution (product, service or platform).

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Explore and validate problem	1.1 Define current problem according to business needs 1.2 Research problem and alternatives in market 1.3 Set data metrics and goals, and define design success according to business needs 1.4 Research user groups and confirm groups suitable for consultation
2. Research and develop user groups' experiences	2.1 Research problem, required user group information and solutions in market

ELEMENT	PERFORMANCE CRITERIA
	2.2 Document research and synthesise findings 2.3 Interview user groups and document user experience findings and feedback according to user and market segmentation 2.4 Create user group personas and map to user experience problems and improvement opportunities 2.5 Develop wireframes to communicate user experience according to current problem
3. Create solution options and validate solution	3.1 Workshop and determine solutions according to user experience, problems and improvement opportunities identified 3.2 Confirm best solution with required personnel and client according to UX principals and user needs 3.3 Develop solution prototype according to confirmed solution 3.4 Test solution according to required methodology 3.5 Collect feedback from user groups and adjust solution according to UX principles and user needs 3.6 Finalise solution and document work according to organisational requirements
4. Finalise and present UX solution	4.1 Finalise and confirm UX solution 4.2 Document and collate findings and solution documentation according to organisational requirements 4.3 Present solutions to required personnel 4.4 Integrate UX design into solution according to business need

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Oral communication	<ul style="list-style-type: none">Uses listening and questioning skills to confirm requirements and participate in discussion to synthesise information from others
Reading	<ul style="list-style-type: none">Critically analyses documentation, information and data from a variety of sources and records, and consolidates information to determine requirements, meaning and applicability to task
Writing	<ul style="list-style-type: none">Prepares complex documents using required language and grammar to present ideas, options and recommendations in a logical sequence

SKILL	DESCRIPTION
Teamwork	<ul style="list-style-type: none">• Builds formal and informal networks to include key people/communities with expert skills and knowledge• Coordinates team effectiveness by including, coaching, informing and coordinating others
Problem solving	<ul style="list-style-type: none">• Makes complex decisions in varied situations, taking a range of constraints into account when monitoring the project and design process
Self-management	<ul style="list-style-type: none">• Monitors progress of plans and schedules, and reviews and changes them to meet new demands and priorities• Investigates new and innovative ideas and work practices through consultation, formal and analytical thinking
Technology	<ul style="list-style-type: none">• Interprets the purposes, specific functions and key features of technologies and operates them effectively to complete design exercises and identify how others use technologies

Unit Mapping Information

No equivalent unit. New unit.

Assessment Requirements for ICTICT530 Design user experience solutions

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design and document at least one user experience (UX) solution for a user group of at least 3 people.

In the course of the above, the candidate must:

- undertake research and consultation
- test, adjust and improve solution to desired outcome.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- consultation and communication techniques and methodologies applicable to designing user experience solutions
- UX principles and values, including usefulness, aesthetics, desirability, useability and function
- UX methodologies and techniques, including:
 - design thinking
 - use-mapping and journey exercises
 - market segmentation
 - testing solution on user groups
 - testing function and useability
 - validating user experience of solution.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- wireframe and prototype tools and templates
- design problem or business case
- user group of at least three different people.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT531 Test network using virtual instruments

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to apply simulation testing techniques when testing networking systems.

It applies to technical staff who work with optical communication systems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan to test network	1.1 Obtain work details and scope from relevant personnel and arrange for site access in compliance with organisational security arrangements, legislation, codes, regulations and standards 1.2 Determine required features and applications of virtual instruments across networking systems 1.3 Identify limitations of virtual instruments according to organisational standards 1.4 Select simple and complex virtual instruments to test networking systems
2. Perform network simulation techniques	2.1 Measure networking systems according to organisational policies and procedures 2.2 Simulate and display properties of modulated signals with software-generated instruments according to organisational

ELEMENT	PERFORMANCE CRITERIA
	<p>policies and procedures</p> <p>2.3 Simulate and display data signals transmitted through band-limited channels</p> <p>2.4 Monitor virtual instruments</p>
3. Process network measurements	<p>3.1 Determine conversion processes used in virtual instruments</p> <p>3.2 Document effects of a simulation algorithm on recorded readings</p> <p>3.3 Analyse measurements in consideration of conversion process and simulation algorithm</p>
4. Report network test results	<p>4.1 Prepare report on measurement results according to organisational procedures</p> <p>4.2 Submit report to relevant personnel and obtain sign-off</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Selects and applies mathematical and problem-solving techniques in a broad range of contexts
Reading	<ul style="list-style-type: none"> Draws on a range of strategies to research and demonstrate knowledge of complex texts Analyses and consolidates test results and data from a range of sources against defined criteria and requirements
Writing	<ul style="list-style-type: none"> Demonstrates sophisticated writing skills and selects required conventions and stylistic devices to express precise meaning
Planning and organising	<ul style="list-style-type: none"> Accepts responsibility for planning and sequencing complex tasks, workloads and managing network capabilities, Negotiates key details with relevant personnel
Problem solving	<ul style="list-style-type: none"> Applies systematic and analytical decision-making processes for complex and non-routine situations Responds to problems requiring immediate resolution, drawing on past experiences
Self-management	<ul style="list-style-type: none"> Takes responsibility for following policies, procedures and legislative requirements
Technology	<ul style="list-style-type: none"> Investigates and uses new digital technologies and applications for testing, managing and manipulating data

Unit Mapping Information

Supersedes and is equivalent to ICTICT516 Test telecommunications network using virtual instruments.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTICT531 Test network using virtual instruments

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- test at least three different types of networks using at least one complex and at least one simple virtual instrument in each network.

In the course of the above, the candidate must:

- use system manuals and equipment according to manufacturer specifications.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- organisational policies and procedures, including those for:
 - obtaining work details and scope from relevant personnel
 - arranging site access
 - security arrangements
 - report sign-off procedures
 - identifying limitations of virtual instruments
 - measuring networking systems
- features and applications of:
 - simple and complex virtual instruments
 - band-limited channels
 - data buses
 - simulation algorithms
 - virtual instruments
- differences between simple and complex virtual instruments

- sampling and data conversion processes
- instrumentation principles and practices
- mathematical and problem-solving techniques of measuring networking systems using virtual instruments
- technological developments of virtual instruments
- internet support services
- modulation methods, AM, FM and digital formats
- report formats and requirements
- legislation, codes, regulations and standards and workplace health and safety requirements for scoped work.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- internet sites
- electronic workbench or similar software
- virtual instrument applications and media
- a workplace conducting operations involving virtual instruments
- support from a competent supervisor or mentor
- networking equipment that can be used for integrating projects
- industry software packages.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT532 Apply IP, ethics and privacy in ICT environments

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to maintain professional and ethical conduct, as well as to ensure that personal information of stakeholders is handled in a confidential and professional manner when dealing with stakeholders in an Information and Communications Technology (ICT) environment.

It applies to ICT personnel who are required to gather information to determine the organisation's code of ethics and protect and maintain privacy policies and system security.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Establish organisational IP requirements	1.1 Identify industry standard intellectual property (IP) and copyright legislation, policies and procedures 1.2 Identify and document organisational policy and industry standard legislation against organisational work practices 1.3 Distribute new or revised policy and procedures to stakeholders according to organisational procedures
2. Review and determine organisational IP, ethics and privacy policies	2.1 Review organisational privacy policy and procedures and determine compliance with industry standard requirements

ELEMENT	PERFORMANCE CRITERIA
	2.2 Review organisational code of ethics and determine compliance with industry standard requirements 2.3 Review ethical work practices and feedback and determine application of code according to organisational requirements
3. Contribute to privacy policy	3.1 Update privacy policy and procedures and code of ethics to align with required privacy legislation 3.2 Distribute revised policy, procedures and ethics to required personnel 3.3 Implement new work procedures and ethics according to organisational requirements 3.4 Test level of integrity, confidentiality, security and availability of information according to industry standards and organisational policies and procedures
4. Maintain ethics code	4.1 Establish and document review and grievance procedures and submit to required personnel 4.2 Seek and respond to review and grievance procedure documents feedback from required personnel 4.3 Obtain final sign-off from required personnel

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none"> Uses each experience to reflect on ways in which variables impact on decision outcomes and to gain insights into what constitutes decision making in different contexts
Oral communication	<ul style="list-style-type: none"> Participates in verbal exchange of ideas and elicits views and opinions of others using listening and questioning techniques Identifies requirements of important communication exchanges, selecting channels, format, tone and content to suit purpose and audience
Reading	<ul style="list-style-type: none"> Analyses and evaluates complex text to determine legislative and organisational standards, and applies information to organisational policies and processes
Writing	<ul style="list-style-type: none"> Integrates information and ideas from a range of sources, utilising support materials and specialised and cohesive language in a format and style applicable to audience and organisation

SKILL	DESCRIPTION
Planning and organising	<ul style="list-style-type: none">Sequences and schedules complex activities, monitors implementation and manages communication
Self-management	<ul style="list-style-type: none">Identifies and analyses changes to legislation and regulations applicable to own rights and responsibilitiesIdentifies implications of changes to legislation and regulations applicable to own rights and responsibilities when negotiating, planning and undertaking work
Technology	<ul style="list-style-type: none">Uses digital technologies and systems safely, legally and ethically when gathering, storing, accessing and sharing information, with a growing awareness of the permanence and transparency of all activities

Unit Mapping Information

Supersedes and is not equivalent to ICTICT418 Contribute to copyright, ethics and privacy in an ICT environment.

Assessment Requirements for ICTICT532 Apply IP, ethics and privacy in ICT environments

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- analyse legislation and standards, and contribute to policy and procedures improvements in code of ethics and privacy policy documents in the Information and Communications Technology (ICT) industry on at least once occasion.

In the course of the above, the candidate must:

- document and communicate updates with relevant personnel.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- codes of ethics pertinent to ICT industry
- federal, state and territory legislation and policies applicable to ICT environments and relating to:
 - copyright and intellectual property
 - privacy
- organisational communication processes and procedures related to applying IP, ethics and privacy policies in ICT environments.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- industry standard organisational policies, legislation and standards documentation
- organisational style guide

- records and documentation that assists in determination of workplace adherence to organisational code of ethics
- industry codes of practice
- hardware and software applicable to applying legislative and organisational policies.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT533 Conduct quality audit of IT system design specifications

Modification History

Release	Comments
Release 1	<p>This version first released with the Information and Communications Technology Training Package Version 8.0.</p> <p>Supersedes and is not equivalent to:</p> <ul style="list-style-type: none">• ICTICT503 Validate quality and completeness of system design specifications• ICTICT506 Implement process re-engineering strategies.

Application

This unit describes the skills and knowledge required to audit information technology (IT) system design specifications against organisational policies, procedures and system expectations. It also includes collecting audit evidence, as well as documenting and analysing audit findings.

The unit applies to individuals who may work as system designers and auditors who are responsible for validating the compliance of IT system designs with required organisational and legislative audit standards.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to audit system	1.1 Confirm work brief and tasks according to organisational

ELEMENT	PERFORMANCE CRITERIA
designs	<p>policies and procedures</p> <p>1.2 Identify system on which the quality audit will be performed according to work brief</p> <p>1.3 Select techniques and methodologies for audit of system design</p> <p>1.4 Identify automated and manual controls that depend on information technology (IT) system</p> <p>1.5 Confirm system access for required quality audit</p> <p>1.6 Prepare audit plan for required specifications according to organisational and legislative requirements</p>
2. Implement audit plan	<p>2.1 Access system to be audited and required resources</p> <p>2.2 Collect evidence about the functionality and quality of the in-scope system according to audit plan</p> <p>2.3 Identify IT system control deficiencies and weaknesses</p> <p>2.4. Document audit outcomes according to work brief</p> <p>2.5 Document any issues detected in audit according to work brief</p>
3. Finalise findings	<p>3.1 Obtain and review system contract through required means</p> <p>3.2 Compare system functionality against system contract according to organisational policies and procedures</p> <p>3.3 Analyse instances of non-compliance and points where system design does not reflect contract details according to organisational policies and procedures</p> <p>3.4 Document recommended options for corrective action according to work brief</p> <p>3.5 Disclose audit findings according to organisational policies and procedures</p> <p>3.6 Save documentation and quality audit in secure location according to organisational requirements.</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interprets, analyses and evaluates text with complex terminology, diagrams, codes, syntax, icons and symbols
Writing	<ul style="list-style-type: none"> Uses plain English and writing structures when developing audit plan and documenting findings

Skill	Description
Initiative and enterprise	<ul style="list-style-type: none">Analyses and follows protocols, and meets expectations associated with own role in complex contexts
Planning and organising	<ul style="list-style-type: none">Applies formal processes when planning complex tasks, producing plans with logically sequenced steps and identifying constraints
Problem solving	<ul style="list-style-type: none">Demonstrates a sophisticated knowledge of principles, concepts, language and practices associated with the digital world and uses them to troubleshootUses analytical processes in a variety of situations, gathers relevant information and identifies options against agreed criteriaUses advanced decision-making processes to solve problems

Unit Mapping Information

Supersedes and is not equivalent to:

- ICTICT503 Validate quality and completeness of system design specifications
- ICTICT506 Implement process re-engineering strategies.

Assessment Requirements for ICTICT533 Conduct quality audit of IT system design specifications

Modification History

Release	Comments
Release 1	<p>This version first released with the Information and Communications Technology Training Package Version 8.0.</p> <p>Supersedes and is not equivalent to:</p> <ul style="list-style-type: none">• ICTICT503 Validate quality and completeness of system design specifications• ICTICT506 Implement process re-engineering strategies.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- conduct at least one quality audit of the design specifications of at least two different information technology (IT) systems, where the work must include:
 - evaluating at least three different aspects of an organisation's system design
 - identifying at least one system control weakness and at least one system control deficiency.

In the course of the above, the candidate must:

- create audit documentation according to organisational and legislative requirements
- apply required organisational policies and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- methods to:
 - develop audit criteria and quality benchmarks
 - access IT systems for quality audit
 - conduct quality audits of IT system designs
 - identify IT system non-compliance, control deficiencies and weaknesses

- functions and features of IT automated and manual controls
- types of IT included in system audits, including:
 - programs
 - program developments and changes
 - computer operations
- types of tools and resources used for quality audits
- types of audit documentation techniques
- methods to:
 - compare audit findings against system contracts
 - disclose audit findings
- features and applications of audit plans, including:
 - audit criteria and quality benchmarks that reflect organisational and legislative requirements
 - methods for auditing IT system design and identifying IT system control deficiencies and weaknesses
 - resources required to undertake quality audit
 - projected timelines
- types of system design principles, specification standards and system contracts
- organisational formats for documentation and reporting audit findings
- organisational policies and procedures, and legislative requirements relating to work tasks.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- software, hardware and resources required to conduct quality audits
- live IT system, including database, system files and designed interface
- technical specifications of system design
- work brief and organisational policies and procedures required to demonstrate the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT611 Develop ICT strategic business plans

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to create strategic in alignment with organisational Information and Communications Technology (ICT) goals and strategies.

It applies to those who work as senior ICT professionals, across various ICT specialisms and are required to develop strategies and action plans for implementation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Develop and share mission and vision statement	1.1 Review organisation's mission statement 1.2 Develop and document organisation's vision statement 1.3 Submit documentation to required personnel and seek and respond to feedback 1.4 Communicate mission and vision statements to required personnel
2. Assess organisational environment	2.1 Evaluate and document organisation's internal environment 2.2 Evaluate organisation's external environment and document findings 2.3 Determine and document trends, developments and

ELEMENT	PERFORMANCE CRITERIA
	critical issues impacting the organisation
3. Set objectives and targets	3.1 Develop and document organisation's objectives and targets 3.2 Develop and document strategies that meet organisational objectives, mission and values 3.3 Determine and document strategy and objective constraints
4. Finalise strategic plan	4.1 Submit all documentation and request feedback 4.2 Incorporate required changes and improvements 4.3 Obtain final task sign off from required personnel

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Description
Numeracy	<ul style="list-style-type: none"> Uses a range of statistical, mathematical and financial calculations and functions to interpret numerical data relating to SWOT analysis and time and financial constraints
Oral communication	<ul style="list-style-type: none"> Uses listening, probing and open questioning techniques to clarify and present information according to requirements and audience
Reading	<ul style="list-style-type: none"> Identifies, analyses and evaluates complex text, diagrams, business models, industry trends, statistical information and financial information
Writing	<ul style="list-style-type: none"> Integrates information and ideas from different sources, utilising appropriate strategic planning tools, specialised and cohesive language and formal document structures
Initiative and enterprise	<ul style="list-style-type: none"> Identifies the strategic and operational potential of digital trends to achieve work goals, enhance work processes, create opportunities and reduce risks
Problem solving	<ul style="list-style-type: none"> Identifies a range of factors that impact on a decision, including own values and principles, the needs, power, values, beliefs and assumptions of stakeholders Recognises problem areas and identifies possible solutions
Self-management	<ul style="list-style-type: none"> Takes a lead role in the development of organisational goals, roles and responsibilities Identifies importance of clarifying, focusing and aligning goals

Skill	Description
	<p>and expectations, and develops ownership of and broad commitment to achieving outcomes</p> <ul style="list-style-type: none">• Develops and implements strategies that ensure organisational policies, procedures and regulatory requirements are being met

Unit Mapping Information

Supersedes and is equivalent to ICTICT601 Develop ICT strategic and action plans.

Assessment Requirements for ICTICT611 Develop ICT strategic business plans

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- document plan, processes and outcomes and incorporate changes on at least one occasion.

In the course of the above, the candidate must:

- develop, review and contribute to business vision statements and strategic plans.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- analysis and planning approaches to technical problems and management requirements relating to network ICT security guidelines of the organisation
- SWOT analysis methodology
- an organisation's approach to:
 - monitoring strategic directions
 - setting objectives and targets
 - selecting hardware platform
- evaluation methods used when forecasting for planning, including:
 - system functionality, including ICT trends and developments
 - internal and external operating environments
 - operating systems supported by the organisation.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- budget and time constraints
- business objectives
- business risks.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT612 Develop contracts and manage contract performance

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to negotiate and document contractual arrangements between clients and vendors and to monitor and manage performance against agreed contractual obligations.

The unit applies to those in senior Information and Communications Technology (ICT) management roles who are required to contract both staff and suppliers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Establish contract	1.1 Determine and document boundaries of the contract according to organisational requirements 1.2 Determine and document contract requirements according to organisational requirements 1.3 Determine and document required performance criteria 1.4 Obtain client and vendor feedback to clarify problems
2. Monitor performance and facilitate negotiations	2.1 Confirm implementation of contractual obligations 2.2 Confirm and document performance against required performance criteria and contractual

ELEMENT	PERFORMANCE CRITERIA
	obligations 2.3 Facilitate negotiations to resolve problems and misunderstandings
3. Conclude performance outcomes and recommendations	3.1 Determine and document organisational alignment to documented performance 3.2 Determine and document unsatisfactory performance 3.3 Determine and document recommendations for contractual variations 3.4 Submit document to required personnel and seek and respond to feedback

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Numeracy	<ul style="list-style-type: none"> Draws from a range of mathematical and financial calculations to determine and monitor contractual milestones, costs and budgetary constraints
Oral communication	<ul style="list-style-type: none"> Demonstrates use of listening and probing and open questioning techniques to elicit the views and opinions of others and obtain information and feedback
Reading	<ul style="list-style-type: none"> Analyses a variety of organisational documentation, vendor and client information, technical specifications and financial data
Writing	<ul style="list-style-type: none"> Integrates information and requirements from a number of sources using correct spelling and grammar, specialised and cohesive language and formal contract documentation structures
Teamwork	<ul style="list-style-type: none"> Demonstrates active identification of the requirements of important communication exchanges, selecting appropriate channels, format, tone and content to suit purpose and audience
Planning and organising	<ul style="list-style-type: none"> Develops plans to manage relatively complex, non-routine tasks with an awareness of how they may contribute to longer term operational and strategic goals
Problem solving	<ul style="list-style-type: none"> Demonstrates an understanding of context to identify anomalies and subtle deviations to normal expectations, focussing attention on critical issues and variables and filtering out peripheral issues
Technology	<ul style="list-style-type: none"> Recognises and identifies strategic and operational potential of digital trends to achieve work goals, enhance work processes,

Skill	Description
	create opportunities and reduce risks

Unit Mapping Information

Supersedes and is equivalent to ICTICT602 Develop contracts and manage contracted performance.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTICT612 Develop contracts and manage contract performance

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- negotiate and formulate at least one contract.

In the course of the above, the candidate must:

- document processes and outcomes
- monitor performance outcomes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard analysis and planning approaches to technical problems and management requirements including:
 - organisational values
 - purpose in context of formulating contracts
- methods for evaluating and forecasting vendor and technology trends
- contracting requirements related to Information and Communications Technology (ICT)
- methods of purchasing ICT equipment and services, such as negotiating extensive organisational support contracts
- industry standards in relation to service and product agreements.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- organisational policies and procedures
- industry standard service and product agreements
- detailed information relating to business strategic plan and objectives.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT613 Manage the use of development methodologies

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to evaluate and determine required traditional and non-traditional systems development methodologies for use by a team.

The unit applies to those in senior Information and Communications Technology (ICT) management roles who are required to manage development teams.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine appropriate development methodology	1.1 Determine, document and define subject activity 1.2 Define and document selection of development methodology criteria 1.3 Evaluate industry standard traditional and non-traditional system development methodologies 1.4 Determine system development methodology according to organisational requirements 1.5 Submit documentation to required personnel and seek and respond to feedback
2. Review development methodology	2.1 Review project plan and determine suitability to guide developmental processes and adjust according 2.2 Review identification and description of required task

ELEMENT	PERFORMANCE CRITERIA
	<p>types and adjust according to development methodology</p> <p>2.3 Review definition of appropriate control structures that need to be created during task type execution</p> <p>2.4 Review identification of resources to support methodology selection</p>
3. Direct development methodology use	<p>3.1 Monitor application of required methodology to solve tasks</p> <p>3.2 Monitor the project flow and effectiveness of use of methodology against project plan</p> <p>3.3 Review documented opportunities for improvement, lessons learned and recommendations for future projects</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Oral communication	<ul style="list-style-type: none"> Uses specific and complex systems development terminology to liaise with project leader, review methodology and monitor the project
Reading	<ul style="list-style-type: none"> Identifies, analyses and evaluates a range of online and hard copy organisational documentation and technical information containing complex, systems development specific terminology, syntax and diagrams and applies the information to the task
Writing	<ul style="list-style-type: none"> Uses correct spelling, grammar and plain English together with a range of systems development specific terminology and computer-generated diagrams
Planning and organising	<ul style="list-style-type: none"> Develops plans to manage relatively complex, non-routine tasks with an awareness of how they may contribute to longer term operational and strategic goals Uses systematic analytical processes in complex, non-routine situations, setting goals, gathering relevant information and identifying and evaluating options against agreed criteria
Problem solving	<ul style="list-style-type: none"> Identifies relevant information and ideas from a range of messages and oral and written exchanges, paying some attention to the meanings attached to the choice of form, channel and wording

Unit Mapping Information

Supersedes and is equivalent to ICTICT603 Manage the use of appropriate development methodologies.

Assessment Requirements for ICTICT613 Manage the use of development methodologies

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- evaluate and apply at least three different development methodologies and their application to a development project.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- organisational business domain and organisational requirements
- life cycle maintenance of a live system, network or website applicable to managing the use of appropriate development methodologies
- technology requirements involved for a range of development methodologies relating to managing the use of appropriate development methodologies
- industry standard development methodologies applicable to managing the use of appropriate development methodologies.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- design specifications and development methodologies
- organisational standards for documentation and version control
- detailed user requirements document, including model and scope
- a project plan.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT614 Identify and implement business innovation

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to analyse traditional business processes to identify and implement business opportunities for innovation and reform.

The unit applies to those in senior Information and Communications Technology (ICT) in areas of knowledge management and systems development, who are responsible for analysing, identifying and coordinating ICT business solutions.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Compare business with competitor businesses	1.1 Identify information on business markets, customers and methods of doing business 1.2 Analyse market for business and customer base 1.3 Analyse business relationships, processes and methods of doing business with e-facilitated businesses
2. Identify business opportunities	2.1 Identify organisational innovation and reform strategies 2.2 Determine strategy compatibility against organisational goals and objectives and conduct a cost-benefit analysis according to organisational requirements 2.3 Evaluate degree of likely change and organisational ramifications according to task requirements

ELEMENT	PERFORMANCE CRITERIA
	2.4 Conduct risk management analysis and formulate a contingency plan according to organisational requirements 2.5 Determine future proofed innovation strategies according to organisational requirements
3. Implement innovation	3.1 Redesign innovation for organisation and implement online technologies according to organisational strategy requirements 3.2 Integrate innovation according to organisational requirements 3.3 Review organisational innovation against organisational requirements outcomes 3.4 Determine organisational innovation requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Numeracy	<ul style="list-style-type: none"> Uses a range of statistical, mathematical and financial calculations and functions to interpret numerical data relating to cost-benefit analysis, risk, time constraints and to monitor implementation of the reform
Reading	<ul style="list-style-type: none"> Analyses and evaluates complex textual information to obtain information relevant to the organisation and the development of the innovative reforms
Writing	<ul style="list-style-type: none"> Integrates information and ideas from a number of sources, utilising appropriate strategic planning and business innovation tools, specialised and cohesive language and formal document structures to meet the varied requirements of the organisation and the stakeholders
Planning and organising	<ul style="list-style-type: none"> Operates from a broad conceptual plan, developing the operational detail in stages, regularly reviewing priorities and performance during implementation, and identifying and addressing issues
Problem solving	<ul style="list-style-type: none"> Analysis, lateral thinking, experience and knowledge to address complex problems Demonstrates an understanding of the ways in which variables impact on decision outcomes Demonstrates an understanding of the strategic and operational potential of digital trends to achieve work goals, enhance work processes, create opportunities and enhance or reduce risks

Skill	Description
Self-management	<ul style="list-style-type: none">Responds to both implicit and explicit protocols within familiar work contexts and demonstrates an understanding of the importance of identifying and responding to protocols in new situations

Unit Mapping Information

Supersedes and is equivalent to ICTICT604 Identify and implement business innovation.

Assessment Requirements for ICTICT614 Identify and implement business innovation

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- define, develop and implement a complex innovation plan.

In the course of the above, the candidate must:

- define the organisation's strategic directions
- develop innovations to assist the business
- produce a cost-benefit analysis of suggested innovations.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- organisation's culture and traditional organisational models
- internal and external sources of information relating to identifying and implementing business innovation
- legal, ethical and security issues relating to business strategies
- records management principles and processes
- legislation from levels of government that effect business operation.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- organisational documents including mission statements and strategic directions
- an environment where business opportunities for innovation may be implemented.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT615 Implement knowledge management strategies

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to implement, monitor and review knowledge management strategies.

The unit applies to those in senior Information and Communications Technology (ICT) roles including knowledge management and systems development teams.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Implement knowledge management system and procedures	1.1 Determine formal and informal incentives and reward policy for information knowledge sharing 1.2 Implement knowledge sharing policy according to organisational needs 1.3 Determine methods of contributing to the organisation's knowledge management system 1.4 Determine user support strategies 1.5 Determine knowledge and information protection and security access levels
2. Maintain business knowledge base	2.1 Test input procedures and align to organisational needs 2.2 Collect and analyse data and align to organisational

ELEMENT	PERFORMANCE CRITERIA
	needs 2.3 Implement contingency measures and address non-aligned procedures and incorrect data capture
3. Review knowledge management system	3.1 Evaluate knowledge management system procedures against organisational requirements 3.2 Review organisational knowledge content for accuracy and currency 3.3 Determine and document required system improvements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Learning	<ul style="list-style-type: none"> Demonstrates an understanding the critical importance of the ongoing exploration of new ideas to the viability and effectiveness of a work situation Uses each experience to reflect on the ways in which variables impact on decision outcomes
Numeracy	<ul style="list-style-type: none"> Uses a range of statistical, mathematical and financial calculations and functions, and relevant software tools to interpret data, review knowledge bank efficiency and develop a cost-benefit analysis
Reading	<ul style="list-style-type: none"> Critically evaluates a wide variety of textual information to ensure current accuracy of knowledge bank
Writing	<ul style="list-style-type: none"> Integrates information and ideas from a number of sources using clear, logical document structures, relevant terminology and correct grammatical structures
Teamwork	<ul style="list-style-type: none"> Collaborates with others to achieve joint outcomes, playing an active role in facilitating effective group interaction, influencing direction and taking leadership role on occasion
Planning and organising	<ul style="list-style-type: none"> Operate from a broad conceptual plan, developing the operational detail in stages, regularly reviewing priorities and performance during implementation, identifying and addressing issues
Problem solving	<ul style="list-style-type: none"> Demonstrates an understanding of the strategic and operational potential of digital trends to achieve work goals, enhance work processes, create opportunities and enhance or reduce risks May intuitively hone in on problem areas and identify a small set

Skill	Description
	<p>of possible appropriate solutions</p> <ul style="list-style-type: none">• Makes a range of critical and non-critical decisions in relatively complex situations, taking a range of constraints into account
Self-management	<ul style="list-style-type: none">• Responds to both explicit and implicit protocols within familiar work contexts and demonstrates an understanding of the importance of identifying and responding to workplace policies and procedures

Unit Mapping Information

Supersedes and is equivalent to ICTICT605 Implement a knowledge management strategy.

Assessment Requirements for ICTICT615 Implement knowledge management strategies

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop and implement a complex knowledge management system.

In the course of the above, the candidate must:

- review and improve systems and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- knowledge management uses, systems and structures in a contemporary organisation
- database design concepts that apply to management knowledge
- methodologies to quantify internal and external sources of information
- legal, ethical and security issues relating to knowledge management
- records management principles that apply to implementing knowledge management strategies
- legislation from levels of government that effect business operation.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- organisation's structure, goals and knowledge requirements
- organisational business plans
- existing knowledge management strategies.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT616 Develop communities of practice

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to identify areas that would benefit from communities of practice (CoPs) and to develop communities.

The unit applies to senior Information and Communications Technology (ICT) management professionals responsible for teams and their output.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify community of practice requirements	1.1 Develop and document organisational knowledge map 1.2 Identify existing informal communities of practice (CoPs) 1.3 Determine and document needs and benefit of CoPs 1.4 Identify groups in disparate areas that share work goals
2. Devise spaces for involvement	2.1 Research and determine electronic meeting space according to group requirements 2.2 Search and secure shared storage in public and private areas 2.3 Enable group mailing capability 2.4 Enable other required technical facilitators

ELEMENT	PERFORMANCE CRITERIA
3. Invite participation	3.1 Publicise and promote CoP collaborative tools according to group requirements 3.2 Host and invite required personnel to group events 3.3 Allow new groups to coalesce 3.4 Accept different levels of participation
4. Assist evolution of community	4.1 Facilitate regular contact within CoPs 4.2 Enable evolution of CoPs 4.3 Seek feedback from group participants and change CoP accordingly

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Learning	<ul style="list-style-type: none"> Actively identifies, creates and utilises linkages to enhance knowledge sharing, idea creation, individual and collective engagement and work outcomes
Oral communication	<ul style="list-style-type: none"> Uses the appropriate tone of voice, encouraging body language, plain English and a courteous manner when encouraging participation and facilitating CoPs
Reading	<ul style="list-style-type: none"> Identifies and reviews a wide variety of text sourced from organisational documentation, electronic meeting places and the organisational knowledge bank to determine relevant and key information
Writing	<ul style="list-style-type: none"> Uses persuasive writing, correct spelling, appropriate grammatical structures and a broad range of vocabulary, including idioms, colloquialisms and technical terminology, and applies document structures suitable to the document type
Teamwork	<ul style="list-style-type: none"> Fosters a collaborative culture within own sphere of influence, facilitating a sense of commitment and cohesion, and highlighting and using the strengths of those involved
Planning and organising	<ul style="list-style-type: none"> Takes responsibility for defining key aspects of own workload, balancing own needs and priorities with those of the work group
Problem solving	<ul style="list-style-type: none"> Actively identifies systems, devices and applications with potential to meet current and future needs

Unit Mapping Information

Supersedes and is equivalent to ICTICT606 Develop communities of practice.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTICT616 Develop communities of practice

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- identify, map and facilitate a community of practice (CoP) with more than three people.

In the course of the above, the candidate must:

- facilitate effective interaction and communicate within the group
- define purpose and intent of a CoP.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- ‘communities of practice’ features and purpose
- organisational structures, goals and knowledge and how they apply to CoPs
- communications enabling technologies that apply to developing communities of practice
- group dynamics and its impact on building CoPs in an organisational setting
- methodologies to promote, market and engage with CoPs and the enabling technologies.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- an organisational structure, goals and knowledge
- a site where CoP may be developed
- personnel that forms a community
- user device.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT617 Lead the evaluation and implementation of current industry specific technologies

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to lead the identification, management and implementation of specific industry technologies to meet identified industry standards.

The unit applies to those in senior Information and Communications Technology (ICT) leadership roles, who review and research methodologies to improve aspects of an organisation's activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Lead implementation of technologies	1.1 Determine specific industry technologies according to organisational and industry standards 1.2 Determine technology requirements 1.3 Plan implementation of industry specific technologies according to organisational and industry standards
2. Direct application of industry specific technologies	2.1 Lead management of industry specific technology according to organisational and industry standards testing 2.2 Direct implementation of specific features and

ELEMENT	PERFORMANCE CRITERIA
	<p>functions of industry specific technologies</p> <p>2.3 Determine alignment of implemented technologies to organisational requirements</p>
3. Lead review, analysis and evaluation of the technology performance	<p>3.1 Lead analysis of the technology implementation according to organisational and industry standards</p> <p>3.2 Analyse, review and evaluate benefits to organisation</p> <p>3.3 Determine environmental considerations involved with using the technology</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Oral communication	<ul style="list-style-type: none"> Uses clear, easy-to-understand language together with effective listening and open questioning techniques to elicit information
Reading	<ul style="list-style-type: none"> Identifies and interprets technical online and hard copy documentation that will enable the organisation
Writing	<ul style="list-style-type: none"> Uses vocabulary, grammatical structures, specific terminology and document structure relevant to the job role and organisation Uses plain English and appropriate questioning strategies, avoiding loaded or leading questions, when developing feedback gathering documentation
Planning and organising	<ul style="list-style-type: none"> Develops plans to manage relatively complex non-routine tasks with an awareness of how they may contribute to longer term strategic goals
Problem solving	<ul style="list-style-type: none"> Makes a range of critical and non-critical decisions in relatively complex situations, taking a range of constraints into account
Self-management	<ul style="list-style-type: none"> Demonstrates an understanding of the implications of legal and regulatory responsibilities related to own work, with specific reference to environmental considerations
Technology	<ul style="list-style-type: none"> Demonstrates an understanding of key principles and concepts underpinning the design and operation of digital systems and tools, and applies these when troubleshooting existing technology and when seeking to understand the potential of new technology

Unit Mapping Information

Supersedes and is equivalent to ICTICT609 Lead the evaluation and implementation of current industry specific technologies.

Companion Volume Implementation Guide is found on VETNet -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=a53af4e4-b400-484e-b778-71c9e9d6aff2>

Assessment Requirements for ICTICT617 Lead the evaluation and implementation of current industry specific technologies

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- identify, document and lead a review of at least one new and established and at least one emerging technology.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard technology trends and directions in Information and Communications Technology (ICT) sector
- features and uses of industry standards relevant to new technologies
- industry standard vendor products features, functions and uses relevant to existing and new technologies
- information gathering techniques relevant to evaluating new technologies
- general features, capabilities and application of industry standard hardware and software products.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site where industry specific technologies may be used
- industry specific technologies currently used in industry.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT618 Manage IP, ethics and privacy in ICT environments

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to manage the issues of intellectual property (IP), copyright and professional and ethical conduct in a team and to ensure that personal information of stakeholders is handled in a confidential and professional manner.

The unit applies to those operating at a senior level in an organisation with a high degree of autonomy in managing policies and system security.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Manage adherence to IP regulations	1.1 Review and summarise outcomes of Australian IP and copyright law relating to Information and Communications Technology (ICT) 1.2 Determine and document alignment of Australian IP law to organisational requirements 1.3 Develop and document review plan of organisation's adherence to Australian IP law 1.4 Submit document to required personnel and seek and respond to feedback
2. Manage ethical behaviour	2.1 Review organisational and ICT specific code of ethics and summarise outcomes

ELEMENT	PERFORMANCE CRITERIA
	2.2 Determine and document alignment of code of ethics and conduct against organisational operations 2.3 Develop and document review plan of organisation's adherence to code of ethics and conduct 2.4 Establish review and grievance procedure and confidential reporting of ethical issues 2.5 Submit document to required personnel and seek and respond to feedback
3. Manage privacy	3.1 Determine and document regular review plan and align to required legislation and standards 3.2 Determine and document integrity, confidentiality, security and availability of information 3.3 Determine and document review plan for continued confidentiality and proprietary rights of stakeholders' interests 3.4 Submit documentation to required personnel and seek and respond to feedback 3.5 Implement new work procedures according to review plan

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Oral communication	<ul style="list-style-type: none"> Participates in a verbal exchange of ideas and elicits the view and opinions of others by using effective listening and open questioning techniques
Reading	<ul style="list-style-type: none"> Identifies, analyses and evaluates complex text to determine legislative requirements and organisational standards and applies the information
Writing	<ul style="list-style-type: none"> Integrates information and ideas from a number of sources, utilising appropriate support materials, specialised and cohesive language and a range of writing styles and document structures
Teamwork	<ul style="list-style-type: none"> Actively identifies the requirements of important communication exchanges, selecting appropriate channels, format, tone and content to suit purpose and audience, and monitoring impact
Planning and organising	<ul style="list-style-type: none"> Plans strategic priorities and outcomes within a flexible, efficient and effective context in a diverse environment exposed to competing demands

Skill	Description
	<ul style="list-style-type: none">• Demonstrates an understanding of the application of key principles in a particular context, the appropriateness and effectiveness of different sources of information and planning processes for that context, and the potential implications for future situations
Problem solving	<ul style="list-style-type: none">• Demonstrates a nuanced understanding of context to identify anomalies and subtle deviations to normal expectations, focusing attention and remedying problems as they arise
Self-management	<ul style="list-style-type: none">• Takes full responsibility for identifying and considering relevant legal and regulatory obligations when managing copyright, ethics and privacy in an ICT environment• Takes a lead role in the development of organisational goals, roles and responsibilities• Monitors and reviews the organisation's policies, procedures and adherence to legislative requirements in order to implement and manage change
Technology	<ul style="list-style-type: none">• Demonstrates an understanding of the broader positive and negative implications of new technologies, and acknowledges the vital importance of system security and storage management

Unit Mapping Information

Supersedes and is equivalent to ICTICT610 Manage copyright, ethics and privacy in an ICT environment.

Assessment Requirements for ICTICT618 Manage IP, ethics and privacy in ICT environments

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- analyse legislation and standards and contribute to the review of at least three different policies including IP, ethical conduct and privacy in an organisation.
- In the course of the above, the candidate must:
- communicate policy change to required personnel.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- federal and state/territory legislation and policy relevant to an ICT environment relating to:
 - copyright and intellectual property
 - privacy
- processes and procedures by which an organisation communicates its policies and procedures
- organisational requirements for customer service relating to managing copyright, ethics and privacy in ICT environments
- industry standard ICT system security systems and procedures relating to managing IP, copyright, ethics and privacy in ICT environments.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required organisational policies
- legislation and standards documentation
- industry codes of practice.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT818 Develop knowledge management strategies

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to evaluate existing knowledge management processes, identify barriers to capturing knowledge and to develop new strategies.

It applies to individuals who work in senior management positions and lead the analysis, implementation and management of emerging, and converging, information and communications technology (ICT) as they are integrated into the business process to support the organisational strategic goals.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Evaluate existing knowledge management systems	1.1 Discuss existing knowledge management strategies with relevant personnel and identify advantages and disadvantages 1.2 Identify differences between knowledge management and information management systems within the organisation 1.3 Evaluate and confirm existing procedures and systems against organisational frameworks 1.4 Identify the need for improvements in the use of knowledge in the organisation
2. Evaluate knowledge	2.1 Investigate barriers to capturing knowledge within the

ELEMENT	PERFORMANCE CRITERIA
management options	<p>organisation</p> <p>2.2 Review evaluations and recommendations of knowledge management software obtained from relevant personnel</p> <p>2.3 Propose software to be implemented within the organisation according to organisational requirements and procedures</p> <p>2.4 Review investigations into incentives and reward systems that support knowledge management</p> <p>2.5 Confirm required processes for maintaining integrated knowledge management systems are documented by the organisation</p> <p>2.6 Determine the viability of selected options and present ideas to relevant personnel in a business case</p>
3. Improve existing knowledge management systems	<p>3.1 Implement recommended software following consultation with relevant personnel</p> <p>3.2 Discuss and confirm how the improved strategy supports knowledge management and organisational needs and budget requirements with relevant personnel</p> <p>3.3 Discuss and confirm whether processes for periodic reviews of knowledge management metrics are in place with relevant personnel</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> • Uses mathematical and financial calculations and functions and required software tools • Interprets and develops numerical and financial reports
Oral communication	<ul style="list-style-type: none"> • Uses listening and open questioning techniques, to elicit the views and opinions of others and to obtain information • Participates in a verbal exchange of ideas and solutions • Uses required grammatical structures, specialised language, required tone, pitch and body language, to achieve precise meaning when articulating requirements
Reading	<ul style="list-style-type: none"> • Identifies and reviews complex textual information, sourced from organisational documentation, electronic meeting places, communities of practice and ICT vendors
Writing	<ul style="list-style-type: none"> • Selects formal document structure, organisational style and format, and subject-specific language, grammar and terminology, to develop

SKILL	DESCRIPTION
	organisational documentation
Initiative and enterprise	<ul style="list-style-type: none">• Takes responsibility for high-impact decisions in complex situations involving many variables and constraints
Problem solving	<ul style="list-style-type: none">• Uses mixes of intuitive and formal processes to identify key information and issues, evaluate alternative strategies, anticipate consequences and deals with implementation issues, and contingencies• Evaluates principles, concepts and features of new perspectives and ideas to solve problems
Self-management	<ul style="list-style-type: none">• Monitors adherence to organisational policies and procedures, and considers own role in terms of a contribution to the broader goals of the work environment
Technology	<ul style="list-style-type: none">• Considers the strategic and operational potential of digital trends to achieve work goals, enhance work processes, create opportunities and reduce risks

Unit Mapping Information

Supersedes and is equivalent to ICTICT808 Direct the development of a knowledge management strategy for a business.

Assessment Requirements for ICTICT818 Develop knowledge management strategies

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop at least one knowledge management business strategy for at least one organisation.

In the course of the above, the candidate must:

- summarise management concepts, processes and trends
- apply legal, ethical and security issues relating to knowledge management
- discuss records management and database management principles as they relate to knowledge management, particularly metadata.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- concepts, processes and trends for information and communications technology (ICT) organisational knowledge management
- advantages and disadvantages of knowledge management strategies
- differences between knowledge management and information management systems
- features of organisational knowledge management frameworks
- organisational policies, procedures, and legislation, that affect business operations
- functions and features of metadata
- legal, ethical and security issues relating to knowledge management
- organisational change-management theory and methods
- records management and database-management principles and how they relate to knowledge management, particularly metadata.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a workplace of sufficient complexity, to enable the required level of analysis to be carried out in relation to:
 - current business processes
 - existing knowledge management systems
 - the organisational culture
- relevant enterprise strategic documentation, including:
 - strategic planning
 - financial
 - ICT infrastructure
- organisational objectives and policies.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT819 Lead analysis of information and communications technology business strategy

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to lead analysis of an information and communications technology (ICT) business strategy within medium-to-large organisations.

It applies to individuals who work in high-level management positions in medium-to-large organisations and who manage the strategic planning, risk management, and security of internal and external ICT infrastructure of their organisation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare in-scope ICT business areas for analysis	1.1 Discuss and identify areas of the ICT business environment to be analysed with relevant personnel 1.2 Obtain supporting organisational documentation for ICT areas 1.3 Confirm supporting documentation is accurate and complete, according to enterprise methodology 1.4 Negotiate the complexity, required resources, deliverables and timelines of the ICT analysis with relevant personnel
2. Analyse ICT business strategy	2.1 Select modelling and researching tools used for analysing ICT business strategies 2.2 Research and explain to personnel how the industry, economic

ELEMENT	PERFORMANCE CRITERIA
	<p>and market factors of the business, drive the ICT business strategy</p> <p>2.3 Develop a framework for ICT business strategy assessment</p> <p>2.4 Develop change request process</p> <p>2.5 Assess the ICT business strategy against the developed framework and report findings according to organisational requirements</p>
3. Finalise analysis of ICT business strategy	<p>3.1 Complete documentation and review for accuracy and completeness</p> <p>3.2 Report outcomes of analysis to relevant personnel</p> <p>3.3 Complete documentation and obtain required signoffs</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Uses statistical and financial calculations and functions to interpret and compile data relating to market analysis and budgetary requirements
Oral communication	<ul style="list-style-type: none"> Elicits the view and opinions of others, and obtains information by listening and questioning Articulates requirements and strategies clearly, using the required tone, style, body language, and reflective responses, to build business relationships
Reading	<ul style="list-style-type: none"> Identifies, analyses and evaluates complex textual information, to obtain information relevant to enterprise resource planning and management
Writing	<ul style="list-style-type: none"> Integrates information and ideas from a number of sources, utilising required ICT modelling tools, specialised and cohesive language, and document structures, to meet the varied requirements of the enterprise and stakeholders
Planning and organising	<ul style="list-style-type: none"> Develops plans for complex, high-impact activities with strategic implications
Initiative and enterprise	<ul style="list-style-type: none"> Takes initiative to innovate beyond own context, borrowing, adapting, combining and redesigning for own purposes, or using as a provocation, to rethink current approaches
Self-management	<ul style="list-style-type: none"> Takes full responsibility for considering own role in terms of a contribution to the broader goals of the work environment Takes responsibility for high-impact decisions in complex situations, involving many variables and constraints

SKILL	DESCRIPTION
Technology	<ul style="list-style-type: none">• Demonstrates a sophisticated understanding of the principles, concepts, language and practices associated with the digital world, and uses these to troubleshoot, and understands the uses and potential of new technologies

Unit Mapping Information

Supersedes and is equivalent to ICTICT809 Facilitate business analysis.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTICT819 Lead analysis of information and communications technology business strategy

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- lead analysis of at least two information and communications technology (ICT) business strategies.

In the course of the above, the candidate must:

- analyse business strategy for risk assessment procedures, including security for ICT assets, and confirm that the measures required to mitigate risk are applied
- determine whether the implementation of the required processes and procedures confirm that quality expectations are met.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- AS/NZS ISO 31000:2009 "risk management requirements"
- business factors which impact upon characteristics of ICT environments
- organisational policies and procedures, including those for:
 - ICT risk management strategies
 - addressing change requests
 - analytical project completion requirements
- frameworks used to assess ICT business strategies and role of enterprise methodology in analysing ICT business strategies
- applications of security products
- possible ICT business continuity issues and resolutions.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- strategic-level enterprise documentation required for analysis, including planning, financial and ICT infrastructure documentation
- legislative policies required for leading analysis of ICT business strategies.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTICT822 Manage automated ICT system applications

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to apply the enterprise-wide operating system to system automation in a distributed computing environment as used in network applications.

It applies to network engineers who manage automated systems within a network and includes databases, files systems and user administration.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare enterprise-wide operating systems	<p>1.1 Obtain work details and scope from relevant personnel and arrange for access to information and communications technology (ICT) systems applications in compliance with security arrangements, legislation, codes, regulations and standards</p> <p>1.2 Modify boot options and run enterprise-wide operating systems, according to agreed scope and organisational requirements</p> <p>1.3 Shutdown the scoped networked operating system according to organisational procedures</p> <p>1.4 Manage file commands and wildcards according to system requirements</p> <p>1.5 Identify system commands and mount and unmount file systems</p>

ELEMENT	PERFORMANCE CRITERIA
	1.6 Verify the integrity of file systems and configure networking applications 1.7 Analyse, evaluate and apply enterprise-wide operating system features to given networking multi-user applications
2. Apply system functions	2.1 Utilise command line interfaces and interact with shells and commands to the networking application on distributed computing 2.2 Manage files and apply regular expressions with system functions 2.3 Identify text utilities and send text files and output streams 2.4 Evaluate and apply enterprise-wide operating system functions to a networking application on distributed computing and create menu options
3. Manage user login environment and customisation	3.1 Manage user and group accounts to the networking application on distributed computing 3.2 Change user and group profiles to allowed security access level 3.3 Scan log files and identify activity 3.4 Configure user environments for setting users and global profiles 3.5 Record required configuration settings
4. Manage system level functions	4.1 Identify the system 'cron' command and automate scheduling 4.2 Analyse the need for backup strategy in the required network application 4.3 Plan a backup strategy to maintain redundancy of the system 4.4 Configure the system to perform scheduled file backups to various media 4.5 Verify integrity of backup operations by restoring system using backup files 4.6 Configure system log files for administration and security needs 4.7 Manage a print server and print files to provide customer service 4.8 Document the configuration backup schedules and system logs
5. Complete evaluation and configuration documentation	5.1 Produce a report on the application of Unix features to given networking multi-user applications that use distributed computing 5.2 Document recommendations on system improvements according to organisational requirements 5.3 Produce a report on the management and configuration of user applications and system level functions

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none">• Applies a wide range of highly developed mathematical and problem-solving strategies and techniques to a wide range of contexts
Oral communication	<ul style="list-style-type: none">• Presents complex and spoken communication in a broad range of contexts
Reading	<ul style="list-style-type: none">• Evaluates and critiques ideas and information from a range of complex texts
Writing	<ul style="list-style-type: none">• Generates complex written texts demonstrating sophisticated writing skills
Planning and organising	<ul style="list-style-type: none">• Plans strategic priorities and outcomes when exposed to competing demands• Makes high-impact decisions in a complex and diverse environment, using input from a range of sources• Identifies key factors that impact on decisions and their outcomes, drawing on experience, competing priorities, and decision-making strategies where required
Problem solving	<ul style="list-style-type: none">• Explores and incubates new and innovative ideas through unconstrained analysis and critical thinking to develop and improve the organisations goals
Technology	<ul style="list-style-type: none">• Uses digital technologies to manage business operations and actively investigates new technologies for strategic and operational purposes

Unit Mapping Information

Supersedes and is equivalent to ICTICT815 Manage automated ICT system applications using enterprise wide operating system.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTICT822 Manage automated ICT system applications

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- manage at least one automated information and communications technology (ICT) system application.

In the course of the above, the candidate must:

- use functions using enterprise-wide operating systems
- analyse system functions based on data
- produce at least one report that evaluates the system
- document recommendations for system improvements.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- organisational regulations and procedures, regarding:
 - obtaining work details and scope from relevant personnel
 - arranging access to ICT systems applications
 - network security arrangements
 - report sign-off procedures
 - running enterprise-wide operating systems
- functions and features of:
 - enterprise-wide operating systems
 - automated ICT systems
 - networking multi-user applications
 - networking infrastructure
 - software simulation

- multiuser networking systems
- distributed computing functions
- disk partitions
- media file systems
- system commands
- special permission modes
- 'cron' commands
- automated scheduling
- command line interfaces
- networking shells and commands
- text files and utilities
- data backup strategies
- unifix features
- modifying boot options
- methods to shutdown operating network systems
- system requirements for managing file commands and wildcards
- mounting and unmounting file systems
- utilising command line interfaces
- interacting with shells and network commands
- managing user and group accounts in networking applications
- scanning log files for activity
- configuring network applications
- encoding and programming techniques
- analysing and reporting on network security arrangements
- enterprise-wide operating system commands.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a telecommunications operations site
- unix-based system
- special purpose tools, equipment and materials
- industry software packages
- enterprise objectives and policies.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTIO T501 Install IoT devices and networks

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to install IoT (Internet of Things) devices and networks, including connecting, programming and testing the networks and devices for functionality against a given performance objective.

It applies to those in roles including software developers, programmers or network engineers, working as embedded systems engineers, IoT developers or senior software developers, and who have basic knowledge of electrical engineering.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Internet of Things (IoT)

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to install devices	<ul style="list-style-type: none">1.1 Establish and confirm IoT device and network task requirements1.2 Determine and document different environmental factors in which sensors and IoT devices will be deployed1.3 Gather and document IoT device programming requirements according to business need1.4 Determine and document organisational IoT security requirements1.5 Determine remaining networking, software and installation architecture requirements

	1.6 Lodge documentation according to organisational requirements
2. Install devices	2.1 Install required networks according to technical specifications 2.2 Connect IoT devices to network according to specifications 2.3 Configure required sensors and determine operational needs aligned to specifications
3. Finalise device installation	3.1 Test connectivity of networks against technical specifications 3.2 Test device connectivity against specifications 3.3 Determine and document required system upgrades according to organisational requirements 3.4 Lodge documentation according to organisational requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none"> Monitors outcomes of decisions, considering results and identifying key concepts and principles that may be adaptable in the future
Numeracy	<ul style="list-style-type: none"> Uses mathematical formulae to calculate required equipment, undertake measurements and determine response times
Oral communication	<ul style="list-style-type: none"> Articulates information and requirements, using effective communication techniques and industry standard technical language intended for audience and environment
Reading	<ul style="list-style-type: none"> Interprets technical, manufacturer and organisational documentation to determine and confirm job requirements
Writing	<ul style="list-style-type: none"> Prepares required documentation expressing ideas requirements and recommendations for specific audiences according to organisational procedures
Planning and organising	<ul style="list-style-type: none"> Uses a formal, logical planning processes together with an increasingly intuitive understanding of context
Problem solving	<ul style="list-style-type: none"> Analyses context to recognise anomalies and subtle deviations to normal expectations, focusing attention and remedying problems as they arise
Self-management	<ul style="list-style-type: none"> Takes end-to-end responsibility for identifying and considering relevant organisational protocols and requirements

SKILL	DESCRIPTION
	<ul style="list-style-type: none">• Uses systematic processes, setting goals, gathering required information and identifying and evaluating options against agreed criteria
Technology	<ul style="list-style-type: none">• Demonstrates an understanding of principles, concepts, language and practices associated with the digital world

Unit Mapping Information

No equivalent unit. New unit.

Assessment Requirements for ICTIOT501 Install IoT devices and networks

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- connect at least three IoT devices to an IoT network.

In the course of the above, the candidate must:

- check and test environmental factors affecting connectivity of devices.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- functions and features of industry standard network and platforms that support IoT devices and components
- language uses required for installing IoT devices and networks
- functions and uses industry standard hardware and software tools relating to installing IoT devices and networks
- different environmental impacts and contexts relating to where and how IoT devices are used
- IoT security considerations and their impact
- testing and debugging methodologies and techniques required to test software, hardware and environmental impacts.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- tools, equipment, materials, hardware required to install and test an IoT network to devices
- industry standard software packages relevant to installing IoT devices and networks
- organisational, technical and manufacturer procedures and documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTIOT502 Program IoT devices

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to program IoT (Internet of Things) devices and networks, including developing, programming and testing devices against predetermined specifications.

It applies to those in roles including software developers, programmers or network engineers, working as embedded systems engineers, IoT developers or senior software developers, and who have basic knowledge of electrical engineering.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Internet of Things (IoT)

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify IoT business requirements	1.1 Establish business needs for IoT devices and applications 1.2 Determine and document different environmental factors in which sensors and IoT devices will be deployed 1.3 Determine microcontroller application and IoT device output according to business needs 1.4 Select required language and hardware with required memory, power constraints and functions
2. Program IoT device	2.1 Select microcontroller and circuit boards according to IoT requirements 2.2 Program microcontroller according to technical specifications

	2.3 Test microcontroller and identify and rectify faults as required 2.4 Identify and rectify recordings and measurements against environmental variables and specifications
3. Finalise programming activities	3.1 Document processes and outcomes of programming activities 3.2 Submit document to required personnel and seek and respond to feedback 3.3 Finalise and resubmit documentation as required

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Uses mathematical formulae to calculate required equipment, record measurements and determine response times
Oral communication	<ul style="list-style-type: none"> Articulates information and requirements, using effective communication techniques and industry standard technical language intended for audience and environment
Reading	<ul style="list-style-type: none"> Analyses technical, manufacturer and organisational documentation to determine and confirm job requirements
Writing	<ul style="list-style-type: none"> Prepares required documentation expressing ideas requirements and recommendations for specific audiences according to organisational procedures
Planning and organising	<ul style="list-style-type: none"> Uses a formal, logical planning processes together with an increasingly intuitive understanding of context
Problem solving	<ul style="list-style-type: none"> Uses nuanced understanding of context to recognise anomalies and subtle deviations to normal expectations, focusing attention and remedying problems as they arise
Self-management	<ul style="list-style-type: none"> Takes full responsibility for identifying and considering relevant organisational protocols and requirements Uses systematic processes, setting goals, gathering required information and identifying and evaluating options against agreed criteria
Technology	<ul style="list-style-type: none"> Demonstrates an understanding of principles, concepts, language and practices associated with the digital world

Unit Mapping Information

No equivalent unit. New unit.

Assessment Requirements for ICTIOT502 Program IoT devices

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- research, select and program at least one IoT device for at least two different environmental conditions.

In the course of the above, the candidate must:

- test IoT device function and environmental variables
- document programming processes and outcomes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- language used to program IoT devices
- laboratory tools including:
 - power supply
 - silla scope
 - spectrum analyser
 - signal generator
- schematic drawing documentation and reading tools
- principles of electricity, energy and electricity usage, as they relate to IoT devices
- principles and functions of sensors and wireless communication
- uses and features of microcontroller programming, microprocessors and microcontrollers
- basic principles of soldering and manufacturing processes and related electrical circuits
- basic mathematical equations, algebra, signal processing and statistics concepts and procedures
- operational procedures and safety checks for using power usage instruments
- different environments, contexts and its impact where IoT devices are used

- readings and standards of workplace electrical equipment range
- testing and troubleshooting methodologies and techniques.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- tools, equipment, materials, hardware required to program IoT devices
- microcontroller and required text editor software
- technical and manufacturer documentation
- environment with different factors applicable for IoT use.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTIOT503 Design and test IoT devices and networks

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to design and test (Internet of Things) IoT devices and networks.

It applies to those who utilise a moderate level of technical knowledge to carry out and evaluate the connectivity of IoT devices and networks.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Internet of Things (IoT)

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Scope design options to design IoT devices and networks	1.1 Discuss IoT device and network needs with required personnel 1.2 Determine the nature, purpose and types of resources available to design IoT devices 1.3 Research industry standard IoT devices and networks 1.4 Determine design topology of scoped network and IoT devices in agreement with required personnel
2. Evaluate IoT and network design options	2.1 Discuss advantages and disadvantages of available resources to design IoT devices and networks with required personnel 2.2 Evaluate resources to be utilised to design IoT devices and networks 2.3 Communicate activities required to avoid design and

	performance of IoT device and network issues
3. Produce design documentation and test IoT devices and networks	3.1 Produce a design report and present to required personnel for approval 3.2 Test connectivity and ensure design compatibility with network and devices

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none"> Monitors outcomes of decisions, considering results and identifying key concepts and principles that may be adaptable in the future
Oral communication	<ul style="list-style-type: none"> Articulates information and requirements, using effective communication techniques and industry standard technical language intended for audience and environment
Reading	<ul style="list-style-type: none"> Interprets technical, manufacturer and organisational documentation to determine and confirm job requirements
Writing	<ul style="list-style-type: none"> Prepares required documentation expressing ideas requirements and recommendations for specific audiences according to organisational procedures
Planning and organising	<ul style="list-style-type: none"> Uses a formal, logical planning processes together with an increasingly intuitive understanding of context
Problem solving	<ul style="list-style-type: none"> Uses nuanced understanding of context to recognise anomalies and subtle deviations to normal expectations, focusing attention and remedying problems as they arise
Self-management	<ul style="list-style-type: none"> Takes full responsibility for identifying and considering relevant organisational protocols and requirements Uses systematic processes, setting goals, gathering required information and identifying and evaluating options against agreed criteria
Technology	<ul style="list-style-type: none"> Demonstrates an understanding of principles, concepts, language and practices associated with the digital world

Unit Mapping Information

No equivalent unit. New unit.

Assessment Requirements for ICTIOT503 Design and test IoT devices and networks

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- research, design and test at least two IoT devices according to organisational needs.

In the course of the above, the candidate must:

- communicate advantages and disadvantages of IoT devices in specified networks
- produce design reports for the two devices.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- functions and features of industry IoT devices and networks
- types of resources available to design IoT devices
- IoT design topologies
- advantages and disadvantages of resources available to design IoT devices and networks
- methods to determine compatibility between IoT devices and networks
- characteristics of design reports for IoT devices
- organisational policies and procedures to design IoT devices and networks.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- tools, equipment, materials, hardware required to design and test IoT devices and networks

- environmental conditions and specifications required for design IoT devices and networks.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTNPL412 Apply business acumen to network planning

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to consider business drivers in decision-making processes for network planning and investment. It prepares individuals for entry into planning and design for network additions and implementations to accommodate network growth and incorporating new technologies.

It applies to individuals with diverse telecommunications networking skills and extensive knowledge of core and access network capabilities of service providers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Network Planning

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Analyse network usage forecasts	1.1 Obtain work details and scope from relevant personnel and arrange for network access in compliance with required security arrangements, legislation, codes, regulations, standards and organisational requirements 1.2 Organise network information concerning customer service and usage data, according to organisational requirements 1.3 Determine trends in customer network demands, and operating environments and markets, according to organisational requirements 1.4 Assess key measures of capacity and customer demand, according

ELEMENT	PERFORMANCE CRITERIA
	to organisational requirements
2. Build models to develop business cases	2.1 Construct network model and represent key options and strategic network plan proposals 2.2 Determine rights of carriers and service providers in installing facilities under required legislation 2.3 Produce strategic network plan with key variables, and communicate plan to relevant personnel 2.4 Determine key economic measures, business risks and values, and available resources for network planning strategies 2.5 Recommend network planning strategies to relevant personnel
3. Analyse financial trends	3.1 Determine and confirm extent of financial analysis required to plan network 3.2 Apply required economic measures in financial analysis and develop recommended network strategy 3.3 Obtain required financial investment tools and determine financial viability of network plans
4. Analyse demographic trends	4.1 Determine and confirm extent of demographic analysis required to plan network 4.2 Gather demographic data and determine impact of demographic diversity on network planning strategies 4.3 Analyse data and produce demographic trends for use in strategy developments in network planning
5. Analyse technological trends	5.1 Determine and confirm extent of technological analysis required to plan network 5.2 Determine unit costs associated with required network technologies and products 5.3 Research the advantages and implementation requirements of network technology bases stipulated in the recommended network strategy
6. Evaluate network deployment architecture	6.1 Evaluate network deployment architecture according to architectural and network deployment rules 6.2 Produce a network business model in consideration of commercial considerations and exemption processes

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none">Identifies and evaluates text to determine key information and specific requirements and responsibilities
Writing	<ul style="list-style-type: none">Develops material for a specific audience using clear and detailed languageUses expected forms and conventions to present required information
Oral Communication	<ul style="list-style-type: none">Articulates specific information using a tone and vocabulary for intended audiences
Numeracy	<ul style="list-style-type: none">Interprets numerical information and applies mathematical calculations relating to time durations and financial consequencesApplies different financial models to planning processes
Teamwork	<ul style="list-style-type: none">Uses strategies to establish a sense of connection and build rapport with clients and co-workersSelects and uses required conventions and protocols to communicate with clients and co-workers in a range of work contexts
Self-management	<ul style="list-style-type: none">Takes responsibility for planning, sequencing and prioritising tasksMakes routine decisions and implements standard procedures for routine tasks, using formal decision-making processes for more complex and non-routine situationsAddresses less predictable problems and initiates standard procedures in response, applying problem-solving processes in determining a solution

Unit Mapping Information

Supersedes and is equivalent to ICTNPL401 Apply business acumen to network planning.

Assessment Requirements for ICTNPL412 Apply business acumen to network planning

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- analyse financial, demographic, technological and usage trends and document for at least two networks.

In the course of the above, the candidate must:

- analyse forecasts using customer demand
- build models to develop business cases
- apply financial analysis
- analyse demographic trends for strategy development
- assess technology implementation
- communicate with customers
- evaluate network deployment architecture.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- methods of organising network information and usage data
- methods to determine trends in customer network demands, operating environments and markets
- emerging telecommunications and networking technologies
- principles and techniques of:
 - network planning strategies
 - analysing financial, demographic and technological trends in networks
 - constructing network models
 - financial modelling

- forecasting trends
- legislative rights of required telecommunications network carriers and service providers
- commercial considerations of implementing network plans, including:
 - capital expenditure (CAPEX)
 - operational expenditure (OPEX)
 - product revenue and demand versus network costs
 - return on investment (RoI)
 - time to market
- principles and techniques of financial investment tools, including:
 - cost-benefit analysis
 - investment management systems
 - net present value (NPV)
- legislation, codes, regulations and standards, work health and safety (WHS) requirements and organisational requirements for scoped work, including:
 - Australian competition and consumer affairs
 - telecommunications industry regulatory accounting
 - universal services obligations.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- network planning data
- relevant databases
- business and financial models
- systems and deployment rules and relevant legislation
- planning processes and regulatory frameworks.

ICTNPL413 Evaluate networking regulations and legislation for the telecommunications industry

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to evaluate the impact of deregulation, competition, economic conditions, regulations and legislation on enterprise-specific policies and procedures and its subsequent incorporation into the planning process.

It applies to individuals with a range of networking skills and extensive knowledge of core and access network capabilities of the service provider. It prepares individuals for entry into planning and design for network additions and implementations to accommodate network growth and technologies in the industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Network Planning

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Assess economic and political influences on networking regulations and legislation	1.1 Access all legislation governing carriers and service providers in Australia and research the impact of government regulation and deregulation on the networking planning industry 1.2 Assess the influence of economic conditions on the growth and planning of network industries 1.3 Produce a report that evaluates economic and political influences on public and commercial enterprises that provide services in networking markets

ELEMENT	PERFORMANCE CRITERIA
2. Determine impact of networking regulations and legislation	<p>2.1 Determine the rights of carriers and service providers in installing facilities in Australia</p> <p>2.2 Identify the method used by the Australian Competition and Consumer Commission (ACCC) to enforce competitive provisions between service providers</p> <p>2.3 Review the planning obligations of Universal Service Obligation (USO) and evaluate the accessibility of networking services to individuals and organisations across Australia</p> <p>2.4 Produce a report outlining the impact of Australian federal legislation on network service planning processes and accessibility</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Analyses and evaluates complex written and visual text in workplace documentation to determine key information and specific requirements Evaluates complex text to determine legislative, regulatory and project requirements
Writing	<ul style="list-style-type: none"> Develops complex material for a specific audience using clear and detailed language employing expected forms and conventions Prepares reports which incorporate evaluation of information and specialised and cohesive language
Planning and organising	<ul style="list-style-type: none"> Takes responsibility for planning, sequencing and prioritising tasks, and own workload
Problem solving	<ul style="list-style-type: none"> Identifies and acts on issues that contravene relevant policies, procedures and legal requirements
Self-management	<ul style="list-style-type: none"> Ensures knowledge of legislative requirements is kept up to date in order to provide accurate information
Technology	<ul style="list-style-type: none"> Uses familiar digital technologies and systems to access information, search and enter data and code, present information and communicate with others Recognises importance of data security and safety

Unit Mapping Information

Supersedes and is equivalent to ICTNPL409 Apply knowledge of regulation and legislation for the telecommunications industry.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTNPL413 Evaluate networking regulations and legislation for the telecommunications industry

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- produce at least two comprehensive reports that evaluate the economic and political influences on the networking industry in Australia and the impact of regulations and legislation on the networking industry
- produce at least two summary reports that evaluate the impact of legislation on planning processes and accessibility to networks.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- identify economic factors that can affect growth
- functions and features of producing evaluation reports
- policies and procedures of:
 - Australian Competition and Consumer Commission (ACCC)
 - Universal Services Obligation (USO)
- the implications of Australian federal government regulation and deregulation on the networking industry
- the purpose and implementation of networking legislation.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- legislation
- planning processes

- databases
- licensing requirements
- other related procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTNWK307 Provide network systems administration

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to manage the technical elements of a network, including contributing to a disaster recovery plan and network systems performance monitoring.

It applies to individuals working as frontline technical support personnel, who are responsible for network systems administration.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to provide network systems administration	1.1 Identify network performance requirements 1.2 Determine required security level according to organisational requirements 1.3 Determine required capacity of network according to organisational requirements 1.4 Determine required user access privileges and usage according to user account records and organisation policies and procedures
2. Provide client access and security features	2.1 Provide logins, passwords and applications to users according to organisational requirements 2.2 Provide file access to required users according to

ELEMENT	PERFORMANCE CRITERIA
	organisational requirements 2.3 Prepare documented security user data according to organisational policies and procedures
3. Monitor network performance	3.1 Analyse and respond to diagnostic information according to organisational requirements 3.2 Monitor software usage and identify any inappropriate or illegal use according to organisational policies and procedures 3.3 Delete any identified illegal software from network 3.4 Monitor hardware response time, and required performance indicators 3.5 Provide feedback to required personnel on performance indicators

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Interprets contextual information from organisational guidelines Interprets systems design terminology, syntax and diagrams, and applies information to task
Writing	<ul style="list-style-type: none"> Prepares documentation outlining security user data according to organisational procedures
Oral Communication	<ul style="list-style-type: none"> Obtains information to confirm task requirements and provides feedback to required personnel using succinct verbal language
Numeracy	<ul style="list-style-type: none"> Interprets numerical data relating to network operations and performance indicators
Teamwork	<ul style="list-style-type: none"> Selects appropriate form, channel and mode of communication for a specific purpose, relevant to own role
Planning and organising	<ul style="list-style-type: none"> Plans own work requirements and prioritises actions to achieve required outcomes Ensures tasks are completed within workplace timeframes Takes responsibility for planning and organising own workload, identifying ways of sequencing and combining elements for greater efficiency, and considering how to link with work of others
Problem solving	<ul style="list-style-type: none"> Responds to highly obvious routine problems, using step by step instruction and procedures, or by a trial and error process, for

	non-critical situations
Technology	<ul style="list-style-type: none">• Demonstrates an understanding of purposes, specific functions and key features of common digital systems, and tools, and operates them effectively to complete routine tasks

Unit Mapping Information

Supersedes and is equivalent to ICTNWK301 Provide network systems administration.

Companion Volume Implementation Guide is found on VETNet -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=a53af4e4-b400-484e-b778-71c9e9d6aff2>

Assessment Requirements for ICTNWK307 Provide network systems administration

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, and to:

- sustain the operation of at least one network and meet organisational specifications
- use diagnostic test results to maintain network's integrity.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- network's operating system
- key elements of a disaster recovery policy
- features of network file and folder permissions
- vendor service-level agreements
- operating systems supported by an organisation, including functions and basic features
- organisational policies and procedures including:
 - access, security and networks
 - protection against, and elimination of computer viruses
 - deleting, restoring and archiving files
 - creating logons
- personal responsibilities for software copyright.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a live network

- industry standard systems administration tools
- organisational policy and procedures
- industry standard hardware, software, tools, licenses and digital devices
- business and client requirements
- project deliverables.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTNW K308 Determine and action network problems

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to identify, document and provide solutions to network related problems in the context of the technical environment.

It applies to individuals involved in frontline technical support, who maintain network continuity by isolating and rectifying network problems as they arise.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to action network problems	1.1 Identify organisational policies and procedures to document user reported network problems 1.2 Determine network problem reported by organisational users 1.3 Document reported network problem according to organisational policies and procedures
2. Determine service level requirements and agreements	2.1 Determine existing third-party insurance policies and existing coverage 2.2 Determine existing maintenance and technical support agreements 2.3 Verify scope and coverage of maintenance and technical support agreements according to organisational

ELEMENT	PERFORMANCE CRITERIA
	requirements
3. Carry out maintenance support	3.1 Diagnose and confirm scope of identified problem according to task requirements 3.2 Determine solution to identified problem, including hardware and software components and action required 3.3 Obtain required hardware and software components 3.4 Carry out required resolution maintenance according to task requirements
4. Prepare and submit maintenance report	4.1 Refer unresolved maintenance requirements to higher level service area 4.2 Prepare maintenance report according to support agreements and organisational requirements 4.3 Submit maintenance report to required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Interprets systems design terminology, syntax and diagrams, and applies information to task Integrates and evaluates a range of textual information to maintain effective methods and appropriate standards in technical environment
Writing	<ul style="list-style-type: none"> Prepares documentation outlining reported network problem and recommendation according to organisational procedures
Oral Communication	<ul style="list-style-type: none"> Uses listening and questioning techniques to articulate information and task requirements using succinct verbal language
Numeracy	<ul style="list-style-type: none"> Interprets numerical data relating to network operations and performance indicators
Planning and organising	<ul style="list-style-type: none"> Completes tasks within workplace timeframes Demonstrates responsibility for planning and organising own workload, identifying ways of sequencing and combining elements for greater efficiency, and considering how to link with work of others
Problem-solving	<ul style="list-style-type: none"> Initiates standard procedures when responding to familiar problems within immediate context Responds to highly obvious routine problems, using step by step instruction and procedures, or by a trial and error process, for

	non-critical situations
Technology	<ul style="list-style-type: none">• Demonstrates an understanding of purposes, specific functions and key features of common digital systems, and tools, and operates them effectively to complete routine tasks

Unit Mapping Information

Supersedes and is equivalent to ICTNWK302 Determine and action network problems.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTNWK308 Determine and action network problems

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- determine and action at least two different network problems reported by at least two different organisational users
- document finalised solution for two different reported network problems.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- common networking procedures for diagnostic testing and solution seeking
- organisational policies and procedures for documenting and logging reported service issues
- contracting and maintenance requirements
- organisational problem escalation procedures
- inventory processes that may be used to determine and action network problems
- technical features and functions of network hardware and software systems
- common network problems relating to organisational information
- agreements used for technical support.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- reported network user problems
- a network
- hardware

- diagnostic tools, components and software
- records and reports
- organisational guidelines and procedures
- industry standard ICT blueprint.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTNWK309 Configure and administer network operating systems

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to create a network operating system and set up and use administrative tools to manage the network.

It applies to individuals who are required to provide frontline technical support to maintain network continuity to a network operating system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify and assess network features	1.1 Determine organisational policies and procedures used to administer network operating systems 1.2 Determine interfaces used by organisation's existing network 1.3 Identify potential network integration compatibility issues and risks
2. Administer and support system	2.1 Format hard drives, set up security restrictions and establish user log-in information according to organisational requirements 2.2 Determine organisational data requirements and data access frequency on systems interaction map 2.3 Plan required upgrades and reconfigurations to network

ELEMENT	PERFORMANCE CRITERIA
	operating system according to organisational requirements 2.4 Implement planned upgrades and reconfigurations according to task requirements
3. Set up and manage network file system	3.1 Create file and folder structure according to organisational requirements, policies and procedures 3.2 Set security access and sharing of file system to meet organisational requirements 3.3 Identify and implement required network operating system virus protection
4. Administer user services and user accounts	4.1 Create users and groups required to facilitate user security and network access according to user authorisation and organisational requirements 4.2 Verify successful user access to authorised network data and resources, and documents outcomes
5. Provide backup security support	5.1 Scan and clean network of viruses 5.2 Perform backup of network according to organisational procedures and requirements 5.3 Document processes used and lodge with required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none">Analyses and consolidates technical information and data from a range of sources against defined criteria and requirements
Writing	<ul style="list-style-type: none">Prepares documentation describing outcomes and processes using relevant language according to organisational requirements
Oral communication	<ul style="list-style-type: none">Uses listening and questioning techniques to articulate information and task requirements using succinct verbal language
Teamwork	<ul style="list-style-type: none">Uses appropriate methods to communicate with a range of stake holders and co-workers across different contextsUses a range of strategies to establish a sense of connection and build rapport with clients and co workers
Planning and organising	<ul style="list-style-type: none">Plans own work requirements and prioritises actions to achieve required outcomesEnsures tasks are completed within workplace timeframes

Unit Mapping Information

Supersedes and is equivalent to ICTNWK303 Configure and administer a network operating system.

Assessment Requirements for ICTNWK309 Configure and administer network operating systems

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, and to:

- set up and manage at least one network operating system.

In the course of the above, the candidate must:

- use network administrative tools to carry out system administration tasks
- manage the network file system
- create the network configuration required by the client
- provide user services and user accounts
- provide backup and service restoration capability.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- antivirus software, its operation, installation and update procedures
- organisational and industry standard network operating system (NOS)
- facilities available in an operating environment
- features and capabilities of networking technologies
- implementation of network security in a local area network (LAN) including:
 - file and folder permissions
 - users and group settings
- monitoring aspects of network performance or traffic including:
 - system administration tools
 - third-party tools.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- industry standard ICT blueprint
- user network requirements
- antivirus software
- network administration tools
- a live network with a representative range of networked environments and operating systems
- a server
- technical records, organisational policies, access policy and documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTNWK310 Administer network peripherals

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to manage an environment of networked peripheral devices, in order to provide services to client users.

It applies to individuals working as frontline technical support personnel, responsible for connecting, maintaining and administering peripheral devices attached to networks.

No legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to install peripherals to a network	1.1 Determine location of peripherals according to user and organisational requirements 1.2 Connect peripherals to network according to vendor approved methods and organisational requirements 1.3 Connect peripherals to computers in network 1.4 Add peripheral accessories and upgrades to printer according to organisational requirements
2. Configure and manage peripheral services	2.1 Install software required and manage local and network connected peripherals 2.2 Setup name identifiers for peripherals and control queues according to organisational policies and procedures 2.3 Configure security and user access to peripherals

ELEMENT	PERFORMANCE CRITERIA
	2.4 Configure workstation for peripherals according to organisational requirements
3. Administer and support peripheral services	3.1 Assign priority to control queues according to organisational requirements 3.2 Create templates for use on network according to organisational policies and procedures 3.3 Configure settings on network and create maintenance schedules, usage logs, and cost centre usage statistics
4. Maintain peripherals and fix common problems	4.1 Establish a regular maintenance schedule according to peripheral manufacturer guidelines and organisational requirements 4.2 Assess peripheral usage and traffic and recommend additional peripherals as required 4.3 Determine failures of peripheral services and devices and rectify as required 4.4. Document finalised process and lodge with required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Oral communication	<ul style="list-style-type: none"> Uses listening and questioning techniques to articulate information and task requirements using succinct verbal language
Reading	<ul style="list-style-type: none"> Interprets textual information from manufacturers guidelines to establish and follow a regular maintenance schedule
Writing	<ul style="list-style-type: none"> Prepares documentation outlining finalised processes using relevant and succinct language according to organisational requirements
Teamwork	<ul style="list-style-type: none"> Recognises and addresses common cultural and other differences of people in work context Uses a limited range of accepted practices for communicating in a work environment
Planning and organising	<ul style="list-style-type: none"> Takes responsibility for planning and organising own workload, identifying ways of sequencing and combining elements for greater efficiency, and considering how to link with work of others
Problem solving	<ul style="list-style-type: none"> Takes responsibility for addressing predictable and some less predictable problems, including equipment services or devices

SKILL	DESCRIPTION
	malfunctions
Self-management	<ul style="list-style-type: none">• Takes personal responsibility for adherence to legal/regulatory responsibilities relevant to own work context with specific reference to work health and safety requirements

Unit Mapping Information

Supersedes and is equivalent to ICTNWK304 Administer network peripherals.

Assessment Requirements for ICTNWK310 Administer network peripherals

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- install, configure and troubleshoot network peripherals to at least one network.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- network peripherals and their configuration
- organisational deliverables that may be used to administer network peripherals
- current industry standards for network peripherals
- general construction and operation of peripheral devices to facilitate troubleshooting.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a range of internal and external network peripherals including:
 - mouse
 - keyboard
 - monitor
 - printer
 - internal modem
- industry standard ICT blueprint
- network administration tools
- live network with a representative range of networked client server environments and operating systems

- technical records, organisational policies and documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTNWK311 Install and test network protocols

Modification History

Release	Comments
Release 2	This version first released with ICT Information and Communications Technology Training Package Version 8.0. Removal of 'Writing' skill removed from Foundation Skills.
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to install and test network protocols in a networking environment.

It applies to individuals with Information and Communications Technology (ICT) skills, who are required to provide network support to ensure that appropriate protocols have been installed in networks to allow user functionality and maintenance.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to install network protocols	1.1 Determine network protocol, user and task requirements 1.2 Select network protocol applications according to task requirements 1.3 Determine network protocol services according to task requirements 1.4 Design network addressing system according to protocol and task requirements

ELEMENT	PERFORMANCE CRITERIA
2. Install network protocols	2.1 Install and validate network protocol services according to task requirements 2.2 Install required network addressing system 2.3 Apply internet protocol (IP) addressing scheme according to user needs and organisational policies and procedures 2.4 Configure IP addresses on hosts and workstations
3. Test network protocols	3.1 Test and validate network protocols according to user requirements 3.2 Seek and respond to network protocol performance feedback 3.3 Store unused ICT equipment and dispose of redundant ICT equipment according to manufacturer specifications and organisational procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none">Ensures knowledge of legislative requirements and products is kept up to date
Reading	<ul style="list-style-type: none">Recognises and interprets textual information, including technical manuals to establish the job requirements
Oral Communications	<ul style="list-style-type: none">Uses listening and questioning techniques to articulate information and task requirements using succinct verbal language
Self-management	<ul style="list-style-type: none">Identifies roles and responsibilities for task and makes decisions on work completion parameters in accordance with organisational procedures, WHS and environmental guidelines
Technology	<ul style="list-style-type: none">Identifies the purposes, specific functions and key features of common digital systems and tools, and operates them effectively to complete routine tasks

Unit Mapping Information

Supersedes and is equivalent to ICTNWK305 Install and manage network protocols.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTNWK311 Install and test network protocols

Modification History

Release	Comments
Release 2	This version first released with ICT Information and Communications Technology Training Package Version 8.0. Removal of 'Writing' skill removed from Foundation Skills.
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- configure, test and validate network protocols in order to facilitate interconnectivity on at least one occasion
- install and manage network protocols in a network and troubleshoot problems on at least one occasion.

In the course of the above, the candidate must:

- adhere to work health safety (WHS) requirements according to organisational policies and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- business domains, including the organisational structure and business functionality of the network
- user needs, manufacturer specifications and organisational policies and procedures
- network protocol required to install and manage network protocols
- required communications technologies and their associated protocols
- industry accepted hardware and software products, and general features and capabilities
- network protocols currently in use in the organisation and industry, including:
 - transmission control protocol
 - internet protocol (TCP/IP)

- OSI models
- vendor product range and development directions
- network protocols transcend organisational size and network complexity.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a live network
- application software and operating system
- networked computers
- organisational guidelines
- technical documentation and installation manuals
- vendor software
- work health and safety (WHS) guidelines, policies and procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTNWK409 Create scripts for networking

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to undertake scripted programming tasks for networking related activities.

It applies to individuals with competent technical skills employed in network or systems administration roles.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Develop algorithms to represent solutions to a given problem	1.1 Consult with client and key stakeholders to identify the problem and associated script requirements 1.2 Employ abbreviated software development cycle to script creation 1.3 Develop an algorithm to solve the problem and meet client requirements 1.4 Develop an algorithm which takes account of expected possible situations

ELEMENT	PERFORMANCE CRITERIA
	1.5 Develop an algorithm which is guaranteed to end 1.6 Use structure, sequence, selection and iteration
2. Create code	2.1 Select appropriate scripting language 2.2 Demonstrate understanding and application of basic language syntax rules and best practices 2.3 Select and use language data types, operators and expressions to create clear and concise code 2.4 Use techniques of selection, iteration and sequence to control script execution flow 2.5 Use techniques for sequential file input and output to retrieve and store information 2.6 Obtain and use user input to affect the operation of the script 2.7 Apply internal document principles to created code 2.8 Follow organisational guidelines for developing maintainable code when creating scripts 2.9 Adhere to coding standards when creating scripts
3. Use operating system tools	3.1 Use searching and sorting tools to select information from the logging output of operating system (OS) 3.2 Implement controls to ensure that where significant events occur, script creates and maintains a log of operations via operating system logging mechanism 3.3 Register and run scripts with OS scheduling facility
4. Test and debug code	4.1 Engineer, document and conduct simple tests to confirm code meets design specification 4.2 Identify areas that are not covered or are covered incorrectly in the script 4.3 Take action to ensure that code complies with security policy 4.4 Take action to ensure that code operates with proper permissions 4.5 Use script debugging techniques suitable for use with scripting language to detect and resolve errors of syntactical, logical and design origin
5. Document script	5.1 Create technical-level documentation

ELEMENT	PERFORMANCE CRITERIA
	5.2 Create user-level documentation

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	2.8, 2.9, 4.3	<ul style="list-style-type: none"> Recognises and interprets technical material, organisational policy and regulatory information to determine job requirements
Writing	2.7, 3.2, 4.1, 5.1, 5.2	<ul style="list-style-type: none"> Prepares user, peer and technical documentation that communicates complex information clearly and effectively
Oral Communication	1.1, 2.6	<ul style="list-style-type: none"> Uses listening and questioning skills to confirm understanding for requirements, participates in a verbal exchange of ideas/solutions and uses appropriate, detailed and clear language to address key personnel and to disseminate information
Navigate the world of work	2.8, 2.9, 4.3	<ul style="list-style-type: none"> Recognises and follows explicit protocols and meets expectations associated with own role
Numeracy	1.3-1.5, 2.3	<ul style="list-style-type: none"> Creates complex algorithms to calculate and process data for code creation
Get the work done	1.2, 2.1-2.5, 2.8, 3.1-3.3, 4.1, 4.2, 4.4, 4.5	<ul style="list-style-type: none"> Uses logical planning processes and an increasingly intuitive understanding of context to identify relevant information to plan business requirements Reflects on the ways in which digital systems and tools are used, or could be used, to achieve work goals and begins to recognise strategic and operational applications Understands the key principles and concepts underpinning the design and operation of digital systems and tools, and applies these when troubleshooting existing technology Seeks advice and feedback from client when making decisions Applies formal problem solving processes when tackling an unfamiliar problem, breaking complex

		issues into manageable parts and identifying and evaluating options
--	--	---

Unit Mapping Information

Assessment Requirements for ICTNWK409 Create scripts for networking

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- develop an algorithmic statement of a solution for a set process
- design, document, construct and test a small single purpose operating system (OS) utility application in response to a problem description
- create scripted programs that access information stored in files on the system and use system utility programs to sort or find information within these files
- validate and record script results.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- summarise the principles of algorithm design
- identify and describe operating system components and processes, including:
 - command line interface
 - log files
 - program scheduling utilities
 - development methodologies
 - tools and utilities
 - testing methods
- explain debugging for a variety of scripting scenarios
- outline programming structured control constructs: sequence, selection and iteration
- summarise scripting techniques and language syntax.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry, and include access to:

- technical requirements
- software development environment
- software testing environment.

Assessors must satisfy NVR/AQTF assessor requirements.

ICTNWK419 Identify and use current virtualisation technologies

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to use virtualisation technology, according to the industry standards for reviewing and demonstrating work processes, skills and techniques to ensure that the quality of the entire business process is maintained at the highest level possible through the appropriate application of virtualisation technology.

This unit applies to individuals engaged in ongoing review and research who review, and maintain, business processes at the highest level possible.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to use virtualisation technologies	1.1 Identify the enterprise requirements, and determine the need for desktop virtualisation software 1.2 Identify the virtualisation vendors and the different types of virtualisation technology that they offer 1.3 Identify, review and select the desktop virtualisation software, where appropriate

ELEMENT	PERFORMANCE CRITERIA
	1.4 Select suitable desktop virtualisation software
2. Use desktop virtualisation software to assist in solving organisational problems	2.1 Test the desktop virtualisation software 2.2 Use the features and functions of desktop virtualisation software in an organisational context, in line with environmental factors 2.3 Demonstrate an in-depth of knowledge of desktop virtualisation technologies, to an accepted industry standard 2.4 Access and use, the sources of information relating to desktop virtualisation technology
3. Evaluate the desktop virtualisation software performance	3.1 Review the effect of desktop virtualisation software on benefits to the enterprise 3.2 Seek feedback from users, where appropriate, and update the desktop

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.1, 1.2, 1.3, 1.4, 2.4, 3.1	<ul style="list-style-type: none"> Critically analyses documentation from a variety of sources and records, and consolidates information, to determine requirements
Writing	3.2	<ul style="list-style-type: none"> Writes, edits and proofreads documents to ensure clarity of meaning, and the accuracy and consistency of information
Oral Communication	3.2	<ul style="list-style-type: none"> Uses specific and relevant language to clearly describe and explain, a range of technical, operational and business-related matters, with internal and external personnel
Navigate the world of work	1.1, 2.2	<ul style="list-style-type: none"> Identifies, and acts on, issues that contravene relevant policies, procedures and legal requirements Takes personal responsibility for following explicit and implicit policies, procedures and legislative requirements
Interact with	3.2	<ul style="list-style-type: none"> Selects and uses, the appropriate conventions and protocols when communicating with clients and

others		co-workers, in a range of work contexts
Get the work done	1.1-1.4, 2.1, 2.2, 2.3, 3.1	<ul style="list-style-type: none"> • Takes responsibility for planning, sequencing and prioritising tasks and own workload, for efficiency and effective outcomes • Makes routine decisions and implements standard procedures for routine tasks, using formal decision-making processes, for more complex and non-routine situations • Contributes to the continuous improvement of current work practices, by applying basic principles of analytical and lateral thinking

Unit Mapping Information

Assessment Requirements for ICTNWK419 Identify and use current virtualisation technologies

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- identify current new, and emerging, virtualisation technology
- identify and use, the features and functions of industry-specific virtualisation technologies
- review and evaluate the virtualisation software.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe current technology trends, and directions, in information and communications technology (ICT), specifically in the major industry technology standards used in virtualisation technology
- recognise the vendor product directions relating to virtualisation technology
- outline current industry hardware and software products, and their general features, capabilities and application
- recognise information-gathering techniques
- describe the environmental and sustainability policies of the workplace
- identify the features of virtualisation technology
- recognise how to test, and evaluate, virtualisation technology
- locate the appropriate sources of information regarding virtualisation technology.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry, and include access to:

- a site where industry-specific technologies may be used
- industry-specific technologies currently used in the industry
- documents detailing work health and safety (WHS) standards, environmental guidelines, and enterprise requirements
- the virtualisation software.

Assessors must satisfy NVR/AQTF assessor requirements.

ICTNWK422 Install and manage servers

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to install and manage a server. It includes the ability to conduct initial configuration and testing, administration, software distribution and updates, profiling and troubleshooting.

It applies to individuals with Information and Communications Technology (ICT) skills, involved in network management, server administration and similar roles.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to install a server	1.1 Identify required server applications and features according to organisational requirements 1.2 Determine required operating system features and network service outputs according to task requirements 1.3 Access and back up local data according to organisational policies and procedures 1.4 Arrange access to site and advise users of deployment and down time expectations
2. Install server	2.1 Create disk partitioning scheme, file systems and virtual memory according to business needs 2.2 Install and configure network operating system, server

ELEMENT	PERFORMANCE CRITERIA
	<p>applications and network services according to task requirements</p> <p>2.3 Reconnect and reconfigure connectivity devices</p> <p>2.4 Patch operating system and applications, restore security and reliability requirements</p> <p>2.5 Restore local data to new server according to organisational requirements</p>
3. Configure and administer the server	<p>3.1 Configure network directory service according to organisational requirements, policies and procedures</p> <p>3.2 Create and manage security and network access to users according to organisational requirements</p> <p>3.3 Configure user environment using operating system policies and scripts</p> <p>3.4 Create directory structure and quotas according to organisational requirements</p>
4. Test server	<p>4.1 Test server against task requirements</p> <p>4.2 Seek and respond to feedback on server performance from required personnel</p> <p>4.3 Test and validate any changes or additions against organisational requirements</p>
5. Finalise documentation and clean-up worksite	<p>5.1 Document configuration and operational changes made to server according to organisational policies and procedures</p> <p>5.2 Document server status according to organisational procedures</p> <p>5.3 Dispose of excess equipment according to organisational and e-waste policies</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none"> Keeps up to date with organisational and e-waste recycling policies and procedures relevant to own rights and responsibilities
Numeracy	<ul style="list-style-type: none"> Identifies and interprets numerical data associated with devices, networks, servers and component specifications
Oral communication	<ul style="list-style-type: none"> Uses listening and questioning techniques to confirm information and requirements and gather feedback

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none">Identifies, interprets and analyses online and hard copy documentation containing complex ICT related terminology, acronyms and concepts
Writing	<ul style="list-style-type: none">Prepares required documentation conveying explicit recommendations, requirements and information using specific and relevant language
Planning and organising	<ul style="list-style-type: none">Uses organisational policies and procedures in context when negotiating, planning and undertaking work
Problem solving	<ul style="list-style-type: none">Responds intuitively to problems requiring immediate attention, quickly drawing on experience to devise solutions
Technology	<ul style="list-style-type: none">Identifies purpose, needs and limitations when selecting devices and applications for different tasks

Unit Mapping Information

Supersedes and is equivalent to ICTNWK401 Install and manage a server.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTNWK422 Install and manage servers

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- install and manage at least one server
- document and lodge outcomes and process.

In the course of the above, the candidate must:

- manage server operating system, including user accounts, file, network directory and print services
- perform backup and recovery
- update operating system and software
- troubleshoot server and network failures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard network hardware and software systems and their requirements, including:
 - network operating systems (NOS)
 - server applications including compatibility issues and resolution procedures
- desktop applications and operating systematic server installation and maintenance processes and procedures, including:
 - documentation skills for networks
 - error logging and reporting
- high availability options for file systems, including redundant array of independent disks (RAID) and replication
- network directory services and network service configuration options for performance tuning user authentication

- processes and procedures required to support and manage a server, including:
 - best practice for implementing backup and recovery procedures
 - boot process
 - operating system help and support utilities
 - operating system installation methods, including installation from CD or DVD, universal serial bus (USB) boot disk, network and script (automated install) printer management
- process and task management, including:
 - process termination
 - task scheduling utilities
- troubleshooting tools and techniques including:
 - network diagnostic utilities user account and password management.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site where server installation may be conducted
- relevant server specifications including:
 - cabling
 - local area networked (LAN) computers
 - server diagnostic software
 - switch
- client requirements
- wide area network (WAN) service point of presence
- workstations
- relevant regulatory documentation that affects installation activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTNWK423 Manage network and data integrity

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to lead development of asset protection processes, determining threats and implementing controls to mitigate risk.

It applies to individuals in the Information Communications Technology (ICT) industries who are responsible for implementing and managing the organisational disaster recovery and asset protection policy and procedures of a network.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Assess organisational network and security policies	1.1 Identify organisational security policies and procedures 1.2 Identify security access and user privileges according to organisational requirements 1.3 Determine compatibility of identified security access user privileges to organisational requirements
2. Audit system assets	2.1 Conduct audit on system hardware and software assets according to organisational procedures and guidelines 2.2 Document audit findings according to organisational procedures 2.3 Lodge audit findings documents with required personnel

ELEMENT	PERFORMANCE CRITERIA
3. Protect assets from threats	<ul style="list-style-type: none">3.1 Determine environmental threats to data3.2 Determine data protection systems and controls according to organisational requirements3.3 Implement data protection systems according to organisational requirements3.4 Implement and test antivirus and anti-malware solutions according to vendor specifications and organisational requirements
4. Develop a backup solution	<ul style="list-style-type: none">4.1 Determine data backup types compatible to organisational systems and requirements4.2 Plan backup solution according to organisational requirements4.3 Implement backup solution and restore backed up media4.4 Implement real time backup and data sync solution according to organisational requirements
5. Monitor network performance	<ul style="list-style-type: none">5.1 Determine available network performance monitoring tools compatible to existing network5.2 Implement network performance monitoring tools according to task requirements5.3 Document network performance expectations and actual performance according to organisational procedures5.4 Lodge document with required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Oral communication	<ul style="list-style-type: none">• Uses verbal techniques to confirm information and requirements, communicate ideas and gather feedback
Reading	<ul style="list-style-type: none">• Interprets textual information from relevant sources to identify software solutions and adherence to organisational security policies and procedures
Writing	<ul style="list-style-type: none">• Prepares required documentation conveying explicit recommendations, requirements and information using specific and relevant language
Planning and	<ul style="list-style-type: none">• Determines job priorities, resources and equipment, and works logically and systematically to undertake clearly defined and familiar

SKILL	DESCRIPTION
organising	tasks
Problem solving	<ul style="list-style-type: none">Initiates standard procedures when applying solutions in networks, including systems management processes, and deploys rapid solutions to problems involving management of network assets
Self-management	<ul style="list-style-type: none">Demonstrates an understanding of, and compliance with, explicit organisational policies and proceduresTakes responsibility for routine decision making by selecting from a range of predetermined options in routine situations, identifying and taking some situational factors into account
Technology	<ul style="list-style-type: none">Demonstrates an understanding of purposes, specific functions and key features of common digital systems and tools, and operates them effectively to complete routine tasks

Unit Mapping Information

Supersedes and is equivalent to ICTNWK403 Manage network and data integrity and ICTTEN511 Administer a data communications network.

Assessment Requirements for ICTNWK423 Manage network and data integrity

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- maintain and manage at least one network
- maintain data integrity whilst managing at least one network
- document and lodge outcomes and process.

In the course of the above, the candidate must:

- use industry standard tools to conduct audit on system assets
- implement and test antivirus solution
- employ systems to negate environmental threats
- demonstrate features of data backup, restore and system roll back
- perform network monitoring using a variety of current standard tools
- add network controls according to network and data integrity policies.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- broad principles of current data integrity on a network, including:
 - auditing and control of user access
 - asset tracking and auditing
- industry standard antivirus solutions and techniques
- backup, restore and rollback procedures
- system and network monitoring tools and their related functions
- organisational structure and business functionality as they relate to data integrity
- tools and applications required to manage network and data integrity, including disaster recovery processes.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site or prototype where network and data integrity strategies may be implemented and managed
- use of network support tools currently used in industry
- organisational security policies, manufacturer recommendations and network and data integrity protection standards.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standard.

ICTNWK424 Install and operate small enterprise branch networks

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to utilise networking fundamentals, including wide area network (WAN) technologies, basic security, route and switch operations as well as to configure simple networks.

It applies to individuals involved in network support positions with the Information Communications Technologies (ICT) skills required to use tools, equipment, software and protocols to install, operate, a small enterprise branch network.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to install network	1.1 Determine organisational network performance and data flow requirements 1.2 Identify protocols in OSI and TCP/IP models according to organisational requirements 1.3 Identify common network problems at layers 1, 2, 3 and 7
2. Install small switched network	2.1 Select media, cables, ports, and connectors according to task requirements 2.2 Identify network segmentation, traffic management and switching requirements

ELEMENT	PERFORMANCE CRITERIA
	2.3 Perform, save and verify initial switch configuration according to task requirements 2.4 Verify network status and switch operation according to technical and organisational standards 2.5 Implement and verify security level for switch according to organisational requirements
3. Implement IP addressing scheme and services	3.1 Create and implement addressing scheme to network according to task requirements and technical standards 3.2 Assign and verify live IP addresses to hosts, servers and networking devices in a local area network (LAN) environment 3.3 Implement static and dynamic addressing services for hosts 3.4 Enable and verify operation of network address translation (NAT) 3.5 Configure and implement dynamic host configuration protocol (DHCP) on router according to task requirements
4. Install small routed network	4.1 Select media, cables, ports, and connectors according to task requirements 4.2 Perform, save and verify basic router configuration according to task requirements 4.3 Install and verify classless routing protocol and network connectivity with required personnel 4.4 Implement password and physical security according to organisational requirements
5. Connect WAN links	5.1 Determine required method for connecting to a WAN 5.2 Implement and verify basic WAN serial connection
6. Finalise branch network activities	6.1 Seek network performance capability feedback from required personnel 6.2 Document finalised process and submit to required personnel 6.3 Store unused ICT equipment according to organisational policies and procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
-------	-------------

Oral Communication	<ul style="list-style-type: none">• Uses listening and questioning techniques to confirm information and requirements and gather feedback from required personnel
Reading	<ul style="list-style-type: none">• Interprets and critically analyses complex texts• Applies appropriate strategies to construct meaning from complex texts
Writing	<ul style="list-style-type: none">• Prepares documentation detailing finalised process• Writes and edits code and technical data in a logical manner using required syntax and specifications

Unit Mapping Information

Supersedes and is equivalent to ICTNWK404 Install, operate and troubleshoot a small enterprise branch network.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTNWK424 Install and operate small enterprise branch networks

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- configure, install and operate one small enterprise branch network
- identify, test and verify performance capability issues for a small enterprise branch network.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- internet protocol (IP) addressing scheme architecture
- network topologies, protocols and security solutions defined network problems
- Open Systems Interconnection (OSI) layers of networking
- Transmission Control Protocol (TCP)
- Network Address translation (NAT)
- dynamic host configuration protocol.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site where network installation may be conducted
- small enterprise routers and switches
- network's design documentation
- equipment specifications
- hardware and software required to install and operate small enterprise branch networks
- organisational guidelines

- computers
- documents including policies and procedures that may affect installation and operation of a network.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTNWK425 Build small wireless local area networks

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to build and arrange connectivity to a single zone wireless local area network (WLAN).

It applies to individuals with the Information and Communications Technology (ICT) skills involved in building wireless access points or wireless router in a small-to-medium enterprise or similar environments.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to build network	1.1 Identify network needs and organisational requirements 1.2 Determine position for user access point according to environmental and organisational requirements 1.3 Plan schedule of works for preliminary work to be carried out according to organisational and technical requirements

ELEMENT	PERFORMANCE CRITERIA
2. Select, install and configure wireless access point	2.1 Determine access point device according to organisational and technical requirements 2.2 Install and configure access point and services according to organisational requirements 2.3 Test access point and verify wireless connection and security arrangements according to task requirements 2.4 Select, install and configure legacy equipment and wireless card
3. Configure network	3.1 Configure security and other key parameters according to organisational requirements 3.2 Test security and firewall arrangements according to organisational requirements 3.3 Test network general compatibility and access with user equipment
4. Prepare network users	4.1 Determine required network devices according to organisational requirements 4.2 Establish and demonstrate user pairing and log-on arrangements 4.3 Inform users of wireless network etiquette and traffic capacity issues according to organisational policies and procedures 4.4 Develop user documentation and network settings according to organisational and technical standards 4.5 Lodge documentation with required personnel according to organisational policies and procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria

SKILL	DESCRIPTION
Oral communication	<ul style="list-style-type: none"> Uses verbal techniques to confirm information and requirements, communicate ideas and gather feedback
Reading	<ul style="list-style-type: none"> Interprets textual information from relevant sources to identify software solutions and adherence to organisational security policies and procedures
Writing	<ul style="list-style-type: none"> Prepares required documentation conveying explicit recommendations, requirements and information using specific and

SKILL	DESCRIPTION
	relevant language
Planning and organising	<ul style="list-style-type: none">• Determines job priorities, resources and equipment, and works logically and systematically to undertake clearly defined and familiar tasks
Problem solving	<ul style="list-style-type: none">• Initiates standard procedures when applying solutions in networks, including systems management processes• Deploys rapid solutions to problems involving building wireless local area networks and technical environment
Self-management	<ul style="list-style-type: none">• Demonstrates understanding of, and compliance with explicit organisational policies and procedures• Takes responsibility for routine decision making by selecting from a range of predetermined options in routine situations, identifying and taking some situational factors into account
Technology	<ul style="list-style-type: none">• Demonstrates an understanding of purposes, specific functions and key features of common digital systems and tools, and operates them effectively to complete routine tasks

Assessment Requirements for ICTNWK425 Build small wireless local area networks

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- install, configure and test at least two wireless access points
- monitor and resolve wireless network issues on at least two wireless local area networks
- develop and document user training material.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- basic principles of network security, including:
 - audit and intrusion detection systems
 - auditing and penetration testing techniques
 - authentication methods
 - network protocols and operating systems
 - security protocols, standards and data encryption
- factors that impact on a small wireless network, including:
 - bandwidth and quality of service
 - factors affecting signal quality
 - layer 2 and layer 3 design issues
 - features of a small office or home office (SOHO) network
 - wireless security strategies
 - wireless topologies
 - wireless local area network (WLAN) solutions
- protocols and their application for wireless networks, including:
 - transmission control protocol (TCP)
 - internet protocol (IP).

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- site at which a small wireless network can be installed
- tools to install small wireless network
- network technical requirements
- network infrastructure, including wireless hardware and software
- documentation and guidelines that may affect wireless network installations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTNWK426 Install and configure client-server applications and services

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to install, configure, maintain and support server-side applications on network workstations, in both Windows and Linux based networks.

It applies to individuals working as network administrators and network support roles who implement the installation and configuration of client-server-based software.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to provide client-server software requirements	1.1 Identify client-server output requirements according to organisational needs 1.2 Plan client-server solution according to organisational requirements 1.3 Determine required hardware to implement client-server solution 1.4 Determine host operating system for client-server software
2. Install, configure, and manage services	2.1 Install client-server software and client hardware according to organisational policies, procedures and

ELEMENT	PERFORMANCE CRITERIA
	guidelines 2.2 Configure client-server software according to vendor guidelines 2.3 Manage installation of upgrades and patches to client-server software environment 2.4 Backup client-server software according to technical and organisational requirements
3. Determine configuration effect on network design	3.1 Identify required utilities to monitor and determine network performance capability according to task requirements 3.2 Create network performance benchmarks 3.3 Determine performance effect on network after installation of client-server software
4. Test and finalise client-server activities	4.1 Test operation of client-server software against task requirements 4.2 Store unused ICT equipment according to manufacturer specifications and organisational procedures 4.3 Obtain sign-off from required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none">Interprets numerical information to analyse memory, hard disk and performance requirements
Oral communication	<ul style="list-style-type: none">Selects appropriate form, channel and mode of communication for a specific purpose relevant to own role
Reading	<ul style="list-style-type: none">Recognises and interprets technical and vendor-specific information to determine business requirements

Unit Mapping Information

Supersedes and is equivalent to ICTNWK407 Install and configure client-server applications and services.

Assessment Requirements for ICTNW K426 Install and configure client-server applications and services

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- install, configure, monitor and maintain at least one server-based client software to communicate with existing server software.

In the course of the above, the candidate must:

- test operation of client-server software
- identify and implement required updates for client-server software
- monitor performance of client-server software
- backup and maintain client-server software.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- requirements for client-server applications and services, including:
 - computer hardware and software required
 - internet protocol (IP) addressing
 - networking fundamentals
 - operating systems
- operating system help and support utilities required, including:
 - procedures for implementing backup and recovery
 - software installation and configuration
 - user account and password management
 - troubleshooting tools and techniques
 - network diagnostic utilities.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- hardware and software supplies
- server and networking tools
- client-server based network
- appropriate client-server software
- ICT equipment used in industry
- relevant equipment documentation
- work health and safety guidelines
- ICT storage guidelines.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTNWK427 Configure desktop environments

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to install, configure and support a desktop and workstation operating system in a networked environment.

It applies to individuals with competent technical skills employed in Information and Communications Technology (ICT) support roles or similar.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to install a desktop operating system	1.1 Determine desktop applications and feature requirements according to organisational requirements 1.2 Determine licensing, data migration, hardware and system requirements according to organisational requirements 1.3 Implement local data backups according to organisational and technical requirements
2. Install desktop operating system	2.1 Install and upgrade desktop operating system and applications according to task requirements 2.2 Configure and connect network settings and workstation according to task requirements 2.3 Patch operating system and applications according to task requirements

ELEMENT	PERFORMANCE CRITERIA
	2.4 Restore local data to new workstation
3. Configure desktop environment	3.1 Configure required hardware devices 3.2 Administer user environment according to task requirements 3.3 Create file and directory structure according to task requirements 3.4 Configure access to external data and desktop applications according to business requirements
4. Operate command line interface	4.1 Open command line interface and run commands and scripts according to task requirements 4.2 Manipulate command line files according to task requirements
5. Configure desktop security	5.1 Modify default user security settings according to organisational policies and guidelines 5.2 Modify file and directory ownership, permissions and password security 5.3 Configure and implement security settings for desktop applications according to business requirements
6. Monitor and test desktop	6.1 Test desktop environment functionality and performance according to organisational requirements 6.2 Diagnose and rectify desktop operating errors according to task requirements 6.3 Document desktop environment and lodge with required personnel according to organisational policies and procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none">Analyses and demonstrates an understanding of numerical test measurements to evaluate workstation performance
Oral Communication	<ul style="list-style-type: none">Uses listening and questioning techniques to confirm information and requirements using industry for intended audience
Reading	<ul style="list-style-type: none">Identifies and interprets technical material, organisational policy and regulatory information to determine job requirements

Writing	<ul style="list-style-type: none">• Prepares documentation detailing finalised process according to specified requirements
Problem solving	<ul style="list-style-type: none">• Makes decisions that demonstrates an understanding of implications of legal and regulatory responsibilities related to own work

Unit Mapping Information

Supersedes and is equivalent to ICTNWK408 Configure a desktop environment.

Links

Companion Volume Implementation Guide is found on VETNet -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=a53af4e4-b400-484e-b778-71c9e9d6aff2>

Assessment Requirements for ICTNWK427 Configure desktop environments

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- install and configure at least one desktop operating system, including user accounts, file and print services and security
- perform backup and recovery, monitor and troubleshoot the desktop environment for one desktop operating system
- document the finalised process.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- features of desktop operating systems, applications, compatibility issues and resolution procedures
- configuration requirements of a desktop environment
- file naming conventions related to selected operating system
- network protocols and transmission control protocol or internet protocol (TCP/IP) network connectivity
- operating systems and their functions, including file system, memory management and process scheduling
- printer driver and queue management
- process or task management, including process termination
- tools available for remote assistance and administration
- troubleshooting tools and techniques, including network diagnostic utilities and remote assistance and administration tools
- user account, group and password administration and guidelines for selecting a secure password
- file system navigation and manipulation utilities
- software and hardware manufacturer and user licensing.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site where server installation may be conducted
- relevant server specifications, including:
 - cabling
 - local area network (LAN)
 - diagnostic software
 - switch
 - client requirements
 - wide area network (WAN) service point of presence
 - desktop workstations
- required regulatory documentation that affects installation activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTNWK428 Create scripts for networking

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to undertake scripted programming tasks for networking related activities.

It applies to individuals with competent technical skills who are employed in network or systems administration roles.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to write networking scripts	1.1 Determine and document problem and script solution requirements according to organisational requirements 1.2 Employ abbreviated software development cycle to script creation according to task requirements 1.3 Develop pre-emptive downtime solution algorithm according to task requirements 1.4 Develop a guaranteed to end algorithm according to task requirements
2. Create and implement code	2.1 Select and create clear and concise code according to task requirements 2.2 Implement selection, iteration and sequence to control script execution flow according to task requirements

ELEMENT	PERFORMANCE CRITERIA
	2.3 Implement sequential file input and output and retrieve and store information 2.4 Seek and respond to script operation from user input according to task requirements
3. Implement operating system tools	3.1 Use searching and sorting tools to select information from logging output of operating system (OS) 3.2 Implement controls and demonstrate capability of script to maintain a log of operations 3.3 Register and run scripts with OS scheduling facility
4. Test and finalise script activities	4.1 Test script against design specification and task requirements 4.2 Identify and resolve scripting language bugs, syntactical, logical and design errors 4.3 Store unused materials and ICT equipment according to manufacturing specifications and organisational procedures 4.4 File documentation in required location according to organisational procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Oral Communication	<ul style="list-style-type: none"> Uses listening and questioning techniques to confirm information and requirements, communicate ideas and solutions, and gather feedback
Reading	<ul style="list-style-type: none"> Identifies and interprets technical material, organisational policy and regulatory information to determine job requirements
Writing	<ul style="list-style-type: none"> Prepares user and technical documentation detailing process according to organisational procedures Writes and edits code and technical data in a logical manner using required syntax

Unit Mapping Information

Supersedes and is equivalent to ICTNWK409 Create scripts for networking.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTNWK428 Create scripts for networking

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design, document, construct and test a small single purpose operating system (OS) utility application in response to a problem description
- create a scripted program that access information stored in files on system and use system utility programs to sort and find information within files for one operating system (OS)
- document process.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- principles of algorithm design
- operating system components and processes, including:
 - command line interface
 - log files
 - program scheduling utilities
 - data types
 - operations and expressions
 - development methodologies
- tools, utilities and testing methods that may be used to create scripts for networking
- debugging for a variety of scripting scenarios
- programming structured control constructs: sequence, selection and iteration
- scripting techniques and language syntax that may be used to create scripts for networking.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- OS scheduling software
- storage guidelines for ICT equipment
- work health and safety requirements
- technical requirements
- software development environment
- software testing environment.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTNWK429 Install hardware to networks

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to plan, manage and install new hardware components in a network.

It applies to individuals involved in technical Information and Communications Technology (ICT) support roles, including network administrators who support network hardware in a peer-to-peer or client-server networked environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine network hardware requirements	1.1 Determine network hardware and cabling requirements for local area network (LAN), wide area network (WAN), wireless networks according to organisational requirements 1.2 Identify any mobile equipment access design limitations according to task requirements 1.3 Determine effectiveness of organisational guidelines, purchasing policies, procedures, licensing arrangements and budget according to organisational requirements
2. Obtain and test network hardware	2.1 Identify technical specifications for required hardware according to task requirements 2.2 Test hardware capability according to organisational and

ELEMENT	PERFORMANCE CRITERIA
	technical requirements 2.3 Document recommendations and provide document to required personnel 2.4 Determine and document licensing requirements and security issues according to organisational and industry standards 2.5 Obtain hardware according to recommendations and organisational requirements
3. Install and configure network hardware	3.1 Install hardware according to manufacturer and organisational policies, procedures and guidelines 3.2 Configure and test installation according to manufacturer and task requirements
4. Provide instruction and support for installed products	4.1 Determine and document organisational user instructions and requirements from installed products 4.2 Provide instruction document to required personnel according to organisational requirements 4.3 Seek evaluation and feedback from required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none">Demonstrates an understanding of licensing and security issues relevant to job requirements
Numeracy	<ul style="list-style-type: none">Uses mathematical formulas and calculations to estimate and plan costs according to business budgets
Oral Communication	<ul style="list-style-type: none">Uses listening and questioning techniques to confirm information and task requirements, communicate ideas and solutions
Writing	<ul style="list-style-type: none">Prepares documentation detailing recommendations, requirements and organisational user instruction using cohesive language for intended audience
Technology	<ul style="list-style-type: none">Demonstrates and understanding of technical information and organisational procedures to determine job requirements

Unit Mapping Information

Supersedes and is equivalent to ICTNWK410 Install hardware to a network.

Assessment Requirements for ICTNWK429 Install hardware to networks

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- evaluate client user requirements and hardware installation for at least one network
- install a range of network hardware by planning, managing and supporting the installation of new components in a network
- document finished process.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry, data and voice networking, security products, devices and procedures, including:
 - industry accepted network protocols
 - organisational contracting procedures and responsibilities
 - system diagnostic software
 - industry accepted network hardware and software products
 - hardware and software installation procedures
 - local area network (LAN) capabilities and characteristics, such as network type, internet protocol (IP) addressing, switch or hub operation
 - various features of network connections, including types of cables, cabling distance limitations and wireless connections
 - operating systems sufficient to enable basic installation
 - set-up and configuration procedures
- software packages supported by organisation.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- vendor hardware and software components
- application software and operating system
- hardware maintenance tools
- a live network
- networked computers
- organisational guidelines
- technical documentation and installation manuals.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTNWK430 Deploy software to networked computers

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to plan, manage and support installation of new and upgraded software to networked computers according to vendor and organisational specifications.

It applies to individuals involved in installing, configuring, maintaining and supporting software, including network administrators and network support staff.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine operating system requirements	1.1 Determine software and licensing according to organisational requirements 1.2 Determine hardware needs according to organisational requirements 1.3 Determine hardware and software requirements against local area network (LAN), wide area network (WAN), and wireless networks
2. Obtain deployment software to automate deployment	2.1 Determine required deployment software according to task requirements 2.2 Obtain required software and licences, technical specifications and support arrangements from vendors

ELEMENT	PERFORMANCE CRITERIA
	2.3 Store software licences and manuals according to organisational guidelines
3. Automate installation of operating system	3.1 Plan and deploy operating system according to vendor installation procedures and organisational requirements 3.2 Configure and test installation according to vendor specifications and organisational requirements 3.3 Install updates and patches according to task requirements
4. Automate installation of software packages	4.1 Plan and deploy software packages according to vendor installation procedures and organisational requirements 4.2 Configure and test installation to task requirements 4.3 Install required updates and patches according to task requirements
5. Test and sign off	5.1 Test installed operating system and software and confirm error-free performance 5.2 Document security and licensing agreements according to organisational policies and procedures 5.3 Submit documentation to required personnel for final approval sign off

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria

SKILL	DESCRIPTION
Oral Communication	<ul style="list-style-type: none">• Uses active listening, observational and questioning techniques to confirm information and determine job requirements
Reading	<ul style="list-style-type: none">• Recognises and interprets written technical, licensing and organisational
Writing	<ul style="list-style-type: none">• Prepares required documentation conveying explicit recommendations, requirements and information using specific and relevant language
Planning and organising	<ul style="list-style-type: none">• Uses effective planning structures and prioritises tasks according to output needs

Unit Mapping Information

Supersedes and is equivalent to ICTNWK411 Deploy software to networked computers.

Assessment Requirements for ICTNWK430 Deploy software to networked computers

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, and to:

- plan and deploy automatic installation of operating system and software to at least two networked computers
- configure and test installation of automatic installation of operating system and software on at least two networked computers
- document finalised process.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- network protocols and operating systems
- transmission control protocols (TCP)
- internet protocols (IPs)
- network applications
- organisational contracting procedures and responsibilities that may be used in deploying software for networked computers
- software licensing requirements and documentation
- standards related to software deployment, including:
 - deployment software configuration
 - configuration of automated deployment processes
 - operating system deployment
 - software package deployment
 - troubleshooting deployment processes.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site or prototype where deployment processes may be implemented
- a live network
- software tools to support implementation of deployment processes
- technical documentation and installation manuals
- required regulatory documentation that affects networking activities
- organisational guidelines.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTNWK431 Create network documentation

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to determine network requirements and produce and evaluate network documentation.

It applies to individuals involved in roles requiring task management and competent Information and Communications Technology (ICT) skills, including network administrators, technicians and support personnel.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine network documentation requirements	1.1 Determine document purpose and standards according to organisational requirements 1.2 Define required network configuration 1.3 Develop naming standards and labelling schemes according to organisational requirements 1.4 Develop, calculate and verify network addressing scheme according to task requirements
2. Design network diagrams and checklists	2.1 Identify network software mapping tools according to task requirements 2.2 Design network diagrams according to task requirements and organisational procedures

ELEMENT	PERFORMANCE CRITERIA
	2.3 Develop plans, checklists and manuals according to organisational procedures and task requirements
3. Produce network documentation	3.1 Validate documentation structure according to task requirements and organisational procedures 3.2 Produce network diagrams, plans and checklists according to organisational procedures 3.3 Produce network according to task requirements 3.4 Document procedure and policy manuals according to organisational requirements and industry standards
4. Complete network documentation	4.1 Check network documentation with required organisational personnel 4.2 Publish network documentation according to task requirements and organisational policies and procedures 4.3 Record and store network documentation according to organisational policies and procedures 4.4 Notify required personnel of completed network documentation and initiate final sign off

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none">Recognises, compares and interprets technical data when developing network addressing scheme
Oral Communication	<ul style="list-style-type: none">Articulates requirements and strategies using technical language appropriate to audience and environment
Reading	<ul style="list-style-type: none">Gathers, interprets and analyses current industry information from a range of sources and identifies relevant and key information
Writing	<ul style="list-style-type: none">Prepares required documentation conveying explicit recommendations, requirements and information using specific and relevant language
Teamwork	<ul style="list-style-type: none">Identifies and takes steps to follow accepted communication practices and protocols

Unit Mapping Information

Supersedes and is equivalent to ICTNWK412 Create network documentation.

Assessment Requirements for ICTNWK431 Create network documentation

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, and to:

- design and implement at least one network document and publish to its intended environment.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- open systems interconnect (OSI) layered communication model
- network requirements related to:
 - applications
 - life cycles
 - manageability
 - quality of service
- design concepts related to:
 - financial constraints
 - network topologies
 - organisation requirements
 - physical constraints
 - security issues.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site where network documentation can be carried out
- a live network
- software tools to support network documentation tasks
- relevant network documentation
- legislation and standards documentation
- industry codes of practice
- required regulatory documentation that affects networking documentation activities
- organisational guidelines.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTNWK432 Build an enterprise wireless network

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to build an enterprise, community or mesh wireless network internally and externally to buildings.

It applies to individuals with task management, interpersonal and Information and Communications Technology (ICT) skills working in senior design roles in the networking area, who are required to develop complex wireless networks for organisations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to install network	1.1 Determine network requirements according organisational requirements 1.2 Review existing network design documentation 1.3 Identify network topology according to task requirements 1.4 Identify required networking components according to technical and task requirements 1.5 Determine usability of installation and safety equipment according to technical standards and organisational requirements
2. Install and configure access points	2.1 Determine hardware according to task requirements 2.2 Install and configure wireless access hardware according to

ELEMENT	PERFORMANCE CRITERIA
	task requirements 2.3 Configure security, monitoring, logging and quality of service features and networks 2.4 Calibrate test equipment according to task requirements 2.5 Test wireless network systems performance according to task requirements
3. Install and configure antennas	3.1 Select antennas according to task requirements 3.2 Install and configure wireless network access antennas to technical specification and task requirements 3.3 Measure and assess signal strength according to task requirements 3.4 Resolve and report any radio frequency interference issues to required personnel
4. Finalise network activities	4.1 Seek and respond to network performance feedback according to task requirements 4.2 Review planned maintenance and network performance continuity upgrade requirements 4.3 Document and store network settings and performance continuity recommendations according to organisational procedures 4.4 Store unused ICT equipment according to organisational and industry procedures and guidelines

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Interprets numerical information to calibrate equipment and measure and assess signal strength
Oral Communication	<ul style="list-style-type: none"> Uses active listening, observational and questioning techniques to confirm information and using technical language appropriate to audience and environment
Reading	<ul style="list-style-type: none"> Gathers, interprets and analyses information from a range of sources and identifies relevant and key information
Writing	<ul style="list-style-type: none"> Prepares required documentation detailing finalised process in a logical manner using cohesive language
Planning and	<ul style="list-style-type: none"> Uses a combination of formal, logical planning processes to ensure

organising	work is completed according to time constraints and an increasingly intuitive understanding of context to identify relevant information and risks
Self-management	<ul style="list-style-type: none">• Demonstrates an understanding of securing information in relation to own work and takes personal responsibility for identifying and managing risk• Initiates standard procedures when solving a broad range of ICT problems• Complies with explicit organisational policies and procedures• Recognises and applies protocols governing what to communicate, with whom and how in a range of different contexts
Technology	<ul style="list-style-type: none">• Uses familiar digital systems and tools to access, organise, analyse and store information• Demonstrates an understanding of purposes, specific functions and key features of common digital systems and tools, and operates them effectively to complete routine tasks

Unit Mapping Information

Supersedes and is equivalent to ICTNWK417 Build an enterprise wireless network.

Assessment Requirements for ICTNWK432 Build an enterprise wireless network

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- select, install and configure required wireless hardware on at least one occasion
- test, monitor, and administer the installation on at least one occasion
- document finalised process.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- Industry standard wireless local area network (WLAN) and wireless area network (WAN) solutions, including:
 - audit and intrusion detection systems
 - auditing and penetration testing techniques
 - bandwidth and quality of service
 - factors affecting signal quality
 - layer 2 and layer 3 design issues
 - suitability for small office home office (SOHO) and enterprise local area networks (LANs)
 - transmission control protocols or internet protocols (TCPs/IPs) and applications
 - wireless topologies
- common features of security threats and how to develop a security strategy, including:
 - security protocols
 - standards
 - data encryption
- common network protocols and operating systems.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site at which design, build and implementation of networking and ICT activities may be carried out
- industry standard ICT equipment
- network infrastructure, including wireless hardware and software
- required regulatory documentation that affects networking activities
- organisational guidelines.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTNWK433 Install backbone technologies in a local area network

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to install core layer (backbone) connectivity in a local area network (LAN) for applications between floors in a multi-storey and separate buildings.

It applies to individuals who apply specialised technical knowledge and a systematic approach to installing Information and Communications Technology (ICT) technologies and backbone connectivity in a LAN.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Design and prepare to install network requirements	1.1 Identify network requirements according to technical and organisational requirements 1.2 Design network structure according to organisational requirements 1.3 Design network addressing system with subnet and host identities (IP addressing) and virtual LANs (VLANs) 1.4 Identify and document resource requirements according to organisational policies, procedures and task requirements
2. Install and configure	2.1 Install and configure networking switches and routers

ELEMENT	PERFORMANCE CRITERIA
network backbone	according to task requirements 2.2 Install network protocol suites according to task requirements 2.3 Configure host and workstation network access according to task requirements
3. Test and validate network	3.1 Test network connectivity and ensure hosts on segments and VLANs operation parameters are met 3.2 Implement adjustments to systems structure according to task requirements 3.3 Document and validate network performance according to organisational policies and procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none">Interprets numerical information to calculate and interpret network connectivity
Oral communication	<ul style="list-style-type: none">Uses active listening, observational and questioning techniques to confirm information and using technical language appropriate to audience and environment
Reading	<ul style="list-style-type: none">Gathers, interprets and analyses current network design specifications and identifies relevant and key information
Writing	<ul style="list-style-type: none">Prepares required documentation detailing network performance using cohesive and relevant language for intended audience
Planning and organising	<ul style="list-style-type: none">Uses a combination of formal, logical planning processes and an increasingly intuitive understanding of context to prioritise tasks and contingency arrangements
Problem solving	<ul style="list-style-type: none">Demonstrates an understanding of purposes, specific functions and key features of common digital systems and tools, and operates them effectively to complete routine tasks
Self-management	<ul style="list-style-type: none">Initiates standard procedures when responding to familiar problems within immediate context
Technology	<ul style="list-style-type: none">Uses mobile communication tools and specialised software to ensure that geographically distributed team members remain connected in virtual environments

Unit Mapping Information

Supersedes and is equivalent to ICTNWK418 Implement backbone technologies in a local area network.

Links

Companion Volume Implementation Guide is found on VETNet -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=a53af4e4-b400-484e-b778-71c9e9d6aff2>

Assessment Requirements for ICTNWK433 Install backbone technologies in a local area network

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, and to:

- install and configure backbone connectivity in a LAN on at least one occasion.
- build and test one asynchronous transfer mode (ATM) local area network (LAN) that provides the required services at the required communication standards
- document resource requirements and network performance.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- current and emerging industry standard practice associated with:
 - bandwidth limitations, measuring and testing
 - LAN and wide area network (WAN) network topologies (three-layer LAN hierarchy: core distribution and access)
 - MAC addresses, network layer protocols
 - open systems interconnect (OSI) layer modelling
 - routers virtual LANs
 - network interface cards (NICs) and switches, including:
 - fast Ethernet
 - gigabit and 10-gigabit Ethernet store-and-forward
 - fast-forward
 - fragment-free
 - internetworking protocol suites, including:
 - TCP/IP, IPX, DECnet, AppleTalk, IPv6.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site at which installation of backbone and ICT activities may be carried out
- required web and technical applications
- documented installation guidelines on vendor products
- local area network infrastructure
- switches with various interfaces
- network administration tools.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTNWK434 Identify and implement industry standard virtualisation technologies

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to use virtualisation technology to review and demonstrate work processes, skills and techniques and to deliver quality across the entire business.

This unit applies to individuals engaged in ongoing review and research, who review and maintain business processes at the most advanced level.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to use virtualisation software	1.1 Determine desktop virtualisation software needs according to organisational requirements 1.2 Identify industry standard virtualisation vendors and different types of virtualisation technology 1.3 Review and select desktop virtualisation software according to organisational requirements
2. Install and test virtualisation software	2.1 Install desktop virtualisation software according to technical and organisational requirements 2.2 Test features and functions of desktop virtualisation software according to technical and organisational

ELEMENT	PERFORMANCE CRITERIA
	<p>requirements</p> <p>2.3 Seek and respond to desktop virtualisation software performance feedback according to task requirements</p>
3. Evaluate desktop virtualisation software performance	<p>3.1 Review and document organisational benefits of desktop virtualisation software</p> <p>3.2 Lodge review document according to organisational policies and procedures</p> <p>3.3 Dispose redundant ICT equipment and store unused ICT equipment according to organisational policies and procedures</p>

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none"> Contributes to the continuous improvement of current work practices, by applying basic principles of analytical and lateral thinking
Reading	<ul style="list-style-type: none"> Critically analyses documentation from a variety of sources and records Consolidates information to determine task requirements
Writing	<ul style="list-style-type: none"> Prepares, edits and proofreads required documents to ensure clarity of meaning, and the accuracy and consistency of information
Planning and organising	<ul style="list-style-type: none"> Takes responsibility for planning, sequencing and prioritising tasks and own workload, for efficiency and effective outcomes
Problem solving	<ul style="list-style-type: none"> Makes routine decisions and implements standard procedures for routine tasks, using formal decision-making processes, for more complex and non-routine situations
Self-management	<ul style="list-style-type: none"> Identifies, and acts on, issues that contravene relevant policies, procedures and legal requirements Takes personal responsibility for following explicit and implicit policies, procedures and legislative requirements

Unit Mapping Information

Supersedes and is equivalent to ICTNWK419 Identify and use current virtualisation technologies.

Assessment Requirements for ICTNWK434 Identify and implement industry standard virtualisation technologies

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- identify and implement at least one major virtualisation software technologies
- test output and performance of at least one major virtualisation software technologies
- document findings.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard trends and directions in Information and Communications Technology (ICT), in major industry technology standards used in virtualisation technology
- vendor product directions relating to virtualisation technology
- industry hardware and software products, their general features, capabilities and application
- technical information-gathering techniques
- environmental and sustainability policies of workplace
- features of virtualisation technology
- current standards of testing and evaluating virtualisation technology.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site where industry-specific technologies are used
- industry-specific technologies currently used in industry
- virtualisation software.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standard.

ICTNWK435 Create secure virtual private networks

Modification History

Release	Comments
Release 1	<p>This version first released with the Information and Communications Technology Training Package Version 8.0.</p> <p>Supersedes and is equivalent to ICTNWK416 Build security into virtual private networks.</p> <p>Supersedes and is not equivalent to:</p> <ul style="list-style-type: none">• ICTSAS422 Scope implementation requirements• ICTWEB423 Ensure dynamic website security. <p>Updated title to better reflect unit scope.</p>

Application

This unit describes the skills and knowledge required to assess and implement security access measures into virtual private networks (VPNs). It includes configuring a secure network router, testing router functionality, and following workplace procedures to rectify faults.

The unit applies to individuals who may be networkers, technical specialists and security analysts who are responsible for implementing secure network solutions and who use a wide range of information and communications technology (ICT) skills and knowledge to establish secure VPNs.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Configure secure VPN	1.1 Confirm work brief and tasks according to organisational

ELEMENT	PERFORMANCE CRITERIA
	<p>policies and procedures</p> <p>1.2 Select secure network router according to work brief</p> <p>1.3 Source network configuration hardware, software and tools</p> <p>1.4 Confirm component serviceability</p> <p>1.5 Set up gateway and connect network router</p> <p>1.6 Create and apply audit rules for network router and run asset security monitoring</p>
2. Secure site-to-site VPN	<p>2.1 Test network for vulnerabilities according to work brief and organisational policies and procedures</p> <p>2.2 Establish prerequisites and confirm gateway connection to network router</p> <p>2.3 Configure internet key exchange (IKE) and site-to-site internet protocol security (IPSec) systems</p> <p>2.4 Authenticate site-to-site VPN user access</p>
3. Secure client-to-site remote access VPN	<p>3.1 Configure client-to-site VPN remote user access server</p> <p>3.2 Install and access router management console</p> <p>3.3 Test remote access server and rectify any faults</p>
4. Finalise creation of secure VPNs	<p>4.1 Develop and securely file documentation on system settings and framework components</p> <p>4.2 Confirm VPN has been secured to an acceptable quality according to organisational policies and procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none">Gathers, interprets and analyses current industry rules from a range of sources and locates relevant sources of information
Writing	<ul style="list-style-type: none">Prepares workplace documentation in a format appropriate to organisational requirements
Initiative and enterprise	<ul style="list-style-type: none">Initiates standard procedures when responding to problems in known or changing contexts
Planning and organising	<ul style="list-style-type: none">Uses a combination of formal planning processes to identify threats, risks and vulnerabilities

Skill	Description
Self-management	<ul style="list-style-type: none">Undertakes security procedures in relation to own work and takes personal responsibility for identifying and managing risks
Technology	<ul style="list-style-type: none">Identifies the purposes, specific functions and key features of specialist systems and tools, and operates them effectively to complete work tasks

Unit Mapping Information

Supersedes and is equivalent to ICTNWK416 Build security into virtual private networks.

Supersedes and is not equivalent to:

- ICTSAS422 Scope implementation requirements
- ICTWEB423 Ensure dynamic website security.

Links

Assessment Requirements for ICTNWK435 Create secure virtual private networks

Modification History

Release	Comments
Release 1	<p>This version first released with the Information and Communications Technology Training Package Version 8.0.</p> <p>Supersedes and is equivalent to ICTNWK416 Build security into virtual private networks.</p> <p>Supersedes and is not equivalent to:</p> <ul style="list-style-type: none">• ICTSAS422 Scope implementation requirements• ICTWEB423 Ensure dynamic website security. <p>Updated title to better reflect unit scope.</p>

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- configure at least one network router
- configure client-to-site virtual private network (VPN) access on at least one network router
- configure site-to-site VPN user access on at least one network router.

In the course of the above, the candidate must:

- authenticate VPN user access using one of the following:
 - pre-shared keys
 - digital certificates
- apply required organisational policies and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- key characteristics of a VPN, including:
 - site-to-site access systems

- client-to-site remote access systems
- network protocols and operating system functionality
- key features and distinguishing differences of network routers
- key methods to configure network components using technical guidelines
- key security threats, including:
 - data interception
 - data corruption
 - data falsification
 - eavesdropping
- key security requirements, authentication tools and techniques to secure a VPN, including:
 - auditing and penetration testing
 - shared keys and digital certificates
 - audit rules and intrusion detection systems
 - asset security monitoring
 - router and switch configuration
 - security and encryption protocols and standards
 - prerequisites and gateways
 - processes to establish security perimeters
 - processes to contain security breaches
 - transmission control protocol or internet protocol (TCP/IP) applications
 - procedures for user authentication
- key differences between different types of networks, including:
 - local area network (LAN)
 - wireless local area network (WLAN)
 - wide area network (WAN)
- organisational security techniques to identify and minimise network vulnerabilities, including:
 - security cryptography
 - screened subnets
 - virus detection software
- organisational formats for documentation
- organisational policies and procedures and legislative requirements relating to work tasks.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- technical network requirements, including access to different browsers and different devices
- network infrastructure, including servers, tools, hardware and software

- organisational policies and procedures required to demonstrate the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTNWK537 Implement secure encryption technologies

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to select, implement and monitor secure file encryption technologies on a computer network or local environment.

It applies to individuals working as network engineers, security analysts, application and software developers as well as systems support administrations in any size enterprise.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine encryption methods	1.1 Identify enterprise data security needs according to computer network and organisational needs 1.2 Obtain and review available range of encryption technologies and determine options according to computer network and organisational needs 1.3 Plan and document proposed encryption implementation strategy and submit to required personnel 1.4 Seek and respond to proposed encryption plan feedback from required personnel according to organisational needs
2. Carry out encryption	2.1 Implement encryption technology to enterprise system according to vendor specifications 2.2 Analyse and document effect of encryption technologies on

ELEMENT	PERFORMANCE CRITERIA
	<p>required user roles and responsibilities</p> <p>2.3 Submit encryption technologies analysis report and inform user impact to required users and organisational personnel</p>
3. Finalise encryption technologies	<p>3.1 Evaluate implementation of encryption technologies according to encryption analysis report</p> <p>3.2 Determine function and performance of encryption technologies</p> <p>3.3 Seek user feedback on function and performance of encryption technologies</p> <p>3.4 Document encryption issues and compromises and submit to organisational help desk support</p>

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Interprets and analyses technical data to determine security requirements Identifies and interprets technical compromises from help desk records
Writing	<ul style="list-style-type: none"> Prepares workplace documentation that incorporates an evaluation of technical information using specialised and cohesive language
Teamwork	<ul style="list-style-type: none"> Determines the required form, channel and mode of communication for a specific purpose, according to own role
Problem solving	<ul style="list-style-type: none"> Uses a combination of formal, logical planning processes and an increasingly intuitive knowledge of context to determine data security threats, risks and countermeasures Initiates standard procedures when responding to familiar problems to troubleshoot, debug and correct connectivity and security issues
Self-management	<ul style="list-style-type: none"> Follows explicit and implicit protocols and meets expectations associated with own role Demonstrates knowledge of the purposes, specific functions and key features of industry standard digital systems and tools Operates industry standard digital systems and tools effectively to complete routine tasks
Technology	<ul style="list-style-type: none"> Manages and maintains data securely and actively monitors technology, notifying others if security becomes compromised Operates industry standard digital systems and tools effectively to complete routine tasks

Unit Mapping Information

Supersedes and is equivalent to ICTNWK502 Implement secure encryption technologies.

Assessment Requirements for ICTNWK537 Implement secure encryption technologies

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- create and document a security plan for the encryption of at least two applications or solutions.

In the course of the above, the candidate must:

- carry out and evaluate encryption of applications or solutions
- analyse enterprise data security requirements
- determine encryption methods.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard certificate related infrastructure including certificate authorities, registration authorities, repository services
- industry standard symmetric key algorithms and their usage, including:
 - advanced encryption standard (AES), data encryption standard (DES), triple data encryption algorithm (triple DES)
 - Blowfish
- industry standard encryption types, including:
 - public key, secret key, hash key
 - encryption strength
- functions and features of:
 - access control permissions
 - digital signatures and timestamps
 - symmetric encryption, asymmetric encryption and one-way encryption

- one-way message digests including:
 - message digest algorithm 5 (MD5)
 - secure hash algorithm (SHA)
- public key infrastructure (PKI), pretty good privacy (PGP) and GNU Privacy Guard (GnuPG)
- replay security processes and how to prevent them
- transmission control protocol and internet protocol (TCP/IP) protocols and applications
- wired equivalent privacy (WEP), Wi-Fi protected access (WPA) and Wi-Fi protected access 2 (WPA2).

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site where encryption installation may be conducted
- a live network
- servers
- industry standard encryption software
- industry standard encryption tools
- organisational security and encryption deliverables.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTNWK538 Install and maintain valid authentication processes

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to design, develop, install and maintain authentication processes and reduce vulnerability of a system.

It applies to individuals working in middle management roles including information security managers, network engineers, security analysts, or similar roles who are responsible for implementing and monitoring an organisational security management system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Evaluate authentication requirements	1.1 Determine user and organisational security requirements according to organisational security plan 1.2 Identify and analyse authentication options according to user and organisational requirements 1.3 Determine required authentication and authorisation processes according to organisational policies and procedures
2. Configure authentication system	2.1 Create required authentication realm and reuse according to authentication system and organisational requirements 2.2 Add required users and authorisation rules to new realm according to authentication system requirements 2.3 Determine user attributes and user attribute set-up according to

ELEMENT	PERFORMANCE CRITERIA
	<p>authentication system requirements</p> <p>2.4 Set up authentication filter and authorisation parameters according to authentication system requirements</p>
3. Apply authentication methods	<p>3.1 Develop and document authentication systems and protocols according to authentication system requirements</p> <p>3.2 Develop, document and distribute user authentication system responsibilities to required personnel</p> <p>3.3 Apply authentication system to network and user according to system product and authentication system requirements</p> <p>3.4 Record and securely store permission and configuration information according to authentication system requirements</p>
4. Monitor authentication system	<p>4.1 Review authentication system according to user security and quality of service requirements</p> <p>4.2 Determine and document security monitoring, incident management and reporting processes according to organisational security plan</p> <p>4.3 Submit documentation and respond to feedback from to required personnel</p> <p>4.4 Seek and respond to feedback from required personnel according to organisational policies and procedures</p>

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Interprets and analyses technical data to determine requirements according to user and organisational plans
Writing	<ul style="list-style-type: none"> Prepares documentation detailing work performed according to organisational policies and procedures for a specific audience
Planning and organising	<ul style="list-style-type: none"> Uses a combination of formal, logical planning processes and an increasingly intuitive knowledge of context to plan control methods and systems processes
Problem solving	<ul style="list-style-type: none"> Demonstrates a high-level knowledge of ways in which digital systems and tools are used or could be used to achieve work goals and begins to recognise strategic and operational applications Uses intuition to identify authentication failure and security incidents and their general problem area Demonstrates an analytical thought processes to clarify goals and key

SKILL	DESCRIPTION
	issues and lateral thinking processes to generate possible solutions
Self-management	<ul style="list-style-type: none">Follows explicit and implicit protocols and meets expectations associated with own roleUses digital technologies and systems safely and securely when implementing and monitoring a system with a growing awareness of the permanence and transparency of all activities

Unit Mapping Information

Supersedes and is equivalent to ICTNWK503 Install and maintain valid authentication processes.

Assessment Requirements for ICTNWK538 Install and maintain valid authentication processes

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design and deploy authentications solutions to a medium-sized business technology environment.

In the course of the above, the candidate must:

- configure authentication software and tools
- align authentication processes to organisational requirements and industry standard best practices
- document work plans and processes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- problems and challenges associated with organisational authentication issues, including resource accounting through authentication
- industry standard virtual private network (VPN) issues, including:
 - quality of service (QoS) considerations
 - bandwidth
 - dynamic security environment
 - function and operation of VPN concepts
- authentication adaptors, including biometric authentication adaptors
- digital certificates, including:
 - VeriSign
 - X.509
 - SSL

- function and operation of authentication controls and protocols including:
 - passwords and personal identification numbers (PINs)
 - smart cards biometric devices
- network authentication services including:
 - Kerberos
 - NT LAN Manager (NTLM)
- features of common password protocols, including:
 - challenge handshake authentication protocol (CHAP)
 - challenge phrases
 - password authentication protocol (PAP)
 - remote authentication dial-in user service (RADIUS) authentication
- principles of security tokens.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

- a site or prototype where network authentication may be implemented and managed
- network support tools currently used in industry
- organisational security policies related to authentication
- manufacturers recommendations
- current authentication standards, including biometric authentication adaptors.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTNWK539 Design and implement integrated server solutions

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to design and implement network authentication models that allow users to log in using the same user credentials between multiple operating system platforms and that provides a secure method of file sharing on a single, shared network.

It applies to individuals working in network or systems engineering roles, where they are required to support multiple operating systems in a complex computing environment of medium-to-large organisational settings.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to design and install integrated server solution	1.1 Identify server integration requirements according to organisational network requirements 1.2 Determine deployment access requirements and user down times 1.3 Determine required authentication methods and protocols according to organisational network requirements 1.4 Identify additional installation preparation requirements and document preparation details according to organisational network requirements

ELEMENT	PERFORMANCE CRITERIA
2. Design integrated server solution	2.1 Analyse network operating systems integration and authentication methods according to network authentication model 2.2 Research redundancy and replication requirements for required authentication model 2.3 Design and document integrated server design
3. Install and configure the integrated server solution	3.1 Implement integrated authentication solution according to server design specifications 3.2 Implement integrated file sharing solution according to server design specifications 3.3 Configure required integrated environment on required user workstations 3.4 Implement required integrated server environment security according to server design specifications
4. Test and reconfigure network servers	4.1 Test server performance and document outcomes according to network requirements 4.2 Analyse documented error report and identify system errors 4.3 Diagnose and correct identified integration problems according to network requirements 4.4 Test and validate network server changes and additions against specifications
5. Document and complete network design and installation	5.1 Document server configuration and operational changes 5.2 Complete required documentation report and notification of server status 5.3 Clean up and restore worksite according to organisational requirements

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none">Analyses numerical information to take measurements, interpret results and evaluate performance and interoperability of network
Reading	<ul style="list-style-type: none">Interprets and analyses enterprise procedures, manuals and specifications to determine requirements
Writing	<ul style="list-style-type: none">Prepares workplace documentation that incorporates an evaluation of technical information and specialised and cohesive language in a

SKILL	DESCRIPTION
	format and style required for a specific audience
Teamwork	<ul style="list-style-type: none">Actively identifies the requirements of important communication exchanges, selecting channels, format, tone and content to suit purpose and audience
Planning and organising	<ul style="list-style-type: none">Uses a combination of formal, logical planning processes and an increasingly intuitive knowledge of context to plan, prioritise and monitor own work
Problem solving	<ul style="list-style-type: none">Makes a range of decisions in relatively complex situations, taking a range of constraints into accountInitiates standard procedures and contingency management skills when responding to familiar problems to adapt configuration procedures to requirements of network and reconfigure, depending on differing operational contingencies, risk situations and environments
Self-management	<ul style="list-style-type: none">Demonstrates knowledge of the implications of legal and regulatory responsibilities related to own work
Technology	<ul style="list-style-type: none">Demonstrates knowledge of key principles and concepts underpinning design and operation of digital systems and tools and applies these when troubleshooting existing technology

Unit Mapping Information

Supersedes and is equivalent to ICTNWK504 Design and implement an integrated server solution.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTNWK539 Design and implement integrated server solutions

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- install and configure at least two integrated server solutions according to at least two produced integrated server design documents.

In the course of the above, the candidate must:

- produce design documents required to integrate multiple server operating systems for authentication, file sharing and security
- monitor and test the solution
- troubleshoot integration problems
- test and reconfigure network servers.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- authentication methods and protocols, including:
 - lightweight directory access protocol (LDAP)
 - Kerberos
- industry standard network operating systems (NOS), including:
 - operating system help and support utilities
 - network file systems and sharing
- industry standard server applications, compatibility issues and resolution procedures, including:
 - error and event logging and reporting procedures
 - file and print management
 - high availability options for servers

- network service configuration and security
- industry standard performance monitoring tools and tuning options
- process of managing a project, including:
 - process or task management
 - task scheduling utilities
- troubleshooting tools and techniques, including network diagnostic utilities
- user authentication and directory services.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site where server installation may be conducted
- industry standard server specifications including:
 - multiple operating system platforms
 - cabling
- networked (LAN) computers
- server diagnostic software
- switching equipment
- client requirements
- workstations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTNWK540 Design, build and test network servers

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to design, install and test servers in complex network environments.

It applies to individuals who are employed in network or systems engineering roles or similar and are required to design and build network servers in a complex computing environment of medium-to-large organisations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan and design network servers	1.1 Identify network server performance and data migration specifications according to organisational requirements 1.2 Design and document configuration of network services and server applications according to organisational requirements 1.3 Prototype design and update documentation 1.4 Develop test plan and confirm alignment according to organisational requirements 1.5 Submit documented plan and obtain sign off from required personnel
2. Prepare for network server	2.1 Identify safety hazards and implement risk control

ELEMENT	PERFORMANCE CRITERIA
installation	<p>measures according to network design specifications</p> <p>2.2 Determine network and user disruptions and communicate to required personnel</p> <p>2.3 Back up local data according to network design specifications</p>
3. Build and configure servers	<p>3.1 Install network operating system according to design specifications</p> <p>3.2 Install additional tools and required third-party software applications according to network server requirements</p> <p>3.3 Implement security design and patch operating system and application according to network design specifications</p> <p>3.4 Configure network services, restore local data and provide automatic updates according to network design specifications</p> <p>3.5 Implement security design to prevent unauthorised access to system according to network design specifications</p> <p>3.6 Reconnect and reconfigure connectivity devices according to network server requirements</p> <p>3.7 Configure update services to provide automatic updates for operating system and applications</p> <p>3.8 Restore local data to new server</p> <p>3.9 Implement backup and recovery methods and enable restoration capability in the event of a disaster</p>
4. Test and reconfigure network servers	<p>4.1 Test server and benchmark against network design specifications and document outcomes</p> <p>4.2 Identify and remediate identified server operating issues according to network design specifications</p> <p>4.3 Test and validate changes and additions against organisational requirements</p>
5. Complete and document network design and installation process	<p>5.1 Document server configuration, server status and operational changes</p> <p>5.2 Complete required documentation report and notification of server status</p> <p>5.3 Clean up and restore worksite according to organisational requirements</p>

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none">• Demonstrates knowledge of ways in which digital systems and tools are used or could be used to achieve work goals and begins to recognise strategic and operational applications
Numeracy	<ul style="list-style-type: none">• Analyses numerical information to take measurements, interpret results and evaluate performance and interoperability of network• Uses mathematical formulas and calculations to estimate and plan project costs within a defined budget
Reading	<ul style="list-style-type: none">• Interprets organisational procedures, manuals and specifications to determine requirements
Writing	<ul style="list-style-type: none">• Prepares workplace documentation that incorporates an evaluation of technical information using specialised language in a format and style required for a specific audience
Teamwork	<ul style="list-style-type: none">• Determines the required form, channel and mode of communication for a specific purpose, according to own role
Planning and organising	<ul style="list-style-type: none">• Uses a combination of formal, logical planning processes and an increasingly intuitive knowledge of context to plan, prioritise and monitor own work
Problem solving	<ul style="list-style-type: none">• Uses formal and informal processes to monitor implementation of solutions and reflect on outcomes• Demonstrates effective decision making in relatively complex situations
Self-management	<ul style="list-style-type: none">• Demonstrates knowledge of the nature and purpose of own role and associated responsibilities and how it contributes to the work of others• Demonstrates and articulates knowledge of legislation and regulations required to own rights and responsibilities
Technology	<ul style="list-style-type: none">• Uses digital technologies and systems safely and securely when implementing and monitoring a system, with a growing awareness of the permanence and transparency of all activities

Unit Mapping Information

Supersedes and is equivalent to ICTNWK505 Design, build and test a network server and ICTTEN514 Install, configure and test a server.

Assessment Requirements for ICTNWK540 Design, build and test network servers

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- produce a design report for at least one server with complex user and network service requirements
- prepare and install a network server on at least one occasion.

In the course of the above, the candidate must:

- document work plans and processes
- configure a wide range of server network and security services, including:
 - domain name system (DNS)
 - dynamic host configuration protocol (DHCP)
 - web and proxy mail
 - file transfer protocol (FTP)
 - firewall.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- features of industry standard network operating systems (NOS)
- industry standard server applications compatibility issues and resolution procedures
- industry standard network service configuration, including:
 - domain name system (DNS)
 - dynamic host configuration protocol (DHCP)
 - file transfer protocol (FTP)
 - mail
 - network time protocol (NTP)

- proxy
- server messages block (SMB)
- web
- industry standard network service management including start, stop, restart and start on boot
- network service security features, including server firewall configuration
- troubleshooting tools and techniques including network diagnostic utilities
- industry standard operating system installation and operation issues, including:
 - installation media
 - boot process and diagnosing boot failures
 - operating system rescue environment
 - operating system help and support utilities
 - performance monitoring tools and tuning options
 - compatibility issues and resolution procedures
 - high availability options for servers
 - file and print management
- data security and storage measures required on networked server, including:
 - user authentication and directory services
 - best practice procedures for implementing backup and recovery
 - error and event logging and reporting
 - storage options, including file systems and disk partitioning schemes.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site where server installation may be conducted
- server specifications
- industry standard hardware
- networked (LAN) computers
- server diagnostic software
- switching equipment
- organisational deliverables relating to building network servers
- wide area network (WAN) service point of presence
- end user device.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTNWK541 Configure, verify and troubleshoot WAN links and IP services

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to use required tools, equipment, software and protocols to install, operate and troubleshoot switches and routers in a medium-size enterprise network.

It applies to individuals who are employed in desk technician and network support technician roles.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to install medium enterprise Wide Area Network (WAN) links	1.1 Review existing network design documentation and determine currency and completeness according to organisational requirements 1.2 Analyse organisational security protocol requirements 1.3 Determine access and security requirements of required tools, equipment, software 1.4 Develop and document installation plans and detail prioritised tasks and contingency arrangements according to organisational requirements 1.5 Obtain installation plan sign off from required

ELEMENT	PERFORMANCE CRITERIA
	personnel
2. Configure WAN links	<ul style="list-style-type: none">2.1 Determine WAN connection method requirements according to installation plan specifications2.2 Configure and verify required serial WAN configuration and WAN protocols according to vendor specifications2.3 Configure required virtual private network (VPN) and site-to-site technology according to vendor specifications2.4 Determine and configure an asymmetric digital subscriber line (ADSL) connection according to installation plan specifications
3. Configure and verify IP services on a router	<ul style="list-style-type: none">3.1 Configure, implement and verify a Dynamic Host Configuration Protocol (DHCP) router operation according to vendor specifications3.2 Configure and verify internet protocol version 6 (IPv6) addressing according to vendor specifications3.3 Configure and verify the operation of network address translation (NAT) requirements according to installation plan specifications
4. Secure a network using router services	<ul style="list-style-type: none">4.1 Determine purpose and types of access control lists (ACLs) according to installation plan specifications4.2 Configure and apply ACLs according to network filtering requirements4.3 Secure access to the network router according to installation plan specifications
5. Troubleshoot medium enterprise WAN links	<ul style="list-style-type: none">5.1 Test WAN implementation links and align to installation plan service expectations5.2 Respond and rectify identified WAN implementation issues5.3 Document test results and rectification methods according to installation plan specifications5.4 Seek and respond to feedback from required personnel

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
-------	-------------

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Analyses numerical information to take measurements, interpret results and evaluate performance and interoperability of network
Oral communication	<ul style="list-style-type: none"> Uses listening and questioning techniques to confirm requirements, articulate complex concepts and matters using required terminology to explain technical and business-related matters with required personnel
Reading	<ul style="list-style-type: none"> Interprets and analyses technical information to determine requirements according to organisational needs
Writing	<ul style="list-style-type: none"> Prepares workplace documentation which incorporates an evaluation of technical information and specialised language in a format and style for a specific audience
Planning and organising	<ul style="list-style-type: none"> Uses a combination of formal, logical planning processes and an increasingly intuitive knowledge of context to plan, prioritise and monitor own work
Problem solving	<ul style="list-style-type: none"> Demonstrates effective decision making for relatively complex situations and takes a range of factors into consideration Uses intuition to identify the general problem area, switching to analytical processes to clarify goals and key issues and lateral thinking processes to generate possible solutions
Self-management	<ul style="list-style-type: none"> Demonstrates knowledge of the implications of legal and regulatory responsibilities related to own work Demonstrates knowledge of how strategic and operational applications are used or could be used to achieve work goals
Technology	<ul style="list-style-type: none"> Demonstrates knowledge of the ways in which digital systems and tools are used or could be used to achieve work goals Uses digital technologies and systems safely and securely when implementing and monitoring a system, with a growing awareness of the permanence and transparency of all activities

Unit Mapping Information

Supersedes and is equivalent to ICTNWK506 Configure, verify and troubleshoot WAN links and IP services in a medium enterprise network.

Assessment Requirements for ICTNWK541 Configure, verify and troubleshoot WAN links and IP services

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- install, configure and test Wide Area Networks (WAN) links on at least two occasions.

In the course of the above, the candidate must:

- plan and prepare for WAN link installation
- document finalised solutions for WAN links
- secure access to network router through access control lists.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard operation and configuration of internet protocol version 6 (IPv6)
- industry standard router setup and operations, including:
 - ACLs
 - router command line interface (CLI) configuration
 - router debug commands
- industry standard problems and solutions with WAN link installations.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

- a site where network installation may be conducted
- small enterprise routers and switches
- network's design documentation

- equipment specifications
- hardware and software required to install and operate small enterprise branch networks
- end user device
- policies and procedures pertaining to the installation and operation of a network.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTNW K542 Install, operate and troubleshoot medium enterprise routers

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to use tools, equipment, software and protocols to install, operate and troubleshoot medium enterprise routers.

It applies to individuals working as network technicians and network administrators or in other network support roles.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to install router	1.1 Identify and analyse existing router performance against organisational requirements 1.2 Review existing network design documentation and determine alignment to organisational requirements 1.3 Determine network element additions and upgrades according to organisational requirements 1.4 Develop and document installation plan and submit document to required personnel 1.5 Obtain installation plan sign off from required personnel
2. Configure basic	2.1 Determine basic routing requirements and operating parameters

ELEMENT	PERFORMANCE CRITERIA
router operation	<p>according to installation plan specifications</p> <p>2.2 Select required media, cables, ports, connectors and connect routers to network devices and hosts according to installation plan specifications</p> <p>2.3 Set basic parameters and router firmware according to installation plan specifications</p> <p>2.4 Save and back up router configuration files according to installation plan specifications</p> <p>2.5 Implement required router security and configure static and default routes according to installation plan specifications</p>
3. Configure dynamic classless routing protocols	<p>3.1 Calculate and apply required classless IP addressing scheme using variable length subnet mapping (VLSM) to a local area network (LAN) and a wide area network (WAN) environment according to router specifications</p> <p>3.2 Configure and verify required classless routing protocols according to router specifications</p>
4. Apply troubleshooting processes	<p>4.1 Troubleshoot device configuration and network connectivity according to network specifications</p> <p>4.2 Identify and correct problems with IP addressing and host configurations according to network specifications</p> <p>4.3 Seek and respond to feedback from required personnel</p>

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none"> Reflects on the ways in which digital systems and tools are, or could be, used to achieve work goals and have strategic and operational applications
Numeracy	<ul style="list-style-type: none"> Analyses numerical information to take measurements, interpret results and evaluate the performance and interoperability of the network Adds, subtracts, multiples and divides basic and complex numbers
Reading	<ul style="list-style-type: none"> Gathers, interprets and analyses technical and regulatory information, to determine the requirements according to client needs
Writing	<ul style="list-style-type: none"> Uses factual information and industry-related terminology, to convey information to internal and external personnel on technical, operational and business-related matters

SKILL	DESCRIPTION
Planning and organising	<ul style="list-style-type: none">• Uses a combination of formal, logical planning processes, intuitive knowledge of context to plan, prioritise and monitor own work and coordinate processes, in liaison with others
Problem solving	<ul style="list-style-type: none">• Identifies the implications of legal and regulatory responsibilities related to own work• Demonstrates a use of intuition to identify the general problem area, switching to analytical processes to clarify goals and key issues and uses lateral thinking processes to generate possible solutions
Self-management	<ul style="list-style-type: none">• Makes decisions in relatively complex situations, taking a range of factors into consideration
Technology	<ul style="list-style-type: none">• Uses digital technologies and systems safely and securely, when implementing and monitoring a system, with a growing awareness of the permanence and transparency of all activities

Unit Mapping Information

Supersedes and is equivalent to ICTNWK507 Install, operate and troubleshoot medium enterprise routers.

Assessment Requirements for ICTNWK542 Install, operate and troubleshoot medium enterprise routers

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- configure, install, manage and troubleshoot on medium enterprise routers on at least two occasions.

In the course of the above, the candidate must:

- apply network topologies, routing and security protocols.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard routing concepts for medium enterprise network switches and routers
- classless routing protocols, including:
 - open shortest path first (OSPF)
 - routing information protocol (RIPv2)
- debug commands
- internet protocol version 4 (IPv4)
- purpose and basic operation of protocols in the open system interconnection (OSI) and transmission control protocol and internet protocol (TCP/IP) models
- router command line interface (CLI) configuration.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site where network installation may be conducted
- small enterprise routers and switches
- network's design documentation
- equipment specifications
- hardware and software required to install and operate small enterprise branch networks
- end user device
- policies and procedures pertaining to the installation and operation of a routers.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for ICTNWK543 Install, operate and troubleshoot medium enterprise switches

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- prepare and install at least two medium enterprise switches
- configure and test network elements on at least two occasions.

In the course of the above, the candidate must:

- apply network topologies, protocols and security issues
- apply solutions and troubleshoot defined network problems.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- switches and their operation
- industry standard installation requirements of switches, including:
 - debug commands
 - routing between virtual local area networks (VLANs)
 - spanning tree protocol (STP)
 - switch command line interface (CLI) commands
 - switch security, including:
 - port deactivation
 - port security
 - secure shell (SSH)
 - advanced switching technologies
 - common network switching issues
- industry standard network and related equipment.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site where network installation may be conducted
- enterprise switches and operating systems
- equipment specifications
- hardware and software required to install and operate medium enterprise switches
- end user device
- policies and procedures pertaining to the installation and operation of enterprise switches.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTNWK544 Design and implement a security perimeter for ICT networks

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.
Release 2	Correcting an error in Performance Criteria 3.3.

Application

This unit describes the skills and knowledge required to build a high performance, high security, failure resistant security perimeter for an enterprise Information and Communications Technology (ICT) network.

It applies to individuals with advanced ICT expertise and work in roles including middle managers, information security managers, network engineers, network technicians, security analysts or similar.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan and design firewall solution	1.1 Identify organisational and industry standard security threats according to organisational policies and procedures 1.2 Determine required firewall security according to organisational requirements 1.3 Research and identify available perimeter security options according to organisational requirements 1.4 Design security perimeter according to organisational

ELEMENT	PERFORMANCE CRITERIA
	requirements
2. Configure perimeter to secure network	<ul style="list-style-type: none">2.1 Deploy required perimeter devices according to network security requirements2.2 Configure required perimeter topology according to network security requirements2.3 Configure basic functionality of devices according to network security requirements2.4 Configure required advanced functions according to network security requirements
3. Design and configure network devices	<ul style="list-style-type: none">3.1 Back up device configuration according to network security requirements3.2 Design and configure perimeter and enable continuity of service during devices upgrades3.3 Design and configure perimeter and enable continuity of service in event of device failure
4. Configure VPN solution	<ul style="list-style-type: none">4.1 Configure perimeter for site-to-site virtual private networks (VPNs)4.2 Configure perimeter as a remote access VPN server4.3 Configure perimeter to allow VPN tunnel forwarding4.4 Diagnose and resolve VPN connectivity issues according to network security requirements
5. Test design performance	<ul style="list-style-type: none">5.1 Test required functionality of basic features according to network security requirements5.2 Test required functionality of advanced features according to network security requirements5.3 Perform required penetration testing and verify perimeter against security requirements5.4 Document functionality performance results and submit to required personnel

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none">Selects from and applies an expanding range of mathematical and problem-solving strategies to design and configure advanced features of perimeter devices and an integrated VPN solution

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none">Gathers, interprets and analyses technical and enterprise information to determine requirements according to client needs
Writing	<ul style="list-style-type: none">Uses factual information and industry related terminology to convey complex technical information and notes security breaches for client records to clients on technical, operational and business-related matters
Planning and organising	<ul style="list-style-type: none">Uses a combination of formal, logical planning processes to plan, prioritise and monitor own work and coordinate processes in liaison with others and within different contexts
Problem solving	<ul style="list-style-type: none">Makes decisions in relatively complex situations, taking a range of factors into considerationMay use intuition to identify general problem areas from complex issues and switching to analytical processes to meet security requirements and resolve other technical problems
Self-management	<ul style="list-style-type: none">Identifies digital systems and tools are used or could be used to achieve work goals and begins to recognise strategic and operational applications
Technology	<ul style="list-style-type: none">Uses digital technologies and systems safely and securely when implementing and monitoring a system, with a growing awareness of the permanence and transparency of all activities

Unit Mapping Information

Supersedes and is equivalent to ICTNWK509 Design and implement a security perimeter for ICT networks.

Assessment Requirements for ICTNWK544 Design and implement a security perimeter for ICT networks

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.
Release 2	Correcting an error in Performance Criteria 3.3.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design, configure and test a security perimeter and integrated VPN solution on network devices on at least one occasion.

In the course of the above, the candidate must:

- design and configure a firewall solution and network devices
- conduct testing of the performance of the perimeter of security devices
- document functionality performance results and the finalised process.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard emerging security issues and the requirement for security policies
- industry standard security perimeter issues related to networks, including:
 - security technologies according to perimeter design
 - weaknesses of installed perimeter design
- principles and techniques for designing and implementing a security perimeter, including:
 - software and hardware perimeter solutions
 - organisational network infrastructure
 - auditing and penetration testing techniques
 - logging analysis techniques.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- site or prototype where perimeter security may be implemented and managed
- perimeter devices
- organisational security requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTNWK545 Develop, implement and evaluate systems and applications security

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to develop, implement and evaluate information security in an Information and Communications Technology (ICT) system or application during the system development life cycle (SDLC) and prior to the operations and maintenance phase.

It applies to individuals who work as network managers and required to handle system and application security from the development phase through implementation to evaluation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Develop system and application security	<ul style="list-style-type: none">1.1 Identify organisational ICT system and application security requirements1.2 Determine and document ICT system and application security plan according to organisational requirements1.3 Identify risk-based audit performance criteria against the ICT system or application1.4 Develop and document required mitigation of vulnerabilities processes and procedures1.5 Integrate information security requirements, controls,

ELEMENT	PERFORMANCE CRITERIA
	processes and procedures into ICT system and application design specifications
2. Implement system and application security	<ul style="list-style-type: none">2.1 Execute and verify operational compliance according to technical and organisational requirements2.2 Perform required configuration management practices and mitigate introduction of vulnerabilities2.3 Validate and re-engineer ICT system and application security controls and operations phase vulnerabilities2.4 Document ICT system and application security controls according to organisational policies and procedures
3. Evaluate system and application security	<ul style="list-style-type: none">3.1 Assess effectiveness of information system controls against required risk management practices and procedures3.2 Assess and evaluate system compliance against organisational requirements3.3 Assess system maturation and readiness for promotion to production stage according to organisational requirements3.4 Document assessment findings and submit to required personnel

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none">• Gathers, interprets and analyses technical and regulatory information to determine requirements according to client needs
Writing	<ul style="list-style-type: none">• Uses factual information and industry related terminology to produce workplace documents
Planning and organising	<ul style="list-style-type: none">• Uses a combination of formal, logical planning processes to plan, prioritise and monitor own work and coordinate processes in liaison with others and within different contexts
Problem solving	<ul style="list-style-type: none">• Identifies sophisticated principles, concepts, nuance, language and practices associated with the digital world and uses these to troubleshoot and reduce risks• Uses digital tools to access and organise complex data and analyse multiple sources of information for strategic purpose• Makes a range of critical decisions in relatively complex situations, taking a range of constraints into account

SKILL	DESCRIPTION
Self-management	<ul style="list-style-type: none">Identifies and considers required policies and legislative requirements in the development of system security processes
Technology	<ul style="list-style-type: none">Monitors and controls access to digitally stored and transmitted information

Unit Mapping Information

Supersedes and is equivalent to ICTNWK510 Develop, implement and evaluate system and application security.

Assessment Requirements for ICTNWK545 Develop, implement and evaluate systems and applications security

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- create and implement an Information and Communications Technology (ICT) system and application security plan on at least one occasion.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard programming languages
- industry standard best practices in application of language syntax rules, including:
 - data structures
 - graphical user interfaces (GUIs)
 - small-size application development
- legislation, regulations and codes of practice that impact on network security
- threats and risks to the security environment
- security assurance specifications
- risk assessment process required in evaluating system vulnerabilities, including:
 - risk mitigation
 - security control selection
 - implementation and evaluation process
 - software security standards compliance.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- ICT business specifications
- information on security environment, including:
 - laws and legislation
 - existing organisational security policies
 - organisational expertise and knowledge
- application and system scenarios.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTNWK546 Manage network security

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to implement and manage security functions throughout a network.

It applies to individuals with Information and Communications Technology (ICT) expertise and lead the development of strategic reviews of security and provide technical advice, guidance and leadership in resolution of specified problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan security design process	1.1 Define planning phase for network security design according to organisational requirements 1.2 Define building phase for network security design according to organisational requirements 1.3 Define managing phase for network security design according to organisational requirements
2. Identify threats to network security	2.1 Determine major threat themes to network security 2.2 Determine the potential origin of major threats according to network security design specifications 2.3 Identify industry standard common network vulnerability types

ELEMENT	PERFORMANCE CRITERIA
	2.4 Design and document threat model according to network security design specifications
3. Analyse security risks	3.1 Determine required elements of risk management according to network security design specifications 3.2 Identify organisational assets requiring protection 3.3 Categorise and document assets and determine their value according to organisational requirements 3.4 Determine and document risk management plan according to organisational requirements
4. Create a security design	4.1 Determine attacker scenarios and threats according to network security design specifications 4.2 Design and document network components security measures 4.3 Develop and document security policies 4.4 Submit document to required personnel and seek and respond to feedback
5. Design security incidents response	5.1 Design and document auditing and incidents response procedure 5.2 Submit to required personnel, seek and respond to feedback

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none">Calculates equipment costs in order to assess their business-related value
Oral communication	<ul style="list-style-type: none">Uses active listening, observational and questioning techniques in order to identify different perspectives and confirm and clarify knowledge
Writing	<ul style="list-style-type: none">Uses factual information and industry related terminology to develop organisational plans, security policies and document security breaches
Problem solving	<ul style="list-style-type: none">Identifies and applies complex principles, concepts, language and practices associated with the digital world and uses these to troubleshoot and reduce risksUses digital tools to access and organise complex data and analyse multiple sources of information for strategic purposes

Unit Mapping Information

Supersedes and is equivalent to ICTNWK511 Manage network security and ICTTEN811 Evaluate and apply network security.

Assessment Requirements for ICTNWK546 Manage network security

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- evaluate security information and use it to plan control methods and countermeasures to manage prescribed network security requirements on at least one occasion.

In the course of the above, the candidate must:

- document plans, policies and processes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard ICT networks and their configuration
- network attacks, vulnerabilities and related weaknesses of installed infrastructure, including:
 - security technologies
 - emerging security issues
- network security measures, including:
 - auditing and penetration testing techniques
 - logging analysis techniques
 - organisational network infrastructure
 - capabilities of software and hardware solutions
 - general features of emerging security policies, with depth in security procedures
 - network management and security process controls
- network security implementation risk management plans and procedures, including:
 - network security planning
 - implementation

- cost analysis and budgeting.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site or prototype where network security may be implemented and managed
- network support tools currently used in industry
- organisational security policies, manufacturer recommendations and security standards.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTNWK547 Manage system security on operational systems

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to implement and manage security on an operational system.

It applies to individuals working in middle management or leadership roles and are responsible for implementing and managing the organisations security management system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Analyse threats to system	1.1 Evaluate network security system and determine the level of alignment to organisational requirements 1.2 Conduct risk analysis on network security system and document outcomes 1.3 Identify and evaluate system threats and document findings according to organisational requirements 1.4 Identify and document system user interactions
2. Determine risk category	2.1 Conduct risk assessment on network security system and categorise risks 2.2 Conduct risk assessment on human operations and interactions with network security system and categorise risks 2.3 Match risk plans to risk categories according to risk

ELEMENT	PERFORMANCE CRITERIA
	assessment levels 2.4 Determine and plan resources by risk categories according to risk assessment levels
3. Identify required controls	3.1 Devise and implement risk management controls according to system security requirements 3.2 Plan and document required system-related user policies and procedures 3.3 Identify high-risk categories at specified periods according to risk assessment levels 3.4 Categorise and record system breakdowns according to organisational requirements
4. Implement controls in the system	4.1 Develop a management system security plan according to risk assessment levels and system security requirements 4.2 Develop security recovery plan according to risk assessment levels and system security requirements 4.3 Implement system controls and reduce risks in human interaction with the system
5. Monitor system tools and procedures	5.1 Conduct a management review process and monitor risks 5.2 Review risk analysis process against security vendor benchmarks, security specialists and organisational requirements 5.3 Determine and document re-evaluation system to identify new threats and risks 5.4 Submit all documentation to required personnel, and seek and respond to feedback

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none"> Demonstrates an increasing capacity to manipulate oral, visual and or written formats to achieve a specific purpose with full command of vocabulary required to context
Reading	<ul style="list-style-type: none"> Gathers, interprets and analyses technical and enterprise information to determine requirements according to client needs
Writing	<ul style="list-style-type: none"> Prepares information that incorporates a synthesis of knowledge, using Information and Communications Technology (ICT) terminology and cohesive language in a format and style required to a

SKILL	DESCRIPTION
	specific audience
Teamwork	<ul style="list-style-type: none">Recognises and addresses complex problems involving participation in group solutions and analysis and resolving issues for a mixed mode environment of people and systems processes
Planning and organising	<ul style="list-style-type: none">Uses digital tools to access and organise complex data and analyse multiple sources of information for strategic purposesUses a combination of formal and logical planning processes and an increasingly intuitive knowledge of context to develop a security plan and a security recovery plan
Problem solving	<ul style="list-style-type: none">Identifies and applies complex principles, concepts, language and practices associated with the digital world and uses these to troubleshoot and reduce risksMakes a range of critical decisions in relatively complex situations, taking a range of constraints into account
Self-management	<ul style="list-style-type: none">Takes full responsibility for identifying and considering required policies and procedures when managing a security systemMonitors and controls access to digitally stored and transmitted information

Unit Mapping Information

Supersedes and is equivalent to ICTNWK513 Manage system security.

Assessment Requirements for ICTNWK547 Manage system security on operational systems

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- conduct a network security system evaluation on at least one occasion
- develop a security plan and security recovery plan on at least one occasion
- implement controls within the security system on at least one occasion.

In the course of the above, the candidate must:

- implement and manage security functions on a system
- conduct a risk assessment
- set up effective controls to manage risk
- monitor risks and controls
- review risk analysis process
- document finalised plans.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard security technologies
- industry standard risk analysis procedures, including:
 - general features and
 - security procedures
- security requirements of an organisation, including:
 - industry standard threats to security
 - security techniques and technologies
- systems management and process control in relation to security
- industry standard systems technologies, including their general features and capabilities.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site where system security may be implemented and managed
- use of utility tools currently used in industry
- organisational security policies
- manufacturer recommendations
- security standards.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTNWK548 Model preferred system solutions

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to fit a physical model into the design phase of the methodology.

It applies to individuals working as system designers or similar and are required to model proposed solutions.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Review and confirm system requirements	1.1 Determine and clarify organisation's required system solutions with required personnel 1.2 Identify organisational standards and methods for developing models 1.3 Identify assumptions and incorporate into modelling process 1.4 Identify goals and resolve into task requirements 1.5 Determine and document task plan according to organisational policies and procedures
2. Resolve conflicts and inconsistencies	2.1 Identify missed opportunities arising from previous and current model development 2.2 Identify bottlenecks, overlooked functionalities and other

ELEMENT	PERFORMANCE CRITERIA
	<p>required issues</p> <p>2.3 Determine and document resolution process according to organisational policies and procedures</p>
3. Build and test model	<p>3.1 Develop and document model plan and implement existing architecture</p> <p>3.2 Submit documented plan to required personnel</p> <p>3.3 Seek and respond to plan feedback from required personnel</p> <p>3.4 Test model against test plan specifications</p> <p>3.5 Document test data and confirm that test procedures validate performance of model</p>
4. Finalise workable solution	<p>4.1 Confirm consensus views of key information and communications technology (ICT) stakeholders is represented in model</p> <p>4.2 Submit model to required ICT stakeholders for review and to confirm common knowledge of model and proposed solution</p> <p>4.3 Submit model to required person for sign-off</p>

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none"> Uses a combination of formal and logical planning processes and an increasingly intuitive knowledge of context to set benchmarks and identify project scope when developing a model
Reading	<ul style="list-style-type: none"> Interprets technical material and organisational standards to determine job requirements
Writing	<ul style="list-style-type: none"> Develops material for a specific audience, using clear and detailed language to convey explicit information, requirements and recommendations
Teamwork	<ul style="list-style-type: none"> Identifies the requirements of important communication exchanges, selecting required channels, format, tone and content to suit purpose and audience
Problem solving	<ul style="list-style-type: none"> Identifies and applies complex principles, concepts, language and practices associated with the digital world Uses digital tools to access and organise complex data and analyse multiple sources of information for strategic purposes Makes a range of critical decisions in relatively complex situations,

SKILL	DESCRIPTION
	taking a range of constraints into account <ul style="list-style-type: none">Identifies and addresses complex problems in systems models and may seek advice from required experts
Self-management	<ul style="list-style-type: none">Takes full responsibility for identifying and considering required policies and requirements in the development of preferred system solutionsMonitors and controls access to digitally stored and transmitted information

Unit Mapping Information

Supersedes and is equivalent to ICTNWK514 Model preferred system solutions.

Assessment Requirements for ICTNWK548 Model preferred system solutions

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- identify and resolve model conflicts and build a model using at least two development tools and test on at least one occasion.

In the course of the above, the candidate must:

- document finalised plan
- analyse organisation's required outcomes
- develop specific areas of a system for further information or to confirm a software or hardware direction
- identify opportunities for expansion of the model.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- organisational business domain in relation to the organisational structure
- functions and features of:
 - development and test tools
 - industry standard hardware and software products and standards
- industry standard explain modelling techniques
- systems development methodologies.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- acceptance criteria
- client requirements
- organisational and process goals
- project budget
- project deliverables
- standards for model development
- technical specifications
- test plans.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTNWK549 Design ICT security frameworks

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to evaluate Information and Communications Technology (ICT) security requirements for a new system and to plan for controls and contingencies.

It applies to individuals working in senior roles in the networking area who are required to design security for new ICT systems or similar.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Research ICT security requirements	1.1 Analyse and determine statutory, commercial and application security requirements 1.2 Assess impact on the existing ICT system 1.3 Identify additional ICT security requirements 1.4 Document security requirements and submit for approval from required personnel
2. Conduct risk analysis	2.1 Identify internal and external security threats according to organisational security requirements 2.2 Develop security alleviation controls and contingencies according to organisational security requirements 2.3 Determine costs and additional resource requirements

ELEMENT	PERFORMANCE CRITERIA
	<p>associated with contingencies</p> <p>2.4 Conduct and document risk assessment recommendations</p> <p>2.5 Submit to required personnel for feedback</p>
3. Develop ICT security policy and operational procedures	<p>3.1 Develop security policies and align to organisational security strategy</p> <p>3.2 Create and document work procedures and align to organisational security policies</p> <p>3.3 Document operating procedures</p> <p>3.4 Submit all documentation to required personnel for feedback</p>

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none"> Demonstrate operation from a broad conceptual plan, developing the operational detail in stages and regularly reviewing priorities and performance
Numeracy	<ul style="list-style-type: none"> Interprets numerical data to develop a broad plan, budget and strategy
Oral communication	<ul style="list-style-type: none"> Uses listening and questioning skills to confirm knowledge for requirements and articulates information clearly and concisely
Reading	<ul style="list-style-type: none"> Demonstrates knowledge and knowledge of legislative, organisational and technical material to determine job requirements
Writing	<ul style="list-style-type: none"> Develops a broad range of procedural material for a specific audience, using clear and detailed language to convey explicit information, requirements and recommendations
Teamwork	<ul style="list-style-type: none"> Identifies the requirements of important communication exchanges, selecting required channels, format, tone and content to suit purpose and audience
Problem solving	<ul style="list-style-type: none"> Identifies and applies complex principles, concepts, language and practices associated with the digital world
Self-management	<ul style="list-style-type: none"> Identifies and applies complex own legal rights and responsibilities and understands general legal principles applicable across work contexts Takes responsibility for high-impact decisions in complex situations

SKILL	DESCRIPTION
	<p>involving many variables and constraints</p> <ul style="list-style-type: none">• Recognises complex anomalies and subtle deviations to normal expectations, focussing attention on critical issues and variables
Technology	<ul style="list-style-type: none">• Uses digital technologies and systems safely and legally when gathering, storing, accessing and sharing information, with a growing awareness of the permanence and transparency of all activities

Assessment Requirements for ICTNWK549 Design ICT security frameworks

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- determine and develop security policies and operating procedures on at least one occasion.

In the course of the above, the candidate must:

- conduct risk analysis
- analyse and identify organisation's security requirements
- research and assess security framework requirements with consideration of statutory and commercial requirements
- identify associated costs.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard design criteria for a security framework, including:
 - organisation's business domain
 - legislation relating to Information and Communications Technology (ICT) security
 - current industry standard hardware
 - current industry standard software products
 - industry standard security features and capabilities
 - operating systems
 - risk relating to ICT security
- industry standard security considerations for businesses, including:
 - typical environments
 - threats
 - policies and strategies.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- information on the security environment
- laws and legislation relevant to ICT security
- existing organisational security policies
- security environment, which also includes the threats to security that are, or are held to be, present in the environment
- risk analysis tools.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTNWK550 Design ICT system security controls

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to design the security controls that confirm that an Information and Communications Technology (ICT) system is both physically and legally secure.

It applies to individuals in a range of ICT areas who are required to guarantee the security of ICT systems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Review organisational security policy and procedures	1.1 Analyse business environment and identify organisational system security controls requirements 1.2 Determine legislative requirement for ICT security and impact on organisational requirements 1.3 Identify organisational ICT security threats 1.4 Document analysis findings and security requirements and submit to required personnel for approval 1.5 Seek and respond to feedback from required personnel as required
2. Develop security plan	2.1 Identify potential security attacks, threats and risks

ELEMENT	PERFORMANCE CRITERIA
	2.2 Prioritise, categorise and document assessment results 2.3 Determine and document security plan according to organisational requirements 2.4 Submit plan to required personnel and seek feedback 2.5 Integrate approved changes into security plan and confirm compliance with statutory requirements
3. Implement system controls	3.1 Implement security controls according to security plan and confirm minimum risk of security breaches 3.2 Monitor each phase of implementation and determine organisational impact 3.3 Document implementation process according to organisational requirements 3.4 Plan risk assessment review process according to organisational requirements

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Oral communication	<ul style="list-style-type: none"> Uses listening and questioning skills to confirm requirements, articulate and present complex concepts and matters using required terminology for intended audience
Reading	<ul style="list-style-type: none"> Interprets legislative, organisational and technical material to determine job requirements
Writing	<ul style="list-style-type: none"> Develops a broad range of business reports for a specific audience, using clear and detailed language to convey explicit information, requirements and recommendations
Planning and organising	<ul style="list-style-type: none"> Operates from a broad conceptual plan, developing the operational detail in stages, regularly reviewing priorities and performance during implementation and identifying and addressing issues
Problem solving	<ul style="list-style-type: none"> Monitors outcomes of decisions, considering results from a range of perspectives and identifying key concepts and principles that may be adaptable in the future
Self-management	<ul style="list-style-type: none"> Identifies and applies complex legislative or regulatory requirements required to own role and considers implications of any changes when planning and undertaking work
Technology	<ul style="list-style-type: none"> Identifies and applies complex principles, concepts, language and

Assessment Requirements for ICTNWK550 Design ICT system security controls

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- review organisations existing security policies and procedures and design and document security procedures and controls for a system on at least one occasion.

In the course of the above, the candidate must:

- oversee the implementation and evaluation of the strategy.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- communications security, including human organisational interactions
- procedures for conducting information security risk assessments
- internet security technologies and processes, including:
 - firewalls
 - physical security
 - security testing methods for performing security tests
 - wireless security
 - security threats
 - the impact of security policies, plans and strategies
 - general features of specific security technology
 - risk assessment
- current industry standard security processes, including general features and capabilities of software and hardware solutions
- legislative requirements and ethical standards expected when considering security controls, including:

- ethics in Information and Communications Technology (ICT)
- privacy issues.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- ICT security assurance specifications
- probability, frequency and severity of direct and indirect harm, loss or misuse of the ICT system
- risk analysis tools and methodologies
- an ICT environment in which there are security risks
- legislation, regulations and standards relating to security
- existing organisational security policies.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTNWK551 Build decks using wireless markup language

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to create wireless markup language (WML) decks.

It applies to individuals who create specialised language intended for devices such as mobile phones that implement the Wireless Application Protocol (WAP) specification that provides navigational support, data input, hyperlinks, text and image presentation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Design WML deck	1.1 Analyse existing hypertext markup language (HTML) page design and identify information accessible via hand-held device 1.2 Design deck logical structure and confirm deck size meets required boundaries 1.3 Determine content structure according to organisational requirements and user needs 1.4 Identify links between sets of cards according to WML deck requirements
2. Create deck	2.1 Design user input cards and multiple item selection according to WML design specifications 2.2 Code deck cards according to WML design specifications

ELEMENT	PERFORMANCE CRITERIA
	2.3 Demonstrate cards compliance to international WML standards
3. Test deck	3.1 Test deck on multiple devices and confirm compatibility with required hand-held devices 3.2 Validate and test WML files according to standard testing procedures 3.3 Document test results and submit to required personnel

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none"> Monitors outcomes of decisions, considering results and identifying key concepts and principles that may be adaptable in the future
Oral communication	<ul style="list-style-type: none"> Uses listening and questioning techniques to confirm requirements and participates in a verbal exchange of ideas, feedback and solutions
Reading	<ul style="list-style-type: none"> Interprets technical material to determine and confirm job requirements
Writing	<ul style="list-style-type: none"> Demonstrates sophisticated writing skills using specialised language, stylistic devices and required conventions to express precise meaning
Planning and organising	<ul style="list-style-type: none"> Operates from a broad conceptual plan, developing the operational detail in stages, regularly reviewing priorities and performance during implementation and identifying and addressing issues
Problem solving	<ul style="list-style-type: none"> Recognises anomalies and subtle deviations to normal expectations, focussing attention and remedying problems as they arise
Self-management	<ul style="list-style-type: none"> Demonstrates adherence to explicit and implicit protocols within familiar work contexts
Technology	<ul style="list-style-type: none"> Identifies and applies complex principles, concepts, language and practices associated with the digital world

Unit Mapping Information

Supersedes and is equivalent to ICTNW K522 Build decks using wireless markup language.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTNWK551 Build decks using wireless markup language

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design wireless markup language (WML) files and build and test a deck on at least one occasion.

In the course of the above, the candidate must:

- analyse existing parameters
- create code using required language and standards
- test and validate compatibility and performance.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard internet standards and transmission control protocols and internet protocols (TCPs/IPs) required to WML
- five-layer protocol stack of TCP/IP and its function in applications development
- wireless application protocol (WAP)
- application communication protocols
- WML code, including:
 - WMLScript and WMLScript specification
 - extensible markup language (XML) 1.0 standard
 - XML applications
- wireless features:
 - application environment
 - datagram, session, transaction protocol
 - transport layer security

- computer code of ethics as it applies to programming.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

- This includes access to:
- XML parser
- WML valuator
- industry standard hardware and software.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTNWK552 Install and configure network access storage devices

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to select, install and test a network access storage (NAS) device in a local area network (LAN).

It applies to individuals who work in roles that involve installing, configuring and testing NAS devices in the workplace environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine NAS specifications	1.1 Determine and document topology of local area network (LAN) according to organisational requirements 1.2 Determine current and future organisational storage requirements 1.3 Determine number and type of required NAS devices according to organisational requirements 1.4 Determine requirements for network management, backup, security and redundancy
2. Select hardware and software	2.1 Select required hardware according to organisational requirements and technical specifications 2.2 Select required operating system software version according to organisational requirements and technical specifications

ELEMENT	PERFORMANCE CRITERIA
	2.3 Select required storage applications according to technical specifications
3. Install hardware and software	3.1 Install required level of Redundant Array of Independent Disks (RAID) hardware and software 3.2 Install hard disks according to manufacturer specifications 3.3 Install operating system software according to manufacturer specifications 3.4 Connect required network media according to manufacturer specifications 3.5 Test functionality of hardware and software according to technical specifications
4. Configure NAS	4.1 Configure required network address and hostname 4.2 Establish and test required network connection with other LAN devices 4.3 Configure hard disks according to RAID requirements and format with required file system 4.4 Configure access and security according to application and organisational requirements
5. Test and troubleshoot NAS	5.1 Test NAS according to manufacturer and organisational requirements 5.2 Test access and response times aligned to required applications, users and organisational requirements 5.3 Make required adjustments to configuration according to organisational requirements 5.4 Document finalised process and outcomes and submit to required personnel

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none">Monitors outcomes of decisions, considering results and identifying key concepts and principles that may be adaptable in the future
Numeracy	<ul style="list-style-type: none">Uses mathematical formulae to calculate required equipment, undertake measurements and determine response times
Reading	<ul style="list-style-type: none">Recognises and interprets technical, manufacturer and organisational documentation to determine and confirm job requirements

SKILL	DESCRIPTION
Writing	<ul style="list-style-type: none">Develops a range of workplace documentation for a specific audience, using clear and detailed language to convey explicit information, requirements and recommendations
Planning and organising	<ul style="list-style-type: none">Operates from a broad conceptual plan, developing the operational detail in stages, regularly reviewing priorities and performance during implementation and identifying and addressing issues
Problem solving	<ul style="list-style-type: none">Uses nuanced knowledge of context to recognise anomalies and subtle deviations to normal expectations, focussing attention and remedying problems as they arise
Self-management	<ul style="list-style-type: none">Takes full responsibility for identifying and considering required organisational protocols and requirements
Technology	<ul style="list-style-type: none">Identifies and applies complex concepts, language and practices associated with the digital world

Unit Mapping Information

Supersedes and is equivalent to ICTNWK524 Install and configure network access storage devices.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTNWK552 Install and configure network access storage devices

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- determine specifications, install, configure and test at least three network access storage devices on at least one occasion.

In the course of the above, the candidate must:

- troubleshoot performance issues where required
- document finalised outcomes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- advantages and disadvantages of NAS versus direct attached storage (DAS) devices
- legislative, regulatory, standards and codes of practice related to NAS
- industry standard hard drive types and connectors
- industry standard network cable types and connectors
- common network topologies
- process for implementation and configuration of networks
- redundant array of independent disks (RAID) configurations and their application in data storage.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a NAS device and basic components to build a NAS including:
 - industry standard personal computer
 - industry standard operating system
 - hard disk and network connection
- network devices
- workstations and servers
- cabling access points and a wireless access point.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTNWK553 Configure enterprise virtual computing environments

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to develop and implement virtualisation technologies, with the goal of providing a more sustainable Information and Communications Technology (ICT) environment.

It applies to individuals working in senior networking roles and are responsible for increasing the sustainability of an organisation through the use of virtualisation technologies.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to configure virtual environment	1.1 Analyse organisational environment and determine virtual environment requirements 1.2 Determine virtualisation software requirements 1.3 Determine environmental requirements for installing virtualisation software 1.4 Plan and document installation process according to organisational requirements and manufacturing specifications 1.5 Submit plan to required personnel and seek and respond to feedback
2. Install and configure	2.1 Install and configure services and ports according to

ELEMENT	PERFORMANCE CRITERIA
support services	<p>organisational requirements and manufacturing specifications</p> <p>2.2 Install and configure virtualisation client and server management software according to organisational requirements and manufacturing specifications</p> <p>2.3 Install and configure environmental requirements and virtual machines according to organisational requirements and manufacturing specifications</p> <p>2.4 Test functionality of virtual machines and align with organisational and manufacturing requirements</p>
3. Design and configure virtual network	<p>3.1 Plan and document virtual network according to organisational requirements</p> <p>3.2 Submit plan to required personnel, seek and respond to feedback</p> <p>3.3 Install and configure required virtual networks according to organisational requirements and manufacturing specifications</p> <p>3.4 Verify functionality of virtualisation network, according to organisational requirements and manufacturing specifications</p>

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none"> Actively identifies systems, devices and applications with the potential to meet current and future needs
Oral communication	<ul style="list-style-type: none"> Articulates requirements and responsibilities clearly and distinctively, using industry standard technical language intended for audience and environment
Reading	<ul style="list-style-type: none"> Interprets technical, manufacturer and organisational documentation, to determine and confirm job requirements
Writing	<ul style="list-style-type: none"> Prepares documentation expressing ideas, explores complex issues and constructed logically and succinctly Writes and edits computer code and technical data, with correct syntax
Teamwork	<ul style="list-style-type: none"> Collaborates with others, sharing information to build strong work groups Elicits feedback and provides feedback to others
Planning and organising	<ul style="list-style-type: none"> Operates from a broad conceptual plan, developing the operational detail in stages, regularly reviewing priorities and performance during implementation, identifying and addressing any issues

SKILL	DESCRIPTION
Problem solving	<ul style="list-style-type: none">• Responds intuitively to problems requiring immediate resolution, recognises anomalies and deviations from normal expectations, in a virtualised machine environment
Self-management	<ul style="list-style-type: none">• Takes full responsibility for identifying and considering the required organisational protocols and policies for designing, configuring and managing virtual networks in a virtual environment
Technology	<ul style="list-style-type: none">• Identifies and applies complex principles, concepts, language and practices associated with the digital world

Unit Mapping Information

Supersedes and is equivalent to ICTNWK525 Configure an enterprise virtual computing environment.

Assessment Requirements for ICTNWK553 Configure enterprise virtual computing environments

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- install, configure and test virtual machines on at least 2 occasions.

In the course of the above, the candidate must:

- manage environmental requirements
- document finalised outcomes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- government and industry policies and guidelines related to development of sustainable Information and Communication Technology (ICT) environments
- industry standard technologies and processes designed to produce required ICT environment
- tools and software applications required to manage virtual machines
- configuration of software applications required to manage virtual machines
- configuration required to integrate virtual machines into the existing network design
- outline structure, function and business organisation of the client.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site or prototype where virtual machine environments may be implemented

- the network's technical requirements
- industry required virtualisation software.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to manage resources	1.1 Analyse environment and determine organisational virtual computing environment outcome requirements 1.2 Test, verify and document required functionality of virtual environment 1.3 Determine virtual environment maintenance and upgrades according to organisational requirements and technical specifications 1.4 Implement required upgrades and maintenance and restore to organisational requirements
2. Manage virtual machines	2.1 Convert physical machine to a virtual machine 2.2 Select virtual machine deployment methods according to

ELEMENT	PERFORMANCE CRITERIA
	organisational requirements 2.3 Create and deploy virtual machine and use installation media and automated templates 2.4 Deploy virtual machine snapshots and reverse and implement virtual machine changes according to organisational requirements
3. Confirm high availability	3.1 Plan and design high availability strategy according to organisational requirements 3.2 Identify required high availability implementation resources according to organisational and technical requirements 3.3 Implement and configure virtual machine environment and confirm high availability and live migration
4. Backup virtual environment	4.1 Plan and document backup strategy according to organisational and technical requirements 4.2 Backup and recover virtual machine and use required integrating third-party tools 4.3 Document backup and recovery outcomes and submit to required personnel 4.4 Seek and respond to feedback from required personnel

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none">Monitors the outcomes of decisions, considering the results from a range of perspectives and identifying key concepts and principles that may be adaptable in the future
Oral communication	<ul style="list-style-type: none">Uses listening and questioning techniques to confirm knowledge of requirements to articulate and present complex concepts to the client
Reading	<ul style="list-style-type: none">Gathers, interprets and analyses technical and organisational data to determine requirements, according to client needs
Writing	<ul style="list-style-type: none">Prepares documentation that expresses ideas and explores complex issues and is constructed logically, succinctly and accuratelyWrites and edits computer code and technical data, ensuring the correct syntax and accuracy
Planning and organising	<ul style="list-style-type: none">Operates from a broad conceptual plan, developing operational detail in stages and regularly reviewing priorities and performance, during

SKILL	DESCRIPTION
	implementation and identifying and addressing any issues
Problem solving	<ul style="list-style-type: none">Recognises anomalies and subtle deviations to normal expectations, focusing attention and quickly remedying any problems as they arise
Self-management	<ul style="list-style-type: none">Takes full responsibility for identifying and considering, the required policies and legislative requirements in the management of an enterprise's virtual computing environment
Technology	<ul style="list-style-type: none">Identifies and applies complex principles, concepts, language and practices associated with the digital world and understands the uses and potential, of new technology

ICTNWK555 Determine best-fit topologies for local networks

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to determine the most effective ways of networking computers to meet user needs and business requirements.

It applies to individuals in networking roles who are required to plan network topology options for local networks.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine needs of local network users	<ul style="list-style-type: none">1.1 Obtain work details and scope from relevant personnel and arrange for site access in compliance with security arrangements, legislation, work health and safety (WHS) requirements, codes, regulations and standards1.2 Identify mobile and static network users, network business processes and requirements, according to organisational requirements1.3 Determine organisational budget limitations and approval processes1.4 Perform network functional analysis and identify the needs of segments and network users1.5 Estimate traffic content and volumes

ELEMENT	PERFORMANCE CRITERIA
	1.6 Create prioritised organisational network functional matrix, according to organisational requirements
2. Assess local network specifications	2.1 Perform a functional analysis and determine the resource requirements for each network segment 2.2 Analyse functions and features of the physical environment and identify effects on the network design 2.3 Conduct a cost-benefit analysis and identify viable topology options 2.4 Evaluate topology options in consideration of available resources and network functional matrices 2.5 Nominate the most viable network topology options 2.6 Select and document identified viable network topologies in required reporting format
3. Report best-fit topology options	3.1 Report identified viable network topology to relevant personnel according to organisational procedures 3.2 Obtain task sign-off from relevant personnel

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Interprets numerical information and applies mathematical calculations to determine resource expenditure within predetermined constraints Interprets numerical data to estimate network traffic needs
Reading	<ul style="list-style-type: none"> Interprets textual information obtained from a range of sources and determines how content may be applied to organisational requirements
Writing	<ul style="list-style-type: none"> Develops material for a specific audience, using clear and detailed language to convey explicit information, requirements and recommendations
Planning and organising	<ul style="list-style-type: none"> Operates from a broad conceptual plan, developing the operational detail in stages, regularly reviewing priorities and performance during implementation, and identifying and addressing issues
Oral communication	<ul style="list-style-type: none"> Presents and discusses ideas with relevant personnel Engages with and understands customer needs and requirements

Unit Mapping Information

No equivalent unit. Supersedes and is not equivalent to ICTNWK516 Determine best-fit topology for a local network.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTNWK555 Determine best-fit topologies for local networks

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- determine at least three best-fit topologies for local networks.

In the course of the above, the candidate must:

- analyse business and organisational needs
- identify the most viable local area network (LAN), virtual private network (VPN) and wireless local area network (WLAN) topology
- document recommendations and communicate findings to relevant personnel.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- typical network topologies for the following:
 - large and small LANs
 - wide area networks (WANs)
 - VPNs
 - virtual local area networks (VLANs)
 - WLANs
- typical components of a local network, including:
 - adaptor cards
 - bridges
 - Ethernet hardware
 - gateways
 - hubs
 - routers

- transmission control and internet protocols (TCP/IP)
- business considerations for establishing local networks, including:
 - growth projections and capacity planning
 - costs and queuing constraints
 - high and low speed links
 - redundancy paths
 - response time and reliability requirements
 - scope of operation
 - traffic flow patterns
 - traffic load
 - application requirements of users
- requirements for installing:
 - unshielded twisted pair (UTP)
 - installing shielded twisted pair (STP)
 - optic fibre
 - cables
 - Wi-Fi access points
- features and capabilities of industry-accepted hardware and software products
- functions and features of cost-benefit analyses
- features of line-sharing protocols
- characteristics and relative strengths and weaknesses of LAN network topologies
- organisational requirements regarding:
 - identification of different segments in networks
 - creation of prioritised organisational network functional matrices
 - reporting identified best-fit topologies with personnel
- required legislation, codes, company work practices, regulations and standards, work health and safety (WHS) requirements for scoped work.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- business requirements
- equipment specifications
- organisational and industry costing.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTNWK556 Identify and resolve network problems

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to troubleshoot local area network (LAN), wide area network (WAN) and wireless network problems.

It applies to individuals working as network managers, network engineers and technical specialists or similar, and who generally work independently with limited supervision. Individuals at this level perform a broad range of problem-solving activities including troubleshooting, evaluating and analysing networks and planning and developing new systems and procedures.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Implement network monitoring	1.1 Set up required network monitoring logs and produce a management information base (MIB) according to organisational requirements 1.2 Benchmark network performance and establish network performance reference point 1.3 Identify critical activity levels and network capacity 1.4 Plan and document network performance review schedule according to organisational requirements and technical specifications

ELEMENT	PERFORMANCE CRITERIA
	1.5 Determine additional network enhancing resource requirements according to organisational requirements and technical specifications
2. Prepare to troubleshoot network problems	2.1 Determine major network problems according to organisational reporting requirements 2.2 Identify organisational and vendor support services and network resolution plan 2.3 Plan and document network problem reporting and resolution plan 2.4 Lodge plan according to organisational requirements
3. Diagnose network faults	3.1 Establish fault hierarchy using data from previous resolution attempts 3.2 Progressively isolate and resolve fault according to technical specifications 3.3 Document fault resolution steps according to organisational requirements
4. Rectify faults	4.1 Isolate repair requirements according to technical specifications 4.2 Replace and reconfigure equipment and software 4.3 Test network and confirm fault rectification against technical requirements 4.4 Document outcomes according to organisational policies and procedures 4.5 Document user downtimes and submit report to required personnel
5. Finalise fault rectification process	5.1 Review fault resolution and determine likelihood for reoccurrence 5.2 Determine and document planned maintenance and upgrade requirements 5.3 Submit maintenance plan to required personnel 5.4 Seek and respond to feedback from required personnel

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none"> Demonstrates consideration of strategic and operational potential of digital trends to achieve work goals, enhance work processes, create

SKILL	DESCRIPTION
	opportunities and enhance or reduce risks
Numeracy	<ul style="list-style-type: none"> Performs mathematical calculations to analyse costs and values to accurately determine performance
Oral communication	<ul style="list-style-type: none"> Uses highly developed listening and questioning techniques to understand others' perspectives and articulates complex information to required personnel
Reading	<ul style="list-style-type: none"> Draws knowledge from written technical material, equipment manuals and other specifications to determine and confirm job requirements
Writing	<ul style="list-style-type: none"> Develops a broad range of material such as reports and test documentation for a specific audience, using clear and detailed language to convey explicit information
Teamwork	<ul style="list-style-type: none"> Identifies the requirements of important communication exchanges, selecting required channels, format, tone and content to suit purpose and audience
Planning and organising	<ul style="list-style-type: none"> Operates from a broad conceptual plan, developing the operational detail in stages, regularly reviewing priorities and performance during implementation and identifying and addressing issues
Problem solving	<ul style="list-style-type: none"> Uses nuanced knowledge of context to recognise anomalies in a network environment and subtle deviations to normal expectations, focussing attention and solving problems as they arise
Self-management	<ul style="list-style-type: none"> Demonstrates the importance of knowledge, monitoring and controlling access to digitally stored and transmitted information Identifies a need for further information or seek advice from required experts
Technology	<ul style="list-style-type: none"> Demonstrates a sophisticated knowledge of principles, concepts, language and practices associated with the digital world

Unit Mapping Information

Supersedes and is equivalent to ICTNWK532 Identify and resolve network problems.

Assessment Requirements for ICTNWK556 Identify and resolve network problems

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- monitor a medium-sized network, determine and rectify network fault.

In the course of the above, the candidate must:

- provide constant monitoring and tuning of network
- document finalised processes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard hardware, cabling and software products, including general features and capabilities
- organisational maintenance response-level escalation procedures
- organisational business domain, including organisational structure and business functionality
- network management tools including general features and capabilities with substantial depth in troubleshooting areas
- outline industry standard network topologies
- networking technologies, features and capabilities including those relating to:
 - protocol stacks of transmission control protocol or internet protocol (TCP/IP)
 - open system interconnection (OSI)
- major organisations that oversee internet protocols
- industry standard network protocols.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a live system and sites with a representative range of network environments and operating systems
- technical records and documentation
- management information base of accumulated fault resolution information
- network support tools.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTNWK557 Configure and manage advanced virtual computing environments

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to configure and manage advanced virtual computing environments and to provide a more efficient and reliable Information and Communications Technology (ICT) environment.

It applies to senior networking staff who are responsible for increasing the sustainability of an organisation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Configure and manage core virtual networks	<ul style="list-style-type: none">1.1 Plan and design a virtual network according to organisational requirements1.2 Configure virtual local area networks (VLANs) and required security and virtual switch (vSwitch) ports1.3 Implement required security policies, traffic-shaping and network interface controller (NIC) teaming1.4 Manage required distributed vSwitch connections, vSwitch physical and vSwitch storage adapter connections1.5 Configure and manage required multiple networks

ELEMENT	PERFORMANCE CRITERIA
	according to organisational requirements
2. Configure and manage core infrastructure storage and services	<ul style="list-style-type: none">2.1 Obtain vendor provided virtualisation software technical storage specifications and system requirements2.2 Plan, design and document core infrastructure storage environment according to organisational requirements2.3 Create, configure, manage and secure virtual storage connection according to technical specifications2.4 Install and test local and shared data store, data store clusters and resource pools according to technical specifications2.5 Configure required provisioning services and templates according to organisational requirements and technical specifications
3. Secure virtual environment	<ul style="list-style-type: none">3.1 Plan and document administrative strategies according to organisational requirements3.2 Configure required user roles and administer virtual environment according to organisational requirements and technical specifications3.3 Set up and secure required user privileges and permissions3.4 Submit documents to required personnel, seek and respond to feedback

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none">• Monitors the progress of plans and schedules and reviews and changes them, to meet new demands and priorities• Investigates new and innovative ideas as a means by which to continuously improve work practices and processes through consultation, formal and analytical thinking
Oral communication	<ul style="list-style-type: none">• Articulates requirements and responsibilities clearly and distinctively, using industry standard technical language intended for audience and environment
Reading	<ul style="list-style-type: none">• Draws on strategies, in order to build and maintain knowledge throughout complex texts
Writing	<ul style="list-style-type: none">• Prepares documentation that expresses ideas, explores complex

SKILL	DESCRIPTION
	issues and is constructed logically, succinctly and accurately
Planning and organising	<ul style="list-style-type: none">Operates from a broad conceptual plan, developing the operational detail in stages, regularly reviewing priorities and performance during implementation and identifying and addressing issues
Problem solving	<ul style="list-style-type: none">Makes critical decisions quickly and intuitively in complex situations, taking into consideration a range of variables and previous decisionsApplies systematic and analytical decision-making processes for complex and non-routine situations
Self-management	<ul style="list-style-type: none">Modifies or develops organisational policies and procedures, to comply with legislative requirements and the organisation's goals
Technology	<ul style="list-style-type: none">Uses and investigates, new digital technologies and applications to manage and manipulate data and to communicate effectively with others, in a secure and stable digital environment

ICTNWK558 Monitor and troubleshoot virtual computing environments

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to monitor and troubleshoot virtualisation technologies to provide a more efficient and reliable Information and Communications Technology (ICT) environment.

It applies to those who work as senior networkers and administrators, and responsible for increasing the sustainability of an enterprise or similar environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to monitor and troubleshoot virtual computing environment	<ul style="list-style-type: none">1.1 Determine environment optimal performance requirements1.2 Determine, list and categorise required resources according to organisational requirements1.3 Identify virtual environment's critical activity level and assign resources1.4 Review system's logs and alerts and facilitate virtual environment tuning1.5 Develop and document virtual environment performance monitoring plan according to

ELEMENT	PERFORMANCE CRITERIA
	organisational requirements
2. Manage virtual environment performance	<p>2.1 Monitor and diagnose memory central processing unit (CPU) and distributed power management performance</p> <p>2.2 Review storage and cluster performance and maximise operational efficiency</p> <p>2.3 Monitor tasks, events, alarms and network activity and make optimal operation adjustments</p>
3. Analyse and troubleshoot virtual environments	<p>3.1 Review and identify performance issues in virtual machine capacity, application, storage, input and output (I/O) performance</p> <p>3.2 Resolve identified performance issues according to organisational requirements and technical specifications</p> <p>3.3 Test, analyse and troubleshoot identified virtual network performance issues</p> <p>3.4 Analyse high availability and troubleshoot identified performance</p> <p>3.5 Consult with the virtualisation software vendors to provide solutions, where required</p>
4. Diagnose virtual environment faults and provide solutions	<p>4.1 Use virtualisation client and server management software tools and diagnose virtual environment problems</p> <p>4.2 Install and configure external virtualisation management tools and diagnose virtual environment problems</p> <p>4.3 Identify and resolve alerts and system logged errors</p> <p>4.4 Document solution outcomes and submit to required personnel</p> <p>4.5 Seek and respond to feedback from required personnel</p>

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none">Investigates new and innovative ideas, as a means to continuously improve work practices and processes, through consultation, formal and analytical thinking

SKILL	DESCRIPTION
Oral communication	<ul style="list-style-type: none">• Use listening and questioning techniques for seeking and responding to feedback
Reading	<ul style="list-style-type: none">• Critically analyses documentation from a variety of sources and records and consolidates information, to determine requirements
Writing	<ul style="list-style-type: none">• Writes, edits and proofreads documents to confirm clarity of meaning and accuracy and the consistency of information
Planning and organising	<ul style="list-style-type: none">• Accepts responsibility for planning and sequencing complex tasks and workload, negotiating key aspects with others, taking into account capabilities, efficiencies and effectiveness• Monitors the progress of plans and schedules and reviews and changes them, to meet new demands and priorities
Problem solving	<ul style="list-style-type: none">• Applies systematic and analytical decision-making processes for complex and non-routine situations

Unit Mapping Information

Supersedes and is equivalent to ICTNWK534 Monitor and troubleshoot virtual computing environments.

Assessment Requirements for ICTNWK558 Monitor and troubleshoot virtual computing environments

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- monitor, manage, analyse and troubleshoot a medium-sized virtual computing environment.

In the course of the above, the candidate must:

- document finalised process and solutions.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- government and industry policies and guidelines relating to the development of efficient and reliable Information and Communications Technology (ICT) environments
- industry standard technologies and processes designed to produce an efficient and reliable ICT environment
- client organisational structure and functions applicable to ICT environments
- industry standard tools and software applications used to manage virtual machines
- configuration of software applications used to manage virtual machines
- configuration required to integrate virtual machines into an existing network design.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site or prototype, where virtual machine environments may be implemented

- network technical requirements
- industry standard software and hardware.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTNWK559 Install an enterprise virtual computing environment

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to develop and implement virtualisation technologies to implement and enhance the efficiency and reliability of the Information and Communications Technology (ICT) environment.

It applies to individuals working in senior networking roles, and responsible for increasing the sustainability of an organisation or similar environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine enterprise virtual computing requirements	1.1 Analyse organisational virtual computing environment and determine organisational needs 1.2 Assess existing organisational systems and determine suitability for virtualisation 1.3 Determine and document required installation process and resources according to organisational requirements
2. Analyse the virtualisation host software	2.1 Determine virtualisation host software requirements 2.2 Identify and compare industry standard virtualisation host software 2.3 Determine and document recommended virtualisation host software and submit to required personnel

ELEMENT	PERFORMANCE CRITERIA
3. Evaluate system requirements	<p>3.1 Obtain technical specifications, licensing and system requirements from virtualisation software vendors</p> <p>3.2 Evaluate and compare system requirements needed to implement virtualisation</p> <p>3.3 Determine and document recommendations and submit to required personnel</p>
4. Plan and install the virtualisation host software	<p>4.1 Prepare environment and initiate host software installation according to technical specifications</p> <p>4.2 Obtain and install virtualisation host platform according to technical specifications</p> <p>4.3 Test and validate functionality of virtualisation host platform against specifications</p> <p>4.4 Finalise reports and documentation and submit to required personnel</p>

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none">Investigates new and innovative ideas, as a means by which to continuously improve, work practices and processes through consultation, formal and analytical thinking
Oral communication	<ul style="list-style-type: none">Uses collaborative and inclusive techniques, including active listening and questioning and the reading of verbal and non-verbal signals to convey and clarify information and to confirm knowledge
Reading	<ul style="list-style-type: none">Demonstrates critical analysis of documentation from a variety of sources and records and consolidates information, in order to determine requirements
Writing	<ul style="list-style-type: none">Prepares and produces dynamic material for a specific audience, using clear and detailed language in order to convey explicit information, requirements and recommendations
Teamwork	<ul style="list-style-type: none">Requests feedback and provides feedback to others, in order to improve self or workgroup behavioursRecognises the diversity in people and manages this diversity to improve workplace relations and practices
Planning and organising	<ul style="list-style-type: none">Monitors the progress of plans and schedules and reviews and changes them, to meet new demands and priorities

SKILL	DESCRIPTION
Problem solving	<ul style="list-style-type: none">• Identifies and resolves key business issues, processes and practices that may have legal implications• Makes critical decisions quickly and intuitively in complex situations, taking into consideration a range of variables, including the outcomes of previous decisions• Applies systematic and analytical decision-making processes for complex and non-routine situations
Self-management	<ul style="list-style-type: none">• Takes full responsibility for following policies, procedures and legislative requirements and identifies the organisational implications of new legislation or regulation

Unit Mapping Information

Supersedes and is equivalent to ICTNWK535 Install an enterprise virtual computing environment.

Assessment Requirements for ICTNWK559 Install an enterprise virtual computing environment

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- plan and install a medium enterprise virtual computing environment.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- government and industry policies and guidelines relating to the development of efficient and reliable, information and communications technology (ICT) environments
- recommendations on sustainability options in ICT design
- benefits of virtualisation
- processes and procedures for installing and configuring virtualisation software and virtual machines
- processes and procedures for configuring virtual machines into network design
- industry standard tools and software applications required to manage virtual machines
- configuration of software applications required to manage virtual machines
- configuration required to integrate virtual machines into existing network design.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- site or prototype, where virtual machine environments may be implemented
- the network's technical requirements
- industry standard virtualisation software.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTNWK560 Determine best-fit topologies for wide area networks

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to identify the best way that computers and local area networks (LANs) can be connected to make a wide area network (WAN).

It applies to individuals working in the networking area, with excellent planning, information and communications technology (ICT) skills, who are required to research and recommend viable topologies for a WAN.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine needs of WAN	<ul style="list-style-type: none">1.1 Identify and discuss work details, current and future operational requirements, budget limitations and approved stakeholders with relevant personnel1.2 Arrange for site access in compliance with security arrangements, legislation, work health and safety (WHS) requirements, codes, regulations and standards1.3 Identify different LAN, wireless local area network (WLAN) and virtual private network (VPN) segments of the proposed WAN1.4 Conduct a functional analysis and determine segment needs

ELEMENT	PERFORMANCE CRITERIA
	1.5 Estimate traffic content, volumes and organisational usage 1.6 Develop an organisational WAN functional matrix according to organisational requirements
2. Create WAN specification	2.1 Determine resource requirements for each LAN, WLAN and VPN segment 2.2 Consider and report how features of the physical environment affect WAN design 2.3 Identify the WAN service that will cater for the amount and type of estimated traffic 2.4 Include redundant links in the proposed WAN connectivity and prevent disruption to main link 2.5 Identify viable WAN service
3. Report best-fit topology options for WAN	3.1 Report identified viable network topology to relevant personnel according to organisational procedures 3.2 Obtain task sign-off from relevant personnel

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Conducts complex functional calculus to develop a WAN functional matrix Interprets numerical data to estimate traffic needs and calculate business expenses
Writing	<ul style="list-style-type: none"> Develops material for a specific audience, using clear and detailed language to convey explicit information, requirements and recommendations
Planning and organising	<ul style="list-style-type: none"> Operates from a broad conceptual plan, developing the operational detail in stages, regularly reviewing priorities and performance during implementation Identifying and addressing issues with reference to resource constraints
Problem solving	<ul style="list-style-type: none"> Demonstrates a sophisticated knowledge of principles, concepts, language and practices associated with the digital world Uses digital tools to access and organise complex data and analyse multiple sources of information for strategic purposes
Oral communication	<ul style="list-style-type: none"> Presents and discusses ideas with relevant personnel

SKILL	DESCRIPTION
	<ul style="list-style-type: none">Engages with and understanding customer needs and requirements

Unit Mapping Information

No equivalent unit. Supersedes and is not equivalent to ICTNWK517 Determine best-fit topology for a wide area network.

Links

Companion Volume Implementation Guide is found on VETNet -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=a53af4e4-b400-484e-b778-71c9e9d6aff2>

Assessment Requirements for ICTNWK560 Determine best-fit topologies for wide area networks

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- determine best-fit topologies for at least three wide area networks

In the course of the above, the candidate must:

- consider budget constraints and organisational needs
- identify the configuration for wireless local area network (WLAN) and the virtual private network (VPN) into a wide area network (WAN)
- document the configuration
- report the configuration to relevant personnel.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- typical network topologies for the following networks:
 - large and small LANs
 - WANs
 - VPNs
 - WLANs
- typical components and technologies relevant for a WAN, including:
 - internet protocol (IP) addressing
 - packet switching
 - routed and routable protocols
 - routing protocols, including routing information protocol (RIP), enhanced interior gateway routing protocol (EIGRP) and open shortest path first (OSPF)
 - relationship of asynchronous and synchronous communication

- use of microwave and satellite communication in networking
- transmission control protocols and internet protocols (TCPs/IPs)
- functions and features of cybersecurity and firewalls
- business considerations for establishing a WAN, including:
 - constraints and costs
 - features of networking infrastructure
 - the difference between digital and analogue networks
 - growth projections and capacity planning
 - high and low speed links
 - required WAN protocols
 - redundancy paths
 - response time and reliability requirements
 - scope of operation
 - security
 - traffic flow patterns
 - traffic load
 - users and the applications expected
- organisational requirements policies and procedures, regarding:
 - identification of different segments in networks
 - creation of WAN functional matrices
 - reporting identified best-fit topologies with personnel
- required legislation, codes, company work practices, regulations and standards, work health and safety (WHS) requirements for scoped work.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- design documents relating to LANs to be incorporated into the WAN
- equipment specifications
- vendor product catalogues and costs.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTNW K561 Design enterprise wireless local area networks

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to design an enterprise wireless local area network (WLAN) and analyse existing network layouts and parameters.

It applies to individuals working in the networking area who are required to evaluate client requirements and design a WLAN.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Document WLAN network configuration	1.1 Obtain work details and scope from relevant personnel and arrange for site access in compliance with security arrangements, legislation, codes, regulations and standards 1.2 Obtain details of network layout and parameters 1.3 Hold consultations with planned stakeholders 1.4 Document the network configuration, network topology and links to carrier
2. Research client needs of WLAN	2.1 Discuss current and future network needs with client according to organisational requirements 2.2 Document current and future needs according to organisational requirements

ELEMENT	PERFORMANCE CRITERIA
3. Implement site survey	3.1 Select diagnostic tools and measurement processes for site survey 3.2 Select test equipment and confirm calibration for site survey 3.3 Measure and diagnose wireless working environment by conducting a site survey with minimum disruption to client and confirm safe working environment for all relevant personnel 3.4 Record physical infrastructure, building use, aesthetics and other identified issues that will impact on future network performance and acceptance by the client 3.5 Record radiofrequency interference issues, sources and subsequent resolution 3.6 Document results of site survey
4. Develop specifications for upgrade of local area network	4.1 Document relevant network performance equipment and capacity for the expanded network 4.2 Assess interferences to radiofrequency, topographic barriers, climate, obstacles, transmission distances and construction materials 4.3 Assess optimal location and position of access points, repeaters, routers and other equipment 4.4 Develop cabling plans and repeater links and power requirements 4.5 Determine frequency to be used based on client and user requirements
5. Model local area network	5.1 Determine required test and modelling routines 5.2 Determine estimated network traffic and planned growth 5.3 Test planned network using modelling tools and techniques 5.4 Document outcome of tests and revise design where required
6. Determine components for local area network	6.1 Select and test vendor products and equipment where required 6.2 Identify sustainable compatibility, economic running costs and user connectivity access according to vendor requirements 6.3 Finalise components list 6.4 Prepare implementation plans according to organisational requirements
7. Present local area network design to client	7.1 Present the design to client according to organisational requirements 7.2 Advise client of design rationale 7.3 Inform the client of design limitations, performance expectations, unanticipated outcomes and security threats 7.4 Obtain and document feedback from client 7.5 Modify design if required

ELEMENT	PERFORMANCE CRITERIA
	7.6 Complete design documentation and obtain client endorsement

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Interprets numerical data to estimate and project traffic needs, carry out a cost benefit analysis and accurately calibrate equipment
Oral communication	<ul style="list-style-type: none"> Uses listening and questioning skills to confirm knowledge for requirements and participates in a verbal exchange of ideas/solutions Uses required, detailed and clear language to address stakeholders, users and industry bodies to disseminate information
Reading	<ul style="list-style-type: none"> Recognises and interprets legislative, organisational and technical material to determine job requirements
Writing	<ul style="list-style-type: none"> Develops a broad range of technical material and creates records for a specific audience, using clear and detailed language to convey explicit information, requirements and recommendations
Teamwork	<ul style="list-style-type: none"> Identifies the requirements of important communication exchanges, selecting required channels, format, tone and content to suit purpose and audience
Planning and organising	<ul style="list-style-type: none"> Demonstrates a sophisticated knowledge of principles, concepts, language and practices associated with the digital world Operates from a broad conceptual plan, developing the operational detail in stages, regularly reviewing priorities and performance during implementation, and identifying and addressing issues Takes responsibility for high-impact decisions in complex situations involving many variables and constraints Uses nuanced knowledge of context to recognise anomalies and subtle deviations to normal expectations, focussing attention on critical issues and variables
Problem solving	<ul style="list-style-type: none"> Understands own legal rights and responsibilities and is extending knowledge of general legal principles applicable across work contexts
Technology	<ul style="list-style-type: none"> Uses digital tools to access and organise complex data and analyse multiple sources of information for strategic purposes

Unit Mapping Information

Supersedes and is equivalent to ICTNWK518 Design an enterprise wireless local area network.

Assessment Requirements for ICTNWK561 Design enterprise wireless local area networks

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design at least two enterprise wireless local area networks.

In the course of the above, the candidate must:

- assess wireless network performance requirements for the client
- measure and diagnose wireless working environment
- produce wireless models and network specifications that meet client requirements
- produce wireless network designs and component lists
- document the design and obtain client approval.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- wireless network survey techniques, including:
 - audit and intrusion detection systems
 - auditing and penetration testing techniques
 - bandwidth and quality of service
 - factors affecting signal quality
- key technical considerations for designing a wireless network, including:
 - features of antenna design
 - layer 2 and layer 3 design issues
 - impact of radio frequency
 - problems associated with topography and obstacles in radio transmission path
 - wireless topologies

- wireless local area networks (WLAN) and wireless metropolitan access network (WMAN) solutions
- Wi-Fi access points
- key client organisation considerations when designing a wireless network, including:
 - small office home office (SOHO) and enterprise local area networks (LANs)
 - transmission control protocols and internet protocols (TCP/IP) and applications
 - wireless security strategies
 - security threats
- software considerations when designing wireless networks, including:
 - network protocols and operating systems
 - security protocols, standards and data encryption
- organisational requirements regarding:
 - discussing and documenting current and future network needs for clients
 - preparing implementation plans
 - presenting network designs to clients
- required legislation, codes, company work practices, regulations and standards, work health and safety (WHS) requirements for scoped work.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- network infrastructure, including wireless hardware and software
- network technical requirements
- real or simulated wireless networks
- required diagnostic equipment and standards.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTNWK562 Configure internet gateways

Modification History

Release	Comments
Release 1	<p>This version first released with the Information and Communications Technology Training Package Version 8.0.</p> <p>Supersedes and is equivalent to ICTNWK531 Configure an internet gateway.</p> <p>Minor edits to title.</p>

Application

This unit describes the skills and knowledge required to install and confirm the functionality of internet gateways, including meeting required internet service provider (ISP) security requirements.

The unit applies to individuals who may be network engineers, technical specialists and security analysts who are independently responsible for analysing and managing business security using a variety of information and communications technology (ICT) skills and knowledge.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to configure internet gateways	<p>1.1 Confirm work brief and tasks according to organisational policies and procedures</p> <p>1.2 Assess system architecture according to work brief</p> <p>1.3 Select and source required configuration hardware, software</p>

ELEMENT	PERFORMANCE CRITERIA
	and tools 1.4 Verify equipment specifications and confirm component serviceability
2. Determine security requirements	2.1 Analyse existing ISP security features 2.2 Conduct required ISP speed test and identify system vulnerabilities 2.3 Analyse internet gateway options 2.4 Select required internet gateway option and create security plan according to analysis findings
3. Install internet gateways	3.1 Identify required internet gateway installation method according to security plan and work brief 3.2 Configure internet gateway according to technical guidelines 3.3 Test internet gateway, and rectify and report any network issues
4. Connect nodes to internet gateways	4.1 Establish prerequisites and confirm gateway connection to network router 4.2 Assign nodes to logical gateway as required by network architecture 4.3 Determine connection type and configure firewalls 4.4 Test and confirm internet gateway node connection

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none">Interprets required technical and national guidelines to determine and confirm requirements
Initiative and enterprise	<ul style="list-style-type: none">Initiates standard procedures when responding to complex problems in the immediate context
Planning and organising	<ul style="list-style-type: none">Regularly reviews priorities and performance during implementation, and identifies and addresses issues
Problem solving	<ul style="list-style-type: none">Analyses anomalies in network environment and subtle deviations to normal expectations and solves complex problems as they arise

Skill	Description
Self-management	<ul style="list-style-type: none">• Determines importance of security in relation to own work and takes personal responsibility for identifying and managing risks
Technology	<ul style="list-style-type: none">• Considers strategic and operational potential of digital trends to achieve work goals, enhance work processes, create opportunities and enhance or reduce risks

Unit Mapping Information

Supersedes and is equivalent to ICTNWK531 Configure an internet gateway

Links

Companion Volume Implementation Guide is found on VETNet - -

Assessment Requirements for ICTNWK562 Configure internet gateways

Modification History

Release	Comments
Release 1	<p>This version first released with the Information and Communications Technology Training Package Version 8.0.</p> <p>Supersedes and is equivalent to ICTNWK531 Configure an internet gateway.</p> <p>Minor edits to title.</p>

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- configure at least two different internet gateways
- connect at least two nodes to a logical internet gateway.

In the course of the above, the candidate must:

- assess network performance requirements
- meet required internet service provider (ISP) security requirements
- report network issues to required personnel within required timeframes
- apply required organisational policies and procedures
- comply with required technical and national guidelines for configuring internet gateways.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- key security threats to ISP networks, including:
 - data interception
 - data corruption
 - data falsification
- industry-recognised internet gateways and installation methods
- functions and features of security plans

- industry-recognised methods to configure network components using required technical and national guidelines
- required operations for configuring network components
- networking techniques to analyse and minimise system vulnerabilities
- methods to conduct ISP network security and speed tests
- hardware, software and tools for internet gateway and node configurations
- key functions and features of internet gateway architecture, including:
 - network architecture
 - domain name server (DNS) resolution
 - bridges
 - node connection
 - logical gateways and desktop operating systems
 - hubs
 - firewalls
 - network gateways and operating systems
 - routers and switches
 - prerequisites and technical requirements
- functions and features of security practices for ISP network protection
- troubleshooting procedures for logical gateway and network router connection
- key security maintenance procedures, including ethical hacking
- organisational policies and procedures and legislative requirements relating to work tasks.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- ISP network and internet gateway
- network infrastructure and vendor specifications, including servers and components
- organisational policies and procedures required to demonstrate the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTNWK618 Design and implement a security system

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to use software tools, equipment and protocols to implement a security system.

It applies to individuals who work in ICT roles that involve the planning and implementing of networks, including budgeting, and determining and resolving network security threats.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Assess network infrastructure threats	1.1 Identify major industry standard network attacks and malware 1.2 Evaluate mitigation methods for required network attacks and malware according to organisational network architecture 1.3 Determine and document options for defending network architecture
2. Secure edge devices (routers)	2.1 Secure required network routers according to technical requirements 2.2 Secure required administration access to routers using the router operating system (OS) 2.3 Secure required router OS and its configuration

ELEMENT	PERFORMANCE CRITERIA
	file(s)
3. Implement authentication, authorisation and accounting (AAA) and secure access control system (ACS)	<ul style="list-style-type: none">3.1 Determine and implement required authentication and authorisation3.2 Configure router and use AAA according to technical requirements3.3 Analyse and compare Terminal Access Controller Access-Control System Plus (TACACS+) and Remote Authentication Dial In User Service (RADIUS) AAA protocols for securing the network
4. Mitigate threats to routers and networks using access control lists (ACLs)	<ul style="list-style-type: none">4.1 Assess and document access control list functionality and requirements4.2 Configure and verify IP ACLs to mitigate threats and prevent internet protocol (IP) address spoofing4.3 Test IP ACLs functionality against organisational and technical requirements
5. Implement secure network management and reporting	<ul style="list-style-type: none">5.1 Configure secure shell (SSH) on routers and enable secure management5.2 Configure routers to send log messages to a log server with tools5.3 Document layer two attack prevention methods and confirm basic switch security features5.4 Configure layer two attack prevention switch
6. Implement intrusion detection and prevention system (IDPS) feature set in the router OS using secure device manager (SDM)	<ul style="list-style-type: none">6.1 Evaluate and compare network based and host based IDPS and identify malicious activity, log information, attempt to stop activity and document reported activity6.2 Determine IDPS technologies, attack responses and monitoring options6.3 Configure router OS IDPS operations according to organisational and technical requirements6.4 Finalise reports and documentation and submit to required personnel

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
-------	-------------

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none">Interprets numerical data when taking test measurements, interpreting results and evaluating performance and interoperability of the network
Oral communication	<ul style="list-style-type: none">Establishes and maintains complex and effective spoken communication to convey and clarify a range of complex information
Reading	<ul style="list-style-type: none">Recognises and interprets technical documentation to determine and confirm job requirements
Writing	<ul style="list-style-type: none">Develops a broad range of materials, such as reports, for a specific audience using clear and detailed language to convey explicit information
Teamwork	<ul style="list-style-type: none">Actively identifies the requirements of important communication exchanges, selecting required channels, format, tone and content to suit purpose and audience and monitors impactActively identifies, creates and utilises linkages to enhance knowledge sharing, idea creation, individual and collective engagement and work outcomes
Planning and organising	<ul style="list-style-type: none">Operates from a broad conceptual plan, developing the operational detail in stages, regularly reviewing priorities and performance during implementation and identifying and addressing issues
Problem solving	<ul style="list-style-type: none">Responds intuitively to problems requiring immediate resolution, using knowledge of context to recognise anomalies and deviations from normal expectation in a network environment
Self-management	<ul style="list-style-type: none">Uses a broad range of strategies to store, access and organise virtual information, recognising that design choices will influence what information is retrieved and how it may be interpreted and usedDemonstrates an acute awareness of the importance of knowledge, monitoring and controlling access to digitally stored and transmitted informationMonitors outcomes of decisions, considering results from a range of perspectives and identifying key concepts and principles that may be adaptable to future situations
Technology	<ul style="list-style-type: none">Considers the strategic and operational potential of digital trends to achieve work goals, enhance work processes, create opportunities and enhance or reduce risks

Unit Mapping Information

Supersedes and is equivalent to ICTNWK601 Design and implement a security system.

Assessment Requirements for ICTNWK618 Design and implement a security system

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design and implement a virtual private network (VPN) and mitigate attacks on at least two different occasions.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- authentication protocols and encryption methodologies
- intrusion detection system (IDS) and intrusion prevention system (IPS)
- internet protocol (IP) and networking models
- industry standard procedures, techniques and certifications for:
 - access control lists
 - wireless regulations
 - malicious attacks and prevention techniques
 - network management tools
- procedures and techniques to configure, verify and troubleshoot, including:
 - switch with virtual local area networks (VLANs) and inter-switching communications
 - router
 - access control lists
- command line interface to configure and test network elements
- common features of Terminal Access Controller Access-Control System Plus (TACACS+) and Remote Authentication Dial In User Service (RADIUS) authentication, authorisation and accounting (AAA) protocols.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site where network security may be evaluated and tightened
- required hardware and software, including:
 - LAN or WLAN internet work technologies
 - network security technologies
- organisational guidelines, procedures and policies applicable to designing and implementing security systems.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTNW K619 Plan, configure and test advanced server-based security

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to implement advanced server security using secure authentication and network services on a network server.

It applies to individuals working in network specialists roles, ICT network engineers, network security specialists, network security planners, network security designers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan advanced network server security	1.1 Determine required advanced network server environment 1.2 Analyse and review existing security documentation and identify network service vulnerabilities 1.3 Research required network authentication and network service configuration options and implications 1.4 Determine and document server security design solution according to organisational requirements
2. Prepare for network server security implementation	2.1 Assess environment and determine risk and hazard potential

ELEMENT	PERFORMANCE CRITERIA
	<p>2.2 Determine existing organisational risk and hazard control measures</p> <p>2.3 Update existing risk control measures plan and align to installation requirements</p> <p>2.4 Submit plan to required personnel, seek and respond to plan feedback</p> <p>2.5 Implement risk and control preparation components according to technical and organisational requirements</p>
3. Configure advanced network server security according to design	<p>3.1 Configure required network authentication, authorisation, accounting services and automatic updates</p> <p>3.2 Configure service security and access control lists according to technical design specifications</p> <p>3.3 Configure required encryption and advanced network service security options</p> <p>3.4 Configure operating system and third-party firewall and filter traffic in line with security requirements</p> <p>3.5 Implement backup and recovery methods and enable restoration capability in the event of a disaster</p>
4. Monitor and test network server security	<p>4.1 Test and monitor server, server logs, network traffic and assess effectiveness of network service security</p> <p>4.2 Monitor required files, detect unauthorised modifications, open ports and detect possible intrusions</p> <p>4.3 Investigate, verify and document alleged violations of server and data security and privacy breaches</p> <p>4.4 Implement required risk control measures plan recovery strategies and document outcomes</p> <p>4.5 Finalise reports and documentation and submit to required personnel</p>

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none"> Considers the strategic and operational potential of digital trends to achieve work goals, enhance work processes, create opportunities

SKILL	DESCRIPTION
	and enhance or reduce risks
Oral communication	<ul style="list-style-type: none"> Uses listening and questioning skills to confirm knowledge for requirements and when seeking and responding to feedback
Reading	<ul style="list-style-type: none"> Interprets technical enterprise security procedures, policies, specifications and vendor notifications to determine and confirm job requirements
Writing	<ul style="list-style-type: none"> Develops a broad range of material including security reports for a specific audience, using clear and detailed language to convey explicit information, requirements and recommendations
Teamwork	<ul style="list-style-type: none"> Actively identifies the requirements of important communication exchanges, selecting required channels, format, tone and content to suit purpose and audience
Planning and organising	<ul style="list-style-type: none"> Keeps up to date on changes to legislation or regulations required to own rights and responsibilities and considers implications of these when planning, negotiating and undertaking work
Problem solving	<ul style="list-style-type: none"> Uses a broad range of strategies to store, access and organise virtual information, recognising that design choices will influence what information is retrieved and how it may be interpreted and used Operates from a broad conceptual plan, developing the operational detail in stages, regularly reviewing priorities and performance during implementation and identifying and addressing issues
Self-management	<ul style="list-style-type: none"> Uses nuanced knowledge of context to detect, investigate and recover from security breaches
Technology	<ul style="list-style-type: none"> Demonstrates an acute awareness of the importance of knowledge, monitoring and controlling access to digitally stored and transmitted information

Unit Mapping Information

Supersedes and is equivalent to ICTNWK602 Plan, configure and test advanced server-based security.

Assessment Requirements for ICTNWK619 Plan, configure and test advanced server-based security

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- install, configure and test network security on a medium sized network on at least one occasion.

In the course of the above, the candidate must:

- monitor the server for security breaches
- document requirements, processes and outcomes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard auditing and penetration testing techniques
- best practice procedures for implementing backup and restore
- industry standard cryptographic techniques
- procedures for error and event logging and reporting
- intrusion detection and recovery procedures
- industry standard network service configuration, including:
 - DNS
 - dynamic host configuration protocol (DHCP)
 - web
 - mail
 - FTP
 - server messages block (SMB)
 - network time protocol (NTP)
 - proxy

- network service security features, options, limitations and vulnerabilities
- planning, configuration, monitoring and troubleshooting techniques
- security protection mechanisms, security threats and risks
- server firewall configuration, monitoring and troubleshooting tools and techniques, including network monitoring and diagnostic utilities
- user authentication and directory services.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site where server installation may be conducted
- server specifications
- cabling
- networked (LAN) computers
- server diagnostic software
- switch
- WAN service point of presence
- regulatory documentation that impacts on installation activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTNW K620 Design and implement wireless network security

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to mitigate security threats to a wireless local area network (WLAN) by implementing security standards and policies.

It applies to individuals working in specialised Information and Communications Technology (ICT) roles including wireless help desk support technicians, wireless network support specialists and wireless network engineers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to implement wireless network security	1.1 Evaluate benchmarked organisational and regulatory security policies and network security standards 1.2 Assess organisational requirements against regulatory security compliance 1.3 Develop and document security solution plan according to organisational requirements and future growth expectations
2. Design, implement and test guest access services	2.1 Analyse and select architecture for guest access services 2.2 Produce map and set up guest access accounts 2.3 Configure WLAN controller authorisation

ELEMENT	PERFORMANCE CRITERIA
	2.4 Configure anchor and internal controllers 2.5 Troubleshoot guest access issues
3. Design, implement and test security of wireless client devices	3.1 Design and configure authentication of clients and management frame protection on clients and controllers 3.2 Configure access control servers and integrate with wireless network 3.3 Configure client-and server-side digital certificate services 3.4 Troubleshoot secure wireless connectivity services
4. Design, implement and test integration of wireless network	4.1 Analyse network admission control architectures and assess feasibility of network integration 4.2 Analyse high-level authentication process flow and confirm that integration is compatible 4.3 Configure and test admission control wireless controller 4.4 Troubleshoot network access integration issues of control
5. Evaluate and plan secure wireless connectivity services	5.1 Configure intrusion detection system (IDS) and monitor network activities for malicious activities and policy violations 5.2 Analyse IDS report and review threat-mitigation strategies 5.3 Update security solution plan, mitigate wireless vulnerabilities and check network integrity according to network security requirements
6. Manage WLAN integration requirements and advanced security platform requirements	6.1 Evaluate end-to-end security solutions and assess compatibility to integrate with required wireless solutions 6.2 Analyse WLAN firewall configuration requirements and confirm compliance with organisational and network security requirements 6.3 Configure and test WLAN controllers and detect wired and wireless intrusion prevention and detection system (IPDS) security protection 6.4 Finalise reports and documentation and submit to required personnel

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none">• Uses a mix of intuitive and formal processes to identify key information and issues, evaluate alternative strategies, anticipate consequences and consider implementation issues and contingencies• Monitors outcomes of decisions, considering results from a range of perspectives and identifying key concepts and principles that may be adaptable to future situations
Numeracy	<ul style="list-style-type: none">• Interprets numerical data and undertakes measurements to evaluate performance and interoperability of network
Reading	<ul style="list-style-type: none">• Interprets complex technical information to determine hardware requirements
Writing	<ul style="list-style-type: none">• Develops a broad range of material including plans, maps and other documentation for a specific audience, using clear and detailed language to convey explicit information, requirements and recommendations
Planning and organising	<ul style="list-style-type: none">• Demonstrates knowledge of own legal rights and responsibilities and considers implications of these when planning and undertaking work
Problem solving	<ul style="list-style-type: none">• Demonstrates a sophisticated knowledge of principles, concepts, language and practices associated with the digital world and uses these to troubleshoot and understand the uses and potential of new technology
Self-management	<ul style="list-style-type: none">• Demonstrates an acute awareness of the importance of knowledge, monitoring and controlling access to digitally stored and transmitted information
Technology	<ul style="list-style-type: none">• Uses a broad range of strategies to store, access and organise virtual information, recognising that design choices will influence what information is retrieved and how it may be interpreted and used• Uses nuanced knowledge of context to adapt configuration procedures to requirements of network, troubleshoot and debug WLAN issues and modify work depending on operational contingencies, risk situations and environments

Unit Mapping Information

Supersedes and is equivalent to ICTNWK607 Design and implement wireless network security.

Assessment Requirements for ICTNWK620 Design and implement wireless network security

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- plan, implement and manage wireless network security on a medium size network on at least one occasion.

In the course of the above, the candidate must:

- document requirements, processes and outcomes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- configuration, verification and troubleshooting procedures for:
 - router operation and routing
 - virtual local area network (VLAN) switching and inter-switching communications
- iDevice Operating System (iOS) and internet protocol (IP) networking models
- intrusion prevention system (IPS) and intrusion detection system (IDS) security protection
- network security threat mitigation strategies
- aspects of wireless, including:
 - industry standard regulations, standards and certifications
 - deployment schemes
 - network security technology
 - network topologies, architectures and elements
 - networking protocols
- WLAN with reference to:
 - advanced security platforms
 - devices, their specification and use

- radio frequency characteristics and their measuring techniques.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site or prototype where network installation may be conducted
- industry standard hardware and software, including:
 - live network
 - stand-alone and lightweight WLAN controllers and access points (AP)
 - WLAN site survey tools
 - IDS and IPS
- organisational guidelines.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTNWK621 Configure network devices for a secure network infrastructure

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to use software tools, equipment and protocols to configure network devices in the design of the infrastructure of a secure network.

It applies to individuals with advanced Information and Communications Technology (ICT) expertise, who adapt router and switch operating system capabilities to mitigate attacks.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Implement layer two security	1.1 Configure router operating system (OS) commands and mitigate layer two attacks 1.2 Implement identity-based networking services (IBNS) and provide layer two security 1.3 Implement required identity management and use access control system (ACS)
2. Configure router OS intrusion prevention system (OS-IPS)	2.1 Evaluate advanced capabilities of router OS-IPS firewall feature set and include event action processing (EAP) 2.2 Configure and verify IPS features, identify threats and dynamically block from network

ELEMENT	PERFORMANCE CRITERIA
	<p>2.3 Maintain, update and tune required IPS signatures</p> <p>2.4 Configure and verify context-based access control (CBAC) and network address translation (NAT) and dynamically mitigate identified network threats</p> <p>2.5 Configure and verify zone-based firewall (ZFW), advanced application inspections and uniform resource locator (URL) filtering</p>
3. Configure virtual private networks (VPNs)	<p>3.1 Analyse and evaluate internet protocol security (IPSec) and generic routing encapsulation (IPSec/GRE) features and functionality</p> <p>3.2 Configure secure connectivity for site-to-site VPN using certificate authorities</p> <p>3.3 Analyse required dynamic multipoint VPN (DMVPN) features and capabilities</p> <p>3.4 Configure and verify secure connectivity for site-to-site VPN operations</p>
4. Provide secure connectivity for site-to-site and remote access communications	<p>4.1 Provide highly secure network access with secure socket layer (SSL) VPN to deliver remote access connectivity features and benefits</p> <p>4.2 Evaluate EasyVPN benefits and configure EasyVPN server with dynamic virtual tunnel interface (DVTI) to create a virtual access interface on the virtual tunnel interface</p> <p>4.3 Configure and verify EasyVPN remote to establish a site-to-site connection using both router and VPN software clients</p> <p>4.4 Implement group-encrypted transport (GET) VPN features to simplify the provisioning and management of VPN</p>
5. Implement network foundation protection (NFP)	<p>5.1 Evaluate NFP infrastructure protection features and document outcomes</p> <p>5.2 Secure management plane, data plane and control plane and use OS features of the router</p> <p>5.3 Determine functionality against technical specifications</p> <p>5.4 Report on evaluation outcomes and obtain sign off from required personnel</p>

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none">• Demonstrates a sophisticated knowledge of principles, concepts, language and practices associated with the digital world and uses these to troubleshoot and understand the uses and potential of new technology• Explores and incubates new and innovative ideas through unconstrained analysis and critical thinking
Numeracy	<ul style="list-style-type: none">• Selects from and flexibly applies, a wide range of highly developed mathematical and problem-solving strategies and techniques in a broad range of contexts
Oral communication	<ul style="list-style-type: none">• Articulates requirements and responsibilities clearly and distinctively, using industry standard technical language intended for audience and environment
Reading	<ul style="list-style-type: none">• Organises, evaluates and critiques ideas and information from a range of complex texts• Draws on a broad range of strategies to build and maintain knowledge throughout complex texts
Writing	<ul style="list-style-type: none">• Generates complex written texts, demonstrating control over a broad range of writing styles and purposes• Writes and edits computer code and technical data ensuring correct syntax and accuracy
Planning and organising	<ul style="list-style-type: none">• Plans strategic priorities and outcomes within a flexible, efficient and effective context in a diverse environment exposed to competing demands
Problem solving	<ul style="list-style-type: none">• Uses a broad range of strategies to store, access and organise virtual information recognising that design choices will influence what information is retrieved and how it may be interpreted and used
Self-management	<ul style="list-style-type: none">• Takes full responsibility for identifying and considering required organisational protocols and requirements

Unit Mapping Information

Supersedes and is equivalent to ICTNWK608 Configure network devices for a secure network infrastructure.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTNWK621 Configure network devices for a secure network infrastructure

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design, implement and verify network security systems using layer two and layer three devices.

In the course of the above, the candidate must:

- document evaluation outcomes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- configuration, verification and troubleshooting procedures to undertake:
 - virtual local area network (VLAN) switching
 - inter-switching communications
 - setting up and securing firewalls
 - tunnelling protocols
- key features of deployment schemes
- iDevice operating system (iOS) and internet protocol (IP) networking models
- local area network (LAN) and wide area network (WAN) implementations
- network address translation (NAT) concepts and configuration, topologies, architectures and elements, networking standards and protocols
- procedures for configuring, verifying and troubleshooting router operations and routing
- secure connectivity and remote access communications, security protocols, such as secure socket layer (SSL)
- key features of VPN technologies.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site or prototype where network security may be evaluated and tightened
- organisational guidelines, procedures and policies applicable to configuring network devices securely
- required hardware and software LAN and WLAN internetwork technologies and security technologies.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTNWK622 Configure and manage intrusion prevention system on network sensors

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to use required tools, equipment and software to implement an intrusion prevention system (IPS) on IPS sensors to mitigate network attacks.

It applies to individuals with advanced Information and Communications Technology (ICT) skills who are working as certified IPS specialists, network security specialists and network security managers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Evaluate ways IPS sensors are used to mitigate network attacks	1.1 Evaluate inline operations network system requirements according to industry standards and organisational requirements 1.2 Evaluate inline to promiscuous mode sensor operations and IPS devices network protection capability 1.3 Evaluate and determine ways IPS can defeat evasive network hacking methods 1.4 Evaluate selection considerations, placement and deployment of network IPS and IPS signature

ELEMENT	PERFORMANCE CRITERIA
2. Select, install and configure IPS sensors	<p>2.1 Install, initialise and configure sensor interfaces, interface pairs, virtual local area network (VLAN) pairs and VLAN groups</p> <p>2.2 Configure management access to sensor appliance and create required user accounts</p> <p>2.3 Set up, manage and monitor sensor communications with external management and monitoring systems and use built-in tools</p> <p>2.4 Upgrade IPS sensor parameters and licensing requirements and maintain network integrity</p> <p>2.5 Plan mitigation of specific network vulnerabilities and exploits according to organisational requirements</p>
3. Tune IPS sensor advanced system parameters	<p>3.1 Tune sensor signatures and provide optimal protection of network</p> <p>3.2 Create custom and meta signatures and align to mitigation performance requirements</p> <p>3.3 Configure passive operating system (OS) fingerprinting gateway</p> <p>3.4 Configure external product interface to receive and process information from external security and management products</p> <p>3.5 Configure a virtual sensor and anomaly detection</p>
4. Manage IPS security and network response attacks	<p>4.1 Monitor IPS events and determine network attack response</p> <p>4.2 Assess IPS effectiveness against security intrusion</p> <p>4.2 Report on security and response attacks according to organisational requirements</p>

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none"> Demonstrates a sophisticated knowledge of principles, concepts, language and practices associated with the digital world and uses these to troubleshoot and understand the uses and potential of new technology Demonstrates knowledge that identified 'problems' can be surface indicators of deeper issues and routinely reframes problem

SKILL	DESCRIPTION
	definitions as part of the process of identifying a root cause
Numeracy	<ul style="list-style-type: none"> Selects from and flexibly applies, a wide range of highly developed mathematical and problem-solving strategies and techniques in a broad range of contexts
Reading	<ul style="list-style-type: none"> Recognises and interprets complex technical and regulatory information to determine and confirm job requirements
Writing	<ul style="list-style-type: none"> Demonstrates sophisticated writing skills by selecting required conventions and stylistic devices to express precise meaning Writes and edits complex computer code and technical data, ensuring correct syntax and accuracy
Teamwork	<ul style="list-style-type: none"> Develops and implements communications strategies with internal and external persons Shares knowledge, information and experience openly as an integral part of the working relationship
Planning and organising	<ul style="list-style-type: none"> Operates from a broad conceptual plan, developing the operational detail in stages, regularly reviewing priorities and performance during implementation and identifying and addressing issues
Problem solving	<ul style="list-style-type: none"> Uses a broad range of strategies to store, access and organise virtual information, recognising that design choices will influence what information is retrieved and how it may be interpreted and used Uses a mix of intuitive and formal processes to identify key information and issues, evaluate alternative strategies, anticipate consequences and consider implementation issues and contingencies
Self-management	<ul style="list-style-type: none"> Understands own legal rights and responsibilities and considers implications of these when planning and undertaking work Demonstrates an acute awareness of the importance of knowledge, monitoring and controlling access to digitally stored and transmitted information

Unit Mapping Information

Supersedes and is equivalent to ICTNWK609 Configure and manage intrusion prevention system on network sensors.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTNW K622 Configure and manage intrusion prevention system on network sensors

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- identify and evaluate requirements for a medium size digital environment on at least one occasion
- configure, tune and manage intrusion prevention system on at least one occasion.

In the course of the above, the candidate must:

- upgrade and maintain IPS sensors
- document finalised processes and outcomes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- configuration, verification and troubleshooting procedures to undertake switch and router operation and routing protocol
- internetwork operating system (IOS), internet protocol (IP) networking models and deployment schemes
- IP addressing and transmission control protocol (TCP) and IP stack
- IPS and intrusion detection system (IDS) strategies, sensor technologies and licensing requirements
- local area network and wide area network (LAN/WAN) implementations and design
- network topologies, architectures, elements, standards and protocols
- virtual local area network (VLAN) concepts and functionality and virtual private network (VPN) technologies
- legislation, regulations, standards and codes of practice required to network security.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site or prototype where network installation may be conducted
- industry standard hardware and software
- organisational guidelines, policies and procedures
- live network
- an IPS system and its sensors.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTNWK623 Manage ICT security

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to manage Information and Communications Technology (ICT) security including data security, enterprise continuity, incidents, networks and telecommunications security and system and application security.

It applies to individuals with managerial responsibility and advanced ICT expertise, working as security technical specialists, security analysts or security consultants.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Manage enterprise security parameters	<ul style="list-style-type: none">1.1 Determine organisational security benchmarking requirements1.2 Review security classification and data management policies and procedures1.3 Determine and document effective enterprise continuity of operations (COOP) program and critical business continuity structure1.4 Integrate and evaluate required risk management concepts1.5 Evaluate and document security incidents and establish effective incident management program according to

ELEMENT	PERFORMANCE CRITERIA
	organisational requirements
2. Manage networks and telecommunications security	2.1 Develop and document network security and telecommunications program according to organisational requirements 2.2 Establish risk management communication protocols between network security, telecommunications team and required personnel 2.3 Determine and document integrated network security and telecommunications network performance
3. Implement and document enhancements	3.1 Implement required changes and improvement actions and evaluate effectiveness of enhancements 3.2 Produce and table documentation for audit tracking 3.3 Submit all documentation to required personnel and seek and respond to feedback 3.4 Obtain final task sign off from required personnel

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none"> Demonstrates a sophisticated knowledge of principles, concepts, language and practices associated with the digital world and uses these to troubleshoot and understand the uses and potential of new technology Monitors outcomes of decisions, considering results from a range of perspectives and identifying key concepts and principles that may be adaptable to future situations
Numeracy	<ul style="list-style-type: none"> Uses mathematical formulas and calculations to estimate and plan project costs
Oral communication	<ul style="list-style-type: none"> Articulates requirements and responsibilities clearly and distinctively, using industry standard technical language intended for audience and environment
Reading	<ul style="list-style-type: none"> Identifies, analyses and evaluates complex text to determine regulatory and business requirements
Writing	<ul style="list-style-type: none"> Develops a broad range of operational material, including recommendations and reports for a specific audience, using clear and detailed language to convey explicit information, requirements and recommendations

SKILL	DESCRIPTION
Teamwork	<ul style="list-style-type: none"> • Selects, implements and manipulates communications systems, processes and practices for maximum impact • Influences and fosters a collaborative culture, facilitating a sense of commitment and workplace cohesion • Understands diversity and seeks to integrate diversity into the work context, for managing change, making decisions and achieving shared outcomes
Planning and organising	<ul style="list-style-type: none"> • Operates from a broad conceptual plan, developing the operational detail in stages, regularly reviewing priorities and performance during implementation and identifying and addressing issues
Problem solving	<ul style="list-style-type: none"> • Uses a mix of intuitive and formal processes to identify key information and issues, evaluate alternative strategies, anticipate consequences and consider implementation issues and contingencies • Demonstrates use of intuition to identify general problem area when dealing with complex issues, switching to analytical processes to generate possible solutions, depending on differing operational contingencies, risk situations and environments
Self-management	<ul style="list-style-type: none"> • Develops and implements strategies so that organisational policies, procedures and regulatory requirements are being met • Monitors and reviews the organisation's policies, procedures and adherence to legislative requirements in order to implement and manage change
Technology	<ul style="list-style-type: none"> • Demonstrates high level awareness of the importance of knowledge, monitoring and controlling access to digitally stored and transmitted information

Unit Mapping Information

Supersedes and is equivalent to ICTNWK614 Manage ICT security.

Assessment Requirements for ICTNWK623 Manage ICT security

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- establish and manage an information and communications technology (ICT) system and application security engineering program for a medium size network on at least occasion.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- business and commercial issues related to the management of ICT security
- critical analysis in a management context
- principles and techniques to manage ICT security, including:
 - continuity of operations (COOP)
 - systems development life cycle (SDLC).

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- ICT business specifications
- ICT security assurance specifications
- management related scenarios
- a security environment, including industry standard threats present in the environment
- information on the security environment, including:
 - laws or legislation
 - existing organisational security policies
 - organisational expertise
 - use of risk analysis tools and methodologies currently used in industry.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTNWK624 Configure advanced internetwork routing solutions

Modification History

Release	Comments
Release 1	<p>This version first released with the Information and Communications Technology Training Package Version 8.0.</p> <ul style="list-style-type: none">• Supersedes and is equivalent to ICTNWK603 Plan, configure and test advanced internetwork routing solutions.• Supersedes and is not equivalent to ICTNWK605 Design and configure secure integrated wireless systems. <p>Updated title to better reflect unit scope.</p>

Application

This unit describes the skills and knowledge required to plan, install and test scalable and secure internet protocol version 4 (IPv4) and internet protocol version 6 (IPv6) internetwork routing solutions to local area networks (LANs) and wide area networks (WANs).

The unit applies to individuals who may have advanced information and communications technology (ICT) skills and knowledge working in roles such as security specialists, network and communications engineers, senior network administrators, network managers, branch officers and mobile workers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Develop IP routing	1.1 Confirm work brief and tasks according to organisational

ELEMENT	PERFORMANCE CRITERIA
solutions	<p>policies and procedures</p> <p>1.2 Analyse and select appropriate advanced IPv4 and IPv6 routing protocols according to work brief</p> <p>1.3 Select and source configuration hardware, software and tools</p> <p>1.4 Confirm component serviceability</p> <p>1.5 Create routing solution implementation and verification plan</p> <p>1.6 Configure and test routing solution according to plan</p> <p>1.7 Rectify any routing issues</p>
2. Create IPv6-based network	<p>2.1 Determine IPv6-based network requirements</p> <p>2.2 Create implementation and verification plan for IP-based network solution in consultation with required personnel</p> <p>2.3 Perform IPv6 interoperation with IPv4-based network</p> <p>2.4 Verify and test IPv6-based network solution and rectify any issues</p>
3. Confirm network redistribution	<p>3.1 Complete network redistribution analysis</p> <p>3.2 Create IPv6 redistribution plan according to analysis findings</p> <p>3.3 Conduct and verify IPv6-based network redistribution</p> <p>3.4 Test redistribution solution and rectify any issues</p> <p>3.5 Develop and securely file documentation on completed work tasks according to organisational policies and procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none">Interprets complex technical information to confirm requirements
Writing	<ul style="list-style-type: none">Prepares workplace documentation that includes all completed work tasks in a format appropriate to organisational requirements
Planning and organising	<ul style="list-style-type: none">Uses a combination of formal planning processes to identify threats and risks

Skill	Description
Problem solving	<ul style="list-style-type: none">• Uses nuanced knowledge of context to solve problems in complex and dynamic environments
Technology	<ul style="list-style-type: none">• Interprets the strategic and operational potential of digital trends to achieve work goals, enhance work processes, create opportunities and enhance or reduce risks

Unit Mapping Information

Supersedes and is equivalent to ICTNWK603 Plan, configure and test advanced internetwork routing solutions.

Supersedes and is not equivalent to ICTNWK605 Design and configure secure integrated wireless systems.

Links

Companion Volume Implementation Guide is found on VETNet - -

Assessment Requirements for ICTNWK624 Configure advanced internetwork routing solutions

Modification History

Release	Comments
Release 1	<p>This version first released with the Information and Communications Technology Training Package Version 8.0.</p> <ul style="list-style-type: none">• Supersedes and is equivalent to ICTNWK603 Plan, configure and test advanced internetwork routing solutions.• Supersedes and is not equivalent to ICTNWK605 Design and configure secure integrated wireless systems. <p>Updated title to better reflect unit scope.</p>

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- configure at least one internet protocol version 4 (IPv4) routing solution in which the work must include one of the following:
 - distance vector routing protocol solution
 - link-state routing protocol solution
- configure at least one internet protocol version 6 (IPv6) routing solution.

In the course of the above, the candidate must:

- produce and securely file documentation of work tasks performed
- apply required organisational policies and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- key types of IPv4 and IPv6 routing protocols and solutions, including:
 - distance vector routing solutions
 - link-state routing protocol solutions
 - hybrid routing solutions

- functions and features relevant to configuring advanced internet network routing solutions, including:
 - broadband technologies
 - routing tables
 - external factors that impact network design
 - business component implementation
 - implementation and verification plans
 - virtual private networks (VPN)
 - IPv6-based networks
 - IPv4-based networks
 - IPv4 and IPv6 redistribution and interoperation processes
 - local area networks (LANs)
 - wide area networks (WANs)
 - routing solutions
- configuration procedures for IPv6-based networks
- methods and technical guidelines required to configure network components
- network testing tools and operations for complex networks
- risk management strategies and practices for complex networks, including:
 - protocols and operational processes
 - operating security technologies
 - formal and structured approaches to network management
- organisational formats for documentation
- organisational policies and procedures and legislative requirements relating to work tasks.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- technical network requirements, including access to different operating systems on different devices
- network infrastructure, including servers, tools, hardware and software
- LAN and WAN systems required to demonstrate the performance evidence
- organisational policies and procedures required to demonstrate the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTNWK625 Plan and configure advanced internetwork switching solutions

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Supersedes and is equivalent to ICTNWK604 Plan and configure advanced internetwork switching solutions.

Application

This unit describes the skills and knowledge required to plan and configure advanced internetwork switching and layer-based routing solutions for enterprises. It includes the secure integration of multilayer switches, virtual local area networks (VLANs), wireless local area networks (WLANs), and video voice features into high-availability networks.

The unit applies to individuals who may work in roles such as network specialists, network engineers, network infrastructure engineers, senior network administrators, network and systems managers, information and communications technology (ICT) security specialists and engineers, and communications managers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Test VLAN-based solutions	1.1 Confirm work brief and tasks according to organisational policies and procedures 1.2 Analyse and select VLAN-based solution and network

ELEMENT	PERFORMANCE CRITERIA
	<p>design option according to work brief</p> <p>1.3 Create implementation and verification plan for VLAN-based network solution</p> <p>1.4 Verify switch-to-switch connectivity, loop prevention and access ports for VLAN-based solution</p> <p>1.5 Configure and verify private VLAN-based solution</p> <p>1.6 Document implementation and verification results according to work brief</p>
2. Secure multilayer switch-based solutions	<p>2.1 Analyse and select layer 2 and switch-based layer 3 network solution according to work brief</p> <p>2.2 Create implementation and verification plan for each network solution</p> <p>2.3 Configure and verify layer 2 network solution</p> <p>2.4 Configure and verify routing interfaces and switch-based layer 3 network solution</p> <p>2.5 Document implementation and verification results according to work brief</p>
3. Prepare wireless support infrastructure	<p>3.1 Analyse and select wireless extensions according to work brief</p> <p>3.2 Configure and verify wireless extensions</p> <p>3.3 Implement voice over internet protocol (VoIP) and video application support solutions according to work brief</p> <p>3.4 Test multilayer wireless extension functionality and rectify any issues</p>
4. Develop high-availability multilayer switches	<p>4.1 Identify high-availability multilayer switching solutions</p> <p>4.2 Create implementation and verification plan for high-availability network</p> <p>4.3 Configure and verify first hop redundancy protocols (FHRP) according to work brief</p> <p>4.4 Implement switch supervisor redundancy and verify high-availability network solution</p> <p>4.5 Test multilayer switches and rectify any issues according to work brief and organisational policies and procedures</p> <p>4.6 Develop and securely file documentation on completed work tasks according to organisational policies and procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none">Interprets complex technical information to confirm requirements
Writing	<ul style="list-style-type: none">Develops a broad range of plans and documentation for work tasksConveys explicit information, requirements and recommendations using concise and detailed language
Initiative and enterprise	<ul style="list-style-type: none">Responds to protocols in complex work contexts and follows protocols in changing situations
Planning and organising	<ul style="list-style-type: none">Uses a broad range of strategies to store, access and organise virtual information, identifying how information is retrieved and how it may be interpreted and used
Problem solving	<ul style="list-style-type: none">Uses a mix of intuitive and formal processes to identify key information and issues, evaluate alternative strategies, anticipate consequences and consider implementation issues and contingencies
Technology	<ul style="list-style-type: none">Operates from a broad conceptual plan to identify functional, performance and management features associated with the operation of complex switched networksImplements measures to monitor and control access to digitally stored and transmitted information

Unit Mapping Information

Supersedes and is equivalent to ICTNWK604 Plan and configure advanced internetwork switching solutions.

Assessment Requirements for ICTNWK625 Plan and configure advanced internetwork switching solutions

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Supersedes and is equivalent to ICTNWK604 Plan and configure advanced internetwork switching solutions.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- plan and configure at least two different advanced internetwork switching solutions.

In the course of the above, the candidate must:

- configure one private virtual local area network (VLAN)-based solution
- configure one multilayer switch-based solution
- configure one wireless extension with multi-layered (layer 3) switches
- apply required organisational policies and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- functions and features of formal and structured network management, including:
 - integrated and unified enterprise networks
 - wireless standards and certifications
 - external factors on switched enterprise networks
 - maintenance tools and practices
 - types of network topologies
- methods to configure network components using technical guidelines
- functions and features of advanced internetworking switching solutions, including:
 - local area networks (LANs)

- VLANs
- wide area networks (WANs)
- virtual private networks (VPN)
- implementation and verification plans
- switching and routing technologies
- multilayer switches
- high availability network solutions and switching solutions
- first hop redundancy protocols (FHRPs)
- voice over internet protocol (VoIP)
- wireless extensions
- layer 3 networks
- layer 2 networks
- switch-to-switch connectivity
- video application support solutions
- key risk management strategies and practices for complex networks, including:
 - protocols and operational processes
 - operating security technologies
 - formal and structured approaches to network management
 - internetwork testing procedures
- security features of networks
- organisational formats for documentation
- organisational policies and procedures and legislative requirements relating to work tasks.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- technical network requirements, including access to different operating systems on different devices
- network infrastructure, including servers, tools, hardware and software
- LAN and WAN systems required to demonstrate the performance evidence
- organisational policies and procedures required to demonstrate the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTNWK627 Implement voice applications over secure wireless networks

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Supersedes and is equivalent to ICTNWK606 Implement voice applications over secure wireless networks.

Application

This unit describes the skills and knowledge required to use a variety of networking tools, equipment, and protocols to design voice over wireless local area networks (VoWLANs). It includes securely implementing quality of service (QoS) and high bandwidth applications into wireless networks.

The unit applies to individuals who may have advanced information and communications technology (ICT) skills and knowledge and work in roles such as wireless help desk technicians, wireless network support specialists and wireless network engineers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Assess wireless network architecture	1.1 Confirm work brief and tasks according to organisational policies and procedures 1.2 Analyse and select wireless network option according to work brief

ELEMENT	PERFORMANCE CRITERIA
	1.3 Create wireless network architecture design considerations 1.4 Verify suitability and readiness of wireless network for voice over application
2. Implement VoWLAN	2.1 Configure wireless client devices according to work brief 2.2 Create wireless local area network (WLAN) implementation and verification plan 2.3 Select and source voice over application configuration components according to work brief 2.4 Configure VoWLAN and confirm security control functionality 2.5 Conduct network troubleshooting and rectify any issues
3. Apply QoS practices	3.1 Plan QoS design considerations for voice over internet protocol (VoIP) applications 3.2 Design QoS deployment schemes according to work brief 3.3 Analyse and select wireless multimedia (WMM) extension options according to work brief 3.4 Select and source configuration hardware, software and tools 3.5 Confirm component serviceability 3.6 Test QoS network functionality and rectify any issues
4. Confirm multicast wireless environments	4.1 Analyse multicast concepts 4.2 Assess implications for multicast over the lowest common denominator access point 4.3 Confirm multicast requirements 4.4 Devise structured troubleshooting methodology according to work brief
5. Secure high bandwidth network functions	5.1 Analyse latency-sensitive application requirements according to work brief 5.2 Test video applications over the lowest common denominator access point in WLAN 5.3 Calculate and predict bandwidth requirements for video applications over wireless network 5.4 Confirm WLAN interconnectivity 5.5 Develop and securely file documentation on completed work tasks according to organisational policies and procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Numeracy	<ul style="list-style-type: none">Interprets numerical data to calculate network interoperability
Reading	<ul style="list-style-type: none">Interprets complex technical information to confirm requirements
Writing	<ul style="list-style-type: none">Uses clear and detailed language in documentation to convey explicit information and technical requirements
Planning and organising	<ul style="list-style-type: none">Operates from a broad conceptual plan to identify functional features associated with the operation of complex networks
Problem solving	<ul style="list-style-type: none">Demonstrates a sophisticated use of principles, concepts, language and practices associated with the digital world and uses them to troubleshoot the uses of new technology
Technology	<ul style="list-style-type: none">Operates from a broad conceptual plan to identify functional, performance and management features associated with the operation of complex networks

Unit Mapping Information

Supersedes and is equivalent to ICTNWK606 Implement voice applications over secure wireless networks.

Links

Companion Volume Implementation Guide is found on VETNet - -

Assessment Requirements for ICTNWK627 Implement voice applications over secure wireless networks

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Supersedes and is equivalent to ICTNWK606 Implement voice applications over secure wireless networks.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- implement at least one voice application over a wireless local area network (WLAN)
- conduct at least one quality of service (QoS) practice during the implementation.

In the course of the above, the candidate must:

- assess voice over application architecture and wireless network bandwidth
- apply required organisational policies and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- key configuration and implementation techniques for complex networks, including:
 - virtual local area network (VLAN) with switching and inter-switching communications
 - WLAN
 - voice over wireless local area network (VoWLAN)
- key components of WLAN implementation and verification plans
- functions and features of advanced complex networks, including:
 - mobile device operating systems
 - internet protocol (IP) networking models
 - voice and video applications

- configuration hardware, software and tools fit for serviceability
- key types of high-bandwidth applications and requirements
- key types and functions of QoS practices, including:
 - deployment schemes
 - wireless multimedia (WMM) extensions
 - design considerations
 - deployment schemes
- functions and features of high bandwidth wireless networks and components, including:
 - standards, protocols and certifications
 - wireless devices and WLAN interconnectivity
 - video application bandwidth
 - latency-sensitive applications
 - multicast concepts
 - lowest common denominator access points
 - voice over application and security needs
 - troubleshooting methodology and solutions
 - network topologies and deployment schemes
 - architecture design plans
- methods to configure network components using technical guidelines
- organisational policies and procedures and legislative requirements relating to work tasks.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site where advanced network component configuration and installation is conducted
- voice technologies and network infrastructure, including servers, tools, hardware and software
- stand-alone and lightweight WLAN controllers and access points
- organisational policies and procedures required to demonstrate the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTNWK628 Design and build integrated VoIP networks

Modification History

Release	Comments
Release 1	<p>This version first released with the Information and Communications Technology Training Package Version 8.0.</p> <ul style="list-style-type: none">• Supersedes and is equivalent to ICTNWK610 Design and build integrated VoIP networks.• Supersedes and is not equivalent to ICTNWK611 Configure call processing network elements for secure VoIP networks.

Application

This unit describes the skills and knowledge required to operate specialised tools, hardware, software and networking components to design and build internet protocol (IP)-based integrated voice over network into small-to-medium organisations.

The unit applies to individuals who may be voice over internet protocol (VoIP) network support specialists, VoIP network engineers and installers who are independently responsible for VoIP network management, using specialised information and communications technology (ICT) skills and knowledge.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for VoIP network deployment	1.1 Confirm work brief and tasks according to organisational policies and procedures

ELEMENT	PERFORMANCE CRITERIA
	1.2 Assess current state network architecture and VoIP call flow 1.3 Analyse existing operating systems, networked devices, endpoints and limitations 1.4 Create VoIP network deployment plan according to analysis 1.5 Create site numbering plan and assign calling privileges 1.6 Select and source configuration hardware, software and tools
2. Produce pilot VoIP network components	2.1 Design VoIP network layout according to work brief 2.2 Create VoIP network architecture 2.3 Configure pilot VoIP network with gatekeeper 2.4 Test pilot VoIP network and rectify any issues 2.5 Confirm interoperation of gatekeepers in network 2.6 Confirm IP-to-IP gateway functionality
3. Deploy VoIP network and test functionality	3.1 Configure final VoIP according to VoIP network deployment plan 3.2 Implement address hiding, media interworking, and call admission controls into VoIP network 3.3 Conduct post-deployment testing and rectify any issues according to organisational procedures and technical guidelines 3.4 Conduct security assessment of VoIP network and implement security controls 3.5 Develop and securely file documentation on completed work tasks according to organisational policies and procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Numeracy	<ul style="list-style-type: none"> Interprets numerical data in the planning phase and undertakes measurements to evaluate network interoperability
Reading	<ul style="list-style-type: none"> Interprets complex technical information to determine and adhere to business requirements and deployment plans
Planning and organising	<ul style="list-style-type: none"> Uses a mix of intuitive and formal processes to identify key information and issues, evaluate alternative strategies, anticipate consequences and consider implementation issues

Skill	Description
	and contingencies
Problem solving	<ul style="list-style-type: none">• Uses formal analytical and lateral problem-solving techniques to identify issues and implement solutions
Technology	<ul style="list-style-type: none">• Uses a broad range of strategies to store, access and organise virtual information, recognising that design choices will influence what information is retrieved and how it may be interpreted and used• Monitors and controls access to digitally stored and transmitted information

Unit Mapping Information

Supersedes and is equivalent to ICTNWK610 Design and build integrated VoIP networks.

Supersedes and is not equivalent to ICTNWK611 Configure call processing network elements for secure VoIP networks.

Links

Companion Volume Implementation Guide is found on VETNet - -

Assessment Requirements for ICTNWK628 Design and build integrated VoIP networks

Modification History

Release	Comments
Release 1	<p>This version first released with the Information and Communications Technology Training Package Version 8.0.</p> <ul style="list-style-type: none">• Supersedes and is equivalent to ICTNWK610 Design and build integrated VoIP networks.• Supersedes and is not equivalent to ICTNWK611 Configure call processing network elements for secure VoIP networks.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- configure at least one voice over internet protocol (VoIP) network
- conduct at least one of the following VoIP network security assessments on the configured VoIP network:
 - gateway assessment
 - firewall configuration assessment
 - cyberattack simulation
 - application-based security scanning
 - patching procedures.

In the course of the above, the candidate must:

- implement two security controls to minimise VoIP network vulnerabilities
- apply required organisational policies and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- functions and features of VoIP network components, including:
 - codecs
 - call flows

- address hiding
- network switches and ports
- topologies, architectures and elements
- calling privileges
- internet protocol (IP)-to-IP gateways
- layout designs
- configuration hardware, software and tools
- methods to configure network components using technical guidelines
- key types and features of networked devices, equipment and endpoints, including:
 - handheld devices
 - mobile devices
 - network switches
 - ports
 - routers
- key features of numbering plans, including:
 - digit manipulation
 - path selection process
- key design procedures and features of VoIP network plans, including:
 - VoIP network deployment plans
 - VoIP network post-deployment plans
- key VoIP protocols and their impact on voice quality and network performance, including:
 - H.323 protocol
 - session initiation protocol (SIP)
 - media gateway control protocol (MGCP)
- key procedures for system information management, including:
 - quality of service (QoS)
 - service level management (SLM)
 - service level agreement (SLA)
- key VoIP network testing and troubleshooting procedures, including:
 - address hiding procedures
 - real-time test protocols
 - call management protocols
 - call admission controls
 - gateway signalling protocols
 - dial plan resolution protocols
- internetwork operating system (IOS) and IP networking models
- telephony call processing between traditional circuits and contemporary packet-based networks
- functions and features of:
 - VoIP network interoperation and media interworking

- local area network (LAN) and wide area network (WAN) topologies
- wireless LAN (WLAN) topologies
- controllers and access points
- configuration and verification procedures for basic router operation, VLAN routing switches and inter-switching communications
- VoIP network design considerations
- VoIP network deployment schemes
- VoIP networking technical guidelines and standards
- techniques to select and implement network vulnerability security controls
- organisational policies and procedures required to demonstrate the performance evidence.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site where a VoIP network is designed, built and integrated
- required network infrastructure, including tools, hardware, software and configuration components
- stand-alone, lightweight online controllers and access points
- organisational policies and procedures required to demonstrate the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTNWK629 Configure and manage storage area networks

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Supersedes and is equivalent to ICTNWK617 Configure and manage a storage area network.

Application

This unit describes the skills and knowledge required to implement secure and scalable storage area networks (SANs) into organisations to enable centrally managed systems.

The unit applies to individuals who may work as senior networkers, network technicians and storage engineers who are independently responsible for maintaining high-speed storage in networking environments.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Assemble SAN components	1.1 Confirm work brief and tasks according to organisational policies and procedures 1.2 Assess and compare SAN topology 1.3 Select SAN model according to work brief 1.4 Create SAN implementation plan 1.5 Select and source configuration tools and components
2. Connect SAN	2.1 Cable SAN hardware according to implementation plan

ELEMENT	PERFORMANCE CRITERIA
components	2.2 Install SAN software according to implementation plan 2.3 Configure management and logical interface to endpoint devices 2.4 Test network-attached storage (NAS) and SAN compatibility and rectify any issues 2.5 Update virtual local area network (VLAN) configuration settings 2.6 Take volume snapshot of host operating system and file point-in-time copy under internet small computer systems interface (iSCSI) qualified name
3. Install provisioning services	3.1 Create aggregate using redundant array of independent disk (RAID) levels 3.2 Create logical volumes according to work brief 3.3 Create logical unit numbers (LUN) according to work brief 3.4 Use NAS protocols and create shared folders 3.5 Connect client and server to shared SAN protocols 3.6 Test server interconnection and rectify any issues
4. Monitor disaster recovery	4.1 Compare point-in-time volume with end state host operating system 4.2 Install volume shadow copy service (VSS) hardware provider and confirm automatic copy functionality of host operating system 4.3 Test SAN-based data deduplication and replication operations 4.4 Test SAN-based backup and restore operations and alerts 4.5 Create and document SAN review process and present SAN management plan to enterprise administrators

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Oral communication	<ul style="list-style-type: none"> Uses clear spoken communication in a broad range of contexts Presents ideas and answers questions using logical processes
Reading	<ul style="list-style-type: none"> Uses technical and organisational processes to determine and confirm job requirements
Writing	<ul style="list-style-type: none"> Uses clear and detailed language in documentation to convey explicit information and technical requirements
Initiative and enterprise	<ul style="list-style-type: none"> Identifies and responds to protocols in complex work contexts and

Skill	Description
	in various situations
Technology	<ul style="list-style-type: none">Actively identifies systems, devices and applications with potential to meet current and/or future needsIdentifies anomalies in a virtualised machine environments

Unit Mapping Information

Supersedes and is equivalent to ICTNWK617 Configure and manage a storage area network.

Links

Companion Volume Implementation Guide is found on VETNet - -

Assessment Requirements for ICTNWK629 Configure and manage storage area networks

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Supersedes and is equivalent to ICTNWK617 Configure and manage a storage area network.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- configure at least one storage area network (SAN) according to organisational storage needs
- confirm the interconnection of at least two different enterprise devices to a SAN.

In the course of the above, the candidate must:

- operate within the storage capacity of digital enterprises
- apply required organisational policies and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- functions and features of network protocols, including:
 - common internet file system (CIFS)
 - sever message block (SMB)
 - network file system (NFS)
 - internet small computer system interface (iSCSI)
 - fibre channel (FC)
 - fibre channel over ethernet (FCOE)
- key features and requirements of SANs, including:
 - volume snapshots and clone copies

- data deduplication
- flexible volumes
- hardware and software
- backup and restore settings
- logical unit numbers (LUNs)
- shared folders
- management and logical interfaces
- endpoint devices
- key differences and compatibility requirements between SANs, network-attached storage (NAS), and direct-attached storage (DAS) devices
- types of hard drives, including:
 - serial attached SCSI (SAS)
 - serial advanced technology attachment (SATA)
 - solid state disk (SSD)
- network configuration tools and components
- types of SAN topologies, models, cables, and connectors
- industry-recognised strategies for network management, backup, and security
- methodology for the implementation and configuration of SANs
- methodology for the configuration of virtual local area networks (VLANs)
- functions and features of redundant array of independent disks (RAIDs)
- properties of interconnection testing of storage systems and servers
- types of data storage failures and processes for recovering corrupted data
- organisational formats for documentation
- organisational policies and procedures and legislative requirements relating to work tasks.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site where storage area networks is configured and managed
- required network infrastructure, including tools, hardware, software and configuration components
- organisational policies and procedures required to demonstrate the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTOPN404 Test optical communications systems and components

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Application

This unit describes the skills and knowledge required to test optical communications systems and components using advanced optical test equipment. It involves using the optical time domain reflectometer (OTDR), optical spectrum analyser (OSA) and optical return loss (ORL) test set for performance testing and link budget calculation.

It applies to cablers who combine technical skills with organisational and administrative skills. They may be installation contractors, technical staff and field officers from telecommunications carriers or other private and public organisations or regulatory authorities.

No licensing, registration, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

ICTBWN307 Use optical measuring instruments

Unit Sector

Telecommunications – Optical Networks

Elements and Performance Criteria

Element	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to use advanced optical	1.1 Notify customer for site access, security arrangements and location details of optical system and test purpose

measuring instruments	<p>1.2 Identify site hazards and notify appropriate personnel to make site safe</p> <p>1.3 Devise and implement risk control measures for hazards and risks associated with handling optical fibres and lasers, in consultation with appropriate personnel</p> <p>1.4 Prepare a testing plan indicating the type of measurement, procedures and nominated wavelength, and seek approval from customer</p> <p>1.5 Select appropriate tools and test instruments according to required measurement and enterprise practice</p>
2. Evaluate optical performance and link budget using advanced optical test equipment	<p>2.1 Set-up test instrument according to manufacturer instructions, and work health and safety (WHS) and environmental requirements</p> <p>2.2 Perform measurement and tests in a safe manner to evaluate performance of optical system and component</p> <p>2.3 Record test results and compare with standard test specifications from manufacturer and enterprise guidelines</p> <p>2.4 Perform end-to-end measurements on an optical link and record test results and test points</p> <p>2.5 Calculate optical losses for a link budget figure of an optical link</p> <p>2.6 Evaluate test results and report on functionality of optical component or equipment and performance of optical link</p>
3. Document measurement results	<p>3.1 Document test results for future reference and make recommendations for optimising component and system performance</p> <p>3.2 Clean worksite and make safe according to enterprise requirements and customer satisfaction</p> <p>3.3 Notify appropriate personnel of job completion for sign-off and present test documentation</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance, but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interprets textual information from relevant sources to plan, identify all job requirements and adhere to procedures and standards
Writing	<ul style="list-style-type: none"> Accurately completes relevant reports and documentation using clear and technically specific language and numerical data
Oral Communication	<ul style="list-style-type: none"> Uses listening and questioning skills to confirm understanding for requirements, participates in a verbal exchange of ideas and

Skill	Description
	solutions, and uses appropriate, detailed and clear language to address key personnel and customers
Numeracy	<ul style="list-style-type: none"> Uses mathematical formulae to gather and record technical measurements
Navigate the world of	<ul style="list-style-type: none"> Takes personal responsibility for adherence to legal and regulatory responsibilities relevant to own work context with specific reference to workplace safety Understands main tasks, responsibilities and boundaries of own work
Interact with others	<ul style="list-style-type: none"> Actively identifies requirements of important communication exchanges, selecting appropriate channels, format, tone and content to suit purpose and audience
Get the work done	<ul style="list-style-type: none"> Takes responsibility for planning and organising own workload, identifying ways of sequencing and combining elements for greater efficiency Takes responsibility for routine decision-making by selecting from a range of predetermined options in routine situations, identifying and taking some situational factors into account Considers purpose, needs and limitations when selecting devices and applications for different tasks

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Test equipment must include:	<ul style="list-style-type: none"> optical time domain reflectometer (OTDR) optical spectrum analyser (OSA) or equivalent optical spectrum analyser optical return loss (ORL)
Measurements must include:	<ul style="list-style-type: none"> optical power level insertion loss of optical network end-to-end fibre loss (bi-directional)
Optical performance must include:	<ul style="list-style-type: none"> wavelength spectrum parameters ODTR events

Unit Mapping Information

No equivalent unit. Supersedes and is not equivalent to ICTOPN402 Use advanced optical test equipment.

Assessment Requirements for ICTOPN404 Test optical communications systems and components

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills on two occasions and to:

- obtain operation documentation for advanced optical test instruments
- plan and prepare a schedule of tests to be performed
- conduct at least one optical test
- record the following measurements for a range of parameters:
 - optical power level
 - insertion loss of optical network
 - end-to-end fibre loss (bi-directional)
- test, calculate and document optical link budget according to industry standards using the following test equipment:
 - optical time domain reflectometer (OTDR)
 - optical spectrum analyser (OSA) or equivalent optical spectrum analyser
 - optical return loss (ORL)
- comply with all related work health and safety (WHS) requirements and work practices
- evaluate optical performance using:
 - wavelength spectrum parameters
 - ODTR events.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- optical system and its main components
- hazards and risks associated with optical systems
- health and safety and environmental requirements associated with optical systems
- common tests, measurements and testing plans used for optical systems

- common wavelengths involved with optical systems
- use of tools and test equipment for optical systems
- consequences of mating contaminated optical connectors
- calculations using decibels, dBm
- downstream and upstream signals
- dense wavelength division multiplexing (DWDM) metro and long-haul system architecture
- measurement of:
 - DWDM signals
 - gain and gain flatness of optical amplifier
 - laser spectral stability, drift and unexpected variation in spectral transmission characteristics
- non-linear effects, four-wave mixing
- optical connector types
- optical signal to noise ratio (OSNR)
- optical spectrum limits, wavelengths used in various applications and International Telecommunication Union (ITU) grid
- optical transmitters and receivers
- optical return loss (ORL)
- OTDR dead zones, dynamic range and launch cable reflectance
- safe handling procedures with optical fibres
- transmission system line rates including:
 - optical ethernet
 - optical transport network (OTN)
 - synchronous digital hierarchy (SDH)
- wavelength division multiplexing (WDM), coarse wavelength division multiplexing (CWDM) and DWDM principles and optical multiplexers
- influence of legislation, regulations, codes and standards relevant to advanced optical work.

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- tools and equipment required for measurements
- manufacturer documentation for test instruments and equipment under test.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTOPN405 Install and test a dense wavelength division multiplexing system

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Application

This unit describes the skills and knowledge required to install dense wavelength division multiplexing (DWDM) equipment in optical networks.

It applies to technicians who interpret installation manuals and use technical skills to prepare for and conduct system tests and commissioning.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Optical Networks

Elements and Performance Criteria

Element	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to install DWDM units	1.1 Determine number of racks and DWDM units at each site according to installation documents 1.2 Determine DWDM unit and equipment positions within individual racks 1.3 Assemble equipment racks according to safe industry practice and manufacturer instructions 1.4 Select tools and equipment for DWDM unit installation 1.5 Prepare patch panels with connectors according to installation plan

Element	Performance Criteria
2. Install DWDM units and associated cabling	<p>2.1 Install DWDM unit in designated rack position to maintain planned link budget margin</p> <p>2.2 Install patch panels and ancillary equipment and connections into equipment rack in preparation for commissioning procedures</p> <p>2.3 Insert circuit cards into specified slot locations in readiness for commissioning procedures without seating cards into backplane or locking into position</p> <p>2.4 Connect optical fibre cables between circuit cards, optical multiplexers, adjoining DWDM units and patch panels, according to manufacturer specifications</p> <p>2.5 Seat cards into backplane and lock into position</p>
3. Test power connections and complete installation report	<p>3.1 Measure main and redundant power supplies to verify correct polarity of ground and power connections</p> <p>3.2 Rectify any identified power wiring fault as required</p> <p>3.3 Confirm cooling fans, panel lights, indicator lights and alarms behave according to manufacturer prescribed specifications when power is applied</p> <p>3.4 Complete installation report and reinstate site</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance, but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none">Interprets textual information from relevant sources to identify and adhere to procedures and standards
Writing	<ul style="list-style-type: none">Uses clear, specific and industry related terminology to complete and update workplace documentation
Numeracy	<ul style="list-style-type: none">Uses mathematical formulae to calculate measurements and determine equipment requirements
Navigate the world of work	<ul style="list-style-type: none">Recognises and follows explicit and implicit protocols and meets expectations associated with own roleTakes personal responsibility for adherence to legal and regulatory responsibilities relevant to own work context with specific reference to workplace safety

Skill	Description
Get the work done	<ul style="list-style-type: none">• Implements actions according to installation documents, making slight adjustments if necessary and addressing some unexpected issues• Takes responsibility for routine decision-making by selecting from a range of predetermined options in routine situations, identifying and taking some situational factors into account• Initiates standard procedures when responding to familiar problems within immediate context• Reflects on the ways digital systems and tools are used, or could be used to achieve work goals and begins to recognise strategic and operational applications

Unit Mapping Information

ICTOPN405 Install and test a dense wavelength division multiplexing system supersedes and is equivalent to ICTOPN401 Install and test a dense wavelength division multiplexing system.

Assessment Requirements for ICTOPN405 Install and test a dense wavelength division multiplexing system

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills on two occasions and to:

- determine the dense wavelength division multiplexing (DWDM) requirements for a site
- install a DWDM system and associated cabling according to plans and specifications
- test installation for operation, power and ground connections
- analyse test results and rectify faults
- complete and submit an installation report.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- DWDM principles of operation and manufacturers guidelines
- risk management of electrostatic discharge
- optical fibre connector types and characteristics
- optical fibre types and characteristics
- specific work health and safety requirements that impact the safe measurement and inspection of optical connectors and optical power from laser transmission systems
- power wiring faults.

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- tools and equipment requirement for installation
- a range of optical fibres to suit the installation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTOPN507 Plan and configure dense wavelength division multiplexing optical networks

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to plan and configure dense wavelength division multiplexing (DWDM) optical networks for metropolitan area networks (MAN) and long-haul applications.

It applies to individuals who work as members of a team and use high-level communication and technical skills to provide services in Next Generation Networks (NGN).

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Optical Networks

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for DWDM planning activities	1.1 Obtain cabling plan from relevant personnel and arrange for site access in compliance with organisational regulations and work standards 1.2 Notify relevant personnel of identified safety hazards at worksite and complete required safety procedures
2. Plan DWDM installation activities and develop specifications	2.1 Identify tools, safety equipment, plant and machinery required for installation activities 2.2 Conduct physical inspection of proposed DWDM sites according to organisational requirements and procedures 2.3 Confirm that backbone dark fibre is accessible and available

ELEMENT	PERFORMANCE CRITERIA
	<p>according to cabling plan</p> <p>2.4 Confirm that proposed backbone and customer fibre cable routes to splicing cabinet and fibre patch panel</p> <p>2.5 Identify barriers to cable installation</p> <p>2.6 Verify proposed power cabling route from distribution board and circuit breakers</p> <p>2.7 Modify cabling plan and notify relevant personnel of all changes</p> <p>2.8 Prepare fibre installation specifications, power cable and grounding specifications according to cabling plan, safe work practices and manufacturer instructions</p> <p>2.9 Verify proposed location of associated hardware racks, cabinets and ironwork, and confirm access to enterprise local area network (LAN)</p>
3. Prepare DWDM shelf configuration and specifications	<p>3.1 Prepare configuration documents, and detail configuration plans and specifications for installation teams</p> <p>3.2 Specify location of DWDM shelves, racks and shelf interconnection fibre cabling layout according to cabling plan</p> <p>3.3 Specify individual DWDM units and circuit card types according to customer requirements</p>
4. Plan preliminary optical tests	<p>4.1 Verify backbone fibres at patch panel and conduct bidirectional optical time domain reflectometer (OTDR) test</p> <p>4.2 Record measurement results and OTDR images according to organisational requirements</p> <p>4.3 Conduct bidirectional optical loss test set (OLTS) measurement of insertion loss on backbone fibres between patch panels at adjacent sites</p> <p>4.4 Record measurement results according to organisational requirements</p>
5. Complete documentation and obtain sign-off	<p>5.1 Provide results of optical measurements to design team</p> <p>5.2 Complete and provide updated specification documentation to installation team</p> <p>5.3 Submit documentation to relevant personnel for approval and sign-off</p>

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Uses mathematical equations to evaluate technical data, calculate required settings and make adjustments
Oral communication	<ul style="list-style-type: none"> Uses listening and questioning skills to confirm requirements and participates in verbal exchanges of ideas and solutions Uses detailed and clear language to address key personnel, contractors, vendors and clients
Reading	<ul style="list-style-type: none"> Interprets textual information from sources to identify and plan for all job requirements and to adhere to procedures and standards
Writing	<ul style="list-style-type: none"> Completes reports and documentation using clear and technically specific language, numerical data and diagrammatic information
Teamwork	<ul style="list-style-type: none"> Identifies requirements of important communication exchanges, selecting required channels, format, tone and content to suit purpose and audience and monitoring impact
Planning and organising	<ul style="list-style-type: none"> Develops plans to manage relatively complex, non-routine tasks with an awareness of how they may contribute to longer term operational and strategic goals Monitors adherence to legal and regulatory rights and responsibilities with specific reference to safe industry practices
Problem solving	<ul style="list-style-type: none"> Explains how own role meshes with others and contributes to broader work goals Makes a range of critical and non-critical decisions in relatively complex situations, taking a range of constraints into account
Technology	<ul style="list-style-type: none"> Demonstrates a sophisticated knowledge of principles, concepts, language and practices associated with the digital world

Unit Mapping Information

Supersedes and is equivalent to ICTOPN501 Plan and configure dense wavelength division multiplexing systems.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTOPN507 Plan and configure dense wavelength division multiplexing optical networks

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- plan and configure at least two dense wavelength division multiplexing (DWDM) optical networks.

In the course of the above, the candidate must:

- prepare DWDM shelf configurations and specifications
- plan preliminary optical tests
- complete project and acceptance documentation and submit for approval
- comply with work health and safety (WHS) requirements and job specifications.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- configuration of DWDM shelves
- principles of DWDM operations
- functions and features of cabling plans
- risk of electrostatic discharge
- functions and features of specification documents
- functions and operating features of the following test equipment:
 - hand-held optical power meter
 - optical spectrum analyser
 - optical time domain reflectometer (OTDR)
 - transmission test set
- functions of an optical add drop multiplexer

- role of the following items in planning and configuring DWDM systems internet protocol (IP):
 - subnet masks
 - dynamic host configuration protocol (DHCP)
 - default gateways
- International Telecommunications Union (ITU) wavelength grid for DWDM
- types and characteristics of optical fibre connector types
- path protection and protection switching processes
- features of physical optical loopbacks and software loopbacks used in testing DWDM systems
- protocols used on optical DWDM systems
- use of ring topologies and linear network topologies in DWDM system cable routes
- WHS requirements that impact safe inspection of optical connectors and safe measurement of optical power from laser transmission systems.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- test equipment used in industry
- manufacturer technical documentation
- required regulations and specifications.

Assessors of this unit must satisfy the requirements for assessors in required vocational education and training legislation, frameworks and/or standards.

ICTOPN508 Perform acceptance and commissioning tests on optical networks

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to conduct acceptance tests and commissioning tests on optical networks, including optical portion of broadband hybrid fibre coaxial (HFC) networks, fibre to the x (FTTx) passive optical networks (PONs) and metropolitan and long-haul dense wavelength division multiplexing (DWDM) networks.

It applies to individuals who work as members of a team and use high-level communication and technical skills to provide services in Next Generation Networks (NGN) using emerging technologies.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Optical Networks

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to conduct acceptance and commissioning tests	<ul style="list-style-type: none">1.1 Obtain installation and commissioning specifications from relevant personnel, and confirm that installed optical network is accessible and available1.2 Conduct visual inspection of installation and confirm that system complies with required legislation, codes, regulations and standards, and accepted industry practice1.3 Obtain required test equipment for acceptance and commissioning tests

ELEMENT	PERFORMANCE CRITERIA
	1.4 Prepare acceptance schedule and test criteria in consultation with relevant personnel
2. Conduct acceptance and commissioning tests	2.1 Conduct and evaluate performance tests and ensure measurements meet with predetermined specifications and approved operating margins 2.2 Confirm whether performance levels are within tolerance specifications set in manufacturer's instructions 2.3 Test protection mechanisms to ensure performance criteria meets specified standard 2.4 Test alarms for satisfactory operation and refer identified problems to relevant personnel 2.5 Record all test procedures and results
3. Complete administrative tasks	3.1 Complete acceptance documentation and recommendations 3.2 Notify relevant personnel and obtain sign-off

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Uses mathematical equations to evaluate technical data to determine measurements and any required calibration changes
Oral communication	<ul style="list-style-type: none"> Uses listening and questioning skills to confirm requirements Participates in verbal exchanges of ideas and solutions, and uses required, detailed and clear language to address key personnel
Reading	<ul style="list-style-type: none"> Interprets textual information from required sources for equipment readings to identify and plan for all job requirements and adhere to procedures and standards
Writing	<ul style="list-style-type: none"> Completes required reports and documentation using clear and technically specific language and numerical data
Teamwork	<ul style="list-style-type: none"> Identifies requirements of important communication exchanges, selecting required channels, format, tone and content to suit purpose and audience and monitoring impact
Planning and organising	<ul style="list-style-type: none"> Develops plans to manage relatively complex, non-routine tasks with an awareness of how they may contribute to longer term operational and strategic goals Demonstrates a sophisticated knowledge of principles, concepts, language and practices associated with the digital world

SKILL	DESCRIPTION
Problem solving	<ul style="list-style-type: none">• Takes responsibility for high-impact decisions in complex situations involving many variables and constraints• Recognises and addresses some unfamiliar problems of increasing complexity within own scope, recognising when to seek the expertise of others
Self-management	<ul style="list-style-type: none">• Understands how own role meshes with others and contributes to broader work goals• Monitors adherence to legal and regulatory rights and responsibilities

Unit Mapping Information

Supersedes and is equivalent to ICTOPN502 Perform acceptance and commissioning tests on optical network.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTOPN508 Perform acceptance and commissioning tests on optical networks

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- perform at least two acceptance and commissioning tests on optical networks.

In the course of the above, the candidate must:

- analyse results against specified installation and commissioning documents
- verify 'as built' installation against at least one installation plan
- complete and submit all acceptance documentation, incorporating test procedures, results and recommendations
- comply with all related work health and safety (WHS) requirements and work practices.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- legislation, codes, regulations and standards, WHS and organisational requirements for scoped work
- features of installation and commissioning specifications
- typical test equipment used for acceptance and commissioning tests
- features of acceptance schedules and test criteria
- cabling, terminations and supporting structures that are encountered in the inspected system
- common performance levels and standards
- electrical and optical properties measured in optical networks
- health and safety issues required to the work environment under inspection
- typical network topologies, switching, routing and transmission techniques
- transmission type and signals that may be encountered
- test equipment types suitable for tests to be made.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- testing equipment used in industry
- required regulatory and equipment documentation.

Assessors of this unit must satisfy the requirements for assessors in required vocational education and training legislation, frameworks and/or standards.

ICTOPN509 Plan for optical system upgrades

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to plan the activities of major upgrades of optical systems from specifications provided by the planning and design section or its equivalent. Major upgrades in enterprise networks or a communications service provider's network involve cut over activities to integrate additional work into the existing network.

It applies to individuals who work as members of a team and use high-level communication and technical skills to provide services in Next Generation Networks (NGN) using emerging technologies.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Optical Networks

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Gather information to prepare upgrade activity plan	<ul style="list-style-type: none">1.1 Obtain and review legislation, codes, regulations and standards required for optical system upgrades and cut overs1.2 Obtain design specifications and determine the scope and nature of all required upgrades1.3 Analyse the design specification and design plan, and confirm that it complies with site installation requirements and customer instructions1.4 Determine network equipment types and obtain installation details from manufacturer

ELEMENT	PERFORMANCE CRITERIA
	1.5 Prepare equipment and component list and source vendors for procurement
2. Prepare upgrade activity plans	2.1 Create a detailed installation upgrade procedure for the installer 2.2 Prepare pre-installation optical tests on existing equipment and determine benchmarks and performance levels prior to the upgrade 2.3 Prepare post-installation optical tests on upgrade and confirm that upgraded system is achieving desired results 2.4 Prepare monitoring schedule and progressively assess upgrade progress 2.5 Prepare upgrade contingency plan and methods to avoid systemic disruption in an event where the upgrade fails 2.6 Prepare cutover procedures
3. Complete documentation	3.1 Document results of system upgrades, issues and cutover procedures 3.2 Submit planning activity document for approval

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Uses mathematical equations to evaluate technical data Uses basic arithmetic to determine work schedules
Oral communication	<ul style="list-style-type: none"> Uses listening and questioning skills to confirm requirements Participates in verbal exchanges of ideas and solutions and uses required, detailed and clear language to address key personnel
Reading	<ul style="list-style-type: none"> Interprets textual information from required sources to identify and plan for all job requirements and adhere to procedures and standards
Writing	<ul style="list-style-type: none"> Completes required reports and documentation using clear and technically specific language, numerical data and diagrammatic information
Teamwork	<ul style="list-style-type: none"> Identifies requirements of important communication exchanges, selecting required channels, format, tone and content to suit purpose and audience and monitoring impact
Initiative and enterprise	<ul style="list-style-type: none"> Understands how own role meshes with others and contributes to broader work goals Monitors adherence to legal and regulatory rights and

SKILL	DESCRIPTION
	responsibilities with specific reference to safe industry practices
Planning and organising	<ul style="list-style-type: none">Develops plans to manage relatively complex, non-routine tasks with an awareness of how they may contribute to longer term operational and strategic goals
Problem solving	<ul style="list-style-type: none">Takes responsibility for high-impact decisions in complex situations involving many variables and constraints
Technology	<ul style="list-style-type: none">Demonstrates a sophisticated knowledge of principles, concepts, language and practices associated with digital factors

Unit Mapping Information

Supersedes and is equivalent to ICTOPN503 Plan for an optical system upgrade and cut over.

Assessment Requirements for ICTOPN509 Plan for optical system upgrades

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- plan for at least two optical system upgrades.

In the course of the above, the candidate must:

- create a detailed installation plan and procedure
- incorporate pre-installation and post-installation test methods and document corresponding results
- assess upgrade progress in accordance with monitoring schedule
- prepare a contingency plan.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- legislation, codes, regulations and standards, work health and safety (WHS) requirements for scoped work
- functions and features of:
 - alarms and backup systems that apply to optical networks
 - escalation and outage procedures
 - network management systems
 - design specifications and design plans
- fundamentals of networks and networking equipment
- networking monitoring tools
- networking test equipment and test setups
- networking wiring practices
- upgrade and post-upgrade routines.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site where upgrade and cutover can be planned
- equipment, software, test and monitoring equipment used in industry
- required regulatory, equipment, enterprise and vendor documentation that impacts work activities.

Assessors of this unit must satisfy the requirements for assessors in required vocational education and training legislation, frameworks and/or standards.

ICTOPN510 Test and commission dense wavelength division multiplexing transmission systems

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to test and commission optical transmission systems using dense wavelength division multiplexing (DWDM) technology.

It applies to individuals who work with networking carriers, service providers, public utilities and broadcasting companies. They combine technical optical communications skills with broader organisational and administrative skills in a range of commercial contexts and environments.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Optical Networks

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to commission DWDM transmission system	1.1 Implement hazard risk control measures according to organisational standards and requirements 1.2 Review system specifications and technical data and identify system operating parameters 1.3 Obtain and check required equipment for faults and compliance with organisational regulations 1.4 Verify that all required equipment is installed, and that circuit cards and filler cards are correctly located and seated 1.5 Check that interconnecting fibres to optical multiplexers and

ELEMENT	PERFORMANCE CRITERIA
	<p>shelves are intact and routed</p> <p>1.6 Establish communication between computer and DWDM shelf</p> <p>1.7 Upload latest software release to each DWDM shelf in the network</p>
2. Commission DWDM transmission system	<p>2.1 Connect an optical test set and a physical optical loopback to the system, and select protocol compatible with DWDM hardware</p> <p>2.2 Check connection status and that test set data is passing</p> <p>2.3 Monitor quality of received signal, set performance monitoring (PM) features and retrieve PM counts</p> <p>2.4 Conduct a long-term stability test and verify that no errors are noted while customer input signal is set to the worst case (minimum) power level</p> <p>2.5 Verify that no alarms are generated during long term stability test periods</p> <p>2.6 Dispose of antistatic packaging to minimise environmental impact</p>
3. Complete test and commissioning documentation	<p>3.1 Finalise documentation on commissioning test results according to organisational procedures</p> <p>3.2 Present results to required person according to organisational procedures</p>

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Uses mathematical equations to evaluate technical data and interpret results
Oral communication	<ul style="list-style-type: none"> Uses listening and questioning skills to confirm requirements Participates in verbal exchanges of ideas and solutions, and uses required, detailed and clear language to address key personnel and clients
Reading	<ul style="list-style-type: none"> Interprets textual information from required sources to identify and plan for all job requirements and adhere to procedures and standards
Writing	<ul style="list-style-type: none"> Completes required reports and documentation using clear and technically specific language and numerical data
Planning and	<ul style="list-style-type: none"> Accepts responsibility for planning and sequencing complex tasks and workload, negotiating key aspects with others taking into

SKILL	DESCRIPTION
organising	account capabilities, efficiencies and effectiveness <ul style="list-style-type: none">Monitors progress of plans and schedules and reviews and changes them to meet new demands and priorities
Self-management	<ul style="list-style-type: none">Takes responsibility for following policies, procedures and legislative requirements, and identifies organisational implications of new legislation or regulation

Unit Mapping Information

Supersedes and is equivalent to ICTOPN504 Test and commission a dense wavelength division multiplexing transmission system.

Assessment Requirements for ICTOPN510 Test and commission dense wavelength division multiplexing transmission systems

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- test and commission at least two dense wavelength division multiplexing (DWDM) transmission systems.

In the course of the above, the candidate must:

- plan and coordinate commission
- test and DWDM transmission system according to required regulations and procedures
- complete commissioning documentation according to organisational requirements.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- legislation, codes, regulations and standards, work health and safety (WHS), and organisational requirements for scoped work, including:
 - reporting requirements
 - commissioning test procedures
- organisational hazard risk control measures
- procedures to review equipment for faults and compliance with organisational regulations
- causes of alarms in long term stability tests
- principles of operating DWDM transmission systems
- standard electrostatic discharge precautions
- features and operating requirements of the following test equipment:
 - a hand-held optical power meter
 - a transmission test set
 - an optical spectrum analyser

- functions of an optical add drop multiplexer
- how to set up the following:
 - internet protocol (IP) addressing
 - subnet mask
 - dynamic host configuration protocol (DHCP)
 - default gateway
- International Telecommunications Union (ITU) wavelength grid for DWDM
- identify types and characteristics of optical fibre connector
- path protection and protection switching
- physical optical loopbacks and software loopbacks
- protocols used on optical DWDM systems
- ring topologies and linear network topologies
- specific health and safety requirements that impact the safe inspection of optical connectors and the safe measurement of optical power from laser transmission systems.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- test equipment used in industry
- manufacturer technical documentation.

Assessors of this unit must satisfy the requirements for assessors in required vocational education and training legislation, frameworks and/or standards.

ICTOPN511 Test performance of specialised optical devices

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to use specialised equipment for integration into existing optical networks or part of an upgrade for higher bandwidths required by services and applications of Next Generation Networks (NGN).

It applies to individuals who design and plan networks using emerging technologies and who work with network carriers, service providers, public utilities and broadcasting companies. They combine technical optical communications skills with broader organisational and administrative skills in a range of commercial contexts and environments.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Optical Networks

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to test specialised optical devices	1.1 Obtain and review required legislation, codes, company work practices, regulations and standards, work health and safety (WHS) and environmental requirements, personal protective equipment and hazard identification tools for scoped work. 1.2 Obtain manufacturer testing specifications and determine type of optical device to be tested 1.3 Determine test procedures and equipment required to evaluate optical device suitability
2. Test specialised	2.1 Set up test layout according to safe industry practice and connect

optical devices	specialised optical device into test set-up 2.2 Conduct test regimes and determine performance of specialised optical devices 2.3 Analyse test results and determine suitability and compatibility of optical device for network integration
3. Document performance of specialised optical devices	3.1 Prepare evaluation report with recommendations of the suitability of the specialised optical device 3.2 Present and archive documented test results and evaluation report according to organisational requirements

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Uses mathematical formulae to evaluate technical data and interpret results
Oral communication	<ul style="list-style-type: none"> Uses listening and questioning skills to confirm technical and operational requirements Participates in verbal exchanges of ideas and solutions, and uses required, detailed and clear language to address key internal and external personnel and clients
Reading	<ul style="list-style-type: none"> Interprets textual information from required sources to identify and plan for all job requirements and adhere to procedures and standards
Writing	<ul style="list-style-type: none"> Completes standard reports and documentation using clear and technically specific language and numerical data
Planning and organising	<ul style="list-style-type: none"> Accepts responsibility for planning and sequencing complex tasks and workload, negotiating key aspects with others taking into account capabilities, efficiencies and effectiveness Takes responsibility for high impact decisions in complex situations involving many variables and constraints
Problem solving	<ul style="list-style-type: none"> Identifies requirements of important communication exchanges, selecting required channels, format, tone and content to suit purpose and audience and monitoring impact
Self-management	<ul style="list-style-type: none"> Works independently with a strong sense of responsibility and ownership of goals, plans, decisions and outcomes Monitors adherence to legal and regulatory rights and responsibilities with specific reference to safe industry practices
Technology	<ul style="list-style-type: none"> Identifies systems, devices and applications with potential to meet current and/or future needs

Unit Mapping Information

Supersedes and is equivalent to ICTOPN505 Test the performance of specialised optical devices.

Assessment Requirements for ICTOPN511 Test performance of specialised optical devices

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- test at least two specialised optical devices and determine suitability for integration into at least two networks.

During the course of the above, the candidate must:

- plan and coordinate test activities and equipment
- analyse test results
- report and make recommendations on suitability for integration
- comply with all work health and safety (WHS) requirements and work practices.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- functions and features of evaluation reports
- manufacturer testing specifications and distinguishing functions and features of specialised optical devices used in industry
- types of test layouts commonly used in testing specialised optical devices
- purpose of amplified spontaneous emission (ASE) source tests
- attenuation characteristics of optical fibres
- principles of operation for dense wavelength division multiplexing (DWDM)
- features and operating requirements of the following test equipment:
 - a hand-held optical power meter
 - an optical spectrum analyser
 - a transmission test set
- dispersion characteristics of various fibres

- dispersion compensation devices
- standard electrostatic discharge precautions
- functions of an optical add-drop multiplexer (OADM) and reconfigurable optical add-drop multiplexer (ROADM)
- gain equalisation theory
- International Telecommunications Union (ITU) wavelength grid for DWDM
- function of measurement of dispersion
- optical amplifier operation features
- optical fibre connector types and characteristics
- optical fibre types and characteristics
- 'optical return loss' (ORL)
- path protection and protection switching
- polarisation dependent loss (PDL)
- protocols used on optical DWDM systems
- reflectance in optical systems
- ring topologies and linear network topologies
- WHS requirements that impact the safe inspection of optical connectors and the safe measurement of optical power from laser transmission systems
- required legislation, codes, company work practices, regulations and standards and environmental requirements for scoped work.
- tuneable laser sources and characteristics.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- test equipment used in industry
- manufacturer technical documentation, legislation, codes and standards.

Assessors of this unit must satisfy the requirements for assessors in required vocational education and training legislation, frameworks and/or standards.

ICTOPN512 Analyse and integrate specialised optical devices

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to analyse and integrate specialised optical devices into existing optical networks to support higher bandwidths associated with Next Generation Networks (NGN).

It applies to individuals who work for network carriers, service providers or other private and public organisations, who have experience in optical transmission. They combine technical expertise with a range of analytical, research and planning skills to develop integrated solutions for particular business needs.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Optical Networks

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan for specialised optical devices for network integration	<p>1.1 Obtain and review required legislation, codes, company work practices, regulations and standards, work health and safety (WHS) and environmental requirements, personal protective equipment, and hazard identification tools for scoped work</p> <p>1.2 Obtain plans and drawings of existing optical networks from relevant personnel and review locations for suitability of integrating specialised optical devices</p> <p>1.3 Analyse and evaluate integration options that satisfy customer network requirements and device specifications</p> <p>1.4 Prepare and submit the business case for adopting recommended</p>

	<p>integration solutions</p> <p>1.5 Prepare design plan with interconnection details to existing system and installation options and seek approval to proceed from customer</p> <p>1.6 Conduct an impact risk assessment of the hardware integration with the network operations centre (NOC)</p> <p>1.7 Create a contingency plan and address risks identified in impact risk assessment</p>
2. Integrate specialised optical devices into the network	<p>2.1 Install specialised optical devices into existing network according to design plan</p> <p>2.2 Test the network, evaluate results and verify optical network performance with integrated specialised optical devices in operation</p>
3. Document evaluation of integrating specialised optical devices into dense wavelength division multiplexing (DWDM) networks	<p>3.1 Produce an updated design plan and submit to customer with archived copies filed according to organisational policies</p> <p>3.2 Prepare an evaluation report on network performance with specialised optical devices and recommendations for enhancements</p> <p>3.3 Notify NOC of job completion and obtain sign-off from relevant personnel</p>

Foundation Skills

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Uses mathematical formulae to evaluate technical data and interpret results

Assessment Requirements for ICTOPN512 Analyse and integrate specialised optical devices

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- integrate at least two specialised optical devices in a network.

In the course of the above, the candidate must:

- evaluate and document integration to the network and recommend enhancements
- submit required documentation to personnel
- analyse specialised optical devices
- comply with all related work health and safety (WHS) requirements and work practices.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- locations suitable for integrating specialised optical devices
- types of network integration options available for specialised optical devices
- characteristics and requirements of:
 - evaluation reports
 - business cases
 - design plans
 - impact risk assessments
 - contingency plans
- attenuation characteristics of optical fibres
- principles of operation of dense wavelength division multiplexing (DWDM)
- features and operating requirements of the following test equipment:
 - a hand-held optical power meter
 - an optical spectrum analyser

- a transmission test set
- dispersion characteristics of optical fibres
- role of dispersion compensation devices
- standard electrostatic discharge precautions
- functions of an optical add-drop multiplexer (OADM) and reconfigurable optical add-drop multiplexer (ROADM)
- functions and features of gain equalisation techniques
- International Telecommunications Union (ITU) wavelength grid for DWDM
- measurement of dispersion in optical systems
- optical amplifier operation
- optical fibre connector types and characteristics
- optical fibre types and characteristics
- optical return loss (ORL)
- path protection and protection switching
- protocols used on optical DWDM systems
- role of reflectance in optical systems
- ring topologies and linear network topologies
- tunable laser sources and their characteristics
- WHS requirements that impact the safe inspection of optical connectors and the safe measurement of optical power from laser transmission systems
- required legislation, codes, company work practices, regulations and standards and environmental requirements for scoped work.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- test equipment used in industry
- manufacturer technical documentation, legislation, codes and standards.

Assessors of this unit must satisfy the requirements for assessors in required vocational education and training legislation, frameworks and/or standards.

ICTOPN605 Manage optical ethernet transmission

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to manage ethernet optical transmission systems. It includes analysis of fault conditions that may occur.

It applies to individuals, who work as members of a team with carrier networks and use optical technologies. Individuals in these roles are excellent communicators and skilled technicians.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Optical Networks

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan to test optical ethernet link	1.1 Obtain and review required legislation, codes, company work practices, regulations and standards, work health and safety (WHS) and environmental requirements, personal protective equipment, and hazard identification tools for scoped work 1.2 Confirm that worksite adheres to safety requirements and organisational guidelines 1.3 Determine the technical environment and required network components 1.4 Report on infrastructure and confirm that ethernet link meets performance requirements
2. Specify architecture	2.1 Discuss architecture requirements for managing optical ethernet

requirements for managing optical ethernet transmission	transmission with relevant personnel 2.2 Verify and list required architecture components 2.3 Determine functions and frameworks for the system to operate across network boundaries in consideration of performance criteria
3. Manage optical ethernet link	3.1 Conduct work in compliance with testing requirements and agreed upon procedures 3.2 Document and analyse test results in comparison with industry benchmarks 3.3 Report test results to relevant personnel according to organisational procedures and guidelines

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Uses mathematical formulae to evaluate technical data and interpret results
Oral communication	<ul style="list-style-type: none"> Uses listening and questioning skills to confirm technical and operational requirements Participates in verbal exchanges of ideas and solutions and uses required, detailed and clear language to address internal and external personnel and clients
Reading	<ul style="list-style-type: none"> Interprets textual information from required sources to identify and plan for all job requirements and adhere to procedures and standards
Writing	<ul style="list-style-type: none"> Completes standard reports and documentation using clear and technically specific language and numerical data
Teamwork	<ul style="list-style-type: none"> Identifies requirements of important communication exchanges, selecting required channels, format, tone and content to suit purpose and audience and monitoring impact
Planning and organising	<ul style="list-style-type: none"> Sequences and schedules complex activities, monitors implementation and manages required communication Takes responsibility for high-impact decisions in complex situations involving many variables and constraints
Problem solving	<ul style="list-style-type: none"> Works independently within parameters with a strong sense of responsibility and ownership of goals, plans, decisions and outcomes Monitors adherence to legal and regulatory rights and responsibilities with specific reference to safe industry practices

SKILL	DESCRIPTION
Technology	<ul style="list-style-type: none">Identifies systems, devices and applications with potential to meet current and/or future needs

Unit Mapping Information

Supersedes and is equivalent to ICTOPN601 Manage optical ethernet transmission.

Assessment Requirements for ICTOPN605 Manage optical ethernet transmission

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- manage optical ethernet transmissions in at least two networks.

In the course of the above, the candidate must:

- identify test performance parameters and architectural requirements for managing optical ethernet transmission
- plan optical ethernet transmission tests from performance requirements
- select and perform testing regimes on ethernet optical transmissions
- comply with all work health and safety (WHS) requirements and work practices.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- principles and techniques for documenting and reporting test results
- organisational safety requirements and hazard detection guidelines
- industry benchmarks for managing optical ethernet transmission
- intricacies of the following optical ethernet systems:
 - system architecture
 - function and framework within a network environment
 - required testing techniques and analysis
- explain WHS requirements relating to:
 - handling of optical fibre
 - personal safety issues
 - use of laser light sources

- WHS requirements that impact the safe inspection of optical connectors and the safe measurement of optical power from laser transmission systems
- required legislation, codes, company work practices, regulations and standards and environmental requirements for scoped work.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- test equipment used in industry
- manufacturer technical documentation, legislation, codes and standards.

Assessors of this unit must satisfy the requirements for assessors in required vocational education and training legislation, frameworks and/or standards.

ICTOPN606 Manage dense wavelength division multiplexing transmission systems

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to manage a dense wavelength division multiplexing (DWDM) transmission system using graphical user interface (GUI) management software.

It applies to individuals who use high-level technical skills and network management software to manage network operations. It is often carried out at a central Network Operations Centre (NOC).

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Optical Networks

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to manage DWDM transmission systems	<ul style="list-style-type: none">1.1 Obtain and review required legislation, codes, company work practices, regulations and standards, work health and safety (WHS) and environmental requirements, personal protective equipment, and hazard identification tools for scoped work1.2 Determine networking issues and necessities according to organisational procedures and requirements1.3 Install network management software according to vendor access instructions, security procedures and administrative guidelines1.4 Create customised representations of the enterprise's network

	<p>topology</p> <p>1.5 Set and configure thresholds for performance monitoring according to organisational guidelines</p> <p>1.6 Prepare a plan to integrate DWDM management systems into broader network management systems, where required</p>
2. Manage DWDM transmission systems	<p>2.1 Manage network using required communications links</p> <p>2.2 Monitor network for faults and performance</p> <p>2.3 Produce a fault and performance report as per organisational guidelines</p>
3. Use network management to report on the overall state of DWDM transmission systems	<p>3.1 Analyse performance monitoring data and alarm data</p> <p>3.2 Prepare a report and make recommendations based on analysis</p> <p>3.3 Report on network degradation over the mandated period of time</p>

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none">• Uses mathematical equations to evaluate technical data and determine acceptable monitoring levels
Oral communication	<ul style="list-style-type: none">• Uses listening and questioning skills to confirm technical and operational requirements• Participates in verbal exchanges of ideas and solutions and uses required, detailed and clear language to address key personnel and clients
Reading	<ul style="list-style-type: none">• Interprets textual information from required sources to identify and plan for all job requirements and adhere to procedures and standards
Writing	<ul style="list-style-type: none">• Completes standard reports and documentation using clear and technically specific language, numerical data and diagrammatic information
Planning and organising	<ul style="list-style-type: none">• Sequences and schedules complex activities, monitors implementation and manages required communication• Takes responsibility for high-impact decisions in complex situations involving many variables and constraints• Uses knowledge of context to recognise anomalies and subtle deviations to normal expectations, focusing attention on critical issues
Technology	<ul style="list-style-type: none">• Uses a broad range of features within applications to improve

SKILL	DESCRIPTION
	personal productivity including optimising software functions for specific purposes

Unit Mapping Information

Supersedes and is equivalent to ICTOPN602 Manage dense wavelength division multiplexing transmission system.

Assessment Requirements for ICTOPN606 Manage dense wavelength division multiplexing transmission systems

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- manage at least two dense wavelength division multiplexing (DWDM) transmission systems.

In the course of the above, the candidate must:

- determine network parameters and set up performance monitoring
- manage network using required software and tools
- monitor network for faults and performance
- produce at least one fault and performance report
- analyse performance monitoring and alarm data
- prepare at least one report with recommendations based on analysis.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- workplace and industry environment required for DWDM transmission systems
- optical communications principles
- functions, features, operational requirements and testing principles of DWDM technology
- functions and features of simple network management protocol (SNMP)
- organisational policies and procedures required by the DWDM transmission system
- required report formats and communication tools to make recommendations on performance and network degradation
- specific work health and safety (WHS) requirements that impact management of DWDM transmission systems
- required legislation, codes, company work practices, regulations and standards and environmental requirements for scoped work.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- DWDM system and test equipment used in industry
- required equipment manuals, software manuals and other procedural documentation.

Assessors of this unit must satisfy the requirements for assessors in required vocational education and training legislation, frameworks and/or standards.

ICTOPN607 Design dense wavelength division multiplexing systems

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to design a high capacity, dense wavelength division, multiplexing (DWDM) optical network suitable for a metropolitan area network (MAN) and long-haul applications.

It applies to individuals who are skilled technicians and excellent communicators who use optical technologies for the deployment of high capacity networks. The work involves link budget design and providing specification details for configuration and commissioning teams.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Optical Networks

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to design DWDM systems	<p>1.1 Obtain and review planning documents, required legislation, codes, company work practices, regulations and standards, work health and safety (WHS) and environmental requirements, personal protective equipment, and hazard identification tools for scoped work</p> <p>1.2 Obtain the service type and number of channels required between customer traffic sources, destinations and the type of required protection</p> <p>1.3 Obtain specifications of optical fibre between sites</p>

	1.4 Determine fibre loss between sites
2. Calculate link budget for each wavelength path for DWDM system design	2.1 Calculate link budget and link margin for each DWDM wavelength and path 2.2 Evaluate link budget, assess calculated margin and make recommendations for improvements 2.3 Analyse specifications of installed optical fibre and determine if dispersion will limit the maximum traffic data rate 2.4 Generate options for system design that are realistic for the enterprise and network 2.5 Evaluate and select preferred option in consideration of enterprise business strategy outcomes, service policy and compliance with required legislation 2.6 Discuss and confirm selected option with customer
3. Prepare detailed configuration documents for DWDM system	3.1 Outline detailed requirements of the DWDM system for configuration document 3.2 Document the DWDM systems performance, functional and physical attributes according to the customers traffic needs 3.3 Prepare an internet protocol (IP) address allocation for all DWDM shelves and associated routers and gateways 3.4 Submit documentation to relevant personnel for approval and sign off
4. Investigate upgrade options with emerging technologies	4.1 Investigate option of using a reconfigurable optical add-drop multiplexer (ROADM) and make recommendations, outlining benefits 4.2 Investigate feasibility of a future upgrade up to 100 Gbps system using optical transport network (OTN) - DWDM technology

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Uses mathematical equations to evaluate all required technical data
Oral communication	<ul style="list-style-type: none"> Uses listening and questioning skills to confirm technical and operational requirements Participates in verbal exchanges of ideas and solutions and uses required, detailed and clear language to address installation personnel, vendors, customers and contractors
Reading	<ul style="list-style-type: none"> Interprets textual information from required sources to identify and

SKILL	DESCRIPTION
	plan for all job requirements and adhere to procedures and standards
Writing	<ul style="list-style-type: none">Prepares project briefs, technical documentation and reports using clear and technically specific language, numerical data and diagrammatic information
Teamwork	<ul style="list-style-type: none">Identifies requirements of important communication exchanges, selecting required channels, format, tone and content to suit purpose and audience and monitoring impact
Problem solving	<ul style="list-style-type: none">Understands key principles and concepts underpinning the design and operation of digital systems and tools and applies these when seeking to knowledge the potential
Self-management	<ul style="list-style-type: none">Monitors adherence to legal and regulatory rights and responsibilities

Unit Mapping Information

Supersedes and is equivalent to ICTOPN603 Design a dense wavelength division multiplexing system.

Assessment Requirements for ICTOPN607 Design dense wavelength division multiplexing systems

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design at least two dense wavelength division multiplexing systems (DWDM).

In the course of the above, the candidate must:

- document an internet protocol (IP) addressing scheme that is suitable for DWDM shelf configuration
- determine fibre loss between sites
- calculate link budgets and link margins
- prepare dense wavelength division multiplexing (DWDM) shelf configuration and specifications
- produce detailed configuration documents
- investigate an emerging DWDM technology.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- features of configuration of DWDM shelf
- operation principles of DWDM systems
- required formats for configuration documents for DWDM system
- functions and features of electrostatic discharge
- features and operating requirements of the following test equipment:
 - an optical time domain reflectometer (OTDR)
 - a hand-held optical power meter
 - a transmission test set
 - an optical spectrum analyser

- functions of an optical add-drop multiplexer (OADM)
- functions of reconfigurable optical add-drop multiplexer (ROADM)
- International Telecommunications Union (ITU) wavelength grid for DWDM
- features of laser stability
- characteristics of dispersion compensation devices
- the importance of a link budget and calculate link margins
- optical fibre connector types and characteristics
- optical fibre types and characteristics
- path protection and protection switching requirements
- physical optical loopbacks and software loopbacks
- traditional protocols and emerging Optical Transport Network (OTN) technologies used on optical DWDM systems
- ring topologies and linear network topologies
- specific work health and safety (WHS) requirements that impact management of DWDM systems
- required legislation, codes, company work practices, regulations and standards and environmental requirements for scoped work.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- manufacturer technical documentation
- required regulations
- system specifications.

Assessors of this unit must satisfy the requirements for assessors in required vocational education and training legislation, frameworks and/or standards.

ICTOPN608 Analyse optical transmission systems

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to verify the characteristics of Next Generation Networks (NGN) to ensure they will support the new modulation requirements of the equipment.

It applies to individuals who are experienced technicians from networking carriers, service providers, or other private and public organisations, who have experience in the optical transmission area.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Optical Networks

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to conduct characterisation tests on optical networks	1.1 Obtain and review required legislation, codes, company work practices, regulations and standards, work health and safety (WHS) and environmental requirements, personal protective equipment, and hazard identification tools for scoped work 1.2 Construct test procedures according to organisational guidelines and requirements 1.3 Obtain specifications for characterisation tests on optical networks from relevant personnel
2. Conduct link characterisation tests	2.1 Perform optical tests to characterise existing fibre link 2.2 Analyse results of optical tests, and determine extent and nature

and analyse optical networks	of future upgrades
3. Document analysis of optical networks with recommendations	<p>3.1 Produce final drawings and plans of proposed upgrade requirements for optical transmission and submit to project manager according to enterprise policy</p> <p>3.2 Prepare a report on the networks measured performance and recommendations of future upgrades</p>

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> • Uses mathematical equations to evaluate all required technical data
Oral communication	<ul style="list-style-type: none"> • Uses listening and questioning skills to confirm technical and operational requirements • Participates in verbal exchanges of ideas and solutions and uses required, detailed and clear language to address team members, supervisors and customers
Reading	<ul style="list-style-type: none"> • Interprets textual information from required sources to identify and plan for all job requirements and adhere to procedures and standards
Writing	<ul style="list-style-type: none"> • Prepares standard documentation using clear and technically specific language, numerical data, drawings and plans
Planning and organising	<ul style="list-style-type: none"> • Develops plans to manage relatively complex, non-routine tasks with an awareness of how they may contribute to longer term operational and strategic goals • Takes personal responsibility for adherence to legal and regulatory responsibilities required to own work, with specific reference to workplace safety • Understands main tasks, responsibilities and boundaries of own work
Problem solving	<ul style="list-style-type: none"> • Recognises and addresses complex problems involving multiple variables • Makes a range of critical and non-critical decisions in relatively complex situations, taking a range of constraints into account
Technology	<ul style="list-style-type: none"> • Identifies systems, devices and applications with potential to meet current and/or future needs

Unit Mapping Information

Supersedes and is equivalent to ICTOPN604 Analyse optical transmission systems.

Assessment Requirements for ICTOPN608 Analyse optical transmission systems

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- analyse at least two types of optical transmission systems.

In the course of the above, the candidate must:

- conduct optical transmission measurements
- analyse complex optical measurement results
- liaise with the customer as required
- report on measured network performance and recommendations for future upgrades.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- principles and techniques for documenting measured performance
- conduct characterisation tests on optical networks
- attenuation characteristics of optical fibres
- the chromatic dispersion (CD) test
- principles of operation of dense wavelength division multiplexing (DWDM)
- dispersion and outline dispersion characteristics of various fibres and devices used for compensation
- precautions required to minimise electrostatic discharge
- features and operating requirements of the following test equipment:
 - a hand-held optical power meter
 - an optical spectrum analyser
 - a transmission test set

- functions of an optical add-drop multiplexer (OADM) and reconfigurable optical add-drop multiplexer (ROADM)
- functions and features of gain equalisation techniques
- insertion loss test requirements and procedures
- International Telecommunications Union (ITU) wavelength grid for DWDM
- measurement of dispersion theory
- methods to reduce dispersion
- optical amplifier operation methods
- optical fibre connector types and characteristics
- optical fibre types and characteristics
- the optical return loss (ORL) test procedures
- the optical signal-to-noise ratio (OSNR) test procedures
- the optical time domain reflectometer (OTDR) test procedures
- path protection and protection switching requirements
- performance qualification of 40 Gbit/s and 100 Gbit/s transceivers
- the polarisation mode dispersion (PMD) test procedures
- protocols used on optical DWDM systems
- reflectance in fibre optic systems
- ring topologies and linear network topologies
- required report formats to make recommendations
- work health and safety (WHS) requirements and environmental constraints that impact safe inspection of optical connectors and safe measurement of optical power from laser transmission systems
- required legislation, codes, company work practices, regulations and standards and environmental requirements for scoped work.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- test equipment used in industry
- test equipment and manufacturer technical documentation.

Assessors of this unit must satisfy the requirements for assessors in required vocational education and training legislation, frameworks and/or standards.

ICTPMG201 Prepare site for support installation

Modification History

Release	Comments
Release 2	This version released with ICT Information and Communications Technology Training Package Version 5.0.
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 2.0.

Application

This unit describes the skills and knowledge required to prepare a site for support installation for aerial or underground cable, or for erection of radio towers or above ground or underground equipment enclosures.

It applies to individuals who can apply a broad range of competencies in a varied work context from installation to operation of telecommunications equipment and products.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – project management

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for installation	1.1 Confirm location of proposed installation is according to installation plan and relevant legislation, codes, regulations and standards

	<p>1.2 Recognise and report hazards</p> <p>1.3 Obtain approvals and authorisations for work, and carry at all times during works</p> <p>1.4 Inform landowner or tenant of imminent works</p> <p>1.5 Locate adjoining services according to enterprise guidelines and work health and safety (WHS) practices</p> <p>1.6 Clear site of vegetation and debris according to work specifications and any relevant approvals</p>
2. Excavate site	<p>2.1 Mark out proposed installation according to industry guidelines and site plans</p> <p>2.2 Excavate using appropriate equipment for size of excavation and location of works, according to industry guidelines</p> <p>2.3 Conduct levelling of site within tolerance specified in installation plan</p> <p>2.4 Employ WHS practices and personal protective equipment, where appropriate, in manner intended by manufacturer</p>
3. Complete administration	<p>3.1 Note approved alterations on original plan and design using appropriate symbols, and return plan to originator</p> <p>3.2 Complete and sign reports according to industry policy where required</p> <p>3.3 Inform landowner or tenant of construction completion and expected next steps according to industry guidelines</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Recognises and interprets various texts in a variety of forms to determine key information and specific requirements and responsibilities
Writing	<ul style="list-style-type: none"> Develops material for a specific audience using clear and detailed language to convey explicit information, requirements and recommendations
Oral Communication	<ul style="list-style-type: none"> Explains requirements using relevant language suitable for specific audiences

Numeracy	<ul style="list-style-type: none"> Interprets numerical information and applies basic mathematical calculations
Navigate the world of work	<ul style="list-style-type: none"> Recognises and follows explicit and implicit protocols and meets expectations associated with own role Takes personal responsibility for adherence to legal and regulatory responsibilities relevant to own work context, with specific reference to workplace safety
Interact with others	<ul style="list-style-type: none"> Uses appropriate communication modes for specific work task
Get the work done	<ul style="list-style-type: none"> Plans and implements routine tasks to achieve requirements Implements standard procedures to make routine decisions Understands the purpose and specific functions of common digital tools used in some work contexts

Assessment Requirements for ICTPMG201 Prepare site for support installation

Modification History

Release	Comments
Release 2	This version released with ICT Information and Communications Technology Training Package Version 5.0.
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 2.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- prepare and clear site for installation
- measure and mark out excavation location and levels
- safely excavate site
- obtain sign off, complete reports and record variations to plans.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- construction methods and performance requirements
- features and operating requirements of construction equipment
- legislation, codes of practice and other formal agreements that impact on the work activity
- manufacturer requirements for safe operation of equipment
- specific work health and safety (WHS) requirements relating to the activity and site conditions
- levelling and measuring procedures for marking out an excavation
- operation of tools and equipment suitable for site preparation and excavation

- typical issues and challenges that occur on site
- communications strategies required when dealing with landowners and tenants.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- sites on which installations can be performed
- equipment and personal protective equipment
- relevant regulatory, organisational and equipment documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTPMG301 Contribute as part of an IT project management team

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to contribute to Information and Communications Technology (ICT) project management teams.

It applies to those who, while working under a level of supervision, utilise a basic level of technical knowledge to plan, carry out and evaluate project work in a small or large office environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Project Management

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan and prepare to work in ICT project management team	1.1 Identify and confirm project management methodology required 1.2 Identify and confirm requirements of ICT project and team's responsibilities and roles 1.3 Contribute ideas and information in team planning discussions 1.4 Separate work tasks into individual components 1.5 Plan and prioritise task completion and discuss feedback and review cycles with required personnel

ELEMENT	PERFORMANCE CRITERIA
2. Contribute to ICT project management activities	<p>2.1 Perform work tasks according to organisational procedures and task completion plan</p> <p>2.2 Record work task progression and completion according to organisational procedures and project management tools</p> <p>2.3 Seek and provide assistance and feedback to ICT project management team members as required</p>
3. Evaluate contributions to ICT project management and finalise work procedures	<p>3.1 Confirm all work tasks have been adequately performed</p> <p>3.2 Review and assess impact of contributions to ICT project management team and team performance</p> <p>3.3 Report on contributions and submit to required personnel</p> <p>3.4 Save, file and store information and dispose of materials according to organisational procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Oral communication	<ul style="list-style-type: none">• Uses simple and relevant language to confirm task requirements, present information and obtain feedback• Communicates clearly and respectfully with team members, considering the needs of those from diverse backgrounds and roles
Writing	<ul style="list-style-type: none">• Produces materials relevant to specific ICT project management team requirements and work tasks using applicable software
Teamwork	<ul style="list-style-type: none">• Selects form, channel and mode of communication for a specific purpose relevant to own role, when communicating with others
Planning and organising	<ul style="list-style-type: none">• Plans routine tasks with familiar goals and outcomes, taking some limited responsibility for decisions regarding sequencing and timing
Self-management	<ul style="list-style-type: none">• Evaluates task completion and the impact of such completion, in line with project management team requirements
Technology	<ul style="list-style-type: none">• Identifies the purposes, specific functions and key features of digital systems and tools, and operates them effectively to complete routine project management tasks

Unit Mapping Information

No equivalent unit. New unit.

Assessment Requirements for ICTPMG301 Contribute as part of an IT project management team

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- plan, carry out and evaluate two project work tasks, as part of an ICT project management team, using at least two different project management methodologies.

In the course of the above, the candidate must:

- use required project management tools and methodologies
- discuss and agree on frequency of team communication and feedback.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- project management methodologies, which may include:
 - waterfall
 - agile
 - hybrid
 - critical path method (CPM)
 - critical chain project management (CCPM)
 - integrated project management (IPM)
- PRiSM
- PRINCE2
- service and fixed projects.
- organisational procedures, including:
 - work task prioritisation
 - work task performance
 - work task progression and completion

- file saving and storage and material disposal
- ICT project management team role, structure and responsibilities
- ICT hardware and project management software required for work tasks.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- tools, equipment, materials and hardware required for ICT project management activities
- industry software packages required for ICT project management team work
- a range of simulated work tasks within ICT project management teams
- simulated working environment and project management team
- organisational procedure documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTPMG411 Support small scale ICT projects

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to support the management of low risk, straight forward Information and Communications Technology (ICT) projects within an organisation.

It applies to individuals who work under a level of supervision but have responsibility to ensure workflow is planned and completed on time and in line with organisational and task requirements.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Project management

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Support project commencement	1.1 Identify applicable organisational policies and procedures 1.2 Identify stakeholders and project sponsor 1.3 Identify project objectives and gather requirements 1.4 Prepare project documents and obtain approval from project sponsor
2. Support project plan development	2.1 Break down requirements into individual project tasks 2.2 Identify and gather resources required for project 2.3 Compile schedule of project tasks 2.4 Allocate task responsibilities to project team members

ELEMENT	PERFORMANCE CRITERIA
	2.5 Discuss and agree on risk management process with project sponsor 2.6 Finalise project plan and obtain sign off from required personnel
3. Support project completion	3.1 Discuss and confirm project activities meet timeframe, scope, cost and quality expectations with project team 3.2 Monitor and manage project risks and issues according to risk management procedures 3.3 Confirm all work tasks have been performed and project deliverables meet project requirements 3.4 Initiate and complete sign off 3.5 Present project to stakeholders and train stakeholders in project outcomes if required
4. Support project closure	4.1 Prepare ICT support and maintenance documents 4.2 Obtain final project sign-off from required personnel 4.3 Save and back up project documentation 4.4 Review and assess impact of support to small scale ICT project team performance 4.5 Document lessons learned and support project close

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none">Interprets and analyses text to gather detailed information and confirm requirements
Writing	<ul style="list-style-type: none">Prepares documentation recording project plan and lessons learned using required language and grammar in logical sequence to convey information
Oral Communication	<ul style="list-style-type: none">Uses effective verbal techniques to confirm requirements and present information using industry language for intended audience
Numeracy	<ul style="list-style-type: none">Formulates numerical assumptions and performs mathematical calculations required for task completion
Self- management	<ul style="list-style-type: none">Follows protocols and meets expectations applicable to own role
Teamwork	<ul style="list-style-type: none">Collaborates with others to achieve joint outcomes

SKILL	DESCRIPTION
Planning and organising	<ul style="list-style-type: none">Sequences and schedules complex activities, monitors implementation and manages relevant communication
Problem solving	<ul style="list-style-type: none">Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering relevant information, and identifying and evaluating options against agreed criteriaApplies formal problem-solving processes when tackling unfamiliar problems, breaking complex issues into manageable parts and identifying and evaluating several options for actioning and managing risks

Unit Mapping Information

Supersedes and is equivalent to ICTPMG401 Support small scale ICT projects.

Assessment Requirements for ICTPMG411 Support small scale ICT projects

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- support the initiation, control and completion of two different simple small-scale ICT projects, on separate occasions.

In the course of the above, the candidate must:

- develop a project plan applicable to the individual project objectives, project requirements and project
- comply with requirements and expectations of a project plan
- document and save work.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- project documents, including:
 - project charter
 - project proposal
- project planning process, including:
 - realistic project timelines
 - project costs
- multiple project-management and planning methods and tools
- characteristics of technical teams required to support small scale ICT projects
- different methods of communication and communication styles required to support small scale ICT projects
- applicable organisational values, policies and processes
- risks associated with small scale projects including:

- cost
- scope
- timelines.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- ICT equipment and materials required for supporting simple small-scale ICT projects
- industry software packages
- a range of simulated simple small-scale ICT projects
- stakeholders and project sponsor
- project plan and document templates.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTPMG505 Manage ICT projects

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to manage the initiation, implementation and completion of reasonably complex Information and Communications Technology (ICT) projects incorporating scope, risk control, cyber security and financial factors.

It applies to those who use a range of specialised technical and managerial techniques to plan, carry out and evaluate their own work and the work of a team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Project management

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Manage project definition activities	1.1 Confirm organisational project governance policy and processes 1.2 Confirm business problem, opportunity and project objectives according to organisational needs 1.3 Develop project charter, including preliminary statement of project scope and obtain sign-off with required personnel 1.4 Conduct feasibility study and prepare project business case 1.5 Document and submit business case and respond to feedback
2. Undertake project planning	2.1 Plan information gathering activities and determine project requirements, constraints and risks 2.2 Identify project partitioning according to intended system

ELEMENT	PERFORMANCE CRITERIA
	development life cycle and risk 2.3 Prepare project work breakdown, schedule and budget 2.4 Compile project management plan documents, communicate required management strategy for project and obtain sign-off
3. Establish ICT project team	3.1 Identify and select team members, and allocate roles and responsibilities according to project solution requirements 3.2 Determine training and support needs of team members 3.3 Establish project team values and agreed behavioural standards with team members 3.4 Document team members, role allocation, training and support needs and project team values and agreed behavioural standards 3.5 Submit documentation to required personnel and seek and respond to feedback
4. Manage project execution activities	4.1 Monitor delivery and acceptance of assigned project team work activities and manage individuals according to project requirements 4.2 Monitor and control quality of project deliverables according to organisational quality control standards 4.3 Monitor and control project scope changes, risks and issues 4.4 Manage system testing and hand over activities according to project requirements
5. Coordinate project closure	5.1 Prepare IT support plans, maintenance and support documents 5.2 Obtain final project sign-off with required personnel 5.3 Conduct post project review and document outcomes 5.4 Review and update disaster recovery plan documentation 5.5 Save and back up project documentation and close project according to task requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none">Uses a wide range of mathematical calculations to interpret numerical information and to prepare and reconcile financial data
Oral communication	<ul style="list-style-type: none">Uses effective verbal techniques to confirm requirements, discuss information and conduct presentation using relevant industry language for intended audience

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none">Evaluates complex text and addresses project requirements
Writing	<ul style="list-style-type: none">Prepares complex documentation detailing project management plan using required language and grammar in logical sequence to present ideas and recommendations
Teamwork	<ul style="list-style-type: none">Engages in fostering a collaborative culture within own sphere of influence, facilitating a sense of commitment and cohesion, and highlighting and using the strengths of those involved when establishing project teamBuilds formal and informal networks to include key people and communities with expert skills and knowledge
Self-management	<ul style="list-style-type: none">Makes a range of decisions in relatively complex situations, taking a range of constraints into account when monitoring project and system testingUses systematic, analytical processes in complex, non-routine situations, setting goals, gathering relevant information, and identifying and evaluating options against agreed criteria when conducting post project reviewsIdentifies and follows explicit and implicit protocols and meets expectations associated with own role

Unit Mapping Information

Supersedes and is equivalent to ICTPMG501 Manage ICT projects and ICTPMG802 Manage a telecommunications project.

Assessment Requirements for ICTPMG505 Manage ICT projects

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- scope and manage activities of a complex Information and Communications Technology (ICT) project, including:
 - preparing the project plan
 - determining project team and duties
 - executing the project
 - confirming requirements have been met
 - closing the project.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- key characteristics of leaders and technical teams relating to managing ICT project teams
- consultation and communication techniques and strategies relating to obtaining required ICT project information
- requirements and process for conducting a feasibility study
- process for preparing a business case
- process of establishing technical teams and determine stages of team development
- estimation and cost-analysis techniques
- methods of communication and communication styles, including interviewing techniques
- organisational values, policies and processes for project management
- performance management and project team appraisal methods
- processes for monitoring team and own performance
- project cash flow and budgeting processes
- project-management methods and tools relevant to managing ICT projects
- systems analysis and modelling techniques

- team roles and delegation in a multi-project methodology context relevant to managing ICT projects
- key features of technology solution models and frameworks.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- office equipment, materials and industry software packages
- project outline and objectives brief
- equipment specifications.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTPMG506 Prepare network project briefs

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to prepare project briefs that outline key characteristics of networking projects, including costing, vendor and technology choices, scheduling and resourcing needs.

The unit applies to those who work under limited supervision and have responsibility to provide guidance and to delegate tasks to others.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – project management

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan network project brief	<ul style="list-style-type: none">1.1 Obtain project details and scope from relevant personnel and arrange for network access in compliance with required security arrangements, legislation, codes, regulations, standards, organisational policies and procedures1.2 Assess network conditions according to organisational requirements1.3 Obtain and analyse required site survey data and geographical information according to organisational requirements1.4 Identify and assess barriers to outline key characteristics of project costs, vendor and technology choices, scheduling and resourcing needs

	1.5 Analyse impact of required legislation, codes, regulations and standards on planning the project
2. Develop draft network project brief	2.1 Record project specifications, project costs, vendor and technology choices, scheduling and resourcing needs, according to organisational requirements 2.2 Clarify project brief with relevant personnel 2.3 Present draft project brief to relevant personnel and obtain required approval
3. Assess tenders to be included in network project brief	3.1 Obtain vendor quotes and issue required tenders according to organisational requirements 3.2 Evaluate quotes and tenders against project brief criteria and proposed variations 3.3 Examine project costing estimates and confirm that budget parameters are attained 3.4 Assess whether competitive tenders meet specified organisational timeframes 3.5 Obtain tender approval from relevant personnel according to organisational requirements
4. Develop final network project brief	4.1 Monitor project progress against project brief specifications 4.2 Discuss and propose solutions to project issues with relevant personnel 4.3 Document discussed project solutions and prepare project completion advice according to organisational requirements 4.4 Negotiate and implement contract variations in consideration of proposed project solutions
5. Obtain network project brief sign-off	5.1 Present finalised project brief to relevant personnel 5.2 Complete sign-off procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Performs mathematical calculations to analyse labour, costs and quantities, and accurately process costs and estimates
Oral communication	<ul style="list-style-type: none"> Clearly articulates information using language suitable for specific audiences and checks for understanding by seeking feedback

Reading	<ul style="list-style-type: none">Identifies required information and extrapolates content to determine project impact, provide recommendations and confirm requirements
Writing	<ul style="list-style-type: none">Generates complex written texts, demonstrating control over a broad range of writing styles and purposesDemonstrates sophisticated writing skills by selecting required conventions and stylistic devices to express precise meaning
Teamwork	<ul style="list-style-type: none">Selects, implements and seeks to improve protocols governing communications to required personnel in a range of work contextsImplements strategies for a diverse range of colleagues and clients to build rapport and foster strong relationships
Planning and organising	<ul style="list-style-type: none">Considers legal requirements and organisational requirements in own roleMonitors progress of plans and schedules, and reviews and changes them to meet new demands and priorities
Problem solving	<ul style="list-style-type: none">Responds to problems requiring immediate resolution, drawing on past experiences to focus on the cause of a problem rather than the symptom
Self-management	<ul style="list-style-type: none">Accepts responsibility for planning and sequencing complex tasks and workload, negotiating key aspects with others and taking into account capabilities, efficiencies and effectiveness

Unit Mapping Information

Supersedes and is equivalent to ICTPMG503 Prepare a project brief.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTPMG506 Prepare network project briefs

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop at least two network project briefs.

In the course of the above, the candidate must:

- analyse and document project specifications, including project costs, vendor and technology choices, and scheduling and resourcing needs
- consider and apply required legislative and environmental conditions
- assess tenders and vendors against network project brief requirements
- monitor progress of network project.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- characteristics of optimal network conditions
- functions and features of:
 - survey data and geographical information
 - network project briefs
 - network and transmission equipment
 - network topologies, interface and interconnect solutions
 - warranty information and contractor work guarantee
- techniques to assess barriers against outlining project costs, vendor and technology choices, scheduling and resourcing needs
- organisational policies and procedures to obtain vendor quotes, approval and issue tenders
- principles and techniques of:
 - evaluating quotes and tenders against project brief criteria

- examining project costing estimates
- monitoring budget parameters
- assessing competitive tenders
- key aspects of common client network applications and related equipment
- advantages and disadvantages of leasing and purchase options
- legislation, codes, regulations and standards, workplace health and safety (WHS), organisational requirements and environmental impacts on scoped work, including options for green information and communications technology (ICT) installations
- common faults in equipment and related connection and transmission media.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- sites on which projects are conducted
- required databases, legislative requirements and other site and project related documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTPMG612 Manage ICT project initiation

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to initiate an Information and Communications Technology (ICT) project in small, medium and large organisations.

It applies to those who apply project management skills to establish the necessary foundation to facilitate successful delivery of agreed project outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Project management

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Define project	1.1 Define business problems and initial project scope according to organisational requirements 1.2 Identify key stakeholders and analyse stakeholder requirements 1.3 Define constraints that may impact project
2. Develop project business case	2.1 Identify and document project objectives and benefits 2.2 Identify and select feasible ICT solutions 2.3 Develop the business case according to organisational procedures 2.4 Present business case to required personnel and seek and respond to feedback

ELEMENT	PERFORMANCE CRITERIA
3. Select project approach	3.1 Identify project core technology areas according to project requirements 3.2 Identify and document solution approach requirements 3.3 Negotiate project outcomes with required personnel
4. Establish ICT project team	4.1 Identify and select team members according to project requirements 4.2 Establish and document team member roles and responsibilities 4.3 Develop and document a cohesive technical team 4.4 Develop and document support plan for team members according to project requirements 4.5 Submit documentation to required personnel and seek and respond to feedback

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Tests viability of data by completing estimates and cost comparisons using relevant mathematical calculations
Oral communication	<ul style="list-style-type: none"> Uses effective verbal techniques such as active listening, open-ended questioning and paraphrasing to articulate requirements and facilitate discussions and presentation using relevant industry language for intended audience
Reading	<ul style="list-style-type: none"> Analyses complex textual data to ascertain requirements
Writing	<ul style="list-style-type: none"> Prepares well-structured and cohesive documents presenting alternative views, evidence and recommendations, utilising technical and relevant industry language
Teamwork	<ul style="list-style-type: none"> Invests time and energy in building rapport with others as an integral part of all work-based interactions Plays a lead role in situations requiring effective collaboration, demonstrating high level influencing skills, focusing and shaping awareness, and engaging and motivating others Shares knowledge, experience information and resources with others as an integral part of work relationships Seeks to establish a climate in which it is possible to clarify and share the real needs and issues

SKILL	DESCRIPTION
Planning and organising	<ul style="list-style-type: none">Sequences and schedules complex activities, monitors implementation and manages relevant communication
Self-management	<ul style="list-style-type: none">Demonstrates use of systematic, analytical processes in complex, non-routine situations, setting goals, gathering relevant information, and identifying and evaluating options against agreed criteriaUses formal analytical and lateral thinking techniques for identifying issues, generating and evaluating feasible ICT solutionsSelects ICT solutions, using strategic and operational analysis of digital trendsIdentifies and follows explicit and implicit protocols and meets expectations associated with own role

Unit Mapping Information

Supersedes and is equivalent to ICTPMG602 Manage ICT project initiation.

Assessment Requirements for ICTPMG612 Manage ICT project initiation

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- produce a comprehensive business case using an Information and Communications Technology (ICT) project implementation approach that considers core technology limitations and project constraints on at least one occasion.

In the course of the above, the candidate must:

- document processes and outcomes
- establish and work in a cohesive project team.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- characteristics of leadership and technical teams as it applies to managing ICT projects
- consultation and communication methodologies, styles and strategies, including interviewing techniques required when managing a project
- estimation and cost analysis techniques relating to managing ICT projects
- process of establishing technical teams and determining stages of team development
- process of setting objectives and conducting a benefits analysis
- organisational values, policies and processes that are applicable to ICT projects and teams
- project management methodologies and tools, and how they apply in a formal project management methodology
- process of determining team roles, and delegation process in a multi-project methodology context relating to managing ICT projects
- technology solution models and frameworks applicable to managing ICT projects.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- industry software packages
- organisation's deliverables and project scope
- organisation's unfulfilled legislative need.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTPMG613 Manage ICT project planning

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to plan and manage an Information and Communications Technology (ICT) project in small, medium and large organisations.

The unit applies to those who apply advanced project management skills in developing and documenting logical processes and timelines to ensure that projects are delivered according to organisational and stakeholder expectations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Project management

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Establish project control plans	1.1 Develop and document project management plan according to organisational requirements 1.2 Develop and document management sub-plans 1.3 Lodge documents according to organisational policies and procedures
2. Determine project methodology	2.1 Assess models of project management according to organisational requirements 2.2 Assess product development approach 2.3 Select project management and systems development methodology 2.4 Tailor and document methodologies to solution

ELEMENT	PERFORMANCE CRITERIA
	requirements 2.5 Lodge documentation according to organisational policies and procedures
3. Develop project schedule	3.1 Develop project component breakdown according to project requirements 3.2 Estimate project effort and duration 3.3 Create project schedule and document according to organisational policies and procedures 3.4 Develop and allocate work packages 3.5 Establish schedule controls for monitoring project schedule
4. Finalise project budget	4.1 Identify areas of anticipated project spend 4.2 Determine dollar amounts and timing of cash flows 4.3 Develop and document project budget based on anticipated expenditure and cash flow 4.4 Establish controls for monitoring budget

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Uses sound mathematical assumptions and applies equations in developing cost-benefit analyses, budgets and cash flows
Reading	<ul style="list-style-type: none"> Interprets and analyses complex text to ascertain requirements
Writing	<ul style="list-style-type: none"> Prepares well-structured and cohesive documents presenting ideas and project plan utilising technical and relevant industry language in a logical sequence
Planning and organising	<ul style="list-style-type: none"> Operates from a broad conceptual plan, developing the operational detail in stages, regularly reviewing priorities and performance during implementation, and identifying and addressing issues
Problem solving	<ul style="list-style-type: none"> Uses nuanced understanding of context to recognise anomalies and subtle deviations to normal expectations, focusing attention and remedying problems as they arise
Self-management	<ul style="list-style-type: none"> Sequences and schedules complex activities, monitors implementation and manages relevant communications Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering relevant information, and

SKILL	DESCRIPTION
	<p>identifying and evaluating options against agreed criteria</p> <ul style="list-style-type: none">Identifies and compares several options before making final choice, using a combination of lateral and analytical thinking to suit needs, resources and constraints

Unit Mapping Information

Supersedes and is equivalent to ICTPMG603 Manage ICT project planning and ICTPMG610 Develop a project management plan.

ICTPMG614 Manage ICT project delivery

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to manage the creation and delivery of the products of an Information and Communications Technology (ICT) project in small, medium and large organisations.

The unit applies to those who manage teams and apply advanced project management, business and technical skills necessary to ensure that the project delivered is consistent with system requirements and agreed design.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Project management

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Manage systems analysis and design	1.1 Apply systems thinking to project design 1.2 Model ICT process and systems according to specifications 1.3 Re-engineer business processes according to specifications 1.4 Control required ICT systems development 1.5 Review ICT architecture against required specifications 1.6 Manage design and integration of system according to project requirements
2. Facilitate project-related workshops	2.1 Apply facilitation and problem-solving methodologies to enhance workshop outcomes

ELEMENT	PERFORMANCE CRITERIA
	2.2 Facilitate requirements gathering 2.3 Facilitate ICT design workshops according to task requirements
3. Manage ICT project team performance	3.1 Establish project team performance framework according to project requirements 3.2 Measure team member performance according to framework and metrics 3.3 Manage technical staff performance according to framework and metrics 3.4 Manage project team dissolution
4. Manage project delivery cycle	4.1 Delegate project work to project team members according to task requirements 4.2 Review and report status of project to required personnel 4.3 Assess progress and update plans according to task requirements 4.4 Control project issues and take corrective action 4.5 Update project control documents

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Oral communication	<ul style="list-style-type: none"> Uses required language and style when presenting complex ideas to stakeholders to ensure project requirements are understood Facilitates workshops using effective listening, questioning and summarising skills to convey information
Reading	<ul style="list-style-type: none"> Interprets and analyses models, diagrams and specifications for inclusion into project requirements, plans and methodologies
Writing	<ul style="list-style-type: none"> Prepares well-structured documents presenting ideas and delivery project plan utilising technical and relevant industry language in a logical sequence
Teamwork	<ul style="list-style-type: none"> Shares knowledge, experience, information and resources with others as an integral part of work relationships when facilitating design workshops Plays a lead role in situations requiring effective collaboration, demonstrating advanced influencing skills, focusing and shaping awareness, and engaging and motivating others

SKILL	DESCRIPTION
Planning and organising	<ul style="list-style-type: none">Operates from a broad conceptual plan, developing the operational detail in stages, regularly reviewing priorities and performance during implementation, and identifying and addressing issues
Problem solving	<ul style="list-style-type: none">Uses nuanced understanding of context to recognise anomalies and subtle deviations to normal expectations, focusing attention and remedying problems as they arise
Self-management	<ul style="list-style-type: none">Sequences and schedules complex activities, monitors implementation and manages relevant communicationUses systematic, analytical processes in complex, non-routine situations, setting goals, gathering relevant information, and identifying and evaluating options against agreed criteriaUses formal analytical and lateral thinking techniques for identifying issues, generating and evaluating possible solutions

Assessment Requirements for ICTPMG614 Manage ICT project delivery

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- manage the analysis, design and delivery of Information and Communications Technology (ICT) projects on at least two occasions, including:
 - facilitating workshops for design development
 - managing project team performance
 - managing project delivery cycle.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- management methodology, including project management roles and responsibilities that relate to managing ICT project delivery
- problem-solving tools and techniques, including systems thinking, that relate to managing ICT project delivery
- information and communications technology (ICT) process models and their application
- key requirements of ICT design that relate to managing ICT project delivery
- business processes applicable to project.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- industry software packages
- an organisation's identified problem, opportunity or unfulfilled legislative need.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTPMG615 Manage ICT project closure

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to decommission or close an Information and Communications Technology (ICT) project in small, medium and large organisations.

The unit applies to project managers who use advanced project-management skills in undertaking a strategic assessment of the status of a project.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Project management

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Evaluate project performance	1.1 Collect project performance metrics according to organisational requirements 1.2 Debrief project team on project performance 1.3 Debrief project stakeholders 1.4 Summarise and document results according to organisational policies and procedures 1.5 Lodge documentation according to organisational requirements
2. Finalise project	2.1 Review project performance and determine if project should be continued, decommissioned or closed 2.2 Assess impact of continuing, decommissioning or closing

ELEMENT	PERFORMANCE CRITERIA
	project 2.3 Recommend management action to required governing authority 2.4 Decommission or close project according to requirements
3. Action outstanding activities	3.1 Identify outstanding activities and create and document action plan 3.2 Assign responsibilities to action outstanding activities 3.3 Follow up on outstanding activities and confirm completion 3.4 Obtain final task sign off from required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Analyses complex numerical information embedded in performance metrics
Oral communication	<ul style="list-style-type: none"> Uses applicable language and style for intended audience to present information and facilitate debrief sessions, utilising active listening, questioning and summarising
Reading	<ul style="list-style-type: none"> Analyses complex textual data to ascertain completion of project components and identify issues and root causes to facilitate formulation of required recommendation
Writing	<ul style="list-style-type: none"> Prepares required documentation presenting ideas and information utilising technical and relevant industry language to stakeholders
Planning and organising	<ul style="list-style-type: none"> Operates from a broad conceptual plan, developing the operational detail in stages, regularly reviewing priorities and performance during implementation, and identifying and addressing issues
Problem solving	<ul style="list-style-type: none"> Uses nuanced understanding of context to recognise anomalies and subtle deviations to normal expectations, focusing attention and remedying problems as they arise
Self-management	<ul style="list-style-type: none"> Sequences and schedules complex activities, monitors implementation and manages relevant communication Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering relevant information, and identifying and evaluating options against agreed criteria

Unit Mapping Information

Supersedes and is equivalent to ICTPMG605 Manage ICT project closure.

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- manage at least one complex ICT project closure, including:
 - reviewing project documentation and project metrics
 - analysing project performance
 - recommending and planning decommissioning of project.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- role of project stakeholders relating to managing ICT project closure
- problem-solving techniques to address issues relating to project closure
- project management methods, practices and processes relating to project closure
- project performance metrics relating to managing ICT project closure.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- industry software packages.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTPMG616 Manage ICT project systems implementation

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to manage the system-implementation process in an Information and Communications Technology (ICT) project in small, medium and large organisations.

The unit applies to project managers who use advanced business management technical and communication skills to ensure that ICT projects are implemented with alignment to project and system development documentation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Project management

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for system implementation	<ul style="list-style-type: none">1.1 Review required project and system development documentation1.2 Determine organisational culture and document potential risks during implementation phases1.3 Identify implementation options and constraints, and select required approach in consultation with stakeholders1.4 Develop and document detailed implementation plan and training plan, and obtain sign-off from required personnel1.5 Oversee creation of system user documentation guidelines and obtain sign-off from required personnel

ELEMENT	PERFORMANCE CRITERIA
	1.6 Oversee preparation of operations documentation guidelines and obtain sign-off from required personnel
2. Manage organisational change	2.1 Submit system implementation plans to required personnel 2.2 Establish necessary support structures 2.3 Obtain plan sign-off from required personnel
3. Coordinate release management	3.1 Establish and confirm release management roles and responsibilities according to implementation plan 3.2 Determine release configuration items, including production system software, hardware and capacity changes required, and compile a request for change 3.3 Oversee creation of required test environment according to organisational requirements 3.4 Establish ongoing monitoring procedure to cover post-release warranty period 3.5 Undertake required data conversion activities
4. Manage acceptance testing	4.1 Review results of system test and confirm acceptance test entry criteria are met 4.2 Confirm test environment and ICT configuration management processes meet solution requirements and organisational standards 4.3 Oversee acceptance testing and collation of results 4.4 Confirm test results meet acceptance test exit criteria and obtain sign-off
5. Manage user training	5.1 Undertake and document training needs analysis 5.2 Review training plan and schedule and include required additional activities 5.3 Oversee preparation of training materials and confirm user training is conducted
6. Release system to production	6.1 Develop action plan and checklist for release activities according to task requirements and required deadlines 6.2 Create and document rollback strategy and plan to guide rollback of changes if required 6.3 Prepare communication to inform users of possible interruption to service due to the release 6.4 Manage installation of new release into production and confirm performance of operational verification tests and rollback changes if necessary 6.5 Review and update service level agreements (SLAs) and disaster recovery plan

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Oral communication	<ul style="list-style-type: none">• Uses required language and style, and effective listening, questioning and summarising skills when presenting complex ideas, requirements and results to stakeholders
Reading	<ul style="list-style-type: none">• Interprets and analyses complex textual information to ensure that all requirements are identified, understood and addressed
Writing	<ul style="list-style-type: none">• Develops documentation presenting ideas, requirements and test results using appropriate structure, layout and relevant language
Planning and organising	<ul style="list-style-type: none">• Operates from a broad conceptual plan, developing the operational detail in stages, regularly reviewing priorities and performance during implementation, and identifying and addressing issues• Develops flexible plans for complex, high-impact activities with strategic implications that involve a diverse range of stakeholders with potentially competing demands when preparing for system implementation• Sequences and schedules complex activities, monitors implementation and manages relevant communication when managing organisational change, coordinating release management, managing testing, user training and release of system to production
Problem solving	<ul style="list-style-type: none">• Uses nuanced understanding of context to recognise anomalies and subtle deviations to normal expectations, focusing attention and remedying problems as they arise
Self-management	<ul style="list-style-type: none">• Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering relevant information, and identifying and evaluating options against agreed criteria

Unit Mapping Information

Supersedes and is equivalent to ICTPMG608 Manage ICT project systems implementation.

Assessment Requirements for ICTPMG616 Manage ICT project systems implementation

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- manage systems implementation on at least one occasion, including: communicating and establishing new structures in preparation for change
- coordinating release of new system
- managing system tests and acceptance
- managing training of users
- releasing system to production.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- methods and techniques of configuration management
- organisational policies and standards relating to information and communications technology (ICT) configuration management
- business analysis, processes and methodology relevant to managing ICT implementation projects
- project management and systems development processes, including potential risks associated with implementation activities
- structure and implications of disaster recovery plans and Service Level Agreements (SLAs)
- key features of a training needs analysis and its role in a training program
- purpose of a rollback strategy for an ICT project
- different team roles and responsibilities, including role of release manager.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- industry software packages
- project documentation
- relevant organisational documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTPMG617 Plan and direct complex ICT projects

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to identify, plan, control and finalise complex information and communications technology (ICT) projects.

The unit applies to project managers who use advanced business and project management skills to oversee the effective and timely delivery of projects.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Project management

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify planning needs	1.1 Identify organisation's need for required complex ICT project 1.2 Identify project's strategic context and requirements 1.3 Identify organisation's strategic and business plans, and output requirements 1.4 Identify client requirements and impact of legislation, and industry codes and standards 1.5 Conduct risk management analysis and develop and document risk-management plan
2. Prepare ICT project plan	2.1 Define and document specifications, terms of reference and skills required for project 2.2 Identify and document project budget according to project

ELEMENT	PERFORMANCE CRITERIA
	<p>requirements</p> <p>2.3 Define, document and secure resources required to support project</p> <p>2.4 Develop and document timelines, schedules and critical path for project</p> <p>2.5 Define and document stakeholder consultation strategy according to organisational requirements</p>
3. Assemble ICT project team and commence work	<p>3.1 Brief required personnel on project scope and respond to feedback given</p> <p>3.2 Identify and communicate required reporting processes for team members</p>
4. Manage IT project	<p>4.1 Monitor project progress according to project plan requirements</p> <p>4.2 Manage team member performance and confirm that output aligns to key performance indicators identified in project plan</p> <p>4.3 Make required corrections, changes and additions to project plan</p> <p>4.4 Monitor resourcing and make corrections to reflect changing circumstances</p> <p>4.5 Report overall project progress to required personnel</p>
5. Wrap up IT project	<p>5.1 Finalise project in line with project plan</p> <p>5.2 Conduct handover to required personnel according to organisational procedures</p> <p>5.3 Debrief project team members on conduct and project outcomes</p> <p>5.4 Prepare project report and analyse strengths and weaknesses of project plan</p>
6. Identify policy and process improvements	<p>6.1 Identify and analyse opportunities for organisational learning and required changes to processes and policies generated by project</p> <p>6.2 Determine and document opportunities for future developments following project completion and submit to required personnel</p> <p>6.3 Determine and document strategic impact of project and feed into organisation's ongoing strategic planning processes</p> <p>6.4 Lodge all documentation according to organisational procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> • Uses sound mathematical assumptions and applies equations in developing budgets
Oral communication	<ul style="list-style-type: none"> • Uses required language and style, and effective listening, questioning and summarising skills when presenting complex ideas, requirements and results to stakeholders
Reading	<ul style="list-style-type: none"> • Interprets and analyses complex textual information to ensure that all requirements are identified, understood, addressed and aligned with organisational strategic and operational plans
Writing	<ul style="list-style-type: none"> • Develops documentation presenting ideas, requirements and information using appropriate structure, layout and relevant technical language
Teamwork	<ul style="list-style-type: none"> • Plays a lead role in situations requiring effective collaboration, demonstrating advanced influencing skills, focusing and shaping awareness, and engaging and motivating others, including those who are geographically dispersed
Planning and organising	<ul style="list-style-type: none"> • Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering relevant information, and identifying and evaluating options against agreed criteria
Problem solving	<ul style="list-style-type: none"> • Sequences and schedules complex activities, monitors implementation and manages relevant communication • Uses formal analytical and lateral thinking techniques for identifying issues, generating and evaluating possible solutions • Identifies new approaches and enhances work practices and outcomes

Unit Mapping Information

Supersedes and is equivalent to ICTPMG609 Plan and direct complex ICT projects.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTPMG617 Plan and direct complex ICT projects

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design, implement, manage and finalise a complex Information and Communications Technology (ICT) project.

In the course of the above, the candidate must:

- manage planning processes, scheduling, human resources, reporting and respond to contingencies
- align projects with organisational strategies and requirements
- assess outcomes and provide recommendations to refine and improve future ICT project management processes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- key features of risk management planning and processes
- computer software functions and operation, including relevant proprietary software relevant to planning direct complex ICT projects
- legislation, codes and standards relating to project specified in performance evidence
- contingencies for planning for time slippages
- sustainability requirements and ratings, including:
 - reporting mechanisms
 - conservation of energy
 - management of other resources
- tools and models of project management
- organisational frameworks and functions relevant to planning direct complex ICT projects including:

- enterprises
- government bodies
- industry associations.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- computer software packages and hardware
- codes, standards and legislation relevant to jurisdiction and project
- project documentation
- research resources, including product information and data, and theoretical texts.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTPRG302 Apply introductory programming techniques

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to create simple applications through introductory programming techniques.

It applies to those who have responsibility for creating applications and includes applying language syntax, control structures to create code, using programming standards, testing and debugging.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Programming and software development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Establish application task	1.1 Clarify task with required personnel 1.2 Identify design specifications, programming standards and guidelines according to task requirements
2. Apply language syntax and layout	2.1 Apply basic language syntax rules 2.2 Create code using language data types, operators and expressions 2.3 Apply variables and variable scope 2.4 Use program library functions 2.5 Clarify meaning of code using commenting techniques
3. Apply control structures	3.1 Apply language syntax in sequence, selection and

ELEMENT	PERFORMANCE CRITERIA
	iteration constructs 3.2 Create expressions in selection and iteration constructs using logical operators
4. Code using standard programming algorithms	4.1 Develop algorithms using sequence, selection and iteration constructs 4.2 Create and use data structures 4.3 Code standard sequential access algorithms used in reading and writing text files 4.4 Apply string manipulation
5. Test code	5.1 Examine variable contents and use debugging techniques to detect and correct errors 5.2 Create and conduct simple tests and confirm code meets design specification 5.3 Document actions carried out and results of tests performed
6. Create a simple application and seek feedback	6.1 Design an algorithm in response to basic program specifications 6.2 Develop application to meet program specification 6.3 Confirm application meets initial specifications 6.4 Present application to required personnel 6.5 Obtain feedback and sign off from required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Oral Communication	<ul style="list-style-type: none"> Uses listening and questioning techniques to confirm requirements and articulate complex concepts
Numeracy	<ul style="list-style-type: none"> Confirms program specifications are met using mathematical formulae
Writing	<ul style="list-style-type: none"> Writes and edits code and technical data in a logical manner using required syntax Develops documentation outlining changes and tests performed using appropriate structure, layout and technical programming language
Planning and	<ul style="list-style-type: none"> Takes responsibility for planning, sequencing and prioritising tasks

SKILL	DESCRIPTION
organising	and own workload
Problem solving	<ul style="list-style-type: none">Analyses required outcomes and determines program code using problem-solving techniquesUses a formal decision-making process, identifying and evaluating several choices against a limited set of criteria when selecting syntaxEvaluates decisions in terms of how well they meet stated design specifications
Technology	<ul style="list-style-type: none">Completes complex tasks using features of digital tools

Unit Mapping Information

Supersedes and is equivalent to ICTPRG301 Apply introductory programming techniques.

Assessment Requirements for ICTPRG302 Apply introductory programming techniques

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design and build one simple application according to programming standards and program specifications.

In the course of the above, the candidate must:

- apply programming language syntax, sequence, selection and iteration constructs
- document changes and tests performed
- review code according to feedback obtained during design and development of application.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- language data types, operators, expressions and variables
- basic language syntax rules
- sequence, selection and iteration constructs
- the development of small-sized applications
- industry programming standards and guidelines
- commenting techniques
- debugging techniques
- application testing methods
- basic data structures.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- programming standards and guidelines
- programming software
- required hardware and its components
- industry standard software development tools
- an integrated development environment (IDE).

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTPRG429 Maintain open-source code programs

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to contribute as a member of an open-source software project community and to maintain open-source code.

It applies to those who work as open-source software developers who are required to build, test, distribute and maintain open-source software applications, as well as programmers who are responsible for integrating open-source components, tools and technologies into their applications.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Programming and software development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Investigate open-source paradigm	1.1 Examine open-source paradigm and analyse differences with traditional software development models 1.2 Identify types of online resources, including open source communities 1.3 Investigate types of project documentation 1.4 Identify and analyse role of an online community and international collaboration 1.5 Examine motivational factors for contributors to open-source code 1.6 Analyse open-source licensing models

ELEMENT	PERFORMANCE CRITERIA
2. Familiarise with target program	2.1 Identify open source target program requiring maintenance 2.2 Establish and confirm target program requirements and specifications 2.3 Examine online resources applicable to target program 2.4 Download executable binaries and install and run target program 2.5 Access and analyse supporting documentation
3. Prepare and perform support activities	3.1 Select and register with online community open-source group 3.2 Download snapshots of latest source code and supporting documentation according to organisational procedures 3.3 Build and execute a snapshot according to project requirements
4. Maintain code	4.1 Access project bug database and select bugs to be resolved and features to be added 4.2 Use applicable software-development tools and environment according to project requirements 4.3 Make changes to local copy of code and resolve selected bugs 4.4 Test resulting code and confirm identified bugs are resolved 4.5 Prepare and submit code patch to repository according to project requirements
5. Participate in community	5.1 Exchange messages with other project members and actively participate in community activities 5.2 Submit code and documentation code patches online 5.3 Access online project resources and identify project and community developments 5.4 Maintain and observe community-participation standards
6. Document and finalise project	6.1 Access project documentation according to organisational procedures 6.2 Prepare and contribute new information and updates using existing documentation 6.3 Submit documented changes to required personnel and obtain sign-off

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Oral Communication	<ul style="list-style-type: none">• Uses listening and questioning techniques to articulate information and requirements using detailed language
Reading	<ul style="list-style-type: none">• Interprets intermediate technical and non-technical, information from a range of sources
Writing	<ul style="list-style-type: none">• Prepares documentation recording work performed and findings according to organisational procedures
Teamwork	<ul style="list-style-type: none">• Collaborates with others and achieves required outcome• Selects and uses required conventions and protocols when conferring with community members
Problem solving	<ul style="list-style-type: none">• Resolves technical and conceptual problems by applying analytical processes• Systematically gathers and analyses all required information and evaluates options in making informed decisions
Technology	<ul style="list-style-type: none">• Uses digital technologies and locates and stores required information and communicates with others• Uses a range of sophisticated digital tools and techniques

Unit Mapping Information

Supersedes and is equivalent to ICTPRG401 Maintain open-source code programs.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTPRG429 Maintain open-source code programs

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- install and run at least one open source code program according to organisational procedures.

In the course of the above, the candidate must:

- participate in at least one online open source code program community
- document program source code changes and additions
- build, modify and test code
- identify and resolve at least one bug
- test and confirm bug is fixed.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard software development models and tools
- open source licensing models and techniques
- debugging and testing techniques
- documentation techniques, including internal documentation, user guides and technical documentation
- open-source development methodology
- available online resources that may be used to maintain open-source code programs
- existing online project communities and their involvement in maintaining source codes.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- open source code projects and programming languages
- the internet.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTPRG431 Apply query language in relational databases

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to retrieve and manipulate information stored in information systems using a query language.

It applies to those who are involved in a range of work environments, who are required to extract information from a relational database by creating and running queries.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Programming and software development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine requirements of developing queries	1.1 Identify terminologies applicable to query language 1.2 Identify and build queries using required tools and environment
2. Write queries to extract required information	2.1 Sort and selectively retrieve values through query writing 2.2 Aggregate records by multiple attributes using an expression 2.3 Sort and filter aggregated records using an expression 2.4 Create queries and retrieve records from multiple tables 2.5 Retrieve records from multiple tables using different expressions and approaches 2.6 Filter records from multiple tables using an expression

ELEMENT	PERFORMANCE CRITERIA
	2.7 Retrieve records from multiple tables using expressions, set operators and set logic 2.8 Construct and execute sub-queries
3. Perform calculations and use expressions in queries	3.1 Perform a calculation on numeric values and an operation on text values using an expression 3.2 Perform an operation on date and time values using functions 3.3 Aggregate values and obtain required output using an expression
4. Create and manipulate tables	4.1 Identify required columns, data types, keys, relationships, indexes and constraints 4.2 Use required naming conventions for database elements 4.3 Create tables that implement required elements and use check constraints 4.4 Manipulate tables according to specific requirements
5. Create and use views and stored procedures	5.1 Create views according to information requirements 5.2 Retrieve and save data using a view and transactions 5.3 Drop a view from a database 5.4 Retrieve, insert and modify data using created and stored procedures according to information requirements 5.5 Create and execute stored procedures using one or more parameters 5.6 Drop a stored procedure from database 5.7 Create and test database triggers and perform specific required data-related functions

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Makes basic calculations involving arithmetical operations Makes estimates and comparisons involving date and time data
Reading	<ul style="list-style-type: none"> Determines requirements by analysing and interpreting technical data
Writing	<ul style="list-style-type: none"> Writes and edits code and technical data in a logical manner using required syntax

SKILL	DESCRIPTION
Technology	<ul style="list-style-type: none">Stores and manages data using digitally based technologies and systems

Unit Mapping Information

Supersedes and is not equivalent to ICTPRG402 Apply query language.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTPRG431 Apply query language in relational databases

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop, store and execute at least three queries, and retrieve and extract data at least three times
- perform at least three calculations using control statements, operators and functions
- prepare and manipulate at least three tables to meet specific requirements
- create and use at least two views and at least two stored procedures according to task requirements.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- information gathering methods that may be used to apply query language in relational databases
- industry standard database management systems (DBMS)
- methods of connecting to DBMS
- using data definition language (DDL), data manipulation language (DML) and data control language (DCL)
- data analysis techniques
- data mining
- data source characteristics
- information system features
- required systems and procedures that may be used to apply query language in relational databases.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- industry standard software packages
- required hardware and its components
- a data source
- resources in chosen query language
- documentation regarding client and functionality requirements
- resources to aid calculation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTPRG432 Develop data-driven applications

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to create data-driven applications that access data from a range of sources, including databases, object data sources and extensible mark-up language (XML).

It applies to those who work as programmers or database application developers and who are responsible for data-access coding.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Programming and software development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Establish task requirements and select data-access layer (DAL)	1.1 Identify data and application requirements according to organisational procedures 1.2 Review function of required DAL in multi-layer application model 1.3 Determine data-access application programming interface (API) according to task requirements
2. Establish connection with data source	2.1 Create and manage connection strings according to task requirements 2.2 Connect data source using different data providers according to organisational procedures 2.3 Handle connection exceptions using code

3. Execute commands and return results from data source	3.1 Query data from data source according to task requirements 3.2 Retrieve and manage results sets from data source 3.3 Manage exceptions when retrieving data
4. Modify and manage data in data source	4.1 Insert, update and delete data according to task requirements 4.2 Confirm data integrity 4.3 Manage exceptions when modifying data 4.4 Research disconnected data management strategy 4.5 Confirm application can manage disconnected data according to organisational procedures 4.6 Document code and database connectivity according to organisational procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Interprets complex technical documents and confirms outcomes are met
Writing	<ul style="list-style-type: none"> Prepares documentation outlining changes according to organisational requirements
Initiative and enterprise	<ul style="list-style-type: none"> Identifies opportunities to investigate potential new techniques and accesses data from various resources
Problem solving	<ul style="list-style-type: none"> Identifies technical and conceptual issues and applies analytical processes in resolving issues
Technology	<ul style="list-style-type: none"> Designs and creates complex models and codes using digitally based technologies and systems

Unit Mapping Information

Supersedes and is equivalent to ICTPRG403 Develop data-driven applications.

Assessment Requirements for ICTPRG432 Develop data-driven applications

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- create at least one data access driven application.

In the course of the above, the candidate must:

- select and code data-access layer of multi-layer applications
- retrieve and update data from at least one data source
- document all changes including code and database connectivity.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- features of object-oriented design and multi-layer applications
- relational database management systems, functions and tools
- data-access-layer (DAL) and its functions
- a range of application programming interfaces (API)
- different data providers and vendors
- object-oriented programming expressions and formulas at an intermediate level
- principles of Structured Query Language (SQL)
- organisational guidelines and procedures applicable in assisting the development of data-driven applications.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- integrated development environment (IDE)
- data access application program interfaces (APIs)
- required data-access layer (DAL)
- database management system software and files
- coding standards
- specific tools and licences, as required for particular data-access API
- different types of data-access methods including data retrieval and storage, back-end coding and disconnected data management.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTPRG433 Test software developments

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to prepare test plans, write test procedures and scripts according to test plans and maintain test plans and scripts.

It applies to those who are responsible for test plan preparation, execution, maintenance and reporting as well as defect management in the software development life cycle.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Programming and software development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Establish testing requirements in software development	1.1 Identify testing required across software development life cycle 1.2 Discuss and confirm software development requirements with team members involved in software development project 1.3 Identify testing types and testing tools required 1.4 Discuss and define testing benefits, standards and terms 1.5 Identify organisational guidelines and frameworks related to testing
2. Prepare test plan document	2.1 Identify test and script requirements including data structures, and develop test 2.2 Analyse and identify test data using multiple test-case

	design techniques 2.3 Define and design test cases 2.4 Document test plan and script according to organisational guidelines and industry standards
3. Write and execute test procedures	3.1 Choose and adopt unit test framework according to organisational procedures 3.2 Design and implement algorithm required in test procedures 3.3 Perform test executions according to organisational procedures
4. Review test results	4.1 Record and analyse test results 4.2 Discuss test results with team involved in software development life cycle 4.3 Produce and save test progress reports 4.4 Manage defects and review software, amending further defects

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none">Writes and uses basic mathematical equations
Reading	<ul style="list-style-type: none">Interprets technical documentation and determines requirements
Writing	<ul style="list-style-type: none">Prepares workplace documentation outlining work performed according to organisational requirements
Teamwork	<ul style="list-style-type: none">Collaborates with others and gather ideas and perspectives and achieves required outcome
Planning and organising	<ul style="list-style-type: none">Takes responsibility for planning, sequencing and prioritising tasks and own workload
Problem solving	<ul style="list-style-type: none">Uses systematic, analytical processes and gathers required information when applying testing and debugging techniques
Technology	<ul style="list-style-type: none">Employs a range of sophisticated digital tools and techniques and meets desired outcomes

Unit Mapping Information

Supersedes and is equivalent to ICTPRG404 Test applications.

Assessment Requirements for ICTPRG433 Test software developments

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop at least one test plan that covers specific test requirements, according to organisational guidelines and industry standard test frameworks.

In the course of the above, the candidate must:

- apply at least three test case design techniques
- design, implement and execute a test procedure and a script using a unit test framework and an integrated development environment (IDE)
- create a test progress report according to recorded test results.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- applicable programming languages that may be used to test software developments
- input and output requirements and basic data structures that may be used to test software developments
- software development life cycle
- design techniques that may be used to test software developments
- processes, tools and techniques for testing small-size applications
- industry standard unit test frameworks
- organisational guidelines and procedures applicable to software development and software development testing frameworks
- defect management processes and documentation techniques that may be used to test software developments
- test-case design techniques.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a software development environment
- integrated development environment (IDE)
- specific test requirements including test-plan document
- code requiring testing
- software to create test plan and report
- required hardware and its components.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTPRG434 Automate processes

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to write scripts to automate solutions by using basic scripting processes and application-specific scripting options.

It applies to those who work in Information and Communications Technology (ICT) support roles and who are required to automate tasks.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Programming and software development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Establish problem and applicable guidelines	1.1 Identify process requiring automation 1.2 Identify automation guidelines and instructions 1.3 Discuss and establish potential solutions and process ideas and requirements with team members
2. Develop algorithms and solutions to given problem	2.1 Develop an algorithm matching solution descriptions 2.2 Develop algorithm that takes all possible situations into account and is guaranteed to terminate 2.3 Describe algorithmic solutions in identified problem using structures of sequence, selection and iteration
3. Design and write script	3.1 Create required abstract design 3.2 Review abstract design and amend any omissions and

	<p>errors</p> <p>3.3 Translate abstract design using chosen language according to organisational guidelines</p> <p>3.4 Create and write script and code according to design and process requirements</p> <p>3.5 Create internal documentation according to organisational guidelines and policies</p>
4. Verify and review and document script and code	<p>4.1 Check script and code and amend syntax and semantic errors</p> <p>4.2 Identify any areas that are not covered and any areas that have been covered incorrectly in script and code</p> <p>4.3 Confirm identified problems with team members and resolve as required</p> <p>4.4 Create and finalise user-level and technical level documentation</p> <p>4.5 Seek feedback and obtain sign-off from required personnel</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Interprets and manipulates, complex formulae and numerical information
Reading	<ul style="list-style-type: none"> Analyses complex technical documentation and amends any inconsistencies and errors
Writing	<ul style="list-style-type: none"> Completes code and workplace documentation using vocabulary and form applicable to context and audience
Teamwork	<ul style="list-style-type: none"> Collaborates with required personnel, gathers more perspectives and increases quality of final outcome
Problem solving	<ul style="list-style-type: none"> Uses systematic analytical processes and reviews and identifies coding errors
Technology	<ul style="list-style-type: none"> Uses a range of digital technologies and systems to access information, search and enter data, code and presents information and communicates with others, cognisant of data security and safety

Unit Mapping Information

Supersedes and is not equivalent to ICTPRG405 Automate processes.

Assessment Requirements for ICTPRG434 Automate processes

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop at least one algorithmic statement of a solution for a set process according to organisational guidelines.

In the course of the above, the candidate must:

- produce a functional script to automate a set process
- document script for internal and external stakeholders.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- debugging methods that may be used to automate processes
- principles of algorithms and their application in programming
- scripting language syntax and scripting techniques that may be used to automate processes
- script documentation methods at a user and technical level
- organisational guidelines and policies applicable in automating processes.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- applications capable of being scripted, or having their own scripting language
- templates for automating processes
- executable scripts
- debugging tools

- required hardware and its components.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTPRG435 Write scripts for software applications

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to plan, design and build scripts, using a scripting language to construct highly interactive and automated software applications.

It applies to those who build and integrate interactive applications or websites for internal or public sites. They may work as application developers, application-support personnel, programmers specialising in a scripting language, web application programmers, or web developers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Programming and software development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Specify software application requirements	1.1 Identify required software application outcomes 1.2 Discuss expectations of final software application with required personnel
2. Determine script requirements	2.1 Identify main characteristics of scripting languages 2.2 Identify integrated development environment (IDE) 2.3 Identify protocols and object model used in chosen scripting language
3. Design and build scripts	3.1 Create pseudo code and describe logic required in script 3.2 Review pseudo code and amend missing logic and errors

	3.3 Translate pseudo code into scripts, incorporating use of basic language elements 3.4 Incorporate item manipulation using chosen scripting language
4. Finalise scripts	4.1 Create internal documentation in script according to organisational procedures 4.2 Review, debug and document script according to organisational procedures 4.3 Finalise, save and confirm work with required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Applies applicable strategies and constructs meaning from requirements and technical documentation Interprets and critically analyses, complex scripting language texts and pseudo code when reviewing and amends missing logic, error and bugs
Oral Communication	<ul style="list-style-type: none"> Uses listening and questioning techniques to confirm information and requirements using industry language for intended audience
Writing	<ul style="list-style-type: none"> Selects vocabulary, grammatical structures and conventions applicable to text when documenting script and using pseudocode
Planning and organising	<ul style="list-style-type: none"> Considers purpose, needs and limitations when selecting a framework and IDE in script building
Problem solving	<ul style="list-style-type: none"> Uses systematic, analytical processes, identifying and evaluating scripting language texts and pseudo code

Unit Mapping Information

Supersedes and is equivalent to ICTPRG407 Write script for software applications.

Assessment Requirements for ICTPRG435 Write scripts for software applications

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design, write and integrate at least one script into software solutions to accommodate specified application requirements.

In the course of the above, the candidate must:

- test and debug scripts
- use required framework and an integrated development environment (IDE) in developing scripts.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- software development platforms
- organisational and legislative requirements applicable to writing script for software applications
- software development life cycle methodology and process
- integrated development environment (IDE)
- scripting languages
- processes and techniques related to development of small-size applications.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a brief for development of a small-sized application runtime environment

- the development environment
- scripting language.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTPRG436 Develop mobile applications

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to develop, debug, test and deploy applications for hand-held devices using development platform environments.

It applies to those who are involved in programming and software development and have responsibility for creating applications in small to medium businesses.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Programming and software development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Define platform	1.1 Establish task and features required in mobile application 1.2 Determine target platform for hand-held device according to task requirements 1.3 Choose and evaluate development environment according to target platform and hardware 1.4 Prepare and configure application development environment
2. Design, integrate, build and customise mobile application	2.1 Create views and confirm functionality in different screen orientations and resolutions 2.2 Integrate required navigation techniques according to user needs

	2.3 Design page layout and content according to organisational guidelines 2.4 Integrate required user input techniques and functionalities 2.5 Build user interface according to development environment and functionality 2.6 Write code to allow users to configure application output, including text size, brightness and sound effects
3. Connect to data sources	3.1 Bind controls to data sources 3.2 Persist and access remote data
4. Test and debug mobile device application	4.1 Test mobile application according to functionality requirements 4.2 Iterate application design and build, until test results meet requirements 4.3 Seek feedback from required personnel and respond accordingly
5. Deploy mobile device application and finalise documentation	5.1 Create application packaging used in deployment 5.2 Use application on target devices 5.3 Document deployment procedures and obtain sign-off from required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Extracts and evaluates mathematical information embedded in a range of tasks and texts when designing layout Selects from and applies an expanding range of mathematical and problem-solving techniques when designing layout
Reading	<ul style="list-style-type: none"> Interprets and critically analyses complex texts when choosing and evaluating development environment
Writing	<ul style="list-style-type: none"> Prepares documentation detailing deployment procedures according to organisational requirements Writes and edits code and technical data in a logical manner using required syntax
Initiative and enterprise	<ul style="list-style-type: none"> Identifies concepts, principles and features of approaches in other contexts and redesigns these according to situation

SKILL	DESCRIPTION
Planning and organising	<ul style="list-style-type: none">• Uses systematic processes, setting goals, gathering information and identifies and evaluates options against agreed criteria
Problem solving	<ul style="list-style-type: none">• Identifies and explicitly applies some basic principles of analytical and lateral thinking• Decides on a course of action using analytical processes
Technology	<ul style="list-style-type: none">• Applies principles, concepts, language and practices applicable to digital world

Unit Mapping Information

Supersedes and is equivalent to ICTPRG409 Develop mobile applications.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTPRG436 Develop mobile applications

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop at least one mobile application using a platform and development environment according to task requirements.

In the course of the above, the candidate must:

- determine, prepare and configure a development environment
- design and build a user interface
- test and debug application and confirm task requirements are met.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- programming considerations of mobile device hardware and networking
- applicable programming languages and frameworks
- programming constructs used in interacting with mobile applications
- constraints of different digital devices
- user-interface design principles and implementation methods applicable to developing mobile applications
- organisational guidelines and procedures applicable to developing mobile applications
- industry standard mobile and digital platforms.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- mobile and digital devices and simulators
- integrated development environment (IDE)
- the internet
- server system with sufficient privileges to deploy applications
- platform and its tools
- required hardware and its components.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTPRG437 Build a user interface

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to design, build and test a user interface (UI) to specification, including command-line interfaces (CLI), graphical user interfaces (GUI), web user interfaces (WUI) and natural user interfaces (NUI).

It applies to those who work as user-interface designers and are responsible for specifying the layout and style of the desired user interface. This includes developers working in the area of user interface design and implementation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Programming and software development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Establish task requirements and build a prototype user interface (UI)	1.1 Gather UI requirements and expectations from clients 1.2 Identify organisational guidelines relating to task 1.3 Determine application required to create prototype 1.4 Build prototype using prototyping tools in determined language 1.5 Review UI prototype with client and edit as required
2. Design and build UI	2.1 Formulate application content flow 2.2 Design UI components according to task

	requirements 2.3 Define UI actions 2.4 Itemise UI events 2.5 Determine required language according to task requirements 2.6 Build UI with required functionality according to task and organisational requirements
3. Test and document UI, and obtain client sign-off	3.1 Test overall functionality of UI according to requirements 3.2 Iterate UI design and build, until test results meet requirements 3.3 Document UI and user requirements according to organisational procedures and guidelines 3.4 Obtain client sign-off to completed UI

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Selects from, and applies a range of mathematical and problem-solving techniques
Oral communication	<ul style="list-style-type: none"> Uses listening and questioning techniques to confirm requirements and articulate complex concepts and take lead where required
Reading	<ul style="list-style-type: none"> Applies strategies and constructs meaning from texts when reading technical data
Writing	<ul style="list-style-type: none"> Develops documentation detailing UI design and user requirements using appropriate structure, layout and technical programming language
Planning and organising	<ul style="list-style-type: none"> Uses a combination of formal, logical planning processes and increasing knowledge of context Identifies applicable information and risks and evaluates alternative strategies and resources when gathering requirements Uses systematic processes, setting goals, gathering information and identifying and evaluating options against agreed criteria
Problem solving	<ul style="list-style-type: none"> Decides on a course of action using analytical processes
Self-management	<ul style="list-style-type: none"> Identifies and follows explicit and implicit, protocols and meets expectations applicable to own role when documenting user requirements and gaining sign-off

SKILL	DESCRIPTION
Technology	<ul style="list-style-type: none">• Actively identifies systems, devices and applications with potential to meet current and future needs• Improve personal productivity and optimises software functions using a broad range of features within applications

Unit Mapping Information

Supersedes and is equivalent to ICTPRG410 Build a user interface.

Links

Companion Volume Implementation Guide is found on VETNet -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=a53af4e4-b400-484e-b778-71c9e9d6aff2>

Assessment Requirements for ICTPRG437 Build a user interface

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design and build at least one fully functional user interface (UI).

In the course of the above, the candidate must:

- comply with organisational requirements
- document the user requirements, UI and obtain client sign-off.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- a range of mathematical strategies that may be used in building a user interface activity
- programming languages that may be used in building a user interface
- open-source development tools
- small-size application development process
- application development languages and required prototyping tools
- organisational guidelines relating to user interface building.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- the internet
- online prototyping and UI design tools
- required hardware, software and its components
- specific tools and licenses available, according to selected platform.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTPRG438 Configure and maintain databases

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to install a database, manage data, data access and data security and improve database performance.

It applies to those who are responsible for the maintenance and coordination of database operations. They usually work in an organisation providing daily services as database administrators, database developers, database coordinators, or application developers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Programming and software development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine requirements and install database system	1.1 Identify required database and components and user needs 1.2 Define and use database administrative tools according to database requirements 1.3 Verify database software installation prerequisites 1.4 Install database software and related services according to organisational procedures 1.5 Configure database instance, components and services according to user needs
2. Manage database security and integrity	2.1 Create and administer users according to task requirements

	2.2 Create and manage permissions and roles 2.3 Configure database including backup and recovery operations 2.4 Create and manage database backups 2.5 Restore and perform database recovery 2.6 Tune and perform database optimisation
3. Document and review database	3.1 Document maintenance and tuning work performed on database 3.2 Document users added to system 3.3 Review database and confirm required users have access

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Applies strategies and constructs meaning from technical specifications when identifying database components and defining tools
Writing	<ul style="list-style-type: none"> Develops documentation detailing work performed and added users using appropriate structure, layout and technical programming language
Problem solving	<ul style="list-style-type: none"> Uses systematic processes, gathering information and identifying and evaluating options against agreed criteria Decides on a course of action using analytical processes
Self-management	<ul style="list-style-type: none"> Seeks clarification when meanings and intended actions are open to interpretation when verifying prerequisites
Technology	<ul style="list-style-type: none"> Identifies key principles and concepts underpinning design and operation of digital systems and tools and applies these when troubleshooting database technology Improve personal productivity and optimises software functions using a broad range of features within database applications

Unit Mapping Information

Supersedes and is equivalent to ICTPRG412 Configure and maintain databases.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTPRG438 Configure and maintain databases

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- configure and maintain at least one database system, according to requirements.

In the course of the above, the candidate must:

- create backup and restore database above
- document database work and database users added.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- database design principles
- relational database principles
- hardware functions and components that may be used to configure and maintain databases
- connection methods to database management systems
- documentation techniques that may be used to document database work
- uses of structured query language (SQL).

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- the database-management system software
- specific requirements, including client and functionality requirements
- required hardware and software.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Links

Companion Volume Implementation Guide is found on VETNet -

ICTPRG439 Use pre-existing components

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to identify, evaluate and incorporate pre-existing (re-use) components from a library, or other source, as part of a software project.

It applies to those who work in a programming role in a variety of information technology areas, who are required to use programming libraries to support their work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Programming and software development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify potential re-use components	1.1 Analyse project design and required functionality 1.2 Source re-use components according to required functionality
2. Evaluate and select re-use components	2.1 Evaluate suitability of re-use component and libraries 2.2 Compare functionality of re-use components according to functionality required by parent project 2.3 Clarify technical impact on parent project design 2.4 Identify re-use component vendor licensing agreements, requirements and costs 2.5 Finalise and document selection, evaluation and decision processes according to organisational requirements

3. Incorporate re-use components into parent projects	3.1 Configure development environment and include re-use components during build process 3.2 Construct test programs or use provided example programs according to organisational guidelines and procedures 3.3 Add re-use components incrementally to parent project 3.4 Resolve re-use component dependencies according to task requirements 3.5 Assemble and test parent project according to functionality provided by re-use components 3.6 Review parent project and amend issues accordingly
---	--

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Selects from, and applies a range of mathematics and problem-solving techniques when evaluating costs
Reading	<ul style="list-style-type: none"> Identifies and interprets technical and organisational documentation to determine and confirm job requirements
Writing	<ul style="list-style-type: none"> Develops documentation selection, evaluation and decision processes according to organisational requirements using appropriate structure, layout and technical programming language
Problem-solving	<ul style="list-style-type: none"> Decides on a course of action using analytical processes Uses systematic and analytical processes in complex non-routine situations, setting goals and gathering information
Technology	<ul style="list-style-type: none"> Improve personal productivity and optimises software functions using a broad range of features within applications Interprets key principles and concepts underpinning the design and operation, of digital systems and tools and applies these to troubleshoot technology

Unit Mapping Information

Supersedes and is not equivalent to ICTPRG413 Use a library or pre-existing components.

Assessment Requirements for ICTPRG439 Use pre-existing components

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- identify, evaluate and select at least two existing components to be re-used in a software project.

In the course of the above, the candidate must:

- identify costs of incorporating existing components
- address technical impacts and vendor licensing issues
- document selection and evaluation processes
- test functionality of pre-existing components
- comply with organisational guidelines and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry development and design methodologies
- re-use component licensing agreements, requirements and implementation costs
- project designs that may assist in using pre-existing components
- library content and structures
- documentation techniques used to document selection, evaluation and decision processes
- project testing methods that may assist in determining pre-existing components
- re-use component dependency and version compatibility
- repository tools applicable to using pre-existing components
- organisational guidelines and procedures applicable to using pre-existing components.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- software development environment
- libraries and re-use components
- vendor licensing agreements
- technical requirement guidelines
- required hardware and its components.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTPRG440 Apply introductory programming skills in different languages

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to carry out introductory programming activities including application of basic language syntax, coding and debugging code in different languages.

It applies to those who work in programming, development and technical roles. This includes programmers, software developers and as IT staff responsible for conducting programming activities, including writing, maintaining and updating programs, defining data and file handling.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Programming and software development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Apply basic language syntax and layout	1.1 Identify basic language syntax rules 1.2 Use language data types, operators and expressions 1.3 Use sequence, selection and iteration constructs using required language syntax
2. Code using data structures and standard algorithms	2.1 Use data structures 2.2 Create and manipulate data structures through code 2.3 Create sequential search, binary search, insertion and

	deletion algorithms on data structures
3. Debug, document and test code	<p>3.1 Debug code using stand-alone debugging tools and tools provided by integrated development environment (IDE)</p> <p>3.2 Trace code execution and examine variable contents using debugger</p> <p>3.3 Develop maintainable code according to organisational guidelines and provided coding standard when documenting activities</p> <p>3.4 Apply internal documentation to all code created using documentation tools available in target language</p> <p>3.5 Design and document tests according to organisational guidelines</p> <p>3.6 Capture and record test results according to organisational requirements</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Interprets and critically analyses and applies strategies and constructs meaning from complex texts
Writing	<ul style="list-style-type: none"> Prepares documentation recording process and results for tests performed according to organisational requirements Writes and edits code and technical data in a logical manner using required syntax
Problem solving	<ul style="list-style-type: none"> Decides on a course of action using analytical processes
Self-management	<ul style="list-style-type: none"> Takes personal responsibility and follows explicit and implicit policies, procedures and industry standards Automatically implements standard procedures in routine decisions when programming according to guidelines and standards
Technology	<ul style="list-style-type: none"> Interprets key principles and concepts underpinning the design and operation of digital systems and tools

Unit Mapping Information

Supersedes and is equivalent to ICTPRG414 Apply introductory programming skills in another language.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTPRG440 Apply introductory programming skills in different languages

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- create, maintain and update at least one program using coding activities, basic language syntax and layout.

In the course of the above, the candidate must:

- write code using at least two data structures and at least two standard algorithms according to organisational guidelines
- debug at least one program written above using debugging tools provided by integrated development environment (IDE)
- document activities undertaken in at least one program developed above according to organisational guidelines and coding standards
- test program created above and confirm specifications are met
- record results for tests performed above, according to organisational guidelines.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- language syntax rules
- organisational procedures and guidelines that may be used to apply introductory programming skills in different languages
- coding techniques and standards
- documentation techniques that may be used to document programming activities
- application development processes, debugging methodologies, testing techniques and basic data structures guidelines that may be used to apply introductory programming skills in different languages.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- integrated development environment (IDE) for determined language
- specific tools and licences, depending on particular platform and language.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTPRG441 Apply skills in object-oriented design

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to produce an object-oriented design from specifications, applying the cyclic process of iteration from identification of class, instance, role and type to the final object-oriented model of the application.

It applies to those who are required to design systems using an object-oriented method.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Programming and software development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Derive high-level design from specification	1.1 Gather and determine specifications in object-oriented design 1.2 Create static class diagram according to given set of specifications 1.3 Develop communication diagrams and sequence diagrams according to given set of specifications 1.4 Develop activity diagram and state diagram using given set of specifications
2. Refine design	2.1 Investigate and refine behaviour, state of classes and collaboration between classes 2.2 Validate visibility of class services and state data 2.3 Identify generalisations and specialisations within classes

	2.4 Refine class design and apply aggregation and composition principles
3. Document design	3.1 Create detailed unified modelling language (UML) static class diagrams 3.2 Develop detailed UML communication and sequence diagrams 3.3 Create detailed UML activity and state diagrams

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none">Interprets and critically analyses and applies strategies to construct meaning from specifications
Writing	<ul style="list-style-type: none">Prepares required documentation expressing ideas and information for specific audiences according to organisational procedures
Problem-solving	<ul style="list-style-type: none">Decides on a course of action using analytical processesUses systematic, analytical processes in predictable and unpredictable situations, setting goals, gathering information and identifying and evaluating options against agreed criteria when refining design
Technology	<ul style="list-style-type: none">Interprets key principles and concepts underpinning the design and operation of digital systems and tools

Unit Mapping Information

Supersedes and is not equivalent to ICTPRG415 Apply skills in object-oriented design.

Assessment Requirements for ICTPRG441 Apply skills in object-oriented design

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- produce one object-oriented design from requirements, documents and system specifications, which includes:
 - static class diagrams
 - communication and sequence diagrams
 - activity and state diagrams
 - diagrams mentioned above using unified modelling language (UML)
 - refining class design
 - documentation of design.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- design quality metrics, refinement techniques and programming design principles that may be used for applying skills in object-oriented design
- unified modelling language
- different programming methodologies, documentation techniques and development methodologies that may be used for applying skills in object-oriented design.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- programming design software, tools and licenses
- required hardware and its components

- system specifications
- requirement documents
- design specifications.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTPRG442 Apply mathematical techniques for software development

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to use basic mathematical methods and operations in standard computer notation, Boolean algebra, data types and computer storage.

It applies to those who are involved in software development roles who are required to use mathematical constructions in programming.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Programming and software development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Establish task requirements	1.1 Identify and configure software development environment according to business need 1.2 Discuss and confirm software development task and intent according to business need 1.3 Identify and discuss different mathematical techniques in software development
2. Manipulate number and character	2.1 Convert numbers between binary, decimal

ELEMENT	PERFORMANCE CRITERIA
representation systems in a software development context	and hexadecimal number systems 2.2 Add, subtract and multiply numbers in binary 2.3 Determine binary memory storage of an integer and a character
2. Manipulate algebraic terms and solve linear equations in a software development context	3.1 Position number types on number line 3.2 Evaluate various numerical expressions involving integers, fractions and indices 3.3 Simplify various algebraic expressions involving integers, fractions and indices
4. Construct, simplify and evaluate expressions and mathematical formulas in a software development context	4.1 Solve simple equations 4.2 Convert formulas between standard algebraic form and computer notation 4.3 Create formulas in standard algebraic form and in computer notation 4.4 Simplify and evaluate Boolean expressions and formulas 4.5 Complete truth tables using simple Boolean expressions and logic 4.6 Save and confirm work with required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Oral communication	<ul style="list-style-type: none"> Uses listening and questioning techniques to articulate information and task requirements using specific language applicable to audience
Numeracy	<ul style="list-style-type: none"> Uses a wide range of mainly formal and some informal, oral and written mathematical language and representation when solving equations, constructing mathematical formulas, simplifying and evaluating Boolean expressions and formulas and manipulating number and character systems
Reading	<ul style="list-style-type: none"> Interprets and critically analyses information from a variety of sources and records
Planning and	<ul style="list-style-type: none"> Plans and sequences complex tasks

SKILL	DESCRIPTION
organising	
Problem solving	<ul style="list-style-type: none">• Uses analytical processes and decides on a course of action when evaluating Boolean expressions and formulas

Unit Mapping Information

Supersedes and is equivalent to ICTPRG417 Apply mathematical techniques for software development.

Assessment Requirements for ICTPRG442 Apply mathematical techniques for software development

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- manipulate algebraic terms and evaluate at least three numerical expressions in software development
- solve and evaluate at least three different mathematical problems
- create at least two mathematical formulas in standard algebraic form and at least two mathematical formulas in standard computer notation
- simplify and evaluate at least two Boolean expressions and formulas
- convert two sets of numeric values between binary, decimal and hexadecimal number systems as required in software development.

Knowledge Evidence

elements, performance criteria and foundation skills of this unit, including knowledge of:

- Boolean algebra, number types, numerical and algebraic expressions, simple equations and standard computer notation that may be used to apply mathematical techniques for software development
- binary, decimal and hexadecimal number systems
- memory requirements for different number formats including binary, integer, decimal and negatives
- mathematical terms application and operations in computing
- calculation tools available
- organisational procedures impacting on applying mathematical techniques for software development.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- programming language, tools and licensing
- software development tools and environment
- hardware components and required software.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTPRG443 Apply intermediate programming skills in different languages

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to carry out intermediate programming activities involving coding, debugging and testing of code, and creating applications using different programming languages.

It applies to those who are programmers in a variety of fields and are required to conduct programming activities and produce software programs.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Programming and software development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Establish task requirements and define data structures and code	1.1 Establish user requirements and specifications 1.2 Design, define and use data structures that are aggregate of other data types 1.3 Code using user-defined data structures 1.4 Create, manipulate and destroy dynamic variables, including data structures, using facilities in language
2. Code using standard algorithms	2.1 Code using modular programming approach, including pass-by-reference parameter passing 2.2 Create and manipulate 2-D data structures using code

ELEMENT	PERFORMANCE CRITERIA
	2.3 Create and maintain sorted data structures and use language-provided facilities 2.4 Code using simple binary search technique 2.5 Code binary file-handling solutions using random-access algorithms
3. Debug, document and test code	3.1 Use stand-alone debugging tools and tools provided by integrated development environment (IDE) 3.2 Trace code execution and examine variable contents using debugger 3.3 Develop and document maintainable code according to organisational guidelines and coding standards 3.4 Apply internal documentation to code using documentation tools available in target language 3.5 Design and document tests according to organisational guidelines 3.6 Test produced code and confirm compliance with program specification 3.7 Capture and record test results
4. Develop, test and document files and application	4.1 Build application according to user requirement 4.2 Access multiple source-code files 4.3 Employ integrated development environment (IDE) project maintenance facilities and automate program building using created files 4.4 Develop program specification solution according to coding standards 4.5 Design algorithm and document, construct and test applications according to problem description using target language 4.6 Document completed application according to organisational procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none">Interprets and applies applicable strategies and constructs meaning from texts relating to organisational guidelines and coding standards

SKILL	DESCRIPTION
Writing	<ul style="list-style-type: none">• Prepares required documentation expressing ideas and information for specific audiences according to organisational procedures• Writes and edits code and technical data in a logical manner using required syntax
Problem solving	<ul style="list-style-type: none">• Decides on a course of action using analytical processes• Identifies possible solutions to difficult problems using a systematic process
Self-management	<ul style="list-style-type: none">• Takes personal responsibility and follows explicit and implicit policies, procedures and industry standards• Uses systematic processes, setting goals, gathering required information and identifying and evaluating options against agreed criteria
Technology	<ul style="list-style-type: none">• Interprets key principles and concepts underpinning the design and operation of digital systems and tools

Unit Mapping Information

Supersedes and is not equivalent to ICTPRG418 Apply intermediate programming skills in another language.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTPRG443 Apply intermediate programming skills in different languages

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design and build an application in response to user requirements and specifications.

In the course of the above, the candidate must:

- code using user-defined data structures and standard algorithms
- develop a maintainable code
- design a test for code and record and document test results
- produce a technical documentation of activities and completed application.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- dynamic variables
- modular programming approach to coding
- medium-size application development processes
- data structures including but not limited to:
 - lists
 - arrays
 - linked lists
 - stack
 - queues
 - trees
 - graphs
 - sets
 - hash tables

- random-access algorithms
- user-defined data structures
- project maintenance and required language-provided facilities
- development methodologies and their application
- organisational guidelines and coding standards applicable to applying intermediate programming skills
- programming methodologies
- documentation techniques and tools within target languages that may be used to apply intermediate programming skills in different languages
- debugging tools and methodologies
- code testing procedures.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- an integrated development environment (IDE) for determined language and its tools and licenses
- coding standards
- user requirements and specifications
- technical requirements
- required hardware and its components.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTPRG444 Analyse software requirements

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to research and analyse client requirements, produce a range of options for business process efficiencies and create a software-requirements document.

It applies to those who are required to perform an analysis role in formulating software requirements in a range of work environments. They may work as database or computer developers, business analysts, or project managers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Programming and software development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Gather and confirm client requirements	<ul style="list-style-type: none">1.1 Confirm requirement and scope of project with required personnel1.2 Gather information regarding requirements via sources of information and business processes1.3 Analyse client requirements and problem context and opportunity faced by client1.4 Document client requirements, project scope, related problems and sources of information according to organisational procedures1.5 Submit document to required personnel and seek

	and respond to feedback
2. Analyse functional and related non-functional requirements and feasibility of project	2.1 Map business processes using modelling tool including unified modelling language (UML) 2.2 Determine opportunities in business process efficiencies 2.3 Document functional and non-functional processes according to organisational procedures 2.4 Analyse technical and operational feasibility of project 2.5 Determine budget and schedule feasibility of project 2.6 Examine purpose and intent of project within organisation
3. Develop high-level system solutions	3.1 Develop and document feasible solutions according to client requirements 3.2 Explore and document the feasibility of each solution 3.3 Examine alternatives against project constraints 3.4 Document assumptions, dependencies and required resources 3.5 Produce a project risk analysis according to project requirements 3.6 Document future requirements according to organisational procedures
4. Prepare and publish software-requirements documentation	4.1 Develop software-requirements document according to organisational procedures 4.2 Submit software-requirements report to required personnel and obtain project approval

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Selects from, and applies an expanding range of mathematical and problem-solving techniques when determining project budget and schedule feasibility
Oral communication	<ul style="list-style-type: none"> Uses listening and questioning techniques to obtain information and requirements using industry language for intended audience

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none">• Interprets and critically analyses and applies strategies and constructs meaning from complex texts when gathering and analysing information
Writing	<ul style="list-style-type: none">• Develops documentation detailing requirements, scope of work and solutions using appropriate structure, layout and technical programming language
Planning and organising	<ul style="list-style-type: none">• Sequences and schedules complex activities, monitors implementation and manages communication
Problem solving	<ul style="list-style-type: none">• Decides on a course of action using analytical processes• Uses a systematic process and identifies possible solutions to a difficult problem• Uses systematic processes in predictable and unpredictable situations, setting goals and gathering information
Self-management	<ul style="list-style-type: none">• Identifies and responds to both explicit and implicit protocols when submitting report to required personnel for approval
Technology	<ul style="list-style-type: none">• Accesses, organises, analyses and displays information applicable to software requirements using a range of digital systems and tools

Unit Mapping Information

Supersedes and is not equivalent to ICTPRG419 Analyse software requirements.

Assessment Requirements for ICTPRG444 Analyse software requirements

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop at least two high-level system solutions for one set of software requirements according to client requirements.

In the course of the above, the candidate must:

- analysing and document at least two functional and at least two non-functional requirements
- document requirements and work performed according to organisational procedures
- submit documents and obtain approval.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- tools and techniques that may be used to analyse software requirements including;
 - client business domain
 - content features including clarity and readability
 - system functionality
 - document design and usability
 - budget creation techniques
 - modelling tools including unified modelling language (UML)
 - documentation techniques
 - risk analysis techniques
 - functions and features, of templates and style guides
 - the role of stakeholders and the degree of stakeholder involvement
 - software development life cycle overview

- systems development methodologies
- organisational procedures.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- documentation regarding client and software functionality requirements
- sources of information including client business processes
- word processing software and its features
- required hardware and digital devices
- industry standard modelling software.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTPRG446 Prepare software development review

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to establish standards applicable to information technology and communications technology (ICT) technical requirements and quality assurance processes applicable to software development.

It applies to those who are in the software development area and are required to confirm the software development process incorporates quality considerations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Programming and software development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Review software and implementation standards	1.1 Obtain and clarify project plan, standards and organisational requirements with required personnel 1.2 Document software standards, according to project standards 1.3 Assign software standards to functions, according to detailed technical plan 1.4 Confirm communication and distribution strategies are clear, coherent and meet overall project plan requirements with required personnel 1.5 Monitor and report on implementation of standards against acceptance criteria and detailed technical specifications

ELEMENT	PERFORMANCE CRITERIA
2. Review software metrics and milestones	<ul style="list-style-type: none">2.1 Define metrics related to project milestones, timeframe and cost considerations2.2 Develop a schedule of quality reviews2.3 Determine quality considerations by identifying in-process measurement points applicable to critical organisational requirements2.4 Determine method to benchmark and scale achievement against stated requirements and cost considerations
3. Document and confirm with required personnel	<ul style="list-style-type: none">3.1 Report metrics and milestones to required personnel3.2 Obtain feedback from required personnel and amend accordingly3.3 Confirm requirements are met with required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none">Selects from and applies, an expanding range of mathematical and problem-solving techniques, in the context of metrics and cost considerations
Reading	<ul style="list-style-type: none">Interprets and critically analyses and applies required strategies, to construct meaning from complex texts relating to organisational requirements and project standards
Writing	<ul style="list-style-type: none">Develops documentation detailing software and implementation standards according to project standards using appropriate structure, layout and technical programming language
Planning and organising	<ul style="list-style-type: none">Sequences and schedules complex activities, monitors implementation, and manages communication applicable to quality reviews
Problem solving	<ul style="list-style-type: none">Uses systematic, analytical processes in predictable and unpredictable situations, setting goals and gathering required information
Self-management	<ul style="list-style-type: none">Identifies importance of taking audience, purpose and contextual factors into account when making decisions about what to communicate, with whom, why and how
Technology	<ul style="list-style-type: none">Uses a range of digital systems and tools to access, organise, analyse and display information applicable to own role

Unit Mapping Information

Supersedes and is equivalent to ICTPRG426 Prepare software development review.

Assessment Requirements for ICTPRG446 Prepare software development review

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- prepare at least one software development review.

In the course of the above, the candidate must:

- document software and implementation standards according to project standards
- apply and document at least three software metrics and at least three milestones.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard accepted software configuration management processes
- organisational and quality requirements applicable to software development review, including:
 - quality assurance practices and standards
 - quality review techniques and processes
 - benchmarking standards
 - organisational standards and guidelines
- software development life cycle
- acceptance criteria for software development testing
- software metrics development
- the client business domain.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- technical specifications and plans
- organisational standards and guidelines
- project management process, and hierarchy
- organisational business processes
- software and interface requirement specifications
- project budget and timeframe
- required hardware and digital devices.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTPRG447 Use extensible markup language

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to create extensible markup language (XML) documents, web-service applications, and client applications to consume web services.

It applies to those who are web developers, web programmers or application programmers, who build Windows or web-based applications that access data in XML format, or who develop and consume web services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Programming and software development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Represent structured data with XML	<ul style="list-style-type: none">1.1 Identify task and information requirements and applicable organisational policies and procedures in creating XML document1.2 Gather information by analysing data, documents, problem domains and discussions with required personnel1.3 Write XML document and incorporate required structure and syntax according to task requirements1.4 Validate XML document using validation tools

ELEMENT	PERFORMANCE CRITERIA
	1.5 Format XML document using styling tools
2. Access and manipulate XML document using XML parser application programming interface (API)	2.1 Create new XML document according to task requirements 2.2 Access and traverse elements and attributes 2.3 Modify and delete elements and attributes according to task requirements 2.4 Transform XML document into a data object 2.5 Transform data object into an XML document
3. Create a service-oriented application using XML	3.1 Define web-services architecture and platform elements 3.2 Develop and deploy web-service applications using a language 3.3 Develop a client application and consume web service using a language

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none">Selects from, and applies mathematical and problem-solving techniques in a range of contextsIdentifies order and position of elements in a sequence using XML
Oral communication	<ul style="list-style-type: none">Uses listening and questioning techniques to confirm requirements and articulate ideas
Reading	<ul style="list-style-type: none">Interprets, critically analyses and applies required strategiesConstructs meaning when gathering information by analysing data, documents and problem domains
Writing	<ul style="list-style-type: none">Prepares documentation expressing ideas, explores complex issues, and is constructed logically, succinctly and accuratelyWrites and edits code and technical data, and confirms correct syntax

SKILL	DESCRIPTION
	and accuracy
Planning and organising	<ul style="list-style-type: none">• Uses systematic, analytical processes in predictable and unpredictable situations, setting goals and gathering required information
Problem solving	<ul style="list-style-type: none">• Applies formal problem-solving processes when tackling unfamiliar problems• Breaks complex issues into manageable parts and identifies and evaluates several options for action
Technology	<ul style="list-style-type: none">• Utilises broad range of features within applications and improves personal productivity and optimises software functions

Unit Mapping Information

Supersedes and is equivalent to ICTPRG427 Use XML effectively.

Assessment Requirements for ICTPRG447 Use extensible markup language

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- produce at least two well-formed, formatted and validated XML documents
- use an XML parser to access, modify and transform XML documentation
- create at least one service-oriented application using XML.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- tree structure of data to be represented
- web services architecture and platform elements
- programming concepts and languages including structure and syntax
- validation and styling tools within XML
- XML document elements including:
 - root element
 - child element
 - sub-child element
- syntax rules relating to:
 - case sensitivity
 - closing tag
 - entity reference
 - proper nesting
 - quoted attribute values
 - single-root element
- the main features and services of the internet
- data modelling techniques and procedures

- commonly used elements in hypertext markup language (HTML)
- information system features
- XML parser application programming interface (API) and functions
- source characteristics.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required hardware and its components
- extensive markup language (XML) and JavaScript object notation (JSON) tools and software
- tools to access and develop a data source including:
 - a text editor
 - a web browser
- client and functionality requirements and documentation
- a web server and software that hosts services to deploy and test the web-service application
- required libraries.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTPRG530 Manage projects using software management tools

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to use software management tools, to manage a systems development project from initiation to completion.

It applies to software developers, who work in a team or who individually develop systems to specification using software management tools to manage delivery within time and budget parameters.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Programming and software development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Select software management tools	1.1 Determine required software development methodology according to system development project requirements 1.2 Determine required project management software according to project requirements 1.3 Determine source-control system required to manage code and handle source-control system conflict 1.4 Determine and document required collaboration software according to organisational policies and procedures
2. Use software management tools	2.1 Determine and document project plan according to software specifications and project requirements 2.2 Define required source-control procedures according to

ELEMENT	PERFORMANCE CRITERIA
	software specifications and project requirements 2.3 Create collaborative environment according to software specifications and project requirements
3. Monitor use of software management tools	3.1 Monitor and maintain project plan and document progress according to organisational policies and procedures 3.2 Check accurate code entry according to source-control system 3.3 Monitor collaboration environment and resolve identified issues according to organisational policies and procedures

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Selects from, and applies, an expanding range of mathematical and problem-solving strategies
Reading	<ul style="list-style-type: none"> Interprets and critically analyses, and applies, the required strategies to construct meaning from complex texts
Writing	<ul style="list-style-type: none"> Displays a knowledge of structure and layout, employing a broad vocabulary, grammatical structure, and the conventions required to text
Teamwork	<ul style="list-style-type: none"> Actively identifies the requirements of important communication exchanges, selecting required channels, format, tone and content to suit the purpose and audience, and monitoring the impact when creating and resolving issues Collaborates with others to achieve joint outcomes, playing an active role in facilitating effective group interaction, influencing direction and, on occasion, taking a leadership role
Planning and organising	<ul style="list-style-type: none"> Sequences and schedules complex activities, monitors implementation and manages relevant communication, in a collaborative project environment Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering relevant information and identifying, and evaluating, options against the agreed criteria
Problem solving	<ul style="list-style-type: none"> Uses analytical processes to decide on a course of action, establishing the criteria for deciding between options and seeking input, and advice from others, before taking action when necessary
Technology	<ul style="list-style-type: none"> Uses a range of digitally based technology and applications to access and filter data, extract, organise, integrate, and share relevant information, in

SKILL	DESCRIPTION
	increasingly effective ways

Unit Mapping Information

Supersedes and is equivalent to ICTPRG502 Manage a project using software management tools.

Links

Companion Volume Implementation Guide is found on VETNet -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=a53af4e4-b400-484e-b778-71c9e9d6aff2>

Assessment Requirements for ICTPRG530 Manage projects using software management tools

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- research and select at least one software management tool to manage a system development project.

In the course of the above, the candidate must:

- create, monitor and adjust a project plan, according to the required specifications
- define source-control procedures, and check that the correct entries are input into the system
- create, monitor, and resolve issues in a collaborative environment.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- basic principles of project management
- key features of the software development life cycle (SDLC)
- importance of software specifications when applied managing projects using software management tools
- methods and tools used for version control.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- the internet
- source-control software

- industry standard tools and licences that may be used for managing projects using software management tools.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTPRG533 Debug and monitor applications

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to debug and monitor a software application.

It applies to software developers, testers and support engineers who use logging and tracing techniques to identify software problems and monitor systems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Programming and software development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Implement logging and error handling framework	1.1 Determine logging framework for writing text messages and prioritise log files for sending data to monitoring applications 1.2 Create custom event log for the application according to logging framework 1.3 Test logs and check required state of running application according to logging and error handling framework
2. Debug and trace application	2.1 Apply basic debugging techniques according to error handling framework 2.2 Identify required tools and debug software applications 2.3 Write required code for debugging as required according to error handling framework

ELEMENT	PERFORMANCE CRITERIA
3. Monitor the application's performance	3.1 Identify and use profiling tools and verify parts of system that consume the most resources 3.2 Analyse and document performance issues and apply application performance improving changes

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none">Selects from, and applies, an expanding range of mathematical and problem-solving strategies when analysing logs, and monitoring applications data
Reading	<ul style="list-style-type: none">Interprets and critically analyses complex texts, and applies the required strategies to construct meaning from complex texts
Writing	<ul style="list-style-type: none">Writes and edits code and technical data in a logical manner using required syntax
Planning and organising	<ul style="list-style-type: none">Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering relevant information, and identifying, and evaluating options against the agreed criteria
Problem solving	<ul style="list-style-type: none">Uses analytical processes to decide on a course of action, establishing the criteria for deciding between optionsUses a systematic process to identify possible solutions to a difficult problem
Technology	<ul style="list-style-type: none">Understands the key principles and concepts underpinning the design, and operation, of digital systems and tools

Unit Mapping Information

Supersedes and is equivalent to ICTPRG503 Debug and monitor applications.

Assessment Requirements for ICTPRG533 Debug and monitor applications

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- implement changes to improve an application's performance on at least one application.

In the course of the above, the candidate must:

- collect application performance data
- identify and analyse performance issues
- use a logging framework to create an event log for an application
- use tools and techniques to trace and debug an application.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard logging frameworks, including:
 - logging
 - tracing tools and their functions
 - profiling tools and their functions
- basic principles of:
 - database-management systems
 - object-oriented programming
 - open-source development tools
 - software development life cycle (SDLC)
- procedures for developing, debugging and monitoring small-size applications.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- performance monitoring tools on client and server system
- specific debugging tools and licenses
- integrated development environment (IDE)
- end user device.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTPRG534 Deploy applications to production environments

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to install, uninstall, and configure an application to a production environment.

It applies to those responsible for the software deployments of enterprise applications. They may work as application DevOps engineers, developers, administrators, release managers or deployment coordinators.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Programming and software development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan software installation	1.1 Determine client system and server system according to installation requirements 1.2 Determine installation method according to installation requirements 1.3 Determine organisational security requirements 1.4 Determine and document software-installation plan according to organisational policies and procedures
2. Perform software installation	2.1 Create an install package for application according to installation plan 2.2 Test install package in test environment 2.3 Deploy install package to production environment

ELEMENT	PERFORMANCE CRITERIA
3. Plan and test application removal	3.1 Create uninstall package according to production environment 3.2 Test uninstall package in test environment according to production environment 3.3 Deploy uninstall package to production environment
4. Perform database installation	4.1 Deploy database from development environment to production environment 4.2 Specify connection string to database according to production environment 4.3 Test database installation according to production environment
5. Manage application configuration	5.1 Configure application to required parameters for the production environment 5.2 Modify deployment variables and use configuration files 5.3 Configure security features application to required parameters for the production environment

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Interprets, and critically analyses, complex texts and applies the required strategies to construct meaning from complex texts
Writing	<ul style="list-style-type: none"> Writes and edits code and technical data in a logical manner using required syntax
Planning and organising	<ul style="list-style-type: none"> Sequences and schedules complex activities, monitors implementation, and manages relevant communication
Problem solving	<ul style="list-style-type: none"> Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering relevant information, and identifying, and evaluating options against the agreed criteria Uses analytical processes to decide on a course of action, establishing the criteria for deciding between options
Self-management	<ul style="list-style-type: none"> Identifies and complies with organisational requirements relevant to deployment of applications
Technology	<ul style="list-style-type: none"> Understands the key principles and concepts underpinning the design, and operation, of digital systems and tools

Unit Mapping Information

Supersedes and is equivalent to ICTPRG504 Deploy an application to a production environment.

Links

Assessment Requirements for ICTPRG534 Deploy applications to production environments

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- deploy at least one application to a production environment.

In the course of the above, the candidate must:

- configure variables, parameters and security features for a production environment
- prepare plans for software installation, including account data, resource and security requirements
- install and uninstall packages
- test and troubleshoot issues.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- principles of database management systems applicable to deploying applications to production environments
- software development life cycle (SDLC) that may be used in deploying applications to production environments
- programming language used to create deployment applications
- Information and Communications Technology (ICT) hardware, software, security protocols and standards and organisational policies relevant to deployment of applications.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- packages on client and server system
- database management system software
- required tools and licences
- integrated development environment (IDE).
- end user device.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTPRG535 Build advanced user interfaces

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to design, build and test an advanced user interface (UI), including interaction techniques, rich controls, improved client-side validation, customisation and personalisation, graphics and multimedia.

It applies to individuals who work as user-interface designers and software developers and are responsible for managing and implementing complex UI design.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Programming and software development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan UI design	1.1 Determine client technology, development tools, and platforms according to UI solution 1.2 Review conceptual design with required personnel and seek and respond to feedback 1.3 Design and document UI layout and structure according to UI requirements
2. Implement interaction techniques	2.1 Apply interaction design patterns according to UI design plan 2.2 Implement client-side validation according to UI requirements 2.3 Demonstrate alignment of implement interactions against UI design plan

ELEMENT	PERFORMANCE CRITERIA
3. Build customisable and personalised UI	3.1 Build customisable UI and allow users to select their own customised version of the underlying application 3.2 Build personalised UI according to UI design plan task requirements 3.3 Demonstrate alignment of personalised UI to UI design plan 3.4 Implement required updates and confirm improvement to user experience
4. Implement graphics and multimedia	4.1 Create and display the graphics according to UI requirements 4.2 Add required multimedia content to the application 4.3 Demonstrate alignment of implementing graphics against UI design plan

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Selects from, and applies, an expanding range of mathematical and problem-solving strategies in a range of contexts, when designing layout and structure
Reading	<ul style="list-style-type: none"> Interprets, and critically analyses, complex texts and applies the required strategies to construct meaning from complex texts, when reading and interpreting technical information, and determining suitable technology and tools
Writing	<ul style="list-style-type: none"> Prepares documentation, expressing ideas and exploring complex issues using relevant industry language Writes and edits computer code, and technical data using correct syntax and logical flow
Planning and organising	<ul style="list-style-type: none"> Uses nuanced knowledge of context to demonstrate knowledge of anomalies and subtle deviations to normal expectations, focusing attention and remedying problems as they arise
Problem solving	<ul style="list-style-type: none"> Understands the key principles and concepts underpinning the design, and operation, of digital systems and tools, and applies these when troubleshooting existing technology
Technology	<ul style="list-style-type: none"> Seeks to understand the potential of new technology, in the context of implementing interaction, and customisable features, and graphics and multimedia, into the UI

Unit Mapping Information

Supersedes and is equivalent to ICTPRG505 Build advanced user interface.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTPRG535 Build advanced user interfaces

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design and build an advance UI design.

In the course of the above the candidate must:

- determine an organisation's technology, development tools, and UI platform
- apply advanced techniques in order to create a complex user interface (UI).

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- concepts of programming that may be used to build advanced user interfaces, including:
 - client-side programming
 - object-oriented programming
 - web design programming in hypertext markup language (HTML), cascading style sheet (CSS), and JavaScript
- UI prototyping techniques and purpose.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- integrated development environment (IDE)
- the client system, and the server system
- multimedia tools

- a solution to apply UI design
- required interface and hardware device
- required tools, software and licences required for UI implementation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTPRG536 Design application architecture

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to design the structure of software or systems components, and how they interact.

It applies to those who work as software architects, developers, designers, software engineers or programmers, and responsible for designing, and building, solution architecture.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Programming and software development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Gather and confirm architecture requirements	1.1 Gather broad architectural requirements from required personnel 1.2 Establish and document architectural requirements
2. Design layered architecture	2.1 Separate areas of concern into logical layers according to architectural requirements 2.2 Determine cross-cutting concerns according to architectural requirements 2.3 Define system into components according to architectural requirements 2.4 Identify responsibilities of each component 2.5 Identify required interconnections between components

ELEMENT	PERFORMANCE CRITERIA
3. Plan a strategy to re-use components	3.1 Determine and document a strategy for communicating with external systems according to organisational policies and procedures 3.2 Interact with existing legacy components according to strategy
4. Design for globalisation and localisation	4.1 Determine and document culture specific information according to organisational requirements 4.2 Determine and document database design features according to architectural requirements 4.3 Select and document required user interface according to organisational requirements 4.4 Develop software product for specific country and worldwide distribution

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Oral communication	<ul style="list-style-type: none"> Articulates requirements and responsibilities distinctively, using effective communication techniques and industry standard technical language intended for audience and environment
Reading	<ul style="list-style-type: none"> Interprets complex technical, and non-technical, information from a range of sources
Writing	<ul style="list-style-type: none"> Prepares technical workplace documents detailing processes and outcomes that fulfil the expectations of different stakeholders
Teamwork	<ul style="list-style-type: none"> Identifies, and explores, the differences between a diverse range of people and cultures in a programming context
Planning and organising	<ul style="list-style-type: none"> Takes responsibility for planning, sequencing, and prioritising tasks in order to achieve the required outcomes
Problem solving	<ul style="list-style-type: none"> Uses a range of digital tools and sophisticated techniques, to meet the desired outcomes Identifies technical or conceptual issues, and applies analytical processes to resolve these issues Uses analytical and lateral thinking to review current practices, and to develop new or improved software or systems

Unit Mapping Information

Supersedes and is equivalent to ICTPRG506 Design application architecture.

Assessment Requirements for ICTPRG536 Design application architecture

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design application architecture with at least five layered applications
- configure applications and adapt to at least two different locations.

In the course of the above, the candidate must:

- adapt a software product to a target market
- document processes and outcomes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- principles of database design that may apply to designing application architecture
- industry standard software development methodologies
- object-oriented programming and its role in application architecture
- software development life cycle relevant to designing application architecture.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- both functional and non-functional requirements
- tools to design software architecture
- specific information for target market and audience.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTPRG537 Implement security for applications

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to implement security for software applications, including code access security, security access control, cryptographic and secure, input and output handling.

It applies to individuals who work as software developers, software engineers, system and security administrators and testers, and responsible for coding secure software applications.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Programming and software development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Implement policy-based code-access security	1.1 Identify purpose of application security in software development 1.2 Configure required platform security configuration files using security configuration tools 1.3 Define required restriction custom code access permission and restrict access to protected resources 1.4 Define required access restriction custom code access and run protected operations
2. Implement security access control	2.1 Plan and document authentication and authorisation strategy according to organisational policies and procedures 2.2 Develop and document required application authentication

ELEMENT	PERFORMANCE CRITERIA
	and authorisation strategy
3. Write encrypt and decrypt code data	3.1 Determine and document required standard cryptographic algorithms 3.2 Encrypt, and decrypt, data using standard cryptographic algorithms
4. Protect application against injections	4.1 Plan and document secure input and output handling and prevent vulnerabilities related to code injections 4.2 Use secure input and output handling according to task requirements

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Oral communication	<ul style="list-style-type: none">Articulates requirements and responsibilities distinctively, using effective communication techniques and industry standard technical language intended for audience and environment
Reading	<ul style="list-style-type: none">Evaluates complex and varied information, and concepts, in software security
Writing	<ul style="list-style-type: none">Prepares technical workplace documents detailing processes and outcomes that fulfil the expectations of different stakeholdersWrites and edits computer code, and technical data using correct syntax and logical flow
Planning and organising	<ul style="list-style-type: none">Takes responsibility for planning, sequencing and prioritising processes and tasks to achieve the required outcomesUses a range of digital tools and sophisticated techniques to meet desired outcomesIs acutely aware of the importance of data security and of monitoring, and controlling, access to digitally stored and transmitted information
Problem solving	<ul style="list-style-type: none">Uses nuanced knowledge of context to demonstrate knowledge of anomalies and subtle deviations to normal expectations, focusing attention and remedying problems as they ariseApplies systematic and analytical problem-solving processes, in order to develop required security access control strategies
Technology	<ul style="list-style-type: none">Demonstrates knowledge of principles, concepts, language and practices associated with the digital world

Unit Mapping Information

Supersedes and is equivalent to ICTPRG507 Implement security for applications.

Assessment Requirements for ICTPRG537 Implement security for applications

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- secure at least two different applications.

In the course of the above, the candidate must:

- plan a security strategy
- prevent security attacks
- document processes and outcomes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard hardware and networking relating to implementing security for applications
- industry standard programming algorithms and object-oriented programming used to implement applications security
- mathematics required for programming algorithms.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- security configuration tools required to implement security for applications
- required software development environment
- testing and debugging tools applicable to implementing security for applications

- network resources required to implement security for applications.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTPRG538 Create mashups

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to combine content from more than one source into new integrated applications and create custom mashups.

It applies to those responsible for software developers who develop web applications using the enabling technologies to create mashup applications.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Programming and software development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to create mashups	1.1 Identify mashup content according to organisational requirements 1.2 Determine sources of content required for mashup 1.3 Determine and document mashup interface requirements 1.4 Submit documentation to required personnel and seek and respond to feedback
2. Remix elements from multiple websites to create new mashups	2.1 Analyse Web 2.0 concept and web as a platform according to mashup requirements 2.2 Evaluate and select APIs according to mashup requirements 2.3 Determine programming language according to

ELEMENT	PERFORMANCE CRITERIA
	APIs requirements 2.4 Create mashups of several services according to task requirements
3. Use mashup tools	3.1 Evaluate and select required tools according to task requirements 3.2 Create mashups according to task requirements 3.3 Align created mashups to organisational requirements 3.4 Obtain finalised task sign off from required personnel

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Oral communication	<ul style="list-style-type: none"> Articulates requirements and responsibilities distinctively, using effective communication techniques and industry standard technical language intended for audience and environment
Reading	<ul style="list-style-type: none"> Critically analyses documentation from a variety of sources and records, and consolidates the information to determine requirements
Writing	<ul style="list-style-type: none"> Writes and edits computer code, and technical data using correct syntax and logical flow
Planning and organising	<ul style="list-style-type: none"> Operates from a broad conceptual plan, developing the operational detail in stages, regularly reviewing priorities and performance during implementation, and identifying and addressing issues
Problem solving	<ul style="list-style-type: none"> Systematically gathers and analyses all relevant information and evaluates options, in order to make decisions about APIs Identifies technical or conceptual issues, and applies analytical processes, to resolve issues Uses a range of digital tools and sophisticated techniques, to meet the desired outcomes
Self-management	<ul style="list-style-type: none"> Uses systematic processes, setting goals, gathering required information and identifying and evaluating options against agreed criteria
Technology	<ul style="list-style-type: none"> Demonstrates sophisticated knowledge of principles, concepts, language and practices associated with the digital world

Unit Mapping Information

Supersedes and is equivalent to ICTPRG508 Create mashups.

Assessment Requirements for ICTPRG538 Create mashups

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- create at least two mashups.

In the course of the above, the candidate must:

- document requirements and process.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- hypertext markup language (HTML), cascading style sheet (CSS) and JavaScript applicable to creating mashups
- server-side scripting language required to create mashups
- outline extensible markup language (XML), web services, Asynchronous JavaScript (AJAX), and metadata
- web design and development and how it applies to creating mashups.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- the internet
- required mashup tools and API providers
- required Web 2.0 tools
- an integrated development environment (IDE)
- organisational deliverables and technical expectations for mashup creation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTPRG540 Maintain custom software

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to maintain software to client user requirements.

It applies to individuals who may work as software developers who are required to maintain existing software.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Programming and software development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine software fault	1.1 Determine details of software faults 1.2 Identify and document technical data required to troubleshoot determined fault 1.3 Submit documentation to required personnel and seek and respond to feedback
2. Identify and isolate fault	2.1 Review program documentation and identify specific modules according to task requirements 2.2 Review the source code and identify logic errors according to technical data 2.3 Read manuals, help files and 'read me files,' and determine if there is a known fix 2.4 Conduct required testing and identify and document fault

ELEMENT	PERFORMANCE CRITERIA
	2.5 Escalate faults that cannot be identified to required personnel according to organisational procedures
3. Design fix for fault	3.1 Determine and document faults and initial fix suggestions according to organisational requirements 3.2 Determine and document alternative options and choose required solution 3.3 Determine and document impact of fix on other parts of system 3.4 Document required changes according to organisational guideline 3.5 Submit documents to required personnel and seek and respond to feedback
4. Implement fix to software	4.1 Identify and obtain access to required software development tools, source code, and libraries 4.2 Construct required fault correction code according to organisational and programming standards 4.3 Compile code for changed programs and associated modules 4.4 Correct, and resubmit required code until error free 4.5 Document changes according to organisational and programming standards
5. Test fix and associated system areas	5.1 Check logic and determine it works with test data, corrects original fault, and does not cause problems elsewhere 5.2 Request users to perform acceptance testing and document outcomes 5.3 Submit documentation to required personnel and seek and respond to feedback 5.4 Confirm acceptance by systems operations and arrange for sign-off, according to procedures

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Oral communication	<ul style="list-style-type: none">• Uses listening and questioning techniques to confirm requirements and articulate complex concepts
Reading	<ul style="list-style-type: none">• Analyses and interprets complex technical documents for specific information

SKILL	DESCRIPTION
Writing	<ul style="list-style-type: none">• Prepares technical workplace documents detailing processes and outcomes that fulfil the expectations of different stakeholders
Teamwork	<ul style="list-style-type: none">• Liaises with various stakeholders and negotiates mutually agreeable outcomes
Planning and organising	<ul style="list-style-type: none">• Takes responsibility for planning, sequencing and prioritising tasks to achieve deadlines
Problem solving	<ul style="list-style-type: none">• Identifies technical or conceptual issues, and applies analytical processes to resolve issues• Uses a range of digital tools and sophisticated techniques to meet the desired outcomes
Self-management	<ul style="list-style-type: none">• Takes personal responsibility for following explicit and implicit policies, procedures and standards
Technology	<ul style="list-style-type: none">• Demonstrates sophisticated knowledge of principles, concepts, language and practices associated with the digital world

Unit Mapping Information

Supersedes and is equivalent to ICTPRG510 Maintain custom software.

Assessment Requirements for ICTPRG540 Maintain custom software

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- maintain and fix at least one custom software application.

In the course of the above, the candidate must:

- deploy range of solutions to replicate results
- document processes and outcomes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- concepts relating to analysing a system performance compared with the system's current functionality
- processes and procedures relating to testing software systems
- industry standard hardware and software products, as they relate to system maintenance
- programming code required for the project
- program documentation required for maintaining custom software
- impact of changes on applications and systems relating to maintaining custom software
- programming standards relating to custom software.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required fault logs and help-desk reports

- software development tools, documentation and environment required for maintaining custom software
- source code and libraries required to maintain custom software.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTPRG541 Monitor and support data conversion to new ICT systems

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to monitor and support data conversion to a new Information and Communications Technology (ICT) system.

It applies to software developers who are required to convert data on new ICT systems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Programming and software development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to monitor data conversion	1.1 Determine organisational monitoring and support requirements 1.2 Obtain and analyse conversion supporting documentation from required personnel 1.3 Determine and document monitoring and support conversion plan according to organisational requirements 1.4 Determine software, hardware and environmental prerequisites in conversion plan
2. Monitor data conversion	2.1 Backup production data according to conversion plan 2.2 Validate data accuracy and integrity according to conversion specifications

ELEMENT	PERFORMANCE CRITERIA
	2.3 Identify data rejected by conversion tools, and conduct conversion plan actions 2.4 Document data rejection and errant behaviour of conversion process according to organisational requirements
3. Support conversion	3.1 Demonstrate, document and verify conversion results against conversion plan 3.2 Submit documentation to required personnel, seek and respond to feedback 3.3 Document backup copies of conversion files according to organisational requirements

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Oral communication	<ul style="list-style-type: none"> Articulates requirements and responsibilities distinctively, using effective communication techniques and industry standard technical language intended for audience and environment
Reading	<ul style="list-style-type: none"> Interprets, and critically analyses, complex texts and applies the required strategies in order to construct meaning from the supporting documentation for conversion, and when identifying prerequisites in the plan
Writing	<ul style="list-style-type: none"> Prepares technical workplace documents detailing processes and outcomes that fulfil the expectations of different stakeholders
Teamwork	<ul style="list-style-type: none"> Selects, implements and seeks to improve protocols governing communications with clients and co-workers in a range of work contexts Collaborates with others, sharing information to build strong work groups
Planning and organising	<ul style="list-style-type: none"> Sequences and schedules complex activities, monitors implementation, and manages relevant communication when taking action to confirm backup before conversion
Problem solving	<ul style="list-style-type: none"> Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering relevant information, and identifying, and evaluating options against the agreed criteria when validating data accuracy and integrity, and when verifying results Demonstrates knowledge of an increasing range of familiar problems, their symptoms and causes, actively looking for early warning signs,

SKILL	DESCRIPTION
	and implementing contingency plans in relation to the data rejected by conversion tools
Technology	<ul style="list-style-type: none">• Demonstrates sophisticated knowledge of the principles, concepts, language and practices associated with the digital world, and uses these to troubleshoot, and understand, the uses and potential of new technology, when monitoring and supporting data conversion to a new ICT system

Unit Mapping Information

Supersedes and is equivalent to ICTPRG511 Monitor and support data conversion to new ICT system.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTPRG541 Monitor and support data conversion to new ICT systems

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- implement, backup and maintain an organisation's data conversion on at least one occasion.

In the course of the above, the candidate must:

- document processes and outcomes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard data modelling methodologies required to monitor and support data conversion
- industry standard data conversion tools
- industry standard hardware and software products applicable to monitoring and supporting data conversion
- data conversion from legacy systems.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- documentation guidelines
- sample data to be converted
- data conversion tools.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTPRG542 Review developed software

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to review developed software and quality standards. This involves reviewing quality standards, determining development quality issues and reviewing specific quality areas.

It applies to senior software developers who check the quality of software produced by other programmers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Programming and software development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Review quality standard requirements	1.1 Obtain and review organisation's quality standards and software development requirements 1.2 Determine and document quality review and validation processes
2. Determine and address development quality issues	2.1 Determine and document significant impact that processes could have on quality of product under development 2.2 Conduct consultation with required personnel and determine required actions 2.3 Plan and document resource allocation across required personnel

ELEMENT	PERFORMANCE CRITERIA
3. Review quality areas	<p>3.1 Review development and validation processes and confirm alignment with defect-free software</p> <p>3.2 Examine documentation and methods for development and align supportable software requirements</p> <p>3.3 Determine and document recommendations to improve defect-free software and supportable software</p>

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Oral communication	<ul style="list-style-type: none"> Articulates requirements and responsibilities distinctively, using effective communication techniques and industry standard technical language intended for audience and environment
Reading	<ul style="list-style-type: none"> Interprets, and critically analyses, complex texts and applies required strategies, to construct meaning from the organisation's quality standards and the standards related to software development
Writing	<ul style="list-style-type: none"> Prepares technical workplace documents detailing quality standards and procedures that fulfil the expectations of different stakeholders
Teamwork	<ul style="list-style-type: none"> Collaborates with others to achieve joint outcomes, playing an active role in facilitating effective group interaction, influencing direction, and taking a leadership role on occasion
Planning and organising	<ul style="list-style-type: none"> Operates from a broad conceptual plan, developing the operational detail in stages, regularly reviewing priorities and performance during implementation, and identifying and addressing issues
Problem solving	<ul style="list-style-type: none"> Uses active listening, observational and questioning techniques in order to identify different perspectives, and confirm, clarify or revise knowledge Sequences and schedules complex activities, monitors implementation, and manages relevant communication Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering relevant information, and identifying, and evaluating options against the agreed criteria Uses analytical processes to decide on a course of action, establishing the criteria for deciding between options, and seeking input and advice from others and taking necessary action
Self-management	<ul style="list-style-type: none"> Responds to both, explicit and implicit, protocols within familiar work contexts and demonstrates knowledge of the importance of

SKILL	DESCRIPTION
	identifying, and responding to, protocols in new situations, in the context of gaining agreement on procedures
Technology	<ul style="list-style-type: none">• Demonstrates sophisticated knowledge of principles, concepts, language and practices associated with the digital world

Unit Mapping Information

Supersedes and is equivalent ICTPRG515 Review developed software.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTPRG542 Review developed software

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- review existing developed software and organisation's quality standards relevant to software development on at least one occasion.

In the course of the above, the candidate must:

- determine quality issues against quality standards and procedures that support development of defect-free products to meet client requirements
- provide feedback on the software.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard hardware and software products and quality standards that relate to reviewing developed software
- input and output drivers and operating systems used in the reviewing developed software
- procedural and object-oriented languages that relate to the reviewing and developing software
- real-time programming techniques
- testing strategies and processes
- software application measuring and estimating methodologies
- software development and configuration management processes
- software metrics development relevant to reviewing developed software.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- data dictionaries
- design specifications
- a data stream management system (DSMS)
- a simulated scenario
- Australian and international software quality standards.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTPRG543 Develop integration blueprint for ICT systems

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to document and maintain details of technology, and architectural components, incorporated into the integration blueprint for an Information and Communications Technology (ICT) system.

It applies to individuals in senior development roles, required to integrate a series of components.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Programming and software development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Review technical architecture documents	1.1 Review technical architecture documents against organisational requirements 1.2 Identify, evaluate and document technical considerations for alignment for technical best fit. 1.3 Update integration blueprint according to technical specifications and organisational requirements
2. Undertake compatibility tests	2.1 Assemble components and component technologies according to design specifications 2.2 Test components and confirm functionality against design specifications 2.3 Identify non-compliance issues against technical

ELEMENT	PERFORMANCE CRITERIA
	specifications 2.4 Update integration blueprint with compatibility testing outcomes
3. Assess risk areas	3.1 Identify and document scope of modifications required from the compatibility test 3.2 Determine and document required modifications with suppliers according to compatibility test outcomes 3.3 Record modifications to risk area in integration blueprint
4. Assess readiness for stress testing	4.1 Stabilise platform according to technical requirements 4.2 Evaluate platform compliance with technical requirements 4.3 Update and document integration blueprint for stress testing

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Interprets, and critically analyses, complex texts and applies required strategies, to construct meaning from complex texts when reviewing technical architecture documents
Writing	<ul style="list-style-type: none"> Prepares complex workplace documentation detailing processes and outcomes using required structure, layout and technical programming language
Teamwork	<ul style="list-style-type: none"> Participates in complex formal and informal conversations relevant to own role, initiating and taking the lead where required, in relation to negotiating with suppliers
Planning and organising	<ul style="list-style-type: none"> Uses a combination of formal, logical planning processes, and an increasingly intuitive knowledge of context to identify relevant information and risks, and identify, and evaluate, alternative strategies and resources Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering relevant information, and identifying and evaluating options against agreed criteria Uses analytical processes to decide on a course of action, establishing the criteria for deciding between options
Problem solving	<ul style="list-style-type: none"> Uses nuanced knowledge of context to demonstrate knowledge of anomalies and subtle deviations to normal expectations, focusing attention and remedying problems as they arise

SKILL	DESCRIPTION
Self-management	<ul style="list-style-type: none">• Uses systematic processes, setting goals, gathering required information and identifying and evaluating options against agreed criteria
Technology	<ul style="list-style-type: none">• Demonstrates a sophisticated knowledge of principles, concepts, language and practices associated with the digital world

Unit Mapping Information

Supersedes and is equivalent to ICTPRG516 Develop integration blueprint for ICT systems.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTPRG543 Develop integration blueprint for ICT systems

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- review and develop technical architecture documentation and update integration blueprint on at least two occasions.

In the course of the above, the candidate must:

- undertake component compatibility testing
- assess and minimise risk of modifications
- stabilise platform, assess compliance with the technical requirements.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard technology suppliers and components relating to developing integration blueprints
- industry development and design methodologies relevant to developing integration blueprints
- industry standard hardware and software products, features, and capabilities required for developing integration blueprints
- industry standard testing procedures for developing integration blueprints
- stress load testing principles relevant to developing integration blueprints.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- design specifications
- a high-level, diagrammatic view of the main system components.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTPRG544 Install, test and evaluate pilot version of ICT systems

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to install a pilot version of a developed Information and Communications Technology (ICT) system, test it with a small group of users, and evaluate it against required criteria.

It applies to those who are working in ICT development and deployment roles and required to test and evaluate new systems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Programming and software development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for pilot system	1.1 Determine objectives, success and acceptance criteria, and implementation for pilot system according to organisational requirement 1.2 Identify and secure technical and organisational resources required for pilot implementation 1.3 Determine executive support for the pilot 1.4 Develop project plan according to organisational policies and procedures 1.5 Submit project plan to required personnel and seek and respond to feedback
2. Install pilot system	2.1 Install and configure pilot according to project plan

ELEMENT	PERFORMANCE CRITERIA
	2.2 Verify technical readiness of the pilot against success and acceptance criteria 2.3 Test data accuracy and document outcomes in status report 2.4 Submit document to required personnel and seek and respond to feedback.
3. Test pilot system	3.1 Determine required pilot group release according to project plan 3.2 Determine and document test objectives 3.3 Determine and document new system training brief 3.4 Run the test and document outcomes 3.5 Seek and document test feedback from required personnel
4. Evaluate feedback results	4.1 Identify discrepancies between pilot system test results and pilot system requirements 4.2 Determine and document troubleshooting for discrepancies 4.3 Update and submit documentation to required personnel and obtain finalised task sign off

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Selects from, and applies, an expanding range of mathematical and problem-solving strategies in a range of contexts
Oral communication	<ul style="list-style-type: none"> Articulates ideas and requirements, using effective communication techniques and industry standard technical language intended for audience and environment
Reading	<ul style="list-style-type: none"> Interprets, and critically analyses, complex texts and applies required strategies, to construct meaning from complex texts
Writing	<ul style="list-style-type: none"> Prepares complex workplace documentation detailing processes and outcomes using required structure, layout and technical programming language
Planning and organising	<ul style="list-style-type: none"> Sequences and schedules complex activities, monitors implementation, and manages relevant communication Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering relevant information, and identifying, and evaluating, options against the agreed criteria Uses analytical processes to decide on a course of action, establishing the criteria for deciding between options, and seeking input and advice

SKILL	DESCRIPTION
	from others, before taking action when necessary
Problem solving	<ul style="list-style-type: none">• Uses nuanced knowledge of context to demonstrate knowledge of anomalies and subtle deviations to normal expectations, focusing attention and remedying problems as they arise
Technology	<ul style="list-style-type: none">• Understands the key principles and concepts, underpinning the design and operation of digital systems and tools

Unit Mapping Information

Supersedes and is equivalent to ICTPRG517 Install, test and evaluate pilot version of ICT system.

Assessment Requirements for ICTPRG544 Install, test and evaluate pilot version of ICT systems

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- install, test and evaluate a pilot system on at least one occasion.

In the course of the above, the candidate must:

- establish objectives, acceptance criteria and resource requirements
- document project plan, processes and outcomes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- role of stakeholders and degree of stakeholder involvement in the development of a pilot system
- industry standard information-gathering methodologies applicable to installing, testing and evaluating pilot systems
- industry system development and design methodologies applicable to pilot systems
- industry standard hardware and software products applicable to pilot systems
- features and capabilities of current industry-accepted system piloting methodologies
- quality assurance practices relating to installing, testing and evaluating a system.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- pilot system

- technical materials.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTPRG545 Monitor system pilots

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to monitor implementation of a system pilot, and to evaluate its performance through testing and review.

It applies to senior software developers, systems analysts or those in infrastructure operation roles, who implement systems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Programming and software development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to monitor pilot system implementation	1.1 Determine pilot system implementation requirements 1.2 Identify existing pilot and system procedures 1.3 Obtain and determine completeness and relevance of pilot support documentation 1.4 Determine and document required pilot system updates according to organisational requirements 1.5 Submit documentation to required personnel and seek and respond to feedback
2. Monitor implementation of pilot system	2.1 Supervise system functionality and integrity tests according to pilot system implementation plan 2.2 Document system functionality and integrity test findings 2.3 Determine and document technical support requirements

ELEMENT	PERFORMANCE CRITERIA
	according to organisational policies and procedures 2.4 Provide required technical support
3. Evaluate the pilot system	3.1 Review pilot operation against required pilot objectives, and success criteria and document outcomes 3.2 Prioritise implement and assess impact of required upgrades and modifications 3.3 Document the review process and submit to required personnel

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Oral communication	<ul style="list-style-type: none"> Articulates ideas and requirements, using effective communication techniques and industry standard technical language intended for audience and environment
Reading	<ul style="list-style-type: none"> Interprets and critically analyses complex texts
Writing	<ul style="list-style-type: none"> Prepares complex workplace documentation detailing review process and outcomes using required structure, layout and technical programming language
Planning and organising	<ul style="list-style-type: none"> Sequences and schedules complex activities, monitors implementation, and manages relevant communication Reflects on outcomes and feedback from others in order to identify general principles and concepts that may be applicable in new situations Uses analytical processes to decide on a course of action, establishing the criteria for deciding between options, seeking input and advice from others and taking necessary action
Problem solving	<ul style="list-style-type: none"> Takes responsibility for decisions about when, and how, to complete tasks and coordinate with others
Self-management	<ul style="list-style-type: none"> Identifies and follows relevant organisational policies and procedures
Technology	<ul style="list-style-type: none"> Understands the key principles and concepts, underpinning the design and operation of digital systems and tools

Unit Mapping Information

Supersedes and is equivalent ICTPRG518 Monitor the system pilot.

Assessment Requirements for ICTPRG545 Monitor system pilots

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- identify at least one systems pilot objective
- monitor the implementation and evaluate systems of at least one large pilot system.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard system of piloting methodologies including their general features, capabilities and acceptance criteria
- industry standard system development and design methodologies applicable to monitoring systems pilots
- industry information-gathering methodologies
- function and features of a system, including:
 - system integration
 - system response and recovery times
 - user interfaces
 - validation of inputs and outputs.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- pilot plan
- acceptance criteria
- system to be piloted.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTPRG546 Validate application designs against specifications

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to check software application designs against specifications and to apply validation techniques across the system's life cycle.

It applies to who work in the area of software development, including software project managers, testers, software engineers, system analysts and software developers, and are responsible for verifying and validating software design specifications.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Programming and software development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Evaluate software requirement specifications	1.1 Identify existing software specifications from organisational documents 1.2 Evaluate existing software against requirements and determine and document alignment 1.3 Validate software requirement specifications document with required personnel
2. Create proof of concept prototype	2.1 Create prototype system using rapid application development tools (RAD) according to specifications 2.2 Present and demonstrate prototype system to required personnel 2.3 Seek and respond to presentation feedback from required

ELEMENT	PERFORMANCE CRITERIA
	<p>personnel</p> <p>2.4 Validate the proof of concept according to organisational policies and procedures</p>
3. Evaluate software design	<p>3.1 Determine design completeness, accuracy and consistency according to proof of concept prototype</p> <p>3.2 Validate software design document according to organisational policies and procedures</p> <p>3.3 Validate database structure, elements and user interface</p> <p>3.4 Validate code and software consistency according to design document</p>
4. Evaluate the testing requirements	<p>4.1 Review and validate test plans and cases according to organisational requirements</p> <p>4.2 Document review and validation outcomes</p> <p>4.3 Submit documentation to required personnel and seek and respond to feedback</p>

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Uses mathematical formulae to calculate required equipment, undertake measurements and determine response times
Oral communication	<ul style="list-style-type: none"> Articulates information and requirements, using effective communication techniques and industry standard technical language intended for audience and environment
Reading	<ul style="list-style-type: none"> Interprets and critically analyses complex software-requirement specifications
Writing	<ul style="list-style-type: none"> Prepares complex workplace documentation detailing processes and outcomes using required structure, layout and technical programming language
Planning and organising	<ul style="list-style-type: none"> Takes audience, purpose and contextual factors into account, when making decisions about what to communicate, with whom, why, and how
Problem solving	<ul style="list-style-type: none"> Sequences and schedules complex activities, monitors implementation and manages relevant communication Takes responsibility for decisions about when, and how, to complete tasks and coordinate with others

SKILL	DESCRIPTION
	<ul style="list-style-type: none">• Uses analytical processes to decide on a course of action, establishing the criteria for deciding between options, and evaluating options against the criteria
Self-management	<ul style="list-style-type: none">• Takes full responsibility for identifying relevant organisational protocols and requirement
Technology	<ul style="list-style-type: none">• Understands the key principles and concepts underpinning the design, and operation, of digital systems and tools

Unit Mapping Information

Supersedes and is equivalent to ICTPRG520 Validate an application design against specifications.

Assessment Requirements for ICTPRG546 Validate application designs against specifications

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- interpret software specifications and validate software design, source code and testing requirements on at least one occasion.

In the course of the above, the candidate must:

- document processes and outcomes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- database design and implementation relevant to validating application designs
- business and technical modelling using UML tools at intermediate level
- industry standard software development methodologies applicable to validating application designs
- system development life cycle (SDLC)
- language used in object-oriented programming
- open-source development tools
- software-testing techniques relevant to validating application designs.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- tools to create prototype systems

- static analysis tools
- test plan and test cases.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTPRG547 Apply advanced programming skills in another language

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to undertake advanced level programming tasks using another programming language. The language may be an object-oriented language.

It applies to software developers who are required to program code.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Programming and software development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Code advanced data structures and algorithms	1.1 Design and document dynamic data structures according to programming task requirements 1.2 Implement dynamic data structures, including double-linked lists and binary trees for coding 1.3 Code using hashing techniques according to programming requirements 1.4 Code sorting algorithm using programming techniques 1.5 Code advanced searching techniques for use with complex data structures
2. Write application and	2.1 Use features of enable inter-process language communication

ELEMENT	PERFORMANCE CRITERIA
use third-party libraries	<p>through one mechanism</p> <p>2.2 Use features of language for operating system ‘signals’ to be captured and responded to</p> <p>2.3 Use third-party library in construction of an application according to programming techniques</p> <p>2.4 Write application to work within graphical user interface (GUI) computer environment</p>
3. Debug and test code	<p>3.1 Use integrated development environment (IDE) debugging facilities to debug according to software requirements</p> <p>3.2 Detect and resolve errors of syntactical, logical and design origin</p> <p>3.3 Design and document required tests</p> <p>3.4 Undertake limited testing of produced code and confirm that it complies with technical requirements</p> <p>3.5 Document the test results</p>
4. Create application	<p>4.1 Develop and document solution according to debugging test results</p> <p>4.2 Design and document algorithm and construct, and test application according to techniques</p> <p>4.3 Submit documents to required personnel and seek and respond to feedback according to organisational policies and procedures</p>

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none"> Monitors outcomes of decisions and results and identifies key concepts and principles that may be adaptable in the future
Oral communication	<ul style="list-style-type: none"> Articulates information and requirements, using effective communication techniques and industry standard technical language intended for audience and environment
Reading	<ul style="list-style-type: none"> Interprets, and critically analyses, complex texts and applies the required strategies to construct meaning from complex texts
Writing	<ul style="list-style-type: none"> Prepares complex workplace documentation detailing processes and outcomes using required structure, layout and technical programming language

SKILL	DESCRIPTION
	<ul style="list-style-type: none">Writes and edits code and technical data in a logical manner using required syntax
Planning and organising	<ul style="list-style-type: none">Accepts responsibility for planning and sequencing complex tasks and workload, negotiating key aspects with others, including required capabilities, efficiencies and effectiveness
Problem solving	<ul style="list-style-type: none">Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering relevant information, and identifying, and evaluating, options against the agreed criteriaUses analytical processes to decide on a course of action, establishing the criteria for deciding between options
Self-management	<ul style="list-style-type: none">Uses systematic processes, setting goals, gathering required information and identifying and evaluating options against agreed criteria
Technology	<ul style="list-style-type: none">Understands the key principles and concepts, underpinning the design and operation of digital systems and tools

Unit Mapping Information

Supersedes and is equivalent to ICTPRG523 Apply advanced programming skills in another language.

Assessment Requirements for ICTPRG547 Apply advanced programming skills in another language

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design and build at least one advanced application program according to a design document
- code at least one sorting algorithm
- apply at least two different techniques to optimise code.

In the course of the above, the candidate must:

- design and write code using dynamic data structures
- write code using hashing techniques, sorting algorithms and advanced searching techniques
- use language features that enable inter-process communication and responses to operating system signals
- use third-party libraries in the construction of an application, including referencing third-party documentation
- evaluate and document debugging test processes and outcomes
- test and debug code and resolve errors of a syntactical, logical and design origin.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- programming languages applicable to applying advanced programming skills in another language
- languages required for a GUI environment
- developing large-scale applications applicable to applying advanced programming skills in another language
- procedures for programming with complex data structures

- procedures for using a third-party supplied library for standard programming features.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- software development environment required to apply advanced programming skills in another language
- technical and design documentation
- organisational deliverables
- integrated development environment (IDE).

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTPRG548 Develop high-level object-oriented class specifications

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to analyse requirements and produce a set of high-level object-oriented class specifications.

It applies to those who are required to develop object designs as part of the systems design process.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Programming and software development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Analyse behaviour of objects	1.1 Analyse and document behaviour scenarios according to object design requirements 1.2 Identify classes, objects and abstract data types according to object design requirements 1.3 Prepare class, object, module and process diagrams according to object-oriented class specifications
2. Prepare state model	2.1 Analyse data requirements and iterate data flows according to object design requirements 2.2 Determine and document required state-transition diagrams 2.3 Seek respond to feedback from required personnel, and update abstract data types and specifications according to

ELEMENT	PERFORMANCE CRITERIA
	feedback
3. Describe roles and responsibilities of classes	3.1 Review functional requirements, assign responsibilities and update class structures according to task requirements 3.2 Determine and document interface and class communication requirements 3.3 Determine and document required interaction diagrams
4. Iterate and review object model	4.1 Review and document finding of current object model, class functionality and data transformation 4.2 Identify and develop class relationships, priorities, and the inheritance hierarchy according to object-oriented class specifications 4.3 Analyse and document class-service requirements and initial test criteria 4.4 Identify and document object processes and reuse classes 4.5 Submit documentation to required personnel and seek and respond to feedback according to organisational requirements

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Oral communication	<ul style="list-style-type: none"> Articulates information and requirements, using effective communication techniques and industry standard technical language intended for audience and environment
Reading	<ul style="list-style-type: none"> Interprets, and analyses, complex technical documentation
Writing	<ul style="list-style-type: none"> Accurately records and completes documentation according to organisational formats and procedures
Teamwork	<ul style="list-style-type: none"> Shares knowledge, information and experience openly, liaising with colleagues to achieve the best possible outcome
Planning and organising	<ul style="list-style-type: none"> Operates from a broad conceptual plan, developing the operational detail in stages, regularly reviewing priorities and performance during implementation, and identifying and addressing issues
Problem solving	<ul style="list-style-type: none"> Uses a range of digitally based technologies to access, extract and share relevant information, in order to achieve the required outcomes Identifies technical or conceptual issues, and applies analytical processes, to resolve these issues

SKILL	DESCRIPTION
	<ul style="list-style-type: none">• Uses analytical and lateral thinking to review current practices, and to develop new or improved software or
Self-management	<ul style="list-style-type: none">• Uses systematic processes, setting goals, gathering required information and identifying and evaluating options against agreed criteria
Technology	<ul style="list-style-type: none">• Uses analytical and lateral thinking to review current practices, and to develop new or improved software or systems

Assessment Requirements for ICTPRG548 Develop high-level object-oriented class specifications

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- specify and model abstract for at least two different data types
- specify the interface between classes and objects, and document results on at least one occasion.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- configuration management applicable to developing high-level object-oriented class specification
- industry standard object-oriented methodologies that may be used to specify high-level object-oriented class specifications
- industry standard program development methodologies applicable to developing high-level object-oriented class specification
- data modelling techniques
- object-oriented analysis tools
- quality assurance practice applicable to developing high-level object-oriented class specifications.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- business system and user requirement
- unified modelling language (UML) modelling tool.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTPRG549 Apply intermediate object-oriented language skills

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to undertake intermediate level programming tasks using an object-oriented programming language.

It applies to software developers in a variety of fields who are required to produce programs in object-oriented languages.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Programming and software development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Build applications	1.1 Determine and document program requirements according to object-orientated programming specifications 1.2 Divide multiple source-code files into logical units and packages and collect data in internal storage 1.3 Implement internal data-sorting and searching facilities according to object-orientated programming specifications 1.4 Employ integrated-development environment facilities and make files to automate program building 1.5 Use facilities in specific language for persisting objects to binary files and confirm program stability
2. Write interactive database programs	2.1 Design, document and implement programs that connect to the required database according to program specifications

ELEMENT	PERFORMANCE CRITERIA
	2.2 Design, document and implement programs that use language facilities according to program specifications 2.3 Design, document and implement programs that use language facilities to manipulate database structure 2.4 Write programs that deliver transactional integrity according to program requirements
3. Write graphical user interface	3.1 Employ graphical user interface (GUI) framework according to language requirements 3.2 Use standard GUI components according to object-orientated programming specifications 3.3 Respond to user and program-generated events and according to program requirements
4. Debug and test application	4.1 Examine variables and trace running code 4.2 Detect logical and coding errors according to program requirements 4.3 Examine variable contents during execution and detect and correct errors 4.4 Design and document limited tests of code 4.5 Test and document produced code and determine compliance with the program specification

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none"> Monitors outcomes of decisions and results and identifies key concepts and principles that may be adaptable in the future

Assessment Requirements for ICTPRG549 Apply intermediate object-oriented language skills

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design and build at least one simple application program from a problem scenario and program specification.

In the course of the above, the candidate must:

- use different object-oriented programming language techniques
- check code optimisation.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- data structures applicable to applying intermediate object-oriented language skills
- object-oriented programming concepts and programming language required to apply intermediate object-oriented language skills
- process and techniques related to use of a graphical user interface (GUI), to interact with an operator
- documenting applications required to apply intermediate object-oriented language skills.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- oriented design structures
- programming languages that support object-oriented development
- integrated development environment (IDE)

- database management system (DBMS).

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTPRG550 Perform ICT data conversions

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to translate Information and Communications Technology (ICT) data from one format to another, by means of a data conversion process.

It applies to those in support and implementation roles who are required to convert data from one system to another.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Programming and software development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare system for conversion	1.1 Obtain data stores required for conversion 1.2 Trial conversion work in isolated environment, secure from the production system and confirm backup solutions 1.3 Map and document required data fields according to conversion requirements 1.4 Determine field validation requirements from conversion plans, including data field legal ranges 1.5 Determine actions to be taken with the fields or records that are rejected by the conversion plan
2. Design system conversion	2.1 Design and document data conversion program modules from conversion specifications

ELEMENT	PERFORMANCE CRITERIA
	2.2 Code and test data conversion program modules according to conversion specifications 2.3 Confirm data conversion and test the converted production data 2.4 Document testing outcomes according to organisational policies and procedures
3. Perform data conversion	3.1 Estimate and document conversion time and procedures 3.2 Prepare production system for data conversion, protect data and take off-line 3.3 Determine and document data rejected and reason for rejection by conversion routines 3.4 Execute conversion program modules according to conversion plan 3.5 Document conversion process and submit to required personnel

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Interprets and analyses complex technical documentation
Writing	<ul style="list-style-type: none"> Accurately records and completes documentation according to organisational formats and procedures Writes and edits code and technical data in a logical manner using required syntax
Teamwork	<ul style="list-style-type: none"> Liaises with others to check own knowledge and confirm that the objective is being met
Planning and organising	<ul style="list-style-type: none"> Takes responsibility for planning, sequencing and prioritising tasks, in order to achieve the required outcomes
Problem solving	<ul style="list-style-type: none"> Uses nuanced knowledge of context to demonstrate knowledge of anomalies and subtle deviations to normal expectations, focusing attention and remedying problems as they arise
Technology	<ul style="list-style-type: none"> Uses a range of digital tools and sophisticated techniques to meet the desired outcomes Identifies technical or conceptual issues, and applies analytical processes, to resolve these issues

SKILL	DESCRIPTION
	<ul style="list-style-type: none">• Uses analytical and lateral thinking to review current practices, and develop new or improved software or systems

Unit Mapping Information

Supersedes and is equivalent to ICTPRG528 Perform ICT data conversion.

Assessment Requirements for ICTPRG550 Perform ICT data conversions

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- define inherent data requirements, remodel data and code conversion programs on at least one occasion.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- hardware and software products applicable to performing data conversions
- data conversion tools and data modelling methodologies applicable to performing data conversions
- legacy systems conversions required to perform data conversions
- industry standard database management system (DBMS) modelling applicable to performing data conversions.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- source data
- business quality assurance rules associated with data.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTPRG551 Apply testing techniques for software development

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to develop test strategies and implement tests to assure reliability and quality of an application.

It applies to quality assurance analysts, test analysts, testers, system testers, software testers, test leads and software developers, responsible for activities including test plan preparation, execution and maintenance, reporting of tests and defect management in an application.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Programming and software development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan and design test	1.1 Analyse and review software development specifications against organisational requirements 1.2 Determine and document test context, scope, standard and methodology 1.3 Determine and document test types, tools and input data requirements 1.4 Design and document test plan and test cases according to software testing specifications 1.5 Submit documentation to required personnel and seek and respond to feedback
2. Prepare test environment	2.1 Review documents and determine required preparation for

ELEMENT	PERFORMANCE CRITERIA
	test environment 2.2 Determine and document test environment according to software testing requirements 2.3 Build and set up test environment according to software testing requirements
3. Implement and execute test	3.1 Build input data for testing according to software testing requirements 3.2 Create test suite according to software testing requirements 3.3 Execute test cases according to software testing requirements 3.4 Create test record and store test results according to software testing requirements
4. Manage defect and testing process	4.1 Evaluate and document test results according to software testing requirements 4.2 Track, defect and verify fixes and document outcomes

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Oral communication	<ul style="list-style-type: none">• Articulates information and requirements, using effective communication techniques and industry standard technical language intended for audience and environment
Reading	<ul style="list-style-type: none">• Reviews, and evaluates, technical and business requirements
Writing	<ul style="list-style-type: none">• Prepares complex workplace documentation detailing processes and outcomes using required structure, layout and technical programming language
Planning and organising	<ul style="list-style-type: none">• Takes responsibility for planning, sequencing and prioritising processes, and tasks, to achieve the required outcomes
Problem solving	<ul style="list-style-type: none">• Applies systematic and analytical problem-solving processes, to develop the required security access control strategies
Self-management	<ul style="list-style-type: none">• Uses systematic processes, setting goals, gathering required information and identifying and evaluating options against agreed criteria
Technology	<ul style="list-style-type: none">• Uses a range of digital tools and sophisticated techniques to meet the desired outcomes

Unit Mapping Information

Supersedes and is equivalent to ICTPRG529 Apply testing techniques for software development.

Assessment Requirements for ICTPRG551 Apply testing techniques for software development

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop a test-plan document and test cases to verify completeness, reliability and performance of an application and software on at least one occasion.

In the course of the above, the candidate must:

- document and manage test results
- perform application debugging process
- re-test application.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- industry standard programming language applicable to applying testing techniques for software development
- input and output requirements applicable to testing software development
- software development life cycle (SDLC) methodologies
- system layers including data network, hardware, operating system, database management systems, web servers, application servers, and client deployment
- processes and techniques related to small-size application development.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- business, functional, system and user requirements

- system for testing.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTPRG553 Create and develop REST APIs

Modification History

Release	Comments
Release 2	This version first released with ICT Information and Communications Technology Training Package Version 7.2. Version created to correct a typographical error in the performance evidence.
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to create and implement representational state transfer (REST or RESTful) application program interfaces (APIs) in order to request and manipulate data from data sources.

The unit applies to those working as senior software developers, senior back end developers or full stack developers, and responsible for managing information and communications technology (ICT) in small-to-large enterprises.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Programming

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Create new project	1.1 Establish need and application of REST APIs according to business needs 1.2 Review, evaluate and select REST API framework according to required programming language and business needs 1.3 Review, evaluate and select required integrated development environment (IDE)

ELEMENT	PERFORMANCE CRITERIA
	1.4 Create project using IDE according to business needs 1.5 Configure and implement RESTful API in project
2. Build REST API endpoints	2.1 Build REST API end point using GET method and return a collection of records 2.2 Build REST API endpoint and return a single record 2.3 Configure REST API endpoint using POST and PUT method according to function 2.4 Build REST API endpoint using DELETE method 2.5 Test methods and confirm response status code reflects function of REST API according to business needs
3. Enable cross origin resource sharing (CORS)	3.1 Update REST API GET, POST, PUT and DELETE endpoints and confirm that simple cross-origin requests are allowed 3.2 Review and select REST API client and test simple CORS requests 3.3 Update REST API GET, POST, PUT and DELETE endpoints and allow pre-flight cross-origin requests using OPTION method 3.4 Test CORS for pre-flight request
4. Secure REST API	4.1 Review, evaluate and select method for securing REST API according to business needs 4.2 Implement authentication and authorisation for securing REST API endpoints
5. Finalise REST API	5.1 Review and evaluate industry tools and conventions for documenting REST API endpoints according to business needs 5.2 Develop documentation for REST API endpoints 5.3 Validate documentation against REST API endpoints and submit to required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Critically analyses documentation, instructions and data from a variety of sources and records, and consolidates information, in order to determine requirements and steps forwards Identifies and interprets technical material to determine and confirm

SKILL	DESCRIPTION
	job, business and systems requirements
Writing	<ul style="list-style-type: none"> Demonstrates sophisticated writing skills using specialised language, technical language and scripts and required conventions to document work
Problem solving	<ul style="list-style-type: none"> Applies systematic and analytical decision- making processes for complex situations and bug code Uses nuanced understanding of context to recognise anomalies and subtle deviations to normal expectations, focusing attention and remedying problems as they arise
Self-management	<ul style="list-style-type: none"> Takes full responsibility for following policies, procedures and legislative requirements, and identifies organisational implications of new legislation or regulation, including privacy and data use legislation Monitors progress of plans and schedules, and reviews and changes them, to meet new demands and priorities Investigates new and innovative ideas, as a means by which to continuously improve, work practices and processes through consultation, formal and analytical thinking
Technology	<ul style="list-style-type: none"> Uses complex scripts and tools required within complex systems, applications, operation systems, the internet and required software and hardware components Uses cyber security procedures and techniques to maintain data security, and systems and application integrity

Unit Mapping Information

No equivalent unit. New unit.

Assessment Requirements for ICTPRG553 Create and develop REST APIs

Modification History

Release	Comments
Release 2	This version first released with ICT Information and Communications Technology Training Package Version 7.2. Version created to correct a typographical error in the performance evidence.
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- build and test at least one representational state transfer (REST or RESTful) application program interface (API) endpoint and confirm functionality.

In the course of the above, the candidate must:

- enable cross origin resource sharing (CORS)
- use GET, POST, PUT, DELETE and PATCH methods
- secure REST API with authentication and authorisation
- document REST API work.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- features and different applications that applies to the HTTP network protocol
- features and anatomy of REST API HTTP request and response, including HTTP headers and body
- language used in programming language
- HTTP GET, POST, PUT and OPTIONS methods and features of each
- CORS methodology.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- client/user agent
- integrated development environment (IDE)
- the internet, including connectivity
- required hardware, software and applications.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTPRG554 Manage data persistence using noSQL data stores

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to implement a data store and manage data persistence using non structured query language (NoSQL) to provide automatic scaling as well as high performance and availability over semi-structured data.

The unit applies to those working as senior software developers, senior back end developers or full stack developers, and responsible for managing information and communications technology (ICT) in small-to-large enterprises (SMEs).

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Programming

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Review and select noSQL options	1.1 Confirm use and application for noSQL according to business requirements and needs 1.2 Research and compare horizontal and vertical scaling and confirm relevance and benefit of horizontal scaling according to business requirements 1.3 Research and compare noSQL technologies and traditional relational data models 1.4 Research, review and select noSQL vendor technologies according to business requirements
2. Determine and create	2.1 Design and determine data storage requirements from noSQL

ELEMENT	PERFORMANCE CRITERIA
storage of data types	<p>data store according to selected vendor technology and business requirements</p> <p>2.2 Review and select required types of noSQL data store according to business requirements</p> <p>2.3 Create partition key and determine storage place of data items</p> <p>2.4 Review and determine required partition key and ensure effective distribution of storage across partition</p>
3. Build and configure indexes	<p>3.1 Determine and select required sort key according to business requirements</p> <p>3.2 Calculate, determine and configure read and write through-puts according to business requirements</p> <p>3.3 Determine, configure and create indexes for optimising data retrieval queries</p> <p>3.4 Determine and create additional indexes</p> <p>3.5 Optimise data queries and retrievals for indexes according to business requirements</p> <p>3.6 Determine and configure time-to-live (TTL) on data objects according to business requirements</p>
4. Use queries and retrieve objects	<p>4.1 Research and select required API client for interacting with noSQL data store according to business requirements</p> <p>4.2 Substantiate and connect API client to noSQL data store instance</p> <p>4.3 Insert single data object into noSQL datastore using selected client application</p> <p>4.4 Insert multiple items in single operation</p> <p>4.5 Use query and select single object</p> <p>4.6 Use query and retrieve multiple objects in batch</p> <p>4.7 Perform query against index</p> <p>4.8 Perform query to select required attributes and project results</p>
5. Confirm interaction of objects	<p>5.1 Delete single and multiple objects according to business requirements</p> <p>5.2 Update single and multiple objects according to business requirements</p> <p>5.3 Persist objects with different data types</p> <p>5.4 Configure and confirm change event triggers and notifications according to business needs</p> <p>5.5 Test, fix and ensure responses and trigger notifications work according to business requirements</p> <p>5.6 Review and confirm data is encrypted and authorisation and authentications are active according to user and client access</p>

ELEMENT	PERFORMANCE CRITERIA
	requirements 5.7 Test and fix data persistence process according to business requirements 5.8 Document and finalise work according to business requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none">Critically analyses documentation, instructions and data from a variety of sources and records, and consolidates information in order to determine requirements and steps forwardsIdentifies and interprets technical material to determine and confirm job, business and systems requirements
Writing	<ul style="list-style-type: none">Demonstrates sophisticated writing skills using specialised language, technical language and scripts and required conventions to document work
Planning and organising	<ul style="list-style-type: none">Researches, plans and sequences complex tasks, efficiently and effectively
Problem solving	<ul style="list-style-type: none">Applies systematic and analytical decision- making processes for complex and non-routine situations and bug codeUses nuanced understanding of context to recognise anomalies and subtle deviations to normal expectations, focusing attention and remedying problems as they arise
Self-management	<ul style="list-style-type: none">Monitors progress of plans and schedules, and reviews and changes them, to meet new demands and prioritiesInvestigates new and innovative ideas, as a means by which to continuously improve, work practices and processes through consultation, formal and analytical thinking
Technology	<ul style="list-style-type: none">Uses complex scripts and tools required within complex systems, applications, operation systems, the internet and required software and hardware componentsUses cyber security procedures and techniques to maintain data security, and systems and application integrity

Assessment Requirements for ICTPRG554 Manage data persistence using noSQL data stores

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- create at least three different queries, including updating, deleting and creating data types
- create at least two indexes.

In the course of the above, the candidate must:

- specify partition and sort keys
- optimise the data.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- benefits and functions of noSQL database and schema free data persistence, as well as traditional relational data models
- methods and different features and functions between scaling out and scaling up (horizontal and vertical)
- language used in required programming language for noSQL applications
- partitioning in a noSQL environment and its related terms
- functions and features for time-to-live (TTL) requirements
- authorisation and authentications procedures and levels of responsibility according to client access requirements
- distribution of data storage across partitions
- debugging and testing methodologies and techniques
- functions and features of sort keys in noSQL storage
- features of transport encryptions, authentication and authorisation
- different noSQL data store formats, including:
 - key value

- document based
- column based
- graph based
- different noSQL data types, including:
 - numeric
 - string
 - boolean
 - complex
 - date time.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- an open source or commercial NOSQL database
- the internet, including connectivity
- required hardware, software and applications.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTPRG555 Implement Object Relational Mapping Framework for data persistence

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to implement an Object Relational Mapping (ORM) framework to map, retrieve and manage object persistence in any programming language.

The unit applies to those working as senior software developers, senior back end developers or full stack developers, and responsible for managing Information and Communications Technology (ICT) in small-to-large enterprises (SMEs).

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Programming

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Establish ORM project	1.1 Confirm use, application and need for ORM framework according to business needs 1.2 Review, select and implement ORM framework according to business needs 1.3 Design, develop and build domain object model according to business needs 1.4 Review and select data persistence technology for data store 1.5 Create mapping between domain object model and

	selected data store
2. Retrieve and manipulate objects according to ORM framework	2.1 Instantiate single object in domain model and persist in data store according to ORM framework 2.2 Instantiate collection of objects in domain model and persist in data store according to ORM framework 2.3 Retrieve objects from data store 2.4 Update object and persist changes back to data store using ORM framework 2.5 Delete data in data store 2.6 Detach data and reattach data 2.7 Implement eager loading of related domain 2.8 Implement lazy loading of related domain objects
3. Manage transactions, concurrency and errors	3.1 Handle transaction commits and rollbacks effectively according to ORM framework and business needs 3.2 Handle data persistence and concurrency effectively according to ORM framework and business needs 3.3 Implement and confirm error-handling 3.4 Test and confirm transaction success according to business needs

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Identifies and interprets technical material to determine and confirm job, business and systems requirements
Writing	<ul style="list-style-type: none"> Demonstrates sophisticated writing skills using specialised language, technical language and scripts and required conventions
Planning and organising	<ul style="list-style-type: none"> Researches, plans and sequences complex tasks, efficiently and effectively
Problem solving	<ul style="list-style-type: none"> Applies systematic and analytical decision-making processes for complex and non-routine situations and bug code Uses nuanced understanding of context to recognise anomalies and subtle deviations to normal expectations, focusing attention and remedying problems as they arise
Technology	<ul style="list-style-type: none"> Uses complex scripts and tools required within complex systems, applications, operation systems, the internet and required software and hardware components

SKILL	DESCRIPTION
	<ul style="list-style-type: none">• Uses cyber security procedures and techniques to maintain data security, and systems and application integrity

Unit Mapping Information

No equivalent unit. New unit.

Assessment Requirements for ICTPRG555 Implement Object Relational Mapping Framework for data persistence

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- use ORM framework to handle at least two different transactions
- use ORM framework to manage data persistence to create, update, read and delete operation at least once
- use ORM framework to handle concurrency when working with data persistence
- confirm and use commands affecting at least two entities to the data source.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- functions, features and uses of a database and selected data store
- language used in object-oriented (OO) programming
- different ORM framework methodologies, including:
 - database first methodology
 - object first methodology
- functions and features of an ORM framework
- testing techniques used for ORM framework
- functions and features of transactions, commits and rollbacks
- lazy and eager loading or persistent data objects
- function and use of concurrency
- testing processes for transaction success.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- integrated development environment (IDE) required to use ORM frameworks
- the internet, including connectivity
- hardware, software and applications required for the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTPRG556 Implement and use a model view controller framework

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to use a model view controller (MVC) framework within a development environment that creates and develops dynamic web architecture by convention in any language.

The unit applies to those working as senior software developers, senior back end developers or full stack developers, and responsible for managing Information and Communications Technology (ICT) in small-to-large enterprises (SMEs).

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Programming

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Create MVC project	1.1 Confirm use for MVC framework according to business needs 1.2 Review, evaluate and select Model View Controller (MVC) framework and required Integrated Development Environment (IDE) according to programming language and business needs 1.3 Review, evaluate and select MVC project template and tools 1.4 Create new project using IDE and project template
2. Use MVC framework	2.1 Create and add controllers in project according to business needs

	2.2 Create and add dynamic views 2.3 Connect view to controller 2.4 Send request from client to browser 2.5 Confirm controller receives request and builds MVC model 2.6 Confirm dynamic view is returned 2.7 Develop Controller Model and View for handling HTTP GET, POST, PUT and DELETE requests 2.8 Test and ensure function of requests
3. Finalise MVC project	3.1 Run program according to MVC framework and project requirements 3.2 Test and confirm project function 3.3 Use required debugging tools to inspect request data and model binding in controller handler 3.4 Use debugging tools to inspect HTTP request and response and confirm HTTP redirect functions 3.5 Document and save work according to business procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Critically analyses documentation, instructions and data from a variety of sources and records, and consolidates information, in order to determine requirements and steps forwards Identifies and interprets technical material to determine and confirm job, business and systems requirements
Writing	<ul style="list-style-type: none"> Demonstrates sophisticated writing skills using specialised language, technical language and scripts and required conventions Writes and edits code and technical data in a logical manner using required syntax
Planning and organising	<ul style="list-style-type: none"> Researches, plans and sequences complex tasks, efficiently and effectively
Problem solving	<ul style="list-style-type: none"> Applies systematic and analytical decision-making processes for complex and non-routine situations and bug code Uses nuanced understanding of context to recognise anomalies and subtle deviations to normal expectations, focusing attention and remedying problems as they arise
Self-management	<ul style="list-style-type: none"> Monitors progress of plans and schedules, and reviews and changes

SKILL	DESCRIPTION
	<p>them, to meet new demands and priorities</p> <ul style="list-style-type: none">Investigates new and innovative ideas, as a means by which to continuously improve, work practices and processes through consultation, formal and analytical thinking
Technology	<ul style="list-style-type: none">Uses complex scripts and tools required within complex systems, applications, operation systems, the internet and required software and hardware componentsUses cyber security procedures and techniques to maintain data security, and systems and application integrity

Unit Mapping Information

Assessment Requirements for ICTPRG556 Implement and use a model view controller framework

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- create at least one model view controller (MVC) project and confirm functionality of framework, including:
 - HTTP handlers and routes for GET, POST, PUT and DELETE requests
 - HTML templates, view models and dynamic rendering
 - HTTP request, responses and redirects.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- language used in object-oriented (OO) programming
- HTTP protocol
- functions and features of debugging and testing tools
- principles of model view controller design pattern, conventions and architecture, including:
 - scalability
 - maintainability
 - reusability
- features, structures, logic and modes of interactions between models, controllers and views, including:
 - HTTP Request/Response and redirects
 - HTTP request handlers, routes and parameters
 - Query strings and key/value pairs
 - model binding
 - convention over configuration

- HTML language, templates and dynamic rendering
- view models and data models.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- model view controller framework
- integrated development environment (IDE) required to implement MVC frameworks
- the internet, including connectivity
- required hardware, software and applications.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTPRG557 Develop applications using agile methods

Modification History

Release	Comments
Release 1	<p>This version first released with the Information and Communications Technology Training Package Version 8.0.</p> <p>Supersedes and is equivalent to ICTPRG509 Build using rapid application development.</p> <p>Updated title to better reflect unit scope and current industry processes.</p>

Application

This unit describes the skills and knowledge required to lead the rapid application development (RAD) process by analysing and adopting agile methods.

The unit applies to individuals who may work in programming roles and may be responsible for developing applications, using a range of agile information and communications technology (ICT) skills and knowledge.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Programming and software development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine application development requirements	<p>1.1 Confirm work brief and tasks according to organisational policies and procedures</p> <p>1.2 Develop prioritised plan using series of recursive and iterative stages of build according to application development requirements</p>

ELEMENT	PERFORMANCE CRITERIA
	1.3 Identify and formally allocate prioritised responsibilities across required personnel 1.4 Plan and document endorsement of reviews, administration schedules, and development milestones
2. Design and create applications	2.1 Configure application software and hardware according to work brief and prioritised plan 2.2 Coordinate initial ideation sprint according to work brief 2.3 Develop ideas generated in initial ideation sprint in consultation with required personnel 2.4 Determine required application development and web services 2.5 Configure applications according to work brief 2.6 Conduct quality assurance (QA) testing and seek feedback from required personnel 2.7 Identify and rectify bugs and issues according to organisational policies and procedures
3. Deliver applications	3.1 Seek and implement feedback from required personnel 3.2 Develop and distribute application delivery instructions to users 3.3 Save and secure application according to organisational policies and procedures 3.4 Store application in required location according to organisational policies and procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interprets and analyses complex technical documents
Writing	<ul style="list-style-type: none"> Documents technical processes and completes workplace documents, in a style and form appropriate to the audience
Oral communication	<ul style="list-style-type: none"> Liaises with users, and manages changes in design by collaborating with different stakeholders in the development process
Problem solving	<ul style="list-style-type: none"> Identifies technical and conceptual issues and applies analytical processes in order to resolve them Uses analytical and lateral thinking to review practices and to

Skill	Description
	suggest improvements

Unit Mapping Information

Supersedes and is equivalent to ICTPRG509 Build using rapid application development.

Assessment Requirements for ICTPRG557 Develop applications using agile methods

Modification History

Release	Comments
Release 1	<p>This version first released with the Information and Communications Technology Training Package Version 8.0.</p> <p>Supersedes and is equivalent to ICTPRG509 Build using rapid application development.</p> <p>Updated title to better reflect unit scope and current industry processes.</p>

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop at least two different applications using agile methods.

In the course of the above, the candidate must:

- design applications and develop high quality codes
- provide quality assurance (QA) testing and monitoring during specified timelines
- demonstrate use of code optimisers using agile techniques
- accurately document completed work
- apply required organisational policies and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- functions, features and components of agile rapid application development (RAD), including:
 - ideation sprints
 - web services
- purpose of QA practices required for agile RAD
- implications of agile methods used to develop applications on organisational considerations, including:

- product cost
- product quality
- functions and features of industry-accepted prototyping and application design tools, including computer-aided software engineering (CASE) tools
- industry-recognised programming languages used in agile application development, including:
 - JavaScript
 - C++
 - C#
 - Python
- iterative and agile application development methodologies
- organisational formats for documentation
- organisational policies and procedures and legislative requirements relating to work tasks.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- industry-accepted application design tools, code generator and prototyping software and tools
- detailed user requirements, application model and scope details
- opportunities for interaction with others
- work brief and organisational policies and procedures required to demonstrate the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTPRG603 Develop advanced mobile multi-touch applications

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to design, develop, debug, test and deploy applications for hand-held digital devices using the advanced features of these devices.

It applies to application developers, software developers, game developers, designers and testers, who work in the area of mobile applications development.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Programming and software development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Establish and work on target platform	1.1 Identify and document application requirements according to organisational requirements 1.2 Establish platform and install required development tools, and environment 1.3 Deploy completed applications target device and enable public download 1.4 Test application using an emulator and align to organisational requirements
2. Develop application for multi-touch device	2.1 Design and code application and respond to events according to device requirements 2.2 Design and code application and respond to taps, touches and gestures

ELEMENT	PERFORMANCE CRITERIA
	2.3 Design approach according to device requirements 2.4 Develop application and use autorotation and auto-resizing facilities according to device requirements
3. Develop code using features of mobile device	3.1 Determine and document features of mobile device according code specifications 3.2 Write code requiring web connectivity according to device requirements 3.3 Write code and enable communication with another device 3.4 Write code using application programming interface (API) and check relation to at least one other advanced device feature
4. Use available data persistence facilities	4.1 Write code to read and write to devices file system 4.2 Synchronise data between device and external data sources 4.3 Write code to make use of available database facilities on chosen device
5. Develop secure applications	5.1 Determine, document and apply performance objectives 5.2 Apply performance objectives according to organisational policies and procedures 5.3 Implement memory management and eliminate zombie processes according to application security requirements

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Extracts, evaluates and manipulates the mathematical information embedded in a range of tasks and texts
Oral communication	<ul style="list-style-type: none"> Articulates information and requirements, using effective communication techniques and industry standard technical language intended for audience and environment
Reading	<ul style="list-style-type: none"> Identifies, analyses, and interprets complex technical and business protocol material in order to determine business requirements
Writing	<ul style="list-style-type: none"> Accurately records and completes documentation according to organisational formats and procedures Writes and edits code and technical data in a logical manner using required syntax
Initiative and	<ul style="list-style-type: none"> Demonstrates sophisticated knowledge of the principles, concepts,

SKILL	DESCRIPTION
enterprise	language and practices associated with the digital world, and uses these to troubleshoot, and understand the uses and potential of new technology
Planning and organising	<ul style="list-style-type: none">• Uses a mix of intuitive and formal processes to identify key information and issues, evaluate alternative strategies, anticipate consequences, implementation issues and contingencies• When dealing with complex issues, may use intuition to identify common problems in building, and deploying mobile applications, and completing basic program debugging
Problem solving	<ul style="list-style-type: none">• Uses nuanced knowledge of context to demonstrate and knowledge of anomalies and subtle deviations to normal expectations, focusing attention and remedying problems as they arise
Self-management	<ul style="list-style-type: none">• Responds to both, explicit and implicit, protocols within familiar work contexts
Technology	<ul style="list-style-type: none">• Demonstrates and awareness of the importance of knowledge, monitoring, and controlling access to digitally stored and transmitted information

Unit Mapping Information

Supersedes and is equivalent to ICTPRG601 Develop advanced mobile multi-touch applications.

Assessment Requirements for ICTPRG603 Develop advanced mobile multi-touch applications

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design, build and test applications for mobile devices
- deploy applications onto at least two different types of mobile devices.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard hardware and networking, requirements of a multi-touch application
- object-oriented programming applicable to advanced mobile multi-touch applications development
- user interface designs and their application in developing multi-touch applications
- web design methodology and its integration with hand-held devices
- industry standard mobile devices that use multi-touch technologies
- extensible markup language (XML) programming and web services applicable to developing multi-touch applications
- industry standard software application development methodologies.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- at least two mobile devices
- integrated development environment (IDE)
- the internet and web services
- the server system

- industry standard tools and licences required for applicable platform.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTPRG605 Manage development of technical solutions from business specifications

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to manage the process of compiling client business specifications to produce business solutions.

It applies to those who manage complex technology projects within the Information and Communications Technology (ICT) industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Programming and software development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine business requirements	1.1 Determine and document technical and organisational requirements 1.2 Identify, summarise and document organisational business model 1.3 Determine, manage and document key stakeholder requirements
2. Evaluate impact of technical requirements	2.1 Review and document business problems, opportunities and objectives 2.2 Review hardware, software and network requirements 2.3 Determine and document processes requiring changed by

ELEMENT	PERFORMANCE CRITERIA
	the business solution 2.4 Determine and document expected impact of technical requirements on organisational business activities
3. Produce technical business solutions	3.1 Determine and document solution implementation costs 3.2 Determine and document recommendations for supplier products 3.3 Finalise and document technical solutions and align to organisational requirements

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Uses mathematical formulas and calculations to estimate and plan project costs
Oral communication	<ul style="list-style-type: none"> Uses listening and questioning techniques to convey client requirements, and articulate complex information using specific language required for audience
Reading	<ul style="list-style-type: none"> Demonstrates knowledge of and interpretation of complex technical and operational documentation, to determine and confirm job requirements
Writing	<ul style="list-style-type: none"> Prepares reports, required documentation expressing ideas and solutions and correspondence for specific audiences according to organisational procedures
Teamwork	<ul style="list-style-type: none"> Actively identifies the requirements of important communication exchanges, selecting required channels, format, tone and content to suit the purpose and audience Fosters a collaborative culture within own sphere of influence, facilitating a sense of commitment and cohesion, and highlighting, and using the strengths of those involved
Planning and organising	<ul style="list-style-type: none"> Operates from a broad conceptual plan, developing the operational detail in stages, regularly reviewing priorities and performance during implementation, and identifying and addressing issues
Problem solving	<ul style="list-style-type: none"> Uses a range of strategies to store, access and organise virtual information, recognising that design choices will influence what information is retrieved, and how it may be interpreted, and used Is aware of the importance of knowledge, monitoring and controlling access to digitally stored and transmitted information

SKILL	DESCRIPTION
	<ul style="list-style-type: none">• Uses a mix of intuitive and formal processes to identify key information and issues, evaluate alternative strategies, anticipate consequences, implementation issues and contingencies• Uses a nuanced knowledge of context to adapt varied business procedures to requirements, depending on operational contingencies, risk situations and environments
Self-management	<ul style="list-style-type: none">• Uses systematic processes, setting goals, gathering required information and identifying and evaluating options against agreed criteria
Technology	<ul style="list-style-type: none">• Demonstrates sophisticated knowledge of principles, concepts, language and practices associated with the digital world and uses these to troubleshoot, and understand, the uses and potential of new technology

Unit Mapping Information

Supersedes and is equivalent to ICTPRG602 Manage the development of technical solutions from business specifications and ICTTEN516 Produce technical solutions from business specifications.

Assessment Requirements for ICTPRG605 Manage development of technical solutions from business specifications

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- evaluate organisational requirements to produce technical solutions and apply design concepts on at least one occasion.

In the course of the above, a candidate must:

- document outcomes and processes against accepted industry practices.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- business processes applicable to managing development of technical solutions
- compatibility issues and resolution procedures relating to managing development of technical solutions
- configuration of internet protocol (IP) networks and desktop applications and the operating system (OS) applicable to managing development of technical solutions
- linking processes and procedures
- industry standard technologies, such as:
 - access and core networks
 - information and communications technology (ICT) network topologies
 - mobile cellular networks
 - network protocols and OS
 - optical networks and principles
 - radio frequency (RF) networks and principles
 - radio frequency identification (RFID) hardware and software
 - security protocols, standards and data encryption

- development platform that provides the tools to build, and deploy, applications into target platform environments.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- organisation's functional requirements and technical specifications
- database and simulation software
- organisational guidelines
- network or computer layout
- site-design software and hardware
- information on applicable ICT business solutions.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTPRG614 Create cloud computing services

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to design, build, test and deploy web services and cloud computing applications to specifications.

It applies to individuals in software engineering roles with the Information and Communications Technology (ICT) skills required to create and install web services and cloud computing applications.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Programming and software development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Design web service and cloud computing application	1.1 Identify web service and cloud computing application requirements 1.2 Determine development environment and tools required to create web service and cloud computing application 1.3 Define required web service and cloud computing application architecture and framework
2. Build web service and cloud computing application	2.1 Determine required web service functionality 2.2 Build and develop required web service 2.3 Determine required cloud application requirements 2.4 Build cloud computing application in determined environment to meet required functionality

ELEMENT	PERFORMANCE CRITERIA
3. Test web service and cloud computing application	3.1 Test web service functionality according to technical specifications 3.2 Test cloud computing functionality according to technical specifications 3.3 Seek and respond to feedback from required personnel
4. Deploy web service and cloud computing application	4.1 Deploy web service and cloud computing application to required environment 4.2 Document work and submit and obtain sign off from required personnel 4.3 Seek and respond to feedback from required personnel as required

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none">Interprets complex technical and operational documentation to determine and confirm job requirements
Writing	<ul style="list-style-type: none">Prepares complex documentation conveying completed developments using detailed languageWrites and edits code and technical data in a logical manner using required syntax and language
Oral Communication	<ul style="list-style-type: none">Uses listening and questioning techniques to confirm requirements and articulate complex concepts and matters using relevant industry for intended audience
Self-management	<ul style="list-style-type: none">Demonstrates a sophisticated knowledge of principles, concepts, language and practices associated with the digital world and uses them to troubleshoot and understand the uses and potential of new technologyDemonstrates knowledge of the importance of monitoring and controlling access to digitally stored and transmitted information
Planning and organising	<ul style="list-style-type: none">Uses a broad range of strategies to store, access and organise virtual information and demonstrates the knowledge that design choices will influence what information is retrieved and how it is interpreted and used
Problem solving	<ul style="list-style-type: none">Uses a mix of intuitive and formal processes to identify key information and issues, evaluate alternative strategies, anticipate consequences and consider implementation issues and contingencies

SKILL	DESCRIPTION
	<ul style="list-style-type: none">• Uses knowledge of context to address common problems in operating a web service and a cloud computing application and performs basic debugging when required

Unit Mapping Information

Supersedes and is equivalent to ICTPRG604 Create cloud computing services.

Assessment Requirements for ICTPRG614 Create cloud computing services

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, and to:

- design, build, test and deploy
 - at least one web service to specification that can be accessed and used from a separate web application
 - at least one cloud computing application to specification that can be accessed from different portals.

In the course of the above, the candidate must:

- document completed developments.

Knowledge Evidence

The candidate must demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit. This includes knowledge of:

- agile methodology to design, build, test and deploy web services and cloud computing applications, including for:
 - determining user needs and required functionality of web services and cloud computing application
 - developing uptime strategy for designed services
- characteristics of current and emerging cloud delivery models
- development tools required to produce services deployable through cloud computing
- internet infrastructure necessary for cloud computing
- object-oriented programming and its application to cloud computing
- required languages for database access and manipulation on web.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- client and functionality requirement
- integrated development environment (IDE) for determined language
- database server with tools to access data source and develop queries
- web server for determined environment in performance evidence
- internet and web browser.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTRFN406 Maintain hybrid fibre coaxial broadband cable network

Modification History

Release	Comments
Release 2	This version released with ICT Information and Communications Technology Training Package Version 5.0.
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 2.0.

Application

This unit describes the skills and knowledge required to conduct routine maintenance tasks, analysing results and initiating corrective action.

It applies to individuals working as field officers from telecommunications carriers, service providers and contractors. They combine a broad range of optical and radio frequency (RF) technical skills with organisational skills to maintain the hybrid fibre coaxial (HFC) broadband cable network, generally with limited supervision and guidance.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the ICT Implementation Guide Companion Volume or the relevant regulator for details of licensing, legislative or certification requirements.

Unit Sector

Telecommunications – radio frequency networks

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>

<i>outcomes</i>	
1. Prepare for routine maintenance of broadband cable network	<p>1.1 Obtain relevant legislation, codes, regulations and standards for given work</p> <p>1.2 Determine HFC network elements requiring maintenance and obtain maintenance details from various HFC manufacturer equipment manuals</p> <p>1.3 Plan detailed routine maintenance schedule and discuss with all relevant personnel</p> <p>1.4 Notify network operations centre (NOC) of proposed maintenance details and maintenance schedule</p> <p>1.5 Assess potential impact of proposed maintenance on clients and network, and plan for minimal possible outage or deferral of maintenance</p> <p>1.6 Obtain necessary tools and resources, and test equipment to undertake maintenance</p> <p>1.7 Ascertain and record recent network stability and network performance</p>
2. Undertake routine HFC network maintenance tasks	<p>2.1 Conduct routine maintenance tasks according to documented enterprise instructions, following work health and safety (WHS) and environmental requirements, and record results</p> <p>2.2 Protect network from excessive interference or degradation of service during maintenance routines</p> <p>2.3 Monitor relevant alarms during running of maintenance tasks and report incidences to NOC</p> <p>2.4 Escalate unresolved faults according to established enterprise procedure</p> <p>2.5 Conduct performance measurements following routine maintenance schedule</p>
3. Analyse results and initiate corrective action	<p>3.1 Assess outcomes of performance measurements and maintenance routines to ensure they are according to specification</p> <p>3.2 Analyse identified problems for likely impact and repair within capability, and initiate or escalate repair action where repair is beyond capability</p> <p>3.3 Undertake outage if required in conjunction with NOC and according to prescribed enterprise outage plan</p> <p>3.4 Record problems and incidences in maintenance log for future action as required by maintenance agreement</p> <p>3.5 Verify alarms to ensure maintenance routines did not generate further problems</p>

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Description
Reading	<ul style="list-style-type: none">Recognises and interprets enterprise, regulatory and technical information from relevant sources to determine all specifications and frameworks
Writing	<ul style="list-style-type: none">Uses clear, specific and industry related terminology to complete and update workplace documentation and in written communications to relevant personnel
Oral Communication	<ul style="list-style-type: none">Liaises with a diverse range of personnel to provide advice and guidance using relevant languageUses listening and questioning techniques to confirm understanding
Numeracy	<ul style="list-style-type: none">Interprets numerical information and applies basic calculations to conduct performance measurements
Navigate the world of work	<ul style="list-style-type: none">Takes personal responsibility for adherence to legal and regulatory responsibilities relevant to own work, with specific reference to safety and environmental requirementsSeeks advice from others when a situation becomes too complex to manage personally
Get the work done	<ul style="list-style-type: none">Determines job priorities, resources and equipment and works logically and systematically to undertake clearly defined and familiar tasksImplements actions according to a predetermined plan, making slight adjustments if necessary and addressing some unexpected issuesTakes responsibility for routine decision making by selecting from a range of predetermined options in routine situations, identifying and taking situational factors into accountResponds to typical problems in different situations and implements standard solutionsUnderstands the purposes and specific functions of common digital systems and uses them effectively to complete routine tasksUses experiences to evaluate and identify improvements for future work

Unit Mapping Information

Code and title current version	Code and title previous version	Comments	Equivalence status
ICTRFN406 Maintain hybrid fibre coaxial broadband cable network (Release 2)	ICTRFN406 Maintain hybrid fibre coaxial broadband cable network (Release 1)	Updates to performance evidence and knowledge evidence. Updates to template to apply consistent format between units.	Equivalent unit

Assessment Requirements for ICTRFN406 Maintain hybrid fibre coaxial broadband cable network

Modification History

Release	Comments
Release 2	This version released with ICT Information and Communications Technology Training Package Version 5.0.
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 2.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- determine the performance of and maintenance requirements for the hybrid fibre coaxial (HFC) broadband cable
- prepare a maintenance schedule and planned activities, and arrange resources
- carry out maintenance activities following appropriate procedures and techniques, using approved equipment where specified
- perform radio frequency (RF) and optical measurements and analyse results
- administer corrective measures where required, and verify and document actions
- comply with site risk control, work health and safety (WHS), environmental, quality and communication requirements.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- the following terms: 16 QAM, 64 QAM, 256 QAM
- relevance of alternating current (AC) and direct current (DC) electrical equipment in HFC broadband cable network
- forward error correction (FEC) and Reed-Solomon Code

- bit error ratio (BER) and acceptable values
- constellation diagrams
- digital modulation techniques
- Data Over Cable Service Interface Specification (DOCSIS) cable modem characteristics
- future broadband cable network (BCN) and migration to all-optical cable networks
- HFC broadband cable network principles, architecture and associated equipment
- minimum standards allowable in the return path for ingress
- optical fibre characteristics
- quadrature phase shift keying (QPSK)
- services carried on the HFC broadband cable network
- spectrum utilisation of the return path showing location of telephony and data channels, and signalling and test frequencies
- video stream transport formats including:
 - digital video broadcasting (DVB) - asynchronous serial interface (ASI)
 - high definition serial digital interface (HD-SDI)
 - motion picture experts group 2 (MPEG-2)
 - standard definition serial digital interface (SD-SDI)
 - modulation error ratio (MER) and acceptable values
- types of amplifier and placement in a HFC broadband cable network
- bi-directional RF amplifier and unidirectional RF amplifier
- eye diagram interpretation
- frequency spectrum and RF frequency plan HFC broadband cable network
- use of passive devices including filter, attenuator, power inserter, coaxial splitter, coupler, multiplexer and equaliser
- calculation of overall gain or loss when given signal levels in dBmV
- coaxial transmission line characteristics including cable tilt or slope
- forward path from head end to subscriber showing expected signal levels at key points
- power supply requirements in a HFC broadband cable network
- return path from subscriber to head end showing expected signal levels at key points
- RF amplifier characteristics including gain and tilt adjustment, equalisation and overload
- forms of ingress and where they may fall in the return path
- set up, operation and interpretation of test equipment for complex tests including:
 - optical time domain reflectometer (OTDR)
 - optical power meter
 - digital signal level meter
 - RF sweep equipment
 - spectrum analyser
- hand and power tools required to assemble and disassemble equipment in pits and in elevated work situations.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- sites on which HFC maintenance may be conducted
- maintenance tools and test instruments currently used in industry
- relevant regulatory, enterprise and equipment documentation that impact on maintenance activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTRFN407 Conduct radio frequency measurements

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Application

This unit describes the skills and knowledge required to plan and undertake testing, including measuring, recording and interpreting results within all legislative and regulatory frameworks.

It applies to technicians who work in the field to install, maintain, upgrade and commission radio frequency (RF) telecommunications systems. These systems may include satellite and microwave, radio or television broadcasting, pay television, free to air television, radio frequency identification (RFID), mobile radio, cellular and worldwide interoperability for microwave access (WiMAX) networks.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Radio Frequency Networks

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan to conduct RF measurements	1.1 Access site according to enterprise procedures 1.2 Determine type of measurements required based on industry environment 1.3 Assess impact of conducting measurements on network and advise clients and appropriate person 1.4 Assess previous measurement data as required
2. Take RF	2.1 Check that prescribed safety arrangements associated with RF radiation

Elements	Performance Criteria
measurements	<p>are in place and take corrective action as required</p> <p>2.2 Monitor work activity to ensure it meets site specifications and relevant legislation, regulations, codes and standards</p> <p>2.3 Select industry approved test equipment</p> <p>2.4 Configure test equipment according to manufacturer specifications</p> <p>2.5 Conduct measurements according to planned requirements</p> <p>2.6 Assess RF levels at occupational and non-occupational distances</p> <p>2.7 Record all measurements and test configurations according to industry standards</p>
3. Analyse measurement outcomes	<p>3.1 Verify measurements against relevant standards and vendor specifications</p> <p>3.2 Assess problems and variance for corrective action, and notify appropriate person according to enterprise procedures</p> <p>3.3 Record processes and recommendations according to industry standards</p>
4. Document measurement results	<p>4.1 Complete customer documentation outlining results and recommendations</p> <p>4.2 Notify customer to obtain sign-off</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance, but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Recognises and interprets information from relevant sources to determine technical specifications and regulatory and legislative requirements
Writing	<ul style="list-style-type: none"> Uses clear, specific and industry related terminology to complete and update workplace documentation and in written communications with clients
Oral Communication	<ul style="list-style-type: none"> Uses specific and relevant language and appropriate tone to provide and ask for technical, operational and legal advice Uses listening techniques to determine understanding
Numeracy	<ul style="list-style-type: none"> Evaluates and reviews numerical information when undertaking test measurements, interpreting results, calibrating equipment and evaluating performance
Navigate the world of	<ul style="list-style-type: none"> Takes personal responsibility for adherence to legal and regulatory

Skill	Description
work	<ul style="list-style-type: none">requirements, with specific reference to safetyUnderstands the nature and purpose of own role and associated responsibilities
Get the work done	<ul style="list-style-type: none">Determines job priorities and works logically and systematically to undertake clearly defined and familiar tasksIdentifies and assembles the instruments, equipment and access required to competently undertake the jobTakes responsibility for routine decision making by selecting from a range of predetermined options in routine situations, identifying and taking situational factors into accountDiagnoses and implements standard solutions to minimise measurement errors

Unit Mapping Information

ICTRFN407 Conduct radio frequency measurements supersedes and is equivalent to ICTRFN401 Conduct radio frequency measurements.

Assessment Requirements for ICTRFN407 Conduct radio frequency measurements

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- plan and conduct radio frequency (RF) testing using appropriate equipment and instruments
- measure, record and interpret test results
- monitor work to meet related work health and safety (WHS) requirements and work practices.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes:

- legislation, regulations, codes, standards and enterprise procedures relevant to work activity
- principles and operation of the following:
 - analog and digital modulation methods
 - logarithmic units
 - standard test procedures and test set-ups
 - transmitter and receiver architectures
- principles of radio frequency (RF) operation including:
 - instrument and features and types
 - radiation hazards
 - safety practices.

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- site/s for RF measurements
- a range of test equipment and items to test
- relevant regulatory and equipment documentation that impact on work activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTRFN504 Test cellular handset enhancements and international roaming agreements

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to conduct and analyse the results of testing a subscriber's cellular phone service in a public land mobile network (PLMN) overseas and making recommendations to relevant personnel.

It applies to individuals who work as technical officers and supervisors. They are proficient in the use of specialised testing equipment, are effective communicators and operate with a high degree of autonomy.

No licensing, legislative or certification requirements apply at the time of publication.

Unit Sector

Telecommunications – radio frequency networks

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to conduct tests over cellular phone service	1.1 Identify need for tests from international roaming partners and mobile service providers according to organisational procedures and requirements 1.2 Develop enterprise test procedure according to international roaming arrangements and manufacturer requirements 1.3 Arrange access to locations where tests are to be conducted according to organisational procedures and requirements 1.4 Obtain resources needed to conduct tests according to international roaming arrangements 1.5 Advise relevant personnel of test details and schedules

ELEMENT	PERFORMANCE CRITERIA
2. Conduct tests and analyse results	2.1 Conduct tests according to schedule and organisational requirements 2.2 Analyse recorded test results for roaming compliance and functionality of subscriber identity module (SIM) card and phone enhancements
3. Document and communicate results	3.1 Record details of roaming tests, SIM card validity and functionality of phone enhancements and make recommendations to relevant personnel 3.2 Investigate and report non-compliance to roaming partners, mobile phone manufacturers and relevant personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Performs mathematical calculations to check, analyse and confirm results of system tests
Oral communication	<ul style="list-style-type: none"> Provides advice and guidance using required language with enterprise personnel, international roaming partners and clients to maintain a client focus and consider client needs Uses listening and questioning techniques to confirm knowledge
Reading	<ul style="list-style-type: none"> Recognises and interprets enterprise, regulatory and technical information from required sources to determine all specifications and frameworks
Writing	<ul style="list-style-type: none"> Uses clear, specific and industry related terminology to complete and update workplace documentation and in written communications to personnel
Problem solving	<ul style="list-style-type: none"> Determines job priorities, resources and equipment. and works logically and systematically to undertake clearly defined and familiar tasks Implements actions according to a predetermined plan, making slight adjustments and addressing unexpected challenges by implementing standard solutions
Self-management	<ul style="list-style-type: none"> Takes personal responsibility for adherence to procedures relevant to legal and regulatory requirements
Technology	<ul style="list-style-type: none"> Uses and investigates new digital technologies and applications to manage and manipulate data, and communicate with others, in a secure and stable digital environment

Unit Mapping Information

Supersedes and is equivalent to ICTRFN501 Test cellular handset enhancements and international roaming agreements.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTRFN504 Test cellular handset enhancements and international roaming agreements

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- collate required information to prepare and conduct testing of at least two cellular handset enhancements and at least two international roaming agreements.

In the course of the above, the candidate must:

- conduct tests on international roaming capability and functionality of handset enhancements
- analyse test results and communicate findings to relevant personnel
- recommend solutions based on test results.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- organisational procedures regarding:
 - international roaming agreements and arrangements
 - mobile service providers
 - manufacturer requirements
 - accessing third-party locations
- features and requirements of cellular handset enhancements
- types of enterprise testing procedures and requirements
- features and requirements of specialised roaming test equipment and test schedules
- types of mobile phone network standards and specifications
- testing and analysis procedures for cellular handsets
- required legislation, codes, company work practices, regulations and standards, work health and safety (WHS) requirements for scoped work.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site where tests on handsets and international roaming agreements may be conducted
- testing equipment currently used in industry
- equipment, system manuals, specifications and required enterprise policy and documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTRFN505 Test and measure cellular phone and network equipment performance

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to analyse test results and recommend modifications to the network.

It applies to individuals working as field officers and supervisors from network carriers, service providers, contractors and other public or private organisations who perform measurements during equipment upgrades or during commissioning and routine maintenance on cellular network equipment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – radio frequency networks

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to test cellular phone and network equipment	1.1 Obtain work details from relevant personnel and arrange for site access in compliance with required security arrangements, legislation, codes, regulations and standards 1.2 Review manufacturer technical documentation and network procedures 1.3 Obtain required test equipment in compliance with manufacturer specifications 1.4 Prepare cellular equipment for testing according to manufacturer test procedure

ELEMENT	PERFORMANCE CRITERIA
	1.5 Notify relevant personnel of test and measurement schedule
2. Test and measure cellular phone and network equipment	2.1 Configure network equipment for testing and set options to record test results in compliance with required work health and safety (WHS) and environmental regulations 2.2 Block alarms that may interfere with test 2.3 Run performance measurement software with options set and record test results 2.4 Ensure all equipment and testing locations are restored to their normal state and notify relevant personnel of test completion
3. Analyse measurement and prepare cellular phone and network equipment evaluation report	3.1 Determine performance level of cellular equipment and compatibility within the network 3.2 Prepare evaluation report, making recommendations on network modifications and changes to configuration settings 3.3 Present test results and evaluation report to relevant personnel according to enterprise policy

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Evaluates and interprets technical data and results according to predetermined specifications
Oral communication	<ul style="list-style-type: none"> Liaises with internal and external personnel about technical requirements using specific and required language Uses listening and questioning techniques
Reading	<ul style="list-style-type: none"> Recognises and interprets regulatory and technical information from required sources to determine all specifications and frameworks
Writing	<ul style="list-style-type: none"> Uses clear, specific and industry related terminology to complete and update workplace documentation and when presenting information to work associates, supervisors, team members and clients
Planning and organising	<ul style="list-style-type: none"> Determines job priorities and works logically and systematically to undertake clearly defined and familiar tasks Implements actions according to a predetermined plan, making slight adjustments if necessary and addressing some unexpected issues

SKILL	DESCRIPTION
Problem solving	<ul style="list-style-type: none">• Takes responsibility for routine decision making by selecting from a range of predetermined options in routine situations, identifying and taking some situational factors into account• Diagnoses faults in different situations, adapts procedures and modifies activities depending on operational contingencies, risk situations and environments
Self-management	<ul style="list-style-type: none">• Determines the nature and purpose of own role and associated responsibilities• Takes personal responsibility for adherence to procedures relevant to legal and regulatory requirements, with specific reference to safety
Technology	<ul style="list-style-type: none">• Determines the purposes and specific functions of common digital systems and uses them to complete routine tasks

Unit Mapping Information

Supersedes and is equivalent to ICTRFN502 Test and measure cellular phone and network equipment performance.

Assessment Requirements for ICTRFN505 Test and measure cellular phone and network equipment performance

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- test and measure at least three different types of cellular phone and network equipment performances.

In the course of the above, the candidate must:

- plan and coordinate test activities and equipment
- test cellular phone and network equipment according to test procedures
- analyse test results
- make recommendations on performance in an evaluation report.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- organisational procedures regarding:
 - accessing third-party sites
 - security arrangements
- functions and features of evaluation reports
- application of manufacturer technical documentation, test procedures, specifications and network procedures
- requirements of measurement schedules
- features and operational requirements of cellular test equipment, including the digital cellular test set, spectrum analyser and radio frequency (RF) power meter
- alarm-blocking procedures
- network components, functions and approved specifications

- information about transmission lines, transmitter and receiver architecture and associated cellular networks
- information about cellular antenna and feedlines, and their impact on mobile spectrum interference
- procedures to test network components
- types of adjustments needed when measuring cellular transmission
- types of networks that influence radio transmission paths and transmission lines
- required legislation, codes, company work practices, regulations and standards, work health and safety (WHS) requirements for scoped work.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- sites on which cellular network testing may be conducted
- test equipment currently used in industry
- manufacturer and enterprise technical documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTRFN506 Evaluate radio frequency signal coverage plots

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to combine technical radio communications, organisational and administrative skills to generate and evaluate coverage maps in commercial and community contexts for radio and television broadcasting, radio base station coverage, and point-to-point links.

It applies to individuals who are technically proficient and who work for regulatory authorities and private and public organisations. They are typically responsible for small projects or parts of larger projects, and for the coordination of small technical groups.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – radio frequency networks

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for evaluation of coverage plots	<ul style="list-style-type: none">1.1 Arrange access to site according to required procedures, required legislation, work health and safety (WHS), codes, regulations and standards1.2 Establish type of coverage plots needed by relevant personnel1.3 Determine specifications and minimum acceptable signal levels and timing signal delays within coverage area1.4 Use software to predict coverage plot dimensions1.5 Verify mapping coordinate system to be used1.6 Create custom antenna pattern files representative of expected

ELEMENT	PERFORMANCE CRITERIA
	antenna type for type of coverage required
2. Load data into software program and create coverage plot	2.1 Select and load system parameters 2.2 Select and load antenna elements and antenna pattern files 2.3 Select required propagation model settings 2.4 Load required clutter properties 2.5 Generate coverage plot using required plot options settings
3. Analyse coverage plot outcomes	3.1 Evaluate coverage plot against initial specifications 3.2 Adjust system parameters and antenna elements until coverage plot is within required specifications 3.3 Compare measured signal strength at required locations with predicted values 3.4 Use measured data to improve model 3.5 Make recommendations and ensure transmission meets operational requirements
4. Complete documentation	4.1 Tabulate results according to organisational requirements 4.2 Prepare report with final recommendations

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Evaluates and interprets technical data, converts measurements and comprehends results
Oral communication	<ul style="list-style-type: none"> Liaises with internal and external personnel about technical, operational and commercial matters using specific and required language Uses listening and questioning techniques and confirms knowledge
Reading	<ul style="list-style-type: none"> Recognises and interprets regulatory and technical information from required sources and determines all specifications and frameworks
Writing	<ul style="list-style-type: none"> Uses clear, specific and industry-related terminology to complete and update workplace documentation
Planning and organising	<ul style="list-style-type: none"> Determines job priorities and works systematically to complete clearly defined and familiar tasks Implements actions according to a predetermined plan, making

SKILL	DESCRIPTION
	necessary adjustments and addressing key issues
Problem solving	<ul style="list-style-type: none">Diagnoses faults in specific situations, adapts procedures and modifies activities depending on operational contingencies, risk situations and environments
Self-management	<ul style="list-style-type: none">Takes responsibility for adherence to procedures relevant to legal and regulatory requirements with specific reference to safetyTakes responsibility for routine decision making by selecting from a range of predetermined options in routine situations, identifying and taking situational factors into account
Technology	<ul style="list-style-type: none">Determines ways in which digital systems and tools are used and recognises all required operational applications

Unit Mapping Information

Supersedes and is equivalent to ICTRFN503 Evaluate and analyse radio frequency signal coverage plots.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTRFN506 Evaluate radio frequency signal coverage plots

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- evaluate at least three radio frequency signal coverage plots.

In the course of the above, the candidate must:

- plan and coordinate at least three activities to produce coverage plots using required software settings
- determine a path profile for a point-to-point link
- evaluate and make recommendations on antenna installation specifications.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- organisational procedures regarding:
 - accessing third-party sites
 - security arrangements
 - workplace reports and documentation
- antenna and propagation theory
- antenna array theory
- features of mapping coordinate systems and geocentric datums
- propagation models and their limitations in specific environments
- common issues across antenna installations and the creation of radiation patterns
- required legislation, codes, company work practices, regulations and standards, work health and safety (WHS) requirements for scoped work.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a computer facility on which coverage plots and paths are generated
- propagation prediction software
- a digital terrain database.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTRFN603 Monitor the capacity of and recommend changes to cellular mobile networks

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to evaluate, analyse and make recommendations at the system design level on antenna installation specifications.

It applies to individuals working as technical officers and network engineers who undertake mobile network performance measurements and report on mobile capacity enhancement to senior management.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – radio frequency networks

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan to monitor capacity of cellular mobile networks	1.1 Obtain required equipment to monitor capacity of cellular mobile networks from relevant personnel 1.2 Measure traffic levels from network management system 1.3 Obtain approved enterprise plans and identify planned network growth 1.4 Obtain client forecast data from relevant personnel 1.5 Apply identified data against capacity trigger criteria 1.6 Determine coverage and cell parameters of cellular mobile network

ELEMENT	PERFORMANCE CRITERIA
2. Make recommendations relating to capacity changes	2.1 Identify requirements for additional capacity 2.2 Recommend changes to frequency parameters and submit to relevant personnel 2.3 Assess capacity of transmission path, switch resources and recommend improvements, noting transmission medium 2.4 Manipulate traffic through switch parameter settings and relieve traffic congestion 2.5 Determine cost of proposed changes and calculate return on investment (ROI)
3. Assess monitor capacity changes of cellular mobile networks	3.1 Organise tests and studies and ensure that increased capacity adequately caters for traffic flow 3.2 Make recommendations for further change to network if increased capacity does not meet required needs

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Conducts mathematical calculations to project costs and calculate returns on investments Uses advanced mathematics methods and manipulates complex numerical data
Oral communication	<ul style="list-style-type: none"> Liaises with internal and external personnel about technical and operational matters using required language and listening Uses questioning techniques
Reading	<ul style="list-style-type: none"> Recognises and interprets technical information from required sources and determines all specifications and frameworks
Writing	<ul style="list-style-type: none"> Uses clear, specific and industry related terminology when updating workplace documentation and when presenting recommendations
Planning and organising	<ul style="list-style-type: none"> Determines job priorities and works according to defined tasks Takes responsibility for decision-making in routine situations by identifying and taking some situational factors into account Implements actions according to a predetermined plan, making adjustments if necessary and addressing unexpected issues
Problem solving	<ul style="list-style-type: none"> Diagnoses faults in different situations, adapts procedures and modifies activities depending on operational contingencies, risk

SKILL	DESCRIPTION
	situations and environments
Technology	<ul style="list-style-type: none">Determines ways in which digital systems and tools are used and recognises all required operational applications

Unit Mapping Information

Supersedes and is equivalent to ICTRFN601 Monitor the capacity of and recommend changes to the cellular mobile network.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTRFN603 Monitor the capacity of and recommend changes to cellular mobile networks

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- monitor the capacity of at least two cellular mobile networks and recommend at least two changes.

In the course of the above, the candidate must:

- source and analyse data to prepare a plan indicating growth potential and recommendations for meeting growth goals
- use tools and software packages for forecasting and measurement
- identify site and channel capacity, required network growth and forecasting growth
- adhere to legislative and organisational procedures and requirements.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- characteristics of traffic levels from network management systems
- features of enterprise plans
- functions and features of capacity trigger criteria
- coverage and cell parameters of cellular mobile networks
- types and features of transmission mediums and paths
- methods to calculate return on investment (ROI)
- blocking, non-blocking and grade of service
- features of Erlang B measurements
- features and operating requirements of required monitoring equipment
- methods to measure cell traffic capacity
- methods to:

- analyse and interpret statistical data as applied to teletraffic measurement
- prepare and conduct a capacity measurement
- required legislation, codes of practice and other formal agreements that directly impact radio communications site transmission
- functions and features of:
 - transmission lines
 - transmitter and receiver architecture and their impact on radio communications traffic
- switching architecture with specific reference to space and time switching
- types of adjustments required to meet the standards of particular sites and environmental conditions
- typical challenges that occur in telecommunications cellular capacity design and how they are addressed.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- sites with cellular mobile network
- capacity monitoring data and equipment.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTRFN804 Produce radio link budgets

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to plan and calculate fixed and mobile radio link budgets.

It applies to individuals working as network engineers who take responsibility for establishing layout of a digital radio system to minimise transmission loss and optimise system performance.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – radio frequency networks

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Analyse suitability of radio systems	1.1 Evaluate spectral efficiency of functional elements of mobile radio systems and determine optimal frequency utilisation 1.2 Analyse features of radio communication systems and evaluate effectiveness of required applications 1.3 Compare features and specifications of antennas used in radio systems to assist with radio link budgets 1.4 Report on suitability and ways to improve radio systems to relevant personnel
2. Calculate a radio link budget	2.1 Calculate path loss using variables in required propagation models and create power link budget 2.2 Evaluate power link budget against allowable power margin

ELEMENT	PERFORMANCE CRITERIA
	specifications 2.3 Evaluate modulation types and spectral efficiency according to required standards 2.4 Confirm radio power link budget achieves required criteria
3. Complete evaluation and planning documentations	3.1 Complete an evaluation report on performance of radio systems and recommend system improvements 3.2 Document processes used to determine optimal power link budget for a radio system 3.3 Communicate findings to relevant personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Analyses, synthesises and performs calculations using highly embedded mathematical information in a broad range of tasks and texts
Oral communication	<ul style="list-style-type: none"> Liaises with personnel about technical, operational and commercial matters using specific and language, using relevant listening and questioning techniques
Writing	<ul style="list-style-type: none"> Uses clear, specific and industry-related terminology to complete and update specific workplace documentation and when presenting recommendations to relevant personnel
Planning and organising	<ul style="list-style-type: none"> Determines job priorities and works to perform clearly defined and familiar tasks Uses systematic, analytical processes in complex situations, gathering required information and identifying and evaluating options against predetermined criteria
Problem solving	<ul style="list-style-type: none"> Diagnoses faults in different situations, adapts procedures and modifies activities depending on operational contingencies, risk situations and environments
Technology	<ul style="list-style-type: none"> Demonstrates sophisticated knowledge of principles, concepts, language and practices associated with the digital world and identifies consequences of new technology

Unit Mapping Information

Supersedes and is equivalent to ICTRFN801 Produce a radio link budget.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTRFN804 Produce radio link budgets

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- produce at least two fixed radio link budgets and at least two mobile radio link budgets.

In the course of the above, the candidate must:

- analyse signal degradation characteristics of radio paths and calculate power budgets for various distances and antenna heights versus transmitted power
- research at least two constraints imposed by mobile phone frequency allocations and simulate carrier to interference radiation patterns around a cell site
- create evaluation reports on radio system performance
- document at least two processes used to determine power link budget.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- high frequency (HF), very high frequency (VHF), ultra-high frequency (UHF) and microwave receiving techniques
- functions and features of modulation methods, including:
 - AM
 - FM
 - digital
- functions and features of:
 - multiplexing systems
 - operation of transmitters and receivers
 - propagation methods
 - radio communication systems

- weigh factors affecting radio frequency (RF) path loss
- RF technologies
- personal safety issues
- spectral efficiency of functional elements on mobile radio systems
- antennas
- radio system evaluation reports and system improvements
- organisational policies and procedures, covering:
 - personal safety
 - communication methods with relevant personnel
- evaluation reports on radio system performance
- required legislation, codes, company work practices, regulations and standards, work health and safety (WHS) requirements for scoped work.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a telecommunications operations site
- mobile telephony devices and equipment
- networked computers and required software.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTRFN805 Analyse cellular mobile network systems

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to analyse the detailed architecture and operation of individual cellular mobile elements and develop a plan to integrate emerging cellular technologies.

It applies to individuals working as telecommunications engineers and senior technical officers as they prepare to upgrade to next generation mobile networks.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – radio frequency networks

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Research cellular mobile network systems and interfaces to interconnected networks	1.1 Analyse interfaces between cellular mobile network and clients, including public switched telephone network (PSTN) and internet, and validate interoperability of individual systems 1.2 Research latest generation of mobile radio systems and develop plan for integration of emerging cellular technologies 1.3 Establish client expectations and required characteristics of cellular mobile network system proposed for analysis
2. Analyse constraints imposed by frequency spectrum allocations in cellular mobile	2.1 Analyse techniques to increase system capacity and fixed spectrum bandwidth 2.2 Plan frequency allocation for cellular network 2.3 Develop simulation that plots carrier to interference radiation

ELEMENT	PERFORMANCE CRITERIA
network systems	pattern for given cell geometry in reflective environment
3. Analyse operations of major subsystems of cellular mobile network	3.1 Evaluate major subsystem functions of cellular network and analyse subsystem components 3.2 Research and report how major subsystems interface to other network subsystems 3.3 Simulate transmission path for cellular network
4. Analyse capability of cellular mobile network system	4.1 Simulate traffic flow measurements in microcellular environment 4.2 Produce analytical report on cellular mobile convergence with plan and explain how cellular mobile systems can be integrated into existing networks

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none">Interprets the results of complex numerical measurements
Oral communication	<ul style="list-style-type: none">Liaises with personnel about technical and operational issues using specific and required languageUses listening and questioning techniques
Reading	<ul style="list-style-type: none">Interprets complex technical information in a variety of forms and applies the knowledge gained to evaluate different types of technical data and compare with theoretical values and approved specifications
Writing	<ul style="list-style-type: none">Uses clear, specific and industry related terminology to complete and update specific workplace documentation and when presenting recommendations to relevant personnel
Planning and organising	<ul style="list-style-type: none">Operates from a broad conceptual plan, developing the operational detail in stages, regularly reviewing priorities and performance during implementation, and identifying and addressing issues as the work progresses
Problem solving	<ul style="list-style-type: none">Uses systematic, analytical processes in complex situations, gathering required information and identifying and evaluating options against predetermined criteriaConducts testing procedures in different situations, adapts procedures and modifies activities depending on operational contingencies, risk situations and environments

SKILL	DESCRIPTION
Technology	<ul style="list-style-type: none">• Demonstrates sophisticated knowledge of principles, concepts, language and practices associated with the digital world and evaluates the potential of new technology• Uses digital technologies and manages business operations and investigates new technologies for strategic and operational purposes

Unit Mapping Information

Supersedes and is equivalent to ICTRFN802 Analyse a cellular mobile network system.

Assessment Requirements for ICTRFN805 Analyse cellular mobile network systems

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- produce at least two analytical reports that analyse the implications of integrating at least two emerging technologies into a cellular mobile network system.

In the course of the above, the candidate must:

- research existing and emerging technologies in cellular mobile network systems
- plan frequency allocations for at least one cellular network
- analyse techniques to increase system capacity for a fixed spectrum bandwidth
- develop a plan for integration of emerging cellular technologies
- functions and features of interfaces between mobile networks and clients
- research and report the interfacing of major subsystems to other network subsystems.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- allocations and bandwidth requirements of cellular systems
- efficiency and system capacity given the spectrum allocation, number of channels required and grade of service
- equipment subsystem diagnosis and repair procedures
- features and differences between major frequency bands and their allocation of licences
- features and operating requirements of cellular test equipment
- key features of cellular mobile radio systems
- major element functions of a mobile radio system
- major frequency bands and their allocation of licences
- features of microcellular systems

- features of minimising latency
- components and functions of network components
- features of transmission lines, transmitter and receiver architecture
- restrictions and characteristics of radio spectrum in use
- hazards of radio frequency (RF) and electromagnetic energy (EME)
- components and impacts of antenna performance and mobile components on mobile spectrum interference
- spectrum efficiency
- system configuration procedures
- testing network components
- types of adjustments required to measure cellular transmission
- types of networks that influence radio path/line transmission.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- sites on which cellular network analysis, research and simulation may be conducted
- test equipment currently used in industry
- manufacturer's and enterprise technical documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTRFN806 Analyse satellite communications systems

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge required for a new installation project, an upgrade of capacity or technology in an existing network or as a result of convergence to next generation networks (NGN).

It applies to individuals working as supervisors and engineers, who plan, design and implement satellite communications systems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – radio frequency networks

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Research satellite communication systems	1.1 Research satellite applications with various orbit types and assess their spatial positioning for specific purposes 1.2 Analyse and report on architecture, major subsystems and critical components in communication systems of recently launched commercial satellites 1.3 Research and report on multiple access techniques and their typical applications
2. Analyse uplink and downlink variables	2.1 Determine uplink and downlink criteria that impact on carrier-to-noise ratio 2.2 Determine up/down link criteria that impact on baseband signal-to-noise ratio

ELEMENT	PERFORMANCE CRITERIA
	2.3 Determine critical parameters of satellite system 2.4 Research common types of baseband signal processing, and their spectral and noise improvement parameters and determine criteria for link budget evaluations
3. Conduct link budget analysis	3.1 Produce satellite link budget and calculate link margin for satellite system with specified modulation types 3.2 Analyse relationship between bit-error-ratio (BER) for given energy per bit-per-noise power density (E_b/N_0) and forward error correction (FEC) parameter for determining operational performance of link
4. Analyse properties of geostationary satellites	4.1 Calculate look angles for geostationary satellite from any receiving location 4.2 Research and report on frequency re-use in conjunction with polarisation selection and use of spot beams 4.3 Analyse and specify major features of very small aperture terminal (VSAT) systems, and calculate link reliability in high rainfall regions

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Applies knowledge about space and shape, including angle properties, when analysing variables Applies knowledge about space and shape, including angle properties, when analysing variables Determines link budgets by selecting antennae size, power requirements, link availability and bit error rate (BER) by solving complex mathematical formulas
Reading	<ul style="list-style-type: none"> Interprets complex technical information in a variety of forms and applies the knowledge gained to solve complex problems by making informed judgements and assumptions
Writing	<ul style="list-style-type: none"> Uses clear, specific and industry related terminology to prepare detailed reports containing recommendations for relevant personnel
Planning and organising	<ul style="list-style-type: none"> Analyses data and seeks feedback to improve plans and processes Makes high impact decisions in a complex and diverse environment, using input from a range of sources

SKILL	DESCRIPTION
	<ul style="list-style-type: none">Identifies key factors that impact on decisions and their outcomes, drawing on experience, competing priorities and decision-making strategies where appropriateOperates from a broad conceptual plan, developing the operational detail in stages, regularly reviewing priorities and performance during implementation, and identifying and addressing issues as the work progresses
Problem solving	<ul style="list-style-type: none">Addresses complex problems involving multiple variables, using formal analytical, lateral thinking techniques, experience and knowledge to focus on the root cause
Self-management	<ul style="list-style-type: none">Takes responsibility for high impact decisions in complex situations involving many variables and constraints

Unit Mapping Information

Supersedes and is equivalent to ICTRFN803 Analyse a satellite communications system.

Assessment Requirements for ICTRFN806 Analyse satellite communications systems

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- analyse at least two satellite communications system architectures.

In the course of the above, the candidate must:

- produce a satellite link budget and calculate link margins for a range of digital modulation types
- calculate the look angles for a geostationary satellite from any receiving location
- analyse and specify the major features of very small aperture terminal (VSAT) systems.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- types of antenna calculations, including:
 - gain
 - beamwidth
 - polarisation
 - effective isotropic radiated power (EIRP)
- definition of bit error rate (BER) and how it affects satellite communications
- carrier and noise ratio calculations
- construction of constellation and eye diagrams
- methods to calculate distance to satellite and typical delays
- features of frequency spectrum (satellite bands)
- methods to calculate gain-to-noise-temperature G/T ratio
- features of geostationary orbits
- methods to calculate link budgets

- look angle calculations
- features of low earth orbiting (LEO) satellites
- modulation types that are suitable for satellite communications:
 - n-FSK:
 - 2FSK
 - 4FSK
 - n-PSK:
 - 2PSK
 - 4PSK
 - 8PSK
 - 16PSK
 - n-QAM:
 - 16 QAM
 - 256QAM
- spread spectrum techniques, including:
 - direct sequence
 - frequency hopping.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site on which satellite analysis may be conducted
- data, calculators and appropriate software tools.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTSAD402 Develop and present ICT feasibility reports

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to research and analyse system solutions and present a feasibility report to the client.

It applies to individuals who investigate potential solutions within the context of an Information and Communications Technology (ICT) project, who are required to and work within a team under some level of supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems analysis and design

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Confirm client requirements	1.1 Analyse client requirements to determine project scope, the problem and opportunity faced by the business 1.2 Document client requirements, project scope, related problems and sources of information according to organisational procedures 1.3 Submit documentation to required personnel, seek and respond to feedback according to task requirements
2. Develop high-level alternative scenarios	2.1 Obtain and compare future client requirements with current requirements 2.2 Discuss, develop and document feasible solutions for client requirements

ELEMENT	PERFORMANCE CRITERIA
	2.3 Determine and document feasibility of each solution 2.4 Identify feasibility alternatives against project constraints
3. Prepare and publish feasibility report	3.1 Develop feasibility report according to organisational policies and procedures and task requirements 3.2 Seek and respond to feasibility report feedback from required personnel 3.3 Obtain final task sign-off on report from required personnel

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Description
Numeracy	<ul style="list-style-type: none"> Applies financial modelling skills to identify, analyse and evaluate budgetary information, time durations and human resource allocations
Oral communication	<ul style="list-style-type: none"> Uses listening and questioning techniques to articulate complex concepts and requirements using relevant industry language
Reading	<ul style="list-style-type: none"> Reads and interprets specifications and other documentation from a variety of sources, and consolidates information to determine client requirements
Writing	<ul style="list-style-type: none"> Prepares documentation detailing requirements, scope and solutions to stakeholders using cohesive and instructional language
Teamwork	<ul style="list-style-type: none"> Implements strategies for a diverse range of colleagues and clients
Planning and organising	<ul style="list-style-type: none"> Accepts responsibility for planning and sequencing complex tasks and workload, negotiating key aspects with others, including required capabilities, efficiencies and effectiveness
Problem solving	<ul style="list-style-type: none"> Investigates new and innovative ideas to continuously improve work practices and processes through consultation and formal and analytical thinking

Unit Mapping Information

Supersedes and is equivalent to ICTSAD401 Develop and present feasibility reports.

Assessment Requirements for ICTSAD402 Develop and present ICT feasibility reports

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- Develop a feasibility report for a systems solution.

In the course of the above, the candidate must:

- Identify and confirm the services required
- Identify and propose feasible solutions for the client.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- client business domain, problem and opportunity potential within that environment
- functions and features of a system's functionality
- stakeholders' roles and levels of responsibility in the development of feasibility reports
- industry standard system development methodologies
- feasibility report structure and purpose
- organisational policies and procedures applicable to developing feasibility reports.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- client requirements
- report writing template
- text-editing software

- client expectations brief
- information on required Information and Communications Technology (ICT) business solutions
- organisational business processes
- budgets for business scenarios
- outcomes of business analysis process.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTSAD507 Design and implement quality assurance processes for business solutions

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to define and implement quality assurance processes and procedures to ensure business solutions achieve quality performance expectations.

It applies to senior Information and Communications Technology (ICT) staff in a range of areas who are required to ensure quality in ICT systems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems analysis and design

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan business quality assurance process	1.1 Determine legislative requirements and organisational quality performance expectations and benchmark standards 1.2 Discuss and develop organisational standards and guidelines for achieving each benchmark according to organisational procedures 1.3 Identify and analyse applicable quality management systems guides and quality management plans 1.4 Document expectations, standards and benchmarks in a quality assurance plan according to organisational documentation procedures

2. Develop quality policies and plans	<p>2.1 Write quality policy for business directive according to organisational expectations, standards and benchmarks</p> <p>2.2 Create quality management plan for business solution</p> <p>2.3 Distribute and communicate quality management plan and procedures to required personnel and obtain feedback</p> <p>2.4 Analyse feedback and determine if corrective action is required</p> <p>2.5 Amend quality management plan, as required, and incorporate corrective action</p> <p>2.6 Establish and document a quality reporting and monitoring plan according to organisational expectations, standards and benchmarks</p> <p>2.7 Check and document skills of staff and confirm ability to meet quality standards required</p>
3. Implement and control quality assurance processes	<p>3.1 Determine and allocate strategic quality responsibilities and key quality tasks and functions to required personnel according to quality management plan</p> <p>3.2 Apply quality performance guidelines, procedures and processes according to quality management plan</p> <p>3.3 Obtain stakeholder feedback and monitor implementation of quality processes</p> <p>3.4 Monitor quality process performance and report to required personnel according to quality management plan</p> <p>3.5 Identify and record system breakdowns and create corrective action requests</p> <p>3.6 Take corrective action and escalate as required according to organisational procedures</p>
4. Improve quality	<p>4.1 Collect, analyse and measure quality performance results against benchmarks and determine if quality standards are being met</p> <p>4.2 Use corrective action requests and determine frequency of quality breakdowns, whether defects are isolated incidents or require a wider analysis and corrective action</p> <p>4.3 Discuss and determine corrective actions to be taken with required personnel and assign responsibility for taking action as required</p> <p>4.4 Implement corrective action solutions and measure performance according to organisational procedures</p> <p>4.5 Review and adjust benchmark standards as required and improve quality performance</p> <p>4.6 Document quality performance results and disseminate information to required personnel as necessary</p> <p>4.7 Review organisational procedures at predetermined schedules as part of a management review process and quality reporting</p>

	function
--	----------

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Oral communication	<ul style="list-style-type: none"> Uses listening and questioning techniques to articulate complex concepts and requirements using relevant industry language
Reading	<ul style="list-style-type: none"> Critically analyses complex documentation from a variety of sources and consolidates information applicable to specific criteria in determining requirements
Writing	<ul style="list-style-type: none"> Records information and prepares documentation using required language and organisational standards
Teamwork	<ul style="list-style-type: none"> Implements strategies for a diverse range of colleagues and clients and builds rapport and fosters strong relationships
Initiative and enterprise	<ul style="list-style-type: none"> Seeks to improve policies and procedures according to organisational goals Investigates new and innovative ideas to continuously improve work practices and processes through consultation, and formal and analytical thinking
Planning and organising	<ul style="list-style-type: none"> Accepts responsibility for planning and sequencing complex tasks and workload, negotiating key aspects with others, including required capabilities, efficiencies and effectiveness Monitors progress of plans and schedules, and reviews and changes them to meet new demands and priorities
Problem solving	<ul style="list-style-type: none"> Responds intuitively to problems requiring immediate resolution, drawing on past experiences to focus on causes of a problem rather than symptoms
Self-management	<ul style="list-style-type: none"> Contributes to roles and responsibilities of self and others Selects, implements and seeks to improve protocols governing communications to clients and co-workers in a range of work contexts Elicits feedback and provides feedback to others and improves self and workgroup behaviours
Technology	<ul style="list-style-type: none"> Uses and investigates new digital technologies and applications to manage and manipulate data, and communicate with others in a secure and stable digital environment

Unit Mapping Information

Supersedes and is equivalent to ICTSAD504 Implement quality assurance processes for business solutions.

Assessment Requirements for ICTSAD507 Design and implement quality assurance processes for business solutions

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- plan and implement at least one quality assurance process for a medium sized business.

In the course of the above, the candidate must:

- construct quality standards that can be measured quantitatively and applied universally
- document quality assurance standards, policies and plans
- monitor and review quality assurance standards and processes
- adhere to legislative and organisational procedures and requirements.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- copyright and intellectual property legislation applicable to Information and Communications Technology (ICT) systems development
- legislative requirements and organisational quality performance expectations and benchmark standards
- industry standard quality management system guides, including quality management plans
- features and systems within business model
- quality assurance and quality management plans of:
 - International Organisation for Standardization (ISO)
 - International Electrotechnical Commission (IEC) standards
 - Australian Standards (AS)
- quality assurance improvement processes
- technical performance measurement techniques
- the structure of quality assurance management plans and included standards

- organisational procedures applicable to implementing quality assurance processes, including:
 - documentation standards
 - processes of reporting and monitoring quality assurance plans
 - methods and processes of measuring performance.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- industry and organisational quality assurance standards
- data applicable to business model
- required hardware, software and digital devices
- organisational guidelines and procedures applicable to quality standards.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTSAD508 Develop technical requirements for business solutions

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to develop technical and related requirements that will enable business solutions to be implemented in an organisation.

It applies to individuals responsible for performing complex technical analysis to complete a range of tasks and provide solutions to complex problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems analysis and design

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Research and establish business and business solution requirements	<ul style="list-style-type: none">1.1 Identify organisational and legislative requirements, standards and procedures applicable to business solutions1.2 Define and analyse hardware, software and network requirements of business solution1.3 Determine business model and technical specifications according to business need1.4 Establish interface requirements according to needs of end users and external parties1.5 Determine Information and Communications Technology (ICT) security requirements

	1.6 Document proposed business solution requirements and obtain approval from required personnel
2. Analyse impact of technical solutions	2.1 Define software solutions required to build business platform according to solution requirements 2.2 Identify processes requiring change by business solution 2.3 Determine impact of changes on value and supply chain 2.4 Research security protocols applicable to business solutions 2.5 Document impact of changes and submit to required personnel
3. Develop and plan implementation of business solutions	3.1 Implement hardware and software solutions for testing purposes according to organisational procedures 3.2 Identify training needs and gaps in personnel skills 3.3 Plan timelines and allocation of resources for business solution 3.4 Develop performance standards and benchmark results 3.5 Determine costs involved to implement business solution 3.6 Document business solution according to organisational procedures
4. Validate and finalise solution	4.1 Test, validate and document results of business solution according to organisational procedures 4.2 Finalise documentation and provide results to required personnel for verification 4.3 Seek feedback from required personnel, and iterate accordingly 4.4 Obtain sign-off on business solution by required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Numeracy	<ul style="list-style-type: none"> Performs mathematical calculations and analyses financial information, costs and values in determining cost of implementation

Skill	Description
Reading	<ul style="list-style-type: none">• Critically analyses complex documentation from a variety of sources and consolidates information applicable to specific criteria when determining requirements
Teamwork	<ul style="list-style-type: none">• Implements strategies for a diverse range of colleagues and clients and builds rapport and fosters strong relationships
Initiative and enterprise	<ul style="list-style-type: none">• Seeks to improve policies and procedures according to organisational goals• Investigates new and innovative ideas as a means to continuously improve work practices and processes through consultation and formal and analytical thinking
Planning and organising	<ul style="list-style-type: none">• Accepts responsibility for planning and sequencing complex tasks and workload, negotiating key aspects with others, including required capabilities, efficiencies and effectiveness• Monitors progress of plans and schedules and reviews and changes them to meet new demands and priorities
Self-management	<ul style="list-style-type: none">• Contributes to roles and responsibilities of self and others• Selects, implements and seeks to improve protocols governing communications to clients and co-workers in a range of work contexts
Technology	<ul style="list-style-type: none">• Manages and manipulates data and communicates with others in digital environments, by using and investigating new digital technologies and applications

Assessment Requirements for ICTSAD508 Develop technical requirements for business solutions

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop technical requirements for at least three business solutions.

In the course of the above, the candidate must:

- document internal and external technical environments required
- produce an impact statement of each technical solution above
- evaluate functionality of each business solution above
- comply with organisational procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- business process design
- copyright and intellectual property legislation applicable to Information and Communications Technology (ICT) systems development
- customer and business liaison processes
- technology connectivity implications
- business models and solutions
- corporate strategies which may influence business solutions
- interface requirements of end users
- key policies, procedures and documentation required to develop technical requirements for business solutions, including those related to:
 - business supply chains procedures
 - security protocols
 - time and resource management processes

- performance standards and benchmarks
- methods in calculating implementation costs of business solution
- testing and validation processes applicable to business solution
- software solutions used in building business platforms
- organisational and legislative requirements and procedures applicable to business solutions.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- business model
- business requirements and solutions
- customer relationship model
- hardware, software and network requirements
- organisational and legislative requirements
- software solutions
- processes requiring change by business solution
- security protocols applicable to business solutions
- required tools, equipment, materials and industry standard software packages.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTSAD509 Produce ICT feasibility reports

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to recommend the preferred scenario from a range of feasible options offered and produce a feasibility report to the client.

It applies to individuals responsible for researching, planning and designing solutions for complex Information and Communications Technology (ICT) projects.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems analysis and design

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Confirm client requirements	1.1 Discuss and confirm client requirements with required personnel 1.2 Determine project scope, purpose, problem context and opportunity faced by business 1.3 Identify legislative requirements and organisational standards and guidelines applicable to project scope and task 1.4 Document and review client requirements, project scope, problems and sources of information according to organisational procedures 1.5 Confirm requirements and scope with client and required personnel
2. Examine and review	2.1 Confirm future client requirements

alternatives	<p>2.2 Discuss and research feasible solutions according to client requirements</p> <p>2.3 Confirm feasibility of each solution has been assessed, including constraints and risks</p> <p>2.4 Document feasible solutions discussed according to organisational procedures</p>
3. Prepare and publish feasibility report	<p>3.1 Discuss and establish structure and components of feasibility report with required personnel</p> <p>3.2 Prepare draft feasibility report according to organisational procedures and client requirements</p> <p>3.3 Confirm completed feasibility report covers client requirements, project scope and analysis of alternative scenarios</p> <p>3.4 Seek feedback and confirm recommendation of preferred scenario with required personnel</p> <p>3.5 Amend feasibility report according to feedback as required and finalise documentation</p> <p>3.6 Present feasibility report to required personnel and seek project approval</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Oral communication	<ul style="list-style-type: none"> Uses listening and questioning techniques to determine client requirements and feedback and articulate ideas using specific language applicable to audience
Reading	<ul style="list-style-type: none"> Critically analyses complex documentation from a variety of sources and consolidates information applicable to specific criteria when determining requirements
Initiative and enterprise	<ul style="list-style-type: none"> Selects, implements and seeks to improve protocols governing communications to clients and co-workers in a range of work contexts Investigates new and innovative ideas to continuously improve work practices and processes through consultation, and formal and analytical thinking
Planning and organising	<ul style="list-style-type: none"> Accepts responsibility for planning and sequencing complex tasks and workload, negotiating key aspects with others, including required capabilities, efficiencies and effectiveness Monitors progress of plans and schedules, and reviews and changes them to meet new demands and priorities

SKILL	DESCRIPTION
Self-management	<ul style="list-style-type: none">Identifies diversity in people and manages this diversity to improve workplace relations and practices

Unit Mapping Information

Supersedes and is equivalent to ICTSAD506 Produce a feasibility report.

Assessment Requirements for ICTSAD509 Produce ICT feasibility reports

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- produce a moderately complex feasibility report according to client requirements.

In the course of the above, the candidate must:

- review documentation and confirm client requirements for project
- document at least three different alternative business solutions
- comply with legislative and organisational requirements
- obtain project sign-off from required personnel.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- the client business domain and client requirements
- legislative requirements applicable to project scope
- key organisational standards, guidelines, procedures and documentation required to produce feasibility reports
- the role of stakeholders and degree of stakeholder involvement in developing a feasibility report
- the system's functionality and improvement options.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- client requirements
- report writing template
- information on a range of Information and Communications Technology (ICT) business solutions
- future organisational business processes
- budgets for scenarios
- outcomes of business analysis process
- financial modelling
- business context
- required tools, equipment, materials, hardware and industry software packages.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTSAD510 Manage risks when implementing new technologies

Modification History

Release	Comments
Release 1	<p>This version first released with the Information and Communications Technology Training Package Version 8.0.</p> <p>Supersedes and is equivalent to ICTSAD503 Minimise risk of new technologies to business solutions.</p> <p>Supersedes and is not equivalent to:</p> <ul style="list-style-type: none">• ICTGAM419 Build a database to support a computer game• ICTNWK515 Develop configuration management protocols. <p>Updated title to better reflect unit scope.</p>

Application

This unit describes the skills and knowledge required to develop contingency plans and manage risks associated with the implementation of technological solutions. It includes assessing technological risks in organisational contexts.

The unit applies to individuals who may work as technical support staff and may be responsible for demonstrating judgement to manage implementation risks using specialised information and communications technology (ICT) skills and knowledge.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems analysis and design

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine implementation risks	1.1 Confirm work brief and tasks according to organisational policies and procedures

ELEMENT	PERFORMANCE CRITERIA
	1.2 Research and select proposed technological solution according to organisational requirements 1.3 Confirm technological solution scale and complexity 1.4 Identify key risks associated with implementing new technological solution
2. Analyse implementation risks	2.1 Identify impact of implementation risks on organisational environment 2.2 Determine and document proposed actions against identified risks 2.3 Research and document risk mitigation strategies according to analysis findings 2.4 Create contingency plan according to research and analysis findings
3. Finalise risk contingency plan	3.1 Identify and confirm required feedback channel is available 3.2 Collect and organise feedback from feedback channel 3.2 Identify and document risk testing schedule according to contingency plan 3.3 Present risk contingency plan to required personnel according to organisational policies and procedures 3.4 Implement contingency plan feedback and obtain required approval

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Oral communication	<ul style="list-style-type: none"> Uses a range of listening techniques to confirm understanding of requirements and answers questions using logical processes Presents and seeks feedback for plans using clear language
Reading	<ul style="list-style-type: none"> Critically analyses complex documentation from a variety of sources to identify risks of implementing new technologies
Writing	<ul style="list-style-type: none"> Develops documents and plans logically, succinctly and accurately
Initiative and enterprise	<ul style="list-style-type: none"> Identifies and responds to protocols in complex work contexts
Problem solving	<ul style="list-style-type: none"> Applies systematic and analytical decision-making processes

Skill	Description
	for complex and non-routine situations
Technology	<ul style="list-style-type: none">Actively identifies systems, devices and applications with potential to meet current and/or future needs

Unit Mapping Information

Supersedes and is equivalent to ICTSAD503 Minimise risk of new technologies to business solutions.

Supersedes and is not equivalent to:

- ICTGAM419 Build a database to support a computer game
- ICTNWK515 Develop configuration management protocols.

Assessment Requirements for ICTSAD510 Manage risks when implementing new technologies

Modification History

Release	Comments
Release 1	<p>This version first released with the Information and Communications Technology Training Package Version 8.0.</p> <p>Supersedes and is equivalent to ICTSAD503 Minimise risk of new technologies to business solutions.</p> <p>Supersedes and is not equivalent to:</p> <ul style="list-style-type: none">• ICTGAM419 Build a database to support a computer game• ICTNWK515 Develop configuration management protocols. <p>Updated title to better reflect unit scope.</p>

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- manage risks during the implementation of at least two different technologies
- develop at least one contingency plan
- conduct at least one risk analysis.

In the course of the above, the candidate must:

- present risk contingency plans and key insights
- apply required organisational policies and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- functions and features of common technological solutions, including:
 - accessibility technologies
 - security technologies
 - remote collaboration technologies
- key functions and features of risk analyses, including:

- likelihood of occurrence
- risk strength
- impact
- solutions
- key functions, features and limitations of implementing technological solutions, including:
 - scalability
 - complexity
 - security
 - risk factors
- key features of a technological implementation contingency plan, including:
 - testing schedules
 - detailed steps
 - review timeline
- types and functions of feedback channels
- organisational presentation methods and tools
- risk management processes
- organisational formats for documentation
- organisational policies and procedures and legislative requirements relating to work tasks.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required risk analysis tools
- organisational policies and procedures required to demonstrate the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTSAD608 Perform ICT-focused enterprise analysis

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to provide an enterprise analysis and determine possible Information and Communications Technology (ICT) solutions available for a given initiative or for long-term planning.

It applies to individuals who combine high-level management, business and technical skills required to manage complex analysis efforts within the ICT industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems analysis and design

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Define business need	<ul style="list-style-type: none">1.1 Identify and analyse business goals and objectives and link to measures1.2 Analyse business processes, model and strategies and applicable organisational policies and guidelines1.3 Identify and investigate issues and determine business problems and opportunities according to organisational requirements1.4 Discuss consequences of business problems to organisation with required personnel1.5 Identify and discuss applicable ICT solutions to business problem and speed of implementing solution1.6 Determine desired outcomes of proposed solutions

	1.7 Document research outcomes including business problems and potential solutions
2. Assess capability gaps	<p>2.1 Determine existing capabilities of organisation and relate to desired objectives and outcomes</p> <p>2.2 Identify capabilities required to achieve the desired future state and assess gaps</p> <p>2.3 Test assumptions and use results in decision making process</p> <p>2.4 Document identified capability gaps according to organisational requirements</p>
3. Determine solution approach	<p>3.1 Discuss identified ICT solutions and applicability to business objectives</p> <p>3.2 Generate assumptions and identify constraints and risks which may affect choice of solutions, according to organisational procedures</p> <p>3.3 Identify processes, tools and software required in implementing proposed solutions</p> <p>3.4 Assess and rank solution approaches and select applicable solutions</p>
4. Define solution scope	<p>4.1 Determine solution scope in terms of major features and functions to be included</p> <p>4.2 Explain implementation approach and how chosen solution will deliver solution scope to required personnel</p> <p>4.3 Identify and analyse major business and technical dependencies</p> <p>4.4 Document determined solution approach and scope according to organisational requirements</p>
5. Define business case and finalise process	<p>5.1 Identify benefits of recommended solution in terms of both qualitative and quantitative gains to organisation</p> <p>5.2 Estimate total net cost of solution</p> <p>5.3 Perform initial risk assessment</p> <p>5.4 Agree how identified costs and benefits will be assessed and evaluated</p> <p>5.5 Finalise documentation and seek feedback from required personnel</p> <p>5.6 Amend accordingly, and obtain sign-off from required personnel</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Interprets complex financial information and performs calculations in estimating costs, using highly developed numeracy skills
Oral communication	<ul style="list-style-type: none"> Uses listening and questioning techniques to articulate complex concepts and requirements using industry language
Reading	<ul style="list-style-type: none"> Critically analyses complex documentation from a variety of sources and consolidates information applicable to specific criteria when determining requirements
Writing	<ul style="list-style-type: none"> Prepares documentation analysing requirements and expressing ideas and solution scope in a logical and succinct manner
Initiative and enterprise	<ul style="list-style-type: none"> Explores and incubates new and innovative ideas through unconstrained analysis and critical thinking when developing and improving organisational goals
Planning and organising	<ul style="list-style-type: none"> Plans strategic priorities and outcomes in a diverse environment exposed to competing demands
Problem solving	<ul style="list-style-type: none"> Identifies key factors impacting decisions and their outcomes, drawing on experience, competing priorities and decision-making strategies where required
Self-management	<ul style="list-style-type: none"> Works autonomously, making high-level decisions to achieve and improve organisational goals Takes a lead role in development of organisational goals, roles and responsibilities Develops and implements strategies and confirms organisational policies, procedures and regulatory requirements are met Gathers and analyses data, and seeks feedback

Unit Mapping Information

Supersedes and is equivalent to ICTSAD601 Perform ICT-focused enterprise analysis.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTSAD608 Perform ICT-focused enterprise analysis

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- perform an ICT-focused enterprise analysis for an organisation.

In the course of the above, the candidate must:

- examine business situation in detail and document a business case for a proposed solution that addresses:
 - business need
 - required capabilities
 - solution scope
 - risk assessment
 - cost estimates
 - most feasible approach.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- business analysis processes, procedures and techniques
- business problems and opportunities, processes, models and strategies
- key organisational policies, procedures and documentation required to perform ICT focused enterprise analysis, including those related to:
 - assumption testing processes
 - organisational capabilities
- market trends and best practices in identifying business opportunities
- constraints and risks in implementing solutions
- solution implementation approaches

- methods of calculating qualitative and quantitative benefits of ICT solutions
- technology solution patterns.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- applicable organisational policies and guidelines
- information applicable to organisational goals, objectives, processes, model and strategies
- business analysis practices and tools
- reports and plans prepared for projects
- required hardware, software and its components.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTSAD609 Plan and monitor business analysis activities in an ICT environment

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to establish and manage Information and Communications Technology (ICT) business analysis activities in a medium-to-large organisation.

This unit applies to individuals who require high-level management, business and technical skills to manage complex analysis efforts within the Information and Communications Technology (ICT) industry, often as part of business-critical ICT projects.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems analysis and design

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan business analysis approach	1.1 Identify business analysis initiative and establish applicable organisational process needs and objectives 1.2 Review organisational and legislative requirements, including standards, guidelines and processes applicable to initiative 1.3 Define process requirements of business analysis initiative, according to organisational requirements 1.4 Tailor approach to needs of specific business analysis initiative, according to organisational standards

ELEMENT	PERFORMANCE CRITERIA
	1.5 Engage with required personnel and determine how work will be completed 1.6 Plan execution of business analysis activities according to organisational requirements
2. Conduct stakeholder analysis	2.1 Identify stakeholders who may be affected by business need or new solution 2.2 Assess stakeholder attitudes toward and influence over initiative 2.3 Decide which stakeholders will have authority over business analysis activities 2.4 Instigate regular reviews and identify new stakeholders and changed positions as business needs evolve
3. Plan business analysis activities and communication	3.1 Discuss and establish type of project or initiative and business analysis deliverables 3.2 Determine scope of work in business analysis activities 3.3 Establish and approve which activities the business analyst will perform and when 3.4 Develop estimates for business analysis work 3.5 Determine methods to receive, distribute, access, update and escalate information from project stakeholders 3.6 Decide how best to communicate with each stakeholder according to stakeholder needs and constraints to communication
4. Plan requirements management process	4.1 Establish a requirements repository for storing requirements, including those under development, under review, and approved requirements 4.2 Assess need and process for requirements traceability based on applicable factors 4.3 Conclude which requirements attributes will be captured 4.4 Determine requirements change management process

ELEMENT	PERFORMANCE CRITERIA
5. Manage business analysis performance	<ul style="list-style-type: none">5.1 Determine which metrics will be used when measuring work performed by business analyst5.2 Report performance in required format according to project needs5.3 Assess performance measures and determine where problems may be occurring in executing business analysis activities5.4 Identify and recommend preventative or corrective actions as required5.5 Confirm and review business analysis performance and recommended actions with required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none">• Performs mathematical calculations and analyses financial information, costs and values when determining estimates
Oral communication	<ul style="list-style-type: none">• Determines and confirms stakeholder requirements, using collaborative techniques, including active listening and questioning• Selects and implements communications systems, processes and practices with internal and external stakeholders to communicate information and build rapport
Reading	<ul style="list-style-type: none">• Critically analyses complex documentation from a variety of sources and consolidates information applicable to specific criteria when determining requirements
Writing	<ul style="list-style-type: none">• Prepares documentation expressing ideas, exploring complex issues using succinct language and logical structure
Planning and organising	<ul style="list-style-type: none">• Plans strategic priorities and outcomes within a flexible, efficient and effective context, in a diverse environment exposed to competing demands
Problem solving	<ul style="list-style-type: none">• Identifies key factors impacting decisions and their outcomes, drawing on experience, competing priorities and decision-making strategies where applicable
Self-management	<ul style="list-style-type: none">• Works autonomously, making high-level decisions to achieve and improve organisational goals• Takes a lead role in development of organisational goals, roles and responsibilities

SKILL	DESCRIPTION
	<ul style="list-style-type: none">Gathers and analyses data and seeks feedback

Unit Mapping Information

Supersedes and is equivalent to ICTSAD603 Plan and monitor business analysis activities in an ICT environment.

Assessment Requirements for ICTSAD609 Plan and monitor business analysis activities in an ICT environment

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- plan and monitor at least two different business analysis activities, including determining an approach and required processes.

In the course of the above, the candidate must:

- determine business analysis deliverables, tasks and estimates
- plan business analysis communications
- comply with organisational and legislative requirements.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- business analysis process, procedures and techniques
- project management process, procedures and techniques
- risk management strategies
- technology solution patterns
- stakeholder management techniques and processes
- communication constraints that may impact on stakeholders
- requirements management processes, procedures and techniques
- metrics used in measuring business analysis performance
- organisational and legislative requirements and procedures applicable to business analysis activities.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required tools, equipment and materials
- business requirements documentation and information
- industry software packages
- required hardware and its components
- file storage.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTSAD610 Analyse stakeholder requirements

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to analyse stated requirements, determine potential solutions, and define features available to meet stakeholder ICT needs.

This unit applies to individuals who require high-level management, business and technical skills necessary to manage complex analysis efforts within the information and communications technology (ICT) industry, often as part of business-critical ICT projects.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems analysis and design

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify and organise requirements	<ul style="list-style-type: none">1.1 Determine basis for prioritisation of requirements1.2 Resolve challenges in facilitating prioritisation according to organisational requirements1.3 Obtain and articulate stakeholder requirements according to organisational policies and guidelines1.4 Prioritise stakeholder requirements according to established procedures1.5 Discuss potential solutions to address stakeholder needs with required personnel1.6 Develop models required in describing solution scope according to informational needs of stakeholders

ELEMENT	PERFORMANCE CRITERIA
	1.7 Document dependencies and inter-relationships among requirements
2. Specify and model requirements	2.1 Develop and document textual requirements according to organisational requirements 2.2 Generate matrices, and convey and support identified requirements 2.3 Create models and communicate requirements and improvement opportunities to required personnel
3. Define assumptions and constraints	3.1 Agree on assumptions to be defined and clarified according to requirements 3.2 Document and examine business constraints and identify options no longer available 3.3 Identify and examine technical constraints which may restrict design or mandate standards to be followed
4. Verify and validate requirements	4.1 Discuss and establish characteristics of requirements' quality 4.2 Undertake verification activities iteratively throughout requirements analysis process 4.3 Identify risks and threats arising from stakeholder requirements, and manage them accordingly 4.4 Identify and define stakeholder requirement benefit assumptions and manage associated risks 4.5 Create measurable evaluation criteria and assess requirements benefit post implementation 4.6 Assign business value of requirements and identify candidates for elimination 4.7 Determine requirement dependencies for benefits realisation 4.8 Evaluate alignment with business case and opportunity cost 4.9 Document and record research and findings applicable to stakeholder requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none">• Performs mathematical calculations and interprets and manipulates complex numerical information
Oral communication	<ul style="list-style-type: none">• Presents complex information in formal situations, using required language, tone and pace applicable to audience and purpose• Uses a variety of communication tools, processes and strategies in building and maintaining working relationships
Reading	<ul style="list-style-type: none">• Critically analyses complex documentation from a variety of sources and consolidates information applicable to specific criteria when determining requirements
Writing	<ul style="list-style-type: none">• Prepares documentation expressing ideas, exploring complex issues using succinct language and logical structure• Documents outcomes and changes to discussions, using industry terminology
Initiative and enterprise	<ul style="list-style-type: none">• Explores and incubates new and innovative ideas through unconstrained analysis and critical thinking when developing and improving organisation's goals
Planning and organising	<ul style="list-style-type: none">• Plans strategic priorities and outcomes within a flexible, efficient and effective context in a diverse environment exposed to competing demands
Problem solving	<ul style="list-style-type: none">• Identifies key factors impacting decisions and their outcomes, drawing on experience, competing priorities, and decision-making strategies where required
Self-management	<ul style="list-style-type: none">• Develops and implements strategies and confirms organisational policies, procedures and regulatory requirements are being met• Gathers and analyses data and seeks feedback

Unit Mapping Information

Supersedes and is equivalent to ICTSAD606 Analyse stakeholder requirements.

Assessment Requirements for ICTSAD610 Analyse stakeholder requirements

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- define, specify and prioritise at least three different stakeholder requirements and solutions.

In the course of the above, the candidate must:

- create a model for each stakeholder requirement and solution
- document textual requirements for each stakeholder requirement and solution
- comply with stakeholder and organisational requirements.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- business rules analysis
- data flow diagramming
- data, organisation and process modelling, and applicable business and technical constraints
- functional decomposition
- key policies, procedures and documentation required to analyse stakeholder requirements
- risk management strategies for a range of stakeholder requirements
- potential solutions to a range of stakeholder requirements
- model creation procedures
- assumptions applicable to stakeholder requirements
- business and technical constraints
- verification procedures
- purpose of using scenarios, stories and case studies

- scope modelling.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required policies and legislation
- business analysis practices and tools
- required hardware, equipment and materials
- industry software packages
- stakeholder requirements
- reports and plans prepared for projects
- a portfolio of projects to be undertaken.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTSAD611 Manage assessment and validation of ICT solutions

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to determine the most applicable information and communications technology (ICT) solution and facilitate its implementation.

This unit applies to individuals who are required to assess and validate business processes, organisational structures, outsourcing agreements, software applications, and any other component of the solution to ensure that the overall solution delivers maximum value to stakeholders.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems analysis and design

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Assess proposed solutions according to stakeholder requirements	1.1 Identify and analyse solution options and additional capabilities, and confirm they meet stakeholder requirements 1.2 Rank solution options on business value, and advantages and disadvantages of alternatives 1.3 Allocate requirements to solution components and maximise business value 1.4 Facilitate allocation of requirements to specific project release, phase or iteration

ELEMENT	PERFORMANCE CRITERIA
2. Assess organisational readiness	2.1 Conduct cultural, operational and technical assessment 2.2 Perform stakeholder impact analysis 2.3 Document assessment of proposed solution
3. Define transition requirements	3.1 Evaluate old system actual data and metadata 3.2 Develop options for managing ongoing work during transition to the new solution 3.3 Participate in organisational change management recommendations and processes as required
4. Validate solution and evaluate solution performance	4.1 Investigate defective solution outputs according to organisational evaluation and valuation procedures 4.2 Identify and assess defects and issues, and discuss potential actions with required personnel 4.3 Realise value delivered by solution 4.4 Develop and validate solution metrics 4.5 Decide solution replacement or elimination 4.6 Document work performed and confirm decision with required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Oral communication	<ul style="list-style-type: none"> Uses a variety of communication tools, processes and strategies in building and maintaining working relationships
Reading	<ul style="list-style-type: none"> Critically analyses complex documentation from a variety of sources and consolidates information applicable to specific criteria when determining requirements
Writing	<ul style="list-style-type: none"> Prepares documentation expressing ideas, exploring complex issues using succinct language and logical structure
Initiative and enterprise	<ul style="list-style-type: none"> Explores and incubates new and innovative ideas through unconstrained analysis and critical thinking when developing and improving organisation's goals
Planning and organising	<ul style="list-style-type: none"> Plans strategic priorities and outcomes within a flexible, efficient and effective context, in a diverse environment exposed to competing demands

SKILL	DESCRIPTION
Problem solving	<ul style="list-style-type: none">• Addresses complex problems involving multiple variables, using formal analytical, lateral thinking techniques, experience and knowledge when focusing on root cause
Self-management	<ul style="list-style-type: none">• Takes a lead role in the development of organisational goals, roles and responsibilities• Monitors and reviews organisation's policies, procedures and adherence to requirements when implementing and managing change• Identifies diversity and seeks to integrate diversity into work context, for managing change, making decisions and achieving shared outcomes• Gathers and analyses data and seeks feedback

Unit Mapping Information

Supersedes and is equivalent to ICTSAD607 Manage assessment and validation of ICT solutions.

Assessment Requirements for ICTSAD611 Manage assessment and validation of ICT solutions

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- assess and validate at least three different proposed ICT solutions according to stakeholder requirements.

In the course of the above, the candidate must:

- compare and assess transition requirements between different solutions
- analyse output variances between at least three solutions
- recommend solutions in priority order
- confirm solution metrics and evaluate solutions
- document work performed in assessing and validating solutions.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- the business environment impacts from proposed Information and Communications Technology (ICT) solutions
- techniques used in assessing organisational readiness, including:
 - focus groups, interviews and surveys
 - risk analysis
 - SWOT analysis
 - problem tracking
- techniques for assessing options and validating solutions
- organisational change management processes
- the principles of solution performance metrics
- key policies and documentation required to assess and validate ICT solutions

- organisational procedures applicable to assessment and validation of ICT solutions.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required policies and legislation
- business analysis practices and tools
- industry software packages
- required hardware, equipment and its components
- reports and plans prepared for projects including proposed solutions
- portfolio of project work to be undertaken including stakeholder requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTSAD612 Implement and maintain uses of containerisation

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to build, deploy, run, and monitor containers, and implement micro services, with the goal of providing a more sustainable, flexible and cost-efficient Information and Communications Technology (ICT) environment.

The unit applies to those working as senior computer systems architects proficient in software development, senior software developers and those who work in DevOps roles, responsible for increasing the resource utilisation of an organisation by using containerisation as an alternative to traditional server and application infrastructure technologies. Containers are used to isolate the runtime environment for applications in order to increase portability and reduce operational costs by increasing the utilisation of resources.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems analysis and design

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Assess containerisation needs for application	1.1 Research and select vendor containerisation technology according to business needs 1.2 Obtain and review technical specifications, infrastructure and systems requirements for container service and runtime 1.3 Assess responsibility and requirements of microservice architecture according to business needs 1.4 Check and confirm installation of runtime environment for

ELEMENT	PERFORMANCE CRITERIA
	containerisation technology
2. Implement containers	<ul style="list-style-type: none">2.1 Review and select base container image according to business needs2.2 Author container image file for defining base image, working directory, application code, environment configuration and commands2.3 Determine container image name applying industry standards and conventions2.4 Build container image from authored file2.5 Run a new instance of container from image2.6 Confirm connectivity of published ports for running container instance2.7 Test, debug and fix the running instance of containerised application2.8 Run additional container instances from image2.9 Stop running container instances
3. Manage container image	<ul style="list-style-type: none">3.1 Review available options and select container image registry according to business needs3.2 Create container image repository3.3 Authenticate and connect to registry3.4 Push container image to repository3.5 Update, version and push container image to repository3.6 Pull container image from repository
4. Maintain container services	<ul style="list-style-type: none">4.1 Access logging for application and container4.2 List containers in runtime environment4.3 List container port mappings4.4 Remove container from runtime environment4.5 Monitor and display container resource usage and statistics4.6 Update configuration of container according to business needs

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
-------	-------------

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> • Designs complex algorithms • Selects from, and flexibly applies, a wide range of mathematical and problem-solving strategies, techniques, and principles when solving equations, constructing and reading flow charts and analysing data
Oral communication	<ul style="list-style-type: none"> • Uses listening and questioning skills to confirm understanding of requirements and participates in verbal exchanges of feedback resolution, ideas and solutions
Reading	<ul style="list-style-type: none"> • Critically analyses documentation, instructions and data from a variety of sources and records, and consolidates information, in order to determine requirements and steps forwards • Identifies and interprets technical material to determine and confirm job, business and systems requirements
Writing	<ul style="list-style-type: none"> • Demonstrates sophisticated writing skills using specialised language, technical language and scripts and required conventions
Teamwork	<ul style="list-style-type: none"> • Elicits feedback and provides feedback to others, in order to improve self or workgroup behaviours
Planning and organising	<ul style="list-style-type: none"> • Researches, plans and sequences complex tasks, efficiently and effectively
Problem solving	<ul style="list-style-type: none"> • Applies systematic and analytical decision- making processes for complex and non-routine situations and bug code • Uses nuanced understanding of context to recognise anomalies and subtle deviations to normal expectations, focusing attention and remedying problems as they arise in containers as well as in projects and wider systems
Self-management	<ul style="list-style-type: none"> • Takes full responsibility for following policies, procedures and legislative requirements, and identifies organisational implications of new legislation or regulation, including privacy and data use legislation • Monitors progress of plans and schedules, and reviews and changes them, to meet new demands and priorities • Investigates new and innovative ideas, as a means by which to continuously improve, work practices and processes through consultation, formal and analytical thinking
Technology	<ul style="list-style-type: none"> • Uses complex scripts and tools required within complex systems, applications, operation systems, the internet and required software and hardware components • Uses complex cyber security procedures and techniques to maintain data security, and systems and application integrity

Unit Mapping Information

No equivalent unit. New unit.

Assessment Requirements for ICTSAD612 Implement and maintain uses of containerisation

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- author at least two files for building container images
- run, test and debug a minimum of two running containers instances
- install and run at least one application within container
- monitor a minimum of two container instance in container runtime
- author, build and run container instances from at least one image with two different versions
- set up container image repository in registry and perform push and pull commands at least once.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- features and functions of operating systems
- continuous integration and continuous delivery/deployment methodology, processes and principles
- network protocols including:
 - network communications protocol
 - TCP/IP (transmission control)
- tools and features of registries, command line interface and text editor
- advanced programming language
- organisational policies and procedures for:
 - documenting work and technical requirements
 - evaluating business processes of uses of containerisation
- stages of software development life cycle (SDLC)
- procedures for implementing container services

- basic principles of:
 - computer hardware, networking, operating system, applications, database management systems, cloud solutions and components
 - IT service management systems (ITMS)
 - required programming language, including data serialisation language
 - open-source development tools
- processes for establishing and implementing business requirements for container services
- key functions and features of data flow charts
- methods for monitoring container services, including:
 - manually monitoring services
 - different organisational levels of responsibility relating to application functions.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- the internet, including connectivity
- text editor
- required hardware, software and applications
- vendor products relating to containerisation technology
- containerisation service.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTSAD613 Install and configure container orchestration services

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to install and set up orchestration services to manage the lifecycle of containers in large dynamic environments, using platforms for running multiple containers in production.

The unit applies to those working as senior computer systems architects, senior system administrators and those who work in DevOps roles, and responsible for installing, running and coordinating containerised applications, to provide flexible, scalable, predictable, available and sustainable services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems administration

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Establish and set up container orchestration services (COS)	1.1 Assess business specifications, application and business needs for container orchestration services (COS) with required personnel 1.2 Obtain and review infrastructure requirements and technical specifications for using container technologies according to business needs 1.3 Research and select suitable vendor (COS) software according to business needs 1.4 Install COS on host computer or virtual machine

	1.5 Add host computers/virtual machines/nodes using COS 1.6 Select and promote node to manage and host all nodes 1.7 Set up and confirm group of nodes run as required
2. Configure containers	2.1 Add different types of images/containers to the service 2.2 Name and move containers as required 2.3 Create pod/swarm and run container in pod 2.4 Configure scaling policy according to business need 2.5 Use instrumentation to configure scaling in and out according to business needs 2.6 Test and confirm container set up, function of containers and required resources 2.7 Finalise and create user documentation according to business needs
3. Test and maintain container service	3.1 Configure load tester to port 3.2 Register containers to central point 3.3 Use load balancer to retrieve container requests 3.4 Test requests and ensure load testing works as required
4. Manage containers according to business need	4.1 Experiment with different volumes of traffic to sites 4.2 Monitor and record metrics 4.3 Add and delete containers as required according to CPU, RAM, network traffic readings and business need 4.4 Set up container trigger alarms according to metrics and business needs 4.5 Create user documentation according to business need 4.6 Report metrics and business impact with required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Critically analyses documentation, instructions and data from a variety of sources and records, and consolidates information, in order to determine requirements and steps forwards Identifies and interprets technical material to determine and confirm job, business and systems requirements
Writing	<ul style="list-style-type: none"> Demonstrates sophisticated writing skills using specialised language, technical language and scripts and required conventions to create

SKILL	DESCRIPTION
	workplace documents
Planning and organising	<ul style="list-style-type: none">• Researches, plans and sequences complex tasks, efficiently and effectively
Problem solving	<ul style="list-style-type: none">• Applies systematic and analytical decision-making processes for complex and non-routine situations and bug code• Uses nuanced understanding of context to recognise anomalies and subtle deviations to normal expectations, focusing attention and remedying problems as they arise in containers as well as in projects and wider systems
Self-management	<ul style="list-style-type: none">• Monitors progress of plans and schedules, and reviews and changes them, to meet new demands and priorities• Investigates new and innovative ideas, as a means by which to continuously improve, work practices and processes through consultation, formal and analytical thinking

Assessment Requirements for ICTSAD613 Install and configure container orchestration services

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- configure container orchestration services on at least two host computers or virtual machines
- create and manage at least two containers using at least three different metrics to measure requests and traffic data.

In the course of the above, the candidate must:

- confirm clusters scale out and in required by demand changes and business needs
- document work.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- features and functions of operating systems
- continuous integration and continuous delivery/deployment methodology, processes and principles
- network protocols including:
 - network communications protocol
 - TCP/IP (transmission control)
 - internet protocol
- tools and features of registries, command line interface and text editor
- software development life cycle (SDLC)
- basic principles of container orchestration services:
 - pods/swarms
 - nodes

- services
- virtual machines and containers
- container dependencies
- basic principles of:
 - computer hardware, networking, operating system, database management systems, cloud solutions and components
 - applications
 - database-management systems
 - open-source development tools
 - HTTP
- organisational business needs relating to the use and deployment of containers, including cost constraints
- data flow charts applicable to installing and configuring container orchestration services
- data and metrics of user traffic to sites and applications, including:
 - RAM (random access memory)
 - CPU
 - Network traffic
- different methods of monitoring services, including:
 - manually
 - different organisational levels of responsibility relating to application functions.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- the internet, including connectivity
- required hardware, software and applications
- vendor products relating to containerisation technology
- container orchestration service
- load testing application
- text editor
- user command interface (command prompt).

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTSAD614 Lead ICT requirements elicitation

Modification History

Release	Comments
Release 1	<p>This version first released with the Information and Communications Technology Training Package Version 8.0.</p> <p>Supersedes and is equivalent to ICTSAD605 Elicit ICT requirements.</p> <p>Supersedes and is not equivalent to:</p> <ul style="list-style-type: none">• ICTICT505 Determine acceptable developers for projects• ICTSAD602 Conduct knowledge audits.

Application

This unit describes the skills and knowledge required to elicit and meet a variety of information and communications technology (ICT) requirements. It includes planning consultation activities, engaging stakeholders and eliciting ICT requirements that align with stakeholder interests across various workplace contexts.

The unit applies to individuals who may work in roles such as ICT managers and business analysts and may be independently responsible for leading stakeholder engagements to elicit and meet ICT requirements.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems analysis and design

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to elicit ICT requirements	1.1 Confirm work brief and tasks according to organisational policies and procedures

ELEMENT	PERFORMANCE CRITERIA
	1.2 Confirm project budget, timelines and stakeholder contacts required to meet organisational requirements 1.3 Analyse stakeholder engagement options and constraints according to work brief 1.4 Develop elicitation plan and document constraint mitigation strategies 1.5 Determine business analysis components through process modelling 1.6 Build detailed schedule according to elicitation plan and process models
2. Elicit ICT requirements	2.1 Assign roles through consultation with required personnel 2.2 Confirm elicitation plan, detailed schedule and expectations with required personnel 2.3 Consult with stakeholders and determine requirements according to elicitation plan 2.4 Analyse captured requirements against organisational objectives 2.5 Identify and document scope creep, where required and according to organisational requirements
3. Document elicitation results	3.1 Record elicitation outcomes in correct format according to work brief 3.2 Present elicitation outcomes and seek stakeholder feedback 3.3 Implement and record stakeholder feedback, where required 3.4 Compile required documentation, plans, process models and schedules according to work brief
4. Confirm elicitation results	4.1 Review documented outputs with stakeholders 4.2 Confirm that own understanding reflects stakeholder intentions and preferences 4.3 Obtain stakeholder agreement 4.4 File and save required workplace documentation according to organisational policies and procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
-------	-------------

Skill	Description
Oral communication	<ul style="list-style-type: none">• Confirms organisational and stakeholder requirements, using collaborative and inclusive techniques• Uses active listening to convey information and confirm knowledge• Presents findings and articulates own understanding to confirm
Reading	<ul style="list-style-type: none">• Analyses and consolidates information and data from a range of sources against defined criteria and requirements• Checks for accuracy and completeness of information and documentation
Writing	<ul style="list-style-type: none">• Accurately prepares records, correspondence and documentation using clear language, organisational formats and protocols
Planning and organising	<ul style="list-style-type: none">• Identifies and implements a communication cadence, processes and practices to engage others• Plans strategic priorities and outcomes in a flexible, efficient and effective manner in a context exposed to competing demands
Problem solving	<ul style="list-style-type: none">• Analyses insights and seeks feedback to mitigate constraints and improve project outcomes

Unit Mapping Information

Supersedes and is equivalent to ICTSAD605 Elicit ICT requirements.

Supersedes and is not equivalent to:

- ICTICT505 Determine acceptable developers for projects
- ICTSAD602 Conduct knowledge audits.

Links

Companion Volume Implementation Guide is found on VETNet - -

Assessment Requirements for ICTSAD614 Lead ICT requirements elicitation

Modification History

Release	Comments
Release 1	<p>This version first released with the Information and Communications Technology Training Package Version 8.0.</p> <p>Supersedes and is equivalent to ICTSAD605 Elicit ICT requirements.</p> <p>Supersedes and is not equivalent to:</p> <ul style="list-style-type: none">• ICTICT505 Determine acceptable developers for projects• ICTSAD602 Conduct knowledge audits.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- create at least one elicitation plan that includes at least two different elicitation techniques
- engage with at least five different stakeholders to elicit ICT requirements
- document at least three different ICT requirements identified in stakeholder consultations.

In the course of the above, the candidate must:

- monitor and document actions undertaken and key insights and findings
- apply required organisational policies and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- key stakeholder engagement requirements, including:
 - stakeholder intentions
 - stakeholder lists with demographic targets
 - business objectives
 - project budgets
 - project timelines

- techniques to identify elicitation constraints and constraint mitigation strategies
- techniques to perform process modelling
- functions and features of business analyses
- key types, functions and features of workplace documentation, including of:
 - elicitation plans
 - process models
 - schedules
- key techniques to develop detailed schedules with required components, including:
 - elicitation plan alignment
 - process models alignment
- methods of recording requirements elicited from consultations
- techniques to identify and report scope creep
- organisational formats for documentation
- methods to safely and securely file and store workplace documentation
- organisational policies and procedures and legislative requirements relating to work tasks.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- stakeholder lists and engagement tools
- opportunities for interaction with others, including a minimum of five stakeholders
- organisational policies and procedures required to demonstrate the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTSAS210 Update and maintain hardware, software and documentation inventories

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.
Release 2	Correcting an error in the Application.

Application

This unit describes the skills and knowledge required to update, store and record details of hardware, software and technical documentation within an inventory management software program.

It applies to frontline technical support personnel who work under supervision to maintain hardware, software and documentation in a small to large office environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems administration and support

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Update hardware, software and documentation inventories	1.1 Access hardware, software and documentation inventories according to organisational procedures 1.2 Update hardware, software and documentation inventories according to organisational procedures 1.3 Update software licenses and upgrade software according to organisational procedures 1.4 Record and organise documentation storage
2. Maintain hardware,	2.1 Examine and perform maintenance on hardware, software and

ELEMENT	PERFORMANCE CRITERIA
software and documentation inventories	<p>documentation inventories according to organisational procedures</p> <p>2.2 Document maintenance procedures performed according to organisational procedures</p> <p>2.3 Store technical documentation according to organisational policies and procedures</p> <p>2.4 Access and disseminate technical documentation as required</p>
3. Finalise inventory maintenance activities	<p>3.1 Record maintenance activities according to organisational procedures</p> <p>3.2 Store hardware, software and equipment that is not in use, according to technical manuals</p> <p>3.3 Escalate maintenance problems to required personnel according to organisational procedures</p> <p>3.4 Report completion of maintenance activities to required personnel</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Accesses and interprets textual information from a range of sources to record, manage and maintain information
Writing	<ul style="list-style-type: none"> Accurately records and completes documentation according to organisational formats and procedures
Oral Communication	<ul style="list-style-type: none"> Participates in verbal exchanges of basic ideas that elicit views, opinions and feedback from others
Planning and organising	<ul style="list-style-type: none"> Interprets roles and responsibilities for task and makes basic decisions on work completion parameters Plans and implements routine tasks and workload, making limited decisions on sequencing, timing and collaboration and seeking assistance in setting priorities
Technology	<ul style="list-style-type: none"> Interprets the purpose and operates the specific functions and key features of common digital systems and tools to complete routine tasks

Unit Mapping Information

Supersedes and is equivalent to ICTSAS201 Maintain inventories for equipment, software and documentation.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTSAS210 Update and maintain hardware, software and documentation inventories

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.
Release 2	Correcting an error in the Application.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- update and maintain at least one of each hardware and software inventories according to identified storage and retrieval policy and organisational procedures
- update and maintain at least two documentation inventories according to identified storage and retrieval policy and organisational procedures, including:
 - user documentation
 - technical manuals
- create a profile and description for hardware inventories.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- organisational procedures including:
 - hardware, software and documentation inventory access
 - hardware, software and documentation inventory updates
 - software licenses and software upgrades
 - hardware, software and documentation inventory maintenance
 - maintenance documentation and recording
 - escalation procedures
- technical documentation processes
- software licensing requirements
- inventory principles and procedures.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- hardware, equipment and materials
- industry and inventory management software packages
- organisational documentation
- enterprise intranet
- required person for escalation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTSAS211 Develop solutions for basic ICT malfunctions and problems

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to apply problem-solving techniques to determine the origin of basic Information and Communications Technology (ICT) malfunctions and problems and develop solutions for their resolution.

It applies to those who work under supervision within ICT environments to provide frontline technical support, diagnose technical problems and determine potential solutions.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems administration and support

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify nature and scope of basic ICT malfunctions and problems	1.1 Access and gather information on malfunction and problem according to organisational procedures 1.2 Determine the malfunction according to task requirements 1.3 Investigate current condition of malfunction and problem 1.4 Escalate malfunction when outside scope of own role according to organisational procedures 1.5 Document and confirm work with required personnel
2. Research and determine solutions	2.1 Research potential solutions for identified malfunction 2.2 Develop and determine recommendations for potential

ELEMENT	PERFORMANCE CRITERIA
	<p>solutions</p> <p>2.3 Document and submit proposed solution to required personnel according to organisational procedures</p>
3. Prepare to implement solutions	<p>3.1 Obtain approval for solution implementation</p> <p>3.2 Plan implementation of chosen solution</p> <p>3.3 Plan evaluation of implemented solution</p> <p>3.4 Document solution plan and submit to required personnel according to organisational procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Interprets familiar textual information from a range of sources to identify misleading information, compare technical specifications, and identify solutions to new and emerging issues
Writing	<ul style="list-style-type: none"> Accurately records and completes documentation according to organisational formats and procedures
Teamwork	<ul style="list-style-type: none"> Takes steps to collaborate with others using accepted communication practices and protocols
Planning and organising	<ul style="list-style-type: none"> Efficiently plans and implements routine tasks Identifies roles and responsibilities for task and makes basic decisions on work completion parameters
Problem solving	<ul style="list-style-type: none"> Initiates standard diagnostic procedures when responding to familiar and unfamiliar problems within immediate context, and seeks input from others when problems remain unresolved
Technology	<ul style="list-style-type: none"> Interprets the purposes, specific functions and key features of common digital systems and tools, and operates them effectively to complete routine tasks

Unit Mapping Information

Supersedes and is equivalent to ICTSAS202 Apply problem-solving techniques to routine ICT malfunctions.

Links

Companion Volume Implementation Guide is found on VETNet -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=a53af4e4-b400-484e-b778-71c9e9d6aff2>

Assessment Requirements for ICTSAS211 Develop solutions for basic ICT malfunctions and problems

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- identify at least one basic hardware or software malfunction and at least one user or procedural ICT problem
- develop and document potential solutions to each of the above.

In the course of the above, the candidate must:

- refer unresolved problems to required support personnel
- apply problem-solving techniques to determine the origin of ICT problems.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- organisational procedures regarding:
 - accessing malfunctioning hardware, software, user or procedural malfunctions
 - Work Health and Safety (WHS) requirements for hardware and equipment use
- required industry hardware and software products and services
- required industry maintenance, service and helpdesk practices, processes and procedures
- operating systems used within the ICT industry
- required industry standard diagnostic tools
- computer malfunctions and resolutions
- basic industry documentation practices and procedures
- problem solving techniques that may be used in the development of solutions for basic ICT malfunctions and problems.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- hardware and software with ICT malfunctions
- ICT problems relating to users or systems
- organisational procedures
- digital device with internet connectivity and required browsers.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTSAS212 Record the requirements of client support requests

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to record, prioritise and escalate client support requests, using the required record-keeping and documentation practices.

It applies to those who provide frontline technical client support in small or large office environments. In this context, the individual is not expected to resolve the client support requests.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems administration and support

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Log support requests	1.1 Obtain client support request according to organisational procedures 1.2 Document support request requirements and characteristics according to organisational procedures and client needs 1.3 Review client support history and details 1.4 Confirm request with client
2. Prioritise and progress support requests	2.1 Identify guidelines for prioritising and rating client requests according to business scheduling requirements 2.2 Determine the prioritisation, rating and timeframe of client request 2.3 Process client request according to business scheduling

ELEMENT	PERFORMANCE CRITERIA
	requirements 2.4 Escalate requests to required personnel or department for action
3. Record support request outcome and seek feedback	3.1 Document support request outcome according to organisational procedures 3.2 Seek client satisfaction and request process feedback from required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Interprets familiar textual information from a range of sources to identify and review practices and determine that standards have been maintained
Writing	<ul style="list-style-type: none"> Accurately records and completes documentation according to organisational formats and procedures
Teamwork	<ul style="list-style-type: none"> Identifies and takes steps to follow accepted communication practices and protocols
Planning and organising	<ul style="list-style-type: none"> Understands roles and responsibilities for task and makes basic decisions, within familiar situations, on work completion parameters in accordance with organisational standards Plans and implements routine tasks
Technology	<ul style="list-style-type: none"> Interprets the purposes, specific functions and key features of common digital systems and tools, and operates them effectively to complete routine tasks

Unit Mapping Information

Supersedes and is equivalent to ICTSAS204 Record client support requirements.

Assessment Requirements for ICTSAS212 Record the requirements of client support requests

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- record, prioritise and escalate at least two client support requests from at least two different clients.

In the course of the above, the candidate must:

- log support requests resulting from tickets, phone calls, emails, video calls, automated requests or direct messages
- determine time sensitivity and importance of requests against business or client needs
- refer client support requests in line with business scheduling requirements
- follow up support request progression and client satisfaction.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- organisational procedures for:
 - obtaining and documenting client support request
 - guidelines for prioritising and rating client requests
 - escalation processes and procedures
 - logging procedures
 - prioritising client requests
- frontline client support software, hardware diagnostic tools and maintenance procedures
- business scheduling requirements
- responsibilities of frontline technical client support
- business documentation and record-keeping practices.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- equipment, software and tools required to process and document requests
- client support requests and required documentation
- client support history records
- organisational policy and procedures for:
 - critical cases and escalation processes and procedures
 - escalation procedures
 - logging procedures
 - prioritising client requests.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTSAS213 Maintain the integrity of ICT systems

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to backup, protect and secure stand-alone and networked client server environments.

It applies to technical support individuals who are required to uphold workflow and quality processes in a small or large office environment through the maintenance of Information and Communications Technology (ICT) systems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems administration and support

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to test ICT system integrity	<ul style="list-style-type: none">1.1 Determine restoration and back up schedule according to organisational procedures1.2 Identify and confirm storage and backup destination with required personnel1.3 Perform backup according to task requirements1.4 Label and store backups according to organisational procedures and backup schedule1.5 Update system with virus protection and scanning software according to cyber security procedures1.6 Identify copyright and privacy legislation for licensed software and work

ELEMENT	PERFORMANCE CRITERIA
2. Conduct ICT system testing and backup procedures	<ul style="list-style-type: none">2.1 Test restoration procedures according to organisational procedures2.2 Restore data under instruction from required personnel2.3 Carry out virus scanning and report detected viruses to required personnel2.4 Remove viruses and malware according to organisational procedures and within scope of own role2.5 Check hardware devices and networks for operating condition and performance
3. Finalise and record current state of ICT systems	<ul style="list-style-type: none">3.1 Document and report backup results3.2 Maintain records of backups, file names, licence numbers and their location3.3 Report licensing anomalies related to software to required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none">• Interprets familiar textual information from a range of sources to identify and review practices and determine that standards have been maintained• Researches and interprets information to identify, monitor and evaluate technical information and maintain standards
Writing	<ul style="list-style-type: none">• Accurately records and completes documentation according to organisational formats and procedures
Teamwork	<ul style="list-style-type: none">• Identifies and takes steps to follow accepted communication practices and protocols
Planning and organising	<ul style="list-style-type: none">• Plans and implements routine tasks
Problem solving	<ul style="list-style-type: none">• Makes low-impact decisions within familiar situations, based on a range of predefined or routine solutions, and evaluates the effectiveness of the outcome
Self-management	<ul style="list-style-type: none">• Identifies roles and responsibilities for task and makes basic decisions on work completion parameters in accordance with organisational standards
Technology	<ul style="list-style-type: none">• Identifies the purposes, specific functions and key features of

	common digital systems and tools, and operates them effectively to complete routine tasks
--	---

Unit Mapping Information

Supersedes and is equivalent to ICTSAS205 Maintain ICT system integrity.

Assessment Requirements for ICTSAS213 Maintain the integrity of ICT systems

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- backup, protect and secure at least two client server environments.

In the course of the above, the candidate must:

- review organisational backup schedule
- follow system maintenance procedures
- create, restore, label, delete, archive and report file backups
- check hardware and networks for compliance with licensing requirements
- report data security, privacy, copyright and licensing compliance anomalies
- perform virus protection and scanning software updates.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- organisational procedures for:
 - backups, restoration and testing procedures and operations
 - file name conventions and storage of backups
 - malware and virus scans
 - copyright and privacy legislation
 - inventory and maintenance procedures
- industry accepted hardware and software products
- virus protection methods
- diagnostic tools that may be used in maintaining the integrity of ICT systems
- storage and retrieval guidelines
- system performance metrics and system performance testing tools

- legislation relating to restoration procedures, copyright, privacy and General Public Licence (GPL).

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- stand-alone and networked client server environments
- hardware containing information and data
- antivirus and scanning software
- technical records and documentation
- copyright, GPL and privacy legislation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTSAS214 Protect devices from spam and destructive software

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to reduce the risk of a device's operation being affected by spam or destructive software by implementing a range of protective cyber security procedures.

It applies to those working under a level of supervision who have responsibility to provide technical support, exercise discretion to protect devices and secure software in a workplace environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems administration and support

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to protect devices from spam and destructive software	<ul style="list-style-type: none">1.1 Research and identify common types of spam and destructive software1.2 Identify protective measures against spam and destructive software according to organisational procedures1.3 Select and install spam filter and virus protection software compatible with device1.4 Update software according to organisational procedures and vendor instructions1.5 Configure software security settings and spam filter for protection against destructive software according to

ELEMENT	PERFORMANCE CRITERIA
	organisational procedures 1.6 Create schedule to run virus protection software according to organisational procedures
2. Initiate spam and destructive software protection procedures	2.1 Run virus protection and spam filter software according to schedule 2.2 Identify spam and destructive software on device 2.3 Report spam and destructive software to required personnel 2.4 Select protective measure for spam and destructive software removal according to organisational procedures 2.5 Remove spam and destructive software according to organisational procedures
3. Finalise and record protection measures	3.1 Document outcome of protective measures according to organisational procedures 3.2 Maintain records of spam and destructive software 3.3 Report outcomes of protective measures to required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Researches and interprets information to identify misleading information and compare technical specifications, and identify solutions to new and emerging issues to maintain system
Writing	<ul style="list-style-type: none"> Accurately records and completes documentation according to organisational formats and procedures
Oral Communication	<ul style="list-style-type: none"> Presents information in a clear manner, using specific and appropriate language
Teamwork	<ul style="list-style-type: none"> Identifies and takes steps to follow accepted communication practices and protocols
Planning and organising	<ul style="list-style-type: none"> Plans and implements routine tasks
Problem solving	<ul style="list-style-type: none"> Initiates standard diagnostic procedures when responding to familiar and unfamiliar problems within immediate context, and seeks input from others when problems remain unresolved
Technology	<ul style="list-style-type: none"> Interprets the purposes, specific functions and key features of common digital systems and tools, and operates them effectively to complete routine tasks

Unit Mapping Information

Supersedes and is equivalent to ICTSAS206 Detect and protect from spam and destructive software.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTSAS214 Protect devices from spam and destructive software

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- detect and remove:
 - at least one piece of spam from a device
 - at least one piece of destructive software from a different device.

In the course of the above, the candidate must:

- identify spam types, destructive software and protective measures
- update spam filter and virus protection software as available
- maintain and report on protective measures taken against spam and destructive software.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- spam types and destructive software on a range of different devices including:
 - desktop computers
 - laptops
 - tablets
 - mobile and smartphones
 - wearables
 - media players
- organisational procedures regarding:
 - protective measures against spam and destructive software
 - software updates
 - software security and spam filter settings

- protective procedures for spam and destructive software removal
- documenting and reporting outcome of protective measures
- spam and virus intrusions and remedial actions
- types of protective applications used against viruses and spam
- operating systems features and components
- components of hardware that may be affected by spam
- technical records, vendor documentation, enterprise procedures and guidelines.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- working areas with a representative range of devices, application software and operating systems
- industry standard antivirus and anti-spam software
- technical records and vendor instructions
- enterprise procedures and guidelines.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTSAS215 Protect and secure information assets

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to ensure information assets are protected from improper access and to secure assets in the event that they are threatened.

It applies to those who, while working under a level of supervision in a frontline technical support capacity, have the responsibility to exercise security measures on information assets in a small or large office environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems administration and support

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify assets and threats	1.1 Identify information assets in the organisation 1.2 Identify and record mechanisms by which information assets are accessed, transmitted and stored 1.3 Identify nature of threats to information assets and determine threat impact according to organisational processes
2. Protect assets	2.1 Identify and confirm actions, mechanisms and strategies to protect information assets with required personnel 2.2 Secure assets according to organisational procedures 2.3 Report outcomes and escalate issues to required personnel
3. Mitigate or prevent	3.1 Identify signs and evidence that information assets are

ELEMENT	PERFORMANCE CRITERIA
damage to assets	<p>threatened or undergoing loss or damage</p> <p>3.2 Provide first level response to reduce effects, mitigate damage and protect evidence</p> <p>3.3 Report incident, resulting effects and actions taken to required personnel</p>
4. Document final condition of information assets	<p>4.1 Finalise documentation outlining current state of information assets according to organisational procedures</p> <p>4.2 Save, store and back up reports according to organisational procedures</p> <p>4.3 Maintain records and reports of information assets according to organisational procedures</p>

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Researches and interprets text to identify misleading information and compare technical specifications, and identify solutions to new and emerging issues to maintain system
Writing	<ul style="list-style-type: none"> Accurately records and completes documentation according to organisational formats and procedures
Teamwork	<ul style="list-style-type: none"> Identifies and takes steps to follow accepted communication practices and protocols
Planning and organising	<ul style="list-style-type: none"> Interprets roles and responsibilities for task and makes basic decisions on work completion parameters in accordance with organisational standards Plans and implements routine tasks
Problem Solving	<ul style="list-style-type: none"> Initiates standard diagnostic procedures when responding to familiar and unfamiliar problems within immediate context, and seeks input from others when problems remain unresolved
Technology	<ul style="list-style-type: none"> Interprets the purposes, specific functions and key features of common digital systems and tools, and operates them to complete routine tasks

Unit Mapping Information

Supersedes and is equivalent to ICTSAS207 Protect and secure information assets.

Assessment Requirements for ICTSAS215 Protect and secure information assets

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- protect and secure at least two different information assets types.

In the course of the above, the candidate must:

- identify how information assets are used, specific to different organisations
- establish and analyse potential threats
- secure, mitigate and prevent damage to assets
- discuss details of security threats and issues relating to information assets
- document and report work issues.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- organisational procedures, including:
 - asset security
 - current state of information asset reporting
 - records and report of information asset maintenance
- key sources of information assets
- types of security responses available to secure assets
- organisational information assets
- general Information and Communications Technology (ICT) hardware and security implications
- security procedures relevant to organisational requirements.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- working areas with required hardware and office environments representing a range of workplaces
- software systems required to demonstrate the performance evidence
- organisational information assets
- technical records, documentation and enterprise procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTSAS216 Maintain ICT equipment and replace consumables

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to maintain the operation of basic Information and Communications Technology (ICT) equipment, and the replacement of consumables.

It applies to technical support individuals who, while working under a level of supervision, perform routine tasks within an office environment concerning the maintenance of ICT equipment and replacement of consumables. ICT equipment and consumables includes applications, chemicals, computer accessories, data storage devices, digital cameras, fax and copier supplies, laser and inkjet cartridges, ribbons, scanners and wireless technology modems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems administration and support

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Access cleaning supplies and clean equipment	1.1 Access and verify cleaning supplies for usability on selected equipment with required personnel 1.2 Clean equipment according to manufacturer specifications, organisational manuals and work health and safety (WHS) principles and guidelines
2. Replace and manage ICT equipment	2.1 Access consumables from storage points and record usage according to organisational procedures

ELEMENT	PERFORMANCE CRITERIA
	2.2 Replace consumables and log action according to organisational procedures 2.3 Dispose of consumables following environmental guidelines 2.4 Test replaced consumables according to organisational procedures
3. Maintain ICT equipment	3.1 Identify and access ICT equipment according to maintenance guidelines 3.2 Maintain ICT equipment according to organisational procedures and manufacturer specifications 3.3 Document equipment information and maintenance procedures performed according to organisational procedures 3.4 Test equipment according to organisational procedures
4. Finalise maintenance activities	4.1 Plan maintenance schedule according to business needs to prevent interruption of business activities during maintenance procedures 4.2 Store unused consumables and ICT equipment according to manufacturer specifications and organisational procedures 4.3 Save and file maintenance documentation according to organisational procedures 4.4 Report and confirm work activity and outcomes with required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none">Integrates and evaluates a range of textual information to maintain effective methods and standards
Writing	<ul style="list-style-type: none">Accurately records and completes documentation according to organisational formats and procedures
Oral Communication	<ul style="list-style-type: none">Uses listening and questioning techniques to clarify schedules while maintaining business standards
Numeracy	<ul style="list-style-type: none">Recognises and applies familiar measurements relating to time durations
Self-management	<ul style="list-style-type: none">Interprets roles and responsibilities for task and makes basic decisions on work completion parameters in accordance with organisational procedures, WHS and environmental guidelines

	<ul style="list-style-type: none">Plans and implements routine tasks
Problem solving	<ul style="list-style-type: none">Makes low-impact decisions within familiar situations, based on a range of predefined or routine solutions, and evaluates the effectiveness of the outcome
Technology	<ul style="list-style-type: none">Interprets the purposes, specific functions and key features of common digital systems and tools, and operates them effectively to complete routine tasks

Unit Mapping Information

Supersedes and is equivalent to ICTSAS208 Maintain ICT equipment and consumables.

Links

Companion Volume Implementation Guide is found on VETNet -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=a53af4e4-b400-484e-b778-71c9e9d6aff2>

Assessment Requirements for ICTSAS216 Maintain ICT equipment and replace consumables

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- perform maintenance procedures on two different pieces of basic ICT equipment,
- replace and dispose of a consumable item from basic ICT equipment on at least one occasion.

In the course of the above, the candidate must:

- clean equipment following manufacturer specifications, organisation and WHS policy and procedures
- access, replace and dispose of consumables according to regulations and organisational policy
- test and maintain consumables and ICT equipment
- store unused consumables and ICT equipment
- document, record, log and store documentation of maintenance activities and confirm with required personnel.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- organisational procedures including:
 - consumables replacement information logs
 - consumables storage
 - consumables testing
 - ICT equipment maintenance documentation and filing procedures
 - storage and retrieval of information procedures
 - equipment and chemical storage, control and disposal procedures

- industry standard hardware and software and manufacturer maintenance guides
- work health and safety procedures, principles and responsibilities that may be used in the process of maintaining ICT equipment and replacing consumables
- environmental guidelines that may be used in the storage and disposal of ICT equipment.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site at which ICT equipment maintenance may be carried out
- cleaning supplies
- a range of consumables, such as those listed within the performance evidence
- ICT equipment currently used in industry
- equipment documentation required for maintenance activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTSAS217 Connect a home based local wireless network

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to install, configure and secure network components, such as a wireless router and adapters, to a small home based local wireless network.

It applies to individuals who, while working under a level of supervision, have responsibility in a frontline technical support capacity to connect a wireless router and adapters to a home-based wireless fidelity (Wi-Fi) network to provide wireless connectivity to compatible devices.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems administration and support

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for installation	1.1 Document client requirements and confirm with required personnel 1.2 Identify documentation and technical support options 1.3 Identify digital devices to be connected to the network and confirm wireless network component requirements 1.4 Determine and confirm vendor warranty and support services 1.5 Identify required work health and safety (WHS) standards for installation process
2. Install and configure	2.1 Access digital devices and wireless network components

ELEMENT	PERFORMANCE CRITERIA
wireless router and adapters	2.2 Validate contents of delivered components and physical contents match packing list and resolve discrepancies if required 2.3 Determine internet service provider (ISP) connection properties 2.4 Install wireless router according to manufacturer specifications 2.5 Configure wireless router using router configuration properties 2.6 Install wireless adapters according to manufacturer specifications 2.7 Configure Wi-Fi system according to router configuration properties
3. Secure the wireless system and finalise connection	3.1 Set security components of Wi-Fi system 3.2 Test security components and connectivity of Wi-Fi system 3.3 Update documentation regarding security issues and components used 3.4 Store any unused adapters 3.5 Dispose of waste following environmental guidelines

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none"> Identifies and uses new and upgraded technology skills to enhance learning
Reading	<ul style="list-style-type: none"> Interprets a range of texts to evaluate and integrate strategies and determine standards have been maintained
Writing	<ul style="list-style-type: none"> Uses simple vocabulary to record information and prepare required documents in a sequential manner
Oral Communication	<ul style="list-style-type: none"> Uses listening and questioning techniques to confirm requirements
Teamwork	<ul style="list-style-type: none"> Identifies and takes steps to follow accepted communication practices and protocols
Planning and organising	<ul style="list-style-type: none"> Interprets roles and responsibilities for task and makes basic decisions on work completion parameters in accordance with client requirements and WHS standards Plans and implements routine tasks aiming to achieve them

	efficiently
Problem solving	<ul style="list-style-type: none">• Makes low-impact decisions within familiar situations, based on a range of predefined and routine solutions and evaluates outcome
Technology	<ul style="list-style-type: none">• Utilises basic knowledge of industry hardware and software• Interprets the purpose and operates the specific functions and key features of digital systems and tools to complete routine tasks

Unit Mapping Information

Supersedes and is equivalent to ICTSAS209 Connect and use a home based local wireless network.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTSAS217 Connect a home based local wireless network

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- install, configure and secure a wireless router and its adapters, to a small home based local wireless network on at least two separate occasions.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- computer component installation procedures
- industry accepted Wi-Fi network products
- manufacturer specifications that may be used in the process of connecting a home based local wireless network
- router configuration properties
- Wi-Fi installation requirements
- Wi-Fi systems and Wi-Fi security considerations
- ISP connection protocols
- vendor warranty and support services
- environmental guidelines for waste disposal
- WHS standards and procedures that may be used in the process of connecting a home based local wireless network
- wireless network components.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- internet access
- industry standard wireless router and adapters
- digital devices connected to the network
- technical support and documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTSAS218 Obtain and connect hardware peripherals

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Supersedes and is equivalent to ICTSAS203 Connect hardware peripherals.

Application

This unit describes the skills and knowledge required to select and configure hardware peripherals using specifications and technical guidelines suited to the particular organisational context.

The unit applies to individuals who may work in technical support roles and may have some responsibility to solve technical incompatibility issues under supervision, using a wide range of information and communications technology (ICT) skills and knowledge.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems administration and support

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to connect hardware peripherals	1.1 Confirm work brief relating to work tasks, hardware and peripheral quality standards, work health and safety (WHS) standards, and organisational policies and procedures 1.2 Research and select hardware peripheral components according to work brief 1.3 Select and source configuration components according to organisational policies and procedures 1.4 Confirm that client support expectations are covered by

ELEMENT	PERFORMANCE CRITERIA
	vendor warranty and support services
2. Obtain hardware peripherals	2.1 Source hardware peripherals and check for serviceability according to organisational policies and procedures 2.2 Update hardware inventory register 2.3 Confirm that delivered hardware peripherals match packing list and resolve any discrepancies 2.4 Store hardware peripherals according to organisational policies and procedures
3. Connect hardware peripherals	3.1 Create and confirm configuration schedule with required personnel 3.2 Remove expired components without disrupting architecture integrity and according to technical guidelines, vendor specifications and WHS standards 3.3 Configure and install new hardware peripherals according to organisational policies and procedures 3.4 Configure device and confirm hardware peripheral functionality according to vendor specifications 3.5 Test hardware peripherals and report any issues to required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Oral communication	<ul style="list-style-type: none"> Participates in verbal exchanges of familiar ideas and information using questioning and active listening to elicit views, opinions and feedback from others
Reading	<ul style="list-style-type: none"> Interprets textual information from a range of sources to identify and adhere to requirements
Planning and organising	<ul style="list-style-type: none"> Plans and implements routine tasks efficiently
Problem solving	<ul style="list-style-type: none"> Responds to predictable routine problems and implements standard or logical solutions
Technology	<ul style="list-style-type: none"> Identifies the purposes, specific functions and key features of common digital systems and tools, and operates them effectively to complete routine tasks

Unit Mapping Information

Supersedes and is equivalent to ICTSAS203 Connect hardware peripherals.

Assessment Requirements for ICTSAS218 Obtain and connect hardware peripherals

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Supersedes and is equivalent to ICTSAS203 Connect hardware peripherals.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- connect at least three different types of hardware peripherals to one device.

In the course of the above, the candidate must:

- examine and apply vendor specifications and technical guidelines
- seek and apply feedback from required personnel
- apply required organisational policies and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- key types of computer operating systems and devices
- key functions and features of computing components:
 - hardware peripherals
 - inventory registers
 - packing lists
 - configuration components, tools and equipment
 - installation schedules
- help desk and technical maintenance practices
- industry-accepted hardware and software components
- methods for updating and maintaining hardware inventory status

- key organisational guidelines and standards related to:
 - external suppliers and vendors
 - internal and external communications
 - internet access
 - information and data security
- work health and safety (WHS) standards, organisational policies and procedures relating to work tasks.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site with a representative range of workstations and internet connection
- hardware, software and components to be installed, connected and configured
- technical documentation, organisational hardware blueprint, technical guidelines, vendor specifications and required WHS standards
- opportunities for interaction with others
- organisational policies and procedures required to demonstrate the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTSAS309 Maintain and repair ICT equipment and software

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to carry out maintenance and fault repair according to organisational procedures, in order to keep Information and Communications Technology (ICT) equipment and software operating.

It applies to frontline technical support individuals who work under a level of supervision and have some responsibility to maintain and repair ICT equipment and software.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems administration and support

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine and undertake required equipment maintenance	1.1 Access ICT equipment that requires maintenance 1.2 Examine and review organisational ICT equipment maintenance procedures 1.3 Determine and undertake internal maintenance according to organisational maintenance procedures 1.4 Report problems to required personnel
2. Diagnose and repair faults	2.1 Identify faulty ICT equipment and software 2.2 Test faulty ICT equipment and software according to manufacturing guidelines and task requirements 2.3 Analyse test results

ELEMENT	PERFORMANCE CRITERIA
	2.4 Review historical fault data 2.5 Develop plans, with prioritised tasks and contingency arrangements for repair and replacement of faulty equipment and software 2.6 Liaise with required personnel and obtain plan approvals 2.7 Obtain ICT components and repair equipment and software in a timely, organised manner, following work health and safety (WHS) standards
3. Update documentation and make recommendations for future maintenance	3.1 Record maintenance, fault data and equipment modifications according to organisational standards 3.2 Identify and report instances where preventative measures were required 3.3 Dispose of faulty parts and other waste according to environmental guidelines 3.4 Review and update maintenance and fault data and report outcomes to required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Integrates and evaluates a range of textual information to record and maintain required procedures
Writing	<ul style="list-style-type: none"> Conveys specific information using precise language and the required format for intended audience and purpose and records information
Oral Communication	<ul style="list-style-type: none"> Articulates clearly using required language and listening and questioning techniques to report data and confirm proposed plans
Numeracy	<ul style="list-style-type: none"> Recognises and applies familiar measurements relating to time durations
Teamwork	<ul style="list-style-type: none"> Works in a team and contributes to broader work goals when addressing organisational standards and reporting to required personnel Communicates in the required format with whom and how when reporting problems, gaining approval for plans and

	reviewing and updating data and reporting outcomes
Planning and organising	<ul style="list-style-type: none">Plans a range of routine and some non-routine maintenance tasks and repair and replacement of faulty equipment, accepting stated goals and aiming to achieve them efficiently
Problem solving	<ul style="list-style-type: none">Selects from a range of predetermined options in routine situations, identifying and taking situational factors into account when determining whether procedures can be handled internallySelects from a range of predetermined options when diagnosing and repairing faults, identifying and taking situational factors into account
Technology	<ul style="list-style-type: none">Interprets key principles and concepts that underpin the design and operation of digital systems and tools, and applies these when troubleshooting existing technology, repairing faults and making recommendations for future maintenance

Unit Mapping Information

Supersedes and is equivalent to ICTSAS306 Maintain equipment and software.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTSAS309 Maintain and repair ICT equipment and software

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- carry out maintenance and fault repair procedures on the following, on at least one separate occasion:
 - ICT equipment
 - software.

In the course of the above, the candidate must:

- obtain and review previous ICT equipment fault data
- resolve failures and performance degradation
- analyse test results
- examine and review organisational ICT equipment maintenance procedures
- undertake maintenance according to organisational maintenance procedures
- identify and repair a range of ICT equipment and software problems
- develop plans for maintenance and fault repair
- maintain accurate records according to organisational guidelines.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- equipment and software purpose, standard operating characteristics and maintenance procedures
- internal maintenance organisational procedures
- preventative maintenance procedures
- technical documents in regard to:
 - equipment and maintenance procedures

- help-desk response level escalation procedures
- operation of technical diagnostic tools
- quality assurance practices that may be used in maintaining and repairing ICT equipment and software
- Service Level Agreements (SLAs) to determine conditions of the SLA cover
- client warranty claims, repair and replacement procedures
- environmental guidelines that may be used in maintaining and repairing ICT equipment and software.
- organisational work health and safety (WHS) procedures that relate to maintaining and repairing.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- technical environment with a variety of ICT equipment
- maintenance software and tools
- technical documentation
- organisational health and safety procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTSAS310 Install, configure and secure a small office or home office network

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to identify available network components and client requirements and to install, configure and secure those components as part of a Small Office or Home Office (SOHO) network.

It applies to individuals who work under a level of supervision and have experience with analysis and problem solving when working with technologies.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems administration and support

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Confirm client requirements and identify required network equipment	1.1 Identify and clarify client requirements for SOHO network 1.2 Identify, develop and document SOHO network design according to client requirements 1.3 Identify network materials according to SOHO network design 1.4 Obtain vendor and service suppliers specifications and cost of identified components, with required vendors 1.5 Present SOHO network design to clients and secure sign-off
2. Install and configure hardware and	2.1 Develop installation plans according organisational requirements 2.2 Obtain approval for plans, security clearance and timing with

ELEMENT	PERFORMANCE CRITERIA
software	required personnel 2.3 Confirm and review cables and connectors are installed according to industry standards, client requirements and building requirements 2.4 Install and configure hardware according to network design and industry standards 2.5 Install and configure software according to network design and industry standards
3. Test network	3.1 Troubleshoot client-side connectivity using required networking settings 3.2 Test installed software and hardware according to organisational procedures 3.3 Test network settings according to organisational procedures 3.4 Resolve problems identified according to organisational procedures
4. Secure network	4.1 Identify security features for SOHO network 4.2 Apply identified security features according to organisational procedures 4.3 Troubleshoot security intrusion symptoms and issues
5. Finalise network installation and configuration	5.1 Finalise and document network design, associated hardware, software and security features 5.2 Document installation, boot up and configuration procedures according to client requirements 5.3 Handover and secure sign-off from client

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none">Interprets a range of texts to critically evaluate and design the required network, comparing technical specifications and associated costs to install and maintain the network
Writing	<ul style="list-style-type: none">Records information using precise language and required format to develop network plans, instructions, installation and technical specifications
Oral Communication	<ul style="list-style-type: none">Confirms information and requirements, using effective communication techniques and industry standard technical

SKILL	DESCRIPTION
	language intended for audience and environment
Numeracy	<ul style="list-style-type: none">• Uses a range of mathematical calculations to evaluate and compare numerical information and forecast costs and applies familiar measurements concerning available or consumed data, time durations and required cable length
Planning and organising	<ul style="list-style-type: none">• Plans a range of routine and some non-routine tasks, accepting stated goals and aiming to achieve them efficiently, confirming client requirements and required equipment• Implements actions as per plan, making slight adjustments if required and addressing some unexpected issues
Problem solving	<ul style="list-style-type: none">• Makes decisions quickly and intuitively in familiar situations requiring immediate attention, drawing on past experience to identify key variables, consider implications of different courses of action and determine course of action• Uses systematic, analytical processes in configuration and testing of network, setting goals, gathering required information and identifying and evaluating options against agreed criteria• Applies formal problem-solving processes when resolving network problems and troubleshooting symptoms and issues, breaking complex issues into manageable parts and identifying and evaluating several options for action
Self-management	<ul style="list-style-type: none">• Recognises and follows explicit and implicit protocols and meets expectations associated with own role when obtaining approval and sign-off at required stages of job
Technology	<ul style="list-style-type: none">• Utilises key principles and concepts that underpin the design and operation of digital systems and tools

Unit Mapping Information

Supersedes and is equivalent to ICTSAS307 Install, configure and secure a small office home office network.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTSAS310 Install, configure and secure a small office or home office network

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- install, configure and secure a SOHO network on at least one occasion.

In the course of the above, the candidate must:

- install, configure and test hardware and software for SOHO network, including:
 - network technologies
 - device
 - protocols
 - network cables and connectors
- install, configure and test the network according to client requirements and produce required documentation
- troubleshoot client-side connectivity and security system symptoms and issues
- liaise with vendors and service suppliers to:
 - obtain specifications, availability and cost of identified components
- develop installation plans that incorporate:
 - task prioritisation
 - contingency arrangements
 - minimum disruption to clients
- document final network design, security features and installation, boot up and configuration procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry accepted hardware and software products, including those used for networks

- building requirements that may be used in installing, configuring and securing an office
- data and voice transmission technologies and protocols
- hardware and software installation procedures
- organisational procedures including:
 - software and hardware testing methods
 - network setting testing methods
 - software, hardware and network setting problem resolution procedures
- local area network (LAN) capabilities and characteristics, including:
 - network types
 - internet protocol addressing
 - switch and hub operation
- network connections, both wired and wireless
- networking technologies, including network operating systems and cabling standards
- network tools, set-up and configuration procedures
- security implications and methods for a home office network
- software packages supported by the organisation
- industry standards applicable to small networks
- installation and configuration tools.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- industry standard software, hardware and networking technologies
- server and workstation hardware and software
- internet connection
- live network
- network components, hardware and software
- networked devices
- vendor hardware and software components
- technical documentation and installation manuals.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTSAS311 Maintain computer hardware

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Supersedes and is equivalent to ICTSAS303 Care for computer hardware.

Application

This unit describes the skills and knowledge required to conduct preventative maintenance on physical computing components. It includes identifying methods to enable optimal operating system functionality, security protection, and performance levels, by producing maintenance plans and applying safe working practices.

The unit applies to individuals who may work in supervised technical support roles with some responsibility to maintain organisational hardware, using a wide range of information and communications technology (ICT) skills and knowledge.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems administration and support

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to maintain computer hardware	1.1 Confirm work brief relating to work tasks, hardware and peripheral quality standards, work health and safety (WHS) standards, and organisational policies and procedures 1.2 Confirm and review hardware manufacturer specifications 1.3 Check and confirm that safe working environment is compliant for hardware maintenance activities
2. Review computer	2.1 Select and source required computer hardware diagnostic

ELEMENT	PERFORMANCE CRITERIA
hardware	<p>technologies and inspect computer hardware according to manufacturer specifications</p> <p>2.2 Identify components requiring maintenance according to organisational policies and procedures</p> <p>2.3 Document identified components requiring maintenance</p> <p>2.4 Store necessary component document in required location and distribute to required personnel</p>
3. Develop maintenance plan	<p>3.1 Determine maintenance requirements according to manufacturer specifications</p> <p>3.2 Document maintenance requirements in required format</p> <p>3.3 Record explicit references to computer vulnerabilities and maintenance procedures in required format</p> <p>3.4 Present maintenance plan information to required personnel</p> <p>3.5 Seek and implement feedback on maintenance plan from required personnel</p>
4. Apply maintenance plan	<p>4.1 Prepare identified computer hardware components for maintenance according to maintenance plan</p> <p>4.2 Fix identified computer hardware components according to maintenance plan</p> <p>4.3 Report on any maintenance issues within scope of own role, or escalate as required</p> <p>4.4 Seek sign-off from required personnel according to organisational policies and procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Oral communication	<ul style="list-style-type: none"> Presents factual information in a clear manner, using specific and required language Responds to questions and feedback in a constructive manner
Reading	<ul style="list-style-type: none"> Researches and interprets a range of routine texts to identify requirements and standards
Writing	<ul style="list-style-type: none"> Uses simple vocabulary to record key information in a sequential manner
Initiative and	<ul style="list-style-type: none"> Makes low-impact decisions in familiar situations, based on a range of predefined or routine solutions and evaluates the

Skill	Description
enterprise	effectiveness of the outcome
Planning and organising	<ul style="list-style-type: none">Plans and implements routine tasks and workload, making limited decisions on sequencing, timing and collaboration
Problem solving	<ul style="list-style-type: none">Responds to predictable routine problems and implements standard and logical solutionsCompares technical specifications, and identifies solutions to new and emerging issues
Self-management	<ul style="list-style-type: none">Takes some personal responsibility for following organisational procedures and establishing safe work practices

Unit Mapping Information

Supersedes and is equivalent to ICTSAS303 Care for computer hardware.

Links

Companion Volume Implementation Guide is found on VETNet - -

Assessment Requirements for ICTSAS311 Maintain computer hardware

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Supersedes and is equivalent to ICTSAS303 Care for computer hardware.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- maintain at least two different types of computer hardware
- create a separate maintenance plan for each of the above types of hardware that sets out maintenance requirements.

In the course of the above, the candidate must:

- use diagnostic computer hardware technologies
- establish location requirements for system hardware and associated peripheral devices
- follow required work health and safety (WHS) standards, organisational policies and procedures, and safe work practices.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- key functions and applications of computing hardware architecture and components, including:
 - central processing units
 - security patches and random access memory (RAM)
 - input devices
 - output devices
 - hardware drivers
 - processing devices

- disk space and hard disk drives
- motherboards
- graphics cards
- network interface controllers
- types of preventative measures and typical maintenance periods for optimal computer hardware functionality
- hardware and peripheral storage principles and quality standards
- key sources and types of computing threats, including:
 - human
 - physical and structural
 - environmental
- techniques for identifying computer vulnerabilities
- equipment maintenance requirements
- computing serviceability specifications
- industry-recognised tools and techniques to replace suspect components
- tools and techniques to test computer speed, operating systems and security functions
- types of hardware and associated peripherals
- organisational formats for documentation
- WHS standards, organisational policies and procedures relating to work tasks.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- computer hardware, maintenance software, tools and equipment
- computing maintenance, warranty, replacement and upgrade records and reports
- vendor documentation and equipment specifications
- opportunities for interaction with others
- WHS standards, and organisational policies and procedures required to demonstrate the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTSAS312 Provide basic system administration

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Supersedes and is equivalent to ICTSAS304 Provide basic system administration.

Application

This unit describes the skills and knowledge required to select, operate and implement basic system administrative processes in stand-alone or client server environments.

The unit applies to individuals who may work in supervised technical support roles, with some responsibility in undertaking administrative activities, using a wide range of information and communications technology (ICT) skills and knowledge.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems administration and support

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Administer security access	1.1 Confirm work brief and task according to organisational policies and procedures 1.2 Obtain client access and clearance level guidelines according to organisational policies and procedures 1.3 Authenticate password protected client-server user access 1.4 Document security clearance and client details 1.5 Test user access and report issues to required personnel

ELEMENT	PERFORMANCE CRITERIA
2. Manage software licences	2.1 Identify existing software used in organisation according to work brief 2.2 Access and identify server records 2.3 Analyse and categorise system vulnerability alerts on organisational devices and network 2.4 Report security threats to required personnel in required format
3. Complete backup procedures	3.1 Review and update organisational backup schedule according to analysis findings and system requirements 3.2 Carry out file backups according to backup schedule 3.3 Label and store backups according to organisational policies and procedures 3.4 Identify and report issues related to backups to required personnel
4. Restore system	4.1 Identify system recovery procedures 4.2 Complete system restore under required supervision 4.3 Seek feedback from required personnel 4.4 Record and file system restore process and issues encountered
5. Assess security access controls	5.1 Create security access register according to work brief 5.2 Identify operating system security controls across in-scope systems 5.3 Apply files and directory access control settings 5.4 Confirm security control functionality 5.5 Report any security control issues and alerts to required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Oral communication	<ul style="list-style-type: none">Provides information using required form, channel and mode of communication and language appropriate to environment and audienceUses listening and questioning techniques to confirm understanding

Skill	Description
Reading	<ul style="list-style-type: none">Evaluates a range of textual information to maintain effective methods while adhering to appropriate standards
Writing	<ul style="list-style-type: none">Records detailed information according to organisational standards
Planning and organising	<ul style="list-style-type: none">Takes responsibility for planning and organising own work, identifying ways of sequencing and combining elements for greater efficiencySelects from a range of pre-determined options in routine situations, identifying and taking some situational factors into account
Technology	<ul style="list-style-type: none">Monitors and controls access to digitally stored and transmitted information

Unit Mapping Information

Supersedes and is equivalent to ICTSAS304 Provide basic system administration.

Assessment Requirements for ICTSAS312 Provide basic system administration

Modification History

Release	Comments
Release 1	This version first released with the Information and Communications Technology Training Package Version 8.0. Supersedes and is equivalent to ICTSAS304 Provide basic system administration.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- perform at least two system backup procedures on a client server.

In the course of the above, the candidate must:

- authenticate security access to organisational network for at least one client server
- apply required organisational policies and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- key functions and features of:
 - security access
 - password-protected client servers
 - licensed software and server records
 - operating systems, hardware, software and equipment
 - organisational security procedures
 - computing diagnostic tools
- organisational requirements for obtaining client access and clearance levels
- methods to authenticate and document user access to a network
- techniques and standards used to categorise system vulnerability alerts
- types and features of organisational device and network security threats

- methods to conduct system backups
- key organisational requirements to carry out required work tasks, including:
 - backup and restore operations
 - creating security access registers
 - configuring access control settings
 - backup labelling and storage
 - recording security and software details
 - detecting threats and alerts
- organisational formats for documentation
- organisational policies and procedures relating to work tasks.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- basic computer systems that require basic system administration
- client-server user access operating systems
- opportunities for interaction with others
- organisational policies and procedures required to demonstrate the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTSAS428 Hand over ICT system components to clients

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to ensure the Information and Communications Technology (ICT) system is operational prior to hand over for client use, including conducting formal testing and trials to determine whether the system satisfies its acceptance criteria.

It applies to individuals who work under supervision but have a level of responsibility ensuring work is planned and completed according to quality and client requirements.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems administration and support

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Confirm system integrity	1.1 Obtain acceptance criteria for client ICT system 1.2 Check ICT system function and its components in stand-alone and integrated environments 1.3 Specify and document shortcomings and problems and create action plan 1.4 Review action plan with client 1.5 Document system components according to organisational standards and procedures
2. Provide operation and maintenance	2.1 Identify and document operational issues and procedures according to organisational procedures

ELEMENT	PERFORMANCE CRITERIA
guidance	2.2 Discuss maintenance issues with technical support personnel and document proposed outcomes 2.3 Compare maintenance, operational and warranty considerations with service level agreements (SLAs) and document discrepancies 2.4 Clarify outstanding issues with client 2.5 Implement solution to identified problems with technical support personnel 2.6 Create and confirm client report with required personnel
3. Hand over system to client	3.1 Demonstrate installed system to client and seek and respond to feedback 3.2 Obtain confirmation of client satisfaction and sign-off 3.3 Discuss, confirm and document implementation support and further training needs with client 3.4 Report needs and submit to required personnel for action

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Interprets and analyses technical information containing numeric data and textual specifications to determine and adhere to requirements
Writing	<ul style="list-style-type: none"> Prepares workplace documentation detailing process and outcomes using appropriate structure, layout and technical language
Oral Communication	<ul style="list-style-type: none"> Confirms information and requirements, using effective communication techniques and industry standard technical language intended for audience and environment
Teamwork	<ul style="list-style-type: none"> Selects and uses required conventions and protocols when communicating with client and others in a range of work contexts
Planning and organising	<ul style="list-style-type: none"> Takes responsibility for planning, sequencing and prioritising tasks and own workload for efficiency and effective outcomes
Problem solving	<ul style="list-style-type: none"> Uses formal analytical thinking techniques for identifying issues and generating solutions, seeking input from others as required

Self-management	<ul style="list-style-type: none">• Takes personal responsibility for following explicit and implicit policies, procedures and standards
Technology	<ul style="list-style-type: none">• Uses the main features and functions of digital tools to complete work tasks

Unit Mapping Information

Supersedes and is equivalent to ICTSAS406 Implement and hand over system components.

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- demonstrate operation and hand over a functioning ICT system to clients on at least two occasions.

In the course of the above, the candidate must:

- obtain ICT system acceptance criteria
- check ICT system function and its components in both:
 - stand-alone environment
 - integrated environment
- identify and document system components, operational issues and procedures
- discuss maintenance issues with technical support
- compare maintenance, operational and warranty considerations with SLAs
- provide operational and maintenance guidance.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- business practices related to preparing reports, including:
 - confirming system integrity
 - handing over the system
- organisational procedures including:
 - system component documentation
 - operational issue documentation
 - operational procedures for ICT systems
- industry accepted hardware and software products

- key aspects of change management systems and operational procedures for ICT systems
- client-business domain issues
- information gathering techniques that may be used in the hand over ICT system components to clients
- key features and processes involved in project planning, including:
 - constraints
 - guidelines
 - deadlines
- key features of quality assurance practices that may be used in the hand over ICT system components to clients
- role of stakeholders in SLAs and degree of stakeholder involvement in determining levels of responsibility in a project
- vendor product trends.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- existing ICT systems for client delivery, such as customer computer sites and systems or other simulated systems
- ICT system acceptance criteria
- special purpose tools, equipment and materials
- industry software packages
- implementation plan
- people involved in hand over
- project plan
- SLAs.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTSAS432 Identify and resolve client ICT problems

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to identify, record, prioritise and resolve client Information and Communications Technology (ICT) support activities and escalate as required.

It applies to experienced individuals who use specialised and technical knowledge to take responsibility in providing client-based ICT support to end users in an office or working environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems administration and support

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to resolve client ICT problems	<ul style="list-style-type: none">1.1 Determine client problems and impact of problem according to organisational procedures1.2 Document client response according to organisational policies and procedures1.3 Examine logged requests and determine requirements1.4 Confirm additional information with client and respond to new information according to organisational procedures1.5 Refer to database of known problems and identify resolution options1.6 Establish and record required constraints

ELEMENT	PERFORMANCE CRITERIA
2. Prioritise client ICT problems	2.1 Undertake impact analysis of problem and determine severity and risks 2.2 Prioritise problem according to organisational procedures 2.3 Provide problem resolution advice and support to client
3. Refer problems where required	3.1 Investigate and refer problems to third parties according to organisational procedures 3.2 Provide third party with client and problem details as required 3.3 Document advice and support provided by third party according to organisational procedures
4. Carry out maintenance	4.1 Obtain required components for resolution according to organisational procedures 4.2 Complete maintenance according to organisational procedures 4.3 Store and dispose of used components according to organisational environmental guidelines
5. Create maintenance report	5.1 Prepare maintenance report according to organisational procedures 5.2 Finalise maintenance report and acquire internal sign off 5.3 Distribute maintenance report to client and seek and respond to client feedback as required
6. Confirm problem resolution	6.1 Obtain and respond to client feedback 6.2 Confirm client requirements have been met 6.3 Resolve outstanding client requirements and escalate as required 6.4 Forward client feedback to required personnel for sign-off and record in problems database

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none">Interprets technical specifications and numerical data from a range of documentation and sources to assist in rectifying problems
Writing	<ul style="list-style-type: none">Uses clear language and formats required for the audience to convey explicit technical information, requirements and recommendations

Oral Communication	<ul style="list-style-type: none">• Uses inclusive questioning techniques to obtain information from clients and provides precise advice and information to others
Teamwork	<ul style="list-style-type: none">• Selects and uses required conventions and protocols when communicating with client and others in a range of work contexts
Problem solving	<ul style="list-style-type: none">• Uses formal analytical thinking techniques for identifying issues and generating solutions, seeking input from others as required
Self-management	<ul style="list-style-type: none">• Takes responsibility for planning, sequencing and prioritising tasks and own workload for efficiency and effective outcomes
Technology	<ul style="list-style-type: none">• Uses main features and functions of digital tools to complete work tasks

Unit Mapping Information

Supersedes and is equivalent to ICTSAS410 Identify and resolve client ICT problems.

Assessment Requirements for ICTSAS432 Identify and resolve client ICT problems

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- identify, record, prioritise and resolve a client ICT problem on at least two separate occasions.

In the course of the above, the candidate must:

- record and prioritise client support activities
- determine required resources for maintenance activities
- prioritise client ICT problems, using an impact analysis of the problem
- complete maintenance activities
- resolve client problems and escalate according to organisational guidelines and practices
- refer problems to third parties where required
- prepare, finalise and distribute maintenance report, including information about problems and resolution action
- provide advice to the client and seek and record client feedback
- store and dispose used components.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- hardware and software products:
 - in use
 - supported by the organisation
- organisational procedures, including:
 - problem prioritisation
 - third party support and documentation

- maintenance procedures
- maintenance report preparation and distribution
- sustainable practices consistent with ICT industry
- environmental guidelines that may apply to identifying and resolving client ICT problems
- help desk or service desk structure and escalation procedures
- key functions and basic features of operating system
- organisational structure of workplace that may be relevant to identifying and resolving client ICT problems
- workplace security and network guidelines and procedures.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- special purpose tools, equipment and materials for maintenance
- industry software packages
- a range of industry hardware, software and diagnostic tools
- technical records
- organisational guidelines
- vendor documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTSAS433 Update ICT client support procedures and assist with policy development

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes skills and knowledge required to formulate and update Information and Communications Technology (ICT) client support procedures to be included within organisational policy.

It applies to experienced individuals who work under supervision and have a level of responsibility to ensure client policy development is completed to quality standards and requirements.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems administration and support

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine policy support issues	1.1 Review client support procedures 1.2 Gather feedback from client detailing positive and negative aspects of their contact with the organisation 1.3 Gather feedback from user who executes client support procedures, detailing problems with methods
2. Revise client support procedures	2.1 Determine feedback applicable to client support procedures 2.2 Create and update client support procedures 2.3 Forward new client support procedures to required

ELEMENT	PERFORMANCE CRITERIA
	personnel and seek and respond to client feedback
3. Provide recommendations for client support policy	3.1 Evaluate client support policy feedback 3.2 Incorporate changes to client support policy 3.3 Determine impact of new policy on organisational guidelines and client interactions 3.4 Prepare report detailing changes in policy and impact on client and user 3.5 Forward report and updated policy to required personnel and obtain approval
4. Update client support policy	4.1 Amend policies and include new client support procedures 4.2 Issue new policies to clients and users according to organisational guidelines 4.3 Maintain policy updates according to organisational guidelines

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Interprets and analyses technical information and numerical data from different sources to determine requirements and complete required actions
Writing	<ul style="list-style-type: none"> Develops and presents information logically and concisely, using required formats and clear and accurate language
Oral Communication	<ul style="list-style-type: none"> Confirms information and requirements, using effective communication techniques and industry standard technical language intended for audience and environment
Numeracy	<ul style="list-style-type: none"> Interprets, analyses and presents numeric information in documents and reports
Initiative and enterprise	<ul style="list-style-type: none"> Takes personal responsibility for maintaining policies as required by organisational guideline
Problem solving	<ul style="list-style-type: none"> Uses formal analytical thinking techniques for identifying issues and generating solutions, seeking input from others as required
Teamwork	<ul style="list-style-type: none"> Selects and uses required conventions and protocols when communicating with client and others in a range of work

	contexts
Self-management	<ul style="list-style-type: none">• Takes responsibility for planning, sequencing and prioritising tasks and own workload for efficiency and effective outcomes

Unit Mapping Information

Supersedes and is equivalent to ICTSAS411 Assist with policy development for client support procedures.

Assessment Requirements for ICTSAS433 Update ICT client support procedures and assist with policy development

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- update ICT client support procedures and assist in the formulation of associated policy documents on at least one occasion.

In the course of the above, the candidate must:

- evaluate and analyse existing client support policy and procedures
- elicit feedback to be applied to support procedures and review proposed changes
- make recommendations for changes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- trends and issues in ICT client support
- policy and support recommendation and development practices
- organisational guidelines including:
 - client maintenance and administration
 - policy maintenance updates and key stages of the client review process
- organisational policy including:
 - access of procedures
 - security.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- tools, equipment and materials for support procedures
- industry software packages
- sites, peers and supervisors to identify the extent and quality of the contribution required
- information about systems or networks to be supported
- technical manuals, tools and organisational guidelines
- business requirements and documentation standards.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTSAS434 Action change requests and present updated ICT system to clients

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to receive, review and carry out change requests using a change management system according to client requirements and present the outcome of change requests to clients.

This unit applies to individuals who work using specialised and technical knowledge to ensure change requests are completed according to quality standards and work using communication skills to present outcomes of change requests and how to use the updated Information and Communications Technology (ICT) system to clients.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems administration and support

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Receive and review change requests	1.1 Receive and document requests for hardware and software changes from client 1.2 Gather and organise required ICT system data 1.3 Review proposed changes against current and future business requirements and examine system data 1.4 Select and prioritise required changes 1.5 Discuss and clarify selected changes with client

ELEMENT	PERFORMANCE CRITERIA
2. Modify system according to requested changes	<ul style="list-style-type: none">2.1 Develop ICT system modification plan2.2 Undertake selected ICT system changes according to organisational guidelines and procedures and manufacturer recommendations2.3 Test ICT system performance and identify problems2.4 Resolve identified problems and confirm with required personnel as required2.5 Revise client and technical documentation and ensure ICT system changes comply with organisational standards2.6 Notify client of change and update change management system, according to organisational help desk procedures
3. Prepare and deliver training on use of modified ICT system	<ul style="list-style-type: none">3.1 Develop client training materials on the changed ICT system3.2 Finalise training outcomes according to organisational requirements3.3 Seek training delivery approval from required personnel3.4 Deliver prepared training to client
4. Finalise change request and training activities	<ul style="list-style-type: none">4.1 Confirm change is tested and operational according to organisational procedures4.2 Prepare report and deliver to required personnel, indicating the results of change request and training according to organisational procedures4.3 Hand over ICT system to client

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none">• Interprets and analyses technical textual information and numerical data to determine requirements and complete required actions
Writing	<ul style="list-style-type: none">• Uses clear language and formats required for the task to record and update explicit technical information, requirements and recommendations
Oral Communication	<ul style="list-style-type: none">• Confirms information and requirements, using effective communication techniques and industry standard technical language intended for audience and environment

Teamwork	<ul style="list-style-type: none">• Selects and uses required conventions and protocols when communicating with co-workers and clients in a range of work contexts• Reviews proposed changes and confirms actions with work team
Problem solving	<ul style="list-style-type: none">• Uses formal analytical thinking techniques for identifying issues and generating solutions, seeking input from others as required
Self-management	<ul style="list-style-type: none">• Takes responsibility for planning, sequencing and prioritising tasks and own workload for efficiency and effective outcomes
Technology	<ul style="list-style-type: none">• Uses main features and functions of digital tools to complete work tasks

Unit Mapping Information

Supersedes and is equivalent to ICTSAS412 Action change requests.

Assessment Requirements for ICTSAS434 Action change requests and present updated ICT system to clients

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- receive, review and carry out a change requests according to client requirements and present the outcomes of those changes back to the client on two separate occasions.

In the course of the above, the candidate must:

- receive, review, document and assess change requests and requirements
- plan, implement and test change procedures
- comply with organisational guidelines and client requirements
- prepare and deliver training appropriate to the client.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- organisational procedures, including:
 - help desk procedures
 - system change processes
 - change request reporting
- practices relating to:
 - change management procedures and criteria
 - change-management tools and systems
 - diagnostic tools
 - help desk practices
 - quality assurance practices
- client business domain, including:
 - role of stakeholders

- degree of stakeholder involvement
- system modification plans
- industry-accepted hardware and software products
- service level agreements (SLAs) within or between organisations
- process for system testing
- system's functionality.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- tools, equipment and materials required for actioning change requests
- training environment, including all required tools, equipment and materials to present changes
- industry software packages
- change request documentation
- physical system or network
- technical manuals required diagnostic tools
- business requirements
- documentation standards
- change management system.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTSAS435 Resolve system faults on a live system

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to manage the modification of reactive errors and failures on a live system to resolve system faults.

It applies to individuals who apply specialised and technical knowledge, management skills and a systematic approach to monitor, maintain and troubleshoot maintenance requirements on systems that are operating.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems administration and support

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify repositories and develop modifications for live system	1.1 Identify existence and currency of repositories 1.2 Review repositories and develop new backup procedures 1.3 Identify system faults 1.4 Identify the nature and effect of modifications to the system 1.5 Prepare and check change request forms and levels of authority for sign-off according to organisational procedures 1.6 Develop a hierarchy of modifications and document expected outcomes of each 1.7 Inform users of implications and impacts of modifications 1.8 Determine existing backup and blackout strategies

ELEMENT	PERFORMANCE CRITERIA
2. Implement modifications for live system	2.1 Identify standards and procedures for logging change request 2.2 Log change request according to organisational requirements 2.3 Identify levels of failure and reporting procedures 2.4 Assign modification to required personnel 2.5 Oversee modification implementation
3. Review and report results	3.1 Confirm modification is tested and operational according to organisational procedures 3.2 Prepare report and deliver to required personnel, indicating the results of modification according to organisational procedures 3.3 Update and amend documentation and repositories according to organisational procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none">Interprets technical and non-technical information and numerical data from a range of documentation and sources to assist with troubleshooting and rectifying problems
Writing	<ul style="list-style-type: none">Records and reports information logically, using required formats and structures and revises and updates documentation and repositories based on outcomes of action
Oral Communication	<ul style="list-style-type: none">Confirms and presents information and requirements, using effective communication techniques and industry standard technical language intended for audience and environment
Numeracy	<ul style="list-style-type: none">Uses mathematical equations to calculate and compare numerical data to determine required actions and for preparing technical reports
Teamwork	<ul style="list-style-type: none">Selects and uses required conventions and protocols when communicating with co-workers and others in a range of work contexts
Problem solving	<ul style="list-style-type: none">Uses formal analytical thinking and problem-solving techniques for identifying issues and generating solutions, seeking input from others as required
Self-management	<ul style="list-style-type: none">Takes responsibility for planning, sequencing and prioritising tasks and own workload for efficiency and effective outcomes

Technology	<ul style="list-style-type: none">• Uses main features and functions of digital tools to complete work tasks
------------	--

Unit Mapping Information

Supersedes and is equivalent to ICTSAS413 Manage resolution of system faults on a live system.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTSAS435 Resolve system faults on a live system

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- manage system fault resolution on a live system on at least two occasions.

In the course of the above, the candidate must:

- identify the required modifications and the associated effect, implication and impact of each
- itemise the expected outcomes of the modifications
- oversee implementation of modification and test operation
- document and report on the modifications.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- organisational procedures including:
 - change request forms
 - levels of authority for sign-off
 - modification operation testing
 - modification reports
 - modification documents and repositories
- change control procedures
- client business domain including the role of stakeholders and the degree of stakeholder involvement
- industry accepted hardware and software products
- help desk and maintenance practices
- quality assurance practices that relate to resolving system faults on a live system

- the process for system testing
- the system's functionality and the features and functions of the system under modification
- Information and Communications Technology (ICT) industry fault resolution standards.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required tools, equipment and materials for system fault management, modification and resolution
- live system
- benchmarking and testing tools
- reporting tools.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTSAS436 Evaluate ICT system status

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes skills and knowledge required to evaluate the status of a running system, covering both hardware and software aspects to determine system performance and reliability while Information and Communications Technology (ICT) system is still in an operational state.

It applies to individuals who apply specialised and technical knowledge and a systematic approach to assessing and evaluating ICT systems prior to problem resolution or upgrades.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems administration and support

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for ICT system evaluation	1.1 Access ICT system according to organisational procedures 1.2 Determine scope of ICT system status evaluation and performance indicators and agree with client 1.3 Review evaluation purpose using required capacity tools 1.4 Plan a 'change of status' test according to organisational procedures 1.5 Plan and document ICT system status evaluation and required resources according to organisational procedures 1.6 Alert affected users of ICT system status evaluation impacts as required

ELEMENT	PERFORMANCE CRITERIA
	1.7 Access resources required for ICT system status evaluation
2. Carry out ICT system evaluation	<ul style="list-style-type: none">2.1 Organise required resources and implement evaluation methods2.2 Run ICT system evaluation according to agreed scope, evaluation parameters and organisational procedures2.3 Record ICT system status and reliability according to procedural parameters and evaluation plan2.4 Run 'change of status' test according to organisational procedures2.5 Observe and record effects of changes to ICT system status according to effect being evaluated2.6 Observe and record effects of changes to ICT system status not being evaluated2.7 Escalate unresolved effects of changes to ICT system status to required personnel
3. Report on ICT system evaluation	<ul style="list-style-type: none">3.1 Document anomalies observed in ICT system status evaluation outside expected results3.2 Finalise ICT system status evaluation procedures according to organisational procedures3.3 Prepare report for required personnel3.4 Formulate and present recommendations to required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none">• Analyses and evaluates technical and non-technical information and numerical data from a range of sources to assist with fault finding and troubleshooting problems
Writing	<ul style="list-style-type: none">• Prepares material using clear and accurate language and numerical data to convey explicit information, requirements and recommendations
Oral Communication	<ul style="list-style-type: none">• Articulates information and strategies using effective communication techniques and industry standard technical language intended for audience and environment

Numeracy	<ul style="list-style-type: none">• Uses mathematical equations to calculate and compare numerical data to determine required actions and for preparing technical reports
Teamwork	<ul style="list-style-type: none">• Selects and uses required conventions and protocols when communicating with client and others in a range of work contexts
Problem solving	<ul style="list-style-type: none">• Uses formal analytical thinking techniques for identifying issues and generating solutions
Self-management	<ul style="list-style-type: none">• Takes responsibility for planning, sequencing and prioritising tasks and own workload for efficiency and effective outcomes
Technology	<ul style="list-style-type: none">• Uses main features and functions of digital tools to complete work tasks

Unit Mapping Information

Supersedes and is equivalent to ICTSAS414 Evaluate system status.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTSAS436 Evaluate ICT system status

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- evaluate the performance and reliability status of a running ICT system's hardware and software for at least two different systems, on separate occasions.

In the course of the above, the candidate must:

- determine scope of system performance evaluation and reliability for hardware and software
- identify performance indicators
- access and organise required resources
- evaluate system performance and record status and reliability
- observe and record effects of changes to ICT system status
- document and report on results, reliability, changes, anomalies and recommendations for improvements.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- organisational procedures that may be used to evaluate ICT system status, including:
 - 'change of status' test planning
 - ICT system evaluating, evaluation planning and finalisation
 - capacity planning and change management tools
 - change-control procedures
- client business domains, including the role and level of stakeholder involvement
- industry standard hardware and software products

- help desk and maintenance practices that are used on the evaluating the status of ICT systems
- quality assurance practices that may be used to evaluate ICT system status
- reasons for system evaluation, including objectives, deliverables and key performance indicators
- ICT system testing procedures
- status evaluation, including:
 - time, environmental, internal and external factors
 - manual and computerised methods of status evaluation
- system functionality characteristics.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- tools, equipment and materials for system status evaluation
- industry software packages
- documentation standards
- backup and recovery policies
- database package with data
- server and networked personal computer.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTSAS437 Optimise ICT system performance

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to identify, modify, improve and monitor Information and Communications Technology (ICT) system performance.

It applies to individuals who apply experienced technical support knowledge to maintain computer system performance, and operate in roles such as help desk supervisors, ICT support technicians and user support specialists.

No licensing, legislative, or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems administration and support

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine ICT system performance	1.1 Access ICT system according to organisational procedures 1.2 Determine client requirements and ICT system performance benchmarks 1.3 Collect ICT system performance data 1.4 Analyse collected system performance data according to performance benchmarks and client requirements 1.5 Identify and document areas of poor ICT system performance
2. Investigate methods to improve ICT system performance	2.1 Discuss ICT system performance findings with required personnel 2.2 Identify performance improvement options and determine required technical resources

ELEMENT	PERFORMANCE CRITERIA
	2.3 Create ICT system report for required personnel 2.4 Submit report to required personnel
3. Develop implementation plan for ICT system optimisation	3.1 Develop optimisation implementation plan according to task requirements 3.2 Submit implementation plan to required personnel and seek approval
4. Modify ICT system to optimise performance	4.1 Install ICT system improvements according to installation procedures and implementation plan 4.2 Configure ICT system components according organisational procedures and implementation plan 4.3 Measure and record change in performance resulting from ICT system modification 4.4 Assess optimisation against required level of optimisation 4.5 Update required documentation according to organisational procedures
5. Monitor ongoing ICT system performance	5.1 Implement and maintain performance register 5.2 Confirm all optimisation procedures have been performed according to task requirements 5.3 Review and assess benchmarks and impact of implemented optimisation procedures 5.4 Evaluate and report on optimisation procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Analyses and evaluates technical and non-technical information and numerical data from a range of sources to determine benchmarks and performance indicators
Writing	<ul style="list-style-type: none"> Accurately records information and numerical data and prepares material using clear and accurate language to convey explicit information, requirements and recommendations
Oral Communication	<ul style="list-style-type: none"> Uses active listening and questioning techniques and participates in verbal exchanges with a range of stakeholders to obtain information and express requirements
Numeracy	<ul style="list-style-type: none"> Uses mathematical equations to calculate and compare numerical and financial data to determine required actions and

SKILL	DESCRIPTION
	for preparing technical reports
Initiative and enterprise	<ul style="list-style-type: none">• Takes personal responsibility for following explicit and implicit policies and procedures
Teamwork	<ul style="list-style-type: none">• Selects and uses required conventions and protocols when communicating with co-workers and others in a range of work contexts• Collaborates with others to achieve shared goals
Problem solving	<ul style="list-style-type: none">• Applies analytical processes to resolve technical or conceptual problems
Self-management	<ul style="list-style-type: none">• Takes responsibility for planning, sequencing and prioritising tasks and own workload for efficiency and effective outcomes
Technology	<ul style="list-style-type: none">• Uses main features and functions of digital tools to complete work tasks

Unit Mapping Information

Supersedes and is equivalent to ICTSAS415 Optimise ICT system performance.

Assessment Requirements for ICTSAS437 Optimise ICT system performance

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- optimise the performance of two different ICT systems, on separate occasions.

In the course of the above, the candidate must:

- collect usage and time conditions and analyse ICT system data and performance
- identify and document areas of poor ICT system performance
- identify options to improve performance and determine required technical resources
- access required technical resources
- create optimisation implementation plan to improve performance and submit to required personnel for approval and feedback, including:
 - disruption minimisation plan
 - project budget
 - staff availability
- create ICT system report, including:
 - cost analysis
 - identified improvements
 - alternate options
- develop plan for implementing approved optimisation
- modify and tune ICT system to ensure system balance and performance
- record changes in performance.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- report development including:

- cost analysis
- identified options for alternative courses of action designed to measurably improve ICT system performance
- business scheduling requirements, including the role of stakeholders and the degree of stakeholder involvement
- industry standard hardware and software monitoring tools and the information produced from monitoring
- optimum system performance, change-control procedures and theoretical concepts
- change management tools that may be used in optimising ICT system performance
- quality assurance practices with regard to proposed changes of ICT systems
- ICT system functionality and performance indicators
- ICT system performance improvement and optimisation strategies
- features and functions of ICT system under modification.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- tools, equipment and materials required to optimise ICT systems
- industry software packages, including:
 - system components
 - software for performance tuning
 - technical manuals and resources
 - fault logs
 - diagnostic tools.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTSAS438 Implement maintenance procedures

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to improve existing organisational maintenance procedures to keep equipment and software operating effectively.

It applies to individuals who use technical and specialised knowledge and apply a systematic approach to maintaining computer equipment in an organisation.

No licensing, legislative, or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems administration and support

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine maintenance procedures for equipment and software	1.1 Identify equipment and software that requires maintenance 1.2 Obtain equipment and software maintenance and reliability data from user 1.3 Obtain and examine vendor documentation, peer organisations and research information 1.4 Document equipment and software maintenance procedures 1.5 Develop recommended maintenance and operations guidelines 1.6 Identify and record in-house resources, external organisations and third-party suppliers support 1.7 Develop and update service level agreement (SLA) with internal user and third-party supplier information

ELEMENT	PERFORMANCE CRITERIA
2. Revise and improve maintenance procedures	<ul style="list-style-type: none">2.1 Monitor and review organisational maintenance procedures2.2 Identify problem areas according to organisational maintenance procedures2.3 Design improvements to organisational maintenance procedures and seek approval from required personnel2.4 Assess impact and ease of implementing improvements2.5 Implement improvements to organisational maintenance procedures
3. Finalise maintenance improvement procedures	<ul style="list-style-type: none">3.1 Identify future equipment and software acquisitions3.2 Confirm all maintenance procedures have been performed3.3 Review and assess maintenance procedures impact3.4 Evaluate and report on organisational maintenance procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none">• Researches and analyses technical and non-technical information and numerical data from a range of sources to determine benchmarks and performance indicators
Writing	<ul style="list-style-type: none">• Accurately records information and numerical data and prepares material using clear and accurate language to convey explicit information, requirements and recommendations
Oral Communication	<ul style="list-style-type: none">• Uses active listening and questioning techniques and participates in verbal exchanges with a range of stakeholders in formal and informal situations to obtain information and express requirements
Numeracy	<ul style="list-style-type: none">• Uses mathematical equations to calculate and compare numerical data to determine required actions and for preparing documentation
Teamwork	<ul style="list-style-type: none">• Selects and uses required conventions and protocols when communicating with users and others in a range of work contexts
Problem solving	<ul style="list-style-type: none">• Applies analytical processes to resolve technical or conceptual problems

Self-management	<ul style="list-style-type: none">• Takes responsibility for planning, sequencing and prioritising tasks and own workload
Technology	<ul style="list-style-type: none">• Uses main features and functions of digital tools to complete work tasks

Unit Mapping Information

Supersedes and is equivalent to ICTSAS416 Implement maintenance procedures.

Assessment Requirements for ICTSAS438 Implement maintenance procedures

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- improve the existing organisational maintenance procedures of one piece of ICT equipment and one piece of ICT software, on separate occasions.

In the course of the above, the candidate must:

- identify resource requirements with in-house resources, external resources and third-party organisations
- develop and update service level agreements (SLAs).

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- client responsibilities and expectations including:
 - role of stakeholders
 - degree of stakeholder involvement
 - business scheduling requirements
- features and capabilities of industry standard equipment and software
- features and purpose of diagnostic tools
- change management tools that maybe used in implementation maintenance procedure activities
- help desk and maintenance practices and procedures
- organisational quality assurance practices
- ICT systems functionality and performance levels.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- ICT equipment and software packages
- SLAs
- external organisations and third-party suppliers
- internet connectivity
- ICT equipment capable of online and offline research, such as a computer
- technical helpdesk environment
- technical manuals and tools.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTSAS439 Analyse ICT system capacity and implement enhancements

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to monitor and assess the current and future capacity requirements of Information and Communications Technology (ICT) systems, plan future capacity enhancements and install identified capacity enhancements.

It applies to experienced individuals who work under limited supervision and use technical and specialised knowledge to undertake strategic planning and forecasting initiatives.

No licensing, legislative, or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems administration and support

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Analyse existing system capacity	<ul style="list-style-type: none">1.1 Access required ICT system capacity testing hardware and software1.2 Review existing ICT system capacity configuration information1.3 Investigate ICT system workload and analyse effect on capacity according to organisational procedures1.4 Examine and analyse ICT system capacity issues fault logs according to organisational procedures1.5 Discuss and review ICT system capacity issues with users1.6 Examine service level agreement (SLA) to determine

ELEMENT	PERFORMANCE CRITERIA
	<p>agreed-upon capacity standards and benchmarks</p> <p>1.7 Document information and ICT system capacity analysis according to organisational guidelines</p>
2. Determine and develop future system capacity requirements	<p>2.1 Gather ICT system capacity requirements data</p> <p>2.2 Organise, analyse and evaluate ICT system capacity requirements data</p> <p>2.3 Develop ICT system forecast workload</p> <p>2.4 Compare and evaluate existing workload against forecast workload</p> <p>2.5 Estimate required resources and equipment for ICT system capacity requirements</p> <p>2.6 Undertake financial analysis for ICT system capacity requirements</p> <p>2.7 Organise and document ICT system capacity requirements according to organisational procedures</p> <p>2.8 Prepare ICT system capacity requirements report</p> <p>2.9 Present report to required personnel and seek feedback</p>
3. Plan implementation of system capacity enhancements	<p>3.1 Confirm ICT system capacity requirements</p> <p>3.2 Prioritise and plan task implementation</p> <p>3.3 Confirm availability of requirements and access required ICT system enhancement hardware and software</p> <p>3.4 Document and submit implementation plan to required person and seek approval</p>
4. Implement system capacity enhancements	<p>4.1 Install ICT system capacity enhancements according to installation procedures, organisational procedures and implementation plan</p> <p>4.2 Measure and assess increase in capacity and performance</p> <p>4.3 Assess whether capacity requirements have been met according to organisational procedures, SLA standards and benchmarks</p> <p>4.4 Update ICT system capacity documentation according to organisational procedures</p>
5. Monitor ongoing capacity requirements	<p>5.1 Implement and maintain a performance database</p> <p>5.2 Monitor and assess impact of ICT system capacity enhancements</p> <p>5.3 Review benchmarks and performance with work team</p> <p>5.4 Implement capacity enhancements and updates of benchmarks as required</p>

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none">• Researches and evaluates technical and non-technical information and numerical and financial data from a range of sources to determine benchmarks and performance indicators
Writing	<ul style="list-style-type: none">• Accurately records information and numerical data and prepares documentation using clear and accurate language to convey explicit information, requirements and recommendations
Oral communication	<ul style="list-style-type: none">• Articulates ideas and strategies using effective communication techniques and industry standard technical language intended for audience and environment
Numeracy	<ul style="list-style-type: none">• Uses mathematical equations to calculate, compare and estimate numerical and financial data required for forecasting and planning activities
Teamwork	<ul style="list-style-type: none">• Selects and uses required conventions and protocols when communicating with users, co-workers and others in a range of work contexts• Collaborates with others to achieve shared goals
Problem solving	<ul style="list-style-type: none">• Applies analytical processes to resolve technical or conceptual problems
Self-management	<ul style="list-style-type: none">• Takes responsibility for planning, sequencing and prioritising tasks and own workload

Assessment Requirements for ICTSAS439 Analyse ICT system capacity and implement enhancements

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- monitor and assess the current and future capacity requirements and plan and implement capacity enhancements for at least two different ICT systems, on at least two separate occasions.

In the course of the above, the candidate must:

- access required hardware and software for testing and enhancement
- review ICT system configuration information, workload and fault logs
- document and analyse capacity requirements, with realistic and achievable forecasts, including financial requirements.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- ICT system functionality and operating levels
- key features of:
 - component performance management
 - industry accepted hardware and software products
 - financial analysis
 - client business domain
 - performance monitoring tools
 - quality assurance practices with regard to proposed ICT capability enhancements
 - SLAs relating to proposed ICT capability enhancements
 - role of stakeholders and the degree of stakeholder involvement
- organisational procedures including:

- ICT system workload analysis
- ICT system fault log analysis
- ICT system capacity analysis documentation procedures
- ICT system requirement documentation
- ICT system capacity enhancement installation
- assessment of ICT system enhancements.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- tools, equipment, materials, hardware and industry software packages required for ICT system capacity analysis and enhancement implementation
- live system
- SLAs
- fault logs
- users and required person.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTSAS440 Monitor and administer security of ICT systems

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to monitor security functions of an Information and Communications Technology (ICT) system and administer security measures.

It applies to experienced individuals who, while working under a level of supervision, have responsibility in a frontline technical support capacity to ensure organisational standards are met and apply technical and specialised knowledge to maintain the security of an ICT system.

No licensing, legislative, or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems administration and support

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Access and control user accounts	1.1 Access ICT system according to organisational procedures 1.2 Modify default and previously created user settings according to security policies 1.3 Access and review logs and audit reports and identify security threats 1.4 Check the requirements for displayed legal notices at log on are aligned to organisational requirements 1.5 Check strength of passwords using required utilities 1.6 Review organisational guidelines for password complexity and tighten if required

ELEMENT	PERFORMANCE CRITERIA
	1.7 Review password guidelines within other internal departments 1.8 Check for and control legislation compliance breaches 1.9 Identify and resolve ICT system security
2. Secure file and resource access	2.1 Review inbuilt security features of file and resource access 2.2 Review and develop file security categorisation scheme 2.3 Monitor and record security threats to ICT system 2.4 Implement file and resource virus checking process 2.5 Schedule ICT system components virus checking process 2.6 Investigate and implement inbuilt and additional encryption facilities
3. Recommend and administer security measures	3.1 Perform user spot checks according to organisational policies and procedures 3.2 Document areas and instances where security procedures are not being followed 3.3 Create security adherence recommendations 3.4 Prepare and present audit report and recommendations to required personnel 3.5 Obtain recommended changes approval 3.6 Implement approved changes
4. Finalise ICT system security procedures	4.1 Conform all ICT system security checks have been performed 4.2 Review implemented security changes 4.3 Evaluate and report on system security procedures

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Researches and analyses technical and non-technical information and system data from a range of sources to determine requirements and complete required actions
Writing	<ul style="list-style-type: none"> Prepares complex workplace documentation detailing information, requirements and recommendations using appropriate structure, layout and technical programming language
Oral Communication	<ul style="list-style-type: none"> Obtains information by listening and questioning and participates in verbal exchanges with a range of personnel

	using detailed and clear language to contribute information and express requirements and recommendations
Numeracy	<ul style="list-style-type: none">• Uses mathematical equations to calculate and compare system and numerical data to determine required actions and prepare reports and schedules
Teamwork	<ul style="list-style-type: none">• Selects and uses required conventions and protocols when communicating with others in a range of work contexts
Problem solving	<ul style="list-style-type: none">• Applies analytical processes to resolve technical or conceptual problems
Self-management	<ul style="list-style-type: none">• Takes responsibility for planning, sequencing and prioritising tasks and own workload for efficiency and effective outcomes
Technology	<ul style="list-style-type: none">• Uses main features and functions of digital tools to complete work tasks

Unit Mapping Information

Supersedes and is equivalent to ICTSAS418 Monitor and administer security of an ICT system.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTSAS440 Monitor and administer security of ICT systems

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- monitor and administer security functions of at least two different ICT systems.

In the course of the above, the candidate must:

- access and modify user settings to satisfy security policies, including:
 - legal notices at logon
 - password strength
 - email and resource access
- review user accounts for security control
- identify security features in operating environment
- monitor threats to the network using:
 - review logs and audit reports
 - third-party diagnostic tools
 - implementation of virus checking process and schedule
 - preparation of an audit report and recommendations
 - security spot checks.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry accepted hardware and software products related to IT security
- privacy issues and legislation with regard to IT security
- risk analysis processes for system security
- role of users in setting security
- password strength guidelines

- security technology and systems technologies
- client business domains, including:
 - client organisation structure
 - business functionality.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- special purpose tools, equipment and materials required for the monitoring and administration of security functions of ICT systems
- industry software packages
- an environment with an existing security system in place
- security policy for security systems
- industry and organisational standards
- a live ICT system.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTSAS441 Support ICT system software

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to support Information and Communications Technology (ICT) system software through the management of ICT system files, management of ICT system security, ICT system backups and ICT system restores.

It applies to individuals who provide assistance and use technical and specialised knowledge and a systematic approach to tasks to ensure organisational standards are met in maintaining operating systems.

No licensing, legislative, or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems administration and support

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Access and maintain ICT system software	<ul style="list-style-type: none">1.1 Access ICT system software according to organisational procedures1.2 Evaluate ICT system effectiveness against organisational requirements and benchmarks and determine if maintenance activities should be commenced1.3 Identify peak periods and performance problems1.4 Monitor ICT system data levels1.5 Troubleshoot ICT system with required ICT system tools as needed1.6 Monitor and retune ICT system

ELEMENT	PERFORMANCE CRITERIA
2. Set up and manage ICT system files	2.1 Access ICT system files 2.2 Evaluate ICT system requirements and monitor appropriateness of file and folder structures 2.3 Create required administration file and folder structures 2.4 Set up security and access and sharing of file system according to ICT system requirements 2.5 Test file system and confirm required access to user groups 2.6 Write logon scripts and custom utilities and programs according to organisational guidelines 2.7 Document file system created according to organisational guidelines
3. Monitor and manage ICT system usage and security	3.1 Monitor user access against user access levels 3.2 Review user and data security requirements 3.3 Identify virus protection requirements of network according organisational requirements 3.4 Scan ICT system for viruses and remove detected viruses 3.5 Determine data exposure risks and formulate required prevention and recovery processes 3.6 Implement backup and to restore services system 3.7 Document disaster recovery procedures according to organisational requirements
4. Carry out ICT system backup and restore ICT system backup	4.1 Confirm backup schedule meets organisational requirements 4.2 Complete ICT system backup according to organisational, scheduling and system requirements 4.3 Provide and use a secure off-site location for storage of backup media 4.4 Complete required ICT system restores and system recovery according to organisational guidelines 4.5 Optimise restored ICT system according to organisational requirements 4.6 Record ICT system backups and restores according to organisational requirements
5. Finalise ICT system software support procedures	5.1 Confirm all ICT system support procedures have been performed 5.2 Review implemented ICT system changes 5.3 Evaluate and report on ICT system support procedures

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none">Interprets and analyses technical and non-technical information and system data from a range of sources to determine requirements and complete required actions
Writing	<ul style="list-style-type: none">Prepares required workplace documentation using appropriate structure, layout and technical language
Numeracy	<ul style="list-style-type: none">Uses mathematical equations to calculate and compare system and numerical data to determine required actions and to prepare reports
Problem solving	<ul style="list-style-type: none">Applies analytical processes to resolve technical or conceptual problems
Self-management	<ul style="list-style-type: none">Takes responsibility for planning, sequencing and prioritising tasks and own workload for efficiency and effective outcomes
Technology	<ul style="list-style-type: none">Uses main features and functions of digital tools to complete work tasks

Unit Mapping Information

Supersedes and is equivalent to ICTSAS419 Support system software.

Assessment Requirements for ICTSAS441 Support ICT system software

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- support ICT system software by completing all of the following, on two separate ICT systems:
 - ICT system file management
 - ICT system security management
 - ICT system backup
 - ICT system restore.

In the course of the above, the candidate must:

- prepare documentation and reports
- access required ICT system software and files
- maintain system performance benchmarks
- use a wide range of features and system tools.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- system software and system tools
- reasons for system performance problems, such as:
 - system utilisation
 - file and disk structure
 - performance reports and files
- system data levels
 - system performance indicators
 - predetermined system performance standards

- key features of change management systems
- the client business domain
- quality assurance practices with regard to supporting system software
- simple programming constructs
- vendor products and trends in product development.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- special purpose tools, equipment and materials for ICT system support
- industry software packages
- organisational performance benchmarks
- live system
- client user requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTSAS442 Provide first-level remote help desk support

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to resolve first-level user support issues and change requests remotely for a range of Information and Communications Technology (ICT) systems.

It applies to experienced individuals who, while working under a level of supervision, have responsibility in a frontline technical support capacity to exercise discretion and judgement using required knowledge to provide assistance and remote help desk support to clients.

No licensing, legislative, or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems administration and support

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine the user support issue	1.1 Determine eligibility status of individual experiencing user support difficulty against organisational guidelines 1.2 Clarify user support difficulty and change request with client 1.3 Confirm nature of user support difficulty and change request with client
2. Identify the ICT system being used by the client	2.1 Identify software, hardware, network connection and application being used by client 2.2 Identify expected client outcome and stage of issue resolution 2.3 Step client back to beginning of resolution process

ELEMENT	PERFORMANCE CRITERIA
3. Confirm resolution of user support issue and change request	3.1 Determine, describe and eliminate factors that created user support issue and permit it to recur 3.2 Explain and guide client through complete recovery and resolution process 3.3 Provide handling and resolution instructions to client 3.4 Escalate change request where required 3.5 Document changes where required
4. Finalise client support procedures	4.1 Confirm resolution of issue and obtain client satisfaction with client according to client service policy 4.2 Inform client of additional support and services available, according to the organisation's client service policy 4.3 Provide client with additional product and service information according to organisation's sales promotion requirements 4.4 Complete client contact records according to client service requirements

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Interprets and analyses technical and non-technical information from a range of sources to determine requirements and complete required actions
Writing	<ul style="list-style-type: none"> Accurately records information and numerical data and prepares documentation using clear and accurate language to convey explicit information, requirements and recommendations
Oral Communication	<ul style="list-style-type: none"> Articulates ideas and strategies using effective communication techniques and industry standard technical language intended for audience and environment Explain the processes involved with resolving client problems in a logical manner, using plain English
Teamwork	<ul style="list-style-type: none"> Selects and uses required conventions and protocols when communicating with clients in a range of work contexts
Numeracy	<ul style="list-style-type: none"> Uses mathematical equations to calculate costs and estimate time in providing client services and in determining required actions

Self-management	<ul style="list-style-type: none">• Takes responsibility for planning, sequencing and prioritising tasks and own workload for efficiency and effective outcomes
Problem solving	<ul style="list-style-type: none">• Applies analytical processes to resolve technical or conceptual problems
Technology	<ul style="list-style-type: none">• Uses main features and functions of digital tools to complete work tasks

Unit Mapping Information

Supersedes and is equivalent to ICTSAS420 Provide first-level remote help desk support.

Assessment Requirements for ICTSAS442 Provide first-level remote help desk support

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- resolve one first-level user support issue of an ICT system and one first-level change request of a different ICT system, for two separate clients.

In the course of the above, the candidate must:

- identify nature of the user difficulty and determine required support
- identify ICT system being used by client, such as:
 - software
 - hardware
 - network connection
 - application
- resolve first-level user support difficulties remotely
- demonstrate customer service skills
- engage with the client using a range of communication skills, such as:
 - active listening
 - questioning
 - clear and concise language
 - logical, plain English
- obtain client feedback and document problem resolution.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- customer service policies and procedures
- contexts where escalation procedures are required

- organisational guidelines, including user support services
- work health and safety (WHS) procedures related to:
 - work environment
 - organisational requirements
- user support policies of limited complexity related to known or basic options.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- client issues and change requests
- remote helpdesk hardware and software
- communications hardware
- customer service policies
- user support policies
- escalation procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTSAS443 Support operating system users and troubleshoot applications

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to support users who run operating systems (OS) in a corporate or home environment and to troubleshoot applications on a range of Information and Communications Technology (ICT) devices.

It applies to individuals who provide frontline support to users and apply technical and specialised knowledge to fault finding and problem solving.

No licensing, legislative, or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems administration and support

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to support OS users	1.1 Access OS according to organisational procedures 1.2 Determine support requirements with OS users 1.2 Analyse OS according to organisational procedures 1.3 Determine support capacity and refer to required personnel if outside scope of ability 1.4 Document intended OS support
2. Install, configure and troubleshoot applications and	2.1 Install client application 2.2 Configure and customise client application within user environment and according to user specifications

ELEMENT	PERFORMANCE CRITERIA
security	2.3 Identify application problems and security issues 2.4 Troubleshoot application according to organisational procedures 2.5 Troubleshoot security permission problems 2.6 Manage application security settings
3. Implement OS support procedures	3.1 Determine user OS issues and problems 3.2 Research solutions to user OS issues and problems 3.3 Recommend user OS solutions 3.4 Implement OS solutions according to organisational procedures 3.5 Resolve OS issues and problems according to organisational procedures
4. Finalise OS support and troubleshooting procedures	4.1 Confirm all OS system support procedures have been performed 4.2 Review implemented application changes and installations and OS support outcomes according to organisational procedures 4.3 Evaluate and report on support procedures

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Researches and analyses complex technical and non-technical information from a range of sources to determine requirements and complete required actions
Writing	<ul style="list-style-type: none"> Accurately records information and numerical data and prepares documentation using clear and accurate language to convey explicit information, requirements and recommendations
Oral Communication	<ul style="list-style-type: none"> Confirms information and articulates ideas using effective communication techniques and industry standard technical language intended for audience and environment
Numeracy	<ul style="list-style-type: none"> Uses mathematical equations to calculate and compare numerical data to solve problems and determine required actions
Teamwork	<ul style="list-style-type: none"> Selects and uses required conventions and protocols when communicating with clients in a range of work contexts

SKILL	DESCRIPTION
Problem solving	<ul style="list-style-type: none">• Applies analytical processes to resolve technical or conceptual problems
Self-management	<ul style="list-style-type: none">• Takes responsibility for planning, sequencing and prioritising tasks and own workload for efficiency and effective outcomes
Technology	<ul style="list-style-type: none">• Uses main features and functions of digital tools to complete work tasks

Unit Mapping Information

Supersedes and is equivalent to ICTSAS421 Support users and troubleshoot desktop applications.

Assessment Requirements for ICTSAS443 Support operating system users and troubleshoot applications

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- provide support to two different OS users, with different support requirements, on separate occasions
- install and troubleshoot applications on at least two different ICT devices.

In the course of the above, the candidate must:

- install, configure and troubleshoot applications
- manage security issues associated with OS and applications
- provide user support to users of OS
- customise computer applications
- anticipate and respond to a range of security incidents.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- organisational procedures, including:
 - application troubleshooting
 - OS access and analysis
 - OS solution implementation
 - OS issues and problem resolution
- sources of OS patches
- OS and application security incidents
- typical systems and procedures of user support.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required OS installation storage and recovery software
- devices with application errors
- samples of operating system patches
- stand-alone or networked ICT device.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTSAS444 Repair operating systems boot up procedures

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to repair boot up procedures in a variety of operating systems (OS).

It applies to individuals who use technical and specialised knowledge and a systematic approach to troubleshooting and fault finding.

No licensing, legislative, or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems administration and support

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to repair OS	1.1 Review organisation's technical support procedures and confirm client requirements 1.2 Access faulty OS according to organisational procedures 1.3 Examine OS file and root structure according to organisational procedures 1.4 Identify profile information and currency of OS 1.5 Identify and confirm help desk structure for assistance if required 1.6 Examine kernel file structures
2. Analyse OS boot up processes and repair	2.1 Observe boot process according to task requirements 2.2 Compare and contrast features of faulty OS boot up with fully

ELEMENT	PERFORMANCE CRITERIA
	functional OS boot up according to organisational procedures 2.3 Analyse and evaluate boot up procedures according to organisational procedures 2.4 Evaluate boot files 2.5 Determine boot up procedure problems 2.6 Identify boot up procedure solutions 2.7 Implement boot up procedure solutions according to organisational procedures 2.8 Test implemented solution effectiveness 2.9 Document OS boot up repair according to organisational procedures
3. Finalise OS boot up repair processes	3.1 Confirm all OS boot up repair procedures have been performed 3.2 Review implemented boot up repair and OS support outcomes 3.3 Evaluate and report on support procedures

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none">Interprets and analyses complex technical information from a range of sources to determine requirements and complete required actions
Writing	<ul style="list-style-type: none">Records information in the required format, using accurate spelling and grammar and terminology and conventions specific to requirements
Oral Communication	<ul style="list-style-type: none">Articulates ideas and strategies using effective communication techniques and industry standard technical language intended for audience and environment
Numeracy	<ul style="list-style-type: none">Uses mathematical equations to calculate and compare numerical data required for troubleshooting and problem solving
Teamwork	<ul style="list-style-type: none">Selects and uses required conventions and protocols when communicating with clients in a range of work contexts
Problem Solving	<ul style="list-style-type: none">Applies analytical processes to resolve technical or conceptual problems

Self-management	<ul style="list-style-type: none">• Takes responsibility for planning, sequencing and prioritising tasks and own workload for efficiency and effective outcomes
Technology	<ul style="list-style-type: none">• Uses main features and functions of digital tools to complete work tasks

Unit Mapping Information

Supersedes and is equivalent to ICTSAS424 Support different operating systems.

Links

Assessment Requirements for ICTSAS444 Repair operating systems boot up procedures

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- repair the boot up procedures of two different operating systems, on separate occasions.

In the course of the above, the candidate must:

- review technical support procedures with client
- evaluate the functionality of OS
- differentiate OS features, structure and currency
- analyse OS boot processes and procedures
- review and document implemented boot up repair and OS support outcomes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- organisational procedures, including:
 - OS file and root structure examination
 - OS boot up comparison procedures
 - boot up procedures
 - solution implementation for boot up procedures
 - OS boot up repair documentation
- boot process analysis of a large variety of OS
- file analysis of those required for operation
- compare the key features of a range of OS.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- stand-alone or networked operating systems
- required OS installation storage and recovery software
- drivers for connected devices
- system for boot up analysis and repair
- help desk support.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTSAS445 Configure and troubleshoot operating system software

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to install, configure, optimise and troubleshoot operating system (OS) software to ensure organisational and client requirements are met.

It applies to experienced individuals who, whilst working under minimal supervision and in an instructional and management capacity, are required to install, configure, optimise and troubleshoot OS system software to meet organisational client requirements.

No licensing, legislative, or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems administration and support

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify suitable operating systems	1.1 Research OS vendor sites, technical specifications and system requirements 1.2 Compare and contrast different OS according to organisational procedures 1.3 Determine licensing, hardware and security requirements 1.4 Determine OS for required operation 1.5 Provide OS recommendation to required personnel
2. Install, configure, test and optimise	2.1 Install OS according to organisational requirements

ELEMENT	PERFORMANCE CRITERIA
operating systems	2.2 Configure OS user interface installation 2.3 Identify directory structures and demonstrate management of virtual memory 2.4 Test OS functions and operations according to organisational procedures 2.5 Optimise OS according to organisational and client requirements 2.6 Document OS installation procedures and functionality according to organisational procedures
3. Resolve operating system problems using command line options and system tools	3.1 Identify command line options and system tools 3.2 Troubleshoot OS problems according to organisational procedures 3.3 Identify and determine OS problem resolution strategies 3.4 Implement OS resolution strategies according to task requirements 3.5 Test OS problem resolution
4. Provide instruction for new operating system implementation	4.1 Confirm resolution of problems with client according to client service policy 4.2 Document changes to OS according to organisational procedures 4.3 Provide one-to-one change instruction to client and users as required 4.4 Obtain OS client evaluation and approval 4.5 Finalise OS change procedures according to organisational procedures

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Researches and analyses technical textual information and numeric data to source solutions and determine required actions
Writing	<ul style="list-style-type: none"> Uses clear and technical language and formats required to the task to record and convey information, requirements and recommendations

Oral Communication	<ul style="list-style-type: none">• Articulates ideas and strategies using effective communication techniques and industry standard technical language intended for audience and environment• Provides instructions to clients on how changes made to operating systems affect the operating system functionality
Initiative and enterprise	<ul style="list-style-type: none">• Takes personal responsibility for following explicit and implicit policies, procedures and technical requirements
Teamwork	<ul style="list-style-type: none">• Selects and uses required conventions and protocols when communicating with clients and others in a range of work contexts
Problem solving	<ul style="list-style-type: none">• Applies analytical processes to resolve technical or conceptual problems
Self-management	<ul style="list-style-type: none">• Takes responsibility for planning, sequencing and prioritising tasks and own workload for efficiency and effective outcomes
Technology	<ul style="list-style-type: none">• Uses main features and functions of digital tools to complete work tasks

Unit Mapping Information

Supersedes and is equivalent to ICTSAS425 Configure and troubleshoot operating system software.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTSAS445 Configure and troubleshoot operating system software

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- install, configure, optimise and troubleshoot two different operating systems, on two separate occasions, each for a different organisation.

In the course of the above, the candidate must:

- improve system performance with minimum disruption to clients
- identify OS problems and resolve using command line options and system tools.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- requirements of different operating systems
- architecture of technical systems
- industry accepted hardware and software products
- functions and features of the OS used by the organisation
- OS resolution strategies, including:
 - command line options
 - system tools
- installation and configuration of systems software including:
 - organisational requirements for OS software
 - prerequisites for system software installation
 - set-up and configuration procedures
 - software packages supported by the organisation
 - system's functionality
 - system's diagnostic software

- vendor specifications and requirements for installation
- organisational procedures, including:
 - OS comparison and contrast methods
 - OS functionality and operation testing
 - OS installation procedure documentation
 - OS troubleshooting procedures
 - OS change documentation
 - OS change procedures.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- industry accepted devices where OS installations can be performed
- OS software
- command line options and system tools
- technical documentation
- organisational documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTSAS446 Fault find and troubleshoot ICT equipment, hardware and software problems

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to troubleshoot Information and Communications Technology (ICT) equipment, hardware and software problems and apply systematic processes to fault finding across a wide range of ICT disciplines.

It applies to individuals who, whilst working under minimal supervision and with a level of expertise, apply a systematic approach to finding faults, troubleshooting problems and solving issues in a wide range of ICT disciplines in a small or large helpdesk environment.

No licensing, legislative, or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems administration and support

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for fault finding and troubleshooting procedures	1.1 Develop problem resolution troubleshooting process 1.2 Obtain ICT system according to organisational procedures 1.3 Analyse and document ICT system characteristics according to organisational procedures 1.4 Identify and obtain required fault-finding tools according to organisational procedures 1.5 Identify fault finding legislation, health and safety requirements, codes, regulations and standards
2. Analyse the problem	2.1 Collect ICT system data according to organisational

ELEMENT	PERFORMANCE CRITERIA
to be solved	procedures 2.2 Determine specificity of problem according to organisational procedures 2.3 Analyse data to determine nature and scope of problem 2.4 Determine symptoms of ICT system problems 2.5 Document analysis of problem according to organisational procedures
3. Identify a solution and rectify the problem	3.1 Test variables until problem is isolated according to organisational procedures 3.2 Confirm isolated problem has been accurately determined 3.3 Create list of probable causes 3.4 Formulate solution and create provision for rollback 3.5 Implement ICT system solution according to organisational procedures
4. Test system and complete documentation	4.1 Test ICT system to ensure problem has been solved according to organisational procedures 4.2 Record results of tests and file according to organisational procedures 4.3 Implement basic preventative maintenance techniques 4.4 Document characteristics of problem and solution according to organisational procedures 4.5 Load document to required database

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Identifies, analyses and evaluates technical textual information and technical system data to source solutions and determine required actions
Writing	<ul style="list-style-type: none"> Records information relating to issues and outcomes in a sequential manner using grammar and spelling
Initiative and enterprise	<ul style="list-style-type: none"> Identifies and complies with organisational and legislative requirements
Problem solving	<ul style="list-style-type: none"> Applies analytical processes to resolve technical and conceptual problems

Self-management	<ul style="list-style-type: none">• Takes responsibility for planning, sequencing and prioritising tasks and own workload for efficiency and effective outcomes
Get the work done	<ul style="list-style-type: none">• Uses the main features and functions of digital tools to complete work tasks

Unit Mapping Information

Supersedes and is equivalent to ICTSAS426 Locate and troubleshoot ICT equipment, system and software faults.

Links

Companion Volume Implementation Guide is found on VETNet -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=a53af4e4-b400-484e-b778-71c9e9d6aff2>

Assessment Requirements for ICTSAS446 Fault find and troubleshoot ICT equipment, hardware and software problems

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- apply fault finding methods to determine a problem with an ICT system, on at least two occasions, each occasion on a different ICT system
- troubleshoot and resolve problem identified on each ICT system.

In the course of the above, the candidate must:

- identify, analyse and document fault finding method and faults
- develop and document troubleshooting process
- obtain and use suitable tools and equipment
- systematically test variables until problem is isolated.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- ICT systems, including:
 - ICT equipment (including peripheral devices)
 - hardware
 - software
 - operating systems
- organisational procedures, including:
 - fault finding, troubleshooting, analysis and test recording documentation
 - fault finding tool gathering and use procedures
 - ICT system data collection procedures
 - variable and system testing procedures
 - solution implementation procedures

- fault finding test filing procedures
- client support and maintenance practices
- industry accepted hardware and software products
- system's functionality characteristics
- change management tools that may be used for fault finding and troubleshooting ICT equipment, hardware and software problems
- key features of quality assurance practices, including locating and troubleshooting ICT:
 - equipment faults
 - hardware faults
 - software faults
 - operating system faults
- change control procedures of the organisation
- range of trouble shooting methodologies and system testing tools
- symptoms of faulty ICT equipment and probable causes of problems
- basic preventative maintenance techniques
- legislative, regulatory, standards and codes of practice that impact on the ICT service sector.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- equipment, hardware, software and systems to be diagnosed
- diagnostic and fault-finding tools
- technical and system documentation
- organisational requirements for documenting solution.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTSAS506 Update ICT system operational procedures

Modification History

Release 1	This version first released with ICT Information and Communications Technology Training Package Version 1.0.
-----------	--

Application

This unit describes the skills and knowledge required to assess, update and document the operational procedures required to use the information and communications technology (ICT) system.

It applies to individuals who apply technical and specialised knowledge and systematic approaches to documentation in a range of ICT related areas.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems administration and support

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Assess technical and user documentation	1.1 Review current versions of technical and user documentation 1.2 Compare accuracy of technical and user documentation with current system functionality 1.3 Identify and document inaccuracies in the documentation
2. Update procedures	2.1 Determine operational procedure requirements using review outcomes 2.2 Develop or update operating procedures for the system

ELEMENT	PERFORMANCE CRITERIA
	2.3 Submit proposed operating procedures to appropriate person
3. Update documentation	3.1 Review feedback and make appropriate changes 3.2 Update technical and user documentation to incorporate changes 3.3 Submit technical and user documentation to appropriate person for final approval 3.4 Distribute technical and user documentation as agreed with appropriate person

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.1-1.3, 3.1	<ul style="list-style-type: none"> Interprets and analyses textual information and data to compare accuracy of content documentation and determine necessary actions
Writing	1.3, 2.2, 3.1, 3.2	<ul style="list-style-type: none"> Develops material containing specific requirements using clear and technical language Organises content and version control in a manner that supports the purpose of the document
Numeracy	1.1, 1.2	<ul style="list-style-type: none"> Accurately interprets, analyses and documents numerical and technical system data
Interact with others	2.3, 3.3, 3.4	<ul style="list-style-type: none"> Uses a variety of relevant communication tools and strategies in building and maintaining effective working relationships
Get the work done	1.2, 2.1, 2.2, 3.1, 3.3, 3.4	<ul style="list-style-type: none"> Plans strategic priorities and outcomes within a flexible, efficient and effective context in a diverse environment exposed to competing demands Gathers and analyses data and seeks feedback to improve plans and processes Addresses complex problems involving multiple variables, using formal analytical, lateral thinking techniques, experience and knowledge to focus in on the root cause

Unit Mapping Information

Code and title current version	Code and title previous version	Comments	Equivalence status
ICTSAS506 Update ICT system operational procedures	ICASAS506A Update IT system operational procedures	Updated to meet Standards for Training Packages. Minor edit to the competency title.	Equivalent unit

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for ICTSAS506 Update ICT system operational procedures

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- analyse system functionality
- review and update technical and user documentation for at least TWO systems or occasions
- develop procedures to operate systems.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the client business domain
- explain current business practices related to preparing reports
- compare and contrast the key features and capabilities of current industry accepted hardware and software products
- describe documentation standards and tools
- discuss the role of stakeholders and the degree of stakeholder involvement.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the systems administration and support field of work, and include access to:

- special purpose tools, equipment and materials
- industry software packages
- system or project related documentation

- staffing resources
- documentation tools.

Assessors must satisfy NVR/AQTF assessor requirements.

ICTSAS521 Perform integration tests

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 4.0.

Application

This unit describes the skills and knowledge required to ensure that the components of the system operate together to the expected standard.

It applies to experienced development staff who are responsible for ensuring that components function correctly when combined so as not to impact availability or user experience.

No licensing, legislative, or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems administration and support

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for test	<p>1.1 Prepare and initialise test environment and select testing tools according to the test plan</p> <p>1.2 Review results of earlier component testing and identify critical issues to be considered in test scripts</p> <p>1.3 Prepare integration tests and document expected test results according to organisational test procedures</p> <p>1.4 Review expected test results against acceptance and test criteria and earlier component testing and correct discrepancies</p>

	1.5 Perform static tests of each point of integration and verify correctness of each integration test according to test plan
2. Conduct test	<p>2.1 Run test scripts and document results against software life cycle model</p> <p>2.2 Compare and document test results to expected test results on completion of each integration test</p>
3. Analyse and classify results	<p>3.1 Summarise and classify test results and highlight areas of concern according to organisational test procedures</p> <p>3.2 Compare test results against system specifications, and acceptance and test criteria and prepare test results report</p> <p>3.3 Notify contact in operations of completion of testing and communicate implications according to the test plan</p> <p>3.4 Seek, obtain and incorporate feedback from superior on test results report, and log comments and gain required signatures</p> <p>3.5 Agree next actions with superior based on test results report and incorporate into test results report</p> <p>3.6 Finalise test results report according to organisational test procedures</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Analyses and evaluates textual and numerical information from a range of documentation to determine required action
Writing	<ul style="list-style-type: none"> Accurately records information and system data using required format, terminology and conventions specific to requirements Prepares reports using concise language and correct spelling and grammar to convey explicit information, requirements and recommendations
Oral Communication	<ul style="list-style-type: none"> Uses clear and accurate language and inclusive and collaborative techniques to convey and obtain information from a range of personnel
Numeracy	<ul style="list-style-type: none"> Uses mathematical equations to calculate, compare and evaluate numerical test data to determine required actions
Interact with	<ul style="list-style-type: none"> Identifies and uses appropriate conventions and protocols when communicating with colleagues and stakeholders

others	
Get the work done	<ul style="list-style-type: none">• Develops plans to manage relatively complex routine and non-routine tasks with an awareness of how they might contribute to broader strategy and goals• Uses problem solving techniques in analysing required outcomes to perform integration tests• Uses digital technologies to manage information and communications technology (ICT) operations

Assessment Requirements for ICTSAS521 Perform integration tests

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 4.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements and performance criteria of this unit; including evidence of the ability to:

- On two occasions using one or more system:
 - prepare and initialise a test environment
 - construct integration tests addressing memory leakage, global name-space pollution and static variables
 - conduct static tests of integration points including the use of arguments, positional parameters and return values
 - adjust test scripts according to results of earlier component testing
 - conduct tests according to test scripts using appropriate test tools, integration standards and quality benchmarks
 - determine whether components operate according to specifications
 - analyse and classify test results
 - prepare and finalise test results report including gaining approval from superior

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements and performance criteria of this unit. This includes:

- Key features of two programming languages
- Features and processes of automated test tools
- Systems specifications analysis
- Features and common problems relating to the system being tested
- Key features and processes of integration testing techniques and tools, and associated advantages and disadvantages

Assessment Conditions

Skills must be demonstrated in a workplace or simulated environment where conditions are typical of those experienced in an ICT workplace or working environment. This includes access to:

- Automated testing tools
- Acceptance and test criteria
- Test plan
- Individual contact in operations in the organisation
- Software life cycle model
- Integration standards
- System specifications
- Results of component testing
- System suitable for testing
- Organisational testing procedures including quality benchmarks and integration standards

Assessors of this unit must satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards.

ICTSAS523 Perform stress and load tests on integrated platforms

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 4.0.

Application

This unit describes the skills and knowledge required to plan and perform tests to assess and ensure the ability of a system to cope with expected high levels of data volume.

It applies to experienced individuals who provide specialised and technical knowledge in completing complex technical operations to ensure that a proposed system can handle anticipated loads.

No licensing, legislative, or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems administration and support

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Create test plan	1.1 Determine and document standards for acceptance and compliance with user which meet organisational requirements 1.2 Determine and document test plan according to organisational requirements 1.3 Identify testing resources and tools meeting acceptance standards and compliance 1.4 Determine and document clear responsibilities and contact

	<p>points with third party suppliers</p> <p>1.5 Identify and record base-system loads and level of activity against which tests will be measured according to test plan</p> <p>1.6 Finalise test plan and agree with superior</p>
2. Undertake test	<p>2.1 Test system technology components and determine if operates to organisational requirements and system specifications</p> <p>2.2 Test integrated platform and determine if operates to organisational requirements and system specifications</p> <p>2.3 Document test results to according to test plan</p>
3. Diagnose and resolve faults	<p>3.1 Document and prioritise faults according to test results and organisational requirements</p> <p>3.2 Diagnose faults and rectify according to priority</p> <p>3.3 Manage problem resolution processes with third party suppliers according to project procedures</p>
4. Update documentation	<p>4.1 Update project and system documentation with test results</p> <p>4.2 Record and present test findings to development staff</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interprets and analyses a range of textual information and numeric data from a range of technical sources to determine necessary actions
Writing	<ul style="list-style-type: none"> Develops technical and procedural documentation using clear and precise language and numerical data to convey test outcomes, requirements and recommendations
Oral Communication	<ul style="list-style-type: none"> Uses clear and precise language to convey and present complex technical information to a range of personnel Uses questioning and listening techniques to confirm understanding, gain consensus on concepts and clarify responsibilities
Numeracy	<ul style="list-style-type: none"> Uses mathematical equations to calculate numerical data and compare test outcomes
Interact with others	<ul style="list-style-type: none"> Identifies and uses appropriate conventions and protocols when communicating with colleagues and others
Get the work	<ul style="list-style-type: none"> Develops plans to manage relatively complex routine and non-routine

done	<p>tasks with an awareness of how they might contribute to broader strategy and goals</p> <ul style="list-style-type: none">• Uses problem solving techniques to analyse required outcomes to perform stress and load tests• Uses digital technologies to manage information and communications technology operations
------	--

Assessment Requirements for ICTSAS523 Perform stress and load tests on integrated platforms

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 4.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements and performance criteria of this unit; including evidence of the ability to:

- On two occasions on different systems:
 - Create a test plan including scope, objectives, specific automated tests to place high load on system and expected results and performance impacts
 - Undertake and analyse tests that include analysis of the system's ability to cope with expected high levels of data volume against standards
 - Develop documentation related to stress and load testing including third party responsibilities, processes or steps, test sequencing, and standards for acceptance
 - Identify the high data limits expected by the organisation and reflect in test plan and testing
 - Analyse test results to determine whether system and the individual components operate in the manner expected under expected conditions
 - Identify, diagnose, and rectify faults identified during testing
 - Document the test results and corrective action taken according to project standards and organisational requirements
-

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements and performance criteria of this unit. This includes:

- Key features and processes of automated test tools
- Third party software and resource options relevant to stress and load testing
- Program design and performance characteristics
- Key features and processes of testing techniques
- System load and level of activity monitoring methods
- Tests for system and system technology components

- Typical fault prioritisation
- Third party supplier communication and relationship management
- Organisational documentation procedures

Assessment Conditions

Skills must be demonstrated in a workplace or simulated environment where conditions are typical of those in an ICT working environment. This includes access to or availability of:

- Automated testing tools
- Individual to undertake role of user
- Individual development staff and superior in the organisation
- Organisational requirements relating to the system
- Project documentation, including templates, standards, specifications and user and technical manuals
- Business rules and expected loads
- Technical components of system including platform, software, hardware, and network
- Organisational testing procedures including standards
- System for testing

Assessors of this unit must satisfy the assessor requirements in applicable vocational education and training legislation, frameworks and/or standards.

ICTSAS524 Develop, implement and evaluate an incident response plan

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to develop and implement an incident response plan. The results of the incident response plan must be evaluated if they affect the mission of the organisation.

It applies to individuals who apply high-level technical skills and specialised knowledge to provide broad systems administration and support functions.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems administration and support

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to develop an incident response plan	1.1 Identify and document organisational incident response plan requirements 1.2 Identify and document incident response team services according to organisational requirements 1.3 Identify incident response plan structure according to organisational requirements 1.4 Determine and document alignment of organisation's existing incident response plan against identified requirements 1.5 Submit documentation to required personnel, seek and respond to feedback

ELEMENT	PERFORMANCE CRITERIA
2. Develop the incident response plan	2.1 Develop and document incident management policy according to task requirements 2.2 Create incident response plans according to organisational requirements and security policies and procedures 2.3 Develop incident handling and reporting procedures 2.4 Create incident response exercises, red-teaming activities, staffing and training requirements 2.5 Develop procedure for collecting and protecting forensic evidence during incident response procedures according to organisational requirements 2.6 Establish and document incident the response plan
3. Implement the incident response plan	3.1 Apply response actions to reported security incident according to incident response plan and task requirements 3.2 Assist in collecting, processing and preserving evidence according to requirements 3.3 Execute incident response plans, red-teaming activities and incident response exercises 3.4 Document security incident response and actions according to task requirements 3.5 Collect, analyse and report incident management measures according to task requirements
4. Evaluate incident response plans	4.1 Assess and document efficiency and effectiveness of incident response plans activities 4.2 Examine and document effectiveness of red teaming and incident response tests, training and exercises 4.3 Assess effectiveness of communication between incident response team and required internal and external organisations 4.4 Determine and document response improvement activities 4.5 Submit documentation to required personnel and obtain final task sign off

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none"> Monitors outcomes of decisions, considering results and identifying key concepts and principles that may be adaptable in

SKILL	DESCRIPTION
	the future
Numeracy	<ul style="list-style-type: none"> Interprets, analyses and documents numerical and technical system data Uses mathematical equations to calculate data for technical reports
Oral communication	<ul style="list-style-type: none"> Uses listening and questioning techniques to confirm task requirements and relevant information using succinct language
Reading	<ul style="list-style-type: none"> Analyses textual information and data to determine necessary actions
Writing	<ul style="list-style-type: none"> Prepares required workplace documentation detailing processes and outcomes using cohesive language
Teamwork	<ul style="list-style-type: none"> Uses a variety of relevant communication tools and strategies in building and maintaining effective working relationships Influences and fosters a collaborative culture facilitating a sense of commitment and workplace cohesion Understands diversity and seeks to integrate diversity into the work context for managing change, making decisions and achieving shared outcomes
Planning and organising	<ul style="list-style-type: none"> Monitors and reviews the organisations policies, procedures and adherence to legislative requirements in order to implement and manage change
Self-management	<ul style="list-style-type: none"> Works autonomously, making high-level decisions to achieve and improve organisational goals
Problem solving	<ul style="list-style-type: none"> Develops and implements strategies that ensure organisational policies, procedures and regulatory requirements are met Operates from a broad conceptual plan, developing the operational detail in stages, regularly reviewing priorities and performance during implementation, and identifying and addressing issues

Unit Mapping Information

Supersedes and is equivalent to ICTSAS501 Develop, implement and evaluate an incident response plan.

Links

Assessment Requirements for ICTSAS524 Develop, implement and evaluate an incident response plan

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- determine incident response plan requirements, implement and analyse its application in real-world scenarios and document processes and outcomes on at least one occasion.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- key features of:
 - organisational business domain
 - industry standard workplace procedures and legislative requirements that are applicable to formulating prevention and recovery strategy
- industry standard systems engineering methodologies applicable to threat evaluation
- industry standard backup methodologies
- industry standard components of business planning process relevant to development of Information and Communications Technology (ICT) business solutions
- industry standard system functionality for an organisation.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- ICT business specifications and organisational deliverables
- information on the security environment, including required laws and legislation
- existing organisational security policies, organisational expertise and knowledge

- security environment threats
- risk analysis tools and methodologies
- ICT security assurance specifications
- industry standard incident scenarios.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTSAS525 Develop and conduct client acceptance tests

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to plan and conduct acceptance testing as part of a process whereby clients will determine whether to accept the system.

It applies to experienced individuals working in a range of Information and Communications Technology (ICT) environments, who apply specialised and technical knowledge in the development of strategic initiatives and in performing and organising others to complete complex technical operations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems administration and support

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify acceptance criteria and develop test plan	<ul style="list-style-type: none">1.1 Review system requirements documentation and project plans and identify mandatory system objectives, optional criteria and conditions for system acceptance1.2 Develop and document test plan according to organisational and system requirements1.3 Review and validate test plan according to mandatory criteria, conditions and system objectives1.4 Document test plan review findings and submit to required personnel1.5 Schedule acceptance test and notify required personnel

ELEMENT	PERFORMANCE CRITERIA
	according to organisational policies and procedures
2. Perform functional testing	2.1 Prepare test environment according to organisational and task requirements 2.2 Perform testing according to test plan and task requirements 2.3 Execute each test cycle according to test plan 2.4 Document all errors, difficulties and problems according to task requirements
3. Validate test results	3.1 Identify and document performance discrepancies and corrections according to organisational policies, procedures and timeframes 3.2 Submit documentation to required personnel and seek feedback 3.3 Respond to feedback and reschedule required code changes and modifications 3.4 Document modifications and required code changes and submit to required personnel 3.5 Obtain final task sign off from required personnel

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Uses mathematical equations to calculate financial and technical data and to organise schedules Interprets, analyses and documents numerical and technical system data
Oral communication	<ul style="list-style-type: none"> Uses listening and questioning techniques to confirm testing arrangements and convey technical information using relevant industry language for intended audience
Reading	<ul style="list-style-type: none"> Interprets and analyses textual information and data from a range of sources to determine necessary testing and actions
Writing	<ul style="list-style-type: none"> Prepares required workplace documentation detailing test plan, findings and all problems and modifications using required language
Teamwork	<ul style="list-style-type: none"> Selects, implements and manipulates communications systems, processes and practices for maximum impact Uses a variety of relevant communication tools and strategies

SKILL	DESCRIPTION
	<ul style="list-style-type: none">in building and maintaining effective working relationships• Influences and fosters a collaborative culture and facilitates a sense of commitment and workplace cohesion
Planning and organising	<ul style="list-style-type: none">• Plans strategic priorities and outcomes within a flexible, efficient and effective context in a diverse environment exposed to competing demands
Problem solving	<ul style="list-style-type: none">• Gathers and analyses data and seeks feedback to improve plans and processes• Addresses complex problems involving multiple variables, using formal analytical, lateral thinking techniques, experience and knowledge to focus in on the root cause
Self-management	<ul style="list-style-type: none">• Identifies and acts on issues that contravene relevant policies, procedures and legal requirements
Technology	<ul style="list-style-type: none">• Uses digital technologies to manage business operations and actively investigates new technologies for strategic and operational purposes

Unit Mapping Information

Supersedes and is equivalent to ICTSAS504 Develop and conduct client acceptance test and ICTTEN504 Acceptance test new systems and equipment.

Assessment Requirements for ICTSAS525 Develop and conduct client acceptance tests

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop a test plan based on system requirements and acceptance criteria, undertake functional testing, and document outcomes and processes on at least one occasion.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- key features and processes of industry standard automated testing tools
- key aspects of organisational rules and standards
- organisational and user requirements
- industry standard testing methodologies used in acceptance testing.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- business requirements and organisation's deliverables
- project documentation, including:
 - templates
 - standards
 - specifications
 - client user and technical manuals
 - test plan
- technical components of system, including:

- software
- hardware
- network
- industry standard system application required for testing
- functional test cases that satisfy required acceptance criteria.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTSAS526 Review and update disaster recovery and contingency plans

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to analyse the impact of the system on the organisation and carry out risk analysis, disaster recovery and contingency planning.

It applies to individuals who apply a wide range of higher-level technical skills and systematic problem-solving approaches in Information and Communications Technology (ICT) related areas.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems administration and support

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Evaluate system impact on business continuity	1.1 Identify required business critical functions and security environment 1.2 Identify required critical data and software 1.3 Assess potential impact of business risk and threats on ICT systems 1.4 Identify statutory requirements, commercial requirements and contingency requirements according to organisational requirements
2. Evaluate system threats	2.1 Identify and document internal and external business environment system threats

ELEMENT	PERFORMANCE CRITERIA
	2.2 Evaluate and document risk minimisation alternatives against organisational cost constraints and organisational requirements 2.3 Submit document to required personnel, seek and respond to feedback
3. Formulate prevention and recovery strategy	3.1 Evaluate and document prevention and recovery options against business specifications and cost constraints 3.2 Review industry standard operational procedures and check required risk safeguards and contingency plans are in place 3.3 Submit disaster recovery and prevention strategy to required personnel and seek and respond to feedback
4. Develop disaster recovery plan	4.1 Identify and document disaster recovery resources according to cost constraints and organisational requirements 4.2 Identify and document disaster strategy processes 4.3 Identify required cut-over criteria plan 4.4 Document disaster recovery plan and submit to required personnel and seek and respond to feedback 4.5 Obtain final task sign off

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Analyses, interprets and documents numerical, financial and technical system data
Oral communication	<ul style="list-style-type: none"> Uses listening and questioning techniques to confirm information using relevant industry language for intended audience
Reading	<ul style="list-style-type: none"> Researches and analyses textual information and technical data/specifications from a range of documentation and sources to inform the development of contingency plans
Writing	<ul style="list-style-type: none"> Prepares required documentation detailing evaluation and strategy using required language and formats appropriate to the task
Teamwork	<ul style="list-style-type: none"> Uses relevant communication tools and strategies in building and maintaining effective working relationships Influences and fosters a collaborative culture that facilitates a sense of commitment and workplace cohesion
Planning and	<ul style="list-style-type: none"> Demonstrates strategic planning of priorities and outcomes within

SKILL	DESCRIPTION
organising	a flexible, efficient and effective context in a diverse environment exposed to competing demands
Problem solving	<ul style="list-style-type: none">Gathers and analyses data and seeks feedback to improve plans and processes
Self-management	<ul style="list-style-type: none">Develops and implements strategies to ensure organisational policies, procedures and regulatory requirements are metMonitors and reviews the organisations policies, procedures and adherence to legislative requirements to implement and manage change

Unit Mapping Information

Supersedes and is equivalent to ICTSAS505 Review and update disaster recovery and contingency plans.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTSAS526 Review and update disaster recovery and contingency plans

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop at least one contingency plan that identifies threats and minimises down time for critical business functions
- document finalised outcomes and evidence of improvements to critical business functions.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standard backup methodologies
- organisational planning process relevant to the development of Information and Communication Technology (ICT) business solutions
- organisational business domain
- industry standard disaster recovery plan strategies and components, including:
 - physical security
 - system failure, accident or sabotage (hackers)
 - denial of service
 - virus attack
 - cyber attack
 - telecommunications failure
 - contingency arrangements
- workplace health and safety (WHS), legislative and organisational requirements
- organisation's existing systems functionality and systems engineering.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- vulnerability assessment and general definition of requirements
- acceptance test plan
- business impact analysis
- information technology security assurance specifications
- organisational statutory documentation that may impact on work task activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTSAS527 Manage client problems

Modification History

Release	Comments
Release 2	Unit Mapping Information updated to note that ICTSAS527 Manage Client Problems was updated and equivalent to ICTTEN501 Provide consultancy and technical support in the customer premises equipment sector as noted in the Companion Volume Implementation Guide. This information was omitted in error in the first release. This version second released with ICT Information and Communications Technology Training Package Version 7.0.
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to liaise and support clients to manage and resolve problems in an Information and Communications Technology (ICT) environment.

It applies to individuals who apply high level technical and specialised knowledge in assisting clients to support, manage and resolve problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems administration and support

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine and review client support and resolution requirements	1.1 Diagnose potential troubleshooting and identify resolution requirements 1.2 Determine cause and analysis of the problem in accordance with client documentation and support requirements 1.3 Review organisational support and resolution documentation

ELEMENT	PERFORMANCE CRITERIA
	<p>and identify the clients point of contact</p> <p>1.4 Review service level agreement (SLA) and determine action and escalation procedures</p> <p>1.5 Verify the client support and resolution requirements with relevant personnel with the client contact</p>
2. Develop and implement client support and resolution requirements	<p>2.1 Develop required process required for client support and resolution requirements</p> <p>2.2 Implement process required for client support and resolution requirements</p> <p>2.3 Maintain communication with required personnel throughout support activity</p> <p>2.4 Document support activities and resolution outcomes according to client requirements</p>
3. Evaluate client support and resolution requirements	<p>3.1 Gather support and resolution services feedback from required personnel</p> <p>3.2 Determine improvements to future support services according to organisational requirements</p> <p>3.3 Submit documentation to required personnel and seek and respond to feedback</p> <p>3.4 Contact client to determine satisfaction with support and resolution services provided</p>

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Interprets, analyses and documents numerical and technical system data
Oral communication	<ul style="list-style-type: none"> Obtains information and feedback by effectively listening and questioning using concise language
Reading	<ul style="list-style-type: none"> Analyses textual information and data to determine client support
Writing	<ul style="list-style-type: none"> Prepares required documentation detailing task requirements, activities performed and their outcomes using appropriate language
Teamwork	<ul style="list-style-type: none"> Uses a variety of relevant communication tools and strategies in building and maintaining effective working relationships

SKILL	DESCRIPTION
Planning and organising	<ul style="list-style-type: none">• Accepts responsibility for planning and sequencing complex tasks and workload, negotiating key aspects with others, including required capabilities, efficiencies and effectiveness• Addresses complex problems involving multiple variables, using formal analytical, lateral thinking techniques experience and knowledge to focus in on root causes
Problem solving	<ul style="list-style-type: none">• Reviews the organisations policies, procedures and adherence to legislative requirements in order to implement and manage change
Self-management	<ul style="list-style-type: none">• Takes full responsibility for identifying and considering relevant organisational protocols and requirements

Unit Mapping Information

Supersedes and is equivalent to ICTSAS509 Provide client ICT support services and ICTTEN501 Provide consultancy and technical support in the customer premises equipment sector.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTSAS527 Manage client problems

Modification History

Release	Comments
Release 2	Unit Mapping Information updated to note that ICTSAS527 Manage Client Problems was updated and equivalent to ICTTEN501 Provide consultancy and technical support in the customer premises equipment sector as noted in the Companion Volume Implementation Guide. This information was omitted in error in the first release. This version second released with ICT Information and Communications Technology Training Package Version 7.0.
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- determine, plan and implement ICT support and resolution services for at least two different clients problems.

In the course of the above, the candidate must:

- undertake support and resolution services, including:
 - identifying support requirements and procedures
 - liaising with client contact to determine task alignment
 - documenting support provided
 - liaising with client to obtain feedback
 - act on feedback as appropriate.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- organisations domain and business structure
- features and capabilities of industry standard hardware and software products
- quality assurance practices

- stakeholder role and degree of stakeholder involvement in organisation
- structure and purpose of service level agreements (SLAs).

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- special purpose tools, equipment and materials required to provide client support services
- industry standard software packages
- required organisation's SLAs
- organisation's escalation procedure/s
- organisation's documentation processes and style guides.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTSAS528 Review and develop ICT maintenance strategies

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to review and develop maintenance strategies and supporting processes to achieve continuity of Information and Communications Technology (ICT) operations and business functions.

It applies to individuals who apply specialised and technical knowledge in developing strategic initiatives and in performing or organising others to complete complex technical operations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems administration and support

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify and analyse maintenance requirements	1.1 Identify and document business continuity system malfunction risks according to task requirements 1.2 Identify and document quantification of loss potential 1.3 Identify core business functions and determine organisational service requirements 1.4 Develop and document maintenance strategy according to organisational policies, procedures and requirements 1.5 Submit document to required personnel, seek and respond to feedback
2. Identify and analyse	2.1 Review organisational systems architecture and configuration

ELEMENT	PERFORMANCE CRITERIA
IT system components	<p>documentation</p> <p>2.2 Conduct equipment and software audit and obtain required information as required</p> <p>2.3 Determine and document required component and software warranty status according to vendor requirements</p> <p>2.4 Identify and document recommendation for critical components, software and service arrangements</p>
3. Develop service level agreements	<p>3.1 Determine and document organisational maintenance requirements</p> <p>3.2 Prepare and document service level agreements (SLAs) according to organisational requirements</p> <p>3.3 Submit documentation to required personnel, seek and respond to feedback</p>
4. Formulate maintenance strategy	<p>4.1 Analyse and document maintenance options according to business cost constraints, risks and SLAs</p> <p>4.2 Determine and document maintenance according to SLA and organisational requirements</p> <p>4.3 Determine and document preventative maintenance schedule according to SLA and organisational requirements</p> <p>4.4 Submit documentation to required personnel and seek and respond to feedback</p>
5. Define organisational and supplier processes and standards	<p>5.1 Negotiate and create reporting procedures for service requests with client and suppliers</p> <p>5.2 Determine response time standards with client and suppliers</p> <p>5.3 Create escalation procedures with client and suppliers</p> <p>5.4 Set up support function according to business standards and procedures according to industry best practices</p>

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none"> Gathers and analyses data and seeks feedback to improve plans and processes
Numeracy	<ul style="list-style-type: none"> Uses mathematical equations to calculate financial and technical data and to organise schedules Interprets, analyses and documents numerical and technical

SKILL	DESCRIPTION
	system data
Oral communication	<ul style="list-style-type: none"> Obtains information by listening and questioning using concise and relevant industry language
Reading	<ul style="list-style-type: none"> Interprets and analyses technical specifications and data and textual information from a range of sources to develop maintenance strategy
Writing	<ul style="list-style-type: none"> Prepares documentation analysing requirements and detailing recommendation and agreements according to organisational requirements
Teamwork	<ul style="list-style-type: none"> Uses a variety of relevant communication tools and strategies in building and maintaining effective working relationships and negotiating solutions Influences and fosters a collaborative culture to facilitate a sense of commitment and workplace cohesion
Planning and organising	<ul style="list-style-type: none"> Develops plans to manage relatively complex routine and non-routine tasks with an awareness of how they might contribute to broader strategy and goals
Problem solving	<ul style="list-style-type: none"> Makes high impact decisions in a complex and diverse environment, using input from a range of sources Addresses complex problems involving multiple variables, using formal analytical, lateral thinking techniques, experience and knowledge to focus in on the root cause
Self-management	<ul style="list-style-type: none"> Develops and implements strategies that ensure organisational policies, procedures and regulatory requirements are met Monitors and reviews the organisation's policies, procedures and adherence to legislative requirements to implement and manage change

Unit Mapping Information

Supersedes and is equivalent to ICTSAS510 Review and develop ICT maintenance strategy.

Assessment Requirements for ICTSAS528 Review and develop ICT maintenance strategies

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop support processes for maintaining required continuity level of Information and Communications Technology (ICT) operations and business functions for at least two different clients
- document support process and outcomes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- organisational business domain
- ICT system features that support required organisational operations and business activity
- features of industry accepted hardware and software products
- industry standard product warranty and service difficulty records
- industry standard helpdesk and maintenance practices, including:
 - general composition
 - operation of information database hardware tracking
 - software and operational issues
- functions, processes and features of data elements and data storage
- quality assurance practices, including maintenance, warranty and repair of industry standard network equipment and software
- relationships between the stakeholders and service providers.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- industry standard special purpose tools, equipment, materials and industry software packages that may assist in the provision of ICT support services
- systems architecture documentation
- warranty documents
- organisational deliverables
- Service Level Agreements (SLAs).

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTSAS529 Prioritise ICT change requests

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to analyse and prioritise change requests as part of managing Information and Communications Technology (ICT) systems that undergo continual change.

It applies to experienced individuals who provide technical advice, guidance and leadership in the resolution of specified problems and may have responsibility for organising others.

No licensing, legislative, or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems administration and support

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to prioritise change requests	1.1 Identify organisational change request recording methods, policies and procedures 1.2 Identify and document change requests according to organisational policies and procedures 1.3 Classify and prioritise change requests according to service level agreements (SLAs) and organisational requirements
2. Determine priority settings	2.1 Identify organisational business continuity risks 2.2 Prioritise identified risks and determine risk reduction change implementation hierarchy 2.3 Evaluate costs, benefits and timing of change implementation according to organisational requirements

ELEMENT	PERFORMANCE CRITERIA
	2.4 Schedule and document change analysis according to organisational requirements 2.5 Submit document to required personnel, seek and respond to feedback
3. Develop change analysis work plan	3.1 Identify change requests 3.2 Determine and document systems impact and organisation of methodology and timing of change 3.3 Determine and document change plan and include required change development resources 3.4 Submit documentation to required personnel and seek and respond to feedback 3.5 Obtain final task sign off

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> • Uses mathematical equations to calculate financial and technical data and organise schedules • Interprets, analyses and documents numerical and technical system data
Oral communication	<ul style="list-style-type: none"> • Obtains and responds to information and feedback from required personnel using succinct verbal language
Reading	<ul style="list-style-type: none"> • Interprets and analyses technical specifications and data and textual information from a range of sources to develop maintenance strategy
Writing	<ul style="list-style-type: none"> • Prepares documentation detailing analysis, plan and systems impact according to organisational requirements
Teamwork	<ul style="list-style-type: none"> • Identifies and uses appropriate conventions and protocols when communicating with colleagues and stakeholders
Planning and organising	<ul style="list-style-type: none"> • Develops plans to manage relatively complex routine and non-routine tasks with an awareness of how they might contribute to broader strategy and goals
Problem solving	<ul style="list-style-type: none"> • Uses problem solving techniques to analyse required outcomes in order to manage change to ICT systems
Self-management	<ul style="list-style-type: none"> • Takes full responsibility for identifying and considering relevant organisational protocols and requirements

SKILL	DESCRIPTION
Technology	<ul style="list-style-type: none">Demonstrates a sophisticated understanding of principles, concepts, language and practices associated with the digital world

Unit Mapping Information

Supersedes and is equivalent to ICTSAS511 Prioritise ICT change requests.

Assessment Requirements for ICTSAS529 Prioritise ICT change requests

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- review and prioritise change requests
- develop a change analysis work plan on at least one occasion
- document processes and finalised work plan.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- organisational business domain
- industry standard help desk and maintenance practices
- quality assurance practices relating to Information and Communications Technology (ICT) system changes
- role of stakeholders and the degree of stakeholder involvement that may impact on Information and Communications Technology (ICT) system changes activities
- features and capabilities of industry standard hardware and software products, including change management tools
- organisation's system functionality and application
- SLAs that may impact on Information and Communications Technology (ICT) system changes activities.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- special purpose tools, equipment and materials

- industry standard software packages
- sites on which change requests may be coordinated
- industry standard SLAs used in industry
- organisational guidelines, policies and procedures that may impact on system changes activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTSAS530 Use network tools

Modification History

Release	Comments
Release 1	<p>This version first released with the Information and Communications Technology Training Package Version 8.0.</p> <ul style="list-style-type: none">• Supersedes and is equivalent to ICTSAS517 Use network tools.• Supersedes and is not equivalent to ICTNWK613 Develop plans to manage structured troubleshooting process of enterprise networks.

Application

This unit describes the skills and knowledge required to select, operate and test an array of networking tools to maintain high security networks.

The unit applies to individuals who may work in technical management support and security roles with responsibility for maintaining network security using a wide range of information and communications technology (ICT) skills and knowledge.

No licensing, legislative, or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems administration and support

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Apply command-line tools	<p>1.1 Confirm work brief, relating to work tasks, hardware and peripheral quality standards, work health and safety (WHS) standards, and organisational policies and procedures</p> <p>1.2 Analyse command-line interface and graphical user interface (GUI) systems</p>

ELEMENT	PERFORMANCE CRITERIA
	1.3 Identify command-line tools according to analysis 1.4 Write command-line text in required GUI environment 1.5 Run command line and report issues to required personnel according to organisational policies and procedures
2. Apply hardware tools	2.1 Identify organisational computing hardware and components 2.2 Assess hardware quality standards according to work brief 2.3 Test network security using hardware tools according to WHS standards 2.4 Document test results in required format
3. Apply software tools	3.1 Assess organisational computing software 3.2 Access and identify software quality standards 3.3 Conduct risk analysis and document network vulnerabilities 3.4 Recommend computer safeguard guidelines according to risk analysis findings 3.5 Present recommendations to required personnel in required format

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none">Identifies and interprets textual information and numerical data from a range of sources to determine necessary actions
Writing	<ul style="list-style-type: none">Records textual and numerical data in format specific to requirements
Planning and organising	<ul style="list-style-type: none">Accepts responsibility for planning, prioritising and sequencing complex tasks and workload
Problem solving	<ul style="list-style-type: none">Uses problem solving techniques to analyse outcomes and manage networks
Technology	<ul style="list-style-type: none">Monitors and controls access to digitally stored and transmitted information

Unit Mapping Information

Supersedes and is equivalent to ICTSAS517 Use network tools.

Supersedes and is not equivalent to ICTNWK613 Develop plans to manage structured troubleshooting process of enterprise networks.

Links

Companion Volume Implementation Guide is found on VETNet - -

<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=a53af4e4-b400-484e-b778-71c9e9d6aff2>

Assessment Requirements for ICTSAS530 Use network tools

Modification History

Release	Comments
Release 1	<p>This version first released with the Information and Communications Technology Training Package Version 8.0.</p> <ul style="list-style-type: none">• Supersedes and is equivalent to ICTSAS517 Use network tools.• Supersedes and is not equivalent to ICTNWK613 Develop plans to manage structured troubleshooting process of enterprise networks.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- use at least three different types of network tools to maintain high security networks.

In the course of the above, the candidate must:

- distinguish between different types of industry-recognised network tools
- apply required organisational policies and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- different types of industry-recognised network tools to maintain high security networks
- functions and features of:
 - security guidelines
 - command-line interface and graphical user interface (GUI) systems
 - command-line tools
 - command-line text
 - high security networks, software and hardware
 - computing diagnostic tools
- strategies to undertake risk analysis
- techniques to categorise system vulnerability alerts

- types and features of security threats on devices and networks
- key organisational processes and requirements to carry out required work tasks, including:
 - backing up and restoring operations
 - updating settings
 - writing command-line text
 - reporting security and software updates
 - raising threats and alerts to supervisory personnel
- organisational formats for documentation and recommendations
- work health and safety (WHS) standards, organisational policies and procedures, and legislative requirements relating to work tasks.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required networking tools, hardware, software and operating systems
- opportunities for interaction with others
- WHS standards, and organisational policies and procedures required to demonstrate the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTSAS602 Implement change management processes

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to apply methodologies and activities that facilitate the planning, implementation and monitoring of Information and Communications Technology (ICT) change.

It applies to experienced individuals who provide specialised technical advice, guidance and leadership in a range of areas requiring change-management in ICT systems.

No licensing, legislative, or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems administration and support

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan ICT system changes	<ul style="list-style-type: none">1.1 Determine and document organisational change procedures and conventions according to organisational requirement, policies and procedures1.2 Identify required personnel responsible for change management policy and procedures1.3 Evaluate current ICT system to determine changing user or business patterns1.4 Develop and document ICT change management plan according to organisational requirements1.5 Submit document to required personnel, seek and respond to feedback

ELEMENT	PERFORMANCE CRITERIA
2. Identify technology system change needs	<ul style="list-style-type: none">2.1 Determine industry standard ICT benchmarks2.2 Compare identified needs against performance benchmarks and identify and document required changes2.3 Determine and document required changes and determine impact2.4 Submit document to required personnel, seek and respond to feedback
3. Implement change	<ul style="list-style-type: none">3.1 Determine and document change schedule3.2 Implement change management plan according to organisational policies and procedures3.3 Identify and document new performance benchmarks3.4 Determine and document required changes and implementation requirements3.5 Submit document to required personnel, seek and respond to feedback
4. Monitor and review implementation	<ul style="list-style-type: none">4.1 Measure change performance against new benchmarks4.2 Submit performance results to stakeholders4.3 Obtain sign-off on changes4.4 Provide appropriate documentation and reporting

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none">• Takes a lead role in the development and facilitation of change management in an ICT environment
Numeracy	<ul style="list-style-type: none">• Uses mathematical equations to calculate and compare numerical data against benchmarks and to plan and organise schedules
Oral communication	<ul style="list-style-type: none">• Uses listening, questioning and presenting techniques to confirm information and promote changes using appropriate industry language
Reading	<ul style="list-style-type: none">• Interprets and analyses a range of textual information and numerical data from a range of technical sources to determine necessary actions
Writing	<ul style="list-style-type: none">• Prepares documentation detailing required changes, procedures and implementation according to organisational requirements using required language

SKILL	DESCRIPTION
Teamwork	<ul style="list-style-type: none">• Uses a variety of relevant communication tools and strategies in building and maintaining effective working relationships
Planning and organising	<ul style="list-style-type: none">• Plans strategic priorities and outcomes within a flexible, efficient and effective context in a diverse environment exposed to competing demands• Addresses complex problems involving multiple variables, using formal analytical, lateral thinking techniques, experience and knowledge
Problem solving	<ul style="list-style-type: none">• Analyses and understands context of information and uses it to develop solutions to given problems
Technology	<ul style="list-style-type: none">• Uses digital technologies to manage business operations and actively investigates new technologies for strategic and operational purposes

Unit Mapping Information

Supersedes and is equivalent to ICTSAS601 Implement change management processes and ICTTEN605 Implement planned network changes with minimal impact to the customer.

Assessment Requirements for ICTSAS602 Implement change management processes

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- identify and plan Information and Communications Technology (ICT) system changes on at least one occasion.

In the course of the above, the candidate must:

- implement, monitor and review ICT system changes, including:
 - applying guidelines and policies to the change management process
 - maintaining required version control
 - maintaining compliance with existing accessibility and other policies.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- major change management principles
- functions and features of industry standard information technology systems
- internet and internetworking architecture
- principles and structure of performance benchmarking
- server access security procedures and general security issues relating to required operating system
- industry standard methods of communicating change to stakeholders
- organisation's policies and procedures that may impact on implementing change management tasks.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- special purpose tools, software packages, equipment and materials required to implement a change management process
- international standards relating to implementing change management tasks.
- operational data
- organisation's analysis data
- organisational planning guidelines
- version control guidelines.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTSUS502 Install and test virtual infrastructure

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to install and test virtual servers in networks. It also involves replacing multiple physical servers, reducing power requirements of individual servers and meeting sustainability targets.

It applies to individuals with a high level of specialist technical skills and knowledge in information and communications technology (ICT) networks.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – sustainability

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan to install virtual server	<ul style="list-style-type: none">1.1 Obtain work details and scope and arrange for site access in compliance with required security arrangements, legislation, codes, regulations and standards1.2 Analyse use of server virtualisation infrastructure and discuss implementation needs with relevant personnel1.3 Research and analyse alternative virtualisation scenarios and produce a risk analysis and comparisons for each consideration1.4 Create and distribute a feasibility report to required personnel and determine required resources for server implementation1.5 Obtain recommendations and approval for implementation plans from relevant personnel and stakeholders

ELEMENT	PERFORMANCE CRITERIA
2. Design virtual server specification	<ul style="list-style-type: none">2.1 Confirm network operating systems, server applications and server designs with relevant personnel2.2 Determine product, vendor architecture and equipment specifications2.3 Determine technology and resources according to business requirements and budgets2.4 Complete design plan and obtain approval from required personnel
3. Install virtual server	<ul style="list-style-type: none">3.1 Identify installation change management requirements3.2 Create detailed task lists and specify sequence of required work3.3 Review hardware and software and confirm compatibility with ICT system3.4 Install required operating system, additional tools and third-party software as specified in design3.5 Patch operating system and applications and confirm compliance with organisational security and reliability standards
4. Integrate and test virtual server	<ul style="list-style-type: none">4.1 Determine virtual server integration (VSI) tests in consideration of resources and network impact4.2 Run VSI tests according to plan and record outcomes4.3 Create error reports and communicate test outcomes to required personnel4.4 Test required changes and additions4.5 Validate changes and additions against specifications
5. Document completion activities	<ul style="list-style-type: none">5.1 Document installation and integration process according to organisational guidelines5.2 Provide user documentation to required personnel5.3 Notify required personnel and obtain sign off

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Oral communication	<ul style="list-style-type: none">• Articulates using specific language suitable for technical, operational and business audiences to convey requirements• Uses listening and questioning techniques to confirm knowledge
Reading	<ul style="list-style-type: none">• Identifies, analyses and evaluates technical installation manuals

SKILL	DESCRIPTION
	and other texts to determine regulatory and technical requirements
Writing	<ul style="list-style-type: none">• Prepares reports and design solutions in required formats for diverse audiences• Conveys knowledge of outcomes and alternatives using terminology to present to required personnel
Planning and organising	<ul style="list-style-type: none">• Develops plans to manage relatively complex, non-routine tasks with an awareness of how they may contribute to longer term operational and strategic goals• Takes responsibility for own workload, negotiating some key aspects with others• Systematically gathers and analyses all required information and evaluates options to make informed decisions
Problem solving	<ul style="list-style-type: none">• Uses analytical processes to decide on a course of action, establishing criteria for deciding between options
Self-management	<ul style="list-style-type: none">• Recognises and responds to both explicit and implicit organisational procedures and protocols, and legislative and regulatory requirements• Selects the required form, channel and mode of communication for a specific purpose required to own role
Technology	<ul style="list-style-type: none">• Identifies key principles and concepts underpinning the design and operation of digital systems and tools, and applies these when troubleshooting existing technology and when seeking to identify the potential of new technology

Unit Mapping Information

Supersedes and is equivalent to ICTSUS501 Implement server virtualisation for a sustainable ICT system.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTSUS502 Install and test virtual infrastructure

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- implement server virtualisation for at least two sustainable information and communications technology (ICT) systems.

In the course of the above, the candidate must:

- consider ongoing system management, growth scenarios and future infrastructure capacity
- communicate with required personnel to identify required information technology (IT) system changes and additions
- determine and meet organisational requirements for the installation and testing of virtual servers
- install, integrate and test virtualisation components according to vendor and technical specifications.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, codes, organisational procedures, company work practices, regulations and standards, work health and safety (WHS) requirements for scoped work
- uses and requirements of server virtualisation infrastructure in IT systems
- risks of alternative virtualisation scenarios
- functions and features of feasibility reports
- features of client business domains and business functions
- compatibility issues and resolution procedures for server implementation
- configuration of internet protocol (IP) networks
- industry-accepted server virtualisation products
- processes of documenting technical specifications

- systems diagnostic features
- set up and configuration procedures
- change management process
- functions and features of the following:
 - creating a budget
 - network operating systems
 - power supply requirements and management
 - registered random access memory (RAM)
 - server design and network architecture
 - single and multiple processors
 - virtual server functionality.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site and equipment on which servers can be virtualised
- server virtualisation currently used in industry
- documentation, feasibility studies, equipment manuals and other site-related documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTSUS603 Integrate sustainability in ICT planning and design projects

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to integrate sustainability concepts and policies into information and communications technology (ICT) planning and design projects. These projects typically involve upgrades to equipment hardware and software and installations of next generation networks (NGN) using emerging technologies.

It applies to individuals with a high level of specialist technical skills and knowledge in ICT networks using internet protocol (IP) systems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – sustainability

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to integrate sustainability into ICT planning and design projects	<ul style="list-style-type: none">1.1 Identify and research sustainability options, and market and technology trends within the industry according to organisational policies and processes1.2 Evaluate ICT projects into which sustainability can be integrated and discuss project needs with relevant personnel1.3 Discuss extent to which sustainability is to be integrated with relevant personnel1.4 Research and identify technology solutions to be utilised in projects

ELEMENT	PERFORMANCE CRITERIA
	1.5 Gather power consumption data on equipment required for energy audit in compliance with required standards
2. Develop strategies for integrating sustainability into ICT planning and design projects	2.1 Determine and oversee implementation of technology solutions and confirm reduction in power consumption 2.2 Develop environmentally sustainable management principles according to organisational requirements 2.3 Establish key performance indicators (KPI) on sustainability performance according to organisational requirements 2.4 Review and improve KPIs on sustainability performance in consultation with required personnel 2.5 Include planning and design rules for ICT projects and confirm environmentally sustainable best practice according to organisational requirements
3. Complete integration of sustainability into ICT planning and design projects	3.1 Provide a detailed report that identifies energy usage within scope of project 3.2 Estimate potential energy savings and payback periods for recommended sustainability solutions 3.3 Estimate and compare carbon dioxide emissions for projects against required industry benchmarks 3.4 Provide prioritised recommendations and estimates of implementation costs on integration of sustainability

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Uses complex mathematical formulae to estimate carbon dioxide emissions Analyses and confirms capacity requirements and plan budgetary and workforce needs
Oral communication	<ul style="list-style-type: none"> Articulates and validates policy and strategy benefits for project requirements using specific language suitable for different audiences Uses listening and questioning techniques
Reading	<ul style="list-style-type: none"> Gathers, interprets and analyses a range of complex textual information from a range of sources and identifies required and key information

SKILL	DESCRIPTION
Writing	<ul style="list-style-type: none">Records technical requirements and procedures for diverse audiences using specialised language and terminology to convey outcomes and alternative options
Planning and organising	<ul style="list-style-type: none">Develops plans to manage complex, non-routine tasks with an awareness of how they contribute to longer term operational and strategic goalsTakes responsibility for own workload, negotiating key tasks with othersSystematically analyses required information and evaluates options to make informed decisions
Problem solving	<ul style="list-style-type: none">Uses analytical processes to decide on a course of action, establishing criteria for deciding between options
Technology	<ul style="list-style-type: none">Reflects on the ways in which digital systems and tools are used to achieve work goals, and recognises strategic and operational applications

Unit Mapping Information

Supersedes and is equivalent to ICTSUS601 Integrate sustainability in ICT planning and design projects.

Assessment Requirements for ICTSUS603 Integrate sustainability in ICT planning and design projects

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- integrate sustainability into at least two information and communications technology (ICT) planning and design projects.

In the course of the above, the candidate must:

- devise strategies to conserve resources
- analyse energy audit data on enterprise resource consumption
- develop and monitor policies for review and improvements, benchmarking against industry best practice and attempting new approaches.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, codes, company work practices, regulations and standards, work health and safety (WHS) requirements for scoped work
- advantages and disadvantages of integrating sustainability into ICT planning and design projects
- methods to explain and calculate carbon dioxide emissions
- ICT power consumption calculations
- policy development processes and practices
- power consumption audit methodology
- features of key performance indicators (KPI) used to measure sustainability in ICT planning and design projects, including:
 - financial considerations
 - cost-benefit analyses

- principles, practices, available tools and techniques for sustainability management required in the ICT networking industry
- organisational quality assurance systems for environmental sustainability
- systems and procedures to facilitate workplace sustainability.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- websites on which planning, design and integration of sustainability may be carried out
- required legislation, standards, guidelines, reports and equipment specifications and drawings
- a range of workplace documentation, personnel, information and resources, including:
 - compliance obligations
 - organisational plans.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTSUS604 Prepare business cases for sustainability and competitive advantage in ICT projects

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to seek business advantages by developing sustainable solutions in information and communications technology (ICT) project plans.

It applies to individuals who prepare planning, cost-benefit analysis and return on investment (ROI) for the implementation of sustainable schemes at the enterprise level and who work with high-level specialist training skills and knowledge in IT networks using internet protocol (IP) systems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – sustainability

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare information for establishing business case in ICT projects	1.1 Determine scope of ICT project with relevant personnel and identify potential for integration of sustainability and competitive advantage 1.2 Identify reputable sources of information required to prepare business case 1.3 Evaluate goals of project and confirm that the business case complies with organisational goals 1.4 Plan and validate project goals in consultation with required

ELEMENT	PERFORMANCE CRITERIA
	<p>personnel and identify and report risks and constraints that will impact project</p> <p>1.5 Identify available guidelines, principles and tools and techniques of sustainability management required in the ICT industry</p>
2. Produce business case for ICT projects	<p>2.1 Determine strategy and critical factors required to implement sustainability and gain competitive advantage</p> <p>2.2 Prepare a cost-benefit analysis and a sustainability report that estimates overall sustainability and level of competitive advantage</p> <p>2.3 Estimate project expenditure and ROI according to organisational procedures</p> <p>2.4 Evaluate alternative options to determine benefits, disadvantages, costs and risks of project</p>
3. Produce business case documentation for ICT projects	<p>3.1 Validate recommended options with required personnel</p> <p>3.2 Prepare implementation plan for recommended project options</p> <p>3.3 Produce executive summary of proposal and outline consequences of not implementing planned sustainability activities</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Uses mathematical formulae to analyse and confirm capacity requirements and to plan budgetary and workforce needs
Oral communication	<ul style="list-style-type: none"> Articulates and validates policy and strategy benefits for project requirements using specific language suitable for different audiences to convey requirements Uses listening and questioning techniques to confirm knowledge
Reading	<ul style="list-style-type: none"> Analyses complex textual information to determine technical solutions and to evaluate the benefits of improving or introducing sustainability
Writing	<ul style="list-style-type: none"> Prepares a business case for diverse audiences using precise language and specialised terminology to convey knowledge of outcomes and alternatives, technical requirements and procedures
Planning and organising	<ul style="list-style-type: none"> Develops plans to manage relatively complex, non-routine tasks, is aware of operational and strategic goals and takes responsibility for own workload Systematically gathers and analyses all required information, evaluates options and uses analytical processes to make informed

SKILL	DESCRIPTION
	decisions on a course of action when in between options <ul style="list-style-type: none">Identifies key principles and concepts underpinning the design and operation of digital systems and tools, and applies these when seeking to identify the potential of new technology
Self-management	<ul style="list-style-type: none">Recognises and responds to both explicit and implicit organisational procedures and protocols

Unit Mapping Information

Supersedes and is equivalent to ICTSUS602 Establish a business case for sustainability and competitive advantage in ICT projects.

Assessment Requirements for ICTSUS604 Prepare business cases for sustainability and competitive advantage in ICT projects

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- prepare at least two business cases, outlining methods to create sustainability and competitive advantage in at least two information and communications technology (ICT) projects.

In the course of the above, the candidate must:

- demonstrate measurable improvements of businesses through implementation of chosen strategies
- communicate with stakeholders on approaches to improve sustainability, development and implementation, and contribute to dispute resolution among stakeholders
- use software systems to record and file documentation, measure usage, and interpret visual data and information
- identify improvements and benchmarks against industry best practice
- review and improve sustainability policies.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, codes, company work practices, regulations and standards, work health and safety (WHS) requirements for scoped work
- principles, practices and available tools and techniques of sustainability management required in the ICT industry
- best practice approaches required to create sustainable ICT strategies
- features of reputable information sources
- functions and features of cost-benefit analyses and sustainability reports
- methods to calculate and estimate the following project aspects:

- return on investment (ROI)
- project expenditure
- costs
- benefits and risks
- features of implementation plans and executive summaries
- organisational quality assurance systems
- ICT power consumption calculation methods
- energy audit methodology and calculations
- environmental impacts of products, processes, systems and services.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required legislation, standards, guidelines, reports, and equipment specifications and drawings
- workplace documentation and personnel information and resources, compliance obligations, organisational plans and work responsibilities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTSUS811 Conduct and manage life cycle assessments for sustainability

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to conduct life cycle assessments (LCA) to evaluate the human health and environmental impacts arising from delivering products, processes and services.

It applies to individuals who are excellent communicators with a very high level of technical management skills and knowledge of telecommunications networks and systems. In this role, individuals must be able to undertake detailed research, analysis and evaluation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – sustainability

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Define and scope LCA goals	<ul style="list-style-type: none">1.1 Determine reasons for executing LCA study in compliance with organisational requirements1.2 Obtain access to information sources and research resources required for LCA study1.3 Document aims of LCA study and align with organisational sustainability requirements1.4 Identify sustainability legislation, regulations, policies and procedures and codes of practice required in the information and communication technology (ICT) industry

ELEMENT	PERFORMANCE CRITERIA
2. Conduct life cycle inventory (LCI) analysis	<p>2.1 Construct a life cycle flow diagram and identify all environmental inputs and outputs, and environmental processes</p> <p>2.2 Develop data collection strategies for LCI</p> <p>2.3 Collect data according to industry and organisational requirements and procedures</p> <p>2.4 Evaluate and document LCI results according to organisational requirements and procedures</p>
3. Conduct life cycle impact assessment (LCIA)	<p>3.1 Identify and define environmental impact categories to be reported to required personnel</p> <p>3.2 Classify LCI results into environmental impact categories</p> <p>3.3 Model LCI impacts within impact categories using science-based conversion factors</p> <p>3.4 Normalise potential impacts in ways that can be compared</p> <p>3.5 Assign impact categories by grouping into at least one set and facilitate interpretation of results</p> <p>3.6 Assign weighting factors to emphasise most important potential impacts</p>
4. Evaluate results from LCI and LCIA	<p>4.1 Identify significant issues identified in LCI and LCIA</p> <p>4.2 Ensure and evaluate completeness, consistency and sensitivity of results</p> <p>4.3 Make recommendations for improving initially identified product, process and service life cycle</p>
5. Complete LCA for sustainability	<p>5.1 Create a report and document results of LCA according to organisational requirements and procedures</p> <p>5.2 Ensure report conclusions and sustainability recommendations align with initial goals of LCA</p> <p>5.3 Obtain required sign-off procedures and return used resources to their initial state</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none">Uses mathematical formulae to estimate CO² emissions, and analyse and confirm capacity, personnel and budgetary requirements and all other incidental LCA calculations

SKILL	DESCRIPTION
Oral communication	<ul style="list-style-type: none">• Articulates using specific language suitable for clients to convey requirements• Uses listening and questioning techniques to confirm knowledge
Reading	<ul style="list-style-type: none">• Identifies, analyses and evaluates a range of complex documentation, including legislative frameworks and technical specifications
Writing	<ul style="list-style-type: none">• Produces complex, detailed and well-structured media releases and other reports and procedures, using specific language and specialised terminology to convey knowledge of outcomes
Teamwork	<ul style="list-style-type: none">• Takes responsibility for defining key aspects of own workload, balancing own needs and priorities with those of the work group
Planning and organising	<ul style="list-style-type: none">• Develops flexible plans for complex, high impact activities with strategic implications that involve a diverse range of stakeholders with potentially competing demands• Systematically gathers and analyses all required information and evaluates options to make high impact and informed decisions• Uses a broad range of strategies to store, access and organise virtual information, recognising that design choices will influence what information is retrieved and how it may be interpreted and used
Problem solving	<ul style="list-style-type: none">• Uses formal analytical and lateral thinking techniques for identifying issues, and generating and evaluating possible solutions
Technology	<ul style="list-style-type: none">• Considers the strategic and operational potential of digital trends to achieve work goals, enhance work processes, create opportunities and reduce risks

Unit Mapping Information

No equivalent unit. Supersedes and is not equivalent to ICTSUS807 Conduct and manage a life cycle assessment for sustainability.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTSUS811 Conduct and manage life cycle assessments for sustainability

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- conduct and manage at least two life cycle assessments (LCA) and at least two life cycle inventories (LCI) for sustainability.

In the course of the above, the candidate must:

- scope and define the goals of an LCA
- produce at least two LCI using required software and data collection strategies
- use at least two LCA and required software for researching and interpreting charts, flowcharts, graphs and other visual data and information
- evaluate LCI and life cycle impact assessment (LCIA) results in light of completeness, consistency and sensitivity factors
- make best practice recommendations based on results of LCA studies.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, codes, company work practices, regulations and standards, work health and safety (WHS) requirements for scoped work
- applications and characteristics of LCA, LCI and LCIA
- industry-approved information sources and research resources used to conduct LCA, LCI and LCIA
- methods to construct life cycle flow diagrams
- industry-approved data collection strategies used in LCA, LCI and LCIA
- types of environmental impact categories (EIC) that affect sustainability
- types of weighting factors used to normalise impact of EIC
- requirements of LCA reports

- equal opportunity, equity and diversity principles when conducting sensitivity checks for policy development
- policy development processes and practices
- principles, practices and available tools and techniques of sustainability management required to the telecommunications industry
- quality assurance systems required to own organisation
- required organisational policies, procedures and protocols
- required systems and procedures to aid in the achievement of workplace sustainability
- information and communications technology (ICT) power consumption calculations
- power consumption and energy audit methodology
- methods to estimate CO₂ emissions
- environmental impacts of products, processes, systems and services.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- websites on which planning, design and integration of sustainability may be carried out
- required legislation, standards, guidelines, reports and equipment specifications and drawings
- a range of workplace documentation and personnel information and resources (such as compliance obligations, organisational plans and work responsibilities).

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTSUS812 Lead applied research in ICT sustainability

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to plan, conduct and report on applied research to influence strategic practices on information and communications technology (ICT) sustainability and outcomes within an organisation. The unit also covers constructing an applied research strategy, using a range of applied research techniques, and analysing and presenting findings.

It applies to individuals who are in a leadership capacity and are competent innovators and communicators, with a very high level of technical management skills and knowledge of ICT networks and systems. In this role, individuals must be able to undertake detailed research, analysis and evaluation. Outcomes and solutions must be presented with clarity.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – sustainability

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Establish direction for applied research in ICT sustainability	1.1 Establish and discuss goals of applied research in ICT sustainability with required personnel and stakeholders, according to organisational procedures and requirements 1.2 Confirm applied research purpose and recognised industry research methods to be used 1.3 Facilitate development of policies and procedures to conduct applied research 1.4 Guide development of mechanisms to systematically collect and

ELEMENT	PERFORMANCE CRITERIA
	maintain data 1.5 Review policies and procedures affecting reliability, validity and privacy of data 1.6 Review required research ethics and codes of conduct
2. Monitor applied research techniques and resources	2.1 Review and evaluate applied research methods and theories, and data collection techniques 2.2 Guide selection of required methods to gather and analyse data on sustainability 2.3 Authorise access to required sources of information 2.4 Select sustainable management principles that will impact on project 2.5 Ensure relevance of research and integrity of collected data and used analysis tools
3. Communicate research findings	3.1 Ensure accuracy research data according to legal and organisational requirements and procedures 3.2 Evaluate relevance of collated and analysed data against original applied research strategy 3.3 Evaluate impact of research findings 3.4 Recommend ICT sustainability implementation strategies 3.5 Ensure documentation and presentation of findings is consistent with needs of research users 3.6 Assess need for further research 3.7 Document research findings and approach to further research

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> • Uses mathematical formulae to determine CO₂ emissions and carbon footprint • Performs complex statistical analysis
Oral communication	<ul style="list-style-type: none"> • Articulates using specific language suitable for clients and stakeholder audiences • Uses listening and questioning techniques to confirm knowledge
Reading	<ul style="list-style-type: none"> • Identifies, analyses and evaluates complex information and formal documentation, including legislative frameworks and technical solutions

SKILL	DESCRIPTION
Writing	<ul style="list-style-type: none">• Produces complex, detailed and well-structured reports, procedures and related technical documentation using specific language and specialised terminology to convey knowledge of outcomes
Teamwork	<ul style="list-style-type: none">• Takes responsibility for defining key aspects of own workload, balancing own needs and priorities with those of the work group
Planning and organising	<ul style="list-style-type: none">• Systematically gathers and analyses all required information and evaluates options to make high-impact and informed decisions
Problem solving	<ul style="list-style-type: none">• Develops flexible plans for complex, high impact activities with strategic implications that involve a diverse range of stakeholders with potentially competing demands• Recognises the strategic and operational potential of digital trends to achieve work goals, enhance work processes, create opportunities and reduce risks
Self-management	<ul style="list-style-type: none">• Recognises and responds to both explicit and implicit organisational procedures and protocols• Monitors adherence to legal and regulatory rights and responsibilities for self and possibly for others
Technology	<ul style="list-style-type: none">• Uses a broad range of strategies to store, access and organise virtual information, recognising that design choices will influence what information is retrieved and how it may be interpreted and used

Unit Mapping Information

Supersedes and is equivalent to ICTSUS806 Lead applied research in ICT sustainability.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTSUS812 Lead applied research in ICT sustainability

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- lead applied research in information and communications technology (ICT) sustainability for at least two projects.

In the course of the above, the candidate must:

- direct the formulation of a research proposal and plan that includes:
 - specific research questions on sustainability
 - valid population and sample size
 - description of the geographical, cultural, social and institutional context within which the research will be carried out
 - descriptions of data collection methods
 - analysis of research design limitations
- manage the design of applied research projects
- design research reports with analysis of data, and valid and reliable findings
- evaluate relevance of the research results
- conduct research using recognised research techniques.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, codes, company work practices, regulations and standards, work health and safety (WHS) requirements for scoped work
- environmental and sustainability legislation, regulations and codes of practice in the ICT industry
- audit methodology on ICT energy, waste, product life cycles and CO₂ emissions

- principles, practices and available tools and techniques of sustainability management required to the ICT networking industry
- communication processes and methods
- industry-accepted data collection methods
- requirements of research documentation and reports, according to organisational policy
- required legislation, codes, company work practices, regulations and standards, WHS requirements for scoped work
- leadership strategies required in a research environment.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a research activity that relates to an actual workplace or simulated context and topic
- a range of tools and techniques required for the given situations and research topic.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN202 Use hand and power tools

Modification History

Release	Comments
Release 2	This version released with ICT Information and Communications Technology Training Package Version 5.0.
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 2.0.

Application

This unit describes the skills and knowledge required to safely use hand and power tools in the workshop and on the worksite.

It applies to individuals who may work as technical staff and who may make use of safety equipment and workshop facilities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Telecommunications Networks Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for work activity	1.1 Identify the type of work to be performed from work instructions 1.2 Select appropriate hand and power tools for work to be performed in line with industry standards or specified approved tools for use

ELEMENT	PERFORMANCE CRITERIA
	1.3 Set up and check tools for use according to industry approved information 1.4 Examine work environment and plan work with tools to maximise safety and productivity 1.5 Clear and clean work area to make it free of obstructions and allow clear access to tools
2. Prepare work piece for tool use	2.1 Mount, support or align work piece correctly to the tool or machine to be used 2.2 Anchor work piece securely where necessary to prevent movement
3. Operate hand and power tools	3.1 Use hand and power tools correctly according to industry and enterprise safe working practices 3.2 Use safety equipment during tool operation according to industry and enterprise safe working practices 3.3 Monitor tool operation continuously and discontinue use if abnormal operation occurs 3.4 Clean work area on completion of work
4. Maintain hand and power tools after use	4.1 Clean and store tools according to industry and enterprise safe working practices 4.2 Report abnormal tool operation or other problems according to established procedures 4.3 Perform programmed maintenance of tools according to work role 4.4 Arrange inspection of power tools according to regulatory requirements

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Description
Reading	<ul style="list-style-type: none">Interprets and understands complex information required for preparation and use of tools
Writing	<ul style="list-style-type: none">Completes workplace documentation accurately using appropriate form and vocabulary

Navigate the world of work	<ul style="list-style-type: none">Follows legislative requirements and organisational protocols, policies and procedures relevant to own role, with particular emphasis on safety
Get the work done	<ul style="list-style-type: none">Plans and prioritises tasks, developing and implementing a work program in line with expectations and work roleMakes decisions around immediate, clearly defined tasks regarding use of tools, personal protective equipment (PPE), cleaning agents and waste disposal

Unit Mapping Information

Code and title current version	Code and title previous version	Comments	Equivalence status
ICTTEN202 Use hand and power tools (Release 2)	ICTTEN202 Use hand and power tools (Release 1)	Updates to performance criteria. Updates to template to apply consistent format between units.	Equivalent unit

Assessment Requirements for ICTTEN202 Use hand and power tools

Modification History

Release	Comments
Release 2	This version released with ICT Information and Communications Technology Training Package Version 5.0.
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 2.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- accurately interpret work orders relevant to selection and use of tools
- interpret specifications and instructions relating to materials and equipment on which tools are to be used
- prepare work environment and set up tools for safe and effective use
- perform work processes following all relevant safety requirements applying to use of hand and power tools
- monitor tool operation for correct operation during use
- inspect completed work to verify correct tool operation and use
- communicate evidence of faults and other problems
- comply with all related work health and safety (WHS) requirements and work practices.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- electrical and compressed air safety
- equipment types, characteristics, technical capabilities and limitations

- features and operating requirements of hand and power tools
- general housekeeping policies and procedures
- industry and worksite terminology
- information required to operate equipment according to a test specification
- job safety analysis (JSA) or safe work method statement
- legislation, codes of practice and other formal agreements that impact the work activity
- manufacturer's requirements for safe operation of equipment
- materials commonly used in the industry
- safety data sheets (SDS) and materials handling methods
- operational, maintenance and basic diagnostic procedures
- common power sources
- specific WHS requirements relating to the activity and site conditions
- typical issues and challenges that occur onsite.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- sites where hand and power tools may be used
- hand and power tools currently used in industry
- relevant regulatory and equipment documentation that impact the use of hand and power tools.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN208 Use electrical skills when working with telecommunications networks

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Application

This unit describes the skills and knowledge required to use electrical skills when working with analog and digital, cabling and wireless networks in telecommunications.

It applies to entry-level workers who undertake basic testing, circuit building, and evaluation of cable and wireless devices, and who may work in domestic, commercial or industrial situations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Telecommunications Networks Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1 Connect, test and verify alternating current (AC) and direct current (DC) circuitry	1.1 Identify work health and safety (WHS) issues and notify appropriate personnel 1.2 Connect a series and a parallel circuit following safe work practices 1.3 Choose appropriate test equipment and measure voltage (V), current (I) and resistance (Ω) values for the electricity in these circuits 1.4 Use calculations to verify the flow of electrical current in these circuits 1.5 Compare measured values to calculated values and determine

ELEMENT	PERFORMANCE CRITERIA
	reasons for any variations 1.6 Measure low voltage (LV), extra low voltage (ELV) or telecommunications network voltage (TNV) and determine if values are within equipment or power supply specifications 1.7 Use appropriate test equipment to measure AC voltage (multimeter) or AC current (clamp meter) in a safe manner that does not require an LV circuit to be disconnected 1.8 Test residual current devices (RCD) or earth leakage devices to ensure they are operational prior to working with AC mains powered equipment, power supplies and tools 1.9 Evaluate results and determine probable faults as required
2. Evaluate analog and digital signals	2.1 Compare characteristics of an analog signal and a digital signal 2.2 Produce a layout using building blocks to represent a typical analog and a typical digital circuit to show different characteristics
3. Perform cable selection	3.1 Compare basic transmission characteristics, resistance, impedance and effects of signal frequency of different types of cables and select the most appropriate type to suit application 3.2 Connect two devices with a patch cable and test the connection

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance, but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none">Interprets textual information to inform decision-making process
Writing	<ul style="list-style-type: none">Uses industry specific language to produce technical documentation
Oral Communication	<ul style="list-style-type: none">Articulates specific concerns and issues clearly and listens to and acts on responses of others
Numeracy	<ul style="list-style-type: none">Performs basic calculations to check data, make predictions and make comparisonsSelects and uses appropriate tools to take measurements, analyse results and perform calculations
Navigate the world of work	<ul style="list-style-type: none">Follows legislative requirements and enterprise protocols, policies and procedures relevant to own role

Skill	Description
Get the work done	<ul style="list-style-type: none">• Determines job sequence and works logically and systematically to undertake clearly defined tasks• Identifies task requirements to decide on appropriate equipment and practices• Applies problem-solving processes within scope of own role to locate and resolve faults

Unit Mapping Information

No equivalent unit. Supersedes and is not equivalent to ICTTEN201 Use electrical skills in telecommunications work.

Assessment Requirements for ICTTEN208 Use electrical skills when working with telecommunications networks

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- use fundamental electrical principles to solve basic AC and DC electrical problems
- connect and test an AC and a DC circuit
- respond to test results found to be out of expected specifications.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- legislative requirements and enterprise protocols, policies and procedures relevant to work activity
- principles of AC and DC electricity and how it impacts telecommunications work including:
 - AC and DC electrical SI units of measurement
 - work health and safety (WHS) issues including extra low voltage and high voltage precautions
 - principles of Ohm's law and other relevant calculations for single path circuits
 - circuit configuration
- common AC and DC faults, fault-finding techniques, and procedures for the use and care of testing equipment
- application of binary to decimal conversion and vice versa
- principles of analog and digital electronics and building blocks common to analog and digital circuits
- distinction between analog and digital signals and devices

- electrical current, electromotive force (EMF), AC and DC electrical current
- features and applications of cable types such as single sheathed cable, unshielded twisted pair (UTP), coaxial and fibre cables
- electronic devices, cable types and their applications
- basic characteristics found in AC waveforms
- techniques to convert analog to digital and digital to analog
- characteristics of signal transmission
- common telecommunications cables and their characteristics of use and application.

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- appropriate AC and DC testing equipment commonly used in telecommunications work
- manufacturer documentation and equipment
- safety personal protective equipment (PPE).

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN210 Install underground telecommunications infrastructure

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Application

This unit describes the skills and knowledge required to install underground telecommunications infrastructure using civil construction skills.

It applies to cablers who install, replace or maintain large size pits, manholes, large conduits and ducts.

Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Refer to the ICT Information and Communications Technology Companion Volume Implementation Guide or the relevant regulator for details of licensing, legislative or certification requirements.

Unit Sector

Telecommunications – Telecommunications Network Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan and prepare to install underground infrastructure	1.1 Access, read, interpret and confirm work plans/specifications 1.2 Identify and confirm as required, relevant legislation, regulations, industry standards and enterprise requirements 1.3 Verify scope of work can be carried out without damaging any existing infrastructure such as underground services 1.4 Set-up worksite to ensure public and worker safety according to

ELEMENT	PERFORMANCE CRITERIA
	<p>enterprise requirements</p> <p>1.5 Select equipment/tools for work activities and ensure their operational status</p> <p>1.6 Identify, confirm and apply enterprise environmental protection requirements</p> <p>1.7 Select and wear correct personal protective equipment (PPE) appropriate for work activities</p> <p>1.8 Identify potential hazards, assess risks, implement risk control measures</p> <p>1.9 Obtain and follow emergency procedures</p>
2. Set out and excavate	<p>2.1 Prepare work area and materials</p> <p>2.2 Determine and apply dewatering requirements</p> <p>2.3 Determine location, alignment direction, level and grade of incoming infrastructure</p> <p>2.4 Set out works according to specifications</p> <p>2.5 Advise plant operator of excavation requirements and monitor levels</p> <p>2.5 Install trench support or batters as required</p> <p>2.6 Install bedding for underground structures</p>
3. Install underground infrastructure	<p>3.1 Lower materials and place in position</p> <p>3.2 Join conduits, manhole and ducts</p> <p>3.3 Continually check alignment level and grade</p> <p>3.4 Position side support and/or overlay beside pipes</p> <p>3.5 Check pipeline system support structure</p> <p>3.6 Monitor backfill procedure and ensure work is completed according to enterprise requirements</p> <p>3.7 Construct underground infrastructure and follow test procedures to establish functionality and serviceability</p>
4. Clean up	<p>4.1 Clear work area and dispose of or recycle materials according to enterprise requirements</p> <p>4.2 Clean, check, maintain and store plant, tools and equipment</p> <p>4.3 Record and report test results on plans as-built</p> <p>4.4 Update Dial Before You Dig database as required</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance, but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Interprets textual information from plans, specifications, standards and regulations to identify relevant and key information
Writing	<ul style="list-style-type: none"> Documents outcomes and changes to plans using industry relevant terminology and recognised plan symbols Prepares documentation and correspondence using clear language and correct spelling and terminology
Oral Communication	<ul style="list-style-type: none"> Uses collaborative and inclusive techniques, including active listening and questioning, to convey and clarify information and to confirm understanding Clearly explains detailed information using language, tone and pace appropriate to the audience
Numeracy	<ul style="list-style-type: none"> Makes calculations appropriate for measuring site for excavation
Navigate the world of work	<ul style="list-style-type: none"> Accepts responsibility and ownership for the task, and makes decisions on completion parameters and the need for coordination with others Identifies and acts on issues that contravene relevant policies, procedures and legal requirements
Interact with others	<ul style="list-style-type: none"> Uses a range of strategies and reads verbal and non-verbal signals, establishes a sense of connection and builds rapport with customers and co-workers
Get the work done	<ul style="list-style-type: none"> Takes responsibility for planning, sequencing and prioritising tasks and own workload for efficiency and effective outcomes Accepts responsibility for addressing less predictable problems and initiates procedures in response, applying problem solving processes in determining a solution

Unit Mapping Information

No equivalent unit. New unit.

Assessment Requirements for ICTTEN210 Install underground telecommunications infrastructure

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- apply techniques for the safe, effective and efficient installation of underground telecommunications infrastructure including:
 - problem-solving and troubleshooting techniques
 - diagnostic techniques
- complete an underground telecommunications infrastructure that meets all of the required outcomes.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- legislative, enterprise and site requirements and procedures for:
 - hazard identification, risk assessment and response
 - job safety analysis (JSA)/ job safety and environment analysis (JSEA)/safe work method statements
 - project quality measures
 - excavation/trench safety
 - confined space entry
 - site dewatering
- safety data sheets and material handling methods
- civil construction terminology
- underground telecommunications infrastructure systems and installation procedures for:

- manholes, large pits, conduits, ducts
- inspection covers and minor structures
- pipe joins
- concrete fabrication
- sedimentation and erosion controls
- worksite engineering drawings
- types, characteristics, technical capabilities and limitations of equipment related to work activity
- site isolation and traffic control responsibilities and authorities
- relevant enterprise policies and procedures.
-

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- site/s where underground telecommunications infrastructure can be installed
- tools, equipment and personal protective equipment currently used in industry
- relevant legislation, work instructions and equipment documentation that impacts on work activity.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN211 Work effectively in a telecommunications network environment

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Application

This unit describes the skills and knowledge required to prepare for and work within a telecommunications network environment by familiarising oneself with the devices required to work on basic telecommunications networks and by performing information transmissions.

It applies to entry-level workers who undertake basic information transmission tasks on telecommunications networks.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Telecommunications Network Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Use telecommunications devices to transmit information	1.1. Verify requirements for information transmission according to work specifications 1.2. Identify and select an appropriate telecommunications device for information transmission 1.3. Determine the appropriate medium to transmit information 1.4. Transmit information to identified recipients
2. Use transmitted information	2.1 Identify and use physical mediums to transmit information across devices and cables

ELEMENT	PERFORMANCE CRITERIA
	2.2 Calculate physical distance characteristics that may affect each medium used 2.3 Calculate signal losses in relation to medium used 2.4 Connect test devices and record readings
3. Finalise telecommunications tasks	3.1 Complete finalisation report according to enterprise policies 3.2 Submit report to customers and stakeholders 3.3 Clean-up and reinstate site to original condition

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance, but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none">• Uses explicit strategies to make connections between information and ideas obtained within specifications and manufacturers manuals
Writing	<ul style="list-style-type: none">• Develops material for a specific audience using clear and detailed language in order to convey explicit information for findings report
Oral Communication	<ul style="list-style-type: none">• Participates in a verbal exchange of information by listening and questioning
Numeracy	<ul style="list-style-type: none">• Uses mental and written calculation methods as well we technological tools to problem solve
Get the work done	<ul style="list-style-type: none">• Interprets textual information from technical sources to identify relevant and key information

Unit Mapping Information

No equivalent unit. New unit.

Assessment Requirements for ICTTEN211 Work effectively in a telecommunications network environment

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- determine the basic components used in two telecommunications devices
- identify at least two signal devices and two transmission mediums used in telecommunications system/s in two different situations
- identify two components used in basic switching system/s.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- transmission devices used for telecommunications and information capture including:
 - smart phones
 - computers
 - network termination devices
 - ADSL/VDSL devices
 - telephones
 - wi-fi modem/router cabinets
- mediums for telecommunications information transmission including:
 - twisted pair cable and patch chords
 - coaxial cable
 - optical fibre cable
- radio and wireless associated connectors/sockets used in transmission mediums
- radio antenna types including:
 - wi-fi omni directional antenna
- switching and cable systems including:

- analog and digital telephone systems
- ethernet switch
- point-to-point
- common exchange equipment including:
 - rack and stack equipment.

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- two types of common customer equipment
- two signal transmission mediums in use
- two different telecommunications switching equipment types
- two telephone exchange devices
- cabling products and cable used in telecommunications systems.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN312 Install telecommunications network equipment

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Application

This unit describes the skills and knowledge required to effectively install and test telecommunications network equipment. It includes processes for checking plans, obtaining equipment, and handling equipment and supplies.

It applies to field officers, technicians or technical supervisors working for carriers, contractors or other service providers who install switching, transmission and radio networks and various transmission paths. It includes cable, optical fibre, radio, microwave and satellite telecommunications equipment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Telecommunications Network Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1 Plan for installation of telecommunications network equipment	<p>1.1 Prepare for given work according to relevant work health and safety (WHS) and environmental requirements</p> <p>1.2 Obtain access to site and assess the options for network installation</p> <p>1.3 Identify existing and potential site hazards</p> <p>1.4 Verify network equipment installation according to appropriate plans obtained from authorised personnel</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>1.5 Investigate how equipment is to be connected to existing network systems</p> <p>1.6 Develop and finalise installation plans to ensure minimal workplace disruption according to relevant legislation, regulations, codes and standards</p> <p>1.7 Obtain tools and test equipment required for safe work practice</p> <p>1.8 Notify affected parties of possible network outage</p>
2 Install network hardware and cabling	<p>2.1 Install network equipment according to plan and manufacturer instructions, using safe industry practices</p> <p>2.2 Install equipment or insert equipment cards and modules</p> <p>2.3 Install all cables according to specifications</p> <p>2.4 Confirm service interruption is within limits agreed with customer</p> <p>2.5 Document all installation drawings for customer</p>
3 Install equipment accessories	<p>3.1 Install alarms according to instruction manuals and specifications</p> <p>3.2 Install operations administration and maintenance system according to specification</p> <p>3.3 Install communication facilities for operational staff according to specification, taking into account any special needs of site and operational staff</p> <p>3.4 Install operator communication facilities according to needs and specifications</p>
4 Configure and test system	<p>4.1 Install software and configuration instructions according to system specifications as required</p> <p>4.2 Test to verify system performance according to customer requirements</p> <p>4.3 Recommend changes as required and confirm with customer</p> <p>4.4 Record all test results</p>
5 Clean-up worksite and complete documentation	<p>5.1 Remove and dispose of installation waste and debris from worksite according to environmental requirements</p> <p>5.2 Restore changes made to work area during installation according to customer satisfaction</p> <p>5.3 Complete all installation documents and present to customer</p> <p>5.4 Declare asset ready for commissioning and integration</p> <p>5.5 Notify customer and obtain sign-off</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance, but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none">Interprets information from plans, specifications and manufacturer instruction manuals
Writing	<ul style="list-style-type: none">Uses clear and specific terminology to produce installation plans and instructions appropriate for audienceRecords results of tests in required format using industry-specific language
Oral Communication	<ul style="list-style-type: none">Uses appropriate strategies to establish and maintain dialogue, notify parties of disruptions and changes to planned work
Numeracy	<ul style="list-style-type: none">Accurately interprets measurements from plans and applies results to installation plans and documentsCalibrates test equipment and calculates and compares results with specifications
Navigate the world of work	<ul style="list-style-type: none">Takes personal responsibility for following explicit and implicit policies, procedures and legislative requirementsIdentifies and acts on issues that contravene relevant policies, procedures and legal requirements
Interact with others	<ul style="list-style-type: none">Follows accepted communication practices and protocolsUses a range of strategies to establish a sense of connection and build rapport with customers and co-workers
Get the work done	<ul style="list-style-type: none">Takes responsibility for planning, sequencing and prioritising tasks and own workload for efficiency and effective outcomes, occasionally negotiating changesMaintains required records and reports according to enterprise requirementsMakes routine decisions and implements standard procedures for routine tasks, using formal decision-making processes for more complex and non-routine situations

Unit Mapping Information

ICTTEN312 Install telecommunications network equipment supersedes and is equivalent to ICTTEN302 Install telecommunications network equipment.

Links

Companion Volume Implementation Guides are available from VETNet -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=a53af4e4-b400-484e-b778-71c9e9d6aff2>

Assessment Requirements for ICTTEN312 Install telecommunications network equipment

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- plan for and install network hardware and cabling according to equipment or system manuals and customer specifications
- configure and test installation
- verify cable continuity
- comply with all work health and safety (WHS) and environmental requirements and work practices
- notify customer of work progress and obtain sign-off.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- WHS requirements and environmental procedures relating to the activity and site conditions
- cabling types, connectors and cabling structures
- equipment and connections to carrier infrastructure and internet service provider (ISP) technologies for single and multi-dwelling environments:
 - carrier, asymmetric digital subscriber line, very-high-bit-rate digital subscriber line, fibre network termination device (NTD), hybrid fibre coaxial (HFC) modems
- electrical and/or optical properties of installation
- network and transmission equipment principles
- power requirements and electrical safety

- typical performance parameters and faults that may be encountered in customer equipment and related connection and transmission media
- various test equipment types suitable for tests to be made
- handling and environmental compliance for waste disposal.
-

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- site/s where installation of telecommunications network equipment can be conducted
- network testing equipment currently used in industry
- relevant regulatory and equipment documentation that impact telecommunications network equipment installation activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN313 Work on and resolve recurrent network faults

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Application

This unit describes the skills and knowledge required to use systematic and logical fault-finding techniques according to all safety requirements and work practices.

It applies to cablers and technicians who install and maintain a broad range of telecommunications networks.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Telecommunications Network Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for fault-finding activity	1.1 Prepare for given work according to work health and safety (WHS) and environmental requirements 1.2 Arrange access to site according to required procedure 1.3 Locate existing and potential site hazards and take appropriate action as required 1.4 Gain required information on nature of recurrent fault and network type 1.5 Select appropriate hand and power tools for work to be performed according to industry standards

ELEMENT	PERFORMANCE CRITERIA
	1.6 Set-up and check tools for use according to industry standards
2. Conduct activities for recurrent network fault-finding	2.1 Source and analyse fault information to establish nature of fault 2.2 Select test equipment and conduct appropriate test to identify potential faults ensuring the diagnostic process does not compromise integrity of network element or system 2.3 Evaluate test results to determine relevant symptoms of recurrent fault using appropriate methods and appropriate process 2.4 Locate probable cause, type and location of recurrent fault 2.5 Rectify fault or escalate to appropriate level as required
3. Report fault-findings and solutions	3.1 Prepare report on the diagnostic procedure, fault identification and fault clearance, according to industry standards 3.2 Update fault records database 3.3 Restore worksite according to industry standards 3.4 Notify relevant parties of job completion and obtain sign-off

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance, but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Recognises and interprets technical documentation to determine important information
Writing	<ul style="list-style-type: none"> Uses clear, specific and industry-related terminology to develop basic reports and in all written tasks
Oral Communication	<ul style="list-style-type: none"> Liaises with customers about technical requirements using specific and relevant language Uses listening and questioning techniques to confirm understanding
Numeracy	<ul style="list-style-type: none"> Evaluates and reviews technical data for specifications
Navigate the world of work	<ul style="list-style-type: none"> Appreciates implications of legal and regulatory responsibilities related to own role Seeks advice about expectations when preparing for work
Get the work done	<ul style="list-style-type: none"> Determines job priorities and works logically and systematically to undertake clearly defined and familiar tasks Implements actions according to established procedures, making slight adjustments if necessary and addressing some unexpected

Skill	Description
	<p>issues</p> <ul style="list-style-type: none">• Takes responsibility for routine decision-making by selecting from a range of predetermined options in routine situations, identifying and taking some situational factors into account• Diagnoses and implements standard solutions to for an increasing number of routine problems, seeking assistance from more experienced colleagues when required• Understands purposes and specific functions of common digital systems and uses them effectively to complete routine tasks

Unit Mapping Information

ICTTEN313 Work on and resolve recurrent network faults supersedes and is equivalent to ICTTEN303 Locate, identify and rectify recurrent network faults.

Links

Companion Volume Implementation Guides are available from VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=a53af4e4-b400-484e-b778-71c9e9d6aff2>

Assessment Requirements for ICTTEN313 Work on and resolve recurrent network faults

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- discuss faults with customers and co-workers
- test telecommunications networks to identify faults
- identify and rectify recurrent faults
- conduct and report on a fault-finding task in a telecommunications network for a range of faults
- use systematic and logical fault-finding techniques in telecommunications networks and field-testing procedures according to specific workplace situations
- comply with all work health and safety (WHS) and environmental requirements and work practices.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- relevant legislation, regulations, codes, standards, enterprise guidelines, formal agreements and contracts that impact on the work activity in particular:
 - WHS requirements and environmental procedures relating to the activity and site conditions
- Ohm's law, impedance and reactance formulas to solve alternating current (AC) electrical problems when diagnosing faults
- behaviour of faulty network elements including symptoms and impact on network
- test results and network element/system specifications

- operation and purpose of testing equipment
- summary of telecommunications networks
- performance testing and fault-finding techniques of telecommunications networks
- systematic and logical fault-finding
- types of power sources used in telecommunications networks
- managing faults on special services (such as police stations, hospitals, customers with heart monitors).

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- site/s on which network testing and fault-finding can be conducted
- line transmission, optical and radio measurement equipment currently used in industry
- system documentation, and other site-related documentation necessary to conduct tests and fault-finding investigations.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Links

Companion Volume Implementation Guides are available from VETNet -

ICTTEN315 Determine and apply technologies within a telecommunications system

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Application

This unit describes the skills and knowledge required to determine and apply common technologies used for transmission of both analog and digital signals within telecommunications systems.

It applies to entry-level workers in the telecommunications industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Telecommunications Network Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Categorise and record technologies in use within a given telecommunications system	1.1 Categorise and document basic operational features of telecommunications technologies within a given system 1.2 Categorise and document features and connected devices used for coding and decoding internet signals within a given system 1.3 Categorise and record components within a local area network (LAN)
2. Record data encoding methodologies in use within a given telecommunications	2.1 Identify and document encoding technologies within a given network 2.2 Identify and document basic principles of data error correction

ELEMENT	PERFORMANCE CRITERIA
system	and measuring techniques within a given system 2.3 Identify and verify modulation techniques used within a given system
3. Select and apply twisted pair components used within a given telecommunications system	3.1 Select twisted pair components for a given telecommunications system 3.2 Install and connect twisted pair components in the given telecommunications system 3.3 Test operations of twisted pair components 3.4 Check, document and handover system to end user
4. Select and apply coaxial components used within a given telecommunications system	4.1 Select coaxial components for a given telecommunications system 4.2 Install and connect coaxial components in the given telecommunications system 4.3 Test operations of coaxial components 4.4 Check, document and handover system to end user
5. Select and apply wireless components used within a given telecommunications system	5.1 Select wireless components for a given telecommunications system 5.2 Install and connect wireless components in the given telecommunications system 5.3 Test operations of wireless components 5.4 Check, document and handover system to end user

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance, but not explicit in the performance criteria.

Skill	Description
Learning	<ul style="list-style-type: none"> Identifies, plans and implements strategies to manage gaps in cyber security knowledge
Reading	<ul style="list-style-type: none"> Analyses and consolidates information and data from sources, against defined criteria and requirements, and checks for accuracy and completeness Recognises and interprets textual information to determine specific information about security incidents
Writing	<ul style="list-style-type: none"> Develops material for a specific audience, using clear and detailed

Skill	Description
	language in order to convey explicit information
Oral Communication	<ul style="list-style-type: none"> Articulates information clearly, using specific and relevant language suitable to audience to convey recommendations and provide verbal reports Uses listening and questioning techniques to confirm understanding
Numeracy	<ul style="list-style-type: none"> Extracts and evaluates the mathematical information embedded in a range of tasks and texts
Navigate the world of work	<ul style="list-style-type: none"> Takes personal responsibility for following explicit and implicit policies, procedures and legislative requirements
Interact with others	<ul style="list-style-type: none"> Selects form, channel and mode of communication for a specific purpose relevant to own role
Get the work done	<ul style="list-style-type: none"> Gathers and analyses data, and seeks feedback, to improve plans and processes Explores and incubates new ideas through unconstrained analysis and critical thinking, to develop and improve the enterprise telecommunications technologies

Unit Mapping Information

No equivalent unit. New unit.

Assessment Requirements for ICTTEN315 Determine and apply technologies within a telecommunications system

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- develop a block diagram showing a telecommunications system based on copper, fibre and radio mediums
- connect relevant cable to computer components used in a local area network (LAN) environment
- locate components used in a radio/wireless transmission system
- locate components and equipment to facilitate internet operations.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- basic analog and digital theory
- basic radio-communications theory
- basic fibre optic theory
- basic principles of data encapsulation as a frame and packet of data
- basic multiplexing principles
- timing of data transmission as synchronous, plesiochronous and asynchronous formats
- basic concepts of layers within the OSI and TCP-IP Models
- work health and safety (WHS) regulations for electromagnetic and photonics telecommunications systems
- RF amplification, coax feeder and simple aerial concepts, including Yagi, parabolic dish, aerial gain, directional, omnidirectional, polarity, helical

- components used in common LAN systems including personal computer devices, NUCs, photocopier/printer/scanners, servers, NASs, cable systems, switches, routers, wi-fi modems, and NTDs
- basic concepts and use of programming language
- basic operation of LED, laser and emerging technology sources, fibre cable and photo detector reception
- basic encoding techniques and principles used in ethernet copper cabling
- switching encountered and used in telecommunications, telephone systems, LAN, carrier/retailer
- basic types of modulation, amplitude, frequency and phase modulation used to attain efficiencies in sharing available bandwidth
- basic principles of FDM, TDM and QAM
- basic concepts and use of internet and telecommunications network related programming languages and protocols
- common internet terminology
- measuring techniques, BER, Viterbi, MER, Error rates (10⁻⁶)
- basic operation of commonly used telecommunications devices and systems.

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- safety signs pertaining to electrical, electromagnetic, radio frequency and photonics systems
- equipment currently used in telecommunications systems (electrical, radio and fibre)
- cabling products and cable used in telecommunications systems.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN316 Conduct basic tests and analyses of telecommunications copper cabling

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Application

This unit describes the skills and knowledge required to test and analyse telecommunications copper cabling using a variety of telecommunications industry test equipment.

This unit applies to technicians who conduct basic tests and telecommunications copper cabling analysis.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Telecommunications Network Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine cable type/s and applications in use in telecommunications system	1.1 Identify and document applications in use in telecommunications system according to relevant standards 1.2 Identify cables in use within a telecommunications system according to relevant standards 1.3 Assess balanced/unbalanced nature of type of cable system in use
2. Determine testing parameters and calibrate devices	2.1 Select most appropriate testing device and methodology for cable type 2.2 Outline testing parameters to be used for task

ELEMENT	PERFORMANCE CRITERIA
	2.3 Locate and isolate alternative energy supply sources 2.4 Determine components to be tested 2.5 Resolve implications of system interruptions and methods for live testing with minimum system disruption 2.6 Calibrate test devices according to manufacturer and enterprise requirements
3. Conduct copper cable test/s and record results	3.1 Connect test devices to cable system 3.2 Perform and record test results 3.3 Save and retrieve test results as required 3.4 Review adverse findings and escalate according to enterprise policy and procedures
4. Report test results	4.1 Analyse and record critical test data 4.2 Develop recommendations based on test data analysis 4.3 Write up report of test results 4.4 Submit report to customer and obtain sign-off

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance, but not explicit in the performance criteria.

Skill	Description
Learning	<ul style="list-style-type: none"> Identifies, plans and implements strategies using knowledge attained
Reading	<ul style="list-style-type: none"> Analyses and consolidates information and data from sources, against defined criteria and requirements, and checks for accuracy and completeness Recognises and interprets textual information to determine specific information about security incidents
Writing	<ul style="list-style-type: none"> Develops material for a specific audience, using clear and detailed language in order to convey explicit information
Oral Communication	<ul style="list-style-type: none"> Articulates information clearly, using specific and relevant language suitable to audience to convey recommendations and provide verbal reports Uses listening and questioning techniques to confirm understanding of WHS and operational testing

Skill	Description
Numeracy	<ul style="list-style-type: none"> Extracts and evaluates the mathematical information embedded in a range of technical specifications and manuals
Navigate the world of work	<ul style="list-style-type: none"> Accepts responsibility and ownership for the task and makes decisions on completion parameters and the need for coordination with others Takes personal responsibility for following explicit and implicit policies, procedures and legislative requirements
Interact with others	<ul style="list-style-type: none"> Selects form, channel and mode of communication for a specific purpose relevant to own role Ensures stakeholders are aware of WHS identified risks for task
Get the work done	<ul style="list-style-type: none"> Plans strategic priorities and outcomes within a flexible, efficient and effective context, in a diverse environment exposed to competing demands Gathers and analyses data, and seeks feedback, to improve plans and processes Makes decisions in a complex and diverse environment, using input from a range of sources Explores and incubates new ideas through unconstrained analysis and critical thinking, to develop and improve enterprise controls

Unit Mapping Information

No equivalent unit. New unit.

Assessment Requirements for ICTTEN316 Conduct basic tests and analyses of telecommunications copper cabling

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- select, set-up and operate test instruments for three different cable types from the following list:
 - structured cabling verification/qualification tester
 - wire mapper
 - oscillator and probe
 - spectrum analyser
 - DVB-T/S2 analyser
 - multimeter – analog and digital
 - time-domain reflectometer (TDR)
 - asymmetric digital subscriber line (ADSL)/very-high-bit-rate digital subscriber line (VDSL) test instruments
- select appropriate instrument test cables and adaptors to suit test equipment for three different cable types and:
 - determine safety of cables to be tested (i.e. live or inactive)
 - identify calibration status of selected devices
 - confirm test results are within acceptable operational parameters.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- relevant legislation, regulations, codes, standards, rules, guidance notes and other formal agreements that impact on work, in particular:
 - AS/CA S008:2010 Requirements for customer cabling products
 - AS/CA S009:2013 Installation requirements for customer cabling (Wiring Rules)
 - AS/NZS 1367:2016 Coaxial cable and optical fibre systems for the RF distribution of digital television, radio and in-house analog television signals in single and multiple dwelling installations
 - AS/NZS 3000:2018 Electrical installations known as the Australian/New Zealand Wiring Rules
 - AS/NZS 3080:2013 Information technology - Generic cabling for customer premises (ISO/IEC 11801:2011, MOD)
 - AS/NZS 3084:2017 Telecommunications installations – Telecommunications pathways and spaces for commercial buildings
 - National Construction Code
 - work health and safety (WHS) regulations pertaining to electrical and electromagnetic telecommunications systems including energy supply sources
- different copper cable types utilised to match transmitted and received signals
- testing concepts and parameters used by test instruments including:
 - impedance, resistance, mismatches, crosstalk, reflections, ACR, spectrum, bandwidth, modulation depth, intermodulation, signal delay, group delay, normalisation, linearity, TDR, clock, jitter, latency, ping, signal to noise ratio (SNR), simplified Fourier analysis concepts, eye patterns, PAM4 or SDI, QAM patterns/constellations, MER, BER, FEC, signal losses, noise, interference, data rates, traffic, upload/download testing, signal levels, dBs, dBm, dBμ, dBr, dBμV
- testing acronyms including expansion and meaning
- common tests utilised with each copper cable telecommunication system
- telecommunications systems utilised in the telecommunications industry including:
 - telephone/voice over internet protocol (VoIP) systems
 - mobile phones, security systems
 - closed-circuit television (CCTV) systems
 - fire protection systems
 - structured cabling systems
 - local area network (LAN) equipment, telemetry
 - equipment control and monitoring systems
 - automation control systems
 - entertainment and control systems
 - radio communications
 - wi-fi
 - radio links
 - satellite and digital television reception
 - private automatic branch exchange (PABX)
- technical standards as applicable to copper cable systems

- test devices as applicable to copper cables in each transmission medium
- purpose and use of test results
- solid core cable versus stranded core.
-

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- safety procedures signage and personal protective equipment (PPE) for testing cable
- cabling products and cable used in telecommunications systems
- operating conditions that may be present within local industry and regional contexts
- test equipment to test cable and identify test results, including:
 - wire mapper
 - oscillator and probe
 - spectrum analyser (available in DVB analyser)
 - DVB-T/S2 analyser
 - multimeter
 - TDR (available in SC certifiers)
 - ADSL/VDSL test instruments
- typical cable types including:
 - Cat 6 UTP cable
 - Cat 6/7 STP cable
 - RG6 coaxial cable (quad shielded)
 - RG11 coaxial cable (quad shielded)
 - copper conductor ribbon cable
 - solid core cable
 - stranded core cable
- appropriate connectors for testing cables
- appropriate adaptors and test leads for test instruments and cables to be tested
- backup energy sources, including power supplies and uninterrupted power supply/source (UPS) equipment.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN317 Locate, identify and rectify telecommunications network faults

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Application

This unit describes the skills and knowledge required to use systematic and logical fault-finding techniques according to safety requirements and work practices commonly used in network fault remediation.

It applies to cablers or technicians who install and maintain a broad range of telecommunications networks.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Telecommunications Network Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for fault-finding activity	1.1 Obtain approval for site access from customer or site owner prior to site entry 1.2 Identify existing and potential site hazards, assess risks and implement risk control measures 1.3 Determine, from documentation or discussion with appropriate personnel, work to be undertaken, including reported fault location 1.4 Prepare testing in consultation with others affected by proposed work and sequence work according to established enterprise

ELEMENT	PERFORMANCE CRITERIA
	<p>procedures</p> <p>1.5 Obtain required materials for testing, reporting and rectification work according to established enterprise procedures and job/work ticket requirements</p> <p>1.6 Obtain required tools, equipment and testing devices according to enterprise procedures and check for correct operation and safety</p>
2. Conduct network fault-finding activities	<p>2.1 Establish nature of fault through analysis of source and available information</p> <p>2.2 Select and safely use appropriate test equipment to locate, diagnose and analyse fault</p> <p>2.3 Conduct tests according to test equipment operating instructions and requirements, and ensure diagnostic process does not compromise integrity of network element or system</p> <p>2.4 Identify and test for faults efficiently without damage to equipment, circuits, surrounding environment or services</p> <p>2.5 Evaluate test results to determine cause of fault/s using appropriate methods and processes</p>
3 Action identified fault/s	<p>3.1 Rectify faults or escalate to appropriate personnel according to test results and enterprise procedures</p> <p>3.2 Confirm that fault rectification meets network performance requirements/levels</p> <p>3.3 Use escalation process for dealing with unexpected situations according to enterprise procedures</p>
4. Report fault-findings and rectification	<p>4.1 Close out fault and update records using applicable work management systems</p> <p>4.2 Restore worksite according to enterprise procedures</p> <p>4.3 Notify appropriate personnel when work has been completed and obtain sign-off</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance, but not explicit in the performance criteria.

Skill	Description
-------	-------------

Skill	Description
Reading	<ul style="list-style-type: none">Recognises and interprets technical documentation to determine important information
Writing	<ul style="list-style-type: none">Uses clear, specific and industry-related terminology to develop basic reports and in all written tasks
Oral Communication	<ul style="list-style-type: none">Discusses technical requirements using specific and relevant languageUses listening and questioning techniques to confirm understanding
Numeracy	<ul style="list-style-type: none">Evaluates and reviews technical data for specifications
Navigate the world of work	<ul style="list-style-type: none">Appreciates implications of legal and regulatory responsibilities related to own roleSeeks advice about expectations when preparing for work
Get the work done	<ul style="list-style-type: none">Determines job priorities and works logically and systematically to undertake clearly defined and familiar tasksImplements actions according to a predetermined plan, making slight adjustments if necessary and addressing some unexpected issuesTakes responsibility for routine decision-making by selecting from a range of predetermined options in routine situations, identifying and taking some situational factors into accountDiagnoses and implements standard solutions to for an increasing number of routine problems, seeking assistance from more experienced colleagues when requiredUnderstands purposes and specific functions of common digital systems and uses them effectively to complete routine tasks

Unit Mapping Information

No equivalent unit. New unit.

Assessment Requirements for ICTTEN317 Locate, identify and rectify telecommunications network faults

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- discuss faults with customers and appropriate personnel
- use systematic and logical fault-finding techniques and field-testing procedures according to workplace situations
- test telecommunications networks to identify a minimum of three different types of faults
- analyse test results and rectify faults for a minimum of three different types of faults
- comply with all related work health and safety (WHS) requirements and work practices
- follow direction from appropriate sources, personnel or network operators (including operation centre, supervisor).

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- work health and safety (WHS) and environmental requirements
- basic communications testing, measuring devices and techniques including:
 - types and applications of testing/measuring devices including voltage testers, multimeters, continuity testers and insulation resistance testers
 - features of testing/measuring devices including safety, user calibration and parameter and range settings
 - test/measuring devices into a circuit
 - safety procedures

- circuit arrangement of test/measuring devices
- readings
- storage, maintenance and care of test/measuring devices.
- Australian Standard quality assurance requirements for test equipment calibration certification
- network fundamentals for analog and digital signals including:
 - how information is carried
 - signal distortion, attenuation, reflection, noise, dispersion, latency and collisions
 - types of networks, network components and hardware
 - local area network (LAN) architecture
 - networking protocols and the open systems interconnection (OSI) model
 - network signal propagation
 - transmission control protocol/internet protocol (TCP/IP)
- basics of encoding networking signals including:
 - internet services
- performance parameters associated with copper cables, coaxial cables and optical cables including:
 - electrical circuit characteristics of voltage, current and resistance/impedance
 - open circuit, short circuit and pair continuity
 - split legs and crossed legs, contacts, earths and foreign battery
 - attenuation
 - return loss
 - insulation resistance (leakage)
 - cross talk
 - attenuation to cross talk ratio (ACR)
 - loop resistance
 - noise (impulse noise and average noise)
 - characteristic impedance
- test result compliance with required regulations, standards and/or codes for structured copper cables, coaxial and optical fibre cables including:
 - tests required to evaluate a given performance parameter
 - test equipment and leads needed to evaluate a given performance parameter
 - operation of test equipment for correct evaluation of specific cable performance parameters and to obtain accurate and reliable results
 - transmission performance requirements
- behaviour of faulty network elements, including symptoms and impact on network
- systematic and logical fault-finding
- interpretation of test results and network element/system specifications
- types of power and signal sources used in telecommunications networks.

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- site/s on which network testing and fault-finding can be conducted
- line transmission and optical measurement equipment currently used in industry
- system documentation and other site-related documentation require to conduct tests and fault-finding investigations, for a minimum of three different types of faults.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN318 Inspect, clean and handle optical fibre cable and connectors

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Application

This unit describes the skills and knowledge required to inspect and clean optical fibre connectors and to follow handling and placement practices for optical fibre patch leads and cables. It relates to practices necessary in the installation and patching of fibre for new or replacement cables in switching, transmission and fixed and mobile radio networks.

It applies to lines workers, technicians or jointers working for carriers and/or service providers. It also applies to work performed under direction of the relevant authority.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Telecommunications Network Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for fibre patching	1.1 Obtain design schematics and cut over sequence for fibre patching 1.2 Discuss and record details of activities and work schedule with relevant authority 1.3 Ensure all tools and materials required for patching are available and in good condition 1.4 Undertake an impact risk assessment, including customer impact risk according to work health and safety (WHS) guidelines for fibre patching requirements, and prepare any necessary notifications

ELEMENT	PERFORMANCE CRITERIA
2. Prepare each connector and bulkhead for patching	<ul style="list-style-type: none">2.1 Work safely and identify appropriate connector and lead type2.2 Place fibre patch leads in support pathways avoiding pressure points, crushing and excess bending2.3 Ensure connectors match bulkhead connectors2.4 Remove connector dust cover and inspect connecting surface for dust or damage using the correct video adaptor optical microscope2.5 Clean connector, as required, with recommended cleaning materials and re-inspect2.6 Insert connector and label in accordance with customer practices2.7 Secure cables according to manufacturer instructions and customer practices2.8 Escalate hardware replacement problems with the relevant authority2.9 Test replacement hardware to ensure satisfactory functionality
3. Clean-up worksite and complete administrative work	<ul style="list-style-type: none">3.1 Remove waste and debris from worksite and dispose of according to environmental requirements3.2 Recover faulty equipment and return to appropriate point for disposal or refurbishment3.3 Complete documentation, update fault records and make recommendations according to customer practices3.4 Notify appropriate person at the relevant authority of job completion and obtain sign-off

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance, but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none">Recognises and interprets technical, regulatory and enterprise documentation
Writing	<ul style="list-style-type: none">Uses clear, specific and industry related terminology to complete and update workplace documentation
Oral Communication	<ul style="list-style-type: none">Liaises with a range of personnel about technical and operational requirements using specific and relevant languageUses listening and questioning techniques to confirm understanding

Skill	Description
Navigate the world of work	<ul style="list-style-type: none">Complies with policies, procedures and legislative requirements relevant to own role
Interact with others	<ul style="list-style-type: none">Uses appropriate practices and protocols to communicate effectively with a range of personnel
Get the work done	<ul style="list-style-type: none">Plans, sequences and carries out tasks to meet required outcomesImplements actions according to a predetermined plan making adjustment where necessaryAnalyses task requirements to make routine decisions, taking some situational factors into accountAnticipates potential problems and prepares contingency plansFollows required procedures when responding to problemsUnderstands purpose and some specific functions of common digital tools used in work contexts

Unit Mapping Information

No equivalent unit. Supersedes and is not equivalent to ICTTEN311 Inspect, clean and handle optical fibre cable and connectors.

Links

Companion Volume Implementation Guides are available from VETNet -

Assessment Requirements for ICTTEN318 Inspect, clean and handle optical fibre cable and connectors

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- interpret, discuss and confirm required work
- obtain and check documentation, equipment and hardware for required work
- inspect fibre connectors using inspection scopes
- clean connectors using approved methods
- handle optical fibre cable and connectors to prevent damage
- complete patching according to patching schedule and under the direction of the relevant authority
- follow work health and safety (WHS) requirements and anti-static precautions
- follow required practices or contingency plan if hardware replacement is unsuccessful
- restore site to required condition
- liaise with appropriate personnel for information and reporting purposes.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- relevant legislation, regulations, codes, standards and contracts that impact on the work activity, in particular:
 - relevant safety legislation and company work practices, hazards identification, laser safety, dangerous materials handling and personal protective equipment and safety requirements for working with optical fibre cable
 - International Electrotechnical Commission (IEC) Standards acceptance criteria

- environmental requirements
- signal transmission in optical fibres and the impact of various contaminants on fibre connections
- relevant designs, plans and labelling conventions
- relevant equipment used for inspecting and cleaning cables and connectors
- process of inspecting and cleaning cable, connectors and equipment
- escalation processes for damaged hardware.

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- site/s suitable for inspecting and cleaning optical fibre connectors
- a range of hardware currently used in industry
- a range of general and test equipment required for testing telecommunications network hardware.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN320 Commission an electronic unit

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Application

This unit describes the skills and knowledge required to commission an electronic unit within a telecommunications environment with applications.

The commissioning may be for a new installation or upgrade of capacity or technology for an existing network or subsystem for convergence to next generation networks (NGNs).

It applies to field officers and technicians working for telecommunications carriers, other service providers and contractors.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Telecommunications Network Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to commission electronic unit	1.1 Organise resources based on identified existing and potential site hazards 1.2 Notify customer or network operations personnel to gain site access and network specifications 1.3 Determine type and complexity of electronic unit from specifications 1.4 Verify installed electronic unit and associated cabling conform to specifications

ELEMENT	PERFORMANCE CRITERIA
	<p>1.5 Establish commissioning dates and confirm with all parties</p> <p>1.6 Determine commissioning parameters according to specification and establish planned outage as required</p> <p>1.7 Obtain test equipment and check suitability and calibration status</p> <p>1.8 Produce a preliminary commissioning plan for discussion with customer according to manufacturer instructions and enterprise guidelines</p> <p>1.9 Inform affected customer/s of impending action and likely timing and impact of work</p>
2. Organise planned outages	<p>2.1 Negotiate outage times with appropriate groups and affected customer/s to minimise disruptions</p> <p>2.2 Refer to contingency plans and arrange for emergency communications as required</p> <p>2.3 Notify alarm management centre of planned action</p> <p>2.4 Obtain authority to proceed from relevant control centre and notify customers affected by the outage</p>
3. Perform commissioning procedures	<p>3.1 Program equipment or install software according to manufacturer specifications and safety requirements</p> <p>3.2 Set electronic unit parameters according to manufacturer specifications and customer requirements</p> <p>3.3 Set-up test equipment and conduct tests according to manufacturer specifications and industry practice</p> <p>3.4 Connect and test network access facilities for correct performance</p> <p>3.5 Conduct cut over according to project design and industry practice in consultation with appropriate personnel</p> <p>3.6 Check remote alarm and monitoring features are functional as required</p>
4. Finalise commissioning documentation	<p>4.1 Update relevant databases according to enterprise and network guidelines</p> <p>4.2 Notify appropriate personnel of commissioning results and work completion</p> <p>4.3 Complete administrative tasks according to telecommunications industry practice and enterprise guidelines</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance, but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Recognises and interprets technical documentation and specifications to determine important information
Writing	<ul style="list-style-type: none"> Uses clear, specific and industry-related terminology to develop network documentation and update workplace records, and in written communications with customers
Oral Communication	<ul style="list-style-type: none"> Liaises with appropriate personnel about technical requirements using specific and relevant language Uses listening and questioning techniques to confirm understanding
Numeracy	<ul style="list-style-type: none"> Evaluates and reviews technical data to determine commissioning parameters
Navigate the world of work	<ul style="list-style-type: none"> Takes personal responsibility for following explicit and implicit policies, procedures and legislative requirements
Interact with others	<ul style="list-style-type: none"> Uses appropriate protocols when communicating in a range of familiar work contexts
Get the work done	<ul style="list-style-type: none"> Determines job priorities and works logically and systematically to undertake clearly defined and familiar tasks, arrange site access and organise necessary equipment and resources Implements actions according to a predetermined plan, making slight adjustments if necessary and addressing some unexpected issues Takes responsibility for routine decision-making by selecting from a range of predetermined options in routine situations, identifying and taking some situational factors into account Initiates standard procedures when responding to familiar problems within immediate context Understands purposes and specific functions of common digital systems and uses them effectively to complete routine tasks

Unit Mapping Information

ICTTEN320 Commission an electronic unit supersedes and is equivalent to ICTTEN306 Commission an electronic unit.

Links

Companion Volume Implementation Guides are available from VETNet -

Assessment Requirements for ICTTEN320 Commission an electronic unit

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills at least once each for electrical and optical equipment, and to:

- commission an electronic unit for an electrical and optical input according to specifications
- communicate effectively with stakeholders
- negotiate arrangements for commissioning
- deal with faults and problems, and provide solutions.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- electrical and optical properties to be measured
- common networking equipment
- legislation and licensing requirements surrounding installation of telecommunications equipment
- industry standards and enterprise guidelines relevant to work activity
- commissioning plans based on manufacturer and enterprise guidelines
- network operation procedures
- power requirements and electrical safety
- test equipment types
- transmission type and signals that may be encountered.

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- site/s on which installation and commissioning procedures can be conducted
- testing equipment currently used in industry
- relevant regulatory and equipment documentation that impact commissioning.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN321 Maintain an electronic system

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Application

This unit describes the skills and knowledge required to inspect critical aspects of electronic systems and replace and dispose of items performing below specification and required operating levels.

It applies to individuals with the capacity to apply skills in electrical, workplace safety and power tools, working as technicians on site and from remote locations.

This work does not include major servicing of equipment or repair due to breakdowns.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Telecommunications Network Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to maintain system	<p>1.1 Consult with customer or property owner to arrange site access as required</p> <p>1.2 Plan schedule of routine preventive maintenance for electronic system based on recommended maintenance periods according to manufacturer handbooks and specifications</p> <p>1.3 Report to appropriate person the impact of proposed maintenance activities on customer service delivery</p> <p>1.4 Confirm equipment is accessible and correctly set-up for onsite preventive maintenance activities and for remote interrogation if</p>

ELEMENT	PERFORMANCE CRITERIA
	required 1.5 Confirm alarms are functioning according to manufacturer specifications and enterprise guidelines 1.6 Take corrective action when anomalies or faults are detected, according to enterprise guidelines and manufacturer specifications
2. Undertake preventive maintenance routines on site and remotely	2.1 Conduct preventive maintenance according to planned schedule 2.2 Report to appropriate person any instances where maintenance activities cannot be fully met or where there are identified defects outside the planned schedule 2.3 Verify equipment is functioning against expected operational parameters to confirm operational status 2.4 Take corrective action when faults are detected, according to enterprise guidelines and manufacturer specifications 2.5 Escalate to next level of support as required, where preventive maintenance activity falls outside own level of expertise 2.6 Dispose of onsite waste materials according to safe working practices and approved procedures
3. Make recommendations and update records	3.1 Record results of routine tests and make recommendations 3.2 Store records according to enterprise guidelines

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance, but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none">Recognises and interprets technical documentation such as equipment manuals and specifications
Writing	<ul style="list-style-type: none">Uses clear, specific and industry related terminology to develop network documentation, update workplace records, and in written communications with customers
Oral Communication	<ul style="list-style-type: none">Participates in verbal exchanges about technical and operational requirements using specific and relevant languageUses listening and questioning techniques to confirm understanding
Numeracy	<ul style="list-style-type: none">Evaluates and reviews technical data to calculate measurements and adjustments to equipment

Skill	Description
Navigate the world of work	<ul style="list-style-type: none">• Takes personal responsibility for following explicit and implicit policies, procedures and legislative requirements
Interact with others	<ul style="list-style-type: none">• Selects and uses appropriate conventions and protocols when communicating with customers and co-workers in a range of work contexts
Get the work done	<ul style="list-style-type: none">• Determines job priorities and works logically and systematically to undertake clearly defined and familiar tasks and organise necessary equipment and resources• Seeks assistance from more experienced colleagues as required• Implements actions according to a predetermined plan, making slight adjustments if necessary and addressing some unexpected issues• Takes responsibility for routine decision-making by selecting from a range of predetermined options in routine situations, identifying and taking some situational factors into account• Initiates standard procedures when responding to familiar problems within immediate context• Understands purposes and specific functions of common digital systems and uses them effectively to complete routine tasks

Unit Mapping Information

ICTTEN320 Commission an electronic unit supersedes and is equivalent to ICTTEN306 Commission an electronic unit.

Assessment Requirements for ICTTEN321 Maintain an electronic system

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Performance Evidence

The candidate must demonstrate, on two occasions, the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- identify maintenance required
- communicate maintenance details to customer/s and work associates
- undertake manufacturer preventive maintenance routines on site and remotely
- conduct tests
- interpret test results
- complete documentation according to enterprise guidelines.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- features and operating requirements across a range of electronic equipment
- legislation, codes, enterprise guidelines and other formal agreements that impact the work activity, in particular:
 - specific work health and safety (WHS) and environmental requirements
- manufacturer requirements for safe operation of equipment and correction of faults
- testing methods and performance requirements of equipment under test
- troubleshooting and repair procedures
- typical issues and challenges that occur on site and when conducting remote maintenance procedures.

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- site/s suitable for maintenance of a range of equipment
- test equipment currently used in industry
- relevant regulatory and equipment documentation that impact work activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN322 Provide infrastructure for telecommunications network customer equipment

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Application

This unit describes the skills and knowledge required to install supporting infrastructure for telecommunications equipment and associated hardware, including access equipment and associated media, power and monitoring equipment, and alarm systems.

It applies to field officers, installation technicians or technical supervisors working for contractors or other service providers who work on switching, transmission, radio networks and various transmission paths including cable, optical fibre, radio, microwave and satellite.

No licensing, legislative or certification requirements apply to this unit at the time of publication. However, technical work in telecommunications must only be done on extra-low voltage power levels otherwise it breaches the electrical licensing laws in Australia set within AS/NZS 3000:2018 Electrical installations known as the Australian/New Zealand Wiring Rules.

Unit Sector

Telecommunications – Telecommunications Network Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for installation infrastructure work	1.1 Notify customer to arrange site access and obtain installation plan and specifications 1.2 Conduct site survey to verify infrastructure installation requirements can be met 1.3 Identify site hazards and notify appropriate personnel to make site

ELEMENT	PERFORMANCE CRITERIA
	<p>safe</p> <p>1.4 Notify customer of alterations required to installation design and make recommendations for possible solutions</p> <p>1.5 Obtain approval for alterations and update installation plan as required</p> <p>1.6 Develop installation activity schedule to minimise disruption to the workplace and according to relevant regulations and standards</p> <p>1.7 Obtain material supplies, safety equipment, resources, tools and test equipment to be available as required for installation for safe work practice</p>
2. Build customer equipment infrastructure	<p>2.1 Prepare for given work according to work health and safety (WHS) and environmental requirements</p> <p>2.2 Fit-out telecommunications closet, cabinet or equipment room to house equipment, distributors and AC/DC power systems according to design plans, manufacturer specifications, and safety and electrical standards</p> <p>2.3 Build cable support systems for signal, data cabling and optical cables, including entrance facilities, intra-, and inter-building facilities according to plan and specifications</p> <p>2.4 Organise installation of mains AC electrical power cabling infrastructure according to plan and specifications</p> <p>2.5 Install cable distribution frames according to plan and manufacturers specifications</p> <p>2.6 Install protective earthing to metal infrastructures or gas arrestors according to specifications or design</p>
3. Install uninterrupted power supply power infrastructure	<p>3.1 Install batteries, rectifiers and uninterrupted power supply (UPS) systems as required by specifications or design and connect according to manufacturer and WHS requirements</p> <p>3.2 Test and monitor UPS battery discharge levels and obtain replacement batteries under warranty as required</p> <p>3.3 Identify and rectify faults where possible or escalate according to enterprise policy</p>
4. Restore site and complete documentation	<p>4.1 Attach infrastructure labels and designations according to enterprise requirements</p> <p>4.2 Complete inspection sheets and declare asset ready for customer sign-off documentation</p> <p>4.3 Clean-up site</p>

ELEMENT	PERFORMANCE CRITERIA
	4.4 Notify customer and obtain sign-off

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance, but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Reads and interprets plans, specifications and other documentation from a variety of sources and consolidates information to determine requirements
Writing	<ul style="list-style-type: none"> Accurately records information and prepares correspondence and documentation using clear language and enterprise formats and protocols
Oral Communication	<ul style="list-style-type: none"> Effectively participates in verbal exchanges using collaborative and inclusive techniques including active listening and questioning and reading of verbal and non-verbal signals to convey and clarify information
Numeracy	<ul style="list-style-type: none"> Takes measurements and use them for work layout and construction Makes calculations appropriate for measuring and estimating materials for construction
Navigate the world of work	<ul style="list-style-type: none"> Complies with explicit policies and procedures Explores and implements, where identified, implicit expectations of policies and procedures Ensures knowledge of legislative requirements and products is kept up to ensure compliance
Get the work done	<ul style="list-style-type: none"> Takes responsibility for planning, sequencing and prioritising tasks and own workload for efficiency and effective outcomes Makes routine decisions and implements standard procedures for routine tasks, using formal decision-making processes for more complex and non-routine situations Addresses less predictable problems and initiates standard procedures in response, applying problem-solving processes in determining a solution

Unit Mapping Information

ICTTEN322 Provide infrastructure for telecommunications network customer equipment supersedes and is equivalent to ICTTEN309 Provide infrastructure for telecommunications network customer equipment.

Links

Companion Volume Implementation Guides are available from VETNet -

Assessment Requirements for ICTTEN322 Provide infrastructure for telecommunications network customer equipment

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Performance Evidence

The candidate must demonstrate, on two occasions, the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- identify potential earthing locations, cable routes, cables support systems, data cabinets, telecommunication enclosures and distributors
- construct metal superstructure and racks
- install protective earth installations
- organise AC mains power infrastructure
- install uninterrupted power supply (UPS) backup power
- notify customer of works progress.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- cabling types, connectors and cabling structures used in telecommunications networks
- common customer telecommunications applications and related equipment
- connections to carrier infrastructure or equipment
- legislation, regulations, codes and standards for compliance relating to installation of telecommunications equipment and connection to carrier services in particular:
 - work health and safety (WHS) requirements for managing hazards on the worksite including:
 - confined spaces
 - electrical safety including the limits of electrical work as set by local electrical regulatory body
 - working at heights
 - lifting
 - materials handling

- physical hazards
- tools and test equipment required for an infrastructure installation
- site survey process and data that should be recorded
- environmental impacts, including options for information and communications technology (ICT) installations
- network topologies, interface and interconnect solutions
- network and transmission customer equipment likely to be encountered
- common backup UPS systems, AC mains power requirements and electrical safety for telecommunications networks
- types of warranty information for equipment supplies and contractor work guarantees
- importance of correctly labelling an installation.

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- site/s where installation of supporting infrastructure can be conducted
- plant, tools, equipment and personal protective equipment currently used in industry
- relevant regulatory and equipment documentation that impact work activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN416 Install, configure and test an internet protocol network

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 2.0.

Application

This unit describes the skills and knowledge required to select network elements to meet client business specifications, ensure interoperability within the network, apply network topologies, protocols and security issues, and troubleshoot when required.

It applies to individuals who carry out installation, maintenance and upgrade of information and communications technology (ICT) networks, and are employed by telecommunications or information technology networking provisioning companies.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Telecommunications Networks Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to install IP network	1.1 Prepare for given work according to relevant legislation, work health and safety (WHS) regulations, codes and standards 1.2 Arrange site access according to required procedure 1.3 Review existing network design documentation to ensure it is current and complete

ELEMENT	PERFORMANCE CRITERIA
	<p>1.4 Select components and network elements required to be installed to meet the technical requirements</p> <p>1.5 Contact vendors and service suppliers to obtain specifications and availability of identified components</p> <p>1.6 Develop plans, with prioritised tasks and contingency arrangements, for installation of components with minimum disruption to client</p> <p>1.7 Liaise with appropriate person to obtain approval for the plans, including security clearance and timing</p>
2. Install and configure IP network	<p>2.1 Install and configure server hardware and software according to organisational and industry standards, following plans</p> <p>2.2 Install and configure computer, other hardware and software, according to organisational and industry standards and plans</p> <p>2.3 Install and configure other software required for the network to operate with security and integrity according to the plan</p>
3. Test and reconfigure IP network	<p>3.1 Test installed software and hardware, utilising available technical tools, to ensure all components are functioning as expected</p> <p>3.2 Test the network to ensure it is functioning according to specifications</p> <p>3.3 Resolve problems identified in the modified network</p>
4. Complete documentation and clean worksite	<p>4.1 Complete hardware and asset recording document in line with organisational requirements</p> <p>4.2 Document installation, boot-up and configuration procedures according to organisational requirements</p> <p>4.3 Tabulate test results and complete all user reports</p> <p>4.4 Complete client report and notify of network status</p> <p>4.5 Clean up and restore worksite to client's satisfaction</p> <p>4.6 Secure sign-off from appropriate person</p>

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance	Description
-------	-------------	-------------

	Criteria	
Reading	1.1-1.3, 2.1-2.3, 3.2, 4.1, 4.2	<ul style="list-style-type: none"> Recognises and interprets technical, legislative and operational documentation to determine job requirements
Writing	1.5-1.7, 4.1-4.4	<ul style="list-style-type: none"> Uses clear, specific and industry-related terminology to produce and update workplace documentation in predetermined formats
Oral Communication	1.5, 1.7, 4.4	<ul style="list-style-type: none"> Clearly liaises with internal and external personnel on technical, operational and business related matters Uses listening and questioning skills to confirm understanding for requirements
Numeracy	3.1-3.3	<ul style="list-style-type: none"> Makes calculations required to take test measurements, interpret results and evaluate performance and interoperability of network
Navigate the world of work	1.1, 4.5	<ul style="list-style-type: none"> Takes personal responsibility for adherence to legal and regulatory responsibilities relevant to own work context Recognises and follows explicit and implicit protocols and meets expectations associated with own role
Interact with others	4.5, 4.6	<ul style="list-style-type: none"> Cooperates with others as part of familiar routine activities and contributes to specific activities requiring joint responsibility and accountability
Get the work done	1.2, 1.4, 1.6, 2.1-2.3, 3.1-3.3, 4.5	<ul style="list-style-type: none"> Understands key principles and concepts underpinning design and operation of digital systems and tools, and applies these as required Works logically and systematically to monitor, analyse and action job priorities Implements actions according to a predetermined plan, making adjustments if necessary Makes decisions quickly and intuitively in familiar situations requiring immediate attention, drawing on past experience to identify key variables and determine the best course of action Recognises and anticipates an increasing range of familiar problems, their symptoms and causes, depending on differing operational contingencies, risk situations and environments

Unit Mapping Information

Code and title current version	Code and title previous version	Comments	Equivalence status
ICTTEN416 Install, configure and test an internet protocol network	ICTTEN4198A Install, configure and test an internet protocol network	Updated to meet Standards for Training Packages.	Equivalent unit

Assessment Requirements for ICTTEN416 Install, configure and test an internet protocol network

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 2.0.

Performance Evidence

Evidence of ability to:

- plan and prepare for the IP network installation task
- select network elements to meet client's business specifications
- install, configure and test network elements to ensure interoperability within the network
- apply network topologies, protocols and security issues
- apply solutions to defined network problems.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain client's business domain, business function and organisation
- describe current industry-accepted hardware and software products
- outline data and voice transmission technologies and protocols
- summarise networking technologies, incorporating substantial depth in some areas
- explain router-based network architectures.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications networks engineering field of work and include access to:

- a site where network installation may be conducted
- field measurement equipment currently used in industry

- network design documentation
- equipment specifications
- network components
- hardware and software
- a live network
- organisational guidelines
- networked (LAN) computers
- a wide area network (WAN) service point of presence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Links

Companion Volume implementation guides are found in VETNet -

ICTTEN428 Prepare design drawings and specification for telecommunications installations

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 2.0.

Application

This unit describes the performance outcomes, skills and knowledge required to prepare design drawings and specification for a telecommunications installation.

It applies to technical staff who are responsible for communicating installation requirements for installations, for access, building and core network installations within the Carrier Network for either carrier, commercial or industrial installations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Telecommunications Networks Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Gather information on existing and proposed installation	1.1 Confirm equipment installation requirements from the design brief and client 1.2 Inspect site to confirm plans where possible 1.3 Review existing plans, drawings and databases against the design brief

ELEMENT	PERFORMANCE CRITERIA
2. Determine installation options	<p>2.1 Assess available installation options against client requirements and relevant legislation, codes, regulations and standards</p> <p>2.2 Establish and assess cost of options against client's budget</p> <p>2.3 Select most suitable option based on function, cost, standards and client deployment rules</p>
3. Prepare suitable drawings	<p>3.1 Prepare clear and accurate installation drawings indicating proposed facilities and services</p> <p>3.2 Provide drawings to relevant parties and file copies for later reference according to company policies</p>
4. Prepare project specifications	<p>4.1 Prepare detailed design drawings for network installation</p> <p>4.2 Prepare drawings to include scheduled and non-scheduled codes to facilitate costing</p>
5. Verify specifications with client	<p>5.1 Verify prepared documentation with client</p> <p>5.2 Obtain authorisation and approval from client to proceed according to company policy</p> <p>5.3 Issue design to the field with authority to construct</p>

Foundation Skills

Skill	Performance Criteria	Description
Reading	1.1-1.3, 2.1-2.3	<ul style="list-style-type: none"> Reads and interprets plans, specifications, and other documentation from a variety of sources and consolidates information to determine requirements
Writing	4.1, 4.2, 5.1-5.3	<ul style="list-style-type: none"> Prepares, edits and proofreads plans and documents to ensure clarity of meaning, and accuracy and consistency of information Documents outcomes and changes to plans using industry-relevant terminology and recognised plan symbols Develops procedural material for a specific audience using clear and detailed language to convey explicit information, requirements and recommendations
Oral Communication	1.1, 5.1	<ul style="list-style-type: none"> Presents complex information in formal situations using clear and convincing language, tone and pace appropriate for audience and purpose

Numeracy	2.2, 2.3, 4.2	<ul style="list-style-type: none"> Applies financial modelling skills to identify, analyse and evaluate budgetary information, time durations and human resource allocations and costs
Navigate the world of work	2.1, 5.2	<ul style="list-style-type: none"> Takes personal responsibility for following explicit and implicit policies, procedures and legislative requirements
Interact with others	5.2, 5.3	<ul style="list-style-type: none"> Selects and uses appropriate conventions and protocols when communicating with clients and co-workers in a range of work contexts Uses a range of strategies to establish a sense of connection and build rapport with clients and co-workers
Get the work done	1.2, 1.3, 2.1-2.3, 4.1, 5.3	<ul style="list-style-type: none"> Takes responsibility for planning, sequencing and prioritising tasks and own workload for efficiency and effective outcomes Makes routine decisions and implements standard procedures for routine tasks, using formal decision-making processes for more complex and non-routine situations Addresses less predictable problems and initiates standard procedures in response, applying problem-solving processes in determining a solution Uses familiar digital technologies and systems to access information, search and enter data, present information and communicate with others, cognisant of data security and safety

Unit Mapping Information

Code and title current version	Code and title previous version	Comments	Equivalence status
ICTTEN428 Prepare design drawings and specification for telecommunications installations	ICTTEN4243A Prepare design drawings and specification for telecommunications installations	Updated to meet Standards for Training Packages.	Equivalent unit

Links

Assessment Requirements for ICTTEN428 Prepare design drawings and specification for telecommunications installations

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 2.0.

Performance Evidence

Evidence of ability to:

- determine installation options
- produce schematics and plan drawings
- access and interpret database and knowledge systems for network information
- produce design drawings and specifications
- verify specifications with client.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- summarise carrier network practices, procedures and systems, including databases and deployment rules relating to telecommunications designs
- identify and apply legislation, codes of practice and other formal agreements (including schedule of rates and contract requirements) that impact work activity
- describe manufacturer's requirements for safe operation of equipment
- identify and document specific work health and safety (WHS) requirements relating to the activity and site conditions
- describe typical issues and challenges that occur on site
- establish and describe the various components of telecommunications plans, drawings and specifications.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications networks engineering field of work and include access to:

- special purpose tools, equipment and materials
- sites where network installation may be conducted
- equipment currently used in industry
- relevant regulations and company policies
- cabling specifications that impact network installation activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN432 Identify requirements for customer telecommunications equipment

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Application

This unit describes the skills and knowledge required to locate telecommunications equipment including telephony, audio, television and data, and to place associated cables within domestic, commercial or industrial installations. It includes planning access to new and existing infrastructure, and completing all necessary documentation.

It applies to individuals working as cablers and registered with an Australian Communications and Media Authority (ACMA) accredited registrar.

Licensing, legislative, regulatory and certification requirements apply to telecommunications earthing systems. Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the ICT Information and Communications Technology Training Package Companion Volume Implementation Guide or the relevant regulator for details about licensing, legislative or certification requirements.

Unit Sector

Telecommunications – Telecommunications Network Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to identify services required	1.1 Contact customer to arrange access to site, identify customer equipment and discuss customer requirements 1.2 Assess site-specific safety requirements and enterprise work health and safety (WHS) processes and procedures 1.3 Confirm details of proposed customer equipment

ELEMENT	PERFORMANCE CRITERIA
	<p>1.4 Establish intended uses of customer equipment to assist in identifying cabling requirements</p> <p>1.5 Establish cabling requirements with customer</p> <p>1.6 Locate existing facilities and systems including network facilities</p> <p>1.7 Verify building construction by observation and confirm accessibility</p> <p>1.8 Utilise existing floor plans and integrate into subsequent documentation</p> <p>1.9 Notify customer, as required, that equipment or cabling location may incur additional cost</p> <p>1.10 Prepare a report on required services</p>
2. Establish availability of and access to existing cabling	<p>2.1 Calculate capacity of existing cabling against proposed usage to ensure appropriate decisions are taken made about extent of new cabling required</p> <p>2.2 Inspect cabling to ensure compliance with ACMA regulations, relevant legislation, regulations, codes and standards</p>
3. Complete required reports and documentation	<p>3.1 Complete all required documents promptly and accurately according to enterprise policy</p> <p>3.2 Prepare a report on cabling infrastructure and equipment according to customer requirements</p> <p>3.3 Obtain customer confirmation of documented requirements as required</p> <p>3.4 Distribute relevant documentation promptly to required parties</p> <p>3.5 Obtain sign-off from customer</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance, but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none">Recognises and interprets technical documentation such as equipment manuals and specifications and other drawings to determine job requirements
Writing	<ul style="list-style-type: none">Uses clear, specific and industry-related terminology to produce and update workplace documentation

Skill	Description
Oral Communication	<ul style="list-style-type: none">• Uses listening and questioning skills to confirm understanding for requirements, participates in a verbal exchange of ideas and solutions, and uses appropriate, detailed and clear language to address key personnel and disseminate information
Numeracy	<ul style="list-style-type: none">• Uses mathematical formulae to measure equipment requirements and calculate equipment costs within budgetary constraints
Navigate the world of work	<ul style="list-style-type: none">• Takes personal responsibility for following explicit and implicit policies, procedures and legislative requirements
Interact with others	<ul style="list-style-type: none">• Actively identifies requirements of important communication exchanges, selecting appropriate channels, format, tone and content to suit purpose and audience
Get the work done	<ul style="list-style-type: none">• Determines job priorities, resources and equipment, and works logically and systematically to undertake clearly defined and familiar tasks• Implements actions according to a predetermined plan, making slight adjustments if necessary• Takes responsibility for routine decision-making by selecting from a range of predetermined options in routine situations, identifying and taking some situational factors into account• Initiates standard procedures when responding to familiar equipment and logistics problems within immediate context

Unit Mapping Information

ICTTEN432 Identify requirements for customer telecommunications equipment supersedes and is equivalent to ICTTEN401 Identify requirements for customer telecommunications equipment.

Assessment Requirements for ICTTEN432 Identify requirements for customer telecommunications equipment

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- negotiate with customers about their equipment needs, such as telephony, video, audio, and data
- agree on services required, and availability and access to existing cabling
- identify locations of equipment and placement of cables on support structures
- verify installation based on permitted building conditions
- complete required reports and documentation, including order forms, service checklists, numerical estimates of capacity of cabling and quotation forms
- ensure the integrity of plans.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- process of evaluating customer premises
- key features of floor and building plans that apply to customer telecommunications equipment
- costing processes as determined by enterprise procedures
- features and operating requirements for equipment
- legislation, codes and other formal agreements that impact the work activity
- typical manufacturer requirements for safe operation of equipment
- specific work health and safety (WHS) requirements relating to the activity and site conditions.

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- site/s on which telecommunications installations can be conducted
- tools, equipment and personal protective equipment currently used in industry
- relevant databases, licensing requirements and other site-related documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN433 Install configuration programs on PC based customer equipment

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Application

This unit describes the skills and knowledge required to install software on customer equipment, including digital home integration, security, voice over internet protocol (VoIP), internet protocol television (IPTV), radio frequency identification (RFID), wireless networking and home automation.

It applies to field officers, technicians or technical supervisors working for telecommunications carriers, contractors or other service providers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Telecommunications Network Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1 Prepare to install software	<ul style="list-style-type: none">1.1 Arrange site access according to required procedures1.2 Determine type of customer equipment from installation plan to prepare software requirements1.3 Prepare equipment software configuration specifications to include enhancement/s in customer requirements and confirm with customer1.4 Notify customer of proposed software installation

ELEMENT	PERFORMANCE CRITERIA
	1.5 Confirm software compatibility with existing system as required 1.6 Document job software specification 1.7 Obtain logon and security protocols for system
2 Install program and provide secure remote access	2.1 Log on and configure customer specific data according to system specifications 2.2 Install program, test features and system functionality to verify system operational performance according to work health and safety (WHS) regulations, manufacturer specifications and industry standards 2.3 Develop and configure security arrangements and codes for remote access systems in consultation with customer 2.4 Conduct tests to validate security arrangements
3 Undertake administrative tasks	3.1 Save and record configuration program and provide program back-up for contingency use by customer 3.2 Complete administrative tasks and provide a copy of job specification to be securely stored on site according to enterprise policy 3.3 Notify customer of job completion and obtain sign-off

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance, but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none">Recognises and interprets technical and enterprise policy documentation to determine job requirements
Writing	<ul style="list-style-type: none">Uses clear, specific and industry-related terminology to produce and update workplace documentation
Oral Communication	<ul style="list-style-type: none">Participates in an oral exchange with customers and technical staff on technical and operational matters
Numeracy	<ul style="list-style-type: none">Uses mathematical formulae to make calculations and take readings for necessary configuration changes
Navigate the world of work	<ul style="list-style-type: none">Takes personal responsibility for following explicit and implicit policies, procedures and legislative requirements relevant to own work context

Skill	Description
Interact with others	<ul style="list-style-type: none">• Selects and uses appropriate conventions and protocols when communicating with customers in a range of work contexts
Get the work done	<ul style="list-style-type: none">• Understands key principles and concepts underpinning design and operation of digital systems and tools, and applies these when troubleshooting existing technology and when seeking to understand the potential of new technology• Determines job priorities, resources and equipment, and works logically and systematically to arrange site access and arrange equipment deliveries• Implements actions according to a predetermined plan, making adjustments if necessary• Takes responsibility for routine decision-making by selecting from a range of predetermined options in routine situations, identifying and taking some situational factors into account• When dealing with complex issues, uses intuition to identify problems, switching to analytical processes to modify activities depending on operational contingencies

Unit Mapping Information

ICTTEN432 Identify requirements for customer telecommunications equipment supersedes and is equivalent to ICTTEN401 Identify requirements for customer telecommunications equipment.

Assessment Requirements for ICTTEN433 Install configuration programs on PC based customer equipment

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- prepare software configuration
- load software into customer equipment
- install security programs agreed with customer
- test program and program features including:
 - system facilities
 - product features
 - required peripherals associated with the product
 - system functionality
- notify customer of progress and obtain sign-off.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- regulations, manufacturer specifications, industry standards and requirements, and enterprise procedures relevant to work activity, in particular:
 - work health and safety (WHS)
- channel allocations
- common operating systems and their impact on the configuration of, or version of, software to be installed
- internet protocol (IP) address

- logon procedures
- enterprise numbering formats
- product or service functions to ensure correct operation of completed installation.

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- site/s suitable for installation of system programs
- equipment currently used in industry
- relevant regulatory and enterprise documentation impacting testing and installation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN434 Install, configure and test internet protocol networks

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to identify required network elements according to specifications, install for interoperability within network, apply network topologies, protocols and security issues, and troubleshoot when required.

It applies to individuals who are involved in installation, maintenance and upgrade of Information and Communications Technology (ICT) networks in telecommunications or Information Technology Networking provisioning companies.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Telecommunications Networks Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to install IP network	1.1 Determine internet protocol performance requirements 1.2 Select components and network elements according to technical and organisational requirements 1.3 Obtain vendor specifications and availability of required components 1.4 Develop plans for installation of components according to organisational requirements 1.5 Obtain feedback and approval for plans from required personnel
2. Install and configure IP	2.1 Install and configure server hardware and software according

ELEMENT	PERFORMANCE CRITERIA
network	<p>to organisational and industry standards</p> <p>2.2 Install and configure computer, other hardware and software according to organisational and industry standards</p> <p>2.3 Install and configure security and integrity software required for network</p>
3. Test and reconfigure IP network	<p>3.1 Test installed software and hardware, utilising available technical tools, to ensure all components are functioning as expected</p> <p>3.2 Test the network to ensure it is functioning according to specifications</p> <p>3.3 Resolve problems identified in the modified network</p>
4. Finalise documentation and clean worksite	<p>4.1 Complete hardware and asset recording document according to organisational requirements</p> <p>4.2 Document installation, boot-configuration procedure according to organisational requirements</p> <p>4.3 Tabulate test results and finalise user reports</p> <p>4.4 Complete client report and notify of network status according to organisational policies and procedures</p> <p>4.5 Lodge all documentation and seek finalised sign off from required personnel</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none"> Recognises and anticipates an increasing range of familiar problems, their symptoms and causes, depending on differing operational contingencies, risk situations and environments
Numeracy	<ul style="list-style-type: none"> Makes calculations required to take test measurements, interpret results and evaluate performance and interoperability of network
Oral communication	<ul style="list-style-type: none"> Uses listening and questioning techniques to confirm requirements and articulate complex concepts and matters using relevant industry for intended audience
Reading	<ul style="list-style-type: none"> Recognises and interprets technical, legislative and operational documentation to determine job requirements
Writing	<ul style="list-style-type: none"> Prepares documentation detailing work performed according to organisational requirements

SKILL	DESCRIPTION
Teamwork	<ul style="list-style-type: none">Cooperates with others as part of familiar routine activities and contributes to specific activities requiring joint responsibility and accountability
Planning and organising	<ul style="list-style-type: none">Works logically and systematically to monitor, analyse and action job prioritiesImplements and adjusts actions according to a predetermined plan
Problem solving	<ul style="list-style-type: none">Makes decisions quickly and intuitively in familiar situations requiring immediate attention, drawing on past experience to identify key variables and determine required course of action
Self-management	<ul style="list-style-type: none">Takes personal responsibility for adherence to legal and regulatory responsibilities relevant to own work contextRecognises and follows explicit and implicit protocols and meets expectations associated with own role
Technology	<ul style="list-style-type: none">Demonstrates an understanding of key principles and concepts underpinning design and operation of digital systems and tools, and applies these as required

Unit Mapping Information

Supersedes and is not equivalent to ICTTEN416 Install, configure and test an internet protocol network.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTTEN434 Install, configure and test internet protocol networks

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- select network elements to plan, prepare and install at least one IP network installation
- configure and test network on at least one occasion
- document completed process.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of organisational procedures including:

- industry-accepted hardware and software products
- data and voice transmission technologies and protocols
- networking technologies
- router-based network architectures
- safe installation of networking products
- interoperability across networking layers.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- field measurement equipment currently used in industry
- network design documentation
- equipment specifications
- network components
- hardware and software

- a live network
- organisational guidelines
- networked (LAN) computers
- wide area network (WAN) service point of presence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN435 Solve electrical-based telecommunications circuitry and cabling problems

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Application

This unit describes the skills and knowledge required to solve electrical-based problems encountered in analog and digital signal equipment, signal cabling and wireless networking in the telecommunications sector.

It applies to technicians who undertake a range of functions requiring advanced techniques in testing, fault-finding and rectification for electrical circuitry common to telecommunications signal transmission and operation. These technicians may work in domestic, commercial or industrial situations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

ICTTEN208 Use electrical skills when working with telecommunications networks

Unit Sector

Telecommunications – Telecommunications Network Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to solve problems within given telecommunications	1.1 Determine need to test live or isolate circuitry 1.2 Use specifications or job documentation to verify circuit/signal

ELEMENT	PERFORMANCE CRITERIA
circuitry/cable	<p>parameters that are to be measured for a given problem</p> <p>1.3 Select appropriate test equipment and measure output voltage of digital device for <i>high</i> and <i>low</i> logic states</p> <p>1.4 Identify by calculation or given specifications and record expected values within given electrical circuit</p> <p>1.5 Determine appropriate fault-finding technique to be used for given problem</p> <p>1.6 Select appropriate test equipment and measure circuit according to methodologies already determined</p> <p>1.7 Select and source required hand tools/equipment for problem-solving telecommunications circuitry</p>
2. Test and record electrical operating parameters within given telecommunications circuitry/cable	<p>2.1 Apply work health and safety (WHS) procedures to given task</p> <p>2.2 Isolate circuitry from live source when risk process has indicated that action be taken</p> <p>2.3 Connect appropriate test devices within electrical circuit to obtain operational measurements as pre-determined</p> <p>2.4 Reduce circuit path following accepted fault-finding methodologies and test</p> <p>2.5 Record measured results obtained</p>
3. Analyse and report findings	<p>3.1 Analyse results obtained against specifications and parameters provided</p> <p>3.2 Determine appropriate circuits and actions to rectify circuitry necessary to resolve given problem</p> <p>3.3 Supply customer with report on fault/s and options to resolve issue/s</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance, but not explicit in the performance criteria.

Skill	Description
Reading	<ul style="list-style-type: none"> Reads and responds to complex workplace information contained in specification manuals and standards
Writing	<ul style="list-style-type: none"> Writes reports for customer on complex issues

Skill	Description
Oral Communication	<ul style="list-style-type: none"> • Uses oral communication skills to participate in workplace teams and to liaise with customers and stakeholders.
Numeracy	<ul style="list-style-type: none"> • Calculates with whole numbers, decimals and percentages for work • Uses common functions of a scientific calculator for work • Uses and calculate with complex measurements for work
Learning	<ul style="list-style-type: none"> • Uses strategies for work-related learning • Plans and manages complex workplace tasks
Get the work done	<ul style="list-style-type: none"> • Works logically and systematically to undertake clearly defined tasks • Analyses task requirements to decide on appropriate equipment and practices • Applies problem-solving processes to locate and resolve faults, and reviews impact of decisions • Determines WHS and risk mitigation required for given tasks

Unit Mapping Information

No equivalent unit. New unit.

Links

Companion Volume Implementation Guides are available from VETNet -

Assessment Requirements for ICTTEN435 Solve electrical-based telecommunications circuitry and cabling problems

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- apply work health and safety (WHS) procedures to problem-solving electrical circuitry and cables
- connect suitable test devices incorporating a multimeter and an oscilloscope to investigate operational parameters within AC and DC circuit/s
- perform measurements and calculations on both series and parallel circuits by comparing actual readings with calculated values
- calculate and verify through tests the voltage, current and resistance in both a series and parallel AC/DC given circuit
- apply fault-finding techniques to rectify at least three electrical issues in telecommunications AC/DC circuits
- use circuit characteristics including inductance, impedance and capacitance to improve electrical or signal performance for two basic electronic filter designs
- resolve three electrical issues in an AC/DC circuit.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- safe work practices in electrical work including relevant codes of practice
- localised electrical regulatory requirements including limitations of certain electrical work
- hazards and risks involved in using electrical instruments and the safety control measures within a telecommunications system
- principles of AC and DC electricity and how they impact telecommunications work including:

- AC and DC electrical International System of Units (SI units)
- symbols used to represent an electrical energy source, a load, a switch and a circuit protection device in a circuit diagram including:
 - series and parallel circuits for AC and DC circuits
 - Ohm's Law and other relevant calculations for AC and DC circuits
 - common circuit configurations
 - current and voltage phase relationships
- waveform characteristics caused by resistance, inductance and capacitance in AC and DC circuits
- common faults that cause an increase or decrease in resistance, voltage and current found in telecommunications circuits
- definitions of electrical terms: period, peak, peak-to-peak, instantaneous, average, root-mean-square value in relation to electrical waveforms
- AC electrical generation producing a sinusoidal waveform including:
 - differences between analog and digital signals and devices
 - sinusoidal, pulsed, and static value waveforms found in AC circuitry
 - characteristics of resonance in AC circuits
- transformer use in electrical circuits including:
 - basic construction, operating principles and use of transformers
 - step-up, step-down, turns ratios, voltage and current ratios
 - verification of operation of transformer circuit
- fault-finding techniques including:
 - half circuit split
 - quarter circuit split
 - towards or away from source
- selection and use of testing equipment in telecommunications circuitry including:
 - test devices used for signal measurement
 - test devices for voltage, current and resistance
- telecommunications signal conversion characteristics including:
 - analog and digital signals
 - signal transmissions
 - application of binary to decimal conversion and vice versa
 - 4-bit binary codes with their decimal equivalent to represent output voltages of a digital to analog converter
 - techniques to convert analog signals to digital and digital signals to analog
 - principles of analog and digital electronics limited to block diagrams common to analog and digital circuits
 - components, circuits and uses of common electronic signal filters in telecommunications (high-pass, low-pass and band-pass)
- transformer use in electrical circuits including:
 - construction and operating principles and uses

- step-up, step-down, turns ratios, voltage and current ratios
- verification of operation of transformer circuit
- typical telecommunications electronic devices, cable types and their applications
- common telecommunications cables, their characteristics of use and application
- features and applications of shielding within telecommunications cables, 'skin effect' in cables and transmission losses.

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- appropriate AC and DC testing equipment
- test devices that include a multimeter and an oscilloscope for waveform observation
- manufacturer documentation and equipment
- safety equipment
- codes of practice.

Assessment in a simulated environment will require extra low voltage to be used.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN519 Design network building projects

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge to scope requirements, assess land site suitability, arrange site acquisition and produce building design plans for telecommunications network building projects.

It applies to individuals working for private and public organisations who combine technical design and organisational skills to apply planning principles for provisioning of the various building projects and technologies within a telecommunications network to meet future customer demands.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications Networks Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Scope design options for network building projects	<p>1.1 Obtain project specifications from relevant personnel and determine the nature, purpose and type of network facilities in the project</p> <p>1.2 Analyse project brief and identify design options in compliance with legislation governing carriers in Australia</p> <p>1.3 Evaluate design requirements and determine optimal site selection to house facilities</p> <p>1.4 Arrange an environmental impact study (EIS) to be conducted on the selected site</p>

ELEMENT	PERFORMANCE CRITERIA
	1.5 Confirm that the EIS project requirements assess the suitability of the selected site
2. Evaluate and arrange land acquisition for network building projects	2.1 Evaluate EIS findings and determine the suitability of the selected site 2.2 Analyse EIS findings and determine potential for land acquisition and purchase in compliance with regulations and legislation 2.3 Prepare a report on the EIS 2.4 Consult relevant personnel to establish a base for negotiation
3. Analyse area and select design option for network building projects	3.1 Investigate physical attributes of the area, environmental impacts and collected data 3.2 Prepare field sketch according to enterprise requirements and develop solutions to obvious physical construction impediments 3.3 Produce design options that are viable for the enterprise and recommend a preferred option with justifications 3.4 Evaluate selection of preferred option and confirm that enterprise business strategy outcomes and policies are satisfied
4. Notify interested parties of network building projects	4.1 Assess availability of stakeholders for project implementation and confirm works are within enterprise schedules 4.2 Inform relevant personnel of the type, extent and duration of proposed works according to enterprise policy 4.3 Obtain required written permission from relevant personnel and forward to those who will carry out the job
5. Produce design plan and documentation for network building projects	5.1 Prepare design plan according to enterprise requirements and document required geographical and topological information 5.2 Indicate location and specification of works and network equipment in design plan 5.3 Specify resources needed to complete the project 5.4 Update enterprise information systems according to enterprise guidelines and industry practice 5.5 Produce a complete design report and present to relevant personnel for approval

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
-------	-------------

SKILL	DESCRIPTION
Oral communication	<ul style="list-style-type: none">• Articulates requirements to internal and external personnel on technical and operational matters using language suitable to audience and environment• Employs listening and questioning techniques to confirm understanding
Reading	<ul style="list-style-type: none">• Identifies, analyses and evaluates complex text to determine legislative and business requirements to assist with project planning
Writing	<ul style="list-style-type: none">• Prepares written reports and workplace documentation that communicate complex information clearly and effectively
Planning and organising	<ul style="list-style-type: none">• Applies formal processes when planning tasks and producing plans with logically sequenced steps, reflecting the needs of others• Implements actions according to a predetermined plan, making adjustments, if necessary• Makes decisions quickly in familiar situations requiring immediate attention, drawing on past experience to identify key variables and determine the best course of action
Problem solving	<ul style="list-style-type: none">• Uses analytical processes to decide on a course of action, establishing criteria for deciding between options and seeking input and advice from others before taking action when necessary
Self-management	<ul style="list-style-type: none">• Keeps up to date with legislation and regulations affecting work and considers implications of these when negotiating and planning work
Technology	<ul style="list-style-type: none">• Understands key principles and concepts underpinning design and operation of digital systems and tools, and applies these as required

Unit Mapping Information

Supersedes and is equivalent to ICTTEN502 Design a telecommunications project.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTTEN519 Design network building projects

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design at least two network building projects.

In the course of the above, the candidate must:

- scope and produce design options
- recommend land acquisition options
- prepare at least two justification reports, including evaluation of environmental impact study (EIS) findings
- prepare completed building design plans.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, codes, enterprise policy and requirements, company work practices, regulations and standards, workplace health and safety (WHS) requirements for scoped work
- characteristics of project briefs and design options
- design requirements
- features and information presented in:
 - EIS
 - justification reports
 - field sketches
 - design plans and principles
- physical construction impediments
- access networks

- functions and features of:
 - core networks
 - computer aided design (CAD) software packages used in network designs
 - network performance and capacity
 - site surveys
- Environmental Protection Act (EPA) and its impact on designing network projects
- implications of heritage listings on sites
- networks planning and procedures.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- sites on which projects may be designed
- CAD drawing facilities
- required databases, legislative requirements and other site and project required documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN520 Commission network equipment

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to commission network equipment by creating check plans, obtain and properly handling equipment and supplies, conduct tests, and complete administrative tasks.

It applies to individuals working as field officers, technicians and technical supervisors for carriers, contractors and other telecommunications network service providers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications Networks Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to commission network equipment	<ul style="list-style-type: none">1.1 Obtain network specifications from relevant personnel and arrange for site access in compliance with required security arrangements, legislation, codes, regulations and standards1.2 Identify existing site hazards and organise required resources1.3 Determine the type and complexity of required network equipment1.4 Establish equipment commissioning dates, change management processes and policies, and confirm with all relevant personnel and stakeholders1.5 Determine commissioning parameters according to specification, and establish planned outages

ELEMENT	PERFORMANCE CRITERIA
	1.6 Obtain test equipment and check for suitability and accuracy 1.7 Produce a preliminary commissioning plan according to manufacturer instructions and company guidelines 1.8 Inform affected customers of impending actions, likely timing and impact of the work
2. Organise required planned outages	2.1 Negotiate outage times with relevant personnel and affected customers and minimise disruptions 2.2 Develop required contingency plans and arrange for emergency communications 2.3 Notify relevant personnel of planned action 2.4 Obtain authority to proceed from relevant personnel and notify customers affected by the outage according to organisational procedures
3. Complete installation procedures of network equipment	3.1 Install applications programmes and management data according to specifications and complete installation procedures 3.2 Complete all hardware connections according to commissioning instructions 3.3 Conduct all specified performance tests and confirm operation meets all prescribed parameters and specifications detailed in the original network specifications 3.4 Verify and test compatibility between hardware and software 3.5 Correct performance defects and notify relevant personnel of corrective action
4. Complete commissioning procedures	4.1 Test system monitoring alerts and alarms in conjunction with network management and operational groups 4.2 Test installed specific equipment features and operations administration maintenance system according to instructions 4.3 Diagnose, repair and escalate faults detected to the required area when fault cannot be clearly diagnosed or repaired 4.4 Initiate vendor-required tests, where required
5. Finish commissioning network equipment	5.1 Complete administrative tasks as required by enterprise 5.2 Conduct operational staff training where required 5.3 Restore site to customers satisfaction 5.4 Notify customer and obtain required sign-off

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none">• Uses mathematical formulae to make calculations and interpret test equipment settings and readings
Oral communication	<ul style="list-style-type: none">• Liaises with required technical personnel and customers to confirm requirements are properly understood• Employs listening and questioning techniques to confirm understanding
Reading	<ul style="list-style-type: none">• Identifies, analyses and evaluates information to determine regulatory and technical requirements to assist with project planning
Writing	<ul style="list-style-type: none">• Prepares written reports and workplace documentation that communicates complex information clearly and effectively
Teamwork	<ul style="list-style-type: none">• Selects and uses communication conventions and protocols to suit purpose and audience
Planning and organising	<ul style="list-style-type: none">• Uses a combination of formal, logical planning processes to identify required information, test strategies and resources• Makes decisions in familiar situations requiring immediate attention, drawing on past experience to identify key variables and determine the best course of action
Technology	<ul style="list-style-type: none">• Understands key principles and concepts underpinning design and operation of digital systems and tools and applies these as required

Unit Mapping Information

Supersedes and is equivalent to ICTTEN505 Commission telecommunications network equipment.

Assessment Requirements for ICTTEN520 Commission network equipment

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- commission at least three different types of network equipment.

In the course of the above, the candidate must:

- interact with enterprise personnel, customers and other contractors, keeping a customer focus and consideration of customer needs
- produce at least one outage management plan and at least one contingency plan
- negotiate network activity and timing of commissioning
- commission networking equipment according to specifications
- implement test plan, interpret and analyse results against expected outcomes
- test system monitoring alerts and alarms
- analyse faults, problems and anomalies and provide solutions
- comply with all required workplace health and safety (WHS) requirements and work practices.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, codes, company work practices, regulations and standards, WHS requirements for scoped work
- functions and features of:
 - preliminary commissioning plans
 - outage management plans
 - contingency plans
- electrical and optical properties

- operating functions and features of networking equipment
- functions and features of power requirements and electrical safety
- transmission types and signals that are encountered in networks
- tests and test equipment required for commissioning.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- sites on which installation and commissioning procedures can be conducted
- required regulatory and equipment documentation impacting commissioning
- testing equipment currently used in industry.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN521 Integrate network systems and equipment

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to integrate network systems and equipment by following predetermined procedures to confirm operability of the system while minimising impact on affected customers.

It applies to individuals working as field officers, technicians and technical supervisors, for network carriers, contractors and other service providers, who install new, additional and replacement equipment in networks. This includes providing support and administrative infrastructures for integration of new and emerging internet protocol (IP) based technologies.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications Networks Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan to integrate network systems and equipment	<ul style="list-style-type: none">1.1 Obtain work details and scope from relevant personnel and arrange for site access in compliance with required security arrangements, legislation, codes, regulations and standards1.2 Prepare an integration management plan in agreement with relevant personnel1.3 Obtain available change management plan and prepare a contingency plan according to organisational requirements1.4 Identify systems, traffic and customers to be affected by integrating planned systems and equipment

ELEMENT	PERFORMANCE CRITERIA
	1.5 Notify relevant personnel of planned actions and obtain authority to proceed
2. Test and integrate network system and equipment	<ul style="list-style-type: none">2.1 Conduct activities over the set of integration phases documented in the integration management plan2.2 Load operational software according to specification and confirm interoperability of new and existing system2.3 Stimulate network traffic and confirm that test results are recorded and stored according to enterprise requirements2.4 Analyse test results and confirm that established parameters have all been met2.5 Evaluate problems during the testing phase and rectify and escalate required procedures2.6 Analyse system monitoring alerts and alarms for fault conditions in conjunction with relevant personnel2.7 Locate and detect faults within capability and escalate according to enterprise policy2.8 Check that operations administrative maintenance systems and system monitoring alerts and alarms are connected according to the required instruction manual2.9 Activate new system monitoring alerts and alarms and deactivate old system monitoring alerts and alarms
3. Complete administrative tasks	<ul style="list-style-type: none">3.1 Complete integration records according to manufacturer specification and enterprise policy and make recommendations for future network improvement3.2 Notify relevant personnel of project completion and obtain sign-off

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none">• Uses mathematical formulae to calculate measurements, analyse results and make adjustments to equipment and settings
Oral communication	<ul style="list-style-type: none">• Participates in verbal exchanges with personnel and customers to confirm requirements are properly understood• Employs listening and questioning techniques to confirm understanding

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none">Identifies, analyses and evaluates information to determine regulatory and technical requirements to assist with project planning
Writing	<ul style="list-style-type: none">Identifies, analyses and evaluates information to determine regulatory and technical requirements to assist with project planning
Teamwork	<ul style="list-style-type: none">Selects and uses communication conventions and protocols to suit purpose and audience
Planning and organising	<ul style="list-style-type: none">Uses formal and logical planning processes to identify logistical requirements, test strategies and resources
Problem solving	<ul style="list-style-type: none">Makes decisions quickly in familiar situations requiring immediate attention, drawing on past experience to identify key variables and determine the best course of actionUses analytical processes to decide on a course of action, establishing criteria for deciding between options, and seeking input and advice from others before taking action when necessary
Self-management	<ul style="list-style-type: none">Keeps up to date with required legislation and considers implications of this when planning work, with specific reference to safetyAdheres to organisational procedures and protocols in completing work tasks
Technology	<ul style="list-style-type: none">Understands key principles and concepts underpinning design and operation of digital systems and tools, and applies these as required

Unit Mapping Information

Supersedes and is equivalent to ICTTEN506 Integrate new systems and equipment into the telecommunications network.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTTEN521 Integrate network systems and equipment

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- integrate at least two network systems and at least two types of equipment into the network system.

In the course of the above, the candidate must:

- prepare and implement at least one integration management plan
- develop at least one contingency plan
- test network systems, equipment and associated features being integrated
- apply enterprise escalation and outage procedures
- negotiate procedures and activity on the network and timing of integration
- comply with required organisational and enterprise requirements.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, codes, company work practices and procedures, regulations and standards, workplace health and safety (WHS) requirements for scoped work
- functions and features of:
 - integration management plans
 - change management plans
 - contingency plans
 - network traffic
 - system monitoring alerts and alarms
- connections to carrier infrastructure or customer interface units (CIU)
- electrical and optical properties to be measured

- health and safety issues, including electrical, optical and electromagnetic radiation (EMR) when working with networks
- network equipment and emerging technology networks
- suitable tests and test equipment types
- typical performance parameters and faults that are encountered with using scoped network equipment and connection and transmission media.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- sites on which integration procedures can be conducted
- relevant regulatory and equipment documentation that impacts integration
- testing equipment currently used in industry
- capacity to simulate network traffic
- a network and equipment for integration
- equipment and systems manuals, specifications and enterprise policies.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN522 Cut over new and replacement network equipment

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to cut over new and replacement network equipment by checking plans, obtaining equipment and supplies, initiating tests and completing administrative tasks.

It applies to individuals who may be field officers, technicians and technical supervisors for carriers, contractors or other service providers, who are involved in fast changeover of new and existing equipment in networks, including digital switching and transmission, wireless and optical networks.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications Networks Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan cut over strategy	<ul style="list-style-type: none">1.1 Obtain work details and scope from relevant personnel and arrange for site access in compliance with required security arrangements, legislation, codes, regulations and standards1.2 Prepare a cut over management plan in agreement with relevant personnel, regulations and service obligations1.3 Obtain available incident management plan, otherwise prepare a contingency plan according to organisational requirements1.4 Notify relevant personnel of action planned and obtain authority to proceed

ELEMENT	PERFORMANCE CRITERIA
2. Cut over and test required network equipment	2.1 Perform cut over activities and tests according to the incident plan, technical manuals and specifications 2.2 Record and assess test results and confirm problems identified during cut over are rectified and escalated according to enterprise procedures 2.3 Analyse system monitoring alerts and alarms for fault conditions 2.4 Enact contingency plans in the event of major problems during cut over
3. Complete administrative tasks	3.1 Complete test result sheets and hand over to relevant personnel 3.2 Confirm functionality and that customer issues resulting from an incident have been resolved 3.3 Confirm site is cleaned and ready for operational staff 3.4 Complete work documentation and administrative tasks and forward to required area according to enterprise policy 3.5 Notify relevant personnel of project completion and obtain sign-off

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Uses mathematical formulae to calculate measurements, analyse results and make adjustments to equipment and settings
Oral communication	<ul style="list-style-type: none"> Participates in verbal exchanges with personnel and customers to confirm requirements are properly understood Employs listening and questioning techniques to confirm understanding
Reading	<ul style="list-style-type: none"> Identifies, analyses and evaluates equipment specifications, equipment readings and settings
Writing	<ul style="list-style-type: none"> Prepares written reports and workplace documentation that communicates complex information clearly and effectively
Teamwork	<ul style="list-style-type: none"> Considers purpose and possible actions to take as a result of any work-required communication Selects required communication protocols and conventions in a broad range of work contexts, with a growing awareness of subtle impacts of choices made
Planning and organising	<ul style="list-style-type: none"> Uses a combination of formal, logical planning processes to

SKILL	DESCRIPTION
	identify required information, test strategies and resources
Problem solving	<ul style="list-style-type: none">• Makes decisions quickly in familiar situations requiring immediate attention, drawing on past experience to identify key variables and determine the best course of action• Uses analytical processes to decide on a course of action, establishing criteria for deciding between options and seeking input and advice from others before taking action when necessary
Self-management	<ul style="list-style-type: none">• Works independently and collectively within broad parameters, with a strong sense of responsibility and ownership of goals, plans, decisions and outcomes, with specific reference to safe working practices and requirements
Technology	<ul style="list-style-type: none">• Understands key principles and concepts underpinning design and operation of digital systems and tools, and applies these as required

Unit Mapping Information

Supersedes and is equivalent to ICTTEN507 Cut over new and replacement network equipment.

Assessment Requirements for ICTTEN522 Cut over new and replacement network equipment

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop and implement at least two cut-over plans and at least two outage plans.

In the course of the above, the candidate must:

- develop at least two contingency plans
- apply enterprise escalation and outage procedures
- cut over and test network equipment within an industry acceptable time period.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, codes, company work practices, regulations and standards, workplace health and safety (WHS) requirements for scoped work
- functions and features of:
 - cut over management plans
 - outage plans
 - incident management plans
 - contingency plans
- electrical and optical properties to be measured
- power electrical safety requirements
- types of test equipment and testing procedures suitable for planned network cut over and replacement
- transmission hierarchy and switching principles
- transmission type and signals.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a network and equipment for cut over
- equipment currently used in industry
- systems manuals, specifications and enterprise policy.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN523 Locate, diagnose and rectify complex system equipment faults

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to identify faults in upstream or downstream services that may require involvement of third-party providers.

It applies to individuals working as network engineering officers, installers, maintenance staff, and manufacturer and equipment specialists. They work closely with others and rectify technical faults.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications Networks Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to locate and rectify complex faults	<ul style="list-style-type: none">1.1 Notify client to arrange site access according to organisational procedures1.2 Obtain and interpret results of action taken by previous fault repairers1.3 Obtain fault history from relevant personnel and establish fault patterns according to data and organisational procedures and requirements1.4 Discuss and develop strategies for fault identification and repair with relevant personnel1.5 Obtain tools and test identified faulty equipment according to

ELEMENT	PERFORMANCE CRITERIA
	<p>organisational procedures and manufacturer specifications</p> <p>1.6 Set up equipment according to manufacturer specifications and safe work practices, and reconfigure as required</p>
2. Locate and diagnose faults	<p>2.1 Isolate and test fault and remove likely variables from assessment, following organisational policies and procedures</p> <p>2.2 Escalate equipment fault identification and seek diagnosis advice from relevant personnel</p> <p>2.3 Diagnose fault according to organisational procedures</p> <p>2.4 Provide progress reports to relevant personnel</p> <p>2.5 Seek guidance from national support in fault diagnosis as required, and with third-party vendors for unknown faults</p> <p>2.6 Negotiate required system downtime with relevant personnel</p>
3. Rectify faults	<p>3.1 Identify fault rectification options and present to client</p> <p>3.2 Rectify fault according to findings</p> <p>3.3 Replace, reprogram and repair faulty equipment according to service agreement and guidance</p> <p>3.4 Dismantle and remove temporary service according to organisational requirements</p> <p>3.5 Perform routine checks and identify faults</p> <p>3.6 Notify client of additional faults and replace, reprogram and repair faults within the scope of agreement</p>
4. Clean up worksite and complete documentation	<p>4.1 Record and document fault location and equipment faults</p> <p>4.2 Remove and dispose of waste and debris from worksite according to environmental requirements</p> <p>4.3 Restore worksite to client's satisfaction and receive client signoff</p> <p>4.4 Complete and submit required documentation and explain rectification actions to relevant personnel</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Uses mathematical formulae to interpret technical data, such as specifications of equipment operations
Oral communication	<ul style="list-style-type: none"> Liaises and negotiates with clients, repairers and technical staff using required strategies to extract main ideas and information

SKILL	DESCRIPTION
	<ul style="list-style-type: none">from oral texts regarding technical and operation matters• Employs listening and questioning techniques to confirm understanding
Reading	<ul style="list-style-type: none">• Identifies, analyses and evaluates technical documentation including codes, standards and regulatory information
Writing	<ul style="list-style-type: none">• Prepares written reports and workplace documentation, incorporating technical language to communicate complex information
Teamwork	<ul style="list-style-type: none">• Selects protocols and conventions for communicating with technical personnel and customers in a broad range of work contexts• Collaborates with others to negotiate agreeable outcomes
Planning and organising	<ul style="list-style-type: none">• Uses a combination of formal, logical planning processes to identify and rectify technical faults
Problem solving	<ul style="list-style-type: none">• Uses analytical processes to decide on a course of action, establishing criteria for deciding between options, and seeking input and advice from others before taking action when necessary
Self-management	<ul style="list-style-type: none">• Takes personal responsibility for adherence to legal and regulatory responsibilities and organisational policies and protocols required to own work
Technology	<ul style="list-style-type: none">• Identifies key principles and concepts underpinning design and operation of digital systems and tools, and applies these as required

Unit Mapping Information

Supersedes and is equivalent to ICTTEN508 Locate, diagnose and rectify complex faults.

Assessment Requirements for ICTTEN523 Locate, diagnose and rectify complex system equipment faults

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- locate, diagnose and rectify equipment faults in at least four different situations.

In the course of the above, the candidate must:

- conduct advanced tests
- isolate and locate faults
- follow applicable organisational procedures and workplace health and safety (WHS) requirements and work practices.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, codes, company work practices, regulations and standards, WHS requirements for scoped work
- organisational procedures regarding:
 - contacting clients and other external parties
 - fault history and patterns
 - fault identification and completion approaches
 - fault escalation procedures and requirements
 - safety requirements and standards
 - timeframe requirements
 - environmental requirements
- fault-location techniques and test equipment required
- fault types and rectification methods
- function of service agreements

- types of networks and equipment including:
 - access
 - broadband deployment
 - cabling
 - internet protocol (IP) networks for enterprise and customer systems and installations
 - local area networks (LANs)
 - telephony
 - wide area networks (WANs)
- types of workplace environment and practices.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- sites on which faults are required to be diagnosed
- testing equipment and systems currently used in industry
- required regulatory and equipment documentation impacting complex fault repairs.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN524 Diagnose and organise repair of complex equipment faults

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to methodically diagnose complex faults and organise repair and replacement of defective parts.

It applies to individuals who work as network engineers, installers, maintenance staff, and manufacturers or equipment specialists employed in an advisory and technical rectification role for commercial and residential installations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications Networks Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Research fault background	1.1 Communicate with client and identify type of fault and occurrence according to organisational procedures and requirements 1.2 Obtain report of actions taken by previous fault repairers and result 1.3 Analyse fault history and establish fault patterns according to organisational procedures and requirements 1.4 Develop strategies for identification and repair using advice from engineering and technical personnel 1.5 Refer to required legislation, codes, regulations and standards

ELEMENT	PERFORMANCE CRITERIA
	relating to repair, if required 1.6 Obtain clearance and access to faulty equipment according to organisational procedures and requirements
2. Conduct complex fault diagnostic	2.1 Develop an approach to isolate and diagnose the fault within required timeframes 2.2 Establish ways to escalate fault diagnosis according to organisational procedures and requirements 2.3 Seek back-up support from the product manufacturer as required
3. Organise complex fault rectification	3.1 Determine options to rectify fault, including downtime, and present to customer for decision 3.2 Organise replacement and repair of defective equipment according to service agreement, organisational procedures and manufacturer specifications 3.3 Establish plan to reconfigure replaced and repaired equipment 3.4 Determine plan to dismantle and remove fault-repairing service within the required timeframes and according to organisational procedures 3.5 Provide on-site repair staff with instructions on fault rectification
4. Document complex fault details	4.1 Record details of fault and actions planned to identify and repair complex fault 4.2 Notify vendors and clients of repair details according to manufacturer specifications and organisational procedures 4.3 Recommend changes to faulty equipment where required 4.4 Advise client and document completion of complex fault repair according to organisational requirements 4.5 Create a knowledge management document that identifies fault and rectification steps for future occurrences

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Uses mathematical formulae to interpret technical data and measurements relating to equipment operations
Oral communication	<ul style="list-style-type: none"> Participates in exchanges with internal and external personnel using required strategies to extract main ideas and information from oral texts

SKILL	DESCRIPTION
	<ul style="list-style-type: none">• Employs listening and questioning techniques to confirm understanding
Reading	<ul style="list-style-type: none">• Identifies, analyses and evaluates technical documentation including plans, codes, standards and regulatory information
Writing	<ul style="list-style-type: none">• Prepares written reports and workplace documentation incorporating technical language to communicate complex information clearly and effectively
Teamwork	<ul style="list-style-type: none">• Collaborates with others to achieve joint outcomes, playing an active role in negotiating positive outcomes• Selects and uses required conventions and protocols when communicating with customers and personnel in a range of work contexts
Planning and organising	<ul style="list-style-type: none">• Uses a combination of formal, logical planning processes and an understanding of context to identify and rectify technical faults• Implements actions according to a predetermined plan, making adjustments as required
Problem solving	<ul style="list-style-type: none">• Makes decisions within required timeframes in familiar situations requiring immediate attention, drawing on past experience to identify key variables and determine the best course of action• Uses analytical processes to decide on a course of action, establishing criteria for deciding between options, and seeking input and advice from others when necessary
Self-management	<ul style="list-style-type: none">• Takes personal responsibility for adherence to legal and regulatory responsibilities and organisational policies and procedures required to own work
Technology	<ul style="list-style-type: none">• Identifies key principles and concepts underpinning design and operation of digital systems and tools, and applies these as required

Unit Mapping Information

Supersedes and is not equivalent to ICTTEN509 Provide expert advice and support on complex faults.

Assessment Requirements for ICTTEN524 Diagnose and organise repair of complex equipment faults

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- diagnose and organise at least four repairs of complex equipment faults.

In the course of the above, the candidate must:

- identify and rank likely causes of faults
- organise analysis and interpretation of test results
- apply enterprise escalation and outage procedures
- prioritise fault rectification and report progress
- prepare documentation of fault, including details regarding:
 - nature
 - location
 - likely causes
 - repair methodology
 - recommendations relating to system redesign and specification.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, codes, company work practices, regulations and standards, workplace health and safety (WHS) requirements for scoped work
- organisational procedures regarding:
 - contacting clients and other external parties
 - fault history and patterns
 - fault identification and completion approaches
 - fault escalation procedures and requirements

- documentation of complex faults
- features and operating requirements of test equipment
- test specifications and remote diagnostic procedures
- legislation, codes of practice and other formal agreements relating to repair
- manufacturer requirements for operation of equipment
- test methods and equipment performance requirements
- functions and features of common complex equipment faults in advisory, technical rectification roles, commercial and residential installations.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- sites on which fault diagnostics are required to be conducted
- testing equipment used in industry
- required regulatory and equipment documentation impacting complex fault repairs.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN525 Install, configure and test local area network switches

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to conduct local area network (LAN) switch installation, configuration and testing in field work. It also applies to switching protocols and diagnostics required for integrating new and converging functionalities to the network.

It applies to individuals, employed by network companies and information communications technology (ICT) networking provisioning companies, who carry out installation, maintenance and upgrade of ICT networks.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications Networks Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to install LAN switches	1.1 Obtain work details, change management procedures and scope from relevant personnel and arrange for site access in compliance with required security arrangements, legislation, codes, regulations and standards 1.2 Document LAN topology according to organisational requirements 1.3 Obtain current and future network capacity predictions from relevant personnel

ELEMENT	PERFORMANCE CRITERIA
	<ul style="list-style-type: none">1.4 Specify the number and type of switch required, with reference to future network requirements1.5 Specify requirements for network management and security according to organisational requirements1.6 Select the switch and switch operating system software version with required features according to required specifications
2. Install and configure LAN switches	<ul style="list-style-type: none">2.1 Assemble, rack mount and connect switch and peripherals according to manufacturer requirements2.2 Connect user to access points using cable that meets required standard2.3 Establish a valid network connection with other network devices2.4 Configure the network internet protocol (IP) address for the switch2.5 Install and configure simple network management protocol (SNMP) agent software according to network requirements2.6 Collect network traffic data for the management information base (MIB) according to network requirements2.7 Install and configure SNMP management console software on a computer designated to be the network manager's main console2.8 Manually configure user access ports of the switch for speed and full or half-duplex operation
3. Test and reconfigure LAN switches	<ul style="list-style-type: none">3.1 Test the switch and other network devices according to manufacturer requirements and organisational guidelines3.2 Test to confirm connectivity across the network3.3 Modify the network to verify SNMP management software3.4 Make adjustments to the network, depending on test and troubleshooting results
4. Complete documentation and clean worksite	<ul style="list-style-type: none">4.1 Tabulate test results and complete all user reports4.2 Complete report and notify client of network status4.3 Clean up and restore worksite to client requirements4.4 Secure sign-off from relevant personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
-------	-------------

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none">• Uses mathematical formulas and calculations to take test measurements, interpret results and evaluate performance and interoperability of network
Oral communication	<ul style="list-style-type: none">• Uses active listening, observational and questioning techniques to identify different perspectives and confirm, clarify or revise understanding
Reading	<ul style="list-style-type: none">• Organises, evaluates and critiques information from a range of policy, technical and instructional material
Writing	<ul style="list-style-type: none">• Prepares workplace documentation, incorporating technical language to communicate complex information clearly and effectively
Teamwork	<ul style="list-style-type: none">• Selects and uses required conventions and protocols when communicating with customers
Planning and organising	<ul style="list-style-type: none">• Uses a combination of formal, logical planning processes high-impact activities with strategic implications
Problem solving	<ul style="list-style-type: none">• Uses analytical and lateral thinking techniques for identifying issues, generating and evaluating possible solutions
Self-management	<ul style="list-style-type: none">• Takes personal responsibility for adherence to legal and regulatory responsibilities required to own work
Technology	<ul style="list-style-type: none">• Selects and uses digital technologies and systems to achieve work goals and enhance work processes

Unit Mapping Information

Supersedes and is equivalent to ICTTEN513 Install, configure and test a local area network switch.

Assessment Requirements for ICTTEN525 Install, configure and test local area network switches

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- plan and prepare for at least two local area network (LAN) switch installations.

In the course of the above, the candidate must:

- select LAN switches to meet client business specifications
- install switches without the network losing connectivity or failing outside of an agreed change window
- install and test switch that confirms interoperability within the network
- use switch configurations
- report on status of completed installation
- seek sign-off from relevant personnel.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, codes, company work practices, regulations and standards, workplace health and safety (WHS) requirements for scoped work
- advantages and disadvantages of LAN switches over hubs
- impact of required sections of the Australian Computer Society Code of Ethics on network switches
- network cable types and connectors
- LAN topologies
- differences between standard and intelligent switches, and between switches and hubs
- importance of client documentation prepared when installing networks
- providing the network with redundant paths for reliability and how routers and switches manage these paths.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site where switch installation can be conducted
- field measurement equipment currently used in industry
- required switch specifications, technical requirements for a network, switch, cabling, networked (LAN) computers, workstations, servers and a wide area network (WAN) service point of presence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN526 Dimension and design a radio frequency identification system

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to carry out installation, maintenance and upgrade of information and communication technology (ICT) networks.

It applies to individuals employed by ICT networking provisioning companies specialising in radio frequency identification (RFID) technology. These individuals might work on upgrades to existing systems or be involved in implementation of new logistical or security networks using RFID technology according to design specifications.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications Networks Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to dimension and design an RFID system	<ul style="list-style-type: none">1.1 Obtain project brief and scope from relevant personnel and arrange for site access in compliance with required security arrangements, legislation, codes, regulations and standards1.2 Research the functionality, configuration and implementation methods of RFID technology1.3 Select required software and hardware to confirm the proposed system is designed to meet business requirements1.4 Conduct a survey of relevant interrogators, readers, tags and wireless units

ELEMENT	PERFORMANCE CRITERIA
2. Dimension and design RFID system	<ul style="list-style-type: none">2.1 Select relevant interrogators and readers for the given specification and confirm their compatibility with network infrastructure2.2 Minimise interrogator-to-interrogator interference according to client requirements2.3 Verify that antenna geometry and footprint are consistent with the chosen design2.4 Incorporate use of anti-collision protocols into the RFID design2.5 Customise required tag to client requirements2.6 Predict performance for read distance, write distance and tag response time according to client requirements2.7 Select location for RFID tag to be placed on an item and prepare a design proposal for the RFID system including specifications2.8 Prepare a report containing design solutions, justified recommendations of preferred products and submit for client approval
3. Document specified RFID system	<ul style="list-style-type: none">3.1 Complete documentation according to client requirements3.2 Inform client of standards applying to the design3.3 Secure sign-off of RFID design from relevant personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none">• Uses mathematical formulae and geometric calculations to interpret and record technical specifications and evaluate possible design solutions
Oral communication	<ul style="list-style-type: none">• Uses active listening, observational and questioning techniques to identify different perspectives and confirm, clarify or revise understanding
Reading	<ul style="list-style-type: none">• Organises, evaluates and critiques technical documentation from a range of complex texts
Writing	<ul style="list-style-type: none">• Prepares workplace documentation including reports and design solutions incorporating technical language to communicate complex information clearly and effectively
Planning and organising	<ul style="list-style-type: none">• Uses a combination of formal, logical planning processes to identify required information, test strategies and resources

SKILL	DESCRIPTION
Problem solving	<ul style="list-style-type: none">• Uses formal analytical and lateral thinking techniques for identifying issues, generating and evaluating possible solutions
Self-management	<ul style="list-style-type: none">• Selects required communication protocols and conventions in a broad range of work contexts
Technology	<ul style="list-style-type: none">• Selects and uses digital technologies and systems to achieve work goals and enhance work processes

Unit Mapping Information

Supersedes and is equivalent to ICTTEN515 Dimension and design a radio frequency identification system.

Assessment Requirements for ICTTEN526 Dimension and design a radio frequency identification system

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- dimension and design at least two radio frequency identification (RFID) systems.

In the course of the above, the candidate must:

- adapt RFID technologies to specified plans and designs
- evaluate RFID client specifications against accepted industry practices
- include RFID architecture across secure environments
- integrate RFID information into business applications
- produce design information in configuring the network with internet protocol (IP)
- offer design recommendations and solutions.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, codes, company work practices, regulations and standards, workplace health and safety (WHS) requirements for scoped work
- functions and features of:
 - RFID technology, products and architecture
 - interrogators
 - readers
 - tags
 - wireless units
 - network topologies
 - radio frequency (RF) interference
- methods for conducting surveys of required RFID technologies

- sources of RFID interference
- business process design
- relevant features of business operations, business function and organisation of the client
- compatibility issues with existing system and resolution procedures
- configuration of IP networks
- desktop applications and operating systems
- linkage between operational processes
- network protocols and operating systems
- radio spectrum and RFID frequencies
- RFID hardware and software
- RFID technologies incorporating substantial depth in network operating systems, protocols, interrogators and sensors, wireless technologies and cabling standards
- security protocols, standards and data encryption requirements
- documentation and report requirements according to organisational procedures.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a suitable network site
- client's functional requirements
- RFID equipment specifications
- database software
- simulation software
- organisational guidelines
- network or computer layout documentation and premises plans.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN527 Plan wireless mesh networks

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to design a scalable wireless access network using mesh technology for growing communities to provide users with secure wireless roaming beyond traditional wireless local area network (LAN) boundaries, and which are readily deployed in areas that lack wired backhaul.

It applies to individuals who have proficient technical skills such as planning and field officers from private and public organisations who conduct work on wireless networking or radio communications equipment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications Networks Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Research requirements of wireless mesh network (WMN)	<p>1.1 Obtain WMN design specifications and scope from relevant personnel and arrange for site access in compliance with required security arrangements, legislation, codes, regulations and standards</p> <p>1.2 Evaluate the use of frequency bands when operating the WMN</p> <p>1.3 Evaluate and select wireless technology, internet protocol (IP) version and mesh routing protocol in line with design specifications and scope</p> <p>1.4 Specify and source hardware and software requirements</p>

ELEMENT	PERFORMANCE CRITERIA
2. Prepare detailed WMN designs	<ul style="list-style-type: none">2.1 Determine and evaluate the maximum line of sight distances achievable between backbone nodes and mesh nodes2.2 Plan sites where mesh nodes will be located and plot to scale on a map2.3 Estimate quantity and length of links required between mesh nodes and confirm design is within specifications2.4 Design backbone links in mesh topology and determine scalability of future deployments2.5 Select location of the internet gateway for the WMN2.6 Allocate operating frequencies at mesh nodes, backbone nodes and wireless access points for optimum network performance with minimal interference from adjacent network routers
3. Plan IP addresses and subnet masks	<ul style="list-style-type: none">3.1 Produce an addressing scheme and allocate IP addresses and subnet mask to mesh nodes, backbone nodes and access points3.2 Produce a configuration scheme to secure network
4. Document WMN plan	<ul style="list-style-type: none">4.1 Document design, installation plan and drawings for the WMN4.2 Following installation, configuration and testing of the WMN, incorporate required 'as built' amendments

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none">• Performs calculations, interprets results and evaluates different types of technical data for design solutions
Oral communication	<ul style="list-style-type: none">• Uses active listening, observational and questioning techniques to identify different perspectives and confirm, clarify or revise understanding
Reading	<ul style="list-style-type: none">• Analyses plans and other documentation from a variety of sources, and consolidates information to evaluate requirements
Writing	<ul style="list-style-type: none">• Prepares workplace documentation including reports and design solutions incorporating technical language to communicate complex information clearly and effectively
Teamwork	<ul style="list-style-type: none">• Recognises and applies protocols governing what to communicate, with whom and how, in own work context
Planning and organising	<ul style="list-style-type: none">• Uses a combination of formal, logical planning processes and understanding of context for complex, high-impact activities with

SKILL	DESCRIPTION
	strategic implications
Problem solving	<ul style="list-style-type: none">• Applies formal, analytical and lateral thinking techniques for identifying issues, generating and evaluating possible solutions
Technology	<ul style="list-style-type: none">• Selects and uses digital technologies and systems to achieve work goals and enhance work processes

Unit Mapping Information

Supersedes and is equivalent to ICTTEN517 Plan a wireless mesh network.

Assessment Requirements for ICTTEN527 Plan wireless mesh networks

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- plan at least two wireless mesh networks (WMN).

In the course of the above, the candidate must:

- evaluate and select wireless technology and mesh routing protocols
- prepare at least one report outlining WMN design solutions and recommendations for each planned WMN
- produce internet protocols (IP) addressing schemes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, codes, company work practices, regulations and standards, workplace health and safety (WHS) requirements for scoped work
- advantages and disadvantages of the following WMN components:
 - radiofrequency bands
 - wireless networking hardware, routers and gateways
 - IP
 - wireless and mesh-routing protocols
 - cable loss
- methods of determining and evaluating maximum line of sight distances
- functions and features of:
 - mesh nodes
 - links between mesh nodes
 - backbone links in mesh topology

- internet gateways
- wireless access points
- network routers
- access points
- antenna gain and polarisation
- IP addressing
- subnet masks
- network topologies
- network security
- firewalls
- decibels and required units
- required configuration schemes to secure networks
- calculations for effective isotropic radiated power (EIRP)
- transmission control protocol (TCP)-IP protocols
- workplace plans and reports.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- sites where planning a wireless mesh network may be conducted
- design criteria and other site-required documentation
- equipment specifications and technical documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN613 Assess integration of international network equipment into Australian networks

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to inspect and test international network equipment not previously installed in an Australian network. It involves assessing its suitability and compliance with local regulations and conditions for the carrier or asset owner.

It applies to individuals working as field officers, technicians or technical supervisors for carriers, contractors or other service providers, who verify compliance of new equipment or systems with Australian standards.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications Networks Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine compliance of international network equipment designs with Australian standards	1.1 Obtain international and Australian network designs and design requirements from relevant personnel, and arrange for site access in compliance with required security arrangements, legislation, codes, regulations and standards 1.2 Analyse international designs and verify compliance with required Australian legislation, codes, regulations and standards 1.3 Reconfigure international design in consultation with relevant personnel 1.4 Rewrite design specifications and include configuration

ELEMENT	PERFORMANCE CRITERIA
	amendments
2. Plan network integration tests	2.1 Determine type and number of tests that will confirm a full trial of new designs and provide the greatest coverage of minimal tests 2.2 Establish test environment that will confirm total validity of chosen tests 2.3 Design test regime of proposed network to test impact on existing network 2.4 Confirm test regime in consultation with relevant personnel and verify that test equipment meets required standards
3. Test integration of international network equipment into Australian networks	3.1 Conduct and document required tests in logical and sequential order according to plans 3.2 Negotiate problems experienced during tests with relevant personnel and plan contingency activity according to enterprise policy 3.3 Prepare and submit trouble reports according to enterprise policy
4. Analyse test results	4.1 Analyse test results against design specifications and planned outcomes obtained from relevant personnel 4.2 Prepare a report referring major deficiencies to relevant personnel with recommendations for design change 4.3 Analyse minor variances, plan solutions and document changes to specifications
5. Complete assessment of integration of international network equipment into Australian networks	5.1 Implement design and specification changes and conduct further tests as required 5.2 Analyse test results and verify compliance with updated design specifications 5.3 Document results of tests according to enterprise policy

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Uses mathematical formulae to make calculations and necessary calibration changes by interpreting test results
Oral communication	<ul style="list-style-type: none"> Uses active listening, observational and questioning techniques to identify different perspectives and confirm, clarify or revise understanding

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none">Organises, evaluates and critiques technical specifications, legislative, regulatory and policy requirements
Writing	<ul style="list-style-type: none">Prepares workplace documentation including reports incorporating technical language to communicate recommendations clearly and effectively
Teamwork	<ul style="list-style-type: none">Collaborates with others to achieve joint outcomes, playing an active role in negotiating positive outcomesSelects and uses required conventions and protocols when communicating with personnel in a range of work contexts
Planning and organising	<ul style="list-style-type: none">Takes responsibility for own workload, negotiating some key aspects with othersUses a combination of formal, logical planning processes to identify required information, test strategies and resourcesImplements actions according to a predetermined plan, making adjustments if necessary
Problem solving	<ul style="list-style-type: none">Uses formal, analytical and lateral thinking techniques for identifying issues, and generating and evaluating possible solutions
Self-management	<ul style="list-style-type: none">Adheres to organisational procedures and protocols and legal and regulatory responsibilities, and considers these when planning and undertaking work
Technology	<ul style="list-style-type: none">Uses sophisticated understanding of principles, concepts, language and practices associated with the digital world to identify uses and potential of new technologies

Unit Mapping Information

Supersedes and is equivalent to ICTTEN601 Undertake qualification testing of new or enhanced equipment and systems.

Assessment Requirements for ICTTEN613 Assess integration of international network equipment into Australian networks

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- assess the integration of at least three different types of international network equipment into at least one Australian network.

In the course of the above, the candidate must:

- apply Australian standards to international designs
- identify customer-specific requirements
- configure and set up tests to assess network integration
- identify and conduct tests, including live system tests, and interpret and analyse results
- approach problem diagnosis systematically, eliminating causes
- re-test design changes
- prepare report, including deficiencies, analysis and recommendations.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required international and Australian legislation, codes, enterprise policy, company work practices, regulations and standards, workplace health and safety (WHS) requirements for scoped work
- features of network designs
- required connections to carrier infrastructure and equipment
- testing and amending network designs
- network and equipment tests required for compliance
- common network architectures
- function and features of trouble reports.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a test site where qualification testing of equipment and systems may be conducted
- equipment currently used in industry
- required Australian and international standards, codes, design specifications, manuals and reference materials.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN614 Conduct network system optimisation and administration

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to maintain the integrity of network support systems and software, for both system platforms and applications of computer systems, including local area networks (LAN) and wide area networks (WAN).

It applies to individuals, working as system administration support officers for service providers and large organisations, who manage and administer networks and make recommendations for improved customer support.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications Networks Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to conduct network system administration	<ul style="list-style-type: none">1.1 Obtain work details and scope from relevant personnel and arrange for site access in compliance with required security arrangements, legislation, codes, regulations and standards1.2 Prepare methodology to conduct platform network optimisation and administration according to organisational requirements1.3 Interrogate and monitor system platforms to determine error logs, ageing time on processes, database checks and system loadings1.4 Notify relevant personnel of problems and provide advice and guidance on solutions

ELEMENT	PERFORMANCE CRITERIA
	<p>1.5 Conduct system measurements from a user perspective on response times and initiate investigations on problems where specifications are not being met</p> <p>1.6 Assess availability of data storage space and initiate required action</p> <p>1.7 Develop procedures for system backup and restoration, and review for efficiency of operation and amend, where required</p>
2. Provide application support to system users	<p>2.1 Produce a set of procedures for formal meetings with users on a regular basis, and discuss and support user issues</p> <p>2.2 Devise training and related instructions for database optimisation and administration</p>
3. Investigate unusual network activity special investigations	<p>3.1 Evaluate requests for investigation to determine detail of action required</p> <p>3.2 Prepare activity plan including timelines, specific goals, investigative team and resources required to conduct an investigation</p> <p>3.3 Conduct investigation methodically according to plan and record findings</p> <p>3.4 Analyse findings and prepare and forward reports, including recommendations to the requesting body</p>
4. Investigate unusual network administration	<p>4.1 Conduct investigation and record findings according to organisational requirements</p> <p>4.2 Produce a cost-benefit analysis of database optimisation schedule and evaluate the return on investment (ROI)</p> <p>4.3 Analyse investigative findings and prepare reports and recommendations for relevant personnel</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> • Uses mathematical formulae to make statistical calculations about traffic predictions • Uses mathematical formulae to complete cost-benefit analysis
Oral communication	<ul style="list-style-type: none"> • Provides verbal instructions and guidance using specific and required language suitable to audience • Employs listening and questioning techniques to confirm

SKILL	DESCRIPTION
	understanding
Reading	<ul style="list-style-type: none">Organises, evaluates and interprets technical specifications and required documentation from a range of complex texts
Writing	<ul style="list-style-type: none">Prepares workplace documentation including training instructionsProduces reports on system administration and investigations, incorporating technical language, to communicate complex information clearly and effectively
Planning and organising	<ul style="list-style-type: none">Uses a combination of formal, logical planning processes and an understanding of context for complex, high-impact activities with strategic implications
Problem solving	<ul style="list-style-type: none">Recognises and addresses some unfamiliar problems of increasing complexity within own scopeUses formal processes to monitor implementation of solutions and reflect on outcomes
Technology	<ul style="list-style-type: none">Uses digital systems and tools to enter, store and monitor dataConsiders the strategic and operational potential of digital technologies to achieve work goals, enhance work processes and enhance solutions

Unit Mapping Information

Supersedes and is equivalent to ICTTEN602 Undertake system administration.

Assessment Requirements for ICTTEN614 Conduct network system optimisation and administration

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- conduct optimisation and administration activities for at least two network systems.

In the course of the above, the candidate must:

- prepare methodologies for system maintenance
- produce cost-benefit analyses and training for database optimisation and administration
- review development of training instructions
- conduct system measurements
- develop support processes for system users
- manage user accounts and security procedures
- investigate potential system administration problems and make recommendations.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, codes, company work practices, regulations and standards, workplace health and safety (WHS) requirements for scoped work
- methodologies for database system administration and optimisation
- cost-benefit analysis of database optimisation schedules
- return on investment (ROI) calculations
- producing training and related instructions
- functions and features of:
 - back-up systems
 - computer systems
 - error logs

- database checks
- system loading
- user support networks
- hierarchical user profiling systems
- user account security
- profiling systems
- network monitoring tools
- activity plans
- workplace reports
- methods to calculate ageing time on processes
- processes for investigating user requests and actions.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a network for maintenance and analysis of special investigations
- equipment and systems manuals, specifications and enterprise policy.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN615 Manage network traffic

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to monitor, analyse and improve network performance for the purpose of effectively managing traffic flow in networks.

It applies to individuals working as field officers, technicians or technical supervisors for carriers, contractors or other service providers, who manage network traffic and make recommendations for capacity planning switching and transmission networks.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications Networks Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Evaluate network capacity and traffic congestion	<ul style="list-style-type: none">1.1 Obtain work details, planned network strategy and scope from relevant personnel and arrange for site access in compliance with required security arrangements, legislation, codes, regulations and standards1.2 Interrogate system monitoring alerts and alarms and identify areas of route and circuit unavailability1.3 Assess planned and unplanned outages to determine network unavailability and verify restoration times1.4 Obtain and interrogate network management system and identify traffic status1.5 Analyse system alert and identify real and potential traffic

ELEMENT	PERFORMANCE CRITERIA
	<p>problems</p> <p>1.6 Analyse customer complaints and traffic measurement data to identify network problems</p> <p>1.7 Activate and deactivate semi-permanent controls active in the network on a regular basis to simulate irregular traffic</p>
2. Develop traffic control strategies	<p>2.1 Conduct traffic measurements across all required routes</p> <p>2.2 Analyse results, historical data and traffic volume requirements</p> <p>2.3 Determine specific thresholds, loading and grading levels to alter traffic flows</p> <p>2.4 Obtain funding parameters and budgeted levels, and determine plan amendments</p> <p>2.5 Confirm that traffic control strategies to prevent traffic problems</p> <p>2.6 Develop strategies for recovery where traffic congestion occurs</p> <p>2.7 Develop contingency plans to allow for problems during network changes</p>
3. Apply short and long-term traffic solutions	<p>3.1 Implement software changes according to planned network strategy</p> <p>3.2 Develop short-term ad hoc solutions where only a temporary solution is required</p> <p>3.3 Confirm that reversal action can be initiated in cases of temporary solutions</p> <p>3.4 Implement contingency plan where required according to organisational requirements</p> <p>3.5 Conduct monitoring of changes and take measurements to assess outcomes of variations</p> <p>3.6 Analyse measurements and provide a report to relevant personnel with recommendations for further changes</p> <p>3.7 Review and monitor strategies and initiate corrective action where required</p>
4. Detect and take action on traffic congestion	<p>4.1 Measure and analyse traffic loads to assess congestion problems and determine possible impact</p> <p>4.2 Control traffic flow and prevent processor overloads</p> <p>4.3 Evaluate potential traffic increases for impact on the network and develop contingencies to control traffic flow if required</p>
5. Provide traffic indicators for capacity planning	<p>5.1 Predict future potential traffic trends and requirements using data on current and historical traffic patterns</p> <p>5.2 Identify potential network traffic problems and make recommendations to network planners</p> <p>5.3 Complete reports with recommendations and forward to relevant personnel</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none">• Uses mathematical formulas to interpret data and make projections about traffic flow• Uses mathematical formulae to estimate and plan project costs within business budgets
Oral communication	<ul style="list-style-type: none">• Participates in verbal exchanges using specific and relevant language suitable to audience• Employs listening and questioning techniques to confirm understanding
Reading	<ul style="list-style-type: none">• Organises, evaluates and interprets technical specifications and required documentation from a range of complex texts
Writing	<ul style="list-style-type: none">• Prepares workplace documentation, including reports and recommendations incorporating technical language, to communicate complex information clearly and effectively
Teamwork	<ul style="list-style-type: none">• Collaborates with others to achieve joint outcomes• Selects and uses required conventions and protocols when communicating with relevant personnel in a range of work contexts
Planning and organising	<ul style="list-style-type: none">• Uses a combination of formal, logical planning processes and an understanding of context for complex, high-impact activities with strategic implications
Problem solving	<ul style="list-style-type: none">• Approaches problem-solving in diverse ways, recognising that there is no single formula that applies in all situations• Uses formal processes to monitor implementation of solutions and reflect on outcomes
Technology	<ul style="list-style-type: none">• Uses digital systems and tools to enter, store and analyse data

Unit Mapping Information

Supersedes and is equivalent to ICTTEN603 Undertake network traffic management.

Assessment Requirements for ICTTEN615 Manage network traffic

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- conduct the management of network traffic on at least two network systems.

In the course of the above, the candidate must:

- conduct traffic measurements
- develop and implement contingencies to control traffic flow
- identify potential network traffic problems and make recommendations
- provide information for capacity planning.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, planned network strategies, customer policies, service level agreements, codes, company work practices, regulations and standards, workplace health and safety (WHS) requirements for scoped work
- functions and features of:
 - system monitoring alerts and alarms
 - route and circuit availabilities
 - system outages
 - network management systems
 - traffic patterns
 - semi-permanent controls
 - traffic engineering
 - workplace documentation related to network traffic
- network management planning principles

- traffic blocking, congestion and dimensioning principles
- transmission type and signals that may be encountered
- network topologies, switching, routing and transmission techniques
- network traffic contingency plans
- various network management systems suitable for conducting traffic evaluations.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a network and equipment for traffic monitoring and management
- equipment and systems manuals, specifications and enterprise policy.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN616 Rectify client services following network outages and faults

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to identify, analyse and resolve service faults by coordinating fault rectification, following network outages. It describes strategies for dealing with customers, operational staff and associated system restoration.

It applies to individuals who have high-level technical skills and relevant authority to coordinate activities of maintenance personnel and oversee compliance issues associated with service level agreements.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications Networks Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan to rectify client services following network outages and faults	<ul style="list-style-type: none">1.1 Obtain work details and scope from relevant personnel and arrange for site access in compliance with required security arrangements, legislation, codes, regulations and standards1.2 Evaluate required data and determine the nature of the fault and extent of the outage1.3 Assess impact of the fault on network and customers, and establish priority of required actions1.4 Analyse system monitoring alerts, alarms and required network data and record details according to contractual agreements and

ELEMENT	PERFORMANCE CRITERIA
	enterprise policy 1.5 Prepare action plan to manage fault rectification and restoration, minimising impact on network and customers 1.6 Provide a central point for all rectification activity, information, actions and progress 1.7 Prioritise service restoration based on assessment of contractual arrangements and service-level client agreements 1.8 Negotiate with client's account manager regarding repair arrangements, where service-level agreements cannot be met
2. Implement plan to rectify client services following network outages and faults	2.1 Notify all relevant personnel and departments involved in the outage according to enterprise policy 2.2 Isolate and monitor affected system monitoring alerts and alarms and confirm no additional problems have occurred 2.3 Correct fault according to required plans and enterprise policy 2.4 Manage repair activity with required technical support and adjust resource allocations and confirm effective restoration of network services 2.5 Reset system monitoring alerts and alarms and restore services to normal network configuration 2.6 Test and monitor network activity on recovery to certify effective fault clearance and service restoration
3. Finalise administrative tasks	3.1 Document activities carried out to rectify client services according to enterprise requirements 3.2 Notify customers of fault rectification and service restoration according to service-level agreement

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none">Analyses and synthesises highly embedded mathematical information
Reading	<ul style="list-style-type: none">Organises, evaluates and interprets technical readings, instructional material and workplace documentation from a range of complex texts
Writing	<ul style="list-style-type: none">Prepares workplace documentation, and incorporates technical language to communicate complex information clearly and

SKILL	DESCRIPTION
	effectively
Teamwork	<ul style="list-style-type: none">• Demonstrates understanding of what to communicate, with whom and how, in a broad range of work contexts• Collaborates and cooperates with others to achieve joint outcomes
Planning and organising	<ul style="list-style-type: none">• Uses a combination of formal, logical planning processes and an understanding of context for complex, high-impact activities with strategic implications
Problem solving	<ul style="list-style-type: none">• Uses formal, analytical and lateral thinking techniques for identifying issues, generating and evaluating possible solutions• Uses formal processes to monitor implementation of solutions and reflect on outcomes
Technology	<ul style="list-style-type: none">• Uses digital systems and tools to enter, store and monitor data, and for communication purposes

Unit Mapping Information

Supersedes and is equivalent to ICTTEN604 Coordinate fault rectification and restoration of service following network outages.

Assessment Requirements for ICTTEN616 Rectify client services following network outages and faults

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- coordinate at least two fault rectifications and at least two restorations of service following at least two network outages.

In the course of the above, the candidate must:

- prepare an action plan to manage fault rectification and service restoration
- coordinate implementation of action plan and manage repair activities
- apply escalation procedures
- finalise the administrative and notification processes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, codes, company work practices, regulations and standards, workplace health and safety (WHS) requirements for scoped work
- workplace documentation including action plans
- alarm conditions and areas of the network or service they impact
- connections to carrier infrastructure or equipment
- customer care and service level agreements and policies
- electrical and optical principles underpinning networks
- escalation procedures and list required tier level contacts
- network and transmission equipment faults
- power requirements and electrical safety
- protection switching
- network applications and required equipment

- required test equipment
- transmission hierarchy and switching principles
- performance parameters and faults that will be encountered.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- sites where fault rectification and restoration of service may be conducted
- testing equipment currently used in industry
- manufacturer's and enterprise documentation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN617 Manage common channel signalling networks

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to combine technical and organisational assistance to provide signalling facilities to interconnect networks.

It applies to individuals who may be responsible for small projects or parts of larger projects to provide a reliable service to customers and who work as technical officers or engineers for private and public organisations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications Networks Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Analyse signalling and digital path alarms and clear network faults	<ul style="list-style-type: none">1.1 Obtain work details and scope from relevant personnel and arrange for site access in compliance with required security arrangements, legislation, codes, regulations and standards1.2 Activate alarm management system, produce a trouble report and verify common channel signalling (CCS) and data faults1.3 Investigate cause of alarm, analyse results, determine required repair action and allocate resources according to organisational requirements1.4 Monitor repair and restoration procedures and confirm commitment to specified timelines1.5 Initiate escalation procedures according to enterprise procedures

ELEMENT	PERFORMANCE CRITERIA
	1.6 Reset alarms on completion of repair and monitor subsequent alarms to confirm no re-occurrence of the problem
2. Monitor integrity of data received on equipment ports	2.1 Activate alarm screens and monitor port times on a regular basis to confirm procedures are running 2.2 Clear port blockage and problems on completion of planned works and log in required database 2.3 Monitor repair and restoration procedures to confirm commitment to specified timelines and initiate escalation procedures as required and according to enterprise procedures
3. Monitor and acceptance test repair	3.1 Verify network stabilisation throughout repair and monitor repair action and confirm minimal impact on the network 3.2 Conduct acceptance testing according to prescribed operating procedures 3.3 Monitor network stability on completion and refer problems to required area for action 3.4 Block alarms for out-of-service circuits
4. Coordinate CCS relationships	4.1 Log requests for relationship change and follow up problems with required support staff 4.2 Monitor network stability and manage loading of data until the process is completed 4.3 Update models and enterprise systems
5. Coordinate CCS rearrangements	5.1 Log requests for rearrangement scenarios and verify feasibility of the rearrangement 5.2 Enter details of rearrangement in required system and update system records 5.3 Monitor completed work for accuracy and network stability on completion 5.4 Produce a copy of documentation for future reference

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Extracts and evaluates mathematical data embedded in a range of technical information
Reading	<ul style="list-style-type: none"> Organises, evaluates and interprets information from equipment and system manuals, specifications and relevant enterprise

SKILL	DESCRIPTION
	documentation
Writing	<ul style="list-style-type: none">Prepares workplace documentation, including reports and recommendations, incorporating technical language to communicate complex information clearly and effectively
Teamwork	<ul style="list-style-type: none">Selects and uses relevant conventions and protocols when communicating with personnel in a range of work contexts
Planning and organising	<ul style="list-style-type: none">Sequences and schedules complex activities, monitors implementation and manages required communication
Problem solving	<ul style="list-style-type: none">Uses analytical processes to decide on a course of action, establishing criteria for deciding between options and seeking input and advice from others, if necessaryUses formal processes to monitor implementation of solutions and reflect on outcomes
Self-management	<ul style="list-style-type: none">Considers and adheres to organisational procedures and protocols and legal and regulatory responsibilities when planning and undertaking work
Technology	<ul style="list-style-type: none">Uses digital systems and tools to enter, store and analyse data

Unit Mapping Information

Supersedes and is equivalent to ICTTEN606 Manage a common channel signalling network.

Assessment Requirements for ICTTEN617 Manage common channel signalling networks

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- manage at least two common channel signalling networks.

In the course of the above, the candidate must:

- identify and implement repair actions within service assurance guidelines
- analyse and interpret alarms including common channel signalling (CCS) and digital path
- apply enterprise fault management priorities and escalation procedures
- resolve problems in a methodical and logical manner
- conduct required tests and interpret results.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, codes, company work practices, regulations and standards, workplace health and safety (WHS) requirements for scoped work
- functions and features of:
 - alarm management systems
 - trouble reports
 - data faults
 - network repair and restoration procedures
 - acceptance tests
 - CCS data and signalling pathways
- system monitoring alerts and alarm set-ups
- principles of the following aspects of CCS:
 - architecture

- protocols
- signalling
- testing
- repair and restoration procedures
- switching network equipment operation
- workplace documentation.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site with CCS network
- tests and equipment currently used in industry
- required legislation, codes, regulations and standards.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN618 Analyse and organise repair of highly complex networks

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to identify faults across all network types, with collaboration from the network operations centre (NOC) and resolve any problems.

It applies to individuals working as network engineers, network officers, installers, maintenance staff and manufacturers or equipment specialists. It also applies to NOC staff in advisory roles and technical rectification roles.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications Networks Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Research fault background	1.1 Obtain work details and scope from relevant personnel and arrange for site access in compliance with required security arrangements, legislation, codes, regulations and standards 1.2 Analyse required data and previous actions taken by relevant personnel 1.3 Research areas of similarity to network fault 1.4 Develop commercial and technical strategies with equipment vendor and NOC for diagnosing the fault 1.5 Address and discuss all workplace health and safety (WHS) issues

ELEMENT	PERFORMANCE CRITERIA
	with relevant personnel
2. Diagnose fault	2.1 Apply a methodical approach to isolate and diagnose the network problem 2.2 Simulate fault in the required environment 2.3 Seek support from relevant personnel throughout investigation 2.4 Instruct on-site technical staff to run required tests and analyse results 2.5 Identify type of network fault using established methodical strategies without undue disruption to other services
3. Organise fault rectification	3.1 Recommend fault rectification plans and outages to the NOC, seek approval and adjust plans accordingly 3.2 Instruct on-site repairers to proceed in fault rectification 3.3 Organise replacement and repair of faulty equipment with required advice from vendors and manufacturers 3.4 Reconfigure replaced and repaired equipment and test rectified fault against required performance 3.5 Develop method to notify relevant personnel of fault rectification
4. Report and document fault details and rectification	4.1 Notify relevant personnel of repair details and recommend changes to equipment design 4.2 Conduct cause-and-effect studies and forward results to the required area for action 4.3 Complete all administrative tasks and prepare a report that outlines deficiencies, analysis and recommendations

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Extracts and evaluates technical data, including equipment specifications
Oral communication	<ul style="list-style-type: none"> Articulates requirements using language, tone and pace required to audience and environment Uses active listening, observational and questioning techniques to identify different perspectives and confirm, clarify or revise understanding
Reading	<ul style="list-style-type: none"> Organises, evaluates and interprets technical specifications and standards from a range of complex texts

SKILL	DESCRIPTION
Writing	<ul style="list-style-type: none">• Prepares workplace documentation incorporating technical language to communicate complex information clearly and effectively
Teamwork	<ul style="list-style-type: none">• Selects and uses required conventions and protocols when communicating with customers, vendors or technical personnel in a range of work contexts
Planning and organising	<ul style="list-style-type: none">• Uses a combination of formal, logical planning processes to identify required information, test strategies and resources• Demonstrates a sophisticated understanding of principles, concepts, language and practices associated with the digital world and uses these to troubleshoot and diagnose issues• Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering required information and identifying and evaluating options against agreed criteria
Problem solving	<ul style="list-style-type: none">• Uses formal, analytical and lateral thinking techniques for diagnosing issues, generating and evaluating possible solutions and escalating issues to others when required

Unit Mapping Information

Supersedes and is equivalent to ICTTEN607 Analyse and organise repair of highly complex telecommunications network faults.

Assessment Requirements for ICTTEN618 Analyse and organise repair of highly complex networks

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- analyse and organise the repair of at least two highly complex networks.

In the course of the above, the candidate must:

- diagnose at least three network faults using established methodical strategies without undue disruption to other services
- recommend fault rectification plan to the network operations centre (NOC)
- instruct on-site repairers
- facilitate replacement or repair of faulty equipment with advice from relevant personnel
- facilitate final testing of rectified faults to confirm required performance
- prepare report including deficiencies, analysis and recommendations.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, codes, company work practices, regulations and standards, workplace health and safety (WHS) requirements for scoped work
- fault escalation procedures
- fault-finding techniques and use of test equipment
- fault types and rectification
- operation of integrated packet optical transport networks (P-OTNs)
- use of International Telecommunication Union (ITU) ITU-T G.709 standard
- network protocols
- safety requirements and standards
- service agreements

- synchronous digital hierarchy (SDH)
- transmission control protocol (TCP)-internet protocol (IP)
- the following types of networks and equipment:
 - access
 - broadband deployment
 - cabling
 - customer premises' equipment (CPE)
 - IP networks for enterprise and customer systems and installations
 - local area networks (LAN)
 - telephony
 - wide area networks (WAN)
 - workplace documentation including reports.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site where highly complex network faults may be demonstrated and analysed without jeopardising live traffic
- equipment currently used in industry
- design specifications and manufacturer's manuals and reference materials.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN619 Test new software and hardware releases

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to authenticate compliance and compatibility of software and hardware to an existing system for new software and hardware releases for an existing system or new infrastructure for convergence to Next Generation Networks (NGN).

It applies to individuals with high-level technical skills who make use of software test routines and test hardware for performance to manufacturer's and design specifications.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications Networks Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan testing of new software and hardware releases	<ul style="list-style-type: none">1.1 Obtain manuals, specifications and instructions associated with new releases and identify areas of uncertainty for confirmation with the vendor1.2 Plan the testing environment of the software and hardware release with relevant personnel1.3 Determine resources required to assist with the test, and negotiate their availability1.4 Determine and plan outage and notify relevant personnel1.5 Notify relevant personnel of impact on the network during the test1.6 Develop contingency plans to cater for likely problems during the

ELEMENT	PERFORMANCE CRITERIA
	test
2. Test software and hardware releases	2.1 Load new software and conduct tests using required test equipment according to vendor specifications 2.2 Evaluate test results to assess functionality and features of software and hardware according to vendor documentation 2.3 Test compatibility with existing network and take corrective action with vendor as required 2.4 Implement contingency plans in conjunction with network management if integrity of the network is compromised by the new release
3. Complete testing of software and hardware releases	3.1 Document test results and store according to enterprise policy 3.2 Discuss ongoing and likely problems with the vendor and initiate follow-up arrangements to confirm a permanent solution 3.3 Provide clearance for software and hardware release to be put in service in the system according to enterprise procedures 3.4 Update system documentation and service catalogue systems, where required and communicate with operational teams.

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Extracts and evaluates technical data, including equipment specifications during testing phase
Oral communication	<ul style="list-style-type: none"> Articulates requirements and likely challenges when engaging with enterprise personnel, customers and contractors using relevant language suitable to diverse audiences and employs listening and questioning techniques to confirm understanding
Reading	<ul style="list-style-type: none"> Organises, evaluates and interprets technical documentation including software and hardware manuals, specifications and relevant enterprise policy and documentation
Writing	<ul style="list-style-type: none"> Prepares workplace documentation, including reports and recommendations, incorporating technical language to communicate complex information clearly and effectively
Teamwork	<ul style="list-style-type: none"> Selects and uses relevant conventions and protocols when communicating with customers, vendors or technical personnel in a range of work contexts Collaborates and cooperates with others to achieve joint outcomes

SKILL	DESCRIPTION
Planning and organising	<ul style="list-style-type: none">• Uses a combination of formal, logical planning processes to identify required information, test strategies and resources
Problem solving	<ul style="list-style-type: none">• Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering relevant information and identifying and evaluating options against agreed criteria• Uses formal, analytical and lateral thinking techniques for diagnosing problems, and generating and evaluating possible solutions
Self-management	<ul style="list-style-type: none">• Adheres to organisational procedures and protocols when planning and undertaking work
Technology	<ul style="list-style-type: none">• Uses advanced features of digital systems and tools to enter, store, test and analyse data

Assessment Requirements for ICTTEN619 Test new software and hardware releases

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- test at least two newly released software items and at least two newly released hardware items within at least two networks.

In the course of the above, the candidate must:

- develop at least one plan for testing new software and hardware releases, including functionality and performance under load conditions
- develop a contingency plan for recognising potential causes of problems and their impact on service levels
- test compatibility of software and hardware within an existing network system
- analyse impact of integration of new hardware and software releases on the network and make recommendations for improvement.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, codes, company work practices, system maintenance and upgrade procedures, regulations and standards, workplace health and safety (WHS) requirements for scoped work
- features of service catalogue systems
- methods of testing newly released software and hardware
- functions and features of software and hardware network contingency plans
- features and operating requirements of testing routines and equipment, key performance indicators (KPIs) and service level agreements
- information required to operate software and hardware according to test specifications
- manufacturer requirements and specifications for equipment operation

- specific organisational requirements surrounding activity and site conditions
- test methods, performance and integration requirements
- issues and challenges that occur with new software and hardware releases.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a system to verify compliance and compatibility of software and hardware
- test equipment currently used in industry
- systems manuals, vendor specifications and enterprise policy.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN620 Produce and evaluate architecture designs for convergent cellular mobile networks

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to specify design of the required mobile cellular general packet radio service (GPRS) and the latest two generations of network architectures.

It applies to individuals with high-level technical skills who design and operate mobile wireless systems that meet the industry implementation of wireless convergence in networks.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications Networks Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan to design convergent cellular mobile networks	<ul style="list-style-type: none">1.1 Obtain work details and scope from relevant personnel and arrange for site access in compliance with required security arrangements, legislation, codes, regulations and standards1.2 Examine technical characteristics of the GPRS systems1.3 Develop network architecture for a GPRS network, in addition to the circuit-switched domain of 2G (Generation)1.4 Review 3G structure and identify network requirements to provide required services1.5 Examine technical characteristics, data rates, operating frequencies and multiplexing schemes of the 3G system

ELEMENT	PERFORMANCE CRITERIA
	1.6 Establish positioning and types of antennas, terminals, processors, required protocols and architecture, based on technical specifications and requirements
2. Design a GPRS (2.5G) cellular network	2.1 Investigate how 2.5G GPRS overlays the GSM network to transmit and receive transmission control protocol (TCP) and/or internet protocol (IP) based data to and from GPRS mobile devices
3. Design a 3G cellular network	3.1 Develop network architecture for a 3G network and explain functions of the network elements to relevant personnel 3.2 Integrate a 3G network with a wireless local area network (WLAN)
4. Research and evaluate design features of proposed 4G cellular network	4.1 Investigate how a fully IP-based 4G system can provide an end-to-end IP integrated solution for voice, data and streamed multimedia to end-users roaming anytime and anywhere 4.2 Investigate access schemes and assess design features of a 4G network according to organisational requirements 4.3 Investigate the implication for Internet Protocol version 6 (IPv6) in relation to 4G support of a greater number of IP-based wireless devices with applications for improved multicast, security and route minimisation capabilities 4.4 Investigate use of advanced antenna systems to enable 4G with high rate, high reliability and long-range communications
5. Produce reports for architectural design for cellular networks	5.1 Present a report on the impact of competing technologies and gain consensus on concepts from relevant personnel 5.2 Investigate potential interoperability and global roaming issues that may be faced by the latest, required cellular technologies

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Extracts and evaluates technical data, including equipment specifications during testing phase
Oral communication	<ul style="list-style-type: none"> Uses specific and relevant language to articulate technological issues
Reading	<ul style="list-style-type: none"> Comprehends and evaluates technical specifications to plan and prepare for complex cellular design work

SKILL	DESCRIPTION
Writing	<ul style="list-style-type: none">• Prepares workplace documentation, including reports and recommendations, incorporating technical language to communicate complex information clearly and effectively
Planning and organising	<ul style="list-style-type: none">• Plans strategic priorities and outcomes within a flexible, efficient and effective context in a diverse environment exposed to competing demands• Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering required information, and identifying and evaluating options against agreed criteria
Problem solving	<ul style="list-style-type: none">• Uses formal, analytical and lateral thinking techniques for diagnosing problems and generating and evaluating possible solutions
Technology	<ul style="list-style-type: none">• Considers strategic and operational potential of digital trends to achieve work goals, enhance work processes and create opportunities

Unit Mapping Information

Supersedes and is equivalent to ICTTEN609 Produce and evaluate architecture designs for convergent cellular mobile networks.

Assessment Requirements for ICTTEN620 Produce and evaluate architecture designs for convergent cellular mobile networks

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- produce and evaluate at least two architecture designs for at least two convergent cellular mobile networks.

In the course of the above, the candidate must:

- provide detailed summaries of the client's business domain when designing network
- provide detailed summaries of industry-accepted network hardware and software products and their general features and capabilities, when designing a general packet radio service (GPRS) for the latest, required networks
- design viable GPRS network solutions to meet business needs
- research design features of the latest two cellular networks.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, codes, company work practices, regulations and standards, workplace health and safety (WHS) requirements for scoped work
- features and capabilities of industry security products, devices and procedures
- global systems for the latest mobile network designs
- industry-accepted cellular mobile network protocols
- technical characteristics of GPRS systems, including:
 - capability classes and multi-slot classes
 - coding schemes
 - data rates
 - management systems when evaluating roaming features

- operating frequencies and modulation schemes
- remote user issues when establishing siting and types of antennas, terminals, processors, required protocols and the latest network architecture, based on technical specifications and user requirements
- concepts of three or more industry network developments and design methodologies used when designing networks
- requirements of workplace documentation, including reports.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- cellular mobile network structures
- client requirements
- expected traffic volume
- information on a range of IT business solutions
- technical specifications
- vendors and vendor offerings and pricing.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN621 Design and configure IP-MPLS networks with virtual private network tunnelling

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to design an internet protocol-multiprotocol label switching (IP-MPLS) network, examine MPLS data flow and configure virtual private network (VPN) tunnelling.

It applies to individuals with excellent technical skills including designers and installers of Next Generation Networks (NGN). These IP networks provide fast internet, voice over internet protocol (VoIP) and internet protocol TV (IPTV) services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications Networks Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan and design IP-MPLS network to meet business requirements	1.1 Obtain work details and scope from relevant personnel and arrange for site access in compliance with required security arrangements, legislation, codes, regulations and standards 1.2 Determine IP-MPLS network design requirements in consultation with enterprise customer 1.3 Optimise factors affecting design 1.4 Use label stacking to route MPLS packets in the network and build MPLS services 1.5 Dimension layer-3 generation of core backbone and allow MPLS

ELEMENT	PERFORMANCE CRITERIA
	<p>IP-VPN to provide MPLS convergence services</p> <p>1.6 Obtain MPLS control plane and set up wavelengths</p> <p>1.7 Produce design topology of a MPLS network to include location and types of edge label switch routers (LSR) and core LSRs in agreement with enterprise customer</p>
2. Configure MPLS network and verify traffic engineering (TE) considerations	<p>2.1 Configure edge and core LSRs to provide secure methods of transporting IP packets in the MPLS network using layer 2 protocols</p> <p>2.2 Configure LSRs to provide toll bypass for convergence of voice and data over IP network</p> <p>2.3 Classify traffic in MPLS terms and configure edge LSR to sort traffic into forward equivalent classes (FECs)</p> <p>2.4 Install and remove two standardised signalling protocols for managing TE of MPLS paths</p> <p>2.5 Configure MPLS-TE to provide routing on diverse paths to avoid congestion and guarantee bandwidth services</p>
3. Configure VPN and provide a virtual private Local Area Network service (VPLS)	<p>3.1 Configure a MPLS VPN tunnel for a customer network to provide multipoint-to-multipoint VPN connectivity</p> <p>3.2 Build a content hosting server into a MPLS based VPN to produce a media network</p> <p>3.3 Use (VPLS) as a VPN method for wide area network (WAN) multipoint-to-multipoint ethernet connectivity spanning multiple metropolitan areas</p> <p>3.4 Produce VPLS topology using an internet protocol IP-MPLS cloud with provider edge (PE) routers connecting VPLS domains associated with an enterprise customer</p>
4. Complete documentation	<p>4.1 Produce a final design plan including network elements, configuration details and recommendations for design changes</p> <p>4.2 Notify customer and obtain sign-off according to organisational requirements</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Oral communication	<ul style="list-style-type: none"> Engages with customers, about technical and operational matters, using clear language and active listening, observational and questioning techniques to confirm, clarify or revise understanding

SKILL	DESCRIPTION
Writing	<ul style="list-style-type: none">• Prepares workplace documentation including incorporating technical language to communicate complex information clearly and effectively
Teamwork	<ul style="list-style-type: none">• Selects and uses relevant conventions and protocols when consulting or negotiating with customers
Planning and organising	<ul style="list-style-type: none">• Uses a combination of formal, logical planning processes and an understanding of context for complex, high impact activities with strategic implications• Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering required information and identifying and evaluating options against agreed criteria• Uses formal, analytical and lateral thinking techniques for diagnosing problems and generating and evaluating possible solutions
Technology	<ul style="list-style-type: none">• Considers the strategic and operational potential of digital trends to achieve work goals, enhance work processes and create opportunities• Uses digital systems and tools to enter, store and analyse data

Unit Mapping Information

Supersedes and is equivalent to ICTTEN610 Design and configure an IP-MPLS network with virtual private network tunnelling.

Assessment Requirements for ICTTEN621 Design and configure IP-MPLS networks with virtual private network tunnelling

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- plan and design at least two multiprotocol label switching (MPLS) networks that meet business requirements.

In the course of the above, the candidate must:

- configure and test the MPLS network according to specified guidelines
- produce design topology of a MPLS network
- produce design plans, including network elements, configuration details and recommendations for design changes
- implement secure virtual private network (VPN) tunnelling.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, codes, company work practices, regulations and standards, workplace health and safety (WHS) requirements for scoped work
- industry-accepted hardware and software products used in IP-MPLS networks
- functions and features of MPLS IP-VPN network operating systems including:
 - transmission technologies
 - protocols
 - principles and techniques of constructing design plans
- effects of the customer's business domain, function and organisation on customer requirements and network equipment.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a live network and networked computers
- network design documentation, equipment specifications and organisational guidelines
- network components, routers, switches and multi-layer switches.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN622 Produce ICT network architecture designs

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to compile and evaluate business specifications from a client and produce a set of architecture design solutions to cater for present and future forecast demands.

It applies to individuals working in the field who carry out design and implementation of technical solutions of information communications technology (ICT) networks, employed by information technology networking provisioning companies specialising in integrating converging and emerging technologies of ICT networks.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications Networks Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to produce ICT network architecture design	1.1 Obtain work details, specifications and scope from relevant personnel and arrange for site access in compliance with required security arrangements, legislation, codes, regulations and standards 1.2 Consult with key stakeholders to identify their requirements of the scoped network architecture design 1.3 Assess business problems, opportunities and objectives, and confirm details with relevant personnel
2. Produce preliminary	2.1 Determine hardware, software and network requirements

ELEMENT	PERFORMANCE CRITERIA
ICT network architecture design	<p>according to manufacturer specifications</p> <p>2.2 Select required software solutions</p> <p>2.3 Develop preliminary physical network diagrams as a preface to architecture blueprint</p> <p>2.4 Produce a document on the possible impact of the network design on the business requirements</p>
3. Evaluate preliminary design and anticipated performance	<p>3.1 Predict forecast traffic demands, and impact on network design, from current and future demand requirements</p> <p>3.2 Benchmark design using expected performance parameters</p> <p>3.3 Review likely performance profile of the design</p> <p>3.4 Determine costs involved with a range of supplier products</p> <p>3.5 Produce an evaluation report on predicted performance and costs of the network architecture design, addressing business specifications and recommendations</p>
4. Finalise network architecture design and obtain approval	<p>4.1 Review benchmarks, requirements and final design proposed</p> <p>4.2 Determine support and training requirements needed</p> <p>4.3 Obtain latest technical specifications and pricing by contacting possible vendors</p> <p>4.4 Document network design and present documentation to required person for approval</p> <p>4.5 Obtain sign off on final business solution</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Interprets numerical information according to business requirements and specifications to evaluate possible technical design scenarios within budgetary constraints
Oral communication	<ul style="list-style-type: none"> Participates in verbal exchanges using clear language and active listening, observational and questioning techniques to confirm, clarify or revise understanding
Reading	<ul style="list-style-type: none"> Organises, evaluates and interprets technical documentation and required enterprise policy and documentation
Writing	<ul style="list-style-type: none"> Prepares workplace documentation, including diagrammatic material, incorporating technical language to communicate complex information clearly and effectively

SKILL	DESCRIPTION
Planning and organising	<ul style="list-style-type: none">• Uses a combination of formal, logical planning processes to identify required information, test strategies and resources• Demonstrates a sophisticated understanding of principles, concepts, language and practices associated with the digital world and uses this to propose solutions• Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering required information, and identifying and evaluating options against agreed criteria• Uses formal, analytical and lateral thinking techniques for diagnosing problems and generating and evaluating possible solutions
Technology	<ul style="list-style-type: none">• Selects and uses required conventions and protocols when communicating with stakeholders in a range of work contexts

Unit Mapping Information

Supersedes and is equivalent to ICTTEN611 Produce an ICT network architecture design.

Assessment Requirements for ICTTEN622 Produce ICT network architecture designs

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- produce at least two information communications technology (ICT) network architecture designs.

In the course of the above, the candidate must:

- adapt technologies to specified technical solutions
- use site design software and hardware
- evaluate client specifications against accepted industry practices
- produce technical designs from business specifications
- analyse feedback from client and adjust proposal
- apply design concepts to business solutions
- produce technical reports
- make recommendations and offer optimum design solutions.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, codes, company work practices, regulations and standards, workplace health and safety (WHS) requirements for scoped work
- principles of the following technologies:
 - access networks
 - core networks
 - information communications technologies (ICT) network topologies
 - mobile cellular networks
 - network protocols and operating systems

- optical networks and principles
- radio frequency (RF) technologies and principles
- radio frequency identification (RFID) hardware and software
- ICT industry business processes, including software solutions and supplier costing
- compatibility issues and resolution procedures
- configuration of internet protocol (IP) networks
- desktop applications and operating systems
- security protocols, standards and data encryption
- network design documentation.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site for design work
- client functional requirements
- business specifications
- database software
- simulation software
- organisational guidelines
- a network or computer layout
- site design software and hardware
- information on a range of ICT business solutions.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN623 Design and manage internet protocol TV in a service provider network

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to design a multiprotocol label switching (MPLS) network for internet protocol TV (IPTV) and manage delivery of IPTV services. This includes core and access networks for the service provider.

It applies to individuals with outstanding technical skills, including designers and installers of Next Generation Networks (NGN), IP networks providing fast internet, voice over internet protocol (VoIP), IPTV and internet TV services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications Networks Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Produce and evaluate design requirements for an IPTV network	<ul style="list-style-type: none">1.1 Analyse major video models and the impact video challenges have on design of an IPTV network1.2 Evaluate IPTV against other competing TV broadcast technologies to determine optimum design approach1.3 Produce the topology of an IPTV network, showing network architecture from IPTV standards' bodies and determine design requirements1.4 Plan dimensioning of network parameters for multicast and unicast video delivery over broadband in a service provider

ELEMENT	PERFORMANCE CRITERIA
	network
2. Design an IPTV network for video on demand (VoD) delivery	<p>2.1 Design the content delivery system (CDS) to cache IPTV content in each major metropolitan area for broadcast or streaming VoD models to eliminate performance variability introduced by internet transport or core peering relationships</p> <p>2.2 Design a video network to provide VoD loads with network solutions using VoD design requirements</p> <p>2.3 Design a VoD application to meet bandwidth requirements and quality of service (QoS) requirements for commercial viability of IPTV network</p>
3. Design and configure an MPLS IPTV network to meet business requirements	<p>3.1 Determine IP-MPLS network design requirements</p> <p>3.2 Investigate factors that affect design considerations and ways they can be minimised</p> <p>3.3 Produce the design topology of a MPLS network to provide secure methods of transporting IP packets using layer 2 protocols</p> <p>3.4 Design a MPLS layer over the IP networking structure, to combine efficiency of multicast protocols with traffic engineering (TE) facilities to enable fast packet forwarding for real time video streaming applications</p>
4. Manage delivery of IPTV services	<p>4.1 Determine operational processes required to support IPTV by operators</p> <p>4.2 Produce a plan of the management and customer support model, including strategies dealing with delivery of VoD issues</p> <p>4.3 Produce a plan of a video network using video delivery strategies to deliver optimum average revenue per user (ARPU) to serve the demographic of an area and the nature of an operator's business</p> <p>4.4 Manage and monitor video across the network using a management tool</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none">Organises, evaluates and interprets standards documentation to properly evaluate design requirements
Writing	<ul style="list-style-type: none">Prepares workplace documentation, including diagrammatic material, incorporating technical language to communicate complex information clearly and effectively

SKILL	DESCRIPTION
Planning and organising	<ul style="list-style-type: none">• Uses formal processes to identify key information and issues, evaluate alternative strategies, anticipate consequences and consider implementation issues and contingencies• Experiments with possibilities of new systems, devices and applications before conducting a more sophisticated analysis of benefits and costs
Problem solving	<ul style="list-style-type: none">• Uses formal, analytical and lateral thinking techniques for identifying issues, generating and evaluating possible solutions
Technology	<ul style="list-style-type: none">• Uses digital tools to access and organise complex data and analyse multiple sources of information for strategic purposes

Unit Mapping Information

Supersedes and is equivalent to ICTTEN612 Design and manage internet protocol TV in a service provider network.

Assessment Requirements for ICTTEN623 Design and manage internet protocol TV in a service provider network

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- produce and evaluate design requirements for at least two internet protocol TV (IPTV) networks.

In the course of the above, the candidate must:

- design IPTV network for voice on demand (VoD) delivery
- design and configure a multiprotocol label switching (MPLS) IPTV network to meet business requirements
- manage delivery of IPTV services.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, codes, company work practices, regulations and standards, workplace health and safety (WHS) requirements for scoped work
- competing video delivery over broadband networks
- current industry-accepted IPTV hardware and software products
- networking technologies including:
 - network operating systems
 - internet protocol (IP) networks
 - MPLS networks
- IPTV transmission technologies and protocols
- workplace documentation, including diagrammatic material
- functions and features of:
 - management and customer support plans

- video network plans.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- protocols, configuration documents, management tools and standards
- network and demographic trends, and customer demand data.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN817 Plan transmission networks

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to analyse requirements and plan a new or upgraded telecommunication transmission network or convergence to Next Generation Networks (NGN).

It applies to individuals with high-level technical skills working as technical officers, supervisors and engineers working with optical, dense wavelength division multiplexing (DWDM), fibre networks and wireless networks.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications Networks Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Scope requirements to plan transmission networks	<ul style="list-style-type: none">1.1 Obtain project brief and scope from relevant personnel and arrange for site access in compliance with required security arrangements, legislation, codes, regulations and standards1.2 Evaluate transmission options and select required transmission network that meets criteria outlined in project brief1.3 Analyse limitations of transmission path characteristics and develop solutions for transmission impairments1.4 Produce a report outlining reasons for selection of a transmission network, together with a shortlist of suitable equipment vendors and products

ELEMENT	PERFORMANCE CRITERIA
	<p>1.5 Obtain traffic load from network information sources or forecasts and dimension the proposed network service</p> <p>1.6 Produce brief on relationship between transmission network architecture components and overall network, and their impact on the project</p> <p>1.7 Evaluate equipment type and technologies, and determine availability, cost and compatibility with existing network equipment</p> <p>1.8 Determine resources and equipment needed for work according to enterprise procedures and organisational requirements</p> <p>1.9 Assess capacity limitation of various platforms in context of the work and optimise maximum network performance</p> <p>1.10 Determine product capability and calculate allowable capacity of transmission network to allow for network growth</p>
2. Produce link budget for transmission networks	<p>2.1 Analyse transmission system using equipment and vendor's specifications to produce a link budget and assess resulting margin</p> <p>2.2 Document results of link budget analysis</p>
3. Produce deployment plan for transmission networks	<p>3.1 Conduct planning work using required equipment components in compliance with transmission network deployment rules and exemption process criteria</p> <p>3.2 Produce preliminary plan on network deployment that maintains transmission network integrity</p> <p>3.3 Establish a solution to unexpected situations with consideration to job specifications, safety and enterprise procedures</p> <p>3.4 Review plan and confirm that it complies with required standards and codes when working on network access, and make required adjustments</p>
4. Complete plan of transmission networks	<p>4.1 Produce final deployment plan and recommendations agreed with the customer</p> <p>4.2 Provide report on network management and performance monitoring system to be incorporated in the transmission network</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Interprets numerical information to determine business costs and conduct link budget calculations, interpret results and evaluate

SKILL	DESCRIPTION
	different types of technical data
Oral communication	<ul style="list-style-type: none"> Uses highly developed listening, observational and questioning skills to understand project scope and clarify and explore meaning
Reading	<ul style="list-style-type: none"> Organises, evaluates and interprets complex technical and non-technical information including legislative, enterprise and policy documentation
Writing	<ul style="list-style-type: none"> Prepares workplace documentation, including reports and recommendations, incorporating technical language to communicate complex information clearly and effectively
Teamwork	<ul style="list-style-type: none"> Selects and uses required conventions and protocols when communicating with stakeholders in various work contexts Collaborates with others to achieve joint outcomes, taking the lead in identifying all issues and facilitating agreement
Planning and organising	<ul style="list-style-type: none"> Uses a combination of formal, logical planning processes and an understanding of context for complex, high-impact activities with strategic implications Demonstrates a sophisticated understanding of principles, concepts, language and practices associated with the digital world and uses these to understand uses and potential of technology Implements actions according to a predetermined plan, making adjustments if necessary Takes responsibility for high-impact decisions in complex situations involving many variables and constraints Uses formal analytical and lateral thinking techniques for identifying issues, generating and evaluating possible solutions
Self-management	<ul style="list-style-type: none"> Monitors adherence to organisational policies and protocols and legal and regulatory requirements of self and others

Unit Mapping Information

Supersedes and is equivalent to ICTTEN801 Plan a transmission network.

Assessment Requirements for ICTTEN817 Plan transmission networks

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- plan at least two transmission networks.

In the course of the above, the candidate must:

- scope network requirements
- evaluate transmission options and select required transmission networks
- analyse effects of transmission path characteristics on transmission systems
- develop solutions for transmission impairments
- select required testing regimes for transmission technologies
- determine key multiplexing features of transmission technologies.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, codes, company work practices, regulations and standards, workplace health and safety (WHS) requirements for scoped work
- alternating current and transmission line theory
- emerging network switching and transmission technologies
- network capacity and capability management
- capacity limitation of various platforms
- commercial considerations of Access Network deployment
- common switching and transmission support services
- compatibility issues for new technologies and equipment
- currency of technology and equipment under consideration
- features of:

- data transmission
- digital multiplexing techniques and hierarchies
- enterprise deployment rules
- exemption process criteria
- network topologies
- product capability and availability that are allowable within a transmission network
- aspects of networks when planning a network, including:
 - alarm management
 - bearers
 - performance monitoring systems
 - transmission
 - architectures and geographical categorisation
 - information sources
 - technology and equipment
- cost analysis for a planned network
- workplace documentation, including reports.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site to plan transmission network
- equipment and system manuals and specifications
- legislation and documentation to plan a transmission network

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN818 Align systems with product and technology strategy

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to develop technology roadmaps and interface management systems to align and integrate systems with a product and technology strategy.

It applies to individuals with technical and task management skills according to manufacturer's design specifications.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications Networks Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Develop technology roadmap	1.1 Analyse market research information and determine customer needs within product and technology strategy 1.2 Evaluate enterprise and technology issues anticipated to affect system design, and translate them into system requirements 1.3 Evaluate program, product and technology needs that affect definition of the system lifecycle 1.4 Develop systems integration, verification and validation plans from design requirements 1.5 Develop and communicate key aspects on implementation of the technology roadmap to relevant personnel
2. Develop interface	2.1 Determine system element interfaces and sources of complexity

ELEMENT	PERFORMANCE CRITERIA
management of system elements	<p>for interface management of the system</p> <p>2.2 Develop a process and required techniques to be adopted for interface management of system elements</p> <p>2.3 Create a control process of system element interfaces of the management system</p> <p>2.4 Liaise and arbitrate conflicts in the interface's definition process</p>
3. Implement systems integration	<p>3.1 Evaluate suitability of system integration, verification and validation plans for the product and technology strategy of the technology road map for a consumer product</p> <p>3.2 Develop systems integration, verification and validation plans for complex systems, including method and timing for each activity</p> <p>3.3 Manage system integration plan and diagnose complex faults</p> <p>3.4 Document fault conditions, report to relevant person and follow up corrective actions</p> <p>3.5 Prepare evidence for customer acceptance and certification of the system integration management plan for consumer product</p> <p>3.6 Plan and manage a transition to operational activity of product</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Oral communication	<ul style="list-style-type: none"> Participates in verbal exchanges using highly developed listening, observational and questioning skills to understand others' perspectives, and clarify, explore and extend meaning
Reading	<ul style="list-style-type: none"> Organises, evaluates and interprets technical documentation, software and hardware manuals, specifications and required enterprise policy
Writing	<ul style="list-style-type: none"> Prepares workplace documentation, including diagrammatic material incorporating technical language, to communicate complex information clearly and effectively
Teamwork	<ul style="list-style-type: none"> Selects and uses required conventions and protocols when communicating with stakeholders in a range of work contexts Collaborates with others to achieve joint outcomes, taking the lead in identifying issues and facilitating agreement
Planning and organising	<ul style="list-style-type: none"> Uses a combination of formal, logical planning processes and an understanding of context for complex, high-impact activities with strategic implications

SKILL	DESCRIPTION
	<ul style="list-style-type: none">• Implements actions according to a predetermined plan, making adjustments if necessary• Takes responsibility for high-impact decisions in complex situations involving many variables and constraints• Uses formal analytical and lateral thinking techniques to resolve software, hardware and logistics problems
Technology	<ul style="list-style-type: none">• Demonstrates a sophisticated understanding of principles, concepts, language and practices associated with the digital world and uses these to plan required systems

Unit Mapping Information

Supersedes and is equivalent to ICTTEN802 Manage alignment of systems with product and technology strategy.

Links

Assessment Requirements for ICTTEN818 Align systems with product and technology strategy

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- align at least two systems with an organisation's product and technology strategy.

In the course of the above, the candidate must:

- plan implementation and testing of new system requirements, including system functionality and performance under load conditions
- manage interface elements of systems
- implement systems integration
- recognise potential causes of problems and service level impact
- analyse impact of integration of system changes on network
- prepare documentation for customer acceptance and certification of system integration.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, codes, company work practices, regulations and standards, workplace health and safety (WHS) requirements for scoped work
- technology issues for specified enterprises
- integration, verification and validation plans
- methods of preparing documentation for customer acceptance and certification of system integration
- functions and features of:
 - interface management systems
 - system element interfaces
 - system integration solutions

- technology roadmaps
- workplace documentation
- specific workplace health and safety (WHS) requirements that impact activity in terms of safety of self and the general public
- system life cycles
- product and technology strategies.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site where alignment of computer support systems with a product and technology strategy may be conducted
- software tools currently used in industry
- vendor products, specifications, equipment and enterprise policy required for the activity.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN819 Translate domain and solution architectures into platform requirements and designs

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to develop, deploy, manage and optimise the entire solution life cycle via translation for an existing or new infrastructure of Next Generation Technology (NGN).

It applies to individuals with highly developed technical skills who use design software and simulation to test system performance to a manufacturer's or design specification.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications Networks Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Develop system design requirements	<ul style="list-style-type: none">1.1 Produce system requirements specifications for a complex project involving enterprise and technology issues using the simplest possible technology and making the system modular1.2 Resolve and negotiate requirement conflicts to establish a complete and consistent requirement set1.3 Produce and develop acceptance criteria for requirements1.4 Design a requirements management plan with categorisations, structures and sources of complexity1.5 Develop a process to manage requirements, enabling users to influence future improvements

ELEMENT	PERFORMANCE CRITERIA
2. Produce system design based on requirements	<p>2.1 Evaluate strengths and weaknesses of required technologies in context of the design requirement and needs for systems integration</p> <p>2.2 Create range of alternative interdisciplinary concepts and assess their attributes</p> <p>2.3 Plan for incorporation of later life-cycle design attributes while developing design requirements</p> <p>2.4 Devise a system design strategy and approach, using tools and techniques to conduct functional analysis</p> <p>2.5 Produce a set of parameters to track critical aspects of the design</p> <p>2.6 Use documentation, modelling and simulation tools and techniques to represent a system or system element</p> <p>2.7 Use complex simulations to evaluate design concepts for a system or system element</p> <p>2.8 Produce a report to evaluate and advise on risks, suitability and limitations of models and simulations</p> <p>2.9 Identify underlying domain-specific issues, strategy and approach to be adopted for ensuring system robustness</p> <p>2.10 Produce a robust design using domain-specific strategy and approach for platform requirements and designs</p>
3. Verify solution design and traceability	<p>3.1 Align specific aspects of the design to original intent</p> <p>3.2 Verify and track specific aspects of current design against original intent throughout the supply chain</p> <p>3.3 Compare verification requirements with system requirements</p> <p>3.4 Use change control and configuration management to implement remedial actions and change control for inconsistencies</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Oral communication	<ul style="list-style-type: none"> Participates in verbal exchanges using relevant tone and clear language to address relevant personnel Uses listening and questioning skills to confirm understanding
Reading	<ul style="list-style-type: none"> Organises, evaluates and critiques ideas and information from a wide range of complex texts
Writing	<ul style="list-style-type: none"> Demonstrates sophisticated writing skills by selecting required

SKILL	DESCRIPTION
	conventions and stylistic devices to express precise meaning
Teamwork	<ul style="list-style-type: none">• Collaborates and negotiates to achieve agreeable outcomes in potentially contentious situations
Planning and organising	<ul style="list-style-type: none">• Uses a combination of formal, logical planning processes and an understanding of context for complex, high-impact activities with strategic implications
Problem solving	<ul style="list-style-type: none">• Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering required information and identifying and evaluating options against agreed criteria• Uses formal analytical and lateral thinking techniques for diagnosing problems and generating and evaluating possible solutions
Technology	<ul style="list-style-type: none">• Demonstrates a sophisticated understanding of principles, concepts, language and practices associated with the digital world and uses this to analyse and design solutions

Unit Mapping Information

Supersedes and is equivalent to ICTTEN803 Translate domain and solution architectures into platform requirements and designs.

Assessment Requirements for ICTTEN819 Translate domain and solution architectures into platform requirements and designs

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- translate at least two domain and solution architectures into platform requirements and designs.

In the course of the above, the candidate must:

- develop system design requirements
- evaluate design concepts for system or system element using complex simulations
- produce a system design using domain specific strategy to platform requirements and design
- use functional analysis tools
- verify solution design and traceability.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, codes, company work practices, regulations and standards, workplace health and safety (WHS) requirements for scoped work
- complex simulation techniques
- enterprise platforms and system designs
- design of management plans
- domain and solution architectures
- technological issues for a specified enterprise
- information required to simulate computer system elements according to a test specification
- interdisciplinary concepts and attributes
- life cycle design attributes

- remedial actions and select control for inconsistencies
- solution design and traceability
- functions and features of tools required to conduct functional analysis.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site where development, deployment, management and optimisation of domain and solution architectures into platform requirements and designs can be conducted
- documentation, modelling and simulation tools currently used in industry
- tests and equipment currently used in industry.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN820 Manage end to end architectural solutions across multiple domains

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to analyse business options and design for network infrastructure service providers and implement end-to-end architectural solutions.

It applies to individuals with excellent technical, communication and planning skills working in project management roles with authority to direct installation activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications Networks Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Evaluate tools and techniques for architectural design	1.1 Apply principles of architectural design within the life cycle of application software 1.2 Develop a process to apply required tools and techniques for architectural design of end-to-end solutions 1.3 Evaluate and select required analysis and selection techniques to develop a partition between discipline technologies and acquire discipline-specific requirements
2. Analyse design options for optimal solutions	2.1 Analyse business options to support architectural design trade-offs for an optimal design solution 2.2 Develop alternative architectural designs traceable to the requirements

ELEMENT	PERFORMANCE CRITERIA
	2.3 Evaluate a range of architectural solutions and justify selection of the optimum solution
3. Develop interface requirements for effective solutions across multiple domains	3.1 Evaluate system element interfaces and sources of complexity for interface management of the system across multiple domains 3.2 Develop a process and required techniques to be adopted for the interface management of system elements for end-to-end architectural solutions 3.3 Produce a control process for system element interfaces of the management system 3.4 Liaise and arbitrate between stakeholders where there are conflicts in the definition of interfaces
4. Manage end-to-end systems integration	4.1 Evaluate suitability of system integration, verification and validation plans for end-to-end architectural solutions across multiple domains 4.2 Develop systems integration, verification and validation plans for complex systems to confirm a viable integration process 4.3 Manage system integration plan and diagnose complex faults 4.4 Document fault conditions, report to required person and follow up corrective actions 4.5 Prepare evidence for customer acceptance and certification of the system integration management plan 4.6 Plan and manage a transition to operational activity for the end-to-end solution
5. Incorporate components of an architecture from a third party	5.1 Negotiate with vendor for acceptable vendor agreements and agreed roles and responsibilities of each party 5.2 Manage vendor within a clearly defined process for dealing with defects and scope changes 5.3 Plan beyond delivery of specific elements and establish requirements for ongoing maintenance and support from vendor
6. Manage requirements for the architecture solution	6.1 Negotiate minimum component costs with vendors and assess vendor component costs 6.2 Manage vendor selection process to provide high-quality solutions within required costings

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Interprets numerical information to determine best value-for-money solutions according to business requirements
Oral communication	<ul style="list-style-type: none"> Participates in verbal exchanges with relevant personnel, customers and contractors using required tone and clear language Uses listening and questioning skills to confirm understanding
Reading	<ul style="list-style-type: none"> Organises, evaluates and interprets a range of complex documentation to evaluate product and technology needs
Writing	<ul style="list-style-type: none"> Prepares workplace documentation including reports and designs incorporating technical language to communicate complex information clearly and effectively
Teamwork	<ul style="list-style-type: none"> Selects and uses required conventions and protocols when communicating with customers, vendors or technical personnel in a range of work contexts Collaborates and negotiates to achieve agreeable outcomes in potentially contentious situations
Planning and organising	<ul style="list-style-type: none"> Uses a combination of formal, logical planning processes and an understanding of context for complex, high-impact activities with strategic implications
Problem solving	<ul style="list-style-type: none"> Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering required information and identifying and evaluating options against agreed criteria Uses formal analytical and lateral thinking techniques for diagnosing problems and generating and evaluating possible solutions
Technology	<ul style="list-style-type: none"> Demonstrates a sophisticated understanding of principles, concepts, language and practices associated with the digital world and uses these to plan complex systems

Unit Mapping Information

Supersedes and is equivalent to ICTTEN804 Manage end to end architectural solutions across multiple domains.

Assessment Requirements for ICTTEN820 Manage end to end architectural solutions across multiple domains

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- manage at least two end-to-end architectural solutions across multiple domains.

In the course of the above, the candidate must:

- evaluate tools and techniques for at least two architectural designs
- analyse design options for optimal solutions
- develop interface requirements for effective solutions across multiple domains
- incorporate components of third-party architecture.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, codes, company work practices, regulations and standards, workplace health and safety (WHS) requirements for scoped work
- architectural design tools
- interface management
- management of end-to-end system integration
- new end-to-end architecture design solutions
- solutions for business options across multiple domains
- system integration solution techniques
- system interfaces
- validation plans
- importance of vendors' agreements with specific reference to roles and responsibilities of each party
- methods to calculate components' costs.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site where architecture solutions across multiple domains can be managed
- simulation software tools currently used in industry
- vendor products, specifications, equipment and enterprise policy required for the activity.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN821 Manage solution architecture and impacts

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to analyse business options to plan, develop and manage solution architecture systems integration across multiple architectures for a network service provider.

It applies to individuals with excellent technical, communication and planning skills working in project management roles with authority to direct installation activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications Networks Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Develop plan to support architectural design process	<p>1.1 Prepare a plan with techniques to support the architectural design process and communicate the solution to different stakeholder groups</p> <p>1.2 Analyse business options to support architectural design trade-offs for optimal design solution</p> <p>1.3 Evaluate strengths and weaknesses of required technologies in context of the requirement</p> <p>1.4 Assess a range of interdisciplinary concept ideas and effect their attributes would have on the design requirements</p> <p>1.5 Prepare a solutions architecture plan detailing all possible solutions</p>

ELEMENT	PERFORMANCE CRITERIA
2. Develop interface requirements for effective solutions across multiple architectures	2.1 Evaluate system element interfaces and sources of complexity for interface management of the system across multiple architectures 2.2 Develop a process and required techniques to be adopted for interface management of system elements for solution architecture 2.3 Produce a control process of system element interfaces of the management system 2.4 Liaise and arbitrate between stakeholders where there are conflicts in definition of interfaces
3. Manage solution architecture systems integration	3.1 Evaluate suitability of system integration, verification and validation plans for solution architecture from requirements 3.2 Develop systems integration, verification and validation plans for complex systems to confirm viable integration process 3.3 Manage system integration plan and diagnose complex faults 3.4 Document fault conditions, report to relevant person and follow up corrective actions 3.5 Prepare evidence for customer acceptance and certification of system integration management plan 3.6 Plan and manage a transition to operational activity for the solution architecture
4. Manage solution implementation and notify stakeholder groups	4.1 Produce final project management requirements against solution architecture plan and notify stakeholder groups of impending implementations 4.2 Evaluate impact of proposed project solutions on customers and enterprise 4.3 Manage solution architecture activities as part of overall project plan and monitor solution architecture risks 4.4 Manage amendments to solution architecture processes to meet needs of the project and apply necessary corrective actions

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Oral communication	<ul style="list-style-type: none"> Participates in verbal exchanges using tone and language required for the audience and environment
Reading	<ul style="list-style-type: none"> Organises, evaluates and interprets a range of complex documentation such as software and hardware manuals

SKILL	DESCRIPTION
Writing	<ul style="list-style-type: none">• Prepares workplace documentation, including recommendations, incorporating technical language to communicate complex information clearly and effectively
Teamwork	<ul style="list-style-type: none">• Selects and uses required conventions and protocols when communicating with stakeholders in a range of work contexts• Collaborates and negotiates to achieve agreeable outcomes in potentially contentious situations
Planning and organising	<ul style="list-style-type: none">• Operates from a broad conceptual plan, developing operational detail in stages, regularly reviewing priorities and performance during implementation, identifying and addressing issues• Takes responsibility for high-impact decisions in complex situations involving many variables and constraints• Uses formal analytical and lateral thinking techniques to resolve domain, technology and logistics problems• Monitors outcomes of decisions, considering results from a range of perspectives and identifying key concepts and principles and their impact on customers and enterprise
Technology	<ul style="list-style-type: none">• Demonstrates a sophisticated understanding of principles, concepts, language and practices associated with the digital world and uses this to prepare proposals

Unit Mapping Information

Supersedes and is equivalent to ICTTEN805 Manage solution architecture and impacts in line with organisational processes.

Assessment Requirements for ICTTEN821 Manage solution architecture and impacts

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- manage solution architecture and impacts for at least two projects.

In the course of the above, the candidate must:

- prepare architecture plans exploring solutions
- develop interface requirements for effective solutions across multiple architectures
- manage solution architecture systems integration
- analyse impact of proposed project solutions on customers and enterprise
- prepare evidence for customer acceptance and certification of system integration management plan
- produce final project management requirements.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, codes, company work practices, regulations and standards, workplace health and safety (WHS) requirements for scoped work
- features and operating requirements of complex systems, key performance indicators (KPI) and service level agreements
- information required to define solution architecture and impacts in line with organisational processes
- interdisciplinary concepts across multiple architectures
- issues and challenges occurring with system changes
- manufacturer requirements for operation of systems equipment
- required organisational policies and procedures
- performance and integration requirements

- solutions architecture alternatives
- system element interfaces for solution architecture
- system integration plans
- validation plans.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site where development and management of solution architecture systems integration across multiple architectures may be conducted
- software tools currently used in industry
- vendor products, specifications, equipment and enterprise policy required for the activity.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN822 Manage application layer solutions

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to develop, evaluate, manage, deploy and maintain application layer solutions for new solutions or existing network service.

It applies to individuals with highly developed technical skills working as network engineering staff or senior technical officers with relevant project management roles and authority to direct activities of installation staff, manufacturers and vendors.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications networks engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Develop application layer solutions	<ul style="list-style-type: none">1.1 Produce requirements for applications layer solutions for delivery of new applications layer solutions to customers using forecasting demand data1.2 Prepare a plan for an organisational change control process and integration of new solutions within a complete network infrastructure1.3 Produce a test management schedule for the testing process of application product1.4 Translate complex design and architecture requirements to traceable application characteristics according to design requirements

ELEMENT	PERFORMANCE CRITERIA
	<p>1.5 Develop application architecture solution specifications using an industry process according to design requirements</p> <p>1.6 Develop application software resource profiling and select suitable vendor for negotiations</p> <p>1.7 Translate complex requirements into software packaging</p> <p>1.8 Produce software deployment mapping and version control to confirm complete integration and compatibility of application solution with existing system</p> <p>1.9 Complete configuration management and provide complex input network design requirements</p>
2. Analyse test results of application layer solutions	<p>2.1 Use design document and integration document software to replicate issues exhibited in test environment</p> <p>2.2 Certify software solution compatibility and compliance to requirements using a web-based test management tool (quality centre) to conduct performance evaluation tests</p> <p>2.3 Analyse test reports to evaluate load balancing and network security issues in test environment</p> <p>2.4 Resolve complex issues in interface to isolate defects</p>
3. Manage deployment of application layer solutions	<p>3.1 Plan and prepare evidence for customer acceptance and certification</p> <p>3.2 Plan and manage transition to operation activities required for transition to operation of integrated application layer solution</p> <p>3.3 Prepare installation failures procedure to make changes while maintaining service levels</p> <p>3.4 Manage change implementation plan to maintain system stability</p>
4. Maintain currency of application layer solutions	<p>4.1 Manage ongoing monitoring activities to prolong new applications layer solution life cycle for cost-effective business reasons</p> <p>4.2 Produce tuning activities to make efficient use of resources</p> <p>4.3 Analyse current demands for resources to derive forecasts and future requirements</p> <p>4.4 Produce a capacity plan predicting infrastructure resource needs to achieve agreed service levels</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none">Analyses and synthesises highly embedded mathematical information in a broad range of tasks and texts
Reading	<ul style="list-style-type: none">Organises, evaluates and interprets a range of complex technical documentation including software and hardware manuals
Writing	<ul style="list-style-type: none">Prepares workplace documentation including complex plans incorporating technical language to communicate complex information clearly and effectively
Planning and organising	<ul style="list-style-type: none">Operates from a broad conceptual plan, developing operational detail in stages, regularly reviewing priorities and performance during implementation, and identifying and addressing issuesTakes responsibility for high-impact decisions in complex situations involving many variables and constraintsMonitors outcomes of decisions, considering results from a range of perspectives and identifying key concepts and principles and their impact on customers and enterprise
Problem solving	<ul style="list-style-type: none">Uses formal analytical and lateral thinking techniques to resolve logistics problems
Technology	<ul style="list-style-type: none">Uses a broad range of strategies to store, access and organise virtual information, recognising design choices will influence what information is retrieved and how it may be interpreted and usedDemonstrates a sophisticated understanding of principles, concepts, language and practices associated with the digital world and uses this to devise solutions

Unit Mapping Information

Supersedes and is equivalent to ICTTEN806 Manage application layer solutions.

Assessment Requirements for ICTTEN822 Manage application layer solutions

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- manage at least two application layer solutions.

In the course of the above, the candidate must:

- produce test management schedules
- develop application architecture solution specifications
- produce software deployment mapping and version control
- analyse test results of application layer solutions
- prepare evidence for customer acceptance and certification
- prepare installation failure procedures
- manage ongoing monitoring activities
- produce tuning activities
- produce capacity plans, predicting infrastructure resource needs.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, codes, company work practices, regulations and standards, workplace health and safety (WHS) requirements for scoped work
- installation failure procedures
- important tenets of managing change
- different planning documents including:
 - organisational change implementation plan
 - capacity plan
- new applications layer solutions

- software and hardware resources required by an application layer
- system integration techniques
- test management scheduling
- tuning activities to maintain currency
- use of forecasting demand data
- use and purpose of test management tools.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site where management of application layer solutions may be conducted
- software tools currently used in industry
- vendor products, specifications, equipment and enterprise policy required for the activity.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN823 Manage voice, data and internet protocol network solutions

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to integrate new solutions to an existing network and manage change implementation.

It applies to individuals with excellent technical skills working as network engineering or senior technical staff within project management roles with authority to direct activities of installation staff, manufacturers and vendors.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications Networks Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Develop voice, data and IP network solutions	<p>1.1 Produce requirements for voice, data and IP network solutions for delivery of new voice, data and IP networks to customers using forecasting demand data</p> <p>1.2 Prepare plan for organisational change, control process and integration of new solutions within a complete network infrastructure</p> <p>1.3 Produce test management schedule for testing process of network product solution</p> <p>1.4 Translate complex design and architecture requirements to traceable software application characteristics according to design</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>requirements</p> <p>1.5 Develop network architecture solution specifications using industry process according to design requirements</p> <p>1.6 Develop software and hardware resource profiling and select suitable vendor for negotiations</p> <p>1.7 Translate complex requirements into software packaging</p> <p>1.8 Produce software deployment mapping and version control to confirm complete integration and compatibility of network application solution to existing system</p> <p>1.9 Complete configuration management and provide complex input network design requirements</p>
2. Analyse test results of voice, data and IP network solutions	<p>2.1 Use design document and integration document software to replicate issues exhibited in test environment</p> <p>2.2 Certify software solution compatibility and compliance to requirements using web-based test management tool (quality centre) to conduct performance evaluation tests</p> <p>2.3 Analyse test reports to evaluate load balancing and network security issues in test environment</p> <p>2.4 Resolve complex issues in interface to isolate defects</p>
3. Manage deployment of voice, data and IP network solutions	<p>3.1 Plan and prepare evidence for customer acceptance and certification</p> <p>3.2 Plan and manage transition to operation activities required for transition to operation of integrated IP network solution</p> <p>3.3 Prepare installation failures procedure to make changes while maintaining service levels</p> <p>3.4 Manage change implementation plan to maintain system stability</p>
4. Maintain currency of voice, data and IP network solutions	<p>4.1 Manage ongoing monitoring activities to prolong new IP network solution life cycle for cost-effective business reasons</p> <p>4.2 Produce tuning activities to make efficient use of resources</p> <p>4.3 Analyse current demand for resources to derive forecasts and future requirements</p> <p>4.4 Produce a capacity plan predicting infrastructure resource needs to achieve agreed service levels</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none">• Uses numerical information to interpret results, evaluate different types of technical data, take measurements and determine cost-effective outcomes
Reading	<ul style="list-style-type: none">• Organises, evaluates and interprets complex technical documentation, such as software and hardware manuals and design specifications
Writing	<ul style="list-style-type: none">• Prepares workplace documentation including reports and recommendations incorporating technical language to communicate complex information clearly and effectively
Planning and organising	<ul style="list-style-type: none">• Uses a combination of formal, logical planning processes and an understanding of context for complex, high-impact activities with strategic implications• Uses formal analytical and lateral thinking techniques for identifying issues, and developing and evaluating procedures for network solutions
Technology	<ul style="list-style-type: none">• Demonstrates a sophisticated understanding of principles, concepts, language and practices associated with the digital world and uses this to devise solutions

Assessment Requirements for ICTTEN823 Manage voice, data and internet protocol network solutions

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop and manage at least two voice, data and IP network solutions.

In the course of the above, the candidate must:

- produce test management schedules
- develop network architecture solution specifications
- develop software and hardware resource profiling and select suitable vendor for negotiations
- conduct configuration management of voice, data and IP network and provide complex input network design requirements
- analyse test reports
- prepare installation failures procedure
- produce tuning activities to enable efficiencies
- produce capacity plan predicting infrastructure resource needs.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, codes, company work practices, regulations and standards, workplace health and safety (WHS) requirements for scoped work
- functions and features of capacity plans
- installation failure procedures
- change management strategies required for the introduction of new technologies
- software application characteristics
- new IP network solutions
- software and hardware resources required to project

- system integration techniques
- test management scheduling
- detailed summary of tuning activities necessary to maintain currency
- use of forecasting demand data
- test management tools.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site where management of voice, data and IP network solutions can be conducted
- software and hardware resources suitable for developing, deploying and managing voice, data and IP network solutions
- tests and equipment currently used in industry.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN824 Manage network testing strategies

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to plan and manage a test regime for evaluation of application software for a network.

It applies to individuals with high-level technical skills working as network engineers or senior technical staff within project management roles.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications Networks Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan test effort and develop test strategy for an application software	1.1 Analyse functionalities of an application software from the system design document and create test strategy for new network product lines 1.2 Produce steps for test strategy, including attributes of each step according to enterprise policy 1.3 Produce test strategy for evaluating suitability of application software for integration into networks 1.4 Analyse test strategy and identify types of risks that would hinder test performance or reality
2. Plan test strategy for regime	2.1 Produce phases of a test cycle for a test regime according to system design document 2.2 Assess a range of tests required to evaluate performance and

ELEMENT	PERFORMANCE CRITERIA
	functionality of application software and determine tests required to suit the test regime 2.3 Evaluate features of testing tool and debuggers and select a required tool to test software application and detect faults 2.4 Evaluate elements of test plan that cover testing functionality of the application software
3. Design test plan and produce test reviews	3.1 Determine forecast time, effort and cost for low and medium intensity projects to perform testing 3.2 Develop a test case or test scenario with prerequisite states based on requirements to generate expected test results for test plan 3.3 Produce test plan for specific phases based on requirements of project specifications for the application software 3.4 Produce test reporting associated with particular test phases within test plan 3.5 Analyse test reports and evaluate impact of test plan on the testing environment 3.6 Manage progress of test plan to minimise risks associated with testing and confirm test compliance with test requirements 3.7 Report any detected defects to relevant personnel, and prepare a strategy to manage defects
4. Manage test traceability	4.1 Create a traceability matrix to correlate relationship between marketing requirements and detailed requirements of software product to matching parts of design, test plan and test cases 4.2 Analyse testing metrics produced by test tool to manage tracking of defects and plan process improvements based on the metrics 4.3 Produce an evaluation report from traceability matrix to manage defects or failures from the test plan

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none">Uses numerical information to interpret and evaluate different types of technical data, take measurements and determine cost-effective outcomes
Reading	<ul style="list-style-type: none">Organises, evaluates and critiques ideas and information from a wide range of complex texts

SKILL	DESCRIPTION
Writing	<ul style="list-style-type: none">• Prepares workplace documentation including reports and recommendations incorporating technical language to communicate complex information clearly and effectively
Teamwork	<ul style="list-style-type: none">• Selects and uses required conventions and protocols when communicating with relevant personnel in a range of work contexts
Planning and organising	<ul style="list-style-type: none">• Uses a combination of formal, logical planning processes and an understanding of context for complex, high impact activities with strategic implications• Takes responsibility for high-impact decisions in complex situations involving many variables and constraints
Self-management	<ul style="list-style-type: none">• Adheres to organisational procedures and protocols
Technology	<ul style="list-style-type: none">• Applies formal analytical and lateral thinking techniques for resolving software, hardware and logistics problems• Demonstrates a sophisticated understanding of principles, concepts, language and practices associated with the digital world and uses this to devise strategies

Unit Mapping Information

Supersedes and is equivalent to ICTTEN808 Manage network testing strategies.

Assessment Requirements for ICTTEN824 Manage network testing strategies

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- manage at least two network testing strategies.

In the course of the above, the candidate must:

- produce steps in developing test strategies
- produce test strategies for evaluating suitability of application software
- design test plan and produce test reviews
- produce test plans for specific phases
- develop test scenarios
- produce test reporting associated with particular test phases within test plan
- create traceability matrix
- produce an evaluation report from the traceability matrix to manage defects or failures from the test plan.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, codes, company work practices, regulations and standards, workplace health and safety (WHS) requirements for scoped work
- applications software features and functionalities
- configuration of software testing tools
- creation of a traceability matrix
- different elements of test plans and risks associated with implementation
- features of testing tools and debuggers
- identification of types of risks

- how to manage software defects
- management of test traceability
- phases of test cycles
- production of test reviews
- required steps in developing test strategy
- testing procedures and testing cycles for various system applications
- workplace requirements for evaluation reports.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site where planning and management of a test regime for evaluation of application software may be conducted
- software tools currently used in industry
- vendor products, specifications, equipment and enterprise policy required for the activity.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN825 Investigate applications of cloud networks in network switching

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to develop strategies to accommodate shortfalls in capacity and functionality for a switching network. It also covers how to develop solutions for network growth using emerging technologies, including cloud computing.

It applies to individuals with excellent technical and strategic management skills working as telecommunications planning engineers and senior technical staff.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications Networks Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Evaluate existing physical network infrastructure	<ul style="list-style-type: none">1.1 Analyse scalability, functionality, cost, security and energy consumption of existing physical network infrastructure1.2 Report on shortfalls and risks of existing physical infrastructure in accommodating network growth and increased functionality1.3 Investigate capacity and functionality shortfalls of existing physical infrastructure to highlight limitations of the existing switching network1.4 Document estimated costs and issues associated with meeting capacity and functionality shortfalls using existing physical infrastructure

ELEMENT	PERFORMANCE CRITERIA
2. Investigate the application of cloud networks	<p>2.1 Analyse trends in cloud networks (infrastructure-as-a-service), technologies and multiprotocol label switching (MPLS) architectures against rapid changes in the landscape</p> <p>2.2 Determine applicability of cloud networks (infrastructure-as-a-service) to meet capacity and functionality requirements of the network</p> <p>2.3 Assess risks in using cloud networks to meet capacity and functionality requirements of the network</p> <p>2.4 Evaluate a range of cloud network solutions and justify selection of an optimum network switching solution</p> <p>2.5 Develop solution elements using a series of small project elements</p> <p>2.6 Produce a cloud network alternative solution to emulate the existing core network of a service provider</p>
3. Analyse the impact of the cloud network solution for system integration and across business domains	<p>3.1 Prepare a plan for organisational change control processes and integration of cloud network solutions within a complete network infrastructure</p> <p>3.2 Prepare a test scenario and produce a test management schedule for the testing process of system elements and interfaces using simulation</p> <p>3.3 Use integration document software to replicate issues exhibited in test environment</p> <p>3.4 Certify cloud network solution compatibility and compliance to requirements using the web-based test management tool (quality centre) to conduct performance evaluation tests</p> <p>3.5 Analyse test reports to evaluate load balancing and network security issues in test environment</p> <p>3.6 Document and resolve conflicts detected in simulation testing</p>
4. Develop a business case for implementation of a cloud network	<p>4.1 Prepare a cost-benefit analysis of the cloud network solution as a business case to evaluate the return on investment (RoI)</p> <p>4.2 Investigate staging of the solution and timing implementation of project elements as a scenario for real life implementation</p> <p>4.3 Research and report on key features of cloud network implementation in a business case study</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none">• Uses numerical information to interpret results, evaluate different types of technical data, take measurements and determine cost-effective outcomes for RoI
Reading	<ul style="list-style-type: none">• Researches, evaluates and interprets complex technical documentation, such as software and hardware manuals and design specifications
Writing	<ul style="list-style-type: none">• Prepares workplace documentation, including reports and recommendations incorporating technical language, to communicate complex information
Planning and organising	<ul style="list-style-type: none">• Uses a combination of formal, logical planning processes to identify required information, test strategies and resources• Uses formal, analytical and lateral thinking techniques to resolve problems or to generate ideas
Technology	<ul style="list-style-type: none">• Actively identifies digital systems, devices and applications with potential to meet current and/or future needs• Actively identifies digital systems, devices and applications with potential to meet current and/or future needs• Uses main features and functions of digital tools to complete work tasks

Unit Mapping Information

Supersedes and is equivalent to ICTTEN810 Investigate the application of cloud networks in telecommunications switching.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTTEN825 Investigate applications of cloud networks in network switching

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- investigate applications of at least two cloud networks in network switching.

In the course of the above, the candidate must:

- evaluate physical network capacity and functionality shortfalls
- investigate application of cloud networks and plan at least two architectural designs
- develop components of cloud networking solution for meeting capacity and functionality requirements of the network
- assess network risks
- analyse impact of integration of cloud network solution on network
- prepare test plans with test scenario and produce test management schedules
- use integration document and software test management tools to replicate issues exhibited in test environment
- certify cloud network solution compatibility and compliance
- prepare cost-benefit analyses of cloud network solutions
- develop business cases for implementation of cloud networks.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, codes, company work practices, regulations and standards, workplace health and safety (WHS) requirements for scoped work
- components of infrastructure-as-a-service solutions
- existing digital switching technology in service provider's core network
- information required to develop architectural solutions
- functions and features of:

- test plans, test scenarios and test management schedules
- business cases
- cost-benefit analysis
- return on investment
- cloud network solutions
- integration document software
- new cloud network technologies
- detailed summary of cloud networking transmission, transmitter and receiver architecture and their associated infrastructure
- performance and integration requirements
- technical documentation
- protocols as used on multiprotocol label switching (MPLS) and infrastructure-as-a-service
- detailed explanation of network components and their functions
- specific organisational requirements relating to computer systems
- typical issues and challenges that occur with system changes.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site where the application of cloud networks in network switching may be investigated
- software tools currently used in industry
- vendor products, specifications, equipment and enterprise policy required for the activity.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN826 Evaluate and apply digital signal processing to communication systems

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to analyse, apply and simulate operation of digital signal processing (DSP) to signals in a network system.

It applies to individuals with excellent information and communications technology (ICT) and design skills working as field officers. They develop solutions in modern applications, such as internet protocol TV (IPTV), digital TV, fast broadband and internet applications.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications Networks Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1 Apply DSP design criteria to network system	1.1 Review DSP criteria applied to signal processing 1.2 Perform frequency domain analysis on network signals 1.3 Apply digital processing techniques to DSP baseband communications signals used in digital systems 1.4 Generate output of a comb filter in digital filtering application using convolution theorem and autocorrelation
2 Determine linear time invariant (LTI) system properties	2.1 Simulate network entities using simulation software functions 2.2 Perform calculations to find numerical approximations of the continuous-time convolution process

ELEMENT	PERFORMANCE CRITERIA
	2.3 Simulate echo cancellation by applying simulation software using adaptive DSP algorithms and an inverse filtering method
3 Analyse digital network signals processing	3.1 Analyse the result of digitally passing a signal through a first-order recursive discrete-time filter 3.2 Determine frequency response of a simple continuous-time system using Fourier transform 3.3 Analyse amplitude modulated signals using Fourier transform
4 Analyse time and frequency forms of signals	4.1 Program a simulated software application and represent a comb filter with a signal applied from the required network system 4.2 Produce a report analysing simulated output results and relevance of a DSP filter to a network system

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Performs a range of complex, algorithmic calculations and analyses Analyses and synthesises highly embedded mathematical information in a broad range of tasks and texts
Reading	<ul style="list-style-type: none"> Researches, evaluates and interprets complex technical documentation
Writing	<ul style="list-style-type: none"> Prepares workplace documentation including reports that incorporate technical language to communicate complex information clearly and effectively
Planning and organising	<ul style="list-style-type: none"> Uses different processes to identify key information and issues, evaluate alternative strategies, anticipate consequences and consider implementation issues and contingencies Takes responsibility for high-impact decisions in complex situations involving many variables and constraints
Technology	<ul style="list-style-type: none"> Uses advanced features and functions of digital tools to complete work tasks

Unit Mapping Information

Supersedes and is equivalent to ICTTEN812 Evaluate and apply digital signal processing to communications system.

Assessment Requirements for ICTTEN826 Evaluate and apply digital signal processing to communication systems

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- evaluate and apply at least two digital signal processes to communication systems.

In the course of the above, the candidate must:

- apply digital signal processing (DSP) criteria to a network system
- evaluate linear time invariant (LTI) system properties
- analyse digital and amplitude modulated signals using DSP methods and principles
- demonstrate an awareness of radio frequency issues required to DSP processes
- report on finding of analysis and use of DSP in a network system.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, codes, company work practices, regulations and standards, workplace health and safety (WHS) requirements for scoped work
- digital communications systems
- Fourier transforms
- LTI
- various modulation methods, amplitude (AM), frequency (FM), phase (PM) and digital formats
- organisational policy and procedures for digital signal processing
- common non-compliance issues and responses
- workplace technical documentation and related reports.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a network operations site
- digital communication systems
- simulation software
- network test equipment currently used in industry.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN827 Produce engineering solutions

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to design and evaluate systems and networks to resolve specialised network problems.

It applies to individuals who analyse, calculate and solve complex mathematical engineering problems for advanced network systems requiring numerical simulation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications Networks Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Use advanced engineering mathematics for a range of complex engineering solutions	1.1 Solve mathematical functions using complex trigonometric ratios 1.2 Solve mathematical functions using manipulation of matrices and determinants 1.3 Solve trigonometric functions using operations on complex numbers 1.4 Solve complex functions using integral and differential calculus 1.5 Solve mathematical functions using ordinary differential equations (ODE) 1.6 Solve mathematical equations using Laplace transforms 1.7 Solve mathematical problems using algorithmic control structures 1.8 Produce simulated calculations in required engineering solutions 1.9 Analyse results from simulated solutions and compare to derived

ELEMENT	PERFORMANCE CRITERIA
	solutions 1.10 Adjust variables in the calculation process required to improve engineering solutions
2. Design a simulation control system with queues	2.1 Design simple control systems using simulation software 2.2 Design queuing systems using simulation software 2.3 Design stochastic systems using simulation software 2.4 Document and present all numerical software simulations for the engineering problems

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none">Uses a range of advanced mathematical skills to perform a variety of complex engineering solutions and interpret complex measurement data
Writing	<ul style="list-style-type: none">Prepares workplace documentation that incorporates technical language to communicate complex information clearly and effectively
Planning and organising	<ul style="list-style-type: none">Uses a mix of informal and formal processes to identify key information and issues, evaluate alternative strategies, anticipate consequences and consider implementation issues and contingenciesTakes responsibility for high-impact decisions in complex situations involving many variables and constraints
Technology	<ul style="list-style-type: none">Uses main features and functions of digital tools to complete work tasks

Unit Mapping Information

Supersedes and is equivalent to ICTTEN813 Produce engineering solutions using numerical computations and simulation.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTTEN827 Produce engineering solutions

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- resolve at least two specialised network problems.

In the course of the above, the candidate must:

- solve a range of complex mathematical functions
- use software systems to produce simulations of mathematical solutions
- analyse results of software simulations
- design network systems using software simulations
- document and present software solutions for engineering problems.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, codes, company work practices, regulations and standards, workplace health and safety (WHS) requirements for scoped work
- functions using symbolic and numerical software, including operations of entering and manipulating polynomials in suitable software and then substitution of values and graphing
- matrices and determinants, numerically with and without symbolic and numerical software
- methods to design and debug programs using algorithmic control structures and output results to the screen, a graph and a file
- methods to analyse and manipulate complex numbers numerically and with symbolic software
- methods to determine and manipulate equations using advanced calculus operations of differentiation and integration numerically and with symbolic software

- methods to determine and manipulate equations of the type called ordinary differential equations (ODE) met in network engineering applications numerically and with symbolic software
- methods to determine and manipulate Laplace transforms met in network engineering applications numerically and with symbolic software
- methods to design a simulation control system and simulate queues using software
- functions and features of required technical documentation.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- networked computers
- simulation software
- required documentation
- a range of industry scenarios or workplace examples.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN828 Manage development and application of testing artefacts

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Application

This unit describes the skills and knowledge required to plan and manage test regimes by developing testing artefacts to evaluate network application software.

It applies to individuals working as network engineers and senior technical staff within project management roles, and includes technologies in mobile phones, wireless modems, set top boxes, media centres, web applications and content servers using application software to provide network services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications Networks Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Plan the test effort and develop test strategy for software testing	1.1 Obtain work details and scope from relevant personnel and arrange for site access in compliance with required security arrangements, legislation, codes, regulations and standards 1.2 Analyse functionalities of application software from the system design document and create a test strategy for a new network product line 1.3 Produce steps in developing test strategy and attributes of each step according to enterprise policy 1.4 Produce a test strategy and evaluate suitability of application

ELEMENT	PERFORMANCE CRITERIA
	<p>software for integration into the network</p> <p>1.5 Assess a range of tests required to evaluate performance and functionality of application software and determine tests required to suit the test regime</p> <p>1.6 Evaluate features of testing tool and debuggers, and select a required tool to test the software application and detect faults</p> <p>1.7 Produce a test plan based on requirements of the project specifications, and identify testing artefacts required for model-based software testing</p>
2. Plan the development of testing artefacts	<p>2.1 Develop software testing strategies for uncovering evidence of defects in software systems as part of the quality assurance process</p> <p>2.2 Produce a test dependency model of the relationship between the test regime and test levels in software testing for referencing and validation</p> <p>2.3 Analyse software testing requirements to determine domain testing and application testing artefacts requirements to validate the software product</p>
3. Develop and manage testing artefacts	<p>3.1 Create reusable domain artefacts to detect early defects in domain testing</p> <p>3.2 Modify domain test artefacts by binding variability to create application test artefacts to detect defects in product line applications</p> <p>3.3 Produce test reporting associated with test cycle phases within the test plan</p> <p>3.4 Analyse test reports and evaluate the impact of the test plan with testing artefacts on the testing environment</p> <p>3.5 Manage progress of the test plan, and confirm the test complies with test requirements</p> <p>3.6 Report detected defects to relevant personnel and prepare the strategy to manage defects</p> <p>3.7 Analyse testing metrics produced by the test tool to manage tracking of defects, and use metrics to plan process improvements</p> <p>3.8 Produce an evaluation report from the traceability matrix according to organisational requirements</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none">• Uses numerical information to interpret and evaluate different types of technical data and take measurements
Reading	<ul style="list-style-type: none">• Organises, evaluates and critiques ideas and information from a wide range of complex texts

Assessment Requirements for ICTTEN828 Manage development and application of testing artefacts

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- manage the development and application of at least three different testing artefacts for a network.

In the course of the above, the candidate must:

- produce steps in developing test strategy
- minimise testing risks
- manage defects and failures from the test plan
- produce a test strategy to evaluate suitability of application software
- develop software testing strategies for uncovering evidence of defects in software systems
- create reusable domain artefacts to detect early defects in domain testing
- produce test reporting associated with phases of a test cycle within the test plan
- produce an evaluation report from the traceability matrix.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, codes, company work practices, regulations and standards, workplace health and safety (WHS) requirements for scoped work
- applications' software features and functionalities
- the configuration of software testing tools
- software artefact and explain the process for testing artefacts
- creation of the traceability matrix
- steps in developing the test strategy and specify various tests that may be applied
- domain and application testing

- essential elements of test plans
- features of testing tools and debuggers
- the identification of types of risks
- the management of:
 - software defects
 - test traceability
- phases of test cycles
- production of test reviews
- steps in developing a test strategy
- testing procedures
- workplace evaluation report.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a site where testing artefacts can be developed and applied
- software tools currently used in industry
- vendor products, specifications, equipment and enterprise policy required for the activity.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTWEB304 Build simple web pages

Modification History

Release	Comments
Release 2	This version first released with ICT Information and Communications Technology Training Package Version 8.0. Minor update of unit of competency. Amended typographical error in third bullet point of Knowledge Evidence.
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to use an integrated development environment (IDE) to create, modify and test, simple web pages and web content, according to client requirements.

The unit applies to those who are responsible for creating and maintaining simple websites.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Web

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify authoring and task requirements	1.1 Select preferred integrated development environment (IDE) according to client requirements 1.2 Set preferences for IDE, including site file transfer protocol client
2. Organise required files	2.1 Create, maintain and save files in required location or directory 2.2 Access and use a range of features in IDE

	2.3 Confirm use of IDE with required personnel 2.4 Maintain directory structure for site 2.5 Upload files to required folder using file transfer protocol (FTP)
3. Add content and simple navigation to web pages	3.1 Insert and format text content according to client requirements 3.2 Insert images, data tables and simple forms 3.3 Access markup language and make basic modifications to code 3.4 Create sitemap and plan navigation 3.5 Seek feedback on work performed from required personnel and amend accordingly 3.6 Create links between pages using text and images
4. Test and finalise web pages	4.1 Test elements of website content across multiple browsers and browser versions 4.2 Confirm web page meets client and web content accessibility guidelines 4.3 Evaluate test results and confirm website meets client requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none">Interprets a range of technical specifications and other information and determines solutions according to client requirements
Writing	<ul style="list-style-type: none">Creates files using software and applicable technical language
Self-management	<ul style="list-style-type: none">Identifies and confirms own role and responsibility and complies with specific client requirementsTakes responsibility for planning, sequencing and prioritising tasks within own workloadMakes some critical and non-critical decisions within mostly familiar situations, to develop and test, functional websites according to client requirementsInitiates connections with others through verbal or nonverbal communication and responds as required
Technology	<ul style="list-style-type: none">Identifies and confirms purposes, specific functions and key features of common digital systems and tools

Unit Mapping Information

Supersedes and is equivalent to ICTWEB302 Build simple websites using commercial programs.

Assessment Requirements for ICTWEB304 Build simple web pages

Modification History

Release	Comments
Release 2	This version first released with ICT Information and Communications Technology Training Package Version 8.0. Minor update of unit of competency. Amended typographical error in third bullet point of Knowledge Evidence.
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- create a website with at least three different web pages according to client requirements using applicable features of a selected integrated development environment.

In the course of the above, the candidate must:

- create and maintain files and upload them to required locations and servers
- test consistency and security of created web content.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- legislative requirements applicable to developing simple web content
- web content accessibility guidelines including The World Wide Web Consortium (W3C)
- web navigation functions required in supporting web content functionality, including links between pages
- features of web authoring tools used for web page design
- website publishing and markup languages
- file transfer protocol (FTP) function
- common browsers used for accessing the web

- basic coding techniques
- site map creation methods
- website testing methodologies
- organisational procedures applicable to creating web pages.
-

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- client specifications
- required hardware and software components
- selected integrated development environment (IDE)
- web servers and browsers
- storage media
- required FTP client software
- secure passwords and access procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTWEB305 Produce digital images for the web

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to produce and manipulate images for use in website development.

The unit applies to individuals working as web designers and content creators, who generate and apply digital images and create graphics for a website.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Web

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine client requirements	1.1 Access and interpret requirements brief 1.2 Determine and analyse client needs with regard to digital image content, quality and size 1.3 Research and source required images according to organisational and copyright requirements 1.4 Select applicable industry-standard, image-editing software
2. Source and manipulate images	2.1 Create a range of effects using features of image-editing software 2.2 Edit and resize images according to web application requirements 2.3 Create backups of assets to be used

ELEMENT	PERFORMANCE CRITERIA
3. Save and upload images	<ul style="list-style-type: none">3.1 Save images in required formats and maintain their individual effects3.2 Upload images to applicable server3.3 Link images to required web pages3.4 Save images in applicable directory structure3.5 Check digital images meet client requirements and confirm with required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none">• Identifies and interprets technical information, software and organisational documentation
Writing	<ul style="list-style-type: none">• Uses specific software and technical language to create, format, review, save and access web-based images
Problem solving	<ul style="list-style-type: none">• Makes some critical and non-critical decisions within mostly familiar situations, to produce digital images according to client needs
Self-management	<ul style="list-style-type: none">• Identifies and confirms own role and responsibility• Takes responsibility for planning, sequencing and prioritising tasks within own workload

Unit Mapping Information

Supersedes and is equivalent to ICTWEB303 Produce digital images for the web.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTWEB305 Produce digital images for the web

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- produce at least three different digital images for the web according to client requirements.

In the course of the above, the candidate must:

- adhere to copyright standards and legislation
- save images in required format and location.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- industry standards and copyright legislation applicable to using digital images
- digital image formats and their application
- industry-standard digital image editing software
- purposes, specific functions and key features of common digital systems and tools
- organisational policies and procedures, including procedures for:
 - accessing client briefs
 - sourcing and saving digital images required web content.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- image manipulation software

- industry standard hardware, digital devices and storage devices
- client briefs relating to images to be produced
- required image editing software
- image sources.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTWEB306 Develop web presence using social media

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to develop and drive social media traffic to an established website using social media platforms. It involves comparing, configuring and using different types of social networking tools and applications to increase web presence.

It applies to individuals in Information and Communications Technology (ICT) roles and use social media tools and applications in business environments

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Web

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to use social media tools and applications	<ul style="list-style-type: none">1.1 Establish social media requirements according to business specifications1.2 Identify and analyse characteristics of social media platforms, tools and applications1.3 Identify issues associated with social media tools and applications according to organisational guidelines and policies1.4 Compare and discuss purpose and effect of social media platforms, tools and applications with required personnel

	1.5 Compare and review tools and features of different social media platforms, tools and applications
2. Set up and use social media tools and applications	2.1 Identify social media tools and applications according to business specifications 2.2 Initiate and configure preferred social media tools and applications for use 2.3 Establish social media interface, using text and file content 2.4 Set up accounts for required users according to organisational procedures 2.5 Initiate social networking interaction and confirm security of collaboration 2.6 Link social media and web presence and create content as required
3. Review use of social media tools and application in developing web presence	3.1 Test and evaluate tools and applications according to organisational procedures 3.2 Test and fix errors and confirm website security according to organisational procedures 3.3 Determine whether use of social media tools is effective in developing web presence according to results 3.4 Review social media work and apply required changes according to organisational procedures 3.5 Confirm work performed with required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Extracts required information from technical and organisational documents
Writing	<ul style="list-style-type: none"> Develops content in a manner that supports and conveys information, using required structures and specialised language
Self-management	<ul style="list-style-type: none"> Identifies and applies legal and ethical responsibilities regarding use of social media tools Makes routine decisions and implements standard procedures for routine tasks
Technology	<ul style="list-style-type: none"> Identifies and confirms purposes, specific functions and key features of basic digital systems and tools

Unit Mapping Information

Supersedes and is not equivalent to ICTWEB201 Use social media tools for collaboration and engagement.

Links

Companion Volume Implementation Guide is found on VETNet -

Assessment Requirements for ICTWEB306 Develop web presence using social media

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop social networking presence and upload and link at least three different file types using social media platforms, tools and applications.

In the course of the above, the candidate must:

- evaluate use of social media tools and application and action required changes
- confirm security of social media interactions according to cyber security procedures and protocols
- seek review from required personnel.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- basic technical terminology in relation to social networking, social media applications and tools
- basic methods of uploading images, text files, portable document format (PDF) files, audio files, video files and linking associated files
- features and functions of social media applications
- import and export software functions
- different types of social media tools and applications, benefits and issues associated with their use
- tagging process and facilitating collaborative folksonomy
- social media applications
- organisational procedures applicable to developing web presence through social media
- cyber security procedures and protocols.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required hardware and its components
- online resources
- social media tools and applications that may be used to develop web presence through social media.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTWEB432 Design website layouts

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to design a website to client specifications, within a particular technical and human interface environment.

The unit applies to those who are responsible for the analysis, documentation and design of the human computer interface, including requirements that drive design for either internal or external clients.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Web

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Define and gather business environment	1.1 Establish client requirements from brief 1.2 Identify applicable standards and design principles required in website development 1.3 Identify hardware and software requirements
2. Define human user interface and user experience and determine site hierarchy	2.1 Conduct user analysis and determine user profile and needs 2.2 Identify user content, operating system and requirements 2.3 Determine applicable design principles for website 2.4 Determine user experience design requirements

	<p>according to user needs</p> <p>2.5 Design and create page hierarchy and structure according to design protocol</p> <p>2.6 Review content and confirm user content requirements are met</p>
3. Integrate and finalise design components	<p>3.1 Apply required information hierarchy to site design</p> <p>3.2 Design and implement process flow according to client requirements</p> <p>3.3 Test website layout against user needs and amend as required</p> <p>3.4 Complete and document design structure</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Oral communication	<ul style="list-style-type: none"> Uses listening and questioning techniques with clients for eliciting information and determining specific needs and requirements
Reading	<ul style="list-style-type: none"> Interprets, analyse and synthesises, technical and organisational information and informs decision-making in constructing and validating solutions according to work task
Writing	<ul style="list-style-type: none"> Develops content in a manner that supports and conveys information, using required structures, templates, software and specialised language Produces a logically sequenced text and conveys exact procedural requirements and specific and concise instruction and meaning
Problem solving	<ul style="list-style-type: none"> Makes routine and complex decisions and develops logical structures within website information and operation using analytical processes
Self-management	<ul style="list-style-type: none"> Takes personal responsibility for adherence to standards of industry bodies, where related to own work context Takes responsibility for planning, sequencing and prioritising tasks within own workload and delivers outcomes on time
Technology	<ul style="list-style-type: none"> Identifies and confirms purposes, specific functions and key features of common digital systems and tools

Unit Mapping Information

Supersedes and is equivalent to ICTWEB401 Design a website to meet technical requirements.

Assessment Requirements for ICTWEB432 Design website layouts

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design a website layout using applicable tools and procedures according to client requirements.

In the course of the above, the candidate must:

- identify website and design structure required by conducting a user analysis
- define user interface, user experience and site hierarchy test and amend website layout design document work including documentation of design structure, process notes, tests and solutions.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- copyright and intellectual property requirements applicable to designing web layouts
- customer and business liaison that is applicable to designing website layouts
- internet connectivity impacts
- page load times measurement tools
- technical specifications documentation procedures
- standards applicable to website design
- website design methods and standard website structures
- design and cyber security procedures and protocols
- media queries relevant to designing website layouts documentation techniques applicable documenting website layout designs
- performance budget applications relevant to designing website layouts.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- client requirements documentation
- required hardware, software and digital devices
- site and web servers
- industry standard operating system
- applicable standards and copyright information.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTWEB433 Confirm accessibility of websites

Modification History

Release	Comments
Release 2	This version first released with ICT Information and Communications Technology Training Package Version 7.2. Version created to correct typographical error in the knowledge evidence.
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to confirm accessibility of websites for users with auditory, visual, mobility and cognitive impairments.

The unit applies to web developers and designers who are required to adhere to international and Australian industry standards and practices to ensure that users with accessibility requirements are not disadvantaged when using websites.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Web

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify accessibility standards	1.1 Research and identify, specific user groups with particular accessibility requirements 1.2 Identify general legislated and industry accessibility standards and requirements 1.3 Identify web development standards 1.4 Consolidate specific and general standards and

ELEMENT	PERFORMANCE CRITERIA
	requirements, into an accessibility checklist
2. Test accessibility of pages and website	2.1 Select and run automatic testing tools and software 2.2 Check text equivalent for every non-text element is present in website where feasible 2.3 Confirm text-only pages are logical and accessible 2.4 Demonstrate document can be read without style sheets 2.5 Check and confirm information and pages are not dependent on colour and can operate in monochrome environment 2.6 Verify pages operate on text-to-speech browser 2.7 Test site with different user groups and confirm site transforms and maintains accessibility
3. Apply and document changes and obtain sign off from required personnel	3.1 Apply and document required changes to pages and website according to testing results 3.2 Check and confirm priorities identified in analysis of web development standards are met and completed 3.3 Confirm website is compliant with accessibility checklist requirements 3.4 Confirm accessibility of website is signed off by required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Identifies, analyses and evaluates complex texts
Writing	<ul style="list-style-type: none"> Formats, reviews and amends web-based documents using specific software and technical language Generates checklists that include accessibility standards criteria and other specific requirements
Oral Communication	<ul style="list-style-type: none"> Uses listening and questioning to shares viewpoints, elicit information and participates in verbal exchanges with stakeholders
Self-management	<ul style="list-style-type: none"> Takes personal responsibility for adherence to the regulatory and legislative standards related to own work context Demonstrates responsibility and ownership of tasks and makes

SKILL	DESCRIPTION
	<p>decisions on completion parameters and need for consultation and coordination with others</p> <ul style="list-style-type: none">Plans, sequences and prioritises tasks and own workload and delivers outcomes on time
Problem-solving	<ul style="list-style-type: none">Identifies areas of pages and website that are not compliant with accessibility standards through testing and applies required changes to solve issues.
Teamwork	<ul style="list-style-type: none">Selects and uses applicable conventions and protocols when communicating with clients in a range of work contexts
Technology	<ul style="list-style-type: none">Identifies and confirms purposes, specific functions and key features of common digital systems and toolsCompletes a series of diagnostic tests and tasks according to web development standards for accessibility

Unit Mapping Information

Supersedes and is equivalent to ICTWEB402 Confirm accessibility of websites for people with special needs.

Assessment Requirements for ICTWEB433 Confirm accessibility of websites

Modification History

Release	Comments
Release 2	This version first released with ICT Information and Communications Technology Training Package Version 7.2. Version created to correct typographical error in the knowledge evidence.
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- confirm a website is accessible for people with special needs and adheres to general and specific accessibility standards and requirements.

In the course of the above, the candidate must:

- identify wider context of accessibility through research of accessibility standards
- creates an accessibility checklist which incorporates accessibility standards and requirements
- test accessibility of pages and website using a range of tools and tests
- apply and document required changes according to testing results
- obtain sign-off from required personnel.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- legislation, regulations and codes of practice, applicable to access, equity and security
- computing and programming standards applicable to access and equity
- technical performance measurement principles
- automatic testing tools and software
- required programming language
- Web Accessibility Initiative (WAI)

- World Wide Web Consortium (W3C), Web Content Accessibility Guidelines (WCAG) and other Australian accessibility standards.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a website and included web pages
- required hardware, software and digital devices
- requirements documentation
- the internet
- automatic accessibility measuring tools and software
- organisational requirements and applicable standards.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTWEB434 Transfer content to websites

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to transfer content, from a remote location to a web server, using a range of commercial information and communications technology (ICT) products. The objective of this skill is the upload of new and revised information on a website.

The unit applies to individuals who work as web developers and designers and required to update websites.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Web

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Select and configure file transfer protocol client	<ul style="list-style-type: none">1.1 Identify content requiring transfer to website1.2 Review and select file transfer protocol (FTP) client according to features and functions of content and technical environment1.3 Enter client details, including user identity (ID), password and host name or ID, into profile fields to create a permanent profile1.4 Choose settings including auto-detect, save profile and password, depending on organisational security and privacy policies and guidelines

ELEMENT	PERFORMANCE CRITERIA
	1.5 Test and verify, configuration by connecting to web-hosting server
2. Plan and prepare for data transfer and establish server connection	2.1 Prepare data content and back it up on local device and server 2.2 Identify data as compressed, or uncompressed, with tools available on server 2.3 Confirm files are in required form and receiving directory structure is applicable 2.4 Log on to remote server using administrative, guest or anonymous accounts 2.5 Proceed through security layers according to organisational guidelines and cyber security protocols 2.6 Initiate file transfer protocol client program and locate destination directory
3. Transfer data to remote server	3.1 Select files to be transferred and choose mode, American Standard Code for Information Interchange (ASCII), or binary 3.2 Download files and run antivirus software and confirm files are secure according to cyber security protocols 3.3 Move, rename, copy and delete files on server as required and as permissions allow 3.4 Store and order files according to file extensions and task requirements 3.5 Translate, decompress and de-archive downloaded files 3.6 Confirm data transfer, content functionality and close connection

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Accesses and evaluates technical information, standards and data Confirms alignment between work requirements, implementation protocols and specified outcomes
Writing	<ul style="list-style-type: none"> Creates, updates and enters and verifies data and information using specific standards, software and technical language, according to work requirements, implementation protocols and specified outcomes

SKILL	DESCRIPTION
Self-management	<ul style="list-style-type: none">• Takes personal responsibility for adherence to legislative requirements and organisational policies and guidelines related to own work context• Plans, sequences and prioritises tasks and own workload and delivers outcomes on time
Technology	<ul style="list-style-type: none">• Identifies and confirms purposes, specific functions and key features of common digital systems and tools• Completes a series of sequential tasks required in preparing and transferring data to a website

Unit Mapping Information

Supersedes and is equivalent to ICTWEB403 Transfer content to a website using commercial packages.

Assessment Requirements for ICTWEB434 Transfer content to websites

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- transfer at least three files to a remote server using file transfer protocol (FTP) client, according to organisational security and privacy policies and guidelines.

In the course of the above, the candidate must:

- select and configure a file transfer protocol (FTP) client
- test configuration of FTP client
- plan and prepare content to be transferred including file format, receiving directory structure, account logins and security issues
- connect to server using applicable account login
- follow security procedures according to cyber security protocols
- transfer content to remote server
- store and maintain files in required location.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- the FTP server and client software
- cyber security and internet protocols
- content features and functions
- security issues applicable to transferring content
- server access security procedures and connection methods
- website server architecture and operating systems
- data backup and file transfer methodology
- organisational security and privacy policies and guidelines.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- web servers and tools
- a website
- content requiring transfer
- required hardware and digital devices
- client and login details
- FTP client software
- file storage location
- antivirus software
- server security password and access procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTWEB435 Maintain website performance

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to track and monitor website performance and confirm maintenance of performance levels during peak traffic times and full use access.

The unit applies to individuals who use planning and analytical skills to maintain and improve website performance.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Web

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Benchmark website performance	1.1 Review client performance expectations, specifications and business requirements 1.2 Identify administration and maintenance requirements, against specifications and business requirements 1.3 Establish performance benchmarks, from specifications and business requirements 1.4 Test and record measured performance benchmarks against specifications
2. Track and tune website performance	2.1 Track user activities and compare actual website performance against performance benchmarks in key areas 2.2 Record and document performance inconsistencies and

ELEMENT	PERFORMANCE CRITERIA
	<p>incorporate learning into revised policy and procedures</p> <p>2.3 Identify website faults and implement improvements using diagnostic and software tools according to organisational policies and procedures</p> <p>2.4 Establish automatic fault reporting procedures and processes</p> <p>2.5 Monitor and maintain website security measures</p> <p>2.6 Document and implement administration and maintenance schedules</p> <p>2.7 Complete and record fault, correction and maintenance reports</p>
3. Initiate and monitor performance improvement	<p>3.1 Plan and action, preventative maintenance and establish preventative indicators</p> <p>3.2 Identify maintenance, administration and performance problems by establishing a client initiative capturing mechanism</p> <p>3.3 Review maintenance and administration documentation, security tools and procedures, according to policy and procedures and conduct improvements</p> <p>3.4 Update website, including information, links, multimedia links and back-end software</p> <p>3.5 Confirm client performance expectations are met and respond to client</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Assigns numerical values to performance requirements, Informs decisions, tracks performance and establishes actions to be taken in relation to required work task using measurement data to
Reading	<ul style="list-style-type: none"> Examines, constructs, organises and validates relationships between discrete and interrelated, data and information
Writing	<ul style="list-style-type: none"> Modifies documents using on-going analysis of performance data and feedback Prepares a well-structured and cohesive document and presents analysis of evidence and actions using required format, technical language and spelling and grammar
Teamwork	<ul style="list-style-type: none"> Communicates with others in a specific work context using required conventions and protocols

SKILL	DESCRIPTION
Self-management	<ul style="list-style-type: none">• Takes personal responsibility for following, explicit and implicit, organisational policies applicable to own work
Technology	<ul style="list-style-type: none">• Identifies and confirms purposes, specific functions and key features of common digital systems and tools

Unit Mapping Information

Supersedes and is equivalent to ICTWEB404 Maintain website performance.

Assessment Requirements for ICTWEB435 Maintain website performance

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- track, tune and monitor performance of a website's performance according to client performance expectations, specifications and business requirements.

In the course of the above, the candidate must:

- identify and rectify faults using diagnostic and software tools, where performance is not met
- document faults identified and improvements made according to organisational policy and procedures
- implement scheduled and non-scheduled maintenance
- review and update documentation relating to maintenance and administration and security according to findings
- perform website updates.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- website performance maintenance process including:
 - security issues
 - website server architecture (e.g. Linux, Windows, Unix)
 - website security protocols
 - workload (web traffic) metrics
- business process design methodologies relevant to maintaining website performance
- performance benchmark testing techniques
- website improvement methods

- documentation techniques relevant to maintaining website performance
- security tools and procedures
- website administration techniques including updating website content and links
- organisational policies and procedures applicable to maintaining website performance.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- client specifications documentation
- web servers and websites
- required software, hardware and digital devices
- technical specifications
- web traffic diagnostic tools, including timing tools to gauge website response times
- organisational policies and procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTWEB436 Monitor traffic and compile website traffic reports

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to monitor and compile reports on website traffic and to compile traffic reports according to organisational requirements.

The unit applies to individuals who maintain websites.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Web

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare to monitor website traffic	1.1 Identify and analyse available site-analysis software, according to organisational requirements and website architecture 1.2 Choose and install site-analysis software 1.3 Identify required report options according to organisational requirements and website architecture 1.4 Develop a traffic monitoring program
2. Monitor web traffic	2.1 Identify required traffic reports according to organisational requirements 2.2 Generate required traffic reports
3. Finalise and report on website traffic	3.1 Analyse reports and identify improvements to server and to site performance 3.2 Apply forecasting methodologies and predict traffic peaks

ELEMENT	PERFORMANCE CRITERIA
	3.3 Recommend changes in site-specific hardware and software 3.4 Implement changes according to traffic reports 3.5 Continue traffic monitoring program, as required

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none">Evaluates and presents, numerical and statistical data, to inform decisions and actions
Reading	<ul style="list-style-type: none">Identify, analyse and evaluate a range of organisational documents and technical information
Writing	<ul style="list-style-type: none">Constructs a data collection tool, incorporating the timelines and information to be collectedPrepares a technical report using punctuation, language and layout and convey investigation results and recommendations
Teamwork	<ul style="list-style-type: none">Selects and uses applicable conventions and protocols when communicating in a range of familiar work contexts
Problem solving	<ul style="list-style-type: none">Monitors web server and site performance and suggests improvements using analytical thinking and diagnostic processes
Self-management	<ul style="list-style-type: none">Takes personal responsibility for following explicit and implicit organisational requirements applicable to own work
Technology	<ul style="list-style-type: none">Identifies and confirms purposes, specific functions and key features of common digital systems and tools and operates them according to traffic monitoring requirements

Unit Mapping Information

Supersedes and is equivalent to ICTWEB405 Monitor traffic and compile website traffic reports.

Companion Volume Implementation Guide is found on VETNet -
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=a53af4e4-b400-484e-b778-71c9e9d6aff2>

Assessment Requirements for ICTWEB436 Monitor traffic and compile website traffic reports

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- select and install a site-analysis software and an internet service provider (ISP) according to organisational and vendor requirements and website architecture
- generate and analyse at least two different traffic reports.

In the course of the above, the candidate must:

- recommend and implement changes from traffic reports.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- problems and challenges arising with an organisation website related to:
 - data queues and bottlenecks
 - website security
 - website copyright and intellectual property requirements
- the process of monitoring website traffic, including:
 - functionality of network device drivers
 - functionality of network operating systems
 - queuing systems
 - website architecture
 - workload metrics
 - server design and functionality
- the features and functionality of commercially available drivers, software and systems, including:
 - log file analysis software

- traffic tracking software
- network device drivers
- network operating systems
- queuing systems
- forecasting methodologies relevant to monitoring and reporting on website traffic
- organisational policies and guidelines applicable to monitoring and reporting on website traffic.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- analysis software
- web servers and website
- required hardware, software and digital devices.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTWEB437 Create website testing procedures

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to design and implement procedures, which measure the performance of a website and compare these procedures to the initial design specifications.

The unit applies to individuals who may use significant judgement in planning, design, evaluation, technical or leadership and communications functions in frontline technical support roles.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Web

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Document and define performance criteria	1.1 Review performance specifications and determine benchmark criteria 1.2 Validate and document each performance function 1.3 Select measurement methodology 1.4 Record and document metric tools using applicable methodology 1.5 Prepare performance benchmarks and seek agreement on criteria with client
2. Validate performance measures	2.1 Design and develop inspection and test plans and validate performance measures throughout performance cycle

ELEMENT	PERFORMANCE CRITERIA
	2.2 Test performance functions and record results according to technical documentation and organisational standards 2.3 Compare results of performance function testing to benchmarks 2.4 Redesign functions that do not meet performance benchmarks 2.5 Re-implement functions that have been redesigned during performance testing 2.6 Document performance standards and benchmarks and obtain sign-off
3. Finalise and obtain sign-off	3.1 Submit methodology and function testing document and results and obtain client approval 3.2 Review client feedback and make changes as required 3.3 Obtain website testing procedure sign-off

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none"> Measures and evaluates performance, against established baseline numerical values
Oral communication	<ul style="list-style-type: none"> Participates in verbal exchanges with the client requiring active listening and responses to questions and elicits required and specific information
Reading	<ul style="list-style-type: none"> Evaluates, integrates and confirms authenticity of data and information and reaches an understanding of contextual and procedural nature of business solutions
Writing	<ul style="list-style-type: none"> Develops and documents benchmark standards, performance plans, measurements and detailed results and recommendations using required formats and writing principles in accordance with technical standards and organisational conventions
Teamwork	<ul style="list-style-type: none"> Selects and uses applicable conventions and protocols when communicating in a range of familiar work contexts
Self-management	<ul style="list-style-type: none"> Takes personal responsibility for following explicit and implicit, organisational requirements applicable to own work Determines, implements and evaluates testing and validation processes using analytical thinking, systematic decision-making and diagnostic processes

SKILL	DESCRIPTION
Technology	<ul style="list-style-type: none">Identifies and confirms purposes, specific functions and key features of common digital systems and tools and operates them in performing testing procedures

Unit Mapping Information

Supersedes and is equivalent to ICTWEB406 Create website testing procedures.

Assessment Requirements for ICTWEB437 Create website testing procedures

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- create a website testing procedure according to client requirements and performance specifications.

In the course of the above, the candidate must:

- identify critical performance functions requiring testing
- develop and document required metrics for each function and assign benchmarked performance standards
- validate performance of site against technical requirements
- document results and establish performance benchmarks and obtain client sign off.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- legislation, regulations, codes of practice and standards applicable to web testing including:
 - codes of ethics
 - privacy
 - copyright
 - intellectual property
 - naming
 - documentation
- industry standards, organisational guidelines and technical documentation standards and techniques relevant to creating website testing procedures
- client business domains, including client organisation structure and business functionality

- industry standard hardware and software products
- desktop applications and operating systems
- standard web-testing procedures and optimisation tools
- website design methodologies and standard website structures.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a website
- required hardware and digital devices
- site design and technical requirements documentation
- site-development software and tools.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTWEB438 Conduct operational acceptance tests of websites

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to provide high-level assurance that websites can be effectively and efficiently provisioned and deployed live, in a systematic manner.

The unit applies to individuals employed as web designers and web developers who are involved in testing the effectiveness of websites.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Web

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare test and establish testing framework and methodology	1.1 Establish and document testing framework and schedule 1.2 Determine processes and functions requiring testing and assign quantitative and qualitative performance benchmarks to each process and function 1.3 Document page templates, style guides and expected traffic loads 1.4 Determine and document test methodology and select automatic testing software 1.5 Assemble and brief testing panel on conduct of test 1.6 Develop user and installation manuals according to user

ELEMENT	PERFORMANCE CRITERIA
	needs and requirements
2. Test individual pages and page relationships against business requirements	2.1 Test pages against style guides and templates and confirm consistency of structure and content 2.2 Apply automatic testing software 2.3 Document page statistics of confirmed test results 2.4 Test installation and examples listed in instruction manual 2.5 Assess page navigability, response time and functionality using a variety of browsers and devices against business requirements 2.6 Test software interface points, site security and privacy against business and technical requirements 2.7 Conduct load simulation testing, using single and multiple independent browsers, or automated load testing tools 2.8 Obtain and complete test sign-off sheets for applicable tests
3. Apply and document further tests	3.1 Test website's ability to handle concurrent access 3.2 Conform to applicable privacy, accessibility and acceptable usage policy standards 3.3 Apply automatic testing software 3.4 Collect, collate and document results from sample user and data from automated test 3.5 Obtain and complete test sign-off sheets for further tests performed
4. Evaluate test results	4.1 Consolidate and compare results to benchmarks 4.2 Identify results that fail to meet benchmarks and conduct a site remedial iteration 4.3 Record and document test results as site performance baseline, against which further development and updating can be measured 4.4 Provide evaluation feedback to required personnel and obtain signoff prior to going live

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Numeracy	<ul style="list-style-type: none">Determines, analyses and presents, numerical and statistical, data and informs decisions and actions required
Oral communication	<ul style="list-style-type: none">Conveys information by participating in verbal exchanges including listening, questioning and discussing, data and information
Reading	<ul style="list-style-type: none">Examines, constructs, organises and validates relationships, between both discrete and interrelated data and information
Writing	<ul style="list-style-type: none">Produces a concise formal document and conveys technical information and procedures using required format, technical language and spelling and grammar
Problem solving	<ul style="list-style-type: none">Develops options, resolves issues, designs and implements tests and ascertains functionality of solutions prior to full implementationDesigns and refines ideas according to needs, resources and constraints using a combination of lateral and analytical thinking
Self-management	<ul style="list-style-type: none">Complies with product and business requirements and protocolsSequences and schedules complex activities, monitors implementation and manages communication
Technology	<ul style="list-style-type: none">Creates and refines websites using a range of digitally-based technologies and software packages and hardware

Unit Mapping Information

Supersedes and is equivalent to ICTWEB407 Conduct operational acceptance tests of websites.

Assessment Requirements for ICTWEB438 Conduct operational acceptance tests of websites

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- prepare an operational acceptance test that measures the independent and integrated structural content and technical components of the site according to business requirements.

In the course of the above, the candidate must:

- confirm testing panel is aware of test conduct
- develop user and installation manuals
- apply automatic testing software and collect, collate and document results and tests
- conduct tests on at least two browsers and at least two digital devices
- evaluate results against benchmarks
- provide feedback on test results to required personnel.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- the client business domain
- the structure, function and business organisation of the client, including business-process design
- organisational policies and procedures that cover routine work processes and use of:
 - web optimising tools
 - web monitoring tools
 - web testing procedures
- technical performance measurement
- user acceptance testing methods

- website accessibility and equity principles
- website structures, design and testing methodologies and standards
- common website security issues and risk mitigating methods
- common testing software and metrics used and its application
- applicable privacy, accessibility and accessible usage policy standards
- organisational policies and procedures relevant to conducting operational acceptance tests of websites.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required tools, equipment and materials including:
 - web servers, browsers and website
- industry standard software packages, including site server software and analysis software
- required hardware, digital devices and its components
- organisational requirements documentation, customer relationship model, website manuals and instructions.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTWEB439 Confirm basic website security

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to provide basic website server and protocol security to level required by an organisation.

The unit applies to individuals employed as web maintenance staff who are required to check that a website meets basic security requirements.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Web

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Determine business security requirements	1.1 Identify level of security required according to business and commercial intent of website 1.2 Identify whether password protection is required for site, or part of site 1.3 Decide on minimum and maximum password protection solutions according to business requirements
2. Confirm web server security	2.1 Confirm web server password is obscure and non-traceable 2.2 Install and maintain intrusion detection system, according to business requirements 2.3 Check and confirm user accounts only have required permissions on server 2.4 Confirm interpreters' programs running common gateway

ELEMENT	PERFORMANCE CRITERIA
	<p>interfaces (CGIs) are not stored in CGI-bin directory</p> <p>2.5 Check web form data before passing it to server</p>
3. Confirm protocol security	<p>3.1 Protect fixed internet connection and internet protocol (IP) address</p> <p>3.2 Protect shared network resources from intrusion, according to business requirements</p> <p>3.3 Conform protocols and preferences on digital devices follow security protocols</p> <p>3.4 Disable control protocol and internet protocol (TCP/IP) bindings according to task requirements</p> <p>3.5 Check and confirm network basic input/output system (NetBIOS) over TCP/IP is disabled</p> <p>3.6 Confirm basic security level of website is met with required personnel</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Oral communication	<ul style="list-style-type: none"> Listens and asks questions in eliciting information
Reading	<ul style="list-style-type: none"> Identify and evaluate technical information in producing solutions according to business requirements Identify critical information and confirms accuracy through cross checks
Writing	<ul style="list-style-type: none"> Writes and edits, computer code and technical data and confirms syntax and accuracy
Planning and organising	<ul style="list-style-type: none"> Plans approach to work according to analysis of business needs and requirements
Problem solving	<ul style="list-style-type: none"> Resolves issues and implements tests and ascertains functionality of solutions prior to full implementation Utilises a combination of lateral and analytical thinking and evaluates and validates reliability and efficacy of website
Self-management	<ul style="list-style-type: none"> Sequences, schedules and prioritises own work activities
Technology	<ul style="list-style-type: none"> Uses a range of digitally-based technologies and software packages and hardware, required for interrogating vendor databases and

Assessment Requirements for ICTWEB439 Confirm basic website security

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- confirm a basic level of security for a website according to business requirements.

In the course of the above, the candidate must:

- implement password protection solutions, for the website and server
- install and maintain, an intrusion detection system
- implement protocol security
- confirm security of website with required personnel.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- the client business domain, including client organisation structure and business functionality and requirements
- desktop applications and operating systems, as required
- firewall functionality
- hypertext transfer protocol (HTTP) and disk and executing monitor tools (daemons)
- the range of security protocols, including:
 - secure socket layer (SSL)
 - point-to-point network tunnelling protocol (PPTP)
 - layer 2 tunnelling protocol (L2TP)
- required security patches used to confirm basic website security
- disabling control protocol and internet protocol (TCP/IP) bindings, including file and printer sharing
- industry standard protection solutions

- specific purpose security devices acting as bastion hosts
- web-server operating systems.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required tools, equipment, materials
- a website and web servers
- the internet
- industry-standard hardware and software packages and products
- digital devices
- organisational requirements documentation
- website manuals and instructions.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTWEB440 Use web authoring tools

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to use a web-authoring tool to convert text and images and create website content for a client.

The unit applies to individuals employed as web developers who are responsible for developing websites for a client.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Web

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for task and use of authoring tool	1.1 Establish client website and business requirements 1.2 Discuss and confirm client scope with required personnel 1.3 Identify and select preferred web authoring tool according to client requirements 1.4 Set web-authoring tool preferences 1.5 Customise and navigate web authoring tool environment and workspace according to website and business requirements 1.6 Define and name site and root folder 1.7 Create site map and plan navigation

ELEMENT	PERFORMANCE CRITERIA
2. Create files and CSS	<ul style="list-style-type: none">2.1 Create files with client data and save in required location and directory2.2 Collate and format text and images according to website requirements2.3 Create basic external cascading style sheets (CSS) according to organisational guidelines and procedures2.4 Define styles for required tags according to business requirements2.5 Link CSS to created files and display formatting according to organisational guidelines and procedures
3. Define library items	<ul style="list-style-type: none">3.1 Identify and include recurring items in library3.2 Format selected items according to CSS3.3 Check tags of selected library items, according to task requirements3.4 Update items contained in library according to business requirements
4. Develop boiler plates	<ul style="list-style-type: none">4.1 Create boiler plate file and link with CSS4.2 Format and name boiler plate according to website requirement4.3 Place generic images in a page as required by business image4.4 Save and modify boiler plates according to organisational procedures
5. Create simple forms and navigation	<ul style="list-style-type: none">5.1 Create form and add elements5.2 Set element properties5.3 Insert additional fields as required5.4 Identify availability and location of required script5.5 Connect form to script5.6 Test form and fix errors5.7 Create links between pages and reflect content structure using text and images
6. Finalise task and seek feedback	<ul style="list-style-type: none">6.1 Test links and website on multiple browsers and devices and fix as required6.2 Confirm website is secure and follows cyber-security procedures and protocols6.3 Seek feedback and obtain sign-off from required personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none">Identifies and interprets information from technical and business documentation and completes work tasks according to business requirements and technical specifications
Writing	<ul style="list-style-type: none">Creates, formats, reviews, saves and accesses web based documents, templates, diagrams and images using specific software and technical languageElectronically enters data and information according to business requirements and adheres to technical requirements and specifications
Problem solving	<ul style="list-style-type: none">Solves operational problems as they arise
Self-management	<ul style="list-style-type: none">Prioritises and monitors own workAnalyses business requirements and interprets technical aspects of implementation
Technology	<ul style="list-style-type: none">Operates software applications, selects required authoring tools according to required specifications and writes and maintains hypertext markup language (HTML)

Unit Mapping Information

Supersedes and is equivalent to ICTWEB410 Apply web authoring tool to convert client data for websites.

Assessment Requirements for ICTWEB440 Use web authoring tools

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- develop a web page using web authoring tools according to website and business requirements.

In the course of the above, the candidate must:

- create and incorporate files with required formatted text and images
- confirm web pages are functional on at least browsers and at least two devices
- check cyber-security of web page.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- client business domains required to use web authoring tools
- industry standard web authoring tools and preferences including site file transfer protocol (FTP) clients
- organisational guidelines and procedures applicable to using web authoring tools
- vendor standards and requirements for web authoring tools
- text and image formatting techniques
- web page customisation and navigation techniques
- standard web and CSS design principles and structures.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- industry software packages and vendor instructions
- a website
- web authoring software and tools
- business expectations brief
- required hardware and its components
- multiple browsers and digital devices
- the internet.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTWEB441 Produce basic client-side script

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to develop interactive and engaging websites, using a range of features from various languages.

The unit applies to individuals working in web development environments who are required to produce client-side scripts as a common means of creating interactive websites. These scripts offer an effective simple means of enabling websites to provide greater interaction with clients.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Web

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Analyse web document requirements	1.1 Determine dynamic functionality of web document 1.2 Identify required language according to required functionality 1.3 Engage in client discussions and determine web document requirements 1.4 Confirm level of documentation required
2. Design and produce web documents	2.1 Design web document and embedded scripts and confirm required functionality is achieved according to organisational procedures 2.2 Write a simple hypertext markup language (HTML), considering accessibility

	2.3 Write and produce embedded scripts according to web document requirements
3. Test and debug scripts	3.1 Test web document against required functionality and reiterate accordingly 3.2 Test script using cyber security procedures and protocols and confirm script is secure and bug free 3.3 Complete documentation and submit to required personnel for approval

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Oral communication	<ul style="list-style-type: none"> Articulates using specific language applicable to technical, operational and business audiences Confirms interpretation using listening and questioning techniques
Reading	<ul style="list-style-type: none"> Identifies and interprets textual information in various information and communications technology (ICT) languages and determines dynamic functionality of web document
Writing	<ul style="list-style-type: none"> Develops material and conveys explicit information for a specific audience, using detailed ICT language
Problem solving	<ul style="list-style-type: none"> Plans approach to work according to internet protocols and analysis of business needs and requirements Resolves issues, including design and functionality conflicts, debugging and handling errors and implements tests to ascertain functionality of solutions, prior to full implementation Designs and validates reliability and efficacy of web documents using a combination of lateral and analytical thinking and practice,
Self-management	<ul style="list-style-type: none"> Sequences, schedules and prioritises own work activities
Technology	<ul style="list-style-type: none"> Views active elements and objects across different platforms and designs and produces web documents using a range of digitally-based technologies, software packages and hardware.

Unit Mapping Information

Supersedes and is equivalent to ICTWEB411 Produce basic client-side script for dynamic web pages.

Assessment Requirements for ICTWEB441 Produce basic client-side script

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design and produce a script according to web document functionality requirements and organisational procedures.

In the course of the above, the candidate must:

- produce dynamic web page documents, considering accessibility of web page
- test and debug web document functionality and confirm web document is secure
- document and seek approval from required personnel.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- basic principles behind open platform programming
- client-side scripting and its application to dynamic web page design, including:
 - events and event handlers
 - internet operation related to clients
 - internet protocols
 - simple hypertext markup language (HTML)
 - applicable standards
- purpose and differences between server-side and client-side scripting
- standards associated with programming documentation
- script testing methodologies
- cyber security procedures and protocols
- organisational procedures relevant to producing client-side scripts.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required tools, equipment and materials
- industry standard software packages and features within
- required hardware and digital devices
- client requirements documentation
- cyber security procedures and protocols
- functionality and scope requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTWEB442 Produce interactive web animation

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to create interactive animated enhancements to advertisements and web pages.

The unit applies to individuals working as web designers who generate and apply advertisements for website clients, create animations to enhance a web page message and produce fully animated websites.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Web

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Analyse project requirements	1.1 Identify dynamic functionality of animation within web document 1.2 Determine required language in achieving functionality 1.3 Confirm web document requirements 1.4 Research and evaluate online advertising industry requirements using major agencies and website examples
2. Design and produce web animations	2.1 Design web document and animations 2.2 Design and create gif replacements for animation according to major advertising agency requirements 2.3 Confirm advertisements meet industry standard website advertising specifications including size, number and loops,

	<p>sound and buttons</p> <p>2.4 Design advertisements and promote web page within website and on externally hosted paid advertising</p> <p>2.5 Confirm animations add to overall professionalism and entertainment value of website</p> <p>2.6 Produce web page animations and confirm suitability with required personnel</p>
3. Test and publish animations	<p>3.1 Test and debug scripts against required functionality and reiterate as required according to organisational and cyber security protocols and procedures</p> <p>3.2 Publish animations in required web format and confirm animations are viewable on different devices and browsers</p> <p>3.3 Incorporate web animations into a hypertext markup language (HTML) page</p> <p>3.4 Complete documentation and submit to required personnel for approval</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none"> Identifies and explores, connections between ideas and methodologies Gathers and sources knowledge required in resolving technical difficulties using research techniques and extends knowledge of job requirements
Numeracy	<ul style="list-style-type: none"> Interprets numerical information and applies basic mathematical calculations to recurring technical features
Reading	<ul style="list-style-type: none"> Determines advertising, client and technical requirements by analysing and comparing industry-specific and related text
Writing	<ul style="list-style-type: none"> Prepares and produces, dynamic material using clear and detailed language and conveys explicit information, requirements and recommendations
Planning and organising	<ul style="list-style-type: none"> Takes responsibility for planning, sequencing and prioritising tasks and own workload and delivers outcomes on time
Problem solving	<ul style="list-style-type: none"> Makes routine decisions and implements standard procedures for routine tasks, using formal decision-making processes in more complex and non-routine situations
Technology	<ul style="list-style-type: none"> Uses familiar digital technologies and systems to access information, search and enter, data and code, present information and communicate

SKILL	DESCRIPTION
	with others, cognisant of data security and safety

Unit Mapping Information

Supersedes and is equivalent to ICTWEB412 Produce interactive web animation.

Assessment Requirements for ICTWEB442 Produce interactive web animation

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- produce a web animation according to functionality and web document requirements.

In the course of the above, the candidate must:

- determine animation and online advertising requirements
- design interactive animations including gif replacements
- meet industry standard website advertising specifications
- create web page and advertising application animations
- publish animations to web environment and confirm compatibility with at least two browsers and at least two devices
- confirm web animation is cyber safe and secure according to cyber security protocols and procedures
- document actions performed and seek approval.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- web animation programming concepts including:
 - acceptable asset importing formats
 - component libraries
 - cross-browser issues
 - importing and exporting libraries
 - inserting published work to a hypertext markup language (HTML)
 - masking
 - movements and automated movements

- publishing completed work to an acceptable web format
- shape animation and manipulation
- symbols
- text manipulation
- transparencies
- programming control structures, object-oriented programming including:
 - buttons
 - scripting using programming language
- internet technology, including selecting required scripting type
- principles of web parameters analysis and animations design
- methods and attributes of animation and how it enhances website
- web animation testing and debugging methodologies
- organisational and cyber security protocols and procedures
- industry requirements in online advertising.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- a development environment
- the internet
- required hardware and digital devices
- browsers
- a website
- required web design software.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTWEB443 Implement search engine optimisations

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to implement industry standard internet-marketing practices using search engine optimisation (SEO) techniques, including introducing web pages to search engines and monitoring search engine performance.

The unit applies to individuals who make recommendations and monitor keyword enhancements, search engine marketing (SEM) and social network marketing (SNM).

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Web

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Analyse internet-marketing requirements	1.1 Define overall SEO goals and target audiences and set objectives in accordance with business requirements 1.2 Record and analyse traffic to site using online tools, reports and web-hosting statistics 1.3 Create a keyword suggestion list through keyword research and compile and categorise keywords using online tools, considering macro and sub-keywords 1.4 Identify and discuss gaps, opportunities and areas of potential optimisation, through page and website position analysis and create recommendations accordingly
2. Prepare an internet	2.1 Prepare a client recommendation report, covering differences

ELEMENT	PERFORMANCE CRITERIA
marketing strategy report	<p>between search engine optimisation, search engine marketing and social network marketing using detail from analysis</p> <p>2.2 Make recommendations about search engines and social network media, based on volume of users</p> <p>2.3 Develop action plan and timeframe, including goals, recommendations, priorities, schedules, allocation of roles and responsibility</p> <p>2.4 Explain search terms to required personnel</p> <p>2.5 Make recommendations on implementation of search engine optimisation, search engine marketing and search engine ranking improvement methods</p>
3. Implement and review SEO strategy	<p>3.1 Implement keywords, content sections and short tail and long tail keywords on pages</p> <p>3.2 Implement the sections for content, and back links from quality websites</p> <p>3.3 Create online profiles for updating search engine data</p> <p>3.4 Introduce website to major search engines</p> <p>3.5 Measure SEO performance, including website position</p> <p>3.6 Evaluate traffic analysis reports and compare these with previous results</p> <p>3.7 Summarise findings and make further recommendations</p>

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	<ul style="list-style-type: none"> Critically analyses complex documentation from a variety of sources and consolidates information relating to specific criteria and determines requirements
Writing	<ul style="list-style-type: none"> Records and completes organisational documents and correspondence, using plain English, required spelling, grammar and terminology
Oral Communication	<ul style="list-style-type: none"> Convey and clarifies information and confirms interpretation using collaborative and inclusive techniques, including active listening and questioning and reading of verbal and non-verbal signals
Numeracy	<ul style="list-style-type: none"> Measures usage and prepares client reports by interpreting statistical information and comparing information Estimates improved search engine timeframe results using

SKILL	DESCRIPTION
	mathematical calculations using mathematical calculations
Self-management	<ul style="list-style-type: none">• Takes responsibility for planning, sequencing and prioritising tasks and own workload• Contributes to continuous improvement of work by applying basic principles of analytical and lateral thinking
Problem-solving	<ul style="list-style-type: none">• Addresses less predictable problems and initiates standard procedures in response to these problems and determines a solution by applying problem-solving processes
Technology	<ul style="list-style-type: none">• Uses familiar digital technologies and systems to access information, search and enter data and code, present information and communicate with others

Unit Mapping Information

Supersedes and is equivalent to ICTWEB413 Optimise search engines.

Assessment Requirements for ICTWEB443 Implement search engine optimisations

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- conduct analysis and review two existing websites and create optimisation plans for each, according to business requirements.

In the course of the above, the candidate must:

- analyse website performance
- make recommendations according to analysis performed
- prepare and implement, an internet search engine marketing strategy according to website analysis and business requirements
- monitor search engine performance and compare these with previous results.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- internet marketing methods and practices including:
 - search terms
 - keywords
 - keyword density
 - search engine ranking
 - search engine methods of assessing search engine optimisation (SEO)
 - back links
 - social network media in the context of SEO
- how search engines work
- recommendations in optimising the following:
 - image search optimisation (ISO)

- keyword density on web pages
- keywords used in headings and heading levels meta-elements and page titles
- a website's internet marketing strategy
- performance budgets, including loading speeds and ways to optimise speed to load
- keyword research methodology including
 - surveys
 - focus groups
 - social media listening platforms
 - statistical analysis
 - research professionals
- search engine traffic sources
- the differences between paid and organic searches
- SEO and website metrics
- mobile friendly websites.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- website files
- file transfer protocol (FTP)
- internet
- profiling tools
- required SEO software
- client requirements documentation
- social network marketing logins
- applicable online tools, reports and web hosting statistics.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTWEB444 Create responsive website layouts

Modification History

Release	Comments
Release 2	This version first released with ICT Information and Communications Technology Training Package Version 7.2. Version created to correct typographical error in the knowledge evidence.
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to scope web page requirements and to create and implement designs according to client requirements. Clients in this instance refers to internal and external individuals.

The unit applies to individuals working as web designers and web developers, who apply a wide range of knowledge and skills in basic web development for internal and external clients.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Web

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify main layout sections from design specification	1.1 Identify website scope, functionality and design specifications according to business requirements 1.2 Consult with clients and confirm required sections of web page 1.3 Create web page structure according to organisational

ELEMENT	PERFORMANCE CRITERIA
	procedures
2. Layout web page according to design specification	2.1 Select and position document elements 2.2 Style web page elements according to design specifications
3. Test and validate layout	3.1 Test website in multiple browsers and devices 3.2 Debug website and confirm website is secure according to cyber security procedures and protocols 3.3 Validate web pages against applicable web design industry standards 3.4 Obtain client feedback and amend layout as required 3.5 Seek confirmation with required personnel and obtain client sign-off

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Learning	<ul style="list-style-type: none"> Identifies and explores, connections between ideas and methodologies and extends knowledge of requirements
Reading	<ul style="list-style-type: none"> Identifies and interprets textual information and determines and adheres to requirements
Writing	<ul style="list-style-type: none"> Develops clear and well-organised material for a specific audience and conveys explicit information and requirements using precise language
Numeracy	<ul style="list-style-type: none"> Takes measurements and performs web page layout calculations
Self-management	<ul style="list-style-type: none"> Identifies and acts on issues contravening applicable industry standards Takes responsibility for planning, sequencing and prioritising tasks and own workload
Problem-solving	<ul style="list-style-type: none"> Addresses less predictable problems and initiates standard procedures in response to these problems, applying problem-solving processes in determining a solution
Technology	<ul style="list-style-type: none"> Uses familiar digital technologies and systems to access information, search and enter data and code, present information and communicate with others, cognisant of data security and safety

Unit Mapping Information

Supersedes and is equivalent to ICTWEB414 Design simple web page layouts.

Assessment Requirements for ICTWEB444 Create responsive website layouts

Modification History

Release	Comments
Release 2	This version first released with ICT Information and Communications Technology Training Package Version 7.2. Version created to correct typographical error in the knowledge evidence.
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- design a web page according to client design specifications.

In the course of the above, the candidate must:

- lay out page elements and style accordingly
- test web pages on at least two browsers and at least two devices
- obtain client sign-off.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- standard web design principles
- principles and components used in website development:
 - cascading style sheets (CSS)
 - hypertext transfer protocol (HTTP)
 - a markup language, including hypertext markup language (HTML)
 - web libraries
 - web frameworks
- web design and development standards, including:
 - organisational standards

- World Wide Web Consortium (W3C) standards
- Web Content Accessibility Guidelines (WCAG)
- cyber security procedures and protocols.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- required hardware and its components
- client design specifications brief
- a variety of browsers and digital devices
- required libraries and frameworks
- website testing and debugging tools
- the internet
- required web design software.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTWEB445 Implement content management systems

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 6.0.

Application

This unit describes the skills and knowledge required to create and integrate a website into an open-source content management system.

The unit applies to individuals working as web developers, who apply a wide range of knowledge and skills across ICT, to support small to medium enterprises (SMEs) requiring broader rather than more specialised, ICT support.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Web

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Analyse specifications and requirements	1.1 Identify required functionality of website 1.2 Determine server-side language required in website production 1.3 Establish content structure and navigation of website 1.4 Identify pre-existing restraints and standards requiring consideration when developing a website solution
2. Research solutions and create a content management system powered website	2.1 Research solutions according to website requirements, including programming language, content management system (CMS), licensing structure and hosting structure 2.2 Select content management system according to research conducted and website requirements

ELEMENT	PERFORMANCE CRITERIA
	2.3 Fulfil website requirements using plug-ins and additions to existing content management system 2.4 Install and configure chosen CMS and required plugins 2.5 Insert and manage, website content 2.6 Back up CMS as required
