

# MARL023 Demonstrate basic knowledge of ship operation and maintenance

Release: 1

# MARL023 Demonstrate basic knowledge of ship operation and maintenance

### **Modification History**

Release 1. New unit of competency.

# **Application**

This unit involves the skills and knowledge required to ensure that vessels comply with regulatory and survey requirements as well as maintenance and repair procedures associated with satisfying maintenance of Class.

This unit applies to the work of a Marine Engineer Class 2 on commercial vessels greater than 3000 kW and forms part of the requirements for the Certificate of Competency Marine Engineer Class 2 issued by the Australian Maritime Safety Authority (AMSA).

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## **Pre-requisite Unit**

Not applicable.

# **Competency Field**

L – Marine Engineering

#### **Unit Sector**

Not applicable.

#### **Elements and Performance Criteria**

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Identify regulatory environment for shipping operations
- 1.1 Function of the International Maritime Organization (IMO) is outlined, how recommendations are adopted through maritime legislation is explained and areas of exemption for local and international shipping are identified
- 1.2 International maritime law embodied in international agreements and conventions is identified
- 1.3 Application of the International Labour Organization (ILO)

  Convention to dockyard and shipboard practices is explained

Approved Page 2 of 8

- 1.4 Flag State responsibilities are explained
- 1.5 Purpose of the Navigation Act, Marine Notices, Marine Orders, Port State Control and other methods of implementing international agreements and conventions is clarified
- 1.6 Purpose of insurance underwriters and Protection and Indemnity (P & I) Clubs is clarified
- 1.7 Function of Classification Societies and their involvement with Flag States with Memorandum of Agreement is outlined
- 1.8 ISM Code is applied to ship operation and maintenance
- 1.9 Requirement for crew training for emergency response, administration, operation and maintenance to Standards of Training Certification and Watchkeeping (STCW) requirements is explained

#### 2 Prepare for surveys

- 2.1 Areas covered by classification surveys are identified
- 2.2 Reasons for class withdrawal are clarified and condition of class are explained
- 2.3 Continuous, alternative and special surveys, terms of survey and survey frequency are outlined
- 2.4 Differentiation is made between planned maintenance and condition monitoring for machinery
- 2.5 Safe practices for preparing compartments for survey, including pressure testing are identified
- 2.6 Tail shaft surveys are outlined and planned
- 2.7 Pressure vessels and boiler surveys outlined and planned
- 2.8 Machinery and hull layup methods are specified

# 3 Explain survey requirements

- 3.1 Statutory survey requirements for convention and non-convention vessels are identified
- 3.2 Documentation and records essential for compliance with statutory surveys, legislation and measures are identified to ensure protection of the marine environment and safety of life at sea
- 3.3 Load line measurements and freeboard assignment are

Approved Page 3 of 8

#### explained

- 3.4 Conditions of freeboard assignment, tests, common faults and repairs are identified
- 3.5 Maintenance and repair responsibilities are identified to satisfy safety construction surveys
- 3.6 Common defects, tests and preparations are identified to satisfy safety equipment surveys
- 3.7 International Convention for the Prevention of Pollution from Ships (MARPOL) survey requirements, including precautions to be taken to prevent pollution of the marine environment are clarified and how compliance with MARPOL is fully observed is explained
- 3.8 Survey requirements for cargo ship safety construction, safety equipment and safety radio certificates; passenger ship safety certificates; chemical tanker and gas carrier certificates of fitness are clarified
- 3.9 Port State Control is explained
- 3.10 Substandard ship and factors causing ship detention are identified

# 4 Assess influences on vessel stability

- 4.1 Basic theories and factors affecting trim and stability as well as measures necessary to preserve trim and stability are explained
- 4.2 IMO recommendations concerning ship stability are identified
- 4.3 Influences causing change of centre of gravity are explained and action to be taken in the event of partial loss of intact buoyancy, free surface and Angle of Loll is specified
- 4.4 Consequences of cargo movement, including bulk and deck cargo is outlined
- 4.5 Stability documentation required for different ship types to satisfy safety of life at sea (SOLAS) is identified
- 4.6 Intact and damage stability criteria are explained
- 4.7 Damage control procedures and assessment following collision or grounding are specified to ensure watertight integrity of a ship is according to accepted practice

Approved Page 4 of 8

4.8 Stability requirements for routine dry-docking are identified 5 **Outline procedures** 5.1 Properties and repair techniques are identified for ordinary for maintenance and and high tensile hull grades of steel including underwater repairs of hull. repair work pumping systems, 5.2 propellers, Means of minimising and controlling both internal and external hull corrosion are identified machinery and other items satisfying 5.3 Repair techniques for various propeller materials are outlined maintenance of Class 5.4 Drainage arrangements and connections to other systems of spaces outside the engine room are explained 5.5 Ballast main connections to fore and after peak tanks are outlined and procedure for filling and emptying tanks is clarified 5.6 Means of testing performance of shipboard pumping systems is identified 5.7 Common faults and ways of assessing condition of shipboard pumping systems are determined Machinery condition monitoring and planned maintenance 5.8 systems are identified 5.9 Hull life extension surveys and enhanced survey requirements for tankers and bulkships are outlined Explain function of IMDG Code is applied to prepare action plans for emergency 6.1 **International** situations **Maritime Dangerous** Goods (IMDG) Code 6.2 Common hazards of shipboard enclosed spaces are identified and suitable strategies, including compartment re-entry, following extinction of fire, are planned 6.3 Methods of testing enclosed space atmospheres are identified and limits of exposure to common hazards confirmed 6.4 Requirements of ordering and taking bunkers as well as discharging to shore side reception facilities, are specified Outline dry-dock 7.1 Procedures for planning and implementing dry-docking and in-water bottom surveys are clarified and in-water bottom survey 7.2 Responsibilities for engineering personnel associated with responsibilities of planning and implementing dry-docking and in-water bottom engineering staff surveys are detailed

Approved Page 5 of 8

7.3 Dry-dock and in-water hull cleaning methods are compared and contrasted 7.4 Dry-dock refloating criteria and responsibilities of engineering staff are outlined 7.5 Preservation and maintenance requirements for extended layup of vessel, and inspection and tests required on reactivation are outlined 8 Outline 8.1 Safe working practices applicable to cranes, chain blocks, maintenance, repair items of loose gear and other lifting equipment are identified and safe working 8.2 Safety and protective devices used in conjunction with lifting practices associated gear are identified with lifting and life saving equipment 8.3 Means of testing and adjusting lifting gear are confirmed 8.4 Legislative and regulatory requirements for inspection, storage and maintenance of lifting gear are outlined 8.5 Purposes and procedures involved in annual and quadrennial surveys of cargo gear are clarified 8.6 Procedures for safe working load (SWL) and proof load tests, including lifeboat launching gear are clarified 8.7 Safe working practices applicable to rigging and lifting heavy items during maintenance and repair are identified 8.8 Installation, operation, maintenance of lifesaving appliances and launching equipment is outlined 8.9 Safety and protective devices associated with lifesaving appliances and launching equipment are confirmed Outline operation of 9.1 Construction, operation and maintenance of individual an inert gas system components of inert gas system (IGS) are explained for a tanker 9.2 Mandatory controls, alarms and cut-outs are identified 10 Apply leadership 10.1 Shipboard personnel management and training requirements and management are explained in relation to engineering operations skills 10.2 Procedures for managing personal and crew workload in relation to marine engineering functions are clarified 10.3 Effectiveness of resource management in relation to engineering functions is assessed

Approved Page 6 of 8

- 10.4 Decision-making techniques appropriate to engineering functions are explained
- 10.5 Processes for developing, implementing and maintaining standard operating procedures relevant to marine engineering functions are explained

#### **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

International maritime law includes one or more of the following:

- ASM Code
- certificates and other documents to be carried on board ships by international conventions
- International Convention for the Prevention of Pollution from Ships
- International Convention for the Safety of Life at Sea 1974
- International Convention on Load Lines 1966
- International Health Regulations
- international instruments affecting safety of ships, passengers, crew or cargo
- STCW

Areas covered by classification surveys include one or more of the following:

- automation
- boilers/pressure vessels
- cargo gear
- hull
- machinery
- specific notations
- tail shaft
- cathodic protection
- coating systems
- surface preparation techniques

controlling both internal and external hull corrosion includes one or more of the following:

Minimising and

Approved Page 7 of 8

Other systems of spaces outside the engine room include one or more of the following:

- holds
- pump rooms
- spaces forward of the collision bulkhead

Shipboard pumping systems include one or more of the following:

- ballast systems
- bilge systems

Heavy items include one or more of the following:

- hatches
- stern doors
- other large movable structures

## **Unit Mapping Information**

This unit replaces and is equivalent to MARL6010A Demonstrate basic knowledge of ship operation and maintenance.
