- The following conditions of assessment represent the requirements of the Regulators (ADF and CASA) and maintenance stakeholders and must be rigorously observed.
- A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements and performance criteria of the unit of competency are being achieved under routine supervision on a representative range of the borescope inspection tasks performed within the enterprise.
- This shall be established via the records in the Log of Industrial Experience and Achievement, or where appropriate, an equivalent Industry Evidence Guide (for details refer to the Companion Volume Assessment Guidelines).
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).
- Where the unit is to be used for CASA licensing purposes the Assessor must also meet the criteria specified in the CASR Part 147 Manual of Standards.

MEA367 Repair/modify aircraft composite structure using cold bonding

Modification History

Release 1 - New unit of competency

Application

This unit of competency requires application of hand skills and the use of maintenance publications, applicable materials, tools and methods to repair aircraft composite material structure and components using cold cure repair techniques either on-aircraft or in the workshop during scheduled or unscheduled maintenance.

The unit is part of the Aeroskills Structures Maintenance Certificate IV training pathway, and of the Mechanical Certificate IV (Aircraft Maintenance Stream) training pathways.

The unit is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

MEA401 Inspect aircraft structures

OR

MEA339 Inspect, repair and maintain aircraft structures

OR

MEA369 Inspect and maintain structures and related components of non-pressurised small aircraft

Competency Field

Aviation maintenance

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|---|--|
| 1. Plan repair/modification | 1.1 Extent of damage is correctly assessed to assist in determining repair procedure |
| | 1.2 Structure is supported and prepared in accordance with the applicable maintenance manual to ensure personnel safety and freedom from damage |
| | 1.3 Appropriate modification or repair scheme is identified in accordance with structural repair manual and/or approved data |
| | 1.4 Specialist advice is obtained in establishing an approved repair scheme where a standard repair scheme cannot be identified or damage criteria are out of limits |
| | 1.5 All materials and equipment required are organised |
| 2. Repair/modify components using cold cure | 2.1 Lay-up of materials is checked to confirm that components meet required specifications and bagging equipment is correctly installed and operated |
| | 2.2 Curing cycle is regularly monitored to ensure required specifications are met |
| | 2.3 Components are checked for blemishes or delamination in accordance with quality procedures |
| | 2.4 Component assemblies requiring further or special treatment are made ready for the appropriate processes |
| | 2.5 Required maintenance documentation is completed and processed in accordance with standard enterprise procedures |
| | 2.6 Completed assemblies are tagged, sealed or packaged as required |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- Applicable materials and methods include:**
- Cold cure or wet lay-up (using either fibreglass or carbon graphite)
 - Core materials (using one of aluminium, nomex or foam)
- Procedures and requirements include:**
- Industry standard procedures specified by manufacturers, regulatory authorities or the enterprise

Unit Mapping Information

Release 1 – equivalent to MEA367A Repair/modify aircraft composite structure using cold bonding

Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.education.gov.au/Pages/TrainingDocs.aspx?q=ce216c9c-04d5-4b3b-9bcf-4e81d0950371>

Assessment Requirements for MEA367 Repair/modify aircraft composite structure using cold bonding

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- applying relevant WHS procedures, including the use of MSDS and applicable items of PPE
- using approved maintenance documentation and aircraft publications relating to aircraft structure
- identifying composite component applications in aircraft structures
- identifying various aircraft composite materials/resins and their basic properties by interpretation of markings and visual means
- handling and storing of composite materials to industry standards
- assessing composite component damage using visual and tap test methods
- relative advantages and disadvantages of hot and cold cure
- performing composite component repairs using cold cure adhesives:
 - external patch repair
 - scarf repair
 - stepped repair
 - wet lay-up repair
 - composite fastener hole repair
 - metal to metal and metal to composite bonding
- correctly interpreting and/or producing repair scheme/modification drawings/sketches
- using appropriate hand tools and machines to disassemble and assemble aircraft composite components, parts, sections and skin, including extraction/installation equipment, drilling/cutting equipment, and material fasteners.

The underlying skills inherent in this unit should be transferable across the range of different material applications applicable to cold curing. It is essential that specific aspects of the laying up and curing process for aircraft composite materials are checked to ensure quality and safety standards are achieved in this area. Correct checking and wearing of PPE is critical.

Evidence of knowledge about repair techniques and the use of the standard repair manual in a range of different repair situations will be necessary to supplement evidence of ability to plan and undertake component repair. Ability to apply different materials and curing cycles, including composite to composite and composite to metal components, will be necessary to indicate competency in preparing and curing composite materials.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- aircraft construction principles and the causes of structural damage, including metal fatigue and corrosion
- structural fatigue preventative measures
- composite terminology and materials used in both hot and cold bonding
- composite component construction and repair methods, including structural assembly fastener types, specifications and identification
- procedures for the design and approval of repair schemes and modifications
- composite material storage requirements
- sealants used in aircraft structure and their application and handling
- paints and finishes for composite structure
- WHS precautions associated with repair of aircraft structure
- MSDS
- PPE.

Assessment Conditions

- Competency should be assessed in the workplace or simulated workplace. It is also expected that general purpose tools and test equipment found in most routine situations would be used where appropriate.
- The following conditions of assessment represent the requirements of the Regulators (ADF and CASA) and maintenance stakeholders and must be rigorously observed.
- A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency and the performance criteria are being achieved under routine supervision using materials from each of:
 - cold cure or wet lay-up (using either fibreglass or carbon graphite)
 - core materials (using one of aluminium, nomex or foam)
- This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide (for details refer to the Companion Volume Assessment Guidelines).
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).
- Where the unit is to be used for CASA licensing purposes the Assessor must also meet the criteria specified in the CASR Part 147 Manual of Standards.

MEA368 Shot peen aircraft components

Modification History

Release 1 - New unit of competency

Application

This unit of competency requires application of hand skills and the use of relevant process documentation to shot peen aircraft components, such as structural components and components of engines, propellers and landing gear shock struts from fixed and rotary wing aircraft during scheduled or unscheduled maintenance.

The unit is part of the Mechanical Certificate IV training pathway and is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activities
MEA105	Apply quality standards applicable to aviation maintenance processes
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA109	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Competency Field

Aviation maintenance

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|----|---|-----|---|
| 1. | Prepare for shot peening task | 1.1 | Process documentation is obtained and correctly interpreted |
| | | 1.2 | Shot peening equipment is prepared in accordance with the applicable process |
| 2. | Apply shot peening process to Almen strip | 2.1 | The correct Almen strip is selected and fitted and equipment set up with the correct stand-off distance and regulated air pressure or spindle speed in accordance with the process documentation |
| | | 2.2 | Applicable work health and safety (WHS) provisions are observed, including the use of material safety data sheets (MSDS) and personal protective equipment (PPE) |
| | | 2.3 | The process is correctly applied to the Almen strip |
| | | 2.4 | The Almen strip distortion is measured to ensure that it is within the specified tolerance |
| | | 2.5 | Equipment settings are adjusted and the Almen strip test repeated, if required |
| | | 2.6 | Settings that produce specified Almen strip distortion are recorded and the test strip is presented for inspection |
| 3. | Apply shot peening process to component | 3.1 | The component is cleaned and masked in accordance with process documentation |
| | | 3.2 | Shot peening is applied in accordance with the process documentation using equipment settings derived from Almen test strip and while observing all WHS requirements, including use of MSDS and PPE |
| | | 3.3 | The shot peened surface is checked for required density and coverage and re-peened, if necessary |
| | | 3.4 | The shot peened component is checked for cleanliness to ensure that all contaminants have been removed in accordance with the process documentation |

- | | | | |
|----|----------------------------|-----|--|
| 4. | Complete shot peening task | 4.1 | Task completion is recorded in accordance with standard enterprise procedures |
| | | 4.2 | Shot peened component is presented for inspection, along with Almen test strip and completed documentation |
| | | 4.3 | Where applicable, the component is tagged, sealed or packaged in accordance with specified procedures |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Shot peening equipment includes:

- Air pressure or rotor propulsion of shot and either fixed or portable shot peen units

Stand-off distance applies to:

- nozzle distance from surface for air pressure shot peening processes, or
- spindle distance from job for rotor shot peening

Regulated air pressure or spindle speed:

- The specified air pressure applied to the shot nozzle or the specified revolutions per minute (r.p.m.) of the spindle in the rotor peening process

Procedures and requirements include:

- Industry standard procedures specified by manufacturers, regulatory authorities or the enterprise

Unit Mapping Information

Release 1 – equivalent to MEA368A Shot peen aircraft components

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for MEA368 Shot peen aircraft components

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- applying relevant WHS procedures, including the use of MSDS and applicable items of PPE
- using relevant process documentation relating to shot peening of component surfaces to:
 - select and set up the required shot peening equipment
 - select and set up the Almen test strip
 - adjust equipment settings to obtain the required Almen strip distortion
 - prepare component surfaces for shot peening
 - shot peen surfaces to obtain the specified intensity and coverage
 - remove surface contaminants from shot peened surfaces
- correctly disposing of waste shot peening media.

The underlying skills inherent in this unit should be transferable across a range of shot peening applications associated with aircraft components. It is essential that the relevant procedures are interpreted and applied to ensure quality and safety standards are achieved.

Evidence of transferability of skills and knowledge related to shot peening is essential. This shall be demonstrated through application across a number of different aircraft components.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- how to obtain relevant MSDS
- the correct use of PPE
- WHS procedures
- the reasons for shot peening
- the types of aircraft component and the materials that are shot peened
- shot peening equipment and processes applicable to aircraft components
- the uses of different types of shot peening media
- the use of process documentation
- the types of Almen test strips and their uses

- setting up and calibrating equipment for use
- preparation of surfaces for peening and cleaning after peening
- environmental requirements associated with disposal of used media.

Assessment Conditions

- Competency should be assessed in the work environment or simulated work environment using equipment specified in process documentation. It is also expected that general and special purpose tools and test equipment found in most routine situations would be used where appropriate.
- The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards. Ability to obtain and correctly interpret shot peening process documentation will be necessary before undertaking any action.
- The following conditions of assessment represent the requirements of the Regulators (ADF and CASA) and maintenance stakeholders and must be rigorously observed.
- A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements and performance criteria of the unit of competency are being achieved under routine supervision on a representative range of shot peening tasks that are performed within the enterprise.
- This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide (for details refer to the Companion Volume Assessment Guidelines).
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).
- Where the unit is to be used for CASA licensing purposes the Assessor must also meet the criteria specified in the CASR Part 147 Manual of Standards.

ME369 Inspect and maintain structures and related components of non-pressurised small aircraft

Modification History

Release 1 - New unit of competency

Application

This unit of competency requires application of procedures and techniques associated with the inspection and maintenance of non-pressurised small aircraft structures during scheduled or unscheduled maintenance, including special inspections required after events, such as heavy landings, overstress or flight through heavy turbulence.

The unit also covers the performance of a limited range of minor metal and composite repairs that are classified as elementary maintenance. Also required is an application of procedures and techniques associated with the removal and installation of related structural and non-structural components, including items such as internal trim, seats and emergency equipment. Work may be performed individually or as part of a team.

The unit is part of the Aeroskills Mechatronics Certificates III and IV small aircraft maintenance training pathways.

Where a Civil Aviation Safety Authority (CASA) licensing outcome is sought this unit forms part of the CASA requirement for the granting of the chosen maintenance certification licence under Civil Aviation Safety Regulation (CASR) Part 66, in accordance with the licensing provisions in the Companion Volume Implementation Guide.

Pre-requisite Unit

MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activity
MEA105	Apply quality standards applicable to aviation maintenance processes
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA109	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Competency Field

Aviation maintenance

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|--------------------------------|---|
| 1. Inspect aircraft structure | 1.1 Relevant maintenance documentation is used to identify specific inspection requirements |
| | 1.2 Appropriate preparation and access to the aircraft structure is undertaken to allow for proper inspection in accordance with maintenance documentation |
| | 1.3 Aircraft structure is visually or physically checked for signs of deformation defects or damage in accordance with maintenance documentation and approved procedures while observing all relevant work health and safety (WHS) requirements, including the use of material safety data sheets (MSDS) and items of personal protective equipment (PPE) |
| | 1.4 Damage or defects are assessed against damage or wear limits specified by structural repair manual or other approved data to determine if repair or replacement is required |
| | 1.5 Maintenance documentation is completed and processed in accordance with standard enterprise procedures |
| 2. Maintain aircraft structure | 2.1 Minor repairs classified as elementary maintenance are performed in accordance with approved repair methods ensuring that aircraft standard practices are used and process requirements are carried out while observing all relevant WHS requirements, including the use of MSDS and items of PPE |
| | 2.2 Preventative maintenance techniques are employed to preserve the integrity of aircraft structure |

- 2.3 Work area is cleaned of all waste material or contaminants
- 2.4 Required maintenance documentation is completed and processed in accordance with standard enterprise procedures
- 3. Remove components
 - 3.1 Structure is supported and prepared in accordance with the applicable maintenance manual to ensure personnel safety and freedom from damage to aircraft or component during component removal
 - 3.2 Component removal is carried out in accordance with the applicable maintenance manual while observing all relevant WHS requirements, including the use of MSDS and items of PPE
 - 3.3 Required maintenance documentation is completed and processed in accordance with standard enterprise procedures
 - 3.4 Where applicable, removed components are tagged and prepared for transport in accordance with specified procedures
- 4. Install components
 - 4.1 Structural and/or non-structural components to be installed are checked to confirm correct part numbers, serviceability and modification status
 - 4.2 Component installation is carried out in accordance with the applicable maintenance manual while observing all relevant WHS requirements, including the use of MSDS and items of PPE
 - 4.3 Support/safety equipment is removed at an appropriate time to ensure personnel safety and freedom from structural damage
 - 4.4 Required maintenance documentation is completed and processed in accordance with standard enterprise procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Inspection of aircraft structure and removable components of structure include:

- Non-ferrous and ferrous alloys and composite (FRP) materials used in aircraft construction
- Structural fastening and attachment hardware and/or devices
- Seals and sealants
- Glass and moulded plastics
- Preparation for application of non-destructive testing (NDT) techniques
- Doors, hinges and locking mechanisms for damage/misalignment
- Inspections applicable to each of safe life, damage tolerant and fail safe structure relevant to enterprise
- Ageing aircraft inspection programs
- Inspection after abnormal events

Damage or defects include:

- Impact damage
- Fatigue cracking
- Corrosion
- Delamination of composites and bonded structures

Minor repairs include:

- Performing minor repair tasks classified as elementary maintenance, including:
 - repair of non-structural fairings, cover plates and cowlings
 - stop drilling of cracks and bonding to acrylic or Perspex windscreens
 - minor repairs to fabric surfaces
 - restoration of preservative or protective materials

Removable components include:

- Those that are installed using bolts and/or screws. Where component removal and installation requires the removal and installation of rivets the applicable unit is MEA371 Perform major repairs and modifications to small aircraft structure

Components include:

- Removable components of wings, tail booms, pylons, empennage, skids, fairings and nacelles
- Removable components or sections of non-pressurised fuselages
- Non-pressurised fuselage entry, cargo, access doors and associated seals, including checking and adjustment of all doors and access panels and associated locking

- mechanisms
- Non-pressurised fuselage windows and transparent panels
- Floor panels
- Specialist advice is obtained from:**
 - Supervisors
 - Specialist structures personnel
- Maintenance documentation includes:**
 - Servicing schedules
 - Maintenance manuals
- Procedures and requirements include:**
 - Industry standard procedures specified by manufacturers, regulatory authorities or the enterprise

Unit Mapping Information

New unit of competency partially replacing MEA311D Inspect and repair/modify aircraft structures and also partially replacing MEA363B Inspect, repair and maintain structures and related components of non-pressurised small aircraft

Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.education.gov.au/Pages/TrainingDocs.aspx?q=ce216c9c-04d5-4b3b-9bcf-4e81d0950371>

Assessment Requirements for MEA369 Inspect and maintain structures and related components of non-pressurised small aircraft

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- applying all relevant WHS procedures, including the selection and use of MSDS and applicable items of PPE
- demonstrating appropriate cleaning procedures to enable structure inspection
- demonstrating correct inspection procedures in accordance with aircraft and procedures manuals
- identifying damage to aircraft metallic (ferrous and non-ferrous) structures and/or components by way of impact, fatigue or the various types of corrosion
- inspecting damage and assessing composite components/structures
- identifying various aircraft metals and their basic properties
- identifying composite materials used in aircraft construction, associated safety precautions and hazards
- using appropriate hand tools and machines, including riveting equipment, drilling equipment, aligning tools and material fasteners (grip pins)
- applying correct removal, installation and repair techniques for a range of rivets (blind and solid) using hand, squeeze and pneumatic situations
- performing metal, composite and fabric repairs classified as elementary maintenance
- restoring aircraft structure sealing and surface finishes
- using relevant maintenance documentation and aircraft manuals to:
 - remove and install structural and non-structural components
 - remove and install aircraft interior fittings
 - remove and install doors, door seals, windows and transparent panels
 - checking and adjusting all doors and access panels, including locking mechanisms
- removing and installing emergency equipment.

It is essential that the procedures take into account all aircraft and personal safety precautions relating to aircraft structure.

Evidence of transferability of skills and knowledge related to inspection, testing and minor repair of aircraft structure other than primary structure is essential. This may be demonstrated through application across a number of aircraft structures or aircraft types. Ability to interpret inspection and minor repair procedures and apply them in practice is critical.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable WHS procedures, including the use of PPE and MSDS
- construction methods and materials used in:
 - fuselage sections
 - wing sections
 - engine nacelles and mounts
 - windows and window frames
 - doors, locks and access panels
- definition of structural terms, i.e. safe life, damage tolerant, failsafe, stress, strain, shear and cycles
- inspection requirements for metal and composite structure, including:
 - ageing aircraft inspection requirements
 - safe life structure
 - damage tolerant structure
 - fail safe structure
 - inspection following abnormal events
- potential causes of structural failure
- NDT methods and application of the various techniques
- construction methods of, and assessing common defects in, aircraft plastic transparencies
- basic constructional features of, and assessing common defects in, glass windscreens
- aircraft fabric coverings and methods for performance of minor repairs classified as elementary maintenance
- the various forms of structural corrosion, stating the causes and structural effects of corrosion on aircraft
- the terms associated with composite materials and types of composite materials
- non-structural component methods of attachment and faying surface treatment
- non-pressurised fuselage aircraft doors, related seals and window and transparent panel attachment methods and sealing
- aircraft interior fittings (trim, linings, seats and floor panels) construction and attachment methods
- the location and attachment or stowage methods for emergency equipment
- assessment of structural damage:
 - types and classes of mechanical damage
 - types of corrosion and determining the extent of damage
 - relevant documentation and manuals
 - damage limits and repair schemes for metallic and non-metallic structure
- how to perform minor repairs to metal and composite structure that are classified as elementary maintenance

- surface finishes and methods of restoration, including specific WHS and PPE requirements
- how to obtain MSDS
- relevant maintenance and structural repair manuals
- relevant regulatory requirements and standard procedures.

Assessment Conditions

- Competency should be assessed in the work environment or simulated work environment using tools and equipment specified in maintenance documentation. It is also expected that general-purpose tools and test equipment found in most routine situations would be used where appropriate.
- The following conditions of assessment represent the requirements of the Regulators (ADF and CASA) and maintenance stakeholders and must be rigorously observed.
- A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements and performance criteria of the unit of competency are being achieved under routine supervision across the variables in the Range of Conditions as follows:
 - inspection and/or testing of at least one (1) item from each of the following groups:
 - non-ferrous and ferrous alloys and composite (FRP) materials used in aircraft construction
 - structural fastening and attachment hardware and/or devices
 - seals and sealants
 - glass and moulded plastics
 - preparation for application of NDT techniques
 - doors, hinges and locking mechanisms for damage/misalignment
 - inspections applicable to each of safe life, damage tolerant and fail safe structure relevant to enterprise
 - ageing aircraft inspection programs
 - inspection after abnormal events
 - recognition of each type of damage:
 - impact damage
 - fatigue cracking
 - corrosion
 - delamination of composites and bonded structures
 - one (1) minor elementary maintenance repair task from each of the following groups:
 - repair of non-structural fairings, cover plates and cowlings
 - stop drilling of cracks and bonding to acrylic or Perspex windscreens
 - restoration of preservative or protective materials
 - one (1) removal and installation task from each of the following groups:
 - removable components of wings, tail booms, pylons, empennage, skids, fairings and nacelles
 - removable components or sections of non-pressurised fuselages

- non-pressurised fuselage entry, cargo, access doors and associated seals (including checking and adjustment of all doors and access panels and associated locking mechanisms)
 - non-pressurised fuselage windows and transparent panels
 - floor panels.
- This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide (for details refer to the Companion Volume Assessment Guidelines).
 - Assessors must satisfy National Vocational Education and Training Regulator (NVR)/Australian Quality Training Framework (AQTF) assessor requirements.
 - Where the unit is to be used for CASA licensing purposes the Assessor must also meet the criteria specified in the CASR Part 147 Manual of Standards.
 - The competency elements and performance criteria also cover some of those required for units MEA304 Remove and install non-pressurised aircraft structural and non-structural components and MEA339 Inspect, repair and maintain aircraft structures. Refer to those units for details of credits that may be granted during assessment of those units.

MEA370 Repair the structure of non-pressurised small aircraft

Modification History

Release 1 - New unit of competency

Application

This unit of competency requires application of procedures and techniques associated with the repair of non-pressurised small aircraft structure during scheduled or unscheduled maintenance. Work may be performed individually or as part of a team and involves the performance of a limited range of metal and composite repairs. Where extensive repair involving the replacement of major structural components, such as wing spars and fuselage frames, is required the applicable unit is MEA371 Perform major repairs and modifications to small aircraft metal structure.

The unit is part of the Aeroskills Mechatronics Certificates III and IV small aircraft maintenance training pathways.

Where a Civil Aviation Safety Authority (CASA) licensing outcome is sought this unit forms part of the CASA requirement for the granting of the chosen maintenance certification licence under Civil Aviation Safety Regulation (CASR) Part 66, in accordance with the licensing provisions in the Companion Volume Implementation Guide.

Pre-requisite Unit

MEA369 Inspect and maintain structures and related components of non-pressurised small aircraft

Competency Field

Aviation maintenance

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|----|-----------------------------|-----|---|
| 1. | Prepare to undertake repair | 1.1 | Extent of damage is correctly assessed to assist in determining repair procedure |
| | | 1.2 | Appropriate repair scheme is identified in accordance with structural repair manual and/or approved data |
| | | 1.3 | Specialist advice is obtained in establishing an approved repair scheme where a standard repair scheme cannot be identified or damage is out of limits |
| | | 1.4 | All materials and equipment required are organised |
| 2. | Repair aircraft structure | 2.1 | Structural repairs are performed in accordance with approved repair scheme ensuring that aircraft standard practices are used and process requirements are carried out while observing all relevant work health and safety (WHS) requirements, including the use of material safety data sheets (MSDS) and items of personal protective equipment (PPE) |
| | | 2.2 | Preventative maintenance techniques are employed to preserve the integrity of aircraft structure |
| | | 2.3 | Work area is cleaned of all waste material or contaminants |
| | | 2.4 | Required maintenance documentation is completed and processed in accordance with standard enterprise procedures |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- Damage or defects include:**
- Impact damage
 - Fatigue cracking
 - Corrosion

- Structural repairs include:**
- Delamination of composites and bonded structures
 - Removing corrosion by chemical and mechanical methods
 - Restoring protective coatings
 - Applying sealants and jointing compounds
 - Freehand precision hole generation
 - Removing and installing structural hardware and fastening devices
 - Removing and replacing bushes, bearings and bearing surfaces
 - Metal scab patch, flush, splice, lap and formed section repairs
 - Composite external patch, scarf, stepped and bolted repairs
- Specialist advice is obtained from:**
- Supervisors
 - Specialist structures personnel
- Maintenance documentation includes:**
- Servicing schedules
 - Maintenance manuals
- Procedures and requirements include:**
- Industry standard procedures specified by manufacturers, regulatory authorities or the enterprise

Unit Mapping Information

New unit of competency partially replacing MEA363B Inspect, repair and maintain structures and related components of non-pressurised small aircraft

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for MEA370 Repair the structure of non-pressurised small aircraft

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- applying all relevant WHS procedures, including the selection and use of MSDS and applicable items of PPE
- identifying damage to aircraft metallic (ferrous and non-ferrous) structures and/or components by way of impact, fatigue or the various types of corrosion
- inspecting damage and assessing composite components/structures
- identifying various aircraft metals and their basic properties
- identifying composite materials used in aircraft construction, associated safety precautions and hazards
- correctly interpreting repair scheme drawings, including third angle projection, isometric, sectional formats and hand sketches
- using appropriate hand tools and machines, including riveting equipment, drilling equipment, aligning tools and material fasteners (grip pins)
- applying correct removal, installation and repair techniques for:
 - a range of rivets (blind and solid) using hand, squeeze and pneumatic situations
 - a range of close tolerance fasteners (standard and oversize – hillocks and taper locks), including hole preparation
 - threaded devices, including internal and external thread cutting, Helicoil inserts and damaged stud replacement
 - hardware assembled by close tolerance fits using heat, cooling and force methods, including bearings, bushes and inserts
- performing a range of metal structure and composite material repair techniques, including:
 - metal scab patch, flush, splice, lap and formed section repair
 - composite external patch, scarf, stepped and bolted repairs
 - metal to metal and metal to composite bonding
- applying structural corrosion removal/treatment techniques
- restoring aircraft structure sealing and surface finishes.

It is essential that the procedures take into account all aircraft and personal safety precautions relating to aircraft structure.

Evidence of transferability of skills and knowledge related to inspection, testing and repair of aircraft structure is essential. This may be demonstrated through application across a number of aircraft structures or aircraft types. Ability to interpret inspection and repair procedures and specifications and apply them in practice is critical. The application of the procedures should also clearly indicate knowledge of structural flight loads and aerodynamic requirements.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable WHS procedures, including the use of PPE and MSDS
- requirements for handling and storing aircraft metals and composite materials, including sealing agents, to industry standards
- means of identifying aircraft structural assembly fasteners (metal and composite) by interpretation of markings, numbering systems, size, shape and colour
- structural and non-structural component methods of attachment, faying surface treatment and fuel tank sealing
- assessment of structural damage:
 - types and classes of mechanical damage
 - types of corrosion and determining the extent of damage
 - relevant documentation and manuals
 - damage limits and repair schemes for metallic and non-metallic structure
- procedures for the fabrication and fitment of metal repairs:
 - scab patch
 - flush patch
 - splice
 - lap
 - formed section
- corrosion removal and passivation
- procedures for performing composite repairs:
 - external patch
 - scarf patch
 - stepped repairs
 - bolted repairs
- repair of integral fuel tanks and sealing of faying surfaces, including specific WHS and PPE requirements
- surface finishes and methods of restoration, including specific WHS and PPE requirements
- how to obtain MSDS
- relevant maintenance and structural repair manuals
- relevant regulatory requirements and standard procedures.

Assessment Conditions

- Competency should be assessed in the work environment or simulated work environment using tools and equipment specified in maintenance documentation. It is also expected that general-purpose tools and test equipment found in most routine situations would be used where appropriate.
- The following conditions of assessment represent the requirements of the Regulators (ADF and CASA) and maintenance stakeholders and must be rigorously observed.
- A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements and performance criteria of the unit of competency are being achieved under routine supervision across the variables in the Range of Conditions as follows:
 - recognition of each type of damage:
 - impact damage
 - fatigue cracking
 - corrosion
 - delamination of composites and bonded structures
 - one (1) repair task from each of the following groups:
 - remove corrosion by chemical and mechanical methods
 - restore protective coatings
 - apply sealants and jointing compounds
 - freehand precision hole generation
 - remove and install structural hardware and fastening devices
 - remove and replace bushes, bearings and bearing surfaces
 - metal scab patch, flush, splice, lap and formed section repair
 - composite external patch, scarf and stepped repairs.
- This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide (for details refer to the Companion Volume Assessment Guidelines).
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).
- Where the unit is to be used for CASA licensing purposes the Assessor must also meet the criteria specified in the CASR Part 147 Manual of Standards.
- The competency elements and performance criteria also cover a significant portion of those required for unit MEA339 Inspect, repair and maintain aircraft structures. Refer to that unit for details of credits that may be granted during assessment.

MEA371 Perform major repairs and modifications to small aircraft metal structure

Modification History

Release 1 - New unit of competency

Application

This unit of competency requires application of hand skills, applicable tools, maintenance publications and repair drawings to perform major repairs and modifications to small aircraft structure, including the replacement of primary structure components of both fixed and rotary wing aircraft. This may occur during scheduled or unscheduled maintenance activities and may involve individual or team-related activities.

The unit is part of the Aeroskills Mechatronics Certificates III and IV small aircraft maintenance training pathways.

The unit is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Where a CASA licensing outcome is sought this unit forms part of the CASA requirement for the granting of the chosen maintenance certification licence under Civil Aviation Safety Regulation (CASR) Part 66, in accordance with the licensing provisions in the Companion Volume Implementation Guide.

Pre-requisite Unit

- | | |
|--------|--|
| MEA369 | Inspect and maintain structures and related components of non-pressurised small aircraft |
| MEA370 | Repair the structure of non-pressurised small aircraft |

Competency Field

Aviation maintenance

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|--|---|
| 1. Prepare to undertake repair or modification | 1.1 Modification or the repair scheme is identified in accordance with structural repair manual and/or approved data |
| | 1.2 Specialist advice is obtained in establishing an approved repair scheme where a standard repair scheme cannot be identified or where damage is beyond specified limits |
| | 1.3 All materials and equipment required are organised |
| | 1.4 Structure is supported and prepared in accordance with the applicable maintenance manual to ensure personnel safety and freedom from damage |
| | 1.5 Jigs, fixtures or bracing are used, as required, to maintain shape and/or alignment |
| 2. Repair/modify aircraft structure | 2.1 Structural repairs/modifications are performed, in accordance with approved repair scheme or modification drawings and instructions, ensuring that aircraft standard practices are used and process requirements are carried out while observing all relevant work health and safety (WHS) requirements, including the use of material safety data sheets (MSDS) and items of personal protective equipment (PPE) |
| | 2.2 Work area is cleaned of all waste material or contaminants |
| | 2.3 Required mensuration/alignment checks are completed and components are adjusted, where necessary, to operate within prescribed specifications |
| | 2.4 Repaired components or assemblies are tagged, sealed and packaged or cradled in accordance with specified procedures, where required |
| | 2.5 Required maintenance documentation is completed and processed in accordance with standard enterprise |

procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- | | |
|---|--|
| Repair tasks include: | <ul style="list-style-type: none">• Removing and installing structural hardware and fastening devices• Repairing by replacement major load-carrying structural members, such as skins, longerons, spars, frames and bulkheads |
| Assembly stress defects include: | <ul style="list-style-type: none">• Oil canning• Buckling• Contour misalignment |
| Procedures and requirements include: | <ul style="list-style-type: none">• Industry standard procedures specified by manufacturers, regulatory authorities or the enterprise |

Assessment Requirements for MEA371 Perform major repairs and modifications to small aircraft metal structure

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- applying relevant WHS regulations and practices, including the use of MSDS and PPE
- using approved maintenance documentation and aircraft publications relating to aircraft structure
- identifying aircraft structural assembly fasteners by interpretation of markings, numbering systems, size, shape and colour
- correctly interpreting and/or producing repair scheme/modification drawings, including third angle projection, isometric, sectional formats and hand sketches
- using appropriate hand tools and machines to remove and assemble aircraft structural components, parts, sections and skin, including riveting equipment, drilling equipment, aligning tools and material fasteners (grip pins)
- applying correct removal, installation and repair techniques for:
 - a range of rivets (blind and solid) using hand, squeeze and pneumatic situations
 - a range of close tolerance fasteners (standard and oversize – hillocks and taper locks), including hole preparation
 - threaded devices, including internal and external thread cutting, Helicoil inserts and damaged stud replacement
 - hardware assembled by close tolerance fits using heat, cooling and force methods, including bearings, bushes and inserts
- correctly supporting the aircraft structure by jacking, trestling and/or jiggling methods
- performing mensuration checks after structure reassembly.

It is essential that the procedures take into account all aircraft and personal safety precautions relating to aircraft structure.

Evidence of transferability of skills and knowledge related to the major repair and modification of aircraft structure is essential. This may be demonstrated through application across a number of aircraft systems or aircraft types. Ability to interpret repair/modification procedures and specifications and apply them in practice is critical. The application of the procedures should also clearly indicate knowledge of structural flight loads and aerodynamic requirements.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- aircraft construction principles and structural component attachment methods for primary structure:
 - fuselage
 - wings and attachment fittings
 - horizontal and vertical stabilisers and attachment fittings
 - pylons and attachment fittings
 - flight control surfaces
 - engine mounts and nacelles and attachment fittings
 - undercarriage attachments
- procedures for replacement of primary structure components, such as:
 - fuselage frames and longerons
 - wing spars or spar caps
 - wing-to-fuselage attachment fittings
 - tailplane attachment fittings
 - undercarriage attachment fittings
- aircraft mensuration checks – when required and methodology
- repair of integral fuel tanks and sealing of faying surfaces, including specific WHS and PPE requirements
- surface finishes and methods of restoration
- how to obtain MSDS
- relevant maintenance and structural repair manuals and modification data
- relevant regulatory requirements and standard procedures.

Assessment Conditions

- Competency should be assessed in the work environment or simulated work environment using tools and equipment specified in maintenance documentation. It is also expected that general-purpose tools and test equipment found in most routine situations would be used where appropriate.
- The following conditions of assessment represent the requirements of the Regulators (ADF and CASA) and maintenance stakeholders and must be rigorously observed.
- A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements and performance criteria of the unit of competency are being achieved under routine supervision on tasks involving repairing by replacement or modifying major load-carrying structural members, such as skins, longerons, spars, frames and bulkheads.
- This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide (for details refer to the Companion Volume Assessment Guidelines).

- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).
- Where the unit is to be used for CASA licensing purposes the Assessor must also meet the criteria specified in the CASR Part 147 Manual of Standards.

MEA372 Perform mechanical elementary maintenance

Modification History

Release 2 - Additional items added to Range of Conditions to align with CASR Part 66 MOS and related changes made to Assessment Requirements

Application

The unit of competency provides skills and knowledge required by small aircraft maintenance B1 and B2 Licence holders to perform and certify mechanical elementary maintenance on small fixed and rotary wing aircraft.

The unit is part of the Aeroskills Mechatronics Certificates IV small aircraft maintenance training pathways.

Where a Civil Aviation Safety Authority (CASA) licensing outcome is sought this unit forms part of the CASA requirement for the granting of the chosen maintenance certification licence under Civil Aviation Safety Regulation (CASR) Part 66, in accordance with the licensing provisions in the Companion Volume Implementation Guide.

Pre-requisite Unit

MEA301 Perform aircraft flight servicing

Competency Field

Aviation maintenance

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes

Performance criteria describe the performance needed to demonstrate achievement of the element

- | | |
|---------------------------------|--|
| 1. Remove mechanical components | 1.1 System is rendered safe and prepared in accordance with the applicable maintenance manual and isolation tags are fitted, where necessary, to ensure personnel safety |
|---------------------------------|--|

- 1.2 Removal of components is carried out in accordance with approved maintenance data while observing all relevant work health and safety (WHS) procedures including the use of material safety data sheets (MSDS) and personal protective equipment (PPE)
- 1.3 Required maintenance documentation is accurately compiled and correctly processed
- 1.4 Removed components are tagged, sealed and packaged in accordance with specified procedures
2. Install mechanical components
 - 2.1 Components to be installed are checked to confirm correct part numbers, serviceability and modification status
 - 2.2 Installation is carried out in accordance with approved maintenance data while observing all relevant WHS procedures, including the use of MSDS and PPE
 - 2.3 Required maintenance documentation is accurately completed and correctly processed
3. Repair mechanical non-structural components
 - 3.1 Extent of damage is correctly assessed to assist in determining repair procedure
 - 3.2 Appropriate repair scheme is identified in accordance with structural repair manual and/or approved data
 - 3.3 All required materials and equipment are organised
 - 3.4 Repairs are performed in accordance with approved repair scheme, ensuring that aircraft standard practices are used and process requirements are carried out while observing all relevant WHS procedures, including the use of MSDS and PPE
 - 3.5 Work area is cleaned of all waste material or contaminants
 - 3.6 Required maintenance documentation is accurately completed and correctly processed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Mechanical elementary maintenance tasks include:

- Replacement of defective locking wire or split pins used on other than flight control systems
- Removal and installation of passenger and crew seat safety restraints
- Removal and installation of co-pilot control levers
- Removal and installation of simple hose connections not requiring special tools or bench assembly (excludes hydraulic connections and engine compartment fuel and oil pressure or scavenge hose connections)
- Removal and installation of prefabricated fuel lines
- Removal and installation of aircraft wheels or skids, including servicing and inspection of wheel bearings and replacement of tyres
- Removal and installation of landing gear elastic shock absorber cords
- Removal and installation of engine cowls not requiring propeller removal or disconnection of engine controls
- Removal and installation of induction system baffles
- Removal and installation of non-structural passenger cabin partitions
- Replacement of side windows in non-pressurised cabins
- Removal and installation of spark plugs, includes cleaning and setting of gap clearance
- Performance of cylinder compression tests
- Removal and installation of fuel and oil strainers or filter elements, includes element disassembly and cleaning, where applicable
- Removal, checking and installation of magnetic chip detectors
- Removal and installation of doors on non-pressurised aircraft
- Small simple repairs to fairings, non-structural cover plates and cowlings
- Simple fabric patches not requiring rib stitching or the

removal of structural components (not on flight controls)

- Minor repairs to cabin trim and upholstery
- Restoration of finish after repairs and minor touch-up of decorative coatings
- Adding oil, air or both to non-retractable landing gear shock struts
- Industry standard procedures specified by manufacturers, regulatory authorities or the enterprise

Procedures and requirements include:

Unit Mapping Information

Release 2 - Additional items added to Range of Conditions to align with CASR Part 66 MOS and related changes made to Assessment Requirements. Equivalent.

Release 1 - New unit

Assessment Requirements for MEA372 Perform mechanical elementary maintenance

Modification History

Release 2 - Additional items added to Range of Conditions to align with CASR Part 66 MOS and related changes made to Assessment Requirements

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- applying all relevant WHS procedures, including the selection and use of MSDS and applicable items of PPE
- correctly removing and installing mechanical components listed in the Range of Conditions
- performing repairs listed in the Range of Conditions and classified as elementary maintenance
- removing and installing removable items of cabin and cockpit equipment including co-pilot control levers
- removing, checking and reinstalling engine chip detectors.
- performance of engine compression tests

The underlying skills inherent in this unit should be transferable across a range of elementary maintenance and repair applications across the aircraft types maintained by the enterprise. It is essential that the relevant procedures are interpreted and applied to ensure quality and safety standards are achieved.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable WHS procedures, including the use of PPE and MSDS
- aircraft configuration and safety precautions associated with component removal and installation tasks listed in the Range of Conditions
- types of aircraft fabric coverings and the procedures for minor repairs classified as elementary maintenance
- aircraft composite materials and associated safety precautions
- aircraft window materials and construction
- methods of minor composite repairs classified as elementary maintenance

- methods for performing minor repairs to cabin trim and upholstery
- purpose of chip detectors and inspection requirements
- procedure for performing engine compression tests

Assessment Conditions

- Competency should be assessed in the work environment or simulated work environment using tools and equipment specified in maintenance documentation. It is also expected that general-purpose tools and test equipment found in most routine situations would be used where appropriate.
- The following conditions of assessment represent the requirements of CASA and maintenance stakeholders and must be rigorously observed.
- A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements and performance criteria of the unit of competency are being achieved under routine supervision on the following mechanical elementary maintenance tasks:
 - replacement of defective locking wire or split pins used on other than flight control systems
 - removal and installation of passenger and crew seat safety restraints
 - removal and installation of co-pilot control levers
 - removal and installation of simple hose connections not requiring special tools or bench assembly (excludes hydraulic connections and engine compartment fuel and oil pressure or scavenge hose connections)
 - removal and installation of prefabricated fuel lines
 - removal and installation of aircraft wheels or skids, including servicing and inspection of wheel bearings and replacement of tyres
 - removal and installation of landing gear elastic shock absorber cords
 - removal and installation of engine cowls not requiring propeller removal or disconnection of engine controls
 - removal and installation of induction system baffles
 - removal and installation of non-structural passenger cabin partitions
 - replacement of side windows in non-pressurised cabins
 - removal and installation of spark plugs, includes cleaning and setting of gap clearance
 - performance of cylinder compression tests
 - removal and installation of fuel and oil strainers or filter elements, includes element disassembly and cleaning, where applicable
 - removal, checking and installation of magnetic chip detectors
 - removal and installation of doors on non-pressurised aircraft
 - small simple repairs to fairings, non-structural cover plates and cowlings
 - simple fabric patches not requiring rib stitching or the removal of structural components (not on flight controls)
 - minor repairs to cabin trim and upholstery
 - restoration of finish after repairs and minor touch-up of decorative coatings

- adding oil, air or both to non-retractable landing gear shock struts.
- This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide (for details refer to the Companion Volume Assessment Guidelines).
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).
- Where the unit is to be used for CASA licensing purposes the Assessor must also meet the criteria specified in the CASR Part 147 Manual of Standards.

ME A380 Repair and/or overhaul aircraft hydraulic system components

Modification History

Release 1 - New unit of competency

Application

This unit of competency requires application of hand skills, theory knowledge and maintenance publication procedures to repair and overhaul hydraulic system components from fixed and rotary wing aircraft in workshops during the performance of scheduled or unscheduled maintenance. Maintenance may be performed individually or as part of a team.

The unit is part of the Mechanical Certificate IV (Component Workshop Maintenance Stream) training pathway. It is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

ME A101	Interpret work health and safety practices in aviation maintenance
ME A103	Plan and organise aviation maintenance work activity
ME A105	Apply quality standards applicable to aviation maintenance processes
ME A107	Interpret and use aviation maintenance industry manuals and specifications
ME A108	Complete aviation maintenance industry documentation
ME A109	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Competency Field

Aviation maintenance

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|--|--|
| 1. Determine requirements | 1.1 Component defect reports (removal tags) or customer order are correctly interpreted and matched by part and serial numbers |
| | 1.2 Hydraulic components are inspected and/or operated through prescribed test procedures to establish serviceability or confirm defects, as required |
| | 1.3 Modification status is clearly established to assist in determining the overhaul requirements for the components |
| | 1.4 Extent of overhaul or repair is identified and documented in accordance with standard enterprise procedures |
| 2. Troubleshoot hydraulic components | 2.1 Available information from maintenance records and test results is used, where necessary, to assist in fault determination |
| | 2.2 Logical processes are used to ensure efficient and accurate troubleshooting |
| | 2.3 Specialist advice is obtained, where required, to assist with, or confirm, the fault and rectification requirement |
| | 2.4 Hydraulic component faults are located and the causes of the faults are clearly identified |
| | 2.5 Fault rectification requirements are determined to assist in planning the repair |
| 3. Dismantle and inspect hydraulic component parts | 3.1 Hydraulic component parts are dismantled in accordance with maintenance manuals while observing all relevant work health and safety (WHS) requirements, including the use of material safety data sheets (MSDS) and items of personal protective equipment (PPE) |
| | 3.2 Component parts are assessed for serviceability in accordance with the relevant maintenance documentation |

- | | | | |
|----|--|--|--|
| | 3.3 | Parts requiring specialist repair are tagged and repair instructions are specified in accordance with standard enterprise procedures | |
| | 3.4 | Parts requiring non-destructive testing are prepared for testing in accordance with the relevant maintenance documentation | |
| | 3.5 | Parts lists are compiled and processed in accordance with standard enterprise procedures | |
| 4. | Repair and/or modify hydraulic components or parts | 4.1 | Component parts are repaired or replaced in accordance with the relevant maintenance documentation |
| | | 4.2 | Modification of components or parts is undertaken, where required, by relevant manufacturer's bulletins or procedures |
| 5. | Assemble, test and adjust hydraulic components | 5.1 | Hydraulic component parts are assembled within specified tolerances and in accordance with the appropriate maintenance documents while observing all relevant WHS requirements, including the use of MSDS and items of PPE |
| | | 5.2 | Components are adjusted, tested or calibrated to operate within prescribed specifications |
| | | 5.3 | Finished components are tagged, sealed and packaged in accordance with standard enterprise procedures |
| | | 5.4 | Required maintenance documentation and modification records are completed and processed in accordance with standard enterprise procedures |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional

contexts) are included.

Hydraulic components include:

- Valves, pumps, motors, actuators, regulators, struts/oleos and brake units
- Accumulators, filters and reservoirs
- Rigid and flexible pipelines, hoses and fittings

Repair of component parts include:

- Finishing or re-finishing of metal surfaces through processes, such as polishing and lapping
- Removal of corrosion within maintenance manual limits
- Replacement of seals and backing rings
- Replacement of bearings
- Application of surface treatments, such as alodining
- Restoration of paint finishes

Testing and adjustment includes:

- Complex testing and adjusting of components, where required, will be carried out under supervision at the appropriate level

Procedures and requirements include:

- Industry standard procedures specified by manufacturers, regulatory authorities or the enterprise

Unit Mapping Information

Assessment Requirements for MEA380 Repair and/or overhaul aircraft hydraulic system components

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- applying relevant WHS procedures
- using MSDS and applicable items of PPE
- using relevant maintenance documentation and aircraft/component manuals relating to hydraulic system components to:
 - recognise state of serviceability and overhaul or repair requirements
 - test and accurately and efficiently troubleshoot unserviceabilities and document the causes
 - dismantle and inspect component parts for serviceability and identify repair requirements as applicable
 - repair/replace/modify component parts
 - assemble, test for correct operation and adjust components.

The underlying skills inherent in this unit should be transferable across a range of repair and/or overhaul applications associated with aircraft components. It is essential that the maintenance procedures are interpreted and applied to ensure quality and safety standards are achieved.

This shall be demonstrated through application across a number of different aircraft components. Ability to assess component serviceability and interpret parts requirements will be necessary to supplement the required evidence.

Capability to interpret inspection procedures and specifications (allowable limits) and apply them in practice is critical.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- how to obtain relevant MSDS
- the correct use of PPE
- WHS procedures

- fault diagnosis techniques
- system and component operation
- repair and overhaul procedures and processes
- hydraulic test rigs and their operation
- compressed air and nitrogen charging equipment.

Assessment Conditions

- Competency should be assessed in the work environment, or simulated work environment, using tools and equipment specified in maintenance documentation. It is also expected that general-purpose tools and test equipment found in most routine situations would be used where appropriate.
- The application of testing procedures should clearly indicate knowledge of system operation. Knowledge of system operation and the relationship of individual components will be necessary to supplement evidence of ability to troubleshoot component faults before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.
- The following conditions of assessment represent the requirements of the Regulators (ADF and CASA) and maintenance stakeholders and must be rigorously observed.
- A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements and performance criteria of the unit of competency are being achieved under routine supervision on at least one (1) component from each of the following groups:
 - valves, pumps, motors, actuators, regulators, struts/oleos and brake units
 - accumulators, filters and reservoirs
 - rigid and flexible pipelines, hoses and fittings.
- This must include demonstration of the following repair processes:
 - finishing or re-finishing of metal surfaces through processes, such as polishing and lapping
 - removal of corrosion within maintenance manual limits
 - replacement of seals and backing rings
 - replacement of bearings
 - application of surface treatments, such as alodining
 - restoration of paint finishes.
- This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide (for details refer to the Companion Volume Assessment Guidelines).
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

ME A381 Repair and/or overhaul aircraft pneumatic system components

Modification History

Release 1 - New unit of competency

Application

This unit of competency requires application of hand skills, theory knowledge and maintenance publication procedures to repair and overhaul pneumatic system components from fixed and rotary wing aircraft in workshops during the performance of scheduled or unscheduled maintenance. Maintenance may be performed individually or as part of a team.

The unit is part of the Mechanical Certificate IV (Component Workshop Maintenance Stream) training pathway. It is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

ME A101	Interpret work health and safety practices in aviation maintenance
ME A103	Plan and organise aviation maintenance work activity
ME A105	Apply quality standards applicable to aviation maintenance processes
ME A107	Interpret and use aviation maintenance industry manuals and specifications
ME A108	Complete aviation maintenance industry documentation
ME A109	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Competency Field

Aviation maintenance

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|--|--|
| 1. Determine requirements | 1.1 Component defect reports (removal tags) or customer order are correctly interpreted and matched by part and serial numbers |
| | 1.2 Pneumatic components are inspected and/or operated through prescribed test procedures to establish serviceability or confirm defects, as required |
| | 1.3 Modification status is clearly established to assist in determining the overhaul requirements for the components |
| | 1.4 Extent of overhaul or repair is identified and documented in accordance with standard enterprise procedures |
| 2. Troubleshoot pneumatic components | 2.1 Available information from maintenance records and test results is used, where necessary, to assist in fault determination |
| | 2.2 Logical processes are used to ensure efficient and accurate troubleshooting |
| | 2.3 Specialist advice is obtained, where required, to assist with, or confirm, the fault and rectification requirement |
| | 2.4 Pneumatic component faults are located and the causes of the faults are clearly identified |
| | 2.5 Fault rectification requirements are determined to assist in planning the repair |
| 3. Dismantle and inspect pneumatic parts | 3.1 Pneumatic component parts are dismantled in accordance with maintenance manuals while observing all relevant work health and safety (WHS) requirements, including the use of material safety data sheets (MSDS) and items of personal protective equipment (PPE) |
| | 3.2 Component parts are assessed for serviceability in accordance with the relevant maintenance documentation |

- | | | | |
|----|--|-----|--|
| | | 3.3 | Parts requiring specialist repair are tagged and repair instructions are specified in accordance with standard enterprise procedures |
| | | 3.4 | Parts requiring non-destructive testing (NDT) are prepared for testing in accordance with the relevant maintenance documentation |

| 4. | Repair and/or modify pneumatic components or parts | 4.1 | Component parts are repaired or replaced in accordance with the relevant maintenance documentation |
| | | 4.2 | Modification of components or parts is undertaken, where required, by relevant manufacturer's bulletins or procedures |
| 5. | Assemble, test and adjust pneumatic components | 5.1 | Pneumatic component parts are assembled within specified tolerances and in accordance with the appropriate maintenance documents while observing all relevant WHS requirements, including the use of MSDS and items of PPE |
| | | 5.2 | Components are adjusted, tested or calibrated to operate within prescribed specifications |
| | | 5.3 | Finished components are tagged, sealed and packaged in accordance with standard enterprise procedures |
| | | 5.4 | Required maintenance documentation and modification records are completed and processed in accordance with standard enterprise procedures |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional

contexts) are included.

Pneumatic components from pressurisation, air cycle air conditioning and pneumatic systems include:

- Valves, pumps, motors, expansion turbines, actuators, regulators, temperature sensors, mechanical pressurisation controllers, temperature controllers and thrust reversers

Repair of component parts includes:

- Heat exchangers and pressure vessels
- Rigid and flexible pipelines, hoses, fittings and ducting
- Finishing or re-finishing of metal surfaces through processes, such as polishing and lapping
- Removal of corrosion within maintenance manual limits
- Replacement of seals and backing rings
- Replacement of bearings
- Application of surface treatments, such as alodining
- Restoration of paint finishes

Testing and adjustment:

- Complex testing and adjusting of components, where required, will be carried out under supervision at the appropriate level

Procedures and requirements include:

- Industry standard procedures specified by manufacturers, regulatory authorities or the enterprise

Unit Mapping Information

Assessment Requirements for MEA381 Repair and/or overhaul aircraft pneumatic system components

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- applying relevant WHS procedures
- using MSDS and relevant items of PPE
- using relevant maintenance documentation and aircraft/component manuals relating to pneumatic, pressurisation and air cycle air conditioning system components to:
 - recognise state of serviceability and overhaul or repair requirements
 - test and accurately and efficiently troubleshoot unserviceabilities and document the causes
 - dismantle and inspect component parts for serviceability and identify repair requirements as applicable
 - repair/replace/modify component parts
 - assemble, test for correct operation and adjust components.

The underlying skills inherent in this unit should be transferable across a range of repair and/or overhaul applications associated with aircraft components. It is essential that the maintenance procedures are interpreted and applied to ensure quality and safety standards are achieved.

This shall be demonstrated through application across a number of different aircraft components. Ability to assess component serviceability and interpret parts requirements will be necessary to supplement the required evidence. Capability to interpret inspection procedures and specifications (allowable limits) and apply them in practice is critical.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- how to obtain relevant MSDS
- identification and use of items of PPE
- WHS procedures
- fault diagnosis techniques
- system and component operation

- repair and overhaul procedures and processes
- the use of pneumatic test rigs.

Assessment Conditions

- Competency should be assessed in the work environment, or simulated work environment, using tools and equipment specified in maintenance documentation. It is also expected that applicable general-purpose tools and test equipment found in most routine situations would be used where appropriate.
- The application of testing procedures should clearly indicate knowledge of system operation. Knowledge of system operation and the relationship of individual components will be necessary to supplement evidence of ability to troubleshoot component faults before under taking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.
- The following conditions of assessment represent the requirements of the Regulators (ADF and CASA) and maintenance stakeholders and must be rigorously observed.
- A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements and performance criteria of the unit of competency are being achieved under routine supervision on at least one (1) component from each of the following groups:
 - valves, pumps, motors, expansion turbines, actuators, regulators, temperature sensors, mechanical pressurisation controllers, temperature controllers and thrust reversers
 - heat exchangers and pressure vessels
 - rigid and flexible pipelines, hoses, fittings and ducting.
- This must include demonstration of the following repair processes:
 - finishing or re-finishing of metal surfaces through processes, such as polishing and lapping
 - removal of corrosion within maintenance manual limits
 - replacement of seals and backing rings
 - replacement of bearings
 - application of surface treatments, such as alodining
 - restoration of paint finishes.
- This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide (for details refer to the Companion Volume Assessment Guidelines).
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

MEA382 Repair and/or overhaul aircraft fuel system components

Modification History

Release 1 - New unit of competency

Application

This unit of competency requires application of hand skills, theory knowledge and maintenance publication procedures to repair and overhaul fuel system components from fixed and rotary wing aircraft in workshops during the performance of scheduled or unscheduled maintenance. Maintenance may be performed individually or as part of a team.

The unit is part of the Mechanical Certificate IV (Component Workshop Maintenance Stream) training pathway. It is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activity
MEA105	Apply quality standards applicable to aviation maintenance processes
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA109	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Competency Field

Aviation maintenance

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|--|--|
| 1. Determine requirements | 1.1 Component defect reports (removal tags) or customer order are correctly interpreted and matched by part and serial numbers |
| | 1.2 Fuel system components are inspected and/or operated through prescribed test procedures to establish serviceability or confirm defects, as required |
| | 1.3 Modification status is clearly established to assist in determining the overhaul requirements for the components |
| | 1.4 Extent of overhaul or repair is identified and documented in accordance with standard enterprise procedures |
| 2. Troubleshoot fuel system components | 2.1 Available information from maintenance records and test results is used, where necessary, to assist in fault determination |
| | 2.2 Logical processes are used to ensure efficient and accurate troubleshooting |
| | 2.3 Specialist advice is obtained, where required, to assist with, or confirm, the fault and rectification requirement |
| | 2.4 Fuel system component faults are located and the causes of the faults are clearly identified |
| | 2.5 Fault rectification requirements are determined to assist in planning the repair |
| 3. Dismantle and inspect fuel system component parts | 3.1 Fuel system component parts are dismantled in accordance with maintenance manuals while observing all relevant work health and safety (WHS) requirements, including the use of material safety data sheets (MSDS) and items of personal protective equipment (PPE) |
| | 3.2 Component parts are assessed for serviceability in accordance with the relevant maintenance documentation |

- | | | |
|---|-----|--|
| | 3.3 | Parts requiring specialist repair are tagged and repair instructions are specified in accordance with standard enterprise procedures |
| | 3.4 | Parts requiring non-destructive testing (NDT) are prepared for testing in accordance with the relevant maintenance documentation |
| | 3.5 | Parts lists are compiled and processed in accordance with standard enterprise procedures |
| 4. Repair and/or modify fuel system components or parts | 4.1 | Component parts are repaired or replaced in accordance with the relevant maintenance documentation |
| | 4.2 | Modification of components or parts is undertaken, where required, by relevant manufacturer's bulletins or procedures |
| 5. Assemble, test and adjust fuel system components | 5.1 | Fuel system component parts are assembled within specified tolerances and in accordance with the appropriate maintenance documents while observing all relevant WHS requirements, including the use of MSDS and items of PPE |
| | 5.2 | Components are adjusted, tested or calibrated to operate within prescribed specifications |
| | 5.3 | Finished components are tagged, sealed and packaged in accordance with standard enterprise procedures |
| | 5.4 | Required maintenance documentation and modification records are completed and processed in accordance with standard enterprise procedures |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional

contexts) are included.

Fuel system components include:

- Valves, pumps and control units
- Filters, rigid and flexible pipelines, hoses, fittings and flexible fuel tanks

Repair of component parts includes:

- Finishing or re-finishing of metal surfaces through processes, such as polishing and lapping
- Removal of corrosion within maintenance manual limits
- Replacement of seals and backing rings
- Replacement of bearings
- Application of surface treatments, such as alodining
- Restoration of paint finishes
- Repair of flexible fuel tank leaks

Testing and adjustment:

- Complex testing and adjusting of components, where required, will be carried out under supervision at the appropriate level

Procedures and requirements include:

- Industry standard procedures specified by manufacturers, regulatory authorities or the enterprise

MEA383 Repair and/or overhaul gas turbine engine air inlet and compressor components and/or modules

Modification History

Release 1 - New unit of competency

Application

This unit of competency requires application of hand skills, theory knowledge and maintenance publication procedures to repair and overhaul aircraft gas turbine air inlet and compressor components in workshops during the performance of scheduled or unscheduled maintenance. Maintenance may be performed individually or as part of a team.

Applications include air inlet and compressor components from turbo-jet, turbofan, turboshaft, turboprop engines and engine modules, or auxiliary power units.

The unit is part of the Mechanical Certificate IV (Component Workshop Maintenance Stream) training pathway. It is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activity
MEA105	Apply quality standards applicable to aviation maintenance processes
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation

| | | 2.5 | Fault rectification requirements are determined to assist in planning the repair |
| 3. | Dismantle and inspect air inlet and compressor parts | 3.1 | Air inlet and compressor component parts are dismantled in accordance with maintenance manual while observing all relevant work health and safety (WHS) requirements, including the use of material safety data sheets (MSDS) and items of personal protective equipment (PPE) |
| | | 3.2 | Component parts are assessed for serviceability in |

-
- accordance with the relevant maintenance documentation
- 3.3 Parts requiring specialist repair are tagged and repair instructions are specified in accordance with standard enterprise procedures
 - 3.4 Parts requiring non-destructive testing (NDT) are prepared for testing in accordance with the relevant maintenance documentation
 - 3.5 Parts lists are compiled and processed in accordance with standard enterprise procedures
- 4. Repair and/or modify air inlet and compressor components or parts
 - 4.1 Component parts are repaired or replaced in accordance with the relevant maintenance documentation
 - 4.2 Modification of components is undertaken, where required, by reference to relevant manufacturers' bulletins or procedures and/or customer requirements
- 5. Assemble and adjust air inlet and compressor components
 - 5.1 Air inlet and compressor component parts are assembled within specified tolerances and in accordance with the appropriate maintenance documents while observing all relevant WHS requirements, including the use of MSDS and items of PPE
 - 5.2 Support/safety equipment, where fitted, is removed at the appropriate time
 - 5.3 Components are adjusted to ensure that fits and clearances are within prescribed specifications
 - 5.4 Finished components are tagged, sealed and packaged in accordance with standard enterprise procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Air inlet and compressor components include:

- Air inlet structure and blow-in doors where these items are part of an engine change unit or engine module
- Fans (where applicable to the enterprise)
- Inlet guide vanes
- Centrifugal or axial flow compressor assemblies (low and high pressure)
- Compressor bleed valves (where applicable to the enterprise)

Repair of component parts includes:

- Finishing or re-finishing of metal surfaces through processes, such as polishing, lapping and blending of damage within maintenance manual limits
- Removal of corrosion within maintenance manual limits
- Replacement of seals and gaskets
- Replacement of bearings
- Application of surface treatments, such as alodining
- Restoration of paint finishes

Testing and adjustment:

- Complex testing and adjusting of components, where required, will be carried out under supervision at the appropriate level

Procedures and requirements include:

- Industry standard procedures specified by manufacturers, regulatory authorities or the enterprise

Assessment Requirements for MEA383 Repair and/or overhaul gas turbine engine air inlet and compressor components and/or modules

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- applying relevant WHS procedures including the use of MSDS and PPE
- using relevant maintenance documentation, specifications and aircraft/component manuals to:
 - recognise state of serviceability and overhaul or repair requirements for air inlet and compressor components
 - test and accurately and efficiently troubleshoot unserviceabilities and document the causes in air inlet and compressor components
 - dismantle and inspect air inlet and compressor component parts for serviceability and identify repair requirements as applicable
 - repair/replace/modify air inlet and compressor component parts
 - assemble and adjust air inlet and compressor components
- correctly tagging, sealing and packaging completed components.

The underlying skills inherent in this unit should be transferable across a range of repair and/or overhaul applications associated with gas turbine engine components and/or modules. It is essential that the maintenance procedures (including the use of correct fuels and lubricants) are interpreted and applied to ensure quality and safety standards are achieved.

This shall be demonstrated through application across a number of different gas turbine engine components and/or modules. Ability to assess component/module serviceability and interpret parts requirements will be necessary to supplement the required evidence. Capability to interpret inspection procedures and specifications (allowable limits) and apply them in practice is critical.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- how to obtain relevant MSDS
- the use of applicable items of PPE

- WHS procedures
- fault diagnosis techniques
- system and component operation
- repair and overhaul procedures and processes, including inspection, rework, repair and reclamation, assembly, balancing of rotating assemblies and final adjustment.

Assessment Conditions

- Competency should be assessed in the work environment, or simulated work environment, using tools and equipment specified in maintenance documentation. It is also expected that applicable general-purpose tools and test equipment found in most routine situations would be used where appropriate.
- The application of testing procedures should clearly indicate knowledge of system operation. Knowledge of system operation and the relationship of individual components will be necessary to supplement evidence of ability to troubleshoot component faults before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.
- The following conditions of assessment represent the requirements of the Regulators (ADF and CASA) and maintenance stakeholders and must be rigorously observed.
- A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements and performance criteria of the unit of competency are being achieved under routine supervision on at least one (1) item from each of the following groups:
 - air inlet structure and blow-in doors where these items are part of an engine change unit or engine module
 - fans, where applicable (may be omitted if not applicable to the enterprise)
 - inlet guide vanes
 - centrifugal or axial flow compressor assemblies (low and high pressure)
 - compressor bleed valves, where applicable (may be omitted if not applicable to the enterprise).
- This must include demonstration of the following repair processes:
 - finishing or re-finishing of metal surfaces through processes, such as polishing and lapping
 - removal of corrosion within maintenance manual limits
 - replacement of seals and backing rings
 - replacement of bearings
 - application of surface treatments, such as alodining
 - restoration of paint finishes.
- This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide (for details refer to the Companion Volume Assessment Guidelines).
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

MEA384 Repair and/or overhaul gas turbine engine combustion section components and/or modules

Modification History

Release 1 - New unit of competency

Application

This unit of competency requires application of hand skills, theory knowledge and maintenance publication procedures to repair and overhaul aircraft gas turbine engine or engine module combustion section components during the performance of scheduled or unscheduled maintenance. Maintenance may be performed individually or as part of a team.

Applications include combustion section components and modules from turbo-jet, turbofan, turboshaft, turboprop engines, engine modules or auxiliary power units.

The unit is part of the Mechanical Certificate IV (Component Workshop Maintenance Stream) training pathway. It is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activity
MEA105	Apply quality standards applicable to aviation maintenance processes
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation

Assessment Requirements for MEA384 Repair and/or overhaul gas turbine engine combustion section components and/or modules

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- applying relevant WHS procedures, including the use of MSDS and PPE
- using relevant maintenance documentation, specifications and aircraft/component manuals to:
 - recognise state of serviceability and overhaul or repair requirements for combustion section components
 - test and accurately and efficiently troubleshoot engine combustion component unserviceabilities and document the causes
 - dismantle and inspect combustion section component parts for serviceability and identify repair requirements as applicable
 - repair/replace/modify combustion section component parts
 - assemble and adjust combustion section components
- correctly tagging, sealing and packaging completed components.

The underlying skills inherent in this unit should be transferable across a range of repair and/or overhaul applications associated with gas turbine engine components and/or modules. It is essential that the maintenance procedures (including the use of correct fuels and lubricants) are interpreted and applied to ensure quality and safety standards are achieved.

This shall be demonstrated through application across a number of different gas turbine engine components and/or modules. Ability to assess component/module serviceability and interpret parts requirements will be necessary to supplement the required evidence. Capability to interpret inspection procedures and specifications (allowable limits) and apply them in practice is critical.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- how to obtain relevant MSDS
- the use of applicable items of PPE

- WHS procedures
- fault diagnosis techniques
- combustion section and component operation
- repair and overhaul procedures and processes, including inspection, rework, repair and reclamation, assembly, testing and final adjustment.

Assessment Conditions

- Competency should be assessed in the work environment, or simulated work environment, using tools and equipment specified in maintenance documentation. It is also expected that general-purpose tools and test equipment found in most routine situations would be used where appropriate.
- The application of testing procedures should clearly indicate knowledge of system operation. Knowledge of system operation and the relationship of individual components will be necessary to supplement evidence of ability to troubleshoot component faults before under taking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.
- The following conditions of assessment represent the requirements of the Regulators (ADF and CASA) and maintenance stakeholders and must be rigorously observed.
- A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements and performance criteria of the unit of competency are being achieved under routine supervision on at least one (1) item from each of the following groups:
 - fuel manifold and nozzles
 - combustion chamber (multiple can, can-annular or annular).
- This must include demonstration of the following repair processes:
 - finishing or re-finishing of metal surfaces through processes, such as polishing and lapping
 - removal of corrosion within maintenance manual limits
 - replacement of seals and gaskets.
- This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide (for details refer to the Companion Volume Assessment Guidelines).
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

MEA385 Repair and/or overhaul gas turbine engine turbine and exhaust section components

Modification History

Release 1 - New unit of competency

Application

This unit of competency requires application of hand skills, theory knowledge and maintenance publication procedures to repair and overhaul aircraft gas turbine engine turbine and exhaust section components in workshops during the performance of scheduled or unscheduled maintenance. Maintenance may be performed individually or as part of a team.

Applications include turbine and exhaust section components from turbo-jet, turbofan, turboshaft, turboprop engines and engine modules, or auxiliary power units.

The unit is part of the Mechanical Certificate IV (Component Workshop Maintenance Stream) training pathway. It is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activity
MEA105	Apply quality standards applicable to aviation maintenance processes
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA109	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Competency Field

Aviation maintenance

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|--|---|
| 1. Determine requirements | 1.1 Component defect reports (removal tags) or customer order are correctly interpreted and matched by part and serial numbers |
| | 1.2 Turbine and exhaust section components are inspected and/or operated through prescribed test procedures to establish serviceability and confirm defects, if necessary |
| | 1.3 Modification status is clearly established to assist in determining the overhaul requirements for the components |
| | 1.4 Extent of overhaul or repair is identified and documented in accordance with standard enterprise procedures |
| 2. Troubleshoot turbine and exhaust section components | 2.1 Available information from maintenance records and test results is used, where necessary, to assist in fault determination |
| | 2.2 Logical processes are used to ensure efficient and accurate troubleshooting |
| | 2.3 Specialist advice is obtained, where required, to assist with, or confirm, the fault and rectification requirement |
| | 2.4 Turbine and exhaust section component faults are located and the causes of the faults are clearly identified |
| | 2.5 Fault rectification requirements are determined to assist in planning the repair |
| 3. Dismantle and inspect turbine and exhaust section component parts | 3.1 Turbine and exhaust section component parts are dismantled in accordance with maintenance manual while observing all relevant work health and safety (WHS) requirements, including the use of material safety data sheets (MSDS) and items of personal protective equipment (PPE) |

- 3.2 Component parts are assessed for serviceability in accordance with the relevant maintenance documentation
 - 3.3 Parts requiring specialist repair are tagged and repair instructions are specified in accordance with standard enterprise procedures
 - 3.4 Parts requiring non-destructive testing are prepared for testing in accordance with the relevant maintenance documentation
 - 3.5 Parts lists are compiled and processed in accordance with standard enterprise procedures
- 4. Repair and/or modify turbine and exhaust section components or parts
 - 4.1 Component parts are repaired or replaced in accordance with the relevant maintenance documentation
 - 4.2 Modification of components is undertaken, where required, by reference to relevant manufacturers' bulletins or procedures and/or customer requirements
- 5. Assemble and adjust turbine and exhaust section components
 - 5.1 Turbine and exhaust section component parts are balanced where required and assembled within specified tolerances and in accordance with the appropriate maintenance documents while observing all relevant WHS requirements, including the use of MSDS and items of PPE
 - 5.2 Support/safety equipment, where fitted, is removed at the appropriate time
 - 5.3 Components are adjusted to ensure that fits and clearances are within prescribed specifications
 - 5.4 Finished components are tagged, sealed and packaged in accordance with standard enterprise procedures
 - 5.5 Required maintenance documentation and modification records are completed and processed in accordance with standard enterprise procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- Turbine and exhaust section components include:**
- High and low pressure turbine assemblies
 - Free turbine (where applicable to the enterprise)
 - Automatic turbine rotor clearance control system (where applicable to the enterprise)
 - Engine tail cone and exhaust struts
 - Jet pipe that is part of the engine change unit or module
 - Thrust reversers (where applicable to the enterprise)
 - Afterburner system where it is part of the engine change unit or module (where applicable to the enterprise)
- Repair of component parts include:**
- Finishing or re-finishing of metal surfaces through processes, such as polishing and lapping
 - Removal of corrosion within maintenance manual limits
 - Replacement of seals and gaskets
 - Replacement of bearings
- Testing and adjustment:**
- Complex testing and adjusting of components, where required, will be carried out under supervision at the appropriate level
- Procedures and requirements include:**
- Industry standard procedures specified by manufacturers, regulatory authorities or the enterprise

Unit Mapping Information

Release 1 – equivalent to MEA385A Repair and/or overhaul gas turbine engine turbine and exhaust section components

Assessment Requirements for MEA385 Repair and/or overhaul gas turbine engine turbine and exhaust section components

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- applying relevant WHS procedures, including the use of MSDS and PPE
- using relevant maintenance documentation, specifications and aircraft/component manuals to:
 - recognise state of serviceability and overhaul or repair requirements for turbine and exhaust section components
 - test and accurately and efficiently troubleshoot turbine and exhaust section component unserviceabilities and document the causes
 - dismantle and inspect turbine and exhaust section component parts for serviceability and identify repair requirements as applicable
 - repair/replace/modify turbine and exhaust section component parts
 - assemble and adjust turbine and exhaust section components
- correctly tagging, sealing and packaging completed components.

The underlying skills inherent in this unit should be transferable across a range of repair and/or overhaul applications associated with gas turbine engine components and/or modules. It is essential that the maintenance procedures (including the use of correct fuels and lubricants) are interpreted and applied to ensure quality and safety standards are achieved.

This shall be demonstrated through application across a number of different gas turbine engine components and/or modules. Ability to assess component/module serviceability and interpret parts requirements will be necessary to supplement the required evidence. Capability to interpret inspection procedures and specifications (allowable limits) and apply them in practice is critical.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- how to obtain relevant MSDS
- the use of applicable items of PPE
- WHS procedures

- fault diagnosis techniques
- turbine and exhaust section and component operation
- repair and overhaul procedures and processes, including inspection, rework, repair and reclamation, assembly, balancing of rotating assemblies and final adjustment.

Assessment Conditions

- Competency should be assessed in the work environment, or simulated work environment, using tools and equipment specified in maintenance documentation. It is also expected that general-purpose tools and test equipment found in most routine situations would be used where appropriate.
- The application of testing procedures should clearly indicate knowledge of system operation. Knowledge of system operation and the relationship of individual components will be necessary to supplement evidence of ability to troubleshoot component faults before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.
- The following conditions of assessment represent the requirements of the Regulators (ADF and CASA) and maintenance stakeholders and must be rigorously observed.
- A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements and performance criteria of the unit of competency are being achieved under routine supervision on at least one (1) item from each of the following groups:
 - high and low pressure turbine assemblies
 - free turbine (may be omitted where not applicable to the enterprise)
 - automatic turbine rotor clearance control system (may be omitted where not applicable to the enterprise)
 - engine tail cone and exhaust struts
 - jet pipe that is part of the engine change unit or module
 - thrust reversers (may be omitted where not applicable to the enterprise)
 - afterburner system where it is part of the engine change unit or module (may be omitted where not applicable to the enterprise).
- This must include demonstration of the following repair processes:
 - finishing or re-finishing of metal surfaces through processes, such as polishing and lapping
 - removal of corrosion within maintenance manual limits
 - replacement of seals and gaskets
 - replacement of bearings.
- This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide (for details refer to the Companion Volume Assessment Guidelines).
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

MEA386 Repair and/or overhaul gas turbine engine ancillary section components

Modification History

Release 1 - New unit of competency

Application

This unit of competency requires application of hand skills, theory knowledge and maintenance publication procedures to repair and overhaul aircraft gas turbine engine ancillary section components in workshops during the performance of scheduled or unscheduled maintenance. Maintenance may be performed individually or as part of a team.

Applications include ancillary section components from turbo-jet, turbofan, turboshaft, turboprop engines and engine modules, or auxiliary power units.

The unit is part of the Mechanical Certificate IV (Component Workshop Maintenance Stream) training pathway. It is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activity
MEA105	Apply quality standards applicable to aviation maintenance processes
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA109	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Competency Field

Aviation maintenance

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Determine requirements	<p>1.1 Component defect reports (removal tags) or customer order are correctly interpreted and matched by part and serial numbers</p> <p>1.2 Ancillary section components are inspected and/or operated through prescribed test procedures to establish serviceability and confirm defects, if necessary</p> <p>1.3 Modification status is clearly established to assist in determining the overhaul requirements for the components</p> <p>1.4 Extent of overhaul or repair is identified and documented in accordance with standard enterprise procedures</p>
2. Troubleshoot ancillary section components	<p>2.1 Available information from maintenance records and test results is used, where necessary, to assist in fault determination</p> <p>2.2 Logical processes are used to ensure efficient and accurate troubleshooting</p> <p>2.3 Specialist advice is obtained, where required, to assist with, or confirm, the fault and rectification requirement</p> <p>2.4 Ancillary section component/module faults are located and the causes of the faults are clearly identified</p> <p>2.5 Fault rectification requirements are determined to assist in planning the repair</p>
3. Dismantle and inspect ancillary section component parts	<p>3.1 Ancillary section component parts are dismantled in accordance with maintenance manual while observing all relevant work health and safety (WHS) requirements, including the use of material safety data sheets (MSDS) and items of personal protective equipment (PPE)</p> <p>3.2 Component parts are assessed for serviceability in accordance with the relevant maintenance documentation</p> <p>3.3 Parts requiring specialist repair are tagged and repair instructions are specified in accordance with standard</p>

- enterprise procedures
- 3.4 Parts requiring non-destructive testing (NDT) are prepared for testing in accordance with the relevant maintenance documentation
- 3.5 Parts lists are compiled and processed in accordance with standard enterprise procedures
- 4. Repair and/or modify ancillary section components or parts
 - 4.1 Component parts are repaired or replaced in accordance with the relevant maintenance documentation
 - 4.2 Modification of components is undertaken, where required, by reference to relevant manufacturers' bulletins or procedures and/or customer requirements
- 5. Assemble and adjust ancillary section components
 - 5.1 Ancillary section component parts are assembled within specified tolerances and in accordance with the appropriate maintenance documents while observing all relevant WHS requirements, including the use of MSDS and items of PPE
 - 5.2 Support/safety equipment, where fitted, is removed at the appropriate time
 - 5.3 Components are adjusted to ensure that fits and clearances are within prescribed specifications
 - 5.4 Finished components are tagged, sealed and packaged in accordance with standard enterprise procedures
 - 5.5 Required maintenance documentation and modification records are completed and processed in accordance with standard enterprise procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional

contexts) are included.

Ancillary section components include:

- Accessory (or high-speed) gearbox
- Turboprop reduction gearbox (where applicable to the enterprise)
- Turboshaft drive shaft or reduction gearbox (where applicable to the enterprise)

Repair of component parts includes:

- Finishing or re-finishing of metal surfaces through processes, such as polishing and lapping
- Replacement of seals and gaskets
- Replacement of bearings
- Application of surface treatments
- Restoration of paint finishes

Testing and adjustment:

- Complex testing and adjusting of components, where required, will be carried out under supervision at the appropriate level

Procedures and requirements include:

- Industry standard procedures specified by manufacturers, regulatory authorities or the enterprise

Assessment Requirements for MEA386 Repair and/or overhaul gas turbine engine ancillary section components

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- applying relevant WHS procedures
- using relevant MSDS and items of PPE
- using relevant maintenance documentation, specifications and aircraft/component manuals to:
 - recognise state of serviceability and overhaul or repair requirements for ancillary section components
 - test and accurately and efficiently troubleshoot ancillary section component unserviceabilities and document the causes
 - dismantle and inspect ancillary section component parts for serviceability and identify repair requirements as applicable
 - repair/replace/modify ancillary section component parts
 - assemble and adjust ancillary section components
- correctly tagging, sealing and packaging completed components.

The underlying skills inherent in this unit should be transferable across a range of repair and/or overhaul applications associated with gas turbine engine components and/or modules. It is essential that the maintenance procedures (including the use of correct fuels and lubricants) are interpreted and applied to ensure quality and safety standards are achieved.

This shall be demonstrated through application across a number of different gas turbine engine components and/or modules. Ability to assess component/module serviceability and interpret parts requirements will be necessary to supplement the required evidence. Capability to interpret inspection procedures and specifications (allowable limits) and apply them in practice is critical.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- how to obtain relevant MSDS
- the use of applicable items of PPE

- WHS procedures
- fault diagnosis techniques
- ancillary section and component operation
- repair and overhaul procedures and processes, including inspection, rework, repair and reclamation, assembly and final adjustment.

Assessment Conditions

- Competency should be assessed in the work environment, or simulated work environment, using tools and equipment specified in maintenance documentation. It is also expected that general-purpose tools and test equipment found in most routine situations would be used where appropriate.
- The application of testing procedures should clearly indicate knowledge of system operation. Knowledge of system operation and the relationship of individual components will be necessary to supplement evidence of ability to troubleshoot component faults before undertaking any action. ME A387 Test gas turbine engines and engine modules after overhaul or repair

Modification History

Release 1 - New unit of competency

Application

This unit of competency requires application of hand skills, theory knowledge and maintenance publication procedures to test run aircraft gas turbine engines and engine modules in engine test stands following overhaul or repair in workshops during the performance of scheduled or unscheduled maintenance. Testing may be performed individually or as part of a team.

Applications include turbo-jet, turbofan, turboshaft, turboprop engines and engine modules, or auxiliary power units.

The unit is part of the Mechanical Certificate IV (Component Workshop Maintenance Stream) training pathway. It is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

ME A383	Repair and/or overhaul gas turbine engine air inlet and compressor components and/or modules
ME A384	Repair and/or overhaul gas turbine engine combustion section components and/or modules
ME A385	Repair and/or overhaul gas turbine engine turbine and exhaust section components
ME A386	Repair and/or overhaul gas turbine engine ancillary section components

Competency Field

Aviation maintenance

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|----|---|-----|--|
| 1. | Prepare engine or module for testing | 1.1 | Maintenance documentation is checked to confirm that engine or module is ready for testing |
| | | 1.2 | Where required, engine modules are assembled into a test engine |
| | | 1.3 | Engine is configured for testing in accordance with maintenance manual requirements and standard enterprise procedures |
| 2. | Install engine in test stand | 2.1 | Engine is installed in test stand in accordance with maintenance manual requirements and standard enterprise procedures while observing all relevant work health and safety (WHS) requirements, including the use of material safety data sheets (MSDS) and items of personal protective equipment (PPE) |
| | | 2.2 | Fuel, oil and fluid levels are checked |
| | | 2.3 | Engine test stand is prepared for operation |
| 3. | Run and test engine or module performance | 3.1 | Engine is started and operating parameters are checked |
| | | 3.2 | Engine performance is tested and trimmed, where applicable, in accordance with maintenance manual requirements and standard enterprise procedures |
| | | 3.3 | Engine operating parameters and test results are recorded in accordance with standard enterprise procedures |
| 4. | Remove engine from test stand | 4.1 | Engine is removed from test stand in accordance with maintenance manual requirements and standard enterprise procedures while observing all relevant WHS requirements, including the use of MSDS and items of PPE |
| | | 4.2 | Serviceable engines or modules are configured, inhibited and prepared in accordance with maintenance manual requirements and standard enterprise procedures for transport or storage |

- 4.3 Unserviceable engines or modules are returned to workshop in accordance with standard enterprise procedures for rectification or rework

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Assessment Requirements for MEA387 Test gas turbine engines and engine modules after overhaul or repair

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- applying relevant WHS procedures
- using relevant MSDS and items of PPE
- using relevant maintenance manuals and standard enterprise procedures to:
 - prepare engines or modules for test running
 - install engines in test stands
 - test run and trim engines, where applicable
 - record engine operating parameters
 - remove engines from the test stand
 - complete documentation
- configuring and inhibiting serviceable engines and modules for transport or storage.

The underlying skills inherent in this unit should be transferable across a range of repair and/or overhaul applications associated with gas turbine engines and/or modules. It is essential that the maintenance procedures (including the use of correct fuels and lubricants) are interpreted and applied to ensure quality and safety standards are achieved.

This shall be demonstrated through application across a number of gas turbine engine and/or module test runs. Capability to interpret test procedures and specifications (allowable limits) and apply them in practice is critical.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- how to obtain relevant MSDS
- the use of applicable items of PPE
- WHS procedures
- test stand operation
- engine and module test requirements
- engine operating parameters and adjustment methods.

Assessment Conditions

- Competency should be assessed in the work environment or simulated work environment in an applicable engine test stand. It is also expected that general-purpose tools and test equipment found in most routine situations would be used where appropriate.
- The application of testing procedures should clearly indicate knowledge of system operation. Knowledge of system operation and the relationship of individual components will be necessary to supplement evidence of ability to troubleshoot engine or module faults before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.
- The following conditions of assessment represent the requirements of the Regulators (ADF and CASA) and maintenance stakeholders and must be rigorously observed.
- A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements and performance criteria of the unit of competency are being achieved under routine supervision on a range of engine/module test runs that are representative of the testing performed within the enterprise.
- This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide (for details refer to the Companion Volume Assessment Guidelines).
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

MEA389 Repair and/or overhaul propellers

Modification History

Release 1 - New unit of competency

Application

This unit of competency requires application of hand skills, theory knowledge and maintenance publication procedures to repair and overhaul aircraft propellers and components during the performance of scheduled or unscheduled maintenance. Maintenance may be performed individually or as part of a team.

Applications include piston and turbine engine propellers and components, excluding propeller blades that are made from materials other than metal.

The unit is part of the Mechanical Certificate IV (Component Workshop Maintenance Stream) training pathway. It is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activity
MEA105	Apply quality standards applicable to aviation maintenance processes
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA109	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Competency Field

Aviation maintenance

Unit Sector

Elements and Performance Criteria

| | | 4.2 | Modification of components or parts is undertaken, where required, by relevant manufacturers' bulletins or procedures |
| 5. | Assemble, test and adjust propeller components | 5.1 | Component parts are assembled within specified tolerances and in accordance with the appropriate maintenance documents while observing all relevant WHS requirements, including the use of MSDS and items of PPE |
| | | 5.2 | Propeller components are adjusted, tested or calibrated to operate within prescribed specifications |
| | | 5.3 | Finished components are tagged, sealed and packaged in accordance with standard enterprise procedures |
| | | 5.4 | Required maintenance documentation and modification records are completed and processed in accordance with standard enterprise procedures |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional

contexts) are included.

- Propellers and components include:**
- Fixed pitch, constant speed, feathering and reversing propellers and spinners
 - Anti ice/de-ice equipment
 - Propeller blades – metal
 - Hardware
- Repair of component parts includes:**
- Finishing or re-finishing of metal surfaces through processes, such as polishing, lapping and blending of damage within maintenance manual limits
 - Removal of corrosion within maintenance manual limits
 - Replacement of seals and gaskets
 - Replacement of bearings
 - Application of surface treatments, such as alodining
 - Restoration of paint finishes
- Power plant relationship:**
- The repair and/or overhaul of propeller and components may, in the case of turboprops and some full authority digital engine control (FADEC) systems, be related to aircraft power plant control systems
- Testing and adjustment:**
- Complex testing and adjusting of components, where required, will be carried out under supervision at the appropriate level
- Procedures and requirements include:**
- Industry standard procedures specified by manufacturers, regulatory authorities or the enterprise

Assessment Requirements for MEA389 Repair and/or overhaul propellers

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- applying WHS procedures, including the use of MSDS and PPE
- using relevant maintenance documentation, specifications and aircraft/component manuals to:
 - recognise state of serviceability and overhaul or repair requirements for propellers and propeller components as listed in the Range of Conditions
 - test and accurately and efficiently troubleshoot unserviceabilities and document the causes with regard to propeller components
 - dismantle and inspect propeller component parts for serviceability and identify repair requirements as applicable
 - repair/replace/modify propeller component parts
 - assemble, balance, test for correct operation and adjust propeller components and propellers
- correctly tagging, sealing and packaging completed components.

The underlying skills inherent in this unit should be transferable across a range of repair and/or overhaul applications associated with aircraft components. It is essential that the maintenance procedures are interpreted and applied to ensure quality and safety standards are achieved.

This shall be demonstrated through application across a number of different propeller components. Ability to assess component serviceability and interpret parts requirements will be necessary to supplement the required evidence. Capability to interpret inspection procedures and specifications (allowable limits) and apply them in practice is critical.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- how to obtain relevant MSDS
- the use of applicable items of PPE
- WHS procedures

- fault diagnosis techniques
- system and component operation
- repair and overhaul procedures and processes.

Assessment Conditions

- Competency should be assessed in the work environment, or simulated work environment, using tools and equipment specified in maintenance documentation. It is also expected that general-purpose tools and test equipment found in most routine situations would be used where appropriate.
- The application of testing procedures should clearly indicate knowledge of system operation. Knowledge of propeller, engine and constant speed unit operation, individually and as a system, will be necessary to supplement evidence of ability to troubleshoot component faults before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.
- The following conditions of assessment represent the requirements of the Regulators (ADF and CASA) and maintenance stakeholders and must be rigorously observed.
- A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements and performance criteria of the unit of competency are being achieved under routine supervision on at least one (1) item from each of the following groups:
 - fixed pitch, constant speed, feathering and reversing propellers and spinners
 - anti-ice/de-ice equipment
 - propeller blades – metal
 - hardware.
- This must include demonstration of the following repair processes:
 - finishing or re-finishing of metal surfaces through processes, such as polishing, lapping and blending of damage within maintenance manual limits
 - removal of corrosion within maintenance manual limits
 - replacement of gaskets, seals and backing rings
 - replacement of bearings
 - application of surface treatments, such as alodining
 - restoration of paint finishes.
- This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide (for details refer to the Companion Volume Assessment Guidelines).
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

MEA390 Repair and/or overhaul rotary wing dynamic components

Modification History

Release 1 - New unit of competency

Application

This unit of competency requires application of hand skills, theory knowledge and maintenance publication procedures to repair and overhaul rotary wing dynamic components during the performance of scheduled or unscheduled maintenance. Maintenance may be performed individually or as part of a team.

Applications include rotor assemblies and components, transmissions, drive shafts and couplings from piston and turbine engine rotary wing aircraft.

The unit is part of the Mechanical Certificate IV (Component Workshop Maintenance Stream) training pathway. It is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activity
MEA105	Apply quality standards applicable to aviation maintenance processes
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA109	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Competency Field

Aviation maintenance

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|----|---|-----|--|
| 1. | Determine requirements | 1.1 | Rotary wing component defect reports (removal tags) or customer order are correctly interpreted and matched by part and serial numbers |
| | | 1.2 | Components are inspected and/or operated through prescribed test procedures to establish serviceability or confirm defects, as required |
| | | 1.3 | Modification status is clearly established to assist in determining the overhaul requirements for the components |
| | | 1.4 | Extent of overhaul or repair is identified and documented in accordance with standard enterprise procedures |
| 2. | Troubleshoot rotary wing comp | 2.1 | Available information from maintenance records and test results is used, where necessary, to assist in fault determination |
| | | 2.2 | Logical processes are used to ensure efficient and accurate troubleshooting |
| | | 2.3 | Specialist advice is obtained, where required, to assist with, or confirm, the fault and rectification requirement |
| | | 2.4 | Rotary wing component faults are located and the causes of the faults are clearly identified |
| | | 2.5 | Fault rectification requirements are determined to assist in planning the repair |
| 3. | Dismantle and inspect rotary wing component parts | 3.1 | Rotary wing component parts are dismantled in accordance with maintenance manuals while observing all relevant work health and safety (WHS) requirements, including the use of material safety data sheets (MSDS) and items of personal protective equipment (PPE) |

- 3.2 Component parts are assessed for serviceability in accordance with the relevant maintenance documentation
- 3.3 Parts requiring specialist repair are tagged and repair instructions are specified in accordance with standard enterprise procedures
- 3.4 Parts requiring non-destructive testing (NDT) are prepared for testing in accordance with the relevant maintenance documentation
- 3.5 Parts lists are compiled and processed in accordance with standard enterprise procedures
- 4. Repair and/or modify rotary wing components or parts
 - 4.1 Rotary wing component parts are repaired or replaced in accordance with the relevant maintenance documentation
 - 4.2 Modification of components or parts is undertaken, where required, by relevant manufacturers' bulletins or procedures
- 5. Assemble, test and adjust rotary wing components
 - 5.1 Component parts are assembled within specified tolerances and in accordance with the appropriate maintenance documents while observing all relevant WHS requirements, including the use of MSDS and items of PPE
 - 5.2 Rotary wing components are adjusted, tested or calibrated to operate within prescribed specifications
 - 5.3 Finished components are tagged, sealed and packaged in accordance with standard enterprise procedures
 - 5.4 Required maintenance documentation and modification records are completed and processed in accordance with standard enterprise procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- Rotary wing components include:**
- Rotor blades
 - Rotor heads, hinge assemblies and swashplates
 - Transmission gear boxes, drive shafts and couplings
- Repair of component parts includes:**
- Finishing or re-finishing of metal surfaces through processes, such as polishing, lapping and blending of damage within maintenance manual limits
 - Removal of corrosion within maintenance manual limits
 - Replacement of seals and gaskets
 - Replacement of bearings
 - Application of surface treatments, such as alodining
 - Restoration of paint finishes
- Testing and adjustment:**
- Complex testing and adjusting of components, where required, will be carried out under supervision at the appropriate level
- Procedures and requirements include:**
- Industry standard procedures specified by manufacturers, regulatory authorities or the enterprise

Unit Mapping Information

Assessment Requirements for MEA390 Repair and/or overhaul rotary wing dynamic components

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- applying relevant WHS procedures, including the use of MSDS and PPE
- using relevant maintenance documentation, specifications and aircraft/component manuals to:
 - recognise state of serviceability and overhaul or repair requirements for rotary wing components as listed in the Range of Conditions
 - test and accurately and efficiently troubleshoot unserviceabilities and document the causes in rotary wing components
 - dismantle and inspect rotary wing component parts for serviceability and identify repair requirements as applicable
 - repair/replace/modify rotary wing component parts
 - assemble, balance as required, test for correct operation and adjust rotary wing components
- correctly tagging, sealing and packaging completed components.

The underlying skills inherent in this unit should be transferable across a range of repair and/or overhaul applications associated with aircraft components. It is essential that the maintenance procedures are interpreted and applied to ensure quality and safety standards are achieved.

This shall be demonstrated through application across a number of different aircraft components. Ability to assess component serviceability and interpret parts requirements will be necessary to supplement the required evidence. Capability to interpret inspection procedures and specifications (allowable limits) and apply them in practice is critical.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- how to obtain relevant MSDS
- the use of applicable items of PPE
- WHS procedures

- fault diagnosis techniques
- system and component operation
- repair and overhaul procedures and processes.

Assessment Conditions

- Competency should be assessed in the work environment, or simulated work environment, using tools and equipment specified in maintenance documentation. It is also expected that general-purpose tools and test equipment found in most routine situations would be used where appropriate.
- The application of testing procedures should clearly indicate knowledge of system operation. Knowledge of system operation and the relationship of individual components will be necessary to supplement evidence of ability to troubleshoot component faults before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.
- The following conditions of assessment represent the requirements of the Regulators (ADF and CASA) and maintenance stakeholders and must be rigorously observed.
- A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements and performance criteria of the unit of competency are being achieved under routine supervision on at least one (1) item from each of the following groups:
 - rotor blades
 - rotor heads, hinge assemblies and swashplates
 - transmission gear boxes, drive shafts and couplings.
- This must include demonstration of the following repair processes:
 - finishing or re-finishing of metal surfaces through processes, such as polishing, lapping and blending of damage within maintenance manual limits
 - removal of corrosion within maintenance manual limits
 - replacement of seals and gaskets
 - replacement of bearings
 - application of surface treatments, such as alodining
 - restoration of paint finishes.
- This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide (for details refer to the Companion Volume Assessment Guidelines).
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

MEA391 Repair and/or overhaul aircraft mechanical system components

Modification History

Release 1 - New unit of competency

Application

This unit of competency requires application of hand skills and the use of relevant maintenance manuals, drawings and specifications to repair and/or overhaul a range of fixed and rotary wing aircraft mechanical components during the performance of scheduled or unscheduled maintenance. Maintenance may be performed individually or as part of a team.

Components may be from systems such as flight controls, landing gear retraction, nose wheel steering and transmissions other than those that are part of power plant assemblies.

This unit of competency is part of the Mechanical Certificate IV (Component Workshop Maintenance Stream) training pathway. The unit is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activity
MEA105	Apply quality standards applicable to aviation maintenance processes
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA109	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Competency Field

Aviation maintenance

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|---|---|
| 1. Determine requirements | 1.1 Component defect reports (removal tags) or customer order are correctly interpreted and matched by part and serial numbers |
| | 1.2 Mechanical components are inspected and/or operated through prescribed test procedures to establish serviceability or confirm defects, as required |
| | 1.3 Modification status is clearly established to assist in determining the overhaul requirements for the components |
| | 1.4 Extent of overhaul or repair is identified and documented in accordance with standard enterprise procedures |
| 2. Troubleshoot mechanical components | 2.1 Available information from maintenance records and test results is used, where necessary, to assist in fault determination |
| | 2.2 Logical processes are used to ensure efficient and accurate troubleshooting |
| | 2.3 Specialist advice is obtained, where required, to assist with, or confirm, the fault and rectification requirement |
| | 2.4 Mechanical component faults are located and the causes of the faults are clearly identified |
| | 2.5 Fault rectification requirements are determined to assist in planning the repair |
| 3. Dismantle and inspect mechanical component parts | 3.1 Mechanical component parts are dismantled in accordance with maintenance manuals while observing all relevant work health and safety (WHS) requirements, including the use of material safety data sheets (MSDS) and items of personal protective equipment (PPE) |
| | 3.2 Component parts are assessed for serviceability in accordance with the relevant maintenance |

- documentation
- 3.3 Parts requiring specialist repair are tagged and repair instructions are specified in accordance with standard enterprise procedures
 - 3.4 Parts requiring non-destructive testing (NDT) are prepared for testing in accordance with the relevant maintenance documentation
 - 3.5 Parts lists are compiled and processed in accordance with standard enterprise procedures
- 4. Repair and/or modify mechanical
 - 4.1 Component parts are repaired or replaced in accordance with the relevant maintenance documentation
 - 4.2 Modification of components or parts is undertaken, where required, by relevant manufacturer's bulletins or procedures
- 5. Assemble, test and adjust mechanical components
 - 5.1 Mechanical component parts are assembled within specified tolerances and in accordance with the appropriate maintenance documents while observing all relevant WHS requirements, including the use of MSDS and items of PPE
 - 5.2 Components are adjusted, tested or calibrated to operate within prescribed specifications
 - 5.3 Finished components are tagged, sealed and packaged in accordance with standard enterprise procedures
 - 5.4 Required maintenance documentation and modification records are completed and processed in accordance with standard enterprise procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work

situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Mechanical components include:

- Gear boxes and transmissions (except for helicopter components which are covered by MEA390 Repair and/or overhaul rotary wing dynamic components)
- Screwjacks
- Mechanical actuators
- Control rods, bellcranks, walking beams and links

Repair of component parts includes:

- Finishing or re-finishing of metal surfaces through processes, such as polishing and lapping
- Removal of corrosion within maintenance manual limits
- Replacement of seals and gaskets
- Replacement of bearings
- Application of surface treatments, such as alodining
- Restoration of paint finishes

Procedures and requirements include:

- Industry standard procedures specified by manufacturers, regulatory authorities or the enterprise

Assessment Requirements for MEA391 Repair and/or overhaul aircraft mechanical system components

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- applying relevant WHS procedures
- using MSDS and applicable items of PPE
- using relevant maintenance documentation and aircraft/component manuals relating to mechanical system components to:
 - recognise state of serviceability and overhaul or repair requirements
 - test and accurately and efficiently troubleshoot unserviceabilities and document the causes
 - dismantle and inspect component parts for serviceability and identify repair requirements as applicable
 - repair/replace/modify component parts
 - assemble, test for correct operation and adjust components.

The underlying skills inherent in this unit should be transferable across a range of repair and overhaul applications associated with aircraft mechanical components. It is essential that the relevant procedures are interpreted and applied to ensure quality and safety standards are achieved.

This shall be demonstrated through application across a number of different aircraft components. Ability to assess component serviceability and interpret parts requirements will be necessary before undertaking any action.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- how to obtain relevant MSDS
- the correct use of PPE
- WHS procedures
- fault diagnosis and component part inspection techniques
- system and component operation
- repair and overhaul procedures and processes.

Assessment Conditions

- Competency should be assessed in the work environment or simulated work environment using tools and equipment specified in maintenance documentation. It is also expected that general and special-purpose tools and test equipment found in most routine situations would be used where appropriate.
- The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.
- The following conditions of assessment represent the requirements of the Regulators (ADF and CASA) and maintenance stakeholders and must be rigorously observed.
- A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements and performance criteria of the unit of competency are being achieved under routine supervision on at least one (1) component from each of the following groups:
 - gear boxes and transmissions (except for helicopter components which are covered by MEA390 Repair and/or overhaul rotary wing dynamic components)
 - screwjacks
 - mechanical actuators
 - control rods, bellcranks, walking beams and links.
- This must include demonstration of the following repair processes:
 - finishing or re-finishing of metal surfaces through processes, such as polishing and lapping
 - removal of corrosion within maintenance manual limits
 - replacement of seals and gaskets
 - replacement of bearings
 - application of surface treatments, such as alodining
 - restoration of paint finishes
- This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide (for details refer to the Companion Volume Assessment Guidelines).
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

MEA392 Disassemble aircraft piston engines

Modification History

Release 1 - New unit of competency

Application

This unit of competency requires application of hand skills, theory knowledge and maintenance publication procedures to disassemble aircraft piston engines during workshop repair and/or overhaul.

Applications include fixed and rotary wing aircraft piston engines and components and work may be performed individually or as part of a team.

The unit is part of the Mechanical Certificate IV (Component Workshop Maintenance Stream) training pathway. It is used in workplaces that operate under the airworthiness regulatory systems of the Australian defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activity
MEA105	Apply quality standards applicable to aviation maintenance processes
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA109	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Competency Field

Aviation maintenance

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|----|---------------------------|-----|--|
| 1. | Determine requirements | 1.1 | Engine defect reports (removal tags) or customer order are correctly interpreted and matched by part and serial numbers |
| | | 1.2 | Piston engine is inspected in accordance with maintenance publications to establish serviceability state and confirm defects, if necessary |
| | | 1.3 | Piston engine build status is determined and quick engine change (QEC) components are recorded in accordance with standard enterprise procedures |
| | | 1.4 | Modification status and engine operating hours are clearly established from the engine log book to assist in determining the repair or overhaul requirements for the engine |
| | | 1.5 | Extent of overhaul or repair is identified and documented in accordance with standard enterprise procedures |
| 2. | Disassemble piston engine | 2.1 | Where applicable, QEC components are removed from the engine, maintenance requirements are determined, and necessary documentation is raised and packaged with the components |
| | | 2.2 | Any removed QEC components not requiring maintenance are correctly labelled and stored for reinstallation |
| | | 2.3 | Engine is installed in work stand and engine is cleaned |
| | | 2.4 | Engine is disassembled in accordance with maintenance publication and/or enterprise procedures while observing all relevant work health and safety (WHS) procedures, including the use of material safety data sheets (MSDS) and personal protective equipment (PPE) |
| | | 2.5 | Removed components are cleaned, tagged and inspected for serviceability in accordance with |

enterprise procedures

- 2.6 Components that are not to be reinstalled are disposed of in accordance with enterprise procedures and action is initiated to obtain replacement components
- 2.7 Components to be re-fitted are processed for detailed inspection, repair/overhaul and/or modification, as required

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Piston engines include:

- The engine assembly and components that comprise a QEC unit. Engine types include all cylinder arrangements and fuel types (aviation gasoline, two stroke or diesel)

Procedures and requirements include:

- Industry standard procedures specified by manufacturers, regulatory authorities or the enterprise

Unit Mapping Information

Assessment Requirements for MEA392 Disassemble aircraft piston engines

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- applying relevant WHS procedures, including the use of MSDS and PPE
- using relevant maintenance documentation, enterprise procedures, specifications and aircraft/component manuals to:
 - recognise state of serviceability and overhaul or repair requirements for piston engines
 - accurately and efficiently troubleshoot unserviceabilities and document the causes for piston engines and components
 - dismantle and inspect piston engine component parts for serviceability
 - identify and initiate procurement for piston engine component parts/hardware that are discarded
 - identify and process engine components that require detailed inspection, repair, overhaul or modification.

Evidence of transferability of skills and knowledge related to repair and overhaul is essential. This shall be demonstrated through application across a number of different piston engines. Ability to assess component serviceability and interpret parts requirements will be necessary to supplement the required evidence. Capability to interpret inspection procedures and specifications (allowable limits) and apply them in practice is critical.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- how to obtain relevant MSDS
- the use of applicable items of PPE
- WHS procedures
- fault diagnosis techniques
- system and component operation
- engine cleaning and disassembly procedures and component inspection for serviceability, including identification of life expired components
- enterprise documentation requirements.

Assessment Conditions

- Competency should be assessed in the work environment, or simulated work environment, using tools and equipment specified in maintenance documentation. It is also expected that general-purpose tools and test equipment found in most routine situations would be used where appropriate.
- Knowledge of system operation and the relationship of individual components will be necessary to supplement evidence of ability to troubleshoot component faults before undertaking any action.
- The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.
- The following conditions of assessment represent the requirements of the Regulators (ADF and CASA) and maintenance stakeholders and must be rigorously observed.
- A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements and performance criteria of the unit of competency are being achieved under routine supervision on a representative range of the engine types maintained by the enterprise.
- This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide (for details refer to the Companion Volume Assessment Guidelines).
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

MEA393 Repair and/or overhaul aircraft piston engine cylinder assembly components

Modification History

Release 1 - New unit of competency

Application

This unit of competency requires application of hand skills, theory knowledge and maintenance publication procedures to repair and overhaul aircraft piston engine cylinder assembly components.

Applications include components from fixed and rotary wing aircraft piston engines. Work may be performed individually or as part of a team.

The unit is part of the Mechanical Certificate IV (Component Workshop Maintenance Stream) training pathway. It is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activity
MEA105	Apply quality standards applicable to aviation maintenance processes
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA109	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Competency Field

Aviation maintenance

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|---|---|
| 1. Determine requirements | 1.1 Component defect reports (removal tags) or customer order are correctly interpreted and matched by part and serial numbers |
| | 1.2 Cylinder assembly components are inspected and/or operated through prescribed test procedures to establish serviceability and confirm defects, if necessary |
| | 1.3 Modification status is clearly established to assist in determining the overhaul requirements for the components |
| | 1.4 Extent of overhaul or repair is identified and documented in accordance with standard enterprise procedures |
| 2. Dismantle and inspect piston engine cylinder assembly components/parts | 2.1 Cylinder assembly component parts are dismantled in accordance with maintenance manual and/or enterprise procedures while observing relevant work health and safety (WHS) procedures, including the use of material safety data sheets (MSDS) and personal protective equipment (PPE) |
| | 2.2 Component parts are assessed for serviceability in accordance with the relevant maintenance documentation |
| | 2.3 Parts requiring specialist repair are tagged and repair instructions are specified in accordance with standard enterprise procedures |
| | 2.4 Parts requiring non-destructive testing (NDT) are prepared for testing in accordance with the relevant maintenance documentation |
| | 2.5 Parts lists are compiled and processed in accordance with standard enterprise procedures |
| 3. Repair and/or modify piston engine cylinder assembly components | 3.1 Component parts are repaired or replaced in accordance with the relevant maintenance documentation while observing relevant WHS procedures, including the use |

or parts		of MSDS and PPE
	3.2	Modification of components is undertaken where required by reference to relevant manufacturer bulletins or procedures, regulatory requirements and/or customer requirements
4. Assemble, test and adjust piston engine cylinder assembly components	4.1	Cylinder assembly component parts are assembled within specified tolerances and in accordance with the appropriate maintenance documents while observing relevant WHS procedures, including the use of MSDS and PPE
	4.2	Components are tested and adjusted to operate within prescribed specifications
	4.3	Cylinder assemblies are prepared for engine reassembly
	4.4	Where components are not to be assembled into an engine the finished components are tagged, sealed and packaged in accordance with standard enterprise procedures
	4.5	Required maintenance documentation and modification records are completed and processed in accordance with standard enterprise procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Piston engine cylinder assembly components include:

- Cylinder
- Piston and piston rings
- Piston pins
- Valves, valve rockers, valve guides, tappets, pushrods and guard tubes

- Manifold studs
 - Complex testing and adjusting of components, where required, will be carried out under supervision at the appropriate level
 - Industry standard procedures specified by manufacturers, regulatory authorities or the enterprise
- Testing and adjustment:**
- Procedures and requirements include:**

Assessment Requirements for MEA393 Repair and/or overhaul aircraft piston engine cylinder assembly components

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and include:

- applying relevant WHS procedures, including the use of MSDS and PPE
- using relevant maintenance documentation, specifications and aircraft/component manuals to:
 - recognise state of serviceability and overhaul or repair requirements for piston engine cylinder assembly components as listed in the Range of Conditions
 - dismantle and inspect piston engine cylinder assembly component parts for serviceability and identify repair requirements as applicable
 - repair/replace/modify piston engine cylinder assembly component parts
 - assemble, test for correct operation and adjust piston engine cylinder assembly components
- correctly tagging, sealing and packaging completed components.

Evidence of transferability of skills and knowledge related to repair is essential. This shall be demonstrated through application across a number of different piston engine cylinder assembly components. Ability to assess component serviceability and interpret parts requirements will be necessary to supplement the required evidence. Capability to interpret inspection procedures and specifications (allowable limits) and apply them in practice is critical.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- how to obtain relevant MSDS
- the use of applicable items of PPE
- WHS procedures
- component inspection and wear measurement procedures
- non-destructive testing methods and application
- component repair and overhaul procedures and processes.

Assessment Conditions

- Competency should be assessed in the work environment, or simulated work environment, using tools and equipment specified in maintenance documentation. It is also expected that general-purpose tools and test equipment found in most routine situations would be used where appropriate.
- Knowledge of cylinder assembly operation and the relationship of individual components will be necessary to supplement evidence of ability to troubleshoot component faults before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.
- The following conditions of assessment represent the requirements of the Regulators (ADF and CASA) and maintenance stakeholders and must be rigorously observed.
- A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements and performance criteria of the unit of competency are being achieved under routine supervision on at least one (1) item from each of the following groups:
 - cylinder
 - piston and piston rings
 - piston pins
 - valves, valve rockers, valve guides, tappets, pushrods and guard tubes
 - manifold studs.
- This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide (for details refer to the Companion Volume Assessment Guidelines).
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

MEA394 Repair and/or overhaul aircraft piston engine crankcase assembly components

Modification History

Release 1 - New unit of competency

Application

This unit of competency requires application of hand skills, theory knowledge and maintenance publication procedures to repair and overhaul aircraft piston engine crankcase assembly components.

Applications include components from fixed and rotary wing aircraft piston engines. Work can be performed individually or as a member of a team.

The unit is part of the Mechanical Certificate IV (Component Workshop Maintenance Stream) training pathway.

The unit is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activity
MEA105	Apply quality standards applicable to aviation maintenance processes
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA109	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Competency Field

Aviation maintenance

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|--|---|
| 1. Determine requirements | 1.1 Component defect reports (removal tags) or customer order are correctly interpreted and matched by part and serial numbers |
| | 1.2 Crankcase assembly components are inspected and/or operated through prescribed test procedures to establish serviceability and confirm defects, if necessary, while observing relevant work health and safety (WHS) procedures, including the use of material safety data sheets (MSDS) and personal protective equipment (PPE) |
| | 1.3 Modification status is clearly established to assist in determining the overhaul requirements for the components |
| | 1.4 Extent of overhaul or repair is identified and documented in accordance with standard enterprise procedures |
| 2. Dismantle and inspect piston engine crankcase assembly components/parts | 2.1 Crankcase assembly component parts are dismantled in accordance with maintenance manual and/or enterprise procedures while observing relevant WHS procedures, including the use of MSDS and PPE |
| | 2.2 Component parts are assessed for serviceability in accordance with the relevant maintenance documentation |
| | 2.3 Parts requiring specialist repair are tagged and repair instructions are specified in accordance with standard enterprise procedures |
| | 2.4 Parts requiring non-destructive testing (NDT) are prepared for testing in accordance with the relevant maintenance documentation |
| | 2.5 Parts lists are compiled and processed in accordance with standard enterprise procedures |
| 3. Repair and/or modify | 3.1 Component parts are repaired or replaced in accordance |

piston engine crankcase assembly components or parts	3.2	with the relevant maintenance documentation Modification of components is undertaken where required by reference to relevant manufacturer's bulletins or procedures, regulatory requirements and/or customer requirements while observing relevant WHS procedures, including the use of MSDS and PPE
4. Assemble, test and adjust piston engine crankcase assembly components	4.1	Crankcase assembly component parts are assembled within specified tolerances and in accordance with the appropriate maintenance documents while observing relevant WHS procedures, including the use of MSDS and PPE
	4.2	Components are tested, adjusted or calibrated to operate within prescribed specifications
	4.3	Crankcase assembly is prepared for engine reassembly
	4.4	Where components are not to be assembled into an engine the finished components are tagged, sealed and packaged in accordance with standard enterprise procedures
	4.5	Required maintenance documentation and modification records are completed and processed in accordance with standard enterprise procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Piston engine crankcase assembly components include:

- Crankshaft, gears, con rods and counterweights
- Camshaft, hydraulic tappets/cam followers and gears
- Propeller shaft, reduction drive gear and quill shaft
- Component gear drives/trains
- Crankcase castings, bearings, component mounting pads and studs

- Oil system components
 - Supercharger and turbocharger components (where applicable to the enterprise)
 - Propeller governor (where applicable to the enterprise)
- Testing and adjustment:**
- Complex testing and adjusting of components, where required, will be carried out under supervision at the appropriate level
- Procedures and requirements include:**
- Industry standard procedures specified by manufacturers, regulatory authorities or the enterprise

Unit Mapping Information

Assessment Requirements for MEA394 Repair and/or overhaul aircraft piston engine crankcase assembly components

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- applying relevant WHS procedures, including the use of MSDS and PPE
- using relevant maintenance documentation, specifications and aircraft/component manuals to:
 - recognise state of serviceability and overhaul or repair requirements for piston engine crankcase assembly components as listed in the Range of Conditions
 - dismantle and inspect crankcase assembly component parts for serviceability and identify repair requirements as applicable
 - repair/replace/modify crankcase component parts
 - assemble, test for correct operation and adjust crankcase assembly components
- correctly tagging, sealing and packaging completed components.

Evidence of transferability of skills and knowledge related to repair is essential. This shall be demonstrated through application across a number of different piston engine crankcase assembly components. Ability to assess component serviceability and interpret parts requirements will be necessary to supplement the required evidence. Capability to interpret inspection procedures and specifications (allowable limits) and apply them in practice is critical. The application of testing procedures should also clearly indicate knowledge of crankcase assembly operation.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- how to obtain relevant MSDS
- the use of applicable items of PPE
- WHS procedures
- component inspection and wear measurement procedures
- non-destructive testing methods and application
- component repair and overhaul procedures and processes.

Assessment Conditions

- Competency should be assessed in the work environment, or simulated work environment, using tools and equipment specified in maintenance documentation. It is also expected that general purpose tools and test equipment found in most routine situations would be used where appropriate
- Knowledge of crankcase assembly operation and the relationship of individual components will be necessary to supplement evidence of ability to troubleshoot component faults before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.
- The following conditions of assessment represent the requirements of the Regulators (ADF and CASA) and maintenance stakeholders and must be rigorously observed.
- A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency and the performance criteria are being achieved under routine supervision on at least one (1) item from each of the following groups:
 - crankshaft, gears, con rods and counterweights
 - camshaft, hydraulic tappets/cam followers and gears
 - propeller shaft, reduction drive gear and quill shaft
 - component gear drives/trains
 - crankcase castings, bearings, component mounting pads and studs
 - oil system components
 - supercharger and turbocharger components (may be omitted where not applicable to the enterprise)
 - propeller governor (may be omitted where not applicable to the enterprise)
- This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide (for details refer to the Companion Volume Assessment Guidelines).
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.education.gov.au/Pages/TrainingDocs.aspx?q=ce216c9c-04d5-4b3b-9bcf-4e81d0950371>

MEA395 Reassemble aircraft piston engines

Modification History

Release 1 - New unit of competency

Application

This unit of competency requires application of hand skills, theory knowledge and maintenance publication procedures to reassemble aircraft piston engines during workshop repair and/or overhaul. Note that this relates to the bare engine and does not include the assembly of a quick engine change (QEC) unit. For QEC build-up refer to unit MEA396 Assemble aircraft piston engine quick engine change unit.

Applications include fixed and rotary wing aircraft piston engines and components. Work can be performed individually or as a member of a team.

The unit is part of the Mechanical Certificate IV (Component Workshop Maintenance Stream) training pathway.

The unit is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activity
MEA105	Apply quality standards applicable to aviation maintenance processes
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA109	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Competency Field

Aviation maintenance

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|----|-----------------------------------|-----|---|
| 1. | Prepare to assemble piston engine | 1.1 | Engine build requirements are correctly interpreted and matched by part and serial numbers |
| | | 1.2 | Correct engine sub-assemblies and components are gathered for engine assembly and their serviceability state and modification status is confirmed in accordance with the relevant maintenance documentation and quality procedures |
| | | 1.3 | Required hardware and plumbing is obtained and confirmed as approved items |
| 2. | Reassemble piston engine | 2.1 | Piston engine sub-assemblies and components are prepared for reassembly in accordance with maintenance manual and/or enterprise procedures |
| | | 2.2 | Components are assembled and adjusted in accordance with the maintenance manual and/or enterprise procedures |
| | | 2.3 | Engine is assembled and components and linkages are adjusted in accordance with maintenance data requirements while observing relevant work health and safety (WHS) procedures, including the use of material safety data sheets (MSDS) and personal protective equipment (PPE) |
| | | 2.4 | Reassembled engine is prepared for testing |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- Piston engine sub-assemblies and components include:**
- Crankcase assembly
 - Cylinder assemblies
 - External lubrication system components
 - Propeller governor (where applicable to the enterprise)
 - Fuel system components
 - Ignition system components
 - Exhaust system components
 - Turbocharger and waste gate (where applicable to the enterprise)
- Testing and adjustment:**
- Complex testing and adjusting of components, where required, will be carried out under supervision at the appropriate level
- Procedures and requirements include:**
- Industry standard procedures specified by manufacturers, regulatory authorities or the enterprise

Unit Mapping Information

Assessment Requirements for MEA395 Reassemble aircraft piston engines

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- applying relevant WHS procedures, including the use of MSDS and PPE
- using relevant maintenance documentation, enterprise procedures, specifications and aircraft/component manuals to:
 - identify the required engine build level and configuration
 - recognise state of serviceability of the required sub-assemblies, components, hardware and plumbing
 - reassemble the engine and adjust components and linkages.

Evidence of transferability of skills and knowledge related to repair and overhaul is essential. This shall be demonstrated through application across a number of different piston engines. Ability to assess component/sub-assembly serviceability and interpret parts requirements will be necessary to supplement the required evidence. Capability to interpret inspection procedures and specifications (allowable limits) and apply them in practice is critical. The application of adjustment procedures should also clearly indicate knowledge of system operation.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- how to obtain relevant MSDS
- the use of applicable items of PPE
- WHS procedures
- fault diagnosis techniques
- system and component operation
- engine reassembly and component adjustment requirements.

Assessment Conditions

- Competency should be assessed in the work environment, or simulated work environment, using tools and equipment specified in maintenance documentation. It is also expected that general-purpose tools and test equipment found in most routine situations would be used where appropriate.
- The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.
- The following conditions of assessment represent the requirements of the Regulators (ADF and CASA) and maintenance stakeholders and must be rigorously observed.
- A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements and performance criteria of the unit of competency are being achieved under routine supervision on a representative range of the engine types maintained by the enterprise.
- This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide (for details refer to the Companion Volume Assessment Guidelines).
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

MEA396 Assemble aircraft piston engine quick engine change unit

Modification History

Release 1 - New unit of competency

Application

This unit of competency requires application of hand skills, theory knowledge and maintenance publication procedures to assemble aircraft piston engine quick engine change (QEC) units following engine repair and/or overhaul.

Applications include fixed and rotary wing aircraft piston engines and components. Work can be performed individually or as a member of a team.

This unit of competency is part of the Mechanical Certificate IV (Component Workshop Maintenance Stream) training pathway. The unit is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activity
MEA105	Apply quality standards applicable to aviation maintenance processes
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA109	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Competency Field

Aviation maintenance

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|----|--|-----|--|
| 1. | Prepare to assemble piston engine QEC unit | 1.1 | QEC build requirements are correctly interpreted and matched by part and serial numbers |
| | | 1.2 | Correct QEC components are gathered for assembly and their serviceability state and modification status is confirmed in accordance with the relevant maintenance documentation and quality procedures |
| | | 1.3 | Required hardware and plumbing is obtained and confirmed as approved items |
| 2. | Assemble piston engine QEC unit | 2.1 | Piston engine is prepared for QEC assembly in accordance with maintenance manual and/or enterprise procedures |
| | | 2.2 | QEC components are assembled to the engine and adjusted in accordance with the maintenance manual and/or enterprise procedures while observing relevant work health and safety (WHS) procedures, including the use of material safety data sheets (MSDS) and personal protective equipment (PPE) |
| | | 2.3 | QEC unit is assembled and components and linkages are adjusted in accordance with maintenance data requirements |
| | | 2.4 | Where required, QEC unit is prepared for testing |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional

contexts) are included.

Piston engine QEC unit components include:

Components from the following list, according to build requirements:

- Engine
- Engine mount frame
- External lubrication system components
- Baffles
- Heat shields
- fuel system plumbing
- pneumatic plumbing
- control linkages
- induction system
- exhaust system components
- turbocharger and waste gate
- tachometer generator and wiring
- vacuum pump
- air pump
- hydraulic pump
- fire warning system

Testing and adjustment:

- Complex testing and adjusting of components, where required, will be carried out under supervision at the appropriate level

Procedures and requirements include:

- Industry standard procedures specified by manufacturers, regulatory authorities or the enterprise

Unit Mapping Information

Companion Volume implementation guides are found in VETNet - <https://vetnet.education.gov.au/Pages/TrainingDocs.aspx?q=ce216c9c-04d5-4b3b-9bcf-4e81d0950371>

Assessment Requirements for MEA396 Assemble aircraft piston engine quick engine change unit

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- applying relevant WHS procedures, including the use of MSDS and PPE
- using relevant maintenance documentation, enterprise procedures, specifications and aircraft/component manuals to:
 - identify the required QEC build level and configuration
 - recognise state of serviceability of the QEC components, hardware and plumbing
 - assemble the QEC and adjust components and linkages.

Evidence of transferability of skills and knowledge related to repair and overhaul is essential. This may be demonstrated through application across a number of different piston engine QECs. Ability to assess component serviceability and interpret parts requirements will be necessary to supplement the required evidence. Capability to interpret inspection procedures and specifications (allowable limits) and apply them in practice is critical. The application of adjustment procedures should also clearly indicate knowledge of system operation.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- how to obtain relevant MSDS
- the use of applicable items of PPE
- WHS procedures
- fault diagnosis techniques
- system and component operation
- QEC assembly and component adjustment requirements.

Assessment Conditions

- Competency should be assessed in the work environment, or simulated work environment, using tools and equipment specified in maintenance documentation. It is also expected that general-purpose tools and test equipment found in most routine situations would be used where appropriate.

- The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.
- The following conditions of assessment represent the requirements of the Regulators (ADF and CASA) and maintenance stakeholders and must be rigorously observed.
- A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements and performance criteria of the unit of competency are being achieved under routine supervision on at least one (1) of the engine types maintained by the enterprise.
- This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide (for details refer to the Companion Volume Assessment Guidelines).
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

MEA397 Test aircraft piston engines after repair or overhaul

Modification History

Release 1 - New unit of competency

Application

This unit of competency requires application of hand skills, theory knowledge and maintenance publication procedures and/or standard enterprise procedures to test run aircraft piston engines, adjust operating parameters and troubleshoot/rectify faults.

Applications include all types of aircraft piston engines that are not installed in an airframe. Work can be performed individually or as a member of a team.

The unit is part of the Mechanical Certificate IV (Component Workshop Maintenance Stream) training pathway. It covers the competencies required to test aircraft piston engines that are not fitted to an airframe after repair or overhaul.

The unit is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

MEA392	Disassemble aircraft piston engines
MEA393	Repair and/or overhaul aircraft piston engine cylinder assembly components
MEA394	Repair and overhaul aircraft piston engine crankcase assembly components
MEA395	Reassemble aircraft piston engines
MEA396	Assemble aircraft piston engine quick engine change unit

Competency Field

Aviation maintenance

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|----|--|-----|---|
| 1. | Prepare piston engine for test run | 1.1 | Documentation is checked to ensure that engine is ready for testing |
| | | 1.2 | Engine is installed in test rig or test cell, including connection of fuel, oil and electrical supplies and instrumentation while observing relevant work health and safety (WHS) procedures, including the use of material safety data sheets (MSDS) and personal protective equipment (PPE) |
| | | 1.3 | Sump or external oil tank is filled with correct grade and type of lubricating oil |
| | | 1.4 | Test rig/cell fuel tank is filled with correct type and grade of fuel |
| | | 1.5 | Correct propeller or club is fitted to the engine |
| | | 1.6 | Test rig/cell is prepared for operation |
| 2. | Run and test piston engine performance | 2.1 | Engine is started and operating parameters are checked in accordance with maintenance manual and standard enterprise procedures while observing relevant WHS procedures, including the use of MSDS and PPE |
| | | 2.2 | Engine performance is tested and adjusted, where applicable, in accordance with maintenance manual requirements and standard enterprise procedures |
| | | 2.3 | Engine operating parameters and test results are recorded in accordance with standard enterprise procedures |
| 3. | Troubleshoot piston engine faults | 3.1 | Available information from maintenance records and test results is used, where necessary, to assist in fault determination |
| | | 3.2 | Logical processes are used to ensure efficient and accurate troubleshooting |
| | | 3.3 | Specialist advice is obtained, where required, to assist with, or confirm, the fault and rectification requirement |

- | | | |
|----|----------------------------------|--|
| | 3.4 | Piston engine component faults are located and the causes of the faults are clearly identified |
| | 3.5 | Fault rectification requirements are determined to assist in determining if the engine must be returned to the workshop |
| 4. | Remove engine from test rig/cell | 4.1 Engine is removed from test rig/stand in accordance with maintenance manual requirements and standard enterprise procedures while observing relevant WHS procedures, including the use of MSDS and PPE |
| | 4.2 | Serviceable engines are configured, inhibited and prepared in accordance with maintenance manual requirements and standard enterprise procedures for transport or storage |
| | 4.3 | Required maintenance documentation and modification records are completed and processed in accordance with standard enterprise procedures |
| | 4.4 | Unserviceable engines are returned to workshop in accordance with standard enterprise procedures for rectification or re-work |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Testing and adjustment includes:

- Complex adjusting and testing of engine performance carried out under supervision

Procedures and requirements include:

- Industry standard procedures specified by manufacturers, regulatory authorities or the enterprise

Unit Mapping Information

Release 1 – equivalent to MEA397A Test aircraft piston engines after repair or overhaul

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for MEA397 Test aircraft piston engines after repair or overhaul

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and include:

- applying relevant WHS procedures, including the use of MSDS and items of PPE
- using relevant maintenance manuals and standard enterprise procedures to:
 - prepare engines for test running
 - install engines in test rigs or test cells
 - selecting and installing the correct propeller or test club
 - test run and adjust engine parameters, where applicable
 - troubleshoot faults identified during the test run
 - record engine operating parameters
 - remove engines from the test rig or test cell
 - complete documentation
- configuring and inhibiting serviceable engines for transport or storage.

It is essential that the maintenance procedures (including the use of correct fuels and lubricants) are interpreted and applied to ensure quality and safety standards are achieved.

Evidence of transferability of skills and knowledge related to engine test running is essential. This shall be demonstrated through application across a number of engine test runs. Capability to interpret test procedures and specifications (allowable limits) and apply them in practice is critical. The application of testing procedures should also clearly indicate knowledge of system operation.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- how to obtain relevant MSDS
- the use of applicable items of PPE
- WHS procedures
- fault diagnosis techniques
- system and component operation
- repair and overhaul procedures and processes

- test rig or test cell operation
- engine test requirements
- engine operating parameters and adjustment methods.

Assessment Conditions

- Competency should be assessed in the work environment or simulated work environment in an applicable engine test rig or test cell. It is also expected that general-purpose tools and test equipment found in most routine situations would be used where appropriate.
- Knowledge of system operation and the relationship of individual components will be necessary to supplement evidence of ability to troubleshoot engine faults before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.
- The following conditions of assessment represent the requirements of the Regulators (ADF and CASA) and maintenance stakeholders and must be rigorously observed.
- A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements and performance criteria of the unit of competency are being achieved under routine supervision on a representative range of engine test runs.
- This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide (for details refer to the Companion Volume Assessment Guidelines).
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

ME A401 Inspect aircraft structures

Modification History

Release 1 - New unit of competency

Application

This unit of competency requires application of hand skills and use of maintenance documentation and manuals to inspect aircraft structure and identify damage and deterioration during scheduled or unscheduled maintenance. Work may be performed individually or as part of a team.

Applications include the structure of fixed and rotary wing aircraft.

The unit is part of the Aeroskills Structures Maintenance Certificate IV and of the Mechanical Certificate IV (Aircraft Maintenance Stream) training pathways.

The unit is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

ME A101	Interpret work health and safety practices in aviation maintenance
ME A103	Plan and organise aviation maintenance work activity
ME A105	Apply quality standards applicable to aviation maintenance processes
ME A107	Interpret and use aviation maintenance industry manuals and specifications
ME A108	Complete aviation maintenance industry documentation
ME A109	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Competency Field

Aviation maintenance

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|----|----------------------------|-----|---|
| 1. | Inspect aircraft structure | 1.1 | Relevant maintenance documentation and modification status, including defect reports, where relevant, are used to identify specific inspection requirements |
| | | 1.2 | Appropriate preparation and access to the aircraft structure is undertaken to allow for proper inspection in accordance with maintenance documentation while observing all relevant work health and safety (WHS) requirements, including the use of material safety data sheets (MSDS) and items of personal protective equipment (PPE) |
| | | 1.3 | Aircraft structure is visually or physically checked for signs of deformation, defects or damage in accordance with maintenance documentation and approved procedures while observing all relevant WHS requirements, including the use of MSDS and items of PPE |
| | | 1.4 | Damage or defects are assessed against damage or wear limits specified by structural repair manual or other approved data to determine if repair or replacement is required |
| | | 1.5 | Maintenance documentation is completed and processed in accordance with standard enterprise procedures |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional

contexts) are included.

Preparation and access to structure includes:

- Preparation for non-destructive testing (NDT) (access to relevant structural zones and components)

Aircraft structure inspection includes:

- Non-ferrous and ferrous alloys and composite (FRP) materials used in aircraft construction
- Structural fastening and attachment hardware and/or devices
- Seals and sealants
- Glass and moulded plastics
- Application of NDT techniques
- Doors, hinges and locking mechanisms for damage/misalignment
- Inspections applicable to each of safe life, damage tolerant and fail safe structure relevant to enterprise
- Ageing aircraft inspection programs
- Visual inspection, physical checks, mensuration and alignment

Inspection techniques include:

Procedures and requirements include:

- Industry standards specified by manufacturers, regulatory authorities or the enterprise

Unit Mapping Information

Release 1 – equivalent to MEA401C Inspect aircraft structures

Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.education.gov.au/Pages/TrainingDocs.aspx?q=ce216c9c-04d5-4b3b-9bcf-4e81d0950371>

Assessment Requirements for MEA401 Inspect aircraft structures

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- applying all relevant WHS procedures, including the use of PPE and MSDS
- using approved maintenance documentation and aircraft publications relating to aircraft structure
- identifying various aircraft metals and their basic properties
- identifying potential causes of structural failure
- demonstrating appropriate cleaning procedures to enable structure inspection
- demonstrating correct inspection procedures, in particular pressurised aircraft, in accordance with aircraft and procedures manuals
- performing aircraft mensuration and alignment checks
- identifying damage to aircraft metallic (ferrous and non-ferrous) structures and/or components by way of:
 - impact
 - fatigue
 - corrosion
- identifying the various forms of structural corrosion, stating the causes and structural effects of corrosion on aircraft
- identifying composite materials used in aircraft construction, associated safety precautions and hazards
- inspecting damage and assessing composite components/structures for:
 - impact damage
 - fatigue.

The underlying skills inherent in this unit should be transferable across a range of structural inspections associated with aircraft maintenance. It is essential that the procedures take into account all aircraft and personal safety precautions relating to aircraft structure.

Evidence is required of the ability to interpret and apply aircraft structural inspection requirements. This may be demonstrated through application across a range of structural components and materials. Ability to interpret inspection procedures and specifications (allowable limits) and apply them in practice is critical. The application of the procedures should also clearly indicate knowledge of structural flight loads.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- aircraft construction principles
- structural component attachment methods
- describing the construction methods used in:
 - fuselage sections
 - wing sections
 - engine nacelles and mounts
 - windows and window frames
 - doors, locks and access panels in pressurised and unpressurised aircraft
- defining of structural terms, i.e. safe life, damage tolerant, failsafe, stress, strain, shear and cycles
- inspection requirements for metal and composite structure, including:
 - ageing aircraft inspection requirements
 - safe life structure
 - damage tolerant structure
 - fail safe structure
- procedures and methodology for performing aircraft mensuration and alignment checks
- describing NDT methods and application of the various techniques
- describing construction methods of, and assessing common defects in, aircraft plastic transparencies
- describing basic constructional features of, and assessing common defects in, glass windscreens
- defining the terms associated with composite materials
- WHS procedures
- relevant PPE
- how to obtain MSDS.

Assessment Conditions

- Competency should be assessed in the workplace or simulated workplace using tools and equipment specified in maintenance documentation. It is also expected that general-purpose tools and test equipment found in most routine situations would be used where appropriate.
- The following conditions of assessment represent the requirements of the Regulators (ADF and CASA) and maintenance stakeholders and must be rigorously observed.
- A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements and performance criteria of the unit of competency are being achieved under routine supervision on at least one (1) task from each of the following groups:
 - preparation for non-destructive testing (NDT) (access to relevant structural zones and components)

- inspection of:
 - non-ferrous and ferrous alloys and composite (FRP) materials used in aircraft construction
 - structural fastening and attachment hardware and/or devices
 - seals and sealants
 - glass and moulded plastics
 - application of NDT techniques
 - doors, hinges and locking mechanisms for damage/misalignment
 - inspections applicable to each of safe life, damage tolerant and fail safe structure relevant to enterprise
 - ageing aircraft inspection programs.
- This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide (for details refer to the Companion Volume Assessment Guidelines).
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

MEA405 Repair/modify aircraft composite material structure/components

Modification History

Release 1 - New unit of competency

Application

This unit of competency requires application of hand skills and the use maintenance publications, applicable materials, tools and methods to repair aircraft composite material structure and components during the performance of scheduled or unscheduled maintenance. Maintenance may be performed individually or as part of a team.

Applications include composite material structure and components from fixed and rotary wing aircraft either on-aircraft or in the workshop.

The unit is part of the Aeroskills Structures Maintenance Certificate IV training pathway, and of the Mechanical Certificate IV (Aircraft Maintenance Stream) training pathways.

The unit is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

MEA401 Inspect aircraft structures

Competency Field

Aviation maintenance

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1. Plan repair/modification
 - 1.1 Extent of damage is correctly assessed to assist in determining repair procedure
 - 1.2 Structure is supported and prepared in accordance with the applicable maintenance manual to ensure personnel safety and freedom from damage
 - 1.3 Appropriate modification or repair scheme is identified in accordance with structural repair manual and/or approved data
 - 1.4 Specialist advice is obtained in establishing an approved repair scheme where a standard repair scheme cannot be identified or damage criteria are out of limits
 - 1.5 All materials and equipment required are organised
2. Prepare components for hot bonding
 - 2.1 Components are prepared in accordance with applicable process specification while observing all relevant work health and safety (WHS) requirements, including the use of material safety data sheets (MSDS) and items of personal protective equipment (PPE)
 - 2.2 Bagging is checked to ensure vacuum seal is correct
 - 2.3 Temperature probes are placed appropriately to provide accurate measurement
 - 2.4 Equipment is checked for serviceability to ensure safety in application
 - 2.5 Heat blanket is laid on component or repair in a manner that ensures even temperature distribution
3. Repair/modify components using hot bond
 - 3.1 Hot bonding equipment is operated in accordance with equipment manufacturer's procedures
 - 3.2 Vacuum and temperature recordings are monitored, including checking of hot and cold spots on trailing and leading temperature probes, to ensure specifications are met
 - 3.3 Curing cycle and recording of operating cycle data are monitored as required by approved procedures to ensure specifications are met

- 3.4 Blemishes are sealed, potted or filled, where necessary, in accordance with applicable process specification
 - 3.5 Component assemblies, including test pieces, requiring further or special treatment are made ready for the appropriate processes
 - 3.6 Required maintenance documentation is accurately completed and correctly processed
 - 3.7 Completed assemblies are tagged, sealed or packaged as required
4. Repair/modify components using cold cure
- 4.1 Lay up of materials is checked to confirm that components meet required specifications while observing all relevant WHS requirements, including the use of MSDS and items of PPE
 - 4.2 Curing cycle is regularly monitored to ensure required specifications are met
 - 4.3 Components are checked for blemishes or delamination in accordance with quality procedures
 - 4.4 Component assemblies requiring further or special treatment are made ready for the appropriate processes
 - 4.5 Required maintenance documentation is completed and processed in accordance with standard enterprise procedures
 - 4.6 Completed assemblies are tagged, sealed or packaged as required

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional

contexts) are included.

Applicable materials and methods include:

- Pre-preg materials hot cure (performed on one of carbon graphite, kevlar, fibreglass or aluminium)
- Cold cure or wet lay-up (using either fibreglass or carbon graphite)
- Core materials (using one of aluminium, nomex or foam)

Procedures and requirements include:

- Industry standard procedures specified by manufacturers, regulatory authorities or the enterprise

Unit Mapping Information

Release 1 – equivalent to MEA405B Repair/modify aircraft composite material structure/components

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for MEA405 Repair/modify aircraft composite material structure/components

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- applying relevant WHS procedures, including the use of PPE and MSDS
- using approved maintenance documentation and aircraft publications relating to aircraft structure
- identifying composite component applications in aircraft structures
- identifying various aircraft composite materials/resins and their basic properties by interpretation of markings and visual means
- handling and storing of composite materials to industry standards
- assessing composite component damage using visual and tap test methods
- performing composite component repairs using:
 - external patch repair
 - scarf repair
 - stepped repair
 - wet lay-up repair
 - composite fastener hole repair
 - metal to metal and metal to composite bonding
- correctly interpreting and /or producing repair scheme/modification drawings/sketches
- using appropriate hand tools and machines to disassemble and assemble aircraft composite components, parts, sections and skin, including extraction/installation equipment, drilling/cutting equipment, and material fasteners.

The underlying skills inherent in this unit should be transferable across the range of different material applications and curing requirements. It is essential that specific aspects of the laying up and curing process for aircraft composite materials are checked to ensure quality and safety standards are achieved in this area. Correct checking and wearing of safety protective clothing is critical, particularly in the hot bonding process.

Evidence of knowledge about repair techniques and the use of the standard repair manual in a range of different repair situations will be necessary to supplement evidence of ability to plan and undertake component repair. Ability to apply different materials and curing cycles, including composite to composite and composite to metal components, will be necessary to indicate competency in preparing and curing composite materials.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- how to obtain relevant MSDS
- the use of applicable items of PPE
- WHS procedures
- aircraft construction principles
- defining composite terminology
- composite component construction methods, including structural assembly fastener identification.

Assessment Conditions

- Competency should be assessed in the workplace or simulated workplace. It is also expected that general-purpose tools and test equipment found in most routine situations would be used where appropriate.
- The following conditions of assessment represent the requirements of the Regulators (ADF and CASA) and maintenance stakeholders and must be rigorously observed.
- A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements and performance criteria of the unit of competency are being achieved under routine supervision using materials from each of:
 - pre-preg materials hot cure (performed on one of carbon graphite, kevlar, fibreglass or aluminium)
 - cold cure or wet lay-up (using either fibreglass or carbon graphite)
 - core materials (using one of aluminium, nomex or foam).
- This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide (for details refer to the Companion Volume Assessment Guidelines).
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).
- Where the unit is to be used for CASA licensing purposes the Assessor must also meet the criteria specified in the CASR Part 147 Manual of Standards.

MEA406 Repair/modify aircraft non-primary structural sheet metal components

Modification History

Release 1 - New unit of competency

Application

This unit of competency requires application of hand skills and the use of maintenance publications to repair fixed and rotary wing aircraft non-primary structure sheet metal components under the guidance of a qualified person.

This unit is part of the Aeroskills Structures Maintenance Certificate II training pathway. It is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activity
MEA105	Apply quality standards applicable to aviation maintenance processes
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA109	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Competency Field

Aviation maintenance

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|----|--|-----|--|
| 1. | Prepare to perform routine repairs and minor modifications to aircraft non-primary structural sheet metal components | 1.1 | Applicable sheet metal repair scheme is determined in accordance with applicable maintenance documentation, enterprise procedures and qualified person guidance |
| | | 1.2 | All required materials and equipment are selected and organised in accordance with enterprise procedures and maintenance documentation |
| 2. | Perform routine repairs and minor modifications to aircraft non-primary structural sheet metal components | 2.1 | Sheet metal repairs are performed in accordance with approved repair scheme, ensuring that aircraft standard practices are used and standard process requirements are carried out while observing all relevant work health and safety (WHS) requirements, including the use of material safety data sheets (MSDS) and items of personal protective equipment (PPE) |
| | | 2.2 | Work area is cleaned of all waste material or adjustments |
| | | 2.3 | Under guidance of a qualified person, minor adjustments are made, where necessary, for components to operate within prescribed specifications |
| 3. | Complete routine repair and minor modification activities | 3.1 | Required documentation is accurately completed and correctly processed in accordance with enterprise procedures |
| | | 3.2 | Repaired components or assemblies are tagged, sealed and packaged or cradled in accordance with specified procedures, where required |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- Sheet metal repairs include:**
- Removing corrosion by chemical and mechanical methods
 - Restoring protective coatings
 - Freehand precision hole generation
 - Removing and installing fastening devices
 - Routine repairs to non-primary structural sheet metal components

Work environment: Work is undertaken either autonomously or as part of a team and under the guidance of a qualified person.

Routine work is carried out using basic operational knowledge and a defined range of skills ('routine' work is that which follows a customary or regular course of procedure). All work outcomes are achieved by applying known solutions chosen from a limited range of pre-determined options consistent with enterprise procedures. This includes accepting responsibility for own work in terms of quality of outcomes using pre-determined specifications of quality.

Competency application: Competency applies to the routine repair and/or minor modification of aircraft non-primary structural sheet metal components. Note that 'primary structure/structural' refers to all components of an aircraft, the failure of which would seriously endanger safety, for example, wing or tailplane spars, main fuselage frames, engine bearers, portions of skin that are highly stressed. 'Non-primary' refers to any other items. Note also that the scope of any modification and the procedure to be followed will be provided by the qualified person.

Scope: Repairs/modification undertaken are limited to the scope of skills and knowledge included in the unit of competency MEA109 Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Procedures and requirements include:

- Industry standard specified by manufacturers, regulatory authorities or the enterprise

Unit Mapping Information

Assessment Requirements for MEA406 Repair/modify aircraft non-primary structural sheet metal components

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- applying relevant WHS procedures, including the use of PPE and MSDS
- using enterprise procedures, approved maintenance documentation and aircraft publications relating to aircraft sheet metal components
- identifying various aircraft metals used for sheet metal components and their basic metallurgy properties by interpretation of markings, numbering systems or visual, chemical or mechanical means
- handling and storing aircraft metals used for sheet metal components, including sealing agents, to industry standards
- identifying aircraft sheet metal assembly fasteners (metal and non-metallic) by interpretation of markings, numbering systems, size, shape and colour
- correctly interpreting, with expert qualified person guidance and in accordance with enterprise procedures, sheet metal repair scheme/modification drawings and hand sketches
- using appropriate hand tools and machines under supervision to remove and assemble aircraft sheet metal components
- performing under guidance and in accordance with enterprise procedures a range of routine sheet metal repair techniques, including metal scab patch repairs
- applying corrosion removal/treatment techniques
- restoring sealing and surface finishes.

The underlying skills inherent in this unit should be transferable into other areas that require similar techniques. It is essential that procedures take into account all safety precautions and quality requirements, standards and practices, and processes associated with assembly.

Evidence of knowledge about enterprise procedures relating to basic repair techniques and the use of the standard repair manual/practices in a range of different routine repair situations will be necessary to supplement evidence of ability to plan and undertake component repair.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include a basic knowledge of:

- aircraft sheet metal component construction principles and repair techniques
- how to obtain relevant MSDS
- the use of applicable items of PPE
- WHS procedures.

Assessment Conditions

- Competency should be assessed in the work environment, using tools and equipment specified by aircraft maintenance manuals. It is also expected that general-purpose tools, test and ground support equipment found in most routine situations would be used where appropriate.
- The following conditions of assessment represent the requirements of the Regulators (ADF and CASA) and maintenance stakeholders and must be rigorously observed.
- A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements and performance criteria of the unit of competency are being achieved under qualified person guidance on at least one (1) item from each of the following groups:
 - removing corrosion by chemical and mechanical methods
 - restoring protective coatings
 - freehand precision hole generation
 - removing and installing fastening devices
 - routine repairs to non-primary structural sheet metal components.
- This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide (for details refer to the Companion Volume Assessment Guidelines).
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

MEA407 Repair/modify aircraft non-primary structural non-metallic components

Modification History

Release 1 - New unit of competency

Application

This unit of competency requires application of hand skills and the use of maintenance publications to repair fixed and rotary wing aircraft non-primary structure non-metallic components under the guidance of a qualified person.

This unit is part of the Aeroskills Structures Maintenance Certificate II training pathway.

The unit is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activity
MEA105	Apply quality standards applicable to aviation maintenance processes
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA109	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Competency Field

Aviation maintenance

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|----|---|-----|--|
| 1. | Prepare to perform routine repairs and minor modifications to aircraft non-primary structural non-metallic components | 1.1 | Applicable non-metallic repair scheme is determined in accordance with applicable maintenance documentation, enterprise procedures and qualified person guidance |
| | | 1.2 | All required materials and equipment are selected and organised in accordance with enterprise procedures and maintenance documentation |
| 2. | Perform routine repairs and minor modifications to aircraft non-primary structural non-metallic components | 2.1 | Work is performed in accordance with approved repair scheme, ensuring that aircraft standard practices are used and standard process requirements are carried out while observing all relevant work health and safety (WHS) requirements, including the use of material safety data sheets (MSDS) and items of personal protective equipment (PPE) |
| | | 2.2 | Work area is cleaned of all waste material or adjustments |
| | | 2.3 | Under guidance of a qualified person, minor adjustments are made, where necessary, for components to operate within prescribed specifications |
| 3. | Complete routine repair and minor modification activities | 3.1 | Required documentation is accurately completed and correctly processed in accordance with enterprise procedures |
| | | 3.2 | Repaired components or assemblies are tagged, sealed and packaged or cradled in accordance with specified procedures, where required |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Materials and components include:

- Applicable non-metallic materials for the routine repair and/or minor modification under guidance of a qualified person to non-primary structural non-metallic components, as follows:
 - non-metallic materials include fibreglass, sandwich honeycomb, nylon, Perspex, nomex core materials, and matrix resins
 - components include interior trim panels (sidewalls, galleys, toilets, roof panels, floor panels), cargo lining, fairings and windows
- **Note** that ‘primary structure/structural’ refers to all components of an aircraft, the failure of which would seriously endanger safety, for example, wing or tailplane spars, main fuselage frames, engine bearers, portions of skin that are highly stressed. ‘Non-primary’ refers to any other items
- **Note** that the scope of any modification and the procedure to be followed will be provided by the qualified person

Work environment:

Work is undertaken either autonomously or as part of a team and under the guidance of a qualified person

Routine work is carried out using basic operational knowledge and a defined range of skills (‘routine’ work is that which follows a customary or regular course of procedure)

Work outcomes are achieved by applying known solutions chosen from a limited range of pre-determined options consistent with enterprise procedures. This includes accepting responsibility for own work in terms of quality of outcomes using pre-determined specifications of quality

Scope:

Skills and knowledge applied to repairs are limited to those specified in the unit of competency MEA109 Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Procedures and requirements include:

- Industry standard specified by manufacturers, regulatory authorities or the enterprise

Assessment Requirements for MEA407 Repair/modify aircraft non-primary structural non-metallic components

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- applying relevant WHS procedures, including the use of PPE and MSDS
- using enterprise procedures, approved maintenance documentation and aircraft publications relating to aircraft non-primary structural non-metallic components
- identifying various aircraft non-primary structural non-metallic components and their basic properties by interpretation of markings, numbering systems or visual, chemical or mechanical means
- handling and storing aircraft non-metallic components, including sealing agents, to industry standards
- identifying aircraft assembly fasteners by interpretation of markings, numbering systems, size, shape and colour
- correctly interpreting, with expert guidance and in accordance with enterprise procedures, non-primary structural non-metallic repair scheme/modification drawings and hand sketches
- using appropriate hand tools and machines under guidance of a qualified person to remove and assemble aircraft non-metallic components
- performing under guidance and in accordance with enterprise procedures a range of routine non-primary structural non-metallic repair techniques
- restoring sealing and surface finishes.

The underlying skills inherent in this unit should be transferable into other areas that require similar techniques. It is essential that procedures take into account all safety precautions and quality requirements, standards and practices, and processes associated with assembly.

Evidence of knowledge about enterprise procedures relating to routine basic repair techniques and the use of the standard repair manual/practices in a range of situations will be necessary to supplement evidence of ability to plan and undertake component repair under qualified person guidance.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- aircraft non-metallic component construction principles and repair techniques at a basic level
- how to obtain relevant MSDS
- the use of applicable items of PPE
- WHS procedures.

Assessment Conditions

- Competency should be assessed in the work environment, using tools and equipment specified by aircraft maintenance manuals. It is also expected that general-purpose tools, test and ground support equipment found in most routine situations would be used where appropriate.
- The following conditions of assessment represent the requirements of the Regulators (ADF and CASA) and maintenance stakeholders and must be rigorously observed.
- A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements and performance criteria of the unit of competency are being achieved under qualified person guidance on a representative range of components, including interior trim panels (sidewalls, galleys, toilets, roof panels, floor panels), cargo lining, fairings and windows using applicable materials from:
 - non-metallic materials including fibreglass, sandwich honeycomb, nylon, Perspex, nomex core materials, and matrix resins.
- This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide (for details refer to the Companion Volume Assessment Guidelines).
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

MEA410 Maintain aircraft structure/components

Modification History

Release 2 – Assessment Conditions amended to permit assessment under simulated conditions

Application

This unit of competency requires application of hand skills and the use of maintenance publications to remove corrosion from aircraft structural materials during scheduled or unscheduled maintenance. Work may be performed individually or as part of a team.

Applications include the metallic structure of fixed and rotary wing aircraft and structural components.

The unit is part of the Mechanical Aircraft Maintenance Engineer (AME) Certificate IV training pathways.

The unit is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

MEA401 Inspect aircraft structures

Competency Field

Aviation maintenance

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|---------------------------------------|---|
| 1. Prepare to remove corrosion damage | 1.1 Extent of damage is correctly assessed to assist in determining removal procedure |
|---------------------------------------|---|

- 1.2 Structure is supported and prepared in accordance with the applicable maintenance manual to ensure personnel safety and freedom from damage
 - 1.3 Appropriate corrosion removal procedure is identified in accordance with structural repair manual and/or approved data
 - 1.4 Specialist advice is obtained in establishing an approved repair scheme where a standard corrosion removal procedure cannot be identified or damage criteria is out of limits
 - 1.5 All materials and equipment required are organised
2. Remove corrosion damage
- 2.1 Corrosion removal is performed and protective coatings, sealants and jointing compounds applied in accordance with approved repair scheme ensuring that aircraft standard practices are used and process requirements are carried out including relevant work health and safety procedures and the use of material safety data sheets (MSDS) and items of personal protective equipment (PPE)
 - 2.2 Structure/component is cleaned of all waste material or contaminants
 - 2.3 Components are adjusted, where necessary, to operate within prescribed specifications
 - 2.4 Required maintenance/repair documentation is completed and processed in accordance with standard enterprise procedures
 - 2.5 Repaired components or assemblies are tagged, sealed and packaged or cradled in accordance with specified procedures, where required

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect

performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Corrosion removal procedures include:

- Removing corrosion by chemical and mechanical methods
- Restoring protective coatings
- Applying sealants and jointing compounds
- Industry standard specified by manufacturers, regulatory authorities or the enterprise

Procedures and requirements include:

Unit Mapping Information

Release 2 – Assessment Conditions amended to permit assessment under simulated conditions. Equivalent.

Release 1 – equivalent to MEA410C Maintain aircraft structure/components

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for MEA410 Maintain aircraft structure/components

Modification History

Release 2 – Assessment Conditions amended to permit assessment under simulated conditions

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- applying all relevant WHS procedures, including the use of MSDS and selection and use of applicable items of PPE
- using approved maintenance documentation and aircraft publications relating to aircraft structure
- identifying various aircraft metals and their basic metallurgy properties by interpretation of markings, numbering systems or visual, chemical or mechanical means
- applying structural corrosion removal/treatment techniques
- restoring aircraft structure sealing and surface finishes.

The underlying skills inherent in this unit should be transferable into other areas that require similar techniques. It is essential that procedures take into account all safety precautions and quality requirements, standards, practices and processes associated with corrosion removal.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- methods of corrosion removal in aircraft structural metals
- types of corrosion typically found in various areas of aircraft structure
- removal of corrosion damage in integral fuel tanks and sealing of faying surfaces, including specific WHS and PPE requirements, including confined space entry requirements
- surface finishes and methods of restoration, including specific WHS and PPE requirements
- how to obtain MSDS
- relevant maintenance and structural repair manuals specifying corrosion removal limits and methods
- relevant regulatory requirements and standard procedures.

Assessment Conditions

- Competency should be assessed in the work environment or a simulated work environment, using tools and equipment specified by aircraft maintenance manuals. It is also expected that general-purpose tools, test and ground support equipment found in most routine situations would be used where appropriate.
- Evidence of knowledge about corrosion removal techniques and limits and the use of the standard repair manual in a range of different repair situations will be necessary to supplement evidence of ability to plan and undertake structure and component repair by removal of corrosion within applicable limits.
- The following conditions of assessment represent the requirements of the Regulators (ADF and CASA) and maintenance stakeholders and must be rigorously observed.
- A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements and performance criteria of the unit of competency are being achieved under routine supervision on at least one (1) task from each of the following groups:
 - removing corrosion by chemical and mechanical methods
 - restoring protective coatings
 - applying sealants and jointing compounds.
- This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide (for details refer to the Companion Volume Assessment Guidelines).
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

ME A411 Remove surface coatings from aircraft or aircraft components

Modification History

Release 1 - New unit of competency

Application

This unit of competency requires application of skills and knowledge relating to preparation and masking of aircraft and aircraft components for coating removal and the removal of coatings using chemical and mechanical methods during scheduled or unscheduled maintenance working either individually or as part of a team.

No licensing requirements apply to this unit at the time of publication, but compliance with legislation and regulations governing handling and disposal of hazardous materials are included in the unit.

The unit is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation safety Authority (CASA).

Applications include fixed and rotary wing aircraft and aircraft components.

Pre-requisite Unit

ME A101	Interpret work health and safety practices in aviation maintenance
ME A103	Plan and organise aviation maintenance work activity
ME A105	Apply quality standards applicable to aviation maintenance processes
ME A107	Interpret and use aviation maintenance industry manuals and specifications
ME A108	Complete aviation maintenance industry documentation
ME A109	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Competency Field

Aviation maintenance

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|----|---|-----|--|
| 1. | Identify the appropriate coating removal method | 1.1 | The coating removal task is identified from maintenance documentation and enterprise procedures |
| | | 1.2 | Enterprise procedures and maintenance publications are used to identify materials and tools to be used for coating removal |
| | | 1.3 | Aircraft or component identification is matched with relevant maintenance documentation |
| 2. | Prepare for coating removal | 2.1 | Work health and safety (WHS) requirements are identified and complied with and personal protective equipment (PPE) is checked for correct fit and function |
| | | 2.2 | Materials and tools required for coating removal are assembled |
| | | 2.3 | Appropriate preparation for access to the aircraft is undertaken |
| | | 2.4 | Masking requirements are determined using enterprise procedures and maintenance publications |
| | | 2.5 | Masking is applied to relevant areas and sensitive components |
| | | 2.6 | Environmental requirements are observed during the coating removal process |
| 3. | Remove coating | 3.1 | Chemical strippers are applied in accordance with relevant procedures |
| | | 3.2 | Mechanical coating removal is performed in accordance with enterprise procedures and maintenance manuals |
| | | 3.3 | Surfaces are cleaned of all chemical residue and mechanical media in accordance with enterprise |

- procedures and maintenance manuals
- 3.4 Masking materials are removed and final cleaning of surfaces is performed
4. Clean up work area and maintain equipment
- 4.1 Material that can be reused is collected and correctly stored
- 4.2 Waste material is removed and disposed of or stored in accordance with legislative, regulatory and enterprise procedures
- 4.3 Equipment is cleaned in accordance with enterprise procedures or manufacturer's instructions
- 4.4 Equipment is checked for serviceability and unserviceable items are dealt with in accordance with enterprise procedures
- 4.5 Tools are cleaned and maintained in accordance with enterprise procedures
- 4.6 Work area is cleaned and inspected for serviceable condition

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Procedures and requirements include:

- Industry standard procedures specified by manufacturers, regulatory authorities or the enterprise

WHS requirements are identified from relevant:

- Commonwealth/state/territory WHS legislation, regulations and codes
- Procedures manuals
- Safety manuals
- Work instructions
- Maintenance organisation manuals

- Material safety data sheets (MSDS)
 - Defence regulations and instructions
 - Standing instructions
- Materials and tools include:**
- Masking tapes and barrier materials
 - Chemicals
 - Abrasives
 - Grinders
 - Scrapers
 - Paint stripper application pumps
 - Blasting equipment
 - Cleaning material
- Environmental requirements relate to:**
- Noise
 - Dust
 - Fume extraction
 - Clean-up management
- Legislative, regulatory and enterprise procedures include:**
- Commonwealth/state/territory environmental legislation, regulations and codes for the storage and disposal of hazardous and toxic materials
 - MSDS
 - Maintenance organisation manuals
 - Procedures manuals
 - Work instructions
 - Relevant Defence regulations and instructions
 - Standing instructions

Unit Mapping Information

Release 1 – equivalent to MEA411A Remove surface coatings from aircraft or aircraft components

Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.education.gov.au/Pages/TrainingDocs.aspx?q=ce216c9c-04d5-4b3b-9bcf-4e81d0950371>

Assessment Requirements for MEA411 Remove surface coatings from aircraft or aircraft components

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- applying WHS procedures relating to coating removal, including the selection and correct use of PPE
- selecting and applying masking and barrier materials
- selecting and using chemical strippers
- using MSDS
- selecting and using applicable mechanical coating removal methods
- cleaning of surfaces following coating removal
- correctly disposing of waste materials
- cleaning and maintenance of equipment and tools.

It is essential that system testing procedures, cleanliness requirements and safety precautions, including the correct use of PPE, and application of environmental protection procedures are fully observed, understood and complied with. Ability to interpret coating removal procedures and apply them in practice is critical.

Evidence of transferability of skills and knowledge related to coating removal is essential. This is to be demonstrated through application of chemical and mechanical coating removal processes across a range of aircraft and component tasks.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant enterprise procedures and maintenance publications
- WHS procedures relating to the removal of aerospace coatings, including PPE and fume extraction
- how to obtain MSDS
- types of chemicals used for coating removal and methods of application
- mechanical methods that can be used for coating removal
- types of masking and barrier materials
- cleaning methods following coating removal

- environmental legislation and regulations relating to the storage, use and disposal of hazardous materials.

Assessment Conditions

- Competency should be assessed in the workplace or simulated workplace using materials, tools and equipment specified in the maintenance manuals and applicable procedures. It is also expected that general and special-purpose tools and ground support equipment would be used where appropriate.
- The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.
- The following conditions of assessment represent the requirements of the Regulators (ADF and CASA) and maintenance stakeholders and must be rigorously observed.
- A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements and performance criteria of the unit of competency are being achieved under routine supervision on the range of coating removal tasks that are applicable to the enter[prise].
- This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide (for details refer to the Companion Volume Assessment Guidelines).
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

MEA412 Pre-treat aluminium alloy surfaces

Modification History

Release 1 - New unit of competency

Application

This unit of competency requires application of skills and knowledge relating to the application of chemical conversion coatings to aluminium alloy surfaces of fixed and rotary wing aircraft and aircraft components with aluminium alloy surfaces during the performance of scheduled or unscheduled maintenance. Work may be performed individually or as part of a team.

No licensing requirements apply to this unit at the time of publication, but requirements for compliance with legislation and regulations for the handling and disposal of hazardous materials is included in the unit.

The unit is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activity
MEA105	Apply quality standards applicable to aviation maintenance processes
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA109	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Competency Field

Aviation maintenance

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|--|---|
| 1. Prepare surfaces for application of chemical conversion coating | <p>1.1 The required pre-treatment task is identified from maintenance documentation and enterprise procedures</p> <p>1.2 Enterprise procedures and/or process specifications are used to identify required materials and tools</p> <p>1.3 Aircraft or component identification is matched with relevant maintenance documentation</p> <p>1.4 Work health and safety (WHS) requirements are identified and complied with and personal protective equipment (PPE) is checked for correct fit and function</p> <p>1.5 Common surface soils are removed in accordance with enterprise procedures and/or process specifications</p> <p>1.6 Masking is completed on areas where pre-treatment is not required</p> <p>1.7 Aluminium alloy substrate is prepared for application of conversion coating in accordance with enterprise procedures and/or process specifications</p> |
| 2. Apply chemical conversion coating | <p>2.1 The correct environment for conversion coating application is established and maintained</p> <p>2.2 The applicable chemical conversion coating is applied while observing all relevant WHS requirements, including the use of material safety data sheets (MSDS) and items of PPE</p> <p>2.3 Masking is removed and the aircraft or component is left in a suitable condition for the next task</p> <p>2.4 Completion of the pre-treatment process is documented in accordance with enterprise procedures</p> |
| 3. Clean up work area and maintain equipment | <p>3.1 Material that can be reused is collected and correctly stored</p> |

- 3.2 Waste material is removed and disposed of or stored in accordance with legislative, regulatory and enterprise procedures
- 3.3 Equipment is cleaned in accordance with enterprise procedures or manufacturer's instructions while observing all relevant WHS requirements, including the use of MSDS and items of PPE
- 3.4 Equipment is checked for serviceability and unserviceable items are dealt with in accordance with enterprise procedures
- 3.5 Tools are cleaned and maintained in accordance with enterprise procedures
- 3.6 Work area is cleaned and inspected for serviceable condition

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Procedures and requirements include:

- Industry standard procedures specified by manufacturers, regulatory authorities or the enterprise

WHS requirements are identified from:

- Commonwealth/state/territory WHS legislation, regulations and codes
- Procedures manual
- Safety manual
- Work instructions
- Maintenance organisation manual
- MSDS
- Defence regulations and instructions
- Standing instructions

Common surface soils

- Paint

include:

- Dirt
- Grease
- Oils
- Fuel
- Adhesives

Legislative, regulatory and enterprise procedures include:

- Commonwealth/state/territory environmental legislation, regulations and codes for the storage and disposal of hazardous and toxic materials
- MSDS
- Maintenance organisation manual
- Procedures manual
- Work instructions
- Relevant Defence regulations and instructions
- Standing instructions

Unit Mapping Information

Release 1 – equivalent to MEA412A Pre-treat aluminium alloy surfaces

Links

Companion Volume implementation guides are found in VETNet -

<https://vetnet.education.gov.au/Pages/TrainingDocs.aspx?q=ce216c9c-04d5-4b3b-9bcf-4e81d0950371>

Assessment Requirements for MEA412 Pre-treat aluminium alloy surfaces

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- applying WHS procedures relating to pre-treatment of aluminium alloy substrates, including the selection and correct use of PPE
- applying masking
- preparing for chemical conversion coating
- water break testing
- applying specified pre-treatment process
- water break re-testing
- using MSDS
- selecting and using applicable chemical conversion coating
- correctly disposing of waste materials
- cleaning and maintenance of equipment and tools.

The underlying skills inherent in this unit should be transferable across a range of pre-treatment tasks associated with aircraft and aircraft component aluminium alloy surfaces. It is essential that applicable processes, cleanliness requirements and safety precautions, including the correct use of PPE, and application of environmental protection procedures are fully observed, understood and complied with. Ability to interpret pre-treatment procedures and apply them in practice is critical.

This is to be demonstrated through application of conversion coatings to aluminium alloy surfaces across a range of aircraft and component tasks.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant enterprise procedures and/or process specifications
- WHS procedures relating to aluminium alloy pre-treatment processes, including PPE
- how to obtain MSDS
- types of masking and barrier materials
- types of pre-treatment processes

- environmental legislation and regulations relating to the storage, use and disposal of hazardous materials.

Assessment Conditions

- Competency should be assessed in the workplace or simulated workplace using materials, tools and equipment specified in the maintenance manuals and applicable procedures. It is also expected that general and special-purpose tools and ground support equipment would be used where appropriate.
- The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.
- The following conditions of assessment represent the requirements of the Regulators (ADF and CASA) and maintenance stakeholders and must be rigorously observed.
- A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements and performance criteria of the unit of competency are being achieved under routine supervision on a representative range of pre-treatment tasks performed at the enterprise.
- This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide (for details refer to the Companion Volume Assessment Guidelines).
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

MEA413 Seal aircraft and aircraft component structural seams

Modification History

Release 1 - New unit of competency

Application

This unit of competency requires application of skills and knowledge relating to the application of sealant to the surface seams of aircraft and aircraft components prior to surface coating application on fixed and rotary wing aircraft and aircraft components during the performance of scheduled or unscheduled maintenance. Work may be performed individually or as part of a team.

No licensing requirements apply to this unit at the time of publication, but compliance with legislation and regulations for the handling and disposal of hazardous materials is included in the unit.

The unit is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activity
MEA105	Apply quality standards applicable to aviation maintenance processes
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA109	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Competency Field

Aviation maintenance

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|----|--|-----|--|
| 1. | Prepare to undertake seam sealing | 1.1 | The seam sealing task is identified from maintenance documentation and enterprise procedures |
| | | 1.2 | Applicable enterprise procedures, process specifications and maintenance publications are used to identify materials and tools to be used for seam sealing |
| | | 1.3 | Aircraft or component identification is matched with relevant maintenance documentation |
| 2. | Prepare seams for application of sealant | 2.1 | Work health and safety (WHS) requirements are identified and complied with and personal protective equipment (PPE) is checked for correct fit and function |
| | | 2.2 | Materials and tools required for sealant application are assembled |
| | | 2.3 | Masking is applied in accordance with enterprise procedures and/or process specifications |
| | | 2.4 | Seams are prepared for sealant application in accordance with enterprise procedures and/or process specifications |
| 3. | Mix sealant | 3.1 | Environment is established in accordance with enterprise procedures and/or process specifications |
| | | 3.2 | The applicable sealant is mixed in accordance with manufacturer's specifications while observing all relevant WHS requirements, including the use of material safety data sheets (MSDS) and items of PPE |
| 4. | Apply sealant to seams | 4.1 | Sealant is applied in accordance with enterprise procedures and/or process specifications while observing all relevant WHS requirements, including the use of MSDS and items of PPE |
| | | 4.2 | The sealed seam is inspected and blemishes, voids or gaps are filled |
| | | 4.3 | Masking materials are removed |

- 4.4 Waste and/or surplus materials are disposed of in accordance with legislative, regulatory and enterprise procedures
- 4.5 Documentation is completed in accordance with standard enterprise procedures
- 4.6 Aircraft or component, equipment and work area is left in a condition enabling the next task to begin

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Procedures and requirements include:

- Industry standard procedures specified by manufacturers, regulatory authorities or the enterprise

WHS requirements are identified from:

- Commonwealth/state/territory WHS legislation, regulations and codes
- Procedures manuals
- Safety manuals
- Work instructions
- Maintenance organisation manuals
- MSDS
- Defence regulations and instructions
- Standing instructions

Legislative, regulatory and enterprise procedures include:

- Commonwealth/state/territory environmental legislation, regulations and codes for the storage and disposal of hazardous and toxic materials
- MSDS
- Maintenance organisation manuals

MEA414 Remove light corrosion from aircraft

Modification History

Release 1 - New unit of competency

Application

This unit of competency requires application of skills and knowledge relating to the removal of light corrosion from the surfaces of fixed and rotary wing aircraft structure.

No licensing requirements apply to this unit at the time of publication, but compliance with legislation and regulations for the handling and disposal of hazardous materials is included in the unit.

The unit is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activity
MEA105	Apply quality standards applicable to aviation maintenance processes
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA109	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Competency Field

Aviation maintenance

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Identify corrosion damage	1.1 Signs of corrosion are identified through visual inspection 1.2 The type of corrosion is identified 1.3 The severity of corrosion damage is determined and damage more severe than light surface corrosion is documented and reported in accordance with standard enterprise procedures
2. Remove light corrosion	2.1 The applicable corrosion removal method is selected in accordance with enterprise procedures 2.2 Work health and safety (WHS) requirements are identified and complied with and personal protective equipment (PPE) is checked for correct fit and function 2.3 Materials and tools required for corrosion removal are assembled 2.4 Surface is prepared and corrosion removed using the selected removal method
3. Clean area and equipment	3.1 Surface is cleaned of all chemical residue and mechanical media, in accordance with enterprise procedures, ready for the next process 3.2 Equipment is cleaned in accordance with enterprise procedures or manufacturer's instructions 3.3 Equipment is checked for serviceability and unserviceable items are dealt with in accordance with enterprise procedures 3.4 Waste material is removed and disposed of or stored in accordance with legislative, regulatory and enterprise procedures 3.5 Documentation is completed in accordance with standard enterprise procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Procedures and requirements include:

- Industry standard procedures specified by manufacturers, regulatory authorities or the enterprise

Signs of corrosion include:

- Surface deformed
- Paint blistered or flaked
- Powder
- Discolouration

Types of corrosion include:

- Uniform etch
- Pitting
- Intergranular
- Exfoliation
- Filiform
- Galvanic

WHS requirements are identified from:

- Commonwealth/state/territory WHS legislation, regulations and codes
- Procedures manuals
- Safety manuals
- Work instructions
- Maintenance organisation manuals
- Material safety data sheets (MSDS)
- Defence regulations and instructions
- Standing instructions

Materials and tools include:

- Micro grinder
- Sanders
- Plastic media blasting equipment
- Abrasive pads
- Wet/dry abrasive papers
- Chemicals
- PPE applicable to task

Selected removal methods include:

- Light mechanical using micro grinder, sander or plastic media blasting
- Manual removal using wet/dry abrasive papers or

Legislative, regulatory and enterprise procedures include:

- abrasive pads
- Chemical
- Commonwealth/state/territory environmental legislation, regulations and codes for the storage and disposal of hazardous and toxic materials
- MSDS
- Maintenance organisation manuals
- Procedures manuals
- Work instructions
- Relevant Defence regulations and instructions
- Standing instructions

Unit Mapping Information

Release 1 – equivalent to MEA414A Remove light corrosion from aircraft

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for MEA414 Remove light corrosion from aircraft

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- applying WHS procedures relating to light corrosion removal, including the selection and correct use of PPE
- recognising types of corrosion and of damage that exceeds light surface corrosion
- applying enterprise procedures for removal of light corrosion
- selection and use of applicable corrosion removal methods, equipment and tools
- using MSDS
- cleaning of surfaces following corrosion removal
- correctly disposing of waste materials
- cleaning and maintenance of equipment and tools.

The underlying skills inherent in this unit should be transferable across a range of tasks involving the removal of light corrosion damage from the surfaces of aircraft structure. It is essential that applicable processes, cleanliness requirements and safety precautions, including the correct use of PPE, and application of environmental protection procedures are fully observed, understood and complied with. Ability to interpret corrosion removal procedures and apply them in practice is critical.

This is to be demonstrated through corrosion removal using mechanical, manual and chemical means across a range of aircraft tasks.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant enterprise procedures and maintenance publications
- WHS procedures relating to the removal of aerospace coatings, including PPE
- how to obtain MSDS
- types of chemicals used for corrosion removal and methods of application
- mechanical methods that can be used for corrosion removal
- cleaning methods following corrosion removal

- environmental legislation and regulations relating to the storage, use and disposal of hazardous materials.

Assessment Conditions

- Competency should be assessed in the workplace or simulated workplace using materials, tools and equipment specified in the maintenance manuals and applicable procedures. It is also expected that general and special-purpose tools and ground support equipment would be used where appropriate.
- The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.
- The following conditions of assessment represent the requirements of the Regulators (ADF and CASA) and maintenance stakeholders and must be rigorously observed.
- A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements and performance criteria of the unit of competency are being achieved under routine supervision on a representative range of light corrosion removal tasks using applicable mechanical, manual and chemical removal methods as listed in the Range of Conditions.
- This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide (for details refer to the Companion Volume Assessment Guidelines).
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

MEA415 Paint aircraft surfaces

Modification History

Release 1 - New unit of competency

Application

This unit of competency requires application of skills and knowledge relating to final preparation of surfaces and application of paint finishes to fixed and rotary wing aircraft and aircraft components during the performance of scheduled or unscheduled maintenance. Work may be performed individually or as part of a team.

No licensing requirements apply to this unit at the time of publication, but compliance with legislation and regulations for the handling and disposal of hazardous materials is included in the unit.

The unit is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activity
MEA105	Apply quality standards applicable to aviation maintenance processes
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA109	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance
AURVTP2003	Prepare spray painting materials and equipment
AURVTP3012	Apply air dry and polyurethane enamel refinishing materials

Competency Field

Aviation maintenance

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | |
|---------------------------|-----|--|
| 1. Prepare for painting | 1.1 | The painting task is identified from maintenance documentation and enterprise procedures and type of substrate is identified |
| | 1.2 | Enterprise procedures and maintenance publications are used to identify required materials and tools and necessary items are assembled |
| | 1.3 | Aircraft or component identification is matched with relevant maintenance documentation |
| | 1.4 | Surfaces are prepared for application of paint in accordance with enterprise procedures and/or process specification |
| | 1.5 | Masking and barrier materials are applied as required by task |
| 2. Apply primer | 2.1 | Work health and safety (WHS) requirements are identified and complied with and personal protective equipment (PPE) is checked for correct fit and function |
| | 2.2 | Temperature and humidity requirements are complied with |
| | 2.3 | Specified primer is applied in accordance with enterprise procedures and/or process specification |
| | 2.4 | Reject paintwork is identified and rectified in accordance with enterprise procedures and/or process specification |
| | 2.5 | Equipment is cleaned |
| 3. Apply surface top coat | 3.1 | WHS requirements are identified and complied with and PPE is checked for correct fit and function |

- 3.2 Temperature and humidity requirements are complied with
- 3.3 The specified top coat material is prepared in accordance with manufacturer's instructions
- 3.4 Top coat is applied in accordance with enterprise procedures and/or process specifications
- 3.5 Reject paintwork is identified and rectified in accordance with enterprise procedures and/or process specifications
- 3.6 Masking and barrier materials are removed and final finishing of the surface is completed as required
- 3.7 Documentation is completed in accordance with standard enterprise procedures
- 4. Clean up work area and maintain equipment
 - 4.1 Waste material is removed and disposed of or stored in accordance with legislative, regulatory and enterprise procedures
 - 4.2 Equipment is cleaned in accordance with enterprise procedures or manufacturer's instructions
 - 4.3 Equipment is checked for serviceability and unserviceable items are dealt with in accordance with enterprise procedures
 - 4.4 Tools are cleaned and maintained in accordance with enterprise procedures
 - 4.5 Work area is cleaned and inspected for serviceable condition

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional

contexts) are included.

Procedures and requirements include:

- Industry standard procedures specified by manufacturers, regulatory authorities or the enterprise.

Type of substrate includes:

- High strength steel
- Aluminium alloys
- Composite fibre
- Plastic
- Transparencies
- Magnesium alloy
- Fabric
- Wood

Required materials and tools include:

- Epoxy primers
- Lacquer primers
- Acrylic top coats
- Polyurethane top coats
- Chemicals
- Masking and barrier materials
- Low pressure gun or touch-up gun
- General purpose suction feed spray guns
- Airless spray units
- Electrostatic spray equipment
- Sanding/polishing equipment and materials
- PPE

WHS requirements are identified from relevant:

- Commonwealth/state/territory WHS legislation, regulations and codes
- Procedures manuals
- Safety manuals
- Work instructions
- Maintenance organisation manuals
- Material safety data sheets (MSDS)
- Defence regulations and instructions
- Standing instructions

Legislative, regulatory and enterprise procedures include:

- Commonwealth/state/territory environmental legislation, regulations and codes for the storage and disposal of hazardous and toxic materials
- MSDS
- Maintenance organisation manuals
- Procedures manuals
- Work instructions
- Relevant Defence regulations and instructions
- Standing instructions

Assessment Requirements for MEA415 Paint aircraft surfaces

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- applying WHS procedures relating to paint application, including the selection and correct use of PPE
- selecting and applying masking and barrier materials
- identifying, preparing and using applicable primers and top coats
- using MSDS
- using manufacturer specifications and directions
- selecting and using applicable paint application equipment
- preparing surfaces for paint application
- correctly disposing of waste materials
- cleaning and maintenance of equipment and tools.

The underlying skills inherent in this unit should be transferable across a range of paint application tasks associated with aircraft and aircraft components. It is essential that system testing procedures, cleanliness requirements and safety precautions, including the correct use of PPE, and application of environmental protection procedures are fully observed, understood and complied with. Ability to interpret coating application procedures and apply them in practice is critical.

This is to be demonstrated through application of paint finishes across a range of aircraft and component substrate types.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant enterprise procedures, process specifications and maintenance publications
- WHS procedures relating to the application of aerospace coatings, including PPE and fume extraction
- how to obtain MSDS
- manufacturer specifications and directions
- types of paint finishes and applicability to various substrates
- procedures for preparing surfaces for paint application

- types of masking and barrier materials
- methods used for final finishing of surfaces
- environmental legislation and regulations relating to the storage, use and disposal of hazardous materials.

Assessment Conditions

- Competency should be assessed in the workplace or simulated workplace using materials, tools and equipment specified in the maintenance manuals and applicable procedures. It is also expected that general and special-purpose tools and ground support equipment would be used where appropriate.
- The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.
- The following conditions of assessment represent the requirements of the Regulators (ADF and CASA) and maintenance stakeholders and must be rigorously observed.
- A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements and performance criteria of the unit of competency are being achieved under routine supervision on a representative range of paint finish application tasks that are performed at the enterprise.
- This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide (for details refer to the Companion Volume Assessment Guidelines).
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

ME A416 Apply aircraft identification markings, graphics and decals

Modification History

Release 1 - New unit of competency

Application

This unit of competency requires application of skills and knowledge relating to preparation and application of fixed and rotary wing aircraft markings, graphics and decals during the performance of scheduled or unscheduled maintenance. Work may be performed individually or as part of a team.

No licensing requirements apply to this unit at the time of publication, but compliance with legislation and regulations for the handling and disposal of hazardous materials is included in the unit.

The unit is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

ME A101	Interpret work health and safety practices in aviation maintenance
ME A103	Plan and organise aviation maintenance work activity
ME A105	Apply quality standards applicable to aviation maintenance processes
ME A107	Interpret and use aviation maintenance industry manuals and specifications
ME A108	Complete aviation maintenance industry documentation
ME A109	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Competency Field

Aviation maintenance

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|----|---|-----|--|
| 1. | Interpret requirements and prepare materials for aircraft markings, graphics and decals | 1.1 | Requirements for markings, graphics and decals are determined from maintenance documentation, enterprise procedures and maintenance publications |
| | | 1.2 | Equipment for task is identified and gathered |
| | | 1.3 | Aircraft or component identification is matched with relevant maintenance documentation |
| | | 1.4 | Decals are prepared and matched with documentation |
| | | 1.5 | Markings or marking stencils are manufactured in accordance with drawings and specifications |
| | | 1.6 | Graphics or graphic stencils are manufactured in accordance with drawings and specifications |
| 2. | Prepare for application of aircraft markings and graphics | 2.1 | Work health and safety (WHS) requirements are identified and complied with and personal protective equipment (PPE) is checked for correct fit and function |
| | | 2.2 | Materials and equipment required for application of markings and graphics are assembled |
| | | 2.3 | Surface on which marking or graphic will be applied is cleaned in accordance with enterprise procedures |
| | | 2.4 | Marking or graphic position is accurately determined and masking is applied where necessary |
| 3. | Apply aircraft markings, graphics and decals | 3.1 | Environmental requirements for the application of markings and graphics are established in accordance with enterprise procedures |
| | | 3.2 | Markings and graphics are applied in accordance with enterprise procedures |
| | | 3.3 | Rework, gloss measuring and thickness measuring are performed, where applicable, in accordance with |

- enterprise procedures
- 3.4 Masking materials are removed, where applicable, and final clean-up is performed as required
 - 3.5 Decal positions are accurately determined, surfaces cleaned and decals applied in accordance with enterprise procedures
 - 3.6 Documentation is completed in accordance with standard enterprise procedures
4. Clean up work area and maintain equipment
- 4.1 Material that can be reused is collected and correctly stored
 - 4.2 Waste material is removed and disposed of or stored in accordance with legislative, regulatory and enterprise procedures
 - 4.3 Equipment is cleaned in accordance with enterprise procedures or manufacturer's instructions
 - 4.4 Equipment is checked for serviceability and unserviceable items are dealt with in accordance with enterprise procedures
 - 4.5 Tools are cleaned and maintained in accordance with enterprise procedures
 - 4.6 Work area is cleaned and inspected for serviceable condition

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Procedures and

- Industry standard procedures specified by

- requirements include:** manufacturers, regulatory authorities or the enterprise.
- Markings include:**
- NATO
 - National or registration
 - Safety
- Graphics include:**
- Organisational logos or emblems
 - Decorative markings required by customer
- WHS requirements are identified from relevant:**
- Procedures manual
 - Safety manuals
 - Work instructions
 - Maintenance organisation manuals
 - Material safety data sheets (MSDS)
 - Defence regulations and instructions
 - Standing instructions
- Materials and equipment include:**
- Silk screen and/or frame
 - Spray guns
 - Vinyl plotter
 - Screen burner
 - Ink applicators
 - Rollers
 - Brushes
 - Vinyl applicators
 - Hazard tape
 - Masking tape
 - Mediums, including paint, ink and vinyl
 - PPE
- Application methods include:**
- Oil board
 - Vinyl (positive and negative)
 - Screen printing
 - Mask
 - Stencil
- Legislative, regulatory and enterprise procedures include:**
- Commonwealth/state/territory environmental legislation, regulations and codes for the storage and disposal of hazardous and toxic materials
 - MSDS
 - Maintenance organisation manuals
 - Procedures manuals
 - Work instructions
 - Relevant Defence regulations and instructions
 - Standing instructions

Assessment Requirements for MEA416 Apply aircraft identification markings, graphics and decals

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- applying WHS procedures relating to marking and graphic application, including the selection and correct use of PPE
- using procedures, maintenance manuals and finishing scheme drawings to determine the requirements for markings, graphics and decals
- selecting and applying masking and barrier materials
- manufacturing markings and graphics
- manufacturing stencils for the application of markings and graphics
- using MSDS
- cleaning of surfaces before and following the application of markings and graphics
- correctly disposing of waste materials
- cleaning and maintenance of equipment and tools.

The underlying skills inherent in this unit should be transferable across a range of marking, graphic and decal application tasks associated with aircraft. It is essential that cleanliness requirements and safety precautions, including the correct use of PPE, and application of environmental protection procedures are fully observed, understood and complied with. Ability to interpret drawing and specification requirements and application procedures and apply them in practice is critical.

This is to be demonstrated through application of various types of markings and graphics as listed in the Range of Conditions across a range of aircraft applications.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant enterprise procedures, maintenance publications, drawings and specifications
- manufacturer's specifications and directions
- WHS procedures relating to the application of markings and graphics to aircraft, including PPE and fume extraction
- how to obtain MSDS

- types of chemicals used for cleaning and surface preparation
- manufacturing methods for stencils
- types of masking and barrier materials
- cleaning methods following application of markings and graphics
- environmental legislation and regulations relating to the storage, use and disposal of hazardous materials.

Assessment Conditions

- Competency should be assessed in the workplace or simulated workplace using materials, tools and equipment specified in the maintenance manuals and applicable procedures. It is also expected that general and special-purpose tools and ground support equipment would be used where appropriate.
- The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.
- The following conditions of assessment represent the requirements of the Regulators (ADF and CASA) and maintenance stakeholders and must be rigorously observed.
- A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements and performance criteria of the unit of competency are being achieved under routine supervision on a representative range of marking and graphic application tasks that are performed at the enterprise.
- This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide (for details refer to the Companion Volume Assessment Guidelines).
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

MEA417 Apply specialty coatings to aircraft

Modification History

Release 1 - New unit of competency

Application

This unit of competency requires application of skills and knowledge relating to the preparation and application of a range of specialty coatings to fixed and rotary wing aircraft and aircraft components using application methods applicable to the specific coating material during the performance of scheduled or unscheduled maintenance. Work may be performed individually or as part of a team.

No licensing requirements apply to this unit at the time of publication, but compliance with legislation and regulations for the handling and disposal of hazardous materials is included in the unit.

The unit is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activity
MEA105	Apply quality standards applicable to aviation maintenance processes
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA109	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Competency Field

Aviation maintenance

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Determine specialty coating requirements	<p>1.1 Specialty coating requirements are identified from maintenance documentation and enterprise procedures</p> <p>1.2 Enterprise procedures and maintenance publications are used to identify materials and tools to be used for specialty coating application</p> <p>1.3 Aircraft or component identification is matched with relevant maintenance documentation</p>
2. Prepare surface for coating application	<p>2.1 Work health and safety (WHS) requirements are identified and complied with and personal protective equipment (PPE) is checked for correct fit and function</p> <p>2.2 Materials and equipment required for specialty coating application are assembled</p> <p>2.3 Surfaces are cleaned and degreased in accordance with enterprise procedures</p> <p>2.4 Final finishing of surfaces is performed in accordance with enterprise procedures and/or process specifications</p> <p>2.5 Reject parts and surfaces are identified, recorded and reported in accordance with standard enterprise procedures</p> <p>2.6 Masking is applied to relevant areas</p>
3. Prepare and apply coating	<p>3.1 The required coating is prepared in accordance with manufacturer's specifications and directions while observing all relevant WHS requirements, including the use of material safety data sheets (MSDS) and items of PPE</p> <p>3.2 Coating mix is inspected in accordance with enterprise procedures and/or process specifications</p> <p>3.3 Coating is applied to the required surfaces in accordance with enterprise procedures and/or process</p>

- specifications while observing all relevant WHS requirements, including the use of MSDS and items of PPE
- 3.4 Coating is inspected for coating thickness and quality compliance with enterprise procedures and/or process specifications
 - 3.5 Defects in the coating are identified and rectified as required
 - 3.6 Masking materials are removed and final cleaning of surfaces is performed
 - 3.7 Documentation is completed in accordance with standard enterprise procedures
4. Clean up work area and maintain equipment
- 4.1 Waste material is removed and disposed of or stored in accordance with legislative, regulatory and enterprise procedures
 - 4.2 Equipment is cleaned in accordance with enterprise procedures or manufacturer's instructions
 - 4.3 Equipment is checked for serviceability and unserviceable items are dealt with in accordance with enterprise procedures
 - 4.4 Tools are cleaned and maintained in accordance with enterprise procedures
 - 4.5 Work area is cleaned and inspected for serviceable condition

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Procedures and requirements include:

- Industry standard procedures specified by manufacturers, regulatory authorities or the enterprise

Specialty coatings include:

- Specialised inner layer coatings
- Engine coatings
- Leading edge coatings
- Radome coatings
- Waterborne heatproof paints
- Walkway compounds
- Fuel tank coatings
- Heatproof coatings
- Electrical conductive coatings

WHS requirements are identified from relevant:

- Commonwealth/state/territory WHS legislation, regulations and codes
- Procedures manuals
- Safety manuals
- Work instructions
- Maintenance organisation manuals
- MSDS
- Defence regulations and instructions
- Standing instructions

Materials and equipment include:

- Chemicals
- Cleaning materials
- Specialty coating material
- Various spray guns
- Brush
- Roller
- Trowel
- PPE
- Baking oven
- Heat lamps
- Electrical test equipment
- Wet film thickness gauges

Defects in the coating include:

- Sags
- Runs
- Delamination
- Imperfections
- Dry spray
- Contamination
- Over-spray
- Egress

Legislative, regulatory and

- Commonwealth/state/territory environmental legislation,

**enterprise procedures
include:**

regulations and codes for the storage and disposal of hazardous and toxic materials

- MSDS
- Maintenance organisation manuals
- Procedures manuals
- Work instructions
- Relevant Defence regulations and instructions
- Standing instructions

Assessment Requirements for MEA417 Apply specialty coatings to aircraft

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- applying WHS procedures relating to specialty coating application, including the selection and correct use of PPE
- using procedures, process specification and manufacturer's data to identify coating preparation and application requirements
- selecting and applying masking materials
- selecting and using correct specialty coating
- using MSDS
- selecting and using applicable coating application methods
- cleaning and preparing surfaces for coating application
- correctly disposing of waste materials
- cleaning and maintenance of equipment and tools.

The underlying skills inherent in this unit should be transferable across a range of specialty coating application tasks associated with aircraft. It is essential that cleanliness requirements and safety precautions, including the correct use of PPE, and application of environmental protection procedures are fully observed, understood and complied with. Ability to interpret drawing and specification requirements and application procedures and apply them in practice is critical.

This is to be demonstrated through application of various types of specialty coating as listed in the Range of Conditions across a range of aircraft applications.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant enterprise procedures and maintenance publications
- WHS procedures relating to the application of specialty aerospace coatings, including PPE
- relevant data from manufacturers of specialty coatings
- how to obtain MSDS
- criticality of areas of aircraft structure with regard to coating application

- cleaning processes and chemicals used to prepare surfaces for coating application
- coating application methods
- masking materials
- environmental legislation and regulations relating to the storage, use and disposal of hazardous materials.

Assessment Conditions

- Competency should be assessed in the workplace or simulated workplace using materials, tools and equipment specified in the maintenance manuals and applicable procedures. It is also expected that general and special-purpose tools and ground support equipment would be used where appropriate.
- The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.
- The following conditions of assessment represent the requirements of the Regulators (ADF and CASA) and maintenance stakeholders and must be rigorously observed.
- A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements and performance criteria of the unit of competency are being achieved under routine supervision on a minimum of two (2) types of specialty coating on at least three (3) application tasks.
- This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide (for details refer to the Companion Volume Assessment Guidelines).
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

MEA418 Perform basic repair of aircraft internal fittings during line maintenance

Modification History

Release 1 - New unit of competency

Application

This unit of competency requires application of hand skills and the use of maintenance publications to repair aircraft internal fittings, such as internal doors that are not part of the pressure hull, overhead storage compartments and doors and cabin furnishing items that are manufactured from either sheet metal or non-metallic materials and are within the privileges of the Aircraft Maintenance Engineer (AME) A Licence.

Applications include fixed and rotary wing aircraft and work may be performed during scheduled or unscheduled maintenance.

This is one of the units required for the granting of the chosen Aircraft Maintenance Engineer A Licence under Civil Aviation Safety Regulation (CASR) Part 66, in accordance with the licensing provisions in the Companion Volume Implementation Guide.

Pre-requisite Unit

MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activity
MEA105	Apply quality standards applicable to aviation maintenance processes
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA109	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Competency Field

Aviation maintenance

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | |
|---|-----|--|
| 1. Prepare to perform routine repairs and minor modifications to aircraft internal fittings | 1.1 | Applicable repair scheme is determined in accordance with applicable maintenance publications and enterprise procedures |
| | 1.2 | All required materials and equipment are selected and organised in accordance with enterprise procedures and maintenance publications |
| 2. Perform routine repairs to aircraft internal fittings | 2.1 | Sheet metal repairs and non-metallic material repairs are performed in accordance with approved repair scheme, ensuring that aircraft standard practices are used and standard process requirements are carried out while observing all relevant work health and safety (WHS) requirements, including the use of material safety data sheets (MSDS) and items of personal protective equipment (PPE) |
| | 2.2 | Work area is cleaned of all waste material |
| | 2.3 | Adjustments are made, where necessary, for components to operate within prescribed specifications |
| 3. Complete routine repair activities | 3.1 | Required documentation is accurately completed and correctly processed in accordance with enterprise procedures |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- Sheet metal repairs include:**
- Removing corrosion by chemical and mechanical methods
 - Restoring protective coatings to repaired areas
 - Freehand precision hole generation
 - Removing and installing fastening devices
 - Routine repairs to sheet metal internal fittings
- Non-metallic material repairs include:**
- Repairs to fibreglass, sandwich honeycomb, nylon, Perspex, nomex core materials and matrix resins
 - Restoring protective coatings to repaired areas
 - Freehand precision hole generation
 - Removing and installing fastening devices
- Procedures and requirements include:**
- Industry standard procedures specified by manufacturers, regulatory authorities or the enterprise

Unit Mapping Information

Release 1 – equivalent to MEA418A Perform basic repair of aircraft internal fittings during line maintenance

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for MEA418 Perform basic repair of aircraft internal fittings during line maintenance

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- applying relevant WHS procedures, including the use of PPE and MSDS
- using enterprise procedures, approved maintenance documentation and aircraft publications relating to aircraft sheet metal and non-metallic internal fittings
- identifying various materials used for internal fittings and their basic properties by interpretation of markings, numbering systems or visual, chemical or mechanical means
- handling and storing aircraft metals used for sheet metal internal fittings, including sealing agents, to industry standards
- identifying aircraft sheet metal assembly fasteners (metal and non-metallic) by interpretation of markings, numbering systems, size, shape and colour
- correctly interpreting applicable repair schemes and hand sketches
- using appropriate hand tools and power tools under supervision to remove and assemble aircraft sheet metal internal fittings
- performing under guidance and in accordance with enterprise procedures a range of routine metal and non-metal repair techniques
- applying corrosion removal/treatment techniques
- restoring sealing and surface finishes to repaired areas.

The underlying skills inherent in this unit should be transferable into other areas that require similar techniques. It is essential that procedures take into account all safety precautions and quality requirements, standards and practices, and processes associated with repair and assembly.

Evidence of knowledge about enterprise procedures relating to basic repair techniques and the use of the standard repair manual/practices in a range of different routine repair situations will be necessary to supplement evidence of ability to plan and undertake internal fitting repairs.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant WHS procedures

- how to obtain relevant MSDS
- the use of applicable items of PPE
- aircraft sheet metal component construction principles and repair techniques at a basic level
- aircraft non-metallic component construction principles and repair techniques at a basic level.

Assessment Conditions

- Competency should be assessed in the work environment, using tools and equipment specified by aircraft maintenance manuals. It is also expected that general-purpose tools, test and ground support equipment found in most routine situations would be used where appropriate.
- The following conditions of assessment represent the requirements of CASA and must be rigorously observed.
- A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements and performance criteria of the unit of competency are being achieved under supervision but without intervention on a representative range of tasks involving the following:
 - sheet metal repairs involving:
 - removing corrosion by chemical and mechanical methods
 - restoring protective coatings to repaired areas
 - freehand precision hole generation
 - removing and installing fastening devices
 - routine repairs to sheet metal internal fittings
 - non-metallic material repairs involving:
 - repairs to fibreglass, sandwich honeycomb, nylon, Perspex, nomex core materials, and matrix resins
 - restoring protective coatings to repaired areas
 - freehand precision hole generation
 - removing and installing fastening devices.
- This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide (for details refer to the Companion Volume Assessment Guidelines).
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).
- Where the unit is to be used for CASA licensing purposes the Assessor must also meet the criteria specified in the CASR Part 147 Manual of Standards.

Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.education.gov.au/Pages/TrainingDocs.aspx?q=ce216c9c-04d5-4b3b-9bcf-4e81d0950371>

MEA419 Inspect and repair/modify aircraft cabin/cockpit non-primary structure components

Modification History

Release 1 - New unit of competency

Application

This unit of competency requires application of hand skills and the use of maintenance publications to inspect for damage and repair aircraft non-primary structure metallic and non-metallic components of fixed and rotary wing aircraft cabins and cockpits during the performance of scheduled or unscheduled maintenance. Work may be performed individually or as part of a team.

This unit is part of the Aeroskills Life Support and Furnishing Certificate III and IV training pathways.

The unit is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activity
MEA105	Apply quality standards applicable to aviation maintenance processes
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA109	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Competency Field

Aviation maintenance

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|----|---|-----|--|
| 1. | Inspect for damage to aircraft cabin/cockpit non-primary structure metallic and non-metallic components | 1.1 | Metallic and/or non-metallic components are visually inspected for damage |
| | | 1.2 | Extent of damage is determined and confirmed to be within repair limits |
| 2. | Prepare to perform routine repairs and minor modifications to aircraft cabin/cockpit non-primary structure metallic and non-metallic components | 2.1 | Applicable metallic or non-metallic repair scheme is determined in accordance with applicable maintenance documentation and standard enterprise procedures |
| | | 2.2 | Modification instructions are obtained in accordance with standard enterprise procedures |
| | | 2.3 | All required materials and equipment are selected and organised in accordance with enterprise procedures and maintenance documentation |
| 3. | Perform routine repairs and minor modifications to aircraft cabin/cockpit non-primary structure metallic components | 3.1 | Metallic component repairs and minor modifications are performed in accordance with approved repair scheme or modification instructions, ensuring that aircraft standard practices are used and standard process requirements are carried out while observing all relevant work health and safety (WHS) requirements, including the use of material safety data sheets (MSDS) and items of personal protective equipment (PPE) |
| | | 3.2 | Work area is cleaned of all waste material |
| | | 3.3 | Minor adjustments are made, where necessary, for components to operate within prescribed specifications |
| 4. | Perform routine repairs and minor modifications to aircraft cabin/cockpit non-primary structure | 4.1 | Non-metallic component repairs and minor modifications are performed in accordance with approved repair scheme or modification instructions, ensuring that aircraft standard practices are used and standard process requirements are carried out while |

non-metallic components		observing all relevant while observing all relevant WHS requirements, including the use of MSDS and items of PPE
	4.2	Work area is cleaned of all waste material
	4.3	Minor adjustments are made, where necessary, for components to operate within prescribed specifications
5. Complete routine repair and minor modification activities	5.1	Required documentation is accurately completed and correctly processed in accordance with standard enterprise procedures
	5.2	Repaired components or assemblies are tagged, sealed and packaged or cradled in accordance with specified procedures, where required

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Metallic and non-metallic components include:

- Aircraft crew and passenger seats
- Interior trim panels, including sidewalls, galleys, furnishings and partitions, passenger modules/pods, toilets, roof panels, overhead luggage stowage bins, non-structural floor panels and cargo compartment lining

Types of damage include:

- Corrosion, cracking and impact damage to metallic components
- Delamination, cracking and impact damage to non-metallic components

Metallic component repairs include:

- Removing corrosion by chemical and mechanical methods
- Restoring protective coatings
- Freehand precision hole generation

- Removing and installing fastening devices
 - Fitting patches to cabin/cockpit non-primary structure sheet metal components
 - Composite patch, scarf and stepped repairs using fibreglass, sandwich honeycomb, nylon, Perspex, nomex core materials and matrix resins
- Non-metallic component repairs include:**
- Primary structure includes:**
- All components of an aircraft, the failure of which would seriously endanger safety. In the fuselage this includes frames, longerons and stringers, structural floor panels and all additional parts of the pressure hull, such as skin, windows, doors and bulkheads
- Procedures and requirements include:**
- Industry standard procedures specified by manufacturers, regulatory authorities or the enterprise

Unit Mapping Information

Assessment Requirements for MEA419 Inspect and repair/modify aircraft cabin/cockpit non-primary structure components

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- applying relevant WHS practices, including the use of MSDS and the selection and use of applicable items of PPE
- using enterprise procedures, approved maintenance documentation and aircraft publications relating to cabin/cockpit non-primary structure metallic and non-metallic components
- identifying aircraft cabin/cockpit non-primary structure components and their basic properties by interpretation of markings, numbering systems or visual, chemical or mechanical means
- handling and storing aircraft metallic and non-metallic components, including sealing agents, to industry standards
- identifying aircraft assembly fasteners by interpretation of markings, numbering systems, size, shape and colour
- visually inspecting metallic and non-metallic components for damage
- correctly interpreting, in accordance with enterprise procedures, applicable repair scheme/modification drawings and hand sketches
- using appropriate hand tools and machines to remove and assemble aircraft cabin/cockpit non-primary structure metallic and non-metallic components
- performing, in accordance with enterprise procedures, a range of routine non-primary structure sheet metal repair techniques, including metal scab patch repairs
- performing, in accordance with enterprise procedures, a range of routine non-primary structure non-metallic repair techniques
- applying corrosion removal/treatment techniques
- restoring sealing and surface finishes.

The underlying skills inherent in this unit should be transferable into other areas that require similar techniques. It is essential that procedures take into account all safety precautions and quality requirements, standards and practices, and processes associated with assembly.

Evidence of knowledge about enterprise procedures relating to routine basic repair techniques and the use of the standard repair manual/practices in a range of situations will be necessary to supplement evidence of ability to plan and undertake component repair.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable WHS procedures, including how to obtain MSDS
- selection and use of applicable items of PPE
- construction methods used and assessment of common defects in aircraft crew and passenger seats, and in interior trim panels including sidewalls, galleys, furnishings and partitions, passenger modules/pods, toilets, roof panels, overhead luggage stowage bins, non-structural floor panels and cargo compartment lining
- types of deterioration and damage
- inspection methods
- identification and interpretation of metallic and non-metallic repair schemes applicable to cabin/cockpit non-primary structural components
- the various forms of corrosion
- the terms associated with composite materials
- requirements for handling and storing aircraft metals and composite materials including sealing agents, to industry standards
- means of identifying aircraft structural assembly fasteners (metal and composite) by interpretation of markings, numbering systems, size, shape and colour.

Assessment Conditions

- Competency should be assessed in the work environment or simulated work environment, using tools and equipment specified by aircraft maintenance manuals. It is also expected that general-purpose tools, test and ground support equipment found in most routine situations would be used where appropriate.
- The following conditions of assessment represent the requirements of the Regulators (ADF and CASA) and maintenance stakeholders and must be rigorously observed.
- A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements and performance criteria of the unit of competency are being achieved on a representative range of components, inspecting for damage and performing repair tasks, as follows:
 - metallic component repairs involving:
 - removing corrosion by chemical and mechanical methods
 - restoring protective coatings
 - freehand precision hole generation
 - removing and installing fastening devices
 - fitting patches to cabin/cockpit non-primary structure sheet metal components
 - non-metallic component repairs involving:
 - composite patch, scarf and stepped repairs using fibreglass, sandwich honeycomb, nylon, Perspex, nomex core materials and matrix resins.

- This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide (for details refer to the Companion Volume Assessment Guidelines).
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

MEA420 Fabricate basic structural components for aircraft

Modification History

Release 2 - Changes to Performance Evidence and to Knowledge Evidence.

Application

This unit of competency requires application of hand skills and the use of drawings, specifications and maintenance publications to fabricate basic structural components (that are flat or have only a single curve) requiring hand forming only from aluminium alloys and steel alloys at various states of temper during scheduled or unscheduled maintenance. Work may be performed individually or as part of a team.

Applications include components for fixed and rotary wing aircraft.

The unit is part of the Aeroskills Structures Maintenance Certificate IV training pathway.

The unit is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activity
MEA105	Apply quality standards applicable to aviation maintenance processes
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA109	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Competency Field

Aviation maintenance

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|----|---|-----|--|
| 1. | Interpret specifications and organise materials | 1.1 | Specifications and drawings are used to determine material requirements |
| | | 1.2 | Equipment use is planned by determining the procedure for fabricating component |
| | | 1.3 | Material is correctly identified in accordance with specifications |
| | | 1.4 | All materials and equipment are organised |
| 2. | Prepare material and tooling | 2.1 | Dimensions to material are translated in accordance with specifications |
| | | 2.2 | Cutting and forming equipment are prepared and adjusted to ensure accuracy of fabrication |
| | | 2.3 | Material is cut according to specifications ensuring minimisation of wastage and maintenance of surplus material identification while observing all relevant work health and safety (WHS) requirements, including the use of material safety data sheets (MSDS) and items of personal protective equipment (PPE) |
| | | 2.4 | Material requiring special treatment is prepared for the appropriate processes |
| | | 2.5 | Solution treatment of materials is carried out in accordance with approved procedures and specifications |
| 3. | Hand form material | 3.1 | Hand forming is accurately carried out ensuring that specifications are met while observing all relevant WHS requirements, including the use of MSDS and items of PPE |
| | | 3.2 | Formed components are checked for irregularities and correction requirements determined |
| | | 3.3 | Irregularities are removed to meet required dimensions and specifications |

4. Inspect components
- 4.1 Fabricated components are inspected to confirm dimensional accuracy and specifications are met
 - 4.2 Checking fixtures are used, where appropriate, to ensure requirements are met
 - 4.3 Components requiring special or further treatment are prepared for the appropriate processes
 - 4.4 Completed components are tagged or identified, as required

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Components are to be fabricated:

- Using materials comprising various types of sheet metal used in aircraft manufacture, including aluminium alloys and structural steel alloys across a range of temper

Machinery processes include:

- Cutting, bending and drilling

Procedures and requirements include:

- Industry standard procedures specified by manufacturers, regulatory authorities or the enterprise

Unit Mapping Information

Release 2 - Changes to Performance Evidence and to Knowledge Evidence. Equivalent.

Release 1 – Equivalent to MEA420A Fabricate basic structural components for aircraft

Assessment Requirements for MEA420 Fabricate basic structural components for aircraft

Modification History

Release 2 - Changes to Performance Evidence and to Knowledge Evidence.

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- applying relevant WHS procedures, including the use of MSDS and relevant items of PPE
- using approved maintenance documentation and aircraft publications relating to aircraft structure
- identifying various aircraft metals and their basic metallurgy properties by interpretation of markings, numbering systems or visual, chemical or mechanical means
- handling and storing aircraft metals to industry standards
- identifying aircraft structural assembly fasteners by interpretation of markings, numbering systems, size, shape and colour
- fabricating aircraft structural components and parts by:
 - correctly interpreting drawings, including third angle projection, isometric, sectional formats and hand sketches
 - developing component flat pattern using basic drawing tools, geometric drawing processes, calculating and applying bend allowance/deduction/setback
 - using appropriate hand tools and machines for cutting and drilling
 - assembling component parts using appropriate hand and machine tools and standard aircraft fasteners to industry standards
- applying appropriate metal heat treatment processes
- applying appropriate metal surface treatments.

The underlying skills inherent in this unit should be transferable across a range of aircraft applications. It is essential that procedures take into account all safety precautions and quality requirements. Skill and knowledge application must include set back, bend allowance and other standard practices associated with forming of material.

Evidence of knowledge and skills associated with basic structural fabrication techniques and their application to different materials used in aircraft manufacture will be required to supplement evidence of ability to fabricate basic aircraft structural components.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- aircraft construction principles
- causes of structural fatigue and preventative measures
- structural corrosion and preventative measures
- aircraft structural drawings and repair scheme drawings
- material specifications for aluminium alloys and steel alloys used in aircraft structure
- structural material identification by markings and numbering systems
- material identification by chemical, electrical and mechanical methods
- material storage requirements
- hardware types and specifications
- identification of hardware
- sealants used in aircraft structure
- chemical surface treatments
- electroplating
- paints and finishes
- flat pattern development and associated terminology
- basic metal heat treatment metallurgy
- WHS precautions associated with fabrication of aircraft structural components
- MSDS
- PPE.

Assessment Conditions

- Competency should be assessed in the work environment, or simulated work environment, using tools and equipment specified by aircraft maintenance manuals. It is expected that general-purpose tools and test equipment found in most routine situations would be used where appropriate.
- The following conditions of assessment represent the requirements of the Regulators (ADF and CASA) and maintenance stakeholders and must be rigorously observed.
- A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements and performance criteria of the unit of competency are being achieved under routine supervision on at least one structural fabrication task.
- This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide (for details refer to the Companion Volume Assessment Guidelines).
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

MEA421 Fabricate advanced structural components for aircraft

Modification History

Release 2 – Changes made to Performance Evidence and to Knowledge Evidence

Application

This unit of competency requires application of hand skills and the use of drawings, specifications and maintenance publications to fabricate advanced structural components involving complex and multiple curves and section shapes from aluminium alloys and steel alloys at various temper during scheduled or unscheduled maintenance. Work may be performed individually or as part of a team.

Applications include components for fixed and rotary wing aircraft.

The unit is part of the Aeroskills Structures Maintenance Certificate IV training pathway.

The unit is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activity
MEA105	Apply quality standards applicable to aviation maintenance processes
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA109	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Competency Field

Aviation maintenance

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|----|---|-----|--|
| 1. | Interpret specifications and organise materials | 1.1 | Specifications and drawings are used to determine material requirements |
| | | 1.2 | Equipment use is planned by determining the procedure for fabricating component |
| | | 1.3 | Material is correctly identified in accordance with specifications |

Assessment Requirements for MEA421 Fabricate advanced structural components for aircraft

Modification History

Release 2 – Changes made to Performance Evidence and to Knowledge Evidence

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and include:

- applying relevant WHS procedures, including the use of MSDS and applicable items of PPE
- using approved maintenance documentation and aircraft publications relating to aircraft structure
- identifying various aircraft metals and their basic metallurgy properties by interpretation of markings, numbering systems or visual, chemical or mechanical means
- handling and storing aircraft metals to industry standards
- identifying aircraft structural assembly fasteners by interpretation of markings, numbering systems, size, shape and colour
- fabrication of aircraft structural components and parts by:
 - correctly interpreting drawings, including third angle projection, isometric, sectional formats and hand sketches
 - developing component flat pattern using basic drawing tools, geometric drawing processes, calculating and applying bend allowance/deduction/setback Undertake component flat pattern development utilising:
 - parallel line
 - radial line
 - triangulation
 - using appropriate hand tools, machines (stretching, shrinking, bending, cutting, drilling, rolling, wheeling and folding), forming blocks, templates and presses to form/produce dished, domed, curved components, bent/angled (L, Z, U, hat) sections and lightening holes, flanges and joggles
 - assembling component parts using appropriate hand and machine tools and standard aircraft fasteners to industry standards
- applying appropriate metal heat treatment processes
- applying appropriate metal surface treatments.

The underlying skills inherent in this unit should be transferable across a range of aircraft applications. Evidence of knowledge and skills associated with the broad range of structural fabrication techniques and their application to different materials used in aircraft manufacture will be required to supplement evidence of ability to fabricate components.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- aircraft construction principles
- causes of structural fatigue and preventative measures
- structural corrosion and preventative measures
- aircraft structural drawings and repair scheme drawings
- material specifications for aluminium alloys and steel alloys used in aircraft structure
- structural material identification by markings and numbering systems
- material identification by chemical, electrical and mechanical methods
- material storage requirements
- hardware types and specifications
- identification of hardware
- sealants used in aircraft structure
- chemical surface treatments
- electroplating
- paints and finishes
- flat pattern development and terminology
- design and manufacture of templates
- design and manufacture of press tools
- methods for folding complex and nested sections
- machinery used for stretching, shrinking, bending, cutting, drilling and rolling, use of forming blocks, templates and press tools to form components
- use of forming blocks, templates and press tools to form components
- WHS precautions associated with fabrication of aircraft structural components
- MSDS
- PPE.

Assessment Conditions

- Competency should be assessed in the work environment, or simulated work environment, using tools and equipment specified by aircraft maintenance manuals. It is expected that general-purpose tools and test equipment found in most routine situations would be used where appropriate.
- The following conditions of assessment represent the requirements of the Regulators (ADF and CASA) and maintenance stakeholders and must be rigorously observed.
- A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements and performance criteria of the unit of competency are being achieved under routine supervision on a representative range of structural fabrication tasks.
- This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide (for details refer to the Companion Volume Assessment Guidelines).

- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

MEA422 Repair/modify aircraft metal structure

Modification History

Release 2 – Assessment Conditions amended to permit assessment in a simulated workplace

Application

This unit of competency requires application of hand skills, the use of special tools, structural repair manuals and approved repair schemes to repair aircraft structure during scheduled or unscheduled maintenance. Where fabrication of replacement components is required the applicable units are MEA420 Fabricate basic structural components for aircraft and MEA421 Fabricate advanced structural components for aircraft. Where major structural disassembly is required the applicable unit is MEA423 Aircraft structure major disassembly and reassembly.

Work may be performed individually or as part of a team.

Applications include the metal structure of fixed and rotary wing aircraft.

The unit is part of the Aeroskills Structures Maintenance Certificate IV training pathway. It is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

MEA401 Inspect aircraft structures

Competency Field

Aviation maintenance

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|----|----------------------|-----|---|
| 1. | Prepare to undertake | 1.1 | The extent of damage is correctly assessed to assist in |
|----|----------------------|-----|---|

repair		determining repair procedure
	1.2	Structure is prepared and supported in accordance with the applicable maintenance manual to ensure personnel safety and freedom from damage
	1.3	The appropriate modification or repair scheme is identified in accordance with structural repair manual and/or approved data
	1.4	Specialist advice in establishing an approved repair scheme is obtained where a standard repair scheme cannot be identified or damage is out of limits
	1.5	All required materials and equipment are organised
2.	Repair/modify aircraft structure	2.1 Structural repairs are performed in accordance with approved repair scheme, ensuring that aircraft standard practices are used and process requirements are carried out while observing all relevant work health and safety (WHS) requirements, including the use of material safety data sheets (MSDS) and items of personal protective equipment (PPE)
		2.2 Work area is cleaned of all waste material or contaminants
		2.3 Components are adjusted, where necessary, to operate within prescribed specifications
		2.4 Repaired components or assemblies are tagged, sealed and packaged, or cradled in accordance with specified procedures, where required
		2.5 Required documentation is completed and processed in accordance with standard enterprise procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work

situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- Repair procedures include:**
- Removing corrosion by chemical and mechanical methods
 - Restoring protective coatings
 - Applying sealants and jointing compounds
 - Freehand precision hole generation
 - Removing and installing structural hardware, fastening devices, bushes, bearings and bearing surfaces
 - Removing and repairing damaged sections and reinstall
- Procedures and requirements include:**
- Industry standard specified by manufacturers, regulatory authorities or the enterprise

Unit Mapping Information

Release 2 - Assessment Conditions amended to permit assessment in a simulated workplace. Equivalent.

Release 1 – equivalent to MEA422A Repair/modify aircraft metal structure

Assessment Requirements for MEA422 Repair/modify aircraft metal structure

Modification History

Release 2 – Assessment Conditions amended to permit assessment in a simulated workplace

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- applying relevant WHS procedures, including the use of MSDS and applicable items of PPE
- using approved maintenance documentation and aircraft publications relating to aircraft structure
- identifying various aircraft metals and their basic metallurgy properties by interpretation of markings, numbering systems or visual, chemical or mechanical means
- identifying various aircraft composite materials and their basic properties by interpretation of markings and visual means
- handling and storing aircraft metals and composite materials, including sealing agents, to industry standards
- identifying aircraft structural assembly fasteners (metal and composite) by interpretation of markings, numbering systems, size, shape and colour
- correctly assessing and describing the extent of damage
- correctly interpreting and/or producing repair scheme/modification drawings, including third angle projection, isometric, sectional formats and hand sketches
- using appropriate hand tools and machines to remove and assemble aircraft structural components, parts, sections and skin, including riveting equipment, drilling equipment, aligning tools and material fasteners (grip pins)
- applying correct removal, installation and repair techniques for:
 - a range of rivets (blind and solid) using hand, squeeze and pneumatic situations
 - a range of close tolerance fasteners (standard and oversize – hilocks, taper locks), including hole preparation
 - threaded devices, including internal and external thread cutting, helicoil inserts and damaged stud replacement
 - hardware assembled by close tolerance fits using heat, cooling and force methods, including bearings, bushes and inserts
- correctly supporting the aircraft structure by jacking, trestling and/or jiggling methods
- performing a range of metal structure repair techniques, including:
 - metal scab patch, flush, splice, lap and formed section repair
 - metal to metal and metal to composite bonding

- applying structural corrosion removal/treatment techniques
- restoring aircraft structure sealing and surface finishes.

The underlying skills inherent in this unit should be transferable into other areas that require similar techniques. Evidence of knowledge about repair techniques and the use of the standard repair manual in a range of different repair situations will be necessary to supplement evidence of ability to plan and undertake structure and component repair.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- aircraft construction principles and the causes of structural damage, including metal fatigue and corrosion
- structural fatigue preventative measures
- structural corrosion removal and preventative measures
- aircraft repair schemes and modification data/drawings
- procedures for the design and approval of repair schemes and modifications
- material specifications for aluminium alloys and steel alloys used in aircraft structure
- structural material identification by markings and numbering systems
- material identification by chemical, electrical and mechanical methods
- material storage requirements
- hardware types and specifications
- identification of hardware
- sealants used in aircraft structure and their application and handling
- chemical surface treatments
- electroplating
- paints and finishes
- WHS precautions associated with repair of aircraft structure
- MSDS
- PPE.

Assessment Conditions

- Competency should be assessed in the work environment or simulated work environment, using tools and equipment specified by aircraft maintenance manuals. It is also expected that general-purpose tools, test and ground support equipment found in most routine situations would be used where appropriate.
- The following conditions of assessment represent the requirements of the Regulators (ADF and CASA) and maintenance stakeholders and must be rigorously observed.
- A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements and performance criteria of the unit of competency are being achieved under routine supervision on at least one (1) item from each of the following groups:
 - remove corrosion by chemical and mechanical methods

- restore protective coatings
- apply sealants and jointing compounds
- freehand precision hole generation
- remove and install structural hardware, fastening devices, bushes, bearings and bearing surfaces
- remove and repair damaged sections and reinstall.
- This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide (for details refer to the Companion Volume Assessment Guidelines).
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

MEA423 Aircraft structure major disassembly and reassembly

Modification History

Release 2 – Assessment Conditions amended to permit assessment in a simulated workplace

Application

This unit of competency requires application of hand skills and use of maintenance publications, drawings, and appropriate jigs, fixtures and tools to disassemble and reassemble aircraft structure during scheduled or unscheduled maintenance. Structural repair/modification is covered by MEA422 Repair/modify aircraft metal structure or MEA405 Repair/modify aircraft composite material structure/components. Where fabrication of replacement components is required the applicable units are MEA420 Fabricate basic structural components for aircraft and MEA421 Fabricate advanced structural components for aircraft.

Work may be performed individually or as part of a team.

Applications include fixed and rotary wing aircraft.

This unit of competency is part of the Aeroskills Structures Maintenance Certificate IV training pathway. It is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

MEA401 Inspect aircraft structure

Competency Field

Aviation maintenance

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1. Interpret specifications and organise materials
 - 1.1 The procedure for assembly/disassembly of structure is determined in order to plan equipment use
 - 1.2 Appropriate jigs, fixtures or bracing methods are selected to ensure maintenance of contour/structural integrity during disassembly/assembly operations
 - 1.3 All components and equipment are organised
2. Prepare aircraft or sub-assembly for structural disassembly
 - 2.1 Structure is supported with appropriate jigs, fixtures or bracing, as required
 - 2.2 Structural components are removed, as required, to provide access
3. Disassemble aircraft structure or sub-assembly
 - 3.1 Aircraft standard practices are applied in the removal of structural hardware and fasteners while observing all relevant work health and safety (WHS) requirements, including the use of material safety data sheets (MSDS) and items of personal protective equipment (PPE)
 - 3.2 Disassembled components are tagged, as required, to facilitate correct reassembly
4. Prepare components and tooling for assembly
 - 4.1 Jigs and fixtures are set up to ensure accuracy of component assembly
 - 4.2 Replacement component alignment is checked for conformance to specifications prior to fastener hole generation
 - 4.3 Hole location/relocation is carried out in accordance with specification procedures and standard practices
 - 4.4 Standard practices in hole generation sequencing are followed to ensure that assembly stress defects are not built in
 - 4.5 Components are disassembled, cleaned, deburred and surface treatments applied prior to final assembly while observing all relevant WHS requirements, including the use of MSDS and items of PPE

- | | | | |
|----|---|-----|---|
| 5. | Assemble aircraft structure or sub-assembly | 5.1 | Sealants and/or adhesives are selected and applied in accordance with assembly specifications or applicable documentation while observing all relevant WHS requirements, including the use of MSDS and items of PPE |
| | | 5.2 | Components are positioned and secured with appropriate temporary fastening devices for accurate assembly |
| | | 5.3 | Fasteners are selected and installed in accordance with assembly specifications or applicable manuals |
| 6. | Inspect completed assemblies | 6.1 | Assembled components are inspected to confirm dimensional accuracy and specifications are met |
| | | 6.2 | Checking or testing equipment is used, where appropriate, to ensure requirements are met |
| | | 6.3 | Aircraft mensuration is checked for compliance with applicable maintenance manuals, where necessary |
| | | 6.6 | Required documentation is completed and processed in accordance with standard enterprise procedures |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Scope of unit applies to:

- Assembly of aircraft sub-assemblies or end items from detailed parts using jigs and fixtures
- Disassembly and reassembly of aircraft structure, such as wings, tailplanes or fuselage sections, using trestling, jigs and fixtures
- Replacement of major structural load carrying members,

- for example, skins, longerons, spars, frames and bulkheads
- Assembly procedures include:**
- Drilling, reaming and counter-sinking
 - Fitting of fasteners and rivets
 - Application of adhesives and sealants
 - Fitting of hardware
 - Application of corrosion inhibitors and protective coatings
- Assembly stress defects include:**
- Oil canning, buckling, contour misalignment and stress raisers
- Procedures and requirements include:**
- Industry standard procedures specified by manufacturers, regulatory authorities or the enterprise

Companion Volume implementation guides are found in VETNet - <https://vetnet.education.gov.au/Pages/TrainingDocs.aspx?q=ce216c9c-04d5-4b3b-9bcf-4e81d0950371>

Assessment Requirements for MEA423 Aircraft structure major disassembly and reassembly

Modification History

Release 2 – Assessment Conditions amended to permit assessment in a simulated workplace

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- applying relevant WHS procedures, including the use of MSDS and applicable items of PPE
- using approved maintenance documentation and aircraft publications relating to aircraft structural disassembly and assembly
- correctly supporting the aircraft structure by jacking, trestling, bracing and/or jiggling methods
- safely handling heavy components during removal and assembly
- identifying various aircraft metals/composite materials and their basic metallurgy properties by interpretation of markings, numbering systems or visual, chemical or mechanical means
- handling and storing aircraft metal and composite components to industry standards
- identifying aircraft structural assembly fasteners (metal and composite) by interpretation of markings, numbering systems, size, shape and colour
- using appropriate hand tools and machines to remove and assemble aircraft structural components, parts, sections and skin, including riveting equipment, drilling equipment, aligning tools, reamers and material fasteners (grip pins)
- applying correct removal and installation techniques for general and close tolerance fasteners (rivets, standard and oversize hilocks), including hole preparation and location techniques
- performing aircraft alignment and mensuration checks
- applying sealants and restoring aircraft structure surface finishes.

The underlying skills inherent in this unit should be transferable into other areas that require similar techniques.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- aircraft construction principles, including the causes of structural fatigue and corrosion
- describing the basic construction methods used to assemble:

- fuselage (pressure and non-pressurised)
- wings, vertical and horizontal stabilisers, rotary wing tail cones and pylons
- engine nacelles/pylons
- doors and windows, including seals, sealants and locking mechanisms
- material specifications for aluminium alloys and steel alloys used in aircraft structure
- composite cloths, matrix materials and adhesives
- structural material identification by markings and numbering systems
- material identification by chemical, electrical and mechanical methods
- material storage requirements
- hardware types and specifications
- composite bonding methods
- identification of hardware
- sealants used in aircraft structure and their application and handling
- chemical surface treatments
- electroplating
- paints and finishes
- WHS precautions associated with repair of aircraft structure, including the safe handling of heavy components
- MSDS
- PPE.

Assessment Conditions

- Competency should be assessed in the work environment or simulated work environment, using tools and equipment specified by aircraft maintenance manuals. It is also expected that general-purpose tools and ground support equipment found in most routine situations would be used where appropriate.
- The following conditions of assessment represent the requirements of the Regulators (ADF and CASA) and maintenance stakeholders and must be rigorously observed.
- A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements and performance criteria of the unit of competency are being achieved under routine supervision on elements from each of the following groups:
 - assembly of aircraft sub-assemblies or end items from detailed parts using jigs and fixtures
 - disassembly and reassembly of aircraft structure, such as wings, tailplanes or fuselage sections, using trestling, jigs and fixtures
 - replacement of major structural load carrying members, for example, skins, longerons, spars, frames and bulkheads.
- This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide (for details refer to the Companion Volume Assessment Guidelines).
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

MEA424 Evaluate aircraft non-destructive tests

Modification History

Release 1 - New unit of competency

Application

This unit of competency requires application of competencies relating to non-destructive testing (NDT) techniques and related metallurgical knowledge in the research, analysis, development and evaluation of NDT tests for aircraft structure and components to Level 3 (*AS 3669-2006 Non-destructive testing – Qualification and approval of personnel – Aerospace*) during scheduled or unscheduled maintenance. Work may be performed individually or as part of a team.

The work can relate to scheduled and unscheduled maintenance activities on the metallic and composite structure of aircraft and aircraft components

Certification against applicable standards may be achieved where assessment in this unit of competency is carried out in conjunction with an examining authority as described in ISO 9712:2005 Non-destructive testing – Qualification and certification of personnel.

The unit is part of the Diploma and Advanced Diplomas of Aeroskills (Non-Destructive Testing). The unit is similar to unit MEM24011B Establish non-destructive tests but observes the requirements of *AS 3669-2006 Non-destructive testing – Qualification and approval of personnel – Aerospace* and of the Regulators; the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA); for the approval of procedures and the performance of NDT on aircraft and aircraft components.

Pre-requisite Unit

MEA109	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance
MEA133	Communicate aviation technical and maintenance management knowledge
MEM13013B	Work safely with ionising radiation
MEM16010A	Write reports
MEM24002B	Perform penetrant testing

MEM24004B	Perform magnetic particle testing
MEM24006B	Perform eddy current testing
MEM24008B	Perform ultrasonic testing
MEM24010B	Perform radiographic testing
MEM24012C	Apply metallurgy principles

Competency Field

Aviation maintenance

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|---|---|
| 1. Assess requirements for NDT | <ul style="list-style-type: none"> 1.1 The inspection area is assessed for testing and all possible failure sites identified using metallurgical analysis 1.2 Information relevant to test development is collected from available sources using accepted techniques 1.3 Information is analysed and interpreted 1.4 Test requirements are determined |
| 2. Evaluate NDT techniques and procedures | <ul style="list-style-type: none"> 2.1 Test methods, techniques and procedures for specific NDT tasks are specified 2.2 Applicable codes, standards, specifications and procedures are interpreted 2.3 Test procedures are developed in accordance with established techniques and metallurgical principles |
| 3. Validate/confirm NDT tasks | <ul style="list-style-type: none"> 3.1 General and specific test procedures are validated in accordance with established techniques 3.2 Inspection results are interpreted in accordance with existing codes, standards and specifications |

4. Evaluate NDT test procedures
- 4.1 Procedures are evaluated for effectiveness
 - 4.2 Evaluation results are documented and reported in accordance with standard enterprise procedures
 - 4.3 Changes/amendments to NDT procedures are made and distributed in accordance with standard enterprise procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Test methods, techniques and procedures refer to:

- Standard techniques and procedures associated with:
 - penetrant testing
 - magnetic particle testing
 - eddy current testing
 - ultrasonic testing
 - radiographic testing

Codes, standards and specifications include:

- AAP7002.053 Technical airworthiness Management Manual
- Civil aviation Safety Regulations (CASR)
- overseas airworthiness regulators, such as the Federal Aviation Authority (FAA), European Aviation Safety Authority (EASA) and Transport Canada
- AS 3669-2006 Non-destructive testing – Qualification and approval of personnel – Aerospace
- NAS410 Revision 2 Certification and qualification of non-destructive testing personnel (February 2003)
- BS EN 4179:2009 Aerospace series. Qualification and approval of personnel for non-destructive testing
- BS EN 473:2008 Non-destructive testing. Qualification and certification of NDT personnel.

General principles

- ISO 9712:2005 Non-destructive testing – Qualification and certification of personnel
- Applicable materials and equipment specifications

Unit Mapping Information

Release 1 – equivalent to MEA424A Evaluate aircraft non-destructive tests

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for MEA424 Evaluate aircraft non-destructive tests

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- conducting metallurgical assessment of inspection areas and identifying potential failure sites and modes
- designating most appropriate method, technique or procedure
- referencing aircraft maintenance information and regulatory requirements for inspection
- developing and validating test procedures
- applying safety procedures, standard operating procedures and legislative requirements to all work
- reading/interpreting/applying relative testing standards
- reading/interpreting/applying relative conformance standards
- documenting procedure and results
- submitting reports in accordance with standard enterprise procedures.
-

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- definition of structural terms, i.e. safe life, damage tolerant, failsafe, stress, strain, shear and cycles
- inspection requirements for metal and composite structure, including:
 - ageing aircraft inspection requirements
 - safe life structure
 - damage tolerant structure
 - fail safe structure
- potential causes of structural failure
- metallurgical analysis to assess inspection areas and potential failure sites and modes
- NDT methods, techniques and procedures
- meaning and validity of relevant codes, standards, specifications and procedures
- regulatory requirements of the ADF and CASA relating to the use of NDT for inspection of aircraft structure and components

- test procedures for testing techniques and specimens
- validation processes
- process for approval of procedures
- process for documentation/distribution of procedures
- evaluation procedures
- process for documentation of evaluation results
- process for amending tests and distributing amendments
- national/Australian Standards, NOHSC guides, state/territory regulatory codes of practice/standards
- use and application of personal protective equipment (PPE)
- safe work practices and procedures
- relevant hazards and control measures related to the competency.

Assessment Conditions

- This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.
- Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.
- The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
- Assessors must be satisfied that the candidate can competently and consistently perform all elements and performance criteria of the unit of competency, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
- This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the research, analysis, development, approval and evaluation of non-destructive tests, or other units requiring the exercise of the skills and knowledge covered by this unit.
- Assessors must be qualified at *AS 3669-2006 Non-destructive testing – Qualification and approval of personnel – Aerospace Level 3*.

MEA425 Perform bolted composite skin repairs

Modification History

Release 1 - New unit of competency

Application

This unit of competency requires application of hand skills and the use of maintenance publications, applicable materials, tools and methods to repair aircraft composite skin surfaces during scheduled or unscheduled maintenance using bolted repair techniques. Work may involve individual and team-related activities.

Applications include composite skin surfaces from fixed and rotary wing aircraft and aircraft components either on-aircraft or in the workshop.

This unit of competency is part of the Aeroskills Structures Maintenance Certificate IV training pathway, and of the Mechanical Certificate IV (Aircraft Maintenance Stream) training pathways.

The unit is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

MEA401 Inspect aircraft structures

OR

MEA339 Inspect, repair and maintain aircraft structures

OR

MEA369 Inspect and maintain structures and related components of non-pressurised small aircraft

Competency Field

Aviation maintenance

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|---|---|
| 1. Plan repair | 1.1. Extent of damage is correctly assessed to assist in determining repair procedure |
| | 1.2. Structure is supported and prepared in accordance with the applicable maintenance manual to ensure personnel safety and freedom from damage |
| | 1.3. Appropriate bolted repair scheme is identified in accordance with structural repair manual and/or approved data |
| | 1.4. Specialist advice is obtained in establishing an approved repair scheme where a standard repair scheme cannot be identified or damage criteria are out of limits |
| | 1.5. All materials and equipment required are organised |
| 2. Repair components using bolted patches | 2.1. Damage is cleaned up ready for repair while observing all relevant work health and safety (WHS) requirements, including the use of material safety data sheets (MSDS) and items of personal protective equipment (PPE) |
| | 2.2. Patch material is obtained and patches are fabricated in accordance with the applicable repair scheme |
| | 2.3. Repair plug material is obtained and cut to size |
| | 2.4. Patches are fitted and secured with fasteners in accordance with the repair scheme while observing all relevant WHS requirements, including the use of MSDS and items of PPE |
| | 2.5. Applicable sealant is applied in accordance with the repair scheme |
| | 2.6. Surface finish is restored as required |
| | 2.7. Required maintenance documentation is completed and processed in accordance with standard enterprise procedures |

- 2.8 Completed assemblies are tagged, sealed or packaged as required

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Bolted repairs include:

- External
- Internal
- External/internal

Procedures and requirements include:

- Industry standard procedures specified by manufacturers, regulatory authorities or the enterprise

Unit Mapping Information

Release 1 – equivalent to MEA425A Perform bolted composite skin repairs

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for MEA425 Perform bolted composite skin repairs

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- applying while observing all relevant WHS requirements, including the use of MSDS and items of PPE
- using approved maintenance documentation and aircraft publications relating to bolted repairs to composite aircraft skin
- identifying composite component applications in aircraft structures
- identifying various aircraft composite materials and their basic properties by interpretation of markings and visual means
- identifying the range of bolted repair patch and repair plug materials
- identifying applicable fasteners
- identifying applicable sealants
- assessing composite component damage using visual and tap test methods
- performing composite skin bolted repairs:
 - external patch repair
 - internal patch repair
 - external/internal patch repair
- correctly interpreting and/or producing repair scheme/modification drawings/sketches
- using appropriate hand tools and machines to perform bolted repairs, including drilling/cutting equipment and material fasteners.

The underlying skills inherent in this unit should be transferable across the range of composite skin materials and patch materials and fasteners. Correct checking and wearing of PPE is critical.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- aircraft construction principles and the causes of structural damage, including metal fatigue and corrosion
- structural fatigue preventative measures
- composite terminology and materials used

- bolted repair methods
- types of patch material
- fastener types, specifications and identification
- plug materials
- use of scrim to prevent galvanic corrosion
- sealants used in bolted patch repairs and their application and handling
- paints and finishes for composite structure
- WHS precautions associated with repair of aircraft structure
- MSDS
- relevant PPE.

Assessment Conditions

- Competency should be assessed in the workplace or simulated workplace. It is also expected that general-purpose tools and test equipment found in most routine situations would be used where appropriate.
- Evidence of knowledge about bolted repair techniques and the use of the standard repair manual in a range of different repair situations will be necessary to supplement evidence of ability to plan and undertake repair.
- The following conditions of assessment represent the requirements of the Regulators (ADF and CASA) and maintenance stakeholders and must be rigorously observed.
- A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements and performance criteria of the unit of competency are being achieved under routine supervision on the application of repair patches in each of the following types of repair :
 - external
 - internal
 - external/internal
- This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide (for details refer to the Companion Volume Assessment Guidelines).
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).
- Where the unit is to be used for CASA licensing purposes the Assessor must also meet the criteria specified in the CASR Part 147 Manual of Standards.

MEA430 Gas weld aircraft components

Modification History

Release 1 - New unit of competency

Application

The unit of competency requires application of the skills and knowledge of MEM05022C Perform advanced welding using oxy acetylene welding process, to the welding of applicable aircraft parent metal groups, as specified by the Regulators, during scheduled or unscheduled maintenance. Work may be performed individually or as part of a team.

The unit covers the development of competency elements required to gain approval within the Civil Aviation safety authority (CASA) or the Australian Defence Force (ADF) regulatory systems to gas weld aircraft components. Individuals will be authorised to weld specific parent metal groups, as specified in CAAP 33-1(1) Aircraft manual welding: approvals and qualifications or RAAF Specification Engineering W5003 Welders – Qualification for Aircraft, Missile and Aerospace Fusion welding.

Pre-requisite Unit

MEA101	Interpret work health and safety practices in aviation maintenance
MEA105	Apply quality standards applicable to aviation maintenance processes
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEM05022C	Perform advanced welding using oxy acetylene welding process
MEM05026C	Apply welding principles

Competency Field

Aviation maintenance

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|----|--|-----|--|
| 1. | Prepare to perform repair or fabricate component using gas welding process | 1.1 | Materials or components to be welded and the applicable parent metal group are identified in accordance with applicable data |
| | | 1.2 | Correct welding equipment and consumables are selected and safely set up in accordance with standard operating procedures |
| | | 1.3 | Component (or materials) for welding are prepared |
| | | 1.4 | Equipment is adjusted ready for the welding process |
| 2. | Gas weld component | 2.1 | Welds are performed to the required standard in accordance with the applicable repair scheme or drawing while observing all relevant work health and safety (WHS) requirements, including the use of material safety data sheets (MSDS) and items of personal protective equipment (PPE) |
| | | 2.2 | Completed welds are inspected for defects and any defects rectified |
| 3. | Complete documentation | 3.1 | Required documentation is completed in accordance with standard enterprise procedures |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- Materials include:**
- Any metal used in the construction of aircraft components that is suitable for gas welding
- Components include:**
- Any aircraft component where gas welding is specified as either a fabrication or repair technique
- Parent metal group against which welding authorities are individually granted include:**
- Aluminium alloys
 - Magnesium alloys
 - Carbon steels and low alloy steels
 - Corrosion and heat resisting steels
 - Nickel alloys
 - Copper-based alloys
 - Titanium alloys
- Welding equipment includes:**
- Fuel gases
 - Cylinders
 - Regulators
 - Hoses
 - Torches and tips
- Consumables include:**
- Filler rods and fluxes as specified for the task
- Required standards are specified in:**
- Regulations relating to required test pieces
 - Process specifications
 - Repair manuals
 - Overhaul manuals
 - Australian and New Zealand Standards

Assessment Requirements for MEA430 Gas weld aircraft components

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- safely applying advanced gas welding skills defined in unit MEM05022C Perform advanced welding using oxy acetylene welding process, to weld specified aircraft parent metal group materials or components to the standards specified by the relevant Regulator (CASA or the ADF)
- applying welding principles (unit MEM05026C Apply welding principles) in the context of gas welding of aircraft components or materials
- identifying weld requirements from applicable documentation
- selecting and correctly using items of PPE applicable to gas welding of aircraft components.

Evidence is required of the ability to produce gas welds to required specifications consistently across the range of components that are being fabricated or repaired, while applying all relevant safety precautions. The ability to do this must be demonstrated through the production of the test pieces specified for the welding process and parent metal group in the CAAP 33-1(0) Aircraft manual welding: approvals and qualifications or RAAF Specification Engineering W5003 Welders – Qualification for Aircraft, Missile and Aerospace Fusion welding.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- regulatory requirements applicable to aircraft welding
- standards applicable to aircraft welding
- the procedure for assessment of weld test pieces
- the use of gas welding in relation to specified aircraft parent metal groups.

Assessment Conditions

- Test pieces specified for each parent metal group for which approval is sought shall be completed in either the workplace or a simulated workplace. The individual must be provided with all required equipment, consumables, PPE, materials and data/drawings relating to the test pieces that are required for the approvals being sought.
- Assessment of test pieces must be carried out in a testing facility that meets the requirements specified by the applicable Regulator.
- Assessment methods are specified in the CAAP 33-1(0) Aircraft manual welding: approvals and qualifications or RAAF Specification Engineering W5003 Welders – Qualification for Aircraft, Missile and Aerospace Fusion welding.
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

MEA431 Braze weld aircraft components

Modification History

Release 1 - New unit of competency

Application

The unit of competency requires application of the skills and knowledge of MEM05006C Perform brazing and/or silver soldering, to the brazing of applicable aircraft parent metal groups as specified by the Regulators during scheduled or unscheduled maintenance. Work may be performed individually or as part of a team.

The unit covers the development of competency elements required to gain approval within the Civil Aviation Safety Authority (CASA) or the Australian Defence Force (ADF) regulatory systems to braze weld aircraft components. Individuals will be authorised to weld specific parent metal groups, as specified in CAAP 33-1(1) Aircraft manual welding: approvals and qualifications or RAAF Specification Engineering W5003 Welders – Qualification for Aircraft, Missile and Aerospace Fusion welding.

Pre-requisite Unit

MEA101	Interpret work health and safety practices in aviation maintenance
MEA105	Apply quality standards applicable to aviation maintenance processes
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEM05006C	Perform brazing and/or silver soldering
MEM05026C	Apply welding principles

Competency Field

Aviation maintenance

Assessment Requirements for MEA431 Braze weld aircraft components

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- safely applying braze welding skills defined in unit MEM05006C Perform brazing and/or silver soldering, to weld specified aircraft parent metal group materials or components to the standards specified by the relevant Regulator (CASA or the ADF)
- applying welding principles (unit MEM05026C Apply welding principles) in the context of braze welding of aircraft components or materials
- identifying braze weld requirements from applicable documentation
- selecting and correctly using items of PPE applicable to braze welding of aircraft components.

Evidence is required of the ability to produce braze welds to required specifications consistently across the range of components that are being fabricated or repaired, while applying all relevant safety precautions. The ability to do this must be demonstrated through the production of the test pieces specified for the welding process and parent metal group in the CAAP 33-1(0) Aircraft manual welding: approvals and qualifications or RAAF Specification Engineering W5003 Welders – Qualification for Aircraft, Missile and Aerospace Fusion welding.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- regulatory requirements applicable to aircraft welding
- standards applicable to aircraft welding
- the procedure for assessment of weld test pieces
- the use of braze welding in relation to specified aircraft parent metal groups.

Assessment Conditions

- Test pieces specified for each parent metal group for which approval is sought may be completed in the workplace or a simulated workplace. The individual must be provided with all required equipment, consumables, PPE, materials and data/drawings relating to the test pieces that are required for the approvals being sought.

- Assessment of test pieces must be carried out in a testing facility that meets the requirements specified by the applicable Regulator.
- Assessment methods are specified in the CAAP 33-1(0) Aircraft manual welding: approvals and qualifications or RAAF Specification Engineering W5003 Welders – Qualification for Aircraft, Missile and Aerospace Fusion welding.
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

MEA432 Weld aircraft components using the gas tungsten arc welding process

Modification History

Release 1 - New unit of competency

Application

The unit of competency requires application of the skills and knowledge of MEM05044B Perform welds to code standards using gas tungsten arc welding process, to the welding of applicable aircraft parent metal groups as specified by the Regulators during scheduled or unscheduled maintenance. Work may be performed individually or as part of a team.

This unit of competency covers the development of competency elements required to gain approval within the Civil Aviation Safety Authority (CASA) or the Australian Defence Force (ADF) regulatory systems to weld aircraft components using the gas tungsten arc welding (GTAW) process. Individuals will be authorised to weld specific parent metal groups, as specified in CAAP 33-1(1) Aircraft manual welding: approvals and qualifications or RAAF Specification Engineering W5003 Welders – Qualification for Aircraft, Missile and Aerospace Fusion welding.

Pre-requisite Unit

MEA101	Interpret work health and safety practices in aviation maintenance
MEA105	Apply quality standards applicable to aviation maintenance processes
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEM05044B	Perform welds to code standards using gas tungsten arc welding process
MEM05026C	Apply welding principles

Competency Field

Aviation maintenance

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|----|---|-----|--|
| 1. | Prepare to perform repair or fabricate test pieces using GTAW process | 1.1 | Materials or components to be welded and the applicable parent metal group are identified in accordance with applicable data |
| | | 1.2 | Welding equipment is inspected for serviceability and correctly set up in accordance with standard operating procedures |
| | | 1.3 | Component (or materials) is prepared for welding |
| 2. | Gas tungsten arc weld component | 2.1 | Welds are performed to the required standard in accordance with the applicable repair scheme or drawing while observing all relevant work health and safety (WHS) requirements, including the use of material safety data sheets (MSDS) and items of personal protective equipment (PPE) |
| | | 2.2 | Completed welds are inspected for defects and any defects rectified |
| 3. | Complete documentation | 3.1 | Required documentation is completed in accordance with standard enterprise procedures |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Materials include:

- Any metal used in the construction of aircraft components that is suitable for GTAW

- Components include:**
- Any aircraft component where GTAW is specified as either a fabrication or repair technique
- Parent metal groups against which welding authorities are individually granted are:**
- Aluminium alloys
 - Magnesium alloys
 - Carbon steels and low alloy steels
 - Corrosion and heat resisting steels
 - Nickel alloys
 - Copper-based alloys
 - Titanium alloys
- Required standards are specified in:**

Assessment Requirements for MEA432 Weld aircraft components using the gas tungsten arc welding process

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- safely applying advanced GTAW skills defined in unit MEM05044B Perform welds to code standards using gas tungsten arc welding process, to weld specified aircraft parent metal group materials or components to the standards specified by the relevant Regulator (CASA or the ADF)
- applying welding principles (unit MEM05026C Apply welding principles) in the context of welding of aircraft components or materials using the GTAW process
- identifying weld requirements from applicable documentation
- selecting and correctly using items of PPE applicable to GTAW of aircraft components.

Evidence is required of the ability to produce gas tungsten arc welds to required specifications consistently across the range of components that are being fabricated or repaired, while applying all relevant safety precautions. The ability to do this must be demonstrated through the production of the test pieces specified for the welding process and parent metal group in the CAAP 33-1(0) Aircraft manual welding: approvals and qualifications or RAAF Specification Engineering W5003 Welders – Qualification for Aircraft, Missile and Aerospace Fusion welding.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- regulatory requirements applicable to aircraft welding
- standards applicable to aircraft welding
- the procedure for assessment of weld test pieces
- the use of GTAW in relation to specified aircraft parent metal groups.

Assessment Conditions

- Test pieces specified for each parent metal group for which approval is sought may be completed in the workplace or a simulated workplace. The individual must be provided with all required equipment, consumables, PPE, materials and data/drawings relating to the test pieces that are required for the approvals being sought.

- Assessment of test pieces must be carried out in a testing facility that meets the requirements specified by the applicable Regulator.
- Assessment methods are specified in the CAAP 33-1(0) Aircraft manual welding: approvals and qualifications or RAAF Specification Engineering W5003 Welders – Qualification for Aircraft, Missile and Aerospace Fusion welding.
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

MEA433 Weld aircraft components using the gas metal arc welding process

Modification History

Release 1 - New unit of competency

Application

The unit of competency requires application of the skills and knowledge of MEM05043B Perform welds to code standards using gas metal arc welding process, to the welding of applicable aircraft parent metal groups as specified by the Regulators during scheduled or unscheduled maintenance. Work may be performed individually or as part of a team.

The unit covers the development of competency elements required to gain approval within the Civil Aviation Safety Authority (CASA) or the Australian Defence Force (ADF) regulatory systems to weld aircraft components using the gas metal arc welding (GMAW) process. Individuals will be authorised to weld specific parent metal groups, as specified in CAAP 33-1(1) Aircraft manual welding: approvals and qualifications or RAAF Specification Engineering W5003 Welders – Qualification for Aircraft, Missile and Aerospace Fusion welding.

Pre-requisite Unit

MEA101	Interpret work health and safety practices in aviation maintenance
MEA105	Apply quality standards applicable to aviation maintenance processes
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEM05043B	Perform welds to code standards using gas metal arc welding process
MEM05026C	Apply welding principles

Competency Field

Aviation maintenance

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.	Prepare to perform repair or fabricate component using GMAW process	1.1	Materials or components to be welded and the applicable parent metal group are identified in accordance with applicable data
		1.2	Welding equipment is inspected for serviceability and set up correctly in accordance with standard operating procedures
		1.3	Component (or materials) is prepared for welding
2.	Gas metal arc weld component	2.1	Welds are performed to the required standard in accordance with the applicable repair scheme or drawing while observing all relevant work health and safety (WHS) requirements, including the use of material safety data sheets (MSDS) and items of personal protective equipment (PPE)
		2.2	Completed welds are inspected for defects and any defects rectified
3.	Complete documentation	3.1	Required documentation is completed in accordance with standard enterprise procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Materials include:

- Any metal used in the construction of aircraft components that is suitable for GMAW

- Components include:**
- Any aircraft component where GMAW is specified as either a fabrication or repair technique
- Parent metal groups against which welding authorities are individually granted are:**
- Aluminium alloys
 - Magnesium alloys
 - Carbon steels and low alloy steels
 - Corrosion and heat resisting steels
 - Nickel alloys
 - Copper-based alloys
 - Titanium alloys
- Required standards are specified in:**
- Regulations relating to required test pieces
 - Process specifications
 - Repair manuals
 - Overhaul manuals
 - Australian and New Zealand Standards

Unit Mapping Information

MEA434 Weld aircraft components using the plasma arc welding process

Modification History

Release 1 - New unit of competency

Application

The unit of competency requires application and adaption of the skills and knowledge of MEM05044B Perform welds to code standards using gas tungsten arc welding process, to the plasma arc welding (PAW) of applicable aircraft parent metal groups as specified by the Regulators during scheduled or unscheduled maintenance. Work may be performed individually or as part of a team.

The unit covers the development of competency elements required to gain approval within the Civil Aviation Safety Authority (CASA) or the Australian Defence Force (ADF) regulatory systems to weld aircraft components using the PAW process. Individuals will be authorised to weld specific parent metal groups, as specified in CAAP 33-1(1) Aircraft manual welding: approvals and qualifications or RAAF Specification Engineering W5003 Welders – Qualification for Aircraft, Missile and Aerospace Fusion welding.

Pre-requisite Unit

MEA101	Interpret work health and safety practices in aviation maintenance
MEA105	Apply quality standards applicable to aviation maintenance processes
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEM05044B	Perform welds to code standards using gas tungsten arc welding process
MEM05026C	Apply welding principles

Competency Field

Aviation maintenance

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|----|--|-----|--|
| 1. | Prepare to perform repair or fabricate component using PAW process | 1.1 | Materials or component to be welded and the applicable parent metal group are identified in accordance with applicable data |
| | | 1.2 | Welding equipment is inspected for serviceability and correctly set up in accordance with standard operating procedures |
| | | 1.3 | Component (or materials) are prepared for welding |
| 2. | Plasma arc weld component | 2.1 | Welds are performed to the required standard in accordance with the applicable repair scheme or drawing while observing all relevant work health and safety (WHS) requirements, including the use of material safety data sheets (MSDS) and items of personal protective equipment (PPE) |
| | | 2.2 | Completed welds are inspected for defects and any defects rectified |
| 3. | Complete documentation | 3.1 | Required documentation is completed in accordance with standard enterprise procedures |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Materials include:

Assessment Requirements for MEA434 Weld aircraft components using the plasma arc welding process

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- safely applying advanced gas tungsten arc welding skills defined in unit MEM05044B Perform welds to code standards using gas tungsten arc welding process, and adapting them to perform PAW of specified aircraft parent metal group materials or components to the standards specified by the relevant Regulator (CASA or the ADF)
- applying welding principles (unit MEM05026C Apply welding principles) in the context of PAW of aircraft components or materials
- inspecting PAW process equipment for serviceability with particular emphasis on the orifice
- identifying weld requirements from applicable documentation
- selecting and correctly using items of PPE applicable to PAW of aircraft components.

Evidence is required of the ability to produce plasma arc welds to required specifications consistently across the range of components that are being fabricated or repaired, while applying all relevant safety precautions. The ability to do this must be demonstrated through the production of the test pieces specified for the welding process and parent metal group in the CAAP 33-1(0) Aircraft manual welding: approvals and qualifications or RAAF Specification Engineering W5003 Welders – Qualification for Aircraft, Missile and Aerospace Fusion welding.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- regulatory requirements applicable to aircraft welding
- standards applicable to aircraft welding
- the procedure for assessment of weld test pieces
- equipment required for PAW and its operation and maintenance requirements
- the relative advantages of the plasma process for welding and cutting
- the composition of gases used in the PAW process
- safety precautions applicable to PAW and applicable PPE.

Assessment Conditions

- Test pieces specified for each parent metal group for which approval is sought may be completed in the workplace or a simulated workplace. The individual must be provided with all required equipment, consumables, PPE, materials and data/drawings relating to the test pieces that are required for the approvals being sought.
- Assessment of test pieces must be carried out in a testing facility that meets the requirements specified by the applicable Regulator.
- Assessment methods are specified in the CAAP 33-1(0) Aircraft manual welding: approvals and qualifications or RAAF Specification Engineering W5003 Welders – Qualification for Aircraft, Missile and Aerospace Fusion welding.
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

MEA435 Weld aircraft components using the manual metal arc welding process

Modification History

Release 1 - New unit of competency

Application

The unit of competency requires application of the skills and knowledge of MEM05046B Perform welds to code standards using manual metal arc welding process, to the welding of applicable parent metal groups as specified by the Regulators during scheduled or unscheduled maintenance. Work may be performed individually or as part of a team.

The unit covers the development of competency elements required to gain approval within the Civil Aviation Safety Authority (CASA) or the Australian Defence Force (ADF) regulatory systems to weld aircraft components using the manual metal arc welding (MMAW) process. Individuals will be authorised to weld specific parent metal groups, as specified in CAAP 33-1(1) Aircraft manual welding: approvals and qualifications or RAAF Specification Engineering W5003 Welders – Qualification for Aircraft, Missile and Aerospace Fusion welding.

Pre-requisite Unit

MEA101	Interpret work health and safety practices in aviation maintenance
MEA105	Apply quality standards applicable to aviation maintenance processes
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEM05046B	Perform welds to code standards using manual metal arc welding process
MEM05026C	Apply welding principles

Competency Field

Aviation maintenance

Unit Sector

Elements and Performance Criteria

Assessment Requirements for MEA435 Weld aircraft components using the manual metal arc welding process

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- safely applying advanced MMAW skills defined in unit MEM05046B Perform welds to code standards using manual metal arc welding process, to weld specified aircraft parent metal group materials or components to the standards specified by the relevant Regulator (CASA or the ADF)
- applying welding principles (unit MEM05026C Apply welding principles) in the context of MMAW of aircraft components or materials
- identifying weld requirements from applicable documentation
- selecting and correctly using items of PPE applicable to MMAW of aircraft components.

Evidence is required of the ability to produce manual metal arc welds to required specifications consistently across the range of components that are being fabricated or repaired, while applying all relevant safety precautions. The ability to do this must be demonstrated through the production of the test pieces specified for the welding process and parent metal group in the CAAP 33-1(0) Aircraft manual welding: approvals and qualifications or RAAF Specification Engineering W5003 Welders – Qualification for Aircraft, Missile and Aerospace Fusion welding.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- regulatory requirements applicable to aircraft welding
- standards applicable to aircraft welding
- the procedure for assessment of weld test pieces.

Assessment Conditions

- Test pieces specified for each parent metal group for which approval is sought may be completed in the workplace or a simulated workplace. The individual must be provided with all required equipment, consumables, PPE, materials and data/drawings relating to the test pieces that are required for the approvals being sought.

- Assessment of test pieces must be carried out in a testing facility that meets the requirements specified by the applicable Regulator
- Assessment methods are specified in the CAAP 33-1(0) Aircraft manual welding: approvals and qualifications or RAAF Specification Engineering W5003 Welders – Qualification for Aircraft, Missile and Aerospace Fusion welding.
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

ME A501 Maintain and fit anti-G suits

Modification History

Release 1 - New unit of competency

Application

This unit of competency requires application of skills and knowledge relating to the maintenance and fitment of anti-G suits worn by aircrew and passengers in high performance aircraft. Maintenance involves inspection, testing, fault diagnosis, replacement of parts, repairs to fabric and cleaning. Fitment involves adjusting the anti-G suit to correctly fit an individual. Maintenance may be performed individually or as part of a team.

The scope of repairs excludes inflatable components of the anti-G suit.

This unit is part of the Aeroskills Life Support and Furnishing Certificate III and IV training pathways.

The unit is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

ME A101	Interpret work health and safety practices in aviation maintenance
ME A103	Plan and organise aviation maintenance work activity
ME A105	Apply quality standards applicable to aviation maintenance processes
ME A107	Interpret and use aviation maintenance industry manuals and specifications
ME A108	Complete aviation maintenance industry documentation
ME A109	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance
ME A118	Conduct self in the aviation maintenance environment
ME A511	Operate and maintain sewing machines and overlockers

MSFSF2002

Machine sew materials

Competency Field

Aircraft life support

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|-------------------------|---|
| 1. Maintain anti-G suit | 1.1 Anti-G suit is inspected for serviceability in accordance with standard procedures |
| | 1.2 Anti-G suit is tested for serviceability in accordance with standard procedures and manufacturer's specifications |
| | 1.3 Identified faults beyond own authority to rectify are reported to supervisor and faulty anti-G suit is quarantined |
| | 1.4 Unserviceable parts of the anti-G suit are replaced and fabric repairs are completed in accordance with standards procedures while observing all relevant work health and safety (WHS) requirements, including the use of material safety data sheets (MSDS) and items of personal protective equipment (PPE) |
| | 1.5 Anti-G suit is cleaned in accordance with standard procedures |
| | 1.6 Anti-G suit is presented for inspection by supervisor in accordance with standard procedures |
| | 1.7 Maintenance documentation is completed and processed in accordance with standard enterprise procedures |
| 2. Fit anti-G suit | 2.1 Fitting process is explained to the participant so that optimal fit can be achieved |
| | 2.2 Participant is measured and appropriate size anti-G suit |

is selected

- 2.3 Anti-G suit is adjusted to optimise fit in conjunction with participant feedback
- 2.4 Anti-G suit fit is verified by the supervisor
- 2.5 Relevant documentation is completed and processed in accordance with standard enterprise procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Standard procedures are found in any or all of:

- Commonwealth/state/territory WHS legislation, regulations and codes
- Australian Standards
- Equipment manufacturers' specifications and procedures
- Industry practices
- Safety manuals
- Maintenance schedules
- Work instructions
- Maintenance organisation manuals
- MSDS
- Defence regulations and instructions
- Standing instructions
- Broken zips and stitching
- Contamination
- Corrosion of metal parts, such as zippers
- Damaged hardware
- Excessive wear
- Incorrect manufacture
- Leaks
- Tears

Typical faults include:

- Anti-G suit replaceable parts include:**
- Eyelets
 - Press studs
 - Zips
- Adjustment of fit is effected by:**
- Lacing of torso and legs
 - Waist extension/reduction

Unit Mapping Information

Release 1 – equivalent to MEA501A Maintain and fit anti-G suits

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for MEA501 Maintain and fit anti-G suits

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- applying WHS practices relating to Anti-G suit maintenance processes, including the selection and correct use of PPE, where applicable
- using MSDS
- using applicable tools and maintenance documentation to:
 - test/inspect anti-G suits for serviceability
 - replace unserviceable components and repair fabric in accordance with approved procedures including sewing
 - select and use appropriate anti-G suit cleaning materials
 - correctly fit anti-G suits to users
- tying of knots, including:
 - reef knot
 - bowline
 - thumb knot
 - daisy chain
 - half hitch
- cleaning and maintenance of equipment and tools.

The underlying skills inherent in this unit should be transferable across a range of aircraft life support equipment maintenance activities. It is essential that anti-G suit testing and inspection procedures, cleanliness requirements and safety precautions, including the correct use of PPE, are fully observed, understood and complied with. Ability to interpret maintenance and fitting procedures and apply them in practice is critical.

This is to be demonstrated through demonstration of the ability to recognise faults and damage and perform appropriate repairs that are within the bounds of the individual's authority, and through the demonstration of correct fitting procedures on different sized individuals.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant enterprise procedures and maintenance publications
- WHS procedures relating to Anti-G suit maintenance, including the selection and use of PPE
- how to obtain MSDS
- G forces and anti-G suit operation during flight
- physiological effects of flight
- critical nature of maintaining and fitting anti-G suits
- forces of ejection
- operation of testing and measuring equipment and tools used to maintain anti-G suits
- inflation methods used in the maintenance of anti-G suits
- types of corrosion and contamination that may affect anti-G suits
- modification requirements for anti-G suits
- anti-G suit repair procedures and limitations
- lacing techniques used in the fitting of anti-G suits
- anti-G suit cleaning methods and materials
- handling, storage and transit procedures.

Assessment Conditions

- Competency should be assessed in the workplace or simulated workplace using materials, tools and equipment specified in the maintenance manuals and applicable procedures. It is also expected that general and special-purpose tools and ground support equipment would be used where appropriate.
- The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.
- The following conditions of assessment represent the requirements of the Regulators (ADF and CASA) and maintenance stakeholders and must be rigorously observed.
- A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements and performance criteria of the unit of competency are being achieved under routine supervision on a representative range of maintenance tasks and on the correct fitting of anti-G suits to at least three (3) different sized individuals.
- This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide (for details refer to the Companion Volume Assessment Guidelines).
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

MEA502 Maintain and fit helmets

Modification History

Release 1 - New unit of competency

Application

This unit of competency requires application of skills and knowledge relating to the maintenance and fitment of helmets worn by aircrew and passengers. Maintenance involves inspection, testing, fault diagnosis, replacement of parts, cleaning and functional testing. Fitment involves adjusting the helmet to correctly fit an individual. Maintenance may be performed individually or as part of a team.

Maintaining and fitting ancillary helmet equipment, such as illumination systems, night vision equipment and oxygen masks, is not part of this unit.

This unit is part of the Aeroskills Life Support and Furnishing Certificate III and IV training pathways.

The unit is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activity
MEA105	Apply quality standards applicable to aviation maintenance processes
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA109	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance
MEA118	Conduct self in the aviation maintenance environment
MEA240	Use electrical test equipment to perform basic electrical tests

Competency Field

Aircraft life support

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | |
|--------------------|-----|---|
| 1. Maintain helmet | 1.1 | Helmet is inspected for serviceability in accordance with standard procedures |
| | 1.2 | Helmet is tested for serviceability in accordance with standard procedures and manufacturer's specifications |
| | 1.3 | Identified faults beyond own authority to rectify are reported to supervisor and faulty helmet is quarantined |
| | 1.4 | Unserviceable parts of the helmet are replaced in accordance with standards procedures while observing all relevant work health and safety (WHS) requirements, including the use of material safety data sheets (MSDS) and items of personal protective equipment (PPE) |
| | 1.5 | Communication system components are tested in accordance with standard procedures |
| | 1.6 | Helmet is cleaned in accordance with standard procedures |
| | 1.7 | Helmet is presented for inspection by supervisor in accordance with standard procedures |
| | 1.8 | Maintenance documentation is completed and processed in accordance with standard enterprise procedures |
| 2. Fit helmet | 2.1 | Fitting process is explained to the participant so that optimal fit can be achieved through relevant feedback |
| | 2.2 | Participant is measured to select an appropriate size helmet |
| | 2.3 | Components of helmet are adjusted to optimise fit |

- 2.4 Helmet fit is verified through participant feedback and by the supervisor
- 2.5 Relevant documentation is completed and processed in accordance with standard enterprise procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Standard procedures are found in any or all of:

- Commonwealth/state/territory WHS legislation, regulations and codes
- Australian Standards
- Equipment manufacturers' specifications and procedures
- Industry practices
- Safety manual
- Maintenance schedules
- Work instructions
- Maintenance organisation manual
- MSDS
- Defence regulations and instructions
- Standing instructions
- Contamination
- Corrosion
- Cracks
- Delamination
- Fraying
- Incorrect manufacture
- Intermittent communication
- Scores/scratches
- Comfort pads
- Ear cup
- Ear cup pads

Faults include:

Replaceable parts of the helmet include:

- Liner
 - Retention straps
 - Visor
- Communication system components include:**
- Earphones
 - Microphone
 - Electric cables
 - Switches
- Components adjusted for fitment include:**
- Communications system (e.g. ear cup and microphone where fitted)
 - Comfort system (e.g. pads)
 - Retention system (e.g. strap)
 - Sizing system (e.g. liner)
 - Visor system

Assessment Requirements for MEA502 Maintain and fit helmets

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- applying WHS practices relating to helmet maintenance processes, including the selection and correct use of PPE, where applicable
- using MSDS
- using applicable tools and maintenance documentation to:
 - solder helmet electronic/electrical components
 - test the operation of helmet electronic/electrical components
 - replace unserviceable components in accordance with approved procedures including hand sewing, the use of hazardous chemicals and adhesives and thermal oven operation
 - select and use appropriate helmet cleaning materials
 - correctly fit helmets to users
- tying of knots, including:
 - reef knot
 - bowline
 - thumb knot
 - half hitch
- cleaning and maintenance of equipment and tools
- correctly disposing of hazardous waste.

The underlying skills inherent in this unit should be transferable across a range of aircraft life support equipment maintenance activities. It is essential that helmet testing and inspection procedures, cleanliness requirements and safety precautions, including the correct use of PPE, are fully observed, understood and complied with. Ability to interpret maintenance and fitting procedures and apply them in practice is critical.

This is to be demonstrated through demonstration of the ability to recognise faults and damage and perform appropriate repairs that are within the bounds of the individual's authority, and through the demonstration of correct fitting procedures.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant enterprise procedures and maintenance publications
- WHS procedures relating to helmet maintenance including the selection and use of PPE
- how to obtain MSDS
- components of a helmet and their function
- helmet operation in relation to flight
- physiological effects of flight
- aircraft crash dynamics
- critical nature of maintaining and fitting helmets
- need to regularly assess correct fitment of helmets
- helmet fitting procedures
- G forces
- forces of ejection
- basic electrical principles
- environmental conditions that may affect helmets
- approved cleaning methods for aviation life support equipment
- handling, storage and transit procedures relating to life support equipment
- types of corrosion and contamination that may affect helmets
- modification requirements for helmets
- helmet repair procedures and limitations
- soldering techniques
- operation of testing and measuring equipment and relevant specialist tools including thermal oven operation
- use and storage of adhesives.

Assessment Conditions

- Competency should be assessed in the workplace or simulated workplace using materials, tools and equipment specified in the maintenance manuals and applicable procedures. It is also expected that general and special-purpose tools and ground support equipment would be used where appropriate.
- The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.
- The following conditions of assessment represent the requirements of the Regulators (ADF and CASA) and maintenance stakeholders and must be rigorously observed.
- A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements and performance criteria of the unit of competency are being achieved under routine supervision on at least three (3) unserviceable helmets providing a representative range of maintenance tasks and on the correct fitting of helmets to at least three (3) individuals.

- This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide (for details refer to the Companion Volume Assessment Guidelines).
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

ME A503 Maintain and fit immersion suits

Modification History

Release 1 - New unit of competency

Application

This unit of competency requires application of skills and knowledge relating to the maintenance and fitment of immersion suits. Maintenance involves inspection, testing, fault diagnosis, replacement of parts and cleaning and may be performed individually or as part of a team.

Fitment involves adjusting the immersion suit to correctly fit an individual.

There are two types of immersion suits: quick don and constant wear. Quick don usually does not require fitting while constant wear is custom fitted to the individual.

This unit is part of the Aeroskills Life Support and Furnishing Certificate III and IV training pathways.

The unit is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

ME A101	Interpret work health and safety practices in aviation maintenance
ME A103	Plan and organise aviation maintenance work activity
ME A105	Apply quality standards applicable to aviation maintenance processes
ME A107	Interpret and use aviation maintenance industry manuals and specifications
ME A108	Complete aviation maintenance industry documentation
ME A109	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance
ME A118	Conduct self in the aviation maintenance environment

LMTTF2008A

Use adhesives

Competency Field

Aircraft life support

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|----|-------------------------|-----|---|
| 1. | Maintain immersion suit | 1.1 | Immersion suit is inspected for serviceability in accordance with standard procedures |
| | | 1.2 | Immersion suit is tested for serviceability in accordance with standard procedures and manufacturer's specifications |
| | | 1.3 | Identified faults beyond own authority to rectify are reported to supervisor and faulty immersion suit is quarantined |
| | | 1.4 | Unserviceable parts of the immersion suit are replaced while observing all relevant work health and safety (WHS) requirements, including the use of material safety data sheets (MSDS) and items of personal protective equipment (PPE) |
| | | 1.5 | Immersion suit is cleaned in accordance with standard procedures |
| | | 1.6 | Immersion suit is re-packed in accordance with standard procedures |
| | | 1.7 | Immersion suit is presented for inspection by supervisor in accordance with standard procedures |
| | | 1.8 | Maintenance documentation is completed and processed in accordance with standard enterprise procedures |
| 2. | Fit immersion suit | 2.1 | Fitting process is explained to the participant so that optimal fit can be achieved |

- 2.2 Participant is measured and appropriate size immersion suit is selected
- 2.3 Immersion suit is adjusted to optimise fit in conjunction with participant feedback
- 2.4 Immersion suit fit is verified by the supervisor
- 2.5 Relevant documentation is completed and processed in accordance with standard enterprise procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Standard procedures are found in any or all of:

- Commonwealth/state/territory WHS legislation, regulations and codes
- Australian Standards
- Equipment manufacturers' specifications and procedures
- Industry practices
- Safety manuals
- Maintenance schedules
- Work instructions
- Maintenance organisation manuals
- MSDS
- Defence regulations and instructions
- Standing instructions
- Contamination
- Corrosion of metal parts, such as zippers
- Delamination
- Incorrect manufacture
- Leaks
- Lifting of tapes
- Scuffing (e.g. boot)

Faults include:

Parts of the immersion suit include:

- Tears in suit and/or seals
- Boots
- Gloves
- Life line
- Light
- Seals (e.g. wrist, neck)
- Whistle

Adjustment of the immersion suit includes:

- Leg length
- Sleeve length
- Trimming seals

Assessment Requirements for MEA503 Maintain and fit immersion suits

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- applying WHS practices relating to immersion suit maintenance processes, including the selection and correct use of PPE, where applicable
- using MSDS
- using applicable tools and maintenance documentation to:
 - test/inspect immersion suits for serviceability
 - replace unserviceable components in accordance with approved procedures, including the use of hazardous materials and adhesives
 - select and use appropriate immersion suit cleaning materials
 - correctly fit immersion suits to users
- operating specialist equipment, including:
 - heat press
 - vacuum heat sealer
 - 3 stage in-line breathing apparatus
 - filter extraction systems
 - spill kits
- cleaning and maintenance of equipment and tools.

The underlying skills inherent in this unit should be transferable across a range of aircraft life support equipment maintenance activities. It is essential that immersion suit testing and inspection procedures, cleanliness requirements and safety precautions, including the correct use of PPE, are fully observed, understood and complied with. Ability to interpret maintenance and fitting procedures and apply them in practice is critical.

This is to be demonstrated through demonstration of the ability to recognise faults and damage and perform appropriate repairs that are within the bounds of the individual's authority, and through the demonstration of correct fitting procedures.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant regulations, standards, enterprise procedures and maintenance publications
- WHS procedures relating to immersion suit maintenance, including the selection and use of PPE
- how to obtain MSDS
- emergency procedures in relation to chemical spills and emergency evacuation of personnel in distress
- chemical disposal procedures
- requirements for storage of adhesives
- cold shock and hypothermia in relation to survival
- priorities of survival and how they relate to immersion suits and associated ancillary equipment
- physiological effects of flight
- critical nature of maintaining and fitting immersion suits
- materials used to manufacture immersion suits (i.e. neoprene and gortex)
- operation of testing and measuring equipment and tools used to maintain immersion suits
- components of an immersion suit and their function
- types of corrosion and contamination that may affect immersion suits
- modification requirements for immersion suits
- immersion suit repair procedures and limitations
- immersion suit cleaning methods and materials
- handling, storage and transit procedures relating to life support equipment
- handling and storage procedures relating to immersion suits (i.e. MACPAC highly susceptible to damage)
- specialist equipment operation, including:
 - heat press
 - vacuum heat sealer
 - 3 stage in-line breathing apparatus
 - filter extraction systems
- spill kits.

Assessment Conditions

- Competency should be assessed in the workplace or simulated workplace using materials, tools and equipment specified in the maintenance manuals and applicable procedures. It is also expected that general and special-purpose tools and ground support equipment would be used where appropriate.
- The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.
- The following conditions of assessment represent the requirements of the Regulators (ADF and CASA) and maintenance stakeholders and must be rigorously observed.

- A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements and performance criteria of the unit of competency are being achieved under routine supervision on a representative range of maintenance tasks and on the correct fitting of immersion suits.
- This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

ME A504 Maintain and fit oxygen masks

Modification History

Release 1 - New unit of competency

Application

This unit of competency requires application of skills and knowledge relating to the maintenance and fitment of oxygen masks worn by aircrew. Maintenance involves inspection, testing, fault diagnosis, replacement of parts, cleaning and functional testing and may be performed individually or as part of a team.

Fitment involves adjusting the oxygen mask to correctly fit an individual (oxygen masks are not an off-the-shelf issue).

This unit is part of the Aeroskills Life Support and Furnishing Certificate III and IV training pathways.

The unit is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

ME A101	Interpret work health and safety practices in aviation maintenance
ME A103	Plan and organise aviation maintenance work activity
ME A105	Apply quality standards applicable to aviation maintenance processes
ME A107	Interpret and use aviation maintenance industry manuals and specifications
ME A108	Complete aviation maintenance industry documentation
ME A109	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance
ME A118	Conduct self in the aviation maintenance environment
ME A240	Use electrical test equipment to perform basic electrical tests

Competency Field

Aircraft life support

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|----|----------------------|-----|--|
| 1. | Maintain oxygen mask | 1.1 | Oxygen mask is inspected for serviceability in accordance with standard procedures |
| | | 1.2 | Oxygen mask is tested for serviceability in accordance with standard procedures and manufacturer's specifications |
| | | 1.3 | Identified faults beyond own authority to rectify are reported to supervisor and faulty oxygen mask is quarantined |
| | | 1.4 | Unserviceable parts of the oxygen mask are replaced in accordance with standards procedures while observing all relevant work health and safety (WHS) requirements, including the use of material safety data sheets (MSDS) and items of personal protective equipment (PPE) |
| | | 1.5 | Communication system components are tested in accordance with standard procedures |
| | | 1.6 | Oxygen mask is cleaned in accordance with standard procedures |
| | | 1.7 | Oxygen mask is presented for inspection by supervisor in accordance with standard procedures |
| | | 1.8 | Maintenance documentation is completed and processed in accordance with standard enterprise procedures |
| 2. | Fit oxygen mask | 2.1 | Fitting process is explained to the participant so that optimal fit can be achieved through relevant feedback |
| | | 2.2 | Participant is measured to select an appropriate size |

oxygen mask

- 2.3 Components of oxygen mask are adjusted to optimise fit
- 2.4 Integration of the oxygen mask and helmet is confirmed for correct function during operations
- 2.5 Oxygen mask fit is verified through participant feedback and by the supervisor
- 2.6 Relevant documentation is completed and processed in accordance with standard enterprise procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Assessment Requirements for MEA504 Maintain and fit oxygen masks

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- applying WHS practices relating to oxygen mask maintenance processes
- using MSDS
- using applicable tools, testing/measuring equipment and maintenance documentation to:
 - solder oxygen mask electronic/electrical components
 - test the operation of helmet electronic/electrical components
 - replace unserviceable components in accordance with approved procedures
 - select and use appropriate oxygen mask cleaning materials
 - correctly fit oxygen masks to users
- safely using the oxygen test rig
- cleaning and maintenance of equipment and tools
- correctly disposing of hazardous waste.

The underlying skills inherent in this unit should be transferable across a range of aircraft life support equipment maintenance activities. It is essential that oxygen mask testing and inspection procedures, cleanliness requirements and safety precautions are fully observed, understood and complied with. Ability to interpret maintenance and fitting procedures and apply them in practice is critical.

This is to be demonstrated through demonstration of the ability to recognise faults and damage and perform appropriate repairs that are within the bounds of the individual's authority, and through the demonstration of correct fitting procedures.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant enterprise procedures and maintenance publications
- WHS procedures relating to oxygen mask maintenance
- how to obtain MSDS
- safety precautions relating to oxygen and the operation of the oxygen test rig

- requirements for an oxygen mask servicing facility
- oxygen in flight
- components of an oxygen mask and their function
- oxygen mask operation in relation to flight
- oxygen regulator operation
- physiological effects of flight
- hypoxia
- critical nature of maintaining and fitting oxygen masks
- need to regularly assess correct fitment of oxygen masks
- oxygen mask fitting procedures
- fitting procedures relating to the fitment of oxygen masks to helmets
- G forces
- forces of ejection
- basic electrical principles
- environmental conditions that may affect oxygen equipment

ME A505 Maintain and pack parachutes

Modification History

Release 1 - New unit of competency

Application

This unit of competency requires application of skills and knowledge relating to the maintenance and packing of parachutes. Maintenance involves inspection, testing, fault diagnosis, replacement of parts, completion of repairs and cleaning during the performance of scheduled or unscheduled maintenance. Maintenance may be performed individually or as part of a team.

The unit applies to person carrying parachutes, including emergency and ejection parachutes. It also applies to ballistic parachutes used for the recovery of light aircraft.

This unit is part of the Aeroskills Life Support and Furnishing Certificate III and IV training pathways.

The unit is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

ME A101	Interpret work health and safety practices in aviation maintenance
ME A103	Plan and organise aviation maintenance work activity
ME A105	Apply quality standards applicable to aviation maintenance processes
ME A107	Interpret and use aviation maintenance industry manuals and specifications
ME A108	Complete aviation maintenance industry documentation
ME A109	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance
ME A118	Conduct self in the aviation maintenance environment

MEA511	Operate and maintain sewing machines and overlockers
MSFSF2002	Machine sew materials

Competency Field

Aircraft life support

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1. Maintain parachute	1.1	Parachute is inspected for serviceability in accordance with standard procedures
	1.2	Parachute is tested for serviceability in accordance with standard procedures and manufacturer's specifications
	1.3	Identified faults beyond own authority to rectify are reported to supervisor and faulty parachute is quarantined
	1.4	Unserviceable parts of the parachute are replaced to render parachute serviceable in accordance with standard procedures while observing all relevant work health and safety (WHS) requirements, including the use of material safety data sheets (MSDS) and items of personal protective equipment (PPE)
	1.5	Basic parachute repairs are completed in accordance with standard procedures
	1.6	Parachute is cleaned in accordance with standard procedures
	1.7	Parachute is presented for inspection by supervisor in accordance with standard procedures
	1.8	Maintenance documentation is completed and processed in accordance with standard enterprise procedures
2. Pack parachute	2.1	Parachute is packed for use in accordance with standard

procedures

- 2.2 Parachute is presented for inspection by supervisor in accordance with standard enterprise procedures
- 2.3 Relevant documentation is completed and processed in accordance with standard enterprise procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Standard procedures are found in any or all of:

- Commonwealth/state/territory WHS legislation, regulations and codes
- Australian Standards
- Equipment manufacturers' specifications and procedures
- Industry practices
- Safety manuals
- Maintenance schedules
- Work instructions
- Maintenance organisation manuals
- MSDS
- Defence regulations and instructions
- Civil Aviation Safety Regulations (CASRs) and advisory material
- Standing instructions
- Broken stitching
- Broken quick release fitting springs
- Contamination
- Corrosion of metal parts
- Damaged hardware
- Damaged quick release fitting screws
- Excessive wear
- Expired parachute components

Faults include:

Parts of the parachute include:

- Frayed lines
- Incorrect manufacture
- Pulled threads
- Incorrect rigging line sequence
- Seized quick release fitting lugs
- Stretched lines
- Tears in parachute
- Ultraviolet (UV) degradation
- Canopy
- Hardware (e.g. buckles, eyelets, connector links)
- Harness
- Parachute housing (e.g. pack)
- Quick release fitting
- Rigging lines

Basic parachute repairs include:

- Broken stitching
- Corrosion (e.g. fittings)
- Damaged hardware
- Frayed lines
- Pulled threads
- Tears in parachute

Unit Mapping Information

Companion Volume implementation guides are found in VETNet - <https://vetnet.education.gov.au/Pages/TrainingDocs.aspx?q=ce216c9c-04d5-4b3b-9bcf-4e81d0950371>

Assessment Requirements for MEA505 Maintain and pack parachutes

Modification History

Release 1 - New unit of competency

Performance Evidence

- Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:
- applying WHS practices relating to parachute maintenance processes, including the selection and correct use of PPE, where applicable
- handling, storing and organising transport of equipment
- delivering briefings to personnel in relation to operating parachutes
- using MSDS
- using maintenance publications, drawings and documentation relating to parachute maintenance
- using applicable testing and measuring equipment, tools and maintenance documentation to:
 - test parachutes for serviceability
 - replace unserviceable components in accordance with approved procedures
 - select and use appropriate parachute cleaning materials
 - repair parachutes (both hand and machine sewing)
- cleaning and maintenance of equipment and tools.

The underlying skills inherent in this unit should be transferable across a range of aircraft life support equipment maintenance activities. It is essential that parachute testing and inspection procedures, cleanliness requirements and safety precautions are fully observed, understood and complied with. Ability to interpret maintenance and packing procedures and apply them in practice is critical.

This is to be demonstrated through demonstration of the ability to recognise faults, replace components and perform appropriate repairs that are within the bounds of the individual's authority, and through the demonstration of correct packing procedures.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant regulations, standards, enterprise procedures and maintenance publications

- WHS procedures relating to parachute maintenance, including the selection and use of PPE
- how to obtain MSDS
- critical nature of maintaining and packing parachutes, i.e. risk of death
- approved cleaning methods for aviation life support equipment
- components of a parachute and their function
- parachute assembly materials of construction
- environmental conditions that may affect parachutes and parachute assemblies including ultraviolet degradation
- types of corrosion and contamination that may affect parachute assemblies
- handling, storage and transit procedures relating to parachutes
- physiological effects of flight
- sequence of ejection
- operation of person carrying parachutes
- operation of ballistic parachutes in aircraft recovery
- purpose of different types of canopies
- modification requirements for parachutes
- requirements for a parachute servicing facility
- operation of testing and measuring equipment and tools used to maintain parachutes
- repair limitations for parachutes
- packing tools and measuring equipment required to pack parachutes.

Assessment Conditions

- Competency should be assessed in the workplace or simulated workplace using materials, tools and equipment specified in the maintenance manuals and applicable procedures. It is also expected that general and special-purpose tools and ground support equipment would be used where appropriate.
- The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.
- The following conditions of assessment represent the requirements of the Regulators (ADF and CASA) and maintenance stakeholders and must be rigorously observed.
- A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements and performance criteria of the unit of competency are being achieved under routine supervision on the following range of tasks:
 - correctly packing a minimum of three (3) parachutes consecutively and without the need for corrective action by the supervisor
 - recognising the limits of own authority
 - replacing canopy/harness, including line sequence tests
 - correctly repairing a tear in parachute canopy material through patching
 - inspecting, testing and replacing unserviceable parts of a quick release fitting
 - recognising a range of faults and their serviceability limits and repairing within limitations/tolerances.

- This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide (for details refer to the Companion Volume Assessment Guidelines).
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

MEA507 Maintain, pack and fit survival inflatable buoyancy vests

Modification History

Release 1 - New unit of competency

Application

This unit of competency requires application of skills and knowledge relating to the maintenance, packing and fitting of survival inflatable buoyancy vests. Maintenance includes inspecting, testing, isolating faults, replacing components and cleaning prior to packing, during the performance of scheduled or unscheduled maintenance. Maintenance may be performed individually or as part of a team.

The unit does not include repairing buoyancy vests.

The Unit is part of the Aeroskills Life Support and Furnishing Certificate III and IV training pathways. It is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activity
MEA105	Apply quality standards applicable to aviation maintenance processes
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA109	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance
MEA118	Conduct self in the aviation maintenance environment

Competency Field

Aircraft life support

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|----|---|-----|--|
| 1. | Maintain survival inflatable buoyancy vests | 1.1 | Survival inflatable buoyancy vests and associated ancillary equipment are inspected for serviceability in accordance with standard procedures |
| | | 1.2 | Identified faults beyond own authority to rectify are reported to supervisor and faulty survival inflatable buoyancy vest and/or ancillary equipment is quarantined |
| | | 1.3 | Unserviceable parts of the survival inflatable buoyancy vest and/or ancillary equipment are replaced in accordance with standard procedures while observing all relevant work health and safety (WHS) requirements, including the use of material safety data sheets (MSDS) and items of personal protective equipment (PPE) |
| | | 1.4 | Survival inflatable buoyancy vest is tested for serviceability in accordance with standard procedures and manufacturer's specifications |
| | | 1.5 | Survival inflatable buoyancy vest is cleaned in accordance with standard procedures |
| | | 1.6 | Survival inflatable buoyancy vest is presented for inspection by supervisor in accordance with standard procedures |
| | | 1.7 | Maintenance documentation is completed and processed in accordance with standard enterprise procedures |
| 2. | Pack survival inflatable buoyancy vests | 2.1 | Survival inflatable buoyancy vest is packed for use in accordance with standard procedures |
| | | 2.2 | Ancillary equipment is packed for use in accordance with standard procedures |
| | | 2.3 | Survival inflatable buoyancy vest is presented for inspection by supervisor in accordance with standard enterprise procedures |
| | | 2.4 | Relevant documentation is completed and processed in accordance with standard enterprise procedures |

3. Fit survival inflatable buoyancy vests
- 3.1 Fitting process is explained to the participant so that optimal fit can be achieved through relevant feedback
 - 3.2 Participant is measured to select appropriate size survival inflatable buoyancy vest
 - 3.3 Survival inflatable buoyancy vest is adjusted to optimise fit
 - 3.4 Survival inflatable buoyancy vest fit is verified through participant feedback and supervisor approval
 - 3.5 Relevant documentation is completed and processed in accordance with standard enterprise procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Applicable survival inflatable buoyancy vests include:

- Secumar AUS2

Ancillary equipment includes:

- Electronic locating devices
- Lighting devices
- Pyrotechnics
- Rations
- Survival/location aids
- Water

Standard procedures are found in any or all of:

- Commonwealth/state/territory WHS legislation, regulations and codes
- Australian Standards
- Equipment manufacturers' specifications and procedures
- Industry practices
- Safety manuals

- Maintenance schedules
 - Work instructions
 - Maintenance organisation manuals
 - MSDS
 - Defence regulations and instructions
 - Civil Aviation Safety Regulations (CASRs) and advisory material
 - Standing instructions
- Faults include:**
- Abrasion
 - Broken stitching
 - Contamination
 - Corrosion of metal parts
 - Damaged hardware
 - Delamination/porosity
 - Expired components or equipment
 - Faulty valves
 - Frayed lines
 - Holes
 - Incorrect manufacture
 - Lifting tapes
 - Ultraviolet (UV) degradation
- Parts include:**
- Buoyancy chambers
 - Cylinders
 - Hardware
 - Operating head
 - Valves
 - Valise
 - Zippers
- Testing includes:**
- Checking ancillary equipment (e.g. electronic locating devices and survival/location aids)
 - Cylinder weight tolerance
 - Inflation tests
 - Light and battery test
- Adjustment to vest includes:**
- Breast height
 - Chest
 - Waist

Unit Mapping Information

Release 1 – equivalent to MEA507A Maintain, pack and fit survival inflatable buoyancy vests

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for MEA507 Maintain, pack and fit survival inflatable buoyancy vests

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- applying WHS practices relating to survival inflatable buoyancy vest maintenance processes, including the selection and correct use of PPE where applicable
- using MSDS
- using maintenance publications, drawings and documentation relating to survival inflatable buoyancy vests and ancillary equipment maintenance
- handling, storing and organising transport of equipment
- delivering briefings to personnel in relation to operating, donning/doffing and fitting of survival inflatable buoyancy vests
- inflating/deflating survival inflatable devices for maintenance
- using applicable testing and measuring equipment, tools and maintenance documentation to:
 - test survival inflatable buoyancy vests for serviceability
 - replace unserviceable components or items of ancillary equipment in accordance with approved procedures
 - select and use appropriate survival inflatable buoyancy vest cleaning materials
- soldering battery terminals on emergency locator transmitters
- tying various types of knots, including:
 - reef knot
 - bowline
 - thumb knot
 - half hitch
- hand sewing
- cleaning and maintenance of equipment and tools.

The underlying skills inherent in this unit should be transferable across a range of aircraft life support equipment maintenance activities. It is essential that survival inflatable device testing and inspection procedures, cleanliness requirements and safety precautions are fully observed, understood and complied with. Ability to interpret maintenance, packing and fitting procedures and apply them in practice is critical.

This is to be demonstrated through demonstration of the ability to recognise faults and replace components that are within the bounds of the individual's authority, and through the demonstration of correct packing and fitting procedures. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant regulations, standards, enterprise procedures and maintenance publications
- WHS procedures relating to survival inflatable buoyancy vest maintenance, including the selection and use of PPE
- how to obtain MSDS
- relevant safety precautions including storage and handling of compressed gas cylinders and survival and distress pyrotechnics
- critical nature of maintaining and packing survival inflation devices, i.e. risk of death
- search and rescue procedures
- Priorities of survival and how they relate to survival inflatable buoyancy vests and associated ancillary equipment
- electrical principles
- approved cleaning methods for aviation life support equipment
- environmental conditions that may affect survival inflation devices, including ultraviolet (UV) degradation
- types of corrosion and contamination that may affect survival inflation devices
- handling, storage and transit procedures relating to survival inflation devices
- survival inflation devices and methods of operation
- operation of emergency locator beacons and emergency locator transmitters
- principles of operation of inflation mechanisms
- components of a survival inflation device and their function
- repair limitations for survival inflatable buoyancy vests
- modification requirements for survival inflatable buoyancy vests
- requirements for a survival inflation device servicing facility
- packing tools and measuring equipment required to pack survival inflatable devices
- use of survival inflatable buoyancy vests, including associated ancillary equipment.

Assessment Conditions

- Competency should be assessed in the workplace or simulated workplace using materials, tools and equipment specified in the maintenance manuals and applicable procedures. It is also expected that general and special-purpose tools and ground support equipment would be used where appropriate.

- The following conditions of assessment represent the requirements of the Regulators (ADF and CASA) and maintenance stakeholders and must be rigorously observed.
- A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements and performance criteria of the unit of competency are being achieved under routine supervision on the following range of tasks:
 - completing a minimum of three (3) inflation tests without the need for corrective action by the supervisor
 - recognising the limits of own authority
 - testing cylinder weight and determining if it is within tolerance
 - correctly packing a minimum of three (3) survival inflatable buoyancy vests without the need for corrective action by the supervisor
 - correctly fitting survival inflatable buoyancy vests to a minimum of three (3) different people without supervisor intervention
 - recognising a range of faults and their serviceability limits (faults must include incorrect manufacture and verifying expiry date of inflatable buoyancy vest and ancillary equipment).
- This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide (for details refer to the Companion Volume Assessment Guidelines).
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

MEA508 Maintain, install and remove restraint systems

Modification History

Release 1 - New unit of competency

Application

This unit of competency requires application of skills and knowledge relating to the maintenance, installation and removal of personal restraint systems. Maintenance may be performed in-situ or in a maintenance workshop and involves inspection, fault diagnosis, replacement of parts, completion of repairs and cleaning during the performance of scheduled or unscheduled maintenance. Maintenance may be performed individually or as part of a team.

The unit applies to a range of personal restraint systems.

The unit is part of the Aeroskills Life Support and Furnishing Certificate III and IV training pathways. It is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activity
MEA105	Apply quality standards applicable to aviation maintenance processes
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA109	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance
MEA118	Conduct self in the aviation maintenance environment
MEA511	Operate and maintain sewing and overlocking machines
MSFSF2002	Machine sew materials

Competency Field

Aircraft life support

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|---------------------------------------|--|
| 1. Maintain restraint belts/harnesses | 1.1 Restraint belts/harnesses are inspected for serviceability in accordance with standard procedures |
| | 1.2 Identified faults beyond own authority to rectify are reported to supervisor and faulty restraint system is quarantined |
| | 1.3 Unserviceable parts of a quick release fitting are inspected, tested and replaced |
| | 1.4 Unserviceable parts of the restraint belts/harnesses are replaced to render restraint system serviceable in accordance with standard procedures while observing all relevant work health and safety (WHS) requirements, including the use of material safety data sheets (MSDS) and items of personal protective equipment (PPE) |
| | 1.5 Basic restraint belt/harness stitching repairs are completed in accordance with standard procedures |
| | 1.6 Restraint belts/harnesses are cleaned in accordance with standard procedures |
| | 1.7 Restraint belts/harnesses are presented for inspection by supervisor in accordance with standard procedures |
| | 1.8 Maintenance documentation is completed and processed in accordance with standard enterprise procedures |
| 2. Remove restraint systems | 2.1 Approval to remove restraint system is obtained in accordance with standard enterprise procedures |
| | 2.2 Restraint system is removed from the aircraft in |

- accordance with applicable maintenance publication
- 2.3 Maintenance documentation is completed and processed in accordance with standard enterprise procedures
3. Install restraint systems
- 3.1 Approval to fit restraint system is obtained in accordance with standard enterprise procedures
- 3.2 Restraint system is fitted to the aircraft in accordance with applicable maintenance publication
- 3.3 Maintenance documentation is completed and processed in accordance with standard enterprise procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Restraint belts/harnesses include:

- Fixed point attached harness
- Passenger restraint belts
- Retractable restraint harnesses (will be attached to inertia reel but the inertia reel does not form part of the restraint system)

Standard procedures are found in any or all of:

- Commonwealth/state/territory WHS legislation, regulations and codes
- Australian Standards
- Equipment manufacturers' specifications and procedures
- Industry practices
- Safety manuals
- Maintenance schedules
- Work instructions
- Maintenance organisation manuals
- MSDS

Faults include:

- Defence regulations and instructions
- Civil Aviation Safety Regulations (CASRs) and advisory material
- Standing instructions
- Broken quick release fitting springs
- Broken stitching
- Contamination
- Corrosion of metal parts
- Damaged hardware
- Damaged quick release fitting screws
- Excessive wear
- Expired date of restraint components
- Incorrect manufacture
- Pulled threads
- Seized quick release fitting lugs
- Ultraviolet (UV) degradation

Parts include:

- Belt
- Fixed point attachment line
- Hardware (e.g. buckles)
- Harness
- Parachute housing (e.g. pack)
- Quick release fittings including lugs, springs and screws

Unit Mapping Information

Release 1 – equivalent to MEA508A Maintain, install and remove restraint systems

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for MEA508 Maintain, install and remove restraint systems

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- applying WHS practices relating to restraint system maintenance processes, including the selection and correct use of PPE, where applicable
- handling, storing and organising transport of equipment
- using MSDS
- using maintenance publications, drawings and documentation relating to restraint system maintenance
- using applicable testing and measuring equipment, tools and maintenance documentation to:
 - replace unserviceable components in accordance with approved procedures
 - select and use appropriate restraint system cleaning materials
 - repair restraint systems (both hand and machine sewing)
- cleaning and maintenance of equipment and tools.

The underlying skills inherent in this unit should be transferable across a range of aircraft life support equipment maintenance activities. It is essential that restraint system inspection procedures, cleanliness requirements, repair procedures and safety precautions are fully observed, understood and complied with. Ability to interpret maintenance, installation and removal procedures and apply them in practice is critical.

This is to be demonstrated through demonstration of the ability to recognise faults, replace components and perform appropriate repairs that are within the bounds of the individual's authority, and through the demonstration of correct installation and removal procedures.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant regulations, standards, enterprise procedures and maintenance publications
- WHS procedures relating to restraint system maintenance, including the selection and use of PPE
- how to obtain MSDS

- critical nature of maintaining and fitting restraint systems
- approved cleaning methods for aviation life support equipment
- components of a restraint system and their function
- flight line procedures
- ultraviolet (UV) degradation
- types of corrosion and contamination that may affect restraint systems
- handling, storage and transit procedures relating to life support equipment
- modification requirements for restraint systems
- operation of testing and measuring equipment and tools used to maintain restraint systems
- repair limitations for restraint systems.

Assessment Conditions

- Competency should be assessed in the workplace or simulated workplace using materials, tools and equipment specified in the maintenance manuals and applicable procedures. It is also expected that general and special-purpose tools and ground support equipment would be used where appropriate.
- The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.
- The following conditions of assessment represent the requirements of the Regulators (ADF and CASA) and maintenance stakeholders and must be rigorously observed.
- A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements and performance criteria of the unit of competency are being achieved under routine supervision on the inspection, repair, installation and removal of restraint systems, including the demonstration of the ability to recognise a range of faults and their serviceability and repair limitations/tolerances (must include verification of expiry dates of restraint system component parts and recognition of incorrect manufacture).
- This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide (for details refer to the Companion Volume Assessment Guidelines).
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

MEA509 Manufacture, repair and alter aircraft related fabric components

Modification History

Release 1 - New unit of competency

Application

This unit of competency requires application of skills and knowledge relating to the manufacture, repair and alteration of aircraft and support equipment fabric components. Manufacture and alteration may be to existing designs or may also involve design. Repair may involve sewing and/or the use of adhesives.

The unit applies to a range of aircraft environmental protection sets, aircraft life support equipment components, aircraft soft furnishings and associated trimming, aircrew personal fit and associated life support equipment, and to ground support equipment covers.

The unit is part of the Aeroskills Life Support and Furnishing Certificate III and IV training pathways. It is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activity
MEA105	Apply quality standards applicable to aviation maintenance processes
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA109	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance
MEA118	Conduct self in the aviation maintenance environment
MEA511	Operate and maintain sewing and overlocking machines
MSFSF2002	Machine sew materials

Competency Field

Aircraft life support

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1. Manufacture a fabric component	1.1	Technical instructions are identified and interpreted to ensure compliance in accordance with standard procedures
	1.2	Detailed working plan is produced in accordance with standard procedures
	1.3	Fabric component is assembled and fittings are attached in accordance with standard procedures while observing all relevant work health and safety (WHS) requirements, including the use of material safety data sheets (MSDS) and items of personal protective equipment (PPE)
	1.4	Aircraft related fabric components are presented for inspection by supervisor in accordance with standard enterprise procedures
	1.5	Relevant documentation is completed and processed in accordance with standard enterprise procedures
2. Repair a fabric component	2.1	Technical instructions are identified and interpreted to ensure faults are corrected in accordance with standard procedures
	2.2	Fabric component is repaired in accordance with standard procedures while observing all relevant WHS requirements, including the use of MSDS and items of PPE
	2.3	Repaired components are presented for inspection by supervisor in accordance with standard enterprise procedures

- | | | | |
|----|--|-----|--|
| 3. | Alter a fabric component to meet customer requirements | 2.4 | Relevant documentation is completed in accordance with standard enterprise procedures |
| | | 3.1 | Customer is consulted to establish the requirements to alter the fabric component and to ensure defined outcomes are met |
| | | 3.2 | Identified alterations beyond own authority to alter are reported to supervisor |
| | | 3.3 | A detailed working plan is produced, where necessary, in accordance with standard procedures |
| | | 3.4 | Altered fabric components are presented for inspection by supervisor in accordance with standard enterprise procedures |
| | | 3.5 | Relevant documentation is completed in accordance with standard enterprise procedures |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Procedures and requirements include:

- Industry standard procedures specified by manufacturers, regulatory authorities or the enterprise

Fabric components include:

- Aircraft environmental protection sets and warning devices
- Aircraft life support equipment components
- Aircraft soft furnishings and associated trimming
- Aircrew personal fit and associated life support equipment
- Ground support equipment covers
- Aircraft operational requirements
- Job orders

Technical instructions

- include:**
- Manufacturers' specifications
 - Maintenance manuals
 - Modification instructions
 - Technical drawings
- Standard procedures are found in any or all of:**
- Commonwealth/state/territory WHS legislation, regulations and codes
 - Australian Standards
 - Equipment manufacturers' specifications and procedures
 - Industry practices
 - Safety manuals
 - Maintenance schedules
 - Work instructions
 - Maintenance organisation manuals
 - MSDS
 - Defence regulations and instructions
 - Civil Aviation Safety Regulations (CASRs) and advisory material
 - Standing instructions
- Detailed working plan includes:**
- Cutting plan
 - Expected time of completion
 - Manpower requirements
 - Method and sequence of assembly
 - Resource requirements (material, fittings, tools and ground support equipment)
 - Technical sketch (working drawing)
- Assembly of fabric components and attachment of fittings includes:**
- Adhering
 - Hand sewing
 - Machine sewing
 - Press fitting
 - Stapling
- Faults include:**
- Broken stitching
 - Broken zippers
 - Contamination
 - Corrosion of metal parts
 - Damaged fittings
 - Excessive wear
 - Incorrect manufacture
 - Tears in fabric
 - Ultraviolet (UV) degradation
- Customers include:**
- Aircraft configuration authorities
 - Aircrew
 - Engineering maintenance managers

- Defined outcomes include:**
- Supervisors
 - Effect on fit of fabric components
 - Effect on performance of altered fabric components
 - Availability of resources
 - Expected time of completion

Unit Mapping Information

Assessment Requirements for MEA509 Manufacture, repair and alter aircraft related fabric components

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- applying WHS practices relating to fabric component manufacture, repair and alteration, including the selection and correct use of PPE, where applicable
- handling, storing and organising transport of equipment
- using MSDS
- using maintenance publications, drawings and documentation relating to fabric component manufacture, repair and alterations
- applying basic sewing techniques associated with the manufacture, repair and alteration of aircraft fabric components
- using hand sewing techniques
- using basic drawing tools
- calculating dimension and allowable dimension variations
- completing measurements and estimating fabric requirements and other material requirements
- using pre-checking and inspection techniques to anticipate cutting problems and to avoid reworking and wastage
- using relevant hand and power tools
- using the limited workplace technology related to cutting, including tools, equipment, calculators and measuring devices
- cleaning and maintenance of equipment and tools.

The underlying skills inherent in this unit should be transferable across a range of aircraft life support equipment maintenance activities. It is essential that fabric component manufacture, repair and alteration procedures and safety precautions are fully observed, understood and complied with. Ability to interpret fabric component requirements and apply them in practice is critical.

This is to be demonstrated through demonstration of the ability to perform appropriate manufacturing, repair and alteration tasks that are within the bounds of the individual's authority.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant regulations, standards, enterprise procedures and maintenance publications
- WHS procedures relating to fabric component manufacture, repair and alteration, including the selection and use of PPE
- how to obtain MSDS
- basic sewing techniques using *AS 2860-1986 Textiles – stitch types – classification and terminology*
- construction principles of fabric components
- cutting equipment and techniques
- design features of finished items
- fabric types, common faults and inspection procedures
- impact of cutting on fabrics
- geometric drawing processes and techniques
- reading and interpreting specifications
- types of corrosion and contamination that may affect aircraft fabric components.

Assessment Conditions

- Competency should be assessed in the workplace or simulated workplace using materials, tools and equipment specified in the maintenance manuals and applicable procedures. It is also expected that general and special-purpose tools and ground support equipment would be used where appropriate.
- The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.
- The following conditions of assessment represent the requirements of the Regulators (ADF and CASA) and maintenance stakeholders and must be rigorously observed.
- A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements and performance criteria of the unit of competency are being achieved under routine supervision on the following tasks:
 - recognising the limits of own authority
 - correctly manufacture three fabric components from technical instructions using machine sewing and at least one other assembly method (hand sew, press fit, adhere or staple)
 - recognising at least three faults and identifying limits of repair for the fabric components
 - altering a fabric component to meet customer requirements.
- This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide (for details refer to the Companion Volume Assessment Guidelines).
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

MEA510 Maintain seat and pod electrical and electronic systems

Modification History

Release 1 - New unit of competency

Application

This unit of competency requires application of hand skills in the scheduled or unscheduled removal and installation of electrical and electronic system components during the overhaul of aircraft seats and pods, and the use of basic electrical test equipment and in-flight entertainment system test sets to perform functional tests and confirm system serviceability.

This unit is part of the Aeroskills Life Support and Furnishing Certificate III and IV training pathways. It is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

MEA240 Use electrical test equipment to perform basic electrical tests

Competency Field

Aviation maintenance

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|----|--|-----|--|
| 1. | Remove and inspect seat and pod electrical system components | 1.1 | System is rendered safe and prepared in accordance with the applicable maintenance manual to ensure personnel safety |
| | | 1.2 | Removal of electrical system components is carried out in accordance with the applicable maintenance manual while observing all relevant work health and safety (WHS) requirements, including the use of material safety data sheets (MSDS) and items of |

- personal protective equipment (PPE)
- 1.3 Removed components are inspected for visible signs of damage or deterioration in accordance with maintenance manuals and standard enterprise procedures
 - 1.4 Required maintenance documentation is completed and processed in accordance with standard enterprise procedures
 - 1.5 Removed components are tagged, packaged or discarded in accordance with specified procedures
2. Remove and inspect seat and pod electronic system components
- 2.1 System is rendered safe and prepared in accordance with the applicable maintenance manual to ensure personnel safety
 - 2.2 Removal of electronic system components is carried out in accordance with the applicable maintenance manual while observing all relevant WHS requirements, including the use of MSDS and items of PPE
 - 2.3 Removed components are inspected for visible signs of damage or deterioration in accordance with maintenance manuals and standard enterprise procedures
 - 2.4 Required maintenance documentation is completed and processed in accordance with standard enterprise procedures
 - 2.5 Removed components are tagged, packaged or discarded in accordance with specified procedures
3. Install seat and pod electrical system components
- 3.1 Electrical system components to be installed are checked to confirm correct part numbers, modification status, serviceability and shelf life
 - 3.2 Physical installation of electrical components is carried out in accordance with the applicable maintenance manual
 - 3.3 System is reinstated to correct physical condition in preparation for testing
 - 3.4 Required maintenance documentation is completed and processed in accordance with standard enterprise

- procedures
4. Install seat and pod electronic system components
 - 4.1 Electronic system components to be installed are checked to confirm correct part numbers, modification status, serviceability and shelf life
 - 4.2 Physical installation of electronic components is carried out in accordance with the applicable maintenance manual
 - 4.3 System is reinstated to correct physical condition in preparation for testing
 - 4.4 Required maintenance documentation is completed and processed in accordance with standard enterprise procedures
 5. Functionally test seat and pod electrical and electronic systems
 - 5.1 Applicable system test set is connected to seat or pod in accordance with the applicable maintenance manual or approved vendor procedures
 - 5.2 Power is applied to the seat or pod in accordance with applicable maintenance manual
 - 5.3 Seat or pod electrical system is functionally tested for correct operation in accordance with the applicable maintenance manual
 - 5.4 Seat or pod electronic system is functionally tested using the applicable test set in accordance with the applicable maintenance manual
 - 5.5 Test equipment is removed and required maintenance documentation is completed and processed in accordance with standard enterprise procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional

contexts) are included.

Removal and installation of electrical components involves one or more of the following connection methods:

- Bolted
- Plug connectors

Electrical system components include:

- Electrical cables and looms
- Selectors and switches
- Motors and actuators
- Relays, control units and modules

Electronic system components include:

- Display units
- Tuners/selectors
- Volume controls
- Audio headset receptacles
- Data cables

Visible signs of damage or deterioration include:

- Broken or chafed wires
- Corrosion of plugs and connectors
- Physical damage to components
- Wear
- Evidence of electrical or electronic component overheating

Unit Mapping Information

Release 1 – equivalent to MEA510A Maintain seat and pod electrical and electronic systems

Links

Companion Volume implementation guides are found in VETNet -
<https://vetnet.education.gov.au/Pages/TrainingDocs.aspx?q=ce216c9c-04d5-4b3b-9bcf-4e81d0950371>

Assessment Requirements for MEA510 Maintain seat and pod electrical and electronic systems

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- applying relevant WHS practices, including the use of PPE and MSDS
- using approved maintenance documentation and aircraft publications relating to aircraft seat and pod electrical and electronic systems and components
- recognising defects in and deterioration of electrical cables to aircraft industry standards, including crimped and soldered joints
- correctly interpreting aircraft wire markings, terminal block identification and plug/socket pin numbering systems
- inspecting electrical looms and harness pre and post-removal and installation to ensure minimum bends are maintained, cable is not in tension, plugs are correctly aligned, security of route ensures no chaffing of insulation, adequate clipping and cable ties have been utilised and construction complies with aircraft industry standards
- positively identifying seat and pod electrical and electronic system components
- plug connector pin removal and insertion where soldering is not required
- recognising damage and visual defects in electrical components, such as actuators, motors and switches
- recognising damage and visual defects in electronic system components, such as display screens, tuners, volume controls, audio headset receptacles and data cables.

It is essential that applicable cleanliness requirements and WHS precautions are fully observed, including awareness of electrostatic discharge procedures.

Evidence of transferability of skills and knowledge related to removal and installation is essential.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant WHS procedures
- how to obtain relevant MSDS
- the use of applicable items of PPE

- component attachment methods
- connection of hardware and plugs
- electrical wiring used in aircraft and wire marking
- plug/socket pin numbering and terminal block identification
- cable and loom installation requirements, including bonding and screening
- crimping tools and crimp terminals
- procedures for removal and insertion of plug connector pins where soldering is not required
- handling and maintenance precautions relating to electronic displays and electrostatic sensitive devices
- electromagnetic environment
- data cable installation requirements.

Assessment Conditions

- Competency should be assessed in the workplace or simulated workplace using tools and equipment specified in maintenance manuals. It is also expected that general-purpose tools, test and ground support equipment found in most routine situations would be used where appropriate.
- An understanding of the attachment methods, connection of hardware and system operation as they relate to the work must be demonstrated before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.
- The following conditions of assessment represent the requirements of the Regulators (ADF and CASA) and maintenance stakeholders and must be rigorously observed.
- A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements and performance criteria of the unit of competency are being achieved on the range of components and tasks listed in the Range of Conditions.
- This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

MEA511 Operate and maintain sewing machines and overlockers

Modification History

Release 1 - New unit of competency

Application

This unit of competency requires application of skills and knowledge relating to the operation and maintenance of sewing machines and overlockers in the maintenance of items of aircraft life support equipment and in the fabrication and maintenance of items of aircraft soft furnishings.

The unit is part of the Aeroskills Life Support and Furnishing Certificate III and IV training pathways. It is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

Competency Field

Aircraft life support

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|----|---------------------------------|-----|--|
| 1. | Plan work and prepare work area | 1.1 | Work is planned to maximise safety and productivity |
| | | 1.2 | Work area is cleared and cleaned to provide work table free of obstructions and clear access to sewing/overlocking machine |
| | | 1.3 | Safe working environment is established |
| | | 1.4 | Suitable electrical power outlets, if required, are identified |
| | | 1.5 | Assistance to move and position work piece is |

- obtained if necessary
2. Select thread and needle
 - 2.1 Type of material to be sewn, type of stitch to be used and nature of duty to which finished product is to be subjected is determined to assist in selection of thread and needle
 - 2.2 Suitable thread is selected with regard to thread material, diameter of thread, tensile strength and colour
 - 2.3 Appropriate needle is chosen to suit type of thread, type of stitch and material to be sewn
 3. Set up machine
 - 3.1 Machine is examined for damage, missing components or other defects
 - 3.2 Power cords are examined for knots, unsafe routing and insulation damage
 - 3.3 Machine is safely connected to power and correct 'power-on' procedure is followed
 - 3.4 Condition of needle is checked to ensure it is sharp, clean and free from rust and dirt
 - 3.5 Needle is fitted to machine
 - 3.6 Machine is threaded and thread is checked for free travel from spool
 - 3.7 Thread tension and other machine settings are checked and adjusted using test pieces if necessary
 4. Operate machine
 - 4.1 Work piece is correctly aligned to machine
 - 4.2 Machine is operated in accordance with standard procedures while observing all relevant work health and safety (WHS) requirements
 - 4.3 Work piece is appropriately fed into machine
 - 4.4 Performance of machine is monitored through regular checking of thread tension and other settings and inspection of stitching in finished product
 5. Inspection, quality, labelling and documentation
 - 5.1 Work piece is removed from machine using assistance if necessary
 - 5.2 Completed work is inspected to verify that it meets

		applicable technical instructions
	5.3	Any areas in need of rework or rectification are identified and marked
	5.4	Rework is performed or other appropriate action arranged
	5.5	Completed product is labelled or tagged and any necessary documentation completed in accordance with standard enterprise procedures
6.	Clean up and maintain equipment	6.1 Machine is switched off using correct 'power off' procedures
		6.2 Machine is cleaned and programmed maintenance, which is within the province of the operator, is performed in accordance with enterprise requirements and manufacturer's specifications while observing all relevant WHS requirements, including the use of material safety data sheets (MSDS)
		6.3 Worn or damaged needles are disposed of in accordance with safe working practice
		6.4 Supervisor is notified of any abnormal conditions requiring maintenance or repair

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Procedures and requirements include:

- Industry standard procedures specified by manufacturers, regulatory authorities or the enterprise

Working environment includes:

- Work organisation procedures and practices relating to the sewing/overlocking of materials
- Safe use of sewing/overlocking machines and relevant

hand and power tools

- Storage, safe handling and disposal of needles, threads and materials associated with sewing/overlocking
- Reporting actions which include verbal and written communication in accordance with enterprise policies and procedures
- Oral, written or visual communication, including completion of standard forms, interpretation of information and instructions associated with workplace activities, and recording and reporting of work outcomes
- Procedures for safety, environmental protection, housekeeping and quality as specified by equipment and materials manufacturers, regulatory authorities and the enterprise

Standard procedures are found in any or all of:

- Commonwealth/state/territory WHS legislation, regulations and codes
- Australian Standards
- equipment manufacturers' specifications and procedures
- Industry practices
- Safety manual
- Maintenance schedules
- Work instructions
- Maintenance organisation manual
- MSDS
- Defence regulations and instructions
- Civil Aviation Safety Regulations (CASRs) and advisory material
- Standing instructions

Technical instructions include:

- Aircraft operational requirements
- Job orders
- Manufacturers' specifications
- Maintenance manuals
- Modification instructions
- Technical drawings

Unit Mapping Information

Release 1 – equivalent to MEA511A Operate and maintain sewing machines and overlockers

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for MEA511 Operate and maintain sewing machines and overlockers

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- applying relevant WHS procedures
- interpreting and applying work instructions and established procedures
- planning and coordinating work activities
- locating and interpreting technical information about machines and materials used in aircraft life support and furnishing
- selecting appropriate needle and thread
- identifying unsatisfactory machine performance
- using relevant hand and power tools
- using relevant chemicals and cleaning agents and dispose of waste products
- maintaining machines and work area
- applying all relevant safety practices
- communicating effectively within the workplace
- documenting and transferring information.

The underlying skills inherent in this unit should be transferable across a range of aircraft life support equipment maintenance activities involving the use of sewing machines/overlockers. It is essential that fabric component manufacture, repair and alteration procedures and safety precautions are fully observed, understood and complied with. Ability to interpret fabric component requirements and apply them in practice is critical.

This is to be demonstrated through demonstration of the ability to perform appropriate manufacturing, repair and alteration tasks that are within the bounds of the individual's authority.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- precautions and safe working practices based on relevant WHS legislation, codes of practice, policies and procedures
- advanced work piece construction principles and methods
- characteristics of a wide range of materials used in aircraft life support and furnishing

- operating principles of a wide range of sewing/overlocking machines
- types of needles and threads and their applications
- types of stitching and their applications
- standard industry practice for needle storage and safe disposal
- the range of sewing/overlocking machines, hand tools and power tools used in sewing/overlocking processes and their appropriateness for particular applications
- relevant quality standards for sewn/overlocked products
- power sources, such as single phase, three phase and weather protected outlets
- electrical isolation procedures for sewing/overlocking machines
- safety and environmental requirements of relevant industry and enterprise procedures
- general housekeeping policies and procedures
- recording and reporting procedures.
-

Assessment Conditions

- Access is required to:
 - real or appropriately simulated situations involving the sewing or overlocking of materials used in aircraft life support equipment and in aircraft soft furnishings
 - information on specifications of materials used in sewing and overlocking, settings for machines, relevant safety procedures and regulations, quality standards, and enterprise procedures
 - all necessary facilities, sewing/overlocking machines and associated hand and power tools.
- Assessment may occur on the job or in an industry approved simulated environment.
- The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.
- The following conditions of assessment represent the requirements of the Regulators (ADF and CASA) and maintenance stakeholders and must be rigorously observed.
- A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements and performance criteria of the unit of competency are being achieved under routine supervision on a sufficient number of occasions or over sufficient period of time to ensure consistent performance across a typical range of sewing and overlocking requirements performed at the enterprise.
- This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide (for details refer to the Companion Volume Assessment Guidelines).
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

Companion Volume implementation guides are found in VETNet - <https://vetnet.education.gov.au/Pages/TrainingDocs.aspx?q=ce216c9c-04d5-4b3b-9bcf-4e81d0950371>

MEA512 Maintain general aviation recovery devices with ballistic parachute systems

Modification History

Release 1 - New unit of competency

Application

This unit of competency is required by individuals seeking approval within Civil Aviation Safety Regulation (CASR) Part 145 and Civil Aviation Regulation (CAR) 30 maintenance organisations to maintain general aviation recovery devices that have ballistic parachute systems. Coverage does not include the maintenance and re-packing of the parachute which is covered by unit MEA505 Maintain and pack parachutes.

The unit requires the application of hand skills and knowledge of general aviation recovery devices (GARD) with ballistic parachute systems to remove, install and maintain the system when fitted to small aircraft.

Pre-requisite Unit

MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activities
MEA105	Apply quality standards applicable to aviation maintenance processes
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA109	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance
DEFEO101D	Work safely with explosive ordnance

Competency Field

Aviation maintenance

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element
1. Inspect GARD ballistic parachute system	<p>1.1 Ballistic parachute container is inspected in accordance with applicable maintenance data</p> <p>1.2 Parachute deployment rocket and operating cable is inspected in accordance with applicable maintenance data while observing all relevant work health and safety (WHS) requirements, including the use of material safety data sheets (MSDS) and items of personal protective equipment (PPE)</p> <p>1.3 Remaining installed life is verified from aircraft documentation</p> <p>1.4 Maintenance documentation is completed in accordance with standard enterprise procedures</p>
2. Remove GARD ballistic parachute system	<p>2.1 Operating cable is disconnected and rocket is removed in accordance with applicable maintenance data and explosives handling safety precautions</p> <p>2.2 Parachute container is removed from the aircraft in accordance with applicable maintenance data while observing all relevant WHS requirements, including the use of MSDS and items of PPE</p> <p>2.3 Maintenance documentation is completed in accordance with standard enterprise procedures</p>
3. Install GARD ballistic parachute system	<p>3.1 Parachute container is installed in accordance with applicable maintenance data</p> <p>3.2 Rocket is fitted and operating cable connected in accordance with applicable maintenance data and explosives handling safety precautions</p> <p>3.3 Maintenance documentation is completed in accordance with standard enterprise procedures</p>

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- Maintenance data includes:**
- Aircraft maintenance manuals
 - Manufacturer maintenance manuals
 - Regulatory requirements
- Procedures and requirements include:**
- Industry standard procedures specified by manufacturers, regulatory authorities or the enterprise

Unit Mapping Information

New unit of competency

Assessment Requirements for MEA512 Maintain general aviation recovery devices with ballistic parachute systems

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- applying hand skills and using maintenance data to inspect ballistic parachute systems
- using aircraft maintenance records to confirm the remaining installed life of ballistic parachute systems
- observing explosive ordnance handling safety precautions and maintenance data to:
 - disconnect the rocket and remove the ballistic parachute system
 - install the ballistic parachute system and connect the operating cable to the rocket.

It is essential that the relevant procedures are interpreted and applied to ensure quality and safety standards are achieved.

Evidence of transferability of skills and knowledge related to maintenance is essential. This shall be demonstrated through application across a number of ballistic parachute systems.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- ballistic parachute:
 - operation
 - hazards and safety precautions
 - parachute and rocket installed lives
 - maintenance data
- completion of an approved GARD system maintenance course that includes coverage of ballistic parachute systems.

Assessment Conditions

- Competency should be assessed in the work environment or simulated work environment using tools and equipment specified in maintenance documentation. It is also expected that general-purpose tools and test equipment found in most routine situations would be used where appropriate.

- Ability to assess system serviceability and interpret remaining installed life will be necessary before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.
- The following conditions of assessment represent the requirements of CASA and maintenance stakeholders and must be rigorously observed.
- A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that an approved maintenance course has been successfully completed and the relevant elements and the performance criteria of the unit of competency are being achieved under routine supervision on the ballistic parachute systems maintained by the organisation.
- This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide (for details refer to the Companion Volume Assessment Guidelines).
- CAO 100.5 requires that training be delivered in the form of a maintenance course approved by a CAR 30 or CASR Part 145 maintenance organisation. Evidence of course completion forms part of the assessment criteria.
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

MEA513 Maintain and pack survival inflatable life rafts

Modification History

Release 1 - New unit of competency

Application

This unit of competency requires application of skills and knowledge relating to the maintenance and packing of survival inflatable life rafts. Maintenance involves inspection, testing, fault diagnosis, replacement of parts and cleaning during the performance of scheduled or unscheduled maintenance. Maintenance may be performed individually or as part of a team.

The unit does not include repairing life rafts.

The unit applies to a range of types of survival inflatable life raft and is part of the Aeroskills Life Support and Furnishing Certificate III and IV training pathways.

The unit is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activity
MEA105	Apply quality standards applicable to aviation maintenance processes
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA109	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance
MEA118	Conduct self in the aviation maintenance environment

Competency Field

Aircraft life support

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|----|--|-----|---|
| 1. | Maintain survival inflatable life raft | 1.1 | Survival inflatable life raft and associated ancillary equipment is inspected for serviceability in accordance with standard procedures |
| | | 1.2 | Identified faults beyond own authority to rectify are reported to supervisor and faulty survival inflatable life raft, ancillary equipment is quarantined |
| | | 1.3 | Unserviceable parts of the survival inflatable life raft and ancillary equipment items are replaced in accordance with standard procedures while observing all relevant work health and safety (WHS) requirements, including the use of material safety data sheets (MSDS) and items of personal protective equipment (PPE) |
| | | 1.4 | Survival inflatable life raft is tested for serviceability in accordance with standard procedures and manufacturer's specifications |
| | | 1.5 | Survival inflatable life raft is cleaned in accordance with standard procedures |
| | | 1.6 | Survival inflatable life raft is presented for inspection by supervisor in accordance with standard procedures |
| | | 1.7 | Maintenance documentation is completed and processed in accordance with standard enterprise procedures |
| 2. | Pack survival inflatable life raft | 2.1 | Survival inflatable life raft is packed for use in accordance with standard procedures |
| | | 2.2 | Ancillary equipment is packed for use in accordance with standard procedures |

- 2.3 Survival inflatable life raft is presented for inspection by supervisor in accordance with standard enterprise procedures
- 2.4 Relevant documentation is completed and processed in accordance with standard enterprise procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Applicable types of survival inflatable life rafts include:

- 10U Mk8
- F2B
- LRU 16

Ancillary equipment includes:

- Electronic locating devices
- Lighting devices
- Pyrotechnics
- Rations
- Survival/location aids
- Water

Standard procedures are found in any or all of:

- Commonwealth/state/territory WHS legislation, regulations and codes
- Australian Standards
- equipment manufacturers' specifications and procedures
- Industry practices
- Safety manuals
- Maintenance schedules
- Work instructions
- Maintenance organisation manuals
- MSDS
- Defence regulations and instructions
- Civil Aviation Safety Regulations (CASRs) and advisory material
- Standing instructions

Faults include:

- Abrasion
- Broken stitching
- Contamination
- Corrosion of metal parts
- Damaged hardware
- Delamination/porosity
- Expired components or equipment
- Faulty valves
- Frayed lines
- Holes
- Incorrect manufacture
- Lifting tapes
- Ultraviolet (UV) degradation

Parts include:

- Cylinders
- Operating head
- Valves
- Valise

Testing includes:

- Checking ancillary equipment (e.g. electronic locating devices, survival/location aids)
- Cylinder weight tolerance
- Inflation tests
- Light and battery test

Unit Mapping Information

Release 1 – equivalent to MEA506A Maintain and pack survival inflatable life rafts and escape slides with regard to survival inflatable life rafts

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for MEA513 Maintain and pack survival inflatable life rafts

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- applying WHS practices relating to survival inflatable life raft and ancillary equipment maintenance processes, including the selection and correct use of PPE, where applicable
- using MSDS
- using maintenance publications, drawings and documentation relating to survival inflatable life raft and ancillary equipment maintenance
- handling, storing and organising transport of equipment
- delivering briefings to personnel in relation to operating survival inflatable life rafts
- inflating/deflating survival inflatable devices for maintenance
- using applicable testing and measuring equipment, tools and maintenance documentation to:
 - test survival inflatable devices for serviceability
 - replace unserviceable components or items of ancillary equipment in accordance with approved procedures
 - select and use appropriate survival inflatable device cleaning materials
- soldering battery terminals on emergency locator transmitters
- tying various types of knots, including:
 - reef knot
 - bowline
 - thumb knot
 - half hitch
- hand sewing
- cleaning and maintenance of equipment and tools.

The underlying skills inherent in this unit should be transferable across a range of aircraft life support equipment maintenance activities. It is essential that survival inflatable device testing and inspection procedures, cleanliness requirements and safety precautions are fully observed, understood and complied with. Ability to interpret maintenance and packing procedures and apply them in practice is critical.

This is to be demonstrated through demonstration of the ability to recognise faults and replace components that are within the bounds of the individual's authority, and through the demonstration of correct packing procedures.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant regulations, standards, enterprise procedures and maintenance publications
- WHS procedures relating to survival inflatable life raft maintenance including the selection and use of PPE
- how to obtain MSDS
- relevant safety precautions, including storage and handling of compressed gas cylinders and survival and distress pyrotechnics
- critical nature of maintaining and packing survival inflation devices, i.e. risk of death
- search and rescue procedures
- priorities of survival and how they relate to survival inflatable life rafts and associated ancillary equipment
- electrical principles
- approved cleaning methods for aviation life support equipment
- environmental conditions that may affect survival inflation devices, including UV degradation
- types of corrosion and contamination that may affect survival inflation devices
- handling, storage and transit procedures relating to survival inflation devices
- survival inflation devices and methods of operation
- operation of emergency locator beacons and emergency locator transmitters
- principles of operation of inflation mechanisms
- components of a survival inflation device and their function
- repair limitations for survival inflatable life rafts
- modification requirements for survival inflatable life rafts
- requirements for a survival inflation device servicing facility
- packing tools and measuring equipment required to pack survival inflatable devices
- use of survival inflatable life rafts, including associated ancillary equipment.

Assessment Conditions

- Competency should be assessed in the workplace or simulated workplace using materials, tools and equipment specified in the maintenance manuals and applicable procedures. It is also expected that general and special-purpose tools and ground support equipment would be used where appropriate.
- The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.
- The following conditions of assessment represent the requirements of the Regulators (ADF and CASA) and maintenance stakeholders and must be rigorously observed.

- A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements and performance criteria of the unit of competency are being achieved under routine supervision on the following range of tasks:
 - completing a minimum of three (3) inflation tests without the need for corrective action by the supervisor
 - recognising the limits of own authority
 - testing cylinder weight and determining if it is within tolerance
 - correctly packing a minimum of three (3) survival inflatable life rafts or escape slides without the need for corrective action by the supervisor
 - recognising a range of faults and their serviceability limits (faults must include incorrect manufacture and verifying expiry date of inflatable life raft and ancillary equipment or escape slide).
- This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide (for details refer to the Companion Volume Assessment Guidelines).
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

MEA514 Maintain and pack escape slides

Modification History

Release 1 - New unit of competency

Application

This unit of competency requires application of skills and knowledge relating to the maintenance and packing of escape slides. Maintenance involves inspection, testing, fault diagnosis, replacement of parts and cleaning during the performance of scheduled or unscheduled maintenance. Maintenance may be performed individually or as part of a team.

The unit does not include repairing escape slides.

The unit applies to a number of types of inflatable aircraft escape slides and is part of the Aeroskills Life Support and Furnishing Certificate III and IV training pathways.

The unit is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activity
MEA105	Apply quality standards applicable to aviation maintenance processes
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA109	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance
MEA118	Conduct self in the aviation maintenance environment

Competency Field

Aircraft life support

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|----|-----------------------|-----|--|
| 1. | Maintain escape slide | 1.1 | Escape slide is inspected for serviceability in accordance with standard procedures |
| | | 1.2 | Identified faults beyond own authority to rectify are reported to supervisor and faulty escape slide is quarantined |
| | | 1.3 | Unserviceable parts of the escape slide are replaced in accordance with standard procedures while observing all relevant work health and safety (WHS) requirements, including the use of material safety data sheets (MSDS) and items of personal protective equipment (PPE) |
| | | 1.4 | Escape slide is tested for serviceability in accordance with standard procedures and manufacturer's specifications |
| | | 1.5 | Escape slide is cleaned in accordance with standard procedures |
| | | 1.6 | Escape slide is presented for inspection by supervisor in accordance with standard procedures |
| | | 1.7 | Maintenance documentation is completed and processed in accordance with standard enterprise procedures |
| 2. | Pack escape slide | 2.1 | Escape slide is packed for use in accordance with standard procedures |
| | | 2.2 | Escape slide is presented for inspection by supervisor in accordance with standard enterprise procedures |
| | | 2.3 | Relevant documentation is completed and processed in accordance with standard enterprise procedures |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Applicable types of escape slides include:

- 19D22454-2
- 19D22387-2
- 19D22454-5
- 19D22454-6

Standard procedures are found in any or all of:

- Commonwealth/state/territory WHS legislation, regulations and codes
- Australian Standards
- Equipment manufacturers' specifications and procedures
- Industry practices
- Safety manual
- Maintenance schedules
- Work instructions
- Maintenance organisation manual
- MSDS
- Defence regulations and instructions
- Civil Aviation Safety Regulations (CASRs) and advisory material
- Standing instructions

Faults include:

- Abrasion
- Broken stitching
- Contamination
- Corrosion of metal parts
- Damaged hardware
- Delamination/porosity
- Expired components or equipment
- Faulty valves
- Frayed lines
- Holes

- Incorrect manufacture
 - Lifting tapes
 - Ultraviolet (UV) degradation
- Parts include:**
- Cylinders
 - Operating head
 - Valves
 - Valise
- Testing includes:**
- Cylinder weight tolerance
 - Inflation tests

ME A601 Maintain aircraft egress systems

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers the maintenance of aircraft egress systems that contain explosive ordnance.

Maintenance covers the entire egress system, including the explosive ordnance. It involves the installation and removal of safety devices, disarming and rearming, inspecting, testing, replacing parts, cleaning and painting during the performance of scheduled or unscheduled maintenance. Maintenance may be performed individually or as part of a team.

The unit is part of the Aeroskills Aircraft Armament Certificate IV training pathway.

The unit is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence

Pre-requisite Unit

ME A101	Interpret work health and safety practices in aviation maintenance
ME A103	Plan and organise aviation maintenance work activity
ME A105	Apply quality standards applicable to aviation maintenance processes
ME A107	Interpret and use aviation maintenance industry manuals and specifications
ME A108	Complete aviation maintenance industry documentation
ME A109	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance
DEFEO101D	Work safely with explosive ordnance

Competency Field

Aviation maintenance

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.	Fit and remove safety devices	1.1	Safety devices are fitted to aircraft egress systems in accordance with standard operating and maintenance procedures
		1.2	Safety devices are removed from aircraft egress systems and are correctly stowed in accordance with standard operating and maintenance procedures
2.	Prepare for aircraft egress system maintenance	2.1	Applicable maintenance documentation is identified and obtained
		2.2	Aircraft egress system maintenance requirements are identified from applicable documentation
		2.3	Special tools and equipment required for the maintenance tasks are obtained and positioned
3.	Inspect, test and maintain aircraft egress systems	3.1	Aircraft egress systems are inspected in accordance with applicable maintenance documentation
		3.2	Relevant tests are safely conducted and results are recorded in accordance with standard enterprise procedures
		3.3	Required maintenance tasks are performed in accordance with applicable maintenance documentation and standard enterprise procedures while observing all relevant work health and safety (WHS) requirements, including the use of material safety data sheets (MSDS) and items of personal protective equipment (PPE)
		3.4	Emergency and contingency procedures are performed as required

- | | | |
|--|-----|---|
| 4. Remove and install aircraft egress system components | 4.1 | Non-explosive egress system components are removed and installed in accordance with applicable maintenance documentation and standard enterprise procedures while observing all relevant WHS requirements, including the use of MSDS and items of PPE |
| | 4.2 | Explosive egress system components are removed and installed in accordance with applicable maintenance documentation and standard enterprise procedures while observing all relevant WHS requirements, including the use of MSDS and items of PPE |
| 5. Complete aircraft egress system maintenance operation | 5.1 | Removed non-explosive components are tagged and packaged for transportation in accordance with standard enterprise procedures |
| | 5.2 | Removed explosive components are tagged and packaged in accordance with procedures for packaging and transportation of explosive ordnance/dangerous goods |
| | 5.3 | Special tools and equipment are maintained in accordance with standard enterprise procedures |
| | 5.4 | Documentation and records are completed in accordance with standard enterprise procedures |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Applicable maintenance documentation includes:

- Defect reports
- Maintenance releases containing details of unserviceabilities
- Modification orders or leaflets
- Service bulletins

- Instructions issued by airworthiness authorities
 - Work instructions
 - Servicing schedules
 - Maintenance manuals
 - Standards and drawings
 - Applicable airworthiness and explosive ordnance regulations
 - Standing instructions
 - Quality manuals
 - Safety manuals
 - Maintenance and explosives records
 - Arming and de-arming
 - Cleaning
 - Component changes
 - Painting
 - Non-explosive components:
 - barometric and gravitational sensing components
 - canopy jettison components
 - catapults
 - ejection seat railings and guns
 - inertia reels
 - parachute assemblies
 - pressure source bottles
 - survival equipment
 - Explosive components:
 - ejection handles
 - ejection seat cartridges and initiators
 - explosive connectors
 - explosive delay elements
 - flexible linear shaped charges
 - rocket motors
 - shielded mild detonating cord
 - special function cartridges
 - Industry standard procedures specified by manufacturers, regulatory authorities or the enterprise
- Required maintenance tasks include:**
- Egress system components include:**
- Procedures and requirements include:**

Unit Mapping Information

Release 1 – equivalent to MEA601A Maintain aircraft egress systems

Assessment Requirements for MEA601 Maintain aircraft egress systems

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- applying relevant WHS procedures, including selection and use of PPE
- using MSDS
- fitment of applicable safety devices
- egress system disarming and rearming
- safely handling explosive components
- conducting tests involving continuity, gauging and measuring
- identifying and selecting applicable items of specialist equipment and tools
- using maintenance documentation, hand tools, specialist tools and equipment to perform egress system maintenance tasks
- preparing removed explosive components for safe storage or transportation.

It is essential that assessment confirms the ability to comply with organisational safety requirements and appropriate legislative and regulatory requirements while maintaining aircraft egress systems. The ability to work safely within an explosive ordnance environment, conduct applicable tests and maintain relevant documentation is critical.

This is to be established through demonstration of the ability to:

- render the system safe
- perform relevant inspections and tests, replace components (including disarming and re-arming the system)
- perform appropriate maintenance tasks.
-

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- egress system construction, layout and operation
- operation, characteristics and limitations of aircraft egress systems
- effect of environmental conditions
- colour coding, marking and labels associated with egress systems
- operation, characteristics and limitations of specialist tools and equipment

- egress system test procedures
- safety precautions associated with explosive components
- requirements for handling and disposal of explosive components
- general WHS procedures applicable to egress system maintenance, including applicable PPE
- MSDS.

Assessment Conditions

- Competency should be assessed in the workplace or simulated workplace using materials, tools and equipment specified in the maintenance manuals and applicable procedures. It is also expected that general and special-purpose tools and ground support equipment would be used where appropriate.
- Access will also be required to facilities and resources used in the storage, distribution or maintenance of explosive ordnance, including a licensed explosive site.
- The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.
- The following conditions of assessment represent the requirements of the Regulators (ADF and CASA) and maintenance stakeholders and must be rigorously observed.
- A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements and performance criteria of the unit of competency are being achieved under routine supervision on a range of tasks that is representative of the maintenance tasks, tests and the range of non-explosive and explosive components listed in the Range of Conditions.
- This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide (for details refer to the Companion Volume Assessment Guidelines).
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

MEA602 Remove and install aircraft stores management system components

Modification History

Release 1 - New unit of competency

Application

This unit of competency applies to members of the Australian Defence Force (ADF) who are required to apply explosive ordnance safety and handling procedures, hand skills and use maintenance documentation/publications in the removal and installation of stores management system (SMS) components to meet system reconfiguration requirements during the performance of scheduled or unscheduled maintenance. Maintenance may be performed individually or as part of a team.

The unit applies to all aircraft with stores management systems.

The unit is part of the Armament Certificate IV training pathway.

This unit is used in workplaces that operate under the airworthiness regulatory systems of the ADF.

Pre-requisite Unit

MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activities
MEA105	Apply quality standards applicable to aviation maintenance processes
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA109	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance
DEFEO101D	Work safely with explosive ordnance

Competency Field

Aviation maintenance

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.	Prepare aircraft for SMS reconfiguration	1.1	SMS reconfiguration task is verified from applicable documentation
		1.2	Aircraft safety devices are checked in accordance with relevant technical publications and manuals
		1.3	Correct SMS component is visually identified for reconfiguration
		1.4	Appropriate tools and ground support equipment are selected in accordance with the task
2.	Remove SMS component	2.1	Firing devices are checked and removed if fitted
		2.2	SMS component is removed from aircraft in accordance with technical publications and manuals while observing all relevant work health and safety (WHS) requirements, including the use of material safety data sheets (MSDS) and items of personal protective equipment (PPE)
		2.3	Protective covers and panels are fitted to aircraft and stores management system component in accordance with technical publications and manuals
3.	Install SMS component	3.1	Applicable protective covers and panels are removed from aircraft and SMS component in accordance with technical publications and manuals
		3.2	SMS component is fitted to aircraft in accordance with technical publications and manuals while observing all relevant WHS requirements, including the use of MSDS and items of PPE
4.	Complete and process documentation	4.1	Applicable documentation is completed for reconfigured SMS

- 4.2 Documentation is forwarded to Maintenance Control Section (MCS)

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- Reconfiguration includes:**
- Removal of currently fitted SMS components
 - Installation of specified SMS components
- Verification includes:**
- Maintenance restrictions
 - Aircraft tail number
 - Aircraft entered as unserviceable
 - Nil stores fitted
- Documentation includes:**
- EE500
 - CAMM2 documents
 - SMS documentation
- Safety devices include:**
- Earth lead
 - Aircraft safety pins
 - Aircraft switches
- Technical publications and manuals include:**
- Aircraft publications
 - Maintenance instruction manuals and process specifications
 - Servicing or service bulletins or structural repair manuals
 - Illustrated parts catalogues, aircraft wiring manuals or drawings
 - Tooling, equipment or manufacturer's manuals
 - Standard practices
 - Enterprise aviation regulations and publications
- SMS components include:**
- Mission computer
 - Armament computer
 - Encoder/decoder
 - Control unit

- Firing devices include:**
- Head-up display (HUD)
 - Multifunction display (MFD)
 - Stores release cartridges
 - Chaff and flares
 - Gun system
 - Missiles
 - Loaded stores
- Checking of firing devices includes:**
- Visually
 - Physically
- Applicable documentation includes:**
- Aircraft documentation
 - SMS component documentation
- Procedures and requirements include:**
- Industry standard procedures specified by manufacturers, regulatory authorities or the enterprise

Unit Mapping Information

Release 1 – equivalent to MEA602A Remove and install aircraft stores management system components

(This unit was developed from ADF Enterprise unit DDDRARM301A Remove and install aircraft stores management systems and components and is equivalent to it)

Assessment Requirements for MEA602 Remove and install aircraft stores management system components

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- applying all safety procedures relating to aircraft SMS
- applying hand skills and applicable maintenance documentation in the removal and installation of SMS components
- testing the operation of systems and components
- using ground support equipment and test equipment
- determining SMS reconfiguration requirements
- explosive ordnance safety and handling
- manual handling of SMS components.

The underlying skills inherent in this unit should be transferable across a range of aircraft SMS reconfiguration activities. It is essential that assessment confirms the ability to comply with organisational safety requirements and appropriate legislative and regulatory requirements while maintaining SMS. The ability to work safely within an explosive ordnance environment, conduct applicable tests and maintain relevant documentation is critical, including checking specifically for:

- failure to check aircraft safety devices are installed
- failure to ensure firing devices checked and removed if fitted
- commencing task prior to initiating documentation
- failure to comply with relevant WHS procedures and policies.
-

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- the aircraft operating and maintenance environment
- aircraft SMS and interfaces with other aircraft systems
- WHS procedures and policies
- explosive ordnance safety and handling procedures
- technical publications and manuals
- hardware and component attachment methods

- system and component testing requirements
- technical documentation procedures.

Assessment Conditions

- Competency should be assessed on aircraft and/or simulator using materials, tools and equipment specified in the maintenance manuals and applicable procedures. It is also expected that general and special-purpose tools and ground support equipment would be used where appropriate.
- The unit may be assessed independently or in conjunction with unit MEA603 Remove and install aircraft stores suspension system and components.
- Evidence of transferability of skills and knowledge related to SMS component removal and installation is essential. This is to be established through demonstration of the ability to:
 - render the system safe
 - perform relevant inspections and tests
 - replace components
 - perform appropriate maintenance tasks.
- The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.
- The following conditions of assessment represent the requirements of the ADF and must be rigorously observed.
- A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements and performance criteria of the unit of competency are being achieved under routine supervision on a range of system reconfiguration tasks involving the following SMS components:
 - mission computer
 - armament computer
 - encoder/decoder
 - control unit
 - HUD
 - MFD
- This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide (for details refer to the Companion Volume Assessment Guidelines).
- In addition to evidence provided in the Log of Industrial Experience assessment methods may include questioning and observation in operational or simulated environments.
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

MEA603 Remove and install aircraft stores suspension system components

Modification History

Release 1 - New unit of competency

Application

This unit of competency applies to members of the Australian Defence Force (ADF) who are required to apply explosive ordnance safety and handling procedures, hand skills and use maintenance documentation/publications in the removal and installation of stores suspension system (SSS) components to meet system reconfiguration requirements during the performance of scheduled or unscheduled maintenance. Maintenance may be performed individually or as part of a team.

The unit applies to all aircraft fitted with stores suspension systems.

This unit of competency is part of the Armament Certificate IV training pathway.

This unit is used in workplaces that operate under the airworthiness regulatory systems of the ADF.

Pre-requisite Unit

MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activities
MEA105	Apply quality standards applicable to aviation maintenance processes
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA109	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance
DEFEO101D	Work safely with explosive ordnance

Competency Field

Aviation maintenance

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.	Prepare aircraft for SSS reconfiguration	1.1	SSS reconfiguration task is verified from applicable documentation
		1.2	Aircraft safety devices are checked in accordance with relevant technical publications and manuals
		1.3	Correct SSS component is visually identified for reconfiguration
		1.4	Appropriate tools and ground support equipment are selected in accordance with the task
2.	Remove SSS component	2.1	Firing devices are checked and removed if fitted
		2.2	SSS component is removed from aircraft in accordance with technical publications and manuals while observing all relevant work health and safety (WHS) requirements, including the use of material safety data sheets (MSDS) and items of personal protective equipment (PPE)
		2.3	Protective covers and panels are fitted to aircraft and SSS component in accordance with technical publications and manuals
3.	Install SSS component	3.1	Applicable protective covers and panels are removed from aircraft and SSS component in accordance with technical publications and manuals
		3.2	SSS component is fitted to aircraft in accordance with technical publications and manuals while observing all relevant WHS requirements, including the use of MSDS and items of PPE
4.	Complete and process documentation	4.1	Applicable documentation is completed for reconfigured SSS

- 4.2 Documentation is forwarded to Maintenance Control Section (MCS)

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Assessment Requirements for MEA603 Remove and install aircraft stores suspension system components

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- applying safety procedures relating to aircraft SSS
- applying hand skills and applicable maintenance manuals in the removal and installation of SSS components
- using ground support equipment and test equipment
- determining SSS reconfiguration requirements
- explosive ordnance handling and safety
- manual handling of SSS components.

The underlying skills inherent in this unit should be transferable across a range of aircraft SSS reconfiguration activities. It is essential that assessment confirms the ability to comply with organisational safety requirements and appropriate legislative and regulatory requirements while maintaining SSS systems. The ability to work safely within an explosive ordnance environment, conduct applicable tests and maintain relevant documentation is critical, including checking specifically for:

- failure to check aircraft safety devices are installed
- failure to ensure firing devices checked and removed if fitted
- commencing task prior to initiating documentation
- failure to comply with relevant WHS procedures and policies.
-

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- the aircraft operating and maintenance environment
- aircraft SSS and interfaces with the stores management system and other aircraft systems
- WHS procedures and policies
- explosive ordnance safety and handling procedures
- technical publications and manuals
- hardware and component attachment methods
- system and component test procedures

- technical documentation procedures.

Assessment Conditions

- Competency should be assessed on aircraft and/or simulator using materials, tools and equipment specified in the maintenance manuals and applicable procedures. It is also expected that general and special-purpose tools and ground support equipment would be used where appropriate.
- The unit may be assessed independently or in conjunction with unit MEA602 Remove and install aircraft stores management system components.
- Evidence of transferability of skills and knowledge related to SSS system component removal and installation is essential. This is to be established through demonstration of the ability to:
 - render the system safe
 - perform relevant inspections and tests
 - replace components
 - perform appropriate maintenance tasks.
- The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.
- The following conditions of assessment represent the requirements of the ADF and must be rigorously observed.
- A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements and performance criteria of the unit of competency are being achieved under routine supervision on a range of system reconfiguration tasks involving the following SSS components:
 - bomb release unit
 - pylon
 - missile launcher.
- This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide (for details refer to the Companion Volume Assessment Guidelines).
- In addition to evidence provided in the Log of Industrial Experience assessment methods may include questioning and observation in operational or simulated environments.
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

Assessment Requirements for MEA604 Inspect, test and troubleshoot aircraft stores management systems and components

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- applying all safety procedures relating to aircraft SMS
- applying hand skills and use of applicable maintenance manuals in removal and installation of SMS components
- using ground support equipment and test equipment
- applying logic processes, taking and interpreting measurements, using test equipment and appropriate documentation and manuals to isolate SMS malfunctions
- performing system functional tests and checks to isolate system faults and assess post-maintenance serviceability
- explosive ordnance handling
- manual handling of SMS components.

The underlying skills inherent in this unit should be transferable across a range of aircraft SMS and system component inspection, testing and troubleshooting activities. It is essential that assessment confirms the ability to comply with organisational safety requirements and appropriate legislative and regulatory requirements while maintaining SMS systems. The ability to work safely within an explosive ordnance environment, conduct applicable tests and maintain relevant documentation is critical, including checking specifically for:

- failure to check aircraft safety devices are installed
- failure to ensure firing devices checked and removed if fitted
- commencing task prior to initiating documentation
- failure to comply with relevant WHS procedures and policies.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- the aircraft operating and maintenance environment
- aircraft SMS and interfaces with other aircraft systems
- WHS procedures and policies
- SMS and component test procedures
- explosive ordnance safety and handling procedures

- technical publications and manuals
- hardware and component attachment methods
- technical documentation procedures.

Assessment Conditions

- Competency should be assessed on aircraft and/or simulator using materials, tools and equipment specified in the maintenance manuals and applicable procedures. It is also expected that general and special-purpose tools and ground support equipment would be used where appropriate.
- The unit may be assessed independently or in conjunction with unit MEA605 Inspect, test and troubleshoot aircraft stores suspension systems and components.
- Evidence of transferability of skills and knowledge related to SMS and system component inspection, testing and troubleshooting is essential. This is to be established through demonstration of the ability to:
 - render the system safe
 - perform relevant inspections and tests
 - troubleshoot faults and perform appropriate rectification action.
- The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.
- The following conditions of assessment represent the requirements of the ADF and must be rigorously observed.
- A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements and performance criteria of the unit of competency are being achieved under routine supervision on a range of inspection, testing and troubleshooting tasks involving the following SMS components:
 - mission computer
 - armament computer
 - encoder/decoder
 - control unit
 - HUD
 - MFD.
- This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide (for details refer to the Companion Volume Assessment Guidelines).
- In addition to evidence provided in the Log of Industrial Experience assessment methods may include questioning and observation in operational or simulated environments.
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

| | 3.4 | Corrective action is taken in accordance with technical publications and manuals while observing all relevant WHS requirements, including the use of MSDS and items of PPE |
| | 4.1 | Applicable documentation is completed for SSS component inspection, testing and troubleshooting |
| 4. Complete and process documentation | 4.2 | Completed documentation is forwarded to Maintenance Control Section (MCS) |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- Task verification includes:**
- Maintenance restrictions
 - Aircraft tail number
 - Aircraft entered as unserviceable
 - Nil stores fitted
- Documentation includes:**
- EE500
 - CAMM2 documents
 - SMS documentation
- Safety devices include:**
- Earth lead
 - Aircraft safety pins
 - Aircraft switches
- Technical publications and manuals include:**
- Aircraft publications
 - Maintenance instruction manuals and process specifications
 - Servicing or service bulletins or structural repair manuals
 - Illustrated parts catalogues, aircraft wiring manuals or drawings
 - Tooling, equipment or manufacturer's manuals
 - Standard practices
 - Enterprise aviation regulations and publications
- SSS components include:**
- Bomb release unit
 - Pylon
 - Missile launcher
- Firing devices include:**
- Stores release cartridges
 - Chaff and flares
 - Gun system
 - Missiles
 - Loaded stores
- Checking includes:**
- Visually
 - Physically
- Aircraft preparation**
- Panels opened
 - Ground support equipment and test equipment connected

includes:

Specialist advice is obtained from:

- Subject matter experts
- Manufacturer
- Systems program office

Corrective action includes:

- Repair
- Component replacement

Applicable documentation includes:

- Aircraft documentation
- Stores suspension system component documentation

Procedures and requirements include:

- Industry standard procedures specified by manufacturers, regulatory authorities or the enterprise

Unit Mapping Information

Release 1 – equivalent to MEA605A Inspect, test and troubleshoot aircraft stores suspension systems and components

(The unit was developed from ADF Enterprise unit DDRARM402A Inspect, test and troubleshoot aircraft stores suspension systems and components and is equivalent to it).

Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.education.gov.au/Pages/TrainingDocs.aspx?q=ce216c9c-04d5-4b3b-9bcf-4e81d0950371>

Assessment Requirements for MEA605 Inspect, test and troubleshoot aircraft stores suspension systems and components

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- applying all safety procedures relating to aircraft SSS
- applying hand skills in removal and installation of SSS components
- using ground support equipment and test equipment
- applying system and component knowledge and logical fault-finding procedures and applicable maintenance data in the troubleshooting of SSS and component faults
- performing system functional tests and checks to isolate system faults and assess post-maintenance serviceability
- explosive ordnance safety and handling procedures
- manual handling of SMS components.

The underlying skills inherent in this unit should be transferable across a range of aircraft SSS and system component inspection, testing and troubleshooting activities. It is essential that assessment confirms the ability to comply with organisational safety requirements and appropriate legislative and regulatory requirements while maintaining SSS. The ability to work safely within an explosive ordnance environment, conduct applicable tests and maintain relevant documentation is critical, including checking specifically for:

- failure to check aircraft safety devices are installed
- failure to ensure firing devices checked and removed if fitted
- commencing task prior to initiating documentation
- failure to comply with relevant WHS procedures and policies.
-

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- the aircraft operating and maintenance environment
- aircraft SSS and component operation and interfaces with other aircraft systems
- hardware and component attachment methods
- WHS procedures and policies
- explosive ordnance safety and handling procedures

- technical publications and manuals
- technical documentation procedures.

Assessment Conditions

- Competency should be assessed on aircraft and/or simulator using materials, tools and equipment specified in the maintenance manuals and applicable procedures. It is also expected that general and special-purpose tools and ground support equipment would be used where appropriate.
- The unit may be assessed independently or in conjunction with unit MEA604 Inspect, test and troubleshoot aircraft stores management systems and components.
- Evidence of transferability of skills and knowledge related to SSS and component inspection, testing and troubleshooting is essential. This is to be established through demonstration of the ability to:
 - render the system safe
 - perform relevant inspections and tests
 - troubleshoot faults and perform appropriate rectification action.
- The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.
- The following conditions of assessment represent the requirements of the ADF and must be rigorously observed.
- A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements and performance criteria of the unit of competency are being achieved under routine supervision on a range of inspection, testing and troubleshooting tasks involving the following SSS components:
 - bomb release unit
 - pylon
 - missile launcher.
- This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide (for details refer to the Companion Volume Assessment Guidelines).
- In addition to evidence provided in the Log of Industrial Experience assessment methods may include questioning and observation in operational or simulated environments.
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

ME A701 Produce aeronautical engineering related graphics

Modification History

Release 1 - New unit of competency

Application

This unit of competency applies to aircraft structure and to aircraft systems products, projects, and related system modifications. It is suitable for people working in aeronautical related design, drafting and maintenance support at the paraprofessional level.

The unit covers the application of graphical techniques for aeronautical engineering related purposes. Graphics techniques include sketching, computer graphics and the application of drawing standards.

This unit is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

ME A137	Write aviation technical publications
MEM30007A	Select common engineering materials
MEM30012A	Apply mathematical techniques in manufacturing, engineering or related situations

Competency Field

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Review the fundamentals of engineering graphics	1.1 Review uses for aeronautical graphics 1.2 Review engineering drawing standards

- | | | |
|--------------------------------|-----|---|
| for aeronautical applications | 1.3 | Review graphical imaging or modelling techniques and conventions |
| | 1.4 | Review conventional representations of structure and of mechanical, hydraulic and pneumatic features and components, including related electrical and electronic control circuits |
| | 1.5 | Review computer-aided design (CAD) and other related software for currency and relevance |
| | 1.6 | Check and determine relevance of work health and safety (WHS) and regulatory requirements, codes of practice, risk assessment and registration requirements for graphical representation tasks |
| | 1.7 | Confirm the availability and features of a range of standards related to aircraft structure and aeronautical system and component design, maintenance and modification |
| | 1.8 | Review typical criteria for aeronautical designs |
| 2. Apply aeronautical graphics | 2.1 | Determine engineering graphics required by aeronautical applications |
| | 2.2 | Apply relevant standards |
| | 2.3 | Represent aircraft structure and aeronautical components and systems with sketching and computer graphical techniques, including orthogonal, three-dimensional imaging, wiring diagrams, circuit diagrams and system schematic drawings |
| | 2.4 | Determine and apply required dimensioning, tolerancing for limits and fits, surface finish, weld symbols, electrical, electronic and other required graphical convention information appropriate to aeronautical engineering applications |
| | 2.5 | Seek technical and professional assistance or clarification of design information as required |
| | 2.6 | Confirm final graphical representations with professional engineering staff and other stakeholders, including making any required adjustments |

- | | | |
|----|---|---|
| | 2.7 | Engage appropriate licensed technical and professional assistance for advice as required |
| 3. | Provide final drawings, files and documents | 3.1 Provide documentation, graphics, data files and clearances according to job requirements and regulatory and enterprise drawing management system and procedures |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Criteria for aeronautical designs include:

- Function
- Design authority regulatory requirements
- Aircraft design specifications
- Application of configuration management (CM) and/or integrated logistic support (ILS) requirements

Configuration management (CM)

- CM is a process for control and documentation of the design and development process and for the management of system, component and software throughout the service life

Integrated logistic support (ILS)

- ILS is an integrated approach to the management of logistic disciplines originally developed for the management of military systems from design concept to final disposal at life-of-type. It covers:
 - reliability engineering, maintainability engineering and maintenance planning
 - supply and support
 - support and test equipment
 - manpower and personnel
 - training and training support
 - technical data and publications
 - computer resources support
 - facilities
 - packaging, handling, storage and transportation

Features, functions and context of engineering graphics include:

- design interface
- Uses of graphics for purposes, such as:
 - design specifications
 - production specifications
 - maintenance procedures
 - technical specifications and descriptions
- Graphical representation techniques, including orthogonal, 2-D and 3-D modelling, isometric and mechanical perspective, dimensioning, limits and fits, welding and other standard symbols
- Role of WHS and regulatory requirements, codes of practice, risk assessment and registration requirements
- Availability and features of a range of standards related to aircraft structure and system design, maintenance and modification
- Typical criteria for aeronautical designs
- Software developments
- Current graphical methods compared with traditional methods
- Emerging developments in graphics and related engineering software

Aeronautical systems and components include:

- Structure and structural components
- Mechanical systems and components
- Hydraulic systems and components
- Pneumatic systems and components
- Fuel systems and components
- Power plants (engines and engine systems and components)
- Standard fasteners and locking systems
- Electrical
- Electronic
- Automatic flight and automatic engine control interface

Appropriate technical and professional assistance includes:

- Assistance from individuals with Civil Aviation Safety Authority (CASA) maintenance certification licenses or those with supervisory authorisations in the Australian Defence Force (ADF) regulatory system
- Professional support from engineers employed within:
 - organisations with CASA design, continuing airworthiness management or maintenance approvals
 - approved engineering organisations under the ADF regulatory system
- Engineers employed within organisations recognised by overseas airworthiness organisations

WHS, regulatory requirements and enterprise procedures include:

- WHS Acts and regulations
- Relevant standards
- Industry codes of practice
- Risk assessments
- Registration requirements
- Safe work practices
- State and territory regulatory requirements applying to electrical work

Aviation regulatory requirements include:

- Civil Aviation Safety Regulations (CASRs)
- AAP7001.053 ADF Technical Airworthiness Management Manual
- Overseas airworthiness authorities where applicable e.g. Federal Aviation Administration, Transport Canada, European Aviation Safety Agency

Relevant standards include:

- AS 1100.101-1992 Technical drawing – General principles
- AS 1102.101-1989 Graphical symbols for electrotechnical documentation - General information and general index
- AS/NZS ISO 31000 Set:2013 Risk Management Set
- DEF(AUST) 5085B Engineering Drawing – Acquisition and Preparation for Defence Equipments Part 1 – Acquisition Requirements
- DEF(AUST) 5085B Engineering Drawing – Acquisition and Preparation for Defence Equipments Part 2 – Preparation Requirements
- FAA 8083-30 Chapter 2 Aircraft Drawings
- British Defence Standard 00-970 Design and Airworthiness Requirements for Service Aircraft
- US Military Specifications and Standards relevant to aircraft design
- ADF AAP7001.054 Airworthiness Design Requirements Manual
- FAR Part 23 Airworthiness Standards for Airplanes in the Normal, Utility, Aerobatic or Commuter Categories
- FAR Part 25 Airworthiness Standards for Airplanes in the Transport Category
- EASA CS-23 Certification Specifications for Aeroplanes in the Normal, Utility, Aerobatic or Commuter Categories
- EASA CS-25 Certification Specifications for Airplanes in the Transport Category
- CASA AC 21-99 Aircraft Wiring and Bonding
- FAA AC 43-13-1B Acceptable Methods, Techniques and

Practices – Aircraft Inspection and Repair

Unit Mapping Information

Assessment Requirements for MEA701 Produce aeronautical engineering related graphics

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- reviewing aeronautical engineering applications for required features, functions and context of aeronautical engineering graphics
- developing orthographic, isometric and other 3-D graphical representations and techniques for structure, mechanical, hydraulic, pneumatic, power plant, electrical and electronic system representation
- representing aeronautical components and systems using sketching and computer graphics with regard to the following:
 - structure and structural components
 - mechanical systems and components
 - hydraulic systems and components
 - pneumatic systems and components
 - fuel systems and components
 - power plants
 - standard fasteners and locking systems
 - electrical
 - electronic
- representing aeronautical components and features using a comprehensive range of standard conventions and graphical techniques
- representing a range of aeronautical systems using standard graphical representations for wiring, circuit and schematic diagrams
- engaging appropriate technical and professional assistance for advice as required
- reporting results of review and the application of graphics techniques and providing documentation, images and files according to job, regulatory and enterprise procedures.
-

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- uses for graphics, such as:

- design specifications
- aircraft maintenance procedures
- modification orders and instructions
- technical specifications and descriptions
- physical arrangement of mechanical, hydraulic, pneumatic, power plant, and associated electrical and electronic systems and components
- diagrammatic layouts of electrical and electronic circuits
- aeronautical system schematic diagrams
- graphical representation techniques
- role of WHS and regulatory requirements, codes of practice, risk assessment and registration requirements relevant to aeronautical applications
- availability and features of standards related to aeronautical structure, power plants, systems and component, design, maintenance and modification
- typical criteria for aeronautical designs
- sketching techniques
- orthographic and 3-D representations
- hole basis, shaft basis and keyway tolerances and fits
- dimensioning conventions
- representing aeronautical components and systems using sketching and computer graphics
- standard conventions and graphical techniques as specified in standards, such as those listed in the Range of Conditions:
 - hole basis, shaft basis and keyway tolerances and fits
 - dimensioning, tolerancing for limits and fits
 - surface finish
 - weld symbols
 - webs, cross sections and cutting planes
 - chain drives, gear sets, pulley and belt drives
 - threads, fasteners and springs
 - shafts, keyways and splines
 - structural sections
 - surface finishes and welds
 - webs, cross sections, cutting planes
 - electric motors and electrically operated fluid power actuators
 - electrical, electronic, electro fluid (hydraulic and pneumatic) controls
- representations of aeronautical structure, systems and components, including:
 - structure and structural components
 - mechanical systems and components
 - hydraulic systems and components
 - pneumatic systems and components
 - fuel systems and components
 - power plants (engines and engine systems and components)

- standard fasteners and locking systems
- electrical
- electronic
- automatic flight and automatic engine control interface
- current and traditional methods of documentation generation and control:
 - computer library files compared to the use of reference charts and catalogue information
 - generation of orthogonal images from models
 - manual drawing
 - future developments in graphics and related engineering software
- worksite procedures and regulatory requirements for the processing and filing of graphics, specifications and operating and maintenance instructions/manuals, including CM and ILS requirements.
-

Assessment Conditions

- This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, then a simulated working environment must be used that reflects realistic workplace situations and conditions. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application.
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.
- Assessors must be satisfied that the candidate can competently and consistently:
 - review features, functions and context of aeronautical engineering graphics
 - develop orthographic, isometric and other 3-D graphical representations and techniques for mechanical, fluid, electrical and electronic system representation
 - represent aeronautical components and assemblies using sketching and computer graphics
 - represent aeronautical components and features using a comprehensive range of standard conventions and graphical techniques
 - represent a range of aeronautical systems using standard graphical representations for wiring diagrams and system schematic diagrams
 - engage appropriate technical and professional assistance for advice as required
 - report results of review and the application of graphics techniques and provide documentation, images and files

- maintain accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge.
- Assessment may be in conjunction with assessment of other units of competency where required.
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

ME A703 Apply aeronautical modelling for computer-aided engineering

Modification History

Release 1 - New unit of competency

Application

This unit of competency applies to modelling of aeronautical systems and components for civil or military aircraft. It is suitable for people working as design drafters and those pursuing paraprofessional careers and qualifications in aeronautical engineering at the paraprofessional level.

This unit of competency covers the application of aeronautical modelling techniques for aircraft, aircraft structure, systems and component design, modification or maintenance purposes. It includes consideration of the computer-aided engineering (CAE) purposes for which the model is required, such as initial design, modification design or maintenance and as a basis for generating orthogonal drawings and wiring, circuit and schematic diagrams.

This unit is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

ME A701 Produce aeronautical engineering related graphics

Competency Field

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes. Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|--|---|
| 1. Identify the fundamentals of aeronautical | 1.1 Investigate applications for aeronautical modelling |
| | 1.2 Identify sustainability issues related to modelling |

- | | | |
|-------------------------------|-----|--|
| engineering modelling | 1.3 | Identify work health and safety (WHS) and regulatory requirements related to modelling processes and materials |
| | 1.4 | Identify the model parameters, form, function and features, virtual or physical |
| | 1.5 | Identify processes required which may include those for generating graphics, post-processing and physical modelling |
| | 1.6 | Identify technical and professional assistance for advice as required |
| 2. Develop aeronautical model | 2.1 | Generate initial graphical model and adjust in consultation with stakeholders in accordance with procedures or agreement |
| | 2.2 | Prepare model for intended purpose |
| | 2.3 | Use model for purpose and complete investigative analysis or produce physical model |
| | 2.4 | Evaluate model against design criteria and with stakeholders and make adjustments as required |
| | 2.5 | Engage appropriate technical and professional assistance for advice as required |
| 3. Finalise model | 3.1 | Report and demonstrate results |
| | 3.2 | Provide documentation, instructions, models and files as required |
| | 3.3 | Obtain sign-off |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional

contexts) are included.

Models include:

- Virtual, such as computer generated solids models
- Physical models developed from the virtual model data
- Software models

Model purpose includes:

- Aircraft design, including performance and power required
- Component design (structural, mechanical, hydraulic and pneumatic)
- System design and performance simulation (mechanical, hydraulic and pneumatic)

Features, functions and context of engineering mechanical modelling include:

- Techniques used for mechanical modelling
- Sustainability implications of modelling
- WHS and regulatory requirements related to modelling processes and materials
- Model parameters, form, function and features, virtual or physical
- Processes required which may include those for generating graphics, post-processing, and physical modelling
- Required licensed technical and professional assistance

Post-processor

- A post-processor or code generator converts programmed instructions generated by computer-aided manufacture (CAM) software or computer-aided design (CAD) package into computer numerically controlled (CNC) program code to control a machine tool

Post-processing model for analysis or physical modelling includes:

- Setting up component, system and system software models
- Processing dimensional data to create 2-D or 3-D code for CAM operations, such as printed circuit board manufacture

Rapid prototyping processes include:

- Selective laser sintering (SLS) which uses thermoplastics and metal powders
- Fused deposition modelling (FDM) which uses thermoplastics and eutectic metals
- Stereolithography (SL) which uses a photopolymer
- Laminated paper manufacturing (LOM) which uses paper
- Electron beam melting (EBM) which uses titanium alloys
- 3-D printing (3DP) which uses a variety of materials

Criteria for aeronautical designs include:

- Safety and risk
- Function

Appropriate technical and professional assistance includes:

- Aesthetics
- Compliance with relevant regulations and standards
- Manufacturability and maintainability
- Marketability
- Sustainability:
 - social, economic and environmental
 - material and energy resources
- Cost constraints
- Ergonomics, anthropometrics and physiology
- Facilities, plant and skills available
- Assistance from individuals with CASA maintenance certification licenses or those with supervisory authorisations in the ADF regulatory system
- Professional support from engineers employed within:
 - organisations with CASA design, continuing airworthiness management or maintenance approvals
 - approved engineering organisations under the ADF regulatory system
- Engineers employed within organisations recognised by overseas airworthiness organisations

WHS, regulatory requirements and enterprise procedures include:

- WHS Acts and regulations
- Relevant standards
- Industry codes of practice
- Risk assessments
- Registration requirements
- Safe work practices
- State and territory regulatory requirements applying to electrical work
- Civil Aviation Safety Regulations (CASRs)
- AAP7001.053 ADF Technical Airworthiness Management Manual
- Overseas airworthiness authorities where applicable e.g. Federal Aviation Administration, Transport Canada, European Aviation Safety Agency

Relevant standards include:

- AS 1100.101-1992 Technical drawing – General principles
- AS 1102.101-1989 Graphical symbols for electrotechnical documentation - General information and general index
- AS/NZS ISO 31000 Set:2013 Risk Management Set
- British Defence Standard 00-970 Design and Airworthiness Requirements for Service Aircraft

- US Military Specifications and Standards relevant to aircraft design
- ADF AAP7001.054 Airworthiness Design Requirements Manual
- FAR Part 23 Airworthiness Standards for Airplanes in the Normal, Utility, Aerobatic or Commuter Categories
- FAR Part 25 Airworthiness Standards for Airplanes in the Transport Category
- EASA CS-23 Certification Specifications for Aeroplanes in the Normal, Utility, Aerobatic or Commuter Categories
- EASA CS-25 Certification Specifications for Airplanes in the Transport Category
- CASA AC 21-99 Aircraft Wiring and Bonding
- FAA AC 43-13-1B Acceptable Methods, Techniques and Practices – Aircraft Inspection and Repair
- Lumped parameter model
- Empirical, random data tested model
- Finite element analysis (FEA) software
- Model based design

Modelling and related software includes:

Unit Mapping Information

Release 1 – new unit based on and equivalent to MEM09153A Apply computer-aided modelling and data management techniques to aeronautical engineering designs

Assessment Requirements for MEA703 Apply aeronautical modelling for computer-aided engineering

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- investigating the uses of aeronautical models for aircraft, structure, aircraft systems and components
- reviewing features, functions and context of aeronautical modelling
- comparing available software, functions and features
- communicating, participating and negotiating with:
 - stakeholders, team, cross-function support groups and experts
 - appropriate licensed technicians and professionals
- performing modelling using a comprehensive range of techniques, such as:
 - creating and manipulating 3-D entities
 - using library files and adaptations
 - top down system simulation
- comparing available software, functions and features
- creating dimensioned orthographic projections from model
- extracting dimensional properties from model
- using post-processing model for analysis or physical modelling
- modelling aeronautical component and system hardware and software
- finalising modelling by:
 - completing work
 - gaining approval and commissioning work
 - providing documentation and reports as required
 - obtaining sign-off.
-

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- engineering and market context for aeronautical component and systems modelling:
 - relative speed compared to traditional methods related to quantities

- market demand speed, standardisation, quality and flexibility through data
- sustainability implications of modelling: economic, social and environmental
- aeronautical models, such as:
 - aircraft design, including performance and power requirements
 - aircraft structure and components
 - mechanical systems and components
 - hydraulic systems and components
 - pneumatic systems and components
 - flight control systems and components
 - electrical and electronic control interfaces
- software functions and features:
 - modelling software
 - model analysis software (e.g. FEA)
 - post-processor, CNC/CAM and rapid prototyping
 - regulations relating to the design of aeronautical software
- model creation techniques, such as:
 - using and manipulating coordinate systems
 - creating 3-D entities, ruled and revolved surfaces
 - creating solids, editing and combining solids
 - manipulating entities and solids
 - library files
 - manipulations of solids and library files
 - 3-D graphics from models, including rotated views and sections
 - dimensioned orthographic representations from models
 - top down system simulation
 - construction of artwork for printed circuit boards
- typical modelling processes, including:
 - computer modelling
 - post-processing
 - prototyping and model manufacture
- virtual model options, such as automated systems simulation
- physical modelling options, such as:
 - post-processing to create NC data files to CNC circuit board assembly
 - rapid prototyping options
- WHS requirements:
 - WHS Acts and regulations, which recognise that stakeholders in workplace activities include the workforce exposed to worksite conditions, materials and processes of the activity and also recognise the broader community exposed to environmental effects of the activity. Competence in designing for and implementation of the Act, regulations, codes, directives, risk management and standards is required by other units

- relevant standards that give guidance to complying with the WHS Act
- codes of practice, risk assessment and registration requirements
- requirement for licensed technical and professional services
- modelling compared to traditional methods, such as:
 - pen and pencil graphics compared to wire frame, surface and solid models
 - computer animations compared to transparent overlay mobiles to test clearances and motions
 - solid models compared to isometric representations
 - computer library files compared to the use of reference charts and catalogue information
- future developments in modelling and related engineering software:
 - new developments in computer aided engineering
 - dynamic response of models
 - new developments in rapid prototyping and manufacturing
- animations and simulations.

Assessment Conditions

- This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, then a simulated working environment must be used that reflects realistic workplace situations and conditions.
- The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application.
- Assessment may be applied under project related conditions (real or simulated) and require evidence of process.
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.
- Assessors must be satisfied that the candidate competently and consistently:
 - review features, functions and context of aeronautical modelling
 - compare available software, functions and features
 - communicate, participate and negotiate with stakeholders, team, cross-function support groups and experts, appropriate licensed technicians and professionals
 - model using a comprehensive range of techniques
 - create dimensioned orthographic projections from model
 - extract dimensional properties from model
 - post-process model for analysis or physical modelling
 - complete work, commission and gain approval, document and report, obtain sign-off

- identify future developments in modelling.
- Assessment may be in conjunction with assessment of other units of competency where required.
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

ME A704 Apply avionic modelling for computer-aided engineering

Modification History

Release 1 - New unit of competency

Application

This unit of competency applies to modelling of avionic systems and components for civil or military aircraft. It is suitable for people working as design drafters and those pursuing paraprofessional careers and qualifications in avionics.

The unit covers the application of avionic modelling techniques for avionic component or systems design or maintenance purposes. It includes consideration of the computer-aided engineering (CAE) purposes for which the model is required, such as electrical or electronic component or system, printed circuit board manufacture and assembly and as a basis for generating orthogonal drawings and wiring, circuit and schematic diagrams.

This unit is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

ME A702 Produce avionic engineering related graphics

Competency Field

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|---|--|
| 1. Identify the fundamentals of avionic engineering modelling | 1.1 Investigate applications for avionic modelling |
| | 1.2 Identify sustainability issues related to modelling |
| | 1.3 Identify work health and safety (WHS) and regulatory requirements related to modelling processes and |

- materials
- 1.4 Identify the model parameters, form, function and features, virtual or physical
 - 1.5 Identify processes required which may include those for generating graphics, post-processing, and physical modelling
 - 1.6 Identify licensed technical and professional assistance for advice as required
2. Develop avionic model
- 2.1 Generate initial graphical model and adjust in consultation with stakeholders in accordance with procedures or agreement
 - 2.2 Prepare model for intended purpose
 - 2.3 Use model for purpose and complete investigative analysis or produce physical model
 - 2.4 Evaluate model against design criteria and with stakeholders and make adjustments as required
 - 2.5 Engage appropriate technical and professional assistance for advice as required
3. Finalise model
- 3.1 Report and demonstrate results
 - 3.2 Provide documentation, instructions, models and files as required
 - 3.3 Obtain sign-off

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- Models include:**
- Virtual, such as computer generated solids models
 - Physical models developed from the virtual model data
 - Software models
- Model purpose includes:**
- Component hardware design
 - System design and performance simulation
 - System software design
 - Printed circuit board model
- Features, functions and context of engineering modelling include:**
- Techniques used for mechanical modelling
 - Sustainability implications of modelling
 - WHS and regulatory requirements related to modelling processes and materials
 - Model parameters, form, function and features, virtual or physical
 - Processes required which may include those for generating graphics, post-processing, and physical modelling
 - Required technical and professional assistance
- Post-processor**
- A post processor or code generator converts programmed instructions generated by computer-aided manufacture (CAM) software or computer-aided design (CAD) package into computer-numerically controlled (CNC) program code to control a machine tool
- Post-processing model for analysis or physical modelling includes:**
- Setting up component, system and system software models
 - Processing dimensional data to create 2-D or 3-D code for CAM operations, such as printed circuit board manufacture
- Rapid prototyping processes include:**
- A variety of rapid prototyping processes are available, including:
 - selective laser sintering (SLS) which uses thermoplastics and metal powders
 - fused deposition modeling (FDM) which uses thermoplastics and eutectic metals
 - stereolithography (SLA) which uses a photopolymer
 - laminated paper manufacturing (LOM) which uses paper
 - electron beam melting (EBM) which uses titanium alloys
 - 3-D printing (3DP) which uses a variety of materials
- Criteria for avionic designs include:**
- Safety and risk
 - Function
 - Aesthetics
 - Compliance with relevant regulations and standards

Appropriate technical and professional assistance includes:

- Manufacturability and maintainability
- Marketability
- Sustainability:
 - social, economic and environmental
 - material and energy resources
- Cost constraints
- Ergonomics, anthropometrics and physiology
- Facilities, plant and skills available
- Assistance from individuals with CASA maintenance certification licenses or those with supervisory authorizations in the ADF regulatory system

Assessment Requirements for MEA704 Apply avionic modelling for computer-aided engineering

Modification History

Release 1 - New unit of competency

Performance Evidence

- Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:
- investigating the uses of avionic models for hardware, system and software design
- reviewing features, functions and context of avionic modelling
- comparing available software, functions and features
- communicating, participating and negotiating with:
 - stakeholders, team, cross-function support groups and experts
 - appropriate licensed technicians and professionals
- performing modelling using a comprehensive range of techniques, such as:
 - creating and manipulating 3-D entities
 - using library files and adaptations
 - top down system simulation
- comparing available software, functions and features
- creating dimensioned orthographic projections from model
- extracting dimensional properties from model
- using post-processing model for analysis or physical modelling
- modelling avionic component and system hardware and software
- finalising modelling by:
 - completing work
 - gaining approval and commissioning work
 - providing documentation and reports as required
 - obtaining sign-off.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- engineering and market context for avionic component and systems modelling:
 - relative speed compared to traditional methods related to quantities
 - market demand speed, standardisation, quality and flexibility through data
- sustainability implications of modelling: economic, social and environmental

- avionic component models, including:
 - electric motors and electrically operated fluid power actuators
 - printed circuit boards
 - electrical and electronic systems components
 - chain drives, gear sets, pulley and belt drives
 - structural sections for component casings, racks and mounts to the aircraft structure
- avionic systems, including:
 - aircraft electrical power generation and distribution
 - control and indication for mechanical, fluid power and flight control systems
 - aircraft instrument systems
 - radio communication and navigation
 - pulse
 - data communications, including in-flight entertainment
- software functions and features:
 - modelling software
 - model analysis software (e.g. FEA)
 - post-processor, CNC/CAM and rapid prototyping
 - regulations relating to the design of avionic software
- model creation techniques, including:
 - using and manipulating coordinate systems
 - creating 3-D entities, ruled and revolved surfaces
 - creating solids, editing and combining solids
 - manipulating entities and solids
 - library files
 - manipulations of solids and library files
 - three dimensional graphics from models, including rotated views and sections
 - dimensioned orthographic representations from models
 - top down system simulation
 - construction of artwork for printed circuit boards
- typical modelling processes, including:
 - computer modelling
 - post-processing
 - prototyping and model manufacture
- virtual model options, such as automated systems simulation
- physical modelling options, including:
 - post-processing to create NC data files to CNC circuit board assembly
 - rapid prototyping options
- WHS requirements:

- WHS Act and regulation, which recognise that stakeholders in workplace activities include the workforce exposed to worksite conditions, materials and processes of the activity and also recognise the broader community exposed to environmental effects of the activity. Competence in designing for and implementation of the Act, regulations, codes, directives, risk management and standards is required by other units
- relevant standards that give guidance to complying with the WHS Act
- codes of practice, risk assessment and registration requirements
- requirement for licensed technical and professional services
- modelling compared to traditional methods, such as:
 - pen and pencil graphics compared to wire frame, surface and solid models
 - computer animations compared to transparent overlay mobiles to test clearances and motions
 - solid models compared to isometric representations
 - computer library files compared to the use of reference charts and catalogue information
- future developments in modelling and related engineering software:
 - new developments in computer aided engineering
 - dynamic response of models
 - new developments in rapid prototyping and manufacturing
- animations and simulations.

Assessment Conditions

- This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, then a simulated working environment must be used that reflects realistic workplace situations and conditions.
- The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application.
- Assessment may be applied under project related conditions (real or simulated) and require evidence of process.
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.
- Assessors must be satisfied that the candidate competently and consistently:
 - review features, functions and context of avionic modelling
 - compare available software, functions and features
 - communicate, participate and negotiate with stakeholders, team, cross-function support groups and experts, appropriate licensed technicians and professionals
 - model using a comprehensive range of techniques

- create dimensioned orthographic projections from model
- extract dimensional properties from model
- post-process model for analysis or physical modelling
- complete work, commission and gain approval, document and report, and obtain sign-off
- identify future developments in modelling.
- Assessment may be in conjunction with assessment of other units of competency where required.
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

MEA705 Apply basic scientific principles and techniques in aeronautical engineering situations

Modification History

Release 1 - New unit of competency

Application

This unit of competency requires application of basic aeronautical scientific principles and techniques as a member of a design and development team or similar in support of the design and development of aeronautical applications, or within the engineering department of an aircraft maintenance organisation.

Applications include identifying the range of basic aeronautical scientific principles and techniques relevant to aeronautical engineering, selecting aeronautical principles and techniques for particular applications, applying aeronautical principles and techniques to engineering tasks and quoting results appropriately.

This unit is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

MEM23004A Apply technical mathematics

Competency Field

Aeronautical engineering

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes. Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|---|--|
| 1. Research and identify the range of basic scientific principles | 1.1 Research and report on the basic scientific principles relating to aeronautical engineering from appropriate sources of information and examination of |
|---|--|

	and techniques relevant to aeronautical engineering		applications
		1.2	Identify the basic aeronautical techniques and associated technologies, software and hardware required to implement scientific principles relating to aeronautical engineering situations
2.	Select basic aeronautical scientific principles and techniques relevant to particular aeronautical engineering applications	2.1	Select the relevant basic aeronautical scientific techniques and principles for particular aeronautical engineering situations
		2.2	Select the relevant basic aeronautical techniques and associated technologies, software and hardware for particular aeronautical engineering situations
3.	Apply the relevant basic aeronautical scientific principles and techniques appropriately	3.1	Apply the basic aeronautical scientific principles in a consistent and appropriate manner to obtain any required solution
		3.2	Use appropriate calculations and coherent units in the solution of engineering calculations
		3.3	Use significant figures in engineering calculations
		3.4	Apply the basic aeronautical techniques and associated technologies, software and hardware in a consistent and appropriate manner to obtain required solutions
4.	Quote the results of the application of the basic aeronautical scientific principles and basic techniques correctly	4.1	Quote the solution for applications involving engineering calculations in an appropriate style
		4.2	Quote the solution for applications not involving engineering calculations in an appropriate style

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Sources of information include:

- Reference texts
- Manufacturer catalogues and industry magazines
- International aerospace organisation publications
- Websites
- Use of phone, email and fax information gathering

Aeronautical engineering refers to:

- The engineering discipline concerned with the conceptual development, research, design, manufacture, implementation, installation, commissioning and maintenance of aerospace mechanical, hydraulic, pneumatic, fuel and fire products, processes, systems or services for civil and military applications

Relevant basic aeronautical scientific techniques and principles involves:

- The application of appropriate basic techniques (see below) supported by mathematical skills and introductory knowledge of scientific principles to design, manufacturing, commissioning and maintenance related tasks and projects relating to:
 - metal and composite structure
 - aerodynamic loads
 - stability, control and performance
 - mechanical systems and related components
 - hydraulic systems and related components
 - pneumatic systems and related components
 - air cycle air conditioning and pressurisation systems and related components
 - power plant systems and components
 - the application and interfacing of electrical and electronic system control
- The applications may require the use of one or two basic aeronautical scientific principles together with a fundamental mathematical calculation leading to process, resources and system choices from a limited range of options
- Basic techniques include:
 - basic hand and power tool operations
 - machining
 - fitting
 - welding
 - moulding
 - fabricating
 - wiring
 - programming techniques

Unit Mapping Information

Assessment Requirements for MEA705 Apply basic scientific principles and techniques in aeronautical engineering situations

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- selecting appropriate basic aeronautical scientific principles to suit specific applications
- selecting appropriate basic aeronautical techniques and associated technologies, software and hardware to suit specific applications
- applying basic aeronautical scientific principles to particular engineering situations
- applying and manipulate appropriate formulas for applications involving engineering calculations
- applying appropriate calculations to engineering situations
- checking the validity of equations in using dimensional analysis
- applying basic aeronautical techniques and associated technologies, software and hardware in a manner appropriate to the application and identified scientific principles
- referring solutions to the original aim of the application
- quoting solutions in appropriate units, using appropriate significant figures
- quoting limitations of solutions, due to assumptions, scientific principles and techniques used
- presenting solutions referring to the original aim of the application.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- basic aeronautical scientific principles, including:
 - statics, including analysis and application of:
 - forces and moments of forces
 - systems of concurrent and non-concurrent forces
 - dry sliding friction
 - dynamics, including analysis and application of:
 - Newton's Laws
 - kinematics and kinetics of uniformly accelerated linear motion
 - kinematics and kinetics of uniformly accelerated rotation

- curvilinear motion and centrifugal force
- work, energy, power and torque
- mechanical advantage and efficiency
- strength of materials:
 - axial tension and compression
 - direct shear
 - bolted, riveted, bonded and welded connections
 - shear in beams
 - bending stresses and bending deflections (by standard formulas only)
 - torsion
- aerodynamics:
 - Bernoulli's Theorem
 - the atmosphere
 - aerodynamic forces (lift, drag, weight and thrust)
 - stability and control (to a level not requiring the application of calculus)
 - airscrews and propulsion (to a level not requiring the application of calculus)
 - aircraft performance (to a level not requiring the application of calculus)
- fluid mechanics:
 - properties of fluids, including mineral and synthetic hydraulic fluids
 - fluid statics, Archimedes' Principle and Pascal's Principle
 - fluid flow – continuity and energy conservation
 - fluid power – pumps
- thermodynamics:
 - heat transfer principles (conduction, convection and radiation)
 - perfect gas laws
 - kinetic theory of gases
 - laws of thermodynamics
- control concepts including closed and open loop control
- electricity and electronics:
 - basic electrical concepts
 - Ohm's Law
 - Kirchhoff's Current and Voltage Laws
 - basic DC circuits
 - basic power supply, transformer, rectifier, filter and regulator
 - PLC concepts – I/O, timing, counting, programming
 - electronic devices (discrete) – resistors, diodes, capacitors, inductors, transistors and rectifiers
 - microprocessor concepts
- light, sound and vibration:
 - wave behavior – standing vs travelling waves, transverse and longitudinal

- light – reflection, absorption, refraction, diffraction, spectrum, infrared, visible, ultraviolet, transmission medium and engineering applications
- sound – pitch, frequency, intensity (power), decibel scale, ‘noise dose’, spectrum, infrasound, audible, ultrasound, speed, natural frequency, resonance, transmission medium and engineering applications
- vibration – sources, balancing, shaft alignment, measurement, damping and engineering applications
- basic aeronautical techniques and related technologies, software and hardware associated with implementing scientific principles in aeronautical engineering solutions
- the applicability and limitations of basic aeronautical scientific principles
- the applicability and limitations of basic aeronautical techniques and associated technologies, software and hardware
- appropriateness of calculations
- fundamental and derived quantities
- common systems of units
- the procedure for converting between systems of units
- common prefixes used with units and their values
- the procedure for carrying out dimensional analysis
- the concept of significant figures
- the uncertainty of computations based on experimental data
- the procedures for determining the significance of figures in calculations
- the procedures for estimating errors in derived quantities.

Assessment Conditions

- This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, then a simulated working environment must be used that reflects realistic workplace situations and conditions.
- The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application.
- Assessment may be applied under project related conditions (real or simulated) and require evidence of process.
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.
- Assessors must be satisfied that the candidate can competently and consistently:
 - identify and explain the application of basic scientific principles and engineering techniques to aeronautical engineering situations

- for given aeronautical engineering situations, identify and apply the relevant basic scientific principles and techniques
- perform necessary calculations using appropriate applications and evaluate solutions
- document appropriately the outcome of application of basic scientific principles and techniques to given aeronautical engineering situations.
- Assessment may be in conjunction with assessment of other units of competency where required.
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

Release 1 - New unit of competency

Application

This unit of competency requires application of basic avionic scientific principles and techniques as a member of a design and development team or similar in support of the design and development of avionic applications, or as a member of a maintenance organisation engineering department.

Applications include identifying the range of basic avionic scientific principles and techniques relevant to avionic engineering, selecting avionic principles and techniques for particular applications, applying avionic principles and techniques to engineering tasks, and quoting results appropriately.

This unit is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

MEM23004A Apply technical mathematics

Competency Field

Avionic engineering

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|----|-----------------------|-----|---|
| 1. | Research and identify | 1.1 | Research appropriate sources of information |
|----|-----------------------|-----|---|

the range of basic scientific principles and techniques relevant to avionic engineering	1.2	Examine applications and report on the basic scientific principles relating to avionic engineering
	1.3	Identify basic avionic techniques and associated technologies, software and hardware required to implement scientific principles relating to avionic engineering situations
2. Select basic avionic scientific principles and techniques relevant to particular avionic engineering applications	2.1	Select the relevant basic avionic scientific techniques and principles for particular avionic engineering situations
	2.2	Select the relevant basic avionic techniques and associated technologies, software and hardware for particular avionic engineering situations
3. Apply the relevant basic avionic scientific principles and techniques	3.1	Apply the basic avionic scientific principles in a consistent and appropriate manner to obtain any required solution
	3.2	Use appropriate calculations and coherent units in the solution of engineering calculations
	3.3	Use significant figures in engineering calculations
	3.4	Apply the basic avionic techniques and associated technologies, software and hardware in a consistent and appropriate manner to obtain required solutions
4. Quote the results of the application of the basic avionic scientific principles and basic techniques	4.1	Use an appropriate style to quote solutions for applications involving engineering calculations
	4.2	Use an appropriate style to quote solutions for applications not involving engineering calculations

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional

contexts) are included.

Sources of information include:

- Reference texts
- Manufacturer catalogues and industry magazines
- International aerospace organisation publications
- Websites
- Use of phone, email and fax information gathering

Avionic engineering refers to:

- The engineering discipline concerned with the conceptual development, research, design, manufacture, implementation, installation, commissioning and maintenance of aerospace electrical, instrument, radio and electronic systems and components and related test equipment for civil and military applications

Basic avionic scientific techniques and principles involves:

- The application of appropriate basic techniques (see below) supported by their mathematical skills and introductory knowledge of scientific principles to design, manufacturing, commissioning and maintenance-related tasks and projects relating to:
 - electrical systems and related wiring and components (power generation, distribution, control interfaces with hydraulic and pneumatic systems, and caution and warning systems)
 - mechanical and electro-mechanical flight instruments and indication systems (quantity, pressure, temperature and position) and components
 - electronic systems and components (communications, radio navigation, pulse, display, automatic flight control, flight management and engine management)
 - automatic test stations, adapters and software
- The applications may require the use of one or two basic avionic scientific principles together with a fundamental mathematical calculation leading to process, resources and system choices from a limited range of options.
- Basic techniques include:
 - basic hand and power tool operations
 - machining
 - fitting
 - welding
 - moulding
 - fabricating
 - wiring
 - programming techniques

Unit Mapping Information

Release 1 – supersedes and is equivalent to MEA272B Apply basic scientific principles and techniques in avionic engineering situations

Assessment Requirements for MEA706 Apply basic scientific principles and techniques in avionic engineering situations

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- selecting appropriate basic avionic scientific principles to suit specific applications
- selecting appropriate basic avionic techniques and associated technologies, software and hardware to suit specific applications
- applying basic avionic scientific principles to particular engineering situations
- applying and manipulating appropriate formulas for applications involving engineering calculations
- applying appropriate calculations to engineering situations
- checking the validity of equations using dimensional analysis
- applying basic avionic techniques and associated technologies, software and hardware in a manner appropriate to the application and identified scientific principles
- referring solutions to the original aim of the application
- quoting solutions in appropriate units, using appropriate significant figures
- quoting limitations of solutions, due to assumptions, scientific principles and techniques used
- presenting solutions referring to the original aim of the application.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- physics for electronics:
 - units and measurements
 - magnetic force
 - vectors
 - electric fields and potential
 - electric current and resistance
 - capacitance
 - work, power and energy
- analogue electronics:

- negative feedback amplifiers
- differential amplifiers
- operational amplifiers
- amplifier frequency response
- thermal circuits/heat exchangers
- active filters
- fault-finding
- digital electronics:
 - characteristics of digital systems
 - number systems
 - Boolean algebra
 - logic circuits
 - logic families
 - construction and testing techniques
 - flip flop circuits
 - analogue to digital conversion
 - digital to analogue conversion
 - timing and control
 - combinational logic circuits
- circuit theory:
 - Kirchhoff's Current and Voltage Laws
 - Thevenin's Network Theorem
 - Norton's Network Theorem
 - Superposition Network Theorem
 - inductance, capacitance and resistance (LCR) series circuit analysis
 - LCR parallel circuit analysis
 - series and parallel resonance
- electrical systems:
 - DC and AC circuit design principles
 - generators and motors
 - inverters
 - power supply, transformer, rectifier, filter and regulator
 - solenoids
 - circuit protection
 - wiring cables and looms
- aerodynamics:
 - Bernoulli's Theorem
 - the atmosphere
 - aerodynamic forces (lift, drag, weight and thrust)
 - stability and control (to a level not requiring the application of calculus)

- thermodynamics – heat transfer principles (conduction, convection and radiation)
- instruments:
 - airspeed measurement
 - altitude measurement
 - attitude indication
 - measurement of quantity, flow, temperature, pressure and position
- control concepts and data communications:
 - servo and synchronous systems and components
 - data communication definitions and terminology
- communications:
 - radio transmission and modulation
 - radio reception
 - microphones, amplifiers and speakers
 - transmission lines and antennas
- pulse:
 - antennas
 - waveguides
 - transmitters/receivers
 - displays
- light, sound and vibration:
 - wave behaviour – standing vs travelling waves, transverse and longitudinal
 - light – reflection, absorption, refraction, diffraction, spectrum, infrared, visible, ultraviolet (UV), transmission medium and engineering applications
 - sound – pitch, frequency, intensity (power), decibel scale, ‘noise dose’, spectrum, infrasound, audible, ultrasound, speed, natural frequency, resonance, transmission medium and engineering applications
 - vibration – sources, balancing, shaft alignment, measurement, damping and engineering applications
- appropriateness of calculations
- fundamental and derived quantities
- the procedure for carrying out dimensional analysis
- the concept of significant figures
- the uncertainty of computations based on experimental data
- the procedures for determining the significance of figures in calculations
- the procedures for estimating errors in derived quantities.

Assessment Conditions

- This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, then a simulated working environment must be used that reflects realistic workplace situations and conditions.

- The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application.
- Assessment may be applied under project related conditions (real or simulated) and require evidence of process.
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.
- Assessors must be satisfied that the candidate can competently and consistently:
 - identify and explain the application of basic scientific principles and engineering techniques to avionic engineering situations
 - for given avionic engineering situations, identify and apply the relevant basic scientific principles and techniques
 - perform necessary calculations using appropriate applications and evaluate solutions
 - document appropriately the outcome of application of basic scientific principles and techniques to given avionic engineering situations.
- Assessment may be in conjunction with assessment of other units of competency where required.
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

ME A707 Select and test aeronautical engineering materials

Modification History

Release 1 - New unit of competency

Application

Applications of this unit of competency include selecting engineering materials and materials tests, sourcing materials data; ensuring appropriate performance and physical standards for aeronautical applications; documenting materials tests, ensured calibration standards; interpreting and documenting materials data sheets as appropriate for mass production, batch production, jobbing shop, and prototyping applications.

Activities may be performed as a member of a design and development or engineering support team.

This unit is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

Competency Field

Engineering science

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|--|---|
| 1. Identify classes of materials, based on properties and materials tests relevant to aeronautical engineering | 1.1 Identify classes of materials, based on properties, required for particular aeronautical engineering applications |
| | 1.2 Relate material properties to common production and construction methods and processes |
| | 1.3 Identify common characteristics, faults or flaws in |

- materials and components or product in particular engineering applications
- 1.4 Identify test methods for materials and components or product in particular engineering applications
 - 1.5 Identify specific industrial test standards/codes, calibration requirements, regulations and authorities related to selection of materials and products for particular engineering applications
 - 1.6 Investigate the role of Australia's national measurement system
2. Identify and use sources of information on engineering materials, materials tests and test equipment
 - 2.1 Identify and use appropriate sources of information on materials
 - 2.2 Identify and use appropriate sources of information on methods of testing of properties of materials to ensure suitability for a particular application
 - 2.3 Identify and use appropriate sources of information on materials, materials tests, test calibration, test certificates, regulations, standards, standards councils/societies/authorities/regulatory bodies
 - 2.4 Investigate and report on the use of standards and codes
 - 2.5 Identify and use appropriate sources of information on material safety data sheets (MSDS)
 3. Specify and implement materials for particular aeronautical engineering applications
 - 3.1 Select materials for use in given aeronautical engineering applications based on relevant test information
 - 3.2 Incorporate materials and components into aeronautical processes in accordance with design functional requirements
 4. Specify and implement methods used to test or obtain the properties of engineering materials
 - 4.1 Specify and implement tests of materials to ensure quality, safety or suitability for a range of applications
 - 4.2 Ensure traceability of measurement standard
 - 4.3 Obtain test sheets/certificates for appropriate materials for applications in accordance with organisational procedures and/or codes and regulations

- | | | |
|----|---|---|
| | 4.4 | Obtain appropriate MSDS for applications in accordance with organisational procedures and/or codes and regulations |
| 5. | Report on and record materials design data and methods and results of materials tests | 5.1 Report and record materials selections against design functional requirements in accordance with organisational procedures, codes and regulations, including environmental impact and sustainability assessment |
| | 5.2 | Report and record materials tests and test sheets/certificates in accordance with organisational procedures, codes and regulations |
| | 5.3 | Ensure appropriate calibration and traceability |
| | 5.4 | Report and record appropriate MSDS for applications in accordance with organisational procedures, codes and regulations |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- Classes of materials include:**
- Non-ferrous metals and alloys - copper, aluminium, zinc, lead, tin, titanium and their alloys
 - Ferrous metals - carbon steels, alloy steels and cast irons
 - Non-metallic - composite materials, bearing materials, lubricants, ceramics, polymers and fabrics, adhesives
 - Electrical insulation materials, thermal conductors and insulators, electrical conductors, semiconductors and insulators
- Properties of materials include:**
- Strength, elasticity, plasticity, malleability, toughness, brittleness, fatigue endurance, mouldability, weldability, machinability, formability, resistance to creep and stress relaxation, resistance to degradation (e.g. use of plastic

fillers to enhance UV resistance), adhesion; electrical, magnetic, thermal, chemical and optical; material structure and effect on properties, flammability of fabrics

Other factors include:

- Corrosion and corrosion protection methods
- Aging of metals and fatigue
- The effect of manufacturing and construction processes on material properties (e.g. effect of heat treatment on corrosion resistance and fatigue properties, hydrogen embrittlement, shot peening of surfaces)
- The effect of property enhancement on design (e.g. adhesives plus sintering replacing some forging and machining of gears on shafts)
- Lay-up methods for composite structures
- Costs, such as manufacture of material, source of material, and typical applications and possibilities

Aeronautical engineering refers to:

- The engineering discipline concerned with the conceptual development, research, design, manufacture, implementation, installation, commissioning and maintenance of aerospace mechanical, hydraulic, pneumatic, fuel and fire products, processes, systems or services for civil and military applications

Australia's national measurement system includes:

- National Measurement Institute (NMI)
- National Association of Testing Authorities
- Standards Australia
- Joint Accreditation System of Australia and New Zealand

Sources of information include:

- Reference texts
- Manufacturer's catalogues and industrial magazines
- Websites
- Use of phone, email and fax information gathering

Standards councils/societies/ authorities/regulatory bodies include:

- Australian Standards (AS)
- American Society of Testing and Materials (ASTM)
- US Military Specification (MIL Spec.)
- American Society of Manufacturing Engineers (ASME)
- International Standards Organisation (ISO)
- CASA
- ADF
- United States Federal Aviation Authority
- European Aviation Safety Agency

Standards and codes include:

- Non-destructive testing (NDT) and mechanical test standards
- Chemical test standards

- Tests of materials include:**
- Electrical test standards
 - Compliance test standards for components
 - Destructive, including tensile, compression, impact, hardness, fatigue, corrosion, stress relaxation and creep, and peel resistance (adhesives)
 - Non-destructive, including hardness, ultrasonics, X-ray, magnetic particle, dye penetrant, eddy current, surface friction, conductivity, heat expansion, photoelastic, heat capacity refractive index and magnetic hysteresis loop
- Traceability includes:**
- Test calibrations that can be traced back to the relevant base unit in the relevant measurement system

Unit Mapping Information

Release 1 – supersedes and is equivalent to MEA350A Select and test aeronautical engineering materials

Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.education.gov.au/Pages/TrainingDocs.aspx?q=ce216c9c-04d5-4b3b-9bcf-4e81d0950371>

Assessment Requirements for MEA707 Select and test aeronautical engineering materials

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- selecting class of materials for an application based on comparison of properties for a significant range of materials classes
- selecting class of materials for an application suitable to production and construction methods and processes
- identifying, overcoming or compensating for common characteristics, faults or flaws in materials or product
- identifying test methods for materials and components, specific industrial test standards and regulations for particular engineering applications
- identifying test methods for faults or flaws in materials and components or product
- selecting materials following an extensive search of appropriate sources of information, including manufacturer's catalogues and websites
- selecting appropriate tests from a range of possible tests, following an extensive search of appropriate sources of information, including manufacturer's catalogues and websites
- satisfying applicable standards and regulations for materials and components
- sourcing materials test certificates and using the material properties information from them
- sourcing, obtaining and implementing MSDS
- implementing tests correctly for materials and component faults and properties of materials
- selecting test methods appropriate to applications
- obtaining appropriate test sheets/certificates for applications
- completing reports, records and design documentation
- addressing environmental impact and sustainability issues
- reporting, recording and filing test reports and documentation
- implementing materials tests and test sheets/certificates, test calibration and traceability.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- properties of materials classes
- the effect of material properties on production and construction methods and processes
- the effect of characteristics, faults or flaws in materials on product and processes
- test methods for materials and components, specific industrial test standards, regulations and authorities related to particular engineering applications
- test methods for faults or flaws in materials and components or product
- methods of accessing and using alternative information sources
- test procedures and typical applications for tests
- sources and uses of information on materials, materials tests, test certificates, regulations, standards, regulatory bodies and industrial authorities
- methods of accessing MSDS and their relevance to procedures
- identification of materials for an application based on comparison of properties of materials
- identification of test for an application based on an understanding of its ability to measure specific material or product properties
- significance of test sheets/certificates to applications
- the need for obtaining and filing test sheets/certificates
- materials selections in relation to design functional requirements
- environmental impact and sustainability assessment
- significance of test reports and documentation to applications
- significance of reporting and recording procedures
- significance of materials tests and test sheets/certificates, test calibration and traceability
- significance of reporting and recording procedures.

Assessment Conditions

- This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, then a simulated working environment must be used that reflects realistic workplace situations and conditions.
- The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application.
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.
- Assessors must be satisfied that the candidate can competently and consistently:
 - identify classes of materials for specific aeronautical engineering situations and specify by material specification

- identify testing requirements for selected materials and applicable organisations for the conduct of tests
- identify and specify processes required to achieve required material properties
- obtain and apply relevant MSDS
- ensure that material manufacturing and test records meet regulatory requirements.
- Assessment may be in conjunction with assessment of other units of competency where required.
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

Assessment Requirements for MEA708 Select and test avionic engineering materials

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- selecting class of materials for an application based on comparison of properties for a significant range of materials classes
- selecting class of materials for an application suitable to production and construction methods and processes
- identifying, overcoming or compensating for common characteristics, faults or flaws in materials or product
- obtaining appropriate test sheets/certificates for applications
- completing reports, records and design documentation
- addressing environmental impact and sustainability issues
- reporting, recording and filing test reports and documentation
- implementing materials tests and test sheets/certificates, test calibration and traceability
- identifying test methods for materials and components, specific industrial test standards and regulations for particular engineering applications
- identifying test methods for faults or flaws in materials and components or product
- selecting materials following an extensive search of appropriate sources of information, including manufacturer's catalogues and websites
- selecting appropriate tests from a range of possible tests, following an extensive search of appropriate sources of information, including manufacturer's catalogues and websites
- satisfying applicable standards and regulations for materials and components
- sourcing materials test certificates and using the material properties information from them
- sourcing, obtaining and implementing MSDS
- implementing tests correctly for materials and component faults and properties of materials
- selecting testing methods appropriate to applications.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- properties of materials classes
- the effect of material properties on production and construction methods and processes
- the effect of characteristics, faults or flaws in materials on product and processes
- test methods for materials and components, specific industrial test standards, regulations and authorities related to particular engineering applications
- test methods for faults or flaws in materials and components or product
- methods of accessing and using alternative information sources
- test procedures and typical applications for tests
- sources and uses of information on materials, materials tests, test certificates, regulations, standards, regulatory bodies and industrial authorities
- methods of accessing MSDS and their significance to applications
- identification of materials for an application based on comparison of properties of materials
- identification of test for an application based on an understanding of its ability to measure specific material or product properties
- significance of test sheets / certificates to applications
- the need for obtaining and filing test sheets / certificates
- materials selections in relation to design functional requirements
- environmental impact and sustainability assessment
- significance of test reports and documentation to applications
- significance of reporting and recording procedures
- significance of materials tests and test sheets/certificates, test calibration and traceability
- significance of reporting and recording procedures.

Assessment Conditions

- This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, then a simulated working environment must be used that reflects realistic workplace situations and conditions.
- The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application.
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.
- Assessors must be satisfied that the candidate can competently and consistently:
 - identify classes of materials for specific avionic engineering situations and specify by material specification

- identify testing requirements for selected materials and applicable organisations for the conduct of tests
- identify and specify processes required to achieve required material properties
- obtain and apply relevant MSDS
- ensure that material manufacturing and test records meet regulatory requirements
- Assessment may be in conjunction with assessment of other units of competency where required.
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

MEA709 Apply aeronautical structure design techniques

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers the skills needed to contribute to the design of aircraft structure and structural components, including modifications and repairs. It includes performance of the design process within the requirements of airworthiness regulators and documentation of the design process within management systems, such as configuration management (CM) and integrated logistic support (ILS).

It is suitable for people working within aircraft design teams or maintenance support engineering organisations and those pursuing careers and qualifications in aeronautical engineering at the paraprofessional level.

This unit is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

MEA701	Produce aeronautical engineering related graphics
MEA703	Apply aeronautical modelling for computer-aided engineering
MEA705	Apply basic scientific principles and techniques in aeronautical engineering situations
MEA707	Select and test aeronautical engineering materials
MEM23004A	Apply technical mathematics
MEM23007A	Apply calculus to engineering tasks

Competency Field

Aeronautical engineering

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|----|---|-----|--|
| 1. | Investigate requirements of aeronautical structural design projects | 1.1 | Review the context and negotiate parameters of the engineering design brief in consultation with stakeholders |
| | | 1.2 | Determine engineering scientific principles and design techniques required for design process |
| | | 1.3 | Investigate life-cycle design and sustainability implications of aeronautical structural design |
| | | 1.4 | Determine specification, documentation and graphical techniques required to define designs |
| | | 1.5 | Confirm work health and safety (WHS), regulatory requirements, codes of practice, standards, risk management and registration requirements relevant to aircraft structure design project |
| | | 1.6 | Investigate the need for technical and professional assistance |
| 2. | Apply aeronautical structural design techniques | 2.1 | Plan, schedule and coordinate the design task |
| | | 2.2 | Apply the design process and aeronautical scientific principles to component selection and design proposals |
| | | 2.3 | Create adequate and accurate calculations, preliminary graphics and maintain design process records |
| | | 2.4 | Evaluate multiple solutions against design criteria, risk, sustainability and cost |
| | | 2.5 | Apply systems thinking to problem solving and decision making in dealing with contingencies and constraints for continuous improvement and development of design options |
| | | 2.6 | Incorporate professional and technical assistance as required |

- | | | |
|----|----------------|--|
| | 2.7 | Apply specification, documentation and graphical techniques modelling, mock-up or prototyping techniques to define designs |
| 3. | Report results | 3.1 Report results of investigations, application and development of design |
| | 3.2 | Provide documentation and records generated in the design process |
| | 3.3 | Provide draft documentation required by CM plan and/or ILS process, where applicable |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Aeronautical engineering refers to:

- The engineering discipline concerned with the conceptual development, research, design, manufacture, implementation, installation, commissioning and maintenance of aerospace structure, mechanical, hydraulic, pneumatic, fuel and fire products, processes, systems or services for civil and military applications

Aircraft structure and structural components include:

- All primary, secondary and tertiary structures that may be made from metal or fibre composite

Context of engineering design activity includes:

- Competitive market
- Geo political factors, such as access to materials and markets
- Technological advantage/disadvantage
- Resources supply: materials, labour and skills
- Sustainability issues relevant to design task, including
 - social, economic and environmental considerations
 - material and energy resources
- WHS, risk, and applicable standards and code

- requirements
 - Regulatory requirements and procedures associated with design, modification and repair of aircraft structure and structural components
- Planning processes include:**
- Establishing design parameters and design criteria
 - Contributing to the negotiation and advice process
 - Preliminary planning, design investigations and costing
 - Identifying design, development, prototyping activities and skills requirements
 - Planning and scheduling design activities
 - Improving, adjusting, rescheduling as required by emergency contingencies and constraints
- Design process includes:**
- Establishing design parameters and criteria
 - Researching, measuring, experimenting and investigating
 - Generating ideas
 - Synthesis, problem solving, decision making and addressing constraints
 - Applying scientific principles, calculation and graphics, prototyping and mock-up techniques
 - Evaluating solutions against design criteria
 - Consultation, adjustments and agreement
 - Finalising design and sign-off
- Design criteria includes:**
- Regulatory requirements and associated standards
 - Function
 - Aesthetics
 - Manufacturability and maintainability
 - Marketability
 - Sustainability:
 - social, economic and environmental
 - material and energy resources
 - Cost constraints
 - Ergonomics and anthropometrics and physiology
 - Facilities, plant and skills available
 - Safety and risk
- Design analysis includes:**
- Static and dynamic analysis of loads
 - The stresses and deformations resulting
 - Graphical and mathematical methods and software options
- Design application (under professional engineer guidance) includes:**
- Design of structure and structural components
 - Design of structural modifications
 - Design of repair schemes

- Extension of published repair schemes
 - Extension of corrosion removal limits
- Configuration management (CM)**
- CM is a process for control and documentation of the design and development process and for the management of system, component and software throughout the service life
- Integrated logistic support (ILS)**
- ILS is an integrated approach to the management of logistic disciplines originally developed for the management of military systems from design concept to final disposal at life-of-type. It covers:
 - reliability engineering, maintainability engineering and maintenance planning
 - supply and support
 - support and test equipment
 - manpower and personnel
 - training and training support
 - technical data and publications
 - computer resources support
 - facilities
 - packaging, handling, storage and transportation
 - design interface
- Sustainability considerations include:**
- Resources and energy required for design
 - Life-cycle design of product (manufacture to remanufacture or recycle)
 - Environmental considerations in manufacturing and operation of design, including:
 - raw material, solids and hazardous waste, and production by-products
 - potential contamination of land, air and stormwater pollutants, and discharge to sewerage
 - Carbon pollution and reduction effects
- Prototyping includes:**
- Any combination of:
 - mock-ups
 - physical and virtual modelling with post-processing for computer-numerically controlled (CNC) and rapid prototyping
- Systems thinking includes:**
- The process of developing solutions within the context of an entire system
 - Recognising that an improvement in one subsystem can adversely affect another subsystem
- Appropriate technical and professional assistance**
- Assistance from individuals with CASA maintenance certification licences or those with supervisory

includes:

- authorisations in the ADF regulatory system
- Professional support from engineers employed within:
 - organisations with CASA design, continuing airworthiness management or maintenance approvals
 - approved engineering organisations under the ADF regulatory system
- Engineers employed within organisations recognised by overseas airworthiness organisations

WHS, regulatory requirements and enterprise procedures include:

- WHS Acts and regulations
- Relevant standards
- Industry codes of practice
- Risk assessments
- Registration requirements
- Safe work practices
- State and territory regulatory requirements applying to electrical work
- Civil Aviation Safety Regulations (CASRs)
- AAP7001.053 ADF Technical Airworthiness Management Manual
- Overseas airworthiness authorities, where applicable, e.g. Federal Aviation Administration, Transport Canada, European Aviation Safety Agency

Relevant standards include:

- AS 1100.101-1992 Technical drawing – General principles
- AS 4024.1-2006 Series Safety of machinery
- AS/NZS ISO 31000 Set:2013 Risk Management Set
- British Defence Standard 00-970 Design and Airworthiness Requirements for Service Aircraft
- US Military Specifications and Standards relevant to aircraft design
- ADF AAP7001.054 Airworthiness Design Requirements Manual
- FAR Part 23 Airworthiness Standards for Airplanes in the Normal, Utility, Aerobatic or Commuter Categories
- FAR Part 25 Airworthiness Standards for Airplanes in the Transport Category
- EASA CS-23 Certification Specifications for Aeroplanes in the Normal, Utility, Aerobatic or Commuter Categories
- EASA CS-25 Certification Specifications for Airplanes in the Transport Category
- CASA AC 21-99 Aircraft Wiring and Bonding
- FAA AC 43-13-1B Acceptable Methods, Techniques

- and Practices – Aircraft Inspection and Repair
- AC21-15(1) Supplemental Type Certificates
 - AC21.16(0) Approval of Materials, Parts, Processes and Appliances
 - AC21.14 Production Certificates
 - AC21.20 Production Under a Type Certificate Only
 - AC21.27 Manufacturing Approval – Overview
 - AC21.145(0) Manufacture of Parts During the Course of Maintenance
 - AC21-601(0) Australian Technical Standard Order
 - CAAP35-7(0) Design Approval of Modifications and Repairs

Unit Mapping Information

Assessment Requirements for MEA709 Apply aeronautical structure design techniques

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- communicating, negotiating and reviewing context and parameters of the engineering design brief with stakeholders
- determining or confirming scientific principles and design techniques, WHS and regulatory requirements, and design specification requirements
- evaluating multiple solutions against design criteria, risk, sustainability and cost
- investigating life-cycle design and sustainability, technical and professional assistance required
- investigating and applying CM and ILS requirements
- planning, scheduling and coordinating the design task
- applying design process and scientific principles to structure and structural component design proposals, including modifications and repairs to existing structure
- solving problems and making decisions with systems thinking for contingencies and constraints, including airworthiness regulatory requirements and continuous improvement (may be requirements of CM and ILS)
- defining designs, specifying, documenting and applying graphical techniques, modelling, mock-up or prototyping techniques
- creating and maintaining adequate and accurate calculations and design process records
- reporting and documenting results of investigations, application of principles and techniques, calculations, specifications, diagrams, computer-aided design (CAD) files, mock-ups or prototypes of designs
- complying with regulatory procedures for design, modification and repair approval.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- life-cycle design and sustainability implications of aircraft structure designs (may be part of CM and ILS procedures)
- design processes and techniques to investigate, synthesise and develop proposals, evaluate feasibility against design criteria, review and revise in consultation with stakeholders, model, mock-up and prototype

- systems thinking, problem solving and decision making, and continuous improvement methods
- application of CM and ILS procedures
- WHS and regulatory requirements, codes of practice, standards, risk management and registration requirements
- The roles and relevance to the design process of professional and technical assistance for engineering specialisations
- procedures for planning, scheduling and coordination of design
- hardware requirements of typical aircraft structure and structural components
- engineering scientific principles required for design analysis
- design calculations techniques
- application of software for product planning and design, such as CAD, stress analysis and mould design and project management
- required documentation, including:
 - design brief and records of negotiation
 - planning and schedule
 - calculations and diagrams documentation for checking and design records
 - specifications and graphics required to define designs
 - risk analysis report
 - design process summary report
 - life cycle and sustainability reports
 - CM and ILS documentation
 - documentation required by Regulators for approval of designs, modifications and repairs
- prototyping options, including mock-ups, physical and virtual modelling, and rapid prototyping.

Assessment Conditions

- This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations.
- The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application.
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.

- Assessors must be satisfied that the candidate can competently and consistently:
 - communicate, negotiate and review design brief with stakeholders
 - determine or confirm scientific principles and design techniques, WHS and regulatory requirements, and design specification requirements
 - evaluate multiple solutions
 - apply CM and ILS requirements
 - investigate life-cycle design and sustainability, technical and professional assistance required
 - plan, schedule and coordinate the design task
 - select design components using design process and scientific principles
 - solve problems and make decisions with systems thinking for contingencies and constraints and continuous improvement
 - define designs, specify and document and apply graphical techniques, modelling, mock-up or prototyping techniques
 - create and maintain adequate and accurate calculations and design process records
 - report and document, results and processes
 - follow regulatory requirements and procedures for design, modification or repair procedures.
- Assessment may be in conjunction with assessment of other units of competency where required.
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

ME A710 Apply aeronautical system design techniques

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers the skills needed to contribute to the design of aircraft systems (mechanical, hydraulic, pneumatic and fuel distribution and supply systems), including modifications. It includes performance of the design process within the requirements of airworthiness regulators and documentation of the design process within management systems, such as configuration management (CM) and integrated logistic support (ILS).

It is suitable for people working within aircraft design teams or in maintenance support engineering organisations and those pursuing careers and qualifications in aeronautical engineering at the paraprofessional level.

This unit is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

ME A701	Produce aeronautical engineering related graphics
ME A703	Apply aeronautical modelling for computer-aided engineering
ME A705	Apply basic scientific principles and techniques in aeronautical engineering situations
MEM23004A	Apply technical mathematics

Competency Field

Aeronautical engineering

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

		3.3 Provide draft documentation required by CM plan and/or ILS process, where applicable

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Aeronautical engineering refers to:

- The engineering discipline concerned with the conceptual development, research, design, manufacture, implementation, installation, commissioning and maintenance of aerospace structure, mechanical, hydraulic, pneumatic, fuel and fire products, processes, systems or services for civil and military applications.

Aircraft systems include:

- Mechanical systems
- Hydraulic systems
- Pneumatic systems
- Fuel distribution and supply systems
- Electrical and electronic system control interfaces

Context of engineering design activity includes:

- Competitive market
- Geo political factors, such as access to materials and markets
- Technological advantage/disadvantage
- Resources supply: materials, labour and skills
- Sustainability issues relevant to design task, including

- social, economic and environmental considerations
 - material and energy resources
 - WHS, risk, and applicable standards and code requirements
 - Regulatory requirements and procedures associated with design and modification of aircraft systems
- Planning processes include:**
- Establishing design parameters and design criteria
 - Contributing to the negotiation and advice process
 - Preliminary planning, design investigations and costing
 - Identifying design, development, prototyping activities and skills requirements
 - Planning and scheduling design activities
 - Improving, adjusting, rescheduling as required by emergency contingencies and constraints
- Design process includes:**
- Establishing design parameters and criteria
 - Researching, measuring, experimenting and investigating
 - Generating ideas
 - Synthesis, problem solving and decision making, addressing constraints
 - Applying scientific principles, calculation and graphics, prototyping and mock-up techniques
 - Evaluating solutions against design criteria
 - Consultation, adjustments and agreement
 - Finalise design and sign-off
- Design criteria includes:**
- Regulatory requirements and associated standards
 - Function
 - Aesthetics
 - Selection of system components
 - Manufacturability, maintainability
 - Marketability
 - Sustainability:
 - social, economic and environmental
 - material and energy resources
 - cost constraints
 - Ergonomics and anthropometrics and physiology
 - Facilities, plant and skills available
 - Safety and risk
- Design analysis includes:**
- System layout and selection of control media
 - Integration of components into the system
 - System and components performance against specified standards/specifications and regulatory requirements
 - System/component reliability and maintainability against

- specified standards/specifications and regulatory requirements
- Graphical and mathematical methods and software options
- Configuration management (CM)**
- CM is a process for control and documentation of the design and development process and for the management of system, component and software throughout the service life.
- Integrated logistic support (ILS)**
- ILS is an integrated approach to the management of logistic disciplines originally developed for the management of military systems from design concept to final disposal at life-of-type. It covers:
 - reliability engineering, maintainability engineering and maintenance planning
 - supply and support
 - support and test equipment
 - manpower and personnel
 - training and training support
 - technical data and publications
 - computer resources support
 - facilities
 - packaging, handling, storage and transportation
 - design interface
- Sustainability considerations include:**
- Resources and energy required for design:
 - Life-cycle design of product (manufacture to remanufacture or recycle)
 - Environmental considerations in manufacturing and operation of design:
 - raw material, solids and hazardous waste, and production by-products
 - potential contamination of land, air and stormwater pollutants, and discharge to sewerage
 - carbon pollution and reduction effects
- Prototyping includes:**
- Any combination of:
 - mock-ups
 - physical and virtual modelling with post-processing for computer-numerically controlled (CNC) and rapid prototyping
- Systems thinking includes:**
- The process of developing solutions within the context of an entire system
 - Recognising that an improvement in one subsystem can adversely affect another subsystem

Appropriate technical and professional assistance includes:

- Assistance from individuals with CASA maintenance certification licences or those with supervisory authorisations in the ADF regulatory system
- Professional support from engineers employed within:
 - organisations with CASA design, continuing airworthiness management or maintenance approvals
 - approved engineering organisations under the ADF regulatory system
- Engineers employed within organisations recognised by overseas airworthiness organisations

WHS, regulatory requirements and enterprise procedures include:

- WHS Acts and regulations
- Relevant standards
- Industry codes of practice
- Risk assessments
- Registration requirements
- Safe work practices
- State and territory regulatory requirements applying to electrical work
- Civil Aviation Safety Regulations (CASRs)
- AAP7001.053 ADF Technical Airworthiness Management Manual
- Overseas airworthiness authorities, where applicable, e.g. Federal Aviation Administration, Transport Canada, European Aviation Safety Agency

Relevant standards include:

- AS 1100.101-1992 Technical drawing – General principles
- AS 4024.1-2006 Series Safety of machinery
- AS/NZS ISO 31000 Set:2013 Risk Management Set
- British Defence Standard 00-970 Design and Airworthiness Requirements for Service Aircraft
- US Military Specifications and Standards relevant to aircraft design
- ADF AAP7001.054 Airworthiness Design Requirements Manual
- FAR Part 23 Airworthiness Standards for Airplanes in the Normal, Utility, Aerobatic or Commuter Categories
- FAR Part 25 Airworthiness Standards for Airplanes in the Transport Category
- EASA CS-23 Certification Specifications for Aeroplanes in the Normal, Utility, Aerobatic or Commuter Categories
- EASA CS-25 Certification Specifications for Airplanes in the Transport Category
- CASA AC 21-99 Aircraft Wiring and Bonding

- FAA AC 43-13-1B Acceptable Methods, Techniques and Practices – Aircraft Inspection and Repair
- AC21-15(1) Supplemental Type Certificates
- AC21.16(0) Approval of Materials, Parts, Processes and Appliances
- AC21.14 Production Certificates
- AC21.20 Production Under a Type Certificate Only
- AC21.27 Manufacturing Approval – Overview
- AC21.145(0) Manufacture of Parts During the Course of Maintenance
- AC21-601(0) Australian Technical Standard Order
- CAAP35-7(0) Design Approval of Modifications and Repairs

Assessment Requirements for MEA710 Apply aeronautical system design techniques

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and include:

- communicating, negotiating and reviewing context and parameters of the engineering design brief with stakeholders
- determining or confirming scientific principles and design techniques, WHS and regulatory requirements, and design specification requirements
- evaluating multiple solutions against design criteria, risk, sustainability and cost
- investigating life-cycle design and sustainability, technical and professional assistance required
- investigating and applying CM and ILS requirements
- planning, scheduling and coordinating the design task
- applying design process and scientific principles to aircraft system design proposals, including modifications
- solving problems and making decisions, with systems thinking, for contingencies and constraints, including airworthiness regulatory requirements and continuous improvement (may be requirements of CM and ILS)
- defining designs, specifying, documenting and applying graphical techniques, modelling, mock-up or prototyping techniques
- selecting system components to meet design specifications and standards
- creating and maintaining adequate and accurate calculations and design process records
- reporting and documenting results of investigations, application of principles and techniques, calculations, specifications, diagrams, computer-aided design (CAD) files, mock-ups or prototypes of designs
- complying with regulatory procedures for design and modification approval.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- life-cycle design and sustainability implications of aircraft system designs
- design processes and techniques to investigate, synthesise and develop proposals, evaluate feasibility against design criteria, review and revise in consultation with stakeholders, model, mock-up and prototype

- systems approach, problem solving and decision making, and continuous improvement methods
- application of CM and ILS procedures
- WHS and regulatory requirements, codes of practice, standards, risk management and registration requirements
- professional and technical assistance for engineering specialisations
- procedures for planning, scheduling and coordination of design
- component and hardware requirements of typical aircraft systems
- engineering scientific principles required for design analysis
- design calculations techniques
- software for product planning and design, such as CAD, systems design and project management
- required documentation, such as:
 - design brief and records of negotiation
 - planning and schedule
 - calculations and diagrams documentation for checking and design records
 - specifications and graphics required to define designs
 - risk analysis report
 - design process summary report
 - life cycle and sustainability reports
 - CM and ILS documentation
 - documentation required by Regulators for approval of designs and modifications
- prototyping options, including mock-ups, physical and virtual modelling, rapid prototyping.

Assessment Conditions

- This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations.
- The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application.
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.
- Assessors must be satisfied that the candidate can competently and consistently:
 - communicate, negotiate and review design brief with stakeholders

- determine or confirm scientific principles and design techniques, WHS and regulatory requirements, and design specification requirements
- evaluate multiple solutions
- apply CM and ILS requirements
- investigate life-cycle design and sustainability, technical and professional assistance required
- plan, schedule and coordinate the design task
- select design components using design process and scientific principles
- solve problems and make decisions with systems thinking for contingencies and constraints and continuous improvement
- define designs, specify and document and apply graphical techniques, modelling, mock-up or prototyping techniques
- create and maintain adequate and accurate calculations and design process records
- report and document, results and processes
- follow regulatory requirements and procedures for design, modification or repair procedures.
- Assessment may be in conjunction with assessment of other units of competency where required.
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

MEA711 Apply avionic analogue design techniques

Modification History

Release 1 - New unit of competency

Application

This unit of competency applies to design of avionic analogue systems and components for aircraft, design of modifications, test stations and development and update of test procedures and of repair requirements. It includes electrical, electronic and software design techniques and performance of the design process within the requirements of airworthiness regulators and documentation of the design process within management systems, such as Configuration management (CM) and integrated logistic support (ILS).

It is suitable for people working as members of avionic system design teams and for those employed within maintenance engineering support departments or pursuing careers and qualifications as paraprofessionals in avionic engineering.

This unit is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

MEA702	Produce avionic engineering related graphics
MEA708	Select and test avionic engineering materials
MEA714	Integrate avionic fundamentals into an engineering task
MEA725	Apply advanced scientific principles and techniques in avionic engineering situations

Competency Field

Avionic engineering

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|---|--|
| 1. Investigate requirements of avionic analogue design projects | 1.1. Review the context and negotiate parameters of the engineering design brief in consultation with stakeholders |
| | 1.2. Determine engineering scientific principles and design techniques required for design process |
| | 1.3. Investigate life-cycle design and sustainability implications of avionic design |
| | 1.4. Determine specification, documentation and graphical techniques required to define designs |
| | 1.5. Confirm work health and safety (WHS), regulatory requirements, codes of practice, standards, risk management and registration requirements relevant to avionic design project |
| | 1.6. Investigate the need for technical and professional assistance |
| 2. Apply avionic analogue design techniques | 2.1. Plan, schedule and coordinate the design task |
| | 2.2. Apply the design process and avionic scientific principles to component selection and design proposals |
| | 2.3. Create adequate and accurate calculations, preliminary graphics and maintain design process records |
| | 2.4. Evaluate multiple solutions against design criteria, risk, sustainability and cost |
| | 2.5. Integrate avionic analogue techniques, hardware and software, including mechanical, fluid, electrical, electronic, controller and networking |
| | 2.6. Apply systems thinking, problem solving and decision making in dealing with contingencies and constraints for continuous improvement and development of design options |

- | | | |
|----|----------------|--|
| | 2.7 | Incorporate professional and technical assistance as required |
| | 2.8 | Apply specification, documentation and graphical techniques modelling, mock-up or prototyping techniques to define designs |
| 3. | Report results | 3.1 Report results of investigations, application and development of avionic design |
| | | 3.2 Provide documentation and records generated in the design process |
| | | 3.3 Provide draft documentation required by CM plan and/or ILS process, where applicable |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Avionic engineering refers to:

- The engineering discipline concerned with the conceptual development, research, design, manufacture, implementation, installation, commissioning and maintenance of aerospace electrical, instrument, radio and electronic systems and components and related test equipment for civil and military applications

Avionic analogue systems include:

- Flight and measuring instruments
- Communications
- Navigation
- Autopilot
- Interface with electrical power generation, control and distribution systems
- Interface with avionic digital systems

Context of engineering design activity includes:

- Competitive market
- Geo political factors, such as access to materials and markets

- Technological advantage/ disadvantage
 - Resources supply: materials, labour and skills
 - Sustainability issues relevant to design task, including:
 - social, economic and environmental considerations
 - material and energy resources
 - WHS, risk, and applicable standards and code requirements
- Planning processes include:**
- Establishing design parameters and design criteria
 - Contributing to the negotiation and advice process
 - Preliminary planning, design investigations and costing
 - Identifying design, development, prototyping activities and skills requirements
 - Planning and scheduling design activities
 - Improving, adjusting, rescheduling as required by emergency contingencies and constraints
- Design process includes:**
- Establishing design parameters and criteria
 - Researching, measuring, experimenting and investigating
 - Generating ideas
 - Synthesis, problem solving, decision making and addressing constraints
 - Applying scientific principles, calculation and graphics, prototyping and mock-up techniques
 - Evaluating solutions against design criteria
 - Consultation, adjustments and agreement
 - Finalising design and sign-off
- Design criteria includes:**
- Function
 - Aesthetics
 - Manufacturability and maintainability
 - Marketability
 - Sustainability:
 - social, economic and environmental
 - material and energy resources
 - Cost constraints
 - Ergonomics and anthropometrics and physiology
 - Facilities, plant and skills available
 - Safety and risk
- Design analysis includes:**
- Graphical and mathematical methods and software options associated with mechanical, electrical and electronic aspects of avionic analogue systems.
- Sustainability considerations include:**
- Resources and energy required for design:
 - Life-cycle design of product (manufacture to remanufacture or recycle)

- Environmental considerations in manufacturing and operation of design:
 - raw material, solids and hazardous waste, production by-products
 - potential contamination of land, air and storm water pollutants, discharge to sewerage
 - carbon pollution and reduction effects
- Configuration management (CM)**
 - CM is a process for control and documentation of the design and development process and for the management of system, component and software throughout the service life.
- Integrated logistic support (ILS)**
 - ILS is an integrated approach to the management of logistic disciplines originally developed for the management of military systems from design concept to final disposal at life-of-type. It covers:
 - reliability engineering, maintainability engineering and maintenance planning
 - supply and support
 - support and test equipment
 - manpower and personnel
 - training and training support
 - technical data and publications
 - computer resources support
 - facilities
 - packaging, handling, storage and transportation
 - design interface
- Prototyping includes:**
 - Any combination of:
 - mock-ups
 - physical and virtual modelling with post-processing for computer-numerically controlled (CNC) and rapid prototyping
- Appropriate technical and professional assistance includes:**
 - Assistance from individuals with CASA maintenance certification licences or those with supervisory authorisations in the ADF regulatory system
 - Professional support from engineers employed within:
 - organisations with CASA continuing airworthiness management or maintenance approvals
 - approved engineering organisations under the ADF regulatory system
 - Engineers employed within organisations recognised by overseas airworthiness organisations
- WHS, regulatory**
 - WHS Acts and regulations

requirements and enterprise procedures include:

- Relevant standards
- Industry codes of practice
- Risk assessments
- Registration requirements
- Safe work practices
- State and territory regulatory requirements applying to electrical work
- Civil Aviation Safety Regulations (CASRs)
- AAP7001.053 ADF Technical Airworthiness Management Manual
- Overseas airworthiness authorities, where applicable, e.g. Federal Aviation Administration, Transport Canada, European Aviation Safety Agency

Relevant standards include:

- AS 1100.101-1992 Technical drawing – General principles
- AS 1102.101-1989 Graphical symbols for electrotechnical documentation - General information and general index
- AS/NZS ISO 31000 Set:2013 Risk Management Set
- NOHSC:1014 National standard for the control of major hazard facilities
- AS/NZS ISO 14000 Basic Set:2007 Environmental Management Basic Set
- ISO 14040:2006 Environmental management – Life cycle assessment – Principles and framework
- AS 61508.1-2011 Functional safety of electrical/ electronic/ programmable electronic safety related systems – General requirements
- AS 62061-2006 Safety of machinery - Functional safety of safety-related electrical, electronic and programmable electronic control systems
- IEEE 802 Wireless PAN, LAN, MAN and WPAN standards
- IEEE 1332, IEEE Standard reliability program for the development of electronic systems and equipment
- MIL-STD 785 Reliability program for systems and equipment development and production
- MIL-STD 1388-1A Logistic Support Analysis (LSA)
- MIL-STD 1388-2B Requirements for a LSA record
- MIL-STD 1629A Procedures for performing a failure mode, effects and criticality analysis (FMECA)
- MIL-STD 1629B FMECA
- MIL-STD 2173 Reliability centred maintenance requirements (superseded by NAVAIR 00-25-403)

Relevant handbooks include:

- OPNAVINST 4130.2A
- Integrated Logistic Support Handbook, third edition – James V Jones
- MIL-HDBK-217 Reliability prediction of electronic equipment
- MIL-HDBK-338B Electronic reliability design handbook
- MIL-HDBK-781A Reliability test methods, plans and environments for engineering development, qualification and production
- NASA PRA Probabilistic risk assessment handbook
- NASA Fault tree assessment handbook

Systems thinking includes:

- The process of developing solutions within the context of an entire system
- Recognising that an improvement in one subsystem can adversely affect another subsystem

Assessment Requirements for MEA711 Apply avionic analogue design techniques

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- communicating, negotiating and reviewing context and parameters of the engineering design brief with stakeholders
- determining or confirming scientific principles and design techniques, WHS and regulatory requirements, and design specification requirements
- evaluating multiple solutions against design criteria, risk, sustainability and cost
- investigating life-cycle design and sustainability, technical and professional assistance required
- investigating CM and/or ILS requirements
- planning, scheduling and coordinating the avionic analogue design task
- applying design process and scientific principles to component selection and design proposals for components and avionic analogue systems
- solving problems and make decisions with systems thinking for contingencies and constraints and continuous improvement
- integrating avionic analogue techniques, hardware, components and software into aircraft electrical, instrument and electronic systems
- defining designs
- specifying, documenting and applying graphical techniques, modelling, mock-up or prototyping techniques
- creating and maintaining adequate and accurate calculations and design process records
- reporting and documenting results of investigations, application of principles and techniques, calculations, specifications, diagrams, computer-aided design (CAD) files, mock-ups or prototypes of designs.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- life-cycle design and sustainability implications of avionic component and system designs
- CM and ILS requirements

- design processes and techniques to investigate, synthesise and develop proposals, evaluate feasibility against design criteria, review and revise in consultation with stakeholders, model, mock-up and prototype
- systems thinking, problem solving, decision making and continuous improvement methods
- WHS and regulatory requirements, codes of practice, standards, risk management and registration requirements
- professional and licensed technical assistance for engineering specialisations
- requirement for consultation and negotiation to establish design parameters and criteria
- procedures for planning, scheduling and coordination of design
- hardware requirements of typical avionic analogue component and system applications
- engineering avionic scientific principles and techniques required for analogue system design tasks
- design calculations techniques
- software for product planning and design, such as CAD layout, circuit design, system software and project management
- required documentation:
 - design brief and records of negotiation
 - planning and schedule
 - calculations and diagrams documentation for checking and design records
 - specifications and graphics required to define designs
 - risk analysis report
 - design process summary report
 - life-cycle and sustainability reports
 - CM and ILS documentation
- prototyping options, including mock-ups, simulation, physical and virtual modelling, and rapid prototyping.

Assessment Conditions

- This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, then a simulated working environment must be used that reflects realistic workplace situations and conditions.
- The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application.
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.

- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.
- Assessors must be satisfied that the candidate can competently and consistently:
 - communicate, negotiate and review design brief with stakeholders
 - determine or confirm scientific principles and design techniques, WHS and regulatory requirements, and design specification requirements
 - evaluate multiple solutions
 - investigate life-cycle design and sustainability, technical and professional assistance required
 - plan, schedule and coordinate the design task
 - select design components using design process and scientific principles
 - integrate avionic analogue techniques, hardware and software
 - solve problems and make decisions with systems thinking for contingencies and constraints and continuous improvement
 - define designs, specify, document and apply graphical techniques, modelling, mock-up or prototyping techniques
 - create and maintain adequate and accurate calculations and design process records
 - report and document, results and processes.
- Assessment may be in conjunction with assessment of other units of competency where required.
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

MEA712 Apply avionic digital design techniques

Modification History

Release 1 - New unit of competency

Application

This unit of competency applies to design of avionic digital systems and components for aircraft, including hardware and embedded system software, design of modifications, automatic test stations, and development and update of test procedures and of repair requirements. It includes electrical, electronic and software design techniques and performance of the design process within the requirements of airworthiness regulators and documentation of the design process within management systems, such as configuration management (CM) and integrated logistic support (ILS).

It is suitable for people working as members of avionic system design teams and for those employed within maintenance engineering support departments or pursuing careers and qualifications as paraprofessionals in avionic engineering.

This unit is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

MEA702	Produce avionic engineering related graphics
MEA708	Select and test avionic engineering materials
MEA714	Integrate avionic fundamentals into an engineering task
MEA725	Apply advanced scientific principles and techniques in avionic engineering situations

Competency Field

Avionic engineering

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|----|---|-----|---|
| 1. | Investigate requirements of avionic digital design projects | 1.1 | Review the context and negotiate parameters of the engineering design brief in consultation with stakeholders |
| | | 1.2 | Determine engineering scientific principles and design techniques required for design process |
| | | 1.3 | Investigate life-cycle design and sustainability implications of avionic digital design |
| | | 1.4 | Determine specification, documentation and graphical techniques required to define designs |
| | | 1.5 | Confirm work health and safety (WHS), regulatory requirements, codes of practice, standards, risk management and registration requirements relevant to avionic digital design project |
| | | 1.6 | Investigate the need for technical and professional assistance |
| 2. | Apply avionic digital design techniques | 2.1 | Plan, schedule and coordinate the design task |
| | | 2.2 | Apply the design process and avionic scientific principles to component selection and design proposals |
| | | 2.3 | Create adequate and accurate calculations, preliminary graphics and maintain design process records |
| | | 2.4 | Evaluate multiple solutions against design criteria, risk, sustainability and cost |
| | | 2.5 | Integrate avionic techniques, hardware and embedded software, including mechanical, fluid, electrical, electronic, controller and networking |
| | | 2.6 | Apply systems thinking, problem solving and decision making in dealing with contingencies and constraints for continuous improvement and |

- development of design options
- 2.7 Incorporate professional and technical assistance as required
 - 2.8 Apply specification, documentation and graphical techniques modelling, mock-up or prototyping techniques to define designs
3. Report results
- 3.1 Report results of investigations, application and development of avionic digital design
 - 3.2 Provide documentation, such as calculations, specifications, diagrams, computer-aided design (CAD) files, control circuits and controller programs, mock-ups or prototypes
 - 3.3 Provide draft documentation required by CM plan and/or ILS process, where applicable

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Avionic engineering refers to:

- The engineering discipline concerned with the conceptual development, research, design, manufacture, implementation, installation, commissioning and maintenance of aerospace electrical, instrument, radio and electronic systems and components and related test equipment for civil and military applications

Avionic digital systems include:

- Instrument display systems
- Automatic flight and engine control systems
- Monitoring systems
- Navigation and communication systems, including integration through flight management systems
- In-flight entertainment systems
- On-board maintenance systems

Context of engineering design activity includes:

- Competitive market
- Geo political factors, such as access to materials and markets
- Technological advantage/disadvantage
- Resources supply: materials, labour and skills
- Sustainability issues relevant to design task, including:
 - social, economic and environmental considerations
 - material and energy resources
- WHS, risk, applicable standards and code requirements

Planning processes include:

- Establishing design parameters and design criteria
- Contributing to the negotiation and advice process
- Preliminary planning, design investigations and costing
- Identifying design, development, prototyping activities and skills requirements
- Planning and scheduling design activities
- Improving, adjusting, rescheduling as required by emergency contingencies and constraints

Design process includes:

- Establishing design parameters and criteria
- Researching, measuring, experimenting and investigating
- Generating ideas
- Synthesis, problem solving, decision making and addressing constraints
- Applying scientific principles, calculation and graphics, prototyping and mock-up techniques
- Evaluating solutions against design criteria
- Consultation, adjustments and agreement
- Finalising design and sign-off

Design criteria includes:

- Performance specifications
- Function
- Aesthetics
- Manufacturability and maintainability
- Marketability
- Sustainability:
 - social, economic and environmental
 - material and energy resources
- Cost constraints
- Ergonomics and anthropometrics and physiology
- Facilities, plant and skills available
- Safety and risk

Design analysis includes:

- Graphical and mathematical methods and software options associated with mechanical, electrical and

- electronic aspects of avionic digital systems
- Sustainability considerations include:**
- Resources and energy required for design:
 - Life-cycle design of product (manufacture to remanufacture or recycle)
 - Environmental considerations in manufacturing and operation of design:
 - raw material, solids and hazardous waste, and production by-products
 - potential contamination of land, air and stormwater pollutants, and discharge to sewerage
 - carbon pollution and reduction effects
- Configuration management (CM)**
- CM is a process for control and documentation of the design and development process and for the management of system, component and software throughout the service life
- Integrated logistic support (ILS)**
- ILS is an integrated approach to the management of logistic disciplines originally developed for the management of military systems from design concept to final disposal at life-of-type. It covers:
 - reliability engineering, maintainability engineering and maintenance planning
 - supply and support
 - support and test equipment
 - manpower and personnel
 - training and training support
 - technical data and publications
 - computer resources support
 - facilities
 - packaging, handling, storage and transportation
 - design interface
- Prototyping includes:**
- Any combination of:
 - mock-ups
 - physical and virtual modelling with post-processing for computer-numerically controlled (CNC) and rapid prototyping
- Appropriate technical and professional assistance includes:**
- Assistance from individuals with CASA maintenance certification licences or those with supervisory authorisations in the ADF regulatory system
 - Professional support from engineers employed within:
 - organisations with CASA continuing airworthiness management or maintenance approvals
 - approved engineering organisations under the ADF

regulatory system

WHS, regulatory requirements and enterprise procedures include:

- Engineers employed within organisations recognised by overseas airworthiness organisations
- WHS Acts and regulations
- Relevant standards
- Industry codes of practice
- Risk assessments
- Registration requirements
- Safe work practices
- State and territory regulatory requirements applying to electrical work
- Civil Aviation Safety Regulations (CASRs)
- AAP7001.053 ADF Technical Airworthiness Management Manual
- Overseas airworthiness authorities, where applicable, e.g. Federal Aviation Administration, Transport Canada, European Aviation Safety Agency

Relevant standards include:

- AS 1100.101-1992 Technical drawing – General principles
- AS 1102.101-1989 Graphical symbols for electrotechnical documentation - General information and general index
- AS/NZS ISO 31000 Set:2013 Risk Management Set
- NOHSC:1014 National standard for the control of major hazard facilities
- AS/NZS ISO 14000 Basic Set:2007 Environmental Management Basic Set
- ISO 14040:2006 Environmental management – Life cycle assessment – Principles and framework.
- AS 61508.1-2011 Functional safety of electrical/ electronic/ programmable electronic safety related systems – General requirements
- AS 62061-2006 Safety of machinery - Functional safety of safety-related electrical, electronic and programmable electronic control systems
- IEEE 802 Wireless PAN, LAN, MAN and WPAN standards
- IEEE 1332, IEEE Standard reliability program for the development of electronic systems and equipment
- MIL-STD 785 Reliability program for systems and equipment development and production
- MIL-STD 1388-1A Logistic Support Analysis (LSA)
- MIL-STD 1388-2B Requirements for a LSA record
- MIL-STD 1629A Procedures for performing a failure

mode, effects and criticality analysis (FMECA)

- MIL-STD 1629B FMECA
 - MIL-STD 2173 Reliability centred maintenance requirements (superseded by NAVAIR 00-25-403)
 - OPNAVINST 4130.2A
- Relevant handbooks include:**
- Integrated Logistic Support Handbook, third edition – James V Jones
 - MIL-HDBK-217 Reliability prediction of electronic equipment
 - MIL-HDBK-338B Electronic reliability design handbook
 - MIL-HDBK-781A Reliability test methods, plans and environments for engineering development, qualification and production
 - NASA PRA Probabilistic risk assessment handbook
 - NASA Fault tree assessment handbook
- Systems thinking includes:**
- The process of developing solutions within the context of an entire system
 - Recognising that an improvement in one subsystem can adversely affect another subsystem

Assessment Requirements for MEA712 Apply avionic digital design techniques

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- communicating, negotiating and reviewing context and parameters of the engineering design brief with stakeholders
- determining or confirming scientific principles and design techniques, WHS and regulatory requirements, and design specification requirements
- evaluating multiple solutions against design criteria, risk, sustainability and cost
- investigating life-cycle design and sustainability, technical and professional assistance required
- investigating CM and/or ILS requirements
- planning, scheduling and coordinating the avionic design task
- applying design process and scientific principles to component selection and design proposals for components and avionic digital systems
- solving problems and making decisions with systems thinking for contingencies and constraints and continuous improvement
- integrating avionic techniques, hardware, components and software into aircraft avionic digital systems
- defining designs
- specifying, documenting and applying graphical techniques, modelling, mock-up or prototyping techniques
- creating and maintaining adequate and accurate calculations and design process records
- reporting and documenting, results of investigations, application of principles and techniques, calculations, specifications, diagrams, CAD files, mock-ups or prototypes of designs.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- life-cycle design and sustainability implications of avionic digital component and system designs
- CM and ILS requirements

- design processes and techniques to investigate, synthesise and develop proposals, evaluate feasibility against design criteria, review and revise in consultation with stakeholders, model, mock-up and prototype
- systems thinking, problem solving, decision making and continuous improvement methods
- WHS and regulatory requirements, codes of practice, standards, risk management and registration requirements
- professional and licensed technical assistance for engineering specialisations
- requirement for consultation and negotiation to establish design parameters and criteria
- procedures for planning, scheduling and coordination of design
- hardware requirements of typical avionic digital component and system applications
- engineering avionic scientific principles and techniques required for digital system design tasks
- design calculations techniques
- software for product planning and design, such as CAD layout, circuit design, system software and project management
- required documentation:
 - design brief and records of negotiation
 - planning and schedule
 - calculations and diagrams documentation for checking and design records
 - specifications and graphics required to define designs
 - risk analysis report
 - design process summary report
 - life-cycle and sustainability reports
 - CM and ILS documentation
- prototyping options, including mock-ups, simulation, physical and virtual modelling, rapid prototyping.

Assessment Conditions

- This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, then a simulated working environment must be used that reflects realistic workplace situations and conditions.
- The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application.
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.

- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.
- Assessors must be satisfied that the candidate can competently and consistently:
 - communicate, negotiate and review design brief with stakeholders
 - determine or confirm scientific principles and design techniques, WHS and regulatory requirements, design specification requirements
 - evaluate multiple solutions
 - investigate life-cycle design and sustainability, technical and professional assistance required
 - plan, schedule and coordinate the design task
 - select design components using design process and scientific principles
 - integrate avionic digital techniques, hardware and software
 - solve problems and make decisions with systems thinking for contingencies and constraints and continuous improvement
 - define designs, specify and document and apply graphical techniques, modelling, mock-up or prototyping techniques
 - create and maintain adequate and accurate calculations and design process records
 - report and document results and processes.
- Assessment may be in conjunction with assessment of other units of competency where required
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

MEA713 Integrate aeronautical fundamentals into an engineering task

Modification History

Release 1 - New unit of competency

Application

The unit of competency applies to engineering or related projects requiring aeronautical engineering skills and includes the identification, application and integration of aeronautical fundamentals. It includes identifying task parameters, personal and team function, chain of responsibility and work health and safety (WHS) guidelines. It includes investigation of aircraft structure, power plants and of mechanical, hydraulic, pneumatic and flight control systems and components and aeronautical fundamentals, including structural, power plant and aircraft system methods and processes, workshop techniques, materials, scientific and mathematical principles and computer software. It requires completion of the task in cooperation with the team and documentation of the process and outcomes.

It is suitable for people pursuing paraprofessional careers and qualifications in aeronautical engineering.

This unit is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

MEA705	Apply basic scientific principles and techniques in aeronautical engineering situations
MEM23004A	Apply technical mathematics
MEM23007A	Apply calculus to engineering tasks

Competency Field

Aeronautical engineering

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Investigate scope of engineering task	1.1 Determine task parameters and context
	1.2 Confirm personal functions and responsibilities, team and support functional group interdependencies and communications
	1.3 Confirm that task and responsibility is appropriate to qualifications and delegations and that appropriate support, including technical and professional assistance, is available when required
	1.4 Determine chain of responsibility for the activity
	1.5 Determine WHS, regulatory requirements, risk management and organisational procedures
2. Evaluate task for aeronautical fundamentals requirements	2.1 Evaluate methods, processes and workshop techniques required by task
	2.2 Evaluate aeronautical fundamentals required by task
	2.3 Evaluate functions and features of aeronautical components and systems related to the task
	2.4 Evaluate software techniques required for basic programming, analysis and graphics
3. Integrate aeronautical fundamentals	3.1 Plan the task
	3.2 Communicate, cooperate and negotiate with stakeholders, use systems thinking to address contingencies and constraints, problem solving and decision making and continuous improvement to achieve integration task
	3.3 Integrate aeronautical fundamentals to achieve task objectives
4. Report results	4.1 Report results of investigation, evaluation and integration

- 4.2 Provide documentation, such as diagrams and calculations
- 4.3 Provide documentation, such as modification instructions and maintenance manual or manual amendment and other documentation required by configuration management (CM) or integrated logistic support (ILS) procedures, where applicable

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Appropriate technical and professional assistance includes:

- Specific licenses and authorisations required by the relevant airworthiness regulator, CASA or the ADF
- Technical support and advice relating to elements which have intrinsic dangers, for example:
 - high pressure
 - energised fluid vessels
 - high temperatures and heat energy capacity
 - wiring with high current control voltages above extra low voltage
- Professional support for technologies, such as:
 - specialist electric motor drives and controllers
 - specialist materials, plastics, metal alloys and nano materials
- Special processes, foundry, alloy welding, heat treatment, sealing and fastening

WHS, regulatory requirements and enterprise procedures include:

- WHS Acts and regulations
- Relevant standards
- Industry codes of practice
- Risk assessments
- Registration requirements
- Safe work practices

- State and territory regulatory requirements applying to electrical work
 - Civil Aviation Safety Regulations (CASRs)
 - AAP7001.053 ADF Technical Airworthiness Management Manual
 - Overseas airworthiness authorities, where applicable, e.g. Federal Aviation Administration, Transport Canada, European Aviation Safety Agency
- Systems thinking includes:**
- The process of developing solutions within the context of an entire system
 - Recognising that an improvement in one subsystem can adversely affect another subsystem
- Continuous improvement implementation:**
- Continuous improvement implementation relates to plant, products, processes, systems or services, including design, development, implementation or manufacture, commissioning, operation or delivery and maintenance. Continuous improvement is part of CM and ILS.
 - Improvement processes include techniques, such as:
 - balanced scorecard
 - current and future state mapping
 - measuring performance against benchmarks
 - process improvement, problem solving and decision making
 - data management, generation, recording, analysing, storing, use of software
 - training for improvement systems participation
 - technical training
- Constraints and contingencies include:**
- Financial
 - Organisation procedural or culture
 - Physical constraints such as limits to resources, limits to site access or logistical limitations
 - Airworthiness regulatory requirements
- Configuration management (CM)**
- CM is a process for control and documentation of the design and development process and for the management of system, component and software throughout the service life
- Integrated logistic support (ILS)**
- ILS is an integrated approach to the management of logistic disciplines originally developed for the management of military systems from design concept to final disposal at life-of-type. It covers:
 - reliability engineering, maintainability engineering and maintenance planning

- supply and support
- support and test equipment
- manpower and personnel
- training and training support
- technical data and publications
- computer resources support
- facilities
- packaging, handling, storage and transportation
- design interface

Assessment Requirements for MEA713 Integrate aeronautical fundamentals into an engineering task

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- communicating, cooperating and negotiating with stakeholders to achieve integration task
- determining task parameters and context, chain of responsibility, WHS, regulatory requirements, risk management and organisational procedures
- confirming personal, team and support personnel tasks and responsibilities
- evaluating task requirements, principles, techniques, components and systems, including software requirements, and software for basic analysis and graphics
- planning the task
- integrating aeronautical fundamentals to achieve task objectives
- solving problems and making decisions using systems thinking and continuous improvement to address contingencies and constraints and application of CM and/or ILS procedures
- report and documenting results of investigation, evaluation and integration, diagrams and calculations.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- WHS and organisational safe working procedures
- task parameters and broader context
- personal function and responsibilities
- chain of responsibility for the activity
- team interdependencies
- aeronautical fundamentals, including:
 - mathematics
 - materials properties (ferrous metals, non-ferrous metals and fibre composites)
 - mechanics
 - chemistry
 - light, sound and electromagnetic effects, including avoidance of electro-magnetic interference

- thermodynamics and heating, aircraft air conditioning and cabin pressurisation
- gas turbine and piston engines
- aviation fuels and fuel additives
- fluid mechanics
- fluid power
- hydraulic fluid characteristics
- electrical and electronic control interfaces
- fundamentals of system layout and function
- computing
- graphics, including computer-aided design and drafting (CAD) systems
- typical workshop processes
- methods and processes, including:
 - assembly of metal structure using bolts, screws, rivets and adhesives
 - assembly of composite structure using bolts, screws, rivets and adhesive bonding
 - repair techniques for metal and composite structure
 - fabrication of ducting and plumbing for hydraulic, fuel and pneumatic systems
 - fabrication of cables for mechanical linkages and systems
 - simple programming
 - simple interfacing and signal conditioning in relation to systems, such as flight controls and pressurisation/air conditioning
 - machining, such as turning, milling, broaching, boring, shaping, planning, drilling, reaming, sawing, grinding and threading
 - hot and cold working processes
 - press operations, such as drawing, punching, cropping and forging
 - fabrication and welding of metals and plastics
 - fabrication of composite structure components
 - powder metallurgy
 - heat treatment
 - moulding, casting and forging
 - assembly, sealing, fastening and gluing
 - jigs and fixtures
 - surface plating and coating
 - computer-aided engineering (CAE) processes, such as CAD/computer-aided manufacturing (CAM)/computer-numerically controlled (CNC)/rapid processes
- functions and features of aeronautical components and systems, such as:
 - mechanical systems, such as flight controls and system components
 - hydraulic power generation and systems, such as landing gear retraction, brakes, flaps/spoilers and powered flight controls and system components
 - pneumatic systems, such as bleed air, pressurisation, air cycle air conditioning, anti-ice, brakes, flaps and landing gear retraction and system components
 - fuel storage and distribution systems and components

- power plants, including engines, engine systems, propellers, control systems and system components
- electrical systems and related wiring and components (power generation, distribution, circuit protection, control interfaces with hydraulic and pneumatic systems, and flap and landing gear retraction systems/components)
- electronic system interface relating to automatic flight control, full authority digital engine control, air conditioning and cabin pressurisation control systems
- system test stands and equipment, adapters and software
- integration of aeronautical fundamentals required for task
- communication requirements of task
- current options and trends in software, including system layout and simulation
- integration management methods.

Assessment Conditions

- This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, then a simulated working environment must be used that reflects realistic workplace situations and conditions.
- The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application.
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.
- Assessors must be satisfied that the candidate can competently and consistently:
 - communicate, cooperate and negotiate with stakeholders to achieve integration task
 - determine task parameters and context, chain of responsibility, WHS, regulatory requirements, risk management and organisational procedures
 - confirm personal, team and support personnel tasks and responsibilities
 - evaluate task requirements, principles, techniques, typical applications and software
 - plan the task
 - integrate avionic fundamentals to achieve task objectives
 - solve problems and make decisions using systems thinking and continuous improvement to address contingencies and constraints
 - report and document results.
- Assessment may be in conjunction with assessment of other units of competency where required.

- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

ME A714 Integrate avionic fundamentals into an engineering task

Modification History

Release 1 - New unit of competency

Application

The unit of competency applies to engineering or related projects requiring avionic engineering skills and includes the identification, application and integration of avionic fundamentals. It includes identifying task parameters, personal and team function, chain of responsibility and work health and safety (WHS) guidelines. It includes investigation of aircraft electrical, instrument, radio and data systems and components and avionic fundamentals, including electrical and electronic methods and processes, workshop techniques, materials, scientific and mathematical principles and computer software. It requires completion of the task in cooperation with the team and documentation of the process and outcomes.

It is suitable for people pursuing paraprofessional careers and qualifications in avionic engineering.

This unit is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

ME A706 Apply basic scientific principles and techniques in avionic engineering

and

MEM23004A Apply technical mathematics

PLUS

MEM23007A Apply calculus to engineering tasks

or

ME A727 Apply calculus in avionic engineering situations

Competency Field

Avionic engineering

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1. Investigate scope of engineering task	1.1	Determine task parameters and context
	1.2	Confirm personal functions and responsibilities, team and support functional group interdependencies and communications
	1.3	Confirm that task and responsibility is appropriate to qualifications and delegations and that appropriate support including technical and professional assistance is available when required
	1.4	Determine chain of responsibility for the activity
	1.5	Determine WHS, regulatory requirements, risk management and organisational procedures
2. Evaluate task for avionic fundamentals requirements	2.1	Evaluate methods, processes and workshop techniques required by task
	2.2	Evaluate avionic fundamentals required by task
	2.3	Evaluate functions and features of avionic components and systems related to the task
	2.4	Evaluate software techniques required for basic programming, analysis and graphics
3. Integrate avionic fundamentals	3.1	Plan the task
	3.2	Communicate, cooperate and negotiate with stakeholders, use systems thinking to address contingencies and constraints, problem solving and decision making and continuous improvement to achieve integration task
	3.4	Integrate avionic fundamentals to achieve task objectives

- 4. Report results
 - 4.1 Report results of investigation, evaluation and integration
 - 4.2 Provide documentation, such as diagrams and calculations
 - 4.3 Provide documentation, such as modification instructions and maintenance manual or manual amendment and other documentation required by configuration management (CM) or integrated logistic support (ILS) procedures, where applicable

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

<p>This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.</p>	
<p>Appropriate technical and professional assistance includes:</p>	<ul style="list-style-type: none"> • Assistance from holders of specific licenses and authorisations required by the relevant airworthiness regulator, CASA or the ADF • Technical support and advice relating to elements which have intrinsic dangers, for example: <ul style="list-style-type: none"> • high pressure • energised fluid vessels • high temperatures and heat energy capacity • wiring with high current control voltages above extra low voltage • Professional support for technologies, such as: <ul style="list-style-type: none"> • specialist electric motor drives and controllers • specialist materials, plastics, metal alloys and nano materials • Special processes, foundry, alloy welding, heat treatment, sealing and fastening
<p>WHS, regulatory requirements and enterprise</p>	<ul style="list-style-type: none"> • WHS Acts and regulations • Relevant standards

procedures include:	<ul style="list-style-type: none"> • Industry codes of practice • Risk assessments • Registration requirements • Safe work practices • State and territory regulatory requirements applying to electrical work • Civil Aviation Safety Regulations (CASRs) • AAP7001.053 ADF Technical Airworthiness Management Manual • Overseas airworthiness authorities where applicable e.g. Federal Aviation Administration, Transport Canada, European Aviation Safety Agency
Systems thinking includes:	<ul style="list-style-type: none"> • The process of developing solutions within the context of an entire system • Recognising that an improvement in one subsystem can adversely affect another subsystem
Continuous improvement implementation	<ul style="list-style-type: none"> • Continuous improvement implementation relates to plant, products, processes, systems or services including design, development, implementation or manufacture, commissioning, operation or delivery and maintenance. Continuous improvement is part of CM and ILS • Improvement processes, including: <ul style="list-style-type: none"> • balanced scorecard • current and future state mapping • measuring performance against benchmarks • process improvement, problem solving and decision making • data management, generation, recording, analysing, storing and using of software • training for improvement systems participation • technical training
Constraints and contingencies include:	<ul style="list-style-type: none"> • Financial • Organisation procedural or culture • Physical constraints, such as limits to resources, limits to site access or logistical limitations • Airworthiness regulatory requirements
Configuration management (CM)	<ul style="list-style-type: none"> • CM is a process for control and documentation of the design and development process and for the management of system, component and software throughout the service life
Integrated logistic support	<ul style="list-style-type: none"> • ILS is an integrated approach to the management of logistic disciplines originally developed for the

(ILS)	management of military systems from design concept to final disposal at life-of-type. It covers: <ul style="list-style-type: none">• reliability engineering, maintainability engineering and maintenance planning• supply and support• support and test equipment• manpower and personnel• training and training support• technical data and publications• computer resources support• facilities• packaging, handling, storage and transportation• design interface

Assessment Requirements for MEA714 Integrate avionic fundamentals into an engineering task

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- communicating, cooperating and negotiating with stakeholders to achieve integration task
- determining task parameters and context, chain of responsibility, WHS, regulatory requirements, risk management and organisational procedures
- confirming personal, team and support personnel tasks and responsibilities
- evaluating task requirements, principles, techniques, avionic components and systems, including software requirements, and software for basic analysis and graphics
- planning the task
- integrating avionic fundamentals to achieve task objectives
- solve problems and making decisions using systems thinking and continuous improvement to address contingencies and constraints and application of CM and/or ILS procedures
- reporting and documenting results of investigation, evaluation and integration, diagrams and calculations.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- WHS and organisational safe working procedures
- task parameters and broader context
- personal function and responsibilities
- chain of responsibility for the activity
- team interdependencies
- avionic fundamentals, including:
 - mathematics
 - materials properties
 - mechanics
 - chemistry
 - light, sound and electromagnetic effects, including avoidance of electro-magnetic interference

- thermodynamics and heating, aircraft air conditioning and cabin pressurisation
- fluid mechanics
- fluid power
- electrical and electronic fundamentals
- fundamentals of system interfacing and signal conditioning
- computing
- graphics, including computer aided design and drafting (CAD) systems
- typical workshop processes
- methods and processes, including:
 - basic electrical and electronic control circuit assembly, including production of printed circuit boards
 - wiring and soldering, including high reliability hand soldering
 - simple programming
 - simple interfacing and signal conditioning
 - machining, such as turning, milling, broaching, boring, shaping, planing, drilling, reaming, sawing, grinding and threading
 - hot and cold working processes
 - press operations, such as drawing, punching, cropping and forging
 - fabrication and welding of metals and plastics
 - powder metallurgy
 - heat treatment
 - moulding, casting and forging
 - assembly, sealing, fastening and gluing
 - jigs and fixtures
 - surface plating and coating
 - computer-aided engineering (CAE) processes, such as CAD/computer-aided manufacturing (CAM)/computer-numerically controlled (CNC)/rapid processes
- functions and features of avionic components and systems, including:
 - electrical systems and related wiring and components (power generation, distribution, circuit protection, control interfaces with hydraulic and pneumatic systems, and caution and warning systems)
 - mechanical and electro-mechanical flight instruments (pitot/static, barometric and gyroscopic) and indication systems (quantity, pressure, temperature and position)
 - electronic systems and components (communications, radio navigation, pulse, display, automatic flight control, flight management and engine management)
 - air conditioning and cabin pressurisation control systems
 - automatic test stations, adapters and software
- integration of avionic fundamentals required for task
- communication requirements of task
- current options and trends in software, including circuit and system layout and simulation
- integration management methods.

Assessment Conditions

- This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, then a simulated working environment must be used that reflects realistic workplace situations and conditions.
- The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application.
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.
- Assessors must be satisfied that the candidate can competently and consistently:
 - communicate, cooperate and negotiate with stakeholders to achieve integration task
 - determine task parameters and context, chain of responsibility, WHS, regulatory requirements, risk management and organisational procedures
 - confirm personal, team and support personnel tasks and responsibilities
 - evaluate task requirements, principles, techniques, typical applications and software
 - plan the task
 - integrate avionic fundamentals to achieve task objectives
 - solve problems and make decisions using systems thinking and continuous improvement to address contingencies and constraints
 - report and document results.
- Assessment may be in conjunction with assessment of other units of competency where required.
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

MEA715 Evaluate aeroplane flight control systems

Modification History

Release 1 - New unit of competency

Application

This unit of competency applies to mechanical and powered flight control systems and their components, including the interface of powered systems and automatic flight control systems. It involves evaluation of systems (mechanical and powered systems and their components and the interface with automatic flight control systems) within both civil and military environments for compliance with design and performance standards, and with airworthiness regulatory requirements.

Also covered is documentation of the evaluation process within management systems, such as configuration management (CM) and integrated logistic support (ILS).

It is suitable for people working within aircraft design teams, within the engineering departments of aircraft maintenance organisations or employed within Continuing Airworthiness Management Organisations (CAMOs) and Approved Engineering Organisations, and for those pursuing qualifications or careers in those fields.

This unit is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

MEA710	Apply aeronautical system design techniques
MEM23004A	Apply technical mathematics
MEM23007A	Apply calculus to engineering tasks

Competency Field

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|----|--|-----|--|
| 1. | Prepare to evaluate aeroplane flight control system applications | 1.1 | Confirm and apply safe working practices relating to aeroplane flight control systems |
| | | 1.2 | Determine parameters and context of applications and purpose of evaluation |
| | | 1.3 | Confirm personal functions and responsibilities, team and support functional group interdependencies and communications |
| | | 1.4 | Confirm that tasks and responsibilities are appropriate to qualifications and delegations and that appropriate support, including technical and professional assistance, is available |
| | | 1.5 | Determine chain of responsibility for the activity evaluation, reporting arrangements and timelines |
| | | 1.6 | Identify work health and safety (WHS) and regulatory requirements with particular emphasis on safety, codes of practice, performance requirements and standards, including airworthiness regulatory requirements for aeroplane flight control systems, risk management and organisational procedures |
| 2. | Identify principles and techniques required for evaluation of aeroplane flight control system applications | 2.1 | Identify features and functions of aeroplane flight control systems and components |
| | | 2.2 | Review aeroplane flight control system design and layout requirements and techniques |
| | | 2.3 | Identify system electrical power requirements and interfaces with avionic systems |
| 3. | Evaluate aeroplane flight control system applications | 3.1 | Evaluate proposed modifications to aeroplane flight control systems and system components |
| | | 3.2 | Evaluate aeroplane flight control system and system component maintenance requirements |

- 3.3 Evaluate aeroplane flight control system and system component reliability and defect history
- 3.4 Evaluate proposed component substitutions
- 3.5 Evaluate application for compliance with WHS Acts, regulations, codes, directives and standards/specifications, including those related to risk management
- 4. Report results
 - 4.1 Report results of scoping, principles and techniques identification and evaluation of applications
 - 4.2 Provide documentation, such as system schematics, wiring diagrams and data required by CM and/or ILS and as required by airworthiness regulations

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Aeroplane flight control systems include:

- Mechanical primary flight control
- Powered primary flight control
- Trim
- Flaps
- High lift and spoiler
- Speed brakes
- Interfaces with automatic flight control systems and with electrical and instrument systems

Aeroplane flight control system components include:

- Cockpit controls
- Cable runs and hardware
- Mechanical linkages
- Hydraulic actuators and boost packs
- Hydraulic plumbing, valves and filters
- Trim mechanical and electrical actuators

Standards and guidance material include:

- Flap mechanical, hydraulic and electrical actuators
- Flap tracks and rollers
- High lift and spoiler actuators and mechanical linkages
- Speed brake actuators
- Indicators, lights and switches
- ADF AAP7001.054 Airworthiness Design Requirements Manual
- FAR Part 23 Airworthiness Standards for Airplanes in the Normal, Utility, Aerobatic or Commuter Categories
- FAR Part 25 Airworthiness Standards for Airplanes in the Transport Category
- EASA CS-23 Certification Specifications for Aeroplanes in the Normal, Utility, Aerobatic or Commuter Categories
- EASA CS-25 Certification Specifications for Airplanes in the Transport Category
- CASA AC21.16(0) Approval of material, parts, processes and appliances
- CASA AC21.145(0) Manufacture of parts during the course of maintenance
- CASA AC21.601(0) Australian Technical Standards Order Authorisation
- CASA CAAP35-7(0) Design approval of modifications and repairs
- CASA AC 21-99 Aircraft Wiring and Bonding
- FAA AC 43-13-1B Acceptable Methods, Techniques and Practices – Aircraft Inspection and Repair

Configuration management (CM)

- CM is a process for control and documentation of the design and development process and for the management of system, component and software throughout the service life

Integrated logistic support (ILS)

- ILS is an integrated approach to the management of logistic disciplines originally developed for the management of military systems from design concept to final disposal at life-of-type. It covers:
 - reliability engineering, maintainability engineering and maintenance planning
 - supply and support
 - support and test equipment
 - manpower and personnel
 - training and training support
 - technical data and publications
 - computer resources support

- facilities
- packaging, handling, storage and transportation
- design interface

Appropriate technical and professional assistance

- Assistance from individuals with CASA maintenance certification licenses or those with supervisory authorisations in the ADF regulatory system
- Professional support from engineers employed within:
 - organisations with CASA continuing airworthiness management or maintenance approvals
 - approved engineering organisations under the ADF regulatory system
- Engineers employed within organisations recognised by overseas airworthiness organisations

WHS, regulatory requirements and enterprise procedures include:

- WHS Acts and regulations
- Relevant standards
- Industry codes of practice
- Risk assessments
- Registration requirements
- Safe work practices
- Civil Aviation Safety Regulations (CASRs)
- AAP7001.053 ADF Technical Airworthiness Management Manual
- Overseas airworthiness authorities, where applicable, e.g. Federal Aviation Administration, Transport Canada, European Aviation Safety Agency

Unit Mapping Information

Assessment Requirements for MEA715 Evaluate aeroplane flight control systems

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- identifying WHS, regulatory and electrical safety requirements, risk management procedures, features and functions of aeroplane flight control systems and components, system design principles and techniques, including:
 - performance and operating environment
 - system control
 - indicating and circuit protection requirements
 - interface requirements between aeroplane flight control systems and other systems, including automatic flight control systems and electrical power distribution
- determining and confirming:
 - parameters and context of tasks
 - chain of responsibility
 - personal functions and responsibilities
 - team and support functional group interdependencies and communications
 - appropriate qualifications and delegations
 - appropriate support, including technical and professional assistance
- investigating associated CM and ILS requirements and drafting required data
- drafting material required for compliance with airworthiness regulations
- assessing and applying:
 - basic aeroplane flight control system performance analysis and design procedures
 - design standards, regulatory requirements
 - graphics skills and techniques
- evaluating system components and specifications against system design and operating criteria
- reporting and documenting results of scoping, principles and techniques identification and evaluation of applications.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- features and layout of aeroplane flight control systems including control, indication and interface with other systems:
 - primary flight control mechanical systems and components
 - primary flight control powered systems - hydraulic actuators and boost packages
 - interface with automatic flight control synchros and servos
 - trim systems – mechanical and electrical
 - flaps – mechanical, hydraulic and electrical actuation
 - high lift and spoiler systems
 - speed brakes
- basic design principles for:
 - primary flight controls (aerodynamics, stability, control surface mass and aerodynamic balancing, flutter)
 - primary flight control mechanical systems and components
 - powered flight control systems and components
 - trim systems and components
 - flap systems including actuators and mechanical linkages
 - high lift and spoiler systems including actuators and mechanical linkages
 - speed brakes and system components
- interface with the aircraft electrical and instrument systems
- interface with automatic flight control systems
- wiring types, standards and specifications
- performance and operating environment effects
- airworthiness regulator design standards
- compliance requirements of the WHS Act and regulations, codes of practice, standards, risk assessment
- scope of trade, technical and professional support services required in aircraft flight control system applications
- management data interface with CM and ILS.

Assessment Conditions

- This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, then a simulated working environment must be used that reflects realistic workplace situations and conditions.
- The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.

- Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application.
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.
- Assessors must be satisfied that the candidate can competently and consistently:
 - identify and apply WHS, regulatory and risk management procedures
 - determine parameters and context of tasks, personal, team, licensed technical and professional assistance and support personnel functions and responsibilities, and chain of responsibility
 - investigate sustainability implications of aeroplane flight control system applications as specified in CM and/or ILS requirements
 - assess and apply basic aeroplane flight control system design and maintenance/repair requirements, and graphics skills and techniques
 - evaluate aeroplane flight control systems and components for compliance with WHS and airworthiness regulatory requirements
- report and document results including provision of CM and ILS input data
- Assessment may be in conjunction with assessment of other units of competency where required.
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

MEA716 Evaluate avionic analogue systems

Modification History

Release 1 - New unit of competency

Application

This unit of competency applies to avionic analogue communication, navigation, instrument and automatic pilot systems. It involves evaluation of systems in accordance with standards and regulatory requirements within both civil and military environments for compliance with design and performance standards and with airworthiness regulatory requirements.

Also covered is documentation of the evaluation process within management systems such as configuration management (CM) and integrated logistic support (ILS).

It is suitable for people working within aircraft design teams, within the engineering departments of aircraft maintenance organisations or employed within Continuing Airworthiness Management Organisations (CAMOs) and Approved Engineering Organisations (AEOs), and for those pursuing paraprofessional qualifications or careers in those fields.

This unit is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

MEA711 Apply avionic analogue design techniques

MEA727 Apply calculus in avionic engineering situations

Competency Field

Avionic engineering

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Prepare to evaluate avionic analogue system	<p>1.1 Confirm and apply safe electrical working practice</p> <p>1.2 Review the effects of electricity on humans and identify dangerous high currents and voltages and regulatory requirements related to extra low, low and high voltage applications and relate these to aircraft radio frequency system operation and maintenance</p> <p>1.3 Determine parameters and context of applications and purpose of evaluation</p> <p>1.4 Confirm personal functions and responsibilities, team and support functional group interdependencies and communications</p> <p>1.5 Confirm that tasks and responsibilities are appropriate to qualifications and delegations and that appropriate support, including technical and professional assistance, is available</p> <p>1.6 Determine chain of responsibility for the activity evaluation, reporting arrangements and timelines</p> <p>1.7 Identify work health and safety (WHS) and regulatory requirements with particular emphasis on safety, codes of practice, performance requirements and standards, including airworthiness regulatory requirements for avionic systems, risk management and organisational procedures</p>
2. Identify principles and techniques required for evaluation of avionic analogue system and system components	<p>2.1 Identify features and functions of avionic analogue systems and components</p> <p>2.2 Review avionic analogue system design and layout requirements and techniques</p> <p>2.3 Identify system power requirements</p> <p>2.4 Identify electro-magnetic interference protection requirements</p>
3. Evaluate avionic	<p>3.1 Evaluate proposed modifications to avionic analogue</p>

analogue system and system components		systems and components
	3.2	Evaluate avionic analogue system and system component maintenance requirements
	3.3	Evaluate avionic analogue system and system component reliability and defect history
	3.4	Evaluate proposed component and piece part substitution
	3.5	Evaluate application for compliance with WHS Acts, regulations, codes, directives and standards/specifications, including those related to risk management
4. Report results	4.1	Report results of scoping, principles and techniques identification and evaluation of applications
	4.2	Provide documentation, such as system schematics, wiring diagrams and data required by CM and/or ILS, and for compliance with airworthiness regulations

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Avionic analogue systems include:

- High frequency (HF) communications
- Very high frequency (VHF) communications
- Ultra-high frequency (UHF) communications
- Satellite communications
- Internal communications and public address
- Automatic direction finder
- VHF omni-directional range (VOR)
- Pulse:
 - weather radar

- radar altimeter
- air traffic control (ATC) transponder
- doppler navigation
- distance measuring equipment (DME)
- Automatic pilot
- Tactical aerial navigation (TACAN)
- Aircraft communication addressing and reporting (ACAR)
- Instrument landing system (ILS)
- Electro-mechanical flight and indicating instruments
- Compasses
- Interfaces with avionic digital systems, such as:
 - flight management
 - automatic flight control
 - electronic display, including flight instruments and centralised aircraft monitoring
 - area navigation (RNAV)

Avionic analogue system components include:

- Receivers
- Transmitters
- Transceivers
- Racks and cooling fans
- Tuners
- Indicators
- Antennas and related cables and hardware
- Analogue electronic circuitry and components
- Electro-mechanical flight instruments
- Electro-mechanical measuring instruments
- Pitot/static system components
- Wiring and related hardware
- Fuses and circuit breakers
- Synchros and servos
- Gyroscopes
- Sensors
- Flight instruments (air speed indicator, vertical speed indicator, altimeter, turn and slip, artificial horizon and directional gyro)
- Pitot/static components
- Compass indicators
- Flux valves
- Amplifiers
- Power supplies
- ADF AAP7001.054 Airworthiness Design

Standards and guidance

material include:

- Requirements Manual
- FAR Part 23 Airworthiness Standards for Airplanes in the Normal, Utility, Aerobatic or Commuter Categories
- FAR Part 25 Airworthiness Standards for Airplanes in the Transport Category
- EASA CS-23 Certification Specifications for Aeroplanes in the Normal, Utility, Aerobatic or Commuter Categories
- EASA CS-25 Certification Specifications for Airplanes in the Transport Category
- CASA AC 21-99 Aircraft Wiring and Bonding
- RTCA DO-160D Environmental Conditions and Test Procedures for Airborne Equipment
- Military Specification MIL-E-7016F: Electrical Load and Power Source Capacity, Aircraft, Analysis of
- SAE Aerospace AS50881 Wiring Aerospace Vehicles
- CASA AC21.16(0) Approval of material, parts, processes and appliances
- CASA AC21.145(0) Manufacture of parts during the course of maintenance
- CASA AC21.601(0) Australian Technical Standards Order Authorisation
- CASA CAAP35-7(0) Design approval of modifications and repairs
- FAA AC 43-13-1B Acceptable Methods, Techniques and Practices – Aircraft Inspection and Repair

Configuration management (CM)

- CM is a process for control and documentation of the design and development process and for the management of system, component and software throughout the service life

Integrated logistic support (ILS)

- ILS is an integrated approach to the management of logistic disciplines originally developed for the management of military systems from design concept to final disposal at life-of-type. It covers:
 - reliability engineering, maintainability engineering and maintenance planning
 - supply and support
 - support and test equipment
 - manpower and personnel
 - training and training support
 - technical data and publications
 - computer resources support
 - facilities
 - packaging, handling, storage and transportation

Appropriate technical and professional assistance include:

- design interface
- Assistance from individuals with CASA maintenance certification licenses or those with supervisory authorisations in the ADF regulatory system
- Professional support from engineers employed within:
 - organisations with CASA continuing airworthiness management or maintenance approvals
 - approved engineering organisations under the ADF regulatory system
- Engineers employed within organisations recognised by overseas airworthiness organisations

WHS, regulatory requirements and enterprise procedures include:

- WHS Acts and regulations
- Relevant standards
- Industry codes of practice
- Risk assessments
- Registration requirements
- Safe work practices
- Civil Aviation Safety Regulations (CASRs)
- AAP7001.053 ADF Technical Airworthiness Management Manual
- Overseas airworthiness authorities where applicable e.g. Federal Aviation Administration, Transport Canada, European Aviation Safety Agency

Unit Mapping Information

Release 1 - new unit based on MEM23096A Apply avionic system design principles and techniques in avionic engineering situations and MEM23096A Apply avionic system design principles and techniques in avionic engineering situations – units not equivalent

Companion Volume implementation guides are found in VETNet - <https://vetnet.education.gov.au/Pages/TrainingDocs.aspx?q=ce216c9c-04d5-4b3b-9bcf-4e81d0950371>

Assessment Requirements for MEA716 Evaluate avionic analogue systems

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- identifying WHS, regulatory and electrical safety requirements, risk management procedures, features and functions of aircraft analogue avionic systems and components, system design principles and techniques, including performance and operating environment, system control, indicating and circuit protection requirements and interface requirements between analogue avionic systems and other systems, including the electrical power distribution and avionic digital systems and system components
- reviewing effects of electricity on humans, dangerous high currents and voltages and automated systems, regulatory requirements related to extra low, low and high voltage applications and relating these to aircraft analogue avionic system applications
- reviewing effects of electro-magnetic radiation on humans and relate them to aircraft radio frequency and pulse systems
- determining and confirming parameters and context of tasks, chain of responsibility, personal functions and responsibilities, team and support functional group interdependencies and communications, appropriate qualifications and delegations, and appropriate support, including licensed technical and professional assistance
- investigating associated CM and ILS requirements and drafting required data
- identifying and drafting documents required for compliance with airworthiness regulations
- assessing and applying basic aircraft analogue avionic system performance analysis and design procedures, design standards, regulatory requirements and graphics skills and techniques
- evaluating system components and specifications against system design and operating criteria
- reporting and documenting results of scoping, principles and techniques identification and evaluation of applications.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- features and layout of aircraft avionic analogue systems, including control, indication and antennas

- features and layout of electro-mechanical flight instruments and instrument systems, including pitot static and vacuum systems
- features and layout of electro-mechanical measuring systems, including fuel quantity/flow, fluid pressure and position indicating
- analogue electronics
- pulse systems
- compass principles and systems
- gyroscopic principles
- synchro and servo systems, including feedback loops
- basic design principles for:
 - electro-mechanical instrument systems and instrument panel layout
 - analogue communications and navigation systems
 - pulse systems
 - autopilot systems
 - instrument landing systems
 - compass systems
- interface with avionic digital systems, such as flight management, area navigation, display and cabin services
- interface with the aircraft electrical system
- wiring and antenna cabling types, standards and specifications
- performance and operating environment effects
- airworthiness regulator design standards
- compliance requirements of the WHS Act and regulations, codes of practice, standards and risk assessment
- scope of trade, technical and professional support services required in electrical system applications
- management data interface with CM and ILS.

Assessment Conditions

- This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, then a simulated working environment must be used that reflects realistic workplace situations and conditions.
- The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application.
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.

- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.
- Assessors must be satisfied that the candidate can competently and consistently:
 - identify and apply WHS, regulatory and risk management procedures
 - review dangers and effects of electricity and electro-magnetic radiation on humans
 - determine parameters and context of tasks, personal, team, technical and professional assistance and support personnel functions and responsibilities, and chain of responsibility
 - investigate sustainability implications of aircraft analogue avionic system applications as specified in CM and/or ILS requirements
 - assess and apply basic aircraft analogue avionic system design and maintenance/repair requirements, software basic analysis and graphics skills and techniques
 - evaluate aircraft analogue avionic systems and components for compliance with WHS and airworthiness regulatory requirements
 - report and document results, including provision of CM and ILS input data.
- Assessment may be in conjunction with assessment of other units of competency where required.
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

MEA717 Evaluate avionic digital systems

Modification History

Release 1 - New unit of competency

Application

This unit of competency applies to avionic digital communication, navigation, instrument display, on-board computer and automatic flight systems and software for these systems. It involves evaluation of systems for compliance with design and performance standards and with airworthiness regulatory requirements within both civil and military environments.

Also covered is documentation of the evaluation process within management systems, such as configuration management (CM) and integrated logistic support (ILS).

It is suitable for people working as paraprofessionals within aircraft design teams, within the engineering departments of aircraft maintenance organisations or employed within Continuing Airworthiness Management Organisations (CAMOs) and Approved Engineering Organisations, and for those pursuing qualifications or careers in those fields.

This unit is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

MEA712 Apply avionic digital design techniques

MEA727 Apply calculus in avionic engineering situations

Competency Field

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1. Prepare to evaluate avionic digital system
 - 1.1 Confirm and apply safe electrical working practice
 - 1.2 Review the effects of electricity on humans and identify dangerous high currents and voltages and regulatory requirements related to extra low, low and high voltage applications and relate these to aircraft digital system operation and maintenance
 - 1.3 Determine parameters and context of applications and purpose of evaluation
 - 1.4 Confirm personal functions and responsibilities, team and support functional group interdependencies and communications
 - 1.5 Confirm that tasks and responsibilities are appropriate to qualifications and delegations and that appropriate support, including technical and professional assistance, is available
 - 1.6 Determine chain of responsibility for the activity evaluation, reporting arrangements and timelines
 - 1.7 Identify work health and safety (WHS) and regulatory requirements with particular emphasis on safety, codes of practice, performance requirements and standards, including airworthiness regulatory requirements for avionic systems, risk management and organisational procedures
2. Identify principles and techniques required for evaluation of avionic digital system and system components
 - 2.1 Identify features and functions of avionic digital systems and components
 - 2.2 Review avionic digital system design and layout requirements and techniques
 - 2.3 Identify system power requirements and interfaces with aircraft and avionic analogue systems
 - 2.4 Identify electro-magnetic interference protection requirements
3. Evaluate avionic digital system and system components
 - 3.1 Evaluate proposed modifications to avionic digital systems, system components and software
 - 3.2 Evaluate avionic digital system and system component maintenance requirements
 - 3.3 Evaluate avionic digital systems and system

- component reliability and defect history
- 3.4 Evaluate proposed component and piece part substitution
 - 3.5 Evaluate application for compliance with WHS Acts, regulations, codes, directives and standards/specifications, including those related to risk management
4. Report results
 - 4.1 Report results of scoping, principles and techniques identification and evaluation of applications
 - 4.2 Provide documentation, such as system schematics, software, wiring diagrams and data required by CM and/or ILS, and for compliance with airworthiness regulations

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Avionic digital systems include:

- Digital communications, including high frequency (HF), very high frequency (VHF), ultra-high frequency (UHF) and satellite
- Aircraft communication addressing and reporting (ACAR) system
- Display, including primary flight, multi-function and engine indicating and crew alerting
- Head-up display
- Automatic flight control
- Full-authority digital engine control
- Flight management computer
- Area navigation (RNAV)
- Traffic alert and collision avoidance
- Enhanced ground position warning

Digital system components include:

- Global navigation
- Inertial navigation and inertial reference
- Integrated modular avionics
- Cabin systems
- On-board maintenance computers
- Interfaces with avionic analogue communication and navigation systems
- Receivers
- Transmitters
- Transceivers
- Racks and cooling fans
- Tuners
- Computers and micro-processors
- Displays (CRT or LCD)
- Antennas and related cables and hardware
- Digital electronic circuitry and components
- Data buses
- Pitot/static system components
- Wiring and related hardware
- Fuses and circuit breakers
- Synchros and servos
- Gyroscopes
- Sensors
- Power supplies

Standards and guidance material include:

- ADF AAP7001.054 Airworthiness Design Requirements Manual
- CASA AC 21-46(0) Airworthiness Approval of Avionic Equipment
- FAR Part 23 Airworthiness Standards for Airplanes in the Normal, Utility, Aerobatic or Commuter Categories
- FAR Part 25 Airworthiness Standards for Airplanes in the Transport Category
- EASA CS-23 Certification Specifications for Aeroplanes in the Normal, Utility, Aerobatic or Commuter Categories
- EASA CS-25 Certification Specifications for Airplanes in the Transport Category
- CASA AC 21-99 Aircraft Wiring and Bonding
- RTCA DO-160D Environmental Conditions and Test Procedures for Airborne Equipment
- RTCA DO-178B (also EUROCAE ED-12B) Software Considerations in Airborne Systems and Equipment Certification

- IEEE/EIA 12207 Information technology – Software life cycle processes
 - Military Specification MIL-E-7016F: Electrical Load and Power Source Capacity, Aircraft, Analysis of
 - SAE Aerospace AS50881 Wiring Aerospace Vehicles
 - CASA AC21.16(0) Approval of material, parts, processes and appliances
 - CASA AC21.145(0) Manufacture of parts during the course of maintenance
 - CASA AC21.601(0) Australian Technical Standards Order Authorisation
 - CASA CAAP35-7(0) Design approval of modifications and repairs
 - FAA AC 43-13-1B Acceptable Methods, Techniques and Practices – Aircraft Inspection and Repair
 - The Avionics Handbook
 - FAA-H-8083-6 Advanced Avionics Handbook
- Configuration management (CM)**
- CM is a process for control and documentation of the design and development process and for the management of system, component and software throughout the service life
- Integrated logistic support (ILS)**
- ILS is an integrated approach to the management of logistic disciplines originally developed for the management of military systems from design concept to final disposal at life-of-type. It covers:
 - reliability engineering, maintainability engineering and maintenance planning
 - supply and support
 - support and test equipment
 - manpower and personnel
 - training and training support
 - technical data and publications
 - computer resources support
 - facilities
 - packaging, handling, storage and transportation
 - design interface
- Appropriate technical and professional assistance includes:**
- Assistance from individuals with CASA maintenance certification licenses or those with supervisory authorisations in the ADF regulatory system
 - Professional support from engineers employed within:
 - organisations with CASA continuing airworthiness management or maintenance approvals
 - approved engineering organisations under the ADF

- regulatory system
- WHS, regulatory requirements and enterprise procedures include:**
- Engineers employed within organisations recognised by overseas airworthiness organisations
 - WHS Acts and regulations
 - Relevant standards
 - Industry codes of practice
 - Risk assessments
 - Registration requirements
 - Safe work practices
 - Civil Aviation Safety Regulations (CASRs)
 - AAP7001.053 ADF Technical Airworthiness Management Manual
 - Overseas airworthiness authorities where applicable e.g. Federal Aviation Administration, Transport Canada, European Aviation Safety Agency

Unit Mapping Information

Release 1 – new unit based on MEM23096A Apply avionic system design principles and techniques in avionic engineering situations, MEM23096A Apply avionic system design principles and techniques in avionic engineering situations and MEM23098A Apply automated system principles and techniques in avionic engineering situations – units not equivalent

Assessment Requirements for MEA717 Evaluate avionic digital systems

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- identifying WHS, regulatory and electrical safety requirements, risk management procedures, features and functions of aircraft digital avionic systems and components, system design principles and techniques, including performance and operating environment, system control, indicating and circuit protection requirements and interface requirements between avionic systems and other systems, including the electrical power distribution
- reviewing effects of electricity on humans, dangerous high currents and voltages and automated systems, regulatory requirements related to extra low, low and high voltage applications and relating these to aircraft digital avionic system applications
- reviewing effects of electro-magnetic radiation on humans and relate them to aircraft radio frequency and pulse systems
- determining and confirming:
 - parameters and context of tasks
 - chain of responsibility
 - personal functions and responsibilities
 - team and support functional group interdependencies and communications
 - appropriate qualifications and delegations
 - appropriate support including technical and professional assistance
- investigating associated CM and ILS requirements and drafting required data
- identifying and drafting documentation required for compliance with airworthiness regulations
- assessing and applying:
 - basic aircraft digital avionic system performance analysis and design procedures
 - design standards
 - regulatory requirements
 - graphics skills and techniques
- evaluating system components and specifications against system design and operating criteria
- evaluating system software against system design and operating criteria

- reporting and documenting results of scoping, principles and techniques identification and evaluation of applications.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- features and layout of aircraft avionic digital systems, including control, indication and antennas
- features and layout of instrument display systems, including:
 - engine indication and crew alert
 - primary flight
 - multi-function
 - head-up display
- flight management computer system
- digital electronics, including A-D and D-A converters
- pulse systems
- inertial navigation and inertial reference systems
- gyroscopic principles
- synchro and servo systems, including feedback loops
- master caution and warning systems
- basic design principles for:
 - display systems and instrument panel layout including head-up display
 - digital communications and navigation systems
 - pulse systems
 - digital autopilot systems
 - automatic flight control
 - digital engine control
 - automatic landing systems
 - inertial navigation and inertial reference systems
 - flight management computer systems
 - area navigation systems
 - on-board maintenance computer systems
 - cabin services
- avionic software design procedures and requirements
- data buses, including multiplexing and demultiplexing
- interface with the aircraft electrical system
- wiring and antenna cabling types, standards and specifications
- performance and operating environment effects
- airworthiness regulator design standards

- compliance requirements of the WHS Act and regulations, codes of practice, standards, risk assessment
- scope of trade, technical and professional support services required in digital avionic system applications
- management data interface with CM and ILS.

Assessment Conditions

- This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, then a simulated working environment must be used that reflects realistic workplace situations and conditions.
- The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application.
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.
- Assessors must be satisfied that the candidate can competently and consistently:
 - identify and apply WHS, regulatory and risk management procedures
 - review dangers and effects of electricity and electro-magnetic radiation on humans
 - determine parameters and context of tasks, personal, team, technical and professional assistance and support, personnel functions and responsibilities, and chain of responsibility
 - investigate sustainability implications of aircraft digital avionic system applications as specified in CM and/or ILS requirements
 - assess and apply basic aircraft digital avionic system design and maintenance/repair requirements, software basic analysis and graphics skills and techniques
 - evaluate aircraft digital avionic systems and components for compliance with WHS and airworthiness regulatory requirements
 - report and document results including provision of CM and ILS input data.
- Assessment may be in conjunction with assessment of other units of competency where required.
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

MEA718 Evaluate rotorcraft flight control systems

Modification History

Release 1 - New unit of competency

Application

This unit of competency applies to rotorcraft mechanical and powered flight control systems and their components, including the interface of powered systems and automatic flight control systems. It involves evaluation of systems and components for compliance with design and performance standards and with airworthiness regulatory requirements within both civil and military environments.

Also covered is documentation of the evaluation process within management systems, such as configuration management (CM) and integrated logistic support (ILS).

It is suitable for people working within aircraft design teams, within the engineering departments of aircraft maintenance organisations or employed within Continuing Airworthiness Management Organisations (CAMOs) and Approved Engineering Organisations (AEOs), and for those pursuing qualifications or careers in those fields.

This unit is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

MEA710	Apply aeronautical system design techniques
MEM23004A	Apply technical mathematics
MEM23007A	Apply calculus to engineering tasks

Competency Field

Aeronautical engineering

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Prepare to evaluate rotorcraft flight control system	<p>1.1 Confirm and apply safe working practices relating to aircraft pneumatic systems</p> <p>1.2 Determine parameters and context of applications and purpose of evaluation</p> <p>1.3 Confirm personal functions and responsibilities, team and support functional group interdependencies and communications</p> <p>1.4 Confirm that tasks and responsibilities are appropriate to qualifications and delegations and that appropriate support, including technical and professional assistance, is available</p> <p>1.5 Determine chain of responsibility for the activity evaluation, reporting arrangements and timelines</p> <p>1.6 Identify work health and safety (WHS) and regulatory requirements with particular emphasis on safety, codes of practice, performance requirements and standards, including airworthiness regulatory requirements for rotorcraft flight control systems, risk management and organisational procedures</p>
2. Identify principles and techniques required for evaluation of rotorcraft flight control system applications	<p>2.1 Identify features and functions of rotorcraft flight control systems and components</p> <p>2.2 Review rotorcraft flight control system design and layout requirements and techniques</p> <p>2.3 Identify system electrical power requirements and interfaces with avionic systems</p>
3. Evaluate rotorcraft flight control system	<p>3.1 Evaluate proposed modifications to rotorcraft flight control systems and system components</p> <p>3.2 Evaluate rotorcraft flight control system and system component maintenance requirements</p> <p>3.3 Evaluate rotorcraft flight control system and system component reliability and defect history</p>

- 3.4 Evaluate proposed component substitutions
- 3.5 Evaluate application for compliance with WHS Acts, regulations, codes, directives and standards/specifications, including those related to risk management
- 4. Report results
 - 4.1 Report results of scoping, principles and techniques identification and evaluation of applications
 - 4.2 Provide documentation, such as system schematics, wiring diagrams and data required by CM and/or ILS, and as required for compliance with airworthiness regulations

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Rotorcraft flight control systems include:

- Mechanical flight control (cyclic, collective and tail rotor)
- Powered flight control
- Trim
- Interfaces with engine fuel control unit or throttle/governor
- Interfaces with automatic flight control systems, electrical and instrument systems and engine power control

Rotorcraft flight control system components include:

- Cockpit controls
- Cable runs and hardware
- Mechanical linkages
- Hydraulic actuators and valves
- Electric actuators
- Hydraulic power supply, plumbing, valves and filters
- Trim actuators

Standards and guidance material include:

- Mixer box
- Rotor swashplate
- Tail rotor pitch change mechanism
- Indicators, lights and switches
- ADF AAP7001.054 Airworthiness Design Requirements Manual
- FAR Part 27 Airworthiness Standards for Rotorcraft in the Normal Category
- FAR Part 29 Airworthiness Standards for Rotorcraft in the Transport Category
- EASA CS-27 Certification Specifications for Rotorcraft in the Normal Category
- EASA CS-29 Certification Specifications for Rotorcraft in the Transport Category
- CASA AC21.16(0) Approval of material, parts, processes and appliances
- CASA AC21.145(0) Manufacture of parts during the course of maintenance
- CASA AC21.601(0) Australian Technical Standards Order Authorisation
- CASA CAAP35-7(0) Design approval of modifications and repairs
- CASA AC 21-99 Aircraft Wiring and Bonding
- FAA AC 43-13-1B Acceptable Methods, Techniques and Practices – Aircraft Inspection and Repair

Configuration management (CM)

- CM is a process for control and documentation of the design and development process and for the management of system, component and software throughout the service life

Integrated logistic support (ILS)

- ILS is an integrated approach to the management of logistic disciplines originally developed for the management of military systems from design concept to final disposal at life-of-type. It covers:
 - reliability engineering, maintainability engineering and maintenance planning
 - supply and support
 - support and test equipment
 - manpower and personnel
 - training and training support
 - technical data and publications
 - computer resources support
 - facilities
 - packaging, handling, storage and transportation

Appropriate technical and professional assistance includes:

- design interface
- Assistance from individuals with CASA maintenance certification licenses or those with supervisory authorisations in the ADF regulatory system
- Professional support from engineers employed within:
 - organisations with CASA continuing airworthiness management or maintenance approvals
 - approved engineering organisations under the ADF regulatory system
- Engineers employed within organisations recognised by overseas airworthiness organisations

WHS, regulatory requirements and enterprise procedures include:

- WHS Acts and regulations
- Relevant standards
- Industry codes of practice
- Risk assessments
- Registration requirements
- Safe work practices
- Civil Aviation Safety Regulations (CASRs)
- AAP7001.053 ADF Technical Airworthiness Management Manual
- Overseas airworthiness authorities, where applicable, e.g. Federal Aviation Administration, Transport Canada, European Aviation Safety Agency

Unit Mapping Information

Assessment Requirements for MEA718 Evaluate rotorcraft flight control systems

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- identifying WHS, regulatory and electrical safety requirements, risk management procedures, features and functions of aircraft flight control systems and components, system design principles and techniques, including:
 - performance and operating environment
 - system control
 - indicating and circuit protection requirements
 - interface requirements between rotorcraft flight control systems and other systems, including automatic flight control systems and electrical power distribution
- determining and confirming:
 - parameters and context of tasks
 - chain of responsibility
 - personal functions and responsibilities
 - team and support functional group interdependencies and communications
 - appropriate qualifications and delegations
 - appropriate support, including technical and professional assistance
- investigating associated CM and ILS requirements and drafting required data
- identifying and drafting data required for compliance with airworthiness regulations
- assessing and applying:
 - basic rotorcraft flight control system performance analysis and design procedures
 - design standards
 - regulatory requirements
 - graphics skills and techniques
- evaluating system components and specifications against system design and operating criteria
- reporting and documenting results of scoping, principles and techniques identification and evaluation of applications.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- features and layout of rotorcraft flight control systems, including control, indication and interface with other systems:
 - cyclic and collective flight control mechanical systems and components
 - cyclic and collective flight control powered systems - hydraulic actuators and irreversible valves
 - tail rotor control
 - interface with automatic flight control servo actuating devices and trim systems
 - interface with electrical power supply, instrument systems and engine power control system
- basic design principles for:
 - cyclic, collective and tail rotor flight controls
 - cyclic, collective and tail rotor flight control mechanical systems and components
 - powered flight control systems and components
 - trim systems and components
- interface with the aircraft electrical and instrument systems
- interface with automatic flight control systems
- wiring types, standards and specifications
- performance and operating environment effects
- airworthiness regulator design standards
- compliance requirements of the WHS Act and regulations, codes of practice, standards and risk assessment
- scope of trade, technical and professional support services required in aircraft flight control system applications
- management data interface with CM and ILS.

Assessment Conditions

- This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, then a simulated working environment must be used that reflects realistic workplace situations and conditions.
- The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application.
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.

- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.
- Assessors must be satisfied that the candidate can competently and consistently:
 - identify and apply WHS, regulatory and risk management procedures
 - determine parameters and context of tasks, personal, team, technical and professional assistance and support, personnel functions and responsibilities, and chain of responsibility
 - investigate sustainability implications of rotorcraft flight control system applications as specified in CM and/or ILS requirements
 - assess and apply basic rotorcraft flight control system design and maintenance/repair requirements, and graphics skills and techniques
 - evaluate aircraft flight control systems and components for compliance with WHS and airworthiness regulatory requirements
 - report and document results including provision of CM and ILS input data.
- Assessment may be in conjunction with assessment of other units of competency where required.
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

MEA719 Evaluate aircraft electrical systems

Modification History

Release 1 - New unit of competency

Application

This unit of competency applies to aircraft alternating current (AC) and direct current (DC) electrical systems, including power generation, control and distribution circuits and lighting systems. It involves evaluation of systems for compliance with design and performance standards and with airworthiness regulatory requirements within both civil and military environments.

Also covered is documentation of the evaluation process within management systems, such as configuration management (CM) and integrated logistic support (ILS).

It is suitable for people working as paraprofessionals within aircraft design teams, within the engineering departments of aircraft maintenance organisations or employed within Continuing Airworthiness Management Organisations (CAMOs) and Approved Engineering Organisations (AEOs), and for those pursuing qualifications or careers in those fields.

This unit is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

MEA726 Apply aircraft electrical system design techniques

Competency Field

Avionic engineering

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes. Performance criteria describe the performance needed to demonstrate achievement of the element.

1. Prepare to evaluate aircraft electrical system
 - 1.1 Confirm and apply safe electrical working practice
 - 1.2 Review the effects of electricity on humans and identify dangerous high currents and voltages and regulatory requirements related to extra low, low and high voltage applications and relate these to aircraft electrical system operation and maintenance
 - 1.3 Determine parameters and context of applications and purpose of evaluation
 - 1.4 Confirm personal functions and responsibilities, team and support functional group interdependencies and communications
 - 1.5 Confirm that tasks and responsibilities are appropriate to qualifications and delegations and that appropriate support, including technical and professional assistance, is available
 - 1.6 Determine chain of responsibility for the activity evaluation, reporting arrangements and timelines
 - 1.7 Identify work health and safety (WHS) and regulatory requirements with particular emphasis on safety, codes of practice, performance requirements and standards, including airworthiness regulatory requirements for aircraft electrical systems, risk management and organisational procedures
2. Identify principles and techniques required for evaluation of aircraft electrical system
 - 2.1 Identify features and functions of aircraft electrical AC and DC systems and components
 - 2.2 Review aircraft electrical system design and layout requirements and techniques
 - 2.3 Identify system power generation and control requirements
 - 2.4 Identify electrical distribution system circuit and protection requirements
 - 2.5 Identify interfaces with aircraft and avionic systems and their power requirements
 - 2.6 Identify internal and external aircraft lighting requirements
3. Evaluate aircraft
 - 3.1 Evaluate proposed modifications to aircraft electrical

electrical system and system components		systems and system components
	3.2	Evaluate aircraft electrical system and system component maintenance requirements
	3.3	Evaluate aircraft electrical system and system component reliability and defect history
	3.4	Evaluate proposed component substitutions
	3.5	Evaluate application for compliance with WHS Acts, regulations, codes, directives and standards/specifications, including those related to risk management
4.	Report results	
	4.1	Report results of scoping, principles and techniques identification and evaluation of applications
	4.2	Provide documentation, such as system schematics, wiring diagrams and data required by CM and/or ILS, and as required for compliance with airworthiness regulations

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Aircraft electrical systems include:

- AC power generation and control
- DC power generation and control
- Batteries
- Electrical power distribution circuits and circuit protection
- External lighting circuits
- Internal lighting circuits
- Electrical interfaces with aircraft systems, such as:
 - hydraulic
 - landing gear and brakes

- doors
- pneumatic
- air conditioning and pressurisation
- flight controls
- engine controls
- anti-ice and de-ice
- fire detection and extinguishing
- Electrical interfaces with avionic systems, such as:
 - caution and warning
 - instrumentation
 - communications
 - navigation
 - pulse
 - on-board computer systems (e.g. automatic flight and engine control, flight management and on-board maintenance)
 - in-flight entertainment

Electrical system components include:

- Alternators, generators, inverters and transformer/rectifiers
- Batteries and emergency batteries
- Regulators and indicators, such as voltage, current and frequency
- Switches
- Relays
- Wiring and related hardware
- Fuses and circuit breakers
- Rheostats
- Rotary and linear actuators
- Lighting, including strobe lights
- Indication and warning lights

Standards and guidance material include:

- ASTM F2639-07 Standard Practices for Design, Alteration and Certification of Airplane Electrical Wiring Systems
- ARINC Report 609 Design Guidance for Aircraft Electrical Power Systems
- CASA AC 21-38(0) Aircraft Electrical Load Analysis and Power Source Capacity
- CASA AC 21-99 Aircraft Wiring and Bonding
- ADF AAP7001.054 Airworthiness Design Requirements Manual
- FAR Part 23 Airworthiness Standards for Airplanes in the Normal, Utility, Aerobatic or Commuter Categories

- FAR Part 25 Airworthiness Standards for Airplanes in the Transport Category
- FAR Part 27 Airworthiness Standards for Rotorcraft in the Normal Category
- FAR Part 29 Airworthiness Standards for Rotorcraft in the Transport Category
- EASA CS-23 Certification Specifications for Aeroplanes in the Normal, Utility, Aerobatic or Commuter Categories
- EASA CS-25 Certification Specifications for Airplanes in the Transport Category
- EASA CS-27 Certification Specifications for Rotorcraft in the Normal Category
- EASA CS-29 Certification Specifications for Rotorcraft in the Transport Category
- RTCA DO-160D Environmental Conditions and Test Procedures for Airborne Equipment
- Military Specification MIL-E-7016F: Electrical Load and Power Source Capacity, Aircraft, Analysis of
- SAE Aerospace AS50881 Wiring Aerospace Vehicles
- CASA AC21.16(0) Approval of material, parts, processes and appliances
- CASA AC21.145(0) Manufacture of parts during the course of maintenance
- CASA AC21.601(0) Australian Technical Standards Order Authorisation
- CASA CAAP35-7(0) Design approval of modifications and repairs
- FAA AC 43-13-1B Acceptable Methods, Techniques and Practices – Aircraft Inspection and Repair

Configuration management (CM)

- CM is a process for control and documentation of the design and development process and for the management of system, component and software throughout the service life

Integrated logistic support (ILS)

- ILS is an integrated approach to the management of logistic disciplines originally developed for the management of military systems from design concept to final disposal at life-of-type. It covers:
 - reliability engineering, maintainability engineering and maintenance planning
 - supply and support
 - support and test equipment
 - manpower and personnel
 - training and training support

- technical data and publications
 - computer resources support
 - facilities
 - packaging, handling, storage and transportation
 - design interface
- Appropriate technical and professional assistance includes:**
- Assistance from individuals with CASA maintenance certification licenses or those with supervisory authorisations in the ADF regulatory system
 - Professional support from engineers employed within:
 - organisations with CASA continuing airworthiness management or maintenance approvals
 - approved engineering organisations under the ADF regulatory system
 - Engineers employed within organisations recognised by overseas airworthiness organisations
- WHS, regulatory requirements and enterprise procedures include:**
- WHS Acts and regulations
 - Relevant standards
 - Industry codes of practice
 - Risk assessments
 - Registration requirements
 - Safe work practices
 - Civil Aviation Safety Regulations (CASRs)
 - AAP7001.053 ADF Technical Airworthiness Management Manual
 - Overseas airworthiness authorities, where applicable, e.g. Federal Aviation Administration, Transport Canada, European Aviation Safety Agency

Unit Mapping Information

Release 1 – New unit based on MEM23096A Apply avionic system design principles and techniques in avionic engineering situations and MEM23096A Apply avionic system design principles and techniques in avionic engineering situations – units not equivalent

Assessment Requirements for MEA719 Evaluate aircraft electrical systems

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- identifying WHS, regulatory and electrical safety requirements, risk management procedures, features and functions of aircraft electrical systems and components, and system design principles and techniques, including:
 - load analysis and operating environment
 - system control
 - indicating and circuit protection requirements
 - interface requirements between the distribution circuits and aircraft hydro-mechanical and avionic systems/system components
- reviewing effects of electricity on humans, dangerous high currents and voltages and automated systems, regulatory requirements related to extra low, low and high voltage applications and relating these to aircraft electrical applications
- determining and confirming:
 - parameters and context of tasks
 - chain of responsibility
 - personal functions and responsibilities
 - team and support functional group interdependencies and communications
 - appropriate qualifications and delegations
 - appropriate support, including technical and professional assistance
- investigating associated CM and ILS requirements and drafting required data
- identifying and drafting data required for compliance with airworthiness regulations
- assessing and applying:
 - basic aircraft electrical system load analysis and design procedures
 - design standards
 - regulatory requirements
 - graphics skills and techniques
- evaluating system components and specifications against system design and operating criteria
- reporting and documenting results of scoping, principles and techniques identification and evaluation of applications, system schematics and wiring diagrams.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- features of aircraft electrical AC and DC systems, control and distribution, circuit protection and lighting system
- interface with aircraft hydro-mechanical systems, such as hydraulic, pneumatic, environmental, anti-ice, flight control and engine control
- interface with avionic systems, such as instrumentation, communications, navigation, pulse, on-board computer systems and in-flight entertainment
- requirements and procedures for electrical system load analysis
- electrical system components and related specifications
- wiring types, standards and specifications, including optical fibre
- operating environment effects
- airworthiness regulator design standards
- compliance requirements of the WHS Act and regulations, codes of practice, standards, risk assessment
- scope of trade, technical and professional support services required in electrical system applications
- management data interface with CM and ILS.

Assessment Conditions

- This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, then a simulated working environment must be used that reflects realistic workplace situations and conditions.
- The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application.
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.
- Assessors must be satisfied that the candidate can competently and consistently:
 - identify and apply WHS, regulatory and risk management procedures
 - review dangers and effects of electricity on humans
 - determine parameters and context of tasks, personal, team, licensed technical and professional assistance, support personnel functions and responsibilities, and chain of responsibility

- investigate sustainability implications of aircraft electrical system applications as specified in CM and/or ILS requirements
- assess and apply basic aircraft electrical system design and maintenance/repair requirements, software basic analysis and graphics skills and techniques
- evaluate aircraft electrical systems and components for compliance with WHS and airworthiness regulatory requirements
- report and document results including provision of CM and ILS input data.
- Assessment may be in conjunction with assessment of other units of competency where required.
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

MEA720 Evaluate aircraft gas turbine engine power plants

Modification History

Release 1 - New unit of competency

Application

This unit of competency applies to aircraft gas turbine engines, engine control, lubrication, inlet anti-ice and propeller systems, and components thereof. It involves evaluation of power plants and components for compliance with design standards and with airworthiness regulatory requirements within both civil and military environments.

Also covered is documentation of the evaluation process within management systems, such as configuration management (CM) and integrated logistic support (ILS).

It is suitable for people working within aircraft design teams, within the engineering departments of aircraft maintenance organisations or employed within Continuing Airworthiness Management Organisations (CAMOs) and Approved Engineering Organisations (AEOs), and for those pursuing qualifications or careers in those fields.

Where the engine is installed in a rotorcraft the integration of engine and rotor control is covered in unit MEA718 Evaluate rotorcraft flight control system.

This unit is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

MEA710	Apply aeronautical system design techniques
MEM23004A	Apply technical mathematics
MEM23007A	Apply calculus to engineering tasks

Competency Field

Aeronautical engineering

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|----|---|-----|--|
| 1. | Prepare to evaluate gas turbine engine power plant | 1.1 | Confirm and apply safe working practices relating to aircraft structure |
| | | 1.2 | Determine parameters and context of applications and purpose of evaluation |
| | | 1.3 | Confirm personal functions and responsibilities, team and support functional group interdependencies and communications |
| | | 1.4 | Confirm that tasks and responsibilities are appropriate to qualifications and delegations and that appropriate support, including licensed technical and professional assistance, is available |
| | | 1.5 | Determine chain of responsibility for the activity evaluation, reporting arrangements and timelines |
| | | 1.6 | Identify work health and safety (WHS) and regulatory requirements with particular emphasis on safety, codes of practice and standards, including airworthiness regulatory requirements for aircraft gas turbine engine power plants, risk management and organisational procedures |
| 2. | Identify principles and techniques required for evaluation of aircraft gas turbine engine power plant | 2.1 | Identify features and functions of power plant and related systems |
| | | 2.2 | Review gas turbine engine and engine system operation, layout and performance |
| | | 2.3 | Review engine control system design and function, including interface with full authority digital engine control systems |
| | | 2.4 | Review propeller and propeller control system design and function, including coordination of pitch with fuel flow and engine power |
| | | 2.5 | Review engine inlet anti-ice system design and function |

- | | | | | | | | | | | | | |
|-----|--|---|-----|--|-----|--|-----|---|-----|---|-----|--|
| | 2.6 | Review engine lubricating system design and function | | | | | | | | | | |
| 3. | Evaluate aircraft gas turbine engine power plant and components | <table border="0"> <tr> <td>3.1</td> <td>Evaluate proposed modifications and repairs to power plant systems and components</td> </tr> <tr> <td>3.2</td> <td>Evaluate power plant maintenance requirements</td> </tr> <tr> <td>3.3</td> <td>Evaluate power plant reliability and defect history</td> </tr> <tr> <td>3.4</td> <td>Evaluate proposed component substitutions</td> </tr> <tr> <td>3.5</td> <td>Evaluate for compliance with WHS Acts, regulations, codes, directives and standards/specifications, including those related to risk management</td> </tr> </table> | 3.1 | Evaluate proposed modifications and repairs to power plant systems and components | 3.2 | Evaluate power plant maintenance requirements | 3.3 | Evaluate power plant reliability and defect history | 3.4 | Evaluate proposed component substitutions | 3.5 | Evaluate for compliance with WHS Acts, regulations, codes, directives and standards/specifications, including those related to risk management |
| 3.1 | Evaluate proposed modifications and repairs to power plant systems and components | | | | | | | | | | | |
| 3.2 | Evaluate power plant maintenance requirements | | | | | | | | | | | |
| 3.3 | Evaluate power plant reliability and defect history | | | | | | | | | | | |
| 3.4 | Evaluate proposed component substitutions | | | | | | | | | | | |
| 3.5 | Evaluate for compliance with WHS Acts, regulations, codes, directives and standards/specifications, including those related to risk management | | | | | | | | | | | |
| 4. | Report results | <table border="0"> <tr> <td>4.1</td> <td>Report results of scoping, principles and techniques identification and evaluation of gas turbine engine power plant systems and system components</td> </tr> <tr> <td>4.2</td> <td>Provide documentation, such as modification instructions and drawings and data required by CM and/or ILS and for compliance with airworthiness regulations</td> </tr> </table> | 4.1 | Report results of scoping, principles and techniques identification and evaluation of gas turbine engine power plant systems and system components | 4.2 | Provide documentation, such as modification instructions and drawings and data required by CM and/or ILS and for compliance with airworthiness regulations | | | | | | |
| 4.1 | Report results of scoping, principles and techniques identification and evaluation of gas turbine engine power plant systems and system components | | | | | | | | | | | |
| 4.2 | Provide documentation, such as modification instructions and drawings and data required by CM and/or ILS and for compliance with airworthiness regulations | | | | | | | | | | | |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Aircraft gas turbine engine power plant includes:

- Engine
- Engine control system, including propeller, where applicable
- Engine lubricating oil supply and cooling system
- Inlet anti-icing system
- Propeller or rotor
- Engine control linkages and/or sensors

Aircraft gas turbine engine

power plant system components include:

- Oil tank
- Oil cooler
- Valves
- Lubrication oil plumbing
- Anti-ice ducting
- Anti-ice control valves
- Propeller hub and blades
- Propeller governor
- Pitch control
- Coordinator

Aircraft gas turbine engines

- Turbojet, turbofan, turboprop and turboshaft engines, including:
 - inlet and compressor section
 - combustion section
 - turbine section
 - exhaust section
 - ancillary section
 - power output shafts and propeller shafts
 - fuel control unit
 - engine lubrication
 - thrust augmentation

Standards and guidance material include:

- ADF AAP7001.054 Airworthiness Design Requirements Manual
- FAR Part 23 Airworthiness Standards for Airplanes in the Normal, Utility, Aerobatic or Commuter Categories
- FAR Part 25 Airworthiness Standards for Airplanes in the Transport Category
- FAR Part 33 – Airworthiness Standards: Aircraft engines Subparts A,B, E, F
- FAR Part 35 – Airworthiness Standards: Propellers
- EASA CS-23 Certification Specifications for Aeroplanes in the Normal, Utility, Aerobatic or Commuter Categories
- EASA CS-25 Certification Specifications for Airplanes in the Transport Category
- EASA CS-E Certification Specifications for Engines Subparts A, D, E, F
- EASA CS-P Certification Specifications for Propellers
- CASA AC21.16(0) Approval of material, parts, processes and appliances
- CASA AC21.145(0) Manufacture of parts during the course of maintenance
- CASA AC21.601(0) Australian Technical Standards

- Order Authorisation
 - CASA CAAP35-7(0) Design approval of modifications and repairs
 - CASA AC 21-99 Aircraft Wiring and Bonding
 - FAA AC 43-13-1B Acceptable Methods, Techniques and Practices – Aircraft Inspection and Repair
- Configuration management (CM)**
- CM is a process for control and documentation of the design and development process and for the management of system, component and software throughout the service life
- Integrated logistic support (ILS)**
- ILS is an integrated approach to the management of logistic disciplines originally developed for the management of military systems from design concept to final disposal at life-of-type. It covers:
 - reliability engineering, maintainability engineering and maintenance planning
 - supply and support
 - support and test equipment
 - manpower and personnel
 - training and training support
 - technical data and publications
 - computer resources support
 - facilities
 - packaging, handling, storage and transportation
 - design interface
- Appropriate technical and professional assistance includes:**
- Assistance from individuals with CASA maintenance certification licenses or those with supervisory authorisations in the ADF regulatory system
 - Professional support from engineers employed within:
 - organisations with CASA continuing airworthiness management or maintenance approvals
 - approved engineering organisations under the ADF regulatory system
 - Engineers employed within organisations recognised by overseas airworthiness organisations
- WHS, regulatory requirements and enterprise procedures include:**
- WHS Acts and regulations
 - Relevant standards
 - Industry codes of practice
 - Risk assessments
 - Registration requirements
 - Safe work practices
 - Civil Aviation Safety Regulations (CASRs)
 - AAP7001.053 ADF Technical Airworthiness

Management Manual

- Overseas airworthiness authorities, where applicable, e.g. Federal Aviation Administration, Transport Canada, European Aviation Safety Agency

Unit Mapping Information

Release 1 – new unit based on MEM23084A Apply scientific principles and techniques in aeronautical engineering situations and MEM23095A Apply aeronautical system design principles and techniques in aeronautical engineering situations – units not equivalent

Assessment Requirements for MEA720 Evaluate aircraft gas turbine engine power plants

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- identifying WHS, regulatory and risk management procedures, power plant design and construction principles, and maintenance requirements
- determining and confirming:
 - parameters and context of tasks
 - chain of responsibility
 - personal functions and responsibilities
 - team and support functional group interdependencies and communications
 - appropriate qualifications and delegations
 - appropriate support, including technical and professional assistance
- investigating associated CM and ILS requirements and drafting required data
- assessing and applying:
 - basic aircraft power plant and power plant system design procedures
 - design standards
 - regulatory requirements
 - graphics skills and techniques
- evaluating proposed modifications, repairs and power plant maintenance and reliability
- reporting and documenting results of scoping, principles and techniques identification and evaluation of applications.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- aircraft gas turbine engine power plant and power plant system design, function and layout:
 - design standards
 - gas turbine engine types and relative performance
 - system components and hardware
 - construction and assembly methods

- types of propeller and their applications
- basic design principles for:
 - system modifications
 - repair schemes
- airworthiness regulator design standards
- compliance requirements of the WHS Act and regulations, codes of practice, standards and risk assessment
- scope of trade, technical and professional support services required in aircraft power plant applications
- management data interface with CM and ILS.

Assessment Conditions

- This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, then a simulated working environment must be used that reflects realistic workplace situations and conditions.
- The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application.
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.
- Assessors must be satisfied that the candidate can competently and consistently:
 - identify and apply WHS, regulatory, risk management procedures
 - determine parameters and context of tasks, personal, team, licensed technical and professional assistance, support personnel functions and responsibilities, and chain of responsibility
 - investigate sustainability implications of aircraft gas turbine engine power plants as specified in CM and/or ILS requirements
 - assess and apply basic aircraft power plant design and maintenance/repair requirements, and graphics skills and techniques
 - evaluate aircraft gas turbine engine power plant and components for compliance with WHS and airworthiness regulatory requirements
 - report and document results, including provision of CM and ILS input data.
- Assessment may be in conjunction with assessment of other units of competency where required.
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

MEA721 Evaluate aircraft hydro-mechanical systems

Modification History

Release 1 - New unit of competency

Application

This unit of competency applies to hydraulic power, landing gear, fuel storage and distribution, water and waste, and mechanical systems and their components. It involves evaluation of systems and components for compliance with design and performance standards and with airworthiness regulatory requirements within both civil and military environments.

Also covered is documentation of the evaluation process within management systems, such as configuration management (CM) and integrated logistic support (ILS).

It is suitable for people working as paraprofessionals within aircraft design teams, within the engineering departments of aircraft maintenance organisations or employed within Continuing Airworthiness Management Organisations (CAMOs) and Approved Engineering Organisations (AEOs), and for those pursuing qualifications or careers in those fields.

This unit is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Aircraft hydro-mechanical systems include:

- Hydraulic pressure generation and distribution
- Landing gear retraction
- Brake and anti-skid
- Nose wheel steering
- Door operation and locking including integral stairs
- Fuel distribution and management including single point refuelling
- Water and waste
- Interfaces with other aircraft systems and with electrical and instrument systems

Aircraft hydro-mechanical system components include:

- Hydraulic pumps
- Filters
- Valves
- Accumulators
- Actuators
- Plumbing
- Reservoirs
- Shock struts
- Brake units
- Anti-skid units
- Door locking mechanisms

Standards and guidance material include:

- Fuel valves
 - Fuel plumbing
 - Fuel tanks other than integral tanks
 - Mechanical linkages, cables and hardware
 - Sensors
 - Indicators, lights and switches

Assessment Requirements for MEA721 Evaluate aircraft hydro-mechanical systems

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- identifying WHS, regulatory and electrical safety requirements, risk management procedures, features and functions of aircraft hydro-mechanical systems and components, and system design principles and techniques, including:
 - performance and operating environment
 - system control
 - indicating and circuit protection requirements
 - interface requirements between aircraft hydro-mechanical systems and other systems, including the electrical power distribution
- determining and confirming:
 - parameters and context of tasks
 - chain of responsibility
 - personal functions and responsibilities
 - team and support functional group interdependencies and communications
 - appropriate qualifications and delegations
 - appropriate support, including technical and professional assistance
- investigating associated CM and ILS requirements and drafting required data
- identifying and drafting data required for compliance with airworthiness regulations
- assessing and applying:
 - basic aircraft hydro-mechanical system performance analysis and design procedures
 - design standards
 - regulatory requirements
 - graphics skills and techniques
- evaluating system components and specifications against system design and operating criteria
- reporting and documenting results of scoping, principles and techniques identification and evaluation of applications.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- features and layout of aircraft hydro-mechanical systems, including control, indication and interface with other systems:
 - hydraulic power
 - landing gear shock absorbing and retraction
 - brakes
 - nose wheel steering
 - door operation
 - fuel
 - water and waste
- basic design principles for:
 - hydraulic pressure generation and distribution systems and components
 - landing gear shock absorbing struts and retraction systems, including actuators and mechanical linkages
 - brakes and anti-skid systems and system components
 - nose wheel steering systems and system components
 - door operation and locking systems and components/mechanical linkages
 - fuel storage, distribution and management systems, including system components
 - water and waste systems including system components
- interface with the aircraft electrical and instrument systems
- wiring types, standards and specifications
- performance and operating environment effects
- airworthiness regulator design standards
- compliance requirements of the WHS Act and regulations, codes of practice, standards, risk assessment
- scope of trade, technical and professional support services required in aircraft hydro-mechanical system applications
- management data interface with CM and ILS.

Assessment Conditions

- This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, then a simulated working environment must be used that reflects realistic workplace situations and conditions.
- The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.

- Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application.
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.
- Assessors must be satisfied that the candidate can competently and consistently:
 - identify and apply WHS, regulatory and risk management procedures
 - determine parameters and context of tasks, personal, team, technical and professional assistance and support, personnel functions and responsibilities, and chain of responsibility
 - investigate sustainability implications of aircraft hydro-mechanical system applications as specified in CM and/or ILS requirements
 - assess and apply basic aircraft hydro-mechanical system design and maintenance/repair requirements, software basic analysis and graphics skills and techniques
 - evaluate aircraft hydro-mechanical systems and components for compliance with WHS and airworthiness regulatory requirements
 - report and document results, including provision of CM and ILS input data.
- Assessment may be in conjunction with assessment of other units of competency where required.
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

ME A722 Evaluate aircraft piston engine power plants

Modification History

Release 1 - New unit of competency

Application

This unit of competency applies to aircraft piston engines, engine controls, air inlet, cooling, lubrication and propeller systems, and components thereof. It involves evaluation of power plants and components for compliance with design standards and with airworthiness regulatory requirements within both civil and military environments.

Also covered is documentation of the evaluation process within management systems, such as configuration management (CM) and integrated logistic support (ILS).

It is suitable for people working as paraprofessionals within aircraft design teams, within the engineering departments of aircraft maintenance organisations or employed within Continuing Airworthiness Management Organisations (CAMOs) and Approved Engineering Organisations (AEOs), and for those pursuing qualifications or careers in those fields.

Where the engine is installed in a rotorcraft the interface between the engine throttle/governor and the rotor controls is covered in ME A718 Evaluate rotorcraft flight control system.

This unit is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

ME A710	Apply aeronautical system design techniques
MEM23004A	Apply technical mathematics
MEM23007A	Apply calculus to engineering tasks

| | | 1.3 | Confirm personal functions and responsibilities, team and support functional group interdependencies and communications |
| | | 1.4 | Confirm that tasks and responsibilities are appropriate to qualifications and delegations and that appropriate support, including technical and professional assistance, is available |
| | | 1.5 | Determine chain of responsibility for the activity evaluation, reporting arrangements and timelines |
| | | 1.6 | Identify work health and safety (WHS) and regulatory requirements with particular emphasis on safety, codes of practice and standards, including airworthiness regulatory requirements for aircraft piston engine power plant, risk management and organisational procedures |
| 2. | Identify principles and techniques required for evaluation of aircraft piston engine power plant | 2.1 | Identify features and functions of power plant and related systems |
| | | 2.2 | Review piston engine and engine system operation, layout and performance |
| | | 2.3 | Review engine control system design and function, including interface with full authority digital engine control systems |
| | | 2.4 | Review propeller and propeller control system design and function |
| | | 2.5 | Review engine air inlet system design and function |

- | | | |
|---|-----|---|
| | 2.6 | Review engine cooling system design and function |
| | 2.7 | Review engine dry sump lubricating system design and function |
| 3. Evaluate aircraft piston engine power plant and components | 3.1 | Evaluate proposed modifications and repairs to power plant systems and components |
| | 3.2 | Evaluate power plant maintenance requirements |
| | 3.3 | Evaluate power plant reliability and defect history |
| | 3.4 | Evaluate proposed component substitutions |
| | 3.5 | Evaluate for compliance with WHS Acts, regulations, codes, directives and standards/specifications, including those related to risk management |
| 4. Report results | 4.1 | Report results of scoping, principles and techniques identification and evaluation of piston engine power plant systems and system components |
| | 4.2 | Provide documentation, such as modification instructions and drawings and data required by CM and/or ILS, and for compliance with airworthiness regulations |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Aircraft piston engine power plant includes:

- Engine
- Engine control system
- Propeller control system
- Dry sump engine lubricating oil supply and cooling system

Aircraft piston engine power plant system components include:

- Air inlet system
- Cooling system
- Propeller or rotor
- Engine control linkages and/or sensors
- Oil tank
- Oil cooler
- Coolant tank and radiator
- Control valves
- Lubrication oil plumbing
- Air inlet ducting, filters and doors
- Air inlet heating
- Propeller hub and blades
- Propeller governor
- Pitch control

Aircraft piston engines include:

- Two and four stroke petrol and diesel engines, including:
 - the bare engine
 - carburettor or fuel injection system
 - supercharging/turbocharging systems
 - ignition system (petrol engines)
 - starting system
 - ancillary gear box
 - reduction gear and propeller shaft

Standards and guidance material include:

- ADF AAP7001.054 Airworthiness Design Requirements Manual
- FAR Part 23 Airworthiness Standards for Airplanes in the Normal, Utility, Aerobatic or Commuter Categories
- FAR Part 25 Airworthiness Standards for Airplanes in the Transport Category
- FAR Part 33 – Airworthiness Standards: Aircraft engines Subparts A,B, C, D
- FAR Part 35 – Airworthiness Standards: Propellers
- EASA CS-23 Certification Specifications for Aeroplanes in the Normal, Utility, Aerobatic or Commuter Categories
- EASA CS-25 Certification Specifications for Airplanes in the Transport Category
- EASA CS-E Certification Specifications for Engines Subparts A, B, C
- EASA CS-P Certification Specifications for Propellers
- CASA AC21.16(0) Approval of material, parts, processes and appliances
- CASA AC21.145(0) Manufacture of parts during the

- course of maintenance
- CASA AC21.601(0) Australian Technical Standards Order Authorisation
 - CASA CAAP35-7(0) Design approval of modifications and repairs
 - CASA AC 21-99 Aircraft Wiring and Bonding
 - FAA AC 43-13-1B Acceptable Methods, Techniques and Practices – Aircraft Inspection and Repair
- Configuration management (CM)**
- CM is a process for control and documentation of the design and development process and for the management of system, component and software throughout the service life
- Integrated logistic support (ILS)**
- ILS is an integrated approach to the management of logistic disciplines originally developed for the management of military systems from design concept to final disposal at life-of-type. It covers:
 - reliability engineering, maintainability engineering and maintenance planning
 - supply and support
 - support and test equipment
 - manpower and personnel
 - training and training support
 - technical data and publications
 - computer resources support
 - facilities
 - packaging, handling, storage and transportation
 - design interface
- Appropriate technical and professional assistance includes:**
- Assistance from individuals with CASA maintenance certification licenses or those with supervisory authorisations in the ADF regulatory system
 - Professional support from engineers employed within:
 - organisations with CASA continuing airworthiness management or maintenance approvals
 - approved engineering organisations under the ADF regulatory system
 - Engineers employed within organisations recognised by overseas airworthiness organisations
- WHS, regulatory requirements and enterprise procedures include:**
- WHS Acts and regulations
 - Relevant standards
 - Industry codes of practice
 - Risk assessments
 - Registration requirements
 - Safe work practices

- Civil Aviation Safety Regulations (CASRs)
- AAP7001.053 ADF Technical Airworthiness Management Manual
- Overseas airworthiness authorities where applicable e.g. Federal Aviation Administration, Transport Canada, European Aviation Safety Agency

Unit Mapping Information

Release 1 – New unit based on MEM23084A Apply scientific principles and techniques in aeronautical engineering situations and MEM23095A Apply aeronautical system design principles and techniques in aeronautical engineering situations – units not equivalent

Assessment Requirements for MEA722 Evaluate aircraft piston engine power plants

Modification History

Release 1 - New unit of competency

Performance Evidence

- Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:
- identifying WHS, regulatory and risk management procedures, power plant design and construction principles and maintenance requirements
- determining and confirming:
 - parameters and context of tasks
 - chain of responsibility
 - personal functions and responsibilities
 - team and support functional group interdependencies and communications
 - appropriate qualifications and delegations
- appropriate support, including technical and professional assistance
- investigating associated CM and ILS requirements and drafting required data
- assessing and applying:
 - basic aircraft power plant and power plant system design procedures
 - design standards
 - regulatory requirements
 - graphics skills and techniques
- evaluating proposed modification and power plant maintenance and reliability
- reporting and documenting results of scoping, principles and techniques identification and evaluation of applications.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- aircraft piston engine power plant and power plant system design, function and layout:
 - design standards
 - piston engine types and relative performance
 - system components and hardware
 - construction and assembly methods
 - types of propeller and their applications

- basic design principles for:
 - system modifications
 - repair schemes
- airworthiness regulator design standards
- compliance requirements of the WHS Act and regulations, codes of practice, standards and risk assessment
- scope of trade, technical and professional support services required in aircraft power plant applications
- management data interface with CM and ILS.

Assessment Conditions

- This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, then a simulated working environment must be used that reflects realistic workplace situations and conditions.
- The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application.
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.
- Assessors must be satisfied that the candidate can competently and consistently:
 - identify and apply WHS, regulatory and risk management procedures
 - determine parameters and context of tasks, personal, team, technical and professional assistance and support, personnel functions and responsibilities, and chain of responsibility
 - investigate sustainability implications of aircraft piston engine power plants as specified in CM and/or ILS requirements
 - assess and apply basic aircraft piston engine power plant design and maintenance/repair requirements, and graphics skills and techniques
 - evaluate aircraft piston engine power plant components for compliance with WHS and airworthiness regulatory requirements
 - report and document results, including provision of CM and ILS input data.
- Assessment may be in conjunction with assessment of other units of competency where required.
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

ME723 Evaluate aircraft pneumatic systems

Modification History

Release 1 - New unit of competency

Application

This unit of competency applies to pneumatic air supply, air cycle air conditioning, pressurisation, anti-ice and actuating systems, and their components. It involves evaluation of systems and components for compliance with design and performance standards and with airworthiness regulatory requirements within both civil and military environments.

Also covered is documentation of the evaluation process within management systems, such as configuration management (CM) and integrated logistic support (ILS).

It is suitable for people working as paraprofessionals within aircraft design teams, within the engineering departments of aircraft maintenance organisations or employed within Continuing Airworthiness Management Organisations (CAMOs) and Approved Engineering Organisations (AEOs), and for those pursuing qualifications or careers in those fields.

This unit is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

ME710	Apply aeronautical system design techniques
MEM23004A	Apply technical mathematics
MEM23007A	Apply calculus to engineering tasks

Competency Field

Aeronautical engineering

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|----|--|-----|---|
| 1. | Determine scope of aircraft pneumatic system applications for evaluation | 1.1 | Confirm and apply safe working practices relating to aircraft pneumatic systems |
| | | 1.2 | Determine parameters and context of applications and purpose of evaluation |
| | | 1.3 | Confirm personal functions and responsibilities, team and support functional group interdependencies and communications |
| | | 1.4 | Confirm that tasks and responsibilities are appropriate to qualifications and delegations and that appropriate support, including technical and professional assistance, is available |
| | | 1.5 | Determine chain of responsibility for the activity evaluation, reporting arrangements and timelines |
| | | 1.6 | Identify work health and safety (WHS) and regulatory requirements with particular emphasis on safety, codes of practice, performance requirements and standards, including airworthiness regulatory requirements for pneumatic systems, risk management and organisational procedures |
| 2. | Identify principles and techniques required for evaluation of aircraft pneumatic system applications | 2.1 | Identify features and functions of aircraft pneumatic systems and components |
| | | 2.2 | Review aircraft pneumatic system design and layout requirements and techniques |
| | | 2.3 | Identify system electrical control power requirements |
| 3. | Evaluate aircraft pneumatic system applications | 3.1 | Evaluate system requirements and operating environment |
| | | 3.2 | Evaluate suitability of components |
| | | 3.3 | Evaluate suitability of aircraft pneumatic systems and components, including control, indication and interface with other systems |

- | | | |
|----|----------------|--|
| | 3.4 | Evaluate application for compliance with WHS Acts, regulations, codes, directives and standards/specifications, including those related to risk management |
| 4. | Report results | |
| | 4.1 | Report results of scoping, principles and techniques identification and evaluation of applications |
| | 4.2 | Provide documentation, such as system schematics, wiring diagrams and data required by CM and/or ILS |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Aircraft pneumatic systems include:

- Pneumatic air source and distribution
- Air cycle air conditioning
- Pressurisation
- Anti-ice
- Landing gear retraction
- Brakes
- Interfaces with other aircraft systems and with electrical and instrument systems

Aircraft pneumatic system components include:

- Air pumps
- Engine bleed air valves
- Filters
- Valves
- Heat exchangers
- Pressurisation outflow valves
- Pressurisation safety valves
- Pressurisation controllers
- Actuators
- Ducting and plumbing
- Reservoirs

- Brake units
 - Mechanical linkages, cables and hardware
 - Sensors
 - Indicators, lights and switches
- Standards and guidance material include:**
- ADF AAP7001.054 Airworthiness Design Requirements Manual
 - FAR Part 23 Airworthiness Standards for Airplanes in the Normal, Utility, Aerobatic or Commuter Categories
 - FAR Part 25 Airworthiness Standards for Airplanes in the Transport Category
 - FAR Part 27 Airworthiness Standards for Rotorcraft in the Normal Category
 - FAR Part 29 Airworthiness Standards for Rotorcraft in the Transport Category
 - EASA CS-23 Certification Specifications for Aeroplanes in the Normal, Utility, Aerobatic or Commuter Categories
 - EASA CS-25 Certification Specifications for Airplanes in the Transport Category
 - EASA CS-27 Certification Specifications for Rotorcraft in the Normal Category
 - EASA CS-29 Certification Specifications for Rotorcraft in the Transport Category
 - CASA AC 21-99 Aircraft Wiring and Bonding
 - FAA AC 43-13-1B Acceptable Methods, Techniques and Practices – Aircraft Inspection and Repair
- Configuration management (CM)**
- CM is a process for control and documentation of the design and development process and for the management of system, component and software throughout the service life
- Integrated logistic support (ILS)**
- ILS is an integrated approach to the management of logistic disciplines originally developed for the management of military systems from design concept to final disposal at life-of-type. It covers:
 - reliability engineering, maintainability engineering and maintenance planning
 - supply and support
 - support and test equipment
 - manpower and personnel
 - training and training support
 - technical data and publications
 - computer resources support
 - facilities

- packaging, handling, storage and transportation
 - design interface
- Appropriate technical and professional assistance includes:**
- Assistance from individuals with CASA maintenance certification licenses or those with supervisory authorisations in the ADF regulatory system
 - Professional support from engineers employed within:
 - organisations with CASA continuing airworthiness management or maintenance approvals
 - approved engineering organisations under the ADF regulatory system
 - Engineers employed within organisations recognised by overseas airworthiness organisations
- WHS, regulatory requirements and enterprise procedures include:**
- WHS Acts and regulations
 - Relevant standards
 - Industry codes of practice
 - Risk assessments
 - Registration requirements
 - Safe work practices

Assessment Requirements for MEA723 Evaluate aircraft pneumatic systems

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- identifying WHS, regulatory and electrical safety requirements, risk management procedures, features and functions of aircraft pneumatic systems and components, and system design principles and techniques, including:
 - performance and operating environment
 - system control
 - indicating and circuit protection requirements
 - interface requirements between aircraft pneumatic systems and other systems, including electrical power distribution
- determining and confirming:
 - parameters and context of tasks
 - chain of responsibility
 - personal functions and responsibilities
 - team and support functional group interdependencies and communications
 - appropriate qualifications and delegations
 - appropriate support, including technical and professional assistance
- investigating associated CM and ILS requirements and drafting required data
- assessing and applying:
 - basic aircraft pneumatic system performance analysis and design procedures
 - design standards
 - regulatory requirements
 - graphics skills and techniques
- evaluating system components and specifications against system design and operating criteria
- reporting and documenting results of scoping, principles and techniques identification and evaluation of applications.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- features and layout of aircraft pneumatic systems, including control, indication and interface with other systems:
 - bleed air and air pumps
 - air cycle air conditioning
 - pressurisation
 - anti-ice
 - landing gear retraction
 - brakes
- basic design principles for:
 - pneumatic air source and distribution systems and components
 - air cycle air conditioning systems and components
 - pressurisation systems and components
 - anti-ice systems and components
 - landing gear retraction systems, including actuators and mechanical linkages
 - brakes and system components
- interface with the aircraft electrical and instrument systems
- wiring types, standards and specifications
- performance and operating environment effects
- airworthiness regulator design standards
- compliance requirements of the WHS Act and regulations, codes of practice, standards and risk assessment
- scope of trade, technical and professional support services required in aircraft pneumatic system applications
- management data interface with CM and ILS.

Assessment Conditions

- This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, then a simulated working environment must be used that reflects realistic workplace situations and conditions.
- The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application.
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.

- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.
- Assessors must be satisfied that the candidate can competently and consistently:
 - identify and apply WHS, regulatory and risk management procedures
 - determine parameters and context of tasks, personal, team, licensed technical and professional assistance and support, personnel functions and responsibilities, and chain of responsibility
 - investigate sustainability implications of aircraft pneumatic system applications as specified in CM and/or ILS requirements
 - assess and apply basic aircraft pneumatic system design and maintenance/repair requirements, and graphics skills and techniques
 - evaluate aircraft pneumatic systems and components for compliance with WHS and airworthiness regulatory requirements
 - report and document results, including provision of CM and ILS input data.
- Assessment may be in conjunction with assessment of other units of competency where required.
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

MEA724 Evaluate aircraft structure

Modification History

Release 1 - New unit of competency

Application

This unit of competency applies to aircraft primary, secondary and tertiary structure and related structural components. It involves evaluation of structure and structural components for compliance with design standards and with airworthiness regulatory requirements within both civil and military environments.

Also covered is documentation of the evaluation process within management systems, such as configuration management (CM) and integrated logistic support (ILS).

It is suitable for people working as paraprofessionals within aircraft design teams, within the engineering departments of aircraft maintenance organisations or employed within Continuing Airworthiness Management Organisations (CAMOs) and Approved Engineering Organisations (AEOs), and for those pursuing qualifications or careers in those fields.

This unit is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

MEA709	Apply aeronautical structure design techniques
MEM234019A	Apply finite element analysis in engineering design
MEM234022A	Apply advanced calculus to technology problems

Competency Field

Unit Sector

Elements and Performance Criteria

Elements describe the essential Performance criteria describe the performance needed to

outcomes.		demonstrate achievement of the element.
1.	Prepare to evaluate structure	<p>1.1 Confirm and apply safe working practices relating to aircraft structure</p> <p>1.2 Determine parameters and context of applications and purpose of evaluation</p> <p>1.3 Confirm personal functions and responsibilities, team and support functional group interdependencies and communications</p> <p>1.4 Confirm that tasks and responsibilities are appropriate to qualifications and delegations and that appropriate support, including technical and professional assistance, is available</p> <p>1.5 Determine chain of responsibility for the activity evaluation, reporting arrangements and timelines</p> <p>1.6 Identify work health and safety (WHS) and regulatory requirements with particular emphasis on safety, codes of practice and standards, including airworthiness regulatory requirements for aircraft structure, risk management and organisational procedures</p>
2. Assessment Requirements for MEA724 Evaluate aircraft structure

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- identifying WHS, regulatory and risk management procedures, structural design and construction principles, and ageing aircraft structure inspection and maintenance requirements
- determining and confirming:
 - parameters and context of tasks
 - chain of responsibility
 - personal functions and responsibilities
 - team and support functional group interdependencies and communications
 - appropriate qualifications and delegations
 - appropriate support, including technical and professional assistance
- investigating associated CM and ILS requirements and drafting required data
- assessing and applying:
 - basic aircraft structural analysis and design procedures
 - design standards
 - regulatory requirements
 - graphics skills and techniques
- evaluating proposed modification and repair schemes
- reporting and documenting results of scoping, principles and techniques identification and evaluation of applications.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- aircraft structural design and construction:
 - design standards and manufacturer's stress analysis
 - structural materials
 - structural hardware
 - construction and assembly methods

- sealants and surface finishing schemes
- basic design principles for:
 - structural modifications
 - repair schemes and extensions to existing schemes
- ageing aircraft structural inspection and maintenance requirements
- airworthiness regulator design standards
- compliance requirements of the WHS Act and regulations, codes of practice, standards and risk assessment
- scope of trade, technical and professional support services required in aircraft structural applications
- management data interface with CM and ILS.

Assessment Conditions

- This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, then a simulated working environment must be used that reflects realistic workplace situations and conditions.
- The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application.
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.
- Assessors must be satisfied that the candidate can competently and consistently:
 - identify and apply WHS, regulatory and risk management procedures
 - determine parameters and context of tasks, personal, team, technical and professional assistance and support, personnel functions and responsibilities, and chain of responsibility
 - investigate sustainability implications of aircraft structure as specified in CM and/or ILS requirements
 - assess and apply basic aircraft structural design and maintenance/repair requirements, and graphics skills and techniques
 - evaluate aircraft structure and structural components for compliance with WHS and airworthiness regulatory requirements
 - report and document results, including provision of CM and ILS input data.
- Assessment may be in conjunction with assessment of other units of competency where required.

- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

MEA725 Apply advanced scientific principles and techniques in avionic engineering situations

Modification History

Release 1 - New unit of competency

Application

This unit of competency applies to selecting and applying advanced avionic scientific principles and techniques.

Computer techniques, graphical methods and mathematical calculations should complement scientific principles chosen and include unit analysis, appropriate precision and accuracy and use conservative estimations.

This unit is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

MEA706 Apply basic scientific principles and techniques in avionic engineering situations

MEA727 Apply calculus in avionic engineering situations

Competency Field

Avionic engineering

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes. Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|----|---|-----|--|
| 1. | Identify the range of scientific principles and | 1.1 | Identify the scientific principles relating to avionic engineering |
|----|---|-----|--|

techniques relevant to avionic engineering	1.2	Research and report on avionic scientific principles using appropriate sources of information
	1.3	Identify the techniques and associated technologies, software and hardware associated with implementing scientific principles relating to avionic engineering applications
	1.4	Research and report on avionic techniques using appropriate sources of information
2. Select scientific principles and techniques	2.1	Select relevant scientific principles for specific avionic engineering situations
	2.2	Select relevant avionic techniques and associated technologies, software and hardware for specific avionic engineering situations
3. Apply the relevant scientific principles and techniques	3.1	Apply applicable scientific principles in a consistent and appropriate manner to obtain any required solution
	3.2	Use appropriate calculations and correct units to establish quantities
	3.3	Use coherent units in equations in a systematic manner to ensure meaningful solutions
	3.4	Use significant figures in engineering calculations
	3.5	Obtain required solutions by applying chosen techniques and associated technologies, software and hardware in a consistent and appropriate manner
4. Document the results of the application of the avionic scientific principles and techniques	4.1	Document solutions involving engineering calculations in an appropriate style
	4.2	Document solutions not involving engineering calculations in an appropriate style

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Sources of information include:

- Reference texts
- Manufacturer's catalogues and industrial magazines
- Internet search engines and websites
- Email
- The use of phone and fax
- Airworthiness and design authority regulations and associated advisory material

Avionic engineering refers to:

- The engineering discipline concerned with the conceptual development, research, design, manufacture, implementation, installation, commissioning and maintenance of aerospace electrical, instrument, radio and electronic systems and components and related test equipment for civil and military applications

Avionic engineering applications refer to:

- The description or definition of an objective or challenge within a real or simulated engineering environment or state requiring a conceptual development, design, manufacture and/or implementation and/or installation, commissioning and maintenance response to affect a solution or improvement with regard to:
 - electrical systems and related wiring and components (power generation, distribution, control interfaces with hydraulic and pneumatic systems, and caution and warning systems)
 - mechanical and electro-mechanical flight instruments and indication systems (quantity, pressure, temperature and position) and components
 - electronic systems and components (communications, radio navigation, pulse, display, automatic flight control, flight management and engine management)
 - automatic test stations, adapters and software

Unit Mapping Information

Release 1 – new unit based on and equivalent to MEM23085A Apply scientific principles and techniques in avionic engineering situations

Assessment Requirements for MEA725 Apply advanced scientific principles and techniques in avionic engineering situations

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- applying advanced scientific principles relevant to avionic engineering
- analysing the given situation to determine what is required in the manner of a solution
- analysing the given situation to determine which avionic scientific principles are selected
- selecting appropriate avionic techniques and associated technologies, software and hardware to suit the application
- applying appropriate avionic principles in determining the required solution
- applying and manipulating formulas and calculations for engineering applications
- using the correct units to solve engineering calculations
- checking the validity of equations using a systematic method for ensuring coherent units
- applying avionic techniques and associated technologies, software and hardware in a manner appropriate to the application and identified scientific principles
- referring solutions to the original aim of the application
- quoting solutions in appropriate units and using appropriate significant figures
- presenting solutions referring to the original aim of the application.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- physics – analysis and application of:
 - linear kinematics
 - planar kinematics
 - Newton's Laws of Motion
 - friction
 - momentum and center of gravity
 - gravity
 - circular motion
 - orbital motion
 - rotational motion

- oscillation
- electronic fundamentals – determination of required values and characteristics for:
 - resistors, including light and voltage dependent resistors
 - capacitors
 - inductors
 - transformers
 - diodes
 - transistors
 - power amplifiers
 - oscillators
 - silicon controlled rectifiers
 - thyristor power control circuits
 - opto-couplers
- selection of appropriate test equipment
- digital electronics – design, construction and testing of:
 - clocked sequential circuits
 - registers
 - oscillators
 - timers
 - interfacing circuits
 - program logic array
 - state machines
- data communications – analysis and application of:
 - selection of data transmission methods
 - universal asynchronous receiver transmitter construction
 - multiplexers and demultiplexers
 - data encryption/decryption theory
- electronic circuit analysis
- aerodynamics – application of:
 - drag and speed
 - power/thrust available and power/thrust required
 - manoeuvring flight
 - stability and control
- strength of materials – application of:
 - bending and shear in beams
 - forces in trusses and frames
 - engineering concepts of stress and strain
 - properties of areas
 - torsion
 - mechanical properties of materials

- two dimensional stress and strain, including elastic constants
- computer software/programming – application of:
 - high level languages
 - algorithm design and testing
 - Pascal and Turbo-Pascal programming
- the limitations of avionic techniques and associated technologies, software and hardware
- the procedure for ensuring coherent units for meaningful solutions to equations
- the concept of significant figures
- the uncertainty of computations based on experimental data
- the procedures for determining the significance of figures in calculations
- the procedures for estimating errors in derived quantities
- the method of application of the avionic techniques and associated technologies, software and hardware
- the application of the calculation solution style
- the significance of the non-calculation solution style.

Assessment Conditions

- This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, a simulated working environment must be used that reflects realistic workplace situations and conditions.
- The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application.
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.
- Assessors should ensure that candidates can:
 - consistently select and apply appropriate scientific principles in avionic engineering situations
 - document in an appropriate style the solutions obtained through the application of chosen scientific principles in avionic engineering situations.
- Assessment may be in conjunction with assessment of other units of competency where required.
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

MEA726 Apply aircraft electrical system design techniques

Modification History

Release 1 - New unit of competency

Application

This unit of competency applies to design of aircraft electrical systems and components for aircraft, design of modifications and development, and update of test procedures and of repair requirements. It includes electrical design techniques and performance of the design process within the requirements of airworthiness regulators and documentation of the design process within management systems, such as configuration management (CM) and integrated logistic support (ILS).

It is suitable for people working as members of design teams and for those employed within maintenance engineering support departments or pursuing careers and qualifications as paraprofessionals in avionic engineering.

This unit is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

MEA702	Produce avionic engineering related graphics
MEA706	Apply basic scientific principles and techniques in avionic engineering situations
MEA708	Select and test avionic engineering materials
MEA714	Integrate avionic fundamentals into an engineering task
MEA725	Apply advanced scientific principles and techniques in avionic engineering situations

Competency Field

Avionic engineering

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|----|--|-----|--|
| 1. | Investigate requirements of aircraft electrical system design projects | 1.1 | Review the context and negotiate parameters of the engineering design brief in consultation with stakeholders |
| | | 1.2 | Determine engineering scientific principles and design techniques required for design process |
| | | 1.3 | Investigate life-cycle design and sustainability implications of avionic design |
| | | 1.4 | Determine specification, documentation and graphical techniques required to define designs |
| | | 1.5 | Confirm work health and safety (WHS) and regulatory requirements, codes of practice, standards, risk management and registration requirements relevant to avionic design project |
| | | 1.6 | Investigate the need for technical and professional assistance |
| 2. | Apply aircraft electrical system design techniques | 2.1 | Plan, schedule and coordinate the design task |
| | | 2.2 | Apply the design process and avionic scientific principles to component selection and design proposals |
| | | 2.3 | Create adequate and accurate calculations, preliminary graphics and maintain design process records |
| | | 2.4 | Evaluate multiple solutions against design criteria, risk, sustainability and cost |
| | | 2.5 | Integrate avionic analogue techniques, hardware and software, including mechanical, fluid, electrical, electronic, controller and networking |
| | | 2.6 | Apply systems thinking, problem solving and decision making in dealing with contingencies and constraints for continuous improvement and development of design options |

- 2.7 Incorporate professional and technical assistance as required
 - 2.8 Apply specification, documentation and graphical techniques modelling, mock-up or prototyping techniques to define designs
 3. Report results
 - 3.1 Report results of investigations, application and development of avionic design
 - 3.2 Provide documentation, such as calculations, specifications, diagrams, computer-aided design (CAD) files, control circuits and controller programs, mock-ups or prototypes
 - 3.3 Draft documentation required by CM plan and/or ILS process

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Avionic engineering refers to:

- The engineering discipline concerned with the conceptual development, research, design, manufacture, implementation, installation, commissioning and maintenance of aerospace electrical, instrument, radio and electronic systems and components and related test equipment for civil and military applications

Aircraft electrical systems include:

- Electrical power generation
- Control and distribution
- Interface with aircraft systems, including hydraulic, pneumatic, power plant and flight controls
- Interface with avionic analogue systems
- Interface with avionic digital systems

Context of engineering design activity includes:

- Competitive market
- Geo political factors, such as access to materials and

markets

- Technological advantage/disadvantage
- Resources supply: materials, labour and skills
- Sustainability issues relevant to design task, including
 - social, economic and environmental considerations
 - material and energy resources
- WHS, risk, and applicable standards and code requirements

Planning processes include:

- Establishing design parameters and design criteria
- Contributing to the negotiation and advice process
- Preliminary planning, design investigations and costing
- Identifying design, development, prototyping activities and skills requirements
- Planning and scheduling design activities
- Improving, adjusting, rescheduling as required by emergency contingencies and constraints

Design process includes:

- Establishing design parameters and criteria
- Researching, measuring, experimenting and investigating
- Generating ideas
- Synthesis, problem solving and decision making, addressing constraints
- Applying scientific principles, calculation and graphics, prototyping and mock-up techniques
- Evaluating solutions against design criteria
- Consultation, adjustments and agreement
- Finalising design and sign-off

Design criteria include:

- Function
- Aesthetics
- Manufacturability and maintainability
- Marketability
- Sustainability:
 - social, economic and environmental
 - material and energy resources
- Cost constraints
- Ergonomics and anthropometrics and physiology
- Facilities, plant and skills available
- Safety and risk

Design analysis includes:

- Graphical and mathematical methods and software options associated with mechanical, electrical and electronic aspects of aircraft electrical systems

Sustainability considerations include:

- Resources and energy required for design
- Environmental considerations in manufacturing and

- operation of design:
- raw material, solids and hazardous waste, and production by-products
 - potential contamination of land, air and stormwater pollutants, and discharge to sewerage
 - carbon pollution and reduction effects
- Configuration management (CM)**
- CM is a process for control and documentation of the design and development process and for the management of system, component and software throughout the service life
- Integrated logistic support (ILS)**
- ILS is an integrated approach to the management of logistic disciplines originally developed for the management of military systems from design concept to final disposal at life-of-type. It covers:
 - reliability engineering, maintainability engineering and maintenance planning
 - supply and support
 - support and test equipment
 - manpower and personnel
 - training and training support
 - technical data and publications
 - computer resources support
 - facilities
 - packaging, handling, storage and transportation
 - design interface
- Life-cycle assessment is applied to:**
- All aspects of manufacture of a single product
 - The entire operations of an organisation
 - A particular aspect of operations, such as environmental implications
 - As part of the ILS process
- Prototyping includes:**
- Mock-ups
 - Physical and virtual modelling with post-processing for computer-numerically controlled (CNC) and rapid prototyping
- Appropriate technical and professional assistance includes:**
- Assistance from individuals with CASA maintenance certification licenses or those with supervisory authorisations in the ADF regulatory system
 - Professional support from engineers employed within:
 - organisations with CASA design approvals, continuing airworthiness management or maintenance approvals
 - approved engineering organisations under the ADF

regulatory system

WHS, regulatory requirements and enterprise procedures include:

- Engineers employed within organisations recognised by overseas airworthiness organisations
- WHS Acts and regulations
- Relevant standards
- Industry codes of practice
- Risk assessments
- Registration requirements
- Safe work practices
- State and territory regulatory requirements applying to electrical work
- Civil Aviation Safety Regulations (CASRs)
- AAP7001.053 ADF Technical Airworthiness Management Manual
- Overseas airworthiness authorities where applicable e.g. Federal Aviation Administration, Transport Canada, European Aviation Safety Agency

Relevant standards include:

- AS 1100.101-1992 Technical drawing – General principles
- AS 1102.101-1989 Graphical symbols for electrotechnical documentation - General information and general index
- AS/NZS ISO 31000 Set:2013 Risk Management Set
- NOHSC:1014 National standard for the control of major hazard facilities
- AS/NZS ISO 14000 Basic Set:2007 Environmental Management Basic Set
- ISO 14040:2006 Environmental management – Life cycle assessment – Principles and framework
- AS 61508.1-2011 Functional safety of electrical/ electronic/ programmable electronic safety related systems – General requirements
- AS 62061-2006 Safety of machinery - Functional safety of safety-related electrical, electronic and programmable electronic control systems
- MIL-STD 785 Reliability program for systems and equipment development and production
- MIL-STD 1388-1A Logistic Support Analysis (LSA)
- MIL-STD 1388-2B Requirements for a LSA record
- MIL-STD 1629A Procedures for performing a failure mode, effects and criticality analysis (FMECA)
- MIL-STD 1629B FMECA
- MIL-STD 2173 Reliability centred maintenance requirements (superseded by NAVAIR 00-25-403)

Relevant handbooks include:

- OPNAVINST 4130.2A
- Integrated Logistic Support Handbook, third edition – James V Jones
- MIL-HDBK-217 Reliability prediction of electronic equipment
- MIL-HDBK-338B Electronic reliability design handbook
- MIL-HDBK-781A Reliability test methods, plans and environments for engineering development, qualification and production
- NASA PRA Probabilistic risk assessment handbook
- NASA Fault tree assessment handbook

Systems thinking includes:

- The process of developing solutions within the context of an entire system
- Recognising that an improvement in one subsystem can adversely affect another subsystem

Unit Mapping Information

Release 1 - new unit based on MEM14066A Plan and design avionic engineering projects – units not equivalent

Assessment Requirements for MEA726 Apply aircraft electrical system design techniques

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- communicating, negotiating and reviewing context and parameters of the engineering design brief with stakeholders
- determining or confirming scientific principles and design techniques, WHS and regulatory requirements, and design specification requirements
- evaluating multiple solutions against design criteria, risk, sustainability and cost
- investigating life-cycle design and sustainability, technical and professional assistance required
- investigating CM and/or ILS requirements
- planning, scheduling and coordinating the electrical system design task
- applying design process and scientific principles to component selection and design proposals for components and aircraft electrical systems
- solving problems and making decisions with systems thinking for contingencies, constraints and continuous improvement
- integrating aircraft electrical hardware and components into aircraft electrical systems
- defining designs, specifying, documenting and applying graphical techniques, modelling, mock-up or prototyping techniques
- creating and maintaining adequate and accurate calculations and design process records
- reporting and documenting results of investigations, application of principles and techniques, calculations, specifications, diagrams, CAD files, mock-ups or prototypes of designs.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- life-cycle design and sustainability implications of electrical component and system designs
- CM and ILS requirements
- design processes and techniques to investigate, synthesise and develop proposals, evaluate feasibility against design criteria, review and revise in consultation with stakeholders, model, mock-up and prototype

- systems thinking, problem solving and decision making, and continuous improvement methods
- WHS and regulatory requirements, codes of practice, standards, risk management and registration requirements
- professional and licensed technical assistance for engineering specialisations
- requirement for consultation and negotiation to establish design parameters and criteria
- procedures for planning, scheduling and coordination of design
- hardware requirements of typical aircraft electrical component and system applications
- engineering scientific principles and techniques required for aircraft electrical system design tasks
- design calculations techniques
- software for product planning and design, such as CAD layout, circuit design, system software and project management
- required documentation:
 - design brief and records of negotiation
 - planning and schedule
 - calculations and diagrams documentation for checking and design records
 - specifications and graphics required to define designs
 - risk analysis report
 - design process summary report
 - life-cycle and sustainability reports
 - CM and ILS documentation
- prototyping options, including mock-ups, simulation, physical and virtual modelling, and rapid prototyping.

Assessment Conditions

- This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, then a simulated working environment must be used that reflects realistic workplace situations and conditions.
- The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application.
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.
- Assessors must be satisfied that the candidate can competently and consistently:
 - communicate, negotiate and review design brief with stakeholders

- determine or confirm scientific principles and design techniques, WHS and regulatory requirements, and design specification requirements
- evaluate multiple solutions
- investigate life-cycle design and sustainability, technical and professional assistance required
- plan, schedule and coordinate the design task
- select design components using design process and scientific principles
- integrate aircraft electrical hardware and components into aircraft electrical systems
- solve problems and make decisions with systems thinking for contingencies and constraints and continuous improvement
- define designs, specify and document and apply graphical techniques, modelling, mock-up or prototyping techniques
- create and maintain adequate and accurate calculations and design process records
- report and document results and processes.
- Assessment may be in conjunction with assessment of other units of competency where required.
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

ME A727 Apply calculus in avionic engineering situations

Modification History

Release 1 - New unit of competency

Application

This unit of competency applies to avionic engineering tasks requiring the use of calculus to support avionic system and component circuit analysis and limited design, either manually or through use of an appropriate software package.

It is suitable for paraprofessionals and technologists required to perform circuit analysis in the design and modification of avionic systems and components, and in the development and support of test stations. It is suitable for those pursuing technologist careers and qualifications.

This unit is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

MEM23004A Apply technical mathematics

Competency Field

Avionic engineering

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes. Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|----|--|-----|---|
| 1. | Apply differentiation techniques to avionic engineering applications | 1.1 | Solve avionic engineering problems using the rules of differentiation |
| | | 1.2 | Solve avionic engineering problems that are expressed in the form of differential equations |

		1.3	Solve avionic engineering problems that require the application of partial differentiation
2.	Apply integration techniques to avionic engineering applications	2.1	Obtain integrals of algebraic, trigonometric and exponential functions and evaluate definite integrals
		2.2	Solve avionic engineering problems using the rules of integration
3.	Apply fourier analysis and laplace transforms to avionic engineering applications	3.1	Apply fourier analysis and laplace transforms in the analysis and design of avionic circuits
4.	Communicate outcomes	4.1	Communicate outcome to relevant stakeholders by appropriate means
		4.2	Explain outcome to stakeholders as appropriate
		4.3	Check outcome has addressed problem

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Avionic engineering applications include:

- Circuit analysis relating to avionic systems and system components, including but not limited to:
 - communications
 - radio navigation
 - inertial navigation
 - pulse
 - display
 - automatic flight control
 - flight management
 - engine management
- Circuit analysis relating to the design, modification and

- update of avionic component test stands
- Appropriate communication techniques include:**
- Reporting
 - Publication amendment
 - Revision of design data
 - Presentation
 - Verbal communication
 - Web-based
 - Electronic or hard copy
- Check outcome includes:**
- Ensuring that the result of the analysis does assist in the resolution of the problem

Unit Mapping Information

New unit of competency

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for MEA727 Apply calculus in avionic engineering situations

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- identifying and defining avionic circuit analysis problems
- collecting and analysing data through the application of calculus techniques
- reporting and presenting data and quantitative information
- communicating effectively with stakeholders on problem resolution.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- differential calculus:
 - differentiation from first principles
 - differentiation by rule
 - differentiating derivatives of trigonometric, logarithmic and exponential functions
 - Newton's method
 - differentiation application (turning points, intercepts, limits, symmetry, maxima and minima rates)
 - solving first and second order differential equations
 - solving problems involving partial differentiation with up to three independent variables
- integral calculus:
 - definite integrals
 - indefinite integrals
 - integration of trigonometric, algebraic and exponential functions
 - integration using partial fractions
 - integration using improper integrals
 - integration by parts
 - integration with the aid of tables
 - the calculation of areas and volumes
 - the determination of means and root mean square

- the application of double integrals to moments problems and application of double integrals in polar form
- complex numbers – manipulation of complex numbers and application of De Moivre's theorem
- electronic circuit analysis using fourier analysis and laplace transforms.

Assessment Conditions

- This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, then a simulated working environment must be used that reflects realistic workplace situations and conditions.
- The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application.
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.
- Assessors must be satisfied that the candidate can competently and consistently:
 - identify appropriate calculus technique(s) for avionic engineering or related problems
 - apply the appropriate technique to the problem
 - perform circuit analysis using fourier analysis and laplace transforms
 - check answer has addressed problem
 - communicate the outcome of the analysis in an appropriate manner.
- Assessment may be in conjunction with assessment of other units of competency where required.
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

MEA729 Apply configuration management procedures in airworthiness engineering management

Modification History

Release 1 - New unit of competency

Application

This unit of competency applies to engineering or related projects or operations across all forms of manufacturing and engineering. It is suitable for people with system design, installation, commissioning and project or operational management responsibilities who are required to apply configuration management (CM) procedures during system design and/or during the life-cycle of a product. The procedures are used as the control mechanism during the application of the systems engineering design processes which may be used in the design of complex hardware and software products, both for initial design and then as an iterative process as the need for modifications are identified throughout the life-cycle of the product. The outputs of the CM process are configuration documentation that can be used for through-life management or for input of data to logistic management plans where integrated logistics support (ILS) is mandated as the through-life management system.

This unit is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

- | | |
|--------|--|
| MEA135 | Use computers in aviation maintenance-related integrated logistic support activities |
| MEA138 | Perform aviation technical publication management activities |

Competency Field

Airworthiness engineering management

Unit Sector

Elements and Performance Criteria

Elements describe the Performance criteria describe the performance needed to

essential outcomes.		demonstrate achievement of the element.
1.	Plan CM activities	1.1 Identify the context and environment in which CM is to be applied
		1.2 Identify any contractual requirements and specifications for the application of CM procedures to through-life management of product configuration, including the relationship with logistics management systems, such as ILS
		1.3 Document the required CM activities
2.	Develop CM plan	2.1 Describe how CM is to be accomplished
		2.2 Specify how consistency between the product definition, configuration and the CM records is to be achieved and maintained throughout the applicable phases of the product's life-cycle
		2.3 Identify and specify performance indicators for assessing the effectiveness of the plan in terms of implementation and performance of the CM discipline
3.	Specify and set up CM documentation	3.1 Identify records required to effectively implement CM within the identified product context and environment, regulatory requirements and CM plan
		3.2 Select documentation media and develop documentation templates
		3.3 Specify a document version control system
		3.4 Determine and specify protocols for documentation safeguarding and access
4.	Establish and control CM baseline	4.1 Establish product CM baseline in relation to the systems engineering or other design process
		4.2 Revise CM baseline at applicable stages of product development, production and engineering changes in accordance with the CM plan
		4.3 Establish and review documentation baselines in line with the requirements of the CM plan and with changes in the product CM baseline
5.	Implement CM processes	5.1 Develop and deliver training to responsible individuals covering roles and responsibilities and

		the procedures for implementing CM processes as defined in the CM plan
	5.2	Measure performance against the performance indicators in the CM plan and assess measurements/trends to identify possible process improvements
6.	Perform configuration status accounting	6.1 Develop and populate a database with information relating to the configuration of products classified as configuration items
		6.2 Develop and promulgate procedures to update and validate the database whenever there is a configuration change throughout product life-cycle
		6.3 Disseminate data in accordance with the CM plan and standard enterprise procedures
7.	Participate in configuration audits	7.1 Participate in configuration audits where required by the applicable CM standard and the CM plan
		7.2 Initiate action to correct deficiencies identified during audits

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

CM context and environment include:

- The nature of the products, such as hardware and/or software, complete systems and system components or subsystems
- Whether or not CM must extend to subcontractors and/or vendors
- Specific CM value adding functions and level of emphasis
- Contractual CM requirements, including specification of a CM standard to be applied

Use of CM data in logistic management system activities includes:

- Airworthiness regulatory requirements
- Reliability and maintainability engineering
- Maintenance planning
- Life-cycle costing
- Spares support requirements
- Technical data and publications
- Support and test equipment identification
- Determining facilities requirements
- Determining personnel training requirements

CM plan includes:

- Brief description of system or top level configuration item (CI) and of the lower level CI's covered by the plan
- List of reference documents (specifications, standards, manuals, etc)
- CM organisation and responsibilities
- CM phasing and milestones
- Data management
- Configuration identification, including selection of CI's, baseline establishment, configuration identifiers for hardware and for software
- Interface management
- Performance indicators
- Configuration control procedures
- Configuration status accounting procedures
- Configuration audit procedures
- Subcontractor/vendor control procedures

Systems engineering interface refers to:

- Systems engineering processes result in the output of technical information that is controlled through the CM process. Through the service life of the product the CM process identifies the need for modifications and the systems engineering process is used to design and develop the modifications which then result in changes to the CM baseline and documentation which may then also feed into logistic support plan updates

CM standards and references include:

- EIA-649-A 2004 National Consensus Standard for Configuration Management
- GEIA Standard 836-2002 Configuration Management Data Exchange and Interoperability
- IEEE Standard 828-1998 IEEE Standard for Software Configuration Management Plans
- MIL-STD-973 Configuration Management
- STANAG 4159 NATO Materiel Configuration Management Policy and Procedures for Multinational Joint Projects
- STANAG 4427 Introduction of Allied Configuration

Management Publications

- IEEE Standard 1042-1987 IEEE Guide to Software Configuration Management
- MIL-HDBK-61A Configuration Management Guidance
- 10007 Quality management – Guidelines for configuration management

Assessment Requirements for MEA729 Apply configuration management procedures in airworthiness engineering management

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- identifying CM requirements for a product, including listing CIs
- identifying and complying with relevant airworthiness regulations relating to configuration control, documentation and publications
- applying CM processes to the data produced through systems engineering
- establishing CM baselines during product design and development
- developing a CM plan
- training organisation staff in CM plan implementation
- developing CM documentation and related access, version control and security protocols
- implementing and reviewing CM for a product
- developing and applying CM status accounting and maintaining baseline records
- participating in configuration audits and initiating action to resolve deficiencies
- inputting CM data to logistic support plans, where applicable.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- the use and application of CM in through-life management of product configuration
- CM standards and procedures
- relationship between CM and systems engineering during initial design and production
- iteration of the CM and systems engineering interface throughout the product life-cycle during modification development and configuration baseline revision
- relationship between CM and logistic support requirements, such as providing data and updates for ILS plans throughout the product life cycle
- relationship between CM and airworthiness regulations regarding control of aircraft and aeronautical product configuration.

Assessment Conditions

- This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, then a simulated working environment must be used that reflects realistic workplace situations and conditions.
- The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application.
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.
- Assessors must be satisfied that the candidate can competently and consistently:
 - determine the scope of the CM task and identify items for CM (CIs)
 - compile CM documentation from systems engineering data
 - establish and review configuration baselines during product development and production
 - comply with relevant airworthiness regulations
 - develop CM plans
 - implement CM plans
 - review CM performance
 - establish and maintain CM status accounting databases and procedures
 - participate in CM audits and manage the remedy of deficiencies.
- Assessment may be in conjunction with assessment of other units of competency where required.
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

MEA730 Apply systems engineering procedures to airworthiness engineering design project management

Modification History

Release 1 - New unit of competency

Application

Systems engineering procedures are applied in setting up management procedures for engineering design projects involving the design of complex systems that require the integration of subsystems and/or components by a multi-discipline engineering team. The management processes may relate to all design stages and may include the development of systems software. In the production and life-cycle management stages, systems engineering design stage output data may be used in the application of configuration management (CM) procedures (MEA729 Apply configuration management procedures in airworthiness engineering management) and/or to support the application of integrated logistic support (ILS) (MEA139 Perform aviation maintenance-related integrated logistic support management activities) where justified by system size and complexity or where required by contract.

This unit is used in workplaces that operate under the airworthiness regulatory systems of the Australian Defence Force (ADF) and the Civil Aviation Safety Authority (CASA).

Pre-requisite Unit

- | | |
|--------|--|
| MEA135 | Use computers in aviation maintenance-related integrated logistic support activities |
| MEA137 | Write aviation maintenance technical publications |

Competency Field

Airworthiness engineering management

Unit Sector

Elements and Performance Criteria

Elements describe the essential Performance criteria describe the performance needed to

outcomes.	demonstrate achievement of the element.
1. Analyse and document system requirements	1.1 Identify and document customer or contractual system requirements and relevant regulatory requirements 1.2 Set up a systems engineering team and allocate responsibilities 1.3 Analyse system requirements and define functional requirements and design constraints
2. Perform functional analysis and allocation	2.1 Decompose system functions to lower-level functions applicable to system design 2.2 Allocate design constraints to all functional levels 2.3 Define and refine internal and external functional interfaces 2.4 Define, refine and integrate functional architecture 2.5 Review functional analysis outcomes against requirements and revise where necessary 2.6 Develop and document the functional baseline
3. Manage preliminary design activities	3.1 Coordinate the development of performance specifications for the system and components 3.2 Define alternatives for system concepts, components and system elements 3.3 Select preferred product and process solutions 3.4 Define and refine internal and external physical interfaces 3.5 Define and refine system software requirements 3.6 Develop and document the allocated baseline
4. Manage the detail design activities	4.1 Coordinate the development of item, process and material specifications 4.2 Coordinate the development of software specifications 4.3 Coordinate the development of engineering drawings and associated material/component/hardware lists

- | | | |
|---|-----|---|
| | 4.4 | Coordinate the development of item performance specifications |
| | 4.5 | Determine product review and design verification procedures |
| | 4.6 | Develop and document the product baseline |
| 5. Provide oversight of production and delivery | 5.1 | Apply product review and verification procedures and initiate action to remedy design or production deficiencies |
| | 5.2 | Ensure that all relevant regulatory requirements are being met |
| 6. Provide for life-cycle management of the system, components and software | 6.1 | Where there is a contractual requirement for application of CM, provide the technical data package and define the configuration items and baselines |
| | 6.2 | Where there is a contractual requirement for ILS, provide the technical data package and data required for the development of the relevant ILS plans |
| | 6.3 | Where there are no contractual requirements regarding life-cycle management, deliver the technical data package and develop procedures for the management of the configuration of the system, system components and software that meet relevant regulatory requirements |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- Systems engineering process management:**
- The systems engineering process is a comprehensive process for the design and integration of complex systems that cover a range of engineering disciplines.

- The actual design work will be performed by appropriately qualified specialist engineers and the management process ensures that the design activities are coordinated and integrated into a system that meets specified performance requirements and complies with relevant airworthiness regulations
- System requirements analysis:**
- System requirements analysis involves inputs, such as customer needs and objectives, regulatory requirements and the technology base. It must clarify and define functional requirements and design constraints
- Functional analysis and allocation:**
- Functional analysis and allocation provides a greater understanding of what the system has to do and allocates overall system performance requirements to lower level subsystem and component functions. In so doing, it provides information essential to optimising physical solutions
- Baselines:**
- The functional, allocated and product baselines document a product at a specific stage of design definition. The functional baseline describes system level requirements, the allocated baseline describes design requirements for items below systems level and the product baseline describes the product physical detail
- Technical data packages include:**
- Engineering drawings and associated lists
 - Technical manuals
 - Manufacturing part programs
 - Verification provisions
 - Spares provisioning lists
 - Specifications developed for the system and system components
 - Specifications and standards from international and national bodies (government and non-government)
 - Relevant regulatory standards and requirements
- Reference materials include:**
- System Engineering Fundamentals, Dept of Defence Systems Management College
 - NASA/SP-2007-6105 Rev 1 NASA Systems Engineering Handbook
 - Project Documentation Document SPEC-0064 Rev A, ATST System Engineering Plan
 - 7th Annual Conference on Systems Engineering Research 2009 (CSER 2009), Systems Thinking or Systems Engineering
- Airworthiness regulations are found in:**
- AAP7001.053 Technical Airworthiness Management Manual
 - Civil Aviation Safety Regulations (CASRs) and related documentation/publications

Assessment Requirements for MEA730 Apply systems engineering procedures to airworthiness engineering design project management

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- setting up and managing procedures for systems analysis and control that comply with relevant airworthiness regulations
- setting up and managing a systems engineering team
- developing and implementing procedures for identification of systems engineering process inputs
- managing, and recording the outcomes of, requirements analysis
- managing and recording the outcomes of functional analysis and allocation and apply the requirements loop process
- developing and documenting the functional baseline
- managing the development of the system specification and preliminary design
- developing and documenting the allocated baseline
- applying the design loop process
- managing the detail design process and using outputs to develop a technical data package that meets airworthiness regulatory requirements
- developing and documenting the product baseline
- maintaining oversight of the production and delivery phase
- providing process outputs for the establishment of CM procedures or ILS plans
- determining requirements for life-cycle management where CM or ILS is not required and setting up and documenting a life-cycle management system that complies with relevant airworthiness regulations.

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- the systems engineering process and management procedures, including relevant airworthiness regulations
- how to set up and manage the activities of a systems engineering design team
- development of specifications and standards

- identification of applicable published specifications and standards
- how to set up and manage a systems analysis and control database
- how to use process outputs to set up CM and ILS systems for through-life management
- how to develop and document an applicable life-cycle management system where CM or ILS is not prescribed or is inappropriate
- ethical considerations in systems engineering.

Assessment Conditions

- This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, then a simulated working environment must be used that reflects realistic workplace situations and conditions.
- The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application.
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.
- Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in managing the application of the systems engineering process.
- Assessment may be in conjunction with assessment of other units of competency where required.
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).

MEM05004C Perform routine oxy acetylene welding

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers preparing materials and performing routine oxy acetylene welding.
------------------------	--

Application of the Unit

Application of the unit	<p>This unit applies in a maintenance or manufacturing environment where the welding is not required to meet an Australian standard or equivalent. Fillet and butt welds would typically be performed on low carbon/mild steels.</p> <p>Where welding is required to meet Australian Standard 1554 General Purpose or equivalent codes, OHS regulations and/or licensing requirements, Unit MEM05022C (Perform advanced welding using oxy acetylene process) should be selected.</p> <p>Band: A</p> <p>Unit Weight: 2</p>
--------------------------------	---

Licensing/Regulatory Information

Refer to Application of the Unit

Pre-Requisites

Prerequisite units	

Prerequisite units	

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify weld requirements	1.1. Weld requirements are identified from job instructions. 1.2. Location of welds is identified in accordance with standard operating procedures and job specifications.
2. Prepare materials for welding	2.1. Materials are cleaned and prepared ready for welding.
3. Prepare equipment for welding	3.1. Welding equipment is set up correctly. 3.2. Settings and consumables are selected.
4. Perform routine welding using <i>oxy acetylene</i>	4.1. Safe welding practices are applied. 4.2. Materials are welded to job requirements. 4.3. Welds are cleaned in accordance with standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- preparing materials
- setting up welding equipment
- welding with oxy acetylene fuel gas
- reading and interpreting routine information on written job instructions, specifications and standard operating procedures
- following oral instructions
- using measurement skills for joint preparation and routine oxy acetylene welding

Required knowledge

Look for evidence that confirms knowledge of:

- preparatory requirements
- materials and consumables properties and characteristics
- equipment and equipment settings
- fuel gas properties and applications
- post welding treatments
- weld characteristics
- any applicable industry standards, NOHSC guides, State/Territory regulatory codes of practice/standards
- safe work practices and procedures
- safe welding practices
- use and application of personal protective equipment for routine oxy acetylene welding

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment

EVIDENCE GUIDE	
Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to prepare materials and carry out routine oxy acetylene welding.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with performing routine oxy acetylene welding or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Materials	Mild and low carbon steel and cast iron
Prepared	Preheating, setting up jigs, fixtures, clamps, joint preparation
Equipment	Hoses, blowpipes, regulators
Consumables	Filler rods, fluxes
Oxy acetylene	The term 'oxy-acetylene' is used here to describe a range of fuel gases, including acetylene, LPG, hydrogen etc.
Cleaned	Fluxes

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare materials and equipment	<p>1.1. Job requirements are determined from specifications and/ or instructions.</p> <p>1.2. Materials are correctly prepared using appropriate tools and techniques.</p> <p>1.3. Materials are correctly assembled/aligned to meet specifications as required.</p> <p>1.4. Distortion prevention measures are identified and appropriate action is taken as required.</p> <p>1.5. Heating equipment is assembled and set up safely and correctly in accordance with standard operating procedures.</p> <p>1.6. Correct and appropriate consumables are selected and prepared.</p> <p>1.7. Test run is undertaken and verified as required.</p>
2. Braze and/or silver	2.1. The correct process is selected to meet specifications.

ELEMENT	PERFORMANCE CRITERIA
solder	2.2. Materials are preheated as required. 2.3. Consumables are applied using correct techniques. 2.4. Jointing material is applied correctly and in appropriate quantities to meet job/specifications. 2.5. Material temperature is annealed using correct and appropriate techniques.
3. Inspect joints	3.1. Excess jointing materials are removed using correct and appropriate techniques. 3.2. Inspection of joints is undertaken to standard operating procedures. 3.3. Inspection results are reported/recorded using standard operating procedures as required.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- preparing materials
- performing brazing, braze welding, silver soldering
- undertaking visual inspection
- reading and interpreting routine information on written job instructions, specifications and standard operating procedures
- following oral instructions

Required knowledge

Look for evidence that confirms knowledge of:

- the reasons for selecting specific methods of assembly/alignment
- the procedures for minimising distortion of the materials being brazed/braze welded/silver soldered
- the procedures for assembling and setting up the specific heating equipment
- the reasons for selecting specific heating equipment
- the reasons for selecting specific consumables
- conducting test runs

REQUIRED SKILLS AND KNOWLEDGE

- typical applications of brazing/braze welding and silver soldering processes
- the procedures and precautions for preheating the materials to be joined
- the effects of the use of inappropriate techniques on the performance of the jointed materials
- the effect of inappropriate quantities of jointing material on the performance of the jointed materials
- the procedures for normalising the temperature of jointed materials
- the consequences of using inappropriate techniques to normalise the temperature of the joint
- the procedures for removing excess jointing material
- the procedures for inspecting brazed/braze welded/silver soldered joints
- use and application of personal protective equipment for silver soldering and brazing/braze welding
- safe work practices and procedures

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assemble/disassemble plant and equipment	1.1. Accessories and equipment are correctly selected and assembled for manual heating and thermal cutting.
2. Operate heating and thermal cutting equipment	2.1. Cutting process and/or procedure appropriate for material is selected. 2.2. All safety procedures are observed. 2.3. Equipment start-up procedures are followed correctly to standard operating procedures. 2.4. Equipment adjustments are made correctly using standard operating procedures. 2.5. Appropriate cutting allowances are made. 2.6. Material is used in the most economical way. 2.7. Defects are identified and corrective action is taken to standard operating procedures. 2.8. Material is heated and cut to specification.

ELEMENT	PERFORMANCE CRITERIA
	2.9.Shape/size/length is to accepted workplace standards.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- performing pre-start checks
- safely starting equipment
- following standard operating procedures
- adjusting equipment to operating specifications
- making cutting allowances
- economising material and minimising wastage
- identifying cutting defects and taking corrective action
- heating and cutting materials to specifications
- reading and interpreting routine information on written job instructions, specifications and standard operating procedures. May include drawings
- following oral instructions
- performing measurements needed to meet the requirements of this unit
- entering routine and familiar information onto proformas and standard workplace forms

Required knowledge

Look for evidence that confirms knowledge of:

- cutting processes appropriate to various materials
- heating and cutting specifications
- procedures for heating and cutting
- the tools, equipment and techniques for heating and cutting
- assembling procedures for equipment and accessories
- hazards and control measures associated with manual heating and thermal cutting
- use and application of personal protective clothing and equipment
- equipment pre-checks and operation
- procedures for adjusting heating and cutting equipment

REQUIRED SKILLS AND KNOWLEDGE

- cutting allowances and reasons for applying them
- procedures for minimising waste material
- reasons for minimising waste material
- cutting defects and their causes
- procedures for correcting cutting defects
- tools, equipment and techniques required to correct cutting defects
- use and application of personal protective equipment
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to perform manual heating and thermal cutting.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.

Context of and specific resources for assessment

This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with manual heating/thermal cutting or other units requiring the exercise of the skills and knowledge covered by this unit.

EVIDENCE GUIDE	
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questions should not require language, literacy and numeracy skills beyond those required in this unit. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify weld requirements	1.1. Weld requirements are identified from job instructions. 1.2. Location of welds is identified in accordance with standard operating procedures and job specifications.
2. Prepare materials for welding	2.1. Materials are cleaned and prepared ready for welding.
3. Prepare equipment for welding	3.1. Welding equipment is set up correctly. 3.2. Correct electrodes are selected to suit application and settings.
4. Perform routine welding using MMAW	4.1. Safe welding practices are applied. 4.2. Materials are welded to job requirements. 4.3. Welds are cleaned in accordance with standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- preparing materials and electrodes
- setting up welding equipment
- welding with MMAW
- reading and interpreting routine information on written job instructions, specifications and standard operating procedures
- performing measurements for joint preparation and routine MMAW

Required knowledge

Look for evidence that confirms knowledge of:

- material and equipment preparation
- properties and characteristics of materials and consumables
- weld characteristics
- equipment set-up and settings
- MMAW processes and properties
- post-welding treatments
- safe welding practices
- use and application of personal protective equipment

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to prepare materials and carry out routine manual metal arc welding (MMAW).

EVIDENCE GUIDE	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both. Where assessment occurs off the job, i.e. the candidate is not in productive work, then appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with performing routine manual metal arc welding or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning should not require language, literacy and numeracy skills beyond those required in this unit. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Materials	Low and mild carbon steel or similar
Prepared	Cleaning, setting up jigs, fixtures, clamps, joint preparation
Welding equipment	Welding leads, welding machines, electrode holder etc.
Cleaned	Slag and spatter, cleaning, using files and grinders

Unit Descriptor

Unit descriptor	This unit of competency covers the preparation, positioning, fixing, and manual welding techniques associated with general trade level welding using manual metal arc welding (MMAW) equipment including the selection and set up of the equipment appropriate to both the material and the weld to be performed, carrying out the MMAW to prescribed standards, and examining for and correcting defects, in a range of welded fabrications.
------------------------	---

Application of the Unit

Application of the unit	<p>This unit of competency applies to welds associated with heavy or light metal fabrications. Welds are fillet and butt welds in all positions on a range of ferrous and non-ferrous materials that may include carbon steel or stainless steel. Weld quality would conform to Australian Standard 1554 General Purpose, American Bureau of Shipping (ABS) or equivalent.</p> <p>This unit has been primarily developed for Engineering Tradesperson - Fabrication apprenticeship training and the recognition of trade level skills in MMAW. It may also apply to other trade occupations requiring higher level MMAW welding skills.</p> <p>Where manual thermal processes associated with preparation, pre-heat and/or post-heat are required, MEM05007C Perform manual heating and thermal cutting and/or MEM05008C Perform advanced manual thermal cutting, gouging and shaping should be considered for selection.</p> <p>Band: A</p> <p>Unit Weight: 4</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare materials for manual metal arc welding (MMAW)	1.1. Weld requirements are identified from specifications and/or drawings 1.2. Materials are correctly prepared 1.3. Materials are assembled/aligned to specification, where required
2. Select welding equipment and consumables	2.1. Welding equipment and electrodes appropriate to the material and the weld are identified and selected
3. Assemble and set up welding equipment	3.1. Welding equipment is assembled and set up
4. Minimise and rectify distortion	4.1. Appropriate distortion prevention measures are selected and applied 4.2. Distortion is rectified
5. Weld to job specification using MMAW	5.1. Weld deposit is to specification 5.2. Joints are cleaned to specifications
6. Ensure weld conformance	6.1. Defects are rectified with minimum loss of sound metal using correct techniques and tools 6.2. Weld joints are visually inspected for conformance to specifications
7. Where required, maintain weld records	7.1. Where required, weld records are completed correctly

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- identifying and interpreting welding specifications including appropriate standards e.g. Australian Standard 1554 General Purpose, American Bureau of Shipping (ABS) or equivalent
- selecting and using appropriate tools and equipment

REQUIRED SKILLS AND KNOWLEDGE

- using a variety of welding machines and electrodes
- identifying and rectifying weld defects
- applying techniques for distortion prevention and rectification
- cleaning welds
- reading and interpreting information on sketches, written job instructions, specifications, standard operating procedures and engineering drawings
- recording routine information including routine weld records related to MMAW onto proformas and standard workplace forms
- following oral instructions
- measurement skills relating to joint preparation and MMAW

Required knowledge

Required knowledge includes:

- material preparation
- joint preparations
- electrode classification
- causes of distortion for materials within the scope of this unit
- causes of defects and methods of rectification
- the relationships between amperage, electrode and material
- safe welding practices
- use and application of personal protective equipment for MMAW

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to prepare materials, select and set up the welding equipment, carry out MMAW and examine for and correct defects, in a range of welding activities associated with MMAW. Competency in this unit cannot be awarded until all prerequisites have been satisfied.

Critical aspects for assessment and evidence required to demonstrate

Assessors must be satisfied that the candidate can competently and consistently apply the skills covered in

EVIDENCE GUIDE	
competency in this unit	<p>this unit of competency in new and different workplace situations and contexts. Critical aspects of assessment and evidence include:</p> <ul style="list-style-type: none"> • following all safety procedures to protect self, other workers and members of the public • identifying and interpreting specifications for MMA welding including Australian Standard 1554 General Purpose • interpreting welding specifications including standard welding symbols used to show weld procedure • selecting appropriate weld preparation methods for material and position of welds. • preparing materials, setting up of jigs, fixtures, clamps, etc. and joint preparation including bevelling • consistently welding different ferrous and non-ferrous materials to AS 1554 General Purpose or equivalent • identifying defects as described in the range statement across a range of welded materials • rectifying defects.
Context of and specific resources for assessment	<p>Welding to AS 1554 General Purpose or equivalent requires both theoretical knowledge and high level practical skills. The assessment process must be designed to identify consistent performance to the standard and the specifications across a range of materials and positions. The assessment must also identify a level of workplace performance in terms of defect rates and weld failure rates. It is recommended that assessment involve demonstrations of competency under both workshop and site conditions. This means that the ideal assessment environment is either on the job or a combination of both on and off the job.</p> <p>The competencies covered by this unit may be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p>
Method of assessment	<p>Typically an Engineering Tradesperson - Fabrication and other tradespersons engaged in welding are required to exercise MMAW skills and techniques across a range of jobs and specifications.</p> <p>A single assessment event is not appropriate. On the job assessment should be included as part of the assessment</p>

EVIDENCE GUIDE	
	<p>process wherever possible. Where assessment occurs off the job, judgement must consider evidence of the candidate's performance in a productive work environment that includes a sufficient range of appropriate tasks and materials to cover the scope of application for this unit.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>
Guidance information for assessment	<p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with welding using MMAW process or other units requiring the exercise of the skills and knowledge covered by this unit.</p> <p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>

Range Statement

RANGE STATEMENT
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare welding materials and equipment	1.1. Welding equipment is prepared. 1.2. Welding equipment appropriate to task requirements is assembled and adjusted correctly and safely. 1.3. Materials are prepared to achieve the required weld specification.
2. Weld joints to code requirements using MMAW	2.1. Weld requirements are interpreted correctly. 2.2. Welds are deposited correctly to specifications. 2.3. Appropriate distortion prevention measures are selected for the weld type and material and distortions are rectified as required.
3. Assess weld quality and rectify faults	3.1. Weld joints are visually inspected against specifications. 3.2. Defects are removed using appropriate methods for the given task. 3.3. Weld records are correctly completed and maintained.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- welding to conform to Australian Standard 1554 Structural Purpose, Bureau Det Norse Verticas or equivalent
- interpreting weld requirements and specifications
- entering information onto proformas and standard workplace forms
- interpreting technical drawings and weld specifications relating to advanced MMAW
- using hand and power tools to prepare and weld material using MMAW
- using measurement and numeracy skills relating to advanced MMAW and preparation
- selecting equipment and consumables appropriate to the task
- using visual identification of faults/defects

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

Look for evidence that confirms knowledge of:

- in-depth knowledge of the properties and characteristics of a wide range of materials
- requirements to conform to Australian Standard 1554 Structural Purpose, Bureau Det Norse Verticas or equivalent
- weld procedures and requirements
- different welder identification systems such as numbering, bar coding, paint coding, letter stamps
- safety requirements
- safe welding practices
- use and application of personal protective equipment for MMAW

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to prepare materials, select and set up the welding equipment, carry out advanced MMAW, inspect for and correct defects, and maintain the weld records. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.

Context of and specific resources for assessment

This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. - using visual identification of faults/defects

Required knowledge

Look for evidence that confirms knowledge of:

- in-depth knowledge of the properties and characteristics of a wide range of materials
- requirements to conform to Australian Standard 1554 Structural Purpose, Bureau Det Norse Verticas or equivalent
- weld procedures and requirements
- different welder identification systems such as numbering, bar coding, paint coding, letter stamps
- safe welding practices
- use and application of personal protective equipment for GMAW

Evidence Guide**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to prepare materials, select and set up the welding equipment, carry out advanced GMAW, inspect for and correct defects, and maintain the weld records. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.

Context of and specific resources for assessment

This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this

EVIDENCE GUIDE	
	<p>unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with performing advanced welding using gas metal arc welding process or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Welding equipment	AC or DC welding machines, settings, electrodes and related equipment
Preparing materials	Preheating, setting up of jigs, fixtures, clamps, etc., joint preparation e.g. bevelling

RANGE STATEMENT	
Materials	Low carbon, cast iron, stainless and low alloy steel, aluminium and aluminium alloys
Welds	Fillet and butt in all positions
Distortion prevention measures	Preheating, setting up of jigs, fixtures, clamps, etc.
Defects	Porosity, slag inclusions, discontinuities, lack of penetration, undercut
Appropriate methods	Oxy acetylene arc equipment, grinding devices
Weld records	Proformas and other standard workplace forms

Unit Descriptor

Unit descriptor	This unit of competency covers the preparation, positioning, fixing, and welding techniques associated with general trade level welding using gas tungsten arc welding (GTAW) equipment including the selection and set up of the equipment appropriate to both the material and the weld to be performed, carrying out the GTAW to prescribed standards, and examining for and correcting defects, in a range of welded fabrications.
------------------------	--

Application of the Unit

Application of the unit	<p>This unit of competency applies to welds associated with heavy or light metal fabrications. Welds are fillet and butt welds in all positions on a range of ferrous and non-ferrous materials that may include carbon steel or stainless steel and aluminium. Weld quality would conform to Australian Standard 1554 General Purpose, American Bureau of Shipping (ABS), or equivalent.</p> <p>This unit has been primarily developed to support Engineering Tradesperson - Fabrication apprenticeship training and the recognition of trade level skills in GTAW. It may also apply to other trade occupations requiring higher level GTAW welding skills.</p> <p>Where manual thermal processes associated with preparation, pre-heat and/or post-heat are required, MEM05007C Perform manual heating and thermal cutting and/or MEM05008C Perform advanced manual thermal cutting, gouging and shaping should be considered for selection.</p> <p>Band: A</p> <p>Unit Weight: 4</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare materials for gas tungsten arc welding (GTAW)	1.1. Weld requirements are identified from specifications and/or drawings 1.2. Material is correctly prepared 1.3. Materials are assembled/aligned to specification, where required
2. Select welding equipment and consumables	2.1. Welding equipment and electrodes, accessories and consumables appropriate to the material are identified and selected
3. Assemble and set up welding equipment	3.1. Welding equipment is assembled and set up
4. Minimise and rectify distortion	4.1. Appropriate distortion prevention measures for weld and material type are selected and applied 4.2. Distortion is rectified
5. Weld to job specification using GTAW	5.1. Weld deposit is to specifications 5.2. Joints are cleaned to specifications
6. Ensure weld conformance	6.1. Defects are removed with minimum loss of sound metal using techniques and tools appropriate to the defect, material and process 6.2. Weld joints are visually inspected for conformance to specifications
7. Maintain weld records as required	7.1. Weld records are completed correctly

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- identifying and interpreting welding specifications including appropriate standards e.g. Australian Standard 1554 General Purpose, American Bureau of Shipping (ABS) or equivalent
- selecting and using appropriate tools and equipment

REQUIRED SKILLS AND KNOWLEDGE

- using a variety of welding machines and electrodes
- identifying and rectifying weld defects
- applying techniques for distortion prevention and rectification
- cleaning welds
- reading and interpreting information on sketches, written job instructions, specifications, standard operating procedures and engineering drawings
- recording routine information including routine weld records related to GTAW onto proformas and standard workplace forms
- following oral instructions
- measurement skills relating to joint preparation and GTAW

Required knowledge

Required knowledge includes:

- correct welding machine, leads, hand pieces and electrodes
- material preparation
- joint preparations
- electrode classification
- causes of distortion for materials within the scope of this unit
- causes of defects and methods of rectification
- the relationships between amperage, electrode and material
- types of gases and their uses
- types of electrodes, current settings and high frequency voltage
- filler materials and consumables
- safe welding practices
- use and application of personal protective equipment for GTAW

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to prepare materials, select and set up the welding equipment, carry out the GTAW welding and examine for and correct defects, in a range of welding activities associated with GTAW. Competency in this unit cannot

EVIDENCE GUIDE	
	be awarded until all prerequisites have been satisfied.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently apply the skills covered in this unit of competency in new and different workplace situations and contexts. Critical aspects of assessment and evidence include:</p> <ul style="list-style-type: none"> • following all safety procedures to protect self, other workers and members of the public • identifying and interpreting specifications for GTAW including Australian Standard 1554 General Purpose • interpreting welding specifications including standard welding symbols used to show weld procedure • selecting appropriate weld preparation methods for material and position of welds. • preparing materials, setting up of jigs, fixtures, clamps, etc. and joint preparation including bevelling • consistently welding different ferrous and non-ferrous materials to AS 1554 General Purpose or equivalent • identifying defects as described in the range statement across a range of welded materials • rectifying defects.
Context of and specific resources for assessment	<p>Welding to AS 1554 General Purpose or equivalent requires both theoretical knowledge and high practical skills. The assessment process must be designed to identify consistent performance to standard and specification across a range of materials and positions. The assessment must also identify a level of workplace performance in terms of defect rate and weld failure rates. It is recommended that assessment involve demonstrations of competency under both workshop and site conditions. This means that the ideal assessment environment is either on the job or a combination of both on and off the job.</p> <p>The competencies covered by this unit may be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p>
Method of assessment	Typically an Engineering Tradesperson - Fabrication and other tradespersons engaged in welding are required to exercise GTAW skills and techniques across a range of

EVIDENCE GUIDE	
	<p>jobs and specifications.</p> <p>A single assessment event is not appropriate. On the job assessment should be included as part of the assessment process wherever possible. Where assessment occurs off the job, judgement must consider evidence of the candidate's performance in a productive work environment that includes a sufficient range of appropriate tasks and materials to cover the scope of application for this unit.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>
Guidance information for assessment	<p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with welding using GTAW process or other units requiring the exercise of the skills and knowledge covered by this unit.</p> <p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>

Range Statement

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
----------------	-----------------------------

ELEMENT	PERFORMANCE CRITERIA
1. Prepare welding materials and equipment	1.1. Welding equipment is prepared. 1.2. Welding equipment appropriate to task requirements is assembled and adjusted correctly and safely. 1.3. Materials are prepared to achieve the required weld specification.
2. Weld joints to code requirements using advanced GTAW	2.1. Weld requirements are interpreted correctly, 2.2. Welds are deposited correctly to specifications. 2.3. Appropriate distortion prevention measures are selected for the weld type and material and distortions are rectified as required.
3. Assess weld quality and rectify faults	3.1. Weld joints are visually inspected against specifications. 3.2. Defects are removed using appropriate methods for the given task. 3.3. Weld records are correctly completed and maintained.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- welding to conform to Australian Standard 1554 Structural Purpose, Bureau Det Norse Verticas or equivalent
- interpreting technical drawings and weld specifications relating to advanced GTAW
- using hand and power tools to prepare and weld material using GTAW
- using measurement and numeracy skills relating to advanced GTAW and preparation
- selecting equipment and consumables appropriate to task
- using visual identification of faults/defects

Required knowledge

Look for evidence that confirms knowledge of:

REQUIRED SKILLS AND KNOWLEDGE

- in-depth knowledge of the properties and characteristics of a wide range of materials

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Select welding equipment and consumables	1.1. Correct welding equipment and consumables are selected from weld procedure specifications.
2. Prepare welding materials and equipment	2.1. Welding equipment and consumables are prepared according to job requirements. 2.2. Welding equipment appropriate to the task is assembled and adjusted correctly and safely. 2.3. Materials are prepared to achieve required weld specification.
3. Assemble welding equipment	3.1. Welding equipment, including cylinders, regulators, hoses, torches and tips is assembled and set up safely in accordance with standard operating procedures.
4. Weld joints to Australian Standard 1554 SP or equivalent	4.1. Materials are welded to Australian Standard 1554 SP or equivalent in all positions. 4.2. Instructions, symbols, specifications are interpreted correctly including bead size, bead placement, reinforcement etc. and in accordance with weld procedure sheet, if available, and standard operating procedures.
5. Inspect welds	5.1. Weld joints are visually inspected against specifications. 5.2. Weld defects are identified.
6. Correct faults	6.1. Defects are removed with minimum loss of sound metal using correct and appropriate techniques and tools to Australian Standard 3992 or equivalent.
7. Maintain weld records	7.1. Weld records are maintained in accordance with specifications and standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in:

REQUIRED SKILLS AND KNOWLEDGE

- selecting equipment and consumables
- assembling welding equipment
- welding to AS1554 SP
- inspecting welds to specification
- correcting weld faults to AS3992
- entering information on to proformas and standard workplace forms
- using hand and power tools to prepare and weld materials
- interpreting weld requirements and specifications/procedures
- using measurement and numeracy skills for advanced oxy acetylene welding
- selecting equipment and consumables appropriate to given task
- using visual identification of defects/faults

Required knowledge

Look for evidence that confirms knowledge of:

- preparatory requirements
- the purpose and examples of pre-welding and post-welding heating of the weld materials
- the appropriate settings for the given task and the selected equipment/consumables
- the purpose of reinforcing areas to be welded
- the methods of weld defect removal and their application
- material and consumable properties and characteristics
- requirements of AS1554SP and AS3992 or equivalent
- fuel gas properties and applications
- post treatments
- recording procedures
- safe welding practices
- use and application of personal protective equipment for oxy acetylene welding
- relevant hazards and control measures related to the competency

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Apply all statutory and regulatory requirements to welding procedures	1.1. Statutory and safety requirements are applied to welding
2. Interpret all welding terms, codes and symbols	2.1. Welding terms and symbols are correctly interpreted
3. Determine the effects of heat treatment on metal in relation to welding	3.1. Reasons for performing heat treatment are identified 3.2. Processes such as pre-heat/post-heat treatment, stress relieving, normalising and annealing are appropriately applied
4. Plan the logical sequence of welding operations	4.1. Principles of planning and setting up welding are applied 4.2. Where specified, welds are prepared for testing

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- interpreting welding specifications including terms, codes and symbols
- planning the sequence of welding operations

Required knowledge

Required knowledge includes:

- any applicable industry standards, national/Australian standards, NOHSC guidelines, state/territory regulatory codes of practice/standards for the applicable welding processes
- safe work practices and procedures
- hazards related to welding
- safety equipment and procedures related to welding activities
- welding terminology
- welding codes and symbols

REQUIRED SKILLS AND KNOWLEDGE

- heat treatment processes
- logical sequence for welding processes
- tools, equipment, techniques used in welding
- effect of heat treatment on metal

Evidence Guide**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to apply welding principles to meet the statutory and regulatory requirements for welding procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently apply the skills and knowledge covered in this unit of competency in new and different workplace situations and contexts. Critical aspects of assessment and evidence include:

- applying welding statutory and safety requirements to different welding jobs and environments
- interpreting welding codes and symbols including symbols for type of weld, weld size, processing and finishing operations etc
- applying appropriate pre and post-heat treatment processes for a range of welded materials
- setting up weld sequence and preparing materials in a logical manner for welding job.

Context of and specific resources for assessment

This unit must be assessed in combination with one of the units satisfying the Australian Standard 1796 Certificates 1-9. Welding to AS 1796 requires both theoretical knowledge and high practical skills. The assessment process for the two units must be designed to identify consistent performance to the standards, the code and specifications across a range of materials and positions. The assessment must also identify a workplace level of performance in terms of defect rates and weld

EVIDENCE GUIDE	
	<p>failure rates. It is recommended that assessment involve demonstrations of competency under both workshop and site conditions. This means that the ideal assessment environment is either on the job or a combination of both on and off the job.</p> <p>The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p>
Method of assessment	<p>Typically an Engineering Tradesperson - Fabrication and other tradespersons engaged in welding are required to apply welding principles and techniques across a range of jobs and specifications.</p> <p>A single assessment event is not appropriate. On the job assessment should be included as part of the assessment process wherever possible. Where assessment occurs off the job, judgement must consider evidence of the candidate's performance in a productive work environment that includes a sufficient range of appropriate tasks and materials to cover the scope of application for this unit.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>
Guidance information for assessment	<p>This unit must be assessed in combination with one of the units satisfying the Australian Standard 1796 Certificate 1-9 and these units include:</p> <ul style="list-style-type: none"> • MEM05042B Perform welds to code standards using flux core arc welding process • MEM05043B Perform welds to code standards using gas metal arc welding process • MEM05044B Perform welds to code standards using gas tungsten arc welding process

EVIDENCE GUIDE

	<ul style="list-style-type: none"> • MEM05045B Perform pipe welds to code standards using manual metal arc welding process • MEM05046B Perform welds to code standards using manual metal arc welding process. <p>This unit could also be assessed in conjunction with any other units addressing the safety, quality, communication materials handling, recording and reporting associated with applying welding principles to meet the statutory and regulatory requirements for welding procedures or other units requiring the exercise of the skills and knowledge covered by this unit.</p> <p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
--	---

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Statutory and safety requirements	Statutory and safety requirements as required by AS 1796 welding codes
Welding	<p>Welding to AS 1796 using any of the following processes:</p> <ul style="list-style-type: none"> • flux core arc welding • gas metal arc welding • gas tungsten arc welding • manual metal arc welding

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent
---	---

	with the evidence guide.
--	--------------------------

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Maintain welding equipment	1.1. Routine maintenance is performed on welding equipment.
2. Prepare welding materials and equipment for GMAW welding to code standard	2.1. Weld requirements for GMAW welding to code standards are determined. 2.2. Materials are prepared to produce weld to code standard. 2.3. Welding equipment is set up correctly.
3. Weld joints using GMAW to procedure specifications	3.1. Materials are welded as per weld procedure specification.
4. Ensure weld quality	4.1. Discontinuities are rectified to ensure conformance to code requirements. 4.2. Weld records are maintained in accordance with standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
<p>Look for evidence that confirms skills in:</p> <ul style="list-style-type: none"> • depositing welds to procedure requirements • determining weld outcomes, consumables and settings from welding procedure specification • interpreting technical drawings and weld specifications for welding to code standards using GMAW • using hand and power tools to prepare and weld materials to code standard • using measurement and numeracy skills for welding to code standards • using language and literacy skills to enable completion of weld records

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

Look for evidence that confirms knowledge of:

- requirements to produce welds to quality of AS 1210, AS 4041, ASME IX or equivalent
- safe welding practices
- use and application of personal protective equipment for GMAW
- relevant standards or codes
- methods for preparing plate and pipe for code standard welding
- pre-welding and post-welding heating methods and requirements for plate and pipe welding to code standard
- requirements for maintaining weld records to code standard
- hazard and control measures associated with welding, including housekeeping

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to prepare and produce welds to code standards using GMAW process. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.

Context of and specific resources for assessment

This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment

EVIDENCE GUIDE	
	<p>should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with performing welds to code standards using gas metal arc welding process or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with preparing the materials and carrying out routine gas metal arc welding or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Materials	Mild and low carbon steel
Prepared	Preheating, setting up jigs, fixtures, clamps, joint preparation
Equipment	Hoses, welding leads, gas shrouds, gas regulators, liners, contact tips
Consumables	Filler wire, shielding gas
Cleaned	Slag and spatter

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify properties of commonly used metals	1.1. Materials to be welded are identified. 1.2. Characteristics and properties of commonly used materials are identified. 1.3. Uses and purposes of commonly used materials are identified. 1.4. Basic metallurgical characteristics are considered.
2. Identify and provide for welding contingencies	2.1. Information relevant to welding processes is sourced as required. 2.2. Potential contingencies are identified and solutions are considered.
3. Identify appropriate welding processes	3.1. Welding processes are identified and selected to achieve specified outcomes with selected metals. 3.2. Effects of welding processes on materials are identified. 3.3. Distortion prevention measures are identified. 3.4. Alternative joining methods for job are identified and assessed for relevancy.
4. Identify cleaning and preparation requirements	4.1. Processes for cleaning and preparing metals are identified. 4.2. Role of contaminants in welding flaws is explained. 4.3. Safety requirements for chemicals and other

ELEMENT	PERFORMANCE CRITERIA
	materials are identified and utilised in accordance with manufacturers' specifications and legislative requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying task-related information

Required knowledge

Look for evidence that confirms knowledge of:

- hazards and control measures associated with welding practices, including housekeeping
- safe work practices and procedures
- properties and characteristics of commonly used metals and materials
- basic metallurgy principles
- information resources
- chemical content of fumes emitted by welding processes
- uses and purposes of various metals
- distortion prevention measures for various metals

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine requirements of job	1.1. Job requirements are determined from engineering drawings, job sheet, or verbal instructions from metallurgist or supervisor.
2. Select heat treatment equipment	2.1. Appropriate equipment is selected for the required heat treatment.
3. Set up equipment	3.1. Equipment is set up according to standard operating procedures and manufacturers' instructions.
4. Work safely with hot metals	4.1. Safety clothing and personal protective equipment is used correctly according to standard operating procedures. 4.2. Emergency procedures are demonstrated according to approved safety instructions. 4.3. Safety signs and symbols are identified and understood. 4.4. Equipment is used according to specifications and

ELEMENT	PERFORMANCE CRITERIA
	standard operating procedures.
5. Heat treat material	5.1. Material is treated to achieve required result and may include preparation processes. 5.2. Material is piece or batch loaded and unloaded using equipment appropriate to the situation, according to standard operating procedures. 5.3. Correct temperature is maintained according to standard operating procedures.
6. Identify hazardous conditions	6.1. Hazards are identified and hazard control measures are implemented to maintain a safe work environment.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- setting up and operating heat treatment equipment
- applying heat treatment
- safely loading furnace(s)

Required knowledge

Look for evidence that confirms knowledge of:

- work specifications
- material characteristics
- heat treatment applications, equipment and processes
- emergency procedures
- material preparation, quenching, preheating requirements
- material condition during heat treating process
- batch and/or piece loading of furnaces
- safe loading of furnaces
- hazards and control measures associated with heat treatment, including housekeeping
- use and application of personal protective equipment

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to work safely with hot metals to carry out heat treatment of materials.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.

Context of and specific resources for assessment

This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with performing heat treatment or other units requiring the exercise of the skills and knowledge covered by this unit.

Method of assessment

Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond

EVIDENCE GUIDE	
	those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Equipment	Gas, electric, oil fired furnaces, vacuum furnace, induction heating, kilns, heated baths, salt baths, specialised tongs/tools and lifting equipment
Material	Plain carbon steels, alloy steels, non-ferrous
Preparation processes	Coatings and packings; preheating; soaking; quenching; tempering; annealing; normalising; carburizing; sintering

---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Undertake programmed safety and maintenance checks	1.1. Checks are undertaken safely and to prescribed procedure. 1.2. Status/report is recorded on proforma or reported orally.
2. Undertake programmed maintenance	2.1. Removal/replacement of consumable components is undertaken to prescribed procedure and instructions are followed. 2.2. Fluids and lubricants are replaced and/or topped up to prescribed schedule.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- undertaking programmed safety and maintenance checks
- undertaking programmed operational maintenance
- entering routine and familiar information onto proformas and standard workplace forms
- following routine information on written procedures
- following oral instructions
- orally reporting routine information

Required knowledge

Look for evidence that confirms knowledge of:

- programmed maintenance and safety check procedures for the specified machine/equipment
- recording/reporting requirements
- safe work practices and procedures
- hazards and control measures associated with operational maintenance of machines/equipment

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to perform operational maintenance of machines/equipment. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Observe safety precautions	1.1. Correct safety procedures are observed and protective clothing and safety glasses worn.
2. Determine job requirements	2.1. Drawings are interpreted, sequence of operations determined and tools selected to produce component to specification. 2.2. Cutting parameters are determined.
3. Perform precision shaping operations	3.1. Precision shaping operations are carried out including precision flat surfaces, shoulders, slots, keyways, angles and dovetails.

ELEMENT	PERFORMANCE CRITERIA
4. Perform precision planing operations	4.1.Precision planing operations are carried out including horizontal and vertical surfaces and angles.
5. Perform precision slotting operations	5.1.Precision slotting operations are carried out including feathered and tapered keyways, slotting internal cavities, dovetails, slotting circular surfaces and internal splines.
6. Check component for conformance to specification	6.1.Component is checked for conformance to specification using appropriate techniques, tools and equipment.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- preparing an operational work plan
- performing precision shaping operations:
 - flat surfaces
 - shoulders
 - slots
 - keyways
 - angles
 - dovetails
- performing precision planing operations on:
 - horizontal and vertical surfaces
- performing precision slotting operations:
 - feathered keyways
 - tapered keyways
 - slotting internal cavities
 - dovetails
 - slotting circular surfaces
 - slotting internal splines
- checking for conformance to specifications

REQUIRED SKILLS AND KNOWLEDGE

- using precision measurement equipment
- planning and sequencing operations
- reading and interpreting information on written job instructions, specifications, charts, lists, drawings and other applicable reference documents
- checking and clarifying task related information
- measuring components to specified tolerances
- performing calculations for determining cutting parameters and checking tolerances
- undertaking numerical operations within the scope of this unit

Required knowledge

Look for evidence that confirms knowledge of:

- reasons for selecting the chosen sequence of operations
- procedures for setting up the work piece
- tool type and geometry to achieve the required specifications on different materials
- techniques and procedures for machining the following:
 - flat surfaces
 - shoulders
 - slots
 - keyways
 - angles
 - dovetails
- planing techniques and procedures for machining:
 - horizontal and vertical surfaces
- slotting techniques and procedures for machining:
 - feathered keyways
 - tapered keyways
 - slotting internal cavities
 - dovetails
 - slotting circular surfaces
 - slotting internal splines
- appropriate techniques, tools and equipment to measure machined components
- hazards, control measures and housekeeping associated with precision shaping/planing/slotting operations
- use and application of personal protective equipment
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to perform precision shaping/planing/slotting operations. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with performing precision shaping/planing/slotting operations or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p>Method of assessment</p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning should not require language, literacy and numeracy skills beyond those required in this unit. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Tools

Cutting tools, tool holders

Cutting parameters

Feeds, speeds, depth of cut, length of cut etc.

Precision operations

The use of dedicated precision measuring instruments

Unit Descriptor

Unit descriptor	This unit of competency covers determining the job requirements and sequence of operations, selecting and mounting tools, performing the machining, measuring the components, and adjusting and maintaining a range of standard machine tools.
------------------------	--

Application of the Unit

Application of the unit	<p>The unit of competency applies to the use of machinery to shape metal including lathes, mills, planers, shapers, radial arm drills, slotters and surface grinders.</p> <p>This unit has been developed to support Engineering Tradesperson - Mechanical apprenticeship training and the recognition of trade level skills in machining operations. Skills covered by this unit are generally applied in occupational and work situations associated with fitting and machining. It may also apply to other trade occupations requiring general machining skills. It may also apply in some circumstances to senior operators who have responsibility for machine set up, selection of materials and lubricants, establishment of datum points and basic marking out, and setting of speeds, feeds and other machining parameters.</p> <p>This unit has application in the MEM30205 Certificate III in Engineering - Mechanical qualification and other qualifications requiring a basic trade level of machining skills. It may also apply to MEM20205 Certificate II in Engineering - Production Technology and MEM30105 Certificate III in Engineering - Production Systems and other qualifications requiring machining skills.</p> <p>Machining is undertaken on one or more of a range of standard machine tools. Machines are not computer numerical controlled (CNC) machines.</p>
--------------------------------	--

	<p>Where machining is undertaken without undertaking any set up including mounting of tools, setting of speeds, feeds and other operational parameters then either MEM07024B Operate and monitor machine/process or MEM07025B Perform advanced machine/process operation should be selected.</p> <p>Drilling operations in this unit exclude those covered by MEM18002B Use power tools/hand held operations.</p> <p>Where substantial marking out is required, MEM12006C Mark off/out (general engineering) should be considered.</p> <p>Where precision measurement is required, MEM12003B Perform precision mechanical measurement should also be considered.</p> <p>For set-up and operation of electro-discharge (EDM) machines, refer to MEM07014B Perform electro-discharge (EDM) machining operations.</p> <p>Band: A</p> <p>Unit Weight: 8</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine job requirements	1.1. Drawings, instructions and specifications are interpreted and understood
2. Determine sequence of operations	2.1. Sequence of operations including job set-up is determined for maximum efficiency and to meet job specifications 2.2. Appropriate material is selected and datum established as required
3. Select and mount tools	3.1. Appropriate tools for job are selected, sharpened and shaped as required 3.2. Tools are mounted and positioned correctly
4. Perform machining operations	4.1. Basic marking out techniques are used where required 4.2. Machining parameters are set for job requirements and maximum tool life 4.3. Work is held or correctly clamped without damage to product, and all safety requirements are met 4.4. Machining is performed in a safe manner utilising all guards, safety procedures and personal protective clothing and equipment
5. Measure components	5.1. Components are checked with instruments or gauges appropriate to the measurement requirements to ensure compliance with specifications
6. Adjust and maintain machine	6.1. Routine maintenance and adjustments are carried out as required which may include slide and collar adjustment, cleaning and lubrication

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- reading and interpreting routine information on written job instructions, specifications and standard operating procedures which may include drawings
- following oral instruction
- planning and sequencing operations
- preparing operational work plan
- sharpening and shaping cutting tools
- identifying worn or damaged cutting tools
- correct mounting and positioning of cutting tools
- basic marking out of materials
- setting machining parameters to achieve the job requirements and maximise tool life
- using appropriate and sufficient clamping/mounting of the work piece
- using coolant/lubricant correctly
- checking for conformance to specifications
- measuring to specified tolerances and dimensions

Required knowledge

Required knowledge includes:

- reasons for selecting the chosen sequence of operations
- methods of work holding
- basic marking out techniques including datum points/lines
- geometry of cutting tools for a range of materials and applications
- benefits of using correctly sharpened cutting tools
- machine operation
- selection of feeds and speeds to suit a range of materials and operations within the scope of this unit
- correct methods of mounting a variety of cutting tools
- safety issues with regard to correct clamping, guards and shields
- tolerances and limits of size
- situations indicating the need for machine adjustment, lubrication and cleaning
- techniques, tools and equipment to measure materials and machined components

REQUIRED SKILLS AND KNOWLEDGE

- use and application of personal protective equipment
- safe work practices and procedures
- hazards and control measures associated with general machining

Evidence Guide**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to perform general machining including responsibility for selecting and mounting tooling and setting machining parameters. Competency in this unit cannot be claimed until all prerequisites have been satisfied

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently apply the skills covered in this unit of competency in new and different situations and contexts. Critical aspects of assessment and evidence include:

- correct job planning including identifying job requirements from drawings, instructions or specifications and sequence of operations
- identifying any required tooling, measuring equipment and accessories
- selecting and mounting required tooling
- selecting material and marking out if required
- setting machining parameters
- checking machined components for conformance to specifications.

Context of and specific resources for assessment

This unit has been developed to support training in and recognition of trade level competency in general machining as applied to a trade level fitting and machining, other trade or senior operator work environment. Assessment should emphasise a workplace context and procedures found in the candidate's

EVIDENCE GUIDE	
	<p>workplace.</p> <p>The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p>
Method of assessment	<p>Typically Engineering Tradespersons - Mechanical and other persons engaged in general machining work are required to apply their machining skills and techniques across a range of jobs and specifications.</p> <p>A single assessment event is not appropriate. On the job assessment should be included as part of the assessment process wherever possible. Where assessment occurs off the job, judgement must consider evidence of the candidate's performance in a productive work environment that includes a sufficient range of appropriate tasks and materials to cover the scope of application for this unit.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>
Guidance information for assessment	<p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with performing general machining or other units requiring the exercise of the skills and knowledge covered by this unit.</p> <p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Operations	<p>Operations may include:</p> <ul style="list-style-type: none"> • parallel cutting • slotting • planing • drilling • knurling • cutting flats • non-precision surface grinding operations
Materials	Materials may include ferrous and non-ferrous
Tools	<p>Tools may include:</p> <ul style="list-style-type: none"> • cutting tools and accessories • measuring devices
Marking out techniques	Marking out techniques may include basic marking out techniques using calipers, steel rules, dividers and scribes
Machining parameters	<p>Machining parameters may include:</p> <ul style="list-style-type: none"> • speeds • feeds • stops • coolant and cutting lubricants
Machines	<p>Machines may include:</p> <ul style="list-style-type: none"> • lathes • mills • planers • shapers • radial arm drills • slotters

RANGE STATEMENT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Observe safety precautions	1.1. Correct safety procedures are observed and protective clothing and safety glasses worn
2. Determine job requirements	2.1. Drawings are interpreted, sequence of operation is determined and tooling is selected to produce component to specification
3. Mount job	3.1. Job is set up using instruments such as dial test indicators, and digital read-out equipment
4. Perform turning operations	4.1. Speeds and feeds are calculated using appropriate mathematical techniques and reference material 4.2. The full range of accessories on a centre lathe are used including three and four jaw chucks, centres, face plate, steadies, cross slide and tailstock 4.3. Turning operations are performed to specification
5. Check components for conformance with specifications	5.1. Components are checked for conformance to specification using appropriate techniques, tools and equipment

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Required skills include: <ul style="list-style-type: none"> interpreting technical drawings/specifications in relation to turning setting up jobs using appropriate equipment calculating and setting cutting feeds and speeds appropriate to the job checking that job is concentric and running true safely operating lathes performing turning operations
Required knowledge
Required knowledge includes: <ul style="list-style-type: none"> sequence of operations to achieve the job requirements

REQUIRED SKILLS AND KNOWLEDGE

- tool type and geometry to achieve the required specifications and for work pieces of different materials
- numerical operations, geometry and calculations/formulae within the scope of this unit
- the consequences of varying speeds and feeds from the optimum rates calculated
- characteristics of different materials and their effects on cutting speeds and feeds
- application of lathe accessories
- techniques, tools and equipment to measure materials and machined components
- use and application of personal protective equipment
- safe work practices and procedures
- hazards and control measures associated with lathe operations

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to perform a variety of lathe operations to specifications. Competency in this unit cannot be claimed until all prerequisites have been satisfied

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently apply the skills covered in this unit of competency in new and different situations and contexts. Critical aspects of assessment and evidence include:

- determining requirements for turning job including quantity, material, measurements and tolerances
- correct job planning including identifying required measuring equipment, tooling, accessories and sequence of operations
- correct preparation of high speed steel tooling
- correct fixing of job and tooling
- calculating and setting of required speeds and feeds
- correct monitoring of turning operation
- turning undertaken to trade standard in terms of time

EVIDENCE GUIDE	
	<p>and responsibility for own work</p> <ul style="list-style-type: none"> • undertaking correct remedial procedures for out of specification results as per enterprise procedures e.g. procedures for scrapping or reworking of components not turned to specification.

REQUIRED SKILLS AND KNOWLEDGE

- planning and sequencing operations
- using precision measurement equipment within the scope of this unit
- setting up work using tools, techniques and equipment
- using coolant and dust extraction devices
- selecting and preparing grinding wheels and accessories appropriate to the grinding task
- performing and monitoring internal/external cylindrical grinding process
- clamping/mounting work pieces
- checking for conformance to specifications
- performing numerical operations and calculations within the scope of this unit

Required knowledge

Required knowledge includes:

- reasons for selecting the chosen sequence of operations
- the application of a range of holding devices/accessories
- reasons for selecting specific work holding devices, tools, techniques and equipment
- coolant selection/function
- standard grinding wheel shapes
- the range of abrasive materials used in grinding wheels
- factors impacting grinding wheel selection including grain size of abrasive particles, grade or strength of bond and bond material
- grinding wheel dressing tools and their application
- internal/external cylindrical grinding process
- principles of effective clamping
- grinding operations/procedures
- the function of any grinding accessories
- tools, techniques and equipment for checking components for conformance to specifications
- hazards and control measures associated with grinding operations, including housekeeping
- use and application of personal protective equipment
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	<p>A person who demonstrates competency in this unit must be able to perform a variety of grinding operations to specifications. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently apply the skills covered in this unit of competency in new and different situations and contexts. Critical aspects of assessment and evidence include:</p> <ul style="list-style-type: none"> • determining requirements for grinding job including quantity, material, measurements and tolerances • correct job planning including identifying required measuring instruments and equipment, safety equipment, holding devices, grinding wheels, accessories and sequence of operations • identifying guard, coolant and dust extraction requirements and checking equipment and coolant before grinding operation • correct fixing of job • correct monitoring of grinding operation • undertaking grinding to trade standard in terms of time and responsibility for own work • undertaking correct remedial procedures for out of specification results as per enterprise procedures e.g. procedures for scrapping or reworking of components not ground to specification.
Context of and specific resources for assessment	<p>This unit has been developed to support training in and recognition of trade level competency in grinding operations as applied to a trade level fitting and machining work environment. Assessment should emphasise a workplace context and procedures found in the candidate's workplace.</p> <p>The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p>
Method of assessment	<p>Typically, persons engaged in Engineering Tradesperson - Mechanical work are required to apply their grinding</p>

EVIDENCE GUIDE	
	<p>operations skills and techniques across a range of jobs and specifications.</p> <p>A single assessment event is not appropriate. On the job assessment should be included as part of the assessment process wherever possible. Where assessment occurs off the job, judgement must consider evidence of the candidate's performance in a productive work environment that includes a sufficient range of appropriate tasks and materials to cover the scope of application for this unit.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>
Guidance information for assessment	<p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with grinding operations or other units requiring the exercise of the skills and knowledge covered by this unit.</p> <p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>

Range Statement

RANGE STATEMENT
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating</p>

RANGE STATEMENT	
conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Specifications	Specifications may include: <ul style="list-style-type: none"> • dimensions and tolerances • geometry and tolerances • surface finish
Holding devices	Holding devices may include: <ul style="list-style-type: none"> • vices • clamps • magnetic chucks • face plates • collets • 3/4 jaw chuck
Wheels	Wheels may include: <ul style="list-style-type: none"> • shape • grit/bond composition
Balanced	Balanced may include static and dynamic balancing
Grinding machines	Grinding machines may include surface, cylindrical and centreless machines

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Observe safety precautions	1.1. Correct safety procedures are observed and protective clothing and safety glasses are worn.
2. Determine job requirements	2.1. Drawings are interpreted and sequence of operations is determined.
3. Select appropriate tools and accessories	3.1. Tools and accessories are selected in accordance with standard operating procedures to meet job specifications.
4. Mount job	4.1. Job is set up using instruments such as dial test indicators and digital read out equipment.
5. Perform jig boring	5.1. Holes are bored relative to coordinate position and to specification. 5.2. Rotary or tilting rotary table is used as required.

ELEMENT	PERFORMANCE CRITERIA
6. Check components for conformance to specification	6.1.Components are checked for conformance to specification using appropriate techniques, tools and equipment.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on written job instructions, specifications, procedures, charts, lists, drawings and other applicable reference documents
- preparing operational work plan
- planning and sequencing operations
- selecting tools and accessories
- checking for conformance to specifications
- using precision measurement equipment
- checking and clarifying task related information
- performing numerical operations and calculations within the scope of this unit

Required knowledge

Look for evidence that confirms knowledge of:

- reasons for selecting the chosen sequence of operations
- the application of rotary and tilting rotary tables to jig boring operations
- checks for conformance to specifications
- appropriate techniques, tools and equipment to measure machined components
- hazards and control measures associated with jig boring operations, including housekeeping
- use and application of personal protective equipment
- safe work practices and procedures

tool and cutter grinding wheels and accessories	on knowledge of grinding wheel structure, and are balanced and dressed. Accessories are selected to facilitate production to specification.
4. Perform tool and cutter grinding	<p>4.1. Universal tool and cutter grinding machines are operated to sharpen and shape the full range of tools and cutters including side and face cutters, end mill, form relieved milling cutters, flat, vee and circular form tools and hobs, slitting saws, and drills.</p> <p>4.2. Parallel internal and/or external grinding is carried out.</p> <p>4.3. Internal and/or external taper grinding is carried out to drawing specifications.</p>
5. Check components for conformance to specification	5.1. Components are checked for conformance to specification using appropriate techniques, tools and equipment.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on written job instructions, specifications, charts, lists, drawings and other applicable reference documents
- checking and clarifying task related information
- preparing operational work plan
- planning and sequencing operations
- performing numerical operations and calculations within the scope of this unit
- performing safety checks of equipment
- selecting tool and cutter grinding accessories
- balancing/dressing grinding wheels
- sharpening/shaping tools and cutters
- checking components for conformance with specifications
- using precision measurement equipment within the scope of this unit

Required knowledge

REQUIRED SKILLS AND KNOWLEDGE

Look for evidence that confirms knowledge of:

- reasons for selecting the chosen sequence of operations
- function of coolant and dust extraction devices
- criteria for grinding wheel selection:
 - grain size of abrasive particles
 - grade or strength of bond
 - bond material
- grinding wheel dressing procedures and wheel dressing tools
- source(s) of data on tool geometry for the full range of tools and cutters, including the terminology used to describe the tool geometry
- procedures to be followed when parallel grinding on a tool and cutter grinder
- procedures to be followed when grinding tapers on a tool and cutter grinder
- tools, techniques and equipment used to check ground components for conformance with the following specifications:
 - dimensions and tolerances
 - geometry and tolerances
 - surface finish
- hazards and control measures associated with tool and cutter grinding, including housekeeping
- use and application of personal protective equipment
- safe work practices and procedures

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Select milling cutters	1.1. Correct milling cutter/s are selected for required operation. 1.2. Correct cutter inserts are selected as required using International Standard Organisation standards and mounted in cutter blank. 1.3. Cutter is mounted to machine spindle and checked for concentricity.
2. Set up work	2.1. Cutting parameters and steps required to mill given component/s are identified.

ELEMENT	PERFORMANCE CRITERIA
	2.2. Machine is set up with appropriate accessories as required for milling operation. 2.3. Work is set up to required level of accuracy.
3. Perform complex milling	3.1. Components are milled and associated calculations are performed as necessary to achieve specification. 3.2. Components are verified using appropriate precision measuring equipment and reworked as necessary to meet specification.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying work related information
- setting up work to the required level of accuracy
- determining cutting parameters
- selecting the correct milling cutter inserts for the cutting parameters in accordance with ISO standards
- calculating cutting parameters such as speeds, feeds and ratios
- setting up gear trains according to calculations and standard operating procedures
- safely operating milling machine
- performing complex milling operations using dividing heads and omniversal tables

Required knowledge

Look for evidence that confirms knowledge of:

- precision measuring equipment and their applications
- procedures for accurately setting up work
- ISO standards applicable to milling cutter inserts
- procedures for milling components such as racks and gears
- calculations, geometry and formulae relating complex milling activities

REQUIRED SKILLS AND KNOWLEDGE

- accessories used for complex milling
- the applications and use of omniversal tables and differential dividing heads to complex milling operations
- hazards and control measures associated with complex milling operations, including housekeeping
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to perform complex milling operations. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.

Context of and specific resources for assessment

This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with performing complex milling operations or other units requiring the exercise of the skills and knowledge covered by this unit.

EVIDENCE GUIDE	
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- preparing an operational work plan
- dressing grinding wheel to form and size
- performing specialised grinding operations
- reading, interpreting and following information on written job instructions, specifications, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying information
- entering routine and familiar information onto proformas and standard workplace forms
- checking for conformance to specifications
- using precision measurement equipment within the scope of this unit
- measuring components to specified tolerances
- performing numerical operations, geometry and calculations/formulae for specialised complex grinding operations

Required knowledge

Look for evidence that confirms knowledge of:

- reasons for selecting the chosen sequence of operations
- function and application of work holding devices/accessories appropriate to complex grinding
- appropriate techniques, tools and equipment to measure machined components
- hazards and control measures associated with complex grinding, including housekeeping
- use and application of personal protective equipment
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

EVIDENCE GUIDE	
Overview of assessment	A person who demonstrates competency in this unit must be able to perform machining operations using horizontal and/or vertical boring machines. Competency in this unit cannot be claimed until all prerequisites have been satisfied.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the performance of machining operations using horizontal and/or vertical boring machines or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Horizontal boring machines	Table type, floor type
Vertical boring machines	Double column, single column

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Obtain job instructions	1.1. Job sheets or equivalent instructions are understood and correctly followed.
2. Mount work holding fixtures/devices/tools	2.1. Machine is prepared to accept work holding fixtures/devices/tools. 2.2. Preset tooling is mounted as required into machine/equipment. 2.3. Work holding fixtures/devices are set on machine as required using standard operating procedures. 2.4. Tool offset or datum settings are identified/verified against job sheet using standard operating procedures. 2.5. Program is loaded, selected and verified in accordance with job instructions.
3. Conduct pre-start checks	3.1. Pre-start checks are undertaken to standard operating procedures. 3.2. Correct safety procedures are observed and all safety equipment is checked for correct operation.
4. Set machine	4.1. Machine is set/adjusted to meet operational requirements and specifications. 4.2. Production samples are checked for compliance with specifications using standard operating procedures.
5. Instruct machine operator	5.1. Operator is instructed, if necessary, ensuring that all safety procedures and devices are in place.
6. Replace worn/damaged tooling	6.1. Where appropriate, preset tools are replaced, tool offsets are adjusted or other corrective action is taken using standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

REQUIRED SKILLS AND KNOWLEDGE

- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying task related information
- mounting work holding fixtures/devices/tooling
- mounting preset tooling
- verifying tool offsets and/or datum settings against job sheets or instructions
- loading and verifying programs
- conducting pre-start checks
- following safety procedures
- checking safety features and safety equipment for correct operation
- performing numerical operations and calculations/formulae within the scope of this unit
- setting and adjusting machines
- measuring and verifying first-off samples
- instructing machine operators on the sequence of operations
- identifying worn or damaged tooling and taking appropriate corrective action

Required knowledge

Look for evidence that confirms knowledge of:

- work holding fixtures/devices/tools and preset tooling for different machines/processes
- procedures for mounting work holding fixtures/devices/tools
- location of work holding fixtures/devices/tools relative to the machine datum or zero
- reasons for establishing tool offsets
- the purpose of datum settings
- the source(s) of information on tool offsets and datum settings
- procedures to locate and load programs
- procedures for verifying loaded programs
- pre-start checks
- safety features of the machine/process
- the purpose and function of safety features and/or safety equipment
- machine/process setting procedures
- machine operating procedures
- adjustments that can be made to the machine/process
- the effect of adjustments on machine and operational specifications
- product or part specifications in relation to the machining process
- measuring devices for checking parts or products
- examples of worn or damaged tooling

REQUIRED SKILLS AND KNOWLEDGE

- the effects of worn or damaged tooling
- the corrective action for worn or damaged tooling
- hazards and control measures associated with numerical and computer controlled machines, including housekeeping
- safe work practices and procedures

Evidence Guide**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to set computer controlled machines/processes. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.

Context of and specific resources for assessment

This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with setting computer controlled machines/processes or other units requiring the exercise of the skills and knowledge covered by this unit.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying task related information
- attaching ancillary devices
- mounting work holding devices
- measuring tool offsets
- entering and verifying tool offsets
- producing and checking first-off samples
- editing programs
- instructing machine operator on the sequence of operations
- following safety procedures
- identifying worn or damaged tooling and taking appropriate corrective action

Required knowledge

Look for evidence that confirms knowledge of:

- ancillary equipment and its applications
- procedures for attaching the ancillary device(s) to the NC/CNC machine
- work holding devices, their application and procedures for mounting them
- location of work holding fixtures/devices/tools relative to the machine zero or datum
- reasons for establishing tool offsets
- procedures and devices for measuring tool offsets
- procedures for entering and verifying tool offset
- procedures for adjusting tool offsets
- operating procedures

REQUIRED SKILLS AND KNOWLEDGE

- safety features and equipment
- measuring devices/ techniques for checking the parts or product
- effects of changes to cutting feeds and speeds
- the impact of changes to the sequence of operations on the part or product to be produced
- procedures for editing programs via the machine controller
- the sequence of operations of the machine/process
- examples of worn or damaged tooling
- the effects of worn or damaged tooling
- the corrective action to be taken for worn or damaged tooling
- hazards and control measures associated with computer controlled machines, including housekeeping
- safe work practices and procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying task related information
- calculating coordinates of all relevant points on the part or product to be produced
- writing NC/CNC program in standard code format
- producing NC/CNC operation sheet(s)
- operating NC/CNC machine safely in manual mode
- editing NC/CNC program
- checking parts or products for conformance to specifications

Required knowledge

Look for evidence that confirms knowledge of:

- the elements of a basic NC/CNC program
- the function of elements in controlling the operation of an NC/ CNC machine
- machining operations
- type(s) of NC/CNC machine and their applications
- machining operations controlled by program
- the tool path(s) to be followed when producing a part or product
- the sequence of machining operations
- the reasons for selecting tool path(s) and sequence of operations
- the zero point of the NC/CNC machine
- standard codes used in the writing of NC/CNC programs
- applications of standard codes in NC/CNC programming

REQUIRED SKILLS AND KNOWLEDGE

- procedures for writing NC/CNC programs in standard code format
- procedures for completing NC/CNC operation sheets
- the information to be included in NC/CNC operation sheets
- procedures for manual operation of the NC/CNC machine
- reasons for testing and proving the NC/CNC program
- procedures for editing the NC/CNC program via the machine controller
- the effects of editing on the operation of the NC/CNC machine and the part or product to be produced
- the measuring equipment/techniques used to check for conformance to specification
- hazards and control measures associated with numerical and computer controlled machines, including housekeeping
- safe work practices and procedures

ELEMENT	PERFORMANCE CRITERIA
1. Identify basic NC/CNC machine program elements	1.1.Appropriate program elements are selected for machine controller.
2. Write basic NC/CNC machine program	2.1.Engineering drawings are understood and interpreted to define machine function and tool path geometry. 2.2.Coordinates calculated as required for tool path or machine functions. 2.3.Advanced operations using canned cycles and sub-routines are selected and applied appropriately. 2.4.Program is written in standard code format in accordance with standard operating procedures.
3. Write NC/CNC operation sheet	3.1.Operation sheets are produced to specification in accordance with standard operating procedures which includes appropriate Australian standard where required.
4. Trial program	4.1.Machine is operated in manual mode to test and prove program. 4.2.Program is edited if necessary to adjust operation. 4.3.Components are checked to conform to specification.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- interpreting engineering drawings, specifications and instructions
- calculating coordinates of all relevant points on the part or product to be produced
- writing NC/CNC program in standard code format and incorporating, where appropriate, canned cycles and sub-routines
- producing NC/CNC operation sheet(s)
- operating NC/CNC machine in manual mode
- editing NC/CNC program
- checking parts or products produced for conformance with specifications

Required knowledge

Look for evidence that confirms knowledge of:

- elements of an NC/CNC program
- the function of elements in controlling the operation of an NC/ CNC machine
- machining operations to be performed in the manufacture of the given part or product
- the appropriate type(s) of NC/CNC machine to perform the required machining operations
- the machining operations to be controlled by the program to be written
- the tool path(s) to be followed when producing the part or product
- the sequence of machining operations to be programmed
- reasons for selecting the chosen tool path(s) and sequence of operations
- the zero point of the NC/CNC machine
- the canned cycles and sub-routines accessible in the particular NC/CNC machine
- the application of each canned cycle and sub-routine available
- the canned cycles and/or sub-routines to be used in the NC/CNC program
- reasons for selecting the chosen canned cycles and/or sub-routines
- standard codes used in the writing of NC/CNC programs
- applications of standard codes in NC/CNC programming
- procedures for writing NC/CNC programs in standard code format
- procedures for completing NC/CNC operation sheets
- the information to be included in NC/CNC operation sheets
- relevant Australian standards
- procedures for manual operation of the NC/CNC machine
- the reasons for testing and proving the NC/CNC program
- the procedures for editing the NC/CNC program via the machine controller

REQUIRED SKILLS AND KNOWLEDGE

- the effects of editing on the operation of the NC/CNC machine and the part or product to be produced
- the specifications of the part or product
- the measuring equipment/techniques to be used to check for conformance with specifications

Evidence Guide**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to program a NC/CNC machining centre. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.

Context of and specific resources for assessment

This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with programming a NC/CNC machining centre or other units requiring the exercise of the skills and knowledge covered by this unit.

EVIDENCE GUIDE	
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

MEM07020C Program multiple spindle and/or multiple axis NC/CNC machining centre

Modification History

Single band identifier removed to clarify dual status

Unit Descriptor

Unit descriptor	This unit covers identifying NC/CNC machine program elements, writing and trialling a machine program for multiple spindle and/or multiple axis NC/CNC machining centres, and preparing an operation sheet.
------------------------	---

Application of the Unit

Application of the unit	<p>This unit extends to writing programs to describe machine operations including tool paths using appropriate software for machines which include multiple spindles and/or multiple axis/B axis angular, multiple tool turrets, tool changers and may include component loaders of a pallet type etc.</p> <p>The program may use common M and G codes and include the programming of advanced operations, using canned cycles and sub-routines. Programs are trialled and edited as necessary to adjust operation of centre. Technical difficulties are resolved in consultation with appropriate technical advisers. Work would be undertaken autonomously using predetermined standards of quality.</p> <p>Where machining skills in excess of MEM07005C (Perform general machining) are required, then appropriate units should also be selected.</p> <p>Band:</p> <p>This unit has dual status and is to be regarded as both a specialisation band A unit and Specialisation band B unit for progression to C7 (AQF level IV).</p> <p>Unit Weight: 2</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify NC/CNC machine program elements	1.1.Appropriate program elements are selected for machine controller.
2. Write NC/CNC machine program	2.1.Engineering drawings are understood and interpreted to define machine function and tool path geometry. 2.2.Coordinates are calculated as required for tool path or machine functions. 2.3.Advanced operations using canned cycles and sub-routines are selected and applied appropriately. 2.4.Program is written in standard code format in accordance with standard operating procedures.

ELEMENT	PERFORMANCE CRITERIA
3. Write NC/CNC operation sheet	3.1.Operation sheets are produced to specification in accordance with standard operating procedures which includes appropriate Australian standard where required.
4. Trial program	4.1.Machine is operated in manual mode to test and prove program. 4.2.Program is edited if necessary to adjust operation. 4.3.Components are checked to conform to specification.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying task related information
- calculating coordinates of all relevant points on the part or product to be produced
- writing NC/CNC program in standard code format and incorporating, where appropriate, canned cycles and sub-routines
- producing NC/CNC operation sheet(s)
- operating NC/CNC machine in manual mode
- editing NC/CNC program
- checking parts or products produced for conformance with specifications

Required knowledge

Look for evidence that confirms knowledge of:

- elements of an NC/CNC program
- the function of elements in controlling the operation of an NC/ CNC machine
- machining operations to be performed in the manufacture of the given part or product
- the appropriate type(s) of NC/CNC machine to perform the required machining operations

REQUIRED SKILLS AND KNOWLEDGE

- the machining operations to be controlled by the program to be written
- the tool path(s) to be followed when producing the part or product
- the sequence of machining operations to be programmed
- reasons for selecting the chosen tool path(s) and sequence of operations
- the zero point of the NC/CNC machine
- the canned cycles and sub-routines accessible in the particular NC/CNC machine
- the application of each canned cycle and sub-routine available
- the canned cycles and/or sub-routines to be used in the NC/CNC program
- reasons for selecting the chosen canned cycles and/or sub-routines
- standard codes used in the writing of NC/CNC programs
- applications of standard codes in NC/CNC programming
- procedures for writing NC/CNC programs in standard code format
- procedures for completing NC/CNC operation sheets
- the information to be included in NC/CNC operation sheets
- relevant Australian standards
- procedures for manual operation of the NC/CNC machine
- the reasons for testing and proving the NC/CNC program
- the procedures for editing the NC/CNC program via the machine controller
- the effects of editing on the operation of the NC/CNC machine and the part or product to be produced
- the specifications of the part or product
- the measuring equipment/techniques to be used to check for conformance with specifications
- hazards and control measures associated with numerical and computer controlled machines, including housekeeping
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to program multiple spindle and/or multiple axis NC/CNC machining centres. Competency in this unit cannot be claimed until all prerequisites have been

EVIDENCE GUIDE	
	satisfied.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine sequence of operations	1.1. Sequence of operations including job set-up is determined for maximum efficiency and to meet job specifications.
2. Set up work on lathe	2.1. Work is set up on the lathe to required level of accuracy using precision instruments such as dial test

ELEMENT	PERFORMANCE CRITERIA
	<p>indicators etc.</p> <p>2.2. Work piece is balanced as required when using face plates to ensure accuracy in machining.</p> <p>2.3. Work piece is set up to ensure that work piece is free of distortion following completion of machining.</p>
3. Select and prepare tooling	<p>3.1. Tooling, accessories and consumables are selected appropriate to task, specifications and material.</p> <p>3.2. Where necessary, cutting tool modifications required to perform complex turning operations are determined.</p> <p>3.3. Tooling and accessories are prepared and modified as required.</p> <p>3.4. International Standard Organisation standards for cutting tools or other appropriate standards to suit cutting parameters are applied as necessary.</p>
4. Perform complex turning	<p>4.1. Speeds and feeds are correctly calculated using appropriate mathematical techniques and reference material.</p> <p>4.2. Complex turning is undertaken to specifications and workplace procedures.</p> <p>4.3. Work piece is measured and verified to be in accordance with specification using precision measuring equipment.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- setting up work to the required level of accuracy using appropriate precision measuring equipment
- setting and supporting work to avoid distortion on release of clamping devices
- selecting correct cutting tools or inserts as appropriate to turning operation
- selecting and using appropriate feeds and speeds
- performing complex turning operations - counter balancing work on face plates:

REQUIRED SKILLS AND KNOWLEDGE

- mandrel work
- trepanning
- heavy (multi-tonne) shafts
- calculating cutting parameters, speeds and feeds
- reading, interpreting and following information on written job instructions, specifications, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying task related information
- entering routine and familiar information onto proformas and standard workplace forms
- checking for conformance to specifications
- using precision measurement equipment
- measuring components to specified tolerances
- performing numerical operations, geometry and calculations/formulae within the scope of this unit
- following oral instructions
- orally reporting information

Required knowledge

Look for evidence that confirms knowledge of:

- precision measuring equipment and measuring techniques within the scope of this unit
- reasons for selecting different measuring equipment
- procedures for accurately setting up work for a variety of techniques
- ISO or other standards applicable to cutting tool inserts
- cutting parameters for the given task
- feeds and speeds for complex turning operation(s)
- formulae and data relating to feeds and speeds
- techniques and procedures for carrying out the following turning operations:
 - single-start thread cutting
 - multi-start thread cutting
 - internal blind hole thread cutting
 - eccentrics
 - copy turning
 - taper turning
- techniques and procedures for carrying out the following turning operations:
 - counter balancing work on face plates
 - mandrel work
 - trepanning

REQUIRED SKILLS AND KNOWLEDGE

- heavy (multi-tonne) shafts
- hazards and control measures, including housekeeping
- use and application of personal protective equipment
- safe work practices and procedures

Evidence Guide**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to perform complex lathe operations. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- interpreting drawings, specifications and instructions
- calculating coordinates of all relevant points on the part or product to be produced
- storing programs
- producing NC/CNC operation sheet(s)
- downloading and verifying NC/CNC program
- setting machine parameters
- mounting work holding fixtures/ devices/tools
- testing and proving NC/CNC program
- checking parts or products produced for conformance with specifications

Required knowledge

Look for evidence that confirms knowledge of:

- the operations to be controlled by the program to be written
- the tool path(s) to be followed when producing the part or product
- the sequence of operations to be programmed
- the reasons for selecting the chosen tool path(s) and sequence of operations
- the zero point of the wire cut machine
- the canned cycles and sub-routines accessible in the particular NC/CNC machine
- the application of each canned cycle and sub-routine available
- where appropriate, the canned cycles and/or sub-routines to be used in the NC/CNC program
- the reasons for selecting the chosen canned cycles and/or sub-routines
- the standard codes used in the writing of NC/CNC programs
- the applications of standard codes in NC/CNC programming
- procedures for writing NC/CNC programs in standard code format
- procedures for storing NC/CNC programs
- procedures for completing NC/CNC operation sheets
- the information to be included in NC/CNC operation sheets
- procedures for downloading NC/CNC programs
- procedures for verifying downloaded NC/CNC programs
- the machining parameters that may be entered into the machine controller
- the effect of varying the machining parameters on the product or part produced
- work holding fixtures/devices/tools
- procedures for mounting work holding fixtures/devices tools
- the location of the required work holding fixtures/devices/tools relative to the

REQUIRED SKILLS AND KNOWLEDGE

- machine datum or zero
- purpose of datum setting
- pre-start checks
- safety features and equipment of the NC/CNC machine
- the purpose and function of the safety features and/or equipment
- the machine mode appropriate to the testing and proving of the NC/CNC program and the checking of the position of the work piece
- the procedures to be followed when using the machine in this mode
- the relative position of the work piece to the machine datum or zero
- the specifications of the part or product
- the measuring equipment/techniques to be used to check for conformance to specification

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Obtain job instructions	1.1. Job sheets or equivalent instructions are understood and correctly followed.
2. Conduct pre-start checks	2.1. Pre-start checks are undertaken to standard operating procedures. 2.2. Correct safety procedures are observed and all safety equipment is checked for correct operation.
3. Operate computer	3.1. Installed computer controlled program is selected

ELEMENT	PERFORMANCE CRITERIA
controlled machine/process	<p>and verified in accordance with job instructions.</p> <p>3.2.Computer controlled machine is operated safely to product specifications using standard operating procedures.</p> <p>3.3.Machine malfunctions are identified and reported.</p> <p>3.4.Production samples are checked for compliance to specification using standard operating procedures.</p>
4. Monitor machine/process	<p>4.1.Tool wear is monitored and, where appropriate, preset tools are replaced, tool offsets are identified in computer controlled program and adjusted, or other corrective action is taken using standard operating procedures.</p> <p>4.2.Product deviation from specification is reported in accordance with standard operating procedures.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying task related information
- making pre-start checks
- checking safety equipment and guards for correct operation
- following safety procedures
- selecting and verifying the correct computer controlled program
- operating the computer controlled machine
- identifying and reporting machine malfunctions
- checking parts/products for conformance to specification
- monitoring the machine or process for signs of tool wear
- taking corrective action
- reporting part or product deviations from specification

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

Look for evidence that confirms knowledge of:

- pre-start checks
- safety equipment and features associated with the machine/process
- safety procedures associated with the machine/process
- procedures for accessing computer controlled programs installed in the machine controller
- procedures for verifying the correct computer controlled program
- computer controlled machine operating procedures
- typical machine malfunctions
- procedures for reporting machine malfunctions
- measuring instruments/techniques
- examples of tool wear and the effect on product or part specifications
- procedures to be followed once tool wear has been detected
- replacing preset tools
- adjustments to tool offsets
- the effect of adjustments on part or product specifications
- procedures for reporting product or part deviations
- hazards and control measures associated with operating computer controlled machines/processes, including housekeeping
- safe workplace practices and procedures

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to operate computer controlled machine/processes. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required

EVIDENCE GUIDE	
	knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with operating computer controlled machine/processes or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Observe safety precautions	1.1. Correct safety procedures are observed and protective clothing and safety glasses are worn.
2. Determine job requirements	2.1. Drawings are interpreted and sequence of operation is determined. 2.2. Tools are selected to produce components to

ELEMENT	PERFORMANCE CRITERIA
	<p>specifications.</p> <p>2.3. Disc size is determined in accordance with appropriate procedures.</p>
3. Perform spinning operations	<p>3.1. Spinning speeds are calculated for various metals and metal thicknesses using appropriate mathematical techniques and reference materials.</p> <p>3.2. Correct back centre and form chucks are selected and mounted in accordance with procedures and specifications.</p> <p>3.3. Prepared disc is mounted for forming.</p> <p>3.4. A full range of spinning accessories is used including: back centre, various chucks, trimming accessories, blank centre equipment and tee-rest.</p> <p>3.5. Spinning operations are performed to specifications.</p>
4. Check components for conformance to specifications	4.1. Components are checked for conformance to specifications using appropriate techniques, tools and equipment.
5. Remove and store components	<p>5.1. Components are removed from the spinning lathe without marking or any deformation.</p> <p>5.2. Components are correctly stored and packaged to avoid oxidation and damage.</p>
6. Adjust and maintain spinning lathe	6.1. Routine maintenance and adjustments are carried out as required.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading and interpreting routine information on written job instructions, specifications and standard operating procedures. May include drawings
- following oral instruction
- entering routine and familiar information onto proformas and standard workplace forms
- using all basic metal spinning tools

REQUIRED SKILLS AND KNOWLEDGE

- minimising damage and defects
- calculating disc size and lathe speed
- undertaking manual handling related to spinning products
- using appropriate techniques, tools and equipment to measure materials and spinings

Required knowledge

Look for evidence that confirms knowledge of:

- sequence of spinning operation
- types of spinning tools, their functions and requirements for maintaining tools
- types of damage and defects e.g. tool marks, cracking, stress marks, thinning and incorrect finish
- spinning lathe operation
- why and how lathe speed is calculated
- reasons for types of form chuck mounting
- function and operation of accessories for basic spinning
- methods used for each process
- methods for stacking and protecting finished product
- use and application of personal protective equipment
- safe work practices and procedures
- hazards and control measures associated with metal spinning lathe operations (basic)

Evidence Guide**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

ELEMENT	PERFORMANCE CRITERIA
1. Identify job requirements.	<p>1.1. Job requirements are interpreted from work instructions and standard operating procedures.</p> <p>1.2. Appropriate machine is selected to meet requirements.</p>
2. Set up machine	<p>2.1. Tools are selected appropriate to the work requirements.</p> <p>2.2. Cutting tools are sharpened as required.</p> <p>2.3. Tools are correctly installed using standard operating procedures.</p> <p>2.4. Guards are set and adjusted as required.</p>
3. Operate machine	<p>3.1. Material to be machined is mounted and secured using clamping device appropriate to the material and work requirements.</p> <p>3.2. Machine is operated correctly to suit work and material requirements.</p>

ELEMENT	PERFORMANCE CRITERIA
4. Check finished component	4.1.Machined component is checked against work requirements and predetermined finish.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following routine and familiar information on written job instructions, standard operating procedures and other applicable reference documents
- selecting the appropriate machine for the given task
- setting up machines and tooling within the scope of this unit, including speeds and feeds
- sharpening tools within the scope of this unit
- operating machines within the scope of this unit
- checking finished components
- checking and clarifying task-related information
- measuring components to specification within the scope of this unit

Required knowledge

Look for evidence that confirms knowledge of:

- cutting tool sharpening methods and techniques
- tool geometry within the scope of this unit
- units of measurement, tool geometry and numerical operations within the scope of this unit
- safe operation of tool sharpening equipment
- consequences of incorrect sharpening
- machine set-up
- consequences of incorrect speeds and feeds
- procedures for operating workshop machines
- reasons for poor surface finish.
- hazards and control measures
- use and application of personal protective equipment
- safe work practices and procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Load barrels etc., for mass finishing processes	1.1.Machinery is correctly loaded regarding load mass. 1.2.Machine access openings are safely secured.
2. Undertake jig work for non-electrolytic processes	2.1.Components are appropriately secured using standard operating procedures.
3. Undertake wire jig and rack work for electrolytic processes	3.1.Correct type and size of wire or rack is selected and inspected for conformance to specification. Damaged racks are identified for repair or replacement. 3.2.Components are secured presenting appropriate faces according to standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- correctly loading into the surface finishing machinery
- securing and positioning components to minimise damage
- securing machine access openings
- unloading and stacking components to minimise damage
- selecting the correct type and size of wire or rack
- planning and sequencing operations
- checking and clarifying task related information
- checking for conformance to specifications
- reading and interpreting routine information on written job instructions, specifications and standard operating procedures. May include drawings
- following oral instructions
- performing calculations using formulae

Required knowledge

Look for evidence that confirms knowledge of:

- the procedures for loading machinery for mass finishing processes
- the distribution of the components within the machinery
- reasons for distributing the components in a particular manner
- the procedures for securing machine access openings
- the consequences of not securing machine access openings
- the procedures for jiggging work for non-electrolytic processes
- the precautions to be taken when jiggging work for non-electrolytic finishing processes
- the appropriate types and sizes of wire or racks used in conjunction with surface finishing using electrolytic processes
- different faces to be surface finished/coated
- procedures for securing the components to be surface finished using electrolytic processes
- procedures for unloading and stacking surface finished components
- the damage that can be caused by inappropriate handling and storing of surface finished components
- hazard and control measures associated with wiring, jiggging and barrel load/unloading work
- safe workplace practices and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	<p>A person who demonstrates competency in this unit must be able to perform wire, jig and barrel load/unload work related to non-electrolytic processes.</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with performing wire, jig and barrel load/unload work related to non-electrolytic processes or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be</p>

	permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Non-electrolytic processes	Pre-treatment and finishing processes typical of which are degreasing, de-scaling, surface blasting, flame cleaning, wet blasting, grinding, polishing, wet coating, powder coating, electroplating, anodising, electroless plating, electrophoretic coating and hot dip metallising
Components	Refer to components supplied by the customer
Damaged racks	<ul style="list-style-type: none"> • Damage to plastic coating or contact points • Ensuring good electrical contact • Positioning to facilitate optimum thickness on significant surfaces • Avoidance of gas entrapment • The position of contact marks

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify job material	1.1.Common metals, alloys and non-metals can be identified.
2. Identify job surface condition	2.1.Common surface soils and conditions can be identified.
3. Perform pre-treatment processes in correct sequence	3.1.Pre-treatment processes are carried out to standard operating procedures. 3.2.Pre-treatment process parameters are monitored to ensure they remain within specified limits.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading and following routine and familiar information on standard operating procedures
- recognising common surface soils and conditions from given samples
- carrying out appropriate pre-treatment processes
- monitoring and maintaining the pre-treatment process parameters within specified limits
- following verbal instructions
- orally reporting routine information

Required knowledge

Look for evidence that confirms knowledge of:

- characteristics of common metals, alloys and non-metals and procedures and techniques for identifying them
- common surface soils and conditions
- procedures for identifying the type(s) of soil on surfaces to be finished
- simple tests that can be used to assist in identifying surface soils and conditions
- pre-treatment processes applicable to a range of materials, surface soils and conditions
- procedures for carrying out pre-treatment processes
- parameters and procedures for monitoring pre-treatment processes
- hazards and control measures associated with pre-treatment
- use and application of personal protective equipment
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

EVIDENCE GUIDE	
Overview of assessment	A person who demonstrates competency in this unit must be able to pre-treat common ferrous and non-ferrous materials. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify electroplating requirements	1.1. Electroplating requirements are identified. 1.2. Untreated materials and required electroplating treatment are identified.
2. Prepare for electroplating process	2.1. Materials and racking arrangement are checked for non-conformance to specifications/job requirements. 2.2. All plant and equipment relevant to process are checked for compliance with safety and operational

ELEMENT	PERFORMANCE CRITERIA
	requirements. 2.3. Instrumentation/gauges are checked for operation. 2.4. Condition of solution is checked.
3. Perform electroplating operations	3.1. Operation steps are carried out in correct sequence according to standard operating procedures or work instructions. 3.2. Safety precautions are observed.
4. Recognise and rectify process deviations	4.1. Compliance with operating parameters is ensured. 4.2. Uncontrollable variances are reported to appropriate persons. 4.3. Adjustments are made to rectify process deviation. 4.4. Finished products are visually inspected for compliance to specification.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- recognising deviations and faults in product/equipment/process
- identifying machine process requirements, untreated materials and process sequences
- identifying incorrectly loaded work
- inspecting job surface conditions
- checking plant and equipment for conformance to safety and operational requirements
- checking solution levels and identifying visible contamination such as solution clarity, oil, surface contamination
- maintaining required contacts and immersions while moving materials
- monitoring operating parameters, identifying deviations and making required adjustments
- adjusting settings such as voltage, current and temperature within permissible limits
- correcting deviations within scope operator's control
- reading and interpreting routine information on written job instructions,

REQUIRED SKILLS AND KNOWLEDGE

- specifications and standard operating procedures. May include drawings
- following oral instructions
 - performing calculations using formulae

Required knowledge

Look for evidence that confirms knowledge of:

- basic knowledge of electroplating process, machine components, treatment solutions, process parameters
- a basic knowledge of electroplating solutions and handling procedures
- treatment stages
- information relevant to plating products, treatment baths, settings
- characteristics of a variety of base materials that can be plated
- pre-treatment s, treatments and post treatments in relation to task requirements
- required equipment checks
- hazards and control measures associated with electroplating processes
- operational requirements of all plant and equipment associated with the relevant process
- the purpose and typical settings of different instruments/gauges
- sequences and requirements involved in moving materials
- the range of adjustments permissible for given operating parameters including voltage, current and temperature
- variances outside the control of the operator
- common faults and imperfections/deviations
- adjustments to suit specific process deviations
- effects of rust, corrosion and other contaminants
- the reasons for rejecting incorrectly loaded work
- safe operating procedures, safety and personal protective equipment, hazards of specific solutions

Evidence Guide**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to start up, operate and monitor an electroplating

EVIDENCE GUIDE	
	process. Competency in this unit cannot be claimed until all prerequisites have been satisfied.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assess and prepare components for required coating process	1.1.Coating specifications are identified from operation sheets/work procedures. 1.2.Suitability of pre-treated components for finishing process is checked according to enterprise procedures. 1.3.Components are prepared as required for finishing application. 1.4.Components are positioned/located for finishing according to enterprise procedures.
2. Perform simple mixing and estimating operations	2.1.Mixing ratios are calculated and a range of wet coatings are mixed and thinned as required to standard operating procedures. 2.2.Required coating quantities are estimated using

ELEMENT	PERFORMANCE CRITERIA
	simple surface area calculations.
3. Perform coating operation	3.1. Equipment is set up to specification using standard operating procedures. 3.2. Coating and applied curing technique are monitored to standard operating procedures. 3.3. Coating application, thickness and colour are checked and maintained for compliance with specifications.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- obtaining all relevant drawings, specifications and/or instructions in accordance with work place procedures
- racking the components to be coated correctly in accordance with standard operating procedures
- calculating the correct mixing ratios for given wet coatings accurately
- where appropriate, mixing and thinning the given wet coatings
- calculating the surface area to be coated correctly
- where appropriate, estimating the quantities of wet coating materials correctly
- setting up the appropriate coating equipment
- applying the coating correctly using the appropriate technique
- curing the coating correctly using the appropriate technique
- maintaining the coating thickness and colour in accordance with specifications throughout the coating operation
- checking the coating thickness and colour
- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying task-related information
- checking for conformance to specifications
- performing numerical operations, geometry and calculations/formulae within the

REQUIRED SKILLS AND KNOWLEDGE

scope of this unit

Required knowledge

Look for evidence that confirms knowledge of:

- work to be undertaken
- coating process to be used
- coating specifications
- appropriate type of racking for the coating process
- reasons for selecting the chosen rack type
- procedures for racking components to be coated
- source of data on mixing ratios for wet coatings
- mixing ratio for the given task(s)
- function of thinners as applied to the application of wet coatings
- procedures to be followed when mixing wet coatings
- surface area to be coated
- coverage rate of the coating material to be applied
- procedures for estimating quantities of coating materials
- types of equipment used for a variety of coating processes
- appropriate coating equipment for the given task(s)
- reasons for selecting the chosen equipment
- operating procedures applicable to the selected coating equipment
- a range of coating techniques
- a range of curing techniques
- appropriate coating and curing technique for the given task(s)
- reasons for selecting the chosen coating and curing techniques
- monitoring procedures to be followed
- examples of coating defects
- the causes of coating defects
- where appropriate, procedures for rectifying coating defects
- where appropriate, procedures for reporting coating defects
- coating thickness and colour to be achieved
- the means of checking coating thickness and colour
- frequency at which checks are undertaken
- hazards and control measures associated with finishing work using wet, dry and vapour deposition methods, including housekeeping
- safe work practices and procedures
- use of personal protective equipment

Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Perform a series of anodising steps	1.1. All steps are carried out in the correct sequence to standard operating procedures. 1.2. Masking techniques are correctly applied, where required. 1.3. Contact marks and shielding are minimised.
2. Assess preparation of work for correct jiggging/loading	2.1. Work is correctly connected for the required current flow and minimum contact marks and shielding. 2.2. All incorrectly loaded work is rejected.
3. Anodise work by a series of treatment steps	3.1. All steps are carried out in the correct sequence to standard operating procedures.
4. Seal or dye and seal anodised work	4.1. All steps on work are carried out in the correct sequence to standard operating procedures.
5. Monitor and control operating parameters	5.1. Process parameters are maintained within specified limits.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading and following routine and familiar information on standard operating procedures
- following all steps in the anodising process
- applying the correct masking materials and techniques
- minimising contact marks and shielding
- correctly connecting the work to the required electrical current
- identifying incorrectly loaded work
- maintaining process parameters within specified limits
- following verbal instructions
- orally reporting routine information

Required knowledge

Look for evidence that confirms knowledge of:

- process for anodising aluminium
- materials, techniques and procedures for masking materials during anodising
- causes of contact marks and shielding during the anodising process
- procedures for minimising contact marks and shielding
- procedures for connecting the work to the required electrical current
- the electrical current required for the anodising process
- methods for correctly loading work
- examples of incorrectly loaded work
- reasons for rejecting incorrectly loaded work
- steps to be carried out in the seal/dye and seal process
- procedures and reasons for monitoring and maintaining the process parameters within the specified limits
- hazards and control measures associated with anodising operations, including housekeeping
- use and application of personal protective equipment
- safe work practices and procedures

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Select treatments and processes/equipment for producing engineering finishes	1.1.Appropriate treatment processes are selected according to base metal type, surface condition and relevant job specifications. 1.2.Operating/process parameters are selected to achieve required coating. 1.3.Appropriate equipment is selected.
2. Prepare work for engineering finishes	2.1.Products are correctly masked (stopped off) for selective plating. 2.2.Where applicable, conforming anodes are constructed and fitted correctly. 2.3.Where applicable, shields and robbers are constructed and fitted. 2.4.Pre-treatment processes are carried out, where applicable.
3. Monitor and control operating conditions and processes for engineering coatings	3.1.Operating/process parameters are set to produce required surface conditions/specifications. 3.2.Surface conditions of finished components are monitored and confirmed and abnormalities are identified. 3.3.Corrective actions are taken to rectify non-conforming conditions.
4. Maintain solutions for engineering finishes	4.1.Solution compositions are checked and confirmed to specification/operating range. 4.2.Adjustment requirements/additions are determined. 4.3.Additions are made to adjust solution composition to correct operating range.

Required Skills and Knowledge

<p>REQUIRED SKILLS AND KNOWLEDGE</p> <p>This section describes the skills and knowledge required for this unit.</p>
<p>Required skills</p>
<p>Look for evidence that confirms skills in:</p>

REQUIRED SKILLS AND KNOWLEDGE

- selecting treatments and processes/equipment for producing engineering finishes
- preparing work for engineering finishes
- calculating process parameters
- determining current densities
- assessing material condition for suitability for plating
- selecting equipment, masking, materials
- correctly sizing positioning and securing anodes
- sizing, positioning and securing shields and robbers
- carrying out mechanical/chemical pre-treatment
- setting times voltages/currents and temperature
- monitoring and controlling operating conditions and processes for engineering coatings
- maintaining solutions for engineering finishes

Required knowledge

Look for evidence that confirms knowledge of:

- effects of plating process on different materials
- conditions affecting engineering finishes
- base metal types
- surface finish of untreated material
- mechanical/chemical and specialised pre-treatment processes
- process parameters for achieving different coatings
- characteristics of different surface finishes
- masking materials and masking techniques
- safe operation of equipment to produce engineering finishes
- current distribution principles
- methods of constructing/fabricating, fitting anodes
- current-capacity of conforming/auxiliary anodes
- the role, construction, properties, applications, and positioning of shields and robbers
- finish requirements, permissible tolerances
- the causes of abnormalities and their related corrective actions
- purpose and application of simple tests including pH, titration, density
- calculations related to additions/adjustments to solution and of product surface area
- safe work practices and procedures, including handling chemicals

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to apply electroplate engineering coatings. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication materials handling, recording and reporting associated with applying electroplate engineering coatings or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p>Method of assessment</p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

EVIDENCE GUIDE

Guidance information for assessment	
--	--

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Treatment processes	Electroplating, electroforming, electroless plating
Operating/process parameters	Treatment times and currents, bath pH temperatures and densities, anode conditions, addition agent content, cleanliness of contacts etc., make-up, maintenance of solution levels and purity
Coating	Hard chroming, heavy nickel, electroless nickel, nickel composites, heavy deposits of nickel, copper, bronze up to 10 mm
Equipment	Wire racks, handling equipment, barrels, jigs, shields, robbers, etc.
Products	Base materials such as cast iron, brass, steels with machine welded sections, etc.
Masking materials	Wax, lacquers, tapes, foils
Anodes	Soluble, insoluble auxiliary anodes, etc.
Solution compositions	Cleaning, pickling, electroplating, chromate, acid dips
Checks	Density, titration, pH
Adjustment	Strength of solutions, temperature range

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Select correct technical drawing	1.1. Drawing is checked and validated against job requirements or equipment. 1.2. Drawing version is checked and validated.
2. Interpret technical drawing	2.1. Components, assemblies or objects are recognised as required. 2.2. Dimensions are identified as appropriate to field of employment. 2.3. Instructions are identified and followed as required. 2.4. Material requirements are identified as required. 2.5. Symbols are recognised in the drawing as appropriate.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- checking the drawing against job requirements/related equipment in accordance with standard operating procedures
- confirming the drawing version as being current in accordance with standard operating procedures
- where appropriate, obtaining the current version of the drawing in accordance with standard operating procedures
- reading, interpreting information on the drawing, written job instructions, specifications, standard operating procedures, charts, lists and other applicable reference documents
- checking and clarifying task related information
- undertaking numerical operations, geometry and calculations/formulae within the scope of this unit

Required knowledge

Look for evidence that confirms knowledge of:

- application of AS1100.101 in accordance with standard operating procedures
- relationship between the views contained in the drawing
- objects represented in the drawing
- units of measurement used in the preparation of the drawing
- dimensions of the key features of the objects depicted in the drawing
- understanding of the instructions contained in the drawing
- the actions to be undertaken in response to those instructions
- the materials from which the object(s) are made
- any symbols used in the drawing as described in range statement
- hazard and control measures associated with interpreting technical drawings, including housekeeping
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	A person who demonstrates competency in this unit must be able to interpret technical drawings as described.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with interpreting technical drawings or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning should not require language, literacy and numeracy skills beyond those required in this unit. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Interpret technical drawing

AS1100.101 is an extensive work and the candidate is not required to have complete familiarity with all its contents, the application of AS1100 would usually be in line with standard operating procedures; interpretation may require guidance particularly in respect to any geometric tolerancing

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify drawing requirements	<p>1.1. Requirements and purpose of drawing are determined from customer and/or work specification and associated documents.</p> <p>1.2. All data necessary to produce the drawing is identified and collected.</p> <p>1.3. Drawing requirements are confirmed with relevant personnel and timeframes for completion are established.</p>
2. Prepare or make changes to engineering drawing	<p>2.1. Drafting equipment is selected appropriate to the drawing method chosen.</p> <p>2.2. Drafting principles are applied to produce a drawing that is consistent with standard operating procedures</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>within the enterprise.</p> <p>2.3.All work is undertaken safely and to prescribed procedure.</p> <p>2.4.Completed drawing is approved in accordance with standard operating procedures.</p>
3. Prepare engineering parts list	3.1.Components parts are identified and organised by component type and/or in accordance with organisation/customer requirements.
4. Issue drawing	<p>4.1.Drawings and or parts lists records are completed in accordance with standard operating procedures.</p> <p>4.2.Approved drawings and or parts lists are copied and issued to relevant personnel in accordance with standard operating procedures.</p> <p>4.3.Approved drawings and or parts lists are stored and catalogued in accordance with standard operating procedures.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- obtaining all relevant job requirements, data/information and specifications necessary to produce the drawing in accordance with workplace procedures
- using drafting equipment appropriate to the drawing method chosen
- producing/changing the drawing to conform with the relevant standard
- undertaking all work safely and in accordance with workplace procedures
- checking the completed drawing in accordance with standard operating procedures
- producing the component parts list with part name, description of part, material specification or part number, quantities and all other details specified by the customer and/or organisational procedures
- recording completed drawings and or parts lists in accordance with standard operating procedures
- where appropriate, copying and issuing approved drawings and or parts lists in accordance with standard operating procedures

REQUIRED SKILLS AND KNOWLEDGE

- handling and storing the approved drawings and or parts lists in accordance with standard operating procedures
- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying task related information
- undertaking numerical operations, geometry and calculations/formulae within the scope of this unit

Required knowledge

Look for evidence that confirms knowledge of:

- requirements and purpose of the drawing to be produced
- requirements and purpose of the engineering parts list
- sources of relevant data/ information
- timeframe for completion of the drawing(s)
- person(s) who can confirm drawing requirements
- method of drawing preparation
- the reasons for selecting the chosen drawing method
- procedures for producing an initial drawing
- procedures for changing an existing drawing
- drafting principles to be applied to the production/changing of a drawing
- standards to which the drawing is to be produced
- procedures for checking drawings
- the persons responsible for checking and approving drawings
- consequences of inappropriate/incomplete components parts lists
- procedures and reasons for recording completed drawings and or parts lists
- procedures for copying approved drawings and or parts lists
- procedures for issuing approved drawings and or parts lists
- the personnel to whom copies of approved drawings and or parts lists can be issued
- procedures for filing approved drawings and or parts lists
- procedures for safe handling and storage of drawings and or parts lists
- consequences of inappropriate handling and storage of approved drawings and or parts lists
- safe work practices and procedures

Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant personnel

Technical personnel, supervisors, manufacturers, suppliers, contractors, customers

Drafting equipment

Drafting and drawing equipment includes the use of Computer Aided Drafting systems

Drafting principles

Drawings are prepared in accordance with Australian Standard 1100.101, or equivalent, as required

Interpretation of AS1100.101 or other problems are resolved in consultation with a supervisor

Records

Drawing records may include cataloguing, issuing security classifications, filing, preparing distribution lists

Issued

In hard copy, photographic, slide or transparency form including presentation as a single drawing and/or with other drawings, support documentation as a package

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare CAD environment	1.1. System variables are customised to suit standard operating procedures. 1.2. Menus are customised to suit standard operating procedures. 1.3. Drawing defaults are customised to standard operating procedures. 1.4. Macros are developed to standard operating procedures.

ELEMENT	PERFORMANCE CRITERIA
2. Create 2D drawings	2.1. Drawings are created using the full capability of the available software system. 2.2. Drawing entities are linked to database attributes to suit job requirements. 2.3. Detailed views are created using various scales to meet job requirements.
3. Produce output	3.1. Files are saved in various formats to standard operating procedures. 3.2. Linked entities are listed in a bill of materials format to meet job requirements. 3.3. Supplementary data is extracted from drawing to meet job requirements and may include area, lengths, angles and perimeters.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- obtaining all relevant manuals, instructions and operation procedures for the CAD software and hardware being used
- where appropriate, customising the relevant system variables to suit the applicable drafting standards/procedures
- where appropriate, customising menus to suit the applicable drafting standards/procedures
- where appropriate, customising the system defaults to suit the applicable drafting standards/procedures
- where appropriate, developing macros
- creating drawings using the appropriate drawing features of the software system
- where appropriate, linking drawing entities to database attributes
- producing detailed views of the object being drawn
- printing drawing files at the appropriate scale
- saving drawing files in the appropriate format
- producing bills of material from the drawing files/database
- extracting supplementary data from the drawing file to meet job requirements

REQUIRED SKILLS AND KNOWLEDGE

- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying task related information
- checking for conformance to specifications
- undertaking numerical operations, geometry and calculations/formulae within the scope of this unit

Required knowledge

Look for evidence that confirms knowledge of:

- CAD software system
- system variables that can be customised
- procedures for customising identified system variables
- reasons for customising the system variables
- applicable drafting standards/procedures
- procedures for customising menus
- reasons for customising menus
- procedures for customising system defaults
- reasons for customising system defaults
- procedures for developing macros
- reasons for developing macros
- drawing features of the CAD software system
- reasons for using specialised software features
- procedures for linking drawing entities to database attributes
- appropriate drawing scales
- procedures for printing drawing files
- procedures for creating additional views of the object being drawn
- procedures for saving drawing files
- various formats in which drawing files can be saved
- reasons for using different formats when saving drawing files
- procedures to produce bills of material
- procedures to extract data with respect to drawn shapes/features
- properties of shapes/sections/ features that can be extracted from the drawing file
- hazards and control measures associated with using computer aided design system, including housekeeping
- safe work practices and procedures

This section describes the skills and knowledge required for this unit.
Required skills

REQUIRED SKILLS AND KNOWLEDGE

Look for evidence that confirms skills in:

- using device in accordance with standard operating procedures
- storing and maintaining devices
- using basic numeracy skills for undertaking comparison measurements
- following oral instructions and written standard operating procedures

Required knowledge

Look for evidence that confirms knowledge of:

- use and application of various comparison or measurement devices
- procedures for the correct use of devices
- procedures for maintaining and storing devices
- hazards and control measures associated with conducting measurements, including housekeeping
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to use comparison and basic measuring devices.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.

Context of and specific resources for assessment

This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment

EVIDENCE GUIDE	
	<p>should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with using comparison and basic measuring devices or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

MEM12003B Perform precision mechanical measurement

Modification History

Editorial correction to unit application to include missing notes relating to dual band status.
Single band identifier removed to clarify dual status.

Unit Descriptor

Unit descriptor	This unit covers performing precision mechanical measurement by using precision measuring equipment, setting comparison measuring devices and maintaining precision equipment.
------------------------	--

Application of the Unit

Application of the unit	<p>The unit applies to precision and/or complex use of strip gauges, engineering squares, lasers, angle dekkors, sine bars, angle gauges, polygons, dividing heads, rotary tables, precision levels, micrometers, height gauges, hardness testers, and texture measuring equipment etc.</p> <p>Work is undertaken autonomously or as part of team environment. Work is undertaken in the field (in situ) or in a workshop/laboratory environment.</p> <p>This unit covers comprehensive measuring skills where judgement is required in the selection of the most appropriate techniques/devices and where results are interpreted/analysed.</p> <p>All specifications are obtained from engineering drawings and data sheets and/or manufacturers' instructions/data. All measurement/test procedures are undertaken to standard operating procedures or manufacturers' recommended procedures.</p> <p>Band:</p> <p>This unit has dual status and is to be regarded as both a Specialisation Band A unit and Specialisation Band B unit for progression to C7 (AQF level IV)</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Use precision measurement equipment	1.1. Appropriate precision equipment is selected to achieve specified outcome. 1.2. Correct and appropriate measuring techniques are

ELEMENT	PERFORMANCE CRITERIA
	<p>used for the measurement task.</p> <p>1.3. Measurements are taken accurately to the finest graduation of instrument.</p> <p>1.4. Readings and measurements are interpreted correctly and accurately.</p>
2. Set comparative measuring devices	2.1. Measuring equipment is set to specifications using manufacturer guidelines or standard operating procedures and techniques.
3. Maintain precision equipment	<p>3.1. Measuring equipment is adjusted and maintained to required accuracy, using manufacturer or standard operating procedures and techniques.</p> <p>3.2. Equipment is stored to manufacturer specifications or standard operating procedures.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading and interpreting text and numerical information on manufacturer specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- selecting/using precision mechanical measuring devices
- setting measuring devices to specification
- obtaining specified mechanical measurements to the finest graduation of the device
- measuring components to specified tolerances
- reading and interpreting measurements
- maintaining and adjusting precision mechanical measuring devices
- storing precision mechanical measuring devices
- undertaking calculations and numerical operations for measurement using precision mechanical measuring equipment

Required knowledge

Look for evidence that confirms knowledge of:

- the appropriate precision mechanical measuring device for given measurement

REQUIRED SKILLS AND KNOWLEDGE

requirements

- procedures to verify equipment being used has been recently calibrated
- suitability of environmental conditions for the measurements being carried out
- procedures/techniques for obtaining a range of mechanical measurements
- the accuracy to which a range of precision mechanical measuring devices can be read
- procedures for reading graduated mechanical measuring devices
- units of measurement and numerical operations within the scope of this unit
- procedures for setting precision mechanical measuring devices
- specifications of the equipment to be set
- tools and equipment for setting mechanical measuring devices
- the adjustments that can be made to a range of precision mechanical measuring devices
- procedures for adjusting and maintaining precision mechanical measuring devices
- procedures for storing precision mechanical measuring devices
- hazards and control measures associated with precision mechanical measurement, including housekeeping
- safe work practices and procedures

Evidence Guide**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to perform precision mechanical measurement. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.

Context of and specific resources for assessment

This unit may be assessed on the job, off the job or a combination of both on and off the job. Where

EVIDENCE GUIDE	
	<p>assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with other units addressing the safety, quality, communication, materials handling, recording and reporting associated with precision mechanical measurement or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning should not require language, literacy and numeracy skills beyond those required in this unit. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Equipment	Strip gauges, engineering squares, angle dekkors,

RANGE STATEMENT	
	sine bars, angle gauges, polygons, dividing heads, rotary tables, precision levels, micrometers, height gauges, hardness testers, and texture measuring equipment
Appropriate measuring techniques	Includes considerations of the suitability of the environmental conditions for measurements being taken
Measurements	Length, circular, straightness, flatness, hardness, angles, finishes, textures, roundness, squareness, alignment and coordinate measurement etc. on components or equipment

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Select appropriate device or equipment	1.1.Measurement requirements are determined from specifications. 1.2.Appropriate device or equipment is selected according to standard operating procedures, to achieve required outcome.
2. Obtain measurements using a range of measuring devices	2.1.Correct and appropriate measuring technique is used. 2.2.Measurements are accurately obtained .

ELEMENT	PERFORMANCE CRITERIA
	2.3. Dimensions are determined or verified using basic calculations, where required.
3. Maintain measuring devices	3.1. Routine care and storage of devices is undertaken to manufacturers' specifications or standard operating procedures. 3.2. Routine adjustments to devices are made and checked.
4. Communicate measurements as required	4.1. Measurements are accurately recorded, where required. 4.2. Freehand sketch which depicts required information is prepared, as required.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- selecting the appropriate measuring device for given measuring tasks
- using appropriate measuring technique
- reading all measurements taken accurately to the finest graduation of the selected measuring device
- handling and storing measuring devices in accordance with manufacturers' specifications or standard operating procedures
- verifying all measuring devices before use
- making, where appropriate, routine adjustments to measuring devices
- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying task related information
- checking for conformance to specifications
- undertaking numerical operations involving addition, subtraction, multiplication, division, fractions and decimals within the scope of this unit
- preparing drawings as required

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

Look for evidence that confirms knowledge of:

- correct application of a range of measuring devices
- correct and appropriate measuring technique for a range of measuring devices
- addition, subtraction, multiplication, division, fractions, decimals to the scope required by this unit
- procedures for handling and storing a range of measuring devices
- procedures for adjusting and zeroing a range of measuring devices
- methods of communicating measurements by drawings, as required
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to perform engineering measurements.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.

Context of and specific resources for assessment

This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication,

	materials handling, recording and reporting associated with performing engineering measurements or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Specifications	Drawings, sketches, job instructions, schematics, diagrams, technical manuals
Range of measuring devices	Protractors, combination squares, set squares, dial indicators, thermometers, tapes, rules, micrometers, vernier-scaled measuring equipment
Basic calculations	Calculations needed to assist in determining measurements where a reading of the graduated device is not sufficient, for example subtracting one measurement from another to give a third

RANGE STATEMENT	
	measurement. Examples of calculations needed are addition, subtraction, multiplication, division, fractions and decimals. Calculations may be made using a calculator
Routine adjustments	Validating the device using simple zeroing or scale adjustment
Measurements	Measuring length, squareness, flatness, angle, roundness, clearances or any other measurements that can be read off analog, digital or other measuring device
Information	Dimensions, instructions, base line or datum points

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine work requirement	1.1. Required outcomes are established from job instructions. 1.2. Data is obtained from relevant sources and interpreted correctly. 1.3. Required calculation method is determined to suit the application, including selection of relevant arithmetic operations and/or formulae. 1.4. Expected results are estimated, including rounding off, as appropriate.
2. Perform calculations	2.1. Calculation method is applied correctly. 2.2. Correct answer is obtained. 2.3. Answer is checked against estimation.

ELEMENT	PERFORMANCE CRITERIA
3. Produce charts and graphs from given information	3.1.Data is transposed accurately to produce charts or graphs. 3.2.Charts or graphs accurately reflect data on which they are based.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- performing calculations involving whole numbers using all four basic rules
- performing calculations involving length, perimeter, area and volume
- checking calculated answers for accuracy
- rounding off estimated answers
- expressing information presented in fractional or decimal format as a percentage
- selecting appropriate formulae for the given application
- substituting the correct values for each term in the relevant formulae
- using appropriate mathematical operations
- performing calculations involving ratios or proportions
- determining required information from appropriate charts or graphs
- producing simple charts or graphs from given information or observations made
- selecting appropriate scales and using them in the production of charts and graphs
- marking appropriate limits clearly on the graph or chart
- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying task related information
- checking for conformance to specifications
- undertaking numerical operations, geometry and calculations/formulae within the scope of this unit

Required knowledge

Look for evidence that confirms knowledge of:

- formula applicable to the determination of perimeter, area and volume of simple

REQUIRED SKILLS AND KNOWLEDGE

- geometric shapes
- techniques for estimating approximate answers
- reasons for using dimensions with the same units when calculating length, perimeter, area and volume
- concepts of perimeter, area and volume
- procedures for rounding off figures when estimating approximate answers
- mixed numbers, decimals, fractions and whole numbers
- concept of percentage
- procedures to be followed in converting a decimal to a percentage
- procedures for carrying out calculations involving fractions and using each of the four basic rules
- procedures to be followed on converting a fraction to a percentage
- sources of appropriate formulae
- reasons for ensuring that the units of each term are consistent with the formulae selected
- procedures for converting given units to those required for use in formulae
- concepts of ratio and proportion
- given ratios and proportions can be expressed in terms of whole numbers, fractions and decimal fractions
- scales applicable to the axes of the graphs or charts
- three types of charts and/or graphs used in the individual's field of work
- where appropriate, upper and lower limits of acceptability applicable to data entered on a graph or chart
- where appropriate, the trends indicated by the slope or gradient of a graph
- where appropriate, the action to be taken when given trends occur or set limits are approached on graphs or charts
- procedures for drawing 'lines of best fit'
- the trends indicated by the graphs or charts drawn
- hazards and control measures associated with performing computations, including housekeeping
- safe work practices and procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Use personal protective equipment	1.1. Correct and appropriate safety clothing including personal protective equipment is selected and used correctly based on information in relevant material safety data sheet (MSDS).
2. Identify emergency procedures	2.1. Emergency procedures and plan relevant to the particular work environment are documented, understood and demonstrated as laid down in approved safety instructions.

ELEMENT	PERFORMANCE CRITERIA
3. Observe safe working practices	3.1. Hazardous areas and materials are identified and special handling procedures are identified and understood. 3.2. Permits to work (if necessary) are obtained. 3.3. All equipment and hazardous materials are used in accordance with relevant OHS legislation, manufacturers' instructions and standard operating procedures. 3.4. All site-specific safety policies, safety signs, symbols and labels are correctly identified and understood. 3.5. Material safety data sheets are understood and applied. 3.6. Safe manual handling procedures (including equipment) are used. 3.7. Decanted chemicals and storage is to State/Territory dangerous goods and OHS legislation and requirements. 3.8. Housekeeping duties are performed according to standard operating procedures to maintain a safe working environment.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- undertaking risk assessment
- communicating with others
- performing proper manual handling techniques
- interpreting safety signage, labelling and placarding

Required knowledge

Look for evidence that confirms knowledge of:

- dangerous goods classification and labelling/placarding
- testing, use and maintenance of PPE

REQUIRED SKILLS AND KNOWLEDGE

- inherent hazardous properties of the chemicals to be used
- interpretation of the relevant MSDS
- basic fire fighting procedures
- site-specific emergency plan procedures
- chemical spill confinement procedures
- dangerous occurrence (near miss) reporting procedures
- hierarchy of control

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to work safely and efficiently with various chemicals.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.

Context of and specific resources for assessment

This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with working safely with industrial chemicals and materials or other units requiring the exercise of the skills and knowledge covered by this unit.

EVIDENCE GUIDE	
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Personal protective equipment	Personal protective may include appropriate: <ul style="list-style-type: none"> • goggles/face shields • respirators • air supplied or self-contained helmets • safety boots, gloves and appropriate clothes/garments
Safe working practices	<ul style="list-style-type: none"> • Environment is inspected • Hazards (and chemical reactive hazards) are assessed and controlled using hierarchy of hazard control • Properly maintained PPE is available • Emergency management plan is documented/understood

RANGE STATEMENT	
	<ul style="list-style-type: none"> Work to be undertaken in safe 'thermal' environments and all possible ignition sources are to be identified and controlled
Storage	All storage containers (minor quantities and in consumer packages) are suitable for chemical exposure and are properly labelled and/or placarded. Chemical manifests are updated at completion of work activity
State or Territory legislative requirements	Appropriate OHS, dangerous goods acts and regulations, Australian standards, Australian Code for the Transport of Dangerous Goods by Road and Rail (ADGC), NOHSC codes of practice

MEM13013B Work safely with ionizing radiation

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers working safely with ionizing radiation when performing radiographic testing in a range of industrial applications.
------------------------	---

Application of the Unit

Application of the unit	<p>This unit applies to safely working with ionizing radiation in open or closed sites: on fabrications, structures and components across a wide range of industries. It is a prerequisite to undertaking any other radiographic competency standards unit. The work can relate to scheduled and unscheduled maintenance activities, using general tools, specific radiographic testing equipment as specified in maintenance documentation, testing procedures or operator instructions.</p> <p>All testing must be completed with particular attention to personal and OH&S regulations. Certification against Australian standards may be achieved where assessment in this unit of competency is carried out in conjunction with an examining authority as described in ISO 9712.</p> <p>Materials and chemicals which are subject to codes and regulations - for example, chemicals, explosives, solvents, dangerous materials, acids, or noxious waste products - must be subject to safe work habits must be stored and used in accordance with safe work practices.</p> <p>Band: A</p> <p>Unit Weight: 4</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify the hazards and effects of ionizing radiation in the workplace	1.1. The source of ionizing radiation is identified in accordance with relevant organisational policy and procedures. 1.2. Production of X-rays and gamma rays is explained in relation to radiographic testing activities. 1.3. Attenuation factors of ionizing radiation and the biological effects on living tissue are outlined. 1.4. The biological effects of radiation are identified.
2. Apply radiation safety procedures/plans	2.1. Appropriate ionizing radiation protective measures are employed in accordance with relevant organisational policy and procedures.

ELEMENT	PERFORMANCE CRITERIA
	<p>2.2.SI units of radiation are explained as per the National Health and Medical Research Council/ statutory requirements.</p> <p>2.3.Exposure limits for personnel as laid down by the radiation authorities in Australia are stated and adhered to.</p> <p>2.4.Minimum exposure rates/distances are determined from calculations and charts.</p> <p>2.5.Ionizing radiation sources are operated in accordance with legislation, standards and/or organisational policy, procedures or guidelines.</p>
3. Select and use radiation monitoring equipment	<p>3.1.The tools and equipment necessary to monitor radiation are selected and used as required.</p> <p>3.2.Techniques and system verification checks necessary to monitor radiation are selected and applied.</p> <p>3.3.Safety breaches are documented and/or reported in accordance with organisational policy and procedures.</p>
4. Respond to emergency situations	4.1.Procedures for dealing with both X-ray and gamma ray emergency situations are demonstrated.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- calculating and numerical operations within the scope of this unit
- reading and interpreting charts, written job instructions, specifications, standard operating procedures, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying task-related operations
- checking for conformance to specifications
- using monitoring equipment
- calculating and monitoring radiation

REQUIRED SKILLS AND KNOWLEDGE

- handling emergencies
- following safety requirements
- assessing risk

Required knowledge

Look for evidence that confirms knowledge of:

- properties of X-rays and gamma rays and principal radioactive sources used in industrial radiography
- attenuation factors
- known biological effects of radiation
- general principles of gas ionisation, photographic effect, luminescence
- use of film, film badges, ionisation chamber devices, quartz fibre, fluorescent, electronic devices accuracy limits (energy/range)
- different SI units of radiation including becquerel, sievert and gray
- exposure limits for personnel as laid down by the radiation authorities in Australia
- the three exposure reduction factors including: time, distance and shielding
- procedures for establishing safe working barriers
- relevant techniques and checks
- emergency procedures
- safety procedures including for:
 - types of X-ray equipment
 - types of isotope cameras
 - shielding materials
 - design and requirements for exposure areas
 - requirements for storage of radioisotopes
- emergency situations, causes and appropriate responses
- hazards and control measures associated with ionizing radiation, including housekeeping
- storage requirements of equipment and materials
- use and application of personal protective equipment
- safe workplace practices and procedures
- legal requirements including;
 - Australian/NSW regulations, code of practice (detail)
 - ICRP recommended limits for various persons and various parts of the body for short-term, long-term and accumulated exposure
 - background radiation
 - duties of RSO
 - requirements for transport
 - IATA regulations

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to safely work with ionizing radiation when performing radiographic testing.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.

Context of and specific resources for assessment

This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with radiographic testing or other units requiring the exercise of the skills and knowledge covered by this unit.

Method of assessment

Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate

EVIDENCE GUIDE	
	must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Relevant organisational policy and procedures	<ul style="list-style-type: none"> • Legislation • Standard operating procedures (SOPs) • Australian or international standards • Risk assessments • Previous testing reports • Manufacturer specifications
Production of X-rays and gamma rays	<ul style="list-style-type: none"> • Atomic structure, protons, neutrons, electrons, atomic number, mass number, isotopes • Electromagnetic radiation wavelength, frequency, energy relationships, intensity • Construction and operation of X-ray tube anode, cathode, target • Gas and coolidge tubes • Glass and ceramic tubes • X-ray spectrum • Characteristic and continuous spectra effect of voltage and current on continuous spectra • Efficiency • Natural and artificial radioisotopes • Production of radioisotopes

RANGE STATEMENT	
	<ul style="list-style-type: none"> Decay mechanisms, alpha, beta-, beta+, and gamma Concept of half life, decay constants Selection of gamma ray sources Units definition of curie, becquerel, conversion of units, multiple units (e.g. GBq), nuclide chart
Biological effects of radiation	<ul style="list-style-type: none"> Ionisation, absorption, scatter (Compton, Rayleigh, photo-electric, pair production) Attenuation coefficient, absorption edges Units roentgen, rad, coulomb/kg, gray conversions Effects of varying doses on living tissue Somatic effects, genetic effects, cell biology nucleus, cytoplasm DNA, chromosome, mitosis; symptoms, effect of time, ICRP recommendations Dose, dose equivalent, RBE, rem, seivert, conversions Occupancy factor
Protective measures	<ul style="list-style-type: none"> Personal protective equipment (PPE) including for risks other than ionizing radiation Safety protocols of workplace (e.g. flame limitations in refineries) Signage, barriers/guards Limitations on operation of specific equipment/machines
Minimum exposure	<ul style="list-style-type: none"> Time, distance, shielding effect of distance, inverse square law Half and tenth value layers Emergency procedures, company procedure codes

Unit Descriptor

Unit descriptor	This unit covers inspecting products, keeping records and providing feedback on the conformance of product to specifications.
------------------------	---

Application of the Unit

Application of the unit	<p>This unit applies to basic inspection of completed or partly completed products produced by others. Inspection is carried out according to a site quality plan or specifications; it applies to a range of manufacturing enterprises; and requires application of a range of measuring equipment/devices/tools.</p> <p>Location and frequency of checks/tests and measurements are undertaken to standard operating procedures. In general, verification should be made as close as possible to the point of production of the feature or characteristic. Inspection may involve 'first piece inspection', fixed interval, sample etc. Depending on the inspection process, other technical units may need to be accessed, for example, appropriate measurement units.</p> <p>This unit is not intended to be applied to maintenance personnel carrying out their day-to-day activities, for example, fault finding, remedial and checking activities. These skills are covered by other units such as Unit MEM18006C (Repair and fit engineering components).</p> <p>This unit should not be selected for the purposes of non destructive testing, where Unit MEM24002B (Perform penetrant testing), Unit MEM24004B (Perform magnetic particle testing), Unit MEM24006B (Perform eddy current testing), Unit MEM24008B (Perform ultrasonic testing) or Unit MEM24010B (Perform radiographic testing) have already been selected.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
---------	----------------------

ELEMENT	PERFORMANCE CRITERIA
1. Inspect products	1.1.Products are tested for conformance to specifications in accordance with standard operating procedures.
2. Keep records	2.1.Test status identification is made on conforming and non-conforming products and records are accurately kept using standard operating procedures.
3. Provide feedback	3.1.Products are tested/inspected/measured after rework or repair. 3.2.Deficiencies or deviations are reported according to standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on written job instructions, standard operating procedures and other applicable reference documents
- testing products for conformance to specifications in accordance with job instructions
- testing reworked/repared products for conformance to specification, in accordance with job instructions
- entering routine and familiar information onto proformas and standard workplace forms

Required knowledge

Look for evidence that confirms knowledge of:

- the procedures as defined by job instructions to be used to check conformance to specifications
- the data to be recorded and the frequency of recording required
- the consequences of not keeping accurate records
- non-conformances of given products that can be removed by rework/repair in accordance with job instructions
- hazards and control measures associated with performing basic inspection activities
- use and application of personal protective equipment
- safe work practices and procedures

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Work under laboratory conditions	1.1.Independent tests are conducted under controlled conditions.
2. Perform calibration	2.1.Equipment is verified and calibrated to agreed quality standards. 2.2.Calibration status is safeguarded against unauthorised adjustment. 2.3.Accurate records are kept for reference purposes. 2.4.Test equipment is periodically recalled for adjustment, repair and re-calibration. 2.5.Documentary evidence is maintained, covering identification of equipment; frequency of re-calibration; calibration status and procedures for recall, handling and storage, adjustment, repair,

ELEMENT	PERFORMANCE CRITERIA
	<p>calibration, installation and use.</p> <p>2.6. Calibration to reference standards of known accuracy such as national or international standards is traced, or where these do not exist, is set to specifically developed criteria.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- obtaining, reading and interpreting relevant drawings, circuits, specifications, instructions and data in accordance with standard operating procedures
- planning and sequencing operations
- checking and clarifying task-related operations
- using calculations and numerical operations within the scope of this unit
- conducting independent tests under controlled conditions
- checking measuring equipment for correct calibration against the agreed quality standards
- safeguarding the calibration status of the equipment against unauthorised adjustment
- completing and maintaining records of measuring equipment calibrated
- recalling test equipment for adjustment, repair and re-calibration
- using reference standards or specific criteria as the basis for calibration.
- documenting test results
- preparing reports on the tests carried out
- conducting inspections, tests and audits in accordance with standard
- using results of inspections, tests and audits to inform the design and service

Required knowledge

Look for evidence that confirms knowledge of:

- the tests to be undertaken
- the conditions under which the tests are to be undertaken
- the testing procedures to be followed
- the reasons for conducting tests under controlled conditions

REQUIRED SKILLS AND KNOWLEDGE

- the need for tests to be conducted independently
- the quality standards against which the measuring equipment is to be calibrated
- the correct operation of the measuring equipment
- the specifications of the measuring equipment
- the tools and equipment required to check the calibration of the measuring equipment
- the procedures for checking the calibration of the measuring equipment
- any codes, standards, legislative or regulatory requirements applicable to the measuring equipment and/or calibration
- the procedures for preventing unauthorised adjustment of equipment
- the reasons for protecting equipment against unauthorised adjustment
- the records to be kept with respect to the calibration of measuring equipment
- the reasons for keeping accurate calibration records
- the procedures for recalling test equipment for adjustment, repair and re-calibration
- the frequency of test equipment recall
- the reasons test equipment may be recalled
- all relevant documentation relating to the calibration/re-calibration of test equipment
- the procedures for completing the relevant documentation
- sources of reference standards and procedures to be used in the absence of reference standards
- the reports to be prepared/provided with respect to the test equipment being tested
- the procedures for preparing/ providing reports on tests carried out on test equipment
- the auditing processes to be applied to testing procedures
- the use of information from the inspections, tests and audits conducted in the development of design and servicing of products/equipment
- hazards and control measures associated with performing laboratory procedures, including housekeeping
- safe work practices and procedures

Evidence Guide**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

EVIDENCE GUIDE	
Overview of assessment	A person who demonstrates competency in this unit must be able to perform laboratory procedures.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify the appropriate class of reference standard suitable to verify a range of trade measuring instruments	<p>1.1.Tolerances required for reference standards are researched in relation to testing a range of trade measuring instruments and legislation.</p> <p>1.2.The correct classes of reference standards are selected to test a range of trade measuring instruments.</p>
2. Use reference standards and test equipment in a safe and metrologically sound manner	<p>2.1.Standards Laboratory purpose and function are explained.</p> <p>2.2.An operational assessment on reference standards and test equipment is performed prior to use.</p> <p>2.3.Documented operating policies and procedures for reference standards and test equipment are accessed and followed.</p> <p>2.4.Safety requirements for the use of reference standards and test equipment within the work environment are demonstrated.</p>
3. Store and transport reference standards and test equipment to maintain their integrity	<p>3.1.Specialised equipment and reference standards are stored in accordance with organisational procedures.</p> <p>3.2.Specialised equipment and reference standards are transported in accordance with organisational procedures.</p>
4. Perform required maintenance of reference standards and test equipment	<p>4.1.Maintenance requirements of reference standards and test equipment are identified.</p> <p>4.2.Regular maintenance of reference standards and test equipment is undertaken in accordance with maintenance register.</p> <p>4.3.Defective reference standards and test equipment are identified and reported for repair.</p>
5. Interpret documentation relating to the use of maintenance of reference standards and test equipment	<p>5.1.Information contained in the certificate of verification is checked and compared with reference standards and test equipment being used.</p> <p>5.2.Reference standards are used in accordance with documented instructions and certificates.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- accessing correct reference manuals for appropriate information concerning tolerances for reference standards
- identifying correct class of reference standard and matching with the appropriate trade measuring instrument
- accessing documented operating procedures for reference standards and test equipment
- using reference standards and test equipment
- calibrating/maintaining reference standards and test equipment
- maintaining maintenance register
- identifying and recording/reporting malfunction of or damage to reference standards or test equipment
- interpreting certificates of verification in relation to the use of reference standards
- using graphs and tables within certificates

Required knowledge

Look for evidence that confirms knowledge of:

- definition of 'legal metrology'
- the hierarchy of reference standards in relation to legal metrology
- Australian legal units of measurement used for trade
- the organisations involved in legal metrology in Australia
- application of different classes of reference standards used to test measuring instruments
- maintenance requirements for reference standards and test equipment
- major function and purpose of the Standards Laboratory
- the actions to be taken if reference standards and test equipment are found to be defective
- test equipment and reference standards storage specifications and procedures
- personal responsibility for workplace, health and safety requirements
- specialised equipment, reference standards and transport specifications and procedures
- transport specifications and procedures
- variations from storage specifications and procedures requiring appropriate approval
- variations from transport specifications and procedures requiring appropriate approval

REQUIRED SKILLS AND KNOWLEDGE

- maintenance required for test equipment where manufacturers' requirements are unavailable
- a range of maintenance and calibration procedures
- procedure for reporting faults
- action to be taken where legal traceability can not be confirmed
- the purpose of certificates of verification issued under the national legislation
- information in graphs and tables within certificates
- workplace, health and safety requirements relating to reference standards and test equipment

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to use and maintain reference standards. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.

Context of and specific resources for assessment

This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and conduct interviews	1.1. Interview is planned and initiated to achieve a specified purpose. 1.2. Suitable questions appropriate to the purpose are used. 1.3. Discretion and confidentiality are exercised where appropriate.
2. Participate in interviews	2.1. Appropriate preparation is undertaken. 2.2. Active listening skills are employed. 2.3. Self-presentation is applied appropriate to the purpose. 2.4. Questions are asked where appropriate. 2.5. Follow-up activities are clarified and reported in accordance with standard operating procedure.
3. Take part in negotiations	3.1. Language appropriate to the other party is used.

ELEMENT	PERFORMANCE CRITERIA
	3.2. Own and others' needs/wants are stated and clarified. 3.3. The views of fellow employees, including own group or team, are represented to others. 3.4. The appropriate communication medium is selected. 3.5. Follow-up activities are clarified and reported in accordance with standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- planning and formatting interviews
- developing open and closed interview questions to gain required information
- building rapport
- maintaining discretion and confidentiality
- preparing for interviews
- using active listening skills
- identifying interview goals
- identifying selection/assessment criteria
- clarifying follow-up activities
- reporting follow-up activities
- using appropriate language to the other party(s)
- clarifying needs/wants of others
- representing the views of fellow team or group members during negotiations
- selecting appropriate communication media during the negotiations

Required knowledge

Look for evidence that confirms knowledge of:

- the purpose of the interview
- the assessment criteria for the interview
- the procedures to be followed in planning and conducting the interview
- the detail/information to be obtained from the interview
- questions appropriate to the detail/information to be obtained

REQUIRED SKILLS AND KNOWLEDGE

- active listening techniques that can be applied in interview situations
- the effect(s) of the individual's presentation during the interview upon the interview
- the effect(s) of the timing of questions on the interviewee
- the need to follow-up issues raised during the interview and negotiations
- the procedures for reporting the outcomes of follow-up activities
- the parties to be involved in the negotiations
- the reasons for using appropriate language
- the reasons for maintaining confidentiality
- the reasons for clarifying the needs/wants of others
- the needs/wants of the individual
- the views of fellow team or group members
- a range of communication media
- the appropriate communication medium
- safe workplace practices

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Access information and/or records	1.1.Information requirements of tasks are determined and relevant information is accessed from a range of sources. 1.2.Workplace terminology is correctly recognised.
2. Organise and analyse information	2.1.Information is interpreted and organised in accordance with enterprise and work requirements. 2.2.Information is analysed according to enterprise and work requirements.
3. Communicate organised information using established workplace methods	3.1.Information is communicated using established workplace methods.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- accessing relevant information from a range of sources
- recording, where appropriate, the accessed information
- recognising and using workplace terms
- reading, interpreting and following information in workplace documentation
- checking and clarifying information
- organising, categorising and sequencing information

Required knowledge

Look for evidence that confirms knowledge of:

- types of information
- available sources of information
- information analysis techniques
- methods of categorising and organising information
- methods of recording and communicating information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to organise, analyse and communicate information.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency

EVIDENCE GUIDE	
	in new and different situations and contexts.
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with organising, analysing and communicating information or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work

RANGE STATEMENT	
situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Range of sources	Job instructions, specifications, standard operating procedures, charts, lists, documents, computer data, drawings, sketches, tables, technical manuals and/or charts and other applicable reference material
Workplace terminology	Terminology - referring to equipment, processes, workplace areas, staff and procedures - specific to the processes and equipment used in the workplace
Analyse	Analysis for this unit involves simple determinations of relevance and implication for the employee's immediate work requirements
Established workplace methods	<ul style="list-style-type: none"> • Proforma reports • Data entry e.g. bar coding and simple keyboard operations • Verbal • Drawings

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine job requirements	1.1. Nature and scope of task requirement are identified. 1.2. Information/data required to be accessed, input or stored is identified. 1.3. Source of information/data is identified.
2. Access information/data	2.1. Access procedures are followed. 2.2. Technology is navigated to find the required information/data. 2.3. Relevant software application menus, functions and commands are used to locate required information/data. 2.4. Information/data is retrieved using organisational procedures. 2.5. Information/data is checked for relevance to job requirements.
3. Input information/data	3.1. Relevant software menus, functions and commands are used to manipulate information/data. 3.2. Information/data is entered, changed, or removed as required.
4. Store	4.1. Data/files are saved following standard procedures

ELEMENT	PERFORMANCE CRITERIA
information/data	<p>prior to exiting the application.</p> <p>4.2.Data output is produced as required.</p> <p>4.3.Procedures for shutting down/logging off/exiting computing technology are followed.</p>
5. Access assistance as required	<p>5.1.Appropriate personnel are identified and consulted as required.</p> <p>5.2.Manuals, online help and other reference materials are identified and used as required.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- ability to enter or retrieve data using appropriate software applications
- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying task-related information
- using numerical operations within the scope of this unit

Required knowledge

Look for evidence that confirms knowledge of:

- functions and capabilities of various types of computing technology used in the workplace
- functions of software applications
- hazards and control measures associated with using computing technology, including housekeeping
- safe work practices and procedures

Evidence Guide

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify report requirements	1.1. Requirements for a written report are identified and confirmed with appropriate persons. 1.2. Information for the report is accessed according to workplace procedures. 1.3. Information is assessed for currency, accuracy and relevance for inclusion in the report.
2. Prepare and produce report	2.1. A structure and outline of the report are developed according to identified report requirements.

ELEMENT	PERFORMANCE CRITERIA
	<p>2.2. The report is written using terminology appropriate to the reader and established principles of report writing.</p> <p>2.3. Findings and conclusions are based on factual analysis.</p> <p>2.4. Recommendations, alternatives/suggestions are given, and supporting evidence supplied, where required.</p> <p>2.5. Protocols, conventions and legal requirements related to acknowledgements and intellectual property are applied where necessary.</p>
3. Finalise and distribute report	<p>3.1. The report is checked for accuracy and edited as required.</p> <p>3.2. The completed report is consistent with objectives and requirements.</p> <p>3.3. The report is copied, distributed and stored according to instructions and workplace procedures.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- following instructions
- checking and clarifying information
- sorting information/data
- assessing information/data for relevance
- using terminology and language appropriate to the target audience
- structuring and writing reports
- applying principles of report writing
- presenting findings and conclusions based on factual analysis
- making recommendations

REQUIRED SKILLS AND KNOWLEDGE

- managing own time
- planning and sequencing information
- reviewing and editing

Required knowledge

Look for evidence that confirms knowledge of:

- principles of report writing
- report types and purposes
- structure, style and parts of a report
- use of language and expression in reports
- common pitfalls, such as ambiguity, truisms, tautology, verbosity, circumlocution etc.
- report numbering systems
- techniques for reviewing and editing
- importance and benefits of preparing reports appropriate for the intended audience
- referencing and the importance of acknowledging sources
- safe work practices and procedures

Evidence Guide**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to write reports. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.

Context of and specific resources for assessment

This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and plan assessment requirements	<p>1.1. Area and purpose of assessment are identified in consultation with appropriate personnel and person/s being assessed.</p> <p>1.2. Appropriate competency standard/s and assessment guides are identified and selected as required.</p> <p>1.3. Evidence required to establish competency is determined according to industry and enterprise assessment procedure.</p> <p>1.4. Evidence required and assessment arrangements are discussed and confirmed in an appropriate way with person being assessed.</p>
2. Carry out assessment	2.1. Agreed assessment procedure is implemented in a

ELEMENT	PERFORMANCE CRITERIA
	<p>manner, time and location to maximise active participation from assessment candidate/s.</p> <p>2.2.Evidence consistent with the agreed assessment procedure is gathered using appropriate and specified methods and tools, and is documented according to agreed industry or site procedures.</p> <p>2.3.Evaluation and assessment decisions are made according to agreed assessment procedures.</p> <p>2.4.Clear and appropriate feedback is provided to person/s assessed.</p> <p>2.5.Advice is provided to assessment candidate/s on training needs, appeal mechanisms, as appropriate.</p>
3. Record results and review the procedure	<p>3.1.Assessment results are recorded according to industry or site procedures.</p> <p>3.2.Records are kept/stored in a manner appropriate to maintenance of confidentiality and safety.</p> <p>3.3.Assessment procedure are reviewed in cooperation with person being assessed and revised, if appropriate.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- obtaining and interpreting relevant competency standards and assessment guides
- discussing and confirming evidence required and the assessment arrangements
- performing assessments
- gathering and documenting evidence
- evaluating evidence and making assessment decisions
- providing clear and appropriate feedback
- advising on training needs and/or the appeals procedures
- recording assessment results
- storing records
- reviewing and revising the assessment procedure

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

Look for evidence that confirms knowledge of:

- area and purpose of the assessment
- persons to be consulted when determining the assessments to be carried out
- relevant competencies
- evidence required to establish competency
- reasons for identifying the evidence to be obtained
- industry assessment procedure
- reasons for discussing and confirming the assessment arrangements with the assessment candidate
- time and location of the assessment
- reasons for selecting the time/location for the assessment
- methods of gathering the evidence
- reasons for using the selected methods of obtaining evidence
- procedures for documenting the assessment
- procedures for evaluating the gathered evidence
- need to provide clear and positive feedback to the assessment candidate
- appeals procedure
- any further training required by the assessment candidate
- procedures for recording assessment results
- need to keep records securely stored
- procedures for storing assessment records
- procedures for reviewing assessments undertaken
- reasons for evaluating assessment methods/procedures
- procedures for revising assessment procedures

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Use hand tools	<p>1.1. Hand tools are selected appropriate to the task requirements.</p> <p>1.2. Hand tools are used to produce desired outcomes to job specifications which may include finish, tension, size or shape.</p> <p>1.3. All safety requirements are adhered to before, during and after use.</p> <p>1.4. Unsafe or faulty tools are identified and marked for repair according to designated procedures before, during and after use.</p> <p>1.5. Routine maintenance of tools, including hand sharpening is undertaken according to standard</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>operational procedures, principles and techniques.</p> <p>1.6. Hand tools are stored safely in appropriate location according to standard operational procedures and manufacturers' recommendations.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading and following information on standard operating procedures
- following verbal instructions
- selecting hand tools appropriate to the task
- using hand tools safely
- identifying hand tool defects and marking for repair
- maintaining/sharpening hand tools using appropriate techniques
- storing hand tools in accordance with manufacturers'/standard operating procedures

Required knowledge

Look for evidence that confirms knowledge of:

- applications of different hand tools in a general engineering context
- common faults and/or defects in hand tools
- procedures for marking unsafe or faulty tools for repair
- routine maintenance requirements for a range of hand tools
- storage location and procedures for a range of hand tools
- hazards and control measures associated with using hand tools
- use and application of personal protective equipment
- safe work practices and procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Use power tools	<p>1.1. Power tools are selected appropriate to the task requirements.</p> <p>1.2. Power tools are used for a determined sequence of operations - which may include clamping, alignment and adjustment to produce desired outcomes - to job specifications which may include finish, size or shape.</p> <p>1.3. All safety requirements are adhered to before, during and after use.</p> <p>1.4. Unsafe or faulty tools are identified and marked for repair before, during and after use according to designated procedures.</p> <p>1.5. Operational maintenance of tools, including hand sharpening, is undertaken according to standard</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>workplace procedures, principles and techniques.</p> <p>1.6. Power tools are stored safely in appropriate location according to standard workshop procedures and manufacturers' recommendations.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading and following information on standard operating procedures
- following verbal instructions
- selecting power tools appropriate to the task
- using power tools safely
- using clamping/securing devices
- identifying power tool defects
- maintaining power tools using appropriate techniques
- sharpening tools/tool bits within the scope of this unit
- storing power tools according to manufacturers'/ standard operating procedures.

Required knowledge

Look for evidence that confirms knowledge of:

- application of different power tools
- clamping/securing methods
- adjustments/alignments to a range of power tools
- common faults and/or defects in power tools
- procedures for marking unsafe or faulty power tools for repair
- routine maintenance requirements of a range of power tools
- tool sharpening techniques for a range of power tools
- storage location and procedures of a range of power tools
- hazards/control measures associated with power tools
- use and application of personal protective equipment
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	A person who demonstrates competency in this unit must be able to use power tools/hand held operations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with using power tools/hand held operations or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning should not require language, literacy and numeracy skills beyond those required in this unit. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.

EVIDENCE GUIDE

Guidance information for assessment	
--	--

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Power tools

Electric or pneumatic/hydraulic drills, grinders, jigsaws, nibblers, cutting saws, sanders, planers, routers, pedestal drills and pedestal grinders

Clamping

Multigrips, vices, jigs and fixtures, clamps etc.

Job specifications

Finish, size or shape etc.

Operational maintenance

Hand sharpening, cleaning, lubricating, tightening
Simple tool repairs and adjustments using engineering principles, tools, equipment and procedures to statutory and regulatory requirements

MEM22013A Coordinate engineering projects

Modification History

Release 1 - New unit. Replaces MEM22004A, but not equivalent.

Unit Descriptor

This unit of competency covers the coordination of engineering projects within project plans and budgets. It includes monitoring and maintaining the project implementation plan, performance analysis and use of project management software.

Application of the Unit

This unit applies to people with significant coordination and facilitation responsibilities for engineering or related projects. The projects will usually have fixed term or purpose and involve specific engineering-related tasks, such as installation and commissioning of plant, design of equipment or major overhauls.

The coordination role covered by the unit includes monitoring of engineering and other technical performance parameters against the project plan as well as monitoring of other project parameters that impact on engineering and technical compliance of the project. These include finance, accounting, budgeting and control, resourcing, tenders, contracts, work health and safety (WHS), risk management, human resources, and legal and regulatory requirements.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used,

a unit of competency. further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Review and confirm parameters of delegated project	<p>1.1 Review designs, drawings, standards and established implementation plan and schedule to establish scope of the engineering project</p> <p>1.2 Review budget and control measures for delegated project</p> <p>1.3 Review project management structure, functional team relationships, communications and reporting lines</p> <p>1.4 Review materials, logistics and services procurement requirements</p> <p>1.5 Review the need for appropriate technical and professional assistance</p> <p>1.6 Review physical resources requirements</p> <p>1.7 Review human resources and skills development requirements</p> <p>1.8 Review compliance requirements for project, including WHS requirements, codes of practice, regulations, standards, legal and other regulatory requirements, and enterprise procedures</p>
2	Coordinate implementation of delegated project	<p>2.1 Assign and obtain team agreement to plans, communication arrangements, responsibilities, schedules and requirements</p> <p>2.2 Establish liaison arrangements with other functional groups</p> <p>2.3 Ensure efficient and documented arrangements for requests for further information (RFIs) from designers and other experts</p> <p>2.4 Confirm internal and external reporting requirements,</p>

- including content, schedule and sign-off arrangements
- 2.5 Confirm suppliers, contractors and delivery schedules, and any installation requirements
 - 2.6 Coordinate actions to overcome constraints and contingencies, including coordination with stakeholders and adjustments, if necessary, to plans and schedules
 - 2.7 Coordinate and monitor specialist and technical support services to meet schedules, budgets and performance requirements
 - 2.8 Maintain and monitor records of project tasks for accountability against objectives, schedule and budget
 - 2.9 Apply principles of continuous improvement to implementation
 - 2.10 Implement project management, resources control and budgeting software, when required
- 3 Report on outcomes
 - 3.1 Record progress in accordance with procedures
 - 3.2 Supervise the completion of project, including sign-off and completion of required documentation of the project

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- coordinating technically complex engineering-related projects
- project management skills, including using resources control and budgeting software, as required
- reviewing, confirming and establishing parameters for project objectives, project plan, budget and scheduling related to tasks
- communicating, negotiating and reviewing with stakeholders throughout project duration
- coordinating and monitoring task schedules and resources; addressing contingencies and constraints, continuous improvement, problem solving and decision making; and adjusting short-term planning and rescheduling, as necessary

- implementing systems thinking and concurrent engineering, as appropriate
- project planning and scheduling, including:
 - working within or establishing a project management structure
 - establishing functional team relationships, communications and reporting lines
 - ensuring compliance with business plans, financial objectives, budgets and customer brief
 - incorporating WHS and other regulatory requirements
- establishing accountabilities and responsibilities (including recording and reporting) for:
 - scheduling and implementation of project tasks
 - physical and financial resources and budget
 - the use of professional services and contractors
 - maintaining records of trades and industry contacts and sources of expert advice
 - records of procedures and regulatory compliance
 - personal and team skills development
 - maintaining task schedules, Gantt charts and other planning tools and resources
 - procedures for addressing contingencies and constraints, continuous improvement, problem solving and decision making, and adjusting short-term planning and rescheduling as necessary
 - organisational procedures for compliance with WHS, codes of practice, and other legislative requirements, environmental and social obligations, and ethical practice
 - risk management procedures

Required knowledge

Required knowledge includes:

- engineering and technology knowledge appropriate to the project
- context of project, including:
 - customer-supplier relationships
 - regulatory requirements and environment
 - materials resourcing and labour and skills supply arrangements
 - market and competitive environment
- human resources and skills development procedures and options for skill needs typical of engineering projects
- typical budget and control measures for engineering-related projects, including:
 - audit
 - tenders
 - contracts
 - schedules
 - budget categories and items:
 - personnel
 - materials

- equipment procurement and maintenance
- contractors
- logistics
- security
- requirements for and functions of technical documentation, graphics and specifications, meeting procedures, records and minute taking
- WHS Acts and regulations relevant to engineering projects
- risk management procedures, isolation and notification procedures in the event of irregularities or accident
- systems thinking, contingency and constraints management
- conflict resolution, problem solving and decision making

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to coordinate an engineering project This includes working individually and as part of a team and recognising and complying with normal control procedures on engineering projects.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently: <ul style="list-style-type: none"> • review, confirm and establish project objectives, plans and schedules • identify technical and engineering requirements of project from drawings, customer briefs, contracts and other appropriate sources • identify and manage stakeholders, including customers, suppliers, contractors and regulatory agencies • manage for contingencies and non-conformances • cooperate, communicate and negotiate effectively with stakeholders.
Context of and specific resources for assessment	<ul style="list-style-type: none"> • This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. • Where applicable, reasonable adjustment must be made to

	<p>work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p> <ul style="list-style-type: none"> • Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge. • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application. • Assessment may be applied under project-related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • Assessment may be in conjunction with assessment of other units of competency where required.
Guidance information for assessment	<p>Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Personal responsibilities	<p>Personal responsibilities within the project may be defined by:</p> <ul style="list-style-type: none"> • role specification and delegations • workplace agreement or Award • negotiation with clients and/or supervisors • contracts • legal or regulatory obligations
----------------------------------	--

	<ul style="list-style-type: none"> • professional and ethical considerations • agreed operational or project requirements
Systems thinking	<p>Systems thinking refers to the conduct of engineering work in a manner that demonstrates knowledge of how the interaction of different technical systems on equipment, machinery or structures, as well as the skills and techniques of personnel, combine to perform or support engineering-related operations, processes or projects. It embraces determining or establishing how the function of each technical system or component, as well as the skills and techniques of personnel, effects or potentially may effect, outcomes. Systems should be interpreted broadly within the context of the organisation and depending on the project or operation can include equipment, related facilities, material, software, internal services and personnel, and other organisations in the value chain</p>
WHS, regulatory requirements and enterprise procedures	<p>WHS, regulatory requirements and enterprise procedures may include:</p> <ul style="list-style-type: none"> • WHS Acts and regulations • relevant standards • codes of practice from Australian and overseas engineering and technical associations and societies • environmental protection and planning law • risk assessments • registration requirements • safe work practices • state and territory regulatory requirements
Stakeholders	<p>Relevant stakeholders may include:</p> <ul style="list-style-type: none"> • teams • contractors • support professionals and teams • technicians • functional groups • customers • suppliers
Records of project	<p>Records of project may include:</p> <ul style="list-style-type: none"> • tenders and contracts • schedules • personnel • resource allocations and financial management procedures • standard operating procedures, including maintenance procedures • WHS committee minutes and action

	<ul style="list-style-type: none"> • risk management and mitigation • documentation and records of current safe work methods statements (SWMS), material safety data sheets (MSDS), work permits, standards and codes of practice • audits • meetings and communications • graphics and specifications
Continuous improvement implementation	<p>Continuous improvement implementation may relate to:</p> <ul style="list-style-type: none"> • plant, products, processes, systems or services, including design, development, implementation or manufacture, commissioning, operation or delivery and maintenance. It may include techniques, such as: <ul style="list-style-type: none"> • balanced scorecard • current and future state mapping • measuring performance against benchmarks • process improvement, problem solving and decision making • data management, generation, recording, analysing, storing and use of software • training for improvement systems participation • technical training
Appropriate technical and professional assistance	<p>Appropriate technical and professional assistance may include:</p> <ul style="list-style-type: none"> • technical support and advice relating to elements which have intrinsic dangers • professional and technical support for specific technologies and equipment • professional services for: <ul style="list-style-type: none"> • finance, accounts and tax • insurance and legal, • training and human resources
Constraints and contingencies	<p>Constraints and contingencies may be:</p> <ul style="list-style-type: none"> • financial, organisational, procedural or culture constraints • physical constraints, such as limits to resources, limits to site access or logistical limitations

MEM23004A Apply technical mathematics

Modification History

Release 1 - New unit. Replaces MEM23001A, but not equivalent.

Unit Descriptor

This unit of competency covers the application of mathematical analysis, graphical and software techniques to engineering problems. It includes exponential and logarithmic functions, trigonometric equations involving single and double angles, sequences and series, two dimensional vector analysis, complex numbers, determinants and matrices.

Application of the Unit

The unit applies to engineering or related activities requiring specific mathematical techniques. It is suitable for people giving technical support to design, operations or maintenance activities and those pursuing technical qualifications and careers at paraprofessional or technician level.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element.

Elements and Performance Criteria

1	Determine scope of technical mathematical techniques required for an engineering application	1.1	Analyse an engineering application for required technical mathematical tasks
		1.2	Develop systematic methods for layout and solution checking
		1.3	Determine mathematical software required for analytical and graphical solutions and validate software using traditional solutions to simple examples
2	Apply technical mathematical techniques to engineering application	2.1	Use appropriate software for analytical and graphical solutions
		2.2	Convert between different number systems
		2.3	Use appropriate mathematical techniques required for analysis and solution
		2.4	Use appropriate data representations to communicate the solution to others.
		2.5	Report results and document calculations, graphs and analysis

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- solving mathematical problems using standard engineering software packages, and validating software results of simple examples analytically and/or graphically
- manipulating values using decimal, binary and hexadecimal number systems
- graphing and analysing functions for solutions:
 - exponential and logarithmic functions
 - trigonometric functions
- using the techniques of sequences and series to solve simple mathematical problems
- using the techniques of two dimensional vectors to solve mathematic and applied problems
- solving problems involving complex quantities using the properties, operations and theorems

of complex numbers

- using determinant and matrix analysis to solve algebraic and vectorial problems
- using probability to assess likely occurrences

Required knowledge

Required knowledge includes:

- software for mathematical analysis and graphical representations
- binomials and polynomials
- exponential and logarithmic functions
- trigonometric equations
- sequences and series
- two dimensional vectors
- complex numbers
- determinant and matrices
- probability
- stability analysis using plots

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to apply mathematical analysis, graphical and software techniques to engineering-related problems within the context of delegations and other checking and technical oversight procedures. The candidate may demonstrate competence through either working individually or as part of a team.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently: <ul style="list-style-type: none"> • solve mathematical problems using software • validate software results of simple examples analytically and/or graphically • manipulate values using decimal, binary and hexadecimal number systems • graph and analyse exponential, logarithmic and trigonometric functions for solutions • use the techniques of sequences and series to solve simple

MEM23007A Apply calculus to engineering tasks

Modification History

Release 1 - New unit. Replaces MEM23002A, but not equivalent.

Unit Descriptor

This unit of competency covers the application of calculus, including differentiation and integration techniques to engineering applications. It includes the use and application of standard differentiation and integration rules, finding maximum and minimum values of curves, application to rates of change and slope, finding definite integrals, using method of substitution, using trigonometric identities and finding areas under curves.

Application of the Unit

The unit applies to engineering or related activities requiring the application of mathematical techniques using calculus. It is suitable for people giving technical support to design, operations or maintenance activities and those pursuing technical qualifications and careers at paraprofessional or technician level.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEM23004A Apply technical mathematics

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element.

Elements and Performance Criteria

1	Determine scope of calculus techniques required for an engineering application	1.1	Analyse an engineering application for required calculus tasks
		1.2	Develop systematic methods for layout and solution validation, including any required external sign-off of solution
		1.3	Identify calculus technique and any software required for analysis and resolution of identified engineering application tasks
		1.4	Identify sources for professional and technical assistance, if required
2	Apply differential techniques to engineering applications	2.1	Apply standard differentiation rules to solve engineering problems
		2.2	Check solution is laid out correctly and is error free
		2.3	Review solution to ensure it provides information relevant to resolution of engineering application task
		2.4	Report results and document calculations, graphs and analysis
3	Apply integration techniques to engineering applications	3.1	Apply standard integration rules to solve engineering problems
		3.2	Check solution is laid out correctly and is error free
		3.3	Review solution to ensure it provides information relevant to resolution of engineering application task
		3.4	Report results and document calculations, graphs and analysis

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- analysing engineering applications to determine relevant calculus techniques
- applying relevant differentiation and integration concepts and tools to engineering applications
- using appropriate software and/or scientific calculators to generate solutions to statistical and probability-related engineering problems
- using differentiation to find rates of change
- applying special calculus techniques to solve more complex integrals, such as:
 - method of substitution
 - using trigonometric identities
- identifying and solving simple first and second order differential equations
- identifying key points to find constants of integration
- finding integrals of algebraic, trigonometric and exponential functions
- establishing appropriate procedures for checking and validating solutions
- logical layout and presentation of data developed using calculus
- reporting and effectively communicating the results of calculus-based analysis

Required knowledge

Required knowledge includes:

- identifying appropriate limits and applying to engineering problems being solved with calculus techniques
- differentiation rules and techniques
- partial differentiation
- relationship between differentiation and attributes of mathematical curves and graphs
- optimisation of variables based on maximum and minimum values of mathematical curves and graphs
- integration as the reverse of differentiation
- integration rules and techniques
- the definite integral

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment

Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to apply calculus techniques to engineering and related problems within the context of specified engineering applications and solution validation and technical oversight procedures. The candidate may demonstrate competence through either working individually or as part of a team.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently: <ul style="list-style-type: none"> • solve mathematical problems related to engineering and manufacturing using calculus techniques • validate results of mathematical problems using calculus either analytically and/or graphically • manipulate engineering and manufacturing-related mathematical functions and equations using calculus techniques • analyse mathematical problems by using appropriate calculus techniques to achieve engineering and manufacturing solutions.
Context of and specific resources for assessment	<ul style="list-style-type: none"> • This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. • Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. • Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge. • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application. • Assessment may be applied under project-related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • Assessment may be in conjunction with assessment of other units

	of competency where required.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

MEM234019A Apply finite element analysis in engineering design

Modification History

New unit

Unit Descriptor

This unit of competency covers the application of finite element analysis (FEA) for engineering design and modification analyses, including stress analysis, displacements and natural frequencies, and temperature and heat distributions in engineering or related applications.

Application of the Unit

This unit applies to engineering or related applications across all forms of manufacturing and engineering. It is suitable for people with structural, plant or equipment design or maintenance responsibilities, and those pursuing engineering or related qualifications and careers.

Prior experience in mechanics, mathematics and computing techniques and computer-aided design (CAD) is required and areas, such as thermodynamics or structures, depending on the application of the FEA.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | |
|---|--|---|
| 1 | Integrate requirement for FEA into an engineering design application | 1.1 Establish functions, features and performance parameters of plant, structure or equipment to be analysed |
| | | 1.2 Determine parameters to the brief or contract |
| | | 1.3 Determine occupational health and safety (OHS), regulatory, sustainability and environmental requirements of the application |
| | | 1.4 Provide initial advice based on discipline knowledge, OHS and regulatory standards relating to the suitability of using FEA as an analytical technique |
| 2 | Apply FEA solution techniques | 2.1 Set up a finite element model, including internal and external parameters, element mesh and nodes |
| | | 2.2 Select appropriate solver and adjust parameters for optimum solution |
| | | 2.3 Generate and assess solution file for warnings or errors |
| | | 2.4 Interpret results and generate graphics |
| | | 2.5 Identify areas of excessive stress, deformation, instability and excessive temperatures |
| | | 2.6 Verify results to the required certainty level |
| | | 2.7 Apply systems or holistic thinking, contingencies and constraints management, problem solving and decision making techniques in making recommendations to achieve satisfactory functions, features and performance parameters |
| | | 2.8 Review initial results with client |
| | | 2.9 Negotiate adjustments to brief or contract parameters, if required |
| 3 | Embed FEA | 3.1 Report and recommend design improvements or |

results in design application		modifications as a result of the FEA analysis
	3.2	Document results of investigations, analysis and recommendations
	3.3	Obtain sign-off

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- gathering information relevant to the FEA task
- interpreting and evaluating documentation, specifications and drawings for FEA purposes
- researching FEA, mathematical techniques, applicability and limitations, software and evolving opportunities for FEA
- setting up FEA model, parameters, element mesh and nodes
- using FEA software, including pre- and post-processor, if any, effectively
- constructing models of engineering part or structure suitable for FEA using appropriate software
- determining and setting parameters and conditions for required type of analysis
- applying boundary conditions to suit type of analysis required, including axisymmetric analysis
- choosing, setting up, and running appropriate solvers, such as linear static, linear buckling, non-linear static, natural frequency, steady state, heat, and so on
- interpreting results, generating graphics and identifying significant issues
- validating software outputs
- reporting and documenting results

Required knowledge

Required knowledge includes:

- FEA task parameters for applications, such as:
 - stresses and displacements
 - natural frequencies
 - heat and temperature distribution
- software modelling and validation techniques, including:
 - element type and shape for error minimisation
 - library files

- geometry importation from other software packages
- application of boundary conditions
- validation using comparison with traditional solution of simple examples and reviewing of past successful applications
- methods for presentation of results, including software-generated graphics
- measures of excessive stress and/or deformation and to recommend modifications
- software functions and features, such as:
 - deformed displays
 - colour contour plots, contour averaging and contour jumps
 - peeking, graphing and animating
 - multiple views
- coordinate systems:
 - Cartesian
 - polar
 - spherical coordinate systems
- stress concentrations
- structural loads:
 - dead loads, live loads and wind loads
 - structural and non-structural mass
- material libraries:
 - types of beam, plate and brick elements
 - properties of materials, such as stress, strain, modulus of elasticity, modulus of rigidity, Poisson's ratio and allowable stress
- stresses:
 - equivalent stresses based on Von Mises criterion and Tresca criterion
 - shear force and bending moment diagrams, bending stress and torsional stress
 - heat transfer modes (conduction, convection and radiation)
 - thermal stress
- accuracy checking methods, including use of strain gauges and solvers
- software validation techniques

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence	Assessors must be satisfied that the candidate can competently and consistently:
--	--

required to demonstrate competency in this unit	<ul style="list-style-type: none"> • determine functions, features and performance parameters of plant, structure or equipment to be analysed • determine parameters to the brief or contract, OHS, regulatory, risk management and sustainability requirements • communicate, advise, negotiate and review with stakeholders and client throughout process • apply FEA solution techniques • set up FEA model, parameters, element mesh and nodes • select solver and adjust and optimise parameters • generate and assess solution file • interpret results, generate graphics and identify significant issues • validate software outputs • apply systems or holistic thinking, contingencies and constraints management, problem solving and decision making techniques in making recommendations • report and document results.
Context of and specific resources for assessment	<ul style="list-style-type: none"> • This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. • Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. • Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge. • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its correct interpretation and application. • Assessment may be applied under project-related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • Assessment may be in conjunction with assessment of other units of competency where required.

Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.
-------------------------------------	---

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

FEA	FEA uses numerical techniques to find approximate solutions for engineering problems, such as: <ul style="list-style-type: none"> • load, stiffness and deflection analysis and animations for vehicle crash simulations • hopper and bin designs • piping systems • heat flow, such as in in cavity moulds, load distribution, stiffness and strength in structures
Parameters to the brief	The design brief may include the design of new equipment or fault analysis, rectification or modification to an existing design. Parameters to the design brief may include: <ul style="list-style-type: none"> • determination of the degree of innovation and creativity expected by the client • design process limits and budgets • product cost limits and budgets • performance specifications • equipment availability, capacities and restrictions • specified administrative, communication and approval procedures • other special features and limits in the design brief
Standards and codes	Standards and codes refer to all relevant Australian and international standards and codes applicable to a particular design task
OHS, regulatory, sustainability and environmental requirements	OHS, regulatory, sustainability and environmental requirements may include: <ul style="list-style-type: none"> • OHS Acts and regulations • relevant standards • industry codes of practice • risk assessments

	<ul style="list-style-type: none"> • registration requirements • safe work practices • minimising ecological and environmental footprint of process, plant and product • maximising economic benefit of process plant and product to the organisation and the community • minimising the negative OHS impact on employees, community and customer • state and territory regulatory requirements
Appropriate solver	<p>Appropriate solver may include:</p> <ul style="list-style-type: none"> • sparse • preconditioned conjugate gradient (PCG) • incomplete cholesky conjugate gradient • frontal
Client	<p>Client may be:</p> <ul style="list-style-type: none"> • internal or external to the organisation

MEM234022A Apply advanced calculus to technology problems

Modification History

New unit

Unit Descriptor

This unit of competency covers the application of advanced calculus in an engineering or related application. It includes differential and integral calculus and covers both the application of theory in simple calculations and the use of relevant software packages for more complex situations.

Application of the Unit

This unit applies to projects or tasks requiring advanced calculus, either manually or through use of an appropriate software package. It is suitable for paraprofessionals and technologists required to solve advanced mathematical problems in an engineering or related field, or those pursuing technologist careers and qualifications.

Prior or concurrent experience in mathematics covering calculus and differentials is required.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | | |
|---|---|-----|--|
| 1 | Identify a need for the application of calculus | 1.1 | Identify a problem requiring application of calculus |
| | | 1.2 | Define the problem |
| | | 1.3 | Determine data currently available for analysis |
| | | 1.4 | Identify ways of obtaining other required data |
| | | 1.5 | Determine information required from outcome |
| 2 | Prepare to solve problem by calculus | 2.1 | Determine appropriate calculus to be applied |
| | | 2.2 | Identify and gain access to appropriate computational devices |
| | | 2.3 | Collect required input data |
| | | 2.4 | Analyse collected data for suitability and completeness |
| | | 2.5 | Take appropriate action to address any deficiencies found |
| 3 | Solve problem using calculus | 3.1 | Apply appropriate technique to collected data |
| | | 3.2 | Check answer by appropriate means |
| | | 3.3 | Interpret answer to determine information required by problem definition |
| 4 | Communicate outcomes | 4.1 | Communicate outcome to relevant stakeholders by appropriate means |
| | | 4.2 | Explain outcome to stakeholders, as appropriate |
| | | 4.3 | Check outcome has addressed problem |

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- identifying and defining problems
- collecting and analysing data
- reporting and presenting data and quantitative information
- communicating effectively with stakeholders on problem resolution

Required knowledge

Required knowledge includes:

- differential calculus:
 - introduction - review of standard derivatives and rules:
 - power rule
 - product rule
 - quotient rule
 - chain or function of a function rule
 - standard derivatives for a variety of common functions
 - higher order derivatives
 - graph sketching
 - maxima and minima (optimisation)
 - rates of change
 - small increments (errors and approximations)
 - implicit differentiation
 - logarithmic differentiation
 - partial differentiation
 - directional derivatives
- integral calculus
 - revision-integration techniques (areas and volumes)
 - partial fractions
 - integration by parts
 - trigonometric and hyperbolic substitution methods
 - improper integrals
 - integration of partial derivatives
 - evaluation of arc lengths
 - evaluation of surface areas

- mean and RMS values
- approximate integration (the trapezoidal and Simpson's rules)
- evaluation of centre of mass
- evaluation of centroidal positions in plane regions
- evaluation of moments of inertia and second moments of area
- evaluation of work and energy
- evaluation of centres of pressure on submerged plates

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently: <ul style="list-style-type: none"> • identify appropriate calculus technique for engineering or related problems • apply the appropriate technique to the problem • check answer has addressed problem • communicate the outcome of the analysis in an appropriate way.
Context of and specific resources for assessment	<ul style="list-style-type: none"> • This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. The competency covered by this unit would be demonstrated by an individual working alone or as part of a team. • Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. • Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge. • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure its

	<p>correct interpretation and application.</p> <ul style="list-style-type: none"> • Assessment may be applied under project-related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • Assessment may be in conjunction with assessment of other units of competency where required.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Data available	<p>Data currently available includes:</p> <ul style="list-style-type: none"> • all relevant data which is currently available within the organisation or could be readily obtained
Information required	Information required means the outcome which needs to be produced in order to solve/assist in resolving the defined problem
Calculus	<p>Calculus for this unit refers to:</p> <ul style="list-style-type: none"> • problem solving using one or more or any of the techniques listed under 'required knowledge' or a related technique
Computational device	<p>Computational devices include:</p> <ul style="list-style-type: none"> • calculators with calculus functions • computer software packages
Appropriate action	<p>Appropriate action may include:</p> <ul style="list-style-type: none"> • taking necessary steps to obtain required data • obtaining some relevant proxy for the desired data • choosing a different calculus/computational device which will function with available data
Appropriate technique	<p>Appropriate technique includes:</p> <ul style="list-style-type: none"> • selected calculus which will yield required outcome

	<ul style="list-style-type: none"> • technique which is appropriate for the available data and which is relevant to the problem
Check answer	Checking answer means that the answer is examined to ensure it is within the range of expected logical results
Interpret answer	Interpret answer means translating the result of the calculus solution into a form which is useable by the relevant stakeholders
Appropriate communication	<p>Appropriate communication may include:</p> <ul style="list-style-type: none"> • report • presentation • verbal communication • web-based • electronic or hard copy
Check outcome	<p>Check outcome includes:</p> <ul style="list-style-type: none"> • ensuring that the result of the analysis does assist in the resolution of the problem

MEM24001B Perform basic penetrant testing

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers performing basic penetrant testing procedures in a range of industrial applications.
------------------------	---

Application of the Unit

Application of the unit	<p>This unit applies to basic penetrant testing techniques on fabrications, structures and components across a wide range of industries and restricted to basic visible dye and/or process penetrant line methods.</p> <p>The work can relate to scheduled and unscheduled maintenance activities, using general tools, specific penetrant testing equipment as specified in maintenance documentation, testing procedures or operator instructions.</p> <p>Actual and potential defects are to be considered, together with ongoing abnormalities in fabrications, components and structures.</p> <p>Penetrant testing is performed on critical component or structural zones.</p> <p>All testing must be completed with particular attention to personal safety and OH&S regulations. Certification against Australian standards may be achieved where assessment in this unit of competency is carried out in conjunction with an examining authority as described in ISO 9712.</p> <p>Materials and chemicals which are subject to codes and regulations - for example, chemicals, explosives, solvents, dangerous materials, acids, or noxious waste products - must be subject to safe work habits and must be stored and used in accordance with safe work practices.</p> <p>This unit should not be selected when Unit MEM24002B</p>
--------------------------------	--

	<p>(Perform penetrant testing) has already been selected.</p> <p>Where power tools are required, Unit MEM18002B (Use power tools/hand held operations) should also be selected.</p> <p>Band: A</p> <p>Unit Weight: 2</p>

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare inspection areas for basic penetrant testing	1.1. Inspection areas are cleaned and prepared for testing using appropriate procedures and materials. 1.2. Preparation processes are carried out in accordance with the relevant procedures and OH&S requirements. 1.3. Inspection areas are visually assessed and obvious discontinuities are identified.
2. Perform basic penetrant testing	2.1. Nominated test is identified from standard operating procedures. 2.2. Test equipment is prepared in accordance with standard operating procedures. 2.3. Test media is selected and applied in accordance with workplace practices and specifications. 2.4. Penetrant test is carried out in accordance with relevant work instructions and OH&S requirements. 2.5. Penetrant testing equipment is maintained and stored in accordance with standard operating procedures and OH&S requirements.
3. Report the results of penetrant test(s)	3.1. Basic indications are checked and defects are identified in accordance with enterprise standards and/or procedures. 3.2. Basic indications are confirmed in accordance with enterprise standards and/or procedures. 3.3. Test results are reported in accordance with enterprise standards and/or procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- preparing inspection areas
- identifying discontinuities
- applying procedures

REQUIRED SKILLS AND KNOWLEDGE

- applying test media
- applying principles of penetrant testing techniques
- identifying defects
- reading and interpreting routine information on written job instructions, specifications and standard operating procedures.
- following oral instructions
- entering routine and familiar information onto proformas and standard workplace forms

Required knowledge

Look for evidence that confirms knowledge of:

- cleaning and preparation processes
- precleaning methods and their areas of use - solvents, vapour degrease, etching, detergents, paint removers, mechanical methods
- consequences of incorrect preparation
- procedures and OH&S requirements in relation to the preparation process
- basic concepts and principles of NDT; general terms, purpose of NDT and areas of application of NDT
- scope and basic description of test
- general properties of penetrants - penetrability, removability, visibility
- emulsifier types
- developer types
- use of standard test panels
- established inspection procedures and techniques
- types of discontinuities and their consequences
- procedure for carrying out penetrant testing
- penetrant application
- dwell times
- penetrant removal
- developer application
- dry powder
- development time
- factors affecting indications
- non-relevant indications
- post-cleaning methods and their areas of use
- basic maintenance and storage procedures for testing equipment
- OH&S requirements including storage requirements
- definition of a defect and common basic defects
- methods/procedures for reporting test results

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to perform basic penetrant testing. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with performing basic penetrant testing or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p>Method of assessment</p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures,</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- interpreting and following procedures
- identifying inspection areas
- conducting visual inspections
- identifying discontinuities and defects
- selecting appropriate testing techniques and procedures
- using decision making skills
- assessing risk
- performing measurements needed to meet the requirements of this unit
- entering routine and familiar information onto proformas and standard workplace forms
- locating, reading and interpreting information on written job instructions, specifications, drawings, charts, lists and other reference documentation
- planning, sequencing operations

Required knowledge

Look for evidence that confirms knowledge of:

- cleaning and preparation processes for a range of test surfaces
- procedure, statutory and OH&S requirements in relation to the preparation process
- established assessment procedures and techniques
- types of discontinuities and their consequences/effect on the material
- penetrant testing techniques and procedures for a range of situations
- tools, equipment, techniques
- principles and applications of penetrant testing techniques
- hazards and safety requirements associated with penetrant testing
- maintenance and storage procedures for test equipment
- common faults and damage
- range of defects
- meaning and application of national and international codes and standards
- methods/procedures for reporting test results
- implications of test results for the particular material/application
- any applicable industry standards, national/Australian standards, NOHSC guides, State/Territory regulatory codes of practice/standards
- use and application of personal protective equipment
- safe work practices and procedures
- relevant hazards and control measures related to the competency

ELEMENT	PERFORMANCE CRITERIA
1. Prepare inspection areas for basic magnetic particle testing	<p>1.1. Inspection areas are cleaned and prepared for testing using appropriate procedures and materials.</p> <p>1.2. Preparation processes are carried out in accordance with the relevant specifications and OH&S requirements.</p> <p>1.3. Inspection areas are visually assessed and obvious discontinuities are identified.</p>
2. Perform basic magnetic particle testing	<p>2.1. Nominated 'yoke' or 'bench' magnetic particle testing procedure is identified from standard operating procedures.</p> <p>2.2. Test equipment is prepared in accordance with relevant standards and/or procedures.</p> <p>2.3. Magnetic particle test is carried out in accordance with relevant work instructions and OHS requirements.</p> <p>2.4. Magnetic particle testing equipment is maintained and stored in accordance with standard operating procedures and OH&S requirements.</p>
3. Report the results of magnetic particle test(s)	<p>3.1. Basic indications are checked and defects are identified in accordance with enterprise standards and/or procedures.</p> <p>3.2. Basic indications are confirmed in accordance with enterprise standards and/or procedures.</p> <p>3.3. Test results are reported in accordance with enterprise standards and/or procedures.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

REQUIRED SKILLS AND KNOWLEDGE**Required skills**

Look for evidence that confirms skills in:

- interpreting and following procedures
- identifying inspection areas
- identifying discontinuities and defects
- selecting appropriate testing techniques and procedures
- assessing risks
- entering routine and familiar information onto proformas and standard workplace forms
- locating, reading and interpreting information on written job instructions, specifications, charts, lists and other reference documentation
- planning, sequencing operations

Required knowledge

Look for evidence that confirms knowledge of:

- surface preparation
- procedures and OH&S requirements in relation to the preparation process
- established assessment procedures and techniques
- types of discontinuities and their consequences
- scope and basic principles of magnetic particle testing
- procedure for carrying out magnetic particle test using either the 'yoke' or 'bench'
- advantages and limitations of magnetic particle testing
- hazards and safety precautions associated with magnetic particle testing
- basic maintenance and storage procedures for testing equipment
- common basic defects
- methods/procedures for reporting test results
- advantages, limitations of various equipment
- magnetic particle application - methods for wet, dry particles
- recording and reporting results of simple tests
- safety precautions in testing
- use of toxic, flammable materials, electrical hazards
- use and application of personal protective equipment
- safe work practices and procedures
- relevant hazards and control measures related to the competency

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to perform basic magnetic particle testing. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with performing basic magnetic particle testing procedures in a range of industrial applications or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p>Method of assessment</p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare inspection areas for magnetic particle testing	1.1. Inspection areas are identified, cleaned and prepared for testing using appropriate procedures and materials. 1.2. Preparation processes are carried out in accordance with the relevant procedures, statutory and OH&S requirements. 1.3. Inspection areas are visually assessed and obvious discontinuities are identified.
2. Perform magnetic particle testing	2.1. The most appropriate magnetic particle test for the material/application is selected. 2.2. Testing equipment is selected and prepared in accordance with standards and/or procedures. 2.3. Magnetic particle test is carried out in accordance with relevant standards, specifications and OH&S requirements. 2.4. Magnetic particle testing equipment is checked for defects, and maintained and stored in accordance with procedures, OH&S requirements and manufacturer instructions.
3. Interpret and report the results of magnetic particle tests	3.1. Indications are assessed and defects are detected and classified in accordance with national and international codes and standards. 3.2. Defects are confirmed in accordance with enterprise procedures and industry practices. 3.3. Test results are reported in accordance with enterprise procedures, accepted industry practices and customer service requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

REQUIRED SKILLS AND KNOWLEDGE

Look for evidence that confirms skills in:

- interpreting and following procedures
- identifying inspection areas
- identifying discontinuities and defects
- selecting appropriate testing techniques, equipment and procedures
- reading, interpreting and applying relative testing standards
- reading, interpreting and applying relative conformance standards
- assessing risk
- undertaking calculations using formulae
- entering routine and familiar information onto proformas and standard workplace forms

Required knowledge

Look for evidence that confirms knowledge of:

- cleaning and preparation processes
- procedures and OH&S requirements in relation to the preparation process
- established assessment procedures and techniques
- types of discontinuities and their consequences
- magnetic particle testing techniques and procedures for a range of situations
- system verification checks necessary to carry out the magnetic particle test
- principles and applications of magnetic particle testing
- advantages and limitations of magnetic particle testing
- hazards and safety precautions associated with magnetic particle testing
- basic maintenance and storage procedures for testing equipment
- types of magnetism;
- magnetic properties
- magnetic materials
- magnetic circuits
- relative permeability of common engineering materials
- magnetic discontinuity, leakage fields
- types of equipment - portable, stationary, automated etc.
- equipment features
- nature and properties of the various types of magnetising current
- current requirements for testing
- media types - advantages and limitations of dry powders and fluid suspensions
- quality control of media, viewing conditions
- disposal procedures
- environment care
- preparation of parts

REQUIRED SKILLS AND KNOWLEDGE

- effect of surface coatings on sensitivity
- effect of surface roughness
- dressing of welds
- interpretation of indications
- lighting conditions
- use of magnification
- factors influencing appearance
- spurious indications, false indications
- surface and sub-surface indications
- common basic defects
- methods/procedures for reporting test results
- any applicable industry standards, national/Australian standards, NOHSC guides, State/Territory regulatory codes of practice/standards
- use and application of personal protective equipment
- safe work practices and procedures
- relevant hazards and control measures related to the competency

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to perform magnetic particle testing. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.

Context of and specific resources for assessment

This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must

1. Prepare inspection areas for ultrasonic thickness testing	<p>1.1. Inspection areas are cleaned and prepared for testing using appropriate procedures and materials.</p> <p>1.2. Preparation processes are carried out in accordance with the relevant procedures and OH&S requirements.</p> <p>1.3. Inspection areas are visually assessed for obvious discontinuities.</p>
2. Perform ultrasonic thickness testing	<p>2.1. Nominated ultrasonic thickness test is identified from standard operating procedures.</p> <p>2.2. Test equipment is prepared in accordance with standard operating procedures.</p> <p>2.3. Ultrasonic tests are carried out in accordance with relevant standards and OH&S requirements.</p> <p>2.4. Ultrasonic test equipment is maintained and stored in accordance with standard operating procedures and OH&S requirements.</p>
3. Report the results of ultrasonic thickness tests	<p>3.1. Basic thicknesses are identified and explained in accordance with enterprise standards and/or procedures.</p> <p>3.2. Basic thicknesses are confirmed in accordance with enterprise standards and/or procedures.</p> <p>3.3. Test results are reported in accordance with enterprise standards and/or procedures.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

REQUIRED SKILLS AND KNOWLEDGE

Look for evidence that confirms skills in:

- interpreting and following procedures
- identifying inspection areas
- identifying discontinuities and defects
- selecting appropriate testing techniques, equipment and procedures
- performing calculations
- assessing risk
- entering routine and familiar information onto proformas and standard workplace forms

Required knowledge

Look for evidence that confirms knowledge of:

- cleaning and preparation processes for a variety of test surfaces
- procedures and OH&S requirements in relation to the preparation process
- established assessment procedures and techniques
- basic principles of ultrasonic thickness testing
- properties and behaviour of ultrasound
- basic concepts associated with frequency, velocity, wavelength, amplitude
- generation of ultrasound
- types of discontinuities and their consequences
- procedures for carrying out ultrasonic thickness tests
- tools, equipment, techniques and system verification checks necessary to carry out the ultrasonic thickness test
- advantages and limitations of ultrasonic thickness testing
- hazards and safety requirements associated with ultrasonic thickness testing
- basic maintenance and storage procedures for testing equipment
- common basic defects
- indications and thicknesses
- methods/procedures for reporting test results
- ultrasonic thickness testing equipment
- types of displays:
 - a-scan display
 - b-scan display
- types of couplants, desirable characteristics
- straight beam testing method:
- calibration of thickness testing equipment
- frequency
- probe size and shape
- thickness testing

REQUIRED SKILLS AND KNOWLEDGE

- plate testing
 - acceptance standards within the scope of this unit
- recording and reporting:
 - job records
 - routine reports
 - codes and standards
- variables affecting test results
- methods of controlling variables
- component variables:
 - size and geometry
 - distance location from entry surface
 - orientation to entry surface
 - reflecting characteristics of back wall
- any applicable industry standards, national/Australian standards, NOHSC guides, State/Territory regulatory codes of practice/standards
- use and application of personal protective equipment
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to perform ultrasonic thickness testing. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.

Context of and specific resources for assessment

This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not

EVIDENCE GUIDE	
	<p>in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with performing ultrasonic thickness testing in a range of industrial applications, or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Preparation processes	Surface cleaning and drying

RANGE STATEMENT	
Obvious discontinuities	Observed changes in material homogeneity
Reported	Accurate identification of location and size of discontinuities

Unit Descriptor

Unit descriptor	This unit covers operating ultrasonic testing equipment and applying the testing procedure in a range of industrial applications.
------------------------	---

Application of the Unit

Application of the unit	<p>This unit applies to inspecting, interpreting, classifying and reporting on ultrasonic testing techniques of fabrications, structures and components. Testing is across a wide range of industries to Level 2 (AS 3669 and AS 3998) or equivalent and includes identifying abnormalities. The work can relate to scheduled and unscheduled maintenance activities using general tools and specific ultrasonic testing equipment as specified in maintenance documentation, testing procedures or operator instructions.</p> <p>Actual and potential defects are to be considered, together with ongoing abnormalities in fabrications, components and structures on a wide range of applications. Ultrasonic tests are performed on critical component or structural zones, and may require re-assessment of competency at regular intervals in accordance with Australian standards and/or other relevant standards. All testing must be completed with particular attention to personal safety and OH&S regulations. Certification against Australian standards may be achieved where assessment in this unit of competency is carried out in conjunction with an examining authority as described in ISO 9712.</p> <p>Materials and chemicals which are subject to codes and regulations - for example, chemicals, explosives, solvents, dangerous materials, acids, or noxious waste products - are subject to safe work habits and must be stored and used in accordance with safe work practices.</p>
--------------------------------	--

	<p>Where power tools are required, Unit MEM18002B (Use power tools/hand held operations) should also be selected.</p> <p>Where tests require the interpretation of drawings, Unit MEM09002B (Interpret technical drawings) should also be selected.</p> <p>Band:</p> <p>This unit has dual status and is to be regarded as both a Specialisation band A unit and Specialisation band B unit for progression to C5 (AQF level V).</p> <p>Unit Weight: 6</p>

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare inspection areas for ultrasonic testing	<p>1.1. Inspection areas are identified, cleaned and prepared for testing using appropriate procedures and materials.</p> <p>1.2. Preparation processes are carried out in accordance with the relevant procedures, statutory and OH&S requirements.</p> <p>1.3. Inspection areas are visually assessed and obvious discontinuities are identified.</p>
2. Perform ultrasonic testing	<p>2.1. The most appropriate ultrasonic test for the material/application is selected.</p> <p>2.2. Testing equipment is selected and prepared in accordance with standards and/or procedures.</p> <p>2.3. Ultrasonic test is carried out in accordance with relevant standards, specifications and OH&S requirements.</p> <p>2.4. Ultrasonic testing equipment is checked for defects, and maintained and stored in accordance with procedures, OH&S requirements and manufacturer instructions.</p>
3. Interpret and report the results of ultrasonic tests	<p>3.1. Indications are assessed and defects are detected and classified in accordance with national and international codes and standards.</p> <p>3.2. Defects are confirmed in accordance with enterprise procedures and industry practices.</p> <p>3.3. Test results are reported in accordance with enterprise procedures, accepted industry practices and customer service requirements.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- interpreting and following procedures
- identifying inspection areas
- identifying discontinuities and defects
- selecting appropriate testing techniques, equipment and procedures
- analysing test results
- reading, interpreting and applying relative testing standards
- reading, interpreting and applying relative conformance standards
- performing calculations relating to ultrasonic testing
- assessing risk
- entering routine and familiar information onto proformas and standard workplace forms

Required knowledge

Look for evidence that confirms knowledge of:

- cleaning and preparation processes for a variety of test surfaces
- procedures and OH&S requirements in relation to the preparation process
- established assessment procedures and techniques
- principles of ultrasonic testing
- variables affecting test selection
- variables affecting test results
- ultrasound - frequency, velocity, wavelength, amplitude
- behaviour of ultrasound at interfaces
- characteristics of ultrasound in materials
- generation of ultrasound
- detection of ultrasound
- the flaw detector
- basic test methods:
 - pulse-echo and transmission methods
 - resonance methods
 - a, b, c, and p scan
 - types of coupling
 - single, dual and two-probe methods
- characteristics and applications associated with probes
- calibration methods
- variables

REQUIRED SKILLS AND KNOWLEDGE

- contact and immersion test methods
- testing methods and their application
- flaw size evaluation
- interpretation and evaluation:
 - defect types as related to product
 - codes and standards
- recording and reporting:
 - job records
 - routine reports
 - codes and standards
- written procedures:
 - presentation
 - use of standards
- types of discontinuities and their consequences
- procedures for carrying out ultrasonic tests
- tools, equipment, techniques and system verification checks necessary to carry out the ultrasonic test
- advantages and limitations of ultrasonic testing
- hazards and safety requirements associated with ultrasonic thickness testing
- maintenance and storage procedures for testing equipment
- range of defects
- methods/procedures for reporting test results
- any applicable industry standards, national/Australian standards, NOHSC guides, State/Territory regulatory codes of practice/standards
- use and application of personal protective equipment
- safe work practices and procedures

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare inspection areas ready for basic radiographic testing	1.1. Radiographic specimens are cleaned and prepared for testing using appropriate procedures and materials.

ELEMENT	PERFORMANCE CRITERIA
	1.2. Preparation processes are carried out in accordance with the relevant procedures and OH&S requirements. 1.3. Inspection areas are visually assessed and obvious discontinuities are identified.
2. Set up radiographic test equipment	2.1. Nominated test is identified from standard operating procedures. 2.2. Radiation testing and processing equipment is set up in accordance with standard operating procedures.
3. Carry out basic radiographic tests	3.1. Basic properties of X-rays and gamma rays are identified. 3.2. Safety practices and controls for minimising radiation exposure are applied. 3.3. Radiographic testing and safety equipment is operated in accordance with relevant work instructions and OH&S requirements. 3.4. Films are processed to achieve optimum results.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- interpreting and following procedures
- identifying inspection areas
- identifying discontinuities and defects
- selecting appropriate testing techniques, equipment and procedures
- calculating and producing optimum quality radiographs
- effectively designing exposure and storage areas
- calculating shielding thicknesses
- reading, interpreting and applying relative testing standards
- reading, interpreting and applying relative conformance standards
- documenting and reporting
- assessing risk

REQUIRED SKILLS AND KNOWLEDGE**Required knowledge**

Look for evidence that confirms knowledge of:

- cleaning and preparation processes for a range of test surfaces
- cleaning and preparation processes for a range of test surfaces
- assessment procedures and techniques
- types of discontinuities and their consequences/effect on the material
- procedure for carrying out each radiographic test
- principal types of X-ray generators and radioisotopes and their effect on radiographic sensitivity
- tools, equipment, techniques and system verification checks
- relevant standards, regulations and codes
- hazards associated with radiographic testing
- procedures for specialised radiographic applications
- principles of image formation, film and chemical properties and processing techniques
- various types of films and screens, their properties and effects on image quality
- maintenance and storage procedures for test equipment
- common faults and damage
- safety features of radioisotope cameras and X-ray equipment
- production of X-rays and gamma rays
- absorption of ionizing radiation by matter and the biological effects on living
- X-ray equipment
- gamma ray sources
- comparison of X-ray and gamma ray sources on basis of energy and intensity
- shielding thickness
- exposure calculations
- reciprocity law
- preparation and use of exposure charts, radiographic equivalence charts
- exposure techniques
- equipment types
- recording and reporting
- safety aspects

Pre-Requisites

Prerequisite units		
Path 1	MEM13013B	Work safely with ionizing radiation
	MEM16010A	Write reports
	MEM18001C	Use hand tools
	MEM24002B	Perform penetrant testing
	MEM24004B	Perform magnetic particle testing
	MEM24006B	Perform eddy current testing
	MEM24008B	Perform ultrasonic testing
	MEM24010B	Perform radiographic testing
	MEM24012C	Apply metallurgy principles

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assess requirements for non-destructive test	<p>1.1. Inspection area is assessed for testing and all possible failure sites are identified utilising metallurgical analysis.</p> <p>1.2. Relevant information for test development is collected from available sources using accepted techniques.</p> <p>1.3. Information is analysed and interpreted.</p> <p>1.4. Test requirements are determined.</p>
2. Establish non-destructive test techniques and procedures	<p>2.1. Test methods, techniques and procedures to be used for specific NDT work are designated.</p> <p>2.2. Codes, standards, specifications and procedures are interpreted.</p> <p>2.3. Test procedures are developed in accordance with established techniques and metallurgical principles.</p>
3. Validate/confirm non-destructive tests	<p>3.1. General and specific test procedures are validated in accordance with established techniques.</p> <p>3.2. Inspection results are interpreted and evaluated in terms of existing codes, standards and specifications.</p>
4. Approve non-destructive test procedures	<p>4.1. Procedures are approved in accordance with workplace procedures and relevant codes and standards.</p> <p>4.2. Procedures are documented and distributed in accordance with workplace requirements and relevant codes and standards.</p>
5. Evaluate non-destructive test procedures	<p>5.1. Procedures are evaluated for effectiveness.</p> <p>5.2. Evaluation results are documented and reported according to workplace requirements.</p> <p>5.3. Changes/amendments to non-destructive test</p>

ELEMENT	PERFORMANCE CRITERIA
	procedures are made and distributed as necessary.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- conducting metallurgical assessment of inspection areas
- designating most appropriate method, technique or procedure
- referencing information
- developing and validating test procedures
- applying safety procedures, standard operating procedures and legislative requirements to all work
- reading/interpreting/applying relative testing standards
- reading/interpreting/applying relative conformance standards
- documenting procedure and results

Required knowledge

Look for evidence that confirms knowledge of:

- application of metallurgical analysis to assess inspection areas
- NDT methods, techniques and procedures
- meaning and validity of relevant codes, standards, specifications and procedures
- test procedure for testing techniques and specimen
- validation processes
- process for approval of procedures
- process for documentation/distribution of procedures
- evaluation procedures
- process for documentation of evaluation results
- process for amending tests and distributing amendments
- any applicable industry standards, national/Australian standards, NOHSC guides, State/Territory regulatory codes of practice/standards
- use and application of personal protective equipment
- safe work practices and procedures
- relevant hazards and control measures related to the competency

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	<p>A person who demonstrates competency in this unit must be able to establish non-destructive tests. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the research, analysis, development, approval and evaluation of non-destructive tests, or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and</p>

EVIDENCE GUIDE	
	documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>

Single band identifier removed to clarify dual status

Unit Descriptor

Unit descriptor	This unit covers applying basic metallurgy principles related to selecting appropriate non-destructive testing techniques (NDT) and interpreting the results of NDT tests for metallurgical processes.
------------------------	--

Application of the Unit

Application of the unit	<p>This unit applies to knowledge of metallurgy principles, and the relationship between the various non-destructive testing methods and their capabilities and limitations when applied to the detection of specific discontinuities in metals and alloys.</p> <p>The unit applies to employees other than NDT technicians such as metallurgists, welding supervisors etc. who select and order NDT tests and who interpret results provided by tests for metal manufacturing, casting, shaping, and joining processes. The unit does not apply to the conduct of NDT tests.</p> <p>Such variables as the type of discontinuity, manufacturing process and limitations will assist in determining the sequence of testing and the ultimate selection of one non-destructive test method in preference to another. Any testing that may be carried out must be completed with particular attention to personal and OH&S regulations.</p> <p>Where materials and chemicals which are subject to codes and regulations are stored and used - for example, chemicals, explosives, solvents, dangerous materials, acids, or noxious waste products - safe work habits must be considered.</p> <p>Band:</p> <p>This unit has dual status and is to be regarded as both a Specialisation band A unit and Specialisation band B unit</p>

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
----------------	-----------------------------

ELEMENT	PERFORMANCE CRITERIA
1. Interpret and apply the principles of solidification and crystal structures in metals and alloys	1.1.Principles of solidification and crystal structures in metals and alloys are interpreted and applied in relation to NDT techniques.
2. Interpret equilibrium diagrams for metals and alloys	2.1.Equilibrium diagram for metal or alloy is correctly sourced 2.2.Equilibrium diagrams are correctly interpreted.
3. Interpret and apply the principles of fusion welding of metals and alloys	3.1.Principles and methods for fusion welding of metals and alloys are applied to NDT test selection. 3.2.Defects in weldments are identified and classified from NDT test results.
4. Interpret and apply the principles of the formation of castings	4.1.Principles and methods used to produce metal castings are applied to NDT test selection. 4.2.Defects in metal and alloy castings are identified and classified from NDT test results.
5. Interpret and apply the principles of steel forging	5.1.Principles and methods used to produce steel forgings are applied to NDT test selection. 5.2.Defects in steel forgings are identified and classified from NDT test results.
6. Interpret and apply the principles of mechanical testing	6.1.Principles of mechanical testing are applied to NDT test selection. 6.2.Defects in metal product are identified and classified from NDT test results

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- research
- understanding and applying metallurgy principles
- selecting NDT test appropriate to metal or alloy and manufacturing process

REQUIRED SKILLS AND KNOWLEDGE**Required knowledge**

Look for evidence that confirms knowledge of:

- principles of solidification and crystal structures in metal:
 - classification of materials
 - structure of atoms
 - process of solidification
 - crystal structures
 - defects formed during solidification
 - modification of crystal structure
 - heat treatment processes
 - defects formed during heat treatment
- meaning of equilibrium diagrams representative of a range of metals including aluminium, iron, steel and common non-ferrous alloys:
 - alloy systems
 - solid and liquid solubility
 - basic equilibrium diagrams
 - equilibrium diagrams for common alloys
- principles of fusion welding in relation to NDT testing
- defects in fusion welding:
 - processing defects
 - grinding cracks
 - pickling cracks
 - heat treatment cracks
 - service defects
 - fatigue cracks
 - corrosion and stress corrosion cracks
- principles of the formation of castings
- defects in castings
- principles of steel forging
- defects in steel forging
- principles of mechanical testing:
 - mechanical testing
 - tensile testing
 - impact testing
 - hardness testing
 - fatigue testing
- other tests

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify common engineering materials by their principal properties	<p>1.1. The principal properties of ferrous and non-ferrous metals are identified.</p> <p>1.2. The principal properties of thermosetting and thermoplastic polymers are identified.</p> <p>1.3. The principal properties of ceramics and composite materials are identified.</p> <p>1.4. The effects of different types of bonding in materials are identified.</p> <p>1.5. The effects of mechanical and thermal processes on the principal properties of materials are identified.</p>
2. Select materials for specific applications	<p>2.1. The engineering requirement for the specific application is determined in consultation with others.</p> <p>2.2. Material is selected based on the requirement and consideration of principal properties and further processing.</p> <p>2.3. Selection is confirmed according to standard operating procedures.</p>
3. Verify selected material as fit for purpose	<p>3.1. Appropriate tests for the required properties are identified.</p> <p>3.2. Testing of materials is arranged with appropriate persons, if necessary.</p> <p>3.3. Test results are analysed and material choices are</p>

ELEMENT	PERFORMANCE CRITERIA
	confirmed or modified as appropriate.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- undertaking research
- selecting/carrying out tests appropriate to the material
- communicating
- documenting
- planning and sequencing operations
- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents

Required knowledge

Look for evidence that confirms knowledge of:

- classification of materials:
 - metals and non-metals
 - ferrous and non-ferrous metals
 - polymers (thermoplastics, thermosetting and elastomers)
 - ceramics
 - composite materials
- structure of materials
- physical properties of materials:
 - electrical conductivity/resistivity
 - specific gravity/density
 - thermal conductivity/expansion
 - specific heat
 - melting/boiling points
- magnetic properties
- optical properties
- mechanical properties:

REQUIRED SKILLS AND KNOWLEDGE

- strength - yield, tensile, compressive
- stress/strain data
- hardness
- toughness (impact and slow strain)
- elasticity
- plasticity
- ductility
- malleability
- fatigue
- creep
- chemical properties:
 - corrosion of metals, corrosion processes, mechanisms
 - degradation of polymers
- materials testing methods - destructive testing and applications:
 - tensile
 - compressive
 - shear
 - torsion
 - hardness
 - impact
 - fatigue
 - creep
 - visual
 - corrosion testing
- engineering materials
- engineering applications of ferrous metals:
 - cast irons
 - carbon and alloy steels
 - stainless steels
- engineering applications of non-ferrous metals:
 - aluminium and its alloys
 - copper, brass and bronze
 - nickel alloys, zinc, titanium
 - magnesium
 - refractory metals
- engineering applications of polymers:
 - thermosetting polymers
 - thermoplastic polymers

REQUIRED SKILLS AND KNOWLEDGE

- ceramics and glasses
- effects of mechanical and thermal processes on the properties of materials:
 - casting
 - forging, rolling and extrusion
 - cold forming
 - powder processes
 - heat treatment
 - joining - fasteners
 - soldering
 - brazing
 - welding
 - adhesives
 - finishing - coatings, metallic and non-metallic
- hazards and control measure associated with selecting common engineering materials, including housekeeping
- safe work practices and procedures

Evidence Guide

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Use concepts of arithmetic in the solution of engineering problems	1.1.Units of physical quantities are converted to facilitate engineering calculations. 1.2.Calculations are performed to solve problems involving rational and irrational numbers. 1.3.Scientific notation is used to represent numbers. 1.4.Calculations are checked for reasonableness using estimating and approximating techniques.
2. Solve engineering problems involving algebraic expressions with one independent variable	2.1.Algebraic expressions are manipulated using mathematical operations in their correct order.
3. Use two-dimensional geometry to solve practical problems	3.1.Angles expressed in degrees are correctly converted to radians and vice versa. 3.2.The perimeter, area, length and angles of a range of two-dimensional figures are correctly calculated. 3.3.The volume and surface area of complex figures are correctly calculated. 3.4.Points identified in terms of cartesian coordinates can be converted to polar coordinates and vice versa.
4. Use trigonometry to solve practical	4.1.Basic trigonometry functions are used to calculate the lengths of the sides of right-angled triangles.

ELEMENT	PERFORMANCE CRITERIA
problems	4.2. Inverse trigonometry functions are used to determine angles in a right-angled triangle given the lengths of two sides. 4.3. The sine rule is used to determine the lengths of the sides of acute and obtuse angled triangles given one side and two angles. 4.4. The cosine rule is used to determine the lengths of the sides of acute and obtuse angled triangles given two sides and one angle.
5. Graph linear functions	5.1. Linear functions are solved graphically and equations of straight lines are determined from the slope and one point, or two points. 5.2. Two linear functions are solved simultaneously both algebraically and geometrically. 5.3. The length and mid point of a line segment are determined.
6. Solve quadratic equations	6.1. Quadratic equations are solved. 6.2. Simultaneous linear and quadratic equations are solved.
7. Perform basic statistical calculations	7.1. Mean, median and mode are calculated from given data. 7.2. Standard deviation is calculated and interpreted employing graphical representation.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- using and applying mathematical formulas:
 - logical thinking
 - problem solving
 - calculating
 - applying statistics

REQUIRED SKILLS AND KNOWLEDGE
<ul style="list-style-type: none"> • using computer numerical methods • drawing graphs
Required knowledge
<p>Look for evidence that confirms knowledge of:</p> <ul style="list-style-type: none"> • transposing and evaluating formulae • polynomials • straight line coordinate geometry • introduction to indices • introduction to trigonometry • circular functions • trigonometry of oblique triangles • trigonometric identities • introduction to functions and their graphs

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	<p>A person who demonstrates competency in this unit must be able to apply mathematical skills and knowledge to simple engineering applications. Evidence from tasks and projects should/may be used to complement and demonstrate integration of competency.</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify current resource use and environmental issues.	1.1. Identify workplace <i>environmental and resource efficiency issues</i> . 1.2. Identify resources used in own work role. 1.3. <i>Measure</i> and record current usage of resources using <i>appropriate techniques</i> .

ELEMENT	PERFORMANCE CRITERIA
	1.4. Identify and report workplace environmental hazards to appropriate personnel.
2. Comply with environmental regulations.	2.1. Follow <i>procedures</i> to ensure <i>compliance</i> . 2.2. Report environmental incidents to appropriate personnel.
3. Seek opportunities to improve environmental practices and resource efficiency.	3.1. Follow <i>enterprise plans</i> to improve environmental practices and resource efficiency. 3.2. Make <i>suggestions</i> for improvements to workplace practices in own work area.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include the ability to:

- report as required by procedures
- follow procedures and instructions and respond to change
- ask questions and seek clarifications relating to work requirements

Reading and writing is required in order to interpret required procedures and complete required workplace forms/reports.

Numeracy is required to interpret numeric workplace information, readings and measurements, handle data as required and complete numeric components of workplace forms/reports.

Required knowledge

Competency includes sufficient knowledge to:

- have a basic understanding of sustainability
- know the environmental hazards/risks, resource use and inefficiencies associated with own workplace (at an appropriate level)
- know the relevant environmental and resource efficiency systems and procedures for own work area
- know the impact of laws and regulations to a level relevant to the work context

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competence in this unit must be able to provide evidence of the ability to follow workplace procedures according to instructions given and to participate in the improvement of environmental and resource efficient work practices at own level of responsibility. Evidence must be strictly relevant to the particular workplace role.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:</p> <ul style="list-style-type: none"> • identify and measure resources used in their job • identify situations likely to lead to an environmental incident • follow procedures related to environmental performance. <p>Consistent performance should be demonstrated. For example, look to see that:</p> <ul style="list-style-type: none"> • work is routinely to procedures • the minimum of resources is used consistent with the job requirements, good practice and the procedures.
<p>Context of and specific resources for assessment</p>	<p>Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.</p> <p>Depending on the selected methods of assessment access may be required to:</p> <ul style="list-style-type: none"> • workplace procedures and plans • documentation in relation to production, waste, overheads, hazard control/management • reports from supervisors/managers • case study/scenarios
<p>Method of assessment</p>	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed:</p> <ul style="list-style-type: none"> • by demonstration in the workplace

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • using targeted questioning for appropriate portions • by use of a suitable simulation and/or a range of case studies/scenarios • by a combination of these techniques. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment.</p>
Guidance information for assessment	Assessors need to be aware of any cultural issues that may affect responses to questions. Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Procedures	All operations are performed in accordance with procedures including all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.
Environmental and resource efficiency issues	<p>Environmental and resource efficiency issues include minimisation of environmental risks and maximisation of opportunities to improve business environmental performance and to promote more efficient production and consumption of natural resources, for example by:</p> <ul style="list-style-type: none"> • minimisation of waste, through implementation of the waste management hierarchy

RANGE STATEMENT	
	<ul style="list-style-type: none"> • efficient and effective use of energy and other resources • seeking alternative sources of energy • efficient use of materials and appropriate disposal of waste • use of controls to minimise the risk of environmental damage from hazardous substances • efficient water use • reducing emissions • life cycle analysis applied to issues such as energy supply, materials, transport, production
Measure	<p>Measure should be interpreted in a manner consistent with the scope of the job and may include things like:</p> <ul style="list-style-type: none"> • counting the number of items entering/leaving a work area • reading indicators in the work area • obtaining relevant information from support personnel • other simple means
Appropriate techniques	<p>Appropriate techniques include:</p> <ul style="list-style-type: none"> • material fed to/consumed by plant/equipment • plant meters and gauges • job cards including kanbans • examination of invoices from suppliers • measurements made under different conditions • examination of relevant information and data.
Compliance	<p>Compliance includes meeting relevant federal, state and local government laws, by-laws, regulations and mandated codes of practice. It also includes any codes and standards that the enterprise applies voluntarily.</p>
Incidents	<p>Incidents include:</p> <ul style="list-style-type: none"> • breaches or potential breaches of regulations • occurrences outside of standard procedure which may lead to lower environmental performance.
Enterprise plans	<p>Enterprise plans include:</p>

RANGE STATEMENT	
	<ul style="list-style-type: none"> • documented policies and procedures • work plans to minimise waste, increase efficiency of water/energy use, minimise environmental hazards
Suggestions	<p>Suggestions include ideas that help to:</p> <ul style="list-style-type: none"> • prevent and minimise environmental risks and maximise opportunities • reduce emissions of greenhouse gases • reduce use of non-renewable resources • improve energy efficiency • increase use of renewable, recyclable, reusable and recoverable resources • reduce waste • increasing the reusability/recyclability of wastes/products • reduce water usage and/or water wastage.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Investigate current practices in relation to resource usage.	1.1 Identify environmental regulations applying to the enterprise. 1.2 Assess procedures for assessing <i>compliance</i> with environmental regulations. 1.3 Collect information on environmental and resource efficiency systems and procedures, and provide to the work group where appropriate. 1.4 Measure and record current resource usage by members of the work group.

ELEMENT	PERFORMANCE CRITERIA
	1.5 Analyse and record current purchasing strategies. 1.6 Analyse current work processes to access information and data and assist in identifying areas for improvement.
2. Set targets for improvements.	2.1 Seek input from stakeholders, key personnel and specialists. 2.2 Access external sources of information and data as required. 2.3 Evaluate alternative solutions to workplace environmental issues. 2.4 Set efficiency targets.
3. Implement performance improvement strategies.	3.1 Source <i>techniques/tools</i> to assist in achieving targets. 3.2 Apply continuous improvement strategies to own work area of responsibility and communicate ideas and possible solutions to the work group and management. 3.3 Integrate environmental and resource efficiency improvement plans for own work group with other operational activities and implement them. 3.4 Seek suggestions and ideas about environmental and resource efficiency management from stakeholders and act upon them where appropriate. 3.5 Implement costing strategies to fully value environmental assets.
4. Monitor performance.	4.1 Document outcomes and communicate reports on targets to key personnel and stakeholders. 4.2 Evaluate strategies. 4.3 Set new targets and investigate and apply new tools and strategies. 4.4 Promote successful strategies and reward participants where possible.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

REQUIRED SKILLS AND KNOWLEDGE

- using relevant environmental and resource efficiency systems, tools and procedures
- applying quality assurance systems relevant to own work area
- applying relevant supply chain procedures
- measurement and calculation techniques
- communication/consultation skills to ensure information is supplied to the work group

Reading and writing is required to comprehend documentation and interpret environmental and energy efficiency requirements and to document and maintain records

Numeracy is required to interpret numeric workplace information, readings and measurements, handle data as required and complete numeric components of workplace forms/reports.

Required knowledge

Required knowledge includes:

- how to access and use relevant environmental and resource efficiency systems, tools and procedures
- understanding of best practice approaches relevant to own area of responsibility
- strategies to maximise opportunities and minimise impacts relevant to own work area
- relevant environmental and resource efficiency issues specific to industry practices
- methods for measuring and calculating resource usage

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competence in this unit must be able to provide evidence of the ability to implement and monitor integrated environmental and resource efficiency management policies and procedures within an organisation.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • monitor and investigate current resource usage • develop plans to improve sustainability • implement environmental improvements. <p>Consistent performance should be demonstrated. For example, look to see that:</p> <ul style="list-style-type: none"> • environmental performance is routinely monitored and investigated • areas for improvements are followed through and the implemented changes are in turn monitored and investigated.
Context of and specific resources for assessment	<p>This section should be read in conjunction with the range of variables for this unit of competency. Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.</p> <p>Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation.</p> <p>A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.</p> <p>Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.</p>
Method of assessment	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed:</p> <ul style="list-style-type: none"> • by demonstration in the workplace • using targeted questioning for appropriate portions • through use of specific project(s) • by use of a suitable simulation and/or a range of case studies/scenarios • by a combination of these techniques. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or</p>

EVIDENCE GUIDE	
	similar assessment.
Guidance information for assessment	<p>Assessors need to be aware of any cultural issues that may affect responses to questions.</p> <p>Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Procedures	<p>All operations are performed in accordance with procedures.</p> <p>Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.</p> <p>Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.</p>
Environmental and resource efficiency issues	<p>Environmental and resource efficiency issues include:</p> <ul style="list-style-type: none"> • addressing environmental and resource sustainability initiatives such as Environmental Management Systems, action plans, surveys and audits • reference to standards, guidelines and approaches such as: <ul style="list-style-type: none"> • ISO 14001 Environmental Management Systems • Life Cycle Analyses

RANGE STATEMENT	
	<ul style="list-style-type: none"> • Cradle to cradle • Global Reporting Initiative • Ecological footprinting • Triple Bottom Line reporting • Product Stewardship • determining enterprise's most appropriate waste treatment including waste to landfill, recycling, re-use and wastewater treatment • applying the waste management hierarchy in the workplace • initiating and/or maintaining appropriate enterprise procedures for operational energy consumption, including stationary energy and non stationary (transport) • efficient use of water • minimising greenhouse gas emissions • use of controls to minimise the risk of environmental damage from hazardous substances
Measure	<p>Measuring techniques include:</p> <ul style="list-style-type: none"> • material fed to/consumed by plant/equipment • plant meters and gauges • job cards including kanbans • examination of invoices from suppliers • measurements made under different conditions • examination of relevant information and data • others as appropriate to the specific industry contexts.
Techniques and tools	<p>Techniques and tools may includeÂ : </p> <ul style="list-style-type: none"> • visual workplace concepts • measurement, display and/or recording devices • changed work practices/procedures • competence development and awareness training • process and equipment items
Compliance	<p>Compliance includes meeting relevant federal, state and local government laws, by-laws, regulations and codes of practice.</p>
Incidents	<p>Incidents include:</p>

RANGE STATEMENT	
	<ul style="list-style-type: none"> • breaches or potential breaches of regulations • occurrences outside of standard procedure which may lead to lower environmental performance
Purchasing strategies	<p>Purchasing strategies include:</p> <ul style="list-style-type: none"> • influencing suppliers to take up environmental sustainability • selecting materials/components with a lower environmental profile.
Stakeholders, key personnel and specialists	<p>Stakeholders, key personnel and specialists include individuals and groups both inside and outside the organisation that have some direct interest in the enterprise's conduct, actions, products and services, including:</p> <ul style="list-style-type: none"> • employees at all levels of the organisation • customers • suppliers • other organisations • key personnel within the organisation, and specialists outside it who may have particular technical expertise
Suggestions	<p>Suggestions includes ideas that help to:</p> <ul style="list-style-type: none"> • prevent and minimise environmental risks and maximise opportunities • reduce emissions of greenhouse gases • reduce use of non-renewable resources • make more efficient use of energy, water and other resources • maximise opportunities to re use and recycle materials • identify strategies to offset or mitigate environmental impacts. e.g. purchasing of carbon credits • express purchasing power through the selection of suppliers with improved environmental performance. e.g. purchasing renewable energy and materials with lower embedded carbon • eliminate the use of hazardous and toxic materials increasing the reusability/recyclability of wastes/products.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Develop workplace sustainability policy.	1.1 Define <i>scope of sustainability policy</i> . 1.2 Identify and consult <i>stakeholders</i> as a key component of the policy development process. 1.3 Review environmental sustainability <i>strategies</i> relevant to all stages of work covered by the policy 1.4 Make recommendations for policy options based on likely effectiveness, timeframes and cost. 1.5 Develop policy is that reflects the organisation's commitment to sustainability as an integral part of the

ELEMENT	PERFORMANCE CRITERIA
	business planning and as a business opportunity. 1.6 Agree upon appropriate methods of implementation.
2. Communicate the policy.	2.1 Promote the policy, including its expected outcome to key stakeholders. 2.2 Inform those involved in implementing the policy as to outcomes expected, activities to be undertaken and responsibilities assigned.
3. Implement the policy.	3.1 Develop and communicate procedures to help implement the policy. 3.2 Implement <i>strategies</i> for continuous improvement in resource efficiency. 3.3 Establish record systems for tracking continuous improvements in sustainability approaches and assign responsibilities.
4. Review policy implementation	4.1 Record outcomes and provide feedback to key personnel and stakeholders. 4.2 Investigate success or otherwise of policy. 4.3 Monitor records to identify trends that may require remedial action, and use to promote continuous improvement of performance. 4.4 Modify policy and or <i>procedures</i> as required to ensure improvements are made.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- developing and implementing systems and procedures to aid in the achievement of sustainability in the workplace
- applying quality assurance systems relevant to own enterprise
- accessing and applying other relevant enterprise policies, procedures and protocols
- relevant industry competency
- interpreting business/strategic plans

This unit requires the ability to:

REQUIRED SKILLS AND KNOWLEDGE

- read and evaluate complex and formal documents such as policy and legislation
- research, analyse and present information
- prepare written reports requiring precision of expression and language and structures suited to the intended audience
- adjust communication to suit different audiences
- deal with different points of view and dissenting stakeholders.

Required knowledge

Required knowledge includes:

- understanding of relevant policy development and implementation processes and practices
- understanding of the principles, practices and available tools and techniques of sustainability management relevant to the particular industry context
- best practice approaches relevant to own work area
- equal employment opportunity, equity and diversity principles and occupational health and safety implications of policy/s being developed

Evidence Guide**EVIDENCE GUIDE**

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competence in this unit must be able to provide evidence of the ability to develop and implement integrated sustainability policies and procedures within an enterprise. The review of the policy after implementation will also need to be evidenced.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- develop relevant policy and procedures that comply with the regulatory requirements and business plans
- develop a workable implementation strategy
- include measurable criteria for reviewing improvement.

Consistent performance should be demonstrated. For

EVIDENCE GUIDE	
	<p>example, look to see that:</p> <ul style="list-style-type: none"> • policy implementation is reviewed • policy is developed to become part of the routine practices of the organisation.
Context of and specific resources for assessment	<p>This section should be read in conjunction with the range of variables for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation.</p> <p>A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.</p> <p>Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.</p>
Method of assessment	<p>Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.</p> <p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed:</p> <ul style="list-style-type: none"> • by demonstration in the workplace • using targeted questioning for appropriate portions • through use of specific project(s) • by use of a suitable simulation and/or a range of case studies/scenarios • by a combination of these techniques. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment.</p>
Guidance information for assessment	<p>Assessors need to be aware of any cultural issues that may affect responses to questions.</p> <p>Assessment processes and techniques must be culturally</p>

EVIDENCE GUIDE

	appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.
--	--

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Scope of sustainability policy

Scope of sustainability policy include:

- The area/s of environmental sustainability to be targeted and whether social and economic sustainability will be incorporated
- The parts of the enterprise to which it is to apply, including whether it is for the whole enterprise, one site, one work area or combinations of these
- An investigation of the particular business and market context of the industry/ enterprise
- Addressing sustainability initiatives through reference to standards, guidelines and approaches such as:
 - ISO 14001 Environmental Management Systems
 - Life Cycle Analyses

RANGE STATEMENT	
	<ul style="list-style-type: none"> • Cradle to grave/cradle to cradle • Global Reporting Initiative • Ecological Footprint Assessment • Triple Bottom Line reporting • Product Stewardship.
Stakeholders	<p>Stakeholders include individuals and groups both inside and outside the organisation that have some direct interest in the enterprise's conduct, actions, products and services, including:</p> <ul style="list-style-type: none"> • employees at all levels of the organisation • customers • suppliers • regulators • other organisations.
Strategies	<p>Implementation strategies include:</p> <ul style="list-style-type: none"> • awareness raising among stakeholders • training of staff in principles and techniques of sustainability • promotional activities. <p>Continuous improvement strategies include ongoing measuring, improving and monitoring such as:</p> <ul style="list-style-type: none"> • Plan, do, check, act cycles • Kaizen (continuous improvement) • Kaizen blitz (breakthrough improvement event) • Six sigma approaches <p>Environmental sustainability strategies include:</p> <ul style="list-style-type: none"> • reducing toxic material and hazardous chemical use • minimising resource use through changes in processes, facility design and management • supply chain and life cycle management approaches • sourcing renewable energy and low carbon footprint materials • reducing, re-using, recycling and waste

RANGE STATEMENT	
	reduction <ul style="list-style-type: none"> • product and process improvements • carbon offsets • reducing greenhouse gas and other emissions

Co-requisite units		

MSFSF2001 Cut single layer fabrics

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers measuring out and cutting single layer fabrics for manufacture of curtains and soft furnishing accessories. It does not apply to cutting from patterns.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Soft Furnishing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|----------------------|-----|--|
| 1 | Plan work operations | 1.1 | Required fabrics, number of items to be cut and required equipment are identified |
| | | 1.2 | Fabric sizes to be cut are identified from work order plus any required allowances |
| | | 1.3 | Work health and safety (WHS) requirements, including ergonomic criteria and personal protection needs, are observed throughout the work. |
| | | 1.4 | Suitable work area is selected, tidied and cleaned of any contaminants |
| | | 1.5 | Suitable scissors and/or blades are selected and checked prior to use for appropriate sharpness, set, operation and safe condition |

- | | | | |
|---|-------------------------------|-----|--|
| | | 1.6 | Fabrics are selected in accordance with work order and laid out smooth and square |
| 2 | Prepare materials for cutting | 2.1 | Fabrics are inspected for flaws and appropriate finish |
| | | 2.2 | Naps, direction, pattern matches and face of the materials are identified |
| | | 2.3 | Tools and equipment are checked for operation |
| 3 | Complete cutting operations | 3.1 | Cutting is completed with cut out materials identified/labelled where required |
| | | 3.2 | Any measurements for pleat lines, hems, headings and any special seam allowances are marked out using workplace approved methods |
| | | 3.3 | Where required, fabrics are hung using appropriate protective covers and care label information is attached |
| | | 3.4 | Cut lengths are despatched to next process following workplace procedures |
| | | 3.5 | Unused materials are stored as required |
| | | 3.6 | Workplace required documentation is completed following appropriate procedures |
| | | 3.7 | Work area is cleaned and damaged tools tagged as required |
| | | 3.8 | Waste is collected and bundled for recycling/re-use as required |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the

candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Unit context includes:**
- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
 - work requires individuals to demonstrate some discretion, judgement and problem solving
- Tools and equipment include:**
- cutting equipment, including scissors and cutting machines
 - measuring and calculating equipment:
 - tapes
 - rulers
 - calculators and computers
- Products to be constructed include:**
- curtains
 - drapes
 - swags
 - cushions
 - upholstered furniture components
- Personal protective equipment includes:**
- that prescribed under legislation, regulations and enterprise policies and practices
- Information and procedures include:**
- workplace procedures relating to the use of tools and equipment
 - work instructions, including job sheets, cutting lists, plans, drawings and designs
 - workplace procedures relating to reporting and communication
 - manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFSF2001B Cut single layer fabrics.

Links

Companion Volume implementation guides are found in VETNet -

Assessment Requirements for MSFSF2001 Cut single layer fabrics

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Identify materials used and any special marking out requirements
- Measure accurately and cut fabric quantities to minimise waste and produce consistent quality items for at least five (5) different types of material or product
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Work requirements, including workplace standards
- Fabric types, common faults and inspection procedures
- Design features of the finished items in relation to attractive use of fabric patterns
- Cutting equipment and techniques
- Effect of cutting on fabrics

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to fabrics, including linings and interlinings, calculator and other workplace calculating and cutting equipment.

MSFSF2002 Machine sew materials

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers using sewing machines for production of soft furnishings, mattresses and bases, and upholstered furniture.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Soft Furnishing

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|---|---|
| 1 Identify sewing machine equipment controls and procedures | 1.1 Job requirements are identified from work instructions |
| | 1.2 Work health and safety (WHS) requirements, including ergonomic criteria and personal protection needs, are observed throughout the work |
| | 1.3 Equipment components, equipment condition and controls are identified |
| | 1.4 Operating procedures are checked to identify any approved adjustments |
| | 1.5 Equipment operations and production procedures are identified |
| | 1.6 The process for obtaining materials and moving products |

- to the next process is identified
- 2 Prepare for work
 - 2.1 Work order or sample is checked to identify sewing specifications
 - 2.2 Required materials, tools and equipment are assembled
 - 2.3 Materials and equipment are inspected and any faults are identified and reported
 - 2.4 Work sequence is planned to suit job, and materials are laid out
 - 2.5 If required, naps, pattern direction and face side of materials are identified
 - 2.6 Components are matched and secured with tacking, pins or adhesives as required
 - 2.7 Any required supplementary equipment is identified for routine lubrication and adjustments
 - 3 Set up and control sewing machine operations
 - 3.1 Sewing machine is set up and adjusted
 - 3.2 Sewing operation is according to workplace procedures and material characteristics
 - 3.3 Required product quality and outputs are maintained
 - 4 Maintain quality requirements
 - 4.1 Machining process is monitored and conditions which may affect work quality are reported
 - 4.2 Authorised changes in operating procedures are implemented
 - 5 Finish and despatch work
 - 5.1 Completed work is checked for required quality, finished as required, and repaired, where applicable, before moving to the next process
 - 5.2 Material which is able to be re-used is collected and stored
 - 5.3 Equipment and work area clean up and waste management are completed following workplace procedures
 - 5.4 Workplace records are completed as required

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Unit context includes:**
- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
 - work requires individuals to demonstrate some discretion, judgement and problem solving
- Sewing specifications include:**
- required materials
 - threads and additional work features
 - seam and stitch specifications
 - any special stitch requirements and allowances
 - shape characteristics and special requirements
 - needles
 - attachments and ancillary equipment
 - quality requirements
- Sewing products include:**
- top stitching
 - gathering
 - piping
 - braid
 - fringe
 - flange cords
 - straight fabric lengths
 - padded material
 - loose covers
- Sewing processes**
- hemming

- include:**
- seams
 - machine tacking
 - gathering
 - multiple-layer sewing
 - straight or zig zag sewing
- Machines include:**
- single or multi-needle flat bed
 - overlocker
 - blind hemming
 - gathering
 - flange
 - bar tacking
 - tape edging
- Sewing machine set-up and adjustment includes:**
- thread machine and wind bobbin as required
 - set required tensions
 - select required machine settings
 - test operations for work order requirements
- Materials to be machined include:**
- plain fabrics
 - patterned fabrics
- Personal protective equipment includes:**
- that prescribed under legislation, regulations and enterprise policies and practices
- Information and procedures include:**
- workplace procedures relating to the use of tools and equipment
 - work instructions, including job sheets, cutting lists, plans, drawings and designs
 - workplace procedures relating to reporting and communication
 - manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFSF2002B Machine sew materials.

Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.education.gov.au/Pages/TrainingDocs.aspx?q=0601ab95-583a-4e93-b2d4-cfb27b03ed73>

Assessment Requirements for MSFSF2002 Machine sew materials

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Identify and operate three (3) types of industrial sewing machines, including set up of the sewing machine for operation and monitoring the quality of output
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Types, characteristics, uses and limitations of sewing machines
- Characteristics of materials used and finished products
- Safety and environmental aspects of sewing machine operations
- Quality systems and standards for soft furnishings
- Work flow requirements for sewing process
- Operation of work systems and industrial sewing equipment
- Causes of faults and repair methods in soft furnishing machining
- Procedure for reporting damaged or imperfect products or interruptions to work flow

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to appropriate industrial sewing machines, operating procedures, materials and threads.

MSFUP3012 Apply marine sewing and installation techniques

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers using marine sewing techniques in the completion of upholstery products/items used in marine applications, such as covers, and fitting the required attachments and fixing devices.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

Unit Sector

Upholstery

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|------------------|-----|---|
| 1 | Prepare for work | 1.1 | Job requirements are identified from work instructions |
| | | 1.2 | Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work |
| | | 1.3 | Machines, attachments, materials, work method and sequence are determined |
| | | 1.4 | Equipment, including any supplementary equipment, is identified and checked for safe operation, components and controls |
| | | 1.5 | Materials are identified and inspected and problems, including any materials or part-constructed products which |

- do not meet the job order requirements, are identified and reported in accordance with workplace procedures
- 1.6 Work pieces are laid out in sequence in accordance with specifications and workplace procedures
- 2 Conduct sewing operation
- 2.1 Sewing machine, including attachments, as required, set-up requirements and adjustments are observed in accordance with workplace procedures
- 2.2 Appropriate thread type and size is fitted to machine
- 2.3 Machine is operated to maintain required product quality and outputs
- 2.4 Reinforcing/protective measures, fittings/attachments and fixing devices are attached in accordance with workplace procedures
- 2.5 Finished products, including covers, are inspected for quality with unacceptable items being reprocessed in accordance with workplace instructions
- 3 Complete work
- 3.1 Unused materials are stored, as required
- 3.2 Workplace required documentation, including stock usage, is completed and processed following workplace procedures
- 3.3 Work area is cleaned and damaged tools and equipment tagged, as required
- 3.4 Waste is collected and bundled for recycling/reuse as required by workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential

operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

- Unit context includes:**
- WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent
 - work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
 - work requires individuals to demonstrate some discretion, judgement and problem solving
- Fittings/attachments and fixing devices include:**
- clips
 - press studs
 - buckles
 - eyelets
 - shackles
 - zips
 - reinforcing patches
 - straps
- Job requirements include:**
- required materials
 - threads
 - additional work features
 - shape and special requirements for the item
 - any required workplace documentation to be completed
- Machines include:**
- overlocker
 - flat bed
 - twin needle and walking foot
- Tools and equipment include:**
- measuring tape
 - scissors
 - cutting blades
 - knives and thread
- Materials include:**
- canvas
 - sail materials
 - leather
 - foam-backed vinyl and upholstery fabrics

Personal protective equipment includes:

- that prescribed under legislation, regulations and enterprise policies and practices:
 - safety glasses/goggle
 - hair nets
 - ear muffs/plugs
 - gloves
 - footwear and protective clothing

Information and procedures include:

- workplace procedures relating to the use of tools and equipment
- work instructions, including job sheets, cutting lists, plans, drawings and designs
- workplace procedures relating to reporting and communication
- manufacturer specifications and operational procedures

Unit Mapping Information

Supersedes and is equivalent to LMFUP3012B Apply marine sewing and installation techniques.

Assessment Requirements for MSFUP3012 Apply marine sewing and installation techniques

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Prepare and install a minimum of three (3) square metres of cover to at least three (3) vertical or horizontal surfaces
- Sew at least three (3) covers and sew appropriate fasteners and attachments to covers sewn
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Procedure for reporting damaged or imperfect products or interruption to work flow
- Work flow requirements for sewing process
- Operation of work systems and sewing equipment
- Characteristics of materials used and application and requirements of the finished products
- Causes of faults and repair methods
- Identification of equipment, processes and procedures
- Quality systems and standards
- Workplace procedures

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to appropriate sewing machine, work orders, materials, fittings and threads.

PMBPROD262B Operate tyre curing equipment

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the operation of tyre curing equipment in a tyre manufacturing plant or retreading situation where the 'green' tread is laid on the tyre casing.

Application of the Unit

Application of this unit

This competency applies to operators who are involved in curing 'green' tyres and 'hot cap' retreads (ie retreads made using green treads), assembled from a number of intermediate components and stored. This competency is typically performed by operators working independently.

The operator:

- takes product off machine
- checking product for quality and conformity to specifications
- checks raw material feed
- notices any problems and takes required action (eg reporting)
- deal with non-conforming products, waste and scrap
- complete logs and reports.

This unit does not include the use of pre-cured treads - see *PROD263A Operate retread curing equipment*

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisites

This unit has **no** prerequisites.

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Check work requirements.	1.1 Identify work requirements from production plan or request. 1.2 Check product, materials and equipment meet requirements for job(s). 1.3 Recognise requirements which may not be in accordance with usual practice. 1.4 Ask questions of appropriate person to confirm unusual practice. 1.5 Identify hazards associated with the job and take appropriate action. 1.6 Perform other pre-operational checks in accordance with procedures.
2. Start up tyre curing equipment to procedures.	2.1 Conduct pre-start checks. 2.2 Start up tyre curing equipment.
3. Operate equipment to procedures.	3.1 Start machine safely and correctly when required. 3.2 Check process is operating within required limits.

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
	3.3 Check product is in specification and to required quality standard. 3.4 Ensure product is consistently ready for next operation. 3.5 Maintain supply of material(s) as required. 3.6 Complete logs and records when as required. 3.7 Collect and segregate scrap, trim and other materials as required in accordance with procedures. 3.8 Keep equipment and work area clean area in accordance with procedures. 3.9 Pause machine cycle and perform emergency stop, as required by procedures.
4. Respond to routine problems in accordance with procedures.	4.1 Recognise known faults that occur during the operation. 4.2 Identify and take action on causes of routine faults. 4.3 Log problems as required. 4.4 Identify non-routine process and quality problems and take appropriate action.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Application of an operational knowledge of the materials, equipment and process sufficient to recognise out of specification products, process problems and materials faults. For example temperature measurements are essential for curing of tyres, where the temperature must be kept constant during the process. Monitoring the temperature inside the mould is too difficult; therefore the temperature of the condensate is monitored using specialised equipment.

Knowledge of organization procedures and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and work standards.

Application of the knowledge of managing risks using the hierarchy of controls applied to the tyre curing process. Application of approved hazard control and safety procedures and the use of PPE in relation to handling materials, equipment operation and cleanup.

Knowledge of and skills in the operation of tyre curing equipment and main components sufficient for consistent production of quality products including:

- production workflow sequences and materials demand
- the reasons for checking process control panels and reporting readings which are outside of normal range of process variability
- accurately monitoring equipment operation and product quality
- the potential effects of variations in raw materials and equipment operation in relation to quality of product
- processing behaviour of polymers and the role of additives
- waste management and knowing the importance of reusing non-conforming products wherever possible
- correct selection and use of equipment, materials, processes and procedures
- explain the effect of unauthorised or emergency shutdown in relation to safety and production requirements
- identify factors which may affect product quality or production output and appropriate remedies.

Competence also includes the ability to:

- plan own work, including predicting consequences and identifying improvements
- identify when the operator is able to rectify faults, when assistance is required and who is the appropriate source for assistance
- identify and describe own role and role of others involved directly in the curing process.

Language, literacy and numeracy requirements

This unit requires the ability to read and interpret typical product specifications, job sheets, procedures, material labels and safety information as provided to operators.

Writing is required to the level of completing workplace forms.

Basic numeracy is required, eg to determine that two 25 kg bags are needed to make up a requirement for 50 kg.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- apply the required skills and knowledge to operate a tyre curing machine
- apply approved procedures.

Consistent performance should be demonstrated. For example, look to see that:

- tyre curing production standards are met consistently
- all safety procedures are followed.

Assessment method and context

Assessment will occur on an industrial curing machine(s) equipment and will be undertaken in a work-like environment.

Competence in this unit may be assessed:

- by using an appropriate, industrial tyre curing machine requiring demonstration of operation and emergency stop procedures
- in a situation allowing for the generation of evidence of the ability to respond to problems
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency unit includes curing operations.

This competency applies to all work environments within the tyre manufacture sector. It also includes the operation of all relevant ancillary equipment.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

This competency includes use of equipment and tools such as:

- curing press (eg bagomatic, collapsible bladder or shear strip, solid bladder)
- ancillary equipment (eg screens/strainers, computer data systems, ball float steam traps, condensate temperature and steam trap monitoring system)
- curing agents (eg sulphur sources, peroxides, metal oxides, amines, and phenolic resins)
- relevant personal protective equipment.

Hazards

Typical hazards include:

- manual handling
- noise
- humidity
- temperatures (eg from air and steam)
- fumes/vapours (eg from curing agents)
- cleaning equipment (eg screens/strainers)
- stationary and moving machinery.

Problems

'Respond to routine problems' means 'apply known solutions to a limited range of predictable problems'. Typical process problems may include:

- poorly aligned guides
- mould incorrectly placed on machine
- poor mould closure/alignment
- poorly prepared mould (dirty/mould release)
- incorrect temperature settings
- mould temperature/steam pressure/air blinded/waterlogged
- mould/air pressure.

Typical product problems may include:

- contaminated green tyres
- squashed or distorted green tyres
- scorched rubber
- curing time/cycle

- product
- excessive trim/spue
- out of round/eccentric.
-

Unit Sector(s)

Not applicable.

PMBPROD263B Operate retread curing equipment

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the operation of tyre curing equipment in retreading workplaces where pre-vulcanised tread is laid on the retread tyre.

Application of the Unit

Application of this unit

This competency applies to operators who are involved in curing retread tyres assembled from a prepared carcass and a pre-vulcanised tread. This competency is typically performed by operators working independently.

The operator:

- takes product off the machine
- checking product for quality and conformity to specifications
- checks raw material feed
- notices any problems and takes required action (eg reporting)
- deal with non-conforming products, waste and scrap
- complete logs and reports.

This unit does not include retread processes where the green extruded tread is laid onto the buffed casing. This unit also does not include:

- inspection - see *PROD324 Inspect tyres for retreading*
- preparation - see *PROD266 Prepare tyre casings for retreading*
- laying retreads - see *PROD325A Lay on tyre retreads*
-

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisites

This unit has **no** prerequisites.

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Check production plan.	1.1 Identify work requirements from production plan or request. 1.2 Check product, materials and equipment meet requirements for job(s). 1.3 Recognise requirements which may not be in accordance with usual practice. 1.4 Ask questions of appropriate person to confirm unusual practice 1.5 Identify hazards associated with the job and take appropriate action. 1.6 Perform other pre-operational checks in accordance with procedures.
2. Prepare retreads for	2.1 Check stretch height and roundness of tyres.

ELEMENT ELEMENT	PERFORMANCE CRITERIA
curing to procedures.	2.2 Insert equipment used to pressurise inside of tyre to specifications. 2.3 Place tyre within rubber envelope.
3. Start up retread curing equipment to procedures.	3.1 Conduct pre-start checks. 3.2 Start up retread curing equipment.
4. Operate equipment to procedures.	4.1 Check process is operating within required limits. 4.2 Check product is in specification and to required quality standard. 4.3 Ensure product is consistently ready for next operation. 4.4 Maintain supply of material(s) as required. 4.5 Complete logs and records as required. 4.6 Collect and segregate scrap, trim and other materials as required. 4.7 Keep equipment and work area clean. 4.8 Pause machine cycle and perform emergency stop, as required.
5. Respond to routine problems in accordance with procedures.	5.1 Recognise known faults that occur during the operation. 5.2 Identify and take action on causes of routine faults. 5.3 Log problems as required. 5.4 Identify non-routine process and quality problems and take appropriate action.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Application of an operational knowledge of the materials, equipment and process sufficient to recognise out of specification products, process problems and materials faults. For example high pressure is required to secure the retread and cushion gum to the casing to ensure adequate bonding. Therefore the correct amount of pressure applied by such equipment as envelopers and sealing rings needs to be monitored.

Knowledge of organisation procedures and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and work standards.

Application of the knowledge of managing risks using the hierarchy of controls applied to the retread curing process. Application of approved hazard control and safety procedures and the use of PPE in relation to handling materials, equipment operation and cleanup.

Knowledge of and skills in the operation of retread curing equipment and main components sufficient for consistent production of quality products including:

- production workflow sequences and materials demand
- the reasons for checking process control panels and reporting readings which are outside of normal range of process variability
- accurately monitoring equipment operation and product quality
- the potential effects of variations in raw materials and equipment operation in relation to quality of product
- processing behaviour of polymers and the role of additives
- waste management and knowing the importance of reusing non-conforming products wherever possible
- correct selection and use of equipment, materials, processes and procedures
- explain the effect of unauthorised or emergency shutdown in relation to safety and production requirements
- identify factors which may affect product quality or production output and appropriate remedies.

Competence also includes the ability to:

- plan own work, including predicting consequences and identifying improvements
- identify when the operator is able to rectify faults, when assistance is required and who is the appropriate source for assistance
- identify and describe own role and role of others involved directly in the retreading process.

Language, literacy and numeracy requirements

This unit requires the ability to read and interpret typical product specifications, job sheets, procedures, material labels and safety information as provided to operators.

Writing is required to the level of completing workplace forms.

Basic numeracy is required, e.g. to determine that two 25 kg bags are needed to make up a requirement for 50 kg.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- apply the required skills and knowledge to operate retread curing equipment
- apply approved procedures.

Consistent performance should be demonstrated. For example, look to see that:

- retread curing production standards are met consistently
- all safety procedures are followed.

Assessment method and context

Assessment will occur on an industrial retread curing machine(s) equipment and will be undertaken in a work-like environment.

Competence in this unit may be assessed:

- by using appropriate, industrial retread curing equipment requiring demonstration of operation and emergency stop procedures
- in a situation allowing for the generation of evidence of the ability to respond to problems
 - by using a suitable simulation and/or a range of case studies/scenarios
 - through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency unit includes curing operations in retreading operations. Curing is mainly of bonding agents.

This competency applies to most work environments within the tyre retreading sector, but does not include retread processes where the green extruded tread is laid onto the buffed casing. It includes the operation of all relevant additional equipment where that equipment is integral to the retreading process.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

This competency includes use of equipment and tools such as:

- autoclave (such as electric and steam curing chambers)
- envelopers
- sealing rings
- prepared casings
- relevant personal protective equipment.

Hazards

Typical hazards include:

- manual handling
- noise
- humidity
- temperatures (such as from air and steam)
- fumes/vapours
- hazards from high pressures
- stationary and moving machinery, parts and components

Problems

'Respond to routine problems' means 'apply known solutions to a limited range of predictable problems'. Typical process problems may include:

- equipment malfunction
- high humidity in curing oven
- air not being extracted properly from the envelope
- air blinding of steam equipment
- material contamination
- contaminated treads
- poorly prepared/contaminated casing
- poor quality bonding material
- curing time/cycle
- incorrect temperature settings
- incorrect air pressure settings.

Typical product problems may include:

- poor product finish
- poor binding of retread to buffed casing
- excessive trim/spue
- out of round/eccentric.
-

Unit Sector(s)

Not applicable.

PMBPROD264C Check recycle wash process

Modification History

Unit Descriptor

Unit descriptor

This competency covers the use of recycle wash equipment and checking of the process.

Application of the Unit

Application of this unit

This competency applies to operators who are required to use recycle wash equipment and checking of the process. This competency is typically performed by operators working either independently or as part of a work team.

The operator will:

- discuss work progress with other team members
- ensure appropriate raw materials are available
- check the operation of the process
- check product for quality and conformity to specifications
- complete logs and reports.
-

Licensing/Regulatory Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Check work requirements.	1.1 Identify work requirements from workplace approved operating procedures. 1.2 Recognise requirements which may not be in accordance with usual practice. 1.3 Ask questions of appropriate person to confirm unusual practice. 1.4 Ensure housekeeping is to requirements. 1.5 Identify hazards associated with the job and take appropriate action.
2. Conduct pre-checks as required.	2.1 Inspect and sample products in line with workplace procedures. 2.2 Check equipment components and component function is to the required quality standard. 2.3 Check and test fluid circuits, pumps, shutoffs and control valves.
3. Operate recycle washer equipment in accordance with procedures.	3.1 Start machine safely and correctly when required. 3.2 Check process is operating with required limits. 3.3 Collect product samples and store. 3.4 Check product is in specification / to required quality standard. 3.5 Maintain supply of material(s) as required.

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
	3.6 Complete logs and records as required. 3.7 Collect and reprocess/discard scrap/trim and other materials in accordance with workplace procedures. 3.8 Check readouts against standard statistical process information and enter production data into the control system. 3.9 Keep equipment and work area clean. 3.10 Pause machine cycle and perform emergency stop, as required.
4. Identify product quality requirements.	4.1 Check process and note conditions which may affect product quality standards. 4.2 Interpret reports from quality inspections and rectify or report as appropriate equipment conditions within workplace procedures. 4.3 Note and implement authorised changes in standard operating procedures and specifications.
5. Respond to routine problems in accordance with procedures.	5.1 Recognise known faults that occur during the operation. 5.2 Identify and take action on causes of routine faults. 5.3 Log problems as required. 5.4 Identify non-routine process and quality problems and take appropriate action.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Application of knowledge of the materials, equipment and process sufficient to recognise out of specification products, process problems and materials faults.

A knowledge of organisation procedures, relevant regulatory requirements and the ability to implement them within appropriate time constraints and work standards.

Application of the knowledge of managing risks using the hierarchy of controls applied to the recycle wash process. Application of approved hazard control and safety procedures and the use of PPE in relation to handling materials, equipment operation and cleanup.

Knowledge of and skills in the operation of recycle wash equipment and its main components sufficient for consistent production of quality products including:

- impact of incorrect or faulty materials
- focus of operation of work systems and equipment
- hazards of the materials and process and appropriate hazard control procedures
- accurately monitor equipment operation
- identify factors which may affect product quality or production output and appropriate remedies
- explain the effect of unauthorised or emergency shutdown in relation to safety and production requirements.

Competence also includes the ability to:

- plan own work, including predicting consequences and identifying improvements
- identify when the operator is able to rectify problems, when assistance is required and who is the appropriate source for assistance
- identify and describe own role and role of others involved directly in the recycle wash process.

Language, literacy and numeracy requirements

This unit requires the ability to read and interpret typical product specifications, job sheets, procedures, material labels and safety information as provided to operators.

Writing is required to the level of completing workplace forms.

Basic numeracy is required, eg to determine that two 25 kg bags are needed to make up a requirement for 50 kg.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- apply the required skills and knowledge to operate recycle wash equipment
- apply approved procedures.

Consistent performance should be demonstrated. For example, look to see that recycle wash standards are met consistently.

Assessment method and context

Assessment will occur on industrial equipment and will be undertaken in a work-like environment.

Competence in this unit may be assessed:

- by using an appropriate, operating plant requiring demonstration of operation and emergency stop procedures
- in a situation allowing for the generation of evidence of the ability to respond to problems
 - by using a suitable simulation and/or a range of case studies/scenarios
 - through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency applies to all work environments and sectors within the plastics industry. It includes the operation of all relevant ancillary equipment.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

This competency includes use of equipment and tools such as:

- hand carts and trolleys and other manual handling aids
- knives and basic hand tools required for opening of material packaging
- hoists/lifting equipment not requiring any special permits or licences
- bung spanners and similar
- relevant personal protective equipment.

Hazards

Typical hazards include:

- spills
- hazardous materials
- moving equipment
- manual handling hazards.

Problems

'Respond to routine problems' means 'apply known solutions to a limited range of predictable problems'. Typical process and product problems may include:

- equipment malfunction
- variations in materials or contamination of materials.
- incorrect raw materials/additives
- incorrect quantity of materials/additives.

Appropriate action for non-routine problems may be reporting to designated person or other action specified in procedures.

Unit Sector(s)

Not applicable.

PMBPROD265C Operate portable vulcanising equipment

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the application of technical expertise, work planning and problem solving to set up and operate portable vulcanising equipment.

This competency is typically performed by operators working either independently or as part of a work team.

Application of the Unit

Application of this unit

This competency applies to operators who set up and operate portable vulcanising equipment either in a production facility or an on-site work environment. The key factors are the establishment of the appropriate safe working environment, obtaining the necessary power and other supplies, conducting vulcanising operations and assessing and taking appropriate action at the end of the operations.

It includes:

- planning the curing job
- identifying hazards and applying appropriate controls
- obtaining all necessary clearances and permissions for site work
- setting up equipment and materials
- conducting vulcanising operations
- assessing the finished work and identifying and taking action on routine process problems
- completing logs and reports.
-

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisites

This unit has **no** prerequisites.

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Identify work requirements for vulcanising operations.	1.1 Identify the job and vulcaniser characteristics and product quality outcomes required. 1.2 Obtain specifications relevant to the material being vulcanised. 1.3 Identify and obtain equipment and materials required for the vulcanising process. 1.4 Identify hazards associated with the job and take appropriate action. 1.5 Check materials, ancillary supplies, and equipment for quality, access and condition. 1.6 Identify and check emergency stops, gauges, guards and controls.
2. Plan vulcanising operations.	2.1 Identify time, pressure and temperature requirements. 2.2 Plan the task sequences 2.3 Plan for waste management, maintenance and housekeeping requirements.

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
3. Prepare vulcanising equipment.	3.1 Check vulcaniser, ancillary, equipment and attachments are fit for purpose. 3.2 Set up vulcanising press according to procedures. 3.3 Set equipment control parameters to specifications. 3.4 Obtain appropriate clearances for vulcanising to commence.
4. Conduct and monitor vulcanising operations.	4.1 Start the unit and commence vulcanising. 4.2 Monitor the unit operation throughout the entire process 4.3 Note and report non-conformity to specifications to procedures. 4.4 Make adjustments as required. 4.5 Shut down unit when cycle completed. 4.6 Follow procedure to disassemble equipment as required. 4.7 Assess the outcome of the vulcanising process and take remedial action as necessary and report to the appropriate person. 4.8 Brand splice as per company policy 4.9 Clean up, lubricate and adjust equipment as required. 4.10 Complete waste removal or recycling as required.
5. Respond to routine problems to procedure.	5.1 Recognise known faults that occur during the operation. 5.2 Identify and take action on causes of routine faults. 5.3 Log problems as required. 5.4 Identify non-routine process and quality problems and take appropriate action.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Application of knowledge of the materials, equipment and process sufficient to recognise out of specification products, process problems and materials faults.

Knowledge of organization procedures and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and work standards.

Application of the knowledge of managing risks using the hierarchy of controls applied to the vulcanising process. Application of approved hazard control, safety procedures and the use of PPE in relation to handling materials, equipment operation and cleanup.

Knowledge of and skills in the operation of portable vulcanising equipment and main components sufficient for consistent production of quality products including:

- importance of correct selection and use of equipment, materials, processes and procedures
- identifying the function of vulcanising equipment, components and the materials used
- describing changes to materials during the vulcanising process
- explaining the impact of vulcanising speed, pressure, time, temperature and tension on product quality and production output
- describing the role of heat and pressure in relation to providing strength, stiffness, resistance to deformation, fatigue and abrasion
- explaining any differences in vulcanising processes and additives for natural, synthetic and mixed rubber compounds
- deciding if they (the operator) are able to rectify the fault or if assistance is required
- explaining the effect of unauthorised or emergency shutdown of equipment on the vulcanising process
- understand the underlying risks in the process and how best to manage them.

Competence includes the ability to:

- plan own work sequence, including identification of key checkpoints for equipment monitoring and product quality checks
- operate equipment and monitor product quality
- identify factors which may influence product quality and production output and appropriate remedies
- make appropriate authorised alterations to own work plan and equipment to maintain both product quality and required production output
- locate, interpret and apply relevant information and maintain workplace records
- identify and safely handle products and materials, read relevant safety information and apply safety precautions appropriate to the task.

Distinguish between causes of faults such as:

- equipment condition
- materials (eg. contaminated or wrong raw materials/additives/catalyst)
- process conditions (eg incorrect temperatures or pressures and entrapped air in the vulcanised area).

Language, literacy and numeracy requirements

This unit requires the ability to read and interpret typical product specifications, job sheets and material labels as provided to operators.

Writing is required to the level of completing workplace forms.

Basic numeracy is also required, eg to determine that two 25 kg bags are needed to make up a requirement for 50 kg.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- understand the inherent risk associated with using a vulcaniser and the potential consequences of incorrect use
- understand procedures
- understand the importance of critical material properties and quantities
- recognise potential situations requiring action
- implement appropriate action and explain logic.

Consistent performance should be demonstrated. For example, look to see that:

- production standards are met consistently
- wire or reinforcing is not visible in the finished product
- bonding is achieved in accordance with specifications.

Assessment method and context

Assessment will occur on industrial equipment in a work-like environment.

Competence in this unit may be assessed:

- by using an appropriate, portable vulcanising equipment
- in a situation allowing for the generation of evidence of the ability to respond to problems
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency applies to all work environments and sectors within the rubber industry. It includes the operation of all relevant additional equipment where that equipment is integral to the vulcanising process.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

This unit of competency includes use of equipment and tools such as:

- portable vulcanising equipment (including dispersion plates, pressure bags, edge bars, controllers)
- knives and other rubber cutting and shaping equipment
- hoists/lifting equipment not requiring any special permits or licences
- manual handling aids such as handcarts
- relevant personal protective equipment
- powered equipment/aids.

Hazards

Typical hazards include:

- pressure
- heat and hot rubber
- chemical splashes or spills
- dust or vapours/fumes
- manual handling hazards
- knife hazards.

Task sequences

Task sequences include:

- location of vulcaniser
- process monitoring
- quality checks.

Monitoring of vulcanisation

Monitoring of vulcanisation includes noting:

- times,
- vulcanisation quality,
- equipment operating temperatures and times
- additional pressures applied.

Problems

'Respond to routine problems' means 'apply known solutions to a limited range of predictable problems'. Typical process and product problems may include:

- incorrect vulcaniser set-up
- variations in materials
- contamination of materials
- unsuccessful vulcanising processes
- entrapped gasses
- wire or reinforcing exposure
- inappropriate material specification.

Variables

Key variables to be monitored include:

- heat
- pressure
- time
- tension.
-

Unit Sector(s)

Not applicable.

PMBPROD266B Prepare tyre casings for retreading

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the preparation (buffing) of used tyres prior to the laying on of retread. It applies to the tyre retreading sector of the industry.

Application of the Unit

Application of this unit

This competency applies to operators who buff residual tread from used tyres to prepare a carcass for laying retread. The key factors are the removal of sufficient but not excessive old rubber from the used tyre to establish a sound platform for the new tread. This competency is typically performed by operators working either independently or as part of a work team.

The operator will:

- check job sheets for work requirements
- check product for quality and conformity to specifications
- check materials required
- check machine set-up
- buff the tyre
- deal with non-conforming products, waste and scrap
- notice any problems and take required action (eg repair holes or areas where the steel radial becomes exposed)
- complete logs and reports.
-

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisites

This unit has **no** prerequisites.

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Check work requirements.	1.1 Identify work requirements from production plan. 1.2 Identify specific requirements of the tyre being retreaded 1.3 Identify required equipment including handling, buffing, inspection and repair equipment. 1.4 Ask questions of appropriate person to confirm unusual practice. 1.5 Identify hazards associated with the job and take appropriate action. 1.6 Perform other pre-operational checks in accordance with procedures.
2. Start up of tyre buffer to procedures.	2.1 Conduct pre-start checks 2.2 Start up tyre buffer.
3. Operate buffing equipment to procedures.	3.1 Start machine safely and correctly when required. 3.2 Monitor buffing operations noting process stages, depth of cut (according to standard operating procedures) and abrasion.

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
	3.3 Check against workplace standards for colour and texture before completing process. 3.4 Make adjustments to remedy non-conformity to buffing requirements. 3.5 Buzz out areas around exposed steel radials with hand held stone grinder. 3.6 Collect and reprocess/discard scrap/trim and other materials, as required. 3.7 Keep equipment and work area clean. 3.8 Pause machine cycle and perform stop, as required.
4. Repair imperfections.	4.1 Locate casings imperfections from previous inspection. 4.2 Repair casings (especially exposed steel areas) with rubber plugs in accordance with standard operating procedures. 4.3 Complete logs and records as required.
5. Complete operations.	5.1 Check casings for compliance with specifications. 5.2 Create job card, tyre ID, other tracking/information items needed as specified by procedures. 5.3 Adhere the metal tag/s to the tyre wall with uncured rubber.
6. Respond to routine problems to procedures.	6.1 Recognise known faults that occur during the operation. 6.2 Identify and take action on causes of routine faults. 6.3 Log problems as required. 6.4 Identify non-routine process and quality problems and take appropriate action.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Application of knowledge of the materials, equipment and process sufficient to recognise out of specification products, process problems and materials faults.

A knowledge of organization procedures, relevant regulatory requirements and the ability to implement them within appropriate time constraints and work standards. For example the minimum allowable depth of cover over the belt before retreading.

Application of the knowledge of managing risks using the hierarchy of controls applied to the buffing process. Application of approved hazard control and safety procedures and the use of PPE in relation to handling materials, equipment operation and cleanup.

Show knowledge of and skills in the preparation of tyre casings for retreading and its main components sufficient for the consistent production of quality products including:

- different mould part types
- types of releasing agents
- role of releasing agents
- procedures
- factors which may affect product quality or production output and appropriate remedies

Competence includes knowledge of:

- production workflow sequences and materials demand
- the reasons for checking process controls
- the normal range of process variability
- the potential effects of variations in materials and equipment operation in relation to quality of product.
- purpose of the buffing and repair processes
- correct selection and use of equipment, materials, processes and procedures.

Competence also includes the ability to:

- check process controls and report readings which are outside the normal range of process variability
- identify factors which may affect product quality or production output and appropriate remedies
- recognise pre-cure retreads and cured recaps, remould retreads and the relevant procedures to buff casings for each type
- explain the effect of unauthorised or emergency shutdown in relation to safety and production requirements
- plan own work, including predicting consequences and identifying improvements
- accurately monitor equipment operation and product quality
- identify when the operator is able to rectify faults, when assistance is required and who is the appropriate source for assistance
- identify and describe own role and role of others involved directly in the preparation of tyre casing for retreading process.

Language, literacy and numeracy requirements

This unit requires the ability to read and interpret typical product specifications, job sheets, procedures, basic machine control panels, material labels and safety information as provided to operators.

Writing is required to the level of completing workplace forms.

Basic numeracy is required, eg to determine that two 25 kg bags are needed to make up a requirement for 50 kg.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- apply the required skills and knowledge to prepare tyre casings for retreading
- apply approved procedures.

Consistent performance should be demonstrated. For example, look to see that production standards are met consistently.

Assessment method and context

Assessment will occur on an industrial buffing machine(s) equipment and will be undertaken in a work-like environment.

Competence in this unit may be assessed:

- by using an appropriate, industrial tyre buffing machine requiring demonstration of operation and start/stop procedures
- in a situation allowing for the generation of evidence of the ability to respond to problems
 - by using a suitable simulation and/or a range of case studies/scenarios
 - through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency unit includes the use of manual handling aids and various powered equipment/aids. This competency applies to work environments and sectors within the rubber industry. It includes the operation of all relevant ancillary equipment.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards. These may include:

- movement of materials
- stacking of materials
- basic measurement of quantities
- basic pre-blending of materials.

Tools and equipment

This competency includes use of equipment and tools such as:

- hand carts and trolleys
- knives and other bag opening equipment
- hoists/lifting equipment not requiring any special permits or licences
- bung spanners and similar
- basic hand tools required for opening of material packaging
- relevant personal protective equipment.

Hazards

Typical hazards include:

- spills
- dusts/vapours
- hazardous materials (including rubber dust produced during the buffing process)
- manual handling hazards
- knife hazards.

Problems

Respond to routine problems' means 'apply known solutions to a variety of predictable problems'. Typical process and product problems may include:

- variations in tyres
- contamination of tyres
- damaged tyres.
- wrong raw materials
- inappropriate blade selection
- insufficient or too deep buffing.
-

Unit Sector(s)

Not applicable.

PMBPROD324B Inspect tyres for retreading

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the inspection of used tyres to determine their suitability for retreading and the resolving of routine and non-routine problems.

Application of the Unit

Application of this unit

This competency is typically performed by advanced operators applying knowledge of materials, product purpose and processes to the inspection of second hand tyres for defects that would preclude use as a retread. It also requires using a range of well developed skills requiring some discretion and judgment to recognise and resolve a range of problems.

The operator will:

- check settings and adjustments of inspection equipment
- inspect tyres by eye and/ or electronically
- repair minor holes and cracks in the casing
- solve inspection equipment and process problems, seeking guidance where necessary or appropriate.
-

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisites

This unit has **no** prerequisites.

Employability Skills Information

Employability Skills

The required outcomes described in this unit contain applicable Employability Skills. The Employability Skills Summary of the qualification(s) in which this unit is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
1. Plan own work requirements.	1.1 Identify the most appropriate equipment to be used for inspection and upstream and downstream operations from production plan or request. 1.2 Identify tyres to be inspected and check equipment to be used. 1.3 Implement measures to control identified hazards in line with procedures and duty of care.
2. Conduct tyre inspection.	2.1 Identify quality specifications and standard operating procedures for rejecting tyres for retreading 2.2 Check casings for conformity with specification requirements. 2.3 Tag tyres suitable for retreading following workplace procedures 2.4 Discard non-conforming tyres in accordance with workplace procedures. 2.5 Repair minor holes in casings of retreadables, as required. 2.6 Clean, adjust and lubricate equipment as required.

ELEMENT ELEMENT	PERFORMANCE CRITERIA
4. Anticipate and solve problems.	<p>Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.</p> <p>4.1 Recognise a problem or a potential problem. 4.2 Determine problems needing priority action. 4.3 Refer problems outside area of responsibility to appropriate person, with possible causes. 4.4 Seek information and assistance as required, to solve problems. 4.5 Solve problems within area of responsibility. 4.6 Follow through items initiated until final resolution has occurred.</p>

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Application of knowledge of tyre construction and technology, inspection methods and equipment sufficient to recognise tyre conditions which may lead to out of specification retreads. For example, weather checking can be difficult when a tire is under-inflated. The inspector will need to stress the sidewalls by hand or with an inspection spreader.

Knowledge and ability to implement organization procedures, quality requirements at each inspection stage, and relevant regulatory requirements, within appropriate time constraints and work standards.

Application of the knowledge of managing risks using the hierarchy of controls applied to tyre inspection methods. Application of approved hazard control and safety procedures and the use of PPE in relation to handling materials, equipment operation and cleanup.

Knowledge and skills in tyre inspection and retreading process sufficient for consistent identification of good quality tyres for retreading:

- characteristics of finished and second hand tyres in relation to the impact of the retread process on product quality and safety
- importance of tyre size, speed rating and aspect ration markings of tyres on inspection decisions
- function and operating principles of inspection equipment
- impact of significantly faulty tyres falsely passing inspection
- correct selection and use of equipment, materials, processes and procedures.

Competence also includes the ability to:

- plan own work, including predicting consequences and identifying improvements
- maintain inspection output and product quality using appropriate instruments, controls, test information and readings
- identify and describe own role and role of others involved directly in the retreading process.
- identify factors which may affect product quality or production output and appropriate remedies
- identify when assistance is required to solve problems.

Language, literacy and numeracy requirements

This unit requires the ability to read and interpret typical product specifications, job sheets and material labels as provided to operators.

Writing is required to the level of completing workplace forms and production reports.

Basic numeracy is required, eg to determine how many 2 kg, 3 kg and 5 kg bags are needed to make up a requirement for 50 kg.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for this training package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- identify critical tyre properties and tyre inspection criteria in relation to the retreading process and the end product
- make adjustments to the inspection process as required
- identify and take appropriate action on inspection problems and potential problems.

Consistent performance should be demonstrated. For example, look to see that:

- inspection is done thoroughly and consistently
- all safety procedures are always followed.

Assessment method and context

Assessment will occur using industrial tyre inspection methods and equipment and will be undertaken in a work-like environment.

Competence in this unit may be assessed:

- by using an appropriate tyre inspection method and/ or machine
- in a situation allowing for the generation of evidence of the ability to respond to problems
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

The competency applies to the initial inspection of tyres for retreading. It covers the operation of inspection equipment and all relevant additional equipment where that equipment is integral to the tyre inspection process.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

This competency includes use of equipment and tools such as:

- inspection equipment (such as NDI scanning equipment, nail hole detector, high pressure tester, x-ray or ultrasound)
- manual handling aids such as handcarts and overhead tracks
- hand held lights
- basic hand tools required for inspecting holes in the tyre casing
- relevant personal protective equipment.

Hazards

Typical hazards include:

- dust
- manual handling hazards
- noise.

Problems

'Anticipate and solve problems' means resolve a wide range of routine and non-routine problems, using product and process knowledge to develop solutions to problems which do not have a know solution/s recorded in the procedures.

Typical process and product problems may include:

- equipment malfunction
- detecting hidden damage
- blow-outs
- punctures
- broken chords
- cord body fabric damage
- wear patterns.

Appropriate action for problems outside area of responsibility may be reporting to an appropriate person.

Appropriate action for solving problems within area of responsibility includes asking questions and seeking assistance from appropriate persons/sources.

Variables

Key variables to be monitored include:

- tire size
- speed ratings
- aspect ration markings
- pressure
- discolouration.
-

Unit Sector(s)

Not applicable.

PMBPROD325B Lay on tyre retreads

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the laying of retread on casings prepared from used tyres and the solving of routine problems. It applies to the rubber sector of the industry.

Application of the Unit

Application of this unit

This competency is typically performed by advanced operators applying knowledge of materials, product purpose and processes to the operation of laying tyre retreads to produce product conforming to requirements. It also requires using a range of well developed skills requiring some discretion and judgement to recognise and resolve a range of problems.

The operator:

- start up tyre retread laying machinery
- check settings and adjustments of equipment
- monitor equipment and process operation
- make appropriate adjustments to correct materials, equipment or process variations
- solve retread laying equipment, material and process problems, seeking guidance where necessary or appropriate.

This unit does not include:

- inspection - see *PROD324 Inspect tyres for retreading*
- preparation - see *PROD266 Prepare tyre casings for retreading*.
-

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisites

This unit has **no** prerequisites.

Employability Skills Information

Employability Skills

The required outcomes described in this unit contain applicable Employability Skills. The Employability Skills Summary of the qualification(s) in which this unit is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
1. Plan own work requirements.	1.1 Identify the most appropriate equipment to be used for production and upstream and downstream operations from production plan or request. 1.2 Identify and check materials required. 1.3 Implement measures to control identified hazards in line with procedures and duty of care. 1.4 Identify requirements for materials, quality, production and equipment checks.
2. Start up retread laying process to procedures.	2.1 Identify process settings required for product. 2.2 Set process to required settings. 2.3 Check materials are correct. 2.4 Take appropriate action for non-conforming materials. 2.5 Set up date, batch and materials markings to

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
	specifications, as required. 2.6 Complete pre-start checks. 2.7 Start up retread laying process.
3. Operate and make adjustments to the retread laying process to procedures.	3.1 Operate retread laying process, noting key variables. 3.2 Monitor product/process quality. 3.3 Make adjustments to remedy faults and non-conformity as required. 3.4 Establish a stable retread laying process. 3.5 Adjust process to minimise scrap and trim. 3.6 Clean, adjust and lubricate equipment as required.
4. Shut down equipment to procedures.	4.1 Determine type of shut down. 4.2 Leave machine in appropriate condition and with appropriate locks, tags or notices. 4.3 Complete relevant documentation. 4.4 Ensure area is clean and clear after the shutdown, in readiness for the next start-up.
5. Anticipate and solve problems.	5.1 Recognise a problem or a potential problem 5.2 Determine problems needing priority action. 5.3 Refer problems outside area of responsibility to appropriate person, with possible causes. 5.4 Seek information and assistance as required to solve problems. 5.5 Solve problems within area of responsibility. 5.6 Follow through items initiated until final resolution has occurred.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Application of knowledge of the materials, equipment and process sufficient to recognise material and equipment conditions which may lead to out of specification production. For example, the inspection and preparation of casings is crucial to the quality of a retreaded tyre. Therefore, it is important to check, once the casings have been prepared that there are no further problems with the casings prior to laying the retread.

Knowledge of organization procedures, quality requirements at each production stage and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and work standards.

Application of the knowledge of managing risks using the hierarchy of controls applied to the retread laying process. Application of approved hazard control and safety procedures and the use of PPE in relation to handling materials, equipment operation and cleanup.

Competence includes the ability for the practical completion of the job to apply and explain:

- characteristics of materials and behaviour in relation to heat, pressure, flow rate and time
- function and operating principles of retread laying processes, equipment, machine components and ancillary equipment
- impact of tyre size, faulty tyres, speed rating, finished and second hand tyres, and aspect ratio markings of tyres on product quality and production output
- phases of the retread laying cycle and the effect of the key variables on product quality, in order to make appropriate adjustments to process and equipment settings. For example, the adhesive laying phase is needed when laying pre-cured treads to the casings to bond tread during vulcanisation.
- processing behaviour of those polymers which are used in the workplace
- changes to materials at various stages of production
- waste management and importance of non-conforming materials
- impact of variations in raw materials and equipment operation in relation to final product.

Skill to identify the range of possible causes of product faults.

Competence also includes the ability to:

- plan own work, including predicting consequences and identifying improvements
- maintain output and product quality using appropriate instruments, controls, test information and readings
- identify and describe own role and role of others involved directly in the retread laying process
- identify factors which may affect product quality or production output and appropriate remedies
- identify when the when assistance is required to solve problems.

Language, literacy and numeracy requirements

This unit requires the ability to read and interpret typical product specifications, job sheets and material labels as provided to operators.

Writing is required to the level of completing workplace forms and production reports.

Basic numeracy is required, eg to determine how many 2 kg, 3 kg and 5 kg bags are needed to make up a requirement for 50 kg.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for this training package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- identify critical materials properties and retread laying process variables in relation to the process requirements and the end product
- make adjustments to the process as required
- identify and take appropriate action on problems and potential problems.

Consistent performance should be demonstrated. For example, look to see that:

- the process runs consistently and smoothly, with the minimum need for human intervention
- all safety procedures are always followed.

Assessment method and context

Assessment will occur on an industrial retread laying machine(s) and equipment and will be undertaken in a work-like environment.

Competence in this unit may be assessed:

- by use of appropriate, industrial retread laying equipment and machinery requiring demonstration of start up, operation and shut down procedures
- in a situation allowing the generation of evidence of the ability to recognise, anticipate and resolve problems
- by use of a suitable simulation and/or a range of case studies/scenarios
- by a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency applies to tyre retreading. It includes the operation of all relevant additional equipment where that equipment is integral to the tread lay-up process.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

This unit of competency includes use of equipment and tools such as:

- manual handling aids (eg hand carts and trolleys)
- powered equipment/aids (eg compression rollers, staplers, cutting instruments and stone grinders)
- tread application equipment (eg semiautomatic builders to applying cured or uncured tread)
- moulds (for mould cure process)
- ancillary equipment (eg guide lights)
- hand tools (eg for roughing the surface, cutting and stapling the tread)
- raw materials (eg moulded tread and cushion gum)
- relevant personal protective equipment.

Hazards

Typical hazards include:

- fumes/vapours
- cutting tools
- manual handling hazards
- noise
- moving components of machinery and equipment.

Problems

'Anticipate and solve problems' means resolve a wide range of routine and non-routine problems, using product and process knowledge to develop solutions to problems which do not have a known solution/a solution recorded in the procedures.

Typical routine faults include:

- incorrect tread selected
- incorrect tyre inflation pressure.

Non-routine faults, which may have multiple causes include:

- faulty casings
- contamination of materials.

Typical process and product problems may include:

- equipment malfunction
- poorly aligned tread
- tread too long/short
- wrong tread profile.

Appropriate action for problems outside of area of responsibility may be reporting to an appropriate person.

Appropriate action for solving problems within area of responsibility includes asking questions and seeking assistance from appropriate persons/sources.

Variables

Key variables to be monitored include:

- speed (including equipment speed, laying of cured and uncured tread)
- pressure
- colour
- tyre components
- tread alignment
- product integrity and general conformance to specification and quality sample.
-

Unit Sector(s)

PMBPROD326B Inspect tyres

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the testing and inspection of tyres and the solving of routine and non-routine problems.

Application of the Unit

Application of this unit

This competency is typically performed by advanced operators applying knowledge of materials, product purpose and processes in tyre inspection and testing to ensure quality, in both performance and safety, of finished tyres. It also requires using a range of well developed skills requiring some discretion and judgement to recognise and resolve a range of problems.

The operator will:

- inspect tyres visually, manually and by use of inspection equipment
- check settings and adjustments of equipment
- monitor equipment operation and correct variations
- identify non-conforming products and take appropriate action (eg ensuring discarded products are repaired where possible and/or scraped tyres are disposed of in accordance with workplace instructions)
- solve inspection and equipment problems, seeking guidance where necessary or appropriate.
-

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisites

This unit has **no** prerequisites.

Employability Skills Information

Employability Skills

The required outcomes described in this unit contain applicable Employability Skills. The Employability Skills Summary of the qualification(s) in which this unit is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
1. Plan own work requirements.	1.1 Identify the most appropriate equipment and processes to be used for tyre inspection and testing. 1.2 Identify different tyre types, identification codings and quality standards required. 1.3 Implement measures to control identified hazards in line with procedures and duty of care. 1.4 Identify repair, scrap tyre and housekeeping needs
2. Start up testing process to procedures.	2.1 Conduct visual inspection of tyres to spot obvious defects. 2.2 Manually locate bumps or dips. 2.3 Check inspection equipment settings and make adjustments as required. 2.4 Complete other pre-start checks in accordance with procedures.
3. Operate tyre testing	3.1 Operate machine to rotate and test tyres, following

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
machines to procedures.	standard operating procedures and State OHS requirements. 3.2 Monitor product quality in accordance with procedures. 3.3 Clean, adjust and lubricate equipment as required. 3.4 Shut down equipment to procedures, in normal or emergency situations. 3.5 Complete relevant documentation.
4. Respond to faults.	4.1 Identify possible routine and non-routine faults in the tyre. 4.2 Determine tyres needing action. 4.3 Determine possible fault causes. 4.4 Report faults outside area of responsibility to designated person. 4.5 Maintain appropriate records and log books to meet procedures/work instructions.
5. Stamp, label and sort tyres.	5.1 Stamp identification number on each tyre. 5.2 Label tyres with weekly code. 5.3 Sort passed tyres by coding. 5.4 Sort tyres for repair or scrap.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Application of knowledge of the materials, equipment and testing process sufficient to recognise material and equipment conditions which may lead to out of specification production.

Knowledge and ability to implement organization procedures, the quality requirements at each production stage and relevant regulatory requirements, within appropriate time constraints and work standards.

Application of the knowledge of managing risks using the hierarchy of controls applied to the tyre inspection/testing processes. Application of approved hazard control and safety procedures and the use of PPE in relation to handling materials. equipment operation and cleanup.

Knowledge and skills in tyre inspection and testing equipment, including:

- different tyre types and their construction and material content
- quality requirements for the different types of tyres
- function and operating principles of tyre testing equipment, machine components and ancillary equipment
- correct selection and use of equipment and inspection/testing procedures
- waste management and importance of repairing non-conforming products.

Competence also includes the ability to:

- plan own work, including predicting consequences and identifying improvements
- maintain output and product quality using appropriate instruments, controls, test information and readings
- identify and describe own role and role of others involved directly in the inspection/testing process
- identify what faults the operator is able to recognise manually and when assistance by equipment is required.

Language, literacy and numeracy requirements

This unit requires the ability to read and interpret typical product specifications, job sheets and machine control panels such as those displaying SPC information.

Writing is required to the level of completing workplace forms and production reports.

Basic numeracy is required, eg to determine how many 2 kg, 3 kg and 5 kg bags are needed to make up a requirement for 50 kg.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for this training package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- identify critical tyre properties and inspection criteria in relation to the end product
- make adjustments to inspections/testing process and equipment as required
- identify and take appropriate action on problems and potential problems.

Consistent performance should be demonstrated. For example, look to see that:

- tyre inspection and testing standards are met consistently
- all safety procedures are always followed.

Assessment method and context

Assessment will occur on an industrial tyre inspection/testing equipment and will be undertaken in a work-like environment.

Competence in this unit may be assessed:

- by observation over a range of tyre inspection/testing procedures undertaken in the workplace
- in a situation allowing for the generation of evidence of the ability to respond to problems
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency applies to the inspection and testing of tyres within the rubber industry. It includes the operation of all relevant additional equipment where that equipment is integral to the inspection/testing process.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

This competency includes use of equipment and tools such as:

- tyre testing machines such as x-ray, uniformity, bulge test, and tyre balance test machines
- hand tools used in the inspection/testing process
- material loading equipment used for loading of tyres
- relevant personal protective equipment.

Hazards

Typical hazards include:

- manual handling hazards
- equipment operations
- dust/ vapours.

Problems

'Anticipate and solve problems' means resolve a wide range of routine and non-routine problems, using product and process knowledge to develop solutions to problems which do not have a known solution/s recorded in the procedures.

Typical routine faults include:

- bulges in sidewalls
- deformation
- damaged carcass
- offset
- snaking
- cuts.

Typical inspection/testing problems may include:

- equipment malfunction
- incorrect set-up of testing machine to tyre type
- detecting hidden damage.

Appropriate action for problems outside area of responsibility may be reporting to an appropriate person.

Appropriate action for solving problems within area of responsibility includes asking questions and seeking assistance from appropriate persons/sources.

Variables

Key variables to be monitored include:

- colour
- product weight
- product integrity and general conformance to specification/sample.
-

Unit Descriptor

This unit covers input into public sector budgeting, financial forecasting and reporting requirements, and the allocation and management of resources to achieve the required outputs of the business unit. It includes contributing to financial bids and estimates, allocating funds, managing budgets and reporting on financial activity.

In practice, the management of public sector financial resources may occur in the context of other generalist or specialist public sector workplace activities such as managing compliance with legislation, maintaining and enhancing ethical practice, managing people, policy etc.

This unit is one of 6 units of competency in the *Working in Government and Management* Competency fields that deal with resources.

Related units are:

- PSPGOV204B Access and use resources
- PSPGOV305B Access and use resources and financial systems
- PSPGOV403B Use resources to achieve work unit goals
- PSPGOV503B Coordinate resource allocation and usage

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication

Application of the Unit

Not applicable.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements are the essential outcomes of the unit of competency. Together, performance criteria specify the requirements for competent performance. Text in *bold italics* is explained in the Range Statement following.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1. Contribute to financial bids and estimates

- 1.1 Organisational initiatives requiring the preparation of *bids* and *estimates* are identified in accordance with resource constraints and organisational needs.
- 1.2 *Information* for bids/estimates is substantiated, contains logical assumptions and takes account of strategic plans, government policies and priorities.
- 1.3 Information for bids/estimates is prepared in accordance with government *budgetary requirements* including a timeframe to meet critical submission dates.
- 1.4 *Documentation* to support bids/estimates is prepared in accordance with budget guidelines.

2. Allocate funds

- 2.1 *Budgets* are approved and financial resources are allocated according to organisational priorities/business plan.
- 2.2 Allocations are made in accordance with organisational policy and procedures and take account of any statutory requirements or constraints.
- 2.3 Audit trails are maintained to ensure accurate tracking and to identify variances between agreed and actual allocations.
- 2.4 Financial allocation is monitored against organisational objectives and priorities and *corrective action* is taken as

ELEMENT	PERFORMANCE CRITERIA
3. Manage budgets	<p>required in accordance with organisational policy and procedures.</p> <p>3.1 Budget management is undertaken that meets the financial accountability requirements of the organisation.</p> <p>3.2 Expenses are monitored against budget and authorised in accordance with financial <i>delegation</i> and organisational <i>financial controls</i>.</p> <p>3.3 <i>Financial reports</i> are obtained and provided in accordance with organisational requirements.</p> <p>3.4 Expenses are monitored through analysis of financial information/reports and problems are resolved or referred in accordance with organisational procedures and financial delegation.</p> <p>3.5 Expenditure is aligned with service delivery milestones/expectations.</p> <p>3.6 Changes to the budget are negotiated to account for potential under-spending, delays in service/program delivery, overruns and unneeded line items in accordance with organisational policy and procedures.</p>
4. Report on financial activities	<p>4.1 Requirements for financial management and reporting are identified in accordance with the public sector <i>financial management framework</i>.</p> <p>4.2 Financial management and reporting are undertaken in accordance with organisational requirements and <i>public sector financial management policy and procedures</i>.</p>

Required Skills and Knowledge

This section describes the essential skills and knowledge and their level, required for this unit.

Skill requirements

Look for evidence that confirms skills in:

- preparing information and reports requiring precision of expression
- meeting formatting and process requirements for bids and estimates and linkages to strategic plans
- monitoring financial information
- interpreting and signing off on financial reports
- interpreting organisational information in financial terms
- adjusting communication to suit different audiences

- using cross-cultural communication relating to financial management - across professional cultures such as accounting, IT, arts, policy areas
- responding to diversity, including gender and disability
- accessing information and legislation electronically or in hard copy
- applying environmental, sustainability and occupational health and safety procedures relating to working in the public sector

Knowledge requirements

Look for evidence that confirms knowledge and understanding of:

- financial management principles
- legislation, policies and processes relating to public sector financial management, such as conflicts of interest, procurement, value for money
- the organisation's financial accountability mechanisms
- corporate governance requirements
- internal controls and why they are used
- delegations and why the public sector uses them
- public sector financial management framework (detailed knowledge) and the relationship between the elements of the framework
- documents that make up the financial management framework
- legislation related to working in the public sector such as equal employment opportunity, environmental, sustainability and occupational health and safety requirements

Evidence Guide

The Evidence Guide specifies the evidence required to demonstrate achievement in the unit of competency as a whole. It must be read in conjunction with the Unit descriptor, Performance Criteria, the Range Statement and the Assessment Guidelines for the Public Sector Training Package.

Units to be assessed together

- *Pre-requisite* units that must be achieved prior to this unit: *Nil*
- *Co-requisite* units that must be assessed with this unit: *Nil*
- *Co-assessed units* that may be assessed with this unit to increase the efficiency and realism of the assessment process include, but are not limited to:
 - PSPETHC601B Maintain and enhance confidence in public service
 - PSPLEGN601B Manage compliance with legislation in the public sector
 - PSPMNGT603B Facilitate people management
 - PSPMNGT602B Manage resources

- PSPMNGT608B Manage risk
- PSPMNGT609B Formulate business strategies
- PSPPOL603A Manage policy implementation

Overview of evidence requirements

In addition to integrated demonstration of the elements and their related performance criteria, look for evidence that confirms:

- the knowledge requirements of this unit
- the skill requirements of this unit
- application of the Employability Skills as they relate to this unit (see Employability Summaries in Qualifications Framework)
- management of public sector financial resources in a range of (2 or more) contexts (or occasions, over time)

Resources required to carry out assessment

These resources include:

- public sector and organisational financial procedures and protocols
- workplace scenarios and case studies to capture the range of situations likely to be encountered when managing public sector financial resources
- financial legislation and guidelines such as central agency guidelines
- budget process and guidelines

Where and how to assess evidence

Valid assessment of this unit requires:

- a workplace environment or one that closely resembles normal work practice and replicates the range of conditions likely to be encountered when managing public sector financial resources, including coping with difficulties, irregularities and breakdowns in routine
- management of public sector financial resources in a range of (2 or more) contexts (or occasions, over time)

Assessment methods should reflect workplace demands, such as literacy, and the needs of particular groups, such as:

- people with disabilities
- people from culturally and linguistically diverse backgrounds
- Aboriginal and Torres Strait Islander people
- women
- young people
- older people
- people in rural and remote locations

Assessment methods suitable for valid and reliable assessment of

this competency may include, but are not limited to, a combination of 2 or more of:

- case studies
- portfolios
- projects
- questioning
- scenarios
- authenticated evidence from the workplace and/or training courses

For consistency of assessment

Evidence must be gathered over time in a range of contexts to ensure the person can achieve the unit outcome and apply the competency in different situations or environments

Range Statement

The Range Statement provides information about the context in which the unit of competency is carried out. The variables cater for differences between States and Territories and the Commonwealth, and between organisations and workplaces. They allow for different work requirements, work practices and knowledge. The Range Statement also provides a focus for assessment. It relates to the unit as a whole. Text in ***bold italics*** in the Performance Criteria is explained here.

Bids may include:

- program discretionary bids
- program, sub-program, section, business unit bids
- portfolio managed bids

Estimates may include:

- budget estimates
- additional estimates
- forward estimates
- long-term estimates
- forecasts

Information may include:

- historical information
- cost-benefit analysis
- staff requirements
- contractual information
- efficiency/sustainability requirements

Budgetary requirements may include:

- zero-based budgeting
- accrual budgeting
- activity-based costing/management
- output-based budgeting

Supporting documentation may include:

- top-down/bottom-up approach
- base plus increment
- phasing for liability and expenditure/cash flow implications
- impact statements
- reasons for major variations to financial guidance
- staffing resources

Budgets may include:

- capital expenses
- recurrent expenses
- staffing costs
- cash flow
- forward estimates

Corrective action may include:

- re-prioritising activities
- funds transfer
- re-phasing liability/expenditure

Delegations are:

- functions or powers (under an act) assigned to others
- limited to specified powers or amounts
- made to persons in specified positions

Financial controls should:

- identify, record and measure revenue, expenses, assets, liabilities and equity
- ensure assets are safeguarded and used to avoid waste, extravagance, loss and misuse
- ensure liabilities are not incurred without proper authority
- ensure correct valuation, cut-off, presentation and disclosure of financial balances and transactions
- be linked to the organisation's risk management strategy

Financial reports may include:

- program, sub-program, section, business unit financial reports
- accrual reports
- monthly/quarterly financial reports including cost/unit, costs incurred compared with share of program delivered
- annual reports

Elements of the public sector financial management framework may include:

- internal controls
- segregation of duties
- delegations
- corporate governance requirements
- service level agreements
- internal and external reporting
- risk management

Public sector financial

- financial management acts and regulations

policies and procedures
may include:

- financial administration and audit acts
- Treasury guidelines
- public sector finance standards
- financial management benchmarking studies
- the organisation's:
 - financial management practice manual
 - delegation manual
 - budget manual/instructions
 - style manual
 - quality manual
- government financial policy statements

Unit Sector(s)

Not applicable.

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to plan and organise the assessment process, including recognition of prior learning (RPL), in a competency-based assessment system. It also includes the development of simple assessment instruments.

Application of the Unit

This unit typically applies to assessors and workplace supervisors with assessment planning responsibilities; and trainers or other assessors responsible for planning assessment, including RPL.

The unit is suitable for those with an existing assessment strategy which documents the overall framework for assessment.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

ELEMENT

unit of competency.

PERFORMANCE CRITERIA

is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1. Determine assessment approach	<p>1.1 Identify candidate and confirm <i>purposes and context of assessment/RPL</i> with relevant people according to <i>legal, organisational and ethical requirements</i></p> <p>1.2 Identify and access <i>benchmarks for assessment/RPL</i> and any specific assessment guidelines</p>
2. Prepare the assessment plan	<p>2.1 Determine evidence and <i>types of evidence</i> needed to demonstrate competence, according to the <i>rules of evidence</i></p> <p>2.2 Select <i>assessment methods</i> which will support the collection of defined evidence, taking into account the context in which the assessment will take place</p> <p>2.3 Document all aspects of the <i>assessment plan</i> and confirm with relevant personnel</p>
3. Develop assessment instruments	<p>3.1 Develop <i>simple assessment instruments</i> to meet target group needs</p> <p>3.2 Analyse <i>available assessment instruments</i> for their suitability for use and modify as required</p> <p>3.3 <i>Map assessment</i> instruments against unit or course requirements</p> <p>3.4 Write clear instructions for candidate about the use of the instruments</p> <p>3.5 Trial draft assessment instruments to validate content and applicability, and record outcomes</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- cognitive interpretation skills to:
 - interpret competency standards and other assessment documentation, including material

- relating to reasonable adjustment
- identify opportunities for integrated competency assessment
- contextualise competency standards to the operating assessment environment, including RPL
- consider access and equity needs of diverse candidates
- technology skills to use appropriate equipment and software to communicate effectively with others
- research and evaluation skills to:
 - obtain competency standards, assessment tools and other relevant assessment resources
 - research candidate characteristics and any reasonable adjustment needs
 - evaluate feedback, and determine and implement improvements to processes
- literacy skills to read and interpret relevant information to design and facilitate assessment and recognition processes
- communication skills to discuss assessment, including RPL processes with clients and other assessors
- interpersonal skills to:
 - demonstrate sensitivity to access and equity considerations and candidate diversity
 - promote and implement equity, fairness, validity, reliability and flexibility in planning an assessment processes.
- **Required knowledge**
- ethical and legal requirements of an assessor
- competency-based assessment, including:
 - work focused
 - criterion referenced
 - standards based
 - evidence based
- different purposes of assessment and different assessment contexts, including RPL
- how to read and interpret the identified competency standards as the benchmarks for assessment
- how to contextualise competency standards within relevant guidelines
- four principles of assessment and how they guide the assessment process
- purpose and features of evidence, and different types of evidence used in competency-based assessments, including RPL
- rules of evidence and how they guide evidence collection
- different types of assessment methods, including suitability for collecting various types of evidence
- assessment instruments and their purpose; different types of instruments; relevance of different instruments for specific evidence-gathering opportunities.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<ul style="list-style-type: none"> • Evidence of the ability to: • plan and organise the assessment process on a minimum of two occasions • collect evidence that demonstrates: <ul style="list-style-type: none"> • documented assessment plans • having covered a range of assessment events • catering for a number of candidates • different competency standards or accredited curricula • an RPL assessment • contextualisation of competency standards and the selected assessment tools, where required • incorporation of reasonable adjustment strategies • development of simple assessment instruments for use in the process • organisational arrangements.
Context of and specific resources for assessment	<p>Evidence must be gathered in the workplace wherever possible. Where no workplace is available, a simulated workplace must be provided.</p> <p>Assessment must ensure access to training products, such as training packages and accredited course documentation.</p>
Method of assessment	
Guidance information for assessment	

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Purposes of assessment/ RPL</i> may include:</p>	<ul style="list-style-type: none"> • recognising current existing competence of candidates • determining if competence has been achieved following learning • establishing candidate progress towards achievement of competence • determining language, literacy and numeracy needs of candidates • certifying competence through a qualification or Statement of Attainment • licensing or regulatory requirements.
<p><i>Context of assessment/ RPL</i> may include:</p>	<ul style="list-style-type: none"> • environment in which the assessment/RPL will be carried out, including real or simulated workplace • opportunities for collecting evidence in a number of situations • relationships between competency standards and: <ul style="list-style-type: none"> • evidence to support RPL • work activities in the candidate's workplace • learning activities • who carries out the assessment/RPL.
<p><i>Organisational, legal and ethical requirements</i> may include:</p>	<ul style="list-style-type: none"> • assessment system policies and procedures • assessment strategy requirements • reporting, recording and retrieval systems for assessment, including RPL • quality assurance systems • business and performance plans • access and equity policies and procedures • collaborative and partnership arrangements • defined resource parameters • mutual recognition arrangements • industrial relations systems and processes, awards, and enterprise agreements • Australian Quality Training Framework • registration scope • human resources policies and procedures • legal requirements, including: <ul style="list-style-type: none"> • anti-discrimination • equal employment opportunity • job role, responsibilities and conditions • relevant industry codes of practice • confidentiality and privacy requirements • OHS considerations, including: <ul style="list-style-type: none"> • ensuring OHS requirements are adhered to during the

	<p>assessment process</p> <ul style="list-style-type: none"> identifying and reporting OHS hazards and concerns to relevant personnel.
Benchmarks for assessment/RPL may include:	<ul style="list-style-type: none"> criterion against which the candidate is assessed or prior learning recognised, which may be: <ul style="list-style-type: none"> competency standard/unit of competency assessment criteria of course curricula performance specifications of an enterprise or industry product specifications.
Types of evidence may include:	<ul style="list-style-type: none"> direct indirect supplementary.
Rules of evidence ensure that evidence collected is:	<ul style="list-style-type: none"> valid sufficient authentic current.
Assessment methods are the particular techniques used to gather evidence and may include:	<ul style="list-style-type: none"> direct observation, for example: <ul style="list-style-type: none"> real work/real time activities at the workplace work activities in a simulated workplace environment structured activities, for example: <ul style="list-style-type: none"> simulation exercises and role-plays projects presentations activity sheets questioning, for example: <ul style="list-style-type: none"> written questions, e.g. on a computer interviews self-assessment verbal questioning questionnaires oral or written examinations (applicable at higher AQF levels) portfolios of evidence, for example: <ul style="list-style-type: none"> collection of work samples compiled by candidate product with supporting documentation historical evidence journal or log book information about life experience review of products, for example: <ul style="list-style-type: none"> testimonials and reports from employers and supervisors

	<ul style="list-style-type: none"> evidence of training authenticated prior achievements interview with employer, supervisor, or peer.
<i>Assessment plan</i> may include:	<ul style="list-style-type: none"> overall planning document describing: <ul style="list-style-type: none"> what is to be assessed when assessment is to take place where assessment is to take place how assessment is to take place.
<i>Simple assessment instruments</i> may include:	<ul style="list-style-type: none"> instruments developed by an assessor as part of formative or summative assessment activities, including: <ul style="list-style-type: none"> profiles of acceptable performance measures templates and proformas specific questions or activities evidence and observation checklists checklists for the evaluation of work samples recognition portfolios candidate self-assessment materials instruments developed elsewhere that have been modified by the assessor for use with a particular client group.
<i>Available assessment instruments</i> may include:	<ul style="list-style-type: none"> commercially available instruments those created by others inside the registered training organisation.
<i>Map assessment</i> means:	<ul style="list-style-type: none"> showing a clear relationship between the evidence and the requirements of the unit.

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to assess the competence of a candidate.

Application of the Unit

This unit typically applies to assessors.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT

Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1. Prepare for assessment	<p>1.1 Interpret <i>assessment plan</i> and confirm organisational, legal and ethical requirements for conducting assessment with relevant people</p> <p>1.2 Access and interpret relevant <i>benchmarks for assessment</i> and nominated <i>assessment tools</i> to confirm the requirements for evidence to be collected</p> <p>1.3 Arrange identified material and physical resource requirements according to assessment system policies and procedures</p> <p>1.4 Organise <i>specialist support</i> required for assessment</p> <p>1.5 Explain, discuss and agree details of the assessment plan with candidate</p>
2. Gather quality evidence	<p>2.1 Use agreed <i>assessment methods</i> and instruments to gather, organise and document evidence in a format suitable for determining competence</p> <p>2.2 Apply the principles of assessment and rules of evidence in gathering quality evidence</p> <p>2.3 Determine opportunities for evidence gathering in actual or simulated activities through consultation with the candidate and relevant personnel</p> <p>2.4 Determine opportunities for integrated assessment activities and document any changes to assessment instruments where required</p>
3. Support the candidate	<p>3.1 Guide candidates in gathering their own evidence to support recognition of prior learning (RPL)</p> <p>3.2 Use appropriate communication and interpersonal skills to develop a professional relationship with the candidate that reflects sensitivity to <i>individual differences</i> and enables two-way <i>feedback</i></p> <p>3.3 Make decisions on reasonable adjustments with the candidate, based on candidate's needs and characteristics</p> <p>3.4 Access required specialist support in accordance with the assessment plan</p> <p>3.5 Address any OHS risk to person or equipment immediately</p>
4. Make the assessment decision	<p>4.1 Examine collected evidence and evaluate it to ensure that it reflects the evidence required to demonstrate competence</p> <p>4.2 Use judgement to infer whether competence has been demonstrated, based on the available evidence</p> <p>4.3 Make assessment decision in line with agreed assessment procedures and according to agreed assessment plan</p> <p>4.4 Provide clear and constructive feedback to candidate regarding</p>

	the assessment decision and develop any follow-up action plan required
5. Record and report the assessment decision	5.1 Record assessment outcomes promptly and accurately 5.2 Complete and process an assessment report according to agreed assessment procedures 5.3 Inform other relevant parties of the assessment decision according to confidentiality conventions
6. Review the assessment process	6.1 Review the assessment process in <i>consultation</i> with relevant people to improve own future practice 6.2 Document and record the review according to relevant assessment system policies and procedures

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analysis and interpretation skills to:
 - break down competency standards
 - interpret assessment tools and other assessment information, including those used in RPL
 - identify candidate needs
 - make judgements based on assessment of available evidence
- observation skills to:
 - recognise candidate's prior learning
 - determine candidate's performance
 - identify when candidate may need assistance during the assessment processes
- research and evaluation skills to:
 - access required human and material resources for assessment
 - access assessment system policies and procedures
 - access RPL policies and procedures
 - evaluate evidence
 - evaluate assessment process
- cognitive skills to:
 - weigh up the evidence and make a judgement
 - consider and recommend reasonable adjustments
- decision-making skills to:
 - recognise a candidate's prior learning

- make a decision on a candidate's competence
- literacy skills to:
 - read and interpret relevant information to conduct assessment
 - prepare required documentation and records or reports of assessment outcomes in required format
- communication and interpersonal skills to:
 - explain the assessment, including RPL process
 - give clear and precise instructions
 - ask effective questions
 - provide clarification
 - discuss process with other relevant people
 - give appropriate feedback
 - discuss assessment outcome
 - use language appropriate to candidate and assessment environment
 - establish a working relationship with candidate.

Required knowledge

- competency-based assessment, including:
 - vocational education and training as a competency-based system
 - criterion-referenced assessment as distinct from norm-referenced assessment
 - competency standards as the basis of qualifications
 - structure and application of competency standards
 - principles of assessment and how they are applied
 - rules of evidence and how they are applied
 - range of assessment purposes and assessment contexts, including RPL
 - different assessment methods, including suitability for gathering various types of evidence, suitability for content of units, and resource requirements and associated costs
 - reasonable adjustments and when they are applicable
 - types and forms of evidence, including assessment instruments that are relevant to gathering different types of evidence used in competency-based assessment, including RPL
 - potential barriers and processes relating to assessment tools and methods
 - assessment system, including policies and procedures established by the industry, organisation or training authority
- RPL policies and procedures established by the organisation
- cultural sensitivity and equity considerations
- relevant policy, legislation, codes of practice and national standards, including commonwealth and state or territory legislation that may affect training and assessment in the vocational education and training sector, such as:
 - copyright and privacy laws in terms of electronic technology
 - security of information

- plagiarism
- training packages and competency standards
- licensing requirements
- industry and workplace requirements
- duty of care under common law
- recording information and confidentiality requirements
- anti-discrimination, including equal employment opportunity, racial vilification and disability discrimination
- workplace relations
- industrial awards and enterprise agreements
- OHS responsibilities associated with assessing competence, such as:
 - requirements for reporting hazards and incidents
 - emergency procedures
 - procedures for use of relevant personal protective equipment
 - safe use and maintenance of relevant equipment
 - sources of OHS information.
-

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • assess competence of a number of candidates within the vocational education and training context against different units of competency or accredited curricula, following the relevant assessment plan • assess at least one candidate for RPL • consider reasonable adjustment and the reasons for decisions in at least one assessment • cover an entire unit of competency and show: <ul style="list-style-type: none"> • the application of different assessment methods and instruments involving a range of assessment activities and events • two-way communication and feedback • how judgement was exercised in making the assessment decision • how and when assessment outcomes were recorded and reported

	<ul style="list-style-type: none"> assessment records and reports completed in accordance with assessment system and organisational, legal and ethical requirements how the assessment process was reviewed.
Context of and specific resources for assessment	Evidence must be gathered in the workplace whenever possible. Where no workplace is available, a simulated workplace must be provided.
Method of assessment	
Guidance information for assessment	

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Assessment plan</i> may include:	<ul style="list-style-type: none"> overall planning, describing: <ul style="list-style-type: none"> what is to be assessed when assessment is to take place where assessment is to take place how assessment is to take place.
<i>Benchmarks for assessment:</i>	<ul style="list-style-type: none"> refer to a criterion against which the candidate is assessed may be a competency standard/unit of competency, assessment criteria of course curricula, performance specifications, or product specifications.
<i>Assessment tools</i> include:	<ul style="list-style-type: none"> the learning or competency unit(s) to be assessed the target group, context and conditions for the assessment the tasks to be administered to the candidate an outline of the evidence to be gathered from the candidate the evidence criteria used to judge the quality of performance (i.e. the assessment decision-making rules) the administration, recording and reporting requirements the evidence of how validity and reliability have been tested and built into the design and use of the tool.

<p><i>Specialist support</i> may include:</p>	<ul style="list-style-type: none"> • assistance by third party, such as carer or interpreter • support from specialist educator • provision of developed online assessment activities • support for remote or isolated candidates and assessors • support from subject matter or safety experts • advice from regulatory authorities • assessment teams and panels • support from lead assessors • advice from policy development experts.
<p><i>Assessment methods</i> include:</p>	<ul style="list-style-type: none"> • particular techniques used to gather different types of evidence, such as: <ul style="list-style-type: none"> • direct observation • structured activities • oral or written questioning • portfolios of evidence • review of products • third-party feedback.
<p><i>Individual differences</i> may include:</p>	<ul style="list-style-type: none"> • English language, literacy and numeracy barriers • physical impairment or disability • intellectual impairment or disability • medical condition that may impact on assessment, such as arthritis, epilepsy, diabetes and asthma • learning difficulties • mental or psychological disability • religious and spiritual observances • cultural images and perceptions • age • gender.
<p><i>Feedback</i> may include:</p>	<ul style="list-style-type: none"> • ensuring assessment/RPL process is understood • ensuring candidate concerns are addressed • enabling questions and answers • confirming outcomes • identifying further evidence to be provided • discussing action plans • confirming gap training needed • providing information regarding available appeal processes • suggesting improvements in evidence gathering and

	presentation.
<i>Consultation</i> may involve:	<ul style="list-style-type: none">• moderation with other assessors, or training and assessment coordinators• discussions with client, team leaders, managers, RPL coordinators, supervisors, coaches and mentors• technical and subject experts• English language, literacy and numeracy experts.

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to participate in an assessment validation process.

Application of the Unit

This unit typically applies to those participating in assessment validation. It does not address leading the validation process.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
---------	----------------------

<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>
--	---

Elements and Performance Criteria

1. Prepare for validation	<p>1.1 Discuss and confirm the approach to validation according to defined purposes, context, and relevant <i>assessment system policies and procedures</i></p> <p>1.2 Analyse relevant <i>benchmarks for assessment</i> and agree on the evidence needed to demonstrate competence</p> <p>1.3 Arrange <i>materials</i> for <i>validation activities</i></p>
2. Contribute to validation process	<p>2.1 Demonstrate active <i>participation</i> in validation sessions and activities using appropriate communication skills</p> <p>2.2 Participate in validation sessions and activities by applying the principles of assessment and rules of evidence</p> <p>2.3 Check all documents used in the validation process for accuracy and version control</p>
3. Contribute to validation outcomes	<p>3.1 Collectively discuss validation findings to support improvements in the quality of assessment</p> <p>3.2 Discuss, agree and record recommendations to improve assessment practice</p> <p>3.3 Implement changes to own assessment practice, arising from validation</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- planning skills to participate in validation activities within agreed timeframes
- problem-solving skills to identify information that is inconsistent, ambiguous or contradictory
- evaluation skills to:
 - determine evidence requirements from competency standards
 - review assessment process, tools and methods
 - review collected evidence
- communication skills to share information in validation meetings.

Required knowledge

- how to interpret competency standards and other related assessment information to determine the evidence needed to demonstrate competence, including:
 - criterion-referenced assessment as distinct from norm-referenced assessment

- various reasons for carrying out validation and the different approaches to validation that may be appropriate before, during and after assessment
- critical aspects of validation, including validation of assessment processes, methods and products
- relevant OHS legislation, codes of practice, standards and guidelines, impacting on assessment
- legal and ethical requirements of assessors, particularly in relation to validation activities
- principles of assessment
- rules of evidence.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • actively participate in a minimum of two validation sessions or meetings which, in combination, address the critical aspects of validation using different validation approaches and activities • clearly explain purposes of validation and the legal and ethical responsibilities of assessors • collate documentation relating to validation process in a logical manner • demonstrate communication and liaison with relevant people • provide feedback and interpret documentation in validation sessions • record contribution to validation findings.
Context of and specific resources for assessment	<p>Evidence must be gathered in the workplace wherever possible. Where no workplace is available, a simulated workplace must be provided.</p> <p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • assessment reports and records • other documentation relevant to validation.
Method of assessment	
Guidance information	

for assessment	
-----------------------	--

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Assessment system policies and procedures</i> may include:	<ul style="list-style-type: none"> • candidate selection • rationale and purpose of competency-based assessment • assessment records, and data and information management • recognition of current competency, recognition of prior learning and credit arrangements • assessment reporting procedures • assessment appeals • candidate grievances and complaints • validation • evaluation and internal audit • costs and resourcing • access and equity, and reasonable adjustment • partnership arrangements • links with human resource or industrial relations system • links with overall quality management system.
<i>Benchmarks for assessment:</i>	<ul style="list-style-type: none"> • refers to criterion against which the candidate is assessed • may be one or more units of competency or assessment criteria of course curricula.
<i>Materials</i> may include:	<ul style="list-style-type: none"> • assessment tools • samples of collected evidence • documentation outlining the basis of assessment decisions • reports and records of assessment decisions • samples of benchmarks of appropriate evidence • Assessment Guidelines of the relevant training packages • information from the evidence guide of the relevant units of competency.
<i>Validation activities</i> may include:	<ul style="list-style-type: none"> • analysing and reviewing: <ul style="list-style-type: none"> • assessment tools • collected evidence • assessment decisions and records of assessment outcomes

	<ul style="list-style-type: none">• other aspects of assessment policies, processes and outcomes• recording evidence of validation processes and outcomes.
<i>Participation</i> may include comparison and evaluation of:	<ul style="list-style-type: none">• assessment practices• assessment plans• interpretation of units of competency• assessment methods and instruments• assessment decisions• collected evidence.

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to design and develop assessment tools, including tools used in formative, summative and recognition of prior learning (RPL) assessment.

Application of the Unit

An assessment tool is used to guide the collection of quality evidence in the assessment process. It includes the specific instruments for collecting evidence, as well as information about assessment methods and the procedures to be followed in conducting the assessment.

This unit typically applies to those involved in training and assessment or in the development of learning resources or products, assessors, learning resource or product developers, and training and assessment consultants.

Licensing/Regulatory Information

ELEMENT

unit of competency.

PERFORMANCE CRITERIA

is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1. Determine focus of the assessment tool	<p>1.1 Identify target group of candidates, purposes of <i>assessment tool</i>, and <i>contexts</i> in which the tool will be used</p> <p>1.2 Access relevant <i>benchmarks for assessment</i> and interpret them to establish evidence required to demonstrate competence</p> <p>1.3 Identify, access and interpret <i>organisational, legal and ethical requirements</i> and relevant <i>contextualisation guidelines</i></p> <p>1.4 Identify other <i>related documentation</i> to inform assessment tool development</p>
2. Design assessment tool	<p>2.1 Select assessment methods that support the collection of defined evidence, taking into account the context in which the assessment will take place and meeting the principles of assessment</p> <p>2.2 Enable candidates to show or support their claim for recognition of current competency through selected assessment methods</p> <p>2.3 Consider different <i>assessment instruments</i> for the selected assessment methods to generate options for collection of evidence</p> <p>2.4 Consider how the assessment instruments will be administered</p>
3. Develop assessment tool	<p>3.1 Develop specific assessment instruments that address the evidence to be collected</p> <p>3.2 Define and document clear and specific <i>procedures</i> instructing assessor and candidate on the administration and use of the instruments</p> <p>3.3 Consider requirements of <i>assessment system policies and procedures</i> and address storage and retrieval needs, and review, evaluation and version control procedures as part of this process</p>
4. Review and trial assessment tool	<p>4.1 Check draft assessment tools against <i>evaluation criteria</i> and amend as required</p> <p>4.2 Trial assessment tools to validate content and applicability</p> <p>4.3 Collect and document feedback from relevant people involved in trialling</p> <p>4.4 Make amendments to final tool based on analysis of feedback</p>

	4.5 Appropriately format and file finalised assessment tool according to assessment system policies and procedures and organisational, legal and ethical requirements
--	---

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analysis and interpretation skills to review and evaluate assessment tools
- critical thinking skills to translate the interpreted competency standards and other relevant assessment information into meaningful assessment instruments
- design skills to develop different assessment tool designs
- research and evaluation skills to evaluate assessment tools on the basis of trials and feedback.

Required knowledge

- principles of assessment and how they are applied when developing assessment tools
- different types and rules of evidence
- different assessment contexts and relationship to developing assessment tools
- components of competency and dimensions of competency
- contextualisation of competency standards and contextualisation guidelines
- Assessment Guidelines of training packages as relevant to developing assessment tools
- different assessment methods, their purposes and uses
- evaluation methodologies appropriate to the trial and review of assessment tools
- principles of reasonable adjustment
- relevant workplace information, including:
 - organisational policies and procedures
 - workplace tasks and activities
 - standard operating procedures
 - procedures for use of relevant personal protective equipment.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
-------------------------------	--

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • develop assessment tools that support different assessment methods and address at least three units of competency packaged at different Australian Qualifications Framework (AQF) levels • develop assessment tools that: <ul style="list-style-type: none"> • include the instruments for collecting evidence, reflecting the principles of assessment and the rules of evidence, and the related instructions to assessor/s and candidates • show how the contextual needs of different environments are addressed • report on the trial and review of the assessment tools, including proposed changes.
<p>Context of and specific resources for assessment</p>	<p>Evidence must be gathered in the workplace wherever possible. Where no workplace is available, a simulated workplace must be provided.</p> <p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • training products, such as training packages and accredited course documentation.
<p>Method of assessment</p>	
<p>Guidance information for assessment</p>	

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Assessment tool includes:</p>	<ul style="list-style-type: none"> • the learning or competency unit(s) to be assessed • the target group, context and conditions for the assessment • the tasks to be administered to the candidate • an outline of the evidence to be gathered from the candidate • the evidence criteria used to judge the quality of performance (i.e. the assessment decision-making rules) • the administration, recording and reporting requirements • the evidence of how validity and reliability have been tested and built into the design and use of the tool.
<p>Contexts of assessment/RPL may include:</p>	<ul style="list-style-type: none"> • environment in which the assessment/RPL will be carried out, including real or simulated workplace • opportunities for collecting evidence in a number of situations • relationships between competency standards and evidence to support RPL • who carries out the assessment/RPL • relationships between competency standards and work activities in the candidate's workplace • relationships between competency standards and learning activities.
<p>Benchmarks for assessment:</p>	<ul style="list-style-type: none"> • refer to criteria against which the candidate is assessed which may be a unit of competency, assessment criteria of course curricula, performance specifications, or product specifications • where the benchmark is one or more units of competency the standards may be contextualised to reflect the immediate operating environment.
<p>Organisational, legal and ethical requirements may include:</p>	<ul style="list-style-type: none"> • assessment system policies and procedures • industrial relations systems and processes, awards and enterprise agreements • licensing and legal ramifications of assessing competence • reporting, recording and retrieval systems for assessment • requirements of training, assessment and validation, including the AQTF Standards for Registered Training Organisations • human resource policies, procedures and legal requirements, including: <ul style="list-style-type: none"> • anti-discrimination • equal employment opportunity • job role, responsibilities and conditions • relevant industry codes of practice • confidentiality and privacy requirements of information relating to completed assessments

	<ul style="list-style-type: none"> • OHS considerations, including: <ul style="list-style-type: none"> • ensuring assessment methods and tools incorporate appropriate measures to maintain the health, safety and welfare of candidates • ensuring OHS requirements and specified benchmarks are accounted for within evidence requirements and assessment materials • identifying hazards and relevant risk control procedures associated with the assessment environment.
Contextualisation guidelines relate to:	<ul style="list-style-type: none"> • relevant training package or accredited course contextualisation guidelines.
Related documentation may include:	<ul style="list-style-type: none"> • requirements set out in the Assessment Guidelines of the relevant training packages • information from the competency standards about: <ul style="list-style-type: none"> • resources required for assessment • assessment context • appropriate assessment methods • assessment activities identified in accredited modules derived from the relevant competency standards • assessment activities in support materials related to the relevant competency standards • any requirements of OHS, legislation, codes of practice, standards and guidelines • indicators and levels of competence of the Australian Core Skills Framework • organisational requirements for demonstration of work performance • product specifications.
Assessment instrument may be:	<ul style="list-style-type: none"> • profiles of acceptable performance measures • templates and proformas • specific questions or activities • evidence and observation checklists • checklists for the evaluation of work samples • recognition portfolios • candidate self-assessment materials.

<i>Procedures</i> may include:	<ul style="list-style-type: none"> • those that guide the application of the instruments, such as: <ul style="list-style-type: none"> • instructions for the candidates • instructions for administering the assessment tool, including resources needed to conduct assessment and the context for the use of tools • guidance for development or review of decision-making process • guidance on reasonable adjustments • specified variations or restrictions on the tools • rules for verifying assessment decisions • OHS requirements, for example, identified hazards in the assessment environment and appropriate controls and reporting mechanisms • information on access and equity considerations.
<i>Assessment system policies and procedures</i> may include:	<ul style="list-style-type: none"> • assessment records, and data and information management • recognition of current competency, RPL and credit arrangements • assessor needs, qualifications and maintenance of currency • assessment reporting procedures • assessment appeals • candidate grievances and complaints • validation • evaluation and internal audit • costs and resourcing • access and equity, and reasonable adjustment • partnership arrangements • links with human resource or industrial relations systems • links with overall quality management system.
<i>Evaluation criteria</i> may include:	<ul style="list-style-type: none"> • effectiveness and relevance to the competency standards • whether assessment tool is appropriate to selected assessment methods • whether assessment tool is appropriate to target group and assessment context • appropriateness of language and literacy for intended audience.

Unit Sector(s)

TAEDEL301A Provide work skill instruction

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit describes the performance outcomes, skills and knowledge required to conduct individual and group instruction and demonstrate work skills, using existing learning resources in a safe and comfortable learning environment. The unit covers the skills and knowledge required to determine the success of both the training provided and one's own personal training performance. It emphasises the training as being driven by the work process and context.
------------------------	--

Application of the Unit

Application of the unit	This unit supports a wide range of applications across any workplace setting and so can be used by any organisation. Its use is not restricted to training organisations.
--------------------------------	---

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Organise instruction and demonstration	1.1. Gather information about <i>learner characteristics</i> and learning needs 1.2. Confirm a <i>safe learning environment</i> 1.3. Gather and check <i>instruction and demonstration objectives</i> and seek assistance if required 1.4. Access and review relevant <i>learning resources</i> and <i>learning materials</i> for suitability and relevance, and seek assistance to interpret the contextual application 1.5. Organise access to necessary equipment or physical resources required for instruction and demonstration 1.6. Notify learners of <i>details</i> regarding the implementation of the learning program and/or delivery plan
2. Conduct instruction and demonstration	2.1. Use interpersonal skills with learners to establish a safe and comfortable learning environment 2.2. Follow the learning program and/or delivery plan to cover all learning objectives 2.3. Brief learners on any <i>OHS procedures</i> and requirements prior to and during training 2.4. Use <i>delivery techniques</i> to structure, pace and enhance learning 2.5. Apply <i>coaching</i> techniques to assist learning 2.6. Use communication skills to provide information,

ELEMENT	PERFORMANCE CRITERIA
	instruct learners and demonstrate relevant work skills 2.7. Provide opportunities for practice during instruction and through work activities 2.8. Provide and discuss feedback on learner performance to support learning
3. Check training performance	3.1. Use <i>measures</i> to ensure learners are acquiring and can use new technical and generic skills and knowledge 3.2. Monitor learner progress and outcomes in consultation with learner 3.3. Review relationship between the trainer/coach and the learner and adjust to suit learner needs
4. Review personal training performance and finalise documentation	4.1. Reflect upon personal performance in providing instruction and demonstration, and document strategies for improvement 4.2. Maintain, store and secure learner records according to organisational and legal requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- verbal and non-verbal communication techniques, such as:
 - asking relevant and appropriate questions
 - providing explanations
 - demonstrating
 - using listening skills
 - providing information clearly
- safety skills to implement OHS requirements, by acting and responding safely in order to:
 - identify hazards
 - conduct prestart-up checks if required
 - observe and interpret learner behaviour that may put people at risk
- time-management, skills to:

REQUIRED SKILLS AND KNOWLEDGE

- ensure all learning objectives are covered
- pace learning
- reflection skills in order to:
 - identify areas for improvement
 - maintain personal skill development
- literacy skills to:
 - complete and maintain documentation
 - read and follow learning programs and plans
 - read and analyse learner information
- technology skills to operate audio-visual and technical equipment
- interpersonal skills to:
 - engage, motivate and connect with learners
 - provide constructive feedback
 - maintain appropriate relationships
 - establish trust
 - use appropriate body language
 - maintain humour
 - demonstrate tolerance
 - manage a group
 - recognise and be sensitive to individual difference and diversity
- observation skills to:
 - monitor learner acquisition of new skills, knowledge and competency requirements
 - assess learner communication and skills in interacting with others
 - identify learner concerns
 - recognise learner readiness to take on new skills and tasks

Required knowledge

- learner characteristics and needs
- content and requirements of the relevant learning program and/or delivery plan
- sources and availability of relevant learning resources and learning materials
- content of learning resources and learning materials
- training techniques that enhance learning and when to use them
- introductory knowledge of learning principles and learning styles
- key OHS issues in the learning environment, including:
 - roles and responsibilities of key personnel
 - responsibilities of learners
 - relevant policies and procedures, including hazard identification, risk assessment, reporting requirements, safe use of equipment and emergency

REQUIRED SKILLS AND KNOWLEDGE

procedures

- risk controls for the specific learning environment

Evidence Guide**EVIDENCE GUIDE**

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Assessment must address the scope of this unit and reflect all components of the unit. A range of appropriate assessment methods and evidence-gathering techniques must be used to determine competency. A judgement of competency should only be made when the assessor is confident that the required outcomes of the unit have been achieved and that consistent performance has been demonstrated.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the ability to:

- carry out a minimum of three training sessions, involving demonstrating and instructing particular work skills for different groups; with each session addressing:
 - different learning objectives
 - a range of techniques and effective communication skills appropriate to the audience.

Context of and specific resources for assessment

Evidence must be gathered in the workplace wherever possible. Where no workplace is available, a simulated workplace must be provided.

Method of assessment**Guidance information for assessment**

For further information about assessment of this and other TAE units, refer to relevant implementation guidance published on the IBSA website (www.ibsa.org.au).

Range Statement**RANGE STATEMENT**

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Learner characteristics</i> may include:	<ul style="list-style-type: none"> • language, literacy and numeracy levels • learning styles • past learning and work experiences • specific needs • workplace culture.
<i>Safe learning environment</i> may include:	<ul style="list-style-type: none"> • exit requirements • personal protective equipment • safe access • safe use of equipment.
<i>Instruction and demonstration objectives</i> may include:	<ul style="list-style-type: none"> • competencies to be achieved • generic and technical skills, which may be: <ul style="list-style-type: none"> • provided by the organisation • developed by a colleague • individual or group objectives • learning outcomes.
<i>Learning resources</i> may include:	<ul style="list-style-type: none"> • any material used to support learning, such as: <ul style="list-style-type: none"> • learner and user guides • trainer and facilitator guides • example training programs • specific case studies • professional development materials • assessment materials • a variety of formats • those produced locally • those acquired from other sources.
<i>Learning materials</i> may include:	<ul style="list-style-type: none"> • handouts for learners • materials sourced from the workplace, e.g. workplace documentation, operating procedures, and specifications.
<i>Details</i> may include:	<ul style="list-style-type: none"> • location and time • outcomes of instruction or demonstration • reason for instruction or demonstration • who will be attending instruction session.

RANGE STATEMENT	
<i>OHS procedures</i> may include:	<ul style="list-style-type: none"> • emergency procedures • hazards and their means of control • incident reporting • use of personal protective equipment • safe work practices • safety briefings • site-specific safety rules.
<i>Delivery techniques</i> may include:	<ul style="list-style-type: none"> • coaching • demonstration • explanation • group or pair work • providing opportunities to practise skills and solve problems • questions and answers.
<i>Coaching</i> may include:	<ul style="list-style-type: none"> • learning arrangements requiring immediate interaction and feedback • on-the-job instruction and 'buddy' systems • relationships targeting enhanced performance • short-term learning arrangements • working on a one-to-one basis.
<i>Measures</i> may include:	<ul style="list-style-type: none"> • informal review or discussion • learner survey • on-the-job observation • review of peer coaching arrangements.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Establish effective work environment for learning	1.1. Establish and agree upon objectives and scope of the work-based learning 1.2. Analyse work practices and routines to determine their effectiveness in meeting established learning objectives 1.3. Identify and address <i>OHS implications</i> of using work as the basis for learning
2. Develop a work-based learning pathway	2.1. Address <i>contractual requirements</i> and responsibilities for learning at work 2.2. Arrange for integration and monitoring of external learning activities with the <i>work-based learning pathway</i> 2.3. Obtain agreement from relevant personnel to implement the work-based learning pathway
3. Establish the learning-facilitation relationship	3.1. Identify context for learning and individual's learning style 3.2. Select appropriate technique or process to facilitate learning and explain the basis of the technique to learner 3.3. Develop, document and discuss <i>individualised learning plan</i> with learner 3.4. Access, read and interpret documentation outlining the OHS responsibilities of the various parties in the learning environment 3.5. Monitor supervisory arrangements appropriate to learner's levels of knowledge, skill and experience to provide support and encouragement and ensure

ELEMENT	PERFORMANCE CRITERIA
	learner's health and safety
4. Implement work-based learning pathway	4.1. Sequence introduction of workplace tasks, activities and processes to reflect the agreed work-based learning pathway 4.2. Explain objectives of work-based learning and the processes involved to learner 4.3. Encourage learner to take responsibility for learning and to self-reflect 4.4. Develop techniques that facilitate learner's transfer of skills and knowledge
5. Maintain and develop the learning/facilitation relationship	5.1. Prepare for each session 5.2. Structure learning activities to support and reinforce new learning, build on strengths, and identify areas for further development 5.3. Observe learner cues and change approaches where necessary to maintain momentum 5.4. Practise <i>ethical behaviour</i> at all times 5.5. Monitor effectiveness of the learning/facilitation relationship through regular meetings between the parties
6. Close and evaluate the learning/facilitation relationship	6.1. Carry out the closure smoothly, using appropriate interpersonal and communication skills 6.2. Seek feedback from learner on the outcomes achieved and value of the relationship 6.3. Evaluate and document process, including <i>impact, self evaluation and reflection</i> , and file according to legal and organisational requirements
7. Monitor and review the effectiveness of the work-based learning pathway	7.1. Document work performance and learning achievement and keep records according to organisational requirements 7.2. Evaluate effectiveness of the work-based pathway against the objectives, processes and techniques used 7.3. Recommend improvements to work-based practice in light of the review process

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- oral communication and language skills to:
 - motivate the learner
 - transfer skills and knowledge
- interpersonal skills to maintain appropriate relationships
- observation skills to monitor individual progress
- literacy skills to:
 - read and interpret organisational documents, legal documents and contracts
 - complete and maintain documentation
- organisational skills to provide guidance and feedback to individuals
- communication skills, including:
 - using effective verbal and non-verbal language
 - using critical listening and questioning techniques
 - giving constructive and supportive feedback
 - assisting learners to paraphrase advice or instructions back to the trainer/facilitator
 - providing clear and concrete options and advice
 - using appropriate industry/profession terminology and language
 - ensuring language, literacy and numeracy used is appropriate to learners

Required knowledge

- systems, processes and practices within the organisation where work-based learning is taking place
- operational demands of the work and impact of changes on work roles
- organisational work culture, including industrial relations environment
- systems for identifying skill needs
- introductory knowledge of different learning styles and how to encourage learning in each, for example:
 - visual learners
 - audio learners
 - kinaesthetic learners
 - theoretical learners
- relevant policy, legislation, codes of practice and national standards that may affect training and assessment in the vocational education and training sector
- OHS relating to the work role, including:
 - hazards relating to the industry and specific workplace
 - reporting requirements for hazards and incidents

REQUIRED SKILLS AND KNOWLEDGE

- specific procedures for work tasks
- safe use and maintenance of relevant equipment
- emergency procedures
- sources of OHS information

Evidence Guide**EVIDENCE GUIDE**

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Assessment must address the scope of this unit and reflect all components of the unit. A range of appropriate assessment methods and evidence-gathering techniques must be used to determine competency. A judgement of competency should only be made when the assessor is confident that the required outcomes of the unit have been achieved and that consistent performance has been demonstrated.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the ability to:

- prepare and facilitate work-based learning
- provide evidence of a minimum of two examples of developing work-based learning pathways, that include:
 - identifying needs for learning
 - analysing work practices, work environment and work activities
 - organising and allocating work in a way that reflects learning needs and provides effective learning opportunities through work processes
- provide a minimum of two examples of a learning facilitation relationship being conducted:
 - with different individuals
 - demonstrating communication skills and flexibility
 - demonstrating one or more of the processes or techniques identified.

Context of and specific resources for assessment

Evidence must be gathered in the workplace wherever possible. Where no workplace is available, a simulated workplace must be provided.

EVIDENCE GUIDE	
	Assessment must ensure access to information about work activities.
Method of assessment	
Guidance information for assessment	For further information about assessment of this and other TAE units, refer to relevant implementation guidance published on the IBSA website (www.ibsa.org.au).

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>OHS implications</i> may include:	<ul style="list-style-type: none"> • OHS obligations • workplace OHS policies and procedures • ensuring work practices, routines and proposed changes do not pose a risk to learners and others.
<i>Contractual requirements</i> may include:	<ul style="list-style-type: none"> • training plans under apprenticeships/traineeships • requirements of government-funded training programs, such as Workplace English Language and Literacy (WELL).
<i>Work-based learning pathway</i> may include:	<ul style="list-style-type: none"> • identifying specific goals for work-based learning • identifying job tasks or activities to be included in learning process • appropriate sequencing of job tasks/activities to reflect learner incremental development • direct guidance and modelling from experienced co-workers and experts • opportunities for practice.
<i>Individualised learning plan</i> may include:	<ul style="list-style-type: none"> • information about individual's learning style, learner characteristics, and the context for learning • clear boundaries and expectations of the learning/facilitation relationship • documented equity or additional support needs for the learner

RANGE STATEMENT	
	<ul style="list-style-type: none"> • performance benchmarks to be achieved • activities and processes which together will achieve the benchmarks.
<i>Ethical behaviour</i> includes:	<ul style="list-style-type: none"> • trust • integrity • privacy and confidentiality of the session • following organisational policies • knowing own limitations • having a range of other intervention referrals ready when needed • honesty • fairness to others.
<i>Impact</i> may be:	<ul style="list-style-type: none"> • successful achievement, rate of achievement, or lack of achievement of identified goals • achievement of other outcomes as a result of the relationship • development of new goals • new or increased motivation to learn • greater capacity to learn • increase in learner's self-confidence.
<i>Self-evaluation and reflection</i> may include:	<ul style="list-style-type: none"> • asking critical questions about: <ul style="list-style-type: none"> • own ability • what worked or didn't work • how the relationship building process could be improved • reviewing records and journals on sessions and critically evaluating own performance • reviewing feedback from learner and identifying critical aspects and areas for improvement.

TAEDES401A Design and develop learning programs

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit describes the performance outcomes, skills and knowledge required to conceptualise, design, develop and review learning programs to meet an identified need for a group of learners. The unit addresses the skills and knowledge needed to identify the parameters of a learning program, determine the design, outline the content and review its effectiveness.
------------------------	---

Application of the Unit

Application of the unit	This unit typically applies to a trainer or facilitator who designs or develops learning programs. A learning program can be discrete, providing a planned learning approach that relates to specific learning and training needs, or it may form part of the learning design for a qualification.
--------------------------------	--

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Define parameters of the learning program	1.1. Clarify <i>purpose</i> and type of learning program with key stakeholders 1.2. Access and confirm the competency standards and <i>other training specifications</i> on which to base the learning program 1.3. Identify language, literacy and numeracy requirements of the program 1.4. Identify and consider characteristics of the target learner group
2. Work within the vocational education and training (VET) policy framework	2.1. Access relevant <i>VET policies</i> and frameworks, and apply to work practices 2.2. Identify changes to training packages and accredited courses and apply these to program development 2.3. Conduct work according to organisational quality assurance policies and procedures
3. Develop program content	3.1. Research, develop and document specific subject matter content according to agreed design options 3.2. Evaluate existing learning resources for content relevance and quality 3.3. Specify assessment requirements of the learning program
4. Design structure of the learning program	4.1. Break the learning content into manageable segments and document timeframe for each segment

ELEMENT	PERFORMANCE CRITERIA
	<p>4.2. Determine and confirm <i>delivery strategies</i> and required assessment methods and tools</p> <p>4.3. Document complete learning program in line with organisational requirements</p> <p>4.4. Review complete program with key stakeholders and adjust as required</p> <p>4.5. Ensure a safe learning progression by analysing risks in the learning environment and including a risk control plan</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- organisational skills to ensure resources are available and suitable
- evaluation skills to determine the time required for each learning segment and the overall timelines of the learning program
- cognitive skills to develop the learning program content and design its structure
- language and literacy skills to read and interpret a range of documentation, including technical and subject matter documents, references and texts

Required knowledge

- information about training package developers and course accreditation agencies responsible for specific learning program parameters
- training packages and relevant competency standards to be used as the basis of the learning program
- other performance standards and criteria to be used as the basis of the learning program, where relevant
- distinction and relationship between a training package/accredited course, learning strategy and learning program, where linked
- different purposes and focus of learning programs
- sound knowledge of learning principles
- instructional design principles relating to different design options for learning program design and structure
- availability and types of different relevant learning resources, learning materials and pre-developed learning activities
- methodology relating to developing and documenting new learning activities and

REQUIRED SKILLS AND KNOWLEDGE

related learning materials

- different delivery modes and methods
- relevant policies, legal requirements, codes of practice and national standards, including commonwealth and state or territory legislation that may affect training and assessment in the VET sector
- relevant OHS knowledge relating to the work role, and OHS considerations that need to be included in the learning program

Evidence Guide**EVIDENCE GUIDE**

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	Assessment must address the scope of this unit and reflect all components of the unit. Arrange of appropriate assessment methods and evidence-gathering techniques must be used to determine competency. A judgement of competency should only be made when the assessor is confident that the required outcomes of the unit have been achieved and that consistent performance has been demonstrated.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of the ability to: <ul style="list-style-type: none"> • design, develop and review learning programs within the VET context • prepare and develop a minimum of two learning programs: <ul style="list-style-type: none"> • that contain differentiated learning program designs to reflect particular needs, contexts and timelines • at least one of which must be based on competency standards or accredited courses and must cover at least one entire unit of competency or accredited course module.
Context of and specific resources for assessment	Evidence must be gathered in the workplace whenever possible. Where no workplace is available, a simulated workplace must be provided.
Method of assessment

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers a Certificate IV qualification in Aeroskills that includes these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA108	Complete aviation maintenance industry documentation
MEA145	Conversion from allied trades for employment in aviation maintenance workshops
MEA201	Remove and install miscellaneous aircraft electrical hardware/components
MEA246	Fabricate and/or repair aircraft electrical hardware or parts
MEA260	Use electrical test equipment
MEA261	Use electronic test equipment
MEA262	Modify/repair single layer printed circuit boards
MEA286	Repair or overhaul aircraft electrical/electro-mechanical components

Target Group

Individuals with Certificate III or Certificate IV qualifications in an allied trade who are to be employed in aircraft component maintenance workshops on electrical component repair and overhaul.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements for employment of individuals with Certificate III or Certificate IV qualifications in an allied trade in aircraft component maintenance workshops on electrical component repair and overhaul.

Custom Content Section

Not applicable.

MEASS00246 AMW002 Mechanical and electro-mechanical instrument component repair/overhaul

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers a Certificate IV qualification in Aeroskills that includes these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA108	Complete aviation maintenance industry documentation
MEA145	Conversion from allied trades for employment in aviation maintenance workshops
MEA201	Remove and install miscellaneous aircraft electrical hardware/components
MEA246	Fabricate and/or repair aircraft electrical hardware or parts
MEA252	Test, align and troubleshoot synchro and servo system components
MEA260	Use electrical test equipment
MEA261	Use electronic test equipment
MEA262	Modify/repair single layer printed circuit boards
MEA284	Repair or overhaul aircraft instrument system components

Target Group

Individuals with Certificate III or Certificate IV qualifications in an allied trade who are to be employed in aircraft component maintenance workshops on mechanical and electro-mechanical instruments repair and overhaul.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements for employment of individuals with Certificate III or Certificate IV qualifications in an allied trade in aircraft component maintenance workshops on mechanical and electro-mechanical instruments repair and overhaul.

Custom Content Section

Not applicable.

MEASS00247 AMW003 Aircraft display, control and distribution system component repair/overhaul

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers a Certificate IV qualification in Aeroskills that includes these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA108	Complete aviation maintenance industry documentation
MEA145	Conversion from allied trades for employment in aviation maintenance workshops
MEA201	Remove and install miscellaneous aircraft electrical hardware/components
MEA246	Fabricate and/or repair aircraft electrical hardware or parts
MEA252	Test, align and troubleshoot synchro and servo system components
MEA260	Use electrical test equipment
MEA261	Use electronic test equipment
MEA262	Modify/repair single layer printed circuit boards
MEA283	Repair or overhaul aircraft display, control and distribution system components

Target Group

Individuals with Certificate III or Certificate IV qualifications in an allied trade who are to be employed in aircraft component maintenance workshops on aircraft display, control and distribution system component repair and overhaul.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements for employment of individuals with Certificate III or Certificate IV qualifications in an allied trade in aircraft component maintenance workshops on display, control and distribution system component repair and overhaul.

Custom Content Section

Not applicable.

MEASS00248 AMW004 Oxygen system component repair/overhaul

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers a Certificate IV qualification in Aeroskills that includes these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA108	Complete aviation maintenance industry documentation
MEA145	Conversion from allied trades for employment in aviation maintenance workshops
MEA287	Repair or overhaul aircraft oxygen system components

Target Group

Individuals with Certificate III or Certificate IV qualifications in an allied trade who are to be employed in aircraft component maintenance workshops on oxygen system component repair and overhaul.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements for employment of individuals with Certificate III or Certificate IV qualifications in an allied trade in aircraft component maintenance workshops on oxygen system component repair and overhaul.

Custom Content Section

Not applicable.

MEASS00249 AMW005 Aircraft radio frequency communication and navigation system component repair/overhaul

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers a Certificate IV qualification in Aeroskills that includes these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA108	Complete aviation maintenance industry documentation
MEA145	Conversion from allied trades for employment in aviation maintenance workshops
MEA201	Remove and install miscellaneous aircraft electrical hardware/components
MEA246	Fabricate and/or repair aircraft electrical hardware or parts
MEA260	Use electrical test equipment
MEA261	Use electronic test equipment
MEA262	Modify/repair single layer printed circuit boards
MEA285	Repair or overhaul aircraft radio frequency communication and navigation system components

Target Group

Individuals with Certificate III or Certificate IV qualifications in an allied trade who are to be employed in aircraft component maintenance workshops on aircraft radio frequency communication and navigation system component repair and overhaul.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements for employment of individuals with Certificate III or Certificate IV qualifications in an allied trade in aircraft component maintenance workshops on radio frequency communication and navigation system component repair and overhaul.

Custom Content Section

Not applicable.

MEASS00250 AMW006 Aircraft pulse system component repair/overhaul

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers a Certificate IV qualification in Aeroskills that includes these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA108	Complete aviation maintenance industry documentation
MEA145	Conversion from allied trades for employment in aviation maintenance workshops
MEA201	Remove and install miscellaneous aircraft electrical hardware/components
MEA246	Fabricate and/or repair aircraft electrical hardware or parts
MEA260	Use electrical test equipment
MEA261	Use electronic test equipment
MEA262	Modify/repair single layer printed circuit boards
MEA282	Repair or overhaul aircraft pulse system components

Target Group

Individuals with Certificate III or Certificate IV qualifications in an allied trade who are to be employed in aircraft component maintenance workshops on aircraft pulse system component repair and overhaul.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements for employment of individuals with Certificate III or Certificate IV qualifications in an allied trade in aircraft component maintenance workshops on pulse system component repair and overhaul.

Custom Content Section

Not applicable.

MEASS00251 AMW007 Aircraft audio and visual system and reproducer repair/overhaul

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers a Certificate IV qualification in Aeroskills that includes these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA108	Complete aviation maintenance industry documentation
MEA145	Conversion from allied trades for employment in aviation maintenance workshops
MEA201	Remove and install miscellaneous aircraft electrical hardware/components
MEA246	Fabricate and/or repair aircraft electrical hardware or parts
MEA260	Use electrical test equipment
MEA261	Use electronic test equipment
MEA262	Modify/repair single layer printed circuit boards
MEA288	Repair or overhaul aircraft audio and visual systems and reproducers

Target Group

Individuals with Certificate III or Certificate IV qualifications in an allied trade who are to be employed in aircraft component maintenance workshops on audio and visual system and reproducer repair and overhaul.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements for employment of individuals with Certificate III or Certificate IV qualifications in an allied trade in aircraft component maintenance workshops on audio and visual system and reproducer repair and overhaul.

Custom Content Section

Not applicable.

MEASS00252 AMW008 Hydraulic system component repair/overhaul

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers a Certificate IV qualification in Aeroskills that includes these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA108	Complete aviation maintenance industry documentation
MEA145	Conversion from allied trades for employment in aviation maintenance workshops
MEA380	Repair and/or overhaul aircraft hydraulic system components

Target Group

Individuals with Certificate III or Certificate IV qualifications in an allied trade who are to be employed in aircraft component maintenance workshops on hydraulic component repair and overhaul.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements for employment of individuals with Certificate III or Certificate IV qualifications in an allied trade in aircraft component maintenance workshops on hydraulic system component repair and overhaul.

Custom Content Section

Not applicable.

MEASS00253 AMW009 Electro-hydraulic component repair/overhaul

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers a Certificate IV qualification in Aeroskills that includes these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA108	Complete aviation maintenance industry documentation
MEA145	Conversion from allied trades for employment in aviation maintenance workshops
MEA201	Remove and install miscellaneous aircraft electrical hardware/components
MEA246	Fabricate and/or repair aircraft electrical hardware or parts
MEA260	Use electrical test equipment
MEA380	Repair and/or overhaul aircraft hydraulic system components

Target Group

Individuals with Certificate III or Certificate IV qualifications in an allied trade who are to be employed in aircraft component maintenance workshops on electro-hydraulic component repair and overhaul.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements for employment of individuals with Certificate III or Certificate IV qualifications in an allied trade in aircraft component maintenance workshops on electro-hydraulic component repair and overhaul.

Custom Content Section

Not applicable.

MEASS00254 AMW010 Pneumatic system component repair/overhaul

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers a Certificate IV qualification in Aeroskills that includes these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA108	Complete aviation maintenance industry documentation
MEA145	Conversion from allied trades for employment in aviation maintenance workshops
MEA381	Repair and/or overhaul aircraft pneumatic system components

Target Group

Individuals with Certificate III or Certificate IV qualifications in an allied trade who are to be employed in aircraft component maintenance workshops on pneumatic component repair and overhaul.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements for employment of individuals with Certificate III or Certificate IV qualifications in an allied trade in aircraft component maintenance workshops on pneumatic system component repair and overhaul.

Custom Content Section

Not applicable.

MEASS00255 AMW011 Electro-pneumatic component repair/overhaul

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers a Certificate IV qualification in Aeroskills that includes these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA108	Complete aviation maintenance industry documentation
MEA145	Conversion from allied trades for employment in aviation maintenance workshops
MEA201	Remove and install miscellaneous aircraft electrical hardware/components
MEA246	Fabricate and/or repair aircraft electrical hardware or parts
MEA260	Use electrical test equipment
MEA381	Repair and/or overhaul aircraft pneumatic system components

Target Group

Individuals with Certificate III or Certificate IV qualifications in an allied trade who are to be employed in aircraft component maintenance workshops on electro-pneumatic component repair and overhaul.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements for employment of individuals with Certificate III or Certificate IV qualifications in an allied trade in aircraft component maintenance workshops on electro-pneumatic component repair and overhaul.

Custom Content Section

Not applicable.

MEASS00256 AMW012 Fuel system component repair/overhaul

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers a Certificate IV qualification in Aeroskills that includes these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA108	Complete aviation maintenance industry documentation
MEA145	Conversion from allied trades for employment in aviation maintenance workshops
MEA382	Repair and/or overhaul aircraft fuel system components

Target Group

Individuals with Certificate III or Certificate IV qualifications in an allied trade who are to be employed in aircraft component maintenance workshops on fuel system component repair and overhaul.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements for employment in aircraft component maintenance workshops on fuel system component repair and overhaul.

Custom Content Section

Not applicable.

MEASS00257 AMW013 Gas turbine engine air inlet and compressor module/component repair/overhaul

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers a Certificate IV qualification in Aeroskills that includes these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA108	Complete aviation maintenance industry documentation
MEA145	Conversion from allied trades for employment in aviation maintenance workshops
MEA383	Repair and/or overhaul gas turbine engine air inlet and compressor components and/or modules

Target Group

Individuals with Certificate III or Certificate IV qualifications in an allied trade who are to be employed in aircraft component maintenance workshops on gas turbine engine air inlet and compressor module/component repair and overhaul.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements for employment of individuals with Certificate III or Certificate IV qualifications in an allied trade in aircraft component maintenance workshops on gas turbine engine air inlet and compressor module/component repair and overhaul.

Custom Content Section

Not applicable.

MEASS00258 AMW014 Gas turbine engine combustion section module/component repair/overhaul

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers a Certificate IV qualification in Aeroskills that includes these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA108	Complete aviation maintenance industry documentation
MEA145	Conversion from allied trades for employment in aviation maintenance workshops
MEA384	Repair and/or overhaul gas turbine engine combustion section components and/or modules

Target Group

Individuals with Certificate III or Certificate IV qualifications in an allied trade who are to be employed in aircraft component maintenance workshops on gas turbine engine combustion section module/component repair and overhaul.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements for employment of individuals with Certificate III or Certificate IV qualifications in an allied trade in aircraft component maintenance workshops on gas turbine engine combustion section module/component repair and overhaul.

Custom Content Section

Not applicable.

MEASS00259 AMW015 Gas turbine engine turbine and exhaust module/component repair/overhaul

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers a Certificate IV qualification in Aeroskills that includes these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA108	Complete aviation maintenance industry documentation
MEA145	Conversion from allied trades for employment in aviation maintenance workshops
MEA385	Repair and/or overhaul gas turbine engine turbine and exhaust section components

Target Group

Individuals with Certificate III or Certificate IV qualifications in an allied trade who are to be employed in aircraft component maintenance workshops on gas turbine engine turbine and exhaust module/component repair and overhaul.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements for employment of individuals with Certificate III or Certificate IV qualifications in an allied trade in aircraft component maintenance workshops on gas turbine engine turbine and exhaust module/component repair and overhaul.

Custom Content Section

Not applicable.

MEASS00260 AMW016 Gas turbine engine ancillary section module/component repair/overhaul

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers a Certificate IV qualification in Aeroskills that includes these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA108	Complete aviation maintenance industry documentation
MEA145	Conversion from allied trades for employment in aviation maintenance workshops
MEA386	Repair and/or overhaul gas turbine engine ancillary section components

Target Group

Individuals with Certificate III or Certificate IV qualifications in an allied trade who are to be employed in aircraft component maintenance workshops on gas turbine engine ancillary section module/component repair and overhaul.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements for employment of individuals with Certificate III or Certificate IV qualifications in an allied trade in aircraft component maintenance workshops on gas turbine engine ancillary section module/component repair and overhaul.

Custom Content Section

Not applicable.

MEASS00261 AMW017 Piston engine disassembly for repair/overhaul

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers a Certificate IV qualification in Aeroskills that includes these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA108	Complete aviation maintenance industry documentation
MEA145	Conversion from allied trades for employment in aviation maintenance workshops
MEA392	Disassemble aircraft piston engines

Target Group

Individuals with Certificate III or Certificate IV qualifications in an allied trade who are to be employed in aircraft component maintenance workshops on aircraft piston engine disassembly for repair and overhaul.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements for employment of individuals with Certificate III or Certificate IV qualifications in an allied trade in aircraft component maintenance workshops on piston engine disassembly.

Custom Content Section

Not applicable.

MEASS00262 AMW018 Repair and/or overhaul aircraft piston engine cylinder assembly components

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers a Certificate IV qualification in Aeroskills that includes these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA108	Complete aviation maintenance industry documentation
MEA145	Conversion from allied trades for employment in aviation maintenance workshops
MEA393	Repair and/or overhaul aircraft piston engine cylinder assembly components

Target Group

Individuals with Certificate III or Certificate IV qualifications in an allied trade who are to be employed in aircraft component maintenance workshops on the repair and overhaul of aircraft piston engine cylinder assembly components.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements for employment of individuals with Certificate III or Certificate IV qualifications in an allied trade in aircraft component maintenance workshops on piston engine cylinder assembly component repair and overhaul.

Custom Content Section

Not applicable.

MEASS00263 AMW019 Repair and/or overhaul aircraft piston engine crankcase assembly components

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers a Certificate IV qualification in Aeroskills that includes these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA108	Complete aviation maintenance industry documentation
MEA145	Conversion from allied trades for employment in aviation maintenance workshops
MEA394	Repair and/or overhaul aircraft piston engine crankcase assembly components

Target Group

Individuals with Certificate III or Certificate IV qualifications in an allied trade who are to be employed in aircraft component maintenance workshops on the repair and overhaul of aircraft piston engine crankcase assembly components.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements for employment of individuals with Certificate III or Certificate IV qualifications in an allied trade in aircraft component maintenance workshops on piston engine crankcase assembly component repair and overhaul.

Custom Content Section

Not applicable.

MEASS00264 AMW020 Reassemble aircraft piston engines

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers a Certificate IV qualification in Aeroskills that includes these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA108	Complete aviation maintenance industry documentation
MEA145	Conversion from allied trades for employment in aviation maintenance workshops
MEA395	Reassemble aircraft piston engines

Target Group

Individuals with Certificate III or Certificate IV qualifications in an allied trade who are to be employed in aircraft component maintenance workshops on reassembly of aircraft piston engines.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements for employment of individuals with Certificate III or Certificate IV qualifications in an allied trade in aircraft component maintenance workshops on piston engine repair and overhaul.

Custom Content Section

Not applicable.

MEASS00265 AMW021 Assemble aircraft piston engine quick engine change unit

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers a Certificate IV qualification in Aeroskills that includes these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA108	Complete aviation maintenance industry documentation
MEA145	Conversion from allied trades for employment in aviation maintenance workshops
MEA396	Assemble aircraft piston engine quick engine change unit

Target Group

Individuals with Certificate III or Certificate IV qualifications in an allied trade who are to be employed in aircraft component maintenance workshops on assembly of aircraft piston engine quick engine change units.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements for employment of individuals with Certificate III or Certificate IV qualifications in an allied trade in aircraft component maintenance workshops on assembly of piston engine quick engine change units.

Custom Content Section

Not applicable.

MEASS00266 AMW022 Test aircraft piston engines after repair or overhaul

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers a Certificate IV qualification in Aeroskills that includes these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA108	Complete aviation maintenance industry documentation
MEA145	Conversion from allied trades for employment in aviation maintenance workshops
MEA392	Disassemble aircraft piston engines
MEA393	Repair and/or overhaul aircraft piston engine cylinder assembly components
MEA394	Repair and/or overhaul aircraft piston engine crankcase assembly components
MEA395	Reassemble aircraft piston engines
MEA396	Assemble aircraft piston engine quick engine change unit
MEA397	Test aircraft piston engines after repair or overhaul

Target Group

Individuals with Certificate III or Certificate IV qualifications in an allied trade who are to be employed in aircraft component maintenance workshops on testing of aircraft piston engines after repair or overhaul.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements for employment of individuals with Certificate III or Certificate IV qualifications in an allied trade in aircraft component maintenance workshops on testing of piston engines after repair or overhaul.

Custom Content Section

Not applicable.

MEASS00267 AMW023 Propeller repair/overhaul

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers a Certificate IV qualification in Aeroskills that includes these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA108	Complete aviation maintenance industry documentation
MEA145	Conversion from allied trades for employment in aviation maintenance workshops
MEA389	Repair and/or overhaul propellers

Target Group

Individuals with Certificate III or Certificate IV qualifications in an allied trade who are to be employed in aircraft component maintenance workshops on propeller repair and overhaul.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements for employment of individuals with Certificate III or Certificate IV qualifications in an allied trade in aircraft component maintenance workshops on propeller repair and overhaul.

Custom Content Section

Not applicable.

MEASS00268 AMW024 Rotary wing dynamic component repair/overhaul

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers a Certificate IV qualification in Aeroskills that includes these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA108	Complete aviation maintenance industry documentation
MEA145	Conversion from allied trades for employment in aviation maintenance workshops
MEA390	Repair and/or overhaul rotary wing dynamic components

Target Group

Individuals with Certificate III or Certificate IV qualifications in an allied trade who are to be employed in aircraft component maintenance workshops on rotary wing dynamic component repair and overhaul.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements for employment of individuals with Certificate III or Certificate IV qualifications in an allied trade in aircraft component maintenance workshops on rotary wing dynamic component repair and overhaul.

Custom Content Section

Not applicable.

MEASS00269 AMW025 Mechanical system component repair/overhaul

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers a Certificate IV qualification in Aeroskills that includes these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA108	Complete aviation maintenance industry documentation
MEA145	Conversion from allied trades for employment in aviation maintenance workshops
MEA391	Repair and/or overhaul aircraft mechanical system components

Target Group

Individuals with Certificate III or Certificate IV qualifications in an allied trade who are to be employed in aircraft component maintenance workshops on mechanical system component repair and overhaul.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements for employment of individuals with Certificate III or Certificate IV qualifications in an allied trade in aircraft component maintenance workshops on mechanical system component repair and overhaul.

Custom Content Section

Not applicable.

MEASS00270 AMW026 Composite structure maintenance

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers these units as part of a Certificate IV in Aeroskills (Structures).

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activities
MEA105	Apply quality standards applicable to aviation maintenance
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA109	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance
MEA401	Inspect aircraft structures
MEA405	Repair/modify aircraft composite material structure/components

Target Group

Individuals with Certificate III or Certificate IV qualifications in an allied trade who are to be employed in aircraft component maintenance workshops on composite structural component repair and overhaul.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA for the grant of an approval to perform maintenance on aircraft composite structures.

Custom Content Section

Not applicable.

MEASS00271 LME001 Electrical – B1.1 Licence Exclusions E1 and E4 Removal

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA201	Remove and install miscellaneous aircraft electrical hardware/components
MEA203	Remove and install advanced aircraft electrical systems and components
MEA223	Inspect aircraft electrical systems and components
MEA227	Test and troubleshoot aircraft electrical systems and components
MEA246	Fabricate and/or repair aircraft electrical hardware or parts
MEA260	Use electrical test equipment

Target Group

Holders of CASA B1.1 licences endorsed with electrical systems E1 and/or E4 exclusions who wish to have the exclusions removed from their licence. This Skill Set covers the MEA Aeroskills Training Package units of competency that must be attained before undergoing specific type training in electrical systems.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA for the removal of electrical systems exclusions E1 and/or E4 from a CASR Part 66 B1.1 licence.

Custom Content Section

Not applicable.

MEASS00272 LME002 Electrical B1.1 Licence Exclusions E1 and E4 Removal (small aircraft with gas turbine engine)

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA201	Remove and install miscellaneous aircraft electrical hardware/components
MEA274	Maintain basic light aircraft electrical systems and components
MEA246	Fabricate and/or repair aircraft electrical hardware or parts
MEA260	Use electrical test equipment

Target Group

Holders of CASA B1.1 licences endorsed with electrical systems E1 and/or E4 exclusions who wish to have the exclusions removed from their licence. This Skill Set covers the MEA Aeroskills Training Package units of competency that must be attained before being able to certify maintenance on basic light aircraft (with gas turbine engine) electrical systems.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA for the removal of electrical systems exclusions E1 and/or E4 from a CASR Part 66 B1.1 licence for basic light aircraft (with gas turbine engine) maintenance.

Custom Content Section

Not applicable.

MEASS00273 LME003 Electrical – B1.2, B1.3 or B1.4 Licence Exclusions E1 and E4 Removal

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA201	Remove and install miscellaneous aircraft electrical hardware/components
MEA203	Remove and install advanced aircraft electrical systems and components
MEA211	Inspect, test and troubleshoot advanced aircraft electrical systems and components
MEA246	Fabricate and/or repair aircraft electrical hardware or parts
MEA260	Use electrical test equipment

Target Group

Holders of CASA B1.2, 1.3 or B1.4 licences endorsed with electrical systems E1 and/or E4 exclusions who wish to have the exclusions removed from their licence. This Skill Set covers the MEA Aeroskills Training Package units of competency that must be attained before either undergoing specific type training or being able to certify electrical system maintenance.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA for the removal of electrical systems exclusions E1 and/or E4 from a CASR Part 66 B1.2, B1.3 or B1.4 licence.

Custom Content Section

Not applicable.

MEASS00274 LME004 Electrical – B1.2 or B1.4 Licence Exclusions E1 and E4 Removal (small aircraft/helicopters)

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA201	Remove and install miscellaneous aircraft electrical hardware/components
MEA246	Fabricate and/or repair aircraft electrical hardware or parts
MEA260	Use electrical test equipment
MEA274	Maintain basic light aircraft electrical systems and components

Target Group

Holders of CASA B1.2 or B1.4 licences endorsed with electrical systems E1 and/or E4 exclusions who wish to have the exclusions removed from their licence. This Skill Set covers the MEA Aeroskills Training Package units of competency that must be attained before being able to certify maintenance on basic light aircraft and basic helicopter electrical systems.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA for the removal of electrical systems exclusions E1 and/or E4 from a CASR Part 66 B1.2 or B1.4 licence for basic light aircraft and basic helicopter maintenance.

Not applicable.

Skill Set Requirements

MEA202	Remove and install basic aircraft electrical systems and components
MEA210	Inspect, test and troubleshoot basic aircraft electrical systems and components

Target Group

Holders of CASA B2 licences endorsed with electrical systems E1 and/or E4 exclusions who wish to have the exclusions removed from their licence. This Skill Set covers the MEA Aeroskills Training Package units of competency that must be attained before being able to certify maintenance on basic light aircraft and basic helicopter electrical systems.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA for the removal of electrical systems exclusions E1 and/or E4 from a CASR Part 66 B2 licence for basic light aircraft and basic helicopter maintenance.

MEASS00277 LME007 Airframe – B1.1 Licence Exclusion E2 Removal

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA302	Remove and install aircraft hydro-mechanical and landing gear system components
MEA303	Remove and install aircraft pneumatic system components
MEA305	Remove and install aircraft fixed wing flight control system components
MEA317	Remove and install pressurised aircraft structural and non-structural components
MEA318	Inspect aircraft hydro-mechanical, mechanical, gaseous and landing gear systems and components
MEA320	Test and troubleshoot aircraft hydro-mechanical, mechanical, gaseous and landing gear systems and components
MEA321	Test and troubleshoot aircraft fixed wing flight control systems and components
MEA323	Perform advanced troubleshooting in aircraft mechanical maintenance
MEA325	Weigh aircraft and perform aircraft weight and balance calculations as a result of modifications

MEA328	Maintain and/or repair aircraft mechanical components or parts
MEA339	Inspect, repair and maintain aircraft structures
MEA365	Assess structural repair/modification requirements and evaluate structural repairs and modifications

Target Group

Holders of CASA B1.1 licences endorsed with an airframe exclusion E2 who wish to have the exclusion removed from their licence. This Skill Set covers the MEA Aeroskills Training Package units of competency that must be attained before undergoing specific type training in airframe systems/structure.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA for the removal of airframe exclusion E2 from a CASR Part 66 B1.1 licence.

MEASS00278 LME008 Airframe – B1.1 Licence Exclusion E2 Removal (small aircraft with gas turbine engine)

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA351	Maintain airframe systems of basic light fixed wing aircraft
MEA364	Maintain and/or repair small aircraft mechanical components or parts
MEA365	Assess structural repair/modification requirements and evaluate structural repairs and modifications
MEA369	Inspect and maintain structures and related components of non-pressurised small aircraft
MEA370	Repair the structure of non-pressurised small aircraft

Target Group

Holders of CASA B1.1 licences endorsed with an airframe exclusion E2 who wish to have the exclusion removed from their licence. This Skill Set covers the MEA Aeroskills Training Package units of competency that must be attained before being able to certify maintenance on basic light aircraft airframe systems and structure.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA for the removal of airframe exclusion E2 from a CASR Part 66 B1.1 licence for maintenance of basic light aircraft with gas turbine engines.

MEASS00303 LME033 Airframe/Engine – B1.1 and B1.2 Licence Exclusion E12 Removal

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA307 Remove and install propeller systems and components

MEA315 Inspect, test and troubleshoot propeller systems and components

Target Group

Holders of CASA B1.1 or B1.2 licences endorsed with an engine or airframe exclusion E12 who wish to have the exclusion removed from their licence. This Skill Set covers the MEA Aeroskills Training Package units of competency that must be attained before either undergoing specific type training or being able to certify propeller system maintenance.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA for the removal of airframe/engine exclusion E12 from CASR Part 66 B1.1 and B1.2 licences.

Custom Content Section

Not applicable.

MEASS00304 LME034 Airframe – B1 Licence Exclusion E13 Removal

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA302	Remove and install aircraft hydro-mechanical and landing gear system components
MEA309	Inspect, test and troubleshoot aircraft hydro-mechanical and landing gear systems and components

Target Group

Holders of CASA B1 licences endorsed with an airframe exclusion E13 who wish to have the exclusion removed from their licence. This Skill Set covers the MEA Aeroskills Training Package units of competency that must be attained before either undergoing specific type training or being able to certify hydraulic system maintenance.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA for the removal of airframe exclusion E13 from CASR Part 66 B1 licences.

Custom Content Section

Not applicable.

MEASS00305 LME035 Airframe – B1 Licence Exclusion E14 Removal

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA201	Remove and install miscellaneous aircraft electrical hardware/components
MEA246	Fabricate and/or repair aircraft electrical hardware or parts
MEA260	Use electrical test equipment
MEA362	Maintain aircraft vapour cycle air conditioning systems

Target Group

Holders of CASA B1 licences endorsed with an airframe exclusion E14 who wish to have the exclusion removed from their licence. This Skill Set covers the MEA Aeroskills Training Package units of competency that must be attained before being able to certify vapour cycle air conditioning system maintenance.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA for the removal of airframe exclusion E14 from CASR Part 66 B1 licences.

Custom Content Section

Not applicable.

MEASS00306 LME036 Airframe – B1.1 and B1.3 Licence Exclusion E15 Removal

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA201	Remove and install miscellaneous aircraft electrical hardware/components
MEA246	Fabricate and/or repair aircraft electrical hardware or parts
MEA260	Use electrical test equipment
MEA355	Maintain light aircraft air cycle air conditioning systems

Target Group

Holders of CASA B1.1 and B1.3 licences endorsed with an airframe exclusion E15 who wish to have the exclusion removed from their licence. This Skill Set covers the MEA Aeroskills Training Package units of competency that must be attained before being able to certify maintenance of air cycle air conditioning systems of unpressurised aircraft and helicopters.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA for the removal of airframe exclusion E15 from CASR Part 66 B1.1 and B1.3 licences.

Custom Content Section

MEASS00307 LME037 Airframe – B1.1 Licence Exclusion E15 Removal

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA201	Remove and install miscellaneous aircraft electrical hardware/components
MEA203	Remove and install advanced aircraft electrical systems and components
MEA211	Inspect, test and troubleshoot advanced aircraft electrical systems and components
MEA246	Fabricate and/or repair aircraft electrical hardware or parts
MEA260	Use electrical test equipment
MEA303	Remove and install aircraft pneumatic system components
MEA310	Inspect, test and troubleshoot aircraft pneumatic systems and components

Target Group

Holders of CASA B1.1 licences endorsed with an airframe exclusion E15 who wish to have the exclusion removed from their licence. This Skill Set covers the MEA Aeroskills Training Package units of competency that must be attained before undergoing specific type training in air cycle air conditioning systems of pressurised aircraft.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA for the removal of airframe exclusion E15 from CASR Part 66 B1.1 licences.

Not applicable.

MEASS00308 LME038 Airframe – B1.1 Licence Exclusion E16 Removal

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA201	Remove and install miscellaneous aircraft electrical hardware/components
MEA203	Remove and install advanced aircraft electrical systems and components
MEA208	Remove and install aircraft pressurisation control system components
MEA211	Inspect, test and troubleshoot advanced aircraft electrical systems and components
MEA219	Inspect, test and troubleshoot aircraft pressurisation control systems and components
MEA246	Fabricate and/or repair aircraft electrical hardware or parts
MEA260	Use electrical test equipment
MEA303	Remove and install aircraft pneumatic system components
MEA310	Inspect, test and troubleshoot aircraft pneumatic systems and components
MEA317	Remove and install pressurised aircraft structural and non-structural components

MEA323 Perform advanced troubleshooting in aircraft mechanical maintenance

Target Group

Holders of CASA B1.1 licences endorsed with an airframe exclusion E16 who wish to have the exclusion removed from their licence. This Skill Set covers the MEA Aeroskills Training Package units of competency that must be attained before undergoing specific type training in pressurisation systems.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA for the removal of airframe exclusion E16 from CASR Part 66 B1.1 licences.

Custom Content Section

Not applicable.

MEASS00309 LME039 Airframe – B1.2 Licence Exclusion E16 Removal

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA201	Remove and install miscellaneous aircraft electrical hardware and components
MEA246	Fabricate and/or repair aircraft electrical hardware or parts
MEA356	Maintain light piston engine aircraft pressurisation systems

Target Group

Holders of CASA B1.2 licences endorsed with an airframe exclusion E16 who wish to have the exclusion removed from their licence. This Skill Set covers the MEA Aeroskills Training Package units of competency that must be attained before being able to certify pressurisation system maintenance.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA for the removal of airframe exclusion E16 from CASR Part 66 B1.2 licences.

Not applicable.

MEASS00310 LME040 Radio – B2 Licence Exclusion E18 Removal

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA206	Remove and install aircraft basic radio communication and navigation system components
MEA214	Inspect, test and troubleshoot aircraft basic communication and radio navigation systems and components

Target Group

Holders of CASA B2 licences endorsed with a radio E18 exclusion who wish to have the exclusion removed from their licence. This Skill Set covers the MEA Aeroskills Training Package units of competency that must be attained before either undergoing specific type training or being able to certify ADF system maintenance.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA for the removal of radio exclusion E18 from a CASR Part 66 B2 licence.

Custom Content Section

Not applicable.

MEASS00311 LME041 Radio – B2 Licence Exclusion E19 Removal

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA206 Remove and install aircraft basic radio communication and navigation system components

MEA214 Inspect, test and troubleshoot aircraft basic communication and radio navigation systems and components

Or the following two units in lieu of MEA214:

MEA226 Inspect aircraft electronic systems and components

MEA229 Test and troubleshoot aircraft radio frequency navigation and communications systems and components

Target Group

Holders of CASA B2 licences endorsed with a radio E19 exclusion who wish to have the exclusion removed from their licence. This Skill Set covers the MEA Aeroskills Training Package units of competency that must be attained before either undergoing specific type training or being able to certify VOR system maintenance.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA for the removal of radio exclusion E19 from a CASR Part 66 B2 licence.

Custom Content Section

Not applicable.

MEASS00312 LME042 Radio – B2 Licence Exclusion E20 Removal

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA206	Remove and install aircraft basic radio communication and navigation system components
MEA207	Remove and install aircraft electronic system components
MEA216	Inspect, test and troubleshoot instrument landing systems and components

Target Group

Holders of CASA B2 licences endorsed with a radio E20 exclusion who wish to have the exclusion removed from their licence. This Skill Set covers the MEA Aeroskills Training Package units of competency that must be attained before either undergoing specific type training or being able to certify ILS system maintenance.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA for the removal of radio exclusion E20 from a CASR Part 66 B2 licence.

Custom Content Section

Not applicable.

MEASS00313 LME043 Radio – B2 Licence Exclusion E21 Removal

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA207	Remove and install aircraft electronic system components
MEA220	Inspect, test and troubleshoot aircraft primary radar systems and components

Target Group

Holders of CASA B2 licences endorsed with a radio E21 exclusion who wish to have the exclusion removed from their licence. This Skill Set covers the MEA Aeroskills Training Package units of competency that must be attained before either undergoing specific type training or being able to certify weather radar system maintenance.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA for the removal of radio exclusion E21 from a CASR Part 66 B2 licence.

Custom Content Section

Not applicable.

MEASS00314 LME044 Radio – B2 Licence Exclusion E22 Removal

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA207	Remove and install aircraft electronic system components
MEA221	Inspect, test and troubleshoot aircraft secondary radar systems and components

Target Group

Holders of CASA B2 licences endorsed with a radio E22 exclusion who wish to have the exclusion removed from their licence. This Skill Set covers the MEA Aeroskills Training Package units of competency that must be attained before either undergoing specific type training or being able to certify ATC transponder system maintenance.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA for the removal of radio exclusion E22 from a CASR Part 66 B2 licence.

Custom Content Section

MEASS00320 LME050 Instrument – B2 Licence Exclusion E28 Removal

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA207 Remove and install aircraft electronic system components

MEA217 Inspect, test and troubleshoot fixed wing autopilot systems and components

Or, if helicopter systems are being maintained:

MEA218 Inspect, test and troubleshoot rotary wing autopilot systems and components

Target Group

Holders of CASA B2 licences endorsed with instrument E28 exclusion who wish to have the exclusion removed from their licence. This Skill Set covers the MEA Aeroskills Training Package units of competency that must be attained before either undergoing specific type training or being able to certify multi-axis autopilot system maintenance.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA for the removal of instrument exclusion E28 from a CASR Part 66 B2 licence.

Custom Content Section

Not applicable.

MEASS00321 LME051 Instrument – B2 Licence Exclusion E29 Removal

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA205 Remove and install advanced aircraft instrument system components

MEA213 Inspect, test and troubleshoot advanced aircraft instrument systems

Target Group

Holders of CASA B2 licences endorsed with instrument E29 exclusion who wish to have the exclusion removed from their licence. This Skill Set covers the MEA Aeroskills Training Package units of competency that must be attained before either undergoing specific type training or being able to certify remote indicating compass system maintenance.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA for the removal of instrument exclusion E29 from a CASR Part 66 B2 licence.

Custom Content Section

MEASS00322 LME052 Instrument – B2 Licence Exclusion E30 Removal

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA207	Remove and install aircraft electronic system components
MEA233	Inspect, test and troubleshoot aircraft inertial navigation and reference systems and components

Target Group

Holders of CASA B2 licences endorsed with instrument E30 exclusion who wish to have the exclusion removed from their licence. This Skill Set covers the MEA Aeroskills Training Package units of competency that must be attained before either undergoing specific type training or being able to certify inertial navigation and reference system maintenance.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA for the removal of instrument exclusion E30 from a CASR Part 66 B2 licence.

Custom Content Section

Not applicable.

MEASS00323 LME053 Instrument – B2 Licence Exclusion E31 Removal

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA208	Remove and install aircraft pressurisation control system components
MEA219	Inspect, test and troubleshoot aircraft pressurisation control systems and components

Target Group

Holders of CASA B2 licences endorsed with instrument E31 exclusion who wish to have the exclusion removed from their licence. This Skill Set covers the MEA Aeroskills Training Package units of competency that must be attained before either undergoing specific type training or being able to certify pressurisation system maintenance.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA for the removal of instrument exclusion E31 from a CASR Part 66 B2 licence.

MEASS00326 LME056 Electrical/Instrument/Radio – B2 Licence Exclusion E34 Removal

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA207	Remove and install aircraft electronic system components
And any one of:	
MEA227	Test and troubleshoot aircraft electrical systems and components
MEA228	Test and troubleshoot aircraft instrument systems and components
MEA229	Test and troubleshoot aircraft radio frequency navigation and communications systems and components
MEA230	Test and troubleshoot fixed wing aircraft automatic flight control systems and components
MEA231	Inspect, test and troubleshoot rotary wing aircraft automatic flight control systems and components
MEA232	Test and troubleshoot aircraft pulse systems and components
MEA278	Inspect, test and troubleshoot instrument display systems and components

Target Group

Holders of CASA B2 licences endorsed with electrical/instrument/radio E34 exclusion who wish to have the exclusion removed from their licence. This Skill Set covers the MEA Aeroskills Training Package units of competency that must be attained before either undergoing specific type training or being able to certify maintenance of digital electronic systems.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA for the removal of electrical/instrument/radio exclusion E34 from a CASR Part 66 B2 licence.

Custom Content Section

Not applicable.

MEASS00327 LME057 Airframe – B1.1 or B1.2 Licence Exclusion E35 Removal

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA317	Remove and install pressurised aircraft structural and non-structural components
MEA339	Inspect, repair and maintain aircraft structures

Target Group

Holders of CASA B1.1 or B1.2 licences endorsed with airframe E35 exclusion who wish to have the exclusion removed from their licence. This Skill Set covers the MEA Aeroskills Training Package units of competency that must be attained before being able to certify pressurised structure maintenance.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA for the removal of airframe exclusion E35 from a CASR Part 66 B1.1 or B1.2 licence.

MEASS00334 LME064 Airframe – B1 Licence Exclusion E42 Removal

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA201	Remove and install miscellaneous aircraft electrical hardware/components
MEA202	Remove and install basic aircraft electrical systems and components
MEA210	Inspect, test and troubleshoot basic aircraft electrical systems and components
MEA246	Fabricate and/or repair aircraft electrical hardware or parts
MEA260	Use electrical test equipment
MEA302	Remove and install aircraft hydro-mechanical and landing gear system components
MEA309	Inspect, test and troubleshoot aircraft hydro-mechanical and landing gear systems and components

Target Group

Holders of CASA B1 licences endorsed with airframe E42 exclusion who wish to have the exclusion removed from their licence. This Skill Set covers the MEA Aeroskills Training Package units of competency that must be attained before being able to certify landing gear retraction system maintenance.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA for the removal of airframe exclusion E42 from a CASR Part 66 B1 licence.

Not applicable.

MEASS00335 LME065 Electrical – B1 Licence Exclusion E44 Removal

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA201	Remove and install miscellaneous aircraft electrical hardware/components
MEA246	Fabricate and/or repair aircraft electrical hardware or parts
MEA260	Use electrical test equipment

Target Group

Holders of CASA B1 licences endorsed with electrical E44 exclusion who wish to have the exclusion removed from their licence. This Skill Set covers the MEA Aeroskills Training Package units of competency that must be attained before being able to certify repairs to wiring.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA for the removal of electrical exclusion E44 from a CASR Part 66 B1 licence.

Custom Content Section

Not applicable.

MEASS00336 LME066 Units of competency for A1 licence if Certificate IV in Aeroskills (Mechanical) is held

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

This Skill Set has been developed to assist in compliance with CASR Part 66 requirements for the A1 licence and does not relate to attainment of an additional Aeroskills qualification.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

- | | |
|--------|---|
| MEA119 | Perform administrative processes to prepare for certification of civil aircraft A level line maintenance |
| MEA240 | Use electrical test equipment to perform basic electrical tests (Not required if elective MEA260 is held) |
| MEA264 | Remove and install aircraft electrical/avionic components during line maintenance |
| MEA265 | Remove and install general aircraft electrical hardware (Not required if elective MEA201 is held) |
| MEA344 | Remove and install aircraft components (Not required if electives MEA301, MEA302 and either MEA304 or MEA317 are held) |
| MEA345 | Perform scheduled line maintenance activities on gas turbine engine fixed wing aircraft (Not required if MEA301 plus either the five units MEA309, MEA310, MEA312, MEA314 and MEA339 or MEA401 OR the three units MEA318, MEA319 and MEA339 or MEA401 are held) |
| MEA418 | Perform basic repair of aircraft internal fittings during line maintenance (Not required if any one of MEA369, MEA339 or MEA370 is held) |

Target Group

Individuals with Certificate IV in Aeroskills (Mechanical) seeking the grant of an A1 licence. Note that requirements may vary according to the elective units taken for the Certificate IV.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements for the grant of an A1 licence to individuals who hold a Certificate IV in Aeroskills (Mechanical).

Custom Content Section

Not applicable.

MEASS00337 LME067 Units of competency for A2 licence if Certificate IV in Aeroskills (Mechanical) is held

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

This Skill Set has been developed to assist in compliance with CASR Part 66 requirements for the A2 licence and does not relate to attainment of an additional Aeroskills qualification.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

- | | |
|--------|---|
| MEA119 | Perform administrative processes to prepare for certification of civil aircraft A level line maintenance |
| MEA240 | Use electrical test equipment to perform basic electrical tests (Not required if elective MEA260 is held) |
| MEA264 | Remove and install aircraft electrical/avionic components during line maintenance |
| MEA265 | Remove and install general aircraft electrical hardware (Not required if elective MEA201 is held) |
| MEA344 | Remove and install aircraft components (Not required if electives MEA301, MEA302 and either MEA304 or MEA317 are held) |
| MEA347 | Perform scheduled line maintenance activities on piston engine fixed wing aircraft (Not required if MEA301, MEA309, MEA312, MEA313 and MEA339 or MEA401 are held) |
| MEA418 | Perform basic repair of aircraft internal fittings during line maintenance (Not required if any one of MEA369, MEA339 or MEA370 is held) |

Target Group

Individuals with Certificate IV in Aeroskills (Mechanical) seeking the grant of an A2 licence. Note that requirements may vary according to the elective units taken for the Certificate IV.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements for the grant of an A2 licence to individuals who hold a Certificate IV in Aeroskills (Mechanical).

MEASS00340 LME070 Units of competency for A1 licence if Certificate IV in Aeroskills (Avionics) is held

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

This Skill Set has been developed to assist in compliance with CASR Part 66 requirements for the A1 licence and does not relate to attainment of an additional Aeroskills qualification.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA119	Perform administrative processes to prepare for certification of civil aircraft A level line maintenance
MEA264	Remove and install aircraft electrical/avionic components during line maintenance (Not required if MEA203 and MEA207 are held)
MEA344	Remove and install aircraft components
MEA345	Perform scheduled line maintenance activities on gas turbine engine fixed wing aircraft
MEA418	Perform basic repair of aircraft internal fittings during line maintenance

Target Group

Individuals with Certificate IV in Aeroskills (Avionics) seeking the grant of an A1 licence. Note that requirements may vary according to the elective units taken for the Certificate IV.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements for the grant of an A1 licence to individuals who hold a Certificate IV in Aeroskills (Avionics).

MEASS00348 MTA001 Aircraft egress system maintenance

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers these units as part of a Certificate IV in Aeroskills (Armament).

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activities
MEA105	Apply quality standards applicable to aviation maintenance
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA109	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance
MEA601	Maintain aircraft egress systems
DEFEO101D	Work safely with explosive ordnance

Target Group

Individuals who wish to gain approval to maintain egress systems that contain explosive ordnance that are fitted to civil registered aircraft, such as Warbirds.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA for the grant of an approval to perform maintenance on aircraft egress systems that contain explosive ordnance.

Custom Content Section

Not applicable.

MEASS00349 MTA002 In-flight entertainment system maintenance

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers these units as part of a Certificate II in Aircraft Line Maintenance.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activities
MEA105	Apply quality standards applicable to aviation maintenance
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA109	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance
MEA264	Remove and install aircraft electrical/avionic components during line maintenance
MEA265	Remove and install general aircraft electrical hardware

Target Group

Individuals who are required to maintain aircraft in-flight entertainment systems (IFE).

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA, when combined with applicable IFE equipment vendor training, for the grant of an approval to perform maintenance on IFE.

Custom Content Section

Not applicable.

MEASS00350 MTA003 Borescope inspection approval

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers this unit as a skill set that meets regulatory requirements.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA366 Perform borescope inspections

Target Group

Qualified Aircraft Maintenance Engineers seeking approval to perform borescope inspections on aircraft engines.

Suggested words for Statement of Attainment

This competency from the MEA Aeroskills Training Package meets the requirements of CASA for the grant of an approval to perform borescope inspections on aircraft engines.

Custom Content Section

Not applicable.

MEASS00351 MTA004 Aircraft composite structure repair/modification using hot and cold bonding

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers these units as part of a Certificate IV in Aeroskills (Mechanical) and (Mechatronics) and of a Diploma of Aeroskills (Mechanical).

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA401 Inspect aircraft structures

Or

MEA339 Inspect, repair and maintain aircraft structures

Or

MEA369 Inspect and maintain structures and related components of non-pressurised small aircraft

MEA370 Repair the structure of non-pressurised small aircraft

MEA405 Repair/modify aircraft composite material structure/components

Target Group

Individuals with Certificate IV in Aeroskills (Mechanical) or holders of B1 Maintenance Certification Licences who require an approval to repair or modify aircraft composite structure using hot and/or cold bonding.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA for the grant of an approval to perform repairs and modifications on aircraft composite structures using hot and/or cold bonding.

Custom Content Section

Not applicable.

MEASS00352 MTA005 Aircraft composite structure repair/modification using cold bonding only

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers these units as part of a Certificate IV in Aeroskills (Mechanical) and (Mechatronics).

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA401 Inspect aircraft structures

or

MEA339 Inspect, repair and maintain aircraft structures

or

MEA369 Inspect and maintain structures and related components of non-pressurised small aircraft

MEA370 Repair the structure of non-pressurised small aircraft

MEA367 Repair/modify aircraft composite structure using cold bonding

Target Group

Individuals with Certificate IV in Aeroskills (Mechanical) or holders of B1 Maintenance Certification Licences who require an approval to repair or modify aircraft composite structure using cold bonding only.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA for the grant of an approval to perform repairs and modifications on aircraft composite structures using cold bonding only.

Custom Content Section

Not applicable.

MEASS00353 MTA006 Aircraft welding using the gas welding process – aluminium alloys

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers these units as part of a Skill Set designed to meet the requirements for CASA or ADF welding approvals for the welding of aluminium alloys using the gas welding process. The competency elements of MEA430 must be attained using the aluminium alloy parent metal group as listed in the Range of Conditions.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEM05004C	Perform routine oxy acetylene welding
MEM05007C	Perform manual heating and thermal cutting
MEM05022C	Perform advanced welding using oxy acetylene welding process
MEM05026C	Apply welding principles
MEM05051A	Select welding processes
MEM05052A	Apply safe welding processes
MEM09002B	Interpret technical drawing
MEM18001C	Use hand tools
MEM18002B	Use power tools/hand held operations
MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activities

MEA105	Apply quality standards applicable to aviation maintenance
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA430	Gas weld aircraft components

Target Group

Individuals seeking approval under either the CASA or ADF Regulatory system to weld aluminium alloy aircraft components using the gas welding process.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA and of the ADF for the grant of an approval to weld aluminium alloys using the gas welding process.

Custom Content Section

Not applicable.

MEASS00354 MTA007 Aircraft welding using the gas welding process – magnesium alloys

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers these units as part of a Skill Set designed to meet the requirements for CASA or ADF welding approvals for the welding of magnesium alloys using the gas welding process. The competency elements of MEA430 must be attained using the magnesium alloy parent metal group as listed in the Range of Conditions.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEM05004C	Perform routine oxy acetylene welding
MEM05007C	Perform manual heating and thermal cutting
MEM05022C	Perform advanced welding using oxy acetylene welding process
MEM05026C	Apply welding principles
MEM05051A	Select welding processes
MEM05052A	Apply safe welding processes
MEM09002B	Interpret technical drawing
MEM18001C	Use hand tools
MEM18002B	Use power tools/hand held operations
MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activities

MEA105	Apply quality standards applicable to aviation maintenance
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA430	Gas weld aircraft components

Target Group

Individuals seeking approval under either the CASA or ADF Regulatory system to weld magnesium alloy aircraft components using the gas welding process.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA and of the ADF for the grant of an approval to weld magnesium alloys using the gas welding process.

Custom Content Section

Not applicable.

MEASS00355 MTA008 Aircraft welding using the gas welding process – carbon and low alloy steels

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers these units as part of a Skill Set designed to meet the requirements for CASA or ADF welding approvals for the welding of carbon and low alloy steels using the gas welding process. The competency elements of MEA430 must be attained using the carbon steel and low alloy steel parent metal group as listed in the Range of Conditions.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEM05004C	Perform routine oxy acetylene welding
MEM05007C	Perform manual heating and thermal cutting
MEM05022C	Perform advanced welding using oxy acetylene welding process
MEM05026C	Apply welding principles
MEM05051A	Select welding processes
MEM05052A	Apply safe welding processes
MEM09002B	Interpret technical drawing
MEM18001C	Use hand tools
MEM18002B	Use power tools/hand held operations
MEA101	Interpret work health and safety practices in aviation maintenance

MEA103	Plan and organise aviation maintenance work activities
MEA105	Apply quality standards applicable to aviation maintenance
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA430	Gas weld aircraft components

Target Group

Individuals seeking approval under either the CASA or ADF Regulatory system to weld carbon and low alloy steel aircraft components using the gas welding process.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA and of the ADF for the grant of an approval to weld carbon and low alloy steels using the gas welding process.

Custom Content Section

Not applicable.

MEASS00356 MTA009 Aircraft welding using the gas welding process – corrosion and heat resisting steels

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers these units as part of a Skill Set designed to meet the requirements for CASA or ADF welding approvals for the welding of corrosion and heat resisting steel using the gas welding process. The competency elements of MEA430 must be attained using the corrosion and heat resisting steel parent metal group as listed in the Range of Conditions.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEM05004C	Perform routine oxy acetylene welding
MEM05007C	Perform manual heating and thermal cutting
MEM05022C	Perform advanced welding using oxy acetylene welding process
MEM05026C	Apply welding principles
MEM05051A	Select welding processes
MEM05052A	Apply safe welding processes
MEM09002B	Interpret technical drawing
MEM18001C	Use hand tools
MEM18002B	Use power tools/hand held operations
MEA101	Interpret work health and safety practices in aviation maintenance

MEA103	Plan and organise aviation maintenance work activities
MEA105	Apply quality standards applicable to aviation maintenance
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA430	Gas weld aircraft components

Target Group

Individuals seeking approval under either the CASA or ADF Regulatory system to weld corrosion and heat resisting steel aircraft components using the gas welding process.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA and of the ADF for the grant of an approval to weld corrosion and heat resisting steels using the gas welding process.

Custom Content Section

Not applicable.

MEASS00357 MTA010 Aircraft welding using the gas welding process – nickel alloys

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers these units as part of a Skill Set designed to meet the requirements for CASA or ADF welding approvals for the welding of nickel alloys using the gas welding process. The competency elements of MEA430 must be attained using the nickel alloy parent metal group as listed in the Range of Conditions.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEM05004C	Perform routine oxy acetylene welding
MEM05007C	Perform manual heating and thermal cutting
MEM05022C	Perform advanced welding using oxy acetylene welding process
MEM05026C	Apply welding principles
MEM05051A	Select welding processes
MEM05052A	Apply safe welding processes
MEM09002B	Interpret technical drawing

MEM18002B	Use power tools/hand held operations
MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activities

MEA105	Apply quality standards applicable to aviation maintenance
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA430	Gas weld aircraft components

Target Group

Individuals seeking approval under either the CASA or ADF Regulatory system to weld nickel alloy aircraft components using the gas welding process.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA and of the ADF for the grant of an approval to weld nickel alloys using the gas welding process.

Custom Content Section

Not applicable.

MEASS00358 MTA011 Aircraft welding using the gas welding process – copper based alloys

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers these units as part of a Skill Set designed to meet the requirements for CASA or ADF welding approvals for the welding of copper based alloys using the gas welding process. The competency elements of MEA430 must be attained using the copper based alloy parent metal group as listed in the Range of Conditions.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEM05004C	Perform routine oxy acetylene welding
MEM05007C	Perform manual heating and thermal cutting
MEM05022C	Perform advanced welding using oxy acetylene welding process
MEM05026C	Apply welding principles
MEM05051A	Select welding processes
MEM05052A	Apply safe welding processes
MEM09002B	Interpret technical drawing
MEM18001C	Use hand tools
MEM18002B	Use power tools/hand held operations
MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activities

MEA105	Apply quality standards applicable to aviation maintenance
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA430	Gas weld aircraft components

Target Group

Individuals seeking approval under either the CASA or ADF Regulatory system to weld copper based alloy aircraft components using the gas welding process.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA and of the ADF for the grant of an approval to weld copper based alloys using the gas welding process.

Custom Content Section

Not applicable.

MEASS00359 MTA012 Aircraft welding using the gas welding process – titanium alloys

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers these units as part of a Skill Set designed to meet the requirements for CASA or ADF welding approvals for the welding of titanium alloys using the gas welding process. The competency elements of MEA430 must be attained using the titanium alloy parent metal group as listed in the Range of Conditions.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEM05004C	Perform routine oxy acetylene welding
MEM05007C	Perform manual heating and thermal cutting
MEM05022C	Perform advanced welding using oxy acetylene welding process
MEM05026C	Apply welding principles
MEM05051A	Select welding processes
MEM05052A	Apply safe welding processes
MEM09002B	Interpret technical drawing
MEM18001C	Use hand tools
MEM18002B	Use power tools/hand held operations
MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activities

MEA105	Apply quality standards applicable to aviation maintenance
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA430	Gas weld aircraft components

Target Group

Individuals seeking approval under either the CASA or ADF Regulatory system to weld titanium alloy aircraft components using the gas welding process.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA and of the ADF for the grant of an approval to weld titanium alloys using the gas welding process.

Custom Content Section

Not applicable.

MEASS00360 MTA013 Aircraft welding using the braze welding process - aluminium alloys

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers these units as part of a Skill Set designed to meet the requirements for CASA or ADF welding approvals for the welding of aluminium alloys using the braze welding process. The competency elements of MEA431 must be attained using the aluminium alloy parent metal group as listed in the Range of Conditions.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEM05006C	Perform brazing and/or silver soldering
MEM05026C	Apply welding principles
MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activities
MEA105	Apply quality standards applicable to aviation maintenance
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA431	Braze weld aircraft components

Target Group

Individuals seeking approval under either the CASA or ADF Regulatory system to weld aluminium alloy aircraft components using the braze welding process.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA and the ADF for the grant of an approval to weld aluminium alloy aircraft components using the braze welding process.

Custom Content Section

Not applicable.

MEASS00361 MTA014 Aircraft welding using the braze welding process - magnesium alloys

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers these units as part of a Skill Set designed to meet the requirements for CASA or ADF welding approvals for the welding of magnesium alloys using the braze welding process. The competency elements of MEA431 must be attained using the magnesium alloy parent metal group as listed in the Range of Conditions.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEM05006C	Perform brazing and/or silver soldering
MEM05026C	Apply welding principles
MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activities
MEA105	Apply quality standards applicable to aviation maintenance
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA431	Braze weld aircraft components

Target Group

Individuals seeking approval under either the CASA or ADF Regulatory system to weld magnesium alloy aircraft components using the braze welding process.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA and the ADF for the grant of an approval to weld magnesium alloy aircraft components using the braze welding process.

Custom Content Section

Not applicable.

MEASS00362 MTA015 Aircraft welding using the braze welding process - carbon and low alloy steels

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers these units as part of a Skill Set designed to meet the requirements for CASA or ADF welding approvals for the welding of carbon and low alloy steel using the braze welding process. The competency elements of MEA431 must be attained using the carbon steel and low alloy steel parent metal group as listed in the Range of Conditions.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEM05006C	Perform brazing and/or silver soldering
MEM05026C	Apply welding principles
MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activities
MEA105	Apply quality standards applicable to aviation maintenance
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA431	Braze weld aircraft components

Target Group

Individuals seeking approval under either the CASA or ADF Regulatory system to weld carbon and low alloy steel aircraft components using the braze welding process.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA and the ADF for the grant of an approval to weld carbon and low alloy steel aircraft components using the braze welding process.

Custom Content Section

Not applicable.

MEASS00363 MTA016 Aircraft welding using the braze welding process - corrosion and heat resisting steels

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers these units as part of a Skill Set designed to meet the requirements for CASA or ADF welding approvals for the welding of corrosion and heat resisting steel using the braze welding process. The competency elements of MEA431 must be attained using the corrosion and heat resisting steel parent metal group as listed in the Range of Conditions.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEM05006C	Perform brazing and/or silver soldering
MEM05026C	Apply welding principles
MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activities
MEA105	Apply quality standards applicable to aviation maintenance
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA431	Braze weld aircraft components

Target Group

Individuals seeking approval under either the CASA or ADF Regulatory system to weld corrosion and heat resisting steel aircraft components using the braze welding process.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA and the ADF for the grant of an approval to weld corrosion and heat resisting steel aircraft components using the braze welding process.

Custom Content Section

Not applicable.

MEASS00364 MTA017 Aircraft welding using the braze welding process - nickel alloys

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers these units as part of a Skill Set designed to meet the requirements for CASA or ADF welding approvals for the welding of nickel alloy using the braze welding process. The competency elements of MEA431A must be attained using the nickel alloy parent metal group as listed in the Range of Conditions.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEM05006C	Perform brazing and/or silver soldering
MEM05026C	Apply welding principles
MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activities
MEA105	Apply quality standards applicable to aviation maintenance
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA431	Braze weld aircraft components

Target Group

Individuals seeking approval under either the CASA or ADF Regulatory system to weld nickel alloy aircraft components using the braze welding process.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA and the ADF for the grant of an approval to weld nickel alloy aircraft components using the braze welding process.

MEASS00367 MTA020 Aircraft welding using the gas metal arc welding process - aluminium alloys

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers these units as part of a Skill Set designed to meet the requirements for CASA or ADF welding approvals for the welding of aluminium alloys using the gas metal arc welding process. The competency elements of MEA433 must be attained using the aluminium alloy parent metal group as listed in the Range of Conditions.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEM05007C	Perform manual heating and thermal cutting
MEM05017D	Weld using gas metal arc welding process
MEM05018C	Perform advanced welding using gas metal arc welding process
MEM05026C	Apply welding principles
MEM05043B	Perform welds to code standards using gas metal arc welding
MEM05050B	Perform routine gas metal arc welding
MEM05051A	Select welding processes
MEM05052A	Apply safe welding processes
MEM09002B	Interpret technical drawing
MEM12023A	Perform engineering measurement
MEM18001C	Use hand tools

MEM18002B	Use power tools/hand held operations
MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activities
MEA105	Apply quality standards applicable to aviation maintenance
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA433	Weld aircraft components using the gas metal arc welding process

Target Group

Individuals seeking approval under either the CASA or ADF Regulatory system to weld aluminium alloy aircraft components using the gas metal arc welding process.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA and the ADF for the grant of an approval to weld aluminium alloy aircraft components using the gas metal arc welding process.

Custom Content Section

MEM12023A	Perform engineering measurement

MEM18001C	Use hand tools
MEM18002B	Use power tools/hand held operations
MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activities
MEA105	Apply quality standards applicable to aviation maintenance
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA432	Weld aircraft components using the gas tungsten arc welding process

Target Group

Individuals seeking approval under either the CASA or ADF Regulatory system to weld carbon and low alloy steel aircraft components using the gas tungsten arc welding process.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA and the ADF for the grant of an approval to weld carbon and low alloy steel aircraft components using the gas tungsten arc welding process.

Custom Content Section

Not applicable.

MEASS00377 MTA030 Aircraft welding using gas tungsten arc welding process - corrosion and heat resisting steel

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers these units as part of a Skill Set designed to meet the requirements for CASA or ADF welding approvals for the welding of corrosion and heat resisting steel using the gas tungsten arc welding process. The competency elements of MEA432 must be attained using the corrosion and heat resisting steel parent metal group as listed in the Range of Conditions.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEM05007C	Perform manual heating and thermal cutting
MEM05019D	Weld using gas tungsten arc welding process
MEM05020C	Perform advanced welding using gas tungsten arc welding process
MEM05026C	Apply welding principles
MEM05044B	Perform welds to code standards using gas tungsten arc welding
MEM05049B	Perform routine gas tungsten arc welding
MEM05051A	Select welding processes
MEM05052A	Apply safe welding processes
MEM09002B	Interpret technical drawing
MEM12023A	Perform engineering measurement

MEM18001C	Use hand tools
MEM18002B	Use power tools/hand held operations
MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activities
MEA105	Apply quality standards applicable to aviation maintenance
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA432	Weld aircraft components using the gas tungsten arc welding process

Target Group

Individuals seeking approval under either the CASA or ADF Regulatory system to weld corrosion and heat resisting steel aircraft components using the gas tungsten arc welding process.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA and the ADF for the grant of an approval to weld corrosion and heat resisting steel aircraft components using the gas tungsten arc welding process.

Custom Content Section

Not applicable.

MEASS00378 MTA031 Aircraft welding using the gas tungsten arc welding process - nickel alloys

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers these units as part of a Skill Set designed to meet the requirements for CASA or ADF welding approvals for the welding of nickel alloy using the gas tungsten arc welding process. The competency elements of MEA432 must be attained using the nickel alloy parent metal group as listed in the Range of Conditions.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEM05007C	Perform manual heating and thermal cutting
MEM05019D	Weld using gas tungsten arc welding process
MEM05020C	Perform advanced welding using gas tungsten arc welding process
MEM05026C	Apply welding principles
MEM05044B	Perform welds to code standards using gas tungsten arc welding
MEM05049B	Perform routine gas tungsten arc welding
MEM05051A	Select welding processes
MEM05052A	Apply safe welding processes
MEM09002B	Interpret technical drawing
MEM12023A	Perform engineering measurement
MEM18001C	Use hand tools

MEM18002B	Use power tools/hand held operations
MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activities
MEA105	Apply quality standards applicable to aviation maintenance
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA432	Weld aircraft components using the gas tungsten arc welding process

Target Group

Individuals seeking approval under either the CASA or ADF Regulatory system to weld nickel alloy aircraft components using the gas tungsten arc welding process.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA and the ADF for the grant of an approval to weld nickel alloy aircraft components using the gas tungsten arc welding process.

MEASS00379 MTA032 Aircraft welding using the plasma arc welding process - aluminium alloys

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers these units as part of a Skill Set designed to meet the requirements for CASA or ADF welding approvals for the welding of aluminium alloys using the plasma arc welding process. The competency elements of MEA434 must be attained using the aluminium alloy parent metal group as listed in the Range of Conditions.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEM05007C	Perform manual heating and thermal cutting
MEM05019D	Weld using gas tungsten arc welding process
MEM05020C	Perform advanced welding using gas tungsten arc welding process
MEM05026C	Apply welding principles
MEM05044B	Perform welds to code standards using gas tungsten arc welding
MEM05049B	Perform routine gas tungsten arc welding
MEM05051A	Select welding processes
MEM05052A	Apply safe welding processes
MEM09002B	Interpret technical drawing
MEM12023A	Perform engineering measurement
MEM18001C	Use hand tools

MEM18002B	Use power tools/hand held operations
MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activities
MEA105	Apply quality standards applicable to aviation maintenance
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA434	Weld aircraft components using the plasma arc welding process

Target Group

Individuals seeking approval under either the CASA or ADF Regulatory system to weld aluminium alloy aircraft components using the plasma arc welding process.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA and the ADF for the grant of an approval to weld aluminium alloy aircraft components using the plasma arc welding process.

Custom Content Section

Not applicable.

MEASS00380 MTA033 Aircraft welding using the plasma arc welding process - magnesium alloys

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers these units as part of a Skill Set designed to meet the requirements for CASA or ADF welding approvals for the welding of magnesium alloy using the plasma arc welding process. The competency elements of MEA434 must be attained using the magnesium alloy parent metal group as listed in the Range of Conditions.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEM05007C	Perform manual heating and thermal cutting
MEM05019D	Weld using gas tungsten arc welding process
MEM05020C	Perform advanced welding using gas tungsten arc welding process
MEM05026C	Apply welding principles
MEM05044B	Perform welds to code standards using gas tungsten arc welding
MEM05049B	Perform routine gas tungsten arc welding
MEM05051A	Select welding processes
MEM05052A	Apply safe welding processes
MEM09002B	Interpret technical drawing
MEM12023A	Perform engineering measurement
MEM18001C	Use hand tools

MEM18002B	Use power tools/hand held operations
MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activities
MEA105	Apply quality standards applicable to aviation maintenance
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA434	Weld aircraft components using the plasma arc welding process

Target Group

Individuals seeking approval under either the CASA or ADF Regulatory system to weld magnesium alloy aircraft components using the plasma arc welding process.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA and the ADF for the grant of an approval to weld magnesium alloy aircraft components using the plasma arc welding process.

Custom Content Section

MEASS00386 MTA039 Aircraft welding using the manual metal arc welding process - aluminium alloys

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers these units as part of a Skill Set designed to meet the requirements for CASA or ADF welding approvals for the welding of aluminium alloys using the manual metal arc welding process. The competency elements of MEA435 must be attained using the aluminium alloy parent metal group as listed in the Range of Conditions.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEM05007C	Perform manual heating and thermal cutting
MEM05012C	Perform routine manual metal arc welding
MEM05015D	Weld using manual metal arc welding process
MEM05016C	Perform advanced welding using manual metal arc welding process
MEM05026C	Apply welding principles
MEM05046B	Perform welds to code standards using manual metal arc welding process
MEM05051A	Select welding processes
MEM05052A	Apply safe welding processes
MEM09002B	Interpret technical drawing
MEM12023A	Perform engineering measurement

MEM18001C	Use hand tools
MEM18002B	Use power tools/hand held operations
MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activities
MEA105	Apply quality standards applicable to aviation maintenance
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA435	Weld aircraft components using the manual metal arc welding process

Target Group

Individuals seeking approval under either the CASA or ADF Regulatory system to weld aluminium alloy aircraft components using the manual metal arc welding process.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA and the ADF for the grant of an approval to weld aluminium alloy aircraft components using the manual metal arc welding process.

Custom Content Section

Not applicable.

MEASS00387 MTA040 Aircraft welding using the manual metal arc welding process - magnesium alloys

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers these units as part of a Skill Set designed to meet the requirements for CASA or ADF welding approvals for the welding of magnesium alloy using the manual metal arc welding process. The competency elements of MEA435 must be attained using the magnesium alloy parent metal group as listed in the Range of Conditions.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEM05007C	Perform manual heating and thermal cutting
MEM05012C	Perform routine manual metal arc welding
MEM05015D	Weld using manual metal arc welding process
MEM05016C	Perform advanced welding using manual metal arc welding process
MEM05026C	Apply welding principles
MEM05046B	Perform welds to code standards using manual metal arc welding process
MEM05051A	Select welding processes
MEM05052A	Apply safe welding processes
MEM09002B	Interpret technical drawing
MEM12023A	Perform engineering measurement

MEM18001C	Use hand tools
MEM18002B	Use power tools/hand held operations
MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activities
MEA105	Apply quality standards applicable to aviation maintenance
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA435	Weld aircraft components using the manual metal arc welding process

Target Group

Individuals seeking approval under either the CASA or ADF Regulatory system to weld magnesium alloy aircraft components using the manual metal arc welding process.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA and the ADF for the grant of an approval to weld magnesium alloy aircraft components using the manual metal arc welding process.

MEA435	Weld aircraft components using the manual metal arc welding process

Target Group

Individuals seeking approval under either the CASA or ADF Regulatory system to weld titanium alloy aircraft components using the manual metal arc welding process.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA and the ADF for the grant of an approval to weld titanium alloy aircraft components using the manual metal arc welding process.

Custom Content Section

Not applicable.

MEASS00393 MTA046 Liquid penetrant inspection approval for aerospace

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers these units as part of a Diploma of Aeroskills (Non-Destructive Testing). The MEA units also count towards the Diploma and Advanced Diploma of Aviation Maintenance Management. The MEM units count towards Diploma qualifications in the Metal and Engineering Training Package.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activities
MEA105	Apply quality standards applicable to aviation maintenance
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA109	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance Note: This unit is equivalent to MEM18001C as a prerequisite for MEM24002B
MEM24002B	Perform penetrant testing
MEM24012C	Apply metallurgy principles

Target Group

Holders of aircraft engineer licences, qualified AMEs and aviation tradespersons employed on aircraft and component maintenance plus other tradespersons employed in component maintenance workshops seeking approval under either the CASA or ADF Regulatory system to perform liquid penetrant inspection of aircraft structure and items of aeronautical product at AS 3669 Level 2.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA and the ADF for the grant of an approval to perform liquid penetrant inspections on aircraft structure and items of aeronautical product at AS 3669 Level 2.

Custom Content Section

Not applicable.

MEASS00394 MTA047 Magnetic particle inspection approval for aerospace

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers these units as part of a Diploma of Aeroskills (Non-Destructive Testing). The MEA units also count towards the Diploma and Advanced Diploma of Aviation Maintenance Management. The MEM units count towards Diploma qualifications in the Metal and Engineering Training Package.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activities
MEA105	Apply quality standards applicable to aviation maintenance
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA109	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance Note: This unit is equivalent to MEM18001C as a prerequisite for MEM24004B
MEM24004B	Perform magnetic particle testing
MEM24012C	Apply metallurgy principles

Target Group

Holders of aircraft engineer licences, qualified AMEs and aviation tradespersons employed on aircraft and component maintenance plus other tradespersons employed in component maintenance workshops seeking approval under either the CASA or ADF Regulatory system to perform magnetic particle inspection of aircraft structure and items of aeronautical product at AS 3669 Level 2.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA and the ADF for the grant of an approval to perform magnetic particle inspections on aircraft structure and items of aeronautical product at AS 3669 Level 2.

Custom Content Section

Not applicable.

MEASS00395 MTA048 Eddy current inspection approval for aerospace

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers these units as part of a Diploma of Aeroskills (Non-Destructive Testing). The MEA units also count towards the Diploma and Advanced Diploma of Aviation Maintenance Management. The MEM units count towards Diploma qualifications in the Metal and Engineering Training Package.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activities
MEA105	Apply quality standards applicable to aviation maintenance
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA109	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance Note: This unit is equivalent to MEM18001C as a prerequisite for MEM24006B
MEM24006B	Perform eddy current testing
MEM24012C	Apply metallurgy principles

Target Group

Holders of aircraft engineer licences, qualified AMEs and aviation tradespersons employed on aircraft and component maintenance plus other tradespersons employed in component maintenance workshops seeking approval under either the CASA or ADF Regulatory system to perform eddy current inspection of aircraft structure and items of aeronautical product at AS 3669 Level 2.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA and the ADF for the grant of an approval to perform eddy current inspections on aircraft structure and items of aeronautical product at AS 3669 Level 2.

Custom Content Section

Not applicable.

MEASS00396 MTA049 Ultrasonic inspection approval for aerospace

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers these units as part of a Diploma of Aeroskills (Non-Destructive Testing). The MEA units also count towards the Diploma and Advanced Diploma of Aviation Maintenance Management. The MEM units count towards Diploma qualifications in the Metal and Engineering Training Package.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activities
MEA105	Apply quality standards applicable to aviation maintenance
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA109	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance Note: This unit is equivalent to MEM18001C as a prerequisite for MEM24008B
MEM24008B	Perform ultrasonic testing
MEM24012C	Apply metallurgy principles

Target Group

Holders of aircraft engineer licences, qualified AMEs and aviation tradespersons employed on aircraft and component maintenance plus other tradespersons employed in component maintenance workshops seeking approval under either the CASA or ADF Regulatory system to perform ultrasonic inspection of aircraft structure and items of aeronautical product at AS 3669 Level 2.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA and the ADF for the grant of an approval to perform ultrasonic inspections on aircraft structure and items of aeronautical product at AS 3669 Level 2.

Custom Content Section

Not applicable.

MEASS00397 MTA050 Radiographic inspection approval for aerospace

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers these units as part of a Diploma of Aeroskills (Non-Destructive Testing). The MEA units also count towards the Diploma and Advanced Diploma of Aviation Maintenance Management. The MEM units count towards Diploma qualifications in the Metal and Engineering Training Package.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activities
MEA105	Apply quality standards applicable to aviation maintenance
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA109	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance Note: This unit is equivalent to MEM18001C as a prerequisite for MEM24010B
MEM13013B	Work safely with ionising radiation
MEM24010B	Perform radiographic testing

MEM24012C Apply metallurgy principles

Target Group

Holders of aircraft engineer licences, qualified AMEs and aviation tradespersons employed on aircraft and component maintenance plus other tradespersons employed in component maintenance workshops seeking approval under either the CASA or ADF Regulatory system to perform radiographic inspection of aircraft structure and items of aeronautical product at AS 3669 Level 2.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA and the ADF for the grant of an approval to perform radiographic inspections on aircraft structure and items of aeronautical product at AS 3669 Level 2.

MEASS00398 MTA051 Basic visual liquid dye penetrant inspection approval for aerospace

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers these units as a Skill Set that meets regulatory requirements.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activities
MEA105	Apply quality standards applicable to aviation maintenance
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA109	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance Note: This unit is equivalent to MEM18001C as a prerequisite for MEM24001B
MEM24001B	Perform basic liquid dye penetrant testing

Target Group

Qualified AMEs and aviation tradespersons employed on aircraft and component maintenance plus other tradespersons employed in component maintenance workshops seeking approval under either the CASA or ADF Regulatory system to perform basic visual liquid dye penetrant inspection of aircraft structure and items of aeronautical product.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA and the ADF for the grant of an approval to perform basic visual liquid dye penetrant inspections on aircraft structure and items of aeronautical product.

Custom Content Section

Not applicable.

MEASS00399 MTA052 Basic magnetic particle inspection approval for aerospace

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers these units as a Skill Set that meets regulatory requirements.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activities
MEA105	Apply quality standards applicable to aviation maintenance
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA109	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance Note: This unit is equivalent to MEM18001C as a prerequisite for MEM24003B
MEM24003B	Perform basic magnetic particle testing

Target Group

Holders of aircraft engineer licences, qualified AMEs and aviation tradespersons employed on aircraft and component maintenance plus other tradespersons employed in component maintenance workshops seeking approval under either the CASA or ADF Regulatory system to perform basic magnetic particle inspection of aircraft structure and items of aeronautical product.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA and the ADF for the grant of an approval to perform basic magnetic particle inspections on aircraft structure and items of aeronautical product.

Custom Content Section

Not applicable.

MEASS00400 MTA053 Basic eddy current inspection approval for aerospace

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers these units as a Skill Set that meets regulatory requirements.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activities
MEA105	Apply quality standards applicable to aviation maintenance
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA109	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance Note: This unit is equivalent to MEM18001C as a prerequisite for MEM24005B
MEM24005B	Perform basic eddy current testing

Target Group

Holders of aircraft engineer licences, qualified AMEs and aviation tradespersons employed on aircraft and component maintenance plus other tradespersons employed in component maintenance workshops seeking approval under either the CASA or ADF Regulatory system to perform basic eddy current inspection of aircraft structure and items of aeronautical product.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA and the ADF for the grant of an approval to perform basic eddy current inspections on aircraft structure and items of aeronautical product.

Custom Content Section

Not applicable.

MEASS00401 MTA054 Ultrasonic thickness testing inspection approval for aerospace

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers these units as a Skill Set that meets regulatory requirements.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activities
MEA105	Apply quality standards applicable to aviation maintenance
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA109	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance Note: This unit is equivalent to MEM18001C as a prerequisite for MEM24007B
MEM24007B	Perform ultrasonic thickness testing

Target Group

Holders of aircraft engineer licences, qualified AMEs and aviation tradespersons employed on aircraft and component maintenance plus other tradespersons employed in component maintenance workshops seeking approval under either the CASA or ADF Regulatory system to perform ultrasonic thickness testing inspection of aircraft structure and items of aeronautical product.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA and the ADF for the grant of an approval to perform ultrasonic thickness testing inspections on aircraft structure and items of aeronautical product.

Custom Content Section

Not applicable.

MEASS00402 MTA055 Basic radiographic inspection approval for aerospace

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers these units as a Skill Set that meets regulatory requirements.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activities
MEA105	Apply quality standards applicable to aviation maintenance
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA109	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance Note: This unit is equivalent to MEM18001C as a prerequisite for MEM24009B
MEM13013B	Work safely with ionising radiation
MEM24009B	Perform basic radiographic testing

Target Group

Holders of aircraft engineer licences, qualified AMEs and aviation tradespersons employed on aircraft and component maintenance plus other tradespersons employed in component maintenance workshops seeking approval under either the CASA or ADF Regulatory system to perform basic radiographic inspection of aircraft structure and items of aeronautical product.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA and the ADF for the grant of an approval to perform basic radiographic inspections on aircraft structure and items of aeronautical product.

Custom Content Section

Not applicable.

MEASS00403 MTA056 Electroplate aeronautical product component parts

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

This Skill Set has been developed to assist in compliance with CASR Part 145 and does not relate to an Aeroskills qualification.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA108	Complete aviation maintenance industry documentation
MEA145	Conversion from allied trades for employment in aviation maintenance workshops
MEM07001B	Perform operational maintenance of machines equipment
MEM08001B	Perform wire, jig and barrel load unload work
MEM08003C	Perform electroplating operations
MEM08018B	Electroplate engineering coatings
MEM13003B	Work safely with industrial chemicals and materials
MEM18001C	Use hand tools
MEM15004B	Perform inspection

Target Group

Individuals with allied trade qualifications who are employed in CASR Part 145 AMOs and require approval to electroplate aeronautical product component parts.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements for employment of individuals with Certificate III or Certificate IV qualifications in an allied trade in aircraft component maintenance workshops on the electroplating of aeronautical product component parts.

Custom Content Section

Not applicable.

MEASS00404 MTA057 Produce anodised film on aluminium alloy components

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

This Skill Set has been developed to assist in compliance with CASR Part 145 and does not relate to an Aeroskills qualification.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA108	Complete aviation maintenance industry documentation
MEA145	Conversion from allied trades for employment in aviation maintenance workshops
MEM08002C	Pre-treat work for subsequent surface coating
MEM08006B	Produce clear and/or coloured and/or sealed anodised film on aluminium

Target Group

Individuals with allied trade qualifications who are employed in CASR Part 145 AMOs and require approval to produce anodised film on aluminium alloy components.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements for employment of individuals with Certificate III or Certificate IV qualifications in an allied trade in aircraft component maintenance workshops on the production of anodised film on aluminium alloy components.

Custom Content Section

Not applicable.

MEASS00405 MTA058 Metal spray aeronautical product component parts

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

This Skill Set has been developed to assist in compliance with CASR Part 145 and does not relate to an Aeroskills qualification.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA108	Complete aviation maintenance industry documentation
MEA145	Conversion from allied trades for employment in aviation maintenance workshops
MEM08002C	Pre-treat work for subsequent surface coating
MEM08004B	Finish work using wet, dry and vapour deposition methods
MEM13003B	Work safely with industrial chemicals and materials

Target Group

Individuals with allied trade qualifications who are employed in CASR Part 145 AMOs and require approval to perform metal spraying operations.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements for employment of individuals with Certificate III or Certificate IV qualifications in an allied trade in aircraft component maintenance workshops on metal spraying operations.

Custom Content Section

Not applicable.

MEASS00406 MTA059 Machine aeronautical product component parts (general)

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

This Skill Set has been developed to assist in compliance with CASR Part 145 and does not relate to an Aeroskills qualification.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA108	Complete aviation maintenance industry documentation
MEA145	Conversion from allied trades for employment in aviation maintenance workshops
MEM07002B	Perform precision shaping/planning/slotting operations
MEM07005C	Perform general machining
MEM07006C	Perform lathe operations
MEM07007C	Perform milling operations
MEM07021B	Perform complex lathe operations
MEM09002B	Interpret technical drawing
MEM12003B	Perform precision mechanical measurement
MEM12023A	Perform engineering measurement
MEM18001C	Use hand tools

Target Group

Individuals with allied trade qualifications who are employed in CASR Part 145 AMOs and require approval to perform general machining of aeronautical product component parts.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements for employment of individuals with Certificate III or Certificate IV qualifications in an allied trade in aircraft component maintenance workshops on general machining of aeronautical product component parts.

Custom Content Section

Not applicable.

MEASS00407 MTA060 Grind aeronautical product component parts

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

This Skill Set has been developed to assist in compliance with CASR Part 145 and does not relate to an Aeroskills qualification.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA108	Complete aviation maintenance industry documentation
MEA145	Conversion from allied trades for employment in aviation maintenance workshops
MEM07005C	Perform general machining
MEM07008D	Perform grinding operations
MEM07010B	Perform tool and cutter grinding operations
MEM07012B	Perform complex grinding operations
MEM09002B	Interpret technical drawing
MEM12003B	Perform precision mechanical measurement
MEM12023A	Perform engineering measurement
MEM18001C	Use hand tools

Target Group

Individuals with allied trade qualifications who are employed in CASR Part 145 AMOs and require approval to perform grinding operations on aeronautical product component parts.

Suggested words for Statement of Attainment

These competencies from the Aeroskills Training Package MEA11 meet the requirements for employment of individuals with Certificate III or Certificate IV qualifications in an allied trade in aircraft component maintenance workshops on grinding of aeronautical product component parts.

Custom Content Section

Not applicable.

MEASS00408 MTA061 Precision jig boring of aeronautical product component parts

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

This Skill Set has been developed to assist in compliance with CASR Part 145 and does not relate to an Aeroskills qualification.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA108	Complete aviation maintenance industry documentation
MEA145	Conversion from allied trades for employment in aviation maintenance workshops
MEM07005C	Perform general machining
MEM07007C	Perform milling operations
MEM07009B	Perform precision jig boring operations
MEM09002B	Interpret technical drawing
MEM12003B	Perform precision mechanical measurement
MEM12023A	Perform engineering measurement
MEM18001C	Use hand tools

Target Group

Individuals with allied trade qualifications who are employed in CASR Part 145 AMOs and require approval to perform precision jig boring of aeronautical product component parts.

Suggested words for Statement of Attainment

These competencies from the Aeroskills Training Package MEA11 meet the requirements for employment of individuals with Certificate III or Certificate IV qualifications in an allied trade in aircraft component maintenance workshops on precision jig boring of aeronautical product component parts.

Custom Content Section

Not applicable.

MEASS00409 MTA062 Complex milling of aeronautical product component parts

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

This Skill Set has been developed to assist in compliance with CASR Part 145 and does not relate to an Aeroskills qualification.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA108	Complete aviation maintenance industry documentation
MEA145	Conversion from allied trades for employment in aviation maintenance workshops
MEM07005C	Perform general machining
MEM07007C	Perform milling operations
MEM07011B	Perform complex milling operations
MEM09002B	Interpret technical drawing
MEM12003B	Perform precision mechanical measurement
MEM12023A	Perform engineering measurement
MEM12024A	Perform computations
MEM18001C	Use hand tools

Target Group

Individuals with allied trade qualifications who are employed in CASR Part 145 AMOs and require approval to perform complex milling operations on aeronautical product component parts.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements for employment of individuals with Certificate III or Certificate IV qualifications in an allied trade in aircraft component maintenance workshops on complex milling of aeronautical product component parts.

Custom Content Section

Not applicable.

MEASS00410 MTA063 Machine aeronautical product component parts using horizontal and/or vertical boring machines

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

This Skill Set has been developed to assist in compliance with CASR Part 145 and does not relate to an Aeroskills qualification.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA108	Complete aviation maintenance industry documentation
MEA145	Conversion from allied trades for employment in aviation maintenance workshops
MEM07005C	Perform general machining
MEM07013B	Perform machining operations using horizontal and/or vertical boring machines
MEM09002B	Interpret technical drawing
MEM12023A	Perform engineering measurement
MEM18001C	Use hand tools

Target Group

Individuals with allied trade qualifications who are employed in CASR Part 145 AMOs and require approval to perform machining of aeronautical product component parts using horizontal and/or vertical boring machines.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements for employment of individuals with Certificate III or Certificate IV qualifications in an allied trade in aircraft component maintenance workshops on machining of aeronautical product component parts using horizontal and/or vertical boring machines.

Custom Content Section

Not applicable.

MEASS00411 MTA064 Machine aeronautical product component parts using NC/CNC machines

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

This Skill Set has been developed to assist in compliance with CASR Part 145 and does not relate to an Aeroskills qualification.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA108	Complete aviation maintenance industry documentation
MEA145	Conversion from allied trades for employment in aviation maintenance workshops
MEM07015B	Set computer controlled machines/processes
MEM07016C	Set and edit computer controlled machines/processes
MEM07018C	Write basic NC/CNC programs
MEM07022C	Program CNC wire cut machine
MEM07024B	Operate and monitor machine processes
MEM07028B	Operate computer controlled machine processes
MEM09002B	Interpret technical drawing
MEM12023A	Perform engineering measurement
MEM18001C	Use hand tools

Target Group

Individuals with allied trade qualifications who are employed in CASR Part 145 AMOs and require approval to machine aeronautical product component parts using NC/CNC machines.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements for employment of individuals with Certificate III or Certificate IV qualifications in an allied trade in aircraft component maintenance workshops on machining of aeronautical product component parts using NC/CNC machines.

Custom Content Section

Not applicable.

MEASS00412 MTA065 Machine aeronautical product component parts using NC/CNC machining centres

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

This Skill Set has been developed to assist in compliance with CASR Part 145 and does not relate to an Aeroskills qualification.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA108	Complete aviation maintenance industry documentation
MEA145	Conversion from allied trades for employment in aviation maintenance workshops
MEM07015B	Set computer controlled machines/processes
MEM07016C	Set and edit computer controlled machines/processes
MEM07018C	Write basic NC/CNC programs
MEM07019C	Program NC/CNC machine centre
MEM07020C	Program multiple spindle and/or multiple axis NC/CNC machining centre
MEM07024B	Operate and monitor machine processes
MEM07028B	Operate computer controlled machine processes
MEM09002B	Interpret technical drawing
MEM12023A	Perform engineering measurement

MEM18001C Use hand tools

Target Group

Individuals with allied trade qualifications who are employed in CASR Part 145 AMOs and require approval to machine aeronautical product component parts using NC/CNC machining centres.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements for employment of individuals with Certificate III or Certificate IV qualifications in an allied trade in aircraft component maintenance workshops on machining of aeronautical product component parts using NC/CNC machines.

Custom Content Section

Not applicable.

MEASS00413 MTA066 Machine plastic aeronautical product component parts

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

This Skill Set has been developed to assist in compliance with CASR Part 145 and does not relate to an Aeroskills qualification.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA108	Complete aviation maintenance industry documentation
MEA145	Conversion from allied trades for employment in aviation maintenance workshops
MEM07001B	Perform operational maintenance of machines equipment
MEM07024B	Operate and monitor machine processes
MEM09002B	Interpret technical drawing
MEM12023A	Perform engineering measurement
MEM16006A	Organise and communicate information
MEM18001C	Use hand tools

Target Group

Individuals with allied trade qualifications who are employed in CASR Part 145 AMOs and require approval to machine plastic (including composite) aeronautical product component parts.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements for employment of individuals with Certificate III or Certificate IV qualifications in an allied trade in aircraft component maintenance workshops on machining of plastic (including composite) aeronautical product component parts.

Custom Content Section

Not applicable.

MEASS00414 MTA067 Aeronautical product component parts – metal spinning lathe operations

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

This Skill Set has been developed to assist in compliance with CASR Part 145 and does not relate to an Aeroskills qualification.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA108	Complete aviation maintenance industry documentation
MEA145	Conversion from allied trades for employment in aviation maintenance workshops
MEM07030C	Perform metal spinning lathe operations (basic)
MEM07031C	Perform metal spinning lathe operations (complex)
MEM07032B	Use workshop machines for basic operations
MEM09002B	Interpret technical drawing
MEM12023A	Perform engineering measurement
MEM18001C	Use hand tools
MEM18002B	Use power tools/hand held operations

Target Group

Individuals with allied trade qualifications who are employed in CASR Part 145 AMOs and require approval to perform metal spinning lathe operations on aeronautical product component parts.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements for employment of individuals with Certificate III or Certificate IV qualifications in an allied trade in aircraft component maintenance workshops on metal spinning lathe operations on aeronautical product component parts.

Custom Content Section

Not applicable.

MEASS00415 MTA068 Aircraft tyre retreading (basic)

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

This Skill Set has been developed to assist in compliance with CASR Part 145 and does not relate to an Aeroskills qualification.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

- PMBPROD262B Operate tyre curing equipment
- PMBPROD263B Operate tyre retread curing equipment
- PMBPROD264C Check recycle wash process
- PMBPROD265C Operate portable vulcanising equipment
- PMBPROD266B Prepare tyre casing for retreading

Target Group

Individuals who are employed in CASR Part 145 AMOs and require approval to prepare tyres for retreading and operate aircraft tyre retreading equipment.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements for employment of individuals in aircraft tyre retreading, including preparation of tyres and operation of retreading equipment.

Custom Content Section

Not applicable.

MEASS00416 MTA069 Aircraft tyre retreading (advanced)

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

This Skill Set has been developed to assist in compliance with CASR Part 145 and does not relate to an Aeroskills qualification.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA108	Complete aviation maintenance industry documentation
MEA145	Conversion from allied trades for employment in aviation maintenance workshops
PMBPROD324B	Inspect tyres for retreading
PMBPROD325B	Lay on tyre retreads
PMBPROD326B	Inspect tyres

Target Group

Individuals with applicable trade qualifications who are employed in CASR Part 145 AMOs and require approval to select tyres for retreading, set up retreading equipment and inspect tyres for serviceability following retreat.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements for employment of trade qualified individuals in aircraft tyre inspection before and after retreading, and in setting up retreading equipment.

Custom Content Section

MEASS00417 SAL001 B1 Small aircraft elementary maintenance

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

This Skill Set has been developed to define the units of competency that need to be attained by the end of two years of training for the Certificate IV in Aeroskills (Mechatronics) in order to qualify for the grant by CASA of a B1 small aircraft maintenance licence for the performance of elementary maintenance.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA101	Interpret work health and safety practices in aviation maintenance
MEA103	Plan and organise aviation maintenance work activities
MEA105	Apply quality standards applicable to aviation maintenance processes
MEA107	Interpret and use aviation maintenance industry manuals and specifications
MEA108	Complete aviation maintenance industry documentation
MEA109	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance
MEA111	Perform administrative processes to prepare for certification of civil aircraft maintenance
MEA201	Remove and install miscellaneous aircraft electrical hardware/components
MEA246	Fabricate and/or repair aircraft electrical hardware or parts
MEA260	Use electrical test equipment

MEA274	Maintain basic light aircraft electrical systems and components
MEA276	Maintain basic light aircraft communication and radio navigation systems and components
MEA301	Perform aircraft flight servicing
MEA369	Inspect and maintain structures and related components of non-pressurised small aircraft
MEA372	Perform mechanical elementary maintenance

Target Group

Individuals who have completed two years of training for Certificate IV in Aeroskills (Mechatronics) and who are seeking the grant of a B1 small aircraft maintenance licence for the performance of elementary maintenance.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements for the grant of a B1 small aircraft maintenance licence for the performance of elementary maintenance to individuals who have completed two years of training for a Certificate IV in Aeroskills (Mechatronics).

Custom Content Section

Not applicable.

MEASS00418 SAL002 Mechanical/Avionic - B1 and B2 Electrical systems multi-generator - Raing 2

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA202	Remove and install basic aircraft electrical systems and components
MEA210	Inspect, test and troubleshoot basic aircraft electrical systems and components
MEA277	Maintain twin engine aircraft electrical systems and components

Target Group

Holders of CASA B1 or B2 small aircraft licences who wish to gain the electrical systems multi-generator rating. This Skill Set covers the MEA Aeroskills Training Package units of competency that must be attained for the electrical systems multi-generator rating.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA for the electrical systems multi-generator additional rating for the B1 Small Aircraft licences.

Custom Content Section

Not applicable.

MEASS00419 SAL003 Mechanical – B1.2 Wooden structures - Rating 3

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers Certificate IV qualifications in Aeroskills that include this unit.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA359 Inspect and repair aircraft wooden structures

Target Group

Holders of CASA B1.2 small aircraft licences who wish to gain the wooden structures rating. This Skill Set covers the MEA Aeroskills Training Package units of competency that must be attained for the wooden structures rating.

Suggested words for Statement of Attainment

This competency from the MEA Aeroskills Training Package meets the requirements of CASA for the wooden structures additional rating for the B1.2 Small Aircraft licences.

Custom Content Section

Not applicable.

MEASS00420 SAL004 Mechanical – B1.2 Fabric surfaces - Rating 4

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers Certificate IV qualifications in Aeroskills that include this unit.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA357 Inspect, test and repair aircraft fabric surfaces

Target Group

Holders of CASA B1.2 small aircraft licences who wish to gain the fabric surfaces rating. This Skill Set covers the MEA Aeroskills Training Package unit of competency that must be attained for the fabric rating.

Suggested words for Statement of Attainment

This competency from the MEA Aeroskills Training Package meets the requirements of CASA for the fabric surfaces additional rating for the B1.2 Small Aircraft licences.

Custom Content Section

Not applicable.

MEASS00421 SAL005 Mechanical – B1 Hydraulic systems - Rating 5

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA302	Remove and install aircraft hydro-mechanical and landing gear system components
MEA309	Inspect, test and troubleshoot aircraft hydro-mechanical and landing gear systems and components

Target Group

Holders of CASA B1 small aircraft licences who wish to gain the hydraulic systems rating. This Skill Set covers the MEA Aeroskills Training Package units of competency that must be attained for the hydraulic systems rating.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA for the hydraulic systems additional rating for the B1 Small Aircraft licences.

Custom Content Section

Not applicable.

MEASS00422 SAL006 Mechanical – B1 Vapour cycle air conditioning systems - Rating 6A

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include this unit.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA362 Maintain aircraft vapour cycle air conditioning systems

Target Group

Holders of CASA B1 small aircraft licences who wish to gain the vapour cycle air conditioning systems rating. This Skill Set covers the MEA Aeroskills Training Package unit of competency that must be attained for the vapour cycle air conditioning systems rating.

Suggested words for Statement of Attainment

This competency from the MEA Aeroskills Training Package meets the requirements of CASA for the vapour cycle air conditioning systems additional rating for B1 small aircraft licences

Custom Content Section

Not applicable.

MEASS00423 SAL007 Mechanical – B1.1 and B1.3 Air cycle air conditioning systems - Rating 6B

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include this unit.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA355 Maintain light aircraft air cycle air conditioning systems

Target Group

Holders of CASA B1.1 or B1.3 small aircraft licences who wish to gain the air cycle air conditioning systems rating. This Skill Set covers the MEA Aeroskills Training Package unit of competency that must be attained for the air cycle air conditioning systems rating.

Suggested words for Statement of Attainment

This competency from the MEA Aeroskills Training Package meets the requirements of CASA for the air cycle air conditioning systems additional rating for the B1.1 and B1.3 small aircraft licences.

Custom Content Section

Not applicable.

MEASS00424 SAL008 Mechanical/Avionics – B1 and B2 Oxygen systems – Rating 8

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA209 Remove and install aircraft oxygen system components

MEA222 Inspect, test and troubleshoot aircraft oxygen systems and components

Target Group

Holders of CASA B1 or B2 small aircraft licences who wish to gain the oxygen systems rating. This Skill Set covers the MEA Aeroskills Training Package units of competency that must be attained for the oxygen systems rating.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA for the oxygen systems additional rating for the B1 and B2 small aircraft licences.

Custom Content Section

Not applicable.

MEASS00425 SAL009 Mechanical – B1.1 and B1.2 Pressurisation and pneumatic systems – Rating 10

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers Certificate IV qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA317	Remove and install pressurised aircraft structural and non-structural components
MEA339	Inspect, repair and maintain aircraft structures
MEA354	Maintain light aircraft pneumatic systems
MEA356	Maintain light piston engine aircraft pressurisation systems

Target Group

Holders of CASA B1.1 or B1.2 small aircraft licences who wish to gain the pressurisation systems rating. This Skill Set covers the MEA Aeroskills Training Package units of competency that must be attained for the pressurisation systems rating.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA for the pressurisation systems additional rating for B1.1 and B1.2 small aircraft licences.

Custom Content Section

Not applicable.

MEASS00426 SAL010 Mechanical – B1.3 and B1.4 Helicopter powered flight control systems – Rating 11

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA302	Remove and install aircraft hydro-mechanical and landing gear system components
MEA308	Remove and install rotary wing rotor and flight control system components
MEA316	Inspect, test and troubleshoot rotary wing rotor and control systems and components

Target Group

Holders of CASA B1.3 or B1.4 small aircraft licences who wish to gain the helicopter powered flight control systems rating. This Skill Set covers the MEA Aeroskills Training Package units of competency that must be attained for the helicopter powered flight controls systems rating.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA for the helicopter powered flight control systems additional rating for the B1.3 and B1.4 small aircraft licences.

Custom Content Section

Not applicable.

MEASS00427 SAL011 Mechanical – B1 Boosted induction systems – Rating S

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA306 Remove and install engines and engine system components

MEA313 Inspect, test and troubleshoot piston engine systems and components

Target Group

Holders of CASA B1.2 or B1.4 small aircraft licences who wish to gain the boosted induction systems rating. This Skill Set covers the MEA Aeroskills Training Package units of competency that must be attained for the boosted induction systems rating.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA for the boosted induction systems additional rating for the B1.2 and B1.4 small aircraft licences.

Custom Content Section

Not applicable.

MEASS00428 SAL012 Mechanical – B1.2 Constant speed and variable pitch propeller - Rating V

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

- | | |
|--------|--|
| MEA307 | Remove and install propeller systems and components (applicable only where licence type ratings sought include propeller driven aircraft) |
| MEA313 | Inspect, test and troubleshoot piston engine systems and components |
| MEA315 | Inspect, test and troubleshoot propeller systems and components (applicable only where licence ratings sought include propeller driven aircraft) |

Target Group

Holders of CASA B1.2 small aircraft licences who wish to gain the constant speed and variable pitch propeller rating. This Skill Set covers the MEA Aeroskills Training Package units of competency that must be attained for the constant speed and variable pitch propeller rating.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA for the constant speed and variable pitch propeller additional rating for the B1.2 small aircraft licence.

Custom Content Section

Not applicable.

MEASS00429 SAL013 Avionics – B2 Electrical 1 Rating

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA201	Remove and install miscellaneous aircraft electrical hardware/components
MEA202	Remove and install basic aircraft electrical systems and components
MEA207	Remove and install aircraft electronic system components
MEA210	Inspect, test and troubleshoot basic aircraft electrical systems and components
MEA246	Fabricate and/or repair aircraft electrical hardware or parts
MEA260	Use electrical test equipment
MEA290	Fit avionic modification sheet metal components
MEA301	Perform aircraft flight servicing

Target Group

Holders of a CASA B2 small aircraft licence who wish to gain the Electrical 1 rating. This Skill Set covers the MEA Aeroskills Training Package units of competency that must be attained for the Electrical 1 rating.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA for the Electrical 1 additional rating for the B2 small aircraft licence.

Custom Content Section

Not applicable.

MEASS00430 SAL014 Avionics – B2 Instrument 1 Rating

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA201	Remove and install miscellaneous aircraft electrical hardware/components
MEA204	Remove and install basic aircraft instrument system components
MEA207	Remove and install aircraft electronic system components
MEA212	Inspect, test and troubleshoot basic aircraft instrument systems and components
MEA246	Fabricate and/or repair aircraft electrical hardware or parts
MEA260	Use electrical test equipment
MEA290	Fit avionic modification sheet metal components
MEA301	Perform aircraft flight servicing

Target Group

Holders of a CASA B2 small aircraft licence who wish to gain the Instrument 1 rating. This Skill Set covers the MEA Aeroskills Training Package units of competency that must be attained for the Instrument 1 rating.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA for the Instrument 1 additional rating for the B2 small aircraft licence.

Custom Content Section

Not applicable.

MEASS00431 SAL015 Avionics – B2 Radio 1 Rating

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA201	Remove and install miscellaneous aircraft electrical hardware/components
MEA206	Remove and install basic aircraft basic radio communication and navigation system components
MEA207	Remove and install aircraft electronic system components
MEA216	Inspect, test and troubleshoot instrument landing systems and components
MEA246	Fabricate and/or repair aircraft electrical hardware or parts
MEA260	Use electrical test equipment
MEA289	Maintain basic light aircraft avionic systems and components
MEA290	Fit avionic modification sheet metal components

Target Group

Holders of a CASA B2 small aircraft licence who wish to gain the Radio 1 rating. This Skill Set covers the MEA Aeroskills Training Package units of competency that must be attained for the Radio 1 rating.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA for the Radio 1 additional rating for the B2 small aircraft licences.

Custom Content Section

Not applicable.

MEASS00432 SAL016 Avionics – B2 Autopilot and flight control systems – Aeroplane – Rating 12

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include this unit.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA217 Inspect, test and troubleshoot fixed wing autopilot systems and components

Target Group

Holders of a CASA B2 small aircraft licence who wish to gain the autopilot and flight control systems aeroplane rating. This Skill Set covers the MEA Aeroskills Training Package unit of competency that must be attained for the autopilot and flight control systems aeroplane rating.

Suggested words for Statement of Attainment

This competency from the MEA Aeroskills Training Package meets the requirements of CASA for the autopilot and flight control systems aeroplane additional rating for the B2 small aircraft licence.

Custom Content Section

Not applicable.

MEASS00433 SAL017 Avionics – B2 Autopilot and flight control systems – Helicopter - Rating 13

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include this unit.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA218 Inspect, test and troubleshoot rotary wing autopilot systems and components

Target Group

Holders of a CASA B2 small aircraft licence who wish to gain the autopilot and flight control systems helicopter rating. This Skill Set covers the MEA Aeroskills Training Package unit of competency that must be attained for the autopilot and flight control systems helicopter rating.

Suggested words for Statement of Attainment

This competency from the MEA Aeroskills Training Package meets the requirements of CASA for the autopilot and flight control systems helicopter additional rating for the B2 small aircraft licence.

Custom Content Section

MEASS00435 SAL019 Avionics – B2 Navigation systems – Rating 15

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA204	Remove and install basic aircraft instrument system components
MEA212	Inspect, test and troubleshoot basic aircraft instrument systems and components
MEA216	Inspect, test and troubleshoot instrument landing systems and components
MEA234	Inspect, test and troubleshoot aircraft global navigation systems and components

Target Group

Holders of a CASA B2 small aircraft licence who wish to gain the navigation systems rating. This Skill Set covers the MEA Aeroskills Training Package units of competency that must be attained for the navigation systems rating.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA for the navigation systems additional rating for the B2 small aircraft licence.

Custom Content Section

MEASS00436 SAL020 Avionics – B2 Flight management systems – Rating 16

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA205	Remove and install advanced aircraft instrument system components
MEA213	Inspect, test and troubleshoot advanced aircraft instrument systems and components
MEA216	Inspect, test and troubleshoot instrument landing systems and components
MEA221	Inspect, test and troubleshoot aircraft secondary radar systems and components
MEA225	Inspect fixed wing aircraft automatic flight control systems and components
MEA230	Test and troubleshoot fixed wing aircraft automatic flight control systems and components
MEA233	Inspect, test and troubleshoot aircraft inertial navigation and reference systems and components
MEA234	Inspect, test and troubleshoot aircraft global navigation systems and components
MEA280	Inspect, test and troubleshoot flight management systems and components

Target Group

Holders of a CASA B2 small aircraft licence who wish to gain the flight management systems rating. This Skill Set covers the MEA Aeroskills Training Package units of competency that must be attained for the flight management systems rating.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA for the flight management systems additional rating for the B2 small aircraft licence.

Custom Content Section

MEASS00437 SAL021 Avionics – Inertial navigation systems - Rating 17

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include this unit.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA233 Inspect, test and troubleshoot aircraft inertial navigation and reference systems and components

Target Group

Holders of a CASA B2 small aircraft licence who wish to gain the inertial navigation systems rating. This Skill Set covers the MEA Aeroskills Training Package unit of competency that must be attained for the inertial navigation systems rating.

Suggested words for Statement of Attainment

This competency from the MEA Aeroskills Training Package meets the requirements of CASA for the inertial navigation systems additional rating for the B2 small aircraft licence.

Custom Content Section

Not applicable.

MEASS00438 SAL022 Avionics – B2 Secondary radar - Rating 18

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include this unit.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA221 Inspect, test and troubleshoot aircraft secondary radar systems and components

Target Group

Holders of a CASA B2 small aircraft licence who wish to gain the radio systems secondary radar rating covering Rad Alt, Transponder, DME, TCAS and ADSB. This Skill Set covers the MEA Aeroskills Training Package unit of competency that must be attained for the radio systems secondary radar rating.

Suggested words for Statement of Attainment

This competency from the MEA Aeroskills Training Package meets the requirements of CASA for the radio systems secondary radar (covering Rad Alt, Transponder, DME, TCAS and ADSB) additional rating for the B2 small aircraft licence.

Custom Content Section

Not applicable.

MEASS00439 SAL023 Avionics – B2 Weather radar - Rating 19

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include this unit.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA220 Inspect, test and troubleshoot aircraft primary radar systems and components

Target Group

Holders of a CASA B2 small aircraft licence who wish to gain the weather radar rating. This Skill Set covers the MEA Aeroskills Training Package unit of competency that must be attained for the weather radar rating.

Suggested words for Statement of Attainment

This competency from the MEA Aeroskills Training Package meets the requirements of CASA for the weather radar additional rating for the B2 small aircraft licence.

Custom Content Section

Not applicable.

MEASS00440 SAL024 Avionics – B2 Cockpit voice recorder - Rating 20

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA206 Remove and install basic aircraft basic radio communication and navigation system components

MEA215 Inspect, test and troubleshoot advanced aircraft communications systems and components

Target Group

Holders of a CASA B2 small aircraft licence who wish to gain the Cockpit Voice Recorder (CVR) rating. This Skill Set covers the MEA Aeroskills Training Package units of competency that must be attained for the CVR rating.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA for the radio systems CVR additional rating for the B2 small aircraft licence.

Custom Content Section

Not applicable.

MEASS00441 SAL025 Avionics – B2 Flight data recorder systems - Rating 21

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA205	Remove and install advanced aircraft instrument system components
MEA213	Inspect, test and troubleshoot advanced aircraft instrument systems and components

Target Group

Holders of a CASA B2 small aircraft licence who wish to gain the Flight Data Recorder (FDR) systems rating. This Skill Set covers the MEA Aeroskills Training Package units of competency that must be attained for the FDR systems rating.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA for the FDR systems additional rating for the B2 small aircraft licence.

Custom Content Section

Not applicable.

MEASS00442 SAL026 Avionics – B2 High frequency radio systems - Rating 22

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA206	Remove and install basic aircraft basic radio communication and navigation system components
MEA214	Inspect, test and troubleshoot aircraft basic communications and radio navigation systems and components

Target Group

Holders of a CASA B2 small aircraft licence who wish to gain the High Frequency (HF) radio systems rating. This Skill Set covers the MEA Aeroskills Training Package units of competency that must be attained for the HF radio systems rating.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements of CASA for the HF radio systems additional rating for the B2 small aircraft licence.

MEASS00443 SAL027 B1.1 Removal of small aircraft limitation

Modification History

Release 1 - New Skill Set

Description

Not applicable.

Pathways Information

The MEA Aeroskills Training Package offers Certificate IV and Diploma qualifications in Aeroskills that include these units.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

MEA142	Manage self in the aviation maintenance environment
MEA203	Remove and install advanced aircraft electrical system components
MEA208	Remove and install aircraft pressurisation control system components
MEA209	Remove and install oxygen systems and components
MEA219	Inspect, test and troubleshoot aircraft pressurisation control systems and components
MEA222	Inspect, test and troubleshoot aircraft oxygen systems and components
MEA223	Inspect aircraft electrical systems and components
MEA227	Test and troubleshoot aircraft electrical systems and components
MEA302	Remove and install aircraft hydro-mechanical and landing gear system components
MEA303	Remove and install aircraft pneumatic system components
MEA305	Remove and install aircraft fixed wing flight control system components

MEA317	Remove and install pressurised aircraft structural and non-structural components
MEA318	Inspect aircraft hydro-mechanical, mechanical, gaseous and landing gear systems and components
MEA319	Inspect gas turbine engine systems and components
MEA320	Test and troubleshoot aircraft hydro-mechanical, mechanical, gaseous and landing gear systems and components
MEA321	Test and troubleshoot aircraft fixed wing flight control systems and components
MEA322	Test and troubleshoot gas turbine engine systems and components
MEA323	Perform advanced troubleshooting in aircraft mechanical maintenance
MEA325	Weigh aircraft and perform aircraft weight and balance calculations as a result of modifications
MEA328	Maintain and/or repair aircraft mechanical components or parts
MEA339	Inspect, repair and maintain aircraft structures
MEA343	Remove and install avionic system components

Target Group

Holders of a CASA B1.1 small aircraft licence who wish to remove the small aircraft limitation. This Skill Set covers the MEA Aeroskills Training Package units of competency that must be attained for removal of the B1.1 small aircraft licence limitation.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements for the removal of the small aircraft limitation from a B1.1 licence.

Custom Content Section

Skill Set Requirements

MEA142	Manage self in the aviation maintenance environment
MEA203	Remove and install advanced aircraft electrical system components
MEA211	Inspect, test and troubleshoot advanced aircraft electrical systems and components
MEA302	Remove and install aircraft hydro-mechanical and landing gear system components
MEA303	Remove and install aircraft pneumatic system components
MEA304	Remove and install non-pressurised aircraft structural and non-structural components
MEA308	Remove and install rotary wing rotor and flight control system components
MEA309	Inspect, test and troubleshoot aircraft hydro-mechanical and landing gear systems and components
MEA310	Inspect, test and troubleshoot aircraft pneumatic systems and components
MEA316	Inspect, test and troubleshoot rotary wing rotor and control systems and

	components
MEA319	Inspect gas turbine engine systems and components
MEA322	Test and troubleshoot gas turbine engine systems and components
MEA323	Perform advanced troubleshooting in aircraft mechanical maintenance
MEA325	Weigh aircraft and perform aircraft weight and balance calculations as a result of modifications
MEA328	Maintain and/or repair aircraft mechanical components or parts
MEA339	Inspect, repair and maintain aircraft structures
MEA343	Remove and install avionic system components

Target Group

Holders of a CASA B1.3 small aircraft licence who wish to remove the small aircraft limitation. This Skill Set covers the MEA Aeroskills Training Package units of competency that must be attained for removal of the B1.3 small aircraft licence limitation.

Suggested words for Statement of Attainment

These competencies from the MEA Aeroskills Training Package meet the requirements for the removal of the small aircraft limitation from a B1.3 licence.
