Evidence of transferability of skills and knowledge related to inspection, testing and troubleshooting is essential. This may be demonstrated through application across a number of engine systems or engine types. Ability to interpret inspection procedures and specifications (allowable limits) and apply them in practice is critical. The application of testing procedures and functional rigging checks should also indicate knowledge of system operation.

Engine system operation knowledge, the relationship of individual components and the links with other systems will be necessary to supplement evidence of ability to carry out rigging checks and troubleshoot the system within the limits of the aircraft/system fault-finding guide before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.

A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on at least one item from each of Groups 1 to 6 in the

	Range Statement. This shall be established via the records in the Log of Industrial Experience and Achievement, or where appropriate, an equivalent Industry Evidence Guide.
Context of and specific resources for assessment	Competency should be assessed in the work environment or simulated work environment, using tools and equipment specified in aircraft maintenance manuals. It is also expected that general purpose tools, test and ground support equipment found in most routine situations would be used where appropriate. The level of troubleshooting is limited in its application to the use of fault diagnosis guides or other similar information.
Method of assessment	Testing of engines fitted to helicopters (where auxiliary drive is not available) may be carried out through the applicant directing a pilot qualified on type.
Guidance information for assessment	

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Note	Range statements listed below are numbered to facilitate specification of the assessment requirements included in the Evidence Guide
Gas turbine engine and/or systems	<p>Gas turbine engine and/or systems may include:</p> <ol style="list-style-type: none"> 1. Engine change unit, main components and accessories/drives 2. Control system 3. Ignition and starter systems 4. Fuel system 5. Oil system 6. Air system
Troubleshooting	Troubleshooting involves the use of fault-finding charts or similar, to line replacement level

MEA315C Inspect, test and troubleshoot propeller systems and components

Modification History

Minor formatting and editorial changes made.

Unit Descriptor

This unit of competency is part of the Mechanical Certificate IV (Aircraft Maintenance Stream) training pathway. It covers the competencies required to inspect, test and troubleshoot propeller systems and components. This unit is used in workplaces that operate under the airworthiness regulatory systems of the ADF and CASA.

Where a CASA licensing outcome is sought this unit forms part of the CASA requirement for the granting of the chosen Aircraft Maintenance Engineer Licence under CASR Part 66, in accordance with the licensing provisions in Section 3, Assessment Guidelines.

Application of the Unit

This unit requires application of hand skills, the use of maintenance publications and knowledge of propeller and propeller system theory to inspect, test and troubleshoot propellers and propeller system components.

Applications include propeller driven fixed wing aircraft.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEA307C Remove and install propeller systems and components

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

1. Inspect propeller systems and components
 - 1.1. Isolation tags already attached to the system or related systems are checked and aircraft configured for safe system inspection and operation in accordance with applicable maintenance manual
 - 1.2. Propeller system is visually or physically checked for rigging and external signs of defects in accordance with applicable maintenance manual
2. Test propeller systems
 - 2.1. Aircraft and system are correctly prepared in accordance with maintenance manual for the operation of engine and propeller system
 - 2.2. **Propeller and system** are functionally tested in accordance with applicable maintenance manual for evidence of malfunction or defects
 - 2.3. System calibration or adjustments are performed in accordance with applicable maintenance manual
3. Prepare for troubleshooting
 - 3.1. Relevant maintenance documentation and modification status, including system defect reports, where relevant, are interpreted to identify an unserviceability
4. Troubleshoot propeller systems
 - 4.1. Available information from maintenance documentation and inspection and test results is used, where necessary, to assist in fault determination
 - 4.2. Maintenance manual fault diagnosis guide and logical processes are used to ensure efficient and accurate **troubleshooting**
 - 4.3. Specialist advice is obtained, where required, to assist with the troubleshooting process
 - 4.4. Propeller system faults are located and the causes of the faults are clearly identified and correctly recorded in maintenance documentation, where required
 - 4.5. Fault rectification requirements are determined to assist in planning the repair

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying relevant OHS practices, including the lifting and handling of heavy components
- using relevant maintenance documentation and aircraft manuals to:
 - through visual/physical inspection, recognise external signs of defects or rigging abnormalities in propellers and propeller system components
 - functionally test propellers and propeller systems and recognise any indication of malfunction or incorrect rigging or adjustment
 - rig and adjust propeller controls and systems
- using fault diagnosis guides and equivalent data, to accurately and efficiently troubleshoot the causes of unserviceabilities in propellers and propeller systems, clearly record details and identify the required rectification actions

Required knowledge

Look for evidence that confirms knowledge of:

- fault diagnosis techniques
- propeller system layout and operation:
 - propeller types
 - propeller terminology
 - forces acting on a propeller
 - propeller construction
 - propeller operation
 - pitch changing mechanisms
 - governors and beta control
 - controls and rigging of propeller controls
 - maintenance requirements and troubleshooting procedures
- ancillary systems and system component operation, including electrical and instrument system interfaces:
 - de-icing and anti-icing
 - multi-engine synchronising and synchrophasing
 - feathering and unfeathering, including auto feathering
 - pitch reversal
 - negative torque sensing and protection
 - de-coupling
 - braking
 - thrust and torque measuring and indication
 - maintenance requirements and troubleshooting procedures
- relevant OHS practices, including the requirements for the lifting and handling of heavy

components

- relevant maintenance manuals
- relevant regulatory requirements and standard procedures

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to apply hand skills, use maintenance publications and propeller and propeller system theory knowledge to inspect, test and troubleshoot propellers and their systems on propeller driven fixed wing aircraft while applying all relevant safety precautions.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The underlying skills inherent in this unit should be transferable across a range of inspection, testing and troubleshooting applications (including the timely involvement of supervisors or other trades) associated with propeller systems. It is essential that system test procedures take into account all safety precautions associated with propeller system operation, and that awareness be demonstrated of dual inspection requirements associated with work on propeller control systems.

Evidence of transferability of skills and knowledge related to inspection, testing and troubleshooting is essential. This may be demonstrated through application across a number of aircraft systems or aircraft types. Ability to interpret inspection procedures and specifications (allowable limits) and apply them in practice is critical. The application of testing procedures should also clearly indicate knowledge of system operation. System operation knowledge, the relationship of individual components and the links with other systems will be necessary to supplement evidence of ability to troubleshoot the system within the limits of the aircraft/system fault finding guide before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.

A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on at least one item from each of Groups 1 to 4 listed in the Range Statement (Group 5 may be omitted where it is not applicable to the enterprise). This shall be established via the records in the Log of Industrial Experience and

	Achievement or, where appropriate, an equivalent Industry Evidence Guide.
Context of and specific resources for assessment	Competency should be assessed in the work environment or simulated work environment using tools and equipment specified in maintenance manuals. It is also expected that general purpose tools, test and ground support equipment found in most routine situations would be used where appropriate. The level of troubleshooting is limited in its application to the use of fault diagnosis guides or other similar information.

 - 4.2. Relevant aircraft publication fault diagnosis guide and logical processes are used to ensure efficient and accurate **troubleshooting**
 - 4.3. Specialist advice is obtained to assist with the troubleshooting process
 - 4.4. Rotor and rotor control system faults are located and the causes of the faults are clearly identified and recorded in aircraft maintenance documentation in accordance with standard enterprise procedures
 - 4.5. Fault rectification requirements are determined

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying relevant OHS procedures
- using relevant maintenance documentation and aircraft manuals to:
 - recognise through visual/physical inspection external signs of defects in the rotor, rotor head, tail rotor and flight control mechanical system components
 - ground test the rotor and control system and recognise correct function
 - rig and adjust rotor controls and systems
- using fault diagnosis guides and equivalent data, to accurately and efficiently troubleshoot the causes of unserviceabilities in rotor control systems, clearly record details and identify the required rectification actions

Required knowledge

Look for evidence that confirms knowledge of:

- fault diagnosis techniques
- standard trade practices relating to tool and test/rigging equipment usage
- theory of flight:
 - airflow
 - conditions of flight
 - lift and forces
 - drag
- rotary flight principles:
 - terminology relating to:
 - aerofoils
 - main rotor blades
 - rotor discs
 - rotors - main and tail
 - aerodynamic characteristics:
 - aerofoil design
 - forces
 - rotor thrust and power requirements
 - vortex ring
 - autorotation
 - helicopter stability
 - helicopter dynamic components:
 - main rotors:
 - blades
 - heads

- linkages
 - tail rotors
 - swash plates
 - transmissions and drive shafts
 - clutches and freewheeling units
- system and component operation, including electrical and instrument system interfaces:
 - cyclic pitch control
 - collective pitch control
 - tail rotor control
 - mechanical and powered control systems
 - engine control interface
 - torque reaction and anti-torque devices
 - engine indication
 - vibration monitoring
- helicopter maintenance procedures and troubleshooting
- relevant maintenance manuals
- relevant regulatory requirements and standard procedures, including requirements for engine and rotor system operation
- relevant OHS practices

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to apply hand skills, use maintenance publications and rotor and rotor control system theory knowledge to inspect, test and troubleshoot rotors and their control systems on rotary wing aircraft while applying all relevant safety precautions.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The underlying skills inherent in this unit should be transferable across a range of inspection, testing and troubleshooting applications (including the timely involvement of supervisors or other trades) associated with the rotor control systems. It is essential that testing procedures take into account all safety precautions associated with ground testing of rotor and rotor control systems, and that awareness be demonstrated of dual inspection requirements associated with work on control systems.

Evidence of transferability of skills and knowledge related to inspection, testing and troubleshooting is essential. This may be demonstrated through application across a number of aircraft types. Ability to interpret inspection procedures and specifications (allowable limits) and apply them in practice is critical. The application of ground testing procedures should also clearly indicate knowledge of system operation. System operation knowledge, the relationship of individual components and the links with other systems will be necessary to supplement evidence of ability to troubleshoot the system within the limits of the aircraft/system fault finding guide before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.

A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on at least one item from each of Groups 1 to 5, as listed in the Range Statement. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent

	Industry Evidence Guide.
Context of and specific resources for assessment	Competency should be assessed in the work environment or simulated work environment, using tools and equipment specified in aircraft maintenance manuals. It is also expected that general purpose tools, test and ground support equipment found in most routine situations would be used where appropriate. The level of troubleshooting is limited in its application to the use of fault diagnosis guides or other similar information.
Method of assessment	Functional testing of rotors and rotor control systems with engine/s running may be carried out with the applicant directing a pilot qualified on type.
Guidance information for assessment	Individuals being assessed who have already attained MEA352A Maintain basic rotary wing aircraft systems, will have satisfied the requirements of this unit with regard to common Range Statement variables. Log of Industrial Experience and Achievement records relating to MEA352A Maintain basic rotary wing aircraft systems, may be accepted as also meeting the evidence requirements for this unit in the applicable common areas.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Note	Range statements listed below are numbered to facilitate specification of the assessment requirements included in the Evidence Guide
Rotor and rotor control system	Rotor and rotor control system may include: <ol style="list-style-type: none">1. Main rotor blades, tail rotor blades2. Rotor heads, swash plates, tail rotor pitch control assemblies3. Mechanical, powered flight control components4. Main rotor, intermediate or tail rotor gearboxes5. Drive shafts and couplings
Troubleshooting	Troubleshooting involves the use of fault-finding charts or similar, to line replacement level

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

1. Remove components
 - 1.1. Structure is supported and prepared in accordance with the applicable maintenance manual to ensure personnel safety and freedom from damage to aircraft or component during component removal
 - 1.2. Component removal is carried out in accordance with the applicable maintenance manual
 - 1.3. Required maintenance documentation is completed and processed in accordance with standard enterprise procedures
 - 1.4. Removed components are tagged and prepared for transport in accordance with specified procedures
2. Install components
 - 2.1. ***Structural components*** to be installed are checked to confirm correct part numbers, serviceability and modification status
 - 2.2. Component installation is carried out in accordance with the applicable maintenance manual
 - 2.3. Support/safety equipment is removed at an appropriate time to ensure personnel safety and freedom from structural damage
 - 2.4. Required maintenance documentation is completed and processed in accordance with standard enterprise procedures

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying relevant OHS practices, including the use of MSDS and PPE
- using relevant maintenance documentation and aircraft manuals to:
 - remove structural components
 - install structural components
 - remove doors, door seals, windows and transparent panels
 - install doors, door seals, windows and transparent panels
- checking and adjusting all doors and access panels, including locking mechanisms and ensuring effective sealing

Required knowledge

Look for evidence that confirms knowledge of:

- structural component methods of construction and attachment
- faying surface treatment and fuel tank and pressure hull sealing
- aircraft doors and related seals
- window and transparent panel construction, attachment methods and sealing
- aircraft interior fittings (trim, linings, seats, floor panels, and so on) construction and attachment methods
- the location and attachment or stowage methods for emergency equipment:
 - passenger escape systems
 - inflatable slides
 - life jackets
 - life rafts
 - location transmitters, beacons
 - crew and/or passenger seat restraints
- relevant maintenance manuals
- relevant regulatory requirements and standard procedures
- relevant OHS practices
- how to obtain MSDS
- use of PPE
- relevant maintenance manuals

- 4 Inspect mechanical systems and components
- 4.1 Isolation tags already attached to the system or related systems are checked and aircraft configured for safe system inspection and operation in accordance with specified procedures
- 4.2 *Mechanical system and system components* are visually or physically checked for external signs of defects in accordance with specified procedures

Required Skills and Knowledge

Look for evidence that confirms knowledge of:

- how to recognise external defects in hydraulic, fuel, gaseous, flight control, landing gear and mechanical system components
- how to configure the aircraft for inspection of hydraulic, fuel, gaseous, flight control, landing gear and mechanical systems and components
- inspection and testing requirements for gears, springs and bearings
- standard trade practices relating to tool usage and installation/securing of aircraft hardware
- maintenance requirements
- relevant OHS practices relating to hydraulic, fuel, gaseous, flight control, landing gear and mechanical system components, including lifting and handling of heavy items
- how to obtain MSDS
- selection and use of PPE
- maintenance requirements
- relevant maintenance manuals
- relevant regulatory requirements and standard procedures

Look for evidence that confirms skills in:

- applying all relevant OHS practices, including the use of MSDS and PPE
- using maintenance manuals and documentation to prepare the aircraft and identify requirements for inspection of hydraulic, fuel, gaseous, flight control, landing gear and mechanical systems and components
- use of hand skills and tools in the inspection of hydraulic, fuel, flight control, gaseous and mechanical system components
- jacking of the aircraft, as required, for landing gear system inspection
- use of hand skills and tools in the inspection of landing gear components
- the recognition of external defects in hydraulic, fuel, gaseous, flight control, landing gear and mechanical systems and components

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to inspect a range of hydraulic, fuel, gaseous and mechanical system and landing gear components in accordance with relevant maintenance manual instructions while applying all relevant OHS procedures and standard processes.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The underlying skills inherent in this unit should be transferable across a range of inspection applications (including the timely involvement of supervisors or other trades) associated with aircraft hydro-mechanical, gaseous, mechanical and landing gear systems and their components. It is essential that system/component inspection procedures take into account all safety precautions applicable to the system being maintained, especially where system operation/switching interrelates to other systems being maintained. Ability to interpret inspection procedures and specifications (allowable limits) and apply them in practice is critical.

Evidence of transferability of skills and knowledge related to inspection is essential. This may be demonstrated through application across a number of aircraft systems or aircraft types. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.

A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of this unit of competency are being achieved under routine supervision on each type of system and on at least one component of each group listed in the Range Statement, as follows:

- Hydraulic systems – a system and at least one component from each of hydro-mechanical system components 3 and 5
- Fuel systems – a system and at least one component from each of hydro-mechanical system components 4 and 5
- Landing gear systems – each listed system 6 to 8
- Landing gear components – one each of 9 to 11

	<ul style="list-style-type: none"> • Gaseous systems – each listed system 12 to 15 and at least one component from each of gaseous system components 16 to 19 • Mechanical systems – a system applicable to each of system types 20 and 21 and at least one component from each of mechanical system components 22 to 24. <p>This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.</p>
<p>Context of and specific resources for assessment</p>	<p>Competency should be assessed in the work environment or simulated work environment, using procedures, tools and equipment specified in maintenance documentation. It is also expected that general purpose tools, test and ground support equipment found in most routine situations would be used where appropriate.</p>
<p>Method of assessment</p>	
<p>Guidance information for assessment</p>	<p>Individuals being assessed who have already attained the following related units will have met the Performance Criteria and Range Statement variables for Elements listed:</p> <ul style="list-style-type: none"> • MEA309C Inspect, test and troubleshoot aircraft hydro-mechanical and landing gear systems and components, for Element 1 • MEA309C Inspect, test and troubleshoot aircraft hydro-mechanical and landing gear systems and components, for Element 2, provided that the unit was attained on aircraft with retractable landing gear • MEA310C Inspect, test and troubleshoot aircraft pneumatic systems and components, for Element 3 • MEA312C Inspect, test and troubleshoot aircraft fixed wing flight control systems and components, for Element 4. <p>Log of Industrial Experience and Achievement records relating to the listed units may be accepted as also meeting the evidence requirements for this unit in the applicable Elements.</p> <p>Advice in MEA310C Inspect, test and troubleshoot aircraft pneumatic systems and components regarding MEA355A Maintain light aircraft air cycle air conditioning systems, and MEA356A Maintain light piston engine aircraft pressurisation systems, may also be taken into consideration where applicable.</p>

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Note</p>	<p>Range statements listed below are numbered to facilitate specification of the assessment requirements included in the Evidence Guide</p>
<p>Hydro-mechanical systems and system components</p>	<p>Hydro-mechanical systems include:</p> <ol style="list-style-type: none"> 1. Hydraulic systems 2. MEA319C Inspect gas turbine engine systems and components

Modification History

Knowledge statements expanded - equivalent to previous version.

Unit Descriptor

This unit of competency is part of the Mechanical Certificate IV (Aircraft Maintenance Stream) training pathways. It covers the competencies required to inspect the systems and components of gas turbine engines. The unit is used in workplaces that operate under the airworthiness regulatory systems of the ADF and CASA.

Where a CASA licensing outcome is sought this unit forms part of the CASA requirement for the granting of the chosen B1 maintenance certification licence under CASR Part 66, in accordance with the licensing provisions in Section 3, Assessment Guidelines.

Application of the Unit

This unit requires application of hand skills, the use of maintenance publications and knowledge of gas turbine engine and system theory to inspect gas turbine engines and engine system components.

Applications include fixed and rotary wing aircraft.

Licensing/Regulatory Information

Refer to unit descriptor

Pre-Requisites

MEA306C Remove and install engine system and components

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

- | | |
|--|---|
| <p>1 Inspect gas turbine engine systems and components</p> | <p>1.1 Isolation tags already attached to the system or related systems are checked and aircraft configured for safe system inspection and operation in accordance with applicable maintenance manual</p> <p>1.2 <i>Gas turbine engine</i> and/or components are visually or physically checked for external signs of defects in accordance with applicable maintenance manual</p> |
|--|---|

Required Skills and Knowledge

Look for evidence that confirms knowledge of:

- gas turbine engine layout and operation:
 - intakes
 - compressors
 - combustion chambers
 - turbines
 - exhaust
 - thrust reversers
 - accessory drives
 - bearings and seals
 - maintenance requirements
- system and component operation, including electrical and instrument system interfaces:
 - fuel control and fuels
 - lubrication and lubricants
 - air distribution
 - starting
 - ignition
 - power augmentation
 - instrumentation:
- performance indication
- condition indication
- warning
- presentation and interpretation of electronic displays
 - fire warning and extinguishing
 - control system
- engine spin/run procedures, including the operation of APUs
- engine condition monitoring
- relevant OHS practices, including the requirements for the lifting and handling of heavy components
- how to obtain MSDS
- selection and use of PPE
- maintenance requirements
- relevant maintenance manuals
- relevant regulatory requirements and standard procedures

Look for evidence that confirms skills in:

- applying relevant OHS procedures, including lifting and handling of heavy components
- using MSDS and PPE
- using relevant maintenance documentation and aircraft manuals to:

- recognise through visual/physical inspection external and internal signs of defects/damage to gas turbine engine, components and system components
- assist with testing of gas turbine engine and engine system operation

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to apply hand skills, use maintenance publications and engine and system theory knowledge to inspect gas turbine engines and engine system components on fixed or rotary wing aircraft while applying all relevant safety precautions, in particular those relating to high-energy ignition units.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>The underlying skills inherent in this unit should be transferable across a range of inspection applications (including the timely involvement of supervisors or other trades) associated with gas turbine engines, components and systems. It is essential that inspection procedures take into account all safety precautions applicable to the system/component being maintained. Ability to interpret inspection procedures and specifications (allowable limits) and apply them in practice is critical.</p> <p>Evidence of transferability of skills and knowledge related to inspection is essential. This may be demonstrated through application across a number of engine systems. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.</p> <p>A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on each of the systems listed in Range Statement Groups 1 to 6 and at least one component of each system. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.</p>
<p>Context of and specific resources for assessment</p>	<p>Competency should be assessed in the work environment or simulated work environment using tools and equipment specified in maintenance manuals. It is also expected that general purpose tools, test and ground support equipment found in most routine situations and used to assist in the inspection process would be used where appropriate.</p>

Method of assessment	
Guidance information for assessment	Individuals being assessed who have already attained MEA 314C Inspect, test and troubleshoot gas turbine engine systems and components, will have fully met the criteria for this unit. Log of Industrial Experience and Achievement records relating to MEA314C Inspect, test and troubleshoot gas turbine engine systems and components, may be accepted as also meeting the evidence requirements for this unit.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Note	Range statements listed below are numbered to facilitate specification of the assessment requirements included in the Evidence Guide
Gas turbine engine and components	Gas turbine engine may include: <ol style="list-style-type: none"> 1. Engine change unit, main components and accessories/drives 2. Control system 3. Ignition and starter systems 4. Fuel system 5. Oil system 6. Air system
Application	Application of this unit may relate to: <ul style="list-style-type: none"> • scheduled or unscheduled maintenance activities • individual or team-related activities
Procedures and requirements	Refer to industry standard procedures specified by manufacturers, regulatory authorities or the enterprise

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

- | | |
|--|--|
| 1 Prepare for troubleshooting | 1.1 Relevant maintenance documentation and modification status, including system defect/service difficulty reports where relevant, are interpreted to identify an unserviceability |
| 2 Test hydro-mechanical, mechanical, gaseous and landing gear systems and components | 2.1 The aircraft and hydro-mechanical, mechanical, gaseous and landing gear systems are correctly prepared, in accordance with specified procedures, for the application of power
2.2 Power is applied and system and components functionally tested, in accordance with specified procedures, for evidence of malfunction or leaks
2.3 System calibration or adjustments are performed in accordance with specified procedures |
| 3 Troubleshoot hydro-mechanical, mechanical, gaseous and landing gear systems and components | 3.1 Available information from maintenance documentation and inspection and test results is used, where necessary, to assist in fault determination
3.2 Maintenance manual fault diagnosis guide and logical processes are used to ensure efficient and accurate <i>troubleshooting</i>
3.3 Specialist advice is obtained, where required, to assist with the troubleshooting process
3.4 <i>Hydro-mechanical, mechanical, gaseous and landing gear system and component</i> faults are located and the causes of the faults are clearly identified and correctly recorded in maintenance documentation, where required
3.5 Fault rectification requirements are determined to assist in planning the repair or adjustment |

Required Skills and Knowledge

- hydraulic, fuel, gaseous, mechanical and landing gear system layout, operation and characteristics and system component operation and construction, including electrical system interfaces
- how to configure the aircraft for testing and troubleshooting of hydraulic, fuel, gaseous, mechanical and landing gear systems and components
- standard trade practices relating to tool usage and installation/securing of aircraft hardware
- fluid power theory
- hydraulic system layout, operation and characteristics (including electrical and instrument system interfaces) and system component construction and operation for:
 - flight control systems, including primary controls, flaps, speed brakes and spoilers
 - landing gear retraction systems
 - brake and anti-skid systems
 - nose wheel steering systems
- fuel system and component layout, operation and characteristics (including electrical system interfaces) and system component operation and construction
- gaseous (pneumatic, air conditioning, pressurisation and fire-extinguishing system and component layout, operation and characteristics (including electrical and instrument interfaces) and system component operation and construction
- construction and operation of landing gear components, including:
 - wheel assemblies
 - struts/oleos
 - uplocks and downlocks
- mechanical systems and linkages, including those related to the above systems
- how to configure the aircraft for inspection, testing and troubleshooting of hydraulic, fuel and landing gear systems and components
- maintenance requirements and troubleshooting procedures
- relevant OHS practices relating to hydraulic, fuel, gaseous, mechanical and landing gear systems and components, including lifting and handling of heavy items
- how to obtain MSDS
- selection and use of PPE
- relevant maintenance manuals
- relevant regulatory requirements and standard procedures

Look for evidence that confirms skills in:

- applying all relevant OHS procedures, including selection and use of PPE and MSDS
- using maintenance manuals to prepare the aircraft for testing and troubleshooting of hydraulic, fuel, gaseous, flight control, landing gear and mechanical systems and components
- use of hand skills, tools and systems knowledge in the testing, adjustment and troubleshooting of hydraulic, fuel, gaseous, mechanical and landing gear systems
- use of hand skills, tools and component knowledge in the adjustment and troubleshooting

of hydraulic, fuel, gaseous and mechanical system components

- jacking of the aircraft, as required, for landing gear system testing, rigging and troubleshooting
- use of hand skills, tools and system/component knowledge in the adjustment and troubleshooting of landing gear components
- the effective use of maintenance documentation and relevant fault diagnosis guides in the troubleshooting process
- the recognition of external defects in hydro-mechanical, gaseous, mechanical and landing gear systems and components

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to test and troubleshoot a range of hydraulic, fuel, gaseous and mechanical system and landing gear components in accordance with relevant maintenance manual instructions while applying all relevant OHS procedures and standard processes.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The underlying skills inherent in this unit should be transferable across a range of testing and troubleshooting applications (including the timely involvement of supervisors or other trades) associated with aircraft hydro-mechanical, gaseous, mechanical and landing gear systems and their components. It is essential that system test procedures take into account all safety precautions applicable to the system being maintained, especially where system operation/switching interrelates to other systems being maintained. Ability to interpret inspection procedures and specifications (allowable limits) and apply them in practice is critical.

Evidence of transferability of skills and knowledge related to testing and troubleshooting is essential. This may be demonstrated through application across a number of aircraft systems or aircraft types. The application of testing procedures should clearly indicate knowledge of system operation, the relationship of individual components and the links with other systems (if applicable) within the limits of the aircraft/system fault finding guide before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.

A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of this unit of competency are being achieved under routine supervision on each type of system and on at least one component of each group listed in the Range Statement, as follows:

- Hydraulic systems – a system and at least one component from each of hydro-mechanical system components 3 and 5
- Fuel systems – a system and at least one component

	<p>from each of 4 and 5</p> <ul style="list-style-type: none"> • Landing gear systems – each listed system 6 to 8 • Landing gear components – one each of 9 to 11 • Gaseous systems – each listed system 12 to 15 and at least one component from each of gaseous system components 16 to 19 • Mechanical systems – a system applicable to 20 and at least one component from each of mechanical system components 21 and 22. <p>This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.</p>
<p>Context of and specific resources for assessment</p>	<p>Competency should be assessed in the work environment or simulated work environment, using procedures, tools and equipment specified in maintenance documentation. It is also expected that general purpose tools, test and ground support equipment found in most routine situations would be used where appropriate. The level of troubleshooting is limited in its application to the use of fault diagnosis guides or other similar information.</p>
<p>Method of assessment</p>	
<p>Guidance information for assessment</p>	<p>Individuals being assessed who have already attained the following related units will have met the Performance Criteria and Range Statement variables for Elements listed:</p> <ul style="list-style-type: none"> • Element 1 – any one of MEA309C Inspect, test and troubleshoot aircraft hydro-mechanical and landing gear system and components, or MEA310C Inspect, test and troubleshoot aircraft pneumatic systems and components • Elements 2 and 3 – MEA309C Inspect, test and troubleshoot aircraft hydro-mechanical and landing gear system and components, for hydro-mechanical system variables, and MEA310C Inspect, test and troubleshoot aircraft pneumatic systems and components, for gaseous system variables <p>Log of Industrial Experience and Achievement records relating to the listed units may be accepted as also meeting the evidence requirements for this unit in the applicable Elements for systems and components as listed in the Range Statement variables.</p> <p>Advice in MEA310C Inspect, test and troubleshoot aircraft pneumatic systems and components, regarding</p>

	MEA355A Maintain light aircraft air cycle air conditioning systems, and MEA356A Maintain light piston engine aircraft pressurisation systems, may also be taken into consideration where applicable.

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

- | | |
|--|---|
| 1 Prepare for troubleshooting | 1.1 Relevant maintenance documentation and modification status, including system defect reports, where relevant, are interpreted to identify an unserviceability |
| 2 Test fixed wing flight control systems | 2.1 Powered controls of the aircraft and system are prepared, in accordance with maintenance manual, for the application of electrical and hydraulic power
2.2 Power is applied, if necessary, and system is functionally tested, in accordance with applicable maintenance manual, for malfunction or evidence of incorrect rigging
2.3 System rigging is performed in accordance with applicable maintenance manual |
| 3 Troubleshoot fixed wing flight control systems | 3.1 Available information from maintenance documentation and inspection and test results is used, where necessary, to assist in fault determination
3.2 Maintenance manual fault diagnosis guide and logical processes are used to ensure efficient and accurate <i>troubleshooting</i>
3.3 Specialist advice is obtained, where required, to assist with the troubleshooting process
3.4 <i>Fixed wing flight control system</i> faults are located and the causes of the faults are clearly identified and correctly recorded in maintenance documentation, where required
3.5 Fault rectification requirements are determined to assist in planning the repair or adjustment |

Required Skills and Knowledge

Look for evidence that confirms knowledge of:

- OHS precautions relevant to flight control system maintenance
- standard trade practices relating to tool and test/rigging equipment usage and installation/securing of system components
- flight control system layout and operation
- theory of flight:
 - airflow
 - conditions of flight
 - lift and forces
 - drag
 - wings, tailplane and vertical stabiliser
 - lift augmentation (flaps, slats and slots)
 - aircraft control surfaces and their function (elevator, ailerons, rudder, elevons and trim tabs)
 - spoilers and speed brakes
 - flight control balancing and flutter
 - stability and control and flight control rigging
- mechanical system layout and operation:
 - cockpit controls
 - cables and cable tensioning
 - pulleys and fairleads
 - bellcranks
 - levers
 - control surface horns
 - screwjacks
 - push/pull rods
- powered flight controls:
 - system layout and operation
 - component construction and operation
 - electrical and instrument interfaces:
- flaps
- trim
- position indication
- flight control system maintenance procedures and troubleshooting methods
- flight control system rigging equipment and procedures
- flight control system interfaces with automatic pilot systems and automatic flight control systems
- relevant maintenance manuals
- relevant regulatory requirements and standard procedures

Look for evidence that confirms skills in:

- applying all relevant OHS procedures
- using relevant maintenance documentation and aircraft manuals to:
 - recognise defects during visual inspection of fixed wing flight control systems and system components
 - rig fixed wing flight control systems
 - functionally test the operation of fixed wing flight control systems and recognise system/component malfunction or evidence of incorrect rigging
 - to the extent permitted by applicable fault diagnosis guides, troubleshoot unserviceabilities in fixed wing flight control systems and clearly record the causes of the unserviceabilities

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to apply hand skills and use maintenance publications and system theory knowledge to test and troubleshoot fixed wing aircraft flight control systems and components while applying all relevant safety precautions.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>The underlying skills inherent in this unit should be transferable across a range of testing and troubleshooting applications (including the timely involvement of supervisors or other trades) associated with the aircraft fixed wing flight systems. It is essential that testing procedures take into account all safety precautions associated with flight control system operation, in particular where system operation/switching interrelates with other systems being maintained, and that knowledge be demonstrated of dual inspection requirements associated with work on flight controls and systems.</p> <p>Evidence of transferability of skills and knowledge related to testing and troubleshooting is essential. This may be demonstrated through application across a number of aircraft types. The application of ground testing procedures should clearly indicate knowledge of system operation, the relationship of individual components and the links with other systems (if applicable) within the limits of the aircraft/system fault-finding guide before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.</p> <p>A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on at least one item from each of Groups 1 to 3 in the Range Statement. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.</p>
<p>Context of and specific resources</p>	<p>Competency should be assessed in the work environment or simulated work environment using tools and</p>

for assessment	equipment specified in aircraft maintenance manuals. It is also expected that general purpose tools, test and ground support equipment found in most routine situations would be used where appropriate. The level of troubleshooting is limited in its application to the use of fault diagnosis guides or other similar information.
Method of assessment	
Guidance information for assessment	Individuals being assessed who have already attained MEA312C Inspect, test and troubleshoot aircraft fixed wing flight control systems and components, will have met the requirements for the Performance Criteria for Element 1. The requirements for Elements 2 and 3 will also be met if recorded experience for MEA312C Inspect, test and troubleshoot aircraft fixed wing flight control systems and components, involved aircraft with powered flight controls. If experience was gained on aircraft types with only mechanical flight controls the recorded experience will partially meet the requirements for this unit. Log of Industrial Experience and Achievement records relating to MEA312C Inspect, test and troubleshoot aircraft fixed wing flight control systems and components, may be accepted as also meeting the evidence requirements for this unit in the applicable areas.

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Note</p>	<p>Range statements listed below are numbered to facilitate specification of the assessment requirements included in the Evidence Guide</p>
<p>Fixed wing flight control system and components</p>	<p>Fixed wing flight control system may include:</p> <ol style="list-style-type: none"> 1. Ailerons, elevators, rudders, trim tabs, speed brakes, spoilers, flaps and slats 2. Actuators – mechanical, hydraulic, pneumatic or electric 3. Mechanical flight control components including cables, pulleys, guides, fairleads, tension regulators, control rods, bellcranks, torque tubes, chains, sprockets, control sticks (or wheels or columns), trim wheels or handles, and rudder pedals
<p>Troubleshooting</p>	<p>Troubleshooting involves the use of fault-finding charts or similar, to line replacement level</p>
<p>Application</p>	<p>Application of this unit may relate to:</p> <ul style="list-style-type: none"> • scheduled or unscheduled maintenance activities • individual or team-related activities

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

- | | |
|--|---|
| 1 Prepare for troubleshooting | 1.1 Relevant maintenance documentation and modification status, including system defect reports, where relevant, are interpreted to identify an unserviceability |
| 2 Test gas turbine engine system | <p>2.1 Aircraft and <i>gas turbine engine system</i> are correctly prepared in accordance with applicable maintenance manual and connected to appropriate test equipment</p> <p>2.2 Built-in system test functions and status displays are activated, where applicable, outputs recorded and interpreted</p> <p>2.3 Assistance is provided with gas turbine engine and/or system operation during prescribed test procedures to establish serviceability and correct function in accordance with applicable maintenance manual</p> |
| 3 Troubleshoot gas turbine engine system | <p>3.1 Available information from maintenance documentation and inspection and test results is used, where necessary, to assist in fault determination</p> <p>3.2 Maintenance manual fault diagnosis guide and logical processes are used to ensure efficient and accurate <i>troubleshooting</i></p> <p>3.3 Specialist advice is obtained, where required, to assist with the troubleshooting process</p> <p>3.4 Gas turbine engine system faults are located and causes of the faults are clearly identified and correctly recorded in maintenance documentation, where required</p> <p>3.5 Fault rectification requirements are determined to assist in planning the repair or adjustment</p> |

Required Skills and Knowledge

Look for evidence that confirms knowledge of:

- fault diagnosis techniques
- gas turbine engine layout and operation:
 - types of gas turbine
 - operating principles and power output
 - gas path
 - intakes
 - compressors
 - combustion chambers
 - turbines
 - exhaust
 - thrust reversers
 - accessory drives
 - bearings and seals
 - maintenance requirements and troubleshooting procedures
- system and component operation, including electrical and instrument system interfaces:
 - fuel control and fuels
 - lubrication and lubricants
 - air distribution
 - starting
 - ignition
 - power augmentation
 - instrumentation:
- performance indication
- condition indication
- warning
- presentation and interpretation of electronic displays
 - fire warning and extinguishing
 - control system and rigging of engine controls
- engine spin/run procedures including the operation of APUs
- engine condition monitoring
- relevant OHS practices, including the requirements for the lifting and handling of heavy components
- how to obtain MSDS
- selection and use of PPE
- relevant maintenance manuals
- relevant regulatory requirements and standard procedures

Look for evidence that confirms skills in:

- applying relevant OHS procedures, including lifting and handling of heavy components
- using MSDS and PPE
- using relevant maintenance documentation and aircraft manuals to:
 - recognise through visual/physical inspection external and internal signs of defects in gas turbine engines, components and system components
 - assist with testing of gas turbine engine and engine system operation, be able to operate systems, monitor indications, record parameters and recognise correct function
 - compile engine condition monitoring records
 - rig and adjust engine controls and systems
- using fault diagnosis guides and equivalent data, to accurately and efficiently troubleshoot the causes of unserviceabilities in gas turbine engines and engine systems, clearly record details and identify the required rectification actions

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to apply hand skills, use maintenance publications and engine and system theory knowledge to test and troubleshoot gas turbine engines and engine system components on fixed or rotary wing aircraft while applying all relevant safety precautions.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The underlying skills inherent in this unit should be transferable across a range of inspection, testing and troubleshooting applications (including the timely involvement of supervisor or other trades) associated with engine systems. It is essential that system test procedures take into account all safety precautions associated with gas turbine engine system operation, especially with regard to high-energy ignition units, and that awareness be demonstrated of dual inspection requirements associated with work on engine control systems.

Evidence of transferability of skills and knowledge related to testing and troubleshooting is essential. This may be demonstrated through application across a number of engine systems or engine types. The application of testing procedures and functional rigging checks should also indicate knowledge of system operation. Engine system operation knowledge, the relationship of individual components and the links with other systems will be necessary to supplement evidence of ability to carry out rigging checks and troubleshoot the system within the limits of the aircraft/system fault-finding guide before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.

A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on at least one item from each of Groups 1 to 6 in the Range Statement. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent

	Industry Evidence Guide.
Context of and specific resources for assessment	Competency should be assessed in the work environment or simulated work environment using tools and equipment specified in aircraft maintenance manuals. It is also expected that general purpose tools, test and ground support equipment found in most routine situations would be used where appropriate. The level of troubleshooting is limited in its application to the use of fault diagnosis guides or other similar information.
Method of assessment	
Guidance information for assessment	Individuals being assessed who have already attained MEA314C Inspect, test and troubleshoot gas turbine engine systems and components, will have fully met the criteria for this unit. Log of Industrial Experience and Achievement records relating to MEA314C Inspect, test and troubleshoot gas turbine engine systems and components, may be accepted as also meeting the evidence requirements for this unit.

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Note	Range statements listed below are numbered to facilitate specification of the assessment requirements included in the Evidence Guide
Gas turbine engine systems	<p>Gas turbine engine systems may include:</p> <ol style="list-style-type: none"> 1. Engine change unit, main components and accessories/drives 2. Control system 3. Ignition and starter systems 4. Fuel system 5. Oil system 6. Air system
Troubleshooting	Troubleshooting involves the use of fault-finding charts or similar, to line replacement level
Application	<p>Application of this unit may relate to:</p> <ul style="list-style-type: none"> • scheduled or unscheduled maintenance activities • individual or team-related activities
Procedures and requirements	Refer to industry standard procedures specified by manufacturers, regulatory authorities or the enterprise

MEA323B Perform advanced troubleshooting in aircraft mechanical maintenance

Modification History

Minor formatting and editorial changes made. Missing skill requirements reinstated.

Unit Descriptor

This unit covers competencies required to progress from an Aircraft Maintenance Engineer at Certificate IV to the granting of a chosen B1 Aircraft Maintenance Engineer Licence or Aircraft Maintenance Specialist Certificate under CASR Part 66, in accordance with the licensing provisions in the Assessment Guidelines.

The skills and knowledge covered by the units of competency listed in the MEA11 Aeroskills Training Package for Aircraft Maintenance Engineer (Avionics or Mechanical as applicable) at Certificate IV are prerequisite to the attainment of the elements of competency specified in this unit. This includes full coverage of the CASR Part 66 Avionics or Mechanical Syllabus subjects/topics listed in the Assessment Guidelines.

Application of the Unit

This unit requires application of system theory knowledge and advanced fault diagnostic skills to identify the cause of defects that are beyond the bounds of maintenance manual fault diagnosis guides.

Applications include fixed and rotary wing aircraft.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable

Employability Skills Information

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

1. Verify the defect
 - 1.1. Available information from flight crew, such as flight phase, aircraft configuration, etc., maintenance documentation both current and previous history, is used as necessary, to assist in fault determination
 - 1.2. Inspection of the *affected system* is carried out to check both physical integrity and correct operation
 - 1.3. Information gained from Central Maintenance Systems is verified against physical integrity and correct operation, where applicable
 - 1.4. The effects on a system from interfaces/ integration with other systems are taken into account
2. Isolate the defect
 - 2.1. Logical processes, including the application of basic principles and system knowledge and known facts are used to augment maintenance manual fault diagnosis guides to ensure efficient and accurate troubleshooting
 - 2.2. Specialist advice is obtained, where required and/or available, to assist with the troubleshooting process.
 - 2.3. Faults are located and the causes of the defects are clearly identified and correctly recorded in maintenance documentation, including any other system(s) disturbed, where required
3. Determine defect rectification requirements
 - 3.1. Defect rectification requirements are determined and the necessary repair action initiated once verification and isolation of the defect are confirmed
4. Verify defect rectification
 - 4.1. Defect is rectified in accordance with approved maintenance data
 - 4.2. All systems disturbed or accessed during troubleshooting are restored as applicable using maintenance manuals, repair schemes or approved maintenance data
 - 4.3. All checks required by approved maintenance data to ensure correct operation of all disturbed systems are performed

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying relevant OHS procedures
- the diagnosis of faults that are beyond the coverage of maintenance manual fault diagnosis guides in simulated applications in the training environment and/or in the workplace across a representative range of systems and components

Required knowledge

For systems and components relevant to the scope of the licence/ratings sought knowledge is required of:

- theory related to system operation and interfaces between systems and with electrical/electronic control media to a level that will facilitate the diagnosis of faults beyond the level of maintenance manual fault diagnosis guides using reported symptoms and functional test results
- component construction and theory of operation to a level that will facilitate the diagnosis of faults beyond the level of maintenance manual fault diagnosis guides using reported symptoms and functional test results
- advanced fault diagnostic techniques
- condition monitoring and trend analysis techniques

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to apply system theory knowledge and advanced fault diagnostic skills to identify the causes of defects not covered fully by maintenance manual fault diagnosis guides while observing all relevant safety precautions.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The underlying skills inherent in this unit should be transferable across a range of inspection, testing and troubleshooting applications related to mechanical systems, and where applicable other system interfaces/integration. It is essential that system test procedures take into account all safety precautions applicable to the system being maintained. Ability to interpret inspection procedures and specifications (allowable limits) and ensure that they are applied in practice is critical, as is the demonstrated ability to apply fundamental system theory in the logical diagnosis of complex faults.

Evidence of transferability of skills and knowledge related to performance and supervision of inspection, testing and troubleshooting is essential. This must be demonstrated through application across a number of aircraft mechanical systems, including system interfaces/integration. The troubleshooting approach should clearly demonstrate an in-depth knowledge of underpinning theory of a system, with this knowledge being used in a logical process to augment and extend the scope of the aircraft/ system fault-finding guide. The fault rectification work plan should take account of applicable safety (including safe handling of heavy components) and quality requirements in accordance with the industry and regulatory standards.

A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved and the ability to identify the causes of defects not covered fully by maintenance manual fault diagnosis guides has been demonstrated under supervision without intervention. This shall be established via simulated activities at the CASR Part 147 Maintenance Training Organisation and performance

	during observed workplace activities.
Context of and specific resources for assessment	Competency is assessed in the workplace or simulated workplace and shall involve successfully dealing with a number of maintenance and fault scenarios across a range of systems listed in the Range Statement and related system components.
Method of assessment	
Guidance information for assessment	

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Troubleshooting</p>	<p>The competency applies to the troubleshooting from first principles, of defects beyond available maintenance data in the systems of fixed or rotary wing aircraft types. Troubleshooting must be demonstrated across a range of typical systems and system components that includes, but is not limited to:</p> <ul style="list-style-type: none"> • airframes, their engines and all systems (and parts thereof) operated by inherently mechanical or hydro-mechanical principles or means <p>Coverage is not required of specific type systems that are included in type training and PCT activities leading to a specific type licence rating</p>
<p>Application</p>	<p>Application of this unit may relate to:</p> <ul style="list-style-type: none"> • scheduled or unscheduled maintenance activities • individual activities or troubleshooting tasks that would be performed during supervision of other personnel
<p>Procedures and requirements</p>	<p>Refer to industry standard procedures specified by manufacturers, regulatory authorities or the enterprise</p>
<p>Applicable systems</p>	<p>Affected systems may include:</p> <ul style="list-style-type: none"> • hydro-mechanical systems • pneumatic systems • flight control systems • engines and engine systems • propeller and rotor systems

MEA325B Weigh aircraft and perform aircraft weight and balance calculations as a result of modifications

Modification History

Minor formatting and editorial changes made.

Unit Descriptor

This unit covers competencies required to progress from an Aircraft Maintenance Engineer at Certificate IV to the granting of a chosen Aircraft Maintenance Engineer Licence under CASR Part 66, in accordance with the licensing provisions in Section 3, Assessment Guidelines.

The skills and knowledge covered by the units of competency listed in the MEA11 Aeroskills Training Package for Aircraft Maintenance Engineer (Avionics or Mechanical as applicable) at Certificate IV are prerequisite to the attainment of the elements of competency specified in this unit. This includes full coverage of the CASR Part 66 Syllabus subjects/topics listed in Section 3.

Application of the Unit

This unit requires application of knowledge regarding aircraft weighing and the use of relevant maintenance publications and modification data (where applicable) to weigh an aircraft and use the results to calculate centre of gravity and confirm that it is within limits.

Applications include fixed and rotary wing aircraft.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

1. Weigh aircraft
 - 1.1.The requirement for aircraft weighing is determined
 - 1.2.Aircraft is weighed in accordance with the specified procedure
 - 1.3.Aircraft weighing results are provided to the CAMO
2. Calculate the weight and balance impact of a modification
 - 2.1.The new empty weight of the aircraft is determined and it is ensured that the weight is within the predetermined limits set by the CAMO
 - 2.2.The new empty weight ***centre of gravity of the aircraft is calculated*** and it is ensured that the centre of gravity is within the predetermined limits set by the CAMO
 - 2.3.Maintenance records are updated with new figures

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying relevant OHS procedures
- configuring aircraft for weighing
- weighing aircraft
- using weighing results to calculate centre of gravity

Required knowledge

Look for evidence that confirms knowledge of:

- types of weighing equipment used to weigh aircraft and associated safety precautions:
 - mechanical platform scales
 - electronic platform scales
 - electronic load pots
- methods used to level aircraft for weighing
- the importance of correctly configuring aircraft for weighing
- mathematical formulae used to calculate centre of gravity

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to determine the requirement to weigh an aircraft, weigh it using a specified method and use the results to calculate centre of gravity. Safety precautions applicable to the weighing method involved are to be fully observed.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>The underlying skills inherent in this unit should be transferable across a range of aircraft types. Ability to interpret the instructions for configuring and weighing aircraft is critical.</p> <p>Evidence of transferability of skills and knowledge related to weighing of aircraft and calculation of centre of gravity is essential. The aircraft weighing work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards, especially in relation to aircraft jacking and levelling.</p> <p>A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under supervision without intervention. This shall be established via simulated activities at the CASR Part 147 MTO and performance during observed workplace activities.</p>

ME A327B Fabricate and/or repair aircraft mechanical components or parts

Modification History

Minor formatting and editorial changes made. Prerequisite unit version code updated. Additional assessment advice provided in the Evidence Guide. Missing knowledge requirements reinstated.

Unit Descriptor

This unit of competency is part of the Mechanical Certificate IV (Aircraft Maintenance Stream) and Structures Certificate IV training pathways. It covers the competencies required to fabricate and repair a range of aircraft mechanical components and parts. This unit is used in workplaces that operate under the airworthiness regulatory systems of the ADF and CASA.

Where a CASA licensing outcome is sought this unit forms part of the CASA requirement for the granting of the chosen B1 Aircraft Maintenance Engineer Licence under CASR Part 66, in accordance with the licensing provisions in Section 3, Assessment Guidelines.

Application of the Unit

This unit requires application of hand skills and the use of relevant maintenance manuals, drawings and specifications to fabricate and repair a range of aircraft mechanical components.

Applications include fixed and rotary wing aircraft.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

ME A101B	Interpret occupational health and safety practices in aviation maintenance
ME A103B	Plan and organise aviation maintenance work activity
ME A105C	Apply quality standards applicable to aviation maintenance processes
ME A107B	Interpret and use aviation maintenance industry manuals and specifications
ME A108B	Complete aviation maintenance industry documentation
ME A109B	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

1. Fabricate mechanical components or parts
 - 1.1. Specifications are interpreted to determine the dimensions and procedure for fabrication
 - 1.2. Appropriate materials, tools, equipment and assembly or fabrication jigs are selected and prepared for the particular specification requirements
 - 1.3. **Components** or parts are fabricated in accordance with required specifications
 - 1.4. Test equipment and rigs are used, where applicable, to confirm serviceability of finished components
 - 1.5. Fabricated components are tagged, sealed and packaged within specified procedures
 - 1.6. Required maintenance documentation is completed and processed in accordance with standard enterprise procedures
2. Repair mechanical components or parts
 - 2.1. Repair or replacement requirements are determined, following disassembly and assessment of component parts for serviceability, in accordance with the relevant maintenance documentation
 - 2.2. Tagging and repair instructions are accurately specified for parts requiring specialist repair
 - 2.3. Components are modified, as approved, by relevant manufacturers' bulletins or procedures
 - 2.4. Mechanical component parts are assembled within specified tolerances and in accordance with the appropriate maintenance documents
 - 2.5. Mechanical components are adjusted, as required, to operate within prescribed specifications
 - 2.6. Repaired components are tagged, sealed and packaged in accordance with specified procedures
 - 2.7. Required maintenance documentation is completed and processed in accordance with standard enterprise procedures

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying relevant OHS procedures
- using relevant maintenance documentation, specifications and aircraft/component manuals to:
 - recognise state of serviceability and repair requirements for the range of mechanical components listed in the Range Statement
 - fabricate components
 - identify requirements and complete repairs
 - test and/or adjust components as required
 - correctly tag, seal and package completed components

Required knowledge

Look for evidence that confirms knowledge of:

- component operation
- fabrication and repair procedures and processes
- relevant maintenance manuals
- relevant regulatory requirements and standard procedures
- relevant OHS practices
- how to obtain MSDS
- use of PPE

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to apply hand skills and use relevant maintenance manuals, drawings and specifications to fabricate and repair mechanical components while applying all relevant safety precautions.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>The underlying skills inherent in this unit should be transferable across a range of fabrication and repair applications associated with aircraft components. It is essential that the relevant procedures are interpreted and applied to ensure quality and safety standards are achieved.</p> <p>Evidence of knowledge about the general aspects of material specification and selection, measurement and fabrication should be related to specific aircraft component fabrication applications. Evidence of transferability of skills and knowledge related to repair is essential. This may be demonstrated through application across a number of different aircraft components. Ability to assess component serviceability and interpret parts requirements will be necessary before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.</p> <p>A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on at least one item from each of Groups 1 to 4, as listed in the Range Statement. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.</p>
<p>Context of and specific resources for assessment</p>	<p>Competency should be assessed in the work environment or simulated work environment using tools and equipment specified in maintenance documentation. It is also expected that general and special purpose tools and test equipment found in most routine situations would be used where appropriate.</p>

Method of assessment	
Guidance information for assessment	Individuals being assessed who have already attained MEA328C Maintain and/or repair aircraft mechanical components or parts, will have fully met the criteria for Element 2. Unit Descriptor

This unit of competency is part of a Mechanical Certificate II training pathway. It covers the competencies required to maintain and/or repair aircraft basic hydraulic and pneumatic components under the guidance of a qualified person. This unit is used in workplaces that operate under the airworthiness regulatory systems of the ADF and CASA.

Application of the Unit

This unit requires application of hand skills and maintenance documentation to maintain, repair and modify aircraft basic hydraulic and pneumatic components under the guidance of a qualified person.

Applications include fixed and rotary wing aircraft components either attached to the aircraft or in a workshop.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA103B	Plan and organise aviation maintenance work activity
MEA105C	Apply quality standards applicable to aviation maintenance processes
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA108B	Complete aviation maintenance industry documentation
MEA109B	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

1. Prepare to dismantle, inspect, maintain and assemble basic hydraulic and pneumatic components or parts
 - 1.1. Components are removed and/or disassembled in accordance with enterprise procedures, relevant maintenance documentation and qualified person guidance
 - 1.2. Maintenance and/or repair requirements, as defined by the qualified person, enterprise procedures and the relevant maintenance documentation, are understood
 - 1.3. Tagging and repair instructions are accurately specified in accordance with enterprise procedures and qualified person directions for parts requiring specialist repair
 - 1.4. Appropriate materials, tools, equipment and assembly or fabrication jigs, where applicable, are selected and prepared for the particular maintenance and repair requirements in accordance with enterprise procedures and relevant maintenance documentation
2. Dismantle, inspect, maintain and assemble basic hydraulic and pneumatic components or parts
 - 2.1. Routine maintenance, repair or modification procedures are carried out, as approved by relevant manufacturers' bulletins or procedures, in accordance with required enterprise procedures and specifications
 - 2.2. Component parts are assembled within specified tolerances and in accordance with enterprise procedures and the appropriate maintenance documents
 - 2.3. Where applicable and as required by the qualified person, assistance is provided in the final adjustment and testing of components to confirm serviceability
3. Complete maintenance and repair activities
 - 3.1. Required documentation is completed and processed in accordance with standard enterprise procedures
 - 3.2. Maintained/repaired or modified components are tagged, sealed and packaged within specified procedures

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying relevant OHS procedures
- using relevant maintenance documentation, specifications and aircraft/component manuals to:
 - recognise state of serviceability and standard/routine repair requirements for the range of hydraulic and pneumatic components listed in the Range Statement
 - identify requirements under the guidance of a qualified person and complete routine repairs and/or modifications
 - adjust components under expert guidance, as required
 - where post-assembly testing is applicable, set up components for testing and have a basic understanding of the test procedures
 - correctly tag, seal and package completed components

Required knowledge

Look for evidence that confirms knowledge of:

- component operation at a basic level
- standard/routine repair procedures and processes
- relevant OHS practices
- how to obtain MSDS
- use of PPE

For the purpose of this unit of competency, basic knowledge is defined as the level of knowledge required to:

- understand the instructions provided by qualified persons and relevant documentation for the disassembly, routine replacement of component parts and seals and reassembly of components
- under guidance and in the training environment make post-assembly adjustments such as length of stroke or operating pressure
- under guidance and in the training environment perform simple tests involving pressure and function

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to maintain, repair and modify aircraft basic hydraulic and pneumatic components under qualified person guidance while observing all relevant safety precautions.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>The underlying skills inherent in this unit should be transferable across a range of maintenance and repair applications associated with aircraft components. It is essential that the relevant enterprise procedures are interpreted and applied to ensure quality and safety standards are achieved.</p> <p>Evidence of transferability of skills and knowledge related to maintenance/repair standard operating procedures is essential. This may be demonstrated through application across a number of different aircraft components. Ability to assess component serviceability under qualified person guidance and interpret parts requirements will be necessary before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.</p> <p>A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under qualified person guidance on a representative range of components or parts from each of Groups 1 to 4, as listed in the Range Statement. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.</p>
<p>Context of and specific resources for assessment</p>	<p>Competency should be assessed in the work environment or simulated work environment, using tools and equipment specified in maintenance documentation. It is also expected that general and special purpose tools found in most routine situations would be used where appropriate.</p>
<p>Method of assessment</p>	

Guidance information for assessment	
--	--

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Note</p>	<p>The Range Statements below are numbered to facilitate specification of the assessment requirements included in the Evidence Guide</p>
<p>Components to be maintained and/or repaired/modified</p>	<p>Components to be maintained and/or repaired/modified may include:</p> <ol style="list-style-type: none"> 1. Hoses 2. Pipes 3. Simple check or shutoff valves 4. Basic hydraulic and pneumatic actuators and valves
<p>Routine work</p>	<p>Routine work is carried out using basic operational knowledge and a defined range of skills ('routine' work is that which follows a customary or regular course of procedure)</p>
<p>Work outcomes</p>	<p>All work outcomes are achieved by applying known solutions chosen from a limited range of pre-determined options consistent with enterprise procedures. This includes accepting responsibility for own work in terms of quality of outcomes using pre-determined specifications of quality</p>
<p>Scope of work</p>	<p>Note that the scope of any repair or modification and the procedure to be followed will be provided by the qualified person, and be within the scope of the skills and knowledge included in the unit of competency MEA109B Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance</p>
<p>Maintain</p>	<p>Maintain involves cleaning, inspection for wear or damage and consequent replacement of parts, and routine adjustment and lubrication where applicable in accordance with enterprise procedures</p>
<p>Application</p>	<p>Work can relate to:</p> <ul style="list-style-type: none"> • routine scheduled or unscheduled maintenance activities performed under qualified person guidance in accordance with enterprise procedures

	<ul style="list-style-type: none">tasks performed either autonomously or as part of a team and under the guidance of a qualified person

Elements and Performance Criteria

1. Prepare to dismantle, inspect, maintain and assemble non-primary structural removable components or parts and internal fittings
 - 1.1. Components are removed and/or disassembled in accordance with enterprise procedures, relevant maintenance documentation and qualified person guidance
 - 1.2. Maintenance and/or repair requirements as defined by the qualified person, enterprise procedures and the relevant maintenance documentation, are understood
 - 1.3. Tagging and repair instructions are accurately specified in accordance with enterprise procedures and qualified person directions for parts requiring specialist repair
 - 1.4. Appropriate materials, tools, equipment and assembly or fabrication jigs, where applicable, are selected and prepared for the particular maintenance and repair requirements in accordance with enterprise procedures and relevant maintenance documentation
2. Dismantle, inspect, maintain and assemble non-primary structural removable components or parts and internal fittings
 - 2.1. ***Routine maintenance, repair or modification processes*** are carried out as approved by relevant manufacturers' bulletins or procedures in accordance with required enterprise procedures and specifications
 - 2.2. Component parts are assembled within specified tolerances in accordance with enterprise procedures and the appropriate maintenance documents
 - 2.3. Where applicable and as required by the qualified person, assistance is provided in the conduct of final load or functional tests
3. Complete maintenance/ modification activities
 - 3.1. Required documentation is completed and processed in accordance with standard enterprise procedures
 - 3.2. Where applicable, maintained/repared or modified components are tagged, sealed and packaged within specified procedures

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying relevant OHS procedures
- using relevant maintenance documentation, specifications and aircraft/component manuals to:
 - for on-aircraft work, correctly remove and install components covered by the Range Statement, including emergency equipment
 - recognise state of serviceability and standard/routine repair requirements for the range of components listed in the Range Statement
 - identify requirements under the guidance of a supervisor and complete repairs and/or modifications
 - adjust components under expert guidance as required
 - where load or functional testing is applicable in the training environment, set up components for testing and perform tests
 - correctly tag, seal and package completed components

Required knowledge

Look for evidence that confirms knowledge of:

- component construction and/or operation at a basic level
- standard/routine repair procedures and processes
- relevant OHS practices
- how to obtain MSDS
- use of PPE

Unit Descriptor

This unit of competency is part of a Mechanical Certificate II training pathway. It covers the competencies required to undertake routine maintenance and/or repair/modification of aircraft piston engine components or parts under the guidance of a qualified person. Achievement of this unit will contribute towards the attainment of MEA388A Repair and/or overhaul piston engines. This unit is used in workplaces that operate under the airworthiness regulatory systems of the ADF and CASA.

Application of the Unit

This unit requires application of hand skills and maintenance documentation to dismantle, inspect, maintain and assemble aircraft piston engine components or parts under the guidance of a qualified person.

Applications include piston engine components or parts in a workshop.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA103B	Plan and organise aviation maintenance work activity
MEA105C	Apply quality standards applicable to aviation maintenance processes
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA108B	Complete aviation maintenance industry documentation
MEA109B	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

1. Prepare to dismantle, inspect, maintain and assemble piston engine components or parts
 - 1.1. Maintenance and/or repair requirements as defined by the qualified person, standard enterprise procedures and the relevant maintenance documentation, are understood
 - 1.2. Tagging and repair instructions are accurately specified in accordance with standard enterprise procedures and as directed by a qualified person for parts requiring specialist repair
 - 1.3. Appropriate materials, tools, equipment and assembly or fabrication jigs, where applicable, are selected and prepared for the particular maintenance and repair requirements in accordance with standard enterprise procedures and relevant maintenance documentation
2. Dismantle, inspect, maintain and assemble aircraft piston engine components or parts
 - 2.1. **Components** are removed and/or disassembled in accordance with standard enterprise procedures, relevant maintenance documentation and qualified person guidance
 - 2.2. Routine maintenance, repair or modification procedures are carried out, as approved by relevant manufacturers' bulletins or procedures in accordance with required standard enterprise procedures and specifications
 - 2.3. Component parts are assembled within specified tolerances and in accordance with standard enterprise procedures and the appropriate maintenance documents
 - 2.4. Where applicable, and as required by the qualified person, assistance is provided in the final adjustment and testing of components to confirm serviceability
3. Complete maintenance, repair or modification activities
 - 3.1. Required documentation is completed and processed in accordance with standard enterprise procedures
 - 3.2. Maintained/repaired or modified components are tagged, sealed and packaged within specified procedures

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying relevant OHS procedures
- using relevant maintenance documentation, specifications and aircraft/component manuals to:
 - recognise state of serviceability and standard/routine maintenance and repair requirements for the range of engine components listed in the Range Statement
 - identify requirements under the guidance of a qualified person and complete repairs and/or modifications
 - correctly tag, seal and package completed components

Required knowledge

Look for evidence that confirms knowledge of:

- component operation at a basic level
- standard/routine repair procedures and processes

For the purpose of this unit, basic knowledge is defined as the level of knowledge required to:

- remove, install and maintain components, such as hoses, pipes and ducts, and so on
- dismantle and maintain engine assemblies and sub-assemblies
- apply relevant hand skills to repair or modify components of sub-assemblies and systems listed in the Range Statement
- relevant OHS practices
- how to obtain MSDS
- use of PPE

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to dismantle, inspect, maintain and assemble aircraft piston engine components or parts under qualified person guidance while observing all relevant safety precautions.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>The underlying skills inherent in this unit should be transferable across a range of maintenance and repair applications associated with engine components. It is essential that the relevant standard enterprise procedures are interpreted and applied to ensure quality and safety standards are achieved.</p> <p>Evidence of transferability of skills and knowledge related to maintenance/repair standard enterprise procedures is essential. This may be demonstrated through application across a number of different engine components. Ability to assess component serviceability under qualified person guidance and interpret parts requirements will be necessary before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.</p> <p>A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under qualified person guidance on a representative range of components or parts listed in the Range Statement. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.</p>
<p>Context of and specific resources for assessment</p>	<p>Competency should be assessed in the work environment or simulated work environment, using tools and equipment specified in maintenance documentation. It is also expected that general and special purpose tools found in most routine situations would be used where appropriate.</p>
<p>Method of assessment</p>	

Guidance information for assessment	
--	--

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Routine work</p>	<p>Routine work is carried out using basic operational knowledge and a defined range of skills ('routine' work is that which follows a customary or regular course or procedure)</p>
<p>Outcomes are achieved by:</p>	<p>Outcomes are achieved by applying known solutions chosen from a limited range of pre-determined options consistent with standard enterprise procedures. This includes accepting responsibility for own work in terms of quality of outcomes using pre-determined specifications of quality</p>
<p>Scope of work</p>	<p>Note that the scope of any repair or modification and the procedure to be followed will be provided by the qualified person, and will be within the scope of the unit of competency MEA109B Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance</p>
<p>Maintain</p>	<p>Maintain involves removal and installation, cleaning, inspection for wear or damage and consequent replacement of parts, and routine adjustment and lubrication, where applicable, in accordance with standard enterprise procedures</p>
<p>Components to be maintained</p>	<p>Components to be maintained include hoses, pipes, ducts and components of:</p> <ul style="list-style-type: none"> • cooling systems • engine head assemblies • engine block assemblies • accessory drives • lubrication systems
<p>Application</p>	<p>Work can relate to:</p> <ul style="list-style-type: none"> • routine scheduled or unscheduled maintenance activities performed under qualified person guidance in accordance with standard enterprise procedures • tasks performed either autonomously or as part of a team and under the guidance of a qualified person

Procedures and requirements	Refer to procedures specified by manufacturers, regulatory authorities or the enterprise

Unit Sector(s)

Aviation maintenance

Competency field

Co-requisite units

Not applicable

MEA339C Inspect, repair and maintain aircraft structures

Modification History

Knowledge requirements and Range Statement revised to include additional inspection coverage - equivalent to previous version.

Unit Descriptor

This unit of competency is part of the Mechanical Certificate IV (Aircraft Maintenance Stream) training pathway. It covers the competencies required to inspect, repair and maintain aircraft structures.

The competency Elements and Performance Criteria also cover a significant portion of those required for unit MEA311D Inspect and repair/modify aircraft structures. The unit is used in workplaces that operate under the airworthiness regulatory systems of the ADF and CASA. Where a CASA licensing outcome is sought this unit forms part of the CASA requirement for the granting of the chosen maintenance certification licence under CASR Part 66, in accordance with the licensing provisions in Section 3, Assessment Guidelines.

Application of the Unit

This unit requires application of procedures and techniques associated with the inspection and maintenance of aircraft structure, and with the performance of a limited range of metal and composite repairs.

Applications include the performance of structural maintenance activities on fixed or rotary wing aircraft on the flight line or in the hangar.

Licensing/Regulatory Information

Refer to unit descriptor

Pre-Requisites

MEA304C Remove and install non-pressurised aircraft structural and non-structural components

OR

MEA317C Remove and install pressurised aircraft structural and non-structural components

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

- | | |
|-------------------------------|---|
| 1 Inspect aircraft structure | <p>1.1 <i>Relevant maintenance documentation</i> is used to identify specific inspection requirements</p> <p>1.2 Appropriate preparation and access to the aircraft structure is undertaken to allow for proper inspection in accordance with maintenance documentation</p> <p>1.3 <i>Aircraft structure</i> is visually or physically checked for signs of deformation defects or damage in accordance with maintenance documentation and approved procedures</p> <p>1.4 <i>Damage or defects</i> are assessed against damage or wear limits specified by structural repair manual or other approved data to determine if repair or replacement is required</p> <p>1.5 Maintenance documentation is completed and processed in accordance with standard enterprise procedures</p> |
| 2 Prepare to undertake repair | <p>2.1 Extent of damage is correctly assessed to assist in determining repair procedure</p> <p>2.2 Appropriate repair scheme is identified in accordance with structural repair manual and/or approved data</p> <p>2.3 <i>Specialist advice</i> is obtained in establishing an approved repair scheme where a standard repair scheme cannot be identified or damage is out of limits</p> <p>2.4 All materials and equipment required are organised</p> |

- 3 Repair and maintain aircraft structure
- 3.1 *Structural repairs* are performed, in accordance with approved repair scheme, ensuring that aircraft standard practices are used and process requirements are carried out
 - 3.2 Preventative maintenance techniques are employed to preserve the integrity of aircraft structure
 - 3.3 Work area is cleaned of all waste material or contaminants
 - 3.4 Required maintenance documentation is completed and processed in accordance with standard enterprise procedures

Required Skills and Knowledge

Look for evidence that confirms knowledge of:

- applicable OHS procedures, including the use of MSDS and PPE
- construction methods and materials used in:
 - fuselage sections
 - wing sections
 - engine nacelles and mounts
 - windows and window frames
 - doors, locks and access panels in pressurised and non-pressurised aircraft
- definition of structural terms, i.e. safe life, damage tolerant, failsafe, stress, strain, shear and cycles
- inspection requirements for metal and composite structure, including:
 - ageing aircraft inspection requirements
 - safe life structure
 - damage tolerant structure
 - fail safe structure
- potential causes of structural failure
- NDT methods and application of the various techniques
- construction methods of, and assessing common defects in, aircraft plastic transparencies
- basic constructional features of, and assessing common defects in, glass windscreens
- the various forms of structural corrosion, stating the causes and structural effects of corrosion on aircraft
- the terms associated with composite materials
- requirements for handling and storing aircraft metals and composite materials, including sealing agents, to industry standards
- means of identifying aircraft structural assembly fasteners (metal and composite) by interpretation of markings, numbering systems, size, shape and colour
- assessment of structural damage:
 - types and classes of mechanical damage
 - types of corrosion and determining the extent of damage
 - relevant documentation and manuals
 - damage limits and repair schemes for metallic and non-metallic structure
- procedures for the fabrication and fitment of metal repairs:
 - scab patch
 - flush patch
 - splice
 - lap
 - formed section
- corrosion removal and passivation
- procedures for performing composite repairs:

- external patch
- scarf patch
- stepped repairs
- repair of integral fuel tanks and sealing of faying surfaces, including specific OHS and PPE requirements
- surface finishes and methods of restoration, including specific OHS and PPE requirements
- how to obtain MSDS
- relevant maintenance and structural repair manuals
- relevant regulatory requirements and standard procedures

Look for evidence that confirms skills in:

- applying all relevant OHS procedures, including the use of MSDS and selection and use of applicable items of PPE
- demonstrating appropriate cleaning procedures to enable structure inspection
- demonstrating correct inspection procedures, in particular pressurised aircraft, in accordance with aircraft and procedures manuals
- identifying damage to aircraft metallic (ferrous and non-ferrous) structures and/or components by way of impact, fatigue or the various types of corrosion
- inspecting damage and assessing composite components/structures
- identifying various aircraft metals and their basic properties
- identifying composite materials used in aircraft construction, associated safety precautions and hazards
- correctly interpreting repair scheme drawings, including third angle projection, isometric, sectional formats and hand sketches
- using appropriate hand tools and machines, including riveting equipment, drilling equipment, aligning tools and material fasteners (grip pins)
- applying correct removal, installation and repair techniques for:
 - a range of rivets (blind and solid) using hand, squeeze and pneumatic situations
 - a range of close tolerance fasteners (standard and oversize – hillocks and taper locks), including hole preparation
 - threaded devices, including internal and external thread cutting, Helicoil inserts and damaged stud replacement
 - hardware assembled by close tolerance fits using heat, cooling and force methods, including bearings, bushes and inserts
- performing a range of metal structure and composite material repair techniques, including:
 - metal scab patch, flush, splice, lap and formed section repair
 - composite external patch, scarf and stepped repairs
 - metal to metal and metal to composite bonding
- applying structural corrosion removal/treatment techniques
- restoring aircraft structure sealing and surface finishes

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to inspect and maintain aircraft structure and perform a range of metal and composite structural repair tasks that are representative of the scope of the listed variables in accordance with relevant maintenance documentation while applying all relevant OHS procedures and standard processes.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>The underlying skills inherent in this unit should be transferable across a range of inspection, testing and repair applications associated with aircraft maintenance. It is essential that the procedures take into account all aircraft and personal safety precautions relating to aircraft structure.</p> <p>Evidence of transferability of skills and knowledge related to inspection, testing and repair of aircraft structure is essential. This may be demonstrated through application across a number of aircraft systems or aircraft types. Ability to interpret inspection and repair procedures and specifications and apply them in practice is critical. The application of the procedures should also clearly indicate knowledge of structural flight loads and aerodynamic requirements.</p> <p>A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision across the variables in the Range Statement as follows:</p> <ul style="list-style-type: none"> • Inspection and/or testing of at least one item from each of groups 1 to 8 • Recognition of each type of damage in groups 9 to 12 • One repair task from each of groups 13 to 20. <p>This shall be established via the records in the Log of Industrial Experience and Achievement.</p>
<p>Context of and specific resources for assessment</p>	<p>Competency should be assessed in the work environment or simulated work environment using tools and equipment specified in maintenance documentation. It is also expected that general purpose tools and test equipment found in most routine situations would be</p>

	used where appropriate.
Method of assessment	
Guidance information for assessment	<p>Individuals being assessed who have already attained MEA311D Inspect and repair/modify aircraft structures, or MEA363B Inspect, repair and maintain structures and related components of non-pressurised small aircraft, will have met the requirements of the Performance Criteria and Range Statement variables for Elements 1 to 3 for common Range Statement variables. Those who have attained MEA401C Maintain aircraft structure/components, will have met the Performance Criteria and Range Statement variables requirements for Element 1. Log of Industrial Experience and Achievement records relating to MEA311D Inspect and repair/modify aircraft structures, MEA363B Inspect, repair and maintain structures and related components of non-pressurised small aircraft, and MEA401C Maintain aircraft structure/components, may be accepted as also meeting the evidence requirements for this unit in the applicable areas.</p>

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Note</p>	<p>Range statements listed below are numbered to facilitate specification of the assessment requirements included in the Evidence Guide</p>
<p>Inspection and repair of aircraft structure</p>	<p>Inspection of aircraft structure includes:</p> <ol style="list-style-type: none"> 1. Non-ferrous and ferrous alloys and composite (FRP) materials used in aircraft construction 2. Structural fastening and attachment hardware and/or devices 3. Seals and sealants 4. Glass and moulded plastics 5. Application of NDT techniques 6. Doors, hinges and locking mechanisms for damage/misalignment 7. Inspections applicable to each of safe life, damage tolerant and fail safe structure relevant to enterprise 8. Ageing aircraft inspection programs
<p>Damage or defects</p>	<p>Damage or defects may include:</p> <ol style="list-style-type: none"> 9. Impact damage 10. Fatigue cracking 11. Corrosion 12. Delamination of composites and bonded structures
<p>Structural repairs</p>	<p>Structural repairs may include the following:</p> <ol style="list-style-type: none"> 13. Remove corrosion by chemical and mechanical methods 14. Restore protective coatings 15. Apply sealants and jointing compounds 16. Freehand precision hole generation 17. Remove and install structural hardware and fastening devices

	<p>18. Remove and replace bushes, bearings and bearing surfaces</p> <p>19. Metal scab patch, flush, splice, lap and formed section repair</p> <p>20. Composite external patch, scarf and stepped repairs</p>
Specialist advice	<p>Specialist advice is obtained from:</p> <ul style="list-style-type: none"> • supervisors • specialist structures personnel
Relevant maintenance documentation	<p>Relevant maintenance documentation includes:</p> <ul style="list-style-type: none"> • servicing schedules • maintenance manuals • applicable Defence regulations and instructions
Application	<p>Application of this unit may relate to:</p> <ul style="list-style-type: none"> • scheduled or unscheduled maintenance, including special inspections required after events, such as heavy landings, overstress or flight through heavy turbulence • individual or team-related activities
Procedures and requirements	<p>Refer to industry standard procedures specified by manufacturers, regulatory authorities or the enterprise</p>

MEA340A Lay out and set up aircraft systems

Modification History

Minor formatting and editorial changes made.

Unit Descriptor

This unit of competency is part of Diploma and Advanced Diploma training pathways. It covers the basic design and schematic layout of aircraft systems, including mechanical, hydraulic, pneumatic and fuel systems. A basic hydraulic system is set up and operated.

Application of the Unit

Competency in this unit requires application of basic knowledge of aircraft system design and schematic layout, including the relative advantages of the different types of system. The candidate should be able to select appropriate types of systems for given applications and sketch the schematic layout of systems given a list of components.

A simple hydraulic system will also be set up and operated.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA109B	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	--

Elements and Performance Criteria

1. Select and lay out schematically aircraft mechanical systems
 - 1.1. **Mechanical system applications** in aircraft design and their relative advantages and disadvantages compared to other system types are identified
 - 1.2. Components of mechanical systems are identified
 - 1.3. A mechanical system is selected for an application, the schematic layout is sketched and all components are labelled
 - 1.4. Mechanical system maintenance requirements are identified

2. Select and lay out schematically aircraft hydraulic systems
 - 2.1. **Hydraulic system applications** in aircraft design, their operation and their relative advantages and disadvantages compared to other system types are identified
 - 2.2. Aircraft hydraulic fluids, their characteristics and handling precautions are identified
 - 2.3. **Components of hydraulic systems** are identified and their operation is described in general terms
 - 2.4. A hydraulic system is selected for an application, the schematic layout is sketched and all components are labelled
 - 2.5. Hydraulic system maintenance requirements are identified

3. Select and lay out schematically aircraft pneumatic systems
 - 3.1. **Pneumatic system applications** in aircraft design, their operation and their relative advantages and disadvantages compared to other system types are identified
 - 3.2. **Components of pneumatic systems** are identified and their operation is described in general terms
 - 3.3. A pneumatic system is selected for an application, the schematic layout is sketched and all components are labelled
 - 3.4. Pneumatic system maintenance requirements are identified

4. Select and lay out schematically aircraft fuel storage and distribution systems
 - 4.1. Typical **fuel storage and distribution systems** used in aircraft design are identified.
 - 4.2. **Components of fuel storage and distribution systems** are identified and their operation is described.
 - 4.3. A fuel storage and distribution system is selected for an application, the schematic layout is sketched and all components are labelled.
 - 4.4. Types of aircraft fuel, their characteristics and

handling precautions are identified.

4.5. Fuel storage and distribution system maintenance requirements are identified.

5. Set up and operate a simple hydraulic system

5.1. The hydraulic system is sketched and all components are labelled

5.2. *Required components* are obtained

5.3. The system is assembled and operated

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- laying out a typical aircraft mechanical system
- laying out a typical aircraft hydraulic system
- laying out a typical aircraft pneumatic system
- laying out a typical fuel storage and distribution system
- setting up and operating a basic hydraulic system
- applying relevant OHS precautions, including the use of MSDS and PPE

Required knowledge

Look for evidence that confirms knowledge of:

- fluid power principles
- plumbing identification marking
- mechanical, hydraulic and pneumatic aircraft systems, their components and maintenance requirements
- the relative advantages and disadvantages of mechanical, hydraulic and pneumatic systems
- hydraulic fluid types, characteristics and handling precautions
- aircraft fuel storage and distribution systems and components thereof
- aircraft fuels, their characteristics and handling precautions
- OHS precautions relating to aircraft systems and their operation

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to apply basic knowledge of aircraft system design and layout for a range of aircraft applications. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, teacher's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed off the job in a training environment equipped to provide exposure to the range of system types and provide for the layout, set-up and operation of basic hydraulic systems. The candidate must have access to all tools, equipment, materials and documentation required and must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials. The assessment environment should not disadvantage the candidate.</p>
<p>Method of assessment</p>	
<p>Guidance information for assessment</p>	

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Application	Application of this unit may relate to: <ul style="list-style-type: none"> • individual or team-related activities
Mechanical system applications	Mechanical system applications may include: <ul style="list-style-type: none"> • flight controls • flap operation • nose wheel steering • landing gear door operation • entrance door mechanisms
Components of mechanical systems	Components of mechanical systems may include: <ul style="list-style-type: none"> • cables • chains • sprockets • pulleys • fairleads • cable tensioners • gearboxes • screwjacks • rods • universal joints • constant velocity joints • clutches • bearings and bushes
Hydraulic system applications	Hydraulic system applications may include: <ul style="list-style-type: none"> • flight controls • flap and spoiler operation • landing gear retraction and extension • brakes (including anti-skid) • nose wheel steering • shimmy damping • door operation
Components of hydraulic systems	Components of hydraulic systems may include: <ul style="list-style-type: none"> • pumps

	<ul style="list-style-type: none"> • plumbing • valves (manual and electrically operated) • actuators • motors • check valves • pressure gauges (direct reading and electrical) • electrical control circuit micro switches • reservoirs • accumulators • filters • heat exchangers
Pneumatic system applications	<p>Pneumatic system applications may include:</p> <ul style="list-style-type: none"> • landing gear retraction and extension • pneudraulic emergency systems for landing gear extension and brakes • engine bleed air • engine starting • anti-icing • de-icing • pressurisation • air cycle air conditioning
Components of pneumatic systems	<p>Components of pneumatic systems may include:</p> <ul style="list-style-type: none"> • pre-coolers • pressure regulator and shutoff valves • temperature modulating valve • check valves • over-pressure valves • temperature regulating valves • underloading valves • shuttle valves • back pressure valves • outflow valves • moisture separators • chemical driers • filters • mechanical compressors • compressed air bottles • de-icing boots • ducting
Components of fuel storage and	Components of fuel storage and distribution systems may

distribution systems	<p>include:</p> <ul style="list-style-type: none"> • integral fuel cells • rigid and flexible fuel cells • external fuel tanks • rigid and flexible plumbing and couplings • manifolds • selector valves • anti-surge valves • anti-gravity valves • fuel quantity indication • fuel flow indication • boost pumps • transfer pumps • filters • strainers • fuel heaters
Required components	<p>Required components may include:</p> <ul style="list-style-type: none"> • hydraulic rig • manual selector valve • filter • accumulator • check valve • linear actuators • rigid and flexible plumbing

The <i>configurations of landing gear</i> are identified and discussed in terms of relative advantages and disadvantages 4.2. The relative benefits of fixed and retractable landing gear are identified and discussed 4.3. Construction materials used in landing gear components are identified and discussed |
| 5. Apply basic aircraft design characteristics | <ul style="list-style-type: none"> 5.1. Given required aircraft use and performance characteristics, an appropriate aerodynamic shape is determined 5.2. An appropriate method of construction, materials of construction and fabrication method are proposed |

5.3. An appropriate landing gear configuration is proposed

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying basic aircraft design characteristics

Required knowledge

Look for evidence that confirms knowledge of:

- theory of flight, including rotary wing
- loads acting on aircraft structures and structural fatigue, including rotary wing
- aircraft design characteristics, including rotary wing
- types of aircraft structure
- methods of aircraft construction
- materials of construction
- structural maintenance requirements
- use of NDT in structural maintenance
- basic landing gear design characteristics
- use of ultra high strength steels in landing gear design and related maintenance requirements

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to identify and apply basic aircraft design characteristics. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, teacher's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed off the job in a training environment equipped to provide exposure to the relevant aircraft design characteristics and to theory of flight. The candidate must have access to all tools, equipment, materials and documentation required and must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials. The assessment environment should not disadvantage the candidate.</p>
<p>Method of assessment</p>	
<p>Guidance information for assessment</p>	

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Application	Application of this unit may relate to: <ul style="list-style-type: none"> • individual or team-related activities
Common wing plan forms	Common wing plan forms may include: <ul style="list-style-type: none"> • straight • tapered • swept • delta • variable geometry • canard
Common wing configurations	Common wing configurations may include: <ul style="list-style-type: none"> • mid-wing • low wing • high wing
Common rotor configurations	Common rotor configurations may include: <ul style="list-style-type: none"> • main rotor and tail rotor • two main rotors • two blade main rotor • multiple blade main rotor • hinged main rotor blades • rigid rotor
Configurations of landing gear	Configurations of landing gear may include: <ul style="list-style-type: none"> • tricycle • tail wheel • tail skid • floats • skis • helicopter skids • helicopter wheels and brakes

Unit Sector(s)

Aeronautical engineering

Competency field

Co-requisite units

Not applicable

MEA342A Apply basic aircraft power plant design characteristics

Modification History

Minor formatting and editorial changes made.

Unit Descriptor

This unit of competency is part of Diploma and Advanced Diploma training pathways. It covers the basics of aircraft power plant selection and propulsion.

Application of the Unit

This unit requires application of basic knowledge of propulsion and power plant selection.

Applications include aeroplanes and rotary wing aircraft, piston engines and propellers/rotors, turbo prop, gas turbines and gas turbine/rotor.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA109B	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

1. Research and evaluate the types of aeroplane and rotary wing aircraft power plant and their relative advantages and disadvantages
 - 1.1. The *types of aeroplane and rotary wing aircraft power plant* are identified and compared in terms of relative advantages and disadvantages
 - 1.2. *Types of propeller* are identified and compared in terms of relative advantages and disadvantages
 - 1.3. Turbojet and turbofan performance is compared in terms of relative advantages and disadvantages
 - 1.4. Maintenance requirements for aircraft power plants are identified
2. Apply basic power plant and propulsion system selection processes
 - 2.1. Given required aeroplane use and performance characteristics, an appropriate type of power plant is determined
 - 2.2. An appropriate type of propulsion system is selected
 - 2.3. Given required rotary wing aircraft use and performance characteristics, an appropriate type of power plant is determined

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying basic power plant and propulsion system design characteristics

Required knowledge

Look for evidence that confirms knowledge of:

- basic power plant characteristics
- basic propeller theory and characteristics
- use of NDT in power plant maintenance
- power plant maintenance requirements, including the use of engine condition monitoring

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to identify and apply basic power plant and propulsion system design characteristics. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, teacher's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed off the job in a training environment equipped to provide exposure to the relevant aircraft design characteristics and to theory of flight. The candidate must have access to all tools, equipment, materials and documentation required and must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials. The assessment environment should not disadvantage the candidate.</p>
<p>Method of assessment</p>	
<p>Guidance information for assessment</p>	

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Application	Application of this unit may relate to: <ul style="list-style-type: none"> • individual or team-related activities
Types of aeroplane and rotary wing aircraft power plant	Types of aeroplane and rotary wing aircraft power plant may include: <ul style="list-style-type: none"> • piston engine (petrol or diesel) • rotary • turboprop or gas turbine and rotor • turbofan • turbojet
Types of propeller	Types of propeller may include: <ul style="list-style-type: none"> • fixed pitch • adjustable pitch • constant speed • contra-rotating • tractor • pusher

Unit Sector(s)

Aeronautical engineering

Competency field

Co-requisite units

Not applicable

MEA343B Remove and install avionic system components

Modification History

Minor formatting and editorial changes made. Prerequisite unit version code updated.

Unit Descriptor

This unit of competency is part of the B1 Mechanical Aircraft Maintenance Engineer licensing pathway under CASR Part 66, in accordance with the licensing provisions in Section 3, Assessment Guidelines. It covers the competencies required for the removal and installation of avionic system components and certification of tasks where system serviceability can be verified without the use of specialist off-aircraft test equipment.

Application of the Unit

This unit requires application of hand skills and the use of maintenance documentation/publications in the removal, installation and task certification of avionic systems components where system serviceability can be established by a simple self-test facility, other on-board test systems/equipment or by simple ramp test equipment.

Applications include fixed and rotary wing aircraft.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEA211C Inspect, test and troubleshoot advanced aircraft electrical systems and components

OR

MEA227D Test and troubleshoot aircraft electrical systems and components

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

- | | |
|---|--|
| 1. Remove avionic system components | <p>1.1 System is rendered safe and prepared in accordance with the applicable maintenance manual and isolation tags are fitted, where necessary, to ensure personnel safety</p> <p>1.2 <i>Avionic component</i> removal is carried out in accordance with the applicable maintenance manual</p> <p>1.3 Required maintenance documentation is completed and processed in accordance with standard enterprise procedures</p> <p>1.4 Removed components are tagged and packaged in accordance with specified procedures</p> |
| 2. Install avionic system components and verify system serviceability | <p>2.1 Avionic components to be installed are checked to confirm correct part numbers, modification status, serviceability and shelf life</p> <p>2.2 Installation of avionic components is performed in accordance with the applicable maintenance manual and regulatory requirements</p> <p>2.3 System is reinstated to correct operational condition and is <i>tested for serviceability</i></p> <p>2.4 Required maintenance documentation is completed and processed in accordance with standard enterprise procedures and regulatory requirements</p> |

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- locating and identifying avionic components that are part of instrument and radio systems
- determining that component and system serviceability can be confirmed by a simple self-test facility, other on-board test systems/equipment or by simple ramp test equipment requiring a simple go/no go decision
- applying relevant OHS practices
- component attachment methods
- connecting hardware and plugs
- handling precautions for electrostatic sensitive devices
- using approved maintenance documentation and aircraft publications relating to avionic systems
- using built-in test equipment to confirm system serviceability (this may involve the operation of specific built-in test equipment, on-board maintenance systems and Integrated Modular Avionic modules)

Required knowledge

Look for evidence that confirms knowledge of:

- electronic fundamentals
- digital techniques relating to electronic instrument systems
- engine indication systems
- the operation of built-in test equipment
- on-board maintenance systems
- Integrated Modular Avionics and the interface with hydraulic, fuel and pneumatic systems

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to remove and install avionic components and verify system serviceability through the use of built-in test equipment or similar on-board systems and/or off-aircraft test equipment that provides a simple go/no go decision while observing all relevant safety and component handling precautions.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>It is essential that cleanliness requirements and safety precautions applicable to the system being maintained are fully observed, understood and complied with, as well as work practices associated with electrostatic sensitive devices.</p> <p>Evidence of transferability of skills and knowledge related to removal and installation is essential. This is to be demonstrated by application across a range of aircraft avionic system components as listed in the Range Statement. An understanding of the attachment methods, connection of hardware, and system test requirements as they relate to the work must be demonstrated before undertaking any action.</p> <p>The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards. A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on a representative range of avionic components, as listed in the Range Statement. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.</p>
<p>Context of and specific resources for assessment</p>	<p>Competency should be assessed in the workplace or simulated workplace using tools and equipment specified in maintenance manuals. It is also expected that general-purpose tools, test and ground support equipment found in most routine situations would be used where appropriate.</p>
<p>Method of assessment</p>	

Guidance information for assessment

MEA344A Remove and install aircraft components

Modification History

Minor formatting and editorial changes made. Prerequisite unit version code updated.

Unit Descriptor

This unit covers the competencies required to remove and install aircraft components that are within the privileges of the Aircraft Maintenance Engineer A Licence. It is one of the units required for the granting of the chosen Aircraft Maintenance Engineer A Licence under CASR Part 66, in accordance with the licensing provisions in Section 3, Assessment Guidelines.

Application of the Unit

This unit requires application of hand skills and standard trade practices in the removal and installation of aircraft components, including hydro-mechanical and mechanical components, and emergency equipment that is within the privileges of the A Licence.

Applications include component removal and installation on both fixed and rotary wing aircraft.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA103B	Plan and organise aviation maintenance work activity
MEA105C	Apply quality standards applicable to aviation maintenance processes
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA108B	Complete aviation maintenance industry documentation
MEA109B	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

- | | |
|---|--|
| 1. Remove landing gear components | <p>1.1. The aircraft is jacked as specified in the maintenance manual for <i>landing gear component</i> removal</p> <p>1.2. Removal of components is carried out in accordance with the applicable maintenance publications</p> <p>1.3. Required maintenance documentation is accurately completed and correctly processed</p> <p>1.4. Removed components are tagged, sealed and packaged in accordance with standard organisational procedures</p> |
| 2. Remove hydro-mechanical components | <p>2.1. Hydro-mechanical system is rendered safe and prepared in accordance with the applicable maintenance publication, including fitment of isolation tags, where necessary, to ensure personal safety</p> <p>2.2. Removal of <i>hydro-mechanical components</i> is carried out in accordance with the applicable maintenance publications</p> <p>2.3. Required maintenance documentation is accurately completed and correctly processed</p> <p>2.4. Removed components are tagged, sealed and packaged in accordance with standard organisational procedures</p> |
| 3. Remove mechanical components/emergency equipment | <p>3.1. Applicable safety precautions are identified and observed for the removal and handling of components</p> <p>3.2. Removal of <i>mechanical components/emergency equipment</i> is carried out in accordance with the applicable maintenance publications</p> <p>3.3. Required maintenance documentation is accurately completed and correctly processed</p> <p>3.4. Removed components and/or items of emergency equipment are tagged, sealed and packaged in accordance with standard organisational procedures</p> |
| 4. Install landing gear components | <p>4.1. Components to be installed are checked to confirm correct part numbers, serviceability and modification status</p> <p>4.2. Component installation is carried out in accordance with applicable maintenance publications</p> <p>4.3. Required maintenance documentation is completed and processed in accordance with standard enterprise procedures.</p> |
| 5. Install hydro-mechanical components | <p>5.1. Components to be installed are checked to confirm correct part numbers, serviceability and modification status.</p> |

- 5.2. Component installation is carried out in accordance with applicable maintenance publications.
- 5.3. Required maintenance documentation is completed and processed in accordance with standard enterprise procedures
- 6. Install mechanical components/emergency equipment
 - 6.1. Components to be installed are checked to confirm correct part numbers, serviceability and modification status
 - 6.2. Component installation is carried out in accordance with applicable maintenance publications
 - 6.3. Required maintenance documentation is completed and processed in accordance with standard enterprise procedures

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying applicable OHS procedures, including the use of MSDS and PPE
- jacking of aircraft for landing gear component removal
- using hand skills and tools to perform component removal and installation tasks
- correctly installing and securing of aircraft hardware
- inspecting and correctly installing bearings
- safely handling heavy components
- using maintenance publications to prepare the aircraft for component removal and installation and correct interpretation of removal and installation instructions
- applying standard procedures

Required knowledge

Look for evidence that confirms knowledge of:

- standard trade practices relating to tool usage and installation/securing of aircraft hardware
- how to locate and correctly remove and install components
- how to locate and correctly remove and install items of emergency equipment
- OHS procedures relating to component removal and installation and handling of heavy components
- how to obtain PPE
- how to obtain MSDS
- relevant maintenance publications
- relevant regulatory requirements and standard procedures

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to use maintenance publications and applicable tools to remove and install specified landing gear, hydro-mechanical and mechanical components and emergency equipment while applying all relevant OHS procedures and standards processes.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>The underlying skills inherent in this unit should be transferable into other units that require similar techniques. It is essential that system cleanliness requirements and safety precautions applicable to the system being maintained are fully observed, understood and complied with.</p> <p>Evidence of transferability of skills and knowledge related to removal and installation is essential. This may be demonstrated through application across a number of aircraft systems or aircraft types, but must cover a sufficient range of tasks to demonstrate familiarity with attachment methods, connection hardware and couplings peculiar to each type of system, and of safe handling of heavy components. An understanding of system operation as it relates to the work must be demonstrated before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.</p> <p>A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of this unit of competency are being achieved under supervision without intervention on at least one component from each of Groups 1 to 8 listed in the Range Statement. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.</p>
<p>Context of and specific resources for assessment</p>	<p>Competency should be assessed in the work environment using procedures, tools and equipment specified in maintenance documentation. It is also expected that general purpose tools, test and ground support equipment found in most routine situations would be used where</p>

	appropriate.
Method of assessment

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

1. Prepare for flight
 - 1.1. Aircraft is positioned, as required
 - 1.2. Ground locks, aircraft support and safety devices and covers are removed and stowed in accordance with *maintenance documentation*
 - 1.3. Aircraft tie-down devices are removed and stowed/stored
2. Inspect aircraft and systems
 - 2.1. Preparation of the aircraft and systems is appropriate to allow for proper inspection
 - 2.2. Aircraft and systems are visually or physically checked for external signs of defects in accordance with applicable maintenance documentation
3. Replenish aircraft systems
 - 3.1. Fluid level checks and replenishments are carried out in accordance with maintenance documentation requirements
 - 3.2. Maintenance of gaseous levels (oxygen, nitrogen and compressed air) is carried out in accordance with maintenance documentation requirements
 - 3.3. Role equipment/components requiring pre-flight replacement are changed as required by maintenance documentation
 - 3.4. Required maintenance documentation is completed and processed in accordance with standard enterprise procedures
4. Perform scheduled line maintenance checks
 - 4.1. Inspection requirements are determined from maintenance documentation
 - 4.2. Aircraft structure and systems are visually inspected for external signs of defects in accordance with applicable maintenance documentation
 - 4.3. Defects are recorded and reported in accordance with standard enterprise procedures

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- ground handling of aircraft
- using hand skills and tools to perform flight servicing activities
- correctly installing and securing of aircraft hardware
- locating, using and correctly stowing aircraft safety and security equipment (including ground locks, covers, support and safety devices and tie-down devices)
- applying ground power (where applicable)
- inspecting structure for damage and deterioration
- recognising external signs of component damage, leakage and security in aircraft systems
- recognising visual signs of damage, leakage and security with regard to engines and propellers (where applicable)
- refuelling the aircraft with the correct type, quantity and distribution of fuel
- checking and replenishing fluid level using the correct fluids
- recharging of gaseous levels using the correct support equipment and procedures
- lubricating components
- checking fire protection systems (where applicable) for correct gas charge levels
- replacing role equipment requiring pre-flight replacement
- the use of maintenance data and manuals to determine flight servicing requirements and procedures
- application of standard procedures
- observance of all relevant OHS procedures, including the use of MSDS and PPE

Required knowledge

Look for evidence that confirms knowledge of:

- standard trade practices relating to tool usage and installation/securing of aircraft hardware
- aircraft structural concepts and structure to the extent required to be able to recognise typical types of structural damage and deterioration during flight servicing activities and scheduled inspections up to the level of a weekly check or equivalent
- system layout, operation and typical external signs of faults to the extent required to perform flight servicing and scheduled inspections up to the level of a weekly check or equivalent
- types and characteristics of fuels and fuel additives
- types and characteristics of lubricants
- types and characteristics of hydraulic fluids
- OHS procedures relating to flight servicing activities, including how to obtain MSDS and PPE
- basic theory of flight relating to fixed wing aircraft, including stability and control
- the function of on-board maintenance systems
- gas turbine engine and propeller basic theory, installation and operation
- relevant principles of mathematics and physics

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to perform flight servicing activities on the occasions as listed in the variables and scheduled line maintenance checks (up to a weekly check or equivalent) that are relevant to the organisation in accordance with relevant maintenance documentation, while applying all relevant OHS procedures and standard processes.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>It is essential that the specific aspects of the aircraft flight servicing or scheduled line maintenance task are checked to ensure quality and safety standards are fully observed, understood and complied with. Safety precautions applicable to the system being maintained are to be fully observed. An understanding of system operation as it relates to the work must be demonstrated before undertaking any action.</p> <p>Evidence of knowledge of system operation, recognition of defects and completion of documentation, the relationship of individual components and the links with other systems will be necessary to the extent required for completion of flight servicing and scheduled line maintenance task before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.</p> <p>A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of this unit of competency are being achieved under supervision but without intervention on the flight servings and scheduled line maintenance tasks listed in Groups 1 to 5 of the Range Statement that are applicable to the enterprise. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.</p>
<p>Context of and specific resources for assessment</p>	<p>Competency should be assessed in the work environment using procedures, tools and equipment specified in maintenance documentation. It is also expected that general purpose tools, test and ground support equipment found in most routine situations would be used where</p>

	appropriate.

- applying ground power (where applicable)
- inspecting structure for damage and deterioration
- recognising external signs of component damage, leakage and security in aircraft systems
- recognising visual signs of damage, leakage and security with regard to engines, transmissions and rotors
- refuelling the aircraft with the correct type, quantity and distribution of fuel
- checking and replenishing fluid level using the correct fluids
- recharging of gaseous levels using the correct support equipment and procedures
- lubricating components
- checking fire protection systems (where applicable) for correct gas charge levels
- replacing role equipment requiring pre-flight replacement
- the use of maintenance data and manuals to determine flight servicing requirements and procedures
- applying standard procedures
- observing all relevant OHS procedures, including the use of MSDS and PPE

Required knowledge

Look for evidence that confirms knowledge of:

- standard trade practices relating to tool usage and installation/securing of aircraft hardware
- aircraft structural concepts and structure to the extent required to be able to recognise typical types of structural damage and deterioration during flight servicing activities and scheduled inspections up to the level of a Weekly Check or equivalent
- system layout, operation and typical external signs of faults to the extent required to perform flight servicing and scheduled inspections up to the level of a Weekly Check or equivalent
- types and characteristics of fuels and fuel additives
- types and characteristics of lubricants
- types and characteristics of hydraulic fluids
- OHS procedures relating to flight servicing activities, including how to obtain MSDS and PPE
- basic theory of flight relating to rotary wing aircraft, including stability and control
- the function of on-board maintenance systems
- gas turbine engine basic theory, installation and operation
- engine transmission and rotor basic theory, installation and operation

- relevant principles of mathematics and physics

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to perform flight servicing activities on the occasions as listed in the variables and scheduled line maintenance checks (up to a Weekly Check or equivalent) that are relevant to the organisation in accordance with relevant maintenance documentation, while applying all relevant OHS procedures and standard processes.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>It is essential that the specific aspects of the aircraft flight servicing or scheduled line maintenance task are checked to ensure quality and safety standards are fully observed, understood and complied with. Safety precautions applicable to the system being maintained are to be fully observed. An understanding of system operation as it relates to the work must be demonstrated before undertaking any action.</p> <p>Evidence of knowledge of system operation, recognition of defects and completion of documentation, the relationship of individual components and the links with other systems will be necessary to the extent required for completion of flight servicing and scheduled line maintenance task before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.</p> <p>A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of this unit of competency are being achieved under supervision but without intervention on the flight servicings and scheduled line maintenance tasks listed in Groups 1 to 5 of the Range Statement that are applicable to the enterprise. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.</p>
<p>Context of and specific resources for assessment</p>	<p>Competency should be assessed in the work environment using procedures, tools and equipment specified in maintenance documentation. It is also expected that general purpose tools, test and ground support equipment</p>

	found in most routine situations would be used where appropriate.
Method of assessment	
Guidance information for assessment	

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Note	The Range Statements below are numbered to facilitate specification of the assessment requirements included in the Evidence Guide
Applicable maintenance activities	Applicable maintenance activities include: <ol style="list-style-type: none"> 1. Preparation for flight following maintenance 2. Before flight servicing 3. After flight servicing 4. Turn around servicing 5. Scheduled line maintenance activities up to the level of a Weekly Check or specified equivalent
Maintenance documentation	Maintenance documentation may include: <ul style="list-style-type: none"> • maintenance manuals • servicing schedules • applicable airworthiness regulations • aircraft maintenance program
Procedures and requirements	Refer to industry standard procedures specified by manufacturers, regulatory authorities or the enterprise

Co-requisite units

Not applicable

MEA347A Perform scheduled line maintenance activities on piston engine fixed wing aircraft

Modification History

Minor formatting and editorial changes made. Prerequisite unit version code updated.

Unit Descriptor

This unit covers the competencies required to perform line maintenance activities, including flight servicing and scheduled aircraft line maintenance checks, that are within the privileges of the Aircraft Maintenance Engineer A2 Licence. It is one of the units required for the granting of the chosen Aircraft Maintenance Engineer A2 Licence under CASR Part 66, in accordance with the licensing provisions in Section 3, Assessment Guidelines.

Application of the Unit

This unit requires application of hand skills and standard trade practices in the performance of scheduled servicing up to the Weekly Check or equivalent, pre and post-flight servicing activities and the application of aircraft ground handling procedures.

Applications include the performance of flight servicing and scheduled maintenance checks on piston engine fixed wing aircraft.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA103B	Plan and organise aviation maintenance work activity
MEA105C	Apply quality standards applicable to aviation maintenance processes
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA108B	Complete aviation maintenance industry documentation
MEA109B	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

1. Prepare for flight
 - 1.1. Aircraft is positioned, as required
 - 1.2. Ground locks, aircraft support and safety devices and covers are removed and stowed in accordance with *maintenance documentation*
 - 1.3. Aircraft tie-down devices are removed and stowed/stored
2. Inspect aircraft and systems
 - 2.1. Preparation of the aircraft and systems is appropriate to allow for proper inspection
 - 2.2. Aircraft and systems are visually or physically checked for external signs of defects in accordance with applicable maintenance documentation
3. Replenish aircraft systems
 - 3.1. Fluid level checks and replenishments are carried out in accordance with maintenance documentation requirements
 - 3.2. Maintenance of gaseous levels (oxygen, nitrogen and compressed air) is carried out in accordance with maintenance documentation requirements
 - 3.3. Role equipment/components requiring pre-flight replacement are changed as required by maintenance documentation
 - 3.4. Required maintenance documentation is completed and processed in accordance with standard enterprise procedures
4. Perform scheduled line maintenance checks
 - 4.1. Inspection requirements are determined from maintenance documentation
 - 4.2. Aircraft structure and systems are visually inspected for external signs of defects in accordance with applicable maintenance documentation
 - 4.3. Defects are recorded and reported in accordance with standard enterprise procedures

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- ground handling of aircraft
- using hand skills and tools to perform flight servicing activities
- correctly installing and securing of aircraft hardware
- locating, using and correctly stowing aircraft safety and security equipment (including ground locks, covers, support and safety devices and tie-down devices)
- applying ground power (where applicable)
- inspecting structure for damage and deterioration
- recognising external signs of component damage, leakage and security in aircraft systems
- recognising visual signs of damage, leakage and security with regard to engines and propellers
- refuelling the aircraft with the correct type, quantity and distribution of fuel
- checking and replenishing fluid level using the correct fluids
- recharging of gaseous levels using the correct support equipment and procedures
- lubricating components
- checking fire protection systems (where applicable) for correct gas charge levels

MEA349B Apply basic scientific principles and techniques in aeronautical engineering situations

Modification History

Knowledge requirements expanded - equivalent to previous version.

Unit Descriptor

This unit of competency covers applying basic scientific principles and techniques to appropriate aeronautical engineering situations.

Application of the Unit

This unit requires application of basic aeronautical scientific principles and techniques as a member of a design and development team or similar in support of the design and development of aeronautical applications, or within the engineering department of an aircraft maintenance organisation.

Applications include identifying the range of basic aeronautical scientific principles and techniques relevant to aeronautical engineering, selecting aeronautical principles and techniques for particular applications, applying aeronautical principles and techniques appropriately to engineering tasks, quoting results appropriately.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

- | | |
|---|---|
| 1 Research and identify the range of basic scientific principles and techniques relevant to aeronautical engineering | 1.1 The basic scientific principles relating to aeronautical engineering are researched and reported on from appropriate <i>sources of information</i> and examination of applications
1.2 The basic aeronautical techniques and associated technologies, software and hardware required to implement scientific principles relating to <i>aeronautical engineering</i> situations are identified |
| 2 Select basic aeronautical scientific principles and techniques relevant to particular aeronautical engineering applications | 2.1 For particular aeronautical engineering situations, the <i>relevant basic aeronautical scientific techniques and principles</i> can be selected
2.2 For particular aeronautical engineering situations, the relevant basic aeronautical techniques and associated technologies, software and hardware can be selected |
| 3 Apply the relevant basic aeronautical scientific principles and techniques appropriately | 3.1 The basic aeronautical scientific principles are applied in a consistent and appropriate manner to obtain any required solution
3.2 Appropriate calculations and coherent units are used in the solution of engineering calculations
3.3 Significant figures are used in engineering calculations
3.4 The basic aeronautical techniques and associated technologies, software and hardware are applied in a consistent and appropriate manner to obtain required solutions |

- 4 Quote the results of the application of the basic aeronautical scientific principles and basic techniques correctly
 - 4.1 For applications involving engineering calculations, the solution is quoted in an appropriate style
 - 4.2 For applications not involving engineering calculations, the solution is quoted in an appropriate style

Required Skills and Knowledge

Look for evidence that confirms knowledge of:

- basic aeronautical scientific principles including:
 - statics – complete tasks requiring analysis and application of:
- forces and moments of forces
- systems of concurrent and non-concurrent forces
- dry sliding friction
 - dynamics – complete tasks requiring analysis and application of:
- Newton’s Laws
- kinematics and kinetics of uniformly accelerated linear motion
- kinematics and kinetics of uniformly accelerated rotation
- curvilinear motion and centrifugal force
- work, energy, power and torque
- mechanical advantage and efficiency
 - strength of materials:
- axial tension and compression
- direct shear
- bolted, riveted, bonded and welded connections
- shear in beams
- bending stresses and bending deflections (by standard formulas only)
- torsion
 - aerodynamics:
- Bernoulli’s Theorem
- the atmosphere
- aerodynamic forces (lift, drag, weight and thrust)
- stability and control (to a level not requiring the application of calculus)
- airscrews and propulsion (to a level not requiring the application of calculus)
- aircraft performance (to a level not requiring the application of calculus)
 - fluid mechanics:
- properties of fluids including mineral and synthetic hydraulic fluids
- fluid statics, Archimedes’ Principle and Pascal’s Principle
- fluid flow – continuity and energy conservation
- fluid power – pumps
 - thermodynamics:
- heat transfer principles (conduction, convection and radiation)
- perfect gas laws
- kinetic theory of gases
- laws of thermodynamics
- control concepts including closed and open loop control

- electricity and electronics:
 - basic electrical concepts
 - Ohm's Law
 - Kirchhoff's Current and Voltage Laws
 - basic DC circuits
 - basic power supply, transformer, rectifier, filter and regulator
 - PLC concepts – I/O, timing, counting, programming
 - electronic devices (discrete) – resistors, diodes, capacitors, inductors, transistors and rectifiers
 - microprocessor concepts
- light, sound and vibration:
 - wave behaviour – standing vs travelling waves, transverse and longitudinal
 - light – reflection, absorption, refraction, diffraction, spectrum, infrared, visible, ultraviolet, transmission medium and engineering applications
 - sound – pitch, frequency, intensity (power), decibel scale, 'noise dose', spectrum, infrasound, audible, ultrasound, speed, natural frequency, resonance, transmission medium and engineering applications
 - vibration – sources, balancing, shaft alignment, measurement, damping and engineering applications
- basic aeronautical techniques and related technologies, software and hardware associated with implementing scientific principles in mechanical engineering solutions
- the applicability and limitations of basic aeronautical scientific principles
- the applicability and limitations of basic aeronautical techniques and associated technologies, software and hardware
- appropriateness of calculations
- fundamental and derived quantities
- common systems of units
- the procedure for converting between systems of units
- common prefixes used with units and their values
- the procedure for carrying out dimensional analysis
- the concept of significant figures
- the uncertainty of computations based on experimental data
- the procedures for determining the significance of figures in calculations
- the procedures for estimating errors in derived quantities

Look for evidence that confirms skills in:

- selecting appropriate basic aeronautical scientific principles to suit specific applications
- selecting appropriate basic aeronautical techniques and associated technologies, software and hardware to suit specific applications
- applying basic aeronautical scientific principles to particular engineering situations
- applying and manipulating appropriate formulas for applications involving engineering calculations
- applying appropriate calculations to engineering situations

- checking the validity of equations is using dimensional analysis
- applying basic aeronautical techniques and associated technologies, software and hardware in a manner appropriate to the application and identified scientific principles
- referring solutions to the original aim of the application
- quoting solutions in appropriate units, using appropriate significant figures
- quoting limitations of solutions, due to assumptions, scientific principles and techniques used
- presenting solutions referring to the original aim of the application

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to apply basic scientific principles and techniques in aeronautical engineering situations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p>
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>
Method of assessment	This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with applying basic scientific principles and techniques in aeronautical engineering situations or other units requiring the exercise of the skills and knowledge covered by this unit.

Minor formatting and editorial changes made.

Unit Descriptor

This unit of competency covers selecting appropriate materials and materials and components tests for aeronautical engineering applications.

Application of the Unit

Applications of this unit include selecting engineering materials and materials tests, sourcing materials data; ensuring appropriate performance and physical standards for aeronautical applications; documenting materials tests, ensured calibration standards; interpreting and documenting materials data sheets as appropriate for mass production, batch production, jobbing shop, and prototyping applications.

Activities may be performed as a member of a design and development or engineering support team.

--	---

Elements and Performance Criteria

1. Identify classes of materials, based on properties and materials tests relevant to aeronautical engineering
 - 1.1. *Classes of materials* are identified, *based on properties*, required for particular *aeronautical engineering* applications
 - 1.2. Relate material properties are related to common production and construction methods and processes
 - 1.3. Common characteristics, faults or flaws in materials and components or product are identified in particular engineering applications
 - 1.4. Test methods for materials and components or product are identified in particular engineering applications
 - 1.5. Specific industrial test standards/codes, calibration requirements, regulations and authorities related to selection of materials and products are identified for particular engineering applications
 - 1.6. The role of *Australia's national measurement system* is investigated
2. Identify and use sources of information on engineering materials, materials tests and test equipment, including manufacturers' catalogues and websites
 - 2.1. Appropriate *sources of information* on materials are identified and used
 - 2.2. Appropriate sources of information on methods of testing of properties of materials are identified and used to ensure suitability for a particular application
 - 2.3. Appropriate sources of information on materials, materials tests, test calibration, test certificates, regulations, standards, *standards councils/societies/authorities/regulatory bodies* are identified and used
 - 2.4. The use of *standards and codes* are investigated and reported on
 - 2.5. Appropriate sources of information on MSDS are identified and used
3. Specify and implement materials for particular aeronautical engineering applications.
 - 3.1. Materials for particular applications are specified and implemented
4. Specify and implement methods used to test or obtain the properties of engineering materials
 - 4.1. *Tests of materials* are specified and implemented to ensure quality, safety or suitability for a range of applications
 - 4.2. *Traceability* of measurement standard is ensured
 - 4.3. Test sheets/certificates for appropriate materials are obtained for applications in accordance with organisational procedures and/or codes and regulations
 - 4.4. Appropriate MSDS are obtained for applications in

accordance with organisational procedures and/or codes and regulations

5. Report on and record materials design data and methods and results of materials tests

5.1. Materials selections are reported and recorded against design functional requirements in accordance with organisational procedures, codes and regulations, including environmental impact and sustainability assessment.

5.2. Materials tests and test sheets/certificates are reported and recorded in accordance with organisational procedures, codes and regulations

5.3. Appropriate calibration and traceability are ensured

5.4. Appropriate MSDS are reported and recorded for applications in accordance with organisational procedures, codes and regulations

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- selecting class of materials for an application based on comparison of properties for a significant range of materials classes
- selecting class of materials for an application suitable to production and construction methods and processes
- identifying, overcoming or compensating for common characteristics, faults or flaws in materials or product
- identifying test methods for materials and components, specific industrial test standards and regulations for particular engineering applications
- identifying test methods for faults or flaws in materials and components or product
- selecting materials following an extensive search of appropriate sources of information, including manufacturer's catalogues and websites
- selecting appropriate tests from a range of possible tests, following an extensive search of appropriate sources of information, including manufacturer's catalogues and websites
- satisfying applicable standards and regulations for materials and components
- sourcing materials test certificates and using the material properties information from them
- sourcing and implementing MSDS
- implementing tests correctly for materials and component faults and properties of materials
- selecting testing methods appropriate to applications
- obtaining appropriate test sheets/certificates for applications
- obtaining appropriate MSDS for application
- completing reports, records and design documentation
- addressing environmental impact and sustainability issues
- reporting, recording and filing test reports and documentation
- implementing materials tests and test sheets/certificates, test calibration and traceability

Required knowledge

Look for evidence that confirms knowledge of:

- properties of materials classes
- the effect of material properties on production and construction methods and processes
- the effect of characteristics, faults or flaws in materials on product and processes
- test methods for materials and components, specific industrial test standards, regulations and authorities related to particular engineering applications
- test methods for faults or flaws in materials and components or product
- methods of accessing and using alternative information sources
- test procedures and typical applications for tests
- sources and uses of information on materials, materials tests, test certificates, regulations, standards, regulatory bodies and industrial authorities
- methods of accessing MSDS

- identification of materials for an application based on comparison of properties of materials
- identification of test for an application based on an understanding of its ability to measure specific material or product properties
- significance of test sheets/certificates to applications
- the need for obtaining and filing test sheets/certificates
- significance of MSDSs and relevance of procedures
- materials selections in relation to design functional requirements
- environmental impact and sustainability assessment
- significance of test reports and documentation to applications
- significance of reporting and recording procedures
- significance of materials tests and test sheets/certificates, test calibration and traceability
- significance of MSDS to applications
- significance of reporting and recording procedures

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to select and test aeronautical engineering materials.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is, the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.
Method of assessment	This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with selecting and testing aeronautical engineering materials or other units requiring the exercise of the skills and knowledge covered by this unit.
Guidance information for assessment	

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Classes of materials, based on properties

Classes of materials include:

- non-ferrous metals and alloys (copper, aluminium, zinc, lead, tin and their alloys), ferrous metals (carbon steels, alloy steels and cast irons), non-metallic composite materials, bearing materials, lubricants, non-metals (timber, ceramics, polymers and fabrics, adhesives and electrical insulation materials), thermal conductors and insulators, electrical conductors, semiconductors and insulators

Properties of materials include:

- strength, elasticity, plasticity, malleability, toughness, brittleness, fatigue endurance, mouldability, weldability, machinability, formability, resistance to creep and stress relaxation, resistance to degradation (e.g. use of plastic fillers to enhance UV resistance), adhesion, electrical, magnetic, thermal, chemical and optical, material structure and effect on properties, and flammability of fabrics

Other factors include:

- corrosion and corrosion protection methods.
- aging of metals
- the effect of manufacturing and construction processes on material properties.
- the effect of property enhancement on design (e.g. adhesives plus sintering replacing some forging and machining of gears on shafts)
- lay-up methods for composite structures.

Cost includes:

- manufacture of material and source of material, typical applications and possibilities

Aeronautical engineering

Aeronautical engineering refers to:

- the engineering discipline concerned with the conceptual development, research, design, manufacture, implementation, installation, commissioning and maintenance of aerospace

	mechanical, hydraulic, pneumatic, fuel and fire products, processes, systems or services for civil and military applications
Australia's national measurement system	<p>Australia's national measurement systems includes:</p> <ul style="list-style-type: none"> • National Standards Commission (legal metrology) • Commonwealth Scientific and Research Organisation (physical standards) • National Association of Testing Authorities, Aust. (Laboratory accreditation) • Standards Australia International Ltd (AS standards specifications)
Standards councils/ societies/ authorities/regulatory bodies	<p>Standards councils/societies/authorities/regulatory bodies include:</p> <ul style="list-style-type: none"> • Australian Standards Council • ASTM • MIL Spec • ASME • ISO <p>Regulatory bodies include:</p> <ul style="list-style-type: none"> • CASA • ADF • United States Federal Aviation Authority, • European Joint Aviation Authority
Standards and codes	<p>Standards and codes include:</p> <ul style="list-style-type: none"> • NDT and mechanical test standards • chemical test standards • electrical test standards • compliance test standards for components
Tests of materials	<p>Tests of materials include:</p> <ul style="list-style-type: none"> • destructive, including tensile, compression, impact, hardness, fatigue, corrosion, stress relaxation and creep, and peel resistance (adhesives) • non-destructive, including hardness, ultrasonics, X-ray, dye penetrant, eddy current, surface friction, conductivity, heat expansion, photoelastic, heat capacity refractive index, magnetic hysteresis loop
Traceability	Traceability ensures test calibrations can be traced back to the relevant base unit in the relevant measurement system

Unit Sector(s)

Engineering science

Competency field

Co-requisite units

Not applicable

MEA351A Maintain airframe systems of basic light fixed wing aircraft

Modification History

Minor formatting and editorial changes made. Prerequisite unit version code updated.

Unit Descriptor

This unit of competency is part of the Mechanical Certificate IV (Aircraft Maintenance Stream) training pathway. It covers the competencies required to maintain basic light fixed wing aircraft airframe systems and components.

Where a CASA licensing outcome is sought this unit forms part of the CASA requirement for the granting of the applicable Aircraft Maintenance Engineer Licence under CASR Part 66, in accordance with the licensing provisions in Section 3, Assessment Guidelines.

Application of the Unit

This unit requires application of hand skills and the use of system/component knowledge and applicable maintenance publications and test equipment to inspect, test and troubleshoot, and replace components of airframe systems of basic light aircraft.

Applications include fixed wing aircraft that have fixed undercarriage and a normally aspirated engine driving a fixed pitch propeller or a small gas turbine engine.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA103B	Plan and organise aviation maintenance work activities
MEA105C	Apply quality standards applicable to aviation maintenance processes
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA108B	Complete aviation maintenance industry documentation
MEA109B	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

1. Inspect basic light fixed wing airframe systems
 - 1.1. Relevant *maintenance documentation* and modification status, including system defect reports, where relevant, are used to identify specific inspection requirements
 - 1.2. Isolation tags are checked and aircraft configured for safe system inspection and operation in accordance with the applicable maintenance manual
 - 1.3. *Airframe system* components are visually or physically checked for external signs of defects in accordance with applicable maintenance manual
 - 1.4. Defects are correctly identified and reported
2. Test/adjust basic light fixed wing airframe systems and components
 - 2.1. Aircraft and system are prepared in accordance with applicable maintenance manual for the application of power/system operation
 - 2.2. Airframe system is functionally tested in accordance with maintenance manual for evidence of serviceability or malfunction
 - 2.3. System adjustment/rigging is performed in accordance with maintenance manual
3. Troubleshoot basic light fixed wing airframe systems
 - 3.1. Available information from maintenance documentation, inspection and test results are used, where necessary, to assist in fault determination
 - 3.2. Maintenance manual fault diagnosis guides and logic processes are used to ensure efficient and accurate *troubleshooting*
 - 3.3. Specialist advice is obtained, where required, to assist with the troubleshooting process
 - 3.4. Airframe system faults are located and the causes of the faults are clearly identified and correctly recorded in maintenance documentation, where required, in accordance with standard enterprise procedures
 - 3.5. Rectification requirements are determined
4. Remove and install basic light fixed wing airframe system components
 - 4.1. System is rendered safe in accordance with the applicable maintenance manual and isolation tags are fitted, where necessary, to ensure personnel safety
 - 4.2. *Airframe system component* removal is carried out in accordance with the applicable maintenance manual
 - 4.3. Required maintenance documentation is accurately completed and correctly processed
 - 4.4. Removed components are tagged, sealed and packaged in accordance with specified procedures
 - 4.5. Components to be installed are checked to confirm correct part numbers, serviceability and modification

status

- 4.6. Mass balance of control surfaces to be installed is checked in accordance with the applicable maintenance manual, if required
- 4.7. Installation is carried out in accordance with the applicable maintenance manual
- 4.8. Required maintenance documentation is completed and processed in accordance with standard enterprise procedures

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- using hand skills, tools and test equipment in the testing, adjustment and troubleshooting of airframe systems and components, including airframe system component removal and installation
- recognising system and component defects/external damage, correct installation and security for the range of airframe systems listed in the Range Statement
- removing, installing and rigging of flight controls
- checking flight control mass balance
- performing system functional tests and checks to isolate system faults and assess post-maintenance serviceability
- effectively using maintenance documentation and relevant fault diagnosis guides in the troubleshooting process and for component removal and installation
- applying standard procedures
- observing all relevant OHS procedures, including the use of MSDS and PPE

Required knowledge

Look for evidence that confirms knowledge of:

- OHS precautions relevant to airframe system maintenance, including the use of MSDS and PPE
- standard trade practices relating to tool and test/rigging equipment usage and installation/securing of system components
- flight control system layout and operation
- theory of flight:
 - airflow
 - conditions of flight
 - lift and forces
 - drag
 - wings, tailplane and vertical stabiliser
 - lift augmentation (flaps, slats and slots)
 - aircraft control surfaces and their function (elevator, ailerons, rudder, elevons and trim tabs)
 - flight control balancing and flutter
 - stability and control and flight control rigging
- system layout and operation:
 - cockpit controls
 - cables and cable tensioning
 - pulleys and fairleads
 - bellcranks

- levers
- control surface horns
- screwjacks
- push/pull rods
- mechanical flight control system maintenance procedures and troubleshooting
- fixed undercarriage and shock absorber systems:
 - undercarriage configurations and types (tailwheel, tricycle and bicycle)
 - relative advantages of undercarriage configurations
 - steering systems
 - types of shock absorber (springs, leaf, coil, spring tube, rubber disc, bungee and oleo)
 - wheels and tyres
 - axles and wheel bearings
 - wheel spats
 - fixed undercarriage maintenance procedures and troubleshooting
- small aircraft brake systems:
 - types of brake system (mechanical and hydraulic)
 - master/slave cylinder hydraulic brake system operation
 - hydraulic fluids and seals
 - rigid and flexible plumbing
 - brake pads and shoes
 - brake discs and drums/linings
 - brake system maintenance procedures and troubleshooting
- cabin heater system layout and operation:
 - heat source (muff heaters)
 - ducting for heating and demisting
 - valves and linkages
 - fan
 - cabin heating system maintenance procedures and troubleshooting
- fuel system layout and operation:
 - fuel tank types and location
 - selector valves and linkages
 - drain valves
 - rigid and flexible plumbing
 - fuel filters
 - boost pumps
- relevant maintenance manuals
- relevant regulatory requirements and standard procedures

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to inspect, test and troubleshoot airframe systems and remove and install a range of airframe system components that is representative of the scope of the listed variables in accordance with relevant maintenance manual instructions while applying all relevant OHS procedures and standard processes.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The underlying skills inherent in this unit should be transferable across a range of inspection, testing and troubleshooting applications (including the timely involvement of supervisors or other trades) associated with airframe systems and components of basic light fixed wing aircraft. It is essential that relevant procedures, cleanliness requirements and safety precautions are fully observed, understood and complied with. Ability to interpret inspection procedures and specifications (allowable limits) and apply them in practice is critical.

Evidence of transferability of skills and knowledge related to inspection, testing, troubleshooting and component removal and installation is essential. This may be demonstrated through application across a range of airframe systems and components as listed in the Range Statement. The application of testing procedures should clearly indicate knowledge of system operation, the relationship of individual components and the links with other systems (if applicable) within the limits of the aircraft/system fault-finding guide before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.

A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of this unit of competency are being achieved under routine supervision on groups listed in the Range Statement, as follows:

- at least one of each system listed in Groups 1 to 5
- a representative range of components from each of Groups 6 to 12.

	This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.
Context of and specific resources for assessment	Competency should be assessed in the work environment or simulated work environment using tools and equipment specified in maintenance documentation. It is also expected that general purpose tools and test equipment found in most routine situations would be used where appropriate.
Method of assessment

9. Remove and install basic rotary wing airframe system components
- 9.1.System is rendered safe in accordance with the applicable maintenance manual and isolation tags are fitted, where necessary, to ensure personnel safety
- 9.2.**Airframe system component** removal is carried out in accordance with the applicable maintenance manual.
- 9.3.Required maintenance documentation is accurately completed and correctly processed
- 9.4.Removed components are tagged, sealed and packaged in accordance with specified procedures
- 9.5.Components to be installed are checked to confirm correct part numbers, serviceability and modification status
- 9.6.Mass balance of control surfaces to be installed is checked in accordance with the applicable maintenance manual, if

required

9.7. Installation is carried out in accordance with the applicable maintenance manual

9.8. Required maintenance documentation is completed and processed in accordance with standard enterprise procedures

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- using hand skills, tools and test equipment in the testing, adjustment and troubleshooting of:
 - rotary wing mechanical control systems
 - helicopter airframe systems and components, including rotors and rotor system
- recognising system and component defects/external damage, correct installation and security for the range of airframe systems listed in the Range Statement
- removing, installing and rigging of rotor systems and rotor/flight controls
- removing and installing the range of airframe components listed in the Range Statement
- checking rotor mass balance
- performing system functional tests and checks to isolate system faults and assess post-maintenance serviceability
- effectively using maintenance documentation and relevant fault diagnosis guides in the troubleshooting process and for component removal and installation
- applying standard procedures
- observing all relevant OHS procedures, including the use of MSDS and PPE

Required knowledge

Look for evidence that confirms knowledge of:

- OHS precautions relevant to airframe system maintenance, including the lifting and handling of heavy components and how to obtain MSDS and PPE
- standard trade practices relating to tool and test/rigging equipment usage and installation/securing of system components
- theory of flight:
 - airflow
 - conditions of flight
 - lift and forces
 - drag
- rotary flight principles:
 - terminology relating to:
 - aerofoils
 - main rotor blades
 - rotor discs
 - rotors (main and tail)
 - aerodynamic characteristics:
 - aerofoil design
 - forces
 - rotor thrust and power requirements
 - vortex ring

- autorotation
 - helicopter stability
- helicopter dynamic components:
 - main rotors:
- blades
- heads
- linkages
 - tail rotors
 - swash plates
 - transmissions and drive shafts
- helicopter structure and airframe systems:
 - structure and layout
 - engine and transmission
 - flight control system layout and operation
 - cabin heater system layout and operation
 - fuel system layout and operation
- helicopter maintenance procedures and troubleshooting
- relevant maintenance manuals
- relevant regulatory requirements and standard procedures, including requirements for engine and rotor system operation

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to inspect, test and troubleshoot basic rotary wing aircraft rotor, rotor control and airframe systems and remove and install rotors, and a range of rotor control and airframe system components that is representative of the scope of the listed variables in accordance with relevant maintenance manual instructions while applying all relevant OHS procedures and standard processes.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The underlying skills inherent in this unit should be transferable across a range of inspection, testing and troubleshooting applications (including the timely involvement of supervisors or other trades) associated with the, rotors, rotor control systems, airframe systems and components of basic rotary wing aircraft. It is essential that relevant procedures, cleanliness requirements and safety precautions are fully observed, understood and complied with. Ability to interpret inspection procedures and specifications (allowable limits) and apply them in practice is critical.

Evidence of transferability of skills and knowledge related to inspection, testing, troubleshooting and component removal and installation is essential. This may be demonstrated through application across a range of rotors, rotor control systems, airframe systems and components as listed in the Range Statement. The application of testing procedures should clearly indicate knowledge of system operation, the relationship of individual components and the links with other systems (if applicable) within the limits of the aircraft/system fault-finding guide before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.

A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of this unit of competency are being achieved under routine supervision on groups listed in the Range Statement, as follows:

- at least one component from each of Groups 1 to 7
- a representative range of components from Groups 8

	<p>and 9.</p> <p>This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.</p>
Context of and specific resources for assessment	<p>Competency should be assessed in the work environment or simulated work environment using tools and equipment specified in maintenance documentation. It is also expected that general purpose tools and test equipment found in most routine situations would be used where appropriate.</p>

Minor formatting and editorial changes made. Prerequisite unit version code updated.

Unit Descriptor

This unit of competency is part of the Mechanical Certificate IV (Aircraft Maintenance Stream) training pathway. It covers the competencies required to maintain basic light fixed and rotary wing aircraft piston engines and fixed pitch propellers.

Where a CASA licensing outcome is sought this unit forms part of the CASA requirement for the granting of the applicable Aircraft Maintenance Engineer Licence under CASR Part 66, in accordance with the licensing provisions in Section 3, Assessment Guidelines.

Application of the Unit

This unit requires application of hand skills, the use of maintenance publications and knowledge of piston engine and system theory to inspect, test and troubleshoot, remove and install normally aspirated piston engines and engine system components. The unit also covers the inspection, maintenance, removal and installation of fixed pitch propellers.

Applications include normally aspirated piston engines of basic light fixed wing aircraft and basic rotary wing aircraft, and fixed pitch propellers.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA103B	Plan and organise aviation maintenance work activities
MEA105C	Apply quality standards applicable to aviation maintenance processes
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA108B	Complete aviation maintenance industry documentation
MEA109B	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

1. Inspect piston engine system and components/systems
 - 1.1. Isolation tags already attached to the system or related systems are checked and aircraft/engine configured for safe system inspection and operation in accordance with applicable maintenance manual
 - 1.2. **Piston engine and components/systems** are visually or physically checked for external and internal signs of defects in accordance with applicable maintenance manual
2. Test piston engine
 - 2.1. Aircraft and engine are correctly prepared in accordance with applicable maintenance manual
 - 2.2. Assistance is provided with **engine and/or system operation** during prescribed test procedures to establish serviceability and correct function in accordance with applicable maintenance manual
3. Troubleshoot piston engine
 - 3.1. Available information from maintenance documentation and inspection and test results is used, where necessary, to assist in fault determination
 - 3.2. Maintenance manual fault diagnosis guide and logical processes are used to ensure efficient and accurate **troubleshooting**
 - 3.3. Specialist advice is obtained, where required, to assist with the troubleshooting process
 - 3.4. Piston engine faults are located and the causes of the faults are clearly identified and correctly recorded in maintenance documentation, where required
 - 3.5. Fault rectification requirements are determined to assist in planning the repair
4. Remove piston engine and engine system components
 - 4.1. Aircraft is prepared and supported and rendered safe in accordance with the applicable maintenance manual and isolation tags are fitted, where necessary, to ensure the safety of personnel and freedom from damage during engine removal
 - 4.2. Removal is carried out in accordance with the applicable maintenance manual
 - 4.3. Engine is tagged and prepared for transport or storage in accordance with the specified procedures
 - 4.4. Required maintenance documentation is completed and processed in accordance with standard enterprise procedures
5. Install piston engine and engine system components
 - 5.1. Engine to be installed is checked to confirm correct part or model numbers, modification status and serviceability
 - 5.2. Installation is carried out in accordance with the

- applicable maintenance manual
- 5.3. Support/safety equipment is removed at the appropriate time to ensure personnel safety and freedom from structural damage
 - 5.4. Required maintenance documentation is completed and processed in accordance with standard enterprise procedures
6. Inspect and maintain fixed pitch propeller
 - 6.1. Engine is rendered safe for propeller inspection in accordance with maintenance manual or enterprise procedures
 - 6.2. **Fixed pitch propeller** is inspected for security, damage and deterioration in accordance with the applicable maintenance manual
 - 6.3. Metal propeller nicks and dents within damage limits are blended out in accordance with maintenance manual procedures
7. Remove fixed pitch propeller
 - 7.1. Engine is rendered safe and the aircraft is prepared for propeller removal in accordance with maintenance manual or enterprise procedures
 - 7.2. Propeller is removed in accordance with maintenance manual procedures
 - 7.3. Removed propeller is tagged and prepared for transport or storage in accordance with specified procedures
 - 7.4. Required maintenance documentation is completed and processed in accordance with standard enterprise procedures
8. Install fixed pitch propeller
 - 8.1. Engine is rendered safe and the aircraft is prepared for propeller installation in accordance with maintenance manual or enterprise procedures
 - 8.2. Propeller to be installed is checked to confirm correct part or number, modification status and serviceability
 - 8.3. Installation is carried out in accordance with the applicable maintenance manual
 - 8.4. Required maintenance documentation is completed and processed in accordance with standard enterprise procedures

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying relevant OHS procedures, including the use of MSDS and PPE
- using relevant maintenance documentation and aircraft manuals
- recognising external and internal signs of defects in piston engines, components and system components visual/physical inspection
- assisting with testing of piston engine and engine system operation, be able to operate systems, monitor indications, record parameters and recognise correct function
- compiling engine condition monitoring records
- rigging and adjusting engine controls and systems
- using fault diagnosis guides and equivalent data to accurately and efficiently troubleshoot the causes of unserviceabilities in piston engines and engine systems, clearly record details and identify the required rectification actions
- correctly removing and installing piston engine, engine components and fixed pitch propellers, including spinners
- inspecting propellers for security, damage and deterioration
- blending out metal propeller nicks and dents that are within maintenance manual limits

Required knowledge

Look for evidence that confirms knowledge of:

- OHS procedures associated with engine and propeller maintenance, including lifting and handling of heavy objects
- how to obtain MSDS
- use of PPE
- relevant maintenance manuals
- relevant regulatory requirements and standard procedures
- fault diagnosis techniques
- piston engine and engine system layout and operation:
 - four stroke engine theory of operation and performance
 - cylinder configurations
 - construction (components and materials)
 - carburetors and air induction systems
 - fuel injection systems
 - fuels and their characteristics
 - ignition systems
 - lubricating systems and lubricants
 - cooling systems
 - exhaust systems
 - accessory drives and mounts

- normally aspirated piston engine maintenance requirements and troubleshooting procedures
- system component operation, including electrical and instrument system interfaces:
 - magnetos and ignition harnesses
 - spark plugs
 - fuel pumps
 - fuel filters
 - oil pumps
 - oil filters
 - oil tanks
 - vacuum pumps
 - generators
 - starter motors
 - oil pressure gauges (direct reading)
 - temperature gauges (direct reading)
 - tachometers
 - manifold pressure gauges
 - maintenance requirements and troubleshooting procedures
- removal and installation procedures for piston engines and engine components:
 - removal procedures and handling
 - control linkages
 - electrical wiring
 - engine instrument connections
 - installation and rigging
 - ground running
 - system component removal, installation and system testing
- propellers, materials and damage and deterioration criteria:
 - fixed pitch propeller types, terminology and theory:
- tractor/pusher
- matching to engine and aircraft
- leading edge/trailing edge
- blade stations
- forces acting on a propeller
- propeller balance
 - materials and construction methods:
- metal propeller metals, construction and surface protection
- wooden propeller materials, construction and surface protection
- composite propeller materials, construction and surface protection
- damage and deterioration
 - methods of blending out of minor damage to metal propellers

- propeller removal and installation procedures

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to apply hand skills, use maintenance publications and engine and system theory knowledge to maintain fixed pitch propellers and to inspect, test, troubleshoot, remove and install piston engines and engine system components on fixed or rotary wing aircraft while applying all relevant safety precautions.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The underlying skills inherent in this unit should be transferable across a range of inspection, testing, troubleshooting and removal and installation tasks (including the timely involvement of supervisor or other trades) associated with engines, engine systems and fixed pitch propellers. It is essential that system testing procedures take into account all safety precautions associated with piston engine system operation, and that awareness be demonstrated of dual inspection requirements associated with work on engine controls.

Evidence of transferability of skills and knowledge related to inspection, testing and troubleshooting is essential. This may be demonstrated through application across a number of engine systems or types and propellers made from different materials. Ability to interpret inspection procedures and specifications (allowable limits) and apply them in practice is critical. The application of testing procedures and functional rigging checks should also indicate knowledge of system operation. Engine system operation knowledge, the relationship of individual components and the links with other systems will be necessary to supplement evidence of ability to carry out rigging checks and troubleshoot the system within the limits of the aircraft/system fault-finding guide before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.

A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on at least one item from each of Groups 1 to 6 listed in

	the Range Statement (Group 6 may be omitted where not applicable to the enterprise), and on at least one type of fixed pitch propeller. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.
Context of and specific resources for assessment	Competency should be assessed in the work environment or simulated work environment using tools and equipment specified in maintenance documentation. It is also expected that general purpose tools and test equipment found in most routine situations would be used where appropriate.
Method of assessment	
Guidance information for assessment	

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Note	Range statements listed below are numbered to facilitate specification of the assessment requirements included in the Evidence Guide
Piston engines and components/systems	<p>Piston engines and components/systems may include:</p> <ol style="list-style-type: none"> 1. Normally aspirated engine (all types), main components and accessories/drives 2. Control system 3. Starter system 4. Fuel, air systems 5. Exhaust system 6. Oil system (if dry sump)
Engine and/or system operation	<p>Engine and/or system operation:</p> <ul style="list-style-type: none"> • testing of engines fitted to helicopters (where auxiliary drive is not available) may be carried out through the applicant directing a pilot qualified on type
Troubleshooting	Troubleshooting involves the use of test sets, downloaded maintenance data and fault-finding charts or similar, to line replacement level
Fixed pitch propellers	<p>Fixed pitch propeller may include a spinner and the propeller may be made from:</p> <ul style="list-style-type: none"> • metal • composite • wood
Application	<p>Application of this unit may relate to:</p> <ul style="list-style-type: none"> • scheduled or unscheduled maintenance • individual or team-related activities
Procedures and requirements	Refer to industry standard procedures specified by manufacturers, regulatory authorities or the enterprise

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

1. Inspect light aircraft pneumatic systems
 - 1.1.Relevant maintenance documentation and modification status, including system defect reports, where relevant, are used to identify specific inspection requirements
 - 1.2.Isolation tags are checked and aircraft configured for safe system inspection and operation in accordance with the applicable maintenance manual
 - 1.3.Components of *pneumatic systems* are visually or physically checked for external signs of defects in accordance with applicable maintenance manual
 - 1.4.Defects are correctly identified and reported
2. Test/adjust light aircraft pneumatic systems and components
 - 2.1.Aircraft and system are prepared in accordance with applicable maintenance manual for the application of power/system operation
 - 2.2.Pneumatic system is functionally tested in accordance with maintenance manual for evidence of serviceability or malfunction
 - 2.3.System adjustment is performed in accordance with maintenance manual
3. Troubleshoot light aircraft pneumatic systems
 - 3.1.Available information from maintenance documentation, inspection and test results is used, where necessary, to assist in fault determination
 - 3.2.Maintenance manual fault diagnosis guides and logic processes are used to ensure efficient and accurate *troubleshooting*
 - 3.3.Specialist advice is obtained, where required, to assist with the troubleshooting process
 - 3.4.Pneumatic system faults are located and the causes of the faults are clearly identified and correctly recorded in maintenance documentation, where required, in accordance with standard enterprise procedures
 - 3.5.Rectification requirements are determined
4. Remove and install light aircraft pneumatic system components
 - 4.1.System is rendered safe in accordance with the applicable maintenance manual and isolation tags are fitted, where necessary, to ensure personnel safety
 - 4.2.*Pneumatic system component* removal is carried out in accordance with the applicable maintenance manual
 - 4.3.Required maintenance documentation is accurately completed and correctly processed
 - 4.4.Removed components are tagged, sealed and packaged in accordance with specified procedures
 - 4.5.Components to be installed are checked to confirm correct part numbers, serviceability and modification status

- 4.6. Installation is carried out in accordance with the applicable maintenance manual
- 4.7. Required maintenance documentation is completed and processed in accordance with standard enterprise procedures

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- using hand skills, tools and test equipment in the testing, adjustment and troubleshooting of light aircraft pneumatic systems and components, including pneumatic system component removal and installation
- recognising pneumatic system and component defects/external damage, correct installation and security for the types of systems listed in the Range Statement
- performing system functional tests and checks to isolate system faults and assess post-maintenance serviceability
- effectively using maintenance documentation and relevant fault diagnosis guides in the troubleshooting process and for component removal and installation
- applying standard procedures
- observing of all relevant OHS procedures, including use of MSDS and PPE

Required knowledge

Look for evidence that confirms knowledge of:

- OHS precautions relevant to light aircraft pneumatic system maintenance and how to obtain MSDS and PPE
- standard trade practices relating to tool and test equipment usage and installation/securing of system components
- types of light aircraft pneumatic system and components thereof:
 - vacuum
 - positive pressure
 - high pressure
- pneumatic system layout, operation and characteristics and system component operation and construction (including electrical and instrument system interfaces)
- how to configure the aircraft for inspection, testing and troubleshooting of pneumatic systems and components
- pneumatic system maintenance requirements and troubleshooting
- component attachment methods
- connection hardware and couplings
- electrical circuit isolation and plug removal and installation
- relevant maintenance manuals
- relevant regulatory requirements and standard procedures

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to inspect, test and troubleshoot light aircraft pneumatic systems and remove and install a range of pneumatic system components that is representative of the scope of the listed variables in accordance with relevant maintenance manual instructions while applying all relevant OHS procedures and standard processes.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The underlying skills inherent in this unit should be transferable across a range of inspection, testing and troubleshooting applications (including the timely involvement of supervisors or other trades) associated with light aircraft pneumatic systems and components. It is essential that relevant procedures, cleanliness requirements and safety precautions are fully observed, understood and complied with. Ability to interpret inspection procedures and specifications (allowable limits) and apply them in practice is critical.

Evidence of transferability of skills and knowledge related to inspection, testing, troubleshooting and component removal and installation is essential. This may be demonstrated through application across pneumatic systems and components as listed in the Range Statement. The application of testing procedures should clearly indicate knowledge of system operation, the relationship of individual components and the links with other systems (if applicable) within the limits of the aircraft/system fault-finding guide before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.

A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of this unit of competency are being achieved under routine supervision on a system as listed in Group 1 and on a representative range of components as listed in Groups 2 to 5 in the Range Statement.

This shall be established via the records in the Log of Industrial Experience and Achievement or, where

	appropriate, an equivalent Industry Evidence Guide.
Context of and specific resources for assessment	Competency should be assessed in the work environment or simulated work environment using tools and equipment specified in maintenance documentation. It is also expected that general purpose tools and test equipment found in most routine situations would be used where appropriate.

- recognising pressurisation system and component defects/external damage, correct installation and security for the types of system components listed in the Range Statement
- performing system functional tests and checks to isolate system faults and assess post-maintenance serviceability
- effectively using maintenance documentation and relevant fault diagnosis guides in the troubleshooting process and for component removal and installation
- applying standard procedures
- observing all relevant OHS procedures, including use of MSDS and PPE

Required knowledge

Look for evidence that confirms knowledge of:

- OHS precautions relevant to light piston engine aircraft pressurisation system maintenance and how to obtain MSDS and PPE
- physiological aspects relating to high altitude flight:
 - human oxygen requirements and hypoxia
 - human temperature requirements and hypothermia
- standard trade practices relating to tool and test equipment usage and installation/securing of system components
- sources of pressurised air (cabin supercharger, air pump or engine turbocharger)
- the relationship between cabin altitude and pressure differential and related structural limitations
- pressurisation system:
 - layout
 - operation and characteristics
 - system component operation and construction:
- outflow valves
- pressure controllers
- safety valves
- negative pressure relief valves
- dump valves
- ducting and outlets
 - electrical and instrument interfaces, including warning and cabin pressure indication systems
- interface with heating and air conditioning systems
- how to configure the aircraft for inspection, testing and troubleshooting of pressurisation

systems and components

- pressurisation system maintenance requirements and troubleshooting
- component attachment methods
- connection hardware and couplings
- relevant maintenance manuals
- relevant regulatory requirements and standard procedures
- maintenance requirements and troubleshooting procedures

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to inspect, test and troubleshoot light piston engine aircraft pressurisation systems and remove and install a range of pressurisation system components that is representative of the scope of the listed variables in accordance with relevant maintenance manual instructions while applying all relevant OHS procedures and standard processes.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The underlying skills inherent in this unit should be transferable across a range of inspection, testing and troubleshooting applications (including the timely involvement of supervisors or other trades) associated with light piston engine aircraft pressurisation systems and components. It is essential that relevant procedures, cleanliness requirements and safety precautions are fully observed, understood and complied with. Ability to interpret inspection procedures and specifications (allowable limits) and apply them in practice is critical.

Evidence of transferability of skills and knowledge related to inspection, testing, troubleshooting and component removal and installation is essential. This may be demonstrated through application across pressurisation systems and components as listed in the Range Statement. The application of testing procedures should clearly indicate knowledge of system operation, the relationship of individual components and the links with other systems (if applicable) within the limits of the aircraft/system fault-finding guide before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.

A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of this unit of competency are being achieved under routine supervision on a pressurisation system and on a representative range of components as listed in Groups 1 to 5 in the Range Statement. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.

Context of and specific resources for assessment	Competency should be assessed in the work environment or simulated work environment using tools and equipment specified in maintenance documentation. It is also expected that general purpose tools and test equipment found in most routine situations would be used where appropriate.
Method of assessment	
Guidance information for assessment	

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Note	Range statements listed below are numbered to facilitate specification of the assessment requirements included in the Evidence Guide
Pressurisation system components	Pressurisation system components may include: <ol style="list-style-type: none"> 1. Pressure controllers 2. Outflow valves 3. Safety valves 4. Negative pressure relief valves 5. Ducting
Troubleshooting	Troubleshooting involves the use of test sets, downloaded maintenance data and fault-finding charts or similar, to line replacement level
Application	Application of this unit may relate to: <ul style="list-style-type: none"> • scheduled or unscheduled maintenance • individual or team-related activities
Procedures and requirements	Refer to industry standard procedures specified by manufacturers, regulatory authorities or the enterprise

Unit Sector(s)

Aviation maintenance

Competency field

Co-requisite units

Not applicable

MEA357A Inspect, test and repair aircraft fabric surfaces

Modification History

Minor formatting and editorial changes made. Prerequisite unit version code updated.

Unit Descriptor

This unit of competency is part of the Mechanical Certificate IV (Aircraft Maintenance Stream) training pathway. It covers the competencies required to inspect, test and repair aircraft fabric surfaces.

Where a CASA licensing outcome is sought this unit forms part of the CASA requirement for the granting of the applicable Aircraft Maintenance Engineer Licence under CASR Part 66, in accordance with the licensing provisions in Section 3, Assessment Guidelines.

Application of the Unit

This unit requires application of hand skills, knowledge of fabric covering systems and maintenance publications to inspect, test and repair aircraft fabric surfaces.

Applications include aircraft and aircraft components that are covered with fabric.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA103B	Plan and organise aviation maintenance work activities
MEA105C	Apply quality standards applicable to aviation maintenance processes
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA108B	Complete aviation maintenance industry documentation
MEA109B	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

1. Inspect/test aircraft fabric surfaces
 - 1.1. Relevant maintenance documentation and modification status, including defect reports, where relevant, are used to identify specific *inspection/testing* requirements
 - 1.2. Appropriate preparation and access to the aircraft structure is undertaken to allow for proper inspection in accordance with maintenance documentation
 - 1.3. Aircraft fabric-covered surfaces are inspected/tested for signs of damage, deterioration or loss of tensile strength in accordance with maintenance documentation and approved procedures
 - 1.4. Damage or deterioration is assessed against limits specified by maintenance manual or other approved data to determine if *repair*, restoration or replacement is required
2. Repair aircraft fabric surfaces
 - 2.1. Extent of damage is correctly assessed to assist in determining repair procedure
 - 2.2. Structure is supported and prepared in accordance with the applicable maintenance manual to ensure personal safety and freedom from damage
 - 2.3. Appropriate repair scheme is identified in accordance with maintenance manual and/or approved data
 - 2.4. All materials and equipment required are organised
 - 2.5. Fabric repairs are performed, in accordance with approved repair scheme, ensuring that aircraft standard practices are used and process requirements are carried out
 - 2.6. Work area is cleaned of all waste material or contaminants
 - 2.7. Components are adjusted and/or re-balanced, where necessary, to operate within prescribed specifications
 - 2.8. Required maintenance/repair documentation is completed and processed in accordance with standard enterprise procedures
 - 2.9. Where required, repaired components or assemblies are tagged, sealed and packaged or cradled in accordance with specified procedures

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying relevant OHS procedures, including the selection and use of MSDS and PPE
- using approved maintenance documentation and aircraft publications relating to aircraft fabric surfaces
- testing the soundness of fabric surfaces
- recognising and assessing fabric surface damage and deterioration
- recognising defective doping
- identifying and applying applicable repair and surface rejuvenation schemes

Required knowledge

Look for evidence that confirms knowledge of:

- OHS hazards associated with fabric covering processes and how to obtain relevant MSDS and PPE
- regulatory requirements relating to the repair of fabric surfaces
- industry publications relating to the repair of fabric surfaces
- aircraft fabric surface covering and finishing materials and principles
- fabric-covered component attachment methods
- types of fabric and related characteristics
- types of tape, cord and thread and their relative advantages and disadvantages
- cements and finishing scheme materials, their characteristics, uses, storage requirements and related safety precautions
- inspection and testing requirements for existing fabric coverings and new fabric prior to use
- the criteria for fabric rejuvenation, repairs and repair methods, including the need for re-balancing of flight control surfaces after fabric rejuvenation or repair
- the application of flight loads to fabric-covered surfaces, and related failure mechanisms

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying relevant OHS procedures, including the correct selection and use of MSDS and PPE
- using approved maintenance documentation and aircraft publications relating to aircraft fabric surfaces
- inspecting structural members, wiring, grommets and system components and initiation of any necessary repair or rectification action
- fabricating and fitting fabric covering with appropriately placed inspection panels, zips and drainage holes
- applying fabric finishing scheme ready for paint
- recognising defective doping

Required knowledge

Look for evidence that confirms knowledge of:

- OHS hazards and how to obtain and use relevant MSDS and PPE
- regulatory requirements and industry publications relating to fabric covering of aircraft surfaces
- aircraft fabric surface covering and finishing materials and principles
- fabric-covered component attachment methods
- types of fabric and related characteristics
- types of tape, cord and thread and their relative advantages and disadvantages
- cements and finishing scheme materials, their characteristics, uses, storage requirements and related safety precautions
- fabric sewing techniques
- application techniques for cements and finishing schemes
- inspection and testing requirements for new fabric prior to use
- the need for re-balancing of flight control surfaces after re-covering, finishing scheme application and painting
- aircraft structure and system inspection requirements prior to re-covering with fabric
- the application of flight loads to fabric-covered surfaces, and related failure mechanisms
- the methods and procedures used (including doping and finishing) in re-covering components, such as wings, fuselages and control surfaces
- the requirements for the placement of inspection panels and zips, and for the creation of drainage holes

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

MEA360A Maintain aircraft diesel engines

Modification History

Minor formatting and editorial changes made. Unit version codes updated in unit application.

Unit Descriptor

This unit of competency is part of the Mechanical Certificate IV (Aircraft Maintenance Stream) training pathway. It covers the competencies required to maintain installed aircraft diesel engines.

Where a CASA licensing outcome is sought this unit forms part of the CASA requirement for the granting of the chosen Aircraft Maintenance Engineer Licence under CASR Part 66, in accordance with the licensing provisions in Section 3, Assessment Guidelines.

Application of the Unit

This unit requires application of hand skills, the use of maintenance publications and knowledge of diesel engine and system theory to inspect, test and troubleshoot, remove and install aircraft diesel engines and engine system components.

Applications include diesel engines fitted to light aircraft and driving fixed pitch propellers. Where the engine is driving a constant speed propeller, MEA307C Remove and install propeller systems and components and MEA315C Inspect, test and troubleshoot propeller systems and components, will also be required. FADEC systems are covered by MEA279A Inspect, test and troubleshoot full authority digital engine control systems.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

1. Inspect diesel engine and components/systems
 - 1.1. Isolation tags already attached to the system or related systems are checked and aircraft/engine configured for safe system inspection and operation in accordance with applicable maintenance manual
 - 1.2. ***Diesel engine and components/systems*** are visually or physically checked for external and internal signs of defects in accordance with applicable maintenance manual
2. Test diesel engine
 - 2.1. Aircraft and engine are correctly prepared in accordance with applicable maintenance manual
 - 2.2. Built-in system test functions and status displays are activated, where applicable, outputs recorded and interpreted
 - 2.3. Assistance is provided with engine and/or system operation during prescribed test procedures to establish serviceability and correct function in accordance with applicable maintenance manual
3. Troubleshoot diesel engine
 - 3.1. Available information from maintenance documentation and inspection and test results is used, where necessary, to assist in fault determination
 - 3.2. Maintenance manual fault diagnosis guide and logical processes are used to ensure efficient and accurate ***troubleshooting***
 - 3.3. Specialist advice is obtained, where required, to assist with the troubleshooting process
 - 3.4. Diesel engine faults are located and the causes of the faults are clearly identified and correctly recorded in maintenance documentation, where required
 - 3.5. Fault rectification requirements are determined to assist in planning the repair
4. Remove diesel engine and engine system components
 - 4.1. Aircraft is prepared and supported and rendered safe in accordance with the applicable maintenance manual and isolation tags are fitted, where necessary, to ensure the safety of personnel and freedom from damage during engine removal
 - 4.2. Removal is carried out in accordance with the applicable maintenance manual
 - 4.3. Engine is tagged and prepared for transport or storage in accordance with the specified procedures
 - 4.4. Required maintenance documentation is completed and processed in accordance with standard enterprise procedures

5. Install diesel engine and engine system components

- 5.1.Engine to be installed is checked to confirm correct part or model numbers, modification status and serviceability
- 5.2.Installation is carried out in accordance with the applicable maintenance manual
- 5.3.Support/safety equipment is removed at the appropriate time to ensure personnel safety and freedom from structural damage
- 5.4.Required maintenance documentation is completed and processed in accordance with standard enterprise procedures

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying relevant OHS procedures, including the use of MSDS and PPE
- using relevant maintenance documentation and aircraft manuals
- recognising external and internal signs of defects in aircraft diesel engines, components and system components through visual/physical inspection
- assisting with testing of diesel engine and engine system operation, be able to operate systems, monitor indications, record parameters and recognise correct function
- compiling engine condition monitoring records
- rigging and adjusting engine controls and systems other than FADEC systems
- using fault diagnosis guides and equivalent data to accurately and efficiently troubleshoot the causes of unserviceabilities in diesel engines and engine systems, clearly record details and identify the required rectification actions.
- correctly removing and installing diesel engines and engine components

Required knowledge

Look for evidence that confirms knowledge of:

- OHS procedures associated with engine and propeller maintenance, including lifting and handling of heavy objects and how to obtain MSDS and PPE
- fault diagnosis techniques
- two and four stroke diesel aircraft engines and engine system layout and operation:
 - principles of operation of two and four stroke diesel engines
 - component function, construction and materials
 - engine operation
 - engine power, efficiency and performance
- diesel aircraft engine super/turbo charging systems
- diesel aircraft engine fuels and lubricating oils
- diesel fuel injection systems
- interfaces between engine systems and FADEC
- diesel aircraft engine induction systems
- diesel aircraft engine cooling systems (liquid and air)
- diesel aircraft engine exhaust systems
- system component operation, including electrical and instrument system interfaces
- dry sump lubrication systems
- removal and installation procedures for diesel aircraft engines and engine components
- diesel aircraft engine maintenance requirements and troubleshooting
- relevant maintenance manuals
- relevant regulatory requirements and standard procedures

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to apply hand skills, use maintenance publications and engine and system theory knowledge to inspect, test, troubleshoot, remove and install aircraft diesel engines and engine system components on fixed or rotary wing aircraft while applying all relevant safety precautions.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The underlying skills inherent in this unit should be transferable across a range of inspection, testing, troubleshooting and removal and installation tasks (including the timely involvement of supervisor or other trades) associated with diesel aircraft engines and engine systems. It is essential that system testing procedures take into account all safety precautions associated with diesel engine system operation (including interfaces with FADEC systems) and that awareness be demonstrated of dual inspection requirements associated with work on engine controls.

Evidence of transferability of skills and knowledge related to inspection, testing and troubleshooting is essential. This may be demonstrated through application across a number of engine systems or types. Ability to interpret inspection procedures and specifications (allowable limits) and apply them in practice is critical. The application of testing procedures and functional checks should also indicate knowledge of system operation. Engine system operation knowledge, the relationship of individual components and the links with other systems will be necessary to supplement evidence of ability to carry out engine control system checks and troubleshoot the system within the limits of the aircraft/system fault-finding guide before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.

A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on at least one item from each of Groups 1 to 8 listed in

	the Range Statement (Group 8 may be omitted where not applicable to the enterprise). This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.
Context of and specific resources for assessment	Competency should be assessed in the work environment or simulated work environment using tools and equipment specified in maintenance documentation. It is also expected that general purpose tools and test equipment found in most routine situations would be used where appropriate.
Method of assessment	
Guidance information for assessment	

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Note	Range statements listed below are numbered to facilitate specification of the assessment requirements included in the Evidence Guide
Diesel engines and components/systems	<p>Diesel engines and components/systems may include:</p> <ol style="list-style-type: none"> 1. Two and four stroke diesel aircraft engines, main components and accessories/drives 2. Super/turbo charging systems 3. Control system/FADEC interface 4. Starter system 5. Fuel and air systems 6. Cooling system (liquid or air as applicable to enterprise) 7. Exhaust system 8. Oil system (if dry sump)
Engine testing	Testing of engines fitted to helicopters (where auxiliary drive is not available) may be carried out through the individual directing a pilot qualified on type
Troubleshooting	Troubleshooting involves the use of test sets, downloaded maintenance data and fault-finding charts or similar, to line replacement level
Application	<p>Application of this unit may relate to:</p> <ul style="list-style-type: none"> • scheduled or unscheduled maintenance • individual or team-related activities
Procedures and requirements	Refer to industry standard procedures specified by manufacturers, regulatory authorities or the enterprise

Competency field

Co-requisite units

MEA353A Maintain basic light aircraft engines and propellers

MEA361A Maintain aircraft two stroke petrol engines

Modification History

Minor formatting and editorial changes made. Unit version codes updated in unit application.

Unit Descriptor

This unit of competency is part of the Mechanical Certificate IV (Aircraft Maintenance Stream) training pathway. It covers the competencies required to maintain installed aircraft two stroke petrol engines.

Where a CASA licensing outcome is sought this unit forms part of the CASA requirement for the granting of the chosen Aircraft Maintenance Engineer Licence under CASR Part 66, in accordance with the licensing provisions in Section 3, Assessment Guidelines.

Application of the Unit

This unit requires application of hand skills, the use of maintenance publications and knowledge of two stroke petrol engine and system theory to inspect, test and troubleshoot, remove and install aircraft two stroke petrol engines and engine system components.

Applications include aircraft two stroke petrol engines driving fixed pitch propellers. Where the engine is driving a constant speed propeller, MEA307C Remove and install propeller systems and components and MEA315C Inspect, test and troubleshoot propeller systems and components, will also be required.

Elements and Performance Criteria

- | | |
|--|--|
| 1. Inspect two stroke petrol engine and components/systems | <p>1.1. Isolation tags already attached to the system or related systems are checked and aircraft/engine configured for safe system inspection and operation in accordance with applicable maintenance manual</p> <p>1.2. Two stroke petrol engine and components/systems are visually or physically checked for external and internal signs of defects in accordance with applicable maintenance manual</p> |
| 2. Test two stroke petrol engines | <p>2.1. Aircraft and engine are correctly prepared in accordance with applicable maintenance manual</p> <p>2.2. Assistance is provided with engine and/or system operation during prescribed test procedures to establish serviceability and correct function in accordance with applicable maintenance manual</p> |
| 3. Troubleshoot two stroke petrol engines | <p>3.1. Available information from maintenance documentation and inspection and test results is used, where necessary, to assist in fault determination</p> <p>3.2. Maintenance manual fault diagnosis guide and logical processes are used to ensure efficient and accurate troubleshooting</p> <p>3.3. Specialist advice is obtained, where required, to assist with the troubleshooting process</p> <p>3.4. Two stroke petrol engine faults are located and the causes of the faults are clearly identified and correctly recorded in maintenance documentation, where required</p> <p>3.5. Fault rectification requirements are determined to assist in planning the repair</p> |
| 4. Remove two stroke petrol engine and engine system components | <p>4.1. Aircraft is prepared and supported and rendered safe in accordance with the applicable maintenance manual and isolation tags are fitted, where necessary, to ensure the safety of personnel and freedom from damage during engine removal</p> <p>4.2. Removal is carried out in accordance with the applicable maintenance manual</p> <p>4.3. Engine is tagged and prepared for transport or storage in accordance with the specified procedures</p> <p>4.4. Required maintenance documentation is completed and processed in accordance with standard enterprise procedures</p> |
| 5. Install two stroke petrol engine and engine system components | <p>5.1. Engine to be installed is checked to confirm correct part or model numbers, modification status and serviceability</p> <p>5.2. Installation is carried out in accordance with the</p> |

applicable maintenance manual

5.3. Support/safety equipment is removed at the appropriate time to ensure personnel safety and freedom from structural damage

5.4. Required maintenance documentation is completed and processed in accordance with standard enterprise procedures

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying relevant OHS procedures, including the use of MSDS and PPE
- using relevant maintenance documentation and aircraft manuals
- recognising external and internal signs of defects in two stroke petrol aircraft engines, components and system components through visual/physical inspection
- assisting with testing of two stroke petrol engine and engine system operation, be able to operate systems, monitor indications, record parameters and recognise correct function
- compiling engine condition monitoring records
- rigging and adjusting engine controls and systems
- using fault diagnosis guides and equivalent data to accurately and efficiently troubleshoot the causes of unserviceabilities in two stroke petrol engines and engine systems, clearly record details and identify the required rectification actions
- correctly removing and installing two stroke petrol engine and engine components

Required knowledge

Look for evidence that confirms knowledge of:

- OHS procedures associated with engine maintenance, including lifting and handling of heavy objects and how to obtain MSDS and PPE
- fault diagnosis techniques
- two stroke petrol aircraft engine layout and operation:
 - principles of operation of two stroke engines
 - component function, construction and materials
 - engine operation
 - engine power, efficiency and performance
- two stroke aircraft engine fuels, oils and fuel/oil mixing
- components, layout and operation of two stroke petrol aircraft engine:
 - fuel systems
 - ignition systems:
 - magneto
 - coil
 - spark plugs
 - ignition harnesses
 - switches
 - starting systems
 - induction systems
 - cooling systems (liquid and air)
 - exhaust systems
 - electrical and instrument system interfaces:

- battery charging system
- tachometer
- removal and installation procedures for two stroke petrol aircraft engines and engine components
- petrol two stroke aircraft engine maintenance requirements and troubleshooting
- relevant maintenance manuals
- relevant regulatory requirements and standard procedures

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to apply hand skills, use maintenance publications and engine and system theory knowledge to inspect, test, troubleshoot, remove and install aircraft two stroke petrol engines and engine system components while applying all relevant safety precautions.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The underlying skills inherent in this unit should be transferable across a range of inspection, testing, troubleshooting and removal and installation tasks (including the timely involvement of supervisor or other trades) associated with two stroke petrol aircraft engines and engine. It is essential that system testing procedures take into account all safety precautions associated with two stroke petrol engine system operation and that awareness be demonstrated of dual inspection requirements associated with work on engine controls.

Evidence of transferability of skills and knowledge related to inspection, testing and troubleshooting is essential. This may be demonstrated through application across a number of engine systems or types. Ability to interpret inspection procedures and specifications (allowable limits) and apply them in practice is critical. The application of testing procedures and functional checks should also indicate knowledge of system operation. Engine system operation knowledge, the relationship of individual components and the links with other systems will be necessary to supplement evidence of ability to carry out engine control system checks and troubleshoot the system within the limits of the aircraft/system fault-finding guide before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.

A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on at least one item from each of Groups 1 to 7 listed in the Range Statement. This shall be established via the records in the Log of Industrial Experience and

	Achievement or, where appropriate, an equivalent Industry Evidence Guide.
Context of and specific resources for assessment	Competency should be assessed in the work environment or simulated work environment using tools and equipment specified in maintenance documentation. It is also expected that general purpose tools and test equipment found in most routine situations would be used where appropriate.
Method of assessment

system components

- 5.2. Installation is carried out in accordance with the applicable maintenance manual
- 5.3. Vapour cycle air conditioning system is recharged with refrigerant, where necessary, in accordance with maintenance manual procedures and regulatory requirements
- 5.4. Vapour cycle air conditioning system is tested for correct function and freedom from refrigerant leaks if system recharging has been performed
- 5.5. Required maintenance documentation is completed and processed in accordance with standard enterprise procedures

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying relevant OHS procedures, including the selection and use of applicable MSDS and PPE
- complying with regulatory requirements regarding the de-gassing of vapour cycle air conditioning systems
- using relevant maintenance documentation and aircraft manuals
- recognising external and internal signs of defects in vapour cycle air conditioning systems and system components through visual/physical inspection
- testing of vapour cycle air conditioning system operation, be able to operate systems and leak testing equipment, monitor indications and recognise correct function
- using specialist equipment to evacuate and recharge refrigerant
- using fault diagnosis guides and equivalent data to accurately and efficiently troubleshoot the causes of unserviceabilities in vapour cycle air conditioning systems, clearly recording details and identifying the required rectification actions
- correctly removing and installing vapour cycle air conditioning system electrical and mechanical components

Required knowledge

Look for evidence that confirms knowledge of:

- OHS procedures associated with vapour cycle air conditioning system maintenance, including the selection and use of PPE
- how to obtain applicable MSDS
- regulations applying to the evacuation and recharging of refrigerant
- fault diagnosis techniques
- vapour cycle air conditioning system layout and operation
- vapour cycle air conditioning system electrical and mechanical component operation:
 - compressor
 - condenser
 - receiver dryer
 - thermal expansion valve
 - evaporator
 - magnetic clutch and drive system:
- belt
- power takeoff
- electric motor
- hydraulic motor
- pneumatic
 - condenser extension and retraction system

- blower
- throttle system shutoff
- temperature control system
- refrigerant used in aircraft vapour cycle air conditioning systems
- lubricants used in compressors
- equipment used to test systems and evacuate and recharge refrigerant
- procedures for evacuating and recharging system refrigerant
- refrigerant leak testing techniques and equipment
- removal and installation procedures for vapour cycle air conditioning system components
- vapour cycle air conditioning system maintenance requirements
- relevant maintenance manuals
- relevant regulatory requirements and standard procedures

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to apply hand skills, use maintenance publications and engine and system theory knowledge to inspect, test and troubleshoot vapour cycle air conditioning systems and to remove and install system components while applying all relevant safety precautions.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The underlying skills inherent in this unit should be transferable across a range of inspection, testing, troubleshooting and removal and installation tasks (including the timely involvement of supervisor or other trades) associated with vapour cycle air conditioning systems and components. It is essential that system testing procedures take into account all safety precautions associated with vapour cycle air conditioning system operation and testing, and that regulations relating to the evacuation and recharging of refrigerant be strictly observed.

Evidence of transferability of skills and knowledge related to inspection, testing and troubleshooting is essential. This may be demonstrated through application across a number of aircraft vapour cycle air conditioning systems. Ability to interpret inspection procedures and specifications (allowable limits) and apply them in practice is critical. The application of testing procedures and functional checks should also indicate knowledge of system operation and regulations relating to refrigerant. Vapour cycle air conditioning system operation knowledge, the relationship of individual components and the links with other systems will be necessary to supplement evidence of ability to carry out engine control system checks and troubleshoot the system within the limits of the aircraft/system fault-finding guide before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.

A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of

	competency are being achieved under routine supervision on a system and a representative range of components in Groups 1 to 6 as listed in the Range Statement. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.
Context of and specific resources for assessment	Competency should be assessed in the work environment or simulated work environment using tools and equipment specified in maintenance documentation. It is also expected that general purpose tools and test equipment found in most routine situations would be used where appropriate.
Method of assessment

Unit Sector(s)

Aviation maintenance

Competency field

Co-requisite units

Not applicable

MEA363B Inspect, repair and maintain structures and related components of non-pressurised small aircraft

Modification History

Knowledge requirements and Range Statement revised to include additional inspection coverage - equivalent to previous version.

Unit Descriptor

This unit of competency is part of the Mechanical Certificate IV (Aircraft Maintenance Stream) training pathway. It covers the competencies required to inspect, repair and maintain small aircraft structure and the removal and installation of related non-structural components such as internal trim, seats and emergency equipment.

The competency Elements and Performance Criteria also cover a significant portion of those required for units MEA304C Remove and install non-pressurised aircraft structural and non-structural components, MEA311D Inspect and repair/modify aircraft structures and MEA339C Inspect, repair and maintain aircraft structures.

Where a CASA licensing outcome is sought this unit forms part of the CASA requirement for the granting of the chosen maintenance certification licence under CASR Part 66, in accordance with the licensing provisions in Section 3, Assessment Guidelines.

Application of the Unit

This unit requires application of procedures and techniques associated with the inspection and maintenance of aircraft structures, and with the performance of a limited range of metal and composite repairs. Also required is an application of procedures and techniques associated with the removal and installation of related structural and non-structural components.

Applications include the performance of structural maintenance activities and component removal and installation on non-pressurised fixed or rotary wing aircraft on the flight line or in the hangar.

Licensing/Regulatory Information

Refer to unit descriptor

Pre-Requisites

- MEA101B Interpret occupational health and safety practices in aviation maintenance
- MEA103B Plan and organise aviation maintenance work activity
- MEA105C Apply quality standards applicable to aviation maintenance processes
- MEA107B Interpret and use aviation maintenance industry manuals and specifications
- MEA108B Complete aviation maintenance industry documentation
- MEA109B Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

- 1 Inspect aircraft structure
 - 1.1 Relevant maintenance documentation is used to identify specific inspection requirements
 - 1.2 Appropriate preparation and access to the aircraft structure is undertaken to allow for proper inspection in accordance with maintenance documentation
 - 1.3 Aircraft structure is visually or physically checked for signs of deformation defects or damage in accordance with maintenance documentation and approved procedures
 - 1.4 ***Damage or defects*** are assessed against damage or wear limits specified by structural repair manual or other approved data to determine if repair or replacement is required

- 1.5 Maintenance documentation is completed and processed in accordance with standard enterprise procedures
- 2 Prepare to undertake repair
 - 2.1 Extent of damage is correctly assessed to assist in determining repair procedure
 - 2.1 Appropriate repair scheme is identified in accordance with structural repair manual and/or approved data
 - 2.3 *Specialist advice* is obtained in establishing an approved repair scheme where a standard repair scheme cannot be identified or damage is out of limits
 - 2.4 All materials and equipment required are organised
- 3 Repair and maintain aircraft structure
 - 3.1 *Structural repairs* are performed, in accordance with approved repair scheme, ensuring that aircraft standard practices are used and process requirements are carried out
 - 3.2 Preventative maintenance techniques are employed to preserve the integrity of aircraft structure
 - 3.3 Work area is cleaned of all waste material or contaminants
 - 3.4 Required maintenance documentation is completed and processed in accordance with standard enterprise procedures
- 4 Remove components
 - 4.1 Structure is supported and prepared in accordance with the applicable maintenance manual to ensure personnel safety and freedom from damage to aircraft or component during component removal
 - 4.2 *Component* removal is carried out in accordance with the applicable maintenance manual
 - 4.3 Required maintenance *documentation* is completed and processed in accordance with standard enterprise procedures
 - 4.4 Where applicable, removed components are tagged and prepared for transport in accordance with specified procedures
- 5 Install components
 - 5.1 Structural and/or non-structural components to be installed are checked to confirm correct part numbers, serviceability and modification status
 - 5.2 Component installation is carried out in accordance with the applicable maintenance manual
 - 5.3 Support/safety equipment is removed at an appropriate time to

ensure personnel safety and freedom from structural damage

5.4 Required maintenance documentation is completed and processed
in accordance with standard enterprise procedures

Required Skills and Knowledge

Look for evidence that confirms knowledge of:

- applicable OHS procedures, including the use of PPE and MSDS
- construction methods and materials used in:
 - fuselage sections
 - wing sections
 - engine nacelles and mounts
 - windows and window frames
 - doors, locks and access panels
- definition of structural terms, i.e. safe life, damage tolerant, failsafe, stress, strain, shear and cycles
- inspection requirements for metal and composite structure, including:
 - ageing aircraft inspection requirements
 - safe life structure
 - damage tolerant structure
 - fail safe structure
- potential causes of structural failure
- NDT methods and application of the various techniques
- construction methods of, and assessing common defects in, aircraft plastic transparencies
- basic constructional features of, and assessing common defects in, glass windscreens
- the various forms of structural corrosion, stating the causes and structural effects of corrosion on aircraft
- the terms associated with composite materials and types of composite materials
- requirements for handling and storing aircraft metals and composite materials, including sealing agents, to industry standards
- means of identifying aircraft structural assembly fasteners (metal and composite) by interpretation of markings, numbering systems, size, shape and colour
- structural and non-structural component methods of attachment, faying surface treatment and fuel tank sealing
- non-pressurised fuselage aircraft doors, related seals and window and transparent panel attachment methods and sealing
- aircraft interior fittings (trim, linings, seats and floor panels) construction and attachment methods
- the location and attachment or stowage methods for emergency equipment
- assessment of structural damage:
 - types and classes of mechanical damage
 - types of corrosion and determining the extent of damage
 - relevant documentation and manuals
 - damage limits and repair schemes for metallic and non-metallic structure
- procedures for the fabrication and fitment of metal repairs:
 - scab patch

- flush patch
- splice
- lap
- formed section
- corrosion removal and passivation
- procedures for performing composite repairs:
 - external patch
 - scarf patch
 - stepped repairs
- repair of integral fuel tanks and sealing of faying surfaces, including specific OHS and PPE requirements
- surface finishes and methods of restoration, including specific OHS and PPE requirements
- how to obtain MSDS
- relevant maintenance and structural repair manuals
- relevant regulatory requirements and standard procedures

Look for evidence that confirms skills in:

- applying all relevant OHS procedures, including the selection and use of MSDS and applicable items of PPE
- demonstrating appropriate cleaning procedures to enable structure inspection
- demonstrating correct inspection procedures in accordance with aircraft and procedures manuals
- identifying damage to aircraft metallic (ferrous and non-ferrous) structures and/or components by way of impact, fatigue or the various types of corrosion
- inspecting damage and assessing composite components/structures
- identifying various aircraft metals and their basic properties
- identifying composite materials used in aircraft construction, associated safety precautions and hazards
- correctly interpreting repair scheme drawings, including third angle projection, isometric, sectional formats and hand sketches
- using appropriate hand tools and machines, including riveting equipment, drilling equipment, aligning tools and material fasteners (grip pins)
- applying correct removal, installation and repair techniques for:
 - a range of rivets (blind and solid) using hand, squeeze and pneumatic situations
 - a range of close tolerance fasteners (standard and oversize – hillocks and taper locks), including hole preparation
 - threaded devices, including internal and external thread cutting, Helicoil inserts and damaged stud replacement
 - hardware assembled by close tolerance fits using heat, cooling and force methods, including bearings, bushes and inserts
- performing a range of metal structure and composite material repair techniques, including:
 - metal scab patch, flush, splice, lap and formed section repair
 - composite external patch, scarf and stepped repairs

- metal to metal and metal to composite bonding
- applying structural corrosion removal/treatment techniques
- restoring aircraft structure sealing and surface finishes
- using relevant maintenance documentation and aircraft manuals to:
 - remove and install structural and non-structural components
 - remove and install aircraft interior fittings
 - remove and install doors, door seals, windows and transparent panels
- checking and adjusting all doors and access panels, including locking mechanisms
- removing and installing emergency equipment

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to inspect and maintain aircraft structure, perform a range of metal and composite structural repair tasks and remove and install structural and non-structural components that are representative of the scope of the listed variables in accordance with relevant maintenance documentation while applying all relevant OHS procedures and standard processes.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>The underlying skills inherent in this unit should be transferable across a range of inspection, testing and repair applications associated with aircraft maintenance. Unit Sector(s)

Aviation maintenance

Custom Content Section

Not applicable.

MEA364A Maintain and/or repair small aircraft mechanical components or parts

Modification History

Minor formatting and editorial changes made. Prerequisite unit version code updated.

Unit Descriptor

This unit of competency is part of the Mechanical Certificate IV (Aircraft Maintenance Stream) training pathway. It covers the competencies required to maintain and repair a range of small aircraft mechanical components and parts.

Where a CASA licensing outcome is sought this unit forms part of the CASA requirement for the granting of the chosen Aircraft Maintenance Engineer Licence under CASR Part 66, in accordance with the licensing provisions in Section 3, Assessment Guidelines.

Application of the Unit

This unit requires application of hand skills and the use of relevant maintenance publications to maintain and repair a range of aircraft mechanical components.

Applications include fixed and rotary wing aircraft classified by CASA as small aircraft, and components in workshops.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA103B	Plan and organise aviation maintenance work activity
MEA105C	Apply quality standards applicable to aviation maintenance processes
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA108B	Complete aviation maintenance industry documentation
MEA109B	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

1. Maintain and/or repair mechanical components or parts
 - 1.1. Maintenance and/or repair requirements are determined following disassembly and assessment of component parts for serviceability in accordance with the relevant maintenance documentation
 - 1.2. Tagging and repair instructions are accurately specified for parts requiring specialist repair
 - 1.3. Appropriate materials, tools, equipment and assembly or fabrication jigs are selected and prepared for the particular specification requirements
 - 1.4. *Components or parts* are *maintained, repaired* or modified, as approved by relevant manufacturers' bulletins or procedures, in accordance with required specifications
 - 1.5. Mechanical component parts are assembled within specified tolerances and in accordance with the appropriate maintenance documents
 - 1.6. Mechanical components are adjusted, as required, to operate within prescribed specifications
 - 1.7. Test equipment and rigs are used, where applicable, to confirm serviceability
 - 1.8. Maintained/repaired or modified components are tagged, sealed and packaged within specified procedures
 - 1.9. Required maintenance documentation is completed and processed in accordance with standard enterprise procedures

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying relevant OHS practices, including the selection and use of MSDS and PPE
- using relevant maintenance documentation, specifications and aircraft/component manuals to:
 - recognise state of serviceability and repair requirements for the range of components listed in the Range Statement
 - identify requirements and complete repairs and/or modifications
 - test and/or adjust components as required
 - correctly tag, seal and package completed components that are not being immediately refitted

Required knowledge

Look for evidence that confirms knowledge of:

- mechanical component operation and repair procedures and processes:
 - hoses
 - pipes
 - cables, turnbuckles and tensioning devices
 - pulleys
 - chains and sprockets
 - gear drives
 - screwjacks
 - control rods
 - bellcranks
 - links
- internal fittings and emergency equipment operation, construction, installation and maintenance/repair:
 - trim panels
 - linings and coverings
 - seats and crew/passenger restraints
 - cargo restraints
 - cabin equipment and consoles
- emergency equipment inspection and stowage requirements:
 - passenger escape systems
 - life jackets
 - rafts
 - emergency location transmitters
- applicable OHS procedures, including the selection and use of items of PPE

- how to obtain relevant MSDS
- how to identify suitable adhesives and patching materials for upholstery and trim
- inspection and test requirements for restraint system components
- safe stowage requirements for items of emergency equipment
- how to determine serviceability of items of emergency equipment
- relevant maintenance manuals, standards and specifications
- relevant regulatory requirements and standard procedures

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to apply hand skills and use relevant maintenance publications to maintain and repair mechanical components while applying all relevant safety precautions.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>The underlying skills inherent in this unit should be transferable across a range of maintenance and repair applications associated with aircraft components. It is essential that the relevant procedures are interpreted and applied to ensure quality and safety standards are achieved.</p> <p>Evidence of transferability of skills and knowledge related to maintenance/repair is essential. This may be demonstrated through application across a number of different aircraft components. Ability to assess component serviceability and interpret parts requirements will be necessary before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.</p> <p>A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on a representative range of components or parts from each of Groups 1 to 5, as listed in the Range Statement. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.</p>
<p>Context of and specific resources for assessment</p>	<p>Competency should be assessed in the work environment or simulated work environment using tools and equipment specified in maintenance documentation. It is also expected that general and special purpose tools and test equipment found in most routine situations would be used where appropriate.</p>
<p>Method of assessment</p>	
<p>Guidance information for</p>	

assessment	
-------------------	--

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Note	<p>Range statements listed below are numbered to facilitate specification of the assessment requirements included in the Evidence Guide</p>
Components or parts to be maintained and/or repaired	<p>Components or parts to be maintained and/or repaired may include:</p> <ol style="list-style-type: none"> 1. Hoses 2. Pipes 3. Cables, pulleys, chains, sprockets and gear drives 4. Control rods, bellcranks, links and screwjacks 5. Trim panels, linings, seats, cabin equipment and consoles, coverings, emergency equipment stowage (including passenger escape systems, life jackets, rafts, location transmitters, cargo, crew and/or passenger seat restraints)
Maintain	<p>Maintain involves cleaning, inspection for wear or damage and adjustment and lubrication, where applicable</p>
Repair	<p>Repair comprises:</p> <ul style="list-style-type: none"> • standard techniques for pipes and replacement of eye-ends, tubes or bearings for control rods/pulleys/sprockets and bushes or bearings for bellcranks and links • the use of adhesives and appropriate patch materials for trim and upholstery repairs (more extensive repairs involving sewing are covered by MEA509A Manufacture, repair and alter aircraft-related fabric components) • replacement of restraint system components where sewing is not required (more extensive repairs are covered by MEA508A Maintain, install and remove restraint systems)
Application	<p>Application of this unit may relate to:</p> <ul style="list-style-type: none"> • scheduled or unscheduled maintenance activities • individual or team- related activities

Procedures and requirements	Refer to industry standard procedures specified by manufacturers, regulatory authorities or the enterprise

MEA365A Assess structural repair_modification requirements and evaluate structural repairs and modifications

Modification History

Minor formatting and editorial changes made.

Unit Descriptor

This unit of competency covers the competencies required to progress from an Aircraft Maintenance Engineer at Certificate IV to the granting of a chosen Aircraft Maintenance Engineer Licence under CASR Part 66, in accordance with the licensing provisions in the Assessment Guidelines. The unit replaces MEA324B Perform structural repair/modification assessment and evaluation.

The skills and knowledge covered by the units of competency listed in the MEA11 Aeroskills Training Package for Aircraft Maintenance Engineer at Certificate IV are prerequisite to the attainment of the elements of competency specified in this unit. This includes full coverage of the CASR Part 66 Syllabus subjects/topics listed in the Assessment Guidelines.

Application of the Unit

This unit requires interpretation of structural repair and modification data to determine required action and to determine the compliance with airworthiness requirements of completed structural repairs or modifications. In addition, the performance of colour contrast dye penetrant NDT on applicable components is included.

Applications include both fixed and rotary wing aircraft.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

- | | |
|--|--|
| 1. Assess structural repair or modification requirements | <ul style="list-style-type: none">1.1. Structural repair requirements are determined from maintenance manuals or approved repair schemes1.2. Damage beyond repair scheme limits is referred to relevant personnel/authorities1.3. Modification requirements are determined from approved drawings and specifications/instructions or requirements are referred to relevant personnel/authorities1.4. Completed work is evaluated for compliance with airworthiness requirements |
| 2. Perform colour contrast dye penetrant NDT | <ul style="list-style-type: none">2.1. Inspection requirements are identified from relevant maintenance data or to confirm a visually identified defect2.2. <i>Surfaces to be inspected are prepared</i> for the dye penetrant process2.3. <i>Dye penetrant materials</i> are selected in accordance with standard operating procedures2.4. Penetrant test is performed in accordance with standard operating procedures and while observing applicable OHS precautions2.5. Defect indications are checked and identified in accordance with standard operating procedures2.6. Penetrant testing equipment is correctly maintained and stored while observing applicable OHS precautions2.7. Results are recorded in accordance with standard enterprise and regulatory requirements |

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- interpreting damage limits and identifying applicable repair schemes
- interpreting all requirements of modification drawings and assessing work against them
- evaluating completed repairs and modifications for compliance with the applicable data and with airworthiness requirements
- recognising weld defects
- performing colour contrast dye penetrant NDT to confirm defects in applicable aircraft components
- applying relevant OHS practices, including the use of MSDS and PPE

Required knowledge

Look for evidence that confirms a post trade level of knowledge of:

- application of regulatory requirements and of manufacturer's requirements in the determination of structural maintenance needs
- assessment of the extent of damage and an understanding of the need for a professional engineer to develop or extend a repair scheme where damage is beyond the limits of maintenance manual repair schemes, including the identification of relevant personnel and authorities
- assessment of new equipment or component mounting requirements and an understanding of the need to have drawings and specifications developed by a professional engineer, including the identification of relevant personnel and authorities
- the need for shoring and support to maintain aerodynamic shape and for safe performance of structural maintenance
- the need for mensuration checks and the techniques used to perform them
- how to determine welding requirements and the recognition of sound welds
- the correct application of colour contrast dye penetrant NDT and the limitations of the testing method
- dye penetrant test procedures:
 - relevant OHS precautions and how to obtain MSDS and PPE
 - cleaning and preparation processes and materials
 - consequences of incorrect preparation
 - basic concepts and principles of NDT and appropriate use of the colour contrast dye penetrant technique
 - general properties of penetrants (penetrability, removability and visibility)
 - types of emulsifiers and developers
 - established procedures and techniques
 - defect types and their consequences
 - post-test cleaning methods
- aircraft welding regulations

- aircraft welding processes and relevant parent metal groups
- defects applicable to each welding process and parent metal group

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to determine structural repair and modification requirements using maintenance manuals, modification instructions and applicable drawings, and must be able to assess the soundness of weld repairs while identifying all safety precautions relevant to specified structural repair or modification tasks and must also be able to perform colour contrast dye penetrant NDT on relevant aircraft components.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>The underlying skills inherent in this unit should be transferable across a range of repair and modification applications related to the structure of aircraft. It is essential that the repair and modification procedures take into account all applicable safety precautions. The ability to interpret repair scheme and modification requirements, including applicable specifications (allowable limits) and ensure that they are applied in practice is critical.</p> <p>Evidence of transferability of skills and knowledge related to structural maintenance is essential. This must be demonstrated through the correct determination of repair requirements and the determination of compliance with repair schemes and modification drawings. The ability to assess sound weld repairs must also be demonstrated. Applicable work plans should take account of applicable safety (including safe handling of heavy components) and quality requirements in accordance with the industry and regulatory standards.</p> <p>A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the elements of the unit of competency are being achieved under supervision without intervention. This shall be established via simulated activities at the CASR Part 147 MTO and performance during observed workplace activities.</p>
<p>Context of and specific resources for assessment</p>	<p>Competency will be assessed in the training environment using a combination of practical exercises and scenarios.</p>
<p>Method of assessment</p>	

Guidance information for assessment

MEA366A Perform borescope inspections

Modification History

Minor formatting and editorial changes made. Prerequisite unit version code updated.

Unit Descriptor

This unit of competency is required for the grant of approval for Aircraft Maintenance Engineers to perform borescope inspections on aircraft system components and engines. It covers the elements of competency required to set up and use borescopes to perform remote visual inspections required by applicable maintenance data. This unit is used in workplaces that operate under the airworthiness regulatory systems of the ADF and CASA.

Application of the Unit

This unit is applied, in conjunction with units relating to the inspection, testing and troubleshooting of applicable aircraft engines, to perform and assess the results of remote visual inspections using borescopes.

Applications include piston engines and gas turbine engines either installed in aircraft or in workshops.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEA313C Inspect, test and troubleshoot piston engine systems and components

OR

MEA314C Inspect, test and troubleshoot gas turbine engine systems and components

OR

MEA322C Test and troubleshoot gas turbine engine systems and components

OR

MEA387A Test gas turbine engines and engine modules after overhaul or repair

OR

MEA388A Repair and/or overhaul piston engines

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

1. Set up borescope equipment
 - 1.1. Applicable *borescope equipment* is obtained and assembled for use
 - 1.2. Assembled borescope equipment is tested for correct operation
2. Perform borescope inspection
 - 2.1. Component or engine is prepared for safe borescope inspection in accordance with *applicable maintenance data*
 - 2.2. Borescope inspections are performed in accordance with applicable maintenance data or standard operating procedures
3. Record and assess borescope inspection results
 - 3.1. Borescope inspection results are recorded and processed in accordance with standard enterprise procedures for the applicable borescope equipment
 - 3.2. Identified defects are recorded and reported in accordance with standard enterprise procedures
4. Maintain and re-pack borescope equipment for storage
 - 4.1. Borescope equipment is disassembled, maintained and cleaned in accordance with manufacturer's instructions
 - 4.2. Borescope equipment is replaced in transport or storage containers and stored in accordance with standard enterprise procedures

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- selecting applicable borescope equipment and assembling it for use
- identifying required borescope inspections and required techniques using applicable maintenance data
- setting up the applicable system component or engine in accordance with applicable maintenance data for safe borescope inspection
- applying borescope inspection techniques to safely perform required inspections without damage to engine components
- identifying and correctly assessing and reporting/recording defect indications
- maintaining and correctly storing borescope equipment after use

Required knowledge

Look for evidence that confirms knowledge of:

- types of borescope and their applications
- how to assemble borescope equipment and prepare it for use
- use of associated imaging and recording equipment, such as video and digital camera
- use of maintenance data to identify borescope inspection requirements
- borescope inspection techniques and safety
- remote engine rotation equipment
- defect assessment techniques
- borescope inspection reporting and recording requirements
- borescope maintenance and storage requirements

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to apply hand skills, use maintenance publications and apply borescope inspection techniques to inspect piston or gas turbine engine internal components on fixed or rotary wing aircraft or in workshops while applying all relevant safety precautions.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>The underlying skills inherent in this unit should be transferable across a range of remote visual inspection applications associated with internal engine components. It is essential that inspection procedures take into account all safety precautions associated with borescope inspection techniques and the applicable engine.</p> <p>Evidence of transferability of skills and knowledge related to borescope inspection and assessment of results is essential. This may be demonstrated through application across a number of engine types. Ability to interpret inspection procedures and specifications (allowable limits) and apply them in practice is critical.</p> <p>Demonstrated knowledge of both borescope inspection techniques and of the subject engine will be necessary before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.</p> <p>A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on representative range of borescope inspection tasks. This shall be established via the records in the Log of Industrial Experience and Achievement, or where appropriate, an equivalent Industry Evidence Guide.</p>
<p>Context of and specific resources for assessment</p>	<p>Competency should be assessed in the work environment or simulated work environment using tools and equipment specified in maintenance documentation. MEA367A Repair/modify aircraft composite structure using cold bonding

Modification History

New unit.

Unit Descriptor

This unit of competency is part of the Aeroskills Structures Maintenance Certificate IV training pathway, and of the Mechanical Certificate IV (Aircraft Maintenance Stream) training pathways. It covers the competencies required for the repair or modification using cold bonding methods of fixed and rotary wing aircraft structural components that are made from composite materials. The unit is used in workplaces that operate under the airworthiness regulatory systems of the ADF and CASA.

Application of the Unit

This unit requires application of hand skills and the use of maintenance publications, applicable materials, tools and methods to repair aircraft composite material structure and components using cold cure repair techniques. Applications include composite material structure and components from fixed and rotary wing aircraft either on-aircraft or in the workshop.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

ME A401C Inspect aircraft structures

OR

ME A339C Inspect, repair and maintain aircraft structures

OR

ME A363B Inspect, repair and maintain structures and related components of non-pressurised small aircraft

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

- | | |
|----------------------------|--|
| 1 Plan repair/modification | <p>1.1 Extent of damage is correctly assessed to assist in determining repair procedure</p> <p>1.2 Structure is supported and prepared in accordance with the applicable maintenance manual to ensure personnel safety and freedom from damage</p> <p>1.3 Appropriate modification or repair scheme is identified in accordance with structural repair manual and/or approved data</p> <p>1.4 Specialist advice is obtained in establishing an approved repair scheme where a standard repair scheme cannot be identified or damage criteria are out of limits</p> |
|----------------------------|--|

- 1.5 All materials and equipment required are organised
- 2 Repair/modify components using cold cure
 - 2.1 Lay-up of materials is checked to confirm that components meet required specifications and bagging equipment is correctly installed and operated
 - 2.2 Curing cycle is regularly monitored to ensure required specifications are met
 - 2.3 Components are checked for blemishes or delamination in accordance with quality procedures
 - 2.4 Component assemblies requiring further or special treatment are made ready for the appropriate processes
 - 2.5 Required maintenance documentation is completed and processed in accordance with standard enterprise procedures
 - 2.6 Completed assemblies are tagged, sealed or packaged as required

Required Skills and Knowledge

Look for evidence that confirms knowledge of:

- aircraft construction principles and the causes of structural damage, including metal fatigue and corrosion
- structural fatigue preventative measures
- composite terminology and materials used in both hot and cold bonding
- composite component construction and repair methods including structural assembly fastener types, specifications and identification
- procedures for the design and approval of repair schemes and modifications
- composite material storage requirements
- sealants used in aircraft structure and their application and handling
- paints and finishes for composite structure
- OHS precautions associated with repair of aircraft structure
- MSDS
- PPE

Look for evidence that confirms skills in:

- applying relevant OHS procedures, including the use of MSDS and applicable items of PPE
- using approved maintenance documentation and aircraft publications relating to aircraft structure
- identifying composite component applications in aircraft structures
- identifying various aircraft composite materials/resins and their basic properties by interpretation of markings and visual means
- handling and storing of composite materials to industry standards
- assessing composite component damage using visual and tap test methods
- relative advantages and disadvantages of hot and cold cure
- performing composite component repairs using cold cure adhesives:
 - external patch repair
 - scarf repair
 - stepped repair
 - wet lay up repair
 - composite fastener hole repair
 - metal to metal and metal to composite bonding
- correctly interpreting and/or producing repair scheme/modification drawings/sketches
- using appropriate hand tools and machines to disassemble and assemble aircraft composite components, parts, sections and skin, including extraction/installation equipment, drilling/cutting equipment, and material fastener

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to apply hand skills and use maintenance publications, applicable materials, tools and methods to repair aircraft composite material structure and components using cold cure adhesives while applying all relevant safety procedures.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>The underlying skills inherent in this unit should be transferable across the range of different material applications applicable to cold curing. It is essential that specific aspects of the laying up and curing process for aircraft composite materials are checked to ensure quality and safety standards are achieved in this area. Correct checking and wearing of PPE is critical.</p> <p>Evidence of knowledge about repair techniques and the use of the standard repair manual in a range of different repair situations will be necessary to supplement evidence of ability to plan and undertake component repair. Ability to apply different materials and curing cycles, including composite to composite and composite to metal components, will be necessary to indicate competency in preparing and curing composite materials.</p> <p>A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision using materials from each of Groups 1 and 2 in the Range Statement. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.</p>
<p>Context of and specific resources for assessment</p>	<p>Competency should be assessed in the workplace or simulated workplace. It is also expected that general purpose tools and test equipment found in most routine situations would be used where appropriate.</p>
<p>Method of assessment</p>	
<p>Guidance information for assessment</p>	

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Note	Range statements listed below are numbered to facilitate specification of the assessment requirements included in the Evidence Guide
Applicable materials and methods	Applicable materials and methods include: <ol style="list-style-type: none"> 1. Cold cure or wet lay-up (using either fibreglass or carbon graphite) 2. Core materials (using one of aluminium, nomex, or foam)
Application	Application of this unit may relate to: <ul style="list-style-type: none"> • scheduled or unscheduled maintenance activities • individual or team-related activities

ME A368A Shot peen aircraft components

Modification History

New unit

Unit Descriptor

This unit of competency is part of the Mechanical Certificate IV training pathway. It covers the competencies required to perform peening operations on a range of aircraft components. The unit is used in workplaces that operate under the airworthiness regulatory systems of the ADF and CASA.

Application of the Unit

This unit requires application of hand skills and the use of relevant process documentation to shot peen aircraft components, such as structural components and components of engines, propellers and landing gear shock struts.

Applications include fixed and rotary wing aircraft components.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

- ME A101B Interpret occupational health and safety practices in aviation maintenance
- ME A103B Plan and organise aviation maintenance work activities
- ME A105C Apply quality standards applicable to aviation maintenance processes
- ME A107B Interpret and use aviation maintenance industry manuals and specifications
- ME A108B Complete aviation maintenance industry documentation
- ME A109B Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

- | | |
|---|---|
| 1 Prepare for shot peening task | <ul style="list-style-type: none"> 1.1 Process documentation is obtained and correctly interpreted 1.2 Shot peening equipment is prepared in accordance with the applicable process |
| 2 Apply shot peening process to Almen strip | <ul style="list-style-type: none"> 2.1 The correct Almen strip is selected and fitted and equipment set up with the correct stand-off distance and regulated air pressure or spindle speed in accordance with the process documentation 2.2 The process is correctly applied to the Almen strip 2.3 The Almen strip distortion is measured to ensure that it is within the specified tolerance 2.4 Equipment settings are adjusted and the Almen strip test repeated, if required 2.5 Settings that produce specified Almen strip distortion are recorded and the test strip is presented for inspection |
| 3 Apply shot peening process to component | <ul style="list-style-type: none"> 3.1 The component is cleaned and masked in accordance with process documentation 3.2 Shot peening is applied in accordance with the process documentation using equipment settings derived from Almen test strip 3.3 The shot peened surface is checked for required density and coverage and re-peened, if necessary 3.4 The shot peened component is checked for cleanliness to ensure that all contaminants have been removed in accordance with the process documentation |

- 4 Complete shot peening task
- 4.1 Task completion is recorded in accordance with standard enterprise procedures
 - 4.2 Shot peened component is presented for inspection, along with Almen test strip and completed documentation
 - 4.3 Where applicable, the component is tagged, sealed or packaged in accordance with specified procedures

Required Skills and Knowledge

Look for evidence that confirms knowledge of:

- how to obtain relevant MSDS
- the correct use of PPE
- OHS procedures
- the reasons for shot peening
- the types of aircraft component and the materials that are shot peened
- shot peening equipment and processes applicable to aircraft components
- the uses of different types of shot peening media
- the use of process documentation
- the types of Almen test strips and their uses
- setting up and calibrating equipment for use
- preparation of surfaces for peening and cleaning after peening
- environmental requirements associated with disposal of used media

Look for evidence that confirms skills in:

- applying relevant OHS procedures, including the use of MSDS and applicable items of PPE
- using relevant process documentation relating to shot peening of component surfaces to:
 - select and set up the required shot peening equipment
 - select and set up the Almen test strip
 - adjust equipment settings to obtain the required Almen strip distortion
 - prepare component surfaces for shot peening
 - shot peen surfaces to obtain the specified intensity and coverage
 - remove surface contaminants from shot peened surfaces
- correctly disposing of waste shot peening media

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to shot peen surfaces of aircraft components to obtain the intensity and coverage specified in process documentation while applying all relevant safety precautions.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>The underlying skills inherent in this unit should be transferable across a range of shot peening applications associated with aircraft components. It is essential that the relevant procedures are interpreted and applied to ensure quality and safety standards are achieved.</p> <p>Evidence of transferability of skills and knowledge related to shot peening is essential. This may be demonstrated through application across a number of different aircraft components. Ability to obtain and correctly interpret shot peening process documentation will be necessary before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.</p> <p>A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on a representative range of shot peening tasks. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.</p>
<p>Context of and specific resources for assessment</p>	<p>Competency should be assessed in the work environment or simulated work environment using equipment specified in process documentation. It is also expected that general and special purpose tools and test equipment found in most routine situations would be used where appropriate.</p>
<p>Method of assessment</p>	
<p>Guidance information for assessment</p>	

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Shot peening equipment	Peening operations may be carried out using air pressure or rotor propulsion of shot and either fixed or portable shot peen units
Stand-off distance	Stand-off distance can apply to: <ul style="list-style-type: none"> • nozzle distance from surface for air pressure shot peening processes, or • spindle distance from job for rotor shot peening
Regulated air pressure or spindle speed	Regulated air pressure or spindle speed refers to the specified air pressure applied to the shot nozzle or the specified revolutions per minute (r.p.m.) of the spindle in the rotor peening process
Application	Application of this unit may relate to: <ul style="list-style-type: none"> • scheduled or unscheduled maintenance • individual or team-related activities
Procedures and requirements	Refer to industry standard procedures specified by manufacturers, regulatory authorities or the enterprise

Unit Sector(s)

Aviation maintenance

Custom Content Section

MEA380A Repair and/or overhaul aircraft hydraulic system components

Modification History

Minor formatting and editorial changes made. Prerequisite unit version code updated.

Unit Descriptor

This unit of competency is part of the Mechanical Certificate IV (Component Workshop Maintenance Stream) training pathway. It covers the competencies required to overhaul and repair a range of aircraft hydraulic system components. This unit is used in workplaces that operate under the airworthiness regulatory systems of the ADF and CASA.

Application of the Unit

This unit requires application of hand skills, theory knowledge and maintenance publication procedures to repair and overhaul hydraulic system components in workshops.

Applications include components from fixed and rotary wing aircraft hydraulic systems.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

- MEA101B Interpret occupational health and safety practices in aviation maintenance
- MEA103B Plan and organise aviation maintenance work activity
- MEA105C Apply quality standards applicable to aviation maintenance processes
- MEA107B Interpret and use aviation maintenance industry manuals and specifications
- MEA108B Complete aviation maintenance industry documentation
- MEA109B Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

1. Determine requirements
 - 1.1. Component defect reports (removal tags) or customer order are correctly interpreted and matched by part and serial numbers
 - 1.2. *Hydraulic components* are inspected and/or operated through prescribed test procedures to establish serviceability or confirm defects, as required
 - 1.3. Modification status is clearly established to assist in determining the overhaul requirements for the components
 - 1.4. Extent of overhaul or repair is identified and documented in accordance with standard enterprise procedures
2. Troubleshoot hydraulic components
 - 2.1. Available information from maintenance records and test results is used, where necessary, to assist in fault determination
 - 2.2. Logical processes are used to ensure efficient and accurate troubleshooting
 - 2.3. Specialist advice is obtained, where required, to assist with, or confirm, the fault and rectification requirement
 - 2.4. Hydraulic component faults are located and the causes of the faults are clearly identified
 - 2.5. Fault rectification requirements are determined to assist in planning the repair
3. Dismantle and inspect hydraulic component parts
 - 3.1. Hydraulic component parts are dismantled in accordance with maintenance manuals
 - 3.2. Component parts are assessed for serviceability in accordance with the relevant maintenance documentation
 - 3.3. Parts requiring specialist repair are tagged and repair instructions are specified in accordance with standard enterprise procedures
 - 3.4. Parts requiring non-destructive testing are prepared for testing in accordance with the relevant maintenance documentation
 - 3.5. Parts lists are compiled and processed in accordance with standard enterprise procedures
4. Repair and/or modify hydraulic components or parts
 - 4.1. Component parts are *repaired* or replaced in accordance with the relevant maintenance documentation
 - 4.2. Modification of components or parts is undertaken, where required, by relevant manufacturer's bulletins or procedures
5. Assemble, test and adjust hydraulic
 - 5.1. Hydraulic component parts are assembled within specified tolerances and in accordance with the

components

appropriate maintenance documents

5.2. Components are adjusted, tested or calibrated to operate within prescribed specifications

5.3. Finished components are tagged, sealed and packaged in accordance with standard enterprise procedures

5.4. Required maintenance documentation and modification records are completed and processed in accordance with standard enterprise procedures

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying relevant OHS procedures
- using MSDS and applicable items of PPE
- using relevant maintenance documentation and aircraft/component manuals relating to hydraulic system components to:
 - recognise state of serviceability and overhaul or repair requirements
 - test and accurately and efficiently troubleshoot unserviceabilities and document the causes
 - dismantle and inspect component parts for serviceability and identify repair requirements as applicable
 - repair/replace/modify component parts
 - assemble, test for correct operation and adjust components

Required knowledge

Look for evidence that confirms knowledge of:

- how to obtain relevant MSDS
- the correct use of PPE
- fault diagnosis techniques
- system and component operation
- repair and overhaul procedures and processes
- hydraulic test rigs and their operation
- compressed air and nitrogen charging equipment

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to apply hand skills and component theory knowledge and use maintenance publications to repair and overhaul aircraft hydraulic system components while applying all relevant safety precautions.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>The underlying skills inherent in this unit should be transferable across a range of repair and/or overhaul applications associated with aircraft components. It is essential that the maintenance procedures are interpreted and applied to ensure quality and safety standards are achieved.</p> <p>Evidence of transferability of skills and knowledge related to repair is essential. This may be demonstrated through application across a number of different aircraft components. Ability to assess component serviceability and interpret parts requirements will be necessary to supplement the required evidence. Capability to interpret inspection procedures and specifications (allowable limits) and apply them in practice is critical. The application of testing procedures should also clearly indicate knowledge of system operation. Knowledge of system operation and the relationship of individual components will be necessary to supplement evidence of ability to troubleshoot component faults before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.</p> <p>A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on at least one component from each of Groups 1 to 3 in the Range Statement including demonstration of the repair processes listed in Groups 4 to 9. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.</p>
<p>Context of and specific resources for assessment</p>	<p>Competency should be assessed in the work environment, or simulated work environment, using tools</p>

	and equipment specified in maintenance documentation. It is also expected that general purpose tools and test equipment found in most routine situations would be used where appropriate.

 - 3.5. Parts lists are compiled and processed in accordance with standard enterprise procedures
4. Repair and/or modify air inlet and compressor components or parts
 - 4.1. Component parts are *repaired* or replaced in accordance with the relevant maintenance documentation
 - 4.2. Modification of components is undertaken, where required, by reference to relevant manufacturers'

bulletins or procedures and/or customer requirements

5. Assemble and adjust air inlet and compressor components

- 5.1. Air inlet and compressor component parts are assembled within specified tolerances and in accordance with the appropriate maintenance documents
- 5.2. Support/safety equipment, where fitted, is removed at the appropriate time
- 5.3. Components are adjusted to ensure that fits and clearances are within prescribed specifications
- 5.4. Finished components are tagged, sealed and packaged in accordance with standard enterprise procedures

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying relevant OHS procedures, including the use of MSDS and PPE
- using relevant maintenance documentation, specifications and aircraft/component manuals to:
 - recognise state of serviceability and overhaul or repair requirements for air inlet and compressor components
 - test and accurately and efficiently troubleshoot unserviceabilities and document the causes in air inlet and compressor components
 - dismantle and inspect air inlet and compressor component parts for serviceability and identify repair requirements as applicable
 - repair/replace/modify air inlet and compressor component parts
 - assemble and adjust air inlet and compressor components
- correctly tagging, sealing and packaging completed components

Required knowledge

Look for evidence that confirms knowledge of:

- how to obtain relevant MSDS
- the use of applicable items of PPE
- fault diagnosis techniques
- system and component operation
- repair and overhaul procedures and processes, including inspection, rework, repair and reclamation, assembly, balancing of rotating assemblies and final adjustment

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to apply hand skills and component theory knowledge and use maintenance publications to repair and overhaul air inlet and compressor components from aircraft gas turbine engines and/or modules while applying all relevant safety precautions.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The underlying skills inherent in this unit should be transferable across a range of repair and/or overhaul applications associated with gas turbine engine components and/or modules. It is essential that the maintenance procedures (including the use of correct fuels and lubricants) are interpreted and applied to ensure quality and safety standards are achieved.

Evidence of transferability of skills and knowledge related to repair is essential. This may be demonstrated through application across a number of different gas turbine engine components and/or modules. Ability to assess component/module serviceability and interpret parts requirements will be necessary to supplement the required evidence. Capability to interpret inspection procedures and specifications (allowable limits) and apply them in practice is critical. The application of testing procedures should also clearly indicate knowledge of system operation. Knowledge of system operation and the relationship of individual components will be necessary to supplement evidence of ability to troubleshoot component faults before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.

A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on at least one item from each of Groups 1 to 5 listed in the Range Statement (Groups 2 and 5 may be omitted if not applicable to the enterprise), including demonstration of the repair processes listed in Groups 6 to 11. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an

	equivalent Industry Evidence Guide.
Context of and specific resources for assessment	Competency should be assessed in the work environment, or simulated work environment, using tools and equipment specified in maintenance documentation. It is also expected that general purpose tools and test equipment found in most routine situations would be used where appropriate.
Method of assessment	
Guidance information for assessment	

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Note</p>	<p>Range statements listed below are numbered to facilitate specification of the assessment requirements included in the Evidence Guide</p>
<p>Air inlet and compressor components</p>	<p>Air inlet and compressor components from fixed or rotary wing gas turbine engines (turbo-jet, turbofan, turboshaft, turboprop) or engine modules, or auxiliary power units and may include:</p> <ol style="list-style-type: none"> 1. Air inlet structure and blow-in doors where these items are part of an engine change unit or engine module 2. Fan, where applicable 3. Inlet guide vanes 4. Centrifugal or axial flow compressor assemblies (low and high pressure) 5. Compressor bleed valves, where applicable
<p>Repair of component parts</p>	<p>Repair of component parts may include:</p> <ol style="list-style-type: none"> 6. Finishing or re-finishing of metal surfaces through processes, such as polishing, lapping and blending of damage within maintenance manual limits 7. Removal of corrosion within maintenance manual limits 8. Replacement of seals and gaskets 9. Replacement of bearings 10. Application of surface treatments, such as alodining 11. Restoration of paint finishes
<p>Application</p>	<p>Application of this unit may relate to:</p> <ul style="list-style-type: none"> • scheduled or unscheduled maintenance • individual or team-related activities • complex testing and adjusting of components, and where this is undertaken, may be carried out under supervision at the appropriate level

Aviation maintenance

Competency field

Co-requisite units

MEA384A Repair and_or overhaul gas turbine engine combustion section components and_or modules

Modification History

Minor formatting and editorial changes made. Prerequisite unit version code updated.

Unit Descriptor

This unit of competency is part of the Mechanical Certificate IV (Component Workshop Maintenance Stream) training pathway. It covers the competencies required to overhaul and repair components of gas turbine engine or engine module combustion sections. This unit is used in workplaces that operate under the airworthiness regulatory systems of the ADF and CASA.

Application of the Unit

This unit requires application of hand skills, theory knowledge and maintenance publication procedures to repair and overhaul aircraft gas turbine engine or engine module combustion section components.

Applications include combustion section components and modules from turbo-jet, turbofan, turboshaft, turboprop engines, engine modules or auxiliary power units.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA103B	Plan and organise aviation maintenance work activity
MEA105C	Apply quality standards applicable to aviation maintenance processes
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA108B	Complete aviation maintenance industry documentation
MEA109B	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

1. Determine requirements
 - 1.1. Component defect reports (removal tags) or customer order are correctly interpreted and matched by part and serial numbers
 - 1.2. **Combustion section components** are inspected and/or operated through prescribed test procedures to establish serviceability and confirm defects, if necessary
 - 1.3. Modification status is clearly established to assist in determining the overhaul requirements for the components
 - 1.4. Extent of overhaul or repair is identified and documented in accordance with standard enterprise procedures
2. Troubleshoot combustion section components
 - 2.1. Available information from maintenance records and test results is used, where necessary, to assist in fault determination
 - 2.2. Logical processes are used to ensure efficient and accurate troubleshooting
 - 2.3. Specialist advice is obtained, where required, to assist with, or confirm, the fault and rectification requirement
 - 2.4. Combustion section component faults are located and the causes of the faults are clearly identified
 - 2.5. Fault rectification requirements are determined to assist in planning the repair
3. Dismantle and inspect combustion section component parts
 - 3.1. Combustion section component parts are dismantled in accordance with maintenance manual
 - 3.2. Component parts are assessed for serviceability in accordance with the relevant maintenance documentation
 - 3.3. Parts requiring specialist repair are tagged and repair instructions are specified in accordance with standard enterprise procedures
 - 3.4. Parts requiring non-destructive testing are prepared for testing in accordance with the relevant maintenance documentation
 - 3.5. Parts lists are compiled and processed in accordance with standard enterprise procedures
4. Repair and/or modify combustion section components or parts
 - 4.1. Component parts are **repaired** or replaced in accordance with the relevant maintenance documentation
 - 4.2. Modification of components is undertaken, where required, by reference to relevant manufacturers' bulletins or procedures and/or customer requirements

5. Assemble and adjust combustion section components
 - 5.1. Combustion section component parts are assembled within specified tolerances and in accordance with the appropriate maintenance documents
 - 5.2. Support/safety equipment, where fitted, is removed at the appropriate time
 - 5.3. Components are adjusted to ensure that fits and clearances are within prescribed specifications
 - 5.4. Finished components are tagged, sealed and packaged in accordance with standard enterprise procedures
 - 5.5. Required maintenance documentation and modification records are completed and processed in accordance with standard enterprise procedures

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying relevant OHS procedures, including the use of MSDS and PPE
- using relevant maintenance documentation, specifications and aircraft/component manuals to:
 - recognise state of serviceability and overhaul or repair requirements for combustion section components
 - test and accurately and efficiently troubleshoot engine combustion component unserviceabilities and document the causes
 - dismantle and inspect combustion section component parts for serviceability and identify repair requirements as applicable
 - repair/replace/modify combustion section component parts
 - assemble and adjust combustion section components
- correctly tagging, sealing and packaging completed components

Required knowledge

Look for evidence that confirms knowledge of:

- how to obtain relevant MSDS
- the use of applicable items of PPE
- fault diagnosis techniques
- combustion section and component operation
- repair and overhaul procedures and processes, including inspection, rework, repair and reclamation, assembly, testing and final adjustment

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to apply hand skills and component theory knowledge and use maintenance publications to repair and overhaul aircraft gas turbine engine or engine module combustion section components while applying all relevant safety precautions.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

1. Prepare engine or module for testing
 - 1.1.Maintenance documentation is checked to confirm that *engine* or *module* is ready for testing
 - 1.2.Where required, engine modules are assembled into a test engine
 - 1.3.Engine is configured for testing in accordance with maintenance manual requirements and standard enterprise procedures
2. Install engine in test stand
 - 2.1.Engine is installed in test stand in accordance with maintenance manual requirements and standard enterprise procedures
 - 2.2.Fuel, oil and fluid levels are checked
 - 2.3.Engine test stand is prepared for operation
3. Run and test engine or module performance
 - 3.1.Engine is started and operating parameters are checked
 - 3.2.Engine performance is tested and trimmed, where applicable, in accordance with maintenance manual requirements and standard enterprise procedures
 - 3.3.Engine operating parameters and test results are recorded in accordance with standard enterprise procedures
4. Remove engine from test stand
 - 4.1.Engine is removed from test stand in accordance with maintenance manual requirements and standard enterprise procedures
 - 4.2.Serviceable engines or modules are configured, inhibited and prepared in accordance with maintenance manual requirements and standard enterprise procedures for transport or storage
 - 4.3.Unserviceable engines or modules are returned to workshop in accordance with standard enterprise procedures for rectification or rework

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying relevant OHS procedures
- using relevant MSDS and items of PPE
- using relevant maintenance manuals and standard enterprise procedures to:
 - prepare engines or modules for test running
 - install engines in test stands
 - test run and trim engines where applicable
 - record engine operating parameters
 - remove engines from the test stand
 - complete documentation
- configure and inhibit serviceable engines and modules for transport or storage

Required knowledge

Look for evidence that confirms knowledge of:

- how to obtain relevant MSDS
- the use of applicable items of PPE
- test stand operation
- engine and module test requirements
- engine operating parameters and adjustment methods

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to apply hand skills and gas turbine engine theory knowledge and use maintenance publications to test and adjust the operation of overhauled engines or modules while applying all relevant safety precautions.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>The underlying skills inherent in this unit should be transferable across a range of repair and/or overhaul applications associated with gas turbine engines and/or modules. It is essential that the maintenance procedures (including the use of correct fuels and lubricants) are interpreted and applied to ensure quality and safety standards are achieved.</p> <p>Evidence of transferability of skills and knowledge related to repair is essential. This may be demonstrated through application across a number of gas turbine engine and/or module test runs. Capability to interpret test procedures and specifications (allowable limits) and apply them in practice is critical. The application of testing procedures should also clearly indicate knowledge of system operation. Knowledge of system operation and the relationship of individual components will be necessary to supplement evidence of ability to troubleshoot engine or module faults before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.</p> <p>A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on a representative range of engine/module test runs. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.</p>
<p>Context of and specific resources for assessment</p>	<p>Competency should be assessed in the work environment in an applicable engine test stand. It is also expected that general purpose tools and test equipment found in most routine situations would be used where appropriate.</p>

Method of assessment	
Guidance information for assessment	

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Engines	Engines include: <ul style="list-style-type: none"> fixed or rotary wing gas turbine engine (turbo-jet, turbofan, turboshaft, turboprop), or auxiliary power unit
Modules	Modules may include: <ul style="list-style-type: none"> various combinations of gas turbine engine sections as determined by the manufacturer
Application	Application of this unit may relate to: <ul style="list-style-type: none"> scheduled or unscheduled maintenance individual or team-related activities complex adjusting and testing of engine performance to be carried out under supervision
Procedures and requirements	Procedures and requirements refer to industry standard procedures specified by manufacturers, regulatory authorities or the enterprise

Unit Sector(s)

Aviation maintenance

Competency field

Co-requisite units

Not applicable

MEA388A Repair and/or overhaul piston engines

Modification History

Minor formatting and editorial changes made. Prerequisite unit version code updated. Missing knowledge requirements reinstated.

Unit Descriptor

This unit of competency is part of the Mechanical Certificate IV (Component Workshop Maintenance Stream) training pathway. It covers the competencies required to overhaul and repair aircraft piston engines. This unit is used in workplaces that operate under the airworthiness regulatory systems of the ADF and CASA.

Application of the Unit

This unit requires application of hand skills, theory knowledge and maintenance publication procedures to repair and overhaul aircraft piston engines and components.

Applications include fixed and rotary wing aircraft piston engines and components.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

ME A101B	Interpret occupational health and safety practices in aviation maintenance
ME A103B	Plan and organise aviation maintenance work activity
ME A105C	Apply quality standards applicable to aviation maintenance processes
ME A107B	Interpret and use aviation maintenance industry manuals and specifications
ME A108B	Complete aviation maintenance industry documentation
ME A109B	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

1. Determine requirements
 - 1.1. Component defect reports (removal tags) or customer order are correctly interpreted and matched by part and serial numbers
 - 1.2. *Piston engine components* are inspected and/or operated through prescribed test procedures to establish serviceability and confirm defects, if necessary
 - 1.3. Modification status is clearly established to assist in determining the overhaul requirements for the components
 - 1.4. Extent of overhaul or repair is identified and documented in accordance with standard enterprise procedures
2. Troubleshoot piston engine components
 - 2.1. Available information from maintenance records and test results is used, where necessary, to assist in fault determination
 - 2.2. Logical processes are used to ensure efficient and accurate troubleshooting
 - 2.3. Specialist advice is obtained, where required, to assist with, or confirm, the fault and rectification requirement
 - 2.4. Piston engine component faults are located and the causes of the faults are clearly identified
 - 2.5. Fault rectification requirements are determined to assist in planning the repair
3. Dismantle and inspect piston engine components/parts
 - 3.1. Piston engine component parts are dismantled in accordance with maintenance manual
 - 3.2. Component parts are assessed for serviceability in accordance with the relevant maintenance documentation
 - 3.3. Parts requiring specialist repair are tagged and repair instructions are specified in accordance with standard enterprise procedures
 - 3.4. Parts requiring non-destructive testing are prepared for testing in accordance with the relevant maintenance documentation
 - 3.5. Parts lists are compiled and processed in accordance with standard enterprise procedures
4. Repair and/or modify piston engine components or parts
 - 4.1. Component parts are repaired or replaced in accordance with the relevant maintenance documentation
 - 4.2. Modification of components is undertaken where required by reference to relevant manufacturer's bulletins or procedures and/or customer requirements

5. Assemble, test and adjust piston engine components
 - 5.1. Piston engine component parts are assembled within specified tolerances and in accordance with the appropriate maintenance documents
 - 5.2. Components are tested, adjusted or calibrated to operate within prescribed specifications
 - 5.3. Finished components are tagged, sealed and packaged in accordance with standard enterprise procedures
 - 5.4. Required maintenance documentation and modification records are completed and processed in accordance with standard enterprise procedures

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying relevant OHS procedures, including the use of MSDS and PPE
- using relevant maintenance documentation, specifications and aircraft/component manuals to:
 - recognise state of serviceability and overhaul or repair requirements for piston engines and components as listed in the Range of Variables
 - test and accurately and efficiently troubleshoot unserviceabilities and document the causes in piston engines and components
 - dismantle and inspect piston engine component parts for serviceability and identify repair requirements as applicable
 - repair/replace/modify piston engine component parts
 - assemble, test for correct operation and adjust piston engine components
- correctly tagging, sealing and packaging completed components

Required knowledge

Look for evidence that confirms knowledge of:

- how to obtain relevant MSDS
- the use of applicable items of PPE
- OHS procedures
- fault diagnosis techniques
- system and component operation
- repair and overhaul procedures and processes

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to apply hand skills and component theory knowledge and use maintenance publications to repair and overhaul aircraft piston engines and components while applying all relevant safety precautions.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of transferability of skills and knowledge related to repair is essential. This may be demonstrated through application across a number of different piston engines and/or components. Elements and Performance Criteria

1. Determine requirements
 - 1.1. **Propellers and component** defect reports (removal tags) or customer order are correctly interpreted and matched by part and serial numbers
 - 1.2. Components are inspected and/or operated through prescribed test procedures to establish serviceability or confirm defects, as required
 - 1.3. Modification status is clearly established to assist in determining the overhaul requirements for the components
 - 1.4. Extent of overhaul or repair is identified and documented in accordance with standard enterprise procedures
2. Troubleshoot propeller components
 - 2.1. Available information from maintenance records and test results is used, where necessary, to assist in fault determination
 - 2.2. Logical processes are used to ensure efficient and accurate troubleshooting
 - 2.3. Specialist advice is obtained, where required, to assist with, or confirm, the fault and rectification requirement
 - 2.4. Propeller component faults are located and the causes of the faults are clearly identified
 - 2.5. Fault rectification requirements are determined to assist in planning the repair
3. Dismantle and inspect propeller parts
 - 3.1. Propeller component parts are dismantled in accordance with maintenance manuals
 - 3.2. Component parts are assessed for serviceability in accordance with the relevant maintenance documentation
 - 3.3. Parts requiring specialist repair are tagged and repair instructions are specified in accordance with standard enterprise procedures
 - 3.4. Parts requiring non-destructive testing are prepared for testing in accordance with the relevant maintenance documentation
 - 3.5. Parts lists are compiled and processed in accordance with standard enterprise procedures
4. Repair and/or modify propeller components or parts
 - 4.1. Component parts are **repaired** or replaced in accordance with the relevant maintenance documentation
 - 4.2. Modification of components or parts is undertaken, where required, by relevant manufacturers' bulletins or procedures
5. Assemble, test and adjust propeller
 - 5.1. Component parts are assembled within specified tolerances and in accordance with the appropriate

components

maintenance documents

5.2. Propeller components are adjusted, tested or calibrated to operate within prescribed specifications

5.3. Finished components are tagged, sealed and packaged in accordance with standard enterprise procedures

5.4. Required maintenance documentation and modification records are completed and processed in accordance with standard enterprise procedures

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying relevant OHS procedures, including the use of MSDS and PPE
- using relevant maintenance documentation, specifications and aircraft/component manuals to:
 - recognise state of serviceability and overhaul or repair requirements for propellers and propeller components as listed in the Range Statement
 - test and accurately and efficiently troubleshoot unserviceabilities and document the causes with regard to propeller components
 - dismantle and inspect propeller component parts for serviceability and identify repair requirements as applicable
 - repair/replace/modify propeller component parts
 - assemble, balance, test for correct operation and adjust propeller components and propellers
- correctly tagging, sealing and packaging completed components

Required knowledge

Look for evidence that confirms knowledge of:

- how to obtain relevant MSDS
- the use of applicable items of PPE
- OHS procedures
- fault diagnosis techniques
- system and component operation
- repair and overhaul procedures and processes

specified tolerances and in accordance with the appropriate maintenance documents

5.2. Components are adjusted, tested or calibrated to operate within prescribed specifications

5.3. Finished components are tagged, sealed and packaged in accordance with standard enterprise procedures

5.4. Required maintenance documentation and modification records are completed and processed in accordance with standard enterprise procedures

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying relevant OHS procedures
- using MSDS and applicable items of PPE
- using relevant maintenance documentation and aircraft/component manuals relating to mechanical system components to:
 - recognise state of serviceability and overhaul or repair requirements
 - test and accurately and efficiently troubleshoot unserviceabilities and document the causes
 - dismantle and inspect component parts for serviceability and identify repair requirements as applicable
 - repair/replace/modify component parts
 - assemble, test for correct operation and adjust components

Required knowledge

Look for evidence that confirms knowledge of:

- how to obtain relevant MSDS
- the correct use of PPE
- OHS procedures
- fault diagnosis and component part inspection techniques
- system and component operation
- repair and overhaul procedures and processes

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to apply hand skills and use relevant maintenance manuals, drawings and specifications to repair and/or overhaul mechanical components while applying all relevant safety precautions.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>The underlying skills inherent in this unit should be transferable across a range of repair and overhaul applications associated with aircraft mechanical components. It is essential that the relevant procedures are interpreted and applied to ensure quality and safety standards are achieved.</p> <p>Evidence of transferability of skills and knowledge related to mechanical component repair and overhaul is essential. This may be demonstrated through application across a number of different aircraft components. Ability to assess component serviceability and interpret parts requirements will be necessary before undertaking any action. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.</p> <p>A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on sufficient items from Groups 1 to 4 in the Range Statement to demonstrate the range of repair and overhaul activities listed in Groups 5 to 10. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.</p>
<p>Context of and specific resources for assessment</p>	<p>Competency should be assessed in the work environment or simulated work environment using tools and equipment specified in maintenance documentation. It is also expected that general and special purpose tools and test equipment found in most routine situations would be used where appropriate.</p>
<p>Method of assessment</p>	

Guidance information for assessment	
--	--

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Note	Range statements listed below are numbered to facilitate specification of the assessment requirements included in the Evidence Guide
Mechanical components:	<p>Mechanical components may include:</p> <ol style="list-style-type: none"> 1. Gear boxes and transmissions (except for helicopter components which are covered by MEA390A Repair and/or overhaul rotary wing dynamic components) 2. Screwjacks 3. Mechanical actuators 4. Control rods, bellcranks, walking beams and links
Repair of component parts	<p>Repair of component parts may include:</p> <ol style="list-style-type: none"> 5. Finishing or re-finishing of metal surfaces through processes, such as polishing and lapping 6. Removal of corrosion within maintenance manual limits 7. Replacement of seals and gaskets 8. Replacement of bearings 9. Application of surface treatments, such as alodining 10. Restoration of paint finishes
Application	<p>Application of this unit may relate to:</p> <ul style="list-style-type: none"> • scheduled or unscheduled maintenance • individual or team-related activities
Procedures and requirements	Refer to industry standard procedures specified by manufacturers, regulatory authorities or the enterprise

Unit Sector(s)

Aviation maintenance

Competency field

Co-requisite units

Not applicable

MEA401C Inspect aircraft structures

Modification History

Knowledge requirements and Range Statement revised to include additional inspection coverage - equivalent to previous version.

Unit Descriptor

This unit of competency is part of the Aeroskills Structures Maintenance Certificate IV and of the Mechanical Certificate IV (Aircraft Maintenance Stream) training pathways. It covers the competencies required for the inspection of fixed and rotary wing aircraft structures. The unit is used in workplaces that operate under the airworthiness regulatory systems of the ADF and CASA.

Where a CASA licensing outcome is sought this unit forms part of the CASA requirement for the granting of the chosen B1 maintenance certification licence under CASR Part 66, in accordance with the licensing provisions in Section 3, Assessment Guidelines.

Application of the Unit

This unit requires application of hand skills and maintenance documentation and manuals to inspect aircraft structure and identify damage and deterioration. Applications include the structure of fixed and rotary wing aircraft.

Licensing/Regulatory Information

Refer to unit descriptor

Pre-Requisites

- MEA101B Interpret occupational health and safety practices in aviation maintenance
- MEA103B Plan and organise aviation maintenance work activity
- MEA105C Apply quality standards applicable to aviation maintenance processes
- MEA107B Interpret and use aviation maintenance industry manuals and specifications
- MEA108B Complete aviation maintenance industry documentation
- MEA109B Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

- | | |
|------------------------------|--|
| 1 Inspect aircraft structure | <p>1.1 Relevant maintenance documentation and modification status, including defect reports, where relevant, are used to identify specific inspection requirements</p> <p>1.2 Appropriate <i>preparation and access to the aircraft structure</i> is undertaken to allow for proper inspection in accordance with maintenance documentation</p> <p>1.3 Aircraft structure is visually or physically checked for signs of deformation, defects or damage in accordance with maintenance documentation and approved procedures</p> <p>1.4 Damage or defects are assessed against damage or wear limits specified by structural repair manual or other approved data to determine if repair or replacement is required</p> <p>1.5 Maintenance documentation is completed and processed in accordance with standard enterprise procedures</p> |
|------------------------------|--|

Required Skills and Knowledge

Look for evidence that confirms knowledge of:

- aircraft construction principles
- structural component attachment methods
- describing the construction methods used in:
 - fuselage sections
 - wing sections
 - engine nacelles and mounts
 - windows and window frames
 - doors, locks and access panels in pressurised and unpressurised aircraft
- defining of structural terms, i.e. safe life, damage tolerant, failsafe, stress, strain, shear and cycles
- inspection requirements for metal and composite structure, including:
 - ageing aircraft inspection requirements
 - safe life structure
 - damage tolerant structure
 - fail safe structure
- describing NDT methods and application of the various techniques
- describing construction methods of, and assessing common defects in, aircraft plastic transparencies
- describing basic constructional features of, and assessing common defects in, glass windscreens
- defining the terms associated with composite materials
- OHS procedures
- relevant PPE
- how to obtain MSDS

Look for evidence that confirms skills in:

- applying all relevant OHS procedures, including the use of PPE and MSDS
- using approved maintenance documentation and aircraft publications relating to aircraft structure
- identifying various aircraft metals and their basic properties
- identifying potential causes of structural failure
- demonstrating appropriate cleaning procedures to enable structure inspection
- demonstrating correct inspection procedures, in particular pressurised aircraft, in accordance with aircraft and procedures manuals
- identifying damage to aircraft metallic (ferrous and non-ferrous) structures and/or components by way of:
 - impact
 - fatigue
 - corrosion

- identifying the various forms of structural corrosion, stating the causes and structural effects of corrosion on aircraft
- identifying composite materials used in aircraft construction, associated safety precautions and hazards
- inspecting damage and assessing composite components/structures for:
 - impact damage
 - fatigue

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to apply hand skills and use maintenance publications to prepare aircraft structure for inspection and identify structural damage and deterioration while applying all relevant safety precautions.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>The underlying skills inherent in this unit should be transferable across a range of structural inspections associated with aircraft maintenance. It is essential that the procedures take into account all aircraft and personal safety precautions relating to aircraft structure.</p> <p>Evidence is required of the ability to interpret and apply aircraft structural inspection requirements. This may be demonstrated through application across a range of structural components and materials. Ability to interpret inspection procedures and specifications (allowable limits) and apply them in practice is critical. The application of the procedures should also clearly indicate knowledge of structural flight loads.</p> <p>A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant Elements of the unit of competency are being achieved under routine supervision on at least one task from Group 1 and inspection of at least one item from each of Groups 2 to 9, as listed in the Range Statement. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.</p>
<p>Context of and specific resources for assessment</p>	<p>Competency should be assessed in the workplace or simulated workplace using tools and equipment specified in maintenance documentation. It is also expected that general purpose tools and test equipment found in most routine situations would be used where appropriate.</p>
<p>Method of assessment</p>	
<p>Guidance information for assessment</p>	

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. MEA405B Repair/modify aircraft composite material structure/components

Modification History

Minor formatting and editorial changes made. Prerequisite unit version code updated. Missing knowledge requirements reinstated.

Unit Descriptor

This unit of competency is part of the Aeroskills Structures Maintenance Certificate IV training pathway, and of the Mechanical Certificate IV (Aircraft Maintenance Stream) training pathways. It covers the competencies required for the repair or modification of fixed and rotary wing aircraft structural components that are made from composite materials. This unit is used in workplaces that operate under the airworthiness regulatory systems of the ADF and CASA.

Application of the Unit

This unit requires application of hand skills and the use maintenance publications, applicable materials, tools and methods to repair aircraft composite material structure and components.

Applications include composite material structure and components from fixed and rotary wing aircraft either on-aircraft or in the workshop.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEA401C Inspect aircraft structures

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

1. Plan repair/modification
 - 1.1.Extent of damage is correctly assessed to assist in determining repair procedure
 - 1.2.Structure is supported and prepared in accordance with the applicable maintenance manual to ensure personnel safety and freedom from damage
 - 1.3.Appropriate modification or repair scheme is identified in accordance with structural repair manual and/or approved data
 - 1.4.Specialist advice is obtained in establishing an approved repair scheme where a standard repair scheme cannot be identified or damage criteria is out of limits
 - 1.5.All materials and equipment required are organised
2. Prepare components for hot bonding
 - 2.1.Components are prepared in accordance with applicable process specification
 - 2.2.Bagging is checked to ensure vacuum seal is correct
 - 2.3.Temperature probes are placed appropriately to provide accurate measurement
 - 2.4.Equipment is checked for serviceability to ensure safety in application
 - 2.5.Heat blanket is laid on component or repair in a manner that ensures even temperature distribution
3. Repair/modify components using hot bond
 - 3.1.Hot bonding equipment is operated in accordance with equipment manufacturer's procedures
 - 3.2.Vacuum and temperature recordings are monitored, including checking of hot and cold spots on trailing and leading temperature probes, to ensure specifications are met
 - 3.3.Curing cycle and recording of operating cycle data are monitored as required by approved procedures to ensure specifications are met
 - 3.4.Blemishes are sealed, potted or filled, where necessary, in accordance with applicable process specification
 - 3.5.Component assemblies, including test pieces, requiring further or special treatment are made ready for the appropriate processes
 - 3.6.Required maintenance documentation is accurately completed and correctly processed
 - 3.7.Completed assemblies are tagged, sealed or packaged, as required
4. Repair/modify components using cold cure
 - 4.1.Lay-up of materials is checked to confirm that components meet required specifications
 - 4.2.Curing cycle is regularly monitored to ensure required

specifications are met

- 4.3. Components are checked for blemishes or delamination in accordance with quality procedures
- 4.4. Component assemblies requiring further or special treatment are made ready for the appropriate processes
- 4.5. Required maintenance documentation is completed and processed in accordance with standard enterprise procedures
- 4.6. Completed assemblies are tagged, sealed or packaged, as required

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying relevant OHS procedures, including the use of MSDS and PPE
- using approved maintenance documentation and aircraft publications relating to aircraft structure
- identifying composite component applications in aircraft structures
- identifying various aircraft composite materials/resins and their basic properties by interpretation of markings and visual means
- handling and storing of composite materials to industry standards
- assessing composite component damage using visual and tap test methods
- performing composite component repairs using:
 - external patch repair
 - scarf repair
 - stepped repair
 - wet lay up repair
 - composite fastener hole repair
 - metal to metal and metal to composite bonding
- correctly interpreting and/or producing repair scheme/modification drawings/sketches.
- using appropriate hand tools and machines to disassemble and assemble aircraft composite components, parts, sections and skin, including extraction/installation equipment, drilling/cutting equipment and material fasteners

Required knowledge

Look for evidence that confirms knowledge of:

- how to obtain relevant MSDS
- the use of applicable items of PPE
- OHS procedures
- aircraft construction principles
- defining composite terminology
- describing composite component construction methods including structural assembly fastener identification

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to apply hand skills and use maintenance publications, applicable materials, tools and methods to repair aircraft composite material structure and components while applying all relevant safety procedures.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>The underlying skills inherent in this unit should be transferable across the range of different material applications and curing requirements. It is essential that specific aspects of the laying up and curing process for aircraft composite materials are checked to ensure quality and safety standards are achieved in this area. Correct checking and wearing of safety protective clothing is critical, particularly in the hot bonding process.</p> <p>Evidence of knowledge about repair techniques and the use of the standard repair manual in a range of different repair situations will be necessary to supplement evidence of ability to plan and undertake component repair. Ability to apply different materials and curing cycles, including composite to composite and composite to metal components, will be necessary to indicate competency in preparing and curing composite materials.</p> <p>A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the Unit of Competency are being achieved under routine supervision using materials from each of Groups 1 to 3 in the Range Statement. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.</p>
<p>Context of and specific resources for assessment</p>	<p>Competency should be assessed in the workplace or simulated workplace. It is also expected that general purpose tools and test equipment found in most routine situations would be used where appropriate.</p>

MEA406B Repair/modify aircraft non-primary structural sheetmetal components

Modification History

Minor formatting and editorial changes made. Prerequisite unit version code updated. Missing knowledge requirements updated.

Unit Descriptor

This unit of competency is part of the Aeroskills Structures Maintenance Certificate II training pathway. It covers the competencies required to perform routine basic repairs and modifications, under qualified person guidance, on a range of aircraft non-primary structural sheetmetal components. This unit is used in workplaces that operate under the airworthiness regulatory systems of the ADF and CASA.

Application of the Unit

This unit requires application of hand skills and the use of maintenance publications to repair aircraft non-primary structure sheetmetal components under the guidance of a qualified person.

Applications include fixed and rotary wing aircraft.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA103B	Plan and organise aviation maintenance work activity
MEA105C	Apply quality standards applicable to aviation maintenance processes
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA108B	Complete aviation maintenance industry documentation
MEA109B	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

1. Prepare to perform routine repairs and minor modifications to aircraft non-primary structural sheetmetal components
 - 1.1. Applicable sheetmetal repair scheme is determined in accordance with applicable maintenance documentation, enterprise procedures and qualified person guidance
 - 1.2. All required materials and equipment are selected and organised in accordance with enterprise procedures and maintenance documentation
2. Perform routine repairs and minor modifications to aircraft non-primary structural sheetmetal components
 - 2.1. *Sheetmetal repairs* are performed in accordance with approved repair scheme, ensuring that aircraft standard practices are used and standard process requirements are carried out
 - 2.2. Work area is cleaned of all waste material or adjustments
 - 2.3. Under guidance of a qualified person, minor adjustments are made, where necessary, for components to operate within prescribed specifications
3. Complete routine repair and minor modification activities
 - 3.1. Required documentation is accurately completed and correctly processed in accordance with enterprise procedures
 - 3.2. Repaired components or assemblies are tagged, sealed and packaged or cradled in accordance with specified procedures, where required

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying relevant OHS procedures, including the use of MSDS and PPE
- using enterprise procedures, approved maintenance documentation and aircraft publications relating to aircraft sheetmetal components
- identifying various aircraft metals used for sheetmetal components and their basic metallurgy properties by interpretation of markings, numbering systems or visual, chemical or mechanical means
- handling and storing aircraft metals used for sheetmetal components, including sealing agents, to industry standards
- identifying aircraft sheetmetal assembly fasteners (metal and non-metallic) by interpretation of markings, numbering systems, size, shape and colour
- correctly interpreting, with expert qualified person guidance and in accordance with enterprise procedures, sheetmetal repair scheme/modification drawings and hand sketches
- using appropriate hand tools and machines under supervision to remove and assemble aircraft sheetmetal components
- performing under guidance and in accordance with enterprise procedures a range of routine sheetmetal repair techniques, including metal scab patch repairs
- applying corrosion removal/treatment techniques
- restoring sealing and surface finishes

Required knowledge

Look for evidence that confirms a basic knowledge of:

- aircraft sheetmetal component construction principles and repair techniques
- how to obtain relevant MSDS
- the use of applicable items of PPE
- OHS procedures

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to apply hand skills and use maintenance publications under qualified person guidance to repair aircraft non-primary structure sheetmetal components while applying all relevant safety precautions.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>The underlying skills inherent in this unit should be transferable into other areas that require similar techniques. It is essential that procedures take into account all safety precautions and quality requirements, standards and practices, and processes associated with assembly.</p> <p>Evidence of knowledge about enterprise procedures relating to basic repair techniques and the use of the standard repair manual/practices in a range of different routine repair situations will be necessary to supplement evidence of ability to plan and undertake component repair.</p> <p>A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the Unit of Competency are being achieved under qualified person guidance on at least one item from each of Groups 1 to 5 listed in the Range Statement. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.</p>
<p>Context of and specific resources for assessment</p>	<p>Competency should be assessed in the work environment, using tools and equipment specified by aircraft maintenance manuals. It is also expected that general purpose tools, test and ground support equipment found in most routine situations would be used where appropriate.</p>
<p>Method of assessment</p>	
<p>Guidance information for assessment</p>	

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Note:</p>	<p>The Range Statements below are numbered to facilitate specification of the assessment requirements included in the Evidence Guide</p>
<p>Sheetmetal repairs</p>	<p>Sheetmetal repairs may include:</p> <ol style="list-style-type: none"> 1. Removing corrosion by chemical and mechanical methods 2. Restoring protective coatings 3. Freehand precision hole generation 4. Removing and installing fastening devices 5. Routine repairs to non-primary structural sheetmetal components
<p>Work environment</p>	<p>Work is undertaken either autonomously or as part of a team and under the guidance of a qualified person.</p> <p>Routine work is carried out using basic operational knowledge and a defined range of skills ('routine' work is that which follows a customary or regular course of procedure). All work outcomes are achieved by applying known solutions chosen from a limited range of pre-determined options consistent with enterprise procedures. This includes accepting responsibility for own work in terms of quality of outcomes using pre-determined specifications of quality.</p>
<p>Competency application</p>	<p>Competency applies to the routine repair and/or minor modification of aircraft non-primary structural sheetmetal components. Note that 'primary structure/structural' refers to all components of an aircraft, the failure of which would seriously endanger safety, for example, wing or tailplane spars, main fuselage frames, engine bearers, portions of skin that are highly stressed. 'Non-primary' refers to any other items. Note also that the scope of any modification and the procedure to be followed will be provided by the qualified person.</p>
<p>Scope</p>	<p>Repairs/modification undertaken are limited to the scope of skills and knowledge included in the unit of competency</p>

	MEA109B Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance
Procedures and requirements	Refer to industry standard specified by manufacturers, regulatory authorities or the enterprise

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

1. Prepare to perform routine repairs and minor modifications to aircraft non-primary structural non-metallic components
 - 1.1. Applicable non-metallic repair scheme is determined in accordance with applicable maintenance documentation, enterprise procedures and qualified person guidance
 - 1.2. All required materials and equipment are selected and organised in accordance with enterprise procedures and maintenance documentation
2. Perform routine repairs and minor modifications to aircraft non-primary structural non-metallic components
 - 2.1. Work is performed in accordance with approved repair scheme, ensuring that aircraft standard practices are used and standard process requirements are carried out
 - 2.2. Work area is cleaned of all waste material or adjustments
 - 2.3. Under guidance of a qualified person, minor adjustments are made, where necessary, for components to operate within prescribed specifications
3. Complete routine repair and minor modification activities
 - 3.1. Required documentation is accurately completed and correctly processed in accordance with enterprise procedures
 - 3.2. Repaired components or assemblies are tagged, sealed and packaged or cradled in accordance with specified procedures, where required

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying relevant OHS procedures, including the use of MSDS and PPE
- using enterprise procedures, approved maintenance documentation and aircraft publications relating to aircraft non-primary structural non-metallic components
- identifying various aircraft non-primary structural non-metallic components and their basic properties by interpretation of markings, numbering systems or visual, chemical or mechanical means
- handling and storing aircraft non-metallic components, including sealing agents, to industry standards
- identifying aircraft assembly fasteners by interpretation of markings, numbering systems, size, shape and colour
- correctly interpreting, with expert guidance and in accordance with enterprise procedures, non-primary structural non-metallic repair scheme/modification drawings and hand sketches
- using appropriate hand tools and machines under guidance of a qualified person to remove and assemble aircraft non-metallic components
- performing under guidance and in accordance with enterprise procedures a range of routine non-primary structural non-metallic repair techniques
- restoring sealing and surface finishes

Required knowledge

Look for evidence that confirms knowledge of:

- aircraft non-metallic component construction principles and repair techniques at a basic level
- how to obtain relevant MSDS
- the use of applicable items of PPE
- OHS procedures

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Note	<p>The Range Statements below are numbered to facilitate specification of the assessment requirements included in the Evidence Guide</p>
Competency application	<p>Competency applies to the use of applicable non-metallic materials for the routine repair and/or minor modification under guidance of a qualified person to non-primary structural non-metallic components, as follows:</p> <ol style="list-style-type: none"> 1. Non-metallic materials can include fibreglass, sandwich honeycomb, nylon, perspex, nomex core materials and matrix resins 2. Components include interior trim panels (sidewalls, galleys, toilets, roof panels and floor panels), cargo lining, fairings and windows <p>Note that 'primary structure/structural' refers to all components of an aircraft, the failure of which would seriously endanger safety, for example, wing or tailplane spars, main fuselage frames, engine bearers, portions of skin that are highly stressed. 'Non-primary' refers to any other items.</p> <p>Note that the scope of any modification and the procedure to be followed will be provided by the qualified person.</p>
Work environment	<p>Work is undertaken either autonomously or as part of a team and under the guidance of a qualified person.</p> <p>Routine work is carried out using basic operational knowledge and a defined range of skills ('routine' work is that which follows a customary or regular course of procedure).</p> <p>Work outcomes are achieved by applying known solutions chosen from a limited range of pre-determined options consistent with enterprise procedures. This includes accepting responsibility for own work in terms of quality of outcomes using pre-determined specifications of quality.</p>
Scope	<p>Skills and knowledge applied to repairs are limited to those specified in the unit of competency MEA109B Perform basic hand skills, standard trade practices and fundamentals</p>

	in aviation maintenance
Procedures and requirements refer to:	Refer to industry standard specified by manufacturers, regulatory authorities or the enterprise

Unit Sector(s)

Aviation maintenance

Competency field

Co-requisite units

Not applicable

MEA410C Maintain aircraft structure/components

Modification History

Knowledge requirements expanded - equivalent to previous version.

Unit Descriptor

This unit of competency is part of the Mechanical Certificate IV (Aircraft Maintenance Stream) training pathways. It covers the competencies required to remove corrosion damage from the structure and structural components of fixed or rotary wing aircraft. The unit is used in workplaces that operate under the airworthiness regulatory systems of the ADF and CASA. Where a CASA licensing outcome is sought this unit forms part of the CASA requirement for the granting of the chosen B1 maintenance certification licence under CASR Part 66, in accordance with the licensing provisions in Section 3, Assessment Guidelines.

Application of the Unit

This unit requires application of hand skills and the use of maintenance publications to remove corrosion from aircraft structural materials. Applications include the metallic structure of fixed and rotary wing aircraft and structural components.

Licensing/Regulatory Information

Refer to unit descriptor

Pre-Requisites

MEA401C Inspect aircraft structures

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

- | | |
|--------------------------------------|--|
| 1 Prepare to remove corrosion damage | <ul style="list-style-type: none"> 1.1 Extent of damage is correctly assessed to assist in determining removal procedure 1.2 Structure is supported and prepared, in accordance with the applicable maintenance manual, to ensure personnel safety and freedom from damage 1.3 Appropriate <i>corrosion removal procedure</i> is identified in accordance with structural repair manual and/or approved data 1.4 Specialist advice is obtained in establishing an approved repair scheme where a standard corrosion removal procedure cannot be identified or damage criteria is out of limits 1.5 All materials and equipment required are organised |
| 2 Remove corrosion damage | <ul style="list-style-type: none"> 2.1 Corrosion removal is performed and protective coatings, sealants and jointing compounds applied, in accordance with approved repair scheme, ensuring that aircraft standard practices are used and process requirements are carried out 2.2 Structure/component is cleaned of all waste material or contaminants 2.3 Components are adjusted, where necessary, to operate within prescribed specifications 2.4 Required maintenance/repair documentation is completed and processed in accordance with standard enterprise procedures 2.5 Repaired components or assemblies are tagged, sealed and packaged or cradled in accordance with specified procedures, where required |

Required Skills and Knowledge

Look for evidence that confirms knowledge of:

- methods of corrosion removal in aircraft structural metals
- types of corrosion typically found in various areas of aircraft structure
- removal of corrosion damage in integral fuel tanks and sealing of faying surfaces, including specific OHS and PPE requirements, including confined space entry requirements
- surface finishes and methods of restoration, including specific OHS and PPE requirements
- how to obtain MSDS
- relevant maintenance and structural repair manuals specifying corrosion removal limits and methods
- relevant regulatory requirements and standard procedures

Look for evidence that confirms skills in:

- applying all relevant OHS procedures, including the use of MSDS and selection and use of applicable items of PPE
- using approved maintenance documentation and aircraft publications relating to aircraft structure
- identifying various aircraft metals and their basic metallurgy properties by interpretation of markings, numbering systems or visual, chemical or mechanical means
- applying structural corrosion removal/treatment techniques
- restoring aircraft structure sealing and surface finishes

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to apply hand skills and use maintenance publications to remove corrosion damage from aircraft structural materials while applying all relevant safety precautions.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>The underlying skills inherent in this unit should be transferable into other areas that require similar techniques. It is essential that procedures take into account all safety precautions and quality requirements, standards and practices and processes associated with corrosion removal.</p> <p>Evidence of knowledge about corrosion removal techniques and limits and the use of the standard repair manual in a range of different repair situations will be necessary to supplement evidence of ability to plan and undertake structure and component repair by removal of corrosion within applicable limits.</p> <p>A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on at least one task from each of Groups 1 to 3 in the Range Statement. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.</p>
<p>Context of and specific resources for assessment</p>	<p>Competency should be assessed in the work environment, using tools and equipment specified by aircraft maintenance manuals. It is also expected that general purpose tools, test and ground support equipment found in most routine situations would be used where appropriate.</p>
<p>Method of assessment</p>	
<p>Guidance information for assessment</p>	

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Note</p>	<p>The Range Statements below are numbered to facilitate specification of the assessment requirements included in the Evidence Guide</p>
<p>Corrosion removal procedure</p>	<p>Corrosion removal procedure may include:</p> <ol style="list-style-type: none"> 1. Removing corrosion by chemical and mechanical methods 2. Restoring protective coatings 3. Applying sealants and jointing compounds
<p>Application</p>	<p>Application of this unit may relate to:</p> <ul style="list-style-type: none"> • scheduled or unscheduled maintenance • individual or team-related activities
<p>Procedures and requirements</p>	<p>Refer to industry standard specified by manufacturers, regulatory authorities or the enterprise</p>

MEA411A Remove surface coatings from aircraft or aircraft components

Modification History

Minor formatting and editorial changes made. Prerequisite unit version code updated.

Unit Descriptor

This unit covers the competencies required to prepare aircraft and aircraft components for coating removal and remove the coatings. No licensing requirements apply to this unit at the time of publication, but compliance with legislation and regulations governing handling and disposal of hazardous materials is included in the unit. This unit is used in workplaces that operate under the airworthiness regulatory systems of the ADF and CASA.

Application of the Unit

This unit requires application of skills and knowledge relating to preparation and masking of aircraft and aircraft components for coating removal and the removal of coatings using chemical and mechanical methods.

Applications include fixed and rotary wing aircraft and aircraft components.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA103B	Plan and organise aviation maintenance work activity
MEA105C	Apply quality standards applicable to aviation maintenance processes
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA108B	Complete aviation maintenance industry documentation
MEA109B	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | |
|--|--|
| 1. Identify the appropriate coating removal method | <ul style="list-style-type: none"> 1.1. The coating removal task is identified from maintenance documentation and enterprise procedures 1.2. Enterprise procedures and maintenance publications are used to identify materials and tools to be used for coating removal 1.3. Aircraft or component identification is matched with relevant maintenance documentation |
| 2. Prepare for coating removal | <ul style="list-style-type: none"> 2.1. OHS requirements are identified and complied with and PPE is checked for correct fit and function 2.2. Materials and tools required for coating removal are assembled 2.3. Appropriate preparation for access to the aircraft is undertaken 2.4. Masking requirements are determined using enterprise procedures and maintenance publications 2.5. Masking is applied to relevant areas and sensitive components 2.6. Environmental requirements are observed during the coating removal process |
| 3. Remove coating | <ul style="list-style-type: none"> 3.1. Chemical strippers are applied in accordance with relevant procedures 3.2. Mechanical coating removal is performed in accordance with enterprise procedures and maintenance manuals 3.3. Surfaces are cleaned of all chemical residue and mechanical media in accordance with enterprise procedures and maintenance manuals 3.4. Masking materials are removed and final cleaning of surfaces is performed |
| 4. Clean up work area and maintain equipment | <ul style="list-style-type: none"> 4.1. Material that can be reused is collected and correctly stored 4.2. Waste material is removed and disposed of or stored in accordance with legislative, regulatory and enterprise procedures 4.3. Equipment is cleaned in accordance with enterprise procedures or manufacturer's instructions 4.4. Equipment is checked for serviceability and unserviceable items are dealt with in accordance with enterprise procedures 4.5. Tools are cleaned and maintained in accordance with enterprise procedures 4.6. Work area is cleaned and inspected for serviceable condition |

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying OHS procedures relating to coating removal, including the selection and correct use of PPE
- selecting and applying masking and barrier materials
- selecting and using chemical strippers
- using MSDS
- selecting and using applicable mechanical coating removal methods
- cleaning of surfaces following coating removal
- correctly disposing of waste materials
- cleaning and maintaining equipment and tools

Required knowledge

Look for evidence that confirms knowledge of:

- relevant enterprise procedures and maintenance publications
- OHS procedures relating to the removal of aerospace coatings, including PPE and fume extraction
- how to obtain MSDS
- types of chemicals used for coating removal and methods of application
- mechanical methods that can be used for coating removal
- types of masking and barrier materials
- cleaning methods following coating removal
- environmental legislation and regulations relating to the storage, use and disposal of hazardous materials

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to remove surface coatings from aircraft and aircraft components in accordance with specified procedures while using the correct PPE and observing all relevant safety precautions and environmental protection processes.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>The underlying skills inherent in this unit should be transferable across a range of coating removal tasks associated with aircraft and aircraft components. It is essential that system testing procedures, cleanliness requirements and safety precautions, including the correct use of PPE, and application of environmental protection procedures are fully observed, understood and complied with. Ability to interpret coating removal procedures and apply them in practice is critical.</p> <p>Evidence of transferability of skills and knowledge related to coating removal is essential. This is to be demonstrated through application of chemical and mechanical coating removal processes across a range of aircraft and component tasks. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.</p> <p>A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on a representative range of coating removal tasks. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.</p>
<p>Context of and specific resources for assessment</p>	<p>Competency should be assessed in the workplace or simulated workplace using materials, tools and equipment specified in the maintenance manuals and applicable procedures. It is also expected that general and special purpose tools and ground support equipment would be used where appropriate.</p>
<p>Method of assessment</p>

MEA412A Pre-treat aluminium alloy surfaces

Modification History

Minor formatting and editorial changes made. Prerequisite unit version code updated.

Unit Descriptor

This unit covers the competencies required to pre-treat aircraft and aircraft component aluminium alloy surfaces prior to application of surface coatings. No licensing requirements apply to this unit at the time of publication, but compliance with legislation and regulations governing handling and disposal of hazardous materials is included in the unit. This unit is used in workplaces that operate under the airworthiness regulatory systems of the ADF and CASA.

Application of the Unit

This unit requires application of skills and knowledge relating to the application of chemical conversion coatings to aluminium alloy surfaces of aircraft and aircraft components.

Applications include fixed and rotary wing aircraft and aircraft components with aluminium alloy surfaces.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA103B	Plan and organise aviation maintenance work activity
MEA105C	Apply quality standards applicable to aviation maintenance processes
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA108B	Complete aviation maintenance industry documentation
MEA109B	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

1. Prepare surfaces for application of chemical conversion coating
 - 1.1. The required pre-treatment task is identified from maintenance documentation and enterprise procedures
 - 1.2. Enterprise procedures and/or process specifications are used to identify required materials and tools
 - 1.3. Aircraft or component identification is matched with relevant maintenance documentation
 - 1.4. *OHS requirements* are identified and complied with and PPE is checked for correct fit and function
 - 1.5. *Common surface soils* are removed in accordance with enterprise procedures and/or process specifications
 - 1.6. Masking is completed on areas where pre-treatment is not required
 - 1.7. Aluminium alloy substrate is prepared for application of conversion coating in accordance with enterprise procedures and/or process specifications
2. Apply chemical conversion coating
 - 2.1. The correct environment for conversion coating application is established and maintained
 - 2.2. The applicable chemical conversion coating is applied
 - 2.3. Masking is removed and the aircraft or component is left in a suitable condition for the next task
 - 2.4. Completion of the pre-treatment process is documented in accordance with enterprise procedures
3. Clean up work area and maintain equipment
 - 3.1. Material that can be reused is collected and correctly stored
 - 3.2. Waste material is removed and disposed of or stored in accordance with *legislative, regulatory and enterprise procedures*
 - 3.3. Equipment is cleaned in accordance with enterprise procedures or manufacturer's instructions
 - 3.4. Equipment is checked for serviceability and unserviceable items are dealt with in accordance with enterprise procedures
 - 3.5. Tools are cleaned and maintained in accordance with enterprise procedures
 - 3.6. Work area is cleaned and inspected for serviceable condition

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying OHS procedures relating to pre-treatment of aluminium alloy substrates, including the selection and correct use of PPE
- applying masking
- preparing for chemical conversion coating
- water break testing
- application of specified pre-treatment process
- water break re-testing
- using MSDS
- selecting and using applicable chemical conversion coating
- correctly disposing of waste materials
- cleaning and maintaining equipment and tools

Required knowledge

Look for evidence that confirms knowledge of:

- relevant enterprise procedures and/or process specifications
- OHS procedures relating to aluminium alloy pre-treatment processes, including PPE
- how to obtain MSDS
- types of masking and barrier materials
- types of pre-treatment processes
- environmental legislation and regulations relating to the storage, use and disposal of hazardous materials

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

1. Prepare to undertake seam sealing
 - 1.1.The seam sealing task is identified from maintenance documentation and enterprise procedures
 - 1.2.Applicable enterprise procedures, process specifications and maintenance publications are used to identify materials and tools to be used for seam sealing
 - 1.3.Aircraft or component identification is matched with relevant maintenance documentation
2. Prepare seams for application of sealant
 - 2.1.**OHS requirements** are identified and complied with and PPE is checked for correct fit and function
 - 2.2.Materials and tools required for sealant application are assembled
 - 2.3.Masking is applied in accordance with enterprise procedures and/or process specifications
 - 2.4.Seams are prepared for sealant application in accordance with enterprise procedures and/or process specifications
3. Mix sealant
 - 3.1.Environment is established in accordance with enterprise procedures and/or process specifications
 - 3.2.The applicable sealant is mixed in accordance with manufacturer's specifications
4. Apply sealant to seams
 - 4.1.Sealant is applied in accordance with enterprise procedures and/or process specifications
 - 4.2.The sealed seam is inspected and blemishes, voids or gaps are filled
 - 4.3.Masking materials are removed
 - 4.4.Waste and/or surplus materials are disposed of in accordance with **legislative, regulatory and enterprise procedures**
 - 4.5.Documentation is completed in accordance with standard enterprise procedures
 - 4.6.Aircraft or component, equipment and work area is left in a condition enabling the next task to begin

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying OHS procedures relating to seam sealing, including the selection and correct use of PPE
- selecting and applying masking materials
- selecting, mixing and applying applicable sealants
- using MSDS
- selecting and using applicable enterprise procedures and/or process specifications
- correctly disposing of waste materials
- cleaning of work area and maintaining equipment and tools

Required knowledge

Look for evidence that confirms knowledge of:

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

1. Identify corrosion damage
 - 1.1. *Signs of corrosion* are identified through visual inspection
 - 1.2. *The type of corrosion* is identified
 - 1.3. The severity of corrosion damage is determined and damage more severe than light surface corrosion is documented and reported in accordance with standard enterprise procedures
2. Remove light corrosion
 - 2.1. The applicable corrosion removal method is selected in accordance with enterprise procedures
 - 2.2. *OHS requirements* are identified and complied with and PPE is checked for correct fit and function
 - 2.3. *Materials and tools* required for corrosion removal are assembled
 - 2.4. Surface is prepared and corrosion removed using the *selected removal method*
3. Clean area and equipment
 - 3.1. Surface is cleaned of all chemical residue and mechanical media, in accordance with enterprise procedures, ready for the next process
 - 3.2. Equipment is cleaned in accordance with enterprise procedures or manufacturer's instructions
 - 3.3. Equipment is checked for serviceability and unserviceable items are dealt with in accordance with enterprise procedures
 - 3.4. Waste material is removed and disposed of or stored in accordance with *legislative, regulatory and enterprise procedures*
 - 3.5. Documentation is completed in accordance with standard enterprise procedures

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying OHS procedures relating to light corrosion removal, including the selection and correct use of PPE
- recognising types of corrosion and damage that exceeds light surface corrosion
- applying enterprise procedures for removal of light corrosion
- selecting and using applicable corrosion removal methods, equipment and tools
- using MSDS
- cleaning surfaces following corrosion removal
- correctly disposing of waste materials
- cleaning and maintaining equipment and tools

Required knowledge

Look for evidence that confirms knowledge of:

- relevant enterprise procedures and maintenance publications
- OHS procedures relating to the removal of aerospace coatings, including PPE
- how to obtain MSDS
- types of chemicals used for corrosion removal and methods of application
- mechanical methods that can be used for corrosion removal
- cleaning methods following corrosion removal
- environmental legislation and regulations relating to the storage, use and disposal of hazardous materials

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to remove light corrosion from the surfaces of aircraft structure in accordance with specified procedures while using the correct PPE and observing all relevant safety precautions and environmental protection processes.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>The underlying skills inherent in this unit should be transferable across a range of tasks involving the removal of light corrosion damage from the surfaces of aircraft structure. It is essential that applicable processes, cleanliness requirements and safety precautions, including the correct use of PPE, and application of environmental protection procedures are fully observed, understood and complied with. Ability to interpret corrosion removal procedures and apply them in practice is critical.</p> <p>Evidence of transferability of skills and knowledge related to the removal of light corrosion is essential. This is to be demonstrated through corrosion removal using mechanical, manual and chemical means across a range of aircraft tasks. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.</p> <p>A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on a representative range of light corrosion removal tasks using applicable mechanical, manual and chemical removal methods as listed in the Range Statement. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.</p>
<p>Context of and specific resources for assessment</p>	<p>Competency should be assessed in the workplace or simulated workplace using materials, tools and equipment specified in the maintenance manuals and applicable procedures. It is also expected that general and special purpose tools and ground support equipment would be used where appropriate.</p>

Method of assessment	
Guidance information for assessment	

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Application	<p>Application of this unit may relate to:</p> <ul style="list-style-type: none"> • scheduled or unscheduled maintenance • individual or team-related activities
Procedures and requirements	<p>Refer to industry standard procedures specified by manufacturers, regulatory authorities or the enterprise</p>
Signs of corrosion	<p>Signs of corrosion may include:</p> <ul style="list-style-type: none"> • surface deformed • paint blistered or flaked • powder • discolouration
Types of corrosion	<p>The type of corrosion may be:</p> <ul style="list-style-type: none"> • uniform etch • pitting • intergranular • exfoliation • filiform • galvanic
OHS requirements	<p>OHS requirements are identified from relevant:</p> <ul style="list-style-type: none"> • state/territory/Commonwealth OHS legislation, regulations and codes • procedures manual • safety manual • work instructions • maintenance organisation manual • MSDS • Defence regulations and instructions • standing instructions
Materials and tools	<p>Materials and tools may include:</p> <ul style="list-style-type: none"> • micro grinder • sanders • plastic media blasting equipment • abrasive pads

	<ul style="list-style-type: none"> • wet/dry abrasive papers • chemicals • PPE applicable to task
Selected removal methods	<p>Selected removal methods may include:</p> <ul style="list-style-type: none"> • light mechanical using micro grinder, sander or plastic media blasting • manual removal using wet/dry abrasive papers or abrasive pads • chemical
Legislative, regulatory and enterprise procedures	<p>Legislative, regulatory and enterprise procedures may include:</p> <ul style="list-style-type: none"> • state/territory/Commonwealth environmental legislation, regulations and codes for the storage and disposal of hazardous and toxic materials • MSDS • maintenance organisation manual • procedures manual • work instructions • relevant Defence regulations and instructions • standing instructions

Unit Sector(s)

MEA415A Paint aircraft surfaces

Modification History

Minor formatting and editorial changes made. Prerequisite unit version code updated.

Unit Descriptor

This unit covers the competencies required to apply paint finishes to the surfaces of aircraft and aircraft components. No licensing requirements apply to this unit at the time of publication, but compliance with legislation and regulations governing handling and disposal of hazardous materials is included in the unit. This unit is used in workplaces that operate under the airworthiness regulatory systems of the ADF and CASA.

Application of the Unit

This unit requires application of skills and knowledge relating to final preparation of surfaces and application of paint finishes to aircraft and aircraft components.

Applications include fixed and rotary wing aircraft and aircraft components.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA103B	Plan and organise aviation maintenance work activity
MEA105C	Apply quality standards applicable to aviation maintenance processes
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA108B	Complete aviation maintenance industry documentation
MEA109B	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance
AURV229749A	Prepare spray painting materials and equipment
AURV329603DA	Apply air dry and polyurethane enamel refinishing materials

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

1. Prepare for painting
 - 1.1. The painting task is identified from maintenance documentation and enterprise procedures and *type of substrate* is identified
 - 1.2. Enterprise procedures and maintenance publications are used to identify *required materials and tools* and necessary items are assembled
 - 1.3. Aircraft or component identification is matched with relevant maintenance documentation
 - 1.4. Surfaces are prepared for application of paint in accordance with enterprise procedures and/or process specification
 - 1.5. Masking and barrier materials are applied as required by task
2. Apply primer
 - 2.1. *OHS requirements* are identified and complied with and PPE is checked for correct fit and function
 - 2.2. Temperature and humidity requirements are complied with
 - 2.3. Specified primer is applied in accordance with enterprise procedures and/or process specification
 - 2.4. Reject paintwork is identified and rectified in accordance with enterprise procedures and/or process specification
 - 2.5. Equipment is cleaned
3. Apply surface top coat
 - 3.1. OHS requirements are identified and complied with and PPE is checked for correct fit and function
 - 3.2. Temperature and humidity requirements are complied with
 - 3.3. The specified top coat material is prepared in accordance with manufacturer's instructions
 - 3.4. Top coat is applied in accordance with enterprise procedures and/or process specifications
 - 3.5. Reject paintwork is identified and rectified in accordance with enterprise procedures and/or process specifications
 - 3.6. Masking and barrier materials are removed and final finishing of the surface is completed, as required
 - 3.7. Documentation is completed in accordance with standard enterprise procedures
4. Clean up work area and maintain equipment
 - 4.1. Waste material is removed and disposed of or stored in accordance with *legislative, regulatory and enterprise procedures*
 - 4.2. Equipment is cleaned in accordance with enterprise procedures or manufacturer's instructions
 - 4.3. Equipment is checked for serviceability and unserviceable items are dealt with in accordance with enterprise procedures
 - 4.4. Tools are cleaned and maintained in accordance with enterprise procedures

4.5. Work area is cleaned and inspected for serviceable condition

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying OHS procedures relating to paint application, including the selection and correct use of PPE
- selecting and applying masking and barrier materials
- identifying, preparing and using applicable primers and top coats
- using MSDS
- using manufacturer specifications and directions
- selecting and using applicable paint application equipment
- preparing surfaces for paint application
- correctly disposing of waste materials
- cleaning and maintaining equipment and tools

Required knowledge

Look for evidence that confirms knowledge of:

- relevant enterprise procedures, process specifications and maintenance publications
- OHS procedures relating to the application of aerospace coatings, including PPE and fume extraction
- how to obtain MSDS
- manufacturer specifications and directions
- types of paint finishes and applicability to various substrates
- procedures for preparing surfaces for paint application
- types of masking and barrier materials
- methods used for final finishing of surfaces
- environmental legislation and regulations relating to the storage, use and disposal of hazardous materials

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to apply paint finishes to the surfaces of aircraft and aircraft components in accordance with specified procedures while using the correct PPE and observing all relevant safety precautions and environmental protection processes.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>The underlying skills inherent in this unit should be transferable across a range of paint application tasks associated with aircraft and aircraft components. It is essential that system testing procedures, cleanliness requirements and safety precautions, including the correct use of PPE, and application of environmental protection procedures are fully observed, understood and complied with. Ability to interpret coating removal procedures and apply them in practice is critical.</p> <p>Evidence of transferability of skills and knowledge related to application of paint finishes is essential. This is to be demonstrated through application of paint finishes across a range of aircraft and component substrate types. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.</p> <p>A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on a representative range of paint finish application tasks. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

1. Interpret requirements and prepare materials for aircraft markings, graphics and decals
 - 1.1. Requirements for *markings, graphics* and decals are determined from maintenance documentation, enterprise procedures and maintenance publications
 - 1.2. Equipment for task is identified and gathered
 - 1.3. Aircraft or component identification is matched with relevant maintenance documentation
 - 1.4. Decals are prepared and matched with documentation
 - 1.5. Markings or marking stencils are manufactured in accordance with drawings and specifications
 - 1.6. Graphics or graphic stencils are manufactured in accordance with drawings and specifications

2. Prepare for application of aircraft markings and graphics
 - 2.1. *OHS requirements* are identified and complied with and PPE is checked for correct fit and function
 - 2.2. *Materials and equipment* required for application of markings and graphics are assembled
 - 2.3. Surface on which marking or graphic will be applied is cleaned in accordance with enterprise procedures
 - 2.4. Marking or graphic position is accurately determined and masking is applied, where necessary

3. Apply aircraft markings, graphics and decals
 - 3.1. Environmental requirements for the *application* of markings and graphics are established in accordance with enterprise procedures
 - 3.2. Markings and graphics are applied in accordance with enterprise procedures
 - 3.3. Rework, gloss measuring and thickness measuring are performed, where applicable, in accordance with enterprise procedures
 - 3.4. Masking materials are removed, where applicable, and final clean-up is performed, as required
 - 3.5. Decal positions are accurately determined, surfaces cleaned and decals applied in accordance with enterprise procedures
 - 3.6. Documentation is completed in accordance with standard enterprise procedures

4. Clean up work area and maintain equipment
 - 4.1. Material that can be reused is collected and correctly stored
 - 4.2. Waste material is removed and disposed of or stored in accordance with *legislative, regulatory and enterprise procedures*
 - 4.3. Equipment is cleaned in accordance with enterprise

- procedures or manufacturer's instructions
- 4.4. Equipment is checked for serviceability and unserviceable items are dealt with in accordance with enterprise procedures
- 4.5. Tools are cleaned and maintained in accordance with enterprise procedures
- 4.6. Work area is cleaned and inspected for serviceable condition

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying OHS procedures relating to marking and graphic application, including the selection and correct use of PPE
- using procedures, maintenance manuals and finishing scheme drawings to determine the requirements for markings, graphics and decals
- selecting and applying masking and barrier materials
- manufacturing markings and graphics
- manufacturing stencils for the application of markings and graphics
- using MSDS
- cleaning of surfaces before and following the application of markings and graphics
- correctly disposing of waste materials
- cleaning and maintaining equipment and tools

Required knowledge

Look for evidence that confirms knowledge of:

- relevant enterprise procedures, maintenance publications, drawings and specifications
- manufacturer's specifications and directions
- OHS procedures relating to the application of markings and graphics to aircraft, including PPE and fume extraction
- how to obtain MSDS
- types of chemicals used for cleaning and surface preparation
- manufacturing methods for stencils
- types of masking and barrier materials
- cleaning methods following application of markings and graphics
- environmental legislation and regulations relating to the storage, use and disposal of hazardous materials

Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

1. Determine specialty coating requirements
 - 1.1. **Specialty coating** requirements are identified from maintenance documentation and enterprise procedures
 - 1.2. Enterprise procedures and maintenance publications are used to identify materials and tools to be used for specialty coating application
 - 1.3. Aircraft or component identification is matched with relevant maintenance documentation
2. Prepare surface for coating application
 - 2.1. **OHS requirements** are identified and complied with and PPE is checked for correct fit and function
 - 2.2. **Materials and equipment** required for specialty coating application are assembled
 - 2.3. Surfaces are cleaned and degreased in accordance with enterprise procedures
 - 2.4. Final finishing of surfaces is performed in accordance with enterprise procedures and/or process specifications
 - 2.5. Reject parts and surfaces are identified, recorded and reported in accordance with standard enterprise procedures
 - 2.6. Masking is applied to relevant areas
3. Prepare and apply coating
 - 3.1. The required coating is prepared in accordance with manufacturer's specifications and directions
 - 3.2. Coating mix is inspected in accordance with enterprise procedures and/or process specifications
 - 3.3. Coating is applied to the required surfaces in accordance with enterprise procedures and/or process specifications
 - 3.4. Coating is inspected for coating thickness and quality compliance with enterprise procedures and/or process specifications
 - 3.5. **Defects in the coating** are identified and rectified, as required
 - 3.6. Masking materials are removed and final cleaning of surfaces is performed
 - 3.7. Documentation is completed in accordance with standard enterprise procedures.
4. Clean up work area and maintain equipment
 - 4.1. Waste material is removed and disposed of or stored in accordance with **legislative, regulatory and enterprise procedures**
 - 4.2. Equipment is cleaned in accordance with enterprise procedures or manufacturer's instructions
 - 4.3. Equipment is checked for serviceability and unserviceable items are dealt with in accordance with enterprise procedures
 - 4.4. Tools are cleaned and maintained in accordance with

enterprise procedures
4.5. Work area is cleaned and inspected for serviceable
condition

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying OHS procedures relating to specialty coating application, including the selection and correct use of PPE
- using procedures, process specification and manufacturer's data to identify coating preparation and application requirements
- selecting and applying masking materials
- selecting and using correct specialty coating
- using MSDS
- selecting and using applicable coating application methods
- cleaning and preparing surfaces for coating application
- correctly disposing of waste materials
- cleaning and maintaining equipment and tools

Required knowledge

Look for evidence that confirms knowledge of:

- relevant enterprise procedures and maintenance publications
- OHS procedures relating to the application of specialty aerospace coatings, including PPE
- relevant data from manufacturers of specialty coatings
- how to obtain MSDS
- criticality of areas of aircraft structure with regard to coating application
- cleaning processes and chemicals used to prepare surfaces for coating application
- coating application methods
- masking materials
- environmental legislation and regulations relating to the storage, use and disposal of hazardous materials

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to correctly apply a range of aerospace specialty coatings to aircraft surfaces in accordance with specified procedures and drawings while using the correct PPE and observing all relevant safety precautions and environmental protection processes.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>The underlying skills inherent in this unit should be transferable across a range of specialty coating application tasks associated with aircraft. Aviation maintenance

Competency field

Co-requisite units

Not applicable

MEA418A Perform basic repair of aircraft internal fittings during line maintenance

Modification History

Minor formatting and editorial changes made. Prerequisite unit version code updated. Missing knowledge requirements reinstated.

Unit Descriptor

This unit covers the competencies required to repair aircraft internal fittings that are within the privileges of the Aircraft Maintenance Engineer A Licence. It is one of the units required for the granting of the chosen Aircraft Maintenance Engineer A Licence under CASR Part 66, in accordance with the licensing provisions in Section 3, Assessment Guidelines.

Application of the Unit

This unit requires application of hand skills and the use of maintenance publications to repair aircraft internal fittings, such as internal doors, that are not part of the pressure hull, overhead storage compartments, and doors and cabin furnishing items that are manufactured from either sheet metal or non-metallic materials.

Applications include fixed and rotary wing aircraft.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA103B	Plan and organise aviation maintenance work activity
MEA105C	Apply quality standards applicable to aviation maintenance processes
MEA107B	Interpret and use aviation maintenance industry manuals and specifications

MEA109B	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

1. Prepare to perform routine repairs and minor modifications to aircraft internal fittings
 - 1.1. Applicable repair scheme is determined in accordance with applicable maintenance publications and enterprise procedures
 - 1.2. All required materials and equipment are selected and organised in accordance with enterprise procedures and maintenance publications
2. Perform routine repairs to aircraft internal fittings
 - 2.1. *Sheetmetal repairs* and *non-metallic material repairs* are performed in accordance with approved repair scheme, ensuring that aircraft standard practices are used and standard process requirements are carried out
 - 2.2. Work area is cleaned of all waste material
 - 2.3. Adjustments are made, where necessary, for components to operate within prescribed specifications
3. Complete routine repair activities
 - 3.1. Required documentation is accurately completed and correctly processed in accordance with enterprise procedures

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying relevant OHS procedures, including the use of MSDS and PPE
- using enterprise procedures, approved maintenance documentation and aircraft publications relating to aircraft sheetmetal and non-metallic internal fittings
- identifying various materials used for internal fittings and their basic properties by interpretation of markings, numbering systems or visual, chemical or mechanical means
- handling and storing aircraft metals used for sheetmetal internal fittings, including sealing agents, to industry standards
- identifying aircraft sheet metal assembly fasteners (metal and non-metallic) by interpretation of markings, numbering systems, size, shape and colour
- correctly interpreting applicable repair schemes and hand sketches
- using appropriate hand tools and power tools under supervision to remove and assemble aircraft sheet metal internal fittings
- performing under guidance and in accordance with enterprise procedures a range of routine metal and non-metal repair techniques
- applying corrosion removal/treatment techniques
- restoring sealing and surface finishes to repaired areas

Required knowledge

Look for evidence that confirms knowledge of:

- relevant OHS procedures
- how to obtain relevant MSDS
- the use of applicable items of PPE
- aircraft sheet metal component construction principles and repair techniques
- aircraft non-metallic component construction principles and repair techniques

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to apply hand skills and use maintenance publications to repair aircraft internal fittings made from sheet metal and non-metallic materials while applying all relevant safety precautions.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>The underlying skills inherent in this unit should be transferable into other areas that require similar techniques. It is essential that procedures take into account all safety precautions and quality requirements, standards and practices, and processes associated with repair and assembly.</p> <p>Evidence of knowledge about enterprise procedures relating to basic repair techniques and the use of the standard repair manual/practices in a range of different routine repair situations will be necessary to supplement evidence of ability to plan and undertake internal fitting repairs.</p> <p>A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under supervision but without intervention on a representative range of tasks involving Groups 1 to 9 listed in the Range Statement. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.</p>
<p>Context of and specific resources for assessment</p>	<p>Competency should be assessed in the work environment, using tools and equipment specified by aircraft maintenance manuals. It is also expected that general purpose tools, test and ground support equipment found in most routine situations would be used where appropriate.</p>
<p>Method of assessment</p>	
<p>Guidance information for assessment</p>	

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Note</p>	<p>The Range Statements below are numbered to facilitate specification of the assessment requirements included in the Evidence Guide</p>
<p>Repairs</p>	<p>Sheetmetal repairs may include:</p> <ol style="list-style-type: none"> 1. Removing corrosion by chemical and mechanical methods 2. Restoring protective coatings to repaired areas 3. Freehand precision hole generation 4. Removing and installing fastening devices 5. Routine repairs to sheetmetal internal fittings <p>Non-metallic material repairs may include:</p> <ol style="list-style-type: none"> 6. Repairs to fibreglass, sandwich honeycomb, nylon, perspex, nomex core materials and matrix resins 7. Restoring protective coatings to repaired areas 8. Freehand precision hole generation 9. Removing and installing fastening devices
<p>Application</p>	<p>Application of this unit may relate to:</p> <ul style="list-style-type: none"> • scheduled or unscheduled maintenance activities • repair of metallic or non-metallic interior fittings, including interior trim panels (sidewalls, galleys, toilets, roof panels, floor panels), overhead lockers, cargo lining and internal doors that are not part of the aircraft pressure hull
<p>Procedures and requirements</p>	<p>Refer to industry standard procedures specified by manufacturers, regulatory authorities or the enterprise</p>

Unit Sector(s)

Aviation maintenance

Competency field

Co-requisite units

Not applicable

MEA419A Inspect and repair_modify aircraft cabin_cockpit non-primary structure components

Modification History

Minor formatting and editorial changes made. Prerequisite unit version code updated.

Unit Descriptor

This unit of competency is part of the Aeroskills Life Support and Furnishing Certificate III and IV training pathways. It covers the competencies required to inspect for damage and perform routine basic repairs and modifications on a range of aircraft non-primary structural metallic and non-metallic components located in aircraft cabins and cockpits. This unit is used in workplaces that operate under the airworthiness regulatory systems of the ADF and CASA.

Application of the Unit

This unit requires application of hand skills and the use of maintenance publications to inspect for damage and repair aircraft non-primary structure metallic and non-metallic components of aircraft cabins and cockpits.

Applications include fixed and rotary wing aircraft.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA103B	Plan and organise aviation maintenance work activity
MEA105C	Apply quality standards applicable to aviation maintenance processes
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA108B	Complete aviation maintenance industry documentation
MEA109B	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

1. Inspect for damage to aircraft cabin/cockpit non-primary structure metallic and non-metallic components
 - 1.1. ***Metallic and/or non-metallic components*** are visually inspected for damage
 - 1.2. Extent of damage is determined and confirmed to be within repair limits
2. Prepare to perform routine repairs and minor modifications to aircraft cabin/cockpit non-primary structure metallic and non-metallic components
 - 2.1. Applicable metallic or non-metallic repair scheme is determined in accordance with applicable maintenance documentation and standard enterprise procedures
 - 2.2. Modification instructions are obtained in accordance with standard enterprise procedures
 - 2.3. All required materials and equipment are selected and organised in accordance with enterprise procedures and maintenance documentation
3. Perform routine repairs and minor modifications to aircraft cabin/cockpit non-primary structure metallic components
 - 3.1. ***Metallic component repairs*** and minor modifications are performed in accordance with approved repair scheme or modification instructions, ensuring that aircraft standard practices are used and standard process requirements are carried out
 - 3.2. Work area is cleaned of all waste material
 - 3.3. Minor adjustments are made, where necessary, for components to operate within prescribed specifications
4. Perform routine repairs and minor modifications to aircraft cabin/cockpit non-primary structure non-metallic components
 - 4.1. ***Non-metallic component repairs*** and minor modifications are performed in accordance with approved repair scheme or modification instructions, ensuring that aircraft standard practices are used and standard process requirements are carried out
 - 4.2. Work area is cleaned of all waste material
 - 4.3. Minor adjustments are made, where necessary, for components to operate within prescribed specifications
5. Complete routine repair and minor modification activities
 - 5.1. Required documentation is accurately completed and correctly processed in accordance with standard enterprise procedures
 - 5.2. Repaired components or assemblies are tagged, sealed and packaged or cradled in accordance with specified procedures, where required

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying relevant OHS practices, including the use of MSDS and the selection and use of applicable items of PPE
- using enterprise procedures, approved maintenance documentation and aircraft publications relating to cabin/cockpit non-primary structure metallic and non-metallic components
- identifying aircraft cabin/cockpit non-primary structure components and their basic properties by interpretation of markings, numbering systems or visual, chemical or mechanical means
- handling and storing aircraft metallic and non-metallic components, including sealing agents, to industry standards
- identifying aircraft assembly fasteners by interpretation of markings, numbering systems, size, shape and colour
- visually inspecting metallic and non-metallic components for damage
- correctly interpreting, in accordance with enterprise procedures, applicable repair scheme/modification drawings and hand sketches
- using appropriate hand tools and machines to remove and assemble aircraft cabin/cockpit non-primary structure metallic and non-metallic components
- performing, in accordance with enterprise procedures, a range of routine non-primary structure sheetmetal repair techniques, including metal scab patch repairs
- performing, in accordance with enterprise procedures, a range of routine non-primary structure non-metallic repair techniques
- applying corrosion removal/treatment techniques
- restoring sealing and surface finishes

Required knowledge

Look for evidence that confirms knowledge of:

- applicable OHS procedures, including how to obtain MSDS
- selection and use of applicable items of PPE
- construction methods used and assessment of common defects in aircraft crew and passenger seats, and in interior trim panels, including sidewalls, galleys, furnishings and partitions, passenger modules/pods, toilets, roof panels, overhead luggage stowage bins, non-structural floor panels and cargo compartment lining
- types of deterioration and damage
- inspection methods
- identification and interpretation of metallic and non-metallic repair schemes applicable to cabin/cockpit non-primary structural components
- the various forms of corrosion
- The terms associated with composite materials
- requirements for handling and storing aircraft metals and composite materials, including sealing agents, to industry standards

- means of identifying aircraft structural assembly fasteners (metal and composite) by interpretation of markings, numbering systems, size, shape and colour

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to apply hand skills and use maintenance publications to inspect and repair aircraft cabin/cockpit non-primary structure metallic and non-metallic components while applying all relevant safety precautions.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>The underlying skills inherent in this unit should be transferable into other areas that require similar techniques. It is essential that procedures take into account all safety precautions and quality requirements, standards and practices, and processes associated with assembly.</p> <p>Evidence of knowledge about enterprise procedures relating to routine basic repair techniques and the use of the standard repair manual/practices in a range of situations will be necessary to supplement evidence of ability to plan and undertake component repair.</p> <p>A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved on a representative range of components, inspecting for damage and performing repair tasks listed in Groups 1 to 6 in the Range Statement. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.</p>
<p>Context of and specific resources for assessment</p>	<p>Competency should be assessed in the work environment or simulated work environment, using tools and equipment specified by aircraft maintenance manuals. It is also expected that general purpose tools, test and ground support equipment found in most routine situations would be used where appropriate.</p>

<p>Guidance information for assessment</p>	

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Note	Range statements listed below are numbered to facilitate specification of the assessment requirements included in the Evidence Guide
Metallic and/or non-metallic component repair	<p>Metallic and/or non-metallic components may include:</p> <ul style="list-style-type: none"> • aircraft crew and passenger seats, interior trim panels, including sidewalls, galleys, furnishings and partitions, passenger modules/pods, toilets, roof panels, overhead luggage stowage bins, non-structural floor panels and cargo compartment lining <p>Types of damage may include:</p> <ul style="list-style-type: none"> • corrosion, cracking and impact damage to metallic components • delamination, cracking and impact damage to non-metallic components <p>Metallic component repairs may include:</p> <ol style="list-style-type: none"> 1. Removing corrosion by chemical and mechanical methods 2. Restoring protective coatings 3. Freehand precision hole generation 4. Removing and installing fastening devices 5. Fitting patches to cabin/cockpit non-primary structure sheetmetal components <p>Non-metallic component repairs may include:</p> <ol style="list-style-type: none"> 6. Composite patch, scarf and stepped repairs using fibreglass, sandwich honeycomb, nylon, perspex, nomex core materials and matrix resins
Primary structure	All components of an aircraft, the failure of which would seriously endanger safety. In the fuselage this includes frames, longerons and stringers, structural floor panels and all additional parts of the pressure hull, such as skin, windows, doors and bulkheads
Application	Application of this unit may relate to:

	<ul style="list-style-type: none">• scheduled or unscheduled maintenance activities• individual or team-related activities
Procedures and requirements	Refer to industry standard procedures specified by manufacturers, regulatory authorities or the enterprise

Unit Sector(s)

Aviation maintenance

Competency field

Co-requisite units

Not applicable

MEA420A Fabricate basic structural components for aircraft

Modification History

New unit.

Unit Descriptor

This unit of competency is part of the Aeroskills Structures Maintenance Certificate IV training pathway. It covers the competencies required to fabricate by hand and in accordance with specifications and drawings basic structural components for aircraft that are either flat or have only a single curve. The unit is used in workplaces that operate under the airworthiness regulatory systems of the ADF and CASA.

Application of the Unit

This unit requires application of hand skills and the use of drawings, specifications and maintenance publications to fabricate basic structural components requiring hand forming only from aluminium alloys and steel alloys at various states of temper. Applications include components for fixed and rotary wing aircraft.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

- MEA101B Interpret occupational health and safety practices in aviation maintenance
- MEA103B Plan and organise aviation maintenance work activity
- MEA105C Apply quality standards applicable to aviation maintenance processes
- MEA107B Interpret and use aviation maintenance industry manuals and specifications
- MEA108B Complete aviation maintenance industry documentation
- MEA109B Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

- | | |
|--|--|
| <p>1 Interpret specifications and organise materials</p> | <p>1.1 Specifications and drawings are used to determine material requirements</p> <p>1.2 Equipment use is planned by determining the procedure for fabricating component</p> <p>1.3 Material is correctly identified in accordance with specifications</p> <p>1.4 All materials and equipment are organised</p> |
|--|--|

- 2 Prepare material and tooling
 - 2.1 Dimensions to material are translated in accordance with specifications
 - 2.2 Cutting and forming equipment are prepared and adjusted to ensure accuracy of fabrication
 - 2.3 Material is cut according to specifications ensuring minimisation of wastage and maintenance of surplus material identification
 - 2.4 Material requiring special treatment is prepared for the appropriate processes
 - 2.5 Solution treatment of materials is carried out in accordance with approved procedures and specifications
- 3 Hand form material
 - 3.1 Hand forming is accurately carried out ensuring that specifications are met
 - 3.2 Formed components are checked for irregularities and correction requirements determined
 - 3.3 Irregularities are removed to meet required dimensions and specifications
- 4 Inspect components
 - 4.1 Fabricated components are inspected to confirm dimensional accuracy and specifications are met
 - 4.2 Checking fixtures are used, where appropriate, to ensure requirements are met
 - 4.3 Components requiring special or further treatment are prepared for the appropriate processes
 - 4.4 Completed components are tagged or identified, as required

Required Skills and Knowledge

Look for evidence that confirms knowledge of:

- aircraft construction principles
- causes of structural fatigue and preventative measures
- structural corrosion and preventative measures
- aircraft structural drawings and repair scheme drawings
- material specifications for aluminium alloys and steel alloys used in aircraft structure
- structural material identification by markings and numbering systems
- material identification by chemical, electrical and mechanical methods
- material storage requirements
- hardware types and specifications
- identification of hardware
- sealants used in aircraft structure
- chemical surface treatments
- electroplating
- paints and finishes
- flat pattern development
- OHS precautions associated with fabrication of aircraft structural components
- MSDS
- PPE

Look for evidence that confirms skills in:

- applying relevant OHS procedures, including the use of MSDS and relevant items of PPE
- the use of approved maintenance documentation and aircraft publications relating to aircraft structure
- identifying various aircraft metals and their basic metallurgy properties by interpretation of markings, numbering systems or visual, chemical or mechanical means
- handling and storing aircraft metals to industry standards
- identifying aircraft structural assembly fasteners by interpretation of markings, numbering systems, size, shape and colour
- fabrication of aircraft structural components and parts by:
 - correctly interpreting drawings (including third angle projection, isometric, sectional formats and hand sketches)
 - developing component flat pattern using basic drawing tools, geometric drawing processes, parallel, radial and triangulation methods, calculating and applying bend allowance/deduction/setback (an understanding of flat pattern development terminology is required)
 - using appropriate hand tools and machines for cutting and drilling
 - assembling component parts using appropriate hand and machine tools and standard aircraft fasteners to industry standards
- applying appropriate metal heat treatment processes
- applying appropriate metal surface treatments

MEA422A Repair/modify aircraft metal structure

Modification History

New unit.

Unit Descriptor

This unit of competency is part of the Aeroskills Structures Maintenance Certificate IV training pathway. It covers the competencies required for the repair and modification of fixed and rotary wing aircraft metal structure. The unit is used in workplaces that operate under the airworthiness regulatory systems of the ADF and the CASA.

Application of the Unit

This unit requires application of hand skills, the use of special tools and structural repair manuals and approved repair schemes to repair aircraft structure. Where fabrication of replacement components is required the applicable units are MEA420A Fabricate basic structural components for aircraft and MEA421A Fabricate advanced structural components for aircraft. Where major structural disassembly is required the applicable unit is MEA423A Aircraft structure major disassembly and reassembly.

Applications include the metal structure of fixed and rotary wing aircraft.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEA401C Inspect aircraft structures

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

- | | |
|------------------------------------|--|
| 1 Prepare to undertake repair | <ul style="list-style-type: none"> 1.1 The extent of damage is correctly assessed to assist in determining <i>repair procedure</i> 1.2 Structure is prepared and supported in accordance with the applicable maintenance manual to ensure personnel safety and freedom from damage 1.3 The appropriate modification or repair scheme is identified in accordance with structural repair manual and/or approved data 1.4 Specialist advice in establishing an approved repair scheme is obtained where a standard repair scheme cannot be identified or damage is out of limits 1.5 All required materials and equipment are organised |
| 2 Repair/modify aircraft structure | <ul style="list-style-type: none"> 2.1 Structural repairs are performed in accordance with approved repair scheme, ensuring that aircraft standard practices are used and process requirements are carried out 2.2 Work area is cleaned of all waste material or contaminants 2.3 Components are adjusted, where necessary, to operate within prescribed specifications 2.4 Repaired components or assemblies are tagged, sealed and packaged, or cradled in accordance with specified procedures, where required 2.5 Required documentation is completed and processed in accordance with standard enterprise procedures |

Required Skills and Knowledge

Look for evidence that confirms knowledge of:

- aircraft construction principles and the causes of structural damage, including metal fatigue and corrosion
- structural fatigue preventative measures
- structural corrosion removal and preventative measures
- aircraft repair schemes and modification data/drawings
- procedures for the design and approval of repair schemes and modifications
- material specifications for aluminium alloys and steel alloys used in aircraft structure
- structural material identification by markings and numbering systems
- material identification by chemical, electrical and mechanical methods
- material storage requirements
- hardware types and specifications
- identification of hardware
- sealants used in aircraft structure and their application and handling
- chemical surface treatments
- electroplating
- paints and finishes
- OHS precautions associated with repair of aircraft structure
- MSDS
- PPE

Look for evidence that confirms skills in:

- applying relevant OHS procedures, including the use of MSDS and applicable items of PPE
- using approved maintenance documentation and aircraft publications relating to aircraft structure
- identifying various aircraft metals and their basic metallurgy properties by interpretation of markings, numbering systems or visual, chemical or mechanical means
- identifying various aircraft composite materials and their basic properties by interpretation of markings and visual means
- handling and storing aircraft metals and composite materials, including sealing agents, to industry standards
- identifying aircraft structural assembly fasteners (metal and composite) by interpretation of markings, numbering systems, size, shape and colour
- correctly assessing and describing the extent of damage
- correctly interpreting and/or producing repair scheme/modification drawings (including third angle projection, isometric, sectional formats and hand sketches)
- using appropriate hand tools and machines to remove and assemble aircraft structural components, parts, sections and skin, including riveting equipment, drilling equipment, aligning tools and material fasteners (grip pins)
- applying correct removal, installation and repair techniques for:
 - a range of rivets (blind and solid) using hand, squeeze and pneumatic situations

- a range of close tolerance fasteners (standard and oversize – hilocks, taper locks), including hole preparation
- threaded devices, including internal and external thread cutting, helicoil inserts and damaged stud replacement
- hardware assembled by close tolerance fits using heat, cooling and force methods, including bearings, bushes and inserts
- correct support of the aircraft structure by jacking, trestling and/or jiggling methods
- performing a range of metal structure repair techniques, including:
 - metal scab patch, flush, splice, lap and formed section repair
 - metal to metal and metal to composite bonding
- applying structural corrosion removal/treatment techniques
- restoring aircraft structure sealing and surface finishes

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to apply hand skills, use special tools and structural repair manuals and schemes and modification data to repair/modify aircraft structure while applying all relevant safety precautions.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>The underlying skills inherent in this unit should be transferable into other areas that require similar techniques. It is essential that procedures take into account all safety precautions and quality requirements, standards and practices and processes associated with assembly.</p> <p>Evidence of knowledge about repair techniques and the use of the standard repair manual in a range of different repair situations will be necessary to supplement evidence of ability to plan and undertake structure and component repair.</p> <p>A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on at least one item from each of Groups 1 to 6 listed in the Range Statement. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.</p>
<p>Context of and specific resources for assessment</p>	<p>Competency should be assessed in the work environment, using tools and equipment specified by aircraft maintenance manuals. It is also expected that general purpose tools, test and ground support equipment found in most routine situations would be used where appropriate.</p>
<p>Method of assessment</p>	
<p>Guidance information for assessment</p>	

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Note</p>	<p>The Range Statements below are numbered to facilitate specification of the assessment requirements included in the Evidence Guide</p>
<p>Repair procedures</p>	<p>Repair procedures may include:</p> <ol style="list-style-type: none"> 1. Remove corrosion by chemical and mechanical methods 2. Restore protective coatings 3. Apply sealants and jointing compounds 4. Freehand precision hole generation 5. Remove and install structural hardware, fastening devices, bushes, bearings and bearing surfaces 6. Remove and repair damaged sections and reinstall
<p>Procedures and requirements</p>	<p>Refer to industry standard specified by manufacturers, regulatory authorities or the enterprise</p>

MEA423A Aircraft structure major disassembly and reassembly

Modification History

New unit.

Unit Descriptor

This unit of competency is part of the Aeroskills Structures Maintenance Certificate IV training pathway. It covers the competencies required for major disassembly and reassembly of aircraft structure for the purposes, such as major repair or modification. The unit is used in workplaces that operate under the airworthiness regulatory systems of the ADF and CASA.

Application of the Unit

This unit requires application of hand skills and use of maintenance publications, drawings, and appropriate jigs, fixtures and tools to disassemble and reassemble aircraft structure. Structural repair/modification is covered by MEA422A Repair/modify aircraft metal structure or MEA405B Repair/modify aircraft composite material structure/components. Where fabrication of replacement components is required the applicable units are MEA420A Fabricate basic structural components for aircraft and MEA421A Fabricate advanced structural components for aircraft. Applications include fixed and rotary wing aircraft.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEA401C Inspect aircraft structure

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

- | | |
|---|---|
| 1 Interpret specifications and organise materials | <p>1.1 The procedure for assembly/disassembly of structure is determined in order to plan equipment use</p> <p>1.2 Appropriate jigs, fixtures or bracing methods are selected to ensure maintenance of contour/structural integrity during disassembly/assembly operations</p> <p>1.3 All components and equipment are organised</p> |
| 2 Prepare aircraft or sub-assembly for structural disassembly | <p>2.1 Structure is supported with appropriate jigs, fixtures or bracing, as required</p> <p>2.2 Structural components are removed, as required, to provide access</p> |
| 3 Disassemble aircraft structure or sub-assembly | <p>3.1 Aircraft standard practices are applied in the removal of structural hardware and fasteners</p> <p>3.2 Disassembled components are tagged, as required, to facilitate correct reassembly</p> |
| 4 Prepare components and tooling for assembly | <p>4.1 Jigs and fixtures are set up to ensure accuracy of component assembly</p> <p>4.2 Replacement component alignment is checked for conformance to specifications prior to fastener hole generation</p> <p>4.3 Hole location/relocation is carried out in accordance with specification procedures and standard practices</p> <p>4.4 Standard practices in hole generation sequencing are followed to ensure that assembly stress defects are not built in</p> <p>4.5 Components are disassembled, cleaned, deburred and</p> |

surface treatments applied prior to final assembly

5 Assemble aircraft structure or sub- assembly

5.1 Sealants and/or adhesives are selected and applied in accordance with assembly specifications or applicable documentation

5.2 Components are positioned and secured with appropriate temporary fastening devices for accurate assembly

5.3 Fasteners are selected and installed in accordance with assembly specifications or applicable manuals

6 Inspect completed assemblies

6.1 Assembled components are inspected to confirm dimensional accuracy and specifications are met

6.2 Checking or testing equipment is used, where appropriate, to ensure requirements are met

6.3 Aircraft mensuration is checked for compliance with applicable maintenance manuals, where necessary

6.4 Required documentation is completed and processed in accordance with standard enterprise procedures

Required Skills and Knowledge

Look for evidence that confirms knowledge of:

- aircraft construction principles, including the causes of structural fatigue and corrosion
- describing the basic construction methods used to assemble:
 - fuselage (pressure and non-pressurised)
 - wings, vertical and horizontal stabilisers, rotary wing tail cones and pylons
 - engine nacelles/pylons
 - doors and windows, including seals, sealants and locking mechanisms
- material specifications for aluminium alloys and steel alloys used in aircraft structure
- composite cloths, matrix materials and adhesives
- structural material identification by markings and numbering systems
- material identification by chemical, electrical and mechanical methods
- material storage requirements
- hardware types and specifications
- composite bonding methods
- identification of hardware
- sealants used in aircraft structure and their application and handling
- chemical surface treatments
- electroplating
- paints and finishes
- OHS precautions associated with repair of aircraft structure, including the safe handling of heavy components
- MSDS
- PPE

Look for evidence that confirms skills in:

- applying relevant OHS procedures, including the use of MSDS and applicable items of PPE
- the use of approved maintenance documentation and aircraft publications relating to aircraft structural disassembly and assembly
- correctly supporting the aircraft structure by jacking, trestling, bracing and/or jiggling methods
- safely handling heavy components during removal and assembly
- identifying various aircraft metals/composite materials and their basic metallurgy properties by interpretation of markings, numbering systems or visual, chemical or mechanical means
- handling and storing aircraft metal and composite components to industry standards
- identifying aircraft structural assembly fasteners (metal and composite) by interpretation of markings, numbering systems, size, shape and colour
- using appropriate hand tools and machines to remove and assemble aircraft structural components, parts, sections and skin, including riveting equipment, drilling equipment, aligning tools, reamers and material fasteners (grip pins)

- applying correct removal and installation techniques for general and close tolerance fasteners (rivets, standard and oversize – hilocks), including hole preparation and location techniques
- performing aircraft alignment and mensuration checks
- applying sealants and restoring aircraft structure surface finishes

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to apply hand skills and use maintenance publications, drawings and specifications and appropriate jigs, fixtures and tools to disassemble and reassemble aircraft structure while applying all relevant safety precautions.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>The underlying skills inherent in this unit should be transferable into other areas that require similar techniques. It is essential that procedures take into account all safety precautions and quality requirements, standards and practices, and processes associated with assembly.</p> <p>Evidence of knowledge about repair techniques and the use of the standard repair manual in a range of different repair situations will be necessary to supplement evidence of ability to plan and undertake structure and component repair.</p> <p>A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on elements from each of Groups 1 to 3 listed in the Range Statement. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.</p>
Context of and specific resources for assessment	Competency should be assessed in the work environment, using tools and equipment specified by aircraft maintenance manuals. It is also expected that general purpose tools and ground support equipment found in most routine situations would be used where appropriate.

MEA424A Evaluate aircraft non-destructive tests

Modification History

New unit

Unit Descriptor

This unit of competency is part of the Diploma and Advanced Diplomas of Aeroskills (Non-Destructive Testing). It provides the skills and knowledge required to research, analyse, develop and evaluate non-destructive tests (NDT) in the aviation maintenance environment. The unit is similar to unit MEM24011B Establish non-destructive tests but observes the requirements of AS 3669 and of the Regulators, the ADF and CASA for the approval of procedures and the performance of NDT on aircraft and aircraft components.

Application of the Unit

This unit requires application of competencies relating to NDT techniques and related metallurgical knowledge in the research, analysis, development and evaluation of NDT tests for aircraft structure and components to Level 3 (AS 3669-2006 Non-destructive testing – Qualification and approval of personnel – Aerospace).

The work can relate to scheduled and unscheduled maintenance activities on the metallic and composite structure of aircraft and aircraft components.

Certification against applicable standards may be achieved where assessment in this unit of competency is carried out in conjunction with an examining authority as described in ISO 9712:2005 Non-destructive testing – Qualification and certification of personnel.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEA109B	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance
MEA133B	Communicate aviation technical and maintenance management knowledge
MEM13013B	Work safely with ionising radiation
MEM16010A	Write reports
MEM24002B	Perform penetrant testing
MEM24004B	Perform magnetic particle testing
MEM24006B	Perform eddy current testing
MEM24008B	Perform ultrasonic testing
MEM24010B	Perform radiographic testing
MEM24012C	Apply metallurgy principles

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

- | | |
|-------------------------------|--|
| 1 Assess requirements for NDT | 1.1 The inspection area is assessed for testing and all possible failure sites identified using metallurgical analysis

1.2 Information relevant to test development is collected from available sources using accepted techniques |
|-------------------------------|--|

- 1.3 Information is analysed and interpreted
Test requirements are determined
- 2 Evaluate NDT techniques and procedures
 - 2.1 ***Test methods, techniques and procedures*** for specific NDT tasks are specified
 - 2.2 Applicable ***codes, standards, specifications*** and procedures are interpreted
 - 2.3 Test procedures are developed in accordance with established techniques and metallurgical principles
- 3 Validate/confirm NDT tasks
 - 3.1 General and specific test procedures are validated in accordance with established techniques
 - 3.2 Inspection results are interpreted in accordance with existing codes, standards and specifications
- 4 Evaluate NDT test procedures
 - 4.1 Procedures are evaluated for effectiveness
 - 4.2 Evaluation results are documented and reported in accordance with standard enterprise procedures
 - 4.3 Changes/amendments to NDT procedures are made and distributed in accordance with standard enterprise procedures

Required Skills and Knowledge

Look for evidence that confirms knowledge of:

- definition of structural terms, i.e. safe life, damage tolerant, failsafe, stress, strain, shear and cycles
- inspection requirements for metal and composite structure, including:
 - ageing aircraft inspection requirements
 - safe life structure
 - damage tolerant structure
 - fail safe structure
- potential causes of structural failure
- metallurgical analysis to assess inspection areas and potential failure sites and modes
- NDT methods, techniques and procedures
- meaning and validity of relevant codes, standards, specifications and procedures
- regulatory requirements of the ADF and CASA relating to the use of NDT for inspection of aircraft structure and components
- test procedure for testing techniques and specimen
- validation processes
- process for approval of procedures
- process for documentation/distribution of procedures
- evaluation procedures
- process for documentation of evaluation results
- process for amending tests and distributing amendments
- national/Australian standards, NOHSC guides, state/territory regulatory codes of practice/standards
- use and application of personal protective equipment
- safe work practices and procedures
- relevant hazards and control measures related to the competency

Look for evidence that confirms skills in:

- conducting metallurgical assessment of inspection areas and identifying potential failure sites and modes
- designating most appropriate method, technique or procedure
- referencing aircraft maintenance information and regulatory requirements for inspection
- developing and validating test procedures
- applying safety procedures, standard operating procedures and legislative requirements to all work
- reading/interpreting/applying relative testing standards
- reading/interpreting/applying relative conformance standards
- documenting procedure and results
- submission of reports in accordance with standard enterprise procedures

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to establish and evaluate non-destructive tests for aircraft structure and components.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p> <p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.
Method of assessment	This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the research, analysis, development, approval and evaluation of non-destructive tests, or other units requiring the exercise of the skills and knowledge covered by this unit.
Guidance information for assessment	

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Test methods, techniques and procedures</p>	<p>Test methods, techniques and procedures refer to standard techniques and procedures associated with:</p> <ul style="list-style-type: none"> • penetrant testing • magnetic particle testing • eddy current testing • ultrasonic testing • radiographic testing
<p>Codes, standards and specifications</p>	<p>Codes, standards and specifications include:</p> <ul style="list-style-type: none"> • AAP7002.053 Technical airworthiness Maintenance Manual • CASR • overseas airworthiness regulators, such as FAA, EASA and Transport Canada • AS 3669-2006 Non-destructive testing – Qualification and approval of personnel – Aerospace • NAS410 Revision 2 Certification and qualification of non-destructive testing personnel (February 2003) • BS EN 4179:2009 Aerospace series. Qualification and approval of personnel for non-destructive testing • BS EN 473:2008 Non-destructive testing. Qualification and certification of NDT personnel. General principles • ISO 9712:2005 Non-destructive testing – Qualification and certification of personnel • Applicable materials and equipment specifications
<p>Application</p>	<p>Application of this unit may relate to:</p> <ul style="list-style-type: none"> • scheduled or unscheduled maintenance activities • individual or team-related activities

MEA430A Gas weld aircraft components

Modification History

New unit.

Unit Descriptor

This unit of competency covers the development of competency elements required to gain approval within the CASA or ADF regulatory systems to gas weld aircraft components. Individuals will be authorised to weld specific parent metal groups, as specified in CAAP 33-1(1) Aircraft manual welding: approvals and qualifications or RAAF Specification Engineering W5003 Welders – Qualification for Aircraft, Missile and Aerospace Fusion welding.

Application of the Unit

The unit requires application of the skills and knowledge of MEM05022C Perform advanced welding using oxy acetylene welding process, to the welding of applicable aircraft parent metal groups as specified by the Regulators.

Individuals who have attained this unit and the applicable approval from the relevant Regulator for the relevant parent metal groups will be able to perform weld repairs on aircraft components or fabricate components where the applicable welding process is specified as gas welding.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA105C	Apply quality standards applicable to aviation maintenance processes
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA108B	Complete aviation maintenance industry documentation
MEM05022C	Perform advanced welding using oxy acetylene welding process
MEM05026C	Apply welding principles

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Elements and Performance Criteria

- | | |
|---|--|
| <p>1 Prepare to perform repair or fabricate component using gas welding process</p> | <p>1.1 <i>Materials or components</i> to be welded and the applicable <i>parent metal group are identified in accordance with applicable data</i></p> <p>1.2 Correct <i>welding equipment</i> and <i>consumables</i> are selected and safely set up in accordance with standard operating procedures</p> <p>1.3 Component (or materials) for welding are prepared</p> <p>1.4 Equipment is adjusted ready for the welding process</p> |
| <p>2 Gas weld component</p> | <p>2.1 Welds are performed to the <i>required standard</i> in accordance with the applicable repair scheme or drawing</p> <p>2.2 Completed welds are inspected for defects and any defects rectified</p> |

3 Complete documentation

2.3 Required documentation is completed in accordance with standard enterprise procedures

Required Skills and Knowledge

Look for evidence that confirms knowledge of:

- regulatory requirements applicable to aircraft welding
- standards applicable to aircraft welding
- the procedure for assessment of weld test pieces
- the use of gas welding in relation to specified aircraft parent metal groups

Look for evidence that confirms skills in:

- safely applying advanced gas welding skills defined in unit MEM05022C Perform advanced welding using oxy acetylene welding process, to weld specified aircraft parent metal group materials or components to the standards specified by the relevant Regulator (CASA or the ADF)
- applying welding principles (unit MEM05026C Apply welding principles) in the context of gas welding of aircraft components or materials
- identifying weld requirements from applicable documentation
- selecting and correctly using items of PPE applicable to gas welding of aircraft components

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>Test pieces must be completed and assessed in accordance with the regulatory requirements for the granting of aircraft welding approvals. Competency must be separately assessed for each parent metal group for which a gas welding authority is sought.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence is required of the ability to produce gas welds to required specifications consistently across the range of components that are being fabricated or repaired, while applying all relevant safety precautions. The ability to do this must be demonstrated through the production of the test pieces specified for the welding process and parent metal group in the CAAP 33-1(0) Aircraft manual welding: approvals and qualifications or RAAF Specification Engineering W5003 Welders – Qualification for Aircraft, Missile and Aerospace Fusion welding.</p>
<p>Context of and specific resources for assessment</p>	<p>Test pieces specified for each parent metal group for which approval is sought may be completed in the workplace or a simulated workplace. The individual must be provided with all required equipment, consumables, PPE, materials and data/drawings relating to the test pieces that are required for the approvals being sought.</p> <p>Assessment of test pieces must be carried out in a testing facility that meets the requirements specified by the applicable Regulator.</p>
<p>Method of assessment</p>	<p>Assessment methods are specified in the CAAP 33-1(0) Aircraft manual welding: approvals and qualifications or RAAF Specification Engineering W5003 Welders – Qualification for Aircraft, Missile and Aerospace Fusion welding.</p>
<p>Guidance information for assessment</p>	

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. MEA431A Braze weld aircraft components

Modification History

New unit.

Unit Descriptor

This unit of competency covers the development of competency elements required to gain approval within the CASA or ADF regulatory systems to braze weld aircraft components. Individuals will be authorised to weld specific parent metal groups, as specified in CAAP 33-1(1) Aircraft manual welding: approvals and qualifications or RAAF Specification Engineering W5003 Welders – Qualification for Aircraft, Missile and Aerospace Fusion welding.

Application of the Unit

The unit requires application of the skills and knowledge of MEM05006C Perform brazing and/or silver soldering, to the brazing of applicable aircraft parent metal groups as specified by the Regulators.

Individuals who have attained this unit and the applicable approval from the relevant Regulator for the relevant parent metal groups will be able to perform braze repairs on aircraft components or fabricate components where the applicable welding process is specified as brazing.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA105C	Apply quality standards applicable to aviation maintenance processes
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA108B	Complete aviation maintenance industry documentation
MEM05006C	Perform brazing and/or silver soldering
MEM05026C	Apply welding principles

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

- | | |
|--|--|
| 1 Prepare to perform repair or fabricate component using braze welding process | 1.1 <i>Materials</i> or <i>components</i> to be brazed and the applicable <i>parent metal group</i> are identified in accordance with applicable data

1.2 Correct <i>braze welding equipment</i> and <i>consumables</i> are selected and safely set up in accordance with standard operating procedures

1.3 Component (or materials) is prepared for braze welding

1.4 Equipment is adjusted ready for the brazing process |
|--|--|

- | | |
|--------------------------|---|
| 2 Braze weld components | 2.1 Braze welds are performed to the <i>required standard</i> in accordance with the applicable repair scheme or drawing |
| | 2.2 Completed welds are inspected for defects and any defects rectified |
| 3 Complete documentation | 3.1 Required documentation is completed in accordance with standard enterprise procedures |

Required Skills and Knowledge

Look for evidence that confirms knowledge of:

- regulatory requirements applicable to aircraft welding
- standards applicable to aircraft welding
- the procedure for assessment of weld test pieces
- the use of braze welding in relation to specified aircraft parent metal groups

Look for evidence that confirms skills in:

- safely applying braze welding skills defined in unit MEM05006C Perform brazing and/or silver soldering, to weld specified aircraft parent metal group materials or components to the standards specified by the relevant Regulator (CASA or the ADF)
- applying welding principles (unit MEM05026C Apply welding principles) in the context of braze welding of aircraft components or materials
- identifying braze weld requirements from applicable documentation
- selecting and correctly using items of PPE applicable to braze welding of aircraft components

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>Test pieces must be completed and assessed in accordance with the regulatory requirements for the granting of aircraft braze welding approvals. Competency must be separately assessed for each parent metal group for which a braze welding authority is sought.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence is required of the ability to produce braze welds to required specifications consistently across the range of components that are being fabricated or repaired, while applying all relevant safety precautions. The ability to do this must be demonstrated through the production of the test pieces specified for the welding process and parent metal group in the CAAP 33-1(0) Aircraft manual welding: approvals and qualifications or RAAF Specification Engineering W5003 Welders – Qualification for Aircraft, Missile and Aerospace Fusion welding.</p>
<p>Context of and specific resources for assessment</p>	<p>Test pieces specified for each parent metal group for which approval is sought may be completed in the workplace or a simulated workplace. The individual must be provided with all required equipment, consumables, PPE, materials and data/drawings relating to the test pieces that are required for the approvals being sought.</p> <p>Assessment of test pieces must be carried out in a testing facility that meets the requirements specified by the applicable Regulator.</p>
<p>Method of assessment</p>	<p>Assessment methods are specified in the CAAP 33-1(0) Aircraft manual welding: approvals and qualifications or RAAF Specification Engineering W5003 Welders – Qualification for Aircraft, Missile and Aerospace Fusion welding.</p>
<p>Guidance information for assessment</p>

ME432A Weld aircraft components using the gas tungsten arc welding process

Modification History

New unit.

Unit Descriptor

This unit of competency covers the development of competency elements required to gain approval within the CASA or ADF regulatory systems to weld aircraft components using the gas tungsten arc welding (GTAW) process. Individuals will be authorised to weld specific parent metal groups, as specified in CAAP 33-1(1) Aircraft manual welding: approvals and qualifications or RAAF Specification Engineering W5003 Welders – Qualification for Aircraft, Missile and Aerospace Fusion welding.

Application of the Unit

The unit requires application of the skills and knowledge of MEM05044B Perform welds to code standards using gas tungsten arc welding process, to the welding of applicable aircraft parent metal groups as specified by the Regulators.

Individuals who have attained this unit and the applicable approval from the relevant Regulator for the relevant parent metal groups will be able to perform weld repairs on aircraft components or fabricate components where the applicable welding process is specified as GTAW.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA105C	Apply quality standards applicable to aviation maintenance processes
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA108B	Complete aviation maintenance industry documentation
MEM05044B	Perform welds to code standards using gas tungsten arc welding process
MEM05026C	Apply welding principles

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

- | | |
|--|--|
| <p>1 Prepare to perform repair or fabricate test pieces using GTAW process</p> | <p>1.1 Materials or components to be welded and the applicable parent metal group are identified in accordance with applicable data</p> <p>1.2 Welding equipment is inspected for serviceability and correctly set up in accordance with standard operating procedures</p> <p>1.3 Component (or materials) is prepared for welding</p> |
|--|--|

- | | |
|-----------------------------------|--|
| 2 Gas tungsten arc weld component | 2.1 Welds are performed to the <i>required standard</i> in accordance with the applicable repair scheme or drawing |
| | 2.2 Completed welds are inspected for defects and any defects rectified |
| 3 Complete documentation | 3.1 Required documentation is completed in accordance with standard enterprise procedures |

Required Skills and Knowledge

Look for evidence that confirms knowledge of:

- regulatory requirements applicable to aircraft welding
- standards applicable to aircraft welding
- the procedure for assessment of weld test pieces
- the use of GTAW in relation to specified aircraft parent metal groups

Look for evidence that confirms skills in:

- safely applying advanced GTAW skills defined in unit MEM05044B Perform welds to code standards using gas tungsten arc welding process, to weld specified aircraft parent metal group materials or components to the standards specified by the relevant Regulator (CASA or the ADF)
- applying welding principles (unit MEM05026C Apply welding principles) in the context of welding of aircraft components or materials using the GTAW process
- identifying weld requirements from applicable documentation
- selecting and correctly using items of PPE applicable to GTAW of aircraft components

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>Test pieces must be completed and assessed in accordance with the regulatory requirements for the granting of aircraft welding approvals. Competency must be separately assessed for each parent metal group for which a GTAW authority is sought.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence is required of the ability to produce gas tungsten arc welds to required specifications consistently across the range of components that are being fabricated or repaired, while applying all relevant safety precautions. The ability to do this must be demonstrated through the production of the test pieces specified for the welding process and parent metal group in the CAAP 33-1(0) Aircraft manual welding: approvals and qualifications or RAAF Specification Engineering W5003 Welders – Qualification for Aircraft, Missile and Aerospace Fusion welding.</p>
<p>Context of and specific resources for assessment</p>	<p>Test pieces specified for each parent metal group for which approval is sought may be completed in the workplace or a simulated workplace. The individual must be provided with all required equipment, consumables, PPE, materials and data/drawings relating to the test pieces that are required for the approvals being sought.</p> <p>Assessment of test pieces must be carried out in a testing facility that meets the requirements specified by the applicable Regulator.</p>
<p>Method of assessment</p>	<p>Assessment methods are specified in the CAAP 33-1(0) Aircraft manual welding: approvals and qualifications or RAAF Specification Engineering W5003 Welders – Qualification for Aircraft, Missile and Aerospace Fusion welding.</p>
<p>Guidance information for assessment</p>	

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p>Materials</p>	<p>Materials may be any metal used in the construction of aircraft components that is suitable for GTAW</p>
<p>Component</p>	<p>Components may be any aircraft component where GTAW is specified as either a fabrication or repair technique</p>
<p>Parent metal group</p>	<p>Parent metal groups against which welding authorities are individually granted are:</p> <ul style="list-style-type: none"> • aluminium alloys • magnesium alloys • carbon steels and low alloy steels • corrosion and heat resisting steels • nickel alloys • copper-based alloys • titanium alloys
<p>Required standard</p>	<p>Standards may be specified in:</p> <ul style="list-style-type: none"> • regulations relating to required test pieces • process specifications • repair manuals • overhaul manuals • Australian and New Zealand Standards

MEA433A Weld aircraft components using the gas metal arc welding process

Modification History

New unit.

Unit Descriptor

This unit of competency covers the development of competency elements required to gain approval within the CASA or ADF regulatory systems to weld aircraft components using the gas metal arc welding (GMAW) process. Individuals will be authorised to weld specific parent metal groups, as specified in CAAP 33-1(1) Aircraft manual welding: approvals and qualifications or RAAF Specification Engineering W5003 Welders – Qualification for Aircraft, Missile and Aerospace Fusion welding.

Application of the Unit

The unit requires application of the skills and knowledge of MEM05043B Perform welds to code standards using gas metal arc welding process, to the welding of applicable aircraft parent metal groups as specified by the Regulators.

Individuals who have attained this Unit and the applicable approval from the relevant Regulator for the relevant parent metal groups will be able to perform weld repairs on aircraft components or fabricate components where the applicable welding process is specified as GMAW.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA105C	Apply quality standards applicable to aviation maintenance processes
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA108B	Complete aviation maintenance industry documentation
MEM05043B	Perform welds to code standards using gas metal arc welding process
MEM05026C	Apply welding principles

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>

MEA434A Weld aircraft components using the plasma arc welding process

Modification History

New unit.

Unit Descriptor

This unit of competency covers the development of competency elements required to gain approval within the CASA or ADF regulatory systems to weld aircraft components using the plasma arc welding (PAW) process. Individuals will be authorised to weld specific parent metal groups, as specified in CAAP 33-1(1) Aircraft manual welding: approvals and qualifications or RAAF Specification Engineering W5003 Welders – Qualification for Aircraft, Missile and Aerospace Fusion welding.

Application of the Unit

The unit requires application and adaptation of the skills and knowledge of MEM05044B Perform welds to code standards using gas tungsten arc welding process, to the PAW of applicable aircraft parent metal groups as specified by the Regulators. Individuals who have attained this unit and the applicable approval from the relevant Regulator for the relevant parent metal groups will be able to perform weld repairs on aircraft components or fabricate components where the applicable welding process is specified as PAW.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

- MEA101B Interpret occupational health and safety practices in aviation maintenance
- MEA105C Apply quality standards applicable to aviation maintenance processes
- MEA107B Interpret and use aviation maintenance industry manuals and specifications
- MEA108B Complete aviation maintenance industry documentation
- MEM05044B Perform welds to code standards using gas tungsten arc welding process
- MEM05026C Apply welding principles

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

- 1 Prepare to perform repair or fabricate component using PAW process
 - 1.1 **Materials** or **component** to be welded and the applicable **parent metal group** are identified in accordance with applicable data
 - 1.2 **Welding equipment** is inspected for serviceability and correctly set up in accordance with standard operating procedures
 - 1.3 Component (or materials) are prepared for welding

- | | |
|-----------------------------|--|
| 2 Plasma arc weld component | 2.1 Welds are performed to the <i>required standard</i> in accordance with the applicable repair scheme or drawing |
| | 2.2 Completed welds are inspected for defects and any defects rectified |
| 3 Complete documentation | 3.1 Required documentation is completed in accordance with standard enterprise procedures |

Required Skills and Knowledge

Look for evidence that confirms knowledge of:

- regulatory requirements applicable to aircraft welding
- standards applicable to aircraft welding
- the procedure for assessment of weld test pieces
- equipment required for PAW and its operation and maintenance requirements
- the relative advantages of the plasma process for welding and cutting
- the composition of gases used in the PAW process
- safety precautions applicable to PAW and applicable PPE

Look for evidence that confirms skills in:

- safely applying advanced gas tungsten arc welding skills defined in unit MEM05044B Perform welds to code standards using gas tungsten arc welding process, and adapting them to perform PAW of specified aircraft parent metal group materials or components to the standards specified by the relevant Regulator (CASA or the ADF)
- applying welding principles (unit MEM05026C Apply welding principles) in the context of PAW of aircraft components or materials
- inspecting PAW process equipment for serviceability with particular emphasis on the orifice
- identifying weld requirements from applicable documentation
- selecting and correctly using items of PPE applicable to PAW of aircraft components

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>Test pieces must be completed and assessed in accordance with the Regulatory requirements for the granting of aircraft welding approvals. Competency must be separately assessed for each parent metal group for which a PAW authority is sought.</p>

MEA435A Weld aircraft components using the manual metal arc welding process

Modification History

New unit.

Unit Descriptor

This unit of competency covers the development of competency elements required to gain approval within the CASA or ADF regulatory systems to weld aircraft components using the manual metal arc welding (MMAW) process. Individuals will be authorised to weld specific parent metal groups, as specified in CAAP 33-1(1) Aircraft manual welding: approvals and qualifications or RAAF Specification Engineering W5003 Welders – Qualification for Aircraft, Missile and Aerospace Fusion welding.

Application of the Unit

The unit requires application of the skills and knowledge of MEM05045B Perform welds to code standards using manual metal arc welding process, to the welding of applicable parent metal groups as specified by the Regulators.

Individuals who have attained this unit and the applicable approval from the relevant Regulator for the relevant parent metal groups will be able to perform weld repairs on aircraft components or fabricate components where the applicable welding process is specified as MMAW.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA105C	Apply quality standards applicable to aviation maintenance processes
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA108B	Complete aviation maintenance industry documentation
MEM05045B	Perform welds to code standards using manual metal arc welding process
MEM05026C	Apply welding principles

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

- | | |
|--|---|
| <p>1 Prepare to perform repair or fabricate component using MMAW process</p> | <p>1.1 The <i>materials</i> or <i>component</i> to be welded and the applicable <i>parent metal group</i> are identified in accordance with applicable data</p> <p>1.2 Welding equipment is inspected for serviceability and correctly set up in accordance with standard operating procedures</p> <p>1.3 Component (or materials) is prepared for welding</p> |
|--|---|

- | | |
|-----------------------------------|--|
| 2 Manual metal arc weld component | 2.1 Welds are performed to the <i>required standard</i> in accordance with the applicable repair scheme or drawing |
| | 2.2 Completed welds are inspected for defects and any defects are rectified |
| 3 Complete documentation | 3.1 Required documentation is completed in accordance with standard enterprise procedures |

Required Skills and Knowledge

Look for evidence that confirms knowledge of:

- regulatory requirements applicable to aircraft welding
- standards applicable to aircraft welding
- the procedure for assessment of weld test pieces

Look for evidence that confirms skills in:

- safely applying advanced MMAW skills defined in unit MEM05045B Perform welds to code standards using manual metal arc welding process, to weld specified aircraft parent metal group materials or components to the standards specified by the relevant Regulator (CASA or the ADF)
- applying welding principles (unit MEM05026C Apply welding principles) in the context of MMAW of aircraft components or materials
- identifying weld requirements from applicable documentation
- selecting and correctly using items of PPE applicable to MMAW of aircraft components

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>Test pieces must be completed and assessed in accordance with the Regulatory requirements for the granting of aircraft welding approvals. Competency must be separately assessed for each parent metal group for which a MMAW authority is sought.</p>

MEA501A Maintain and fit anti-G suits

Modification History

Minor formatting and editorial changes made. Prerequisite unit version code updated. Unit version code updated in unit descriptor.

Unit Descriptor

This unit of competency is part of the Aeroskills Life Support and Furnishing Certificate III and IV training pathways. It covers the competencies required to maintain and fit an anti-G suit. Maintenance involves inspecting, testing, isolating faults, replacing parts, repairing and cleaning, while fitting involves adjusting the anti-G suit to fit an individual. This unit is used in workplaces that operate under the airworthiness regulatory systems of the ADF and CASA.

This unit is equivalent to PUADEFLS001B Maintain and fit anti-G suits.

Application of the Unit

This unit requires application of skills and knowledge relating to the maintenance and fitment of anti-G suits worn by aircrew and passengers in high performance aircraft. Maintenance involves inspection, testing, fault diagnosis, replacement of parts, repairs to fabric and cleaning. Fitment involves adjusting the anti-G suit to correctly fit an individual.

The scope of repairs excludes inflatable components of the anti-G suit.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA103B	Plan and organise aviation maintenance work activity
MEA105C	Apply quality standards applicable to aviation maintenance processes
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA108B	Complete aviation maintenance industry documentation
MEA109B	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance
MEA511A	Operate and maintain sewing machines and overlockers
LMFSF2002B	Machine sew materials

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

1. Maintain anti-G suit
 - 1.1. Anti-G suit is inspected for serviceability in accordance with *standard procedures*
 - 1.2. Anti-G suit is tested for serviceability in accordance with standard procedures and manufacturer's specifications
 - 1.3. Identified *faults* beyond own authority to rectify are reported to supervisor and faulty anti-G suit is quarantined
 - 1.4. Unserviceable *parts* of the anti-G suit are replaced and fabric repairs are completed in accordance with standards procedures
 - 1.5. Anti-G suit is cleaned in accordance with standard procedures
 - 1.6. Anti-G suit is presented for inspection by supervisor in accordance with standard procedures
 - 1.7. Maintenance documentation is completed and processed in accordance with standard enterprise procedures
2. Fit anti-G suit
 - 2.1. Fitting process is explained to the participant so that optimal fit can be achieved
 - 2.2. Participant is measured and appropriate size anti-G suit is selected
 - 2.3. *Anti-G suit is adjusted* to optimise fit in conjunction with participant feedback
 - 2.4. Anti-G suit fit is verified by the supervisor
 - 2.5. Relevant documentation is completed and processed in accordance with standard enterprise procedures

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying OHS practices relating to anti-G suit maintenance processes, including the selection and correct use of PPE, where applicable
- using MSDS
- using applicable tools and maintenance documentation to:
 - test/inspect anti-G suits for serviceability
 - replace unserviceable components and repair fabric in accordance with approved procedures, including sewing
 - select and use appropriate anti-G suit cleaning materials
 - correctly fit anti-G suits to users
- tying of knots, including:
 - reef knot
 - bowline
 - thumb knot
 - daisy chain
 - half hitch
- cleaning and maintaining equipment and tools

Required knowledge

Look for evidence that confirms knowledge of:

- relevant enterprise procedures and maintenance publications
- OHS procedures relating to anti-G suit maintenance, including the selection and use of PPE
- how to obtain MSDS
- G forces and anti-G suit operation during flight
- physiological effects of flight
- critical nature of maintaining and fitting anti-G suits
- forces of ejection
- operation of testing and measuring equipment and tools used to maintain anti-G suits
- inflation methods used in the maintenance of anti-G suits
- types of corrosion and contamination that may affect anti-G suits
- modification requirements for anti-G suits
- anti-G suit repair procedures and limitations
- lacing techniques used in the fitting of anti-G suits
- anti-G suit cleaning methods and materials
- handling, storage and transit procedures

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to maintain and fit anti-G suits while using the correct PPE and observing all relevant safety precautions.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The underlying skills inherent in this unit should be transferable across a range of aircraft life support equipment maintenance activities. It is essential that anti-G suit testing and inspection procedures, cleanliness requirements and safety precautions, including the correct use of PPE, are fully observed, understood and complied with. Ability to interpret maintenance and fitting procedures and apply them in practice is critical.

Evidence of transferability of skills and knowledge related to Anti-G suit maintenance and fitting is essential. This is to be demonstrated through demonstration of the ability to recognise faults and damage and perform appropriate repairs that are within the bounds of the individual's authority, and through the demonstration of correct fitting procedures on different sized individuals. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.

A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on a representative range of maintenance tasks and on the correct fitting of anti-G suits to at least three (3) different sized individuals. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.

Context of and specific resources for assessment

Competency should be assessed in the workplace or simulated workplace using materials, tools and equipment specified in the maintenance manuals and applicable procedures. It is also expected that general and special purpose tools and ground support equipment would be used where appropriate.

Method of assessment	
Guidance information for assessment	

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Standard procedures</p>	<p>Standard procedures may be found in any or all of:</p> <ul style="list-style-type: none"> • state/territory/Commonwealth OHS legislation, regulations and codes • Australian Standards • equipment manufacturers' specifications, and procedures • industry practices • safety manual • maintenance schedules • work instructions • maintenance organisation manual • MSDS • Defence regulations and instructions • standing instructions
<p>Typical faults</p>	<p>Faults may include:</p> <ul style="list-style-type: none"> • broken zips and stitching • contamination • corrosion of metal parts, such as zippers • damaged hardware • excessive wear • incorrect manufacture • leaks • tears

MEA502A Maintain and fit helmets

Modification History

Minor formatting and editorial changes made. Prerequisite unit version code updated. Unit version code updated in unit descriptor.

Unit Descriptor

This unit is part of the Aeroskills Life Support and Furnishing Certificate III and IV training pathways. It covers the competencies required to maintain and fit helmets that are capable of housing communications equipment. Maintenance involves inspecting, testing, isolating faults, replacing parts and sending away for repair, cleaning and testing prior to placing the item back in service. Fitting a helmet includes adjusting the helmet to fit the individual (helmets are not an off-the-shelf issue). This unit is used in workplaces that operate under the airworthiness regulatory systems of the ADF and CASA.

This unit is equivalent to PUADEFLS002B Maintain and fit helmets.

Application of the Unit

This unit requires application of skills and knowledge relating to the maintenance and fitment of helmets worn by aircrew and passengers. Maintenance involves inspection, testing, fault diagnosis, replacement of parts, cleaning and functional testing. Fitment involves adjusting the helmet to correctly fit an individual.

Maintaining and fitting ancillary helmet equipment, such as illumination systems, night vision equipment and oxygen masks, is not part of this unit.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA103B	Plan and organise aviation maintenance work activity
MEA105C	Apply quality standards applicable to aviation maintenance processes
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA108B	Complete aviation maintenance industry documentation
MEA109B	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

1. Maintain helmet
 - 1.1. Helmet is inspected for serviceability in accordance with *standard procedures*
 - 1.2. Helmet is tested for serviceability in accordance with standard procedures and manufacturer's specifications
 - 1.3. Identified *faults* beyond own authority to rectify are reported to supervisor and faulty helmet is quarantined
 - 1.4. Unserviceable *parts* of the helmet are replaced in accordance with standards procedures
 - 1.5. *Communication system components* are tested in accordance with standard procedures
 - 1.6. Helmet is cleaned in accordance with standard procedures
 - 1.7. Helmet is presented for inspection by supervisor in accordance with standard procedures
 - 1.8. Maintenance documentation is completed and processed in accordance with standard enterprise procedures
2. Fit helmet
 - 2.1. Fitting process is explained to the participant so that optimal fit can be achieved through relevant feedback
 - 2.2. Participant is measured to select an appropriate size helmet
 - 2.3. *Components* of helmet are adjusted to optimise fit
 - 2.4. Helmet fit is verified through participant feedback and by the supervisor
 - 2.5. Relevant documentation is completed and processed in accordance with standard enterprise procedures

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying OHS practices relating to helmet maintenance processes, including the selection and correct use of PPE, where applicable
- using MSDS
- using applicable tools and maintenance documentation to:
 - solder helmet electronic/electrical components
 - test the operation of helmet electronic/electrical components
 - replace unserviceable components in accordance with approved procedures, including hand sewing, the use of hazardous chemicals and adhesives, and thermal oven operation
 - select and use appropriate helmet cleaning materials
 - correctly fit helmets to users
- tying of knots, including:
 - reef knot
 - bowline
 - thumb knot
 - half hitch
- cleaning and maintaining equipment and tools
- correctly disposing of hazardous waste

Required knowledge

Look for evidence that confirms knowledge of:

- relevant enterprise procedures and maintenance publications
- OHS procedures relating to helmet maintenance, including the selection and use of PPE
- how to obtain MSDS
- components of a helmet and their function
- helmet operation in relation to flight
- physiological effects of flight
- aircraft crash dynamics
- critical nature of maintaining and fitting helmets
- need to regularly assess correct fitment of helmets
- helmet fitting procedures
- G forces
- Forces of ejection
- Basic electrical principles
- environmental conditions that may affect helmets
- approved cleaning methods for aviation life support equipment
- handling, storage and transit procedures relating to life support equipment
- types of corrosion and contamination that may affect helmets

- modification requirements for helmets
- helmet repair procedures and limitations
- soldering techniques
- operation of testing and measuring equipment and relevant specialist tools, including thermal oven operation
- use and storage of adhesives

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying OHS practices relating to immersion suit maintenance processes, including the selection and correct use of PPE, where applicable
- using MSDS
- using applicable tools and maintenance documentation to:
 - test/inspect immersion suits for serviceability
 - replace unserviceable components in accordance with approved procedures, including the use of hazardous materials and adhesives
 - select and use appropriate immersion suit cleaning materials
 - correctly fit immersion suits to users
- operating specialist equipment, including:
 - heat press
 - vacuum heat sealer
 - 3 stage in-line breathing apparatus
 - filter extraction systems
 - spill kits
- cleaning and maintaining equipment and tools

Required knowledge

Look for evidence that confirms knowledge of:

- relevant regulations, standards, enterprise procedures and maintenance publications
- OHS procedures relating to immersion suit maintenance, including the selection and use of PPE
- how to obtain MSDS
- emergency procedures in relation to chemical spills and emergency evacuation of personnel in distress
- chemical disposal procedures
- requirements for storage of adhesives
- cold shock and hypothermia in relation to survival
- priorities of survival and how they relate to immersion suits and associated ancillary equipment
- physiological effects of flight
- critical nature of maintaining and fitting immersion suits
- materials used to manufacture immersion suits (i.e. neoprene and gortex)
- operation of testing and measuring equipment and tools used to maintain immersion suits
- components of an immersion suit and their function
- types of corrosion and contamination that may affect immersion suits
- modification requirements for immersion suits

- immersion suit repair procedures and limitations
- immersion suit cleaning methods and materials
- handling, storage and transit procedures relating to life support equipment
- handling and storage procedures relating to immersion suits (i.e. MACPAC highly susceptible to damage)
- specialist equipment operation, including:
 - heat press
 - vacuum heat sealer
 - 3 stage in-line breathing apparatus
 - filter extraction systems
 - spill kits

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to maintain and fit immersion suits while using the correct PPE and observing all relevant safety precautions.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The underlying skills inherent in this unit should be transferable across a range of aircraft life support equipment maintenance activities. It is essential that immersion suit testing and inspection procedures, cleanliness requirements and safety precautions, including the correct use of PPE, are fully observed, understood and complied with. Ability to interpret maintenance and fitting procedures and apply them in practice is critical.

Evidence of transferability of skills and knowledge related to immersion suit maintenance and fitting is essential. This is to be demonstrated through demonstration of the ability to recognise faults and damage and perform appropriate repairs that are within the bounds of the individual's authority, and through the demonstration of correct fitting procedures. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.

A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on a representative range of maintenance tasks and on the correct fitting of immersion suits. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.

Context of and specific resources for assessment

Competency should be assessed in the workplace or simulated workplace using materials, tools and equipment specified in the maintenance manuals and applicable procedures. It is also expected that general and special purpose tools and ground support equipment would be used where appropriate.

Method of assessment	
Guidance information for assessment	

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.  - 1.8. Maintenance documentation is completed and processed in accordance with standard enterprise procedures
2. Pack parachute
 - 2.1. Parachute is packed for use in accordance with standard procedures
 - 2.2. Parachute is presented for inspection by supervisor in accordance with standard enterprise procedures
 - 2.3. Relevant documentation is completed and processed in accordance with standard enterprise procedures

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying OHS practices relating to parachute maintenance processes, including the selection and correct use of PPE, where applicable
- handling, storing and organising transport of equipment
- delivering briefings to personnel in relation to operating parachutes
- using MSDS
- using maintenance publications, drawings and documentation relating to parachute maintenance
- using applicable testing and measuring equipment, tools and maintenance documentation to:
 - test parachutes for serviceability
 - replace unserviceable components in accordance with approved procedures
 - select and use appropriate parachute cleaning materials
 - repair parachutes (both hand and machine sewing)
- cleaning and maintaining equipment and tools

Required knowledge

Look for evidence that confirms knowledge of:

- relevant regulations, standards, enterprise procedures and maintenance publications
- OHS procedures relating to parachute maintenance, including the selection and use of PPE
- how to obtain MSDS
- critical nature of maintaining and packing parachutes, i.e. risk of death
- approved cleaning methods for aviation life support equipment
- components of a parachute and their function
- parachute assembly materials of construction
- environmental conditions that may affect parachutes and parachute assemblies, including UV degradation
- types of corrosion and contamination that may affect parachute assemblies
- handling, storage and transit procedures relating to parachutes
- physiological effects of flight
- sequence of ejection
- operation of person carrying parachutes
- operation of ballistic parachutes in aircraft recovery
- purpose of different types of canopies
- modification requirements for parachutes
- requirements for a parachute servicing facility
- operation of testing and measuring equipment and tools used to maintain parachutes
- repair limitations for parachutes
- packing tools and measuring equipment required to pack parachutes

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to maintain and pack parachutes while observing all relevant safety precautions.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The underlying skills inherent in this unit should be transferable across a range of aircraft life support equipment maintenance activities. It is essential that parachute testing and inspection procedures, cleanliness requirements and safety precautions are fully observed, understood and complied with. Ability to interpret maintenance and packing procedures and apply them in practice is critical.

Evidence of transferability of skills and knowledge related to parachute maintenance and packing is essential. This is to be demonstrated through demonstration of the ability to recognise faults, replace components and perform appropriate repairs that are within the bounds of the individual's authority, and through the demonstration of correct packing procedures. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.

A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on the following range of tasks:

- correctly packing a minimum of three (3) parachutes consecutively and without the need for corrective action by the supervisor
- recognising the limits of own authority
- replacing canopy/harness, including line sequence tests
- correctly repairing a tear in parachute canopy material through patching
- inspecting, testing and replacing unserviceable parts of a quick release fitting
- recognising a range of faults and their serviceability limits and repairing within limitations/tolerances.

This shall be established via the records in the Log of

	Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.
Context of and specific resources for assessment	Competency should be assessed in the workplace or simulated workplace using materials, tools and equipment specified in the maintenance manuals and applicable procedures. It is also expected that general and special purpose tools and ground support equipment would be used where appropriate.

Co-requisite units

MEA118A Conduct self in the aviation maintenance environment

MEA506A Maintain and pack survival inflatable life rafts and escape slides

Modification History

Minor formatting and editorial changes made. Prerequisite unit version code updated. Unit version code update in unit descriptor.

Unit Descriptor

This unit of competency is part of the Aeroskills Life Support and Furnishing Certificate III and IV training pathways. It covers the competencies required to maintain and pack survival inflatable life rafts and escape slides. Maintenance includes inspecting, testing, isolating faults, replacing components and cleaning prior to packing. The unit does not include repairing life rafts and escape slides. This unit is used in workplaces that operate under the airworthiness regulatory systems of the ADF and CASA.

This Unit is equivalent to PUADEFLS006B Maintain and pack survival inflatable life rafts or escape slides.

Application of the Unit

This unit requires application of skills and knowledge relating to the maintenance and packing of survival inflatable life rafts and escape slides. Maintenance involves inspection, testing, fault diagnosis, replacement of parts and cleaning.

The unit applies to a range of types of survival inflatable life raft and to a number of types of inflatable aircraft escape slide.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA103B	Plan and organise aviation maintenance work activity
MEA105C	Apply quality standards applicable to aviation maintenance processes
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA108B	Complete aviation maintenance industry documentation
MEA109B	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

1. Maintain survival inflatable life raft or escape slide
 - 1.1. *Survival inflatable life raft* and *associated ancillary equipment* or *escape slide* is inspected for serviceability in accordance with *standard procedures*
 - 1.2. Identified *faults* beyond own authority to rectify are reported to supervisor and faulty survival inflatable life raft, ancillary equipment or escape slide is quarantined
 - 1.3. Unserviceable *parts* of the survival inflatable life raft, ancillary equipment or escape slide are replaced in accordance with standard procedures
 - 1.4. Survival inflatable life raft or escape slide is *tested* for serviceability in accordance with standard procedures and manufacturer's specifications
 - 1.5. Survival inflatable life raft or escape slide is cleaned in accordance with standard procedures
 - 1.6. Survival inflatable life raft or escape slide is presented for inspection by supervisor in accordance with standard procedures
 - 1.7. Maintenance documentation is completed and processed in accordance with standard enterprise procedures
2. Pack survival inflatable life raft or escape slide
 - 2.1. Survival inflatable life raft or escape slide is packed for use in accordance with standard procedures
 - 2.2. Ancillary equipment is packed for use in accordance with standard procedures
 - 2.3. Survival inflatable life raft or escape slide is presented for inspection by supervisor in accordance with standard enterprise procedures
 - 2.4. Relevant documentation is completed and processed in accordance with standard enterprise procedures

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying OHS practices relating to survival inflatable life raft, ancillary equipment and escape slide maintenance processes, including the selection and correct use of PPE, where applicable
- using MSDS
- using maintenance publications, drawings and documentation relating to survival inflatable life raft, ancillary equipment and escape slide maintenance
- handling, storing and organising transport of equipment
- delivering briefings to personnel in relation to operating survival inflatable life rafts and escape slides
- inflating/deflating survival inflatable devices for maintenance
- using applicable testing and measuring equipment, tools and maintenance documentation to:
 - test survival inflatable devices for serviceability
 - replace unserviceable components or items of ancillary equipment in accordance with approved procedures
 - select and use appropriate survival inflatable device cleaning materials
- solder battery terminals on emergency locator transmitters
- tying various types of knots, including:
 - reef knot
 - bowline
 - thumb knot
 - half hitch
- hand sewing
- cleaning and maintaining equipment and tools

Required knowledge

Look for evidence that confirms knowledge of:

- relevant regulations, standards, enterprise procedures and maintenance publications
- OHS procedures relating to survival inflatable life raft and escape slide maintenance, including the selection and use of PPE
- how to obtain MSDS
- relevant safety precautions including storage and handling of compressed gas cylinders and survival and distress pyrotechnics
- critical nature of maintaining and packing survival inflation devices, i.e. risk of death
- search and rescue procedures
- priorities of survival and how they relate to survival inflatable life rafts and associated ancillary equipment
- electrical principles
- approved cleaning methods for aviation life support equipment

- environmental conditions that may affect survival inflation devices including ultraviolet degradation
- types of corrosion and contamination that may affect survival inflation devices
- handling, storage and transit procedures relating to survival inflation devices
- survival inflation devices and methods of operation
- operation of emergency locator beacons and emergency locator transmitters
- principles of operation of inflation mechanisms
- components of a survival inflation device and their function
- repair limitations for survival inflatable life rafts and escape slides
- modification requirements for survival inflatable life rafts and escape slides
- requirements for a survival inflation device servicing facility
- packing tools and measuring equipment required to pack survival inflatable devices
- use of survival inflatable life rafts, including associated ancillary equipment and escape slides

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to maintain and pack survival inflatable life rafts and escape slides while observing all relevant safety precautions.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The underlying skills inherent in this unit should be transferable across a range of aircraft life support equipment maintenance activities. It is essential that survival inflatable device testing and inspection procedures, cleanliness requirements and safety precautions are fully observed, understood and complied with. Ability to interpret maintenance and packing procedures and apply them in practice is critical.

Evidence of transferability of skills and knowledge related to survival inflatable life raft and escape slide maintenance and packing is essential. This is to be demonstrated through demonstration of the ability to recognise faults and replace components that are within the bounds of the individual's authority, and through the demonstration of correct packing procedures. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.

A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the Unit of Competency are being achieved under routine supervision on the following range of tasks:

- completing a minimum of three (3) inflation tests without the need for corrective action by the supervisor
- recognising the limits of own authority
- testing cylinder weight and determining if it is within tolerance
- correctly packing a minimum of three (3) survival inflatable life rafts or escape slides without the need for corrective action by the supervisor
- recognising a range of faults and their serviceability limits (faults must include incorrect manufacture and verifying expiry date of inflatable life raft and

	<p>ancillary equipment or escape slide.</p> <p>This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.</p>
Context of and specific resources for assessment	Competency should be assessed in the workplace or simulated workplace using materials, tools and equipment specified in the maintenance manuals and applicable procedures. It is also expected that general and special purpose tools and ground support equipment would be used where appropriate.
Method of assessment	
Guidance information for assessment	

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Applicable types of survival inflatable life rafts	Survival inflatable life rafts may include: <ul style="list-style-type: none"> • 10U Mk8 • F2B • LRU 16
Ancillary equipment	Ancillary equipment may include: <ul style="list-style-type: none"> • electronic locating devices • lighting devices • pyrotechnics • rations • survival/location aids • water
Applicable types of escape slide	Escape slides may include: <ul style="list-style-type: none"> • 19D22454-2 • 19D22387-2 • 19D22454-5 • 19D22454-6
Standard procedures	Standard procedures may be found in any or all of: <ul style="list-style-type: none"> • state/territory/Commonwealth OHS legislation, regulations and codes • Australian Standards • equipment manufacturers' specifications and procedures • industry practices • safety manual • maintenance schedules • work instructions • maintenance organisation manual • MSDS • Defence regulations and instructions • CASR and advisory material • standing instructions
Faults	Faults may include: <ul style="list-style-type: none"> • abrasion

	<ul style="list-style-type: none"> • broken stitching • contamination • corrosion of metal parts • damaged hardware • delamination/porosity • expired components or equipment • faulty valves • frayed lines • holes • incorrect manufacture • lifting tapes • UV degradation
Parts	<p>Parts may include:</p> <ul style="list-style-type: none"> • cylinders • operating head • valves • valise
Testing	<p>Testing may include:</p> <ul style="list-style-type: none"> • checking ancillary equipment (e.g. electronic locating devices and survival/location aids) • cylinder weight tolerance • inflation tests • light and battery test

Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

1. Maintain restraint belts/harnesses
 - 1.1. **Restraint belts/harnesses** are inspected for serviceability in accordance with **standard procedures**
 - 1.2. Identified **faults** beyond own authority to rectify are reported to supervisor and faulty restraint system is quarantined
 - 1.3. Unserviceable parts of a quick release fitting are inspected, tested and replaced
 - 1.4. Unserviceable **parts of the restraint belts/harnesses** are replaced to render restraint system serviceable in accordance with standard procedures
 - 1.5. Basic restraint belt/harness stitching repairs are completed in accordance with standard procedures
 - 1.6. Restraint belts/harnesses are cleaned in accordance with standard procedures
 - 1.7. Restraint belts/harnesses are presented for inspection by supervisor in accordance with standard procedures
 - 1.8. Maintenance documentation is completed and processed in accordance with standard enterprise procedures
2. Remove restraint systems
 - 2.1. Approval to remove restraint system is obtained in accordance with standard enterprise procedures
 - 2.2. Restraint system is removed from the aircraft in accordance with applicable maintenance publication
 - 2.3. Maintenance documentation is completed and processed in accordance with standard enterprise procedures
3. Install restraint systems
 - 3.1. Approval to fit restraint system is obtained in accordance with standard enterprise procedures
 - 3.2. Restraint system is fitted to the aircraft in accordance with applicable maintenance publication
 - 3.3. Maintenance documentation is completed and processed in accordance with standard enterprise procedures

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying OHS practices relating to restraint system maintenance processes, including the selection and correct use of PPE, where applicable
- handling, storing and organising transport of equipment
- using MSDS
- using maintenance publications, drawings and documentation relating to restraint system maintenance
- using applicable testing and measuring equipment, tools and maintenance documentation to:
 - replace unserviceable components in accordance with approved procedures
 - select and use appropriate restraint system cleaning materials
 - repair restraint systems (both hand and machine sewing)
- cleaning and maintaining equipment and tools

Required knowledge

Look for evidence that confirms knowledge of:

- relevant regulations, standards, enterprise procedures and maintenance publications
- OHS procedures relating to restraint system maintenance, including the selection and use of PPE
- how to obtain MSDS
- critical nature of maintaining and fitting restraint systems
- approved cleaning methods for aviation life support equipment
- components of a restraint system and their function
- flight line procedures
- UV degradation
- types of corrosion and contamination that may affect restraint systems
- handling, storage and transit procedures relating to life support equipment
- modification requirements for restraint systems
- operation of testing and measuring equipment and tools used to maintain restraint systems
- repair limitations for restraint systems

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to maintain, install and remove restraint systems while observing all relevant safety precautions.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The underlying skills inherent in this unit should be transferable across a range of aircraft life support equipment maintenance activities. It is essential that restraint system inspection procedures, cleanliness requirements, repair procedures and safety precautions are fully observed, understood and complied with. Ability to interpret maintenance, installation and removal procedures and apply them in practice is critical.

Evidence of transferability of skills and knowledge related to restraint system maintenance, installation and removal is essential. This is to be demonstrated through demonstration of the ability to recognise faults, replace components and perform appropriate repairs that are within the bounds of the individual's authority, and through the demonstration of correct installation and removal procedures. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.

A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on the inspection, repair, installation and removal of restraint systems, including the demonstration of the ability to recognise a range of faults and their serviceability and repair limitations/tolerances (must include verification of expiry dates of restraint system component parts and recognition of incorrect manufacture). This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.

Context of and specific resources for assessment

Competency should be assessed in the workplace or simulated workplace using materials, tools and equipment specified in the maintenance manuals and applicable procedures. It is also expected that general and

	special purpose tools and ground support equipment would be used where appropriate.
Method of assessment	
Guidance information for assessment	

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Restraint belts/harnesses	<p>Restraint belts/harnesses may include:</p> <ul style="list-style-type: none"> • fixed point attached harness • passenger restraint belts • retractable restraint harnesses (will be attached to inertia reel but the inertia reel does not form part of the restraint system)
Standard procedures	<p>Standard procedures may be found in any or all of:</p> <ul style="list-style-type: none"> • state/territory/Commonwealth OHS legislation, regulations and codes • Australian Standards • equipment manufacturers' specifications and procedures • industry practices • safety manual • maintenance schedules • work instructions • maintenance organisation manual • MSDS • Defence regulations and instructions • CASR and advisory material • standing instructions
Faults	<p>Faults may include:</p> <ul style="list-style-type: none"> • broken quick release fitting springs • broken stitching • contamination • corrosion of metal parts • damaged hardware • damaged quick release fitting screws • excessive wear • expired date of restraint components • incorrect manufacture • pulled threads • seized quick release fitting lugs • UV degradation

Parts	Parts of the restraint belts/harnesses may include: <ul style="list-style-type: none"> • belt • fixed point attachment line • hardware (e.g. buckles) • harness • parachute housing (e.g. pack) • quick release fittings, including lugs, springs and screws
Application	Application of this unit may relate to: <ul style="list-style-type: none"> • scheduled or unscheduled maintenance activities • individual or team-related activities

2. Repair a fabric component
 - 2.1. Technical instructions are identified and interpreted to ensure **faults** are corrected in accordance with standard procedures
 - 2.2. Fabric component is repaired in accordance with standard procedures
 - 2.3. Repaired components are presented for inspection by supervisor in accordance with standard enterprise procedures
 - 2.4. Relevant documentation is completed in accordance with standard enterprise procedures
3. Alter a fabric component to meet customer requirements
 - 3.1. **Customer** is consulted to establish the requirements to alter the fabric component and to ensure **defined outcomes** are met
 - 3.2. Identified alterations beyond own authority to alter are reported to supervisor
 - 3.3. A detailed working plan is produced, where necessary, in accordance with standard procedures
 - 3.4. Altered fabric components are presented for inspection by supervisor in accordance with standard enterprise procedures
 - 3.5. Relevant documentation is completed in accordance with standard enterprise procedures

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying OHS practices relating to fabric component manufacture, repair and alteration, including the selection and correct use of PPE, where applicable
- handling, storing and organising transport of equipment
- using MSDS
- using maintenance publications, drawings and documentation relating to fabric component manufacture, repair and alterations
- applying basic sewing techniques associated with the manufacture, repair and alteration of aircraft fabric components
- using hand sewing techniques
- using basic drawing tools
- calculating dimensions and allowable dimension variations
- completing measurements and estimating fabric requirements and other material requirements
- using pre-checking and inspection techniques to anticipate cutting problems and avoid reworking and wastage
- using relevant hand and power tools
- using the limited workplace technology related to cutting, including tools, equipment, calculators and measuring devices
- cleaning and maintaining equipment and tools

Required knowledge

Look for evidence that confirms knowledge of:

- relevant regulations, standards, enterprise procedures and maintenance publications
- OHS procedures relating to fabric component manufacture, repair and alteration, including the selection and use of PPE
- how to obtain MSDS
- basic sewing techniques using *AS 2860-1986 Textiles – stitch types – classification and terminology*
- construction principles of fabric components
- cutting equipment and techniques
- design features of finished items
- fabric types, common faults and inspection procedures
- textiles - stitch types - classification and terminology
- impact of cutting on fabrics
- geometric drawing processes and techniques
- reading and interpreting specifications
- types of corrosion and contamination that may affect aircraft fabric components

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to manufacture, repair and alter aircraft-related fabric components while observing all relevant safety precautions.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The underlying skills inherent in this unit should be transferable across a range of aircraft life support equipment maintenance activities. It is essential that fabric component manufacture, repair and alteration procedures and safety precautions are fully observed, understood and complied with. Ability to interpret fabric component requirements and apply them in practice is critical.

Evidence of transferability of skills and knowledge related to fabric component manufacture, repair and alteration is essential. This is to be demonstrated through demonstration of the ability to perform appropriate manufacturing, repair and alteration tasks that are within the bounds of the individual's authority. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.

A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on the following tasks:

- recognising the limits of own authority
- correctly manufacture three (3) fabric components from technical instructions using machine sewing and at least one (1) other assembly method (hand sew, press fit, adhere or staple)
- recognising at least three (3) faults and identifying limits of repair for the fabric components
- altering a fabric component to meet customer requirements.

This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.

Context of and specific resources for assessment	Competency should be assessed in the workplace or simulated workplace using materials, tools and equipment specified in the maintenance manuals and applicable procedures. It is also expected that general and special purpose tools and ground support equipment would be used where appropriate.
Method of assessment	
Guidance information for assessment	

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Application	Application of this unit may relate to: <ul style="list-style-type: none"> • scheduled or unscheduled maintenance • individual or team-related activities
Procedures and requirements	Refer to industry standard procedures specified by manufacturers, regulatory authorities or the enterprise
Fabric components	Fabric components may include: <ul style="list-style-type: none"> • aircraft environmental protection sets and warning devices • aircraft life support equipment components • aircraft soft furnishings and associated trimming • aircrew personal fit and associated life support equipment • ground support equipment covers
Technical instructions	Technical instructions may include: <ul style="list-style-type: none"> • aircraft operational requirements • job orders • manufacturers' specifications • maintenance manuals • modification instructions • technical drawings

Modification History

Minor formatting and editorial changes made. Missing knowledge requirements reinstated.

Unit Descriptor

This unit of competency is part of the Aircraft Life Support and Furnishing Certificate III and IV training pathways. It covers the competencies required for the removal, installation and limited maintenance of seat and pod electrical and electronic systems during the overhaul of seats and pods. This unit is used in workplaces that operate under the airworthiness regulatory systems of the ADF and CASA.

Application of the Unit

This unit requires application of hand skills in the removal and installation of electrical and electronic system components during the overhaul of aircraft seats and pods, and the use of basic electrical test equipment and in-flight entertainment system test sets to confirm system serviceability.

Applications include electrical and electronic system components fitted to seats and pods undergoing overhaul in workshops

- components
- status, serviceability and shelf life
- 4.2. Physical installation of electronic components is carried out in accordance with the applicable maintenance manual
- 4.3. System is reinstated to correct physical condition in preparation for testing
- 4.4. Required maintenance documentation is completed and processed in accordance with standard enterprise procedures
5. Functionally test seat and pod electrical and electronic systems
- 5.1. Applicable system test set is connected to seat or pod in accordance with the applicable maintenance manual or approved vendor procedures
- 5.2. Power is applied to the seat or pod in accordance with applicable maintenance manual
- 5.3. Seat or pod electrical system is functionally tested for correct operation in accordance with the applicable maintenance manual
- 5.4. Seat or pod electronic system is functionally tested using the applicable test set in accordance with the applicable maintenance manual
- 5.5. Test equipment is removed and required maintenance documentation is completed and processed in accordance with standard enterprise procedures

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying relevant OHS practices, including the use of MSDS and PPE
- using approved maintenance documentation and aircraft publications relating to aircraft seat and pod electrical and electronic systems and components
- recognising defects in and deterioration of electrical cables to aircraft industry standards, including crimped and soldered joints
- correctly interpreting aircraft wire markings, terminal block identification and plug/socket pin numbering systems
- inspecting electrical looms and harness pre- and post-removal and installation to ensure minimum bends are maintained, cable is not in tension, plugs are correctly aligned, security of route ensures no chaffing of insulation, adequate clipping and cable ties have been utilised and construction complies with aircraft industry standards
- positively identifying seat and pod electrical and electronic system components
- plug connector pin removal and insertion, where soldering is not required
- recognising damage and visual defects in electrical components, such as actuators, motors and switches
- recognising damage and visual defects in electronic system components, such as display screens, tuners, volume controls, audio headset receptacles and data cables

Required knowledge

Look for evidence that confirms knowledge of:

- relevant OHS procedures
- how to obtain relevant MSDS
- the use of applicable items of PPE
- component attachment methods
- connection of hardware and plugs
- electrical wiring used in aircraft and wire marking
- plug/socket pin numbering and terminal block identification
- cable and loom installation requirements, including bonding and screening
- crimping tools and crimp terminals
- procedures for removal and insertion of plug connector pins, where soldering is not required
- handling and maintenance precautions relating to electronic displays and electrostatic sensitive devices
- electromagnetic environment
- data cable installation requirements

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to apply hand skills, use specialist tools and use maintenance publications to remove and install seat and pod electrical and electronic system components, and to functionally test the systems while observing all relevant safety precautions.</p>

Unit Descriptor

This unit of competency is part of the Aeroskills Life Support and Furnishing Certificate III and IV training pathways. It covers the competencies required to maintain sewing machines and overlockers. This unit is used in workplaces that operate under the airworthiness regulatory systems of the ADF and CASA.

This unit is equivalent to unit LMPRTF05A Operate and maintain sewing machines - 3 which was deleted from a revised version of its parent Training Package, but the content remains valid for Aeroskills Life Support and Furnishing.

Application of the Unit

This unit requires application of skills and knowledge relating to the operation and maintenance of sewing machines and overlockers in the maintenance of items of aircraft life support equipment and in the fabrication and maintenance of items of aircraft soft furnishings.

The unit applies to sewing machines and overlockers used in the range of tasks mentioned above.

Elements and Performance Criteria

- | | |
|---|---|
| 1. Plan work and prepare work area | <ul style="list-style-type: none"> 1.1. Work is planned to maximise safety and productivity 1.2. Work area is cleared and cleaned to provide work table free of obstructions and clear access to sewing/overlocking machine 1.3. Safe <i>working environment</i> is established 1.4. Suitable electrical power outlets, if required, are identified 1.5. Assistance to move and position workpiece is obtained, if necessary |
| 2. Select thread and needle | <ul style="list-style-type: none"> 2.1. Type of material to be sewn, type of stitch to be used and nature of duty to which finished product is to be subjected is determined to assist in selection of thread and needle 2.2. Suitable thread is selected with regard to thread material, diameter of thread, tensile strength and colour 2.3. Appropriate needle is chosen to suit type of thread, type of stitch and material to be sewn |
| 3. Set up machine | <ul style="list-style-type: none"> 3.1. Machine is examined for damage, missing components or other defects 3.2. Power cords are examined for knots, unsafe routing and insulation damage 3.3. Machine is safely connected to power and correct 'power-on' procedure is followed 3.4. Condition of needle is checked to ensure it is sharp, clean and free from rust and dirt 3.5. Needle is fitted to machine 3.6. Machine is threaded and thread is checked for free travel from spool 3.7. Thread tension and other machine settings are checked and adjusted using test pieces, if necessary |
| 4. Operate machine | <ul style="list-style-type: none"> 4.1. Work piece is correctly aligned to machine 4.2. Machine is operated in accordance with <i>standard procedures</i> and OHS requirements 4.3. Work piece is appropriately fed into machine 4.4. Performance of machine is monitored through regular checking of thread tension and other settings and inspection of stitching in finished product |
| 5. Undertake inspection, quality, labelling and documentation | <ul style="list-style-type: none"> 5.1. Work piece is removed from machine using assistance, if necessary 5.2. Completed work is inspected to verify that it meets applicable <i>technical instructions</i> 5.3. Any areas in need of rework or rectification are identified and marked |

- 5.4.Rework is performed or other appropriate action arranged
- 5.5.Completed product is labelled or tagged and any necessary documentation completed in accordance with standard enterprise procedures
- 6. Clean up and maintain equipment
 - 6.1.Machine is switched off using correct 'power off' procedures
 - 6.2.Machine is cleaned, and programmed maintenance, which is within the province of the operator, is performed in accordance with enterprise requirements and manufacturer's specifications
 - 6.3.Worn or damaged needles are disposed of in accordance with safe working practice
 - 6.4.Supervisor is notified of any abnormal conditions requiring maintenance or repair

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills to:

- interpreting and applying work instructions and established procedures
- planning and coordinating work activities
- locating and interpreting technical information about machines and materials used in aircraft life support and furnishing
- selecting appropriate needle and thread
- identifying unsatisfactory machine performance
- using relevant hand and power tools
- using relevant chemicals and cleaning agents and dispose of waste products
- maintaining machines and work area
- applying all relevant safety practices
- communicating effectively within the workplace
- documenting and transferring information

Required knowledge

Look for evidence that confirms knowledge of:

- precautions and safe working practices based on relevant OHS legislation, codes of practice, policies and procedures
- advanced work piece construction principles and methods
- characteristics of a wide range of materials used in aircraft life support and furnishing
- operating principles of a wide range of sewing/overlocking machines
- types of needles and threads and their applications
- types of stitching and their applications
- standard industry practice for needle storage and safe disposal
- the range of sewing/overlocking machines, hand tools and power tools used in sewing/overlocking processes and their appropriateness for particular applications
- relevant quality standards for sewn/overlocked products
- power sources, such as single phase, three phase and weather protected outlets
- electrical isolation procedures for sewing/overlocking machines
- safety and environmental requirements of relevant industry and enterprise procedures
- general housekeeping policies and procedures
- recording and reporting procedures

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to operate and maintain sewing and overlocking machines used in aircraft life support and furnishing while observing all relevant safety precautions.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The underlying skills inherent in this unit should be transferable across a range of aircraft life support equipment maintenance activities involving the use of sewing machines/overlockers. It is essential that fabric component manufacture, repair and alteration procedures and safety precautions are fully observed, understood and complied with. Ability to interpret fabric component requirements and apply them in practice is critical.

Evidence of transferability of skills and knowledge related to the use and maintenance of sewing machines and overlockers is essential. This is to be demonstrated through demonstration of the ability to perform appropriate manufacturing, repair and alteration tasks that are within the bounds of the individual's authority. The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.

A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on a sufficient number of occasions or over sufficient period of time to ensure consistent performance across a typical range of sewing and overlocking requirements. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.

Context of and specific resources for assessment

Access is required to:

- real or appropriately simulated situations involving the sewing or overlocking of materials used in aircraft life support equipment and in aircraft soft furnishings
- information on specifications of materials used in sewing and overlocking, settings for machines, relevant safety procedures and regulations, quality

	<p>standards and enterprise procedures</p> <ul style="list-style-type: none">• all necessary facilities, sewing/overlocking machines and associated hand and power tools. <p>Assessment may occur on the job or in an industry approved simulated environment.</p>
Method of assessment	
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Application

Application of this unit may relate to:

- scheduled or unscheduled maintenance
- individual or team-related activities

Procedures and requirements

Refer to industry standard procedures specified by manufacturers, regulatory authorities or the enterprise

Working environment

Working environment may include:

- work organisation procedures and practices relating to the sewing/overlocking of materials
- safe use of sewing/overlocking machines and relevant hand and power tools
- storage, safe handling and disposal of needles, threads and materials associated with sewing/overlocking
- reporting actions which include verbal and written communication in accordance with enterprise policies and procedures
- oral, written or visual communication, including completion of standard forms, interpretation of information and instructions associated with workplace activities, and recording and reporting of work outcomes
- procedures for safety, environmental protection, housekeeping and quality as specified by equipment and materials manufacturers, regulatory authorities and the enterprise

Standard procedures

Standard procedures may be found in any or all of:

- state/territory/Commonwealth OHS legislation, regulations and codes
- Australian Standards
- equipment manufacturers' specifications and procedures
- industry practices
- safety manual
- maintenance schedules
- work instructions
- maintenance organisation manual

RANGE STATEMENT	
	<ul style="list-style-type: none"> • MSDS • Defence regulations and instructions • CASR and advisory material • standing instructions
Technical instructions	<p>Technical instructions may include:</p> <ul style="list-style-type: none"> • aircraft operational requirements • job orders • manufacturers' specifications • maintenance manuals • modification instructions • technical drawings

MEA601A Maintain aircraft egress systems

Modification History

Minor formatting and editorial changes made. Prerequisite unit version codes updated. Unit version code updated in unit descriptor.

Unit Descriptor

This unit of competency is part of the Aeroskills Aircraft Armament Certificate IV training pathway. It covers the competencies required to maintain aircraft egress systems that contain explosive ordnance.

This unit was developed from PUADEFEO717C Maintain aircraft egress systems and is equivalent to that unit. This unit is used in workplaces that operate under the airworthiness regulatory systems of the ADF and CASA.

Application of the Unit

This unit covers the maintenance of aircraft egress systems that contain explosive ordnance.

Maintenance covers the entire egress system, including the explosive ordnance. It involves the installation and removal of safety devices, disarming and rearming, inspecting, testing, replacing parts, cleaning and painting.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA103B	Plan and organise aviation maintenance work activity
MEA105C	Apply quality standards applicable to aviation maintenance processes
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA108B	Complete aviation maintenance industry documentation
MEA109B	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance
PUADEFEO101D	Work safely with explosive ordnance

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Documentation and records are completed in accordance with standard enterprise procedures</p> |

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying relevant OHS procedures, including selection and use of MSDS and PPE
- fitment of applicable safety devices
- egress system disarming and rearming
- safely handling explosive components
- conducting tests involving continuity, gauging and measuring
- identifying and selecting applicable items of specialist equipment and tools
- using maintenance documentation, hand tools, specialist tools and equipment to perform egress system maintenance tasks
- preparing removed explosive components for safe storage or transportation

Required knowledge

Look for evidence that confirms knowledge of:

- egress system construction, layout and operation
- operation, characteristics and limitations of aircraft egress systems
- effect of environmental conditions
- colour coding, marking and labels associated with egress systems
- operation, characteristics and limitations of specialist tools and equipment
- egress system test procedures
- safety precautions associated with explosive components
- requirements for handling and disposal of explosive components
- general OHS procedures applicable to egress system maintenance, including applicable PPE
- how to obtain and use MSDS

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to maintain aircraft egress systems and system components while observing all relevant safety precautions.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The underlying skills inherent in this unit should be transferable across a range of aircraft egress system maintenance activities. It is essential that assessment confirms the ability to comply with organisational safety requirements and appropriate legislative and regulatory requirements while maintaining aircraft egress systems. The ability to work safely within an explosive ordnance environment, conduct applicable tests and maintain relevant documentation is critical.

Evidence of transferability of skills and knowledge related to egress system maintenance is essential. This is to be established through demonstration of the ability to:

- render the system safe
- perform relevant inspections and tests, replace components (including disarming and re-arming the system)
- perform appropriate maintenance tasks.

The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.

A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on a range of tasks that is representative of the maintenance tasks, tests and the range of non-explosive and explosive components listed in the Range Statement. This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.

Context of and specific resources for assessment

Competency should be assessed in the workplace or simulated workplace using materials, tools and equipment specified in the maintenance manuals and applicable procedures. It is also expected that general and

	<p>special purpose tools and ground support equipment would be used where appropriate.</p> <p>Access will also be required to facilities and resources used in the storage, distribution or maintenance of explosive ordnance, including a licensed explosive site.</p>
Method of assessment	
Guidance information for assessment	

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Applicable maintenance documentation</p>	<p>Applicable maintenance documentation may include:</p> <ul style="list-style-type: none"> • defect reports • maintenance releases containing details of unserviceabilities • modification orders or leaflets • service bulletins • instructions issued by airworthiness authorities • work instructions • servicing schedules • maintenance manuals • standards and drawings • applicable airworthiness and explosive ordnance regulations • standing instructions • quality manuals • safety manuals • maintenance and explosives records
<p>Required maintenance tasks</p>	<p>Required maintenance tasks may include:</p> <ul style="list-style-type: none"> • arming and de-arming • cleaning • component changes • painting
<p>Egress system components</p>	<p>Non-explosive components may include:</p> <ul style="list-style-type: none"> • barometric and gravitational sensing components • canopy jettison components • catapults • ejection seat railings and guns • inertia reels • parachute assemblies • pressure source bottles • survival equipment <p>Explosive components may include:</p> <ul style="list-style-type: none"> • ejection handles

	<ul style="list-style-type: none"> • ejection seat cartridges and initiators • explosive connectors • explosive delay elements • flexible linear shaped charges • rocket motors • shielded mild detonating cord • special function cartridges
Application	<p>Application of this unit may relate to:</p> <ul style="list-style-type: none"> • scheduled or unscheduled maintenance activities • individual or team-related activities
Procedures and requirements	Refer to industry standard procedures specified by manufacturers, regulatory authorities or the enterprise

MEA602A Remove and install aircraft stores management system components

Modification History

Minor formatting and editorial changes made. Prerequisite unit version codes updated.

Unit Descriptor

This unit of competency is part of the Armament Certificate IV training pathway. It covers the competencies required to reconfigure aircraft stores management system (SMS) components.

The unit was developed from the ADF Enterprise unit DDRARM301A Remove and install aircraft stores management systems and components and is equivalent to that unit.

Application of the Unit

This unit applies to members of the ADF who are required to apply explosive ordnance safety and handling procedures, hand skills and use maintenance documentation/publications in the removal and installation of SMS components to meet system reconfiguration requirements.

The unit applies to all aircraft with SMS.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEA101B	Interpret occupational health and safety practices in aviation maintenance
MEA103B	Plan and organise aviation maintenance work activities
MEA105C	Apply quality standards applicable to aviation maintenance processes
MEA107B	Interpret and use aviation maintenance industry manuals and specifications
MEA108B	Complete aviation maintenance industry documentation
MEA109B	Perform basic hand skills, standard trade practices and fundamentals in aviation maintenance
PUADEFEO101D	Work safely with explosive ordnance

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

1. Prepare aircraft for SMS reconfiguration
 - 1.1.SMS *reconfiguration* task is *verified* from applicable *documentation*
 - 1.2.Aircraft *safety devices* are checked in accordance with relevant *technical publications and manuals*
 - 1.3.Correct *SMS component* is visually identified for reconfiguration
 - 1.4.Appropriate tools and ground support equipment are selected in accordance with the task
2. Remove SMS component
 - 2.1.*Firing devices* are *checked* and removed, if fitted
 - 2.2.SMS component is removed from aircraft in accordance with technical publications and manuals
 - 2.3.Protective covers and panels are fitted to aircraft and SMS component in accordance with technical publications and manuals
3. Install SMS component
 - 3.1.Applicable protective covers and panels are removed from aircraft and SMS component in accordance with technical publications and manuals
 - 3.2.SMS component is fitted to aircraft in accordance with technical publications and manuals
4. Complete and process documentation
 - 4.1.*Applicable* documentation is completed for reconfigured SMS
 - 4.2.Documentation is forwarded to MCS

Required Skills and Knowledge

Required skills

Look for evidence that confirms skills in:

- applying all safety procedures relating to aircraft SMS
- applying hand skills and applicable maintenance documentation in the removal and installation of SMS components
- testing the operation of systems and components
- using ground support equipment and test equipment
- determining SMS reconfiguration requirements
- explosive ordnance safety and handling
- manual handling of SMS components

Required knowledge

Look for evidence that confirms knowledge of:

- the aircraft operating and maintenance environment
- aircraft SMS and interfaces with other aircraft systems
- OHS procedures and policies
- explosive ordnance safety and handling procedures
- technical publications and manuals
- hardware and component attachment methods
- system and component testing requirements
- technical documentation procedures

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to reconfigure SMS by removing and installing system components while observing all relevant safety precautions.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The underlying skills inherent in this unit should be transferable across a range of aircraft SMS reconfiguration activities. It is essential that assessment confirms the ability to comply with organisational safety requirements and appropriate legislative and regulatory requirements while maintaining SMS. The ability to work safely within an explosive ordnance environment, conduct applicable tests and maintain relevant documentation is critical, including checking specifically for:

- failure to check aircraft safety devices are installed
- failure to ensure firing devices checked and removed if fitted
- commencing task prior to initiating documentation
- failure to comply with relevant OHS procedures and policies.

Evidence of transferability of skills and knowledge related to SMS component removal and installation is essential. This is to be established through demonstration of the ability to:

- render the system safe
- perform relevant inspections and tests
- replace components
- perform appropriate maintenance tasks.

The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.

A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements of the unit of competency are being achieved under routine supervision on a range of system reconfiguration tasks involving the SMS components listed in Groups 1 to 4 in the Range Statement.

	This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide.
Context of and specific resources for assessment	Competency should be assessed on aircraft and/or simulator using materials, tools and equipment specified in the maintenance manuals and applicable procedures. It is also expected that general and special purpose tools and ground support equipment would be used where appropriate.
Method of assessment	In addition to evidence provided in the Log of Industrial Experience assessment methods may include questioning and observation in operational or simulated environments. The unit may be assessed independently or in conjunction with unit MEA603A Remove and install aircraft stores suspension system and components.
Guidance information for assessment	

Range Statement

<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>

Unit Descriptor

Unit descriptor	This unit of competency covers the skills and knowledge required to prepare spray painting materials and equipment for use.
------------------------	---

Application of the Unit

Application of the unit	<p>The unit includes identification and confirmation of work requirements, preparation for work, preparation of paint for spray guns, preparation of guns and associated equipment, and completion of work finalisation processes, including clean-up and documentation.</p> <p>Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p> <p>Work is carried out in accordance with award provisions.</p>
--------------------------------	--

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Work instructions are used to determine job requirements, including method and material type. 1.2. Job specifications are read and interpreted. 1.3. Occupational health and safety (OHS) requirements, including personal protection needs, are observed throughout the work. 1.4. Materials are selected and inspected for quality. 1.5. Hand, power tooling and safety equipment are identified and checked for operation. 1.6. Procedures are determined to minimise waste material. 1.7. Procedures are identified for maximising energy efficiency while completing the job.
2. Prepare paint for spray gun(s)	2.1. Information is accessed and interpreted from manufacturer/ component supplier specifications. 2.2. Paints are mixed to conform to specification for type and colour, viscosity and temperature. 2.3. A test card is used for comparison of colour and texture. 2.4. Preparation activities are carried out according to industry regulations/guidelines, OHS requirements, legislation and enterprise procedures/policies. 2.5. Paint is prepared without causing damage to component or system. 2.6. Waste materials are stored and/or disposed of in accordance with statutory and enterprise requirements.
3. Prepare spray gun(s) for spraying	3.1. Information is accessed and interpreted from manufacturer/ component supplier specifications. 3.2. Preparation, maintenance and adjustment of spray painting equipment conforms to requirements of manufacturer/component supplier specifications. 3.3. Preparation activities are carried out according to industry regulations/guidelines, OHS requirements, legislation and enterprise procedures/policies. 3.4. Spray guns are prepared without causing damage to component or system.
4. Clean up work area and maintain equipment	4.1. Material that can be reused is collected and stored. 4.2. Waste and scrap is removed following workplace

ELEMENT	PERFORMANCE CRITERIA
	<p>procedures.</p> <p>4.3. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures.</p> <p>4.4. Unserviceable equipment is tagged and faults identified in accordance with workplace procedures.</p> <p>4.5. Operator maintenance is completed in accordance with manufacturer/component supplier specifications and worksite procedures.</p> <p>4.6. Tooling is maintained in accordance with workplace procedures.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- collect, organise and understand information related to work orders, plans and safety procedures for preparing spray painting material and equipment
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with worksite supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including preparation and layout of worksite and obtaining of equipment and material to avoid backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to calculate time, apply accurate measurements, calculate material requirements and establish quality checks
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and wastage
- use workplace technology related to the preparation of spray painting material and equipment, including the use of specialist tooling, measuring equipment and communication devices and the reporting/documenting of results

Required knowledge

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge includes:

- OHS cleaning materials, equipment, material and personal safety requirements
- environmental protection requirements
- material storage, handling and disposal/material safety data sheets
- types of paints, including acrylic lacquers, solids, clear over base, air dry and polyurethane, and two component systems
- paint application methods
- spray guns and their application
- manufacturer/component supplier specifications for spray gun set-up and maintenance
- equipment preparation procedures
- paint mixing techniques
- paint drying methods
- work organisation and planning processes
- enterprise quality processes

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:</p> <ul style="list-style-type: none"> • observing safety procedures and requirements • communicating effectively with others involved in or affected by the work • selecting methods and techniques appropriate to the circumstances • completing preparatory activity in a systematic manner • applying environmental procedures • preparing automotive paint to specifications • preparing spray guns and associated equipment to manufacturer/component supplier requirements.
Context of, and specific resources for assessment	<ul style="list-style-type: none"> • Application of competence is to be assessed in the workplace or simulated worksite. • Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints. • Assessment is to comply with regulatory requirements, including Australian Standards. • The following resources should be made available: <ul style="list-style-type: none"> • workplace location or simulated workplace • material relevant to the preparation of spray painting material and equipment • equipment, hand and power tooling appropriate to the preparation of spray painting material and equipment • activities covering mandatory task requirements • specifications and work instructions.
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed Assessment Guidelines of AUR05 Automotive Industry Retail, Service and Repair Training Package. • Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies. • Assessment may be applied under project-related conditions and require evidence of process. • Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements. • Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Methods	<p>Methods are to include:</p> <ul style="list-style-type: none"> • spray gun techniques • various spraying techniques • drying procedures • paint mixing methods • paint straining methods • paint thinning methods
OHS	OHS requirements are to be in accordance with

RANGE STATEMENT	
	<p>legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include:</p> <ul style="list-style-type: none"> • protective clothing and equipment • use of tooling and equipment • workplace environment and safety • handling of material • use of firefighting equipment • enterprise first aid • hazard control and hazardous material and substances
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices
Safe operating procedures	<p>Safe operating procedures are to include, but are not limited to:</p> <ul style="list-style-type: none"> • operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and worksite visitors
Emergency procedures	<p>Emergency procedures related to this unit are to include, but are not limited to:</p> <ul style="list-style-type: none"> • emergency shutdown and stopping of equipment • extinguishing fires • enterprise first aid requirements • worksite evacuation
Environmental requirements	<p>Environmental requirements are to include, but are not limited to:</p> <ul style="list-style-type: none"> • waste management, noise, dust and clean-up management
Quality requirements	<p>Quality requirements are to include, but are not limited to:</p> <ul style="list-style-type: none"> • regulations, including Australian standards • internal company quality policies and standards • enterprise operations and procedures

RANGE STATEMENT	
Statutory/regulatory authorities	Statutory/regulatory authorities may include: <ul style="list-style-type: none"> • federal, state/territory and local authorities administering Acts, regulations and codes of practice
Tooling and equipment	Tooling and equipment may include: <ul style="list-style-type: none"> • tinting machines • microfiche, scales • air-operated agitators • hand paddles • mixing banks • spray gun stem strainers • funnel strainers • mesh strainers • nylon stocking weave • vacuum paint strainers • viscosity measuring equipment • high-volume low-pressure spray guns • gravity feed spray guns • suction feed spray guns • pressure regulators • air compressors • spray booths • baking ovens • heating and lighting systems
Materials	Materials may include: <ul style="list-style-type: none"> • acrylic lacquers • air dry synthetic enamels • two-pack urethane acrylic enamels • metallic two-pack enamels • clear acrylic lacquers • metallic acrylic lacquers • pearl finishes • water-based finishes • paint thinners and paint reducers
Communications	Communications are to include, but are not limited to: <ul style="list-style-type: none"> • verbal and visual instructions and fault reporting and may include worksite specific

RANGE STATEMENT	
	instructions, written instructions, plans or instructions related to job/task, telephones and pagers
Information/documents	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> • verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets (MSDS), diagrams or sketches • safe work procedures related to the preparation of spray painting material and equipment • regulatory/legislative requirements pertaining to automotive painting and finishing • engineer's design specifications and instructions • organisation work specifications and requirements • instructions issued by authorised enterprise or external persons • Australian standards

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Work instructions are used to determine job requirements, including method, process and equipment. 1.2. Job specifications are read and interpreted. 1.3. Occupational health and safety (OHS) requirements, including personal safety needs, are observed throughout the work. 1.4. Equipment and tooling are identified and checked for safe and effective operation. 1.5. Procedures are determined to minimise task time.
2. Match material	2.1. Information is accessed and interpreted from manufacturer/ component supplier specifications. 2.2. Matching procedures are carried out in accordance with manufacturer/component supplier specifications. 2.3. Matching procedures are completed within established industry enterprise guidelines. 2.4. Activities are carried out according to industry regulations/ guidelines, OHS requirements, legislation and enterprise procedures/policies.
3. Measure and cut material	3.1. Information is accessed and interpreted from manufacturer/ component supplier specifications. 3.2. Measuring and cutting procedures are carried out in accordance with manufacturer/component supplier specifications. 3.3. Measuring and cutting procedures are completed within established industry enterprise guidelines. 3.4. Activities are carried out according to industry regulations/ guidelines, OHS requirements, legislation and enterprise procedures/policies.
4. Fabricate trim/covers to suit vehicle/ components	4.1. Information is accessed and interpreted from manufacturer/ component supplier specifications. 4.2. Trim/cover fabrication procedures are carried out in accordance with manufacturer/component supplier specifications. 4.3. Fabrication procedures are completed within established industry enterprise guidelines. 4.4. Activities are carried out according to industry regulations/guidelines, OHS requirements, legislation and enterprise procedures/policies.

ELEMENT	PERFORMANCE CRITERIA
5. Attach material cover to vehicle/component	5.1.Information is accessed and interpreted from manufacturer/ component supplier specifications. 5.2.Attaching procedures are carried out in accordance with manufacturer/component supplier specifications. 5.3.Attaching procedures are completed within established industry/enterprise guidelines. 5.4.Activities are carried out according to industry regulations/ guidelines, OHS requirements, legislation and enterprise procedures/policies.
6. Clean up work area and maintain equipment	6.1.Material that can be reused is collected and stored. 6.2.Waste and scrap is removed following workplace procedure. 6.3.Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures. 6.4.Unserviceable equipment is tagged and faults identified in accordance with workplace requirements. 6.5.Operator maintenance is completed in accordance with manufacturer/component supplier specifications and worksite procedures. 6.6.Tooling and equipment is maintained in accordance with workplace procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- collect, organise and understand information related to work orders, plans and safety procedures for trimming of vehicle components
- technical literacy and communication skills sufficient to interpret and apply common industry terminology, and interpret technical information and specifications
- research and interpretive skills to locate, interpret and apply operational and safety

REQUIRED SKILLS AND KNOWLEDGE

information

- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with worksite supervisor, other workers and customers, and the reporting of work outcomes and problems
- plain English literacy and communication skills in relation to dealing with others involved in the work
- questioning and active listening skills, for example when obtaining information regarding trimming requirements
- plan and organise activities, including preparation and layout of worksite and obtaining of equipment and material to avoid backtracking or workflow interruptions
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to complete tests and measurements to determine trimming requirements
- use pre-checking and inspection techniques to anticipate planning and scheduling problems, avoid wastage of time and material
- manipulative and dexterity skills to perform trimming activities
- problem-solving skills for a range of differing procedural issues
- use workplace technology related to carrying out trimming of vehicle components, including the use of specialist tooling, measuring equipment and communication devices and the reporting/documenting of results

Required knowledge

Required knowledge includes:

- OHS cleaning materials, equipment, material and personal safety requirements
- removal and replacement methods
- measuring/testing and adjustment procedures
- technical and legal requirements
- manufacturer/component supplier/company policies
- types and uses of various materials
- trim fabrication, matching, measuring and cutting procedures
- use of tooling and equipment
- work organisation and planning processes
- enterprise quality processes

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Work instructions are used to determine job requirements, including method, process and equipment. 1.2. Job specifications are read and interpreted. 1.3. Occupational health and safety (OHS) requirements, including personal safety needs, are observed throughout the work. 1.4. Equipment and tooling are identified and checked for safe and effective operation. 1.5. Procedures are determined to minimise task time.
2. Select trim/fabric materials	2.1. Information is accessed and interpreted from manufacturer/ component supplier specifications. 2.2. Material applications and usages are compared with the job requirements. 2.3. The material selected is that which best meets the user requirement. 2.4. Activities are carried out according to industry regulations/ guidelines, OHS requirements, legislation and enterprise procedures/policies.
3. Determine attachment methods	3.1. Information is accessed and interpreted from manufacturer/ component supplier specifications. 3.2. Attachment options are identified and analysed. 3.3. Attachment option is selected. 3.4. Selected option is documented.
4. Clean up work area and maintain equipment	4.1. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures. 4.2. Operator maintenance is completed in accordance with manufacturer/component supplier specifications and worksite procedures. 4.3. Equipment is maintained in accordance with workplace procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- collect, organise and understand information related to work orders, plans and safety procedures for selection and application of trim/fabric materials
- technical literacy and communication skills sufficient to interpret and apply common industry terminology, and interpret technical information and specifications
- research and interpretive skills to locate, interpret and apply operational and safety information
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with worksite supervisor, other workers and customers, and the reporting of work outcomes and problems

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Work instructions are used to determine job requirements, including method, process and equipment. 1.2. Job specifications are read and interpreted. 1.3. Occupational health and safety (OHS) requirements, including personal safety needs, are observed throughout the work. 1.4. Equipment and tooling are identified and checked for safe and effective operation. 1.5. Procedures are determined to minimise task time.
2. Select adhesive	2.1. Information is accessed and interpreted from manufacturer/component supplier specifications. 2.2. Adhesives are selected according to material type and adhesive produce/manufacturer/component supplier recommendations. 2.3. Activities are carried out according to industry regulations/guidelines, OHS requirements, legislation and enterprise procedures/policies.
3. Prepare surfaces and apply adhesive	3.1. Information is accessed and interpreted from manufacturer/ component supplier specifications. 3.2. Adhesive surface preparation and application procedures are carried out in accordance with adhesive product/ manufacturer/component supplier specifications. 3.3. Work is completed without causing damage to component or system. 3.4. Activities are carried out according to industry regulations/ guidelines, OHS requirements, legislation and enterprise procedures/policies.
4. Clean up work area and maintain equipment	4.1. Material that can be reused is collected and stored. 4.2. Waste and scrap is removed following workplace procedure. 4.3. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures. 4.4. Unserviceable equipment is tagged and faults identified in accordance with workplace requirements. 4.5. Operator maintenance is completed in accordance with manufacturer/component supplier specifications and worksite procedures.

ELEMENT	PERFORMANCE CRITERIA
	4.6. Tooling and equipment is maintained in accordance with workplace procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- collect, organise and understand information related to work orders, plans and safety procedures for selection, preparation and application of adhesives
- technical literacy and communication skills sufficient to interpret and apply common industry terminology, and interpret technical information and specifications
- research and interpretive skills to locate, interpret and apply operational and safety information
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with worksite supervisor, other workers and customers, and the reporting of work outcomes and problems
- plain English literacy and communication skills in relation to dealing with others involved in the work
- questioning and active listening skills, for example when obtaining information for selection, preparation and application of adhesives
- plan and organise activities, including preparation and layout of worksite and obtaining of equipment and material to avoid backtracking or workflow interruptions
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to complete tests and measurements to determine selection, preparation and application of adhesives
- use pre-checking and inspection techniques to anticipate planning and scheduling problems, avoid wastage of time and material
- manipulative and dexterity skills to perform the preparation and application of adhesives
- problem-solving skills for a range of differing procedural issues
- use workplace technology related to selection and application of trim/fabric adhesives, including the use of specialist tooling and equipment, measuring equipment and communication devices and the reporting/documenting of results

REQUIRED SKILLS AND KNOWLEDGE**Required knowledge**

Required knowledge includes:

- OHS cleaning materials, equipment, material and personal safety requirements
- technical information
- product safety requirements
- manufacturer/component supplier/company policies
- adhesive types and their application
- adhesive selection, preparation and application procedures
- work organisation and planning processes
- enterprise quality processes

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:</p> <ul style="list-style-type: none"> • observing safety procedures and requirements • communicating effectively with others involved in or affected by the work • selecting methods and techniques appropriate to the circumstances • completing preparatory activity in a systematic manner • selecting and applying a range of trim/fabric adhesives • completing workplace records.
<p>Context of, and specific resources for assessment</p>	<ul style="list-style-type: none"> • Application of competence is to be assessed in the workplace or simulated worksite. • Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints. • Assessment is to comply with regulatory requirements, including Australian Standards. • The following resources should be made available: <ul style="list-style-type: none"> • workplace location or simulated workplace • materials relevant to selection and application of trim/fabric adhesives • equipment, hand and power tooling appropriate to selection and application of trim/fabric adhesives • activities covering mandatory task requirements • specifications and work instructions.
<p>Method of assessment</p>	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed Assessment Guidelines of AUR05 Automotive Industry Retail, Service and Repair Training Package. • Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge. • Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also

EVIDENCE GUIDE	
	<p>reinforce the integration of key competencies.</p> <ul style="list-style-type: none"> • Assessment may be applied under project-related conditions and require evidence of process. • Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements. • Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Adhesive surface components	<p>Adhesive surface components may include:</p> <ul style="list-style-type: none"> • glass components • mouldings/trim • mirrors • weather shields • body components and panels • foam, fibreglass and trim fabrics
OHS	<p>OHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This</p>

RANGE STATEMENT	
	<p>may include:</p> <ul style="list-style-type: none"> • protective clothing and equipment • use of tooling and equipment • workplace environment and safety • handling of material • use of firefighting equipment • enterprise first aid • hazard control and hazardous material and substances
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices
Safe operating procedures	<p>Safe operating procedures are to include, but are not limited to:</p> <ul style="list-style-type: none"> • operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and worksite visitors
Emergency procedures	<p>Emergency procedures related to this unit are to include, but are not limited to:</p> <ul style="list-style-type: none"> • emergency shutdown and stopping of equipment • extinguishing fires • enterprise first aid requirements • worksite evacuation
Environmental requirements	<p>Environmental requirements are to include, but are not limited to:</p> <ul style="list-style-type: none"> • waste management, noise, dust and clean-up management
Quality requirements	<p>Quality requirements are to include, but are not limited to:</p> <ul style="list-style-type: none"> • regulations, including Australian standards • internal company quality policies and standards • enterprise operations and procedures
Statutory/regulatory authorities	Statutory/regulatory authorities may include:

RANGE STATEMENT	
	<ul style="list-style-type: none"> federal, state/territory and local authorities administering Acts, regulations and codes of practice
Tooling and equipment	<p>Tooling and equipment may include:</p> <ul style="list-style-type: none"> hand tooling power/air tooling cleaning equipment sealing equipment cutting equipment
Materials	<p>Materials may include:</p> <ul style="list-style-type: none"> adhesives, solvents, resins and cleaning materials
Communications	<p>Communications are to include, but are not limited to:</p> <ul style="list-style-type: none"> verbal and visual instructions and fault reporting and may include worksite specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
Information/documents	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets (MSDS), diagrams or sketches safe work procedures related to selection and application of trim/fabric adhesives regulatory/legislative requirements pertaining to automotive industry, including Australian Design Rules engineer's design specifications and instructions organisation work specifications and requirements instructions issued by authorised enterprise or external persons Australian standards

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. Work instructions are used to determine the job requirements, including job sheets, material type, colour, quality and quantity.</p> <p>1.2. Job specifications are read and interpreted.</p> <p>1.3. OH&S requirements, including personal protection needs, breathing apparatus and full body protection, are observed throughout the work.</p> <p>1.4. Materials are selected and inspected for quality.</p> <p>1.5. Hand tooling and safety equipment are identified and checked for operation.</p> <p>1.6. Procedures are determined to minimise waste material.</p> <p>1.7. Procedures are identified for maximising energy efficiency while completing the job.</p>
2. Identify paint faults, causes and rectification procedures	<p>2.1. Paint faults are identified according to industry and workplace procedures.</p> <p>2.2. Paint fault causes are determined according to industry and workplace procedures.</p> <p>2.3. Rectification procedures are determined according to fault and type of finish material according to industry standard practices and workplace requirements.</p> <p>2.4. Identification and determination activities are carried out according to industry regulations/guidelines, OH&S legislation, and enterprise procedures/policies.</p>
3. Apply air dry and polyurethane enamel refinishing materials by spray gun	<p>3.1. The environment for application of refinishing materials conforms to requirements for temperature, extraction of fumes and cleanliness.</p> <p>3.2. Refinishing materials are applied at manufacturer/component supplier recommended intervals using approved methods.</p> <p>3.3. Refinishing materials are dried using approved methods and equipment.</p> <p>3.4. Refinishing materials are applied without causing damage to any component or system.</p> <p>3.5. The finish produced meets specifications for colour, texture, depth and gloss and is contaminant-free.</p> <p>3.6. Surface refinishing is completed within approved timeframes.</p> <p>3.7. Application activities are carried out according to</p>

ELEMENT	PERFORMANCE CRITERIA
	industry regulations/guidelines, OH&S legislation, and enterprise procedures/policies.
4. Clean up work area and maintain equipment	4.1. Material that can be reused is collected and stored. 4.2. Waste material is removed and disposed of or stored according to statutory and workplace procedure. 4.3. Spray equipment is cleaned as specified by manufacturer/ component supplier and/or workplace policy and procedures. 4.4. Work area is cleaned and inspected for serviceable condition in accordance with workplace procedures. 4.5. Unserviceable equipment is tagged and faults identified in accordance with workplace procedures. 4.6. Operator maintenance is completed in accordance with manufacturer/component supplier specifications and worksite procedures. 4.7. Tooling is maintained in accordance with workplace procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, plans and safety procedures for applying air dry and polyurethane enamel refinishing materials
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with worksite supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including preparation and layout of worksite and obtaining of equipment and materials to avoid backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to calculate time, apply accurate

REQUIRED SKILLS AND KNOWLEDGE

- measurements, calculate material requirements and establish quality checks
- use workplace technology related to application of air dry and polyurethane enamel refinishing materials, including the use of specialist equipment, measuring equipment and communication devices and the reporting/recording of results

Required knowledge

A working knowledge of:

- OH&S regulations/requirements, equipment, material and personal safety requirements
- environmental protection requirements/substance disposal and storage requirements
- material safety data sheets
- types of air dry and polyurethane enamel refinishing materials
- application methods
- paint surface fault identification and rectification procedures
- drying methods for air dry and polyurethane enamel refinishing material
- types of spray guns
- spray gun operation and spraying techniques
- spray gun cleaning methods
- work organisation and planning processes
- enterprise quality processes

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:</p> <ul style="list-style-type: none"> • observing safety procedures and requirements • communicating effectively with others involved in or affected by the work • selecting methods and techniques appropriate to the circumstances • completing preparatory activity in a systematic manner • preparing air dry and polyurethane enamel paint • applying a range of air dry and polyurethane enamel refinishing materials • identifying paint faults and determining rectification faults • rectifying faults • applying environmental procedures.
Context of, and specific resources for assessment	<p>Application of competence is to be assessed in the workplace or simulated worksite.</p> <p>Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.</p> <p>Assessment is to comply with regulatory requirements, including Australian Standards. The following resources should be made available:</p> <ul style="list-style-type: none"> • workplace location or simulated workplace • materials relevant to application of air dry and polyurethane enamel refinishing materials • equipment, hand and power tooling appropriate to application of air dry and polyurethane enamel refinishing materials • activities covering mandatory task requirements • specifications and work instructions.
Method of assessment	<ul style="list-style-type: none"> • Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package. • Assessment methods must confirm consistency and

EVIDENCE GUIDE	
	<p>accuracy of performance together with application of underpinning knowledge.</p> <ul style="list-style-type: none"> • Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies. • Assessment may be applied under project related conditions and require evidence of process. • Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements. • Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Paint types	<p>Paint types are to include air dry synthetic enamels, enamel additives, two-pack polyurethane acrylic enamels, urethane additives and paint reducers.</p>
Methods	<p>Methods are to include:</p> <ul style="list-style-type: none"> • spray gun selection, various spraying

RANGE STATEMENT	
	<p>techniques, drying procedures, paint mixing</p> <ul style="list-style-type: none"> • polishing and detailing of surfaces.
OH&S	OH&S requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances.
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices.
Safe operating procedures	Safe operating procedures are to include, but are not limited to operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and worksite visitors.
Emergency procedures	Emergency procedures related to this unit are to include, but are not limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and worksite evacuation.
Environmental requirements	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management.
Quality requirements	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures.
Statutory/regulatory authorities	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice.

RANGE STATEMENT	
Tooling and equipment	Tooling and equipment may include various spray guns, air pressure regulators, air compressors, spray booths, baking ovens, heating and lighting systems, strainers, masking equipment and safety equipment.
Materials	Materials may include rags, tac rags, cleaning solvents and cleaning materials.
Communications	Communications are to include, but are not limited to verbal and visual instructions and fault reporting and may include worksite specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers.
Information/documents	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> • verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches • safe work procedures related to application of air dry and polyurethane enamel refinishing materials • regulatory/legislative requirements pertaining to automotive painting and finishing • engineer's design specifications and instructions • organisation work specifications and requirements • instructions issued by authorised enterprise or external persons • Australian Standards.

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan work operations	1.1.Required fabrics, number of items to be cut and required equipment are identified 1.2.Fabric sizes to be cut are identified from work order plus any required allowances 1.3.OHS requirements, including ergonomic criteria and personal protection needs, are observed throughout the work. 1.4.Suitable work area is selected, tidied and cleaned of any contaminants 1.5.Suitable scissors and or blades are selected and checked prior to use for appropriate sharpness, set, operation and safe condition 1.6.Fabrics are selected in accordance with work order and laid out smooth and square
2. Prepare materials for cutting	2.1.Fabrics are inspected for flaws and appropriate finish 2.2.Naps, direction, pattern matches and face of the materials are identified 2.3.Tools and equipment are checked for operation
3. Complete cutting operations	3.1.Cutting is completed with cut out materials identified/labelled where required 3.2.Any measurements for pleat lines, hems, headings and any special seam allowances are marked out using workplace approved methods 3.3.Where required, fabrics are hung using appropriate protective covers and care label information is attached 3.4.Cut lengths are dispatched to next process following workplace procedures 3.5.Unused materials are stored as required 3.6.Workplace required documentation is completed following appropriate procedures 3.7.Work area is cleaned and damaged tools tagged as required 3.8.Waste is collected and bundled for recycling/reuse as required

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, co-ordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using co-operative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements and estimate fabric requirements and other material requirements
- use pre-checking and inspection techniques to anticipate cutting problems, avoid re-working and wastage
- use the limited workplace technology related to cutting, including tools, equipment, calculators and measuring devices.

Required knowledge

- work requirements, including workplace standards
- fabric types, common faults and inspection procedures
- design features of the finished items in relation to attractive use of fabric patterns
- cutting equipment and techniques
- the impact of cutting on fabrics

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling practices for equipment, products and materials
- Identify materials used and any special marking out requirements
- Measure accurately and cut fabric quantities to minimise waste and produce consistent quality items for at least five different types of material or product
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

Work orders, fabrics, including linings and interlinings, calculator and where available other workplace calculating and cutting equipment.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and will generally be in conjunction with assessment of other units of competency.

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Unit scope	<p>This unit applies to soft furnishings and upholstered items cut from measurements and instructions. It does not apply to cutting from patterns.</p>
Unit context	<ul style="list-style-type: none"> • OHS requirements may include legislation, building codes, material safety management systems, hazardous and dangerous goods codes and local safe operating procedures or equivalent • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements • Work requires individuals to demonstrate some discretion, judgement and problem solving skills in the set up and operation of machines. This may be demonstrated either individually or in a team environment
Workplace environment	<p>Work may be performed in workplaces which are involved in the manufacture of soft furnishings and upholstered furniture and in the repair and restoration of furnishing products</p>
Tools and equipment may include, but are not limited to:	<ul style="list-style-type: none"> • cutting equipment • including scissors and cutting machines; measuring and calculating equipment • including tapes • rulers • calculators and computers
Products to be constructed may include, but are not limited to:	<ul style="list-style-type: none"> • curtains • drapes • swags • cushions and upholstered furniture components

RANGE STATEMENT	
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Machine manufacturer specifications and operational procedures • Workplace procedures relating to the setting and operation of machinery • Work instructions, including job sheets, cutting lists, plans, drawings and designs • Workplace procedures relating to reporting and communication

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify sewing machine equipment controls and procedures	1.1. Job requirements are identified from work instructions 1.2. OHS requirements, including ergonomic criteria and personal protection needs, are observed throughout the work 1.3. Equipment components, equipment condition and controls are identified 1.4. Operating procedures are checked to identify any approved adjustments 1.5. Equipment operations and production procedures are identified 1.6. The process for obtaining materials and moving products to the next process is identified
2. Prepare for work	2.1. Work order or sample is checked to identify sewing specifications 2.2. Required materials, tools and equipment are assembled 2.3. Materials and equipment are inspected and any faults are identified and reported 2.4. Work sequence is planned to suit job, and materials are laid out 2.5. If required, naps, pattern direction and face side of materials are identified 2.6. Components are matched and secured with tacking, pins or adhesives as required 2.7. Any required supplementary equipment is identified for routine lubrication and adjustments
3. Set up and control sewing machine operations	3.1. Sewing machine is set up and adjusted 3.2. Sewing operation is according to workplace procedures and material characteristics 3.3. Required product quality and outputs are maintained
4. Maintain quality requirements	4.1. Machining process is monitored and conditions which may affect work quality are reported 4.2. Authorised changes in operating procedures are implemented
5. Finish and dispatch work	5.1. Completed work is: <ul style="list-style-type: none"> 5.1.1. checked for required quality 5.1.2. finished as required 5.1.3. repaired (where applicable)

ELEMENT	PERFORMANCE CRITERIA
	5.1.4. moved to the next process 5.2. Material which is able to be reused is collected and stored 5.3. Equipment and work area clean up and waste management are completed following workplace procedures 5.4. Workplace records are completed as required

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, co-ordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using co-operative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements and estimate material requirements
- use pre-checking and inspection techniques to anticipate sewing problems, avoid re-working and wastage
- use the workplace technology related to the sewing of materials, including tools, equipment and measuring devices

Required knowledge

- the types, characteristics, uses and limitations of sewing machines
- characteristics of materials used and finished products
- safety and environmental aspects of sewing machine operations
- quality systems and standards
- workflow requirements for sewing process
- operation of work systems and industrial sewing equipment
- causes of faults and repair methods
- procedure for reporting damaged or imperfect products or interruptions to workflow

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Apply safe handling practices for equipment, products and materials, including personal protective equipment
- Identify and operate three types of industrial sewing machines as identified in the Range of Variables
- Set up sewing machine for operations and monitor quality of output
- Interpret work order and locate and apply relevant information
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment
- Identify safe handling of equipment, products and materials

Resource implications

Appropriate industrial sewing machines, work orders, operating procedures, materials and threads.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and will generally be in conjunction with assessment of other units of competency.

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit context

- OHS requirements may include legislation, building codes, material safety management systems, hazardous and dangerous goods codes and local safe operating procedures or equivalent
- Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- Work requires individuals to demonstrate some discretion, judgement and problem solving skills in the set up and operation of machines. This may be demonstrated either individually or in a team environment

Sewing specifications include:

- required materials
- threads and additional work features
- seam and stitch specifications
- any special stitch requirements and allowances
- shape characteristics and special requirements
- needles
- attachments and ancillary equipment and quality requirements

Sewing products include:

- top stitching
- gathering
- piping
- braid
- fringe
- flange cords
- straight fabric lengths
- padded material
- loose covers

Sewing processes may include:

- hemming
- seams

RANGE STATEMENT	
	<ul style="list-style-type: none"> • machine tacking • gathering • multiple-layer sewing and straight or zig zag sewing
Machines may include, but are not limited to:	<ul style="list-style-type: none"> • single or multi-needle flat bed • overlocker • blind hemming • gathering • flange • bar tacking • tape edging
Sewing machine set up and adjustment includes:	<ul style="list-style-type: none"> • thread machine and wind bobbin as required • set required tensions • select required machine settings • and test operations for work order requirements
Materials to be machined may include but are not limited to:	<ul style="list-style-type: none"> • plain and patterned fabrics
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures	<ul style="list-style-type: none"> • Machine manufacturer specifications and operational procedures • Workplace procedures relating to the setting and operation of machinery • Work instructions, including job sheets, plans, drawings and designs • Workplace procedures relating to reporting and communication • The employee completes quality inspection of own work

Elements and Performance Criteria Pre-Content

<p>Elements describe the essential outcomes of a unit of competency.</p>	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Job requirements are identified from work instructions 1.2. Workplace health and safety requirements, including personal protection needs, are observed throughout the work 1.3. Machines, attachments, materials, work method and sequence are determined 1.4. Equipment, including any supplementary equipment, is identified and checked for safe operation, components and controls 1.5. Materials are identified and inspected and problems, including any materials or part constructed products which do not meet the job order requirements, are identified and reported in accordance with workplace procedures 1.6. Work pieces are laid out in sequence in accordance with specifications and workplace procedures
2. Conduct sewing operation	2.1. Sewing machine (including attachments as required), set up requirements and adjustments are observed in accordance with workplace procedures 2.2. Appropriate thread type and size is fitted to machine 2.3. Machine is operated to maintain required product quality and outputs 2.4. Reinforcing/protective measures, fittings/attachments and fixing devices are attached in accordance with workplace procedures 2.5. Finished products are inspected for quality with unacceptable items being reprocessed in accordance with workplace instructions
3. Complete work	3.1. Unused materials are stored as required 3.2. Workplace required documentation, including stock usage, is completed and processed following workplace procedures 3.3. Work area is cleaned and damaged tools and equipment tagged as required 3.4. Waste is collected and bundled for recycling/reuse as required by workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans, and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with work supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities including the preparation and layout of the work area and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate work requirements, optimise component and material sizes for economical cutting and assemble required materials
- use pre-checking and inspection techniques to plan work, avoiding re-working and wastage
- use the workplace technology related to the application of marine sewing and application techniques

Required knowledge

- procedure for reporting damaged or imperfect products or interruption to workflow
- workflow requirements for sewing process
- operation of work systems and sewing equipment
- characteristics of materials used and application and requirements of the finished products
- causes of faults and repair methods
- identification of equipment, processes and procedures
- quality systems and standards
- workplace procedures

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence

- Interpret work order and locate and apply relevant information
- Identify and select materials used and any special handling requirements for those materials
- Follow work instructions, operating procedures and inspection practices to:
 - minimise the risk of injury to self and others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- As a minimum:
 - prepare and install a minimum of 3 square metres of cover to at least 3 vertical or horizontal surfaces
 - sew at least three covers
 - sew appropriate fasteners and attachments to covers sewn
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource implications

Appropriate sewing machine, work orders, operating procedures, materials, fittings and threads.

Method of assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency which form a part of the job role.

Context of assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit scope	<ul style="list-style-type: none"> • This unit addresses the sewing techniques used to sew materials used in marine application and to fit the required attachments and fixing devices • Fittings/attachments and fixing devices include: clips, press studs, buckles, eyelets, shackles, zips, reinforcing patches, straps • Suitable installation methods are used with consideration to suitability of products used in the process
Unit context	<ul style="list-style-type: none"> • Workplace health and safety includes OHS legislation, material safety management systems, hazardous substances and dangerous goods codes and safe operating procedures • Work requires individuals to demonstrate discretion, judgement and problem solving skills in the application of marine sewing techniques • Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
Job requirements may include:	<ul style="list-style-type: none"> • required materials • threads • additional work features • shape and special requirements for the item • any required workplace documentation to be completed
Machines may include, but are not limited to:	<ul style="list-style-type: none"> • overlocker • flat bed • twin needle and walking foot
Tools and equipment may include:	<ul style="list-style-type: none"> • measuring tape • scissors

RANGE STATEMENT	
	<ul style="list-style-type: none"> • cutting blades • knives and thread
Materials to be sewn may include but are not limited to:	<ul style="list-style-type: none"> • canvas • sail materials • leather • foam-backed vinyl and upholstery fabrics
Personal protective equipment	<p>Personal protective equipment is to include that prescribed under legislation, regulations and enterprise practices and procedures. It may include:</p> <ul style="list-style-type: none"> • safety glasses/goggles • hair nets • ear muffs/plugs • gloves • footwear • protective clothing and breathing apparatus
Information and procedures	<ul style="list-style-type: none"> • Machine manufacturer specifications and operational procedures • Workplace procedures relating to the setting and operation of machines • Work instructions, including job sheets, plans, drawings and designs • Workplace procedures relating to reporting and communication

Co-requisite units

Co-requisite units		

LMTTF2008A Use adhesives

Modification History

Not applicable.

Unit Descriptor

Unit descriptor This unit covers the skills and knowledge required to select and safely use adhesives on canvas and sail products.

Application of the Unit

Application of the Unit

This unit applies to the bonding of materials with adhesives on canvas and sail products. Work may be conducted in a variety of environments, such as:

- operational indoor workplaces
- operational outdoor workplaces
- hazardous or exposed conditions

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within defined procedures under direct supervision.

The application of this unit is according to OHS practices of the enterprise and workplace practices, which may include:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- standard operating procedures
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control and recycling

This unit requires the application of skills associated with planning and organising for the safe and effective use of adhesives and textile fabrication technology. This unit also requires communication skills to read and apply workplace information and complete work records. Self management skills are applied to ensure workplace and quality standards are achieved.

Licensing/Regulatory Information

Prerequisites

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare work area	1.1 Safe working environment is established 1.2 Suitable electrical power outlets are identified, if required 1.3 Work is sequenced to maximise safety and productivity 1.4 Workplace procedures and instructions are read and interpreted
2 Select, use and store tools	2.1 Appropriate hand tools, <i>power tools</i> and electrical equipment are obtained for the work to be performed 2.2 Tools are examined for damage, missing components or other defects (including frayed power cords where applicable) 2.3 Extension power cables are checked for knots and insulation damage 2.4 Electrical tools are connected safely to power supply 2.5 Safety equipment is used during tool operation in accordance with <i>OHS practices</i> 2.6 Tasks are performed using tools in accordance with safe working practices 2.7 Tools are located in a safe position when not in use 2.8 Tools and extension cords are cleaned and stored in accordance with industry and enterprise safe working practices
3 Select adhesives and prepare for their use	3.1 Nature of materials to be joined is ascertained 3.2 Specified adhesives are obtained 3.3 Appropriate tools and materials are selected for preparation of work piece surfaces and application of adhesive 3.4 Adhesive manufacturer's OHS requirements are checked and prescribed precautions taken before adhesives are used 3.5 Adhesive is prepared to manufacturer's instructions
4 Apply adhesive and bond materials	4.1 Work piece surfaces are prepared for application of adhesive 4.2 Work piece surfaces to be bonded are anchored or otherwise stabilised 4.3 Adhesive is applied in accordance with recommended practice and surfaces are joined 4.4 Joins are allowed to cure for specified time 4.5 Where appropriate, heat to assist in curing the joins is applied to the work piece in accordance with OHS practices 4.6 Knowledge of using adhesives are applied to perform required tasks
5 Inspect and rectify	5.1 Work piece is removed and joins are informally inspected and tested for strength 5.2 Results of informal inspection are verified by supervisor and

ELEMENT

PERFORMANCE CRITERIA

appropriate action is taken regarding rework or rectification, if necessary

6 Clean up and documentation

6.1 Product is prepared for inspection

6.2 Work area is cleaned and tools and equipment are cleaned and stored in accordance with OHS practices

6.3 Remaining adhesive is safely disposed of or stored in a safe, secure location

6.4 Work records are completed in accordance with workplace requirements

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Demonstrates knowledge of:

- health, fire and explosion hazards associated with the use of volatile or toxic adhesives and solvents, and specific OHS requirements regarding their use, safe handling and storage
- the range of canvas products in common use
- bonding principles and techniques
- commonly used glues, adhesives and solvents
- curing characteristics of commonly used adhesives and the effects of atmospheric conditions
- quality standards for bonding processes
- safety and environmental requirements of relevant industry and enterprise procedures
- general housekeeping policies and procedures
- OHS practices, including hazard identification and control measures
- quality practices
- workplace practices
- recording and reporting practices

Demonstrates skills to:

- locate and interpret technical information about canvas products, adhesives and equipment used in bonding processes
- use relevant hand and power tools
- use relevant chemicals and cleaning agents and dispose of waste products
- maintain work area
- read, interpret and follow information on work specifications, standard operating procedures and work instructions and other reference material
- maintain accurate records
- communicate within the workplace
- sequence operations
- meet specifications
- clarify and check task-related information
- carry out work according to OHS practices

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence to be considered

Demonstrates skills and knowledge to:

- comply with all relevant safety requirements including safe use of adhesives, solvents, hand tools and electrical equipment
- follow work orders
- understand equipment and materials instructions applicable to the use of adhesives
- prepare product to be bonded and set up adhesive application equipment
- perform bonding process
- perform normal operator maintenance of work area to enable work to be conducted safely and efficiently
- document and communicate work related information including reporting of faults and other problems

Consistently applies skills and knowledge when:

- organising work
- completing tasks
- identifying improvements
- using workplace practices
- using OHS practices
- recording and reporting accidents and incidents
- assessing operational readiness of equipment used and work processes
- recognising and adapting to cultural differences in the workplace, including modes of behaviour and interactions
- completing work systematically with attention to detail without damage to goods and equipment

Context and specific resources for assessment

Assessment may occur on the job or in an appropriately simulated environment and requires access to work areas, materials and equipment, and to information on workplace practices and OHS practices.

Guidance information for assessment

This unit may be assessed independently or in combination with other relevant units.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the Performance Criteria, is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Legislative/regulatory requirements All work must comply with relevant Federal and State or Territory legislative or regulatory requirements.

Power tools may include

- spray guns
- portable ventilation fans
- hot air dryers
- heat lamps

OHS practices OHS practices must include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and may include:

- manual handling techniques
- standard operating procedures
- personal protective equipment
- safe materials handling
- taking of rest breaks
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- other OHS practices relevant to the job and enterprise

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify weld requirements	1.1. Weld requirements are identified from job instructions. 1.2. Location of welds is identified in accordance with standard operating procedures and job specifications.
2. Prepare materials for welding	2.1. Materials are cleaned and prepared ready for welding.
3. Prepare equipment for welding	3.1. Welding equipment is set up correctly. 3.2. Settings and consumables are selected.
4. Perform routine welding using <i>oxy acetylene</i>	4.1. Safe welding practices are applied. 4.2. Materials are welded to job requirements. 4.3. Welds are cleaned in accordance with standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- preparing materials
- setting up welding equipment
- welding with oxy acetylene fuel gas
- reading and interpreting routine information on written job instructions, specifications and standard operating procedures
- following oral instructions
- using measurement skills for joint preparation and routine oxy acetylene welding

Required knowledge

Look for evidence that confirms knowledge of:

- preparatory requirements
- materials and consumables properties and characteristics
- equipment and equipment settings
- fuel gas properties and applications

REQUIRED SKILLS AND KNOWLEDGE

- post welding treatments
- weld characteristics
- any applicable industry standards, NOHSC guides, State/Territory regulatory codes of practice/standards
- safe work practices and procedures
- safe welding practices
- use and application of personal protective equipment for routine oxy acetylene welding

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	<p>A person who demonstrates competency in this unit must be able to prepare materials and carry out routine oxy acetylene welding.</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with performing routine oxy acetylene welding or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare materials and equipment	1.1. Job requirements are determined from specifications and/ or instructions. 1.2. Materials are correctly prepared using appropriate tools and techniques. 1.3. Materials are correctly assembled/aligned to meet specifications as required. 1.4. Distortion prevention measures are identified and appropriate action is taken as required. 1.5. Heating equipment is assembled and set up safely and correctly in accordance with standard operating procedures. 1.6. Correct and appropriate consumables are selected and prepared. 1.7. Test run is undertaken and verified as required.
2. Braze and/or silver solder	2.1. The correct process is selected to meet specifications. 2.2. Materials are preheated as required. 2.3. Consumables are applied using correct techniques. 2.4. Jointing material is applied correctly and in appropriate quantities to meet job/specifications. 2.5. Material temperature is annealed using correct and appropriate techniques.
3. Inspect joints	3.1. Excess jointing materials are removed using correct and appropriate techniques. 3.2. Inspection of joints is undertaken to standard operating procedures. 3.3. Inspection results are reported/recorded using standard operating procedures as required.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in:

REQUIRED SKILLS AND KNOWLEDGE

- preparing materials
- performing brazing, braze welding, silver soldering
- undertaking visual inspection
- reading and interpreting routine information on written job instructions, specifications and standard operating procedures
- following oral instructions

Required knowledge

Look for evidence that confirms knowledge of:

- the reasons for selecting specific methods of assembly/alignment
- the procedures for minimising distortion of the materials being brazed/braze welded/silver soldered
- the procedures for assembling and setting up the specific heating equipment
- the reasons for selecting specific heating equipment
- the reasons for selecting specific consumables
- conducting test runs
- typical applications of brazing/braze welding and silver soldering processes
- the procedures and precautions for preheating the materials to be joined
- the effects of the use of inappropriate techniques on the performance of the jointed materials
- the effect of inappropriate quantities of jointing material on the performance of the jointed materials
- the procedures for normalising the temperature of jointed materials
- the consequences of using inappropriate techniques to normalise the temperature of the joint
- the procedures for removing excess jointing material
- the procedures for inspecting brazed/braze welded/silver soldered joints
- use and application of personal protective equipment for silver soldering and brazing/braze welding
- safe work practices and procedures

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assemble/disassemble plant and equipment	1.1. Accessories and equipment are correctly selected and assembled for manual heating and thermal cutting.
2. Operate heating and thermal cutting equipment	2.1. Cutting process and/or procedure appropriate for material is selected. 2.2. All safety procedures are observed. 2.3. Equipment start-up procedures are followed correctly to standard operating procedures. 2.4. Equipment adjustments are made correctly using standard operating procedures. 2.5. Appropriate cutting allowances are made. 2.6. Material is used in the most economical way. 2.7. Defects are identified and corrective action is taken to standard operating procedures. 2.8. Material is heated and cut to specification. 2.9. Shape/size/length is to accepted workplace standards.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- performing pre-start checks
- safely starting equipment
- following standard operating procedures
- adjusting equipment to operating specifications
- making cutting allowances
- economising material and minimising wastage
- identifying cutting defects and taking corrective action
- heating and cutting materials to specifications
- reading and interpreting routine information on written job instructions, specifications and standard operating procedures. May include drawings

REQUIRED SKILLS AND KNOWLEDGE

- following oral instructions
- performing measurements needed to meet the requirements of this unit
- entering routine and familiar information onto proformas and standard workplace forms

Required knowledge

Look for evidence that confirms knowledge of:

- cutting processes appropriate to various materials
- heating and cutting specifications
- procedures for heating and cutting
- the tools, equipment and techniques for heating and cutting
- assembling procedures for equipment and accessories
- hazards and control measures associated with manual heating and thermal cutting
- use and application of personal protective clothing and equipment
- equipment pre-checks and operation
- procedures for adjusting heating and cutting equipment
- cutting allowances and reasons for applying them
- procedures for minimising waste material
- reasons for minimising waste material
- cutting defects and their causes
- procedures for correcting cutting defects
- tools, equipment and techniques required to correct cutting defects
- use and application of personal protective equipment
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	A person who demonstrates competency in this unit must be able to perform manual heating and thermal cutting.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with manual heating/thermal cutting or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questions should not require language, literacy and numeracy skills beyond those required in this unit. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Cutting	Use of hand held and self-propelled straight line cutters
Process	Fuel gas, oxy fuel gas and air fuel gas
Material	Various thicknesses and types including ferrous, non-ferrous and non-metallic materials

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify weld requirements	1.1. Weld requirements are identified from job instructions. 1.2. Location of welds is identified in accordance with standard operating procedures and job specifications.
2. Prepare materials for welding	2.1. Materials are cleaned and prepared ready for welding.
3. Prepare equipment for welding	3.1. Welding equipment is set up correctly. 3.2. Correct electrodes are selected to suit application and settings.
4. Perform routine welding using MMAW	4.1. Safe welding practices are applied. 4.2. Materials are welded to job requirements. 4.3. Welds are cleaned in accordance with standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- preparing materials and electrodes
- setting up welding equipment
- welding with MMAW
- reading and interpreting routine information on written job instructions, specifications and standard operating procedures
- performing measurements for joint preparation and routine MMAW

Required knowledge

Look for evidence that confirms knowledge of:

- material and equipment preparation
- properties and characteristics of materials and consumables
- weld characteristics
- equipment set-up and settings
- MMAW processes and properties

REQUIRED SKILLS AND KNOWLEDGE

- post-welding treatments
- safe welding practices
- use and application of personal protective equipment

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare materials for manual metal arc welding (MMAW)	1.1. Weld requirements are identified from specifications and/or drawings 1.2. Materials are correctly prepared 1.3. Materials are assembled/aligned to specification, where required
2. Select welding equipment and consumables	2.1. Welding equipment and electrodes appropriate to the material and the weld are identified and selected
3. Assemble and set up welding equipment	3.1. Welding equipment is assembled and set up
4. Minimise and rectify distortion	4.1. Appropriate distortion prevention measures are selected and applied 4.2. Distortion is rectified
5. Weld to job specification using MMAW	5.1. Weld deposit is to specification 5.2. Joints are cleaned to specifications
6. Ensure weld conformance	6.1. Defects are rectified with minimum loss of sound metal using correct techniques and tools 6.2. Weld joints are visually inspected for conformance to specifications
7. Where required, maintain weld records	7.1. Where required, weld records are completed correctly

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- identifying and interpreting welding specifications including appropriate standards e.g. Australian Standard 1554 General Purpose, American Bureau of Shipping (ABS) or equivalent
- selecting and using appropriate tools and equipment

REQUIRED SKILLS AND KNOWLEDGE

- using a variety of welding machines and electrodes
- identifying and rectifying weld defects
- applying techniques for distortion prevention and rectification
- cleaning welds
- reading and interpreting information on sketches, written job instructions, specifications, standard operating procedures and engineering drawings
- recording routine information including routine weld records related to MMAW onto proformas and standard workplace forms
- following oral instructions
- measurement skills relating to joint preparation and MMAW

Required knowledge

Required knowledge includes:

- material preparation
- joint preparations
- electrode classification
- causes of distortion for materials within the scope of this unit
- causes of defects and methods of rectification
- the relationships between amperage, electrode and material
- safe welding practices
- use and application of personal protective equipment for MMAW

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to prepare materials, select and set up the welding equipment, carry out MMAW and examine for and correct defects, in a range of welding activities associated with MMAW. Competency in this unit cannot be awarded until all prerequisites have been satisfied.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently apply the skills covered in this unit of competency in new and different workplace situations and contexts. Critical aspects of assessment and evidence include:

- following all safety procedures to protect self, other workers and members of the public
- identifying and interpreting specifications for MMA welding including Australian Standard 1554 General Purpose
- interpreting welding specifications including standard welding symbols used to show weld procedure
- selecting appropriate weld preparation methods for material and position of welds.
- preparing materials, setting up of jigs, fixtures, clamps, etc. and joint preparation including bevelling
- consistently welding different ferrous and non-ferrous materials to AS 1554 General Purpose or equivalent
- identifying defects as described in the range statement across a range of welded materials
- rectifying defects.

Context of and specific resources for assessment

Welding to AS 1554 General Purpose or equivalent requires both theoretical knowledge and high level practical skills. The assessment process must be designed to identify consistent performance to the standard and the specifications across a range of materials and positions. The assessment must also identify a level of workplace performance in terms of defect rates and weld failure rates. It is recommended that assessment involve demonstrations of competency under both workshop and

EVIDENCE GUIDE	
	<p>site conditions. This means that the ideal assessment environment is either on the job or a combination of both on and off the job.</p> <p>The competencies covered by this unit may be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p>
Method of assessment	<p>Typically an Engineering Tradesperson - Fabrication and other tradespersons engaged in welding are required to exercise MMAW skills and techniques across a range of jobs and specifications.</p> <p>A single assessment event is not appropriate. On the job assessment should be included as part of the assessment process wherever possible. Where assessment occurs off the job, judgement must consider evidence of the candidate's performance in a productive work environment that includes a sufficient range of appropriate tasks and materials to cover the scope of application for this unit.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>
Guidance information for assessment	<p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with welding using MMAW process or other units requiring the exercise of the skills and knowledge covered by this unit.</p> <p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Welds	Welds include fillet and butt welds carried out in all positions
Materials	Materials may include ferrous materials including carbon or stainless steel, as well as non-ferrous metals and alloys suitable for MMA welding
Prepared	Preparation of materials may include: <ul style="list-style-type: none"> • pre-heating • setting up of jigs, fixtures and clamps • joint preparation (e.g. bevelling)
Equipment	Equipment may include AC or DC welding machines
Distortion prevention measures	Distortion prevention measures may include: <ul style="list-style-type: none"> • pre heating • setting up of jigs, fixtures and clamps
Rectified	Rectified refers to oxy acetylene, air arc equipment and grinding devices
Defects	Defects may include: <ul style="list-style-type: none"> • porosity • slag inclusions • discontinuities • lack of penetration • undercut

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare welding materials and equipment	1.1. Welding equipment is prepared. 1.2. Welding equipment appropriate to task requirements is assembled and adjusted correctly and safely. 1.3. Materials are prepared to achieve the required weld specification.
2. Weld joints to code requirements using MMAW	2.1. Weld requirements are interpreted correctly. 2.2. Welds are deposited correctly to specifications. 2.3. Appropriate distortion prevention measures are selected for the weld type and material and distortions are rectified as required.
3. Assess weld quality and rectify faults	3.1. Weld joints are visually inspected against specifications. 3.2. Defects are removed using appropriate methods for the given task. 3.3. Weld records are correctly completed and maintained.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: <ul style="list-style-type: none"> • welding to conform to Australian Standard 1554 Structural Purpose, Bureau Det Norse Verticas or equivalent • interpreting weld requirements and specifications • entering information onto proformas and standard workplace forms • interpreting technical drawings and weld specifications relating to advanced MMAW • using hand and power tools to prepare and weld material using MMAW • using measurement and numeracy skills relating to advanced MMAW and preparation • selecting equipment and consumables appropriate to the task • using visual identification of faults/defects

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

Look for evidence that confirms knowledge of:

- in-depth knowledge of the properties and characteristics of a wide range of materials
- requirements to conform to Australian Standard 1554 Structural Purpose, Bureau Det Norse Verticas or equivalent
- weld procedures and requirements
- different welder identification systems such as numbering, bar coding, paint coding, letter stamps
- safety requirements
- safe welding practices
- use and application of personal protective equipment for MMAW

7. Maintain weld records as required	7.1. Weld records are completed correctly

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- identifying and interpreting welding specifications including appropriate standards e.g. Australian Standard 1554 General Purpose, American Bureau of Shipping (ABS) or equivalent
- selecting and using appropriate tools and equipment

REQUIRED SKILLS AND KNOWLEDGE

- using a variety of welding machines and electrodes
- identifying and rectifying weld defects
- applying techniques for distortion prevention and rectification
- cleaning welds
- reading and interpreting information on sketches, written job instructions, specifications, standard operating procedures and engineering drawings
- recording routine information including routine weld records related to GMAW onto proformas and standard workplace forms
- following oral instructions
- measurement skills relating to joint preparation and GMAW

Required knowledge

Required knowledge includes:

- types of gases and their uses
- the relationships between amperage/wire feed, voltage, gas flow, electrode and material
- the application of weld metal transfer (short arc, spray etc.)
- correct welding machine, leads, hand pieces and electrodes
- material preparation
- joint preparations
- electrode classification
- causes of distortion for materials within the scope of this unit
- safe welding practices
- use and application of personal protective equipment for GMAW

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to prepare materials, select and set up the welding equipment, carry out GMAW and examine for and correct defects, in a range of welding activities associated with GMAW. Competency in this unit cannot be awarded until all prerequisites have been satisfied.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently apply the skills covered in this unit of competency in new and different workplace situations and contexts. Critical aspects of assessment and evidence include:

- following all safety procedures to protect self, other workers and members of the public
- identifying and interpreting specifications for GMAW including Australian Standard 1554 General Purpose

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare welding materials and equipment	1.1. Welding equipment is prepared. 1.2. Welding equipment is assembled and adjusted correctly and safely. 1.3. Materials are prepared to achieve required weld specification.
2. Weld joints to code requirements using advanced GMAW	2.1. Weld requirements are interpreted correctly. 2.2. Welds are deposited correctly to specifications. 2.3. Appropriate distortion prevention measures are selected and distortions are rectified as required.
3. Assess weld quality and rectify faults	3.1. Weld joints are visually inspected against specifications. 3.2. Defects are removed using appropriate methods for the given task. 3.3. Weld records are correctly completed and maintained.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- welding to conform to Australian Standard 1554 Structural Purpose, Bureau Det Norse Verticas or equivalent
- performing safe welding practices
- using and applying personal protective equipment for GMAW
- interpreting weld requirements and specifications
- entering information onto proformas and standard workplace forms
- interpreting technical drawings and weld specifications relating to advanced GMAW
- using hand and power tools to prepare and weld material using GMAW
- using measurement and numeracy skills relating to advanced GMAW and preparation
- selecting equipment and consumables appropriate to the task

REQUIRED SKILLS AND KNOWLEDGE

- using visual identification of faults/defects

Required knowledge

Look for evidence that confirms knowledge of:

- in-depth knowledge of the properties and characteristics of a wide range of materials
- requirements to conform to Australian Standard 1554 Structural Purpose, Bureau Det Norse Verticas or equivalent
- weld procedures and requirements
- different welder identification systems such as numbering, bar coding, paint coding, letter stamps
- safe welding practices
- use and application of personal protective equipment for GMAW

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to prepare materials, select and set up the welding equipment, carry out advanced GMAW, inspect for and correct defects, and maintain the weld records. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.

Context of and specific resources for assessment

This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with performing advanced welding using gas metal arc welding process or other units requiring the exercise of the skills and knowledge covered by this unit.

Method of assessment

Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes,

EVIDENCE GUIDE	
	standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Welding equipment	AC or DC welding machines, settings, electrodes and related equipment
Preparing materials	Preheating, setting up of jigs, fixtures, clamps, etc., joint preparation e.g. bevelling
Materials	Low carbon, cast iron, stainless and low alloy steel, aluminium and aluminium alloys
Welds	Fillet and butt in all positions
Distortion prevention measures	Preheating, setting up of jigs, fixtures, clamps, etc.
Defects	Porosity, slag inclusions, discontinuities, lack of penetration, undercut
Appropriate methods	Oxy acetylene arc equipment, grinding devices
Weld records	Proformas and other standard workplace forms

Unit Descriptor

<p>Unit descriptor</p>	<p>This unit of competency covers the preparation, positioning, fixing, and welding techniques associated with general trade level welding using gas tungsten arc welding (GTAW) equipment including the selection and set up of the equipment appropriate to both the material and the weld to be performed, carrying out the GTAW to prescribed standards, and examining for and correcting defects, in a range of welded fabrications.</p>
-------------------------------	---

Application of the Unit

<p>Application of the unit</p>	<p>This unit of competency applies to welds associated with heavy or light metal fabrications. Welds are fillet and butt welds in all positions on a range of ferrous and non-ferrous materials that may include carbon steel or stainless steel and aluminium. Weld quality would conform to Australian Standard 1554 General Purpose, American Bureau of Shipping (ABS), or equivalent.</p> <p>This unit has been primarily developed to support Engineering Tradesperson - Fabrication apprenticeship training and the recognition of trade level skills in GTAW. It may also apply to other trade occupations requiring higher level GTAW welding skills.</p> <p>Where manual thermal processes associated with preparation, pre-heat and/or post-heat are required, MEM05007C Perform manual heating and thermal cutting and/or MEM05008C Perform advanced manual thermal cutting, gouging and shaping should be considered for selection.</p> <p>Band: A</p> <p>Unit Weight: 4</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare materials for gas tungsten arc welding (GTAW)	1.1. Weld requirements are identified from specifications and/or drawings 1.2. Material is correctly prepared 1.3. Materials are assembled/aligned to specification, where required
2. Select welding equipment and consumables	2.1. Welding equipment and electrodes, accessories and consumables appropriate to the material are identified and selected
3. Assemble and set up welding equipment	3.1. Welding equipment is assembled and set up
4. Minimise and rectify distortion	4.1. Appropriate distortion prevention measures for weld and material type are selected and applied 4.2. Distortion is rectified
5. Weld to job specification using GTAW	5.1. Weld deposit is to specifications 5.2. Joints are cleaned to specifications
6. Ensure weld conformance	6.1. Defects are removed with minimum loss of sound metal using techniques and tools appropriate to the defect, material and process 6.2. Weld joints are visually inspected for conformance to specifications
7. Maintain weld records as required	7.1. Weld records are completed correctly

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- identifying and interpreting welding specifications including appropriate standards e.g. Australian Standard 1554 General Purpose, American Bureau of Shipping (ABS) or equivalent
- selecting and using appropriate tools and equipment

REQUIRED SKILLS AND KNOWLEDGE

- using a variety of welding machines and electrodes
- identifying and rectifying weld defects
- applying techniques for distortion prevention and rectification
- cleaning welds
- reading and interpreting information on sketches, written job instructions, specifications, standard operating procedures and engineering drawings
- recording routine information including routine weld records related to GTAW onto proformas and standard workplace forms
- following oral instructions
- measurement skills relating to joint preparation and GTAW

Required knowledge

Required knowledge includes:

- correct welding machine, leads, hand pieces and electrodes
- material preparation
- joint preparations
- electrode classification
- causes of distortion for materials within the scope of this unit
- causes of defects and methods of rectification
- the relationships between amperage, electrode and material
- types of gases and their uses
- types of electrodes, current settings and high frequency voltage
- filler materials and consumables
- safe welding practices
- use and application of personal protective equipment for GTAW

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to prepare materials, select and set up the welding equipment, carry out the GTAW welding and examine for and correct defects, in a range of welding activities associated with GTAW. Competency in this unit cannot be awarded until all prerequisites have been satisfied.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently apply the skills covered in this unit of competency in new and different workplace situations and contexts. Critical aspects of assessment and evidence include:

- following all safety procedures to protect self, other workers and members of the public
- identifying and interpreting specifications for GTAW including Australian Standard 1554 General Purpose
- interpreting welding specifications including standard welding symbols used to show weld procedure
- selecting appropriate weld preparation methods for material and position of welds.
- preparing materials, setting up of jigs, fixtures, clamps, etc. and joint preparation including bevelling
- consistently welding different ferrous and non-ferrous materials to AS 1554 General Purpose or equivalent
- identifying defects as described in the range statement across a range of welded materials
- rectifying defects.

Context of and specific resources for assessment

Welding to AS 1554 General Purpose or equivalent requires both theoretical knowledge and high practical skills. The assessment process must be designed to identify consistent performance to standard and specification across a range of materials and positions. The assessment must also identify a level of workplace performance in terms of defect rate and weld failure rates. It is recommended that assessment involve demonstrations of competency under both workshop and site conditions. This means that the ideal assessment

EVIDENCE GUIDE	
	<p>environment is either on the job or a combination of both on and off the job.</p> <p>The competencies covered by this unit may be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p>
Method of assessment	<p>Typically an Engineering Tradesperson - Fabrication and other tradespersons engaged in welding are required to exercise GTAW skills and techniques across a range of jobs and specifications.</p> <p>A single assessment event is not appropriate. On the job assessment should be included as part of the assessment process wherever possible. Where assessment occurs off the job, judgement must consider evidence of the candidate's performance in a productive work environment that includes a sufficient range of appropriate tasks and materials to cover the scope of application for this unit.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>
Guidance information for assessment	<p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with welding using GTAW process or other units requiring the exercise of the skills and knowledge covered by this unit.</p> <p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Prepared	<p>Prepared may include:</p> <ul style="list-style-type: none"> • pre-heating • setting up of jigs, fixtures and clamps • joint preparation (e.g. bevelling)
Welds	<p>Welds include fillet and butt welds carried out in all positions</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Select welding equipment and consumables	1.1. Correct welding equipment and consumables are selected from weld procedure specifications.
2. Prepare welding materials and equipment	2.1. Welding equipment and consumables are prepared according to job requirements. 2.2. Welding equipment appropriate to the task is assembled and adjusted correctly and safely. 2.3. Materials are prepared to achieve required weld specification.
3. Assemble welding equipment	3.1. Welding equipment, including cylinders, regulators, hoses, torches and tips is assembled and set up safely in accordance with standard operating procedures.
4. Weld joints to Australian Standard 1554 SP or equivalent	4.1. Materials are welded to Australian Standard 1554 SP or equivalent in all positions. 4.2. Instructions, symbols, specifications are interpreted correctly including bead size, bead placement, reinforcement etc. and in accordance with weld procedure sheet, if available, and standard operating procedures.
5. Inspect welds	5.1. Weld joints are visually inspected against specifications. 5.2. Weld defects are identified.
6. Correct faults	6.1. Defects are removed with minimum loss of sound metal using correct and appropriate techniques and tools to Australian Standard 3992 or equivalent.
7. Maintain weld records	7.1. Weld records are maintained in accordance with specifications and standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

REQUIRED SKILLS AND KNOWLEDGE

- selecting equipment and consumables
- assembling welding equipment
- welding to AS1554 SP
- inspecting welds to specification
- correcting weld faults to AS3992
- entering information on to proformas and standard workplace forms
- using hand and power tools to prepare and weld materials
- interpreting weld requirements and specifications/procedures
- using measurement and numeracy skills for advanced oxy acetylene welding
- selecting equipment and consumables appropriate to given task
- using visual identification of defects/faults

Required knowledge

Look for evidence that confirms knowledge of:

- preparatory requirements
- the purpose and examples of pre-welding and post-welding heating of the weld materials
- the appropriate settings for the given task and the selected equipment/consumables
- the purpose of reinforcing areas to be welded
- the methods of weld defect removal and their application
- material and consumable properties and characteristics
- requirements of AS1554SP and AS3992 or equivalent
- fuel gas properties and applications
- post treatments
- recording procedures
- safe welding practices
- use and application of personal protective equipment for oxy acetylene welding
- relevant hazards and control measures related to the competency

Unit Descriptor

Unit descriptor	This unit of competency covers applying welding principles to meet the statutory and regulatory requirements for welding procedures generally associated with the application of one of the units satisfying Australian Standard 1796 Certificates 1-9.
------------------------	---

Application of the Unit

Application of the unit	<p>This unit of competency covers the underpinning knowledge required to satisfy Australian Standard 1796. It includes knowledge of welding terms, codes and symbols, the effects of heat treatment on metal as it relates to welding, and the logical sequence for a welding process required to be conducted to AS 1796. It covers welding, planning and set up principles for a range of materials and processes.</p> <p>This unit must be assessed in combination with one of the units satisfying the Australian Standard 1796 Certificates 1-9 and these units include:</p> <ul style="list-style-type: none"> • MEM05042B Perform welds to code standards using flux core arc welding process • MEM05043B Perform welds to code standards using gas metal arc welding process • MEM05044B Perform welds to code standards using gas tungsten arc welding process • MEM05045B Perform pipe welds to code standards using manual metal arc welding process • MEM05046B Perform welds to code standards using manual metal arc welding process. <p>This unit has been developed for Engineering Tradespersons - Fabrication in either apprenticeship or post trade training and the recognition of trade level knowledge of welding principles.</p> <p>This unit has dual status and is to be regarded as both a Specialisation Band A unit and Specialisation Band B unit for progression to C7 (AQF level IV).</p> <p>Band: A</p> <p>Unit Weight: 4</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Apply all statutory and regulatory requirements to welding procedures	1.1. Statutory and safety requirements are applied to welding
2. Interpret all welding terms, codes and symbols	2.1. Welding terms and symbols are correctly interpreted
3. Determine the effects of heat treatment on metal in relation to welding	3.1. Reasons for performing heat treatment are identified 3.2. Processes such as pre-heat/post-heat treatment, stress relieving, normalising and annealing are appropriately applied
4. Plan the logical sequence of welding operations	4.1. Principles of planning and setting up welding are applied 4.2. Where specified, welds are prepared for testing

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Required skills include: <ul style="list-style-type: none"> interpreting welding specifications including terms, codes and symbols planning the sequence of welding operations
Required knowledge
Required knowledge includes: <ul style="list-style-type: none"> any applicable industry standards, national/Australian standards, NOHSC guidelines, state/territory regulatory codes of practice/standards for the applicable welding processes safe work practices and procedures hazards related to welding safety equipment and procedures related to welding activities welding terminology welding codes and symbols

REQUIRED SKILLS AND KNOWLEDGE

- heat treatment processes
- logical sequence for welding processes
- tools, equipment, techniques used in welding
- effect of heat treatment on metal

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	<p>A person who demonstrates competency in this unit must be able to apply welding principles to meet the statutory and regulatory requirements for welding procedures.</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently apply the skills and knowledge covered in this unit of competency in new and different workplace situations and contexts. Critical aspects of assessment and evidence include:</p> <ul style="list-style-type: none"> • applying welding statutory and safety requirements to different welding jobs and environments • interpreting welding codes and symbols including symbols for type of weld, weld size, processing and finishing operations etc • applying appropriate pre and post-heat treatment processes for a range of welded materials • setting up weld sequence and preparing materials in a logical manner for welding job.
Context of and specific resources for assessment	<p>This unit must be assessed in combination with one of the units satisfying the Australian Standard 1796 Certificates 1-9. Welding to AS 1796 requires both theoretical knowledge and high practical skills. The assessment process for the two units must be designed to identify consistent performance to the standards, the code and specifications across a range of materials and positions. The assessment must also identify a workplace level of performance in terms of defect rates and weld failure rates. It is recommended that assessment involve demonstrations of competency under both workshop and site conditions. This means that the ideal assessment environment is either on the job or a combination of both on and off the job.</p> <p>The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p>
Method of assessment	<p>Typically an Engineering Tradesperson - Fabrication and</p>

EVIDENCE GUIDE

	<p>other tradespersons engaged in welding are required to apply welding principles and techniques across a range of jobs and specifications.</p> <p>A single assessment event is not appropriate. On the job assessment should be included as part of the assessment process wherever possible. Where assessment occurs off the job, judgement must consider evidence of the candidate's performance in a productive work environment that includes a sufficient range of appropriate tasks and materials to cover the scope of application for this unit.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>
<p>Guidance information for assessment</p>	<p>This unit must be assessed in combination with one of the units satisfying the Australian Standard 1796 Certificate 1-9 and these units include:</p> <ul style="list-style-type: none"> • MEM05042B Perform welds to code standards using flux core arc welding process • MEM05043B Perform welds to code standards using gas metal arc welding process • MEM05044B Perform welds to code standards using gas tungsten arc welding process • MEM05045B Perform pipe welds to code standards using manual metal arc welding process • MEM05046B Perform welds to code standards using manual metal arc welding process. <p>This unit could also be assessed in conjunction with any other units addressing the safety, quality, communication materials handling, recording and reporting associated with applying welding principles to meet the statutory and regulatory requirements for welding procedures or other units requiring the exercise of the skills and</p>

EVIDENCE GUIDE

	<p>knowledge covered by this unit.</p> <p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
--	--

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Statutory and safety requirements

Statutory and safety requirements as required by AS 1796 welding codes

Welding

Welding to AS 1796 using any of the following processes:

- flux core arc welding
- gas metal arc welding
- gas tungsten arc welding
- manual metal arc welding

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Maintain welding equipment	1.1. Routine maintenance is performed on welding equipment.
2. Prepare welding materials and equipment for GMAW welding to code standard	2.1. Weld requirements for GMAW welding to code standards are determined. 2.2. Materials are prepared to produce weld to code standard. 2.3. Welding equipment is set up correctly.
3. Weld joints using GMAW to procedure specifications	3.1. Materials are welded as per weld procedure specification.
4. Ensure weld quality	4.1. Discontinuities are rectified to ensure conformance to code requirements. 4.2. Weld records are maintained in accordance with standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- depositing welds to procedure requirements
- determining weld outcomes, consumables and settings from welding procedure specification
- interpreting technical drawings and weld specifications for welding to code standards using GMAW
- using hand and power tools to prepare and weld materials to code standard
- using measurement and numeracy skills for welding to code standards
- using language and literacy skills to enable completion of weld records

Required knowledge

Look for evidence that confirms knowledge of:

- requirements to produce welds to quality of AS 1210, AS 4140, ASME IX or equivalent

REQUIRED SKILLS AND KNOWLEDGE

- safe welding practices
- use and application of personal protective equipment for GMAW
- relevant standards or codes
- methods for preparing plate and pipe for code standard welding
- pre-welding and post-welding heating methods and requirements for plate and pipe welding to code standard
- requirements for maintaining weld records to code standard
- hazard and control measures associated with welding, including housekeeping

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify weld requirements	1.1. Weld requirements are identified from job instructions. 1.2. The locations of welds are identified in accordance with standard operating procedures and job specifications.
2. Prepare materials for welding	2.1. Materials are cleaned and prepared ready for welding.
3. Prepare equipment for welding	3.1. Welding equipment is set up correctly. 3.2. Settings and consumables are selected to suit application.
4. Perform routine welding using GTAW	4.1. Safe welding practices are applied. 4.2. Materials are welded to job requirements. 4.3. Welds are cleaned to standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- preparing materials
- setting up welding equipment
- welding with GTAW
- reading and interpreting routine information on written job instructions, specifications and standard operating procedures
- using measurement skills for joint preparation and routine GTAW

Required knowledge

Look for evidence that confirms knowledge of:

- preparatory requirements
- properties and characteristics of materials and consumables
- equipment and equipment settings
- fuel gas properties and applications
- post welding treatments

assessment

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Materials	Mild and low carbon steel
Prepared	Preheating, setting up jigs, fixtures, clamps, joint preparation
Equipment	Hoses, welding leads and gas shrouds, electrodes, gas regulator, liners, contact tips
Consumables	Tungsten electrodes, filler wire, shielding gas
Cleaned	Slag, spatter

MEM05050B Perform routine gas metal arc welding

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers preparing materials and routine gas metal arc welding (GMAW).
------------------------	--

Application of the Unit

Application of the unit	<p>This unit applies in a maintenance or manufacturing environment where the weld quality is not required to meet an Australian Standard or equivalent. Fillet and butt welds would typically be performed on low carbon/mild steels.</p> <p>Where welding is required to meet Australian Standard 1554 General Purpose or equivalent codes, occupational health and safety regulations and/or licensing requirements, Unit MEM05017D (Weld using gas metal arc welding process) should be selected.</p> <p>Band: A</p> <p>Unit Weight: 2</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify weld requirements	1.1. Weld requirements are identified from job instructions. 1.2. Locations of welds are identified in according to standard operating procedures and job specifications.
2. Prepare materials for welding	2.1. Materials are cleaned and prepared ready for welding.
3. Prepare equipment for welding	3.1. Welding equipment is set up correctly. 3.2. Settings and consumables are selected to suit application.
4. Perform routine welding using GMAW	4.1. Safe welding practices are applied. 4.2. Materials are welded to job requirements. 4.3. Welds are cleaned to standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- preparing materials
- setting up welding equipment
- welding with GMAW
- reading and interpreting routine information on written job instructions, specifications and standard operating procedures
- following oral instruction
- using measurement skills relating to joint preparation and routine GMAW

Required knowledge

Look for evidence that confirms knowledge of:

- different current and voltage settings, gas flow rates wire diameters, wire feed speed and other variables to suit typical situations.
- material and equipment preparation
- properties and characteristics of materials and consumables
- equipment and equipment settings

REQUIRED SKILLS AND KNOWLEDGE

- fuel gas properties and applications
- post-welding treatments
- weld characteristics
- safe welding practices
- use and application of personal protective equipment for routine GMAW

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	<p>A person who demonstrates competency in this unit must be able to perform routine gas metal arc welding (GMAW).</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with preparing the materials and carrying out routine gas metal arc welding or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify properties of commonly used metals	1.1. Materials to be welded are identified. 1.2. Characteristics and properties of commonly used materials are identified. 1.3. Uses and purposes of commonly used materials are identified. 1.4. Basic metallurgical characteristics are considered.
2. Identify and provide for welding contingencies	2.1. Information relevant to welding processes is sourced as required. 2.2. Potential contingencies are identified and solutions are considered.
3. Identify appropriate welding processes	3.1. Welding processes are identified and selected to achieve specified outcomes with selected metals. 3.2. Effects of welding processes on materials are identified. 3.3. Distortion prevention measures are identified. 3.4. Alternative joining methods for job are identified and assessed for relevancy.
4. Identify cleaning and preparation requirements	4.1. Processes for cleaning and preparing metals are identified. 4.2. Role of contaminants in welding flaws is explained. 4.3. Safety requirements for chemicals and other materials are identified and utilised in accordance with manufacturers' specifications and legislative requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents

REQUIRED SKILLS AND KNOWLEDGE

- planning and sequencing operations
- checking and clarifying task-related information

Required knowledge

Look for evidence that confirms knowledge of:

- hazards and control measures associated with welding practices, including housekeeping
- safe work practices and procedures
- properties and characteristics of commonly used metals and materials
- basic metallurgy principles
- information resources
- chemical content of fumes emitted by welding processes
- uses and purposes of various metals
- distortion prevention measures for various metals

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	A person who demonstrates competency in this unit must be able to select welding processes.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Access and interpret OH&S information	1.1.OH&S information is obtained and interpreted. 1.2.Relevant OH&S legislation is identified. 1.3.Work related safety information is obtained and interpreted.
2. Identify risks associated with welding	2.1.Pollutants formed by welding processes are identified. 2.2.Occupational diseases and injuries which may be associated with welding are identified. 2.3.Factors associated with increased risk are identified. 2.4.Exposure levels for pollutants are identified. 2.5.Risks and potential health effects associated with specific metals are identified. 2.6.Risks and potential health effects associated with gases in welding are identified. 2.7.Other hazards of welding are identified.
3. Reduce risks associated with welding	3.1.Manual handling techniques are used. 3.2.Personal protective equipment is used correctly. 3.3.Procedures to control hazards are implemented. 3.4.Workplace safety procedures are implemented. 3.5.Workplace safety non-compliances are reported in accordance with workplace procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- sourcing and interpreting safety-related information and Material Safety Data Sheets (MSDS)
- planning and sequencing operations
- identifying workplace risks and nonconformances
- reporting workplace risks and nonconformances
- checking and clarifying task-related information

REQUIRED SKILLS AND KNOWLEDGE**Required knowledge**

Look for evidence that confirms knowledge of:

- characteristics and properties of common metals and welding materials
- effect of gas and electrical welding operations on metals
- hazards and control measures associated with gas and electrical welding, including housekeeping
- welding safety practices and procedures
- effect of various treatments on a range of commonly used metals
- use and application of personal protective equipment

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	A person who demonstrates competency in this unit must be able to apply safe welding practices.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Undertake programmed safety and maintenance checks	1.1. Checks are undertaken safely and to prescribed procedure. 1.2. Status/report is recorded on proforma or reported orally.
2. Undertake programmed maintenance	2.1. Removal/replacement of consumable components is undertaken to prescribed procedure and instructions are followed. 2.2. Fluids and lubricants are replaced and/or topped up to prescribed schedule.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- undertaking programmed safety and maintenance checks
- undertaking programmed operational maintenance
- entering routine and familiar information onto proformas and standard workplace forms
- following routine information on written procedures
- following oral instructions
- orally reporting routine information

Required knowledge

Look for evidence that confirms knowledge of:

- programmed maintenance and safety check procedures for the specified machine/equipment
- recording/reporting requirements
- safe work practices and procedures
- hazards and control measures associated with operational maintenance of machines/equipment

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Observe safety precautions	1.1. Correct safety procedures are observed and protective clothing and safety glasses worn.
2. Determine job requirements	2.1. Drawings are interpreted, sequence of operations determined and tools selected to produce component to specification. 2.2. Cutting parameters are determined.
3. Perform precision shaping operations	3.1. Precision shaping operations are carried out including precision flat surfaces, shoulders, slots, keyways, angles and dovetails.
4. Perform precision planing operations	4.1. Precision planing operations are carried out including horizontal and vertical surfaces and angles.
5. Perform precision slotting operations	5.1. Precision slotting operations are carried out including feathered and tapered keyways, slotting internal cavities, dovetails, slotting circular surfaces and internal splines.
6. Check component for conformance to specification	6.1. Component is checked for conformance to specification using appropriate techniques, tools and equipment.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- preparing an operational work plan
- performing precision shaping operations:
 - flat surfaces
 - shoulders
 - slots
 - keyways
 - angles
 - dovetails
- performing precision planing operations on:

REQUIRED SKILLS AND KNOWLEDGE

- horizontal and vertical surfaces
- performing precision slotting operations:
 - feathered keyways
 - tapered keyways
 - slotting internal cavities
 - dovetails
 - slotting circular surfaces
 - slotting internal splines
- checking for conformance to specifications
- using precision measurement equipment
- planning and sequencing operations
- reading and interpreting information on written job instructions, specifications, charts, lists, drawings and other applicable reference documents
- checking and clarifying task related information
- measuring components to specified tolerances
- performing calculations for determining cutting parameters and checking tolerances
- undertaking numerical operations within the scope of this unit

Required knowledge

Look for evidence that confirms knowledge of:

- reasons for selecting the chosen sequence of operations
- procedures for setting up the work piece
- tool type and geometry to achieve the required specifications on different materials
- techniques and procedures for machining the following:
 - flat surfaces
 - shoulders
 - slots
 - keyways
 - angles
 - dovetails
- planing techniques and procedures for machining:
 - horizontal and vertical surfaces
- slotting techniques and procedures for machining:
 - feathered keyways
 - tapered keyways
 - slotting internal cavities
 - dovetails
 - slotting circular surfaces

REQUIRED SKILLS AND KNOWLEDGE

- slotting internal splines
- appropriate techniques, tools and equipment to measure machined components
- hazards, control measures and housekeeping associated with precision shaping/planing/slotting operations
- use and application of personal protective equipment
- safe work practices and procedures

Evidence Guide

Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with performing precision shaping/planing/slotting operations or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p>Method of assessment</p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning should not require language, literacy and numeracy skills beyond those required in this unit. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Tools	Cutting tools, tool holders
Cutting parameters	Feeds, speeds, depth of cut, length of cut etc.
Precision operations	The use of dedicated precision measuring instruments

Unit Descriptor

Unit descriptor	This unit of competency covers determining the job requirements and sequence of operations, selecting and mounting tools, performing the machining, measuring the components, and adjusting and maintaining a range of standard machine tools.
------------------------	--

Application of the Unit

Application of the unit	<p>The unit of competency applies to the use of machinery to shape metal including lathes, mills, planers, shapers, radial arm drills, slotters and surface grinders.</p> <p>This unit has been developed to support Engineering Tradesperson - Mechanical apprenticeship training and the recognition of trade level skills in machining operations. Skills covered by this unit are generally applied in occupational and work situations associated with fitting and machining. It may also apply to other trade occupations requiring general machining skills. It may also apply in some circumstances to senior operators who have responsibility for machine set up, selection of materials and lubricants, establishment of datum points and basic marking out, and setting of speeds, feeds and other machining parameters.</p> <p>This unit has application in the MEM30205 Certificate III in Engineering - Mechanical qualification and other qualifications requiring a basic trade level of machining skills. It may also apply to MEM20205 Certificate II in Engineering - Production Technology and MEM30105 Certificate III in Engineering - Production Systems and other qualifications requiring machining skills.</p> <p>Machining is undertaken on one or more of a range of standard machine tools. Machines are not computer numerical controlled (CNC) machines.</p> <p>Where machining is undertaken without undertaking any set up including mounting of tools, setting of speeds, feeds and other operational parameters then either MEM07024B Operate and monitor machine/process or MEM07025B Perform advanced machine/process operation should be selected.</p> <p>Drilling operations in this unit exclude those covered by</p>
--------------------------------	--

	<p>MEM18002B Use power tools/hand held operations.</p> <p>Where substantial marking out is required, MEM12006C Mark off/out (general engineering) should be considered.</p> <p>Where precision measurement is required, MEM12003B Perform precision mechanical measurement should also be considered.</p> <p>For set-up and operation of electro-discharge (EDM) machines, refer to MEM07014B Perform electro-discharge (EDM) machining operations.</p> <p>Band: A</p> <p>Unit Weight: 8</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine job requirements	1.1. Drawings, instructions and specifications are interpreted and understood
2. Determine sequence of operations	2.1. Sequence of operations including job set-up is determined for maximum efficiency and to meet job specifications 2.2. Appropriate material is selected and datum established as required
3. Select and mount tools	3.1. Appropriate tools for job are selected, sharpened and shaped as required 3.2. Tools are mounted and positioned correctly
4. Perform machining operations	4.1. Basic marking out techniques are used where required 4.2. Machining parameters are set for job requirements and maximum tool life 4.3. Work is held or correctly clamped without damage to product, and all safety requirements are met 4.4. Machining is performed in a safe manner utilising all guards, safety procedures and personal protective clothing and equipment
5. Measure components	5.1. Components are checked with instruments or gauges appropriate to the measurement requirements to ensure compliance with specifications
6. Adjust and maintain machine	6.1. Routine maintenance and adjustments are carried out as required which may include slide and collar adjustment, cleaning and lubrication

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- reading and interpreting routine information on written job instructions, specifications and standard operating procedures which may include drawings

REQUIRED SKILLS AND KNOWLEDGE

- following oral instruction
- planning and sequencing operations
- preparing operational work plan
- sharpening and shaping cutting tools
- identifying worn or damaged cutting tools
- correct mounting and positioning of cutting tools
- basic marking out of materials
- setting machining parameters to achieve the job requirements and maximise tool life
- using appropriate and sufficient clamping/mounting of the work piece
- using coolant/lubricant correctly
- checking for conformance to specifications
- measuring to specified tolerances and dimensions

Required knowledge

Required knowledge includes:

- reasons for selecting the chosen sequence of operations
- methods of work holding
- basic marking out techniques including datum points/lines
- geometry of cutting tools for a range of materials and applications
- benefits of using correctly sharpened cutting tools
- machine operation
- selection of feeds and speeds to suit a range of materials and operations within the scope of this unit
- correct methods of mounting a variety of cutting tools
- safety issues with regard to correct clamping, guards and shields
- tolerances and limits of size
- situations indicating the need for machine adjustment, lubrication and cleaning
- techniques, tools and equipment to measure materials and machined components
- use and application of personal protective equipment
- safe work practices and procedures
- hazards and control measures associated with general machining

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to perform general machining including responsibility for selecting and mounting tooling and setting machining parameters. Competency in this unit cannot be claimed until all prerequisites have been satisfied</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently apply the skills covered in this unit of competency in new and different situations and contexts. Critical aspects of assessment and evidence include:</p> <ul style="list-style-type: none"> • correct job planning including identifying job requirements from drawings, instructions or specifications and sequence of operations • identifying any required tooling, measuring equipment and accessories • selecting and mounting required tooling • selecting material and marking out if required • setting machining parameters • checking machined components for conformance to specifications.
<p>Context of and specific resources for assessment</p>	<p>This unit has been developed to support training in and recognition of trade level competency in general machining as applied to a trade level fitting and machining, other trade or senior operator work environment. Assessment should emphasise a workplace context and procedures found in the candidate's workplace.</p> <p>The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p>
<p>Method of assessment</p>	<p>Typically Engineering Tradespersons - Mechanical and other persons engaged in general machining work are required to apply their machining skills and techniques across a range of jobs and specifications.</p>

EVIDENCE GUIDE	
	<p>A single assessment event is not appropriate. On the job assessment should be included as part of the assessment process wherever possible. Where assessment occurs off the job, judgement must consider evidence of the candidate's performance in a productive work environment that includes a sufficient range of appropriate tasks and materials to cover the scope of application for this unit.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>
Guidance information for assessment	<p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with performing general machining or other units requiring the exercise of the skills and knowledge covered by this unit.</p> <p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>

Range Statement

RANGE STATEMENT
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and</p>

RANGE STATEMENT	
regional contexts) may also be included.	
Operations	Operations may include: <ul style="list-style-type: none"> • parallel cutting • slotting • planing • drilling • knurling • cutting flats • non-precision surface grinding operations
Materials	Materials may include ferrous and non-ferrous
Tools	Tools may include: <ul style="list-style-type: none"> • cutting tools and accessories • measuring devices
Marking out techniques	Marking out techniques may include basic marking out techniques using calipers, steel rules, dividers and scribes
Machining parameters	Machining parameters may include: <ul style="list-style-type: none"> • speeds • feeds • stops • coolant and cutting lubricants
Machines	Machines may include: <ul style="list-style-type: none"> • lathes • mills • planers • shapers • radial arm drills • slotters • surface grinder
Maintenance and adjustments	Maintenance and adjustments may include: <ul style="list-style-type: none"> • slide and collar adjustment • cleaning and lubrication

MEM07006C Perform lathe operations

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit of competency covers performing machining operations on a lathe to produce components to required tolerances and specifications using all types of accessories except for the use of taper turning attachment and copy turning attachments. The unit does not cover turning of multi-start threads.
------------------------	---

Application of the Unit

Application of the unit	<p>This unit of competency applies to the production of components using centre lathes and lathe accessories, precision measuring equipment and cutting tools on a range of standard engineering materials. It does not include use of a taper turning attachment, copy turning attachment or multi-start threads.</p> <p>Work is performed to established processes, practices and specifications. Cutting tools are selected using International Standard Organisation (ISO) standards or according to standard operating procedure as appropriate. Work is performed to drawings, sketches, specifications and instructions as appropriate.</p> <p>This unit has been developed for Engineering Tradesperson - Mechanical apprenticeship training and the recognition of trade level skills in lathe operations. Skills covered by this unit are generally applied in occupational and work situations associated with trade level fitting and machining work.</p> <p>This unit has application in the MEM30205 Certificate III in Engineering - Mechanical qualification and other qualifications requiring a trade level of lathe operation skills. Lathe operations may also be known as turning and the processes and associated level of skill covered by this unit are often described in industry by the term '1st Class Machining'.</p> <p>Band: A</p> <p>Unit Weight: 4</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Observe safety precautions	1.1. Correct safety procedures are observed and protective clothing and safety glasses worn
2. Determine job requirements	2.1. Drawings are interpreted, sequence of operation is determined and tooling is selected to produce component to specification
3. Mount job	3.1. Job is set up using instruments such as dial test indicators, and digital read-out equipment
4. Perform turning operations	4.1. Speeds and feeds are calculated using appropriate mathematical techniques and reference material 4.2. The full range of accessories on a centre lathe are used including three and four jaw chucks, centres, face plate, steadies, cross slide and tailstock 4.3. Turning operations are performed to specification
5. Check components for conformance with specifications	5.1. Components are checked for conformance to specification using appropriate techniques, tools and equipment

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- interpreting technical drawings/specifications in relation to turning
- setting up jobs using appropriate equipment
- calculating and setting cutting feeds and speeds appropriate to the job
- checking that job is concentric and running true
- safely operating lathes
- performing turning operations

Required knowledge

Required knowledge includes:

- sequence of operations to achieve the job requirements
- tool type and geometry to achieve the required specifications and for work pieces

REQUIRED SKILLS AND KNOWLEDGE

- of different materials
- numerical operations, geometry and calculations/formulae within the scope of this unit
- the consequences of varying speeds and feeds from the optimum rates calculated
- characteristics of different materials and their effects on cutting speeds and feeds
- application of lathe accessories
- techniques, tools and equipment to measure materials and machined components
- use and application of personal protective equipment
- safe work practices and procedures
- hazards and control measures associated with lathe operations

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to perform a variety of lathe operations to specifications. Competency in this unit cannot be claimed until all prerequisites have been satisfied</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently apply the skills covered in this unit of competency in new and different situations and contexts. Critical aspects of assessment and evidence include:</p> <ul style="list-style-type: none"> • determining requirements for turning job including quantity, material, measurements and tolerances • correct job planning including identifying required measuring equipment, tooling, accessories and sequence of operations • correct preparation of high speed steel tooling • correct fixing of job and tooling • calculating and setting of required speeds and feeds • correct monitoring of turning operation • turning undertaken to trade standard in terms of time and responsibility for own work • undertaking correct remedial procedures for out of specification results as per enterprise procedures e.g. procedures for scrapping or reworking of components not turned to specification.
<p>Context of and specific resources for assessment</p>	<p>This unit has been developed to support training in and recognition of trade level competency in lathe operations as applied to a trade level fitting and machining work environment. Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine job requirements	<p>1.1. Job requirements are determined from specifications, and sequence of operations is determined</p> <p>1.2. Correct and appropriate holding devices are selected and applied</p>
2. Observe safety precautions	<p>2.1. Machine guards, coolant and dust extraction devices are checked</p> <p>2.2. Correct safety procedures are observed and protective clothing and safety glasses are worn</p>
3. Select grinding wheels and accessories	<p>3.1. Wheels are selected, balanced and dressed based on knowledge of grinding wheel structure and application</p> <p>3.2. Accessories are selected to facilitate production to job specifications</p>
4. Perform grinding operations	<p>4.1. Grinding machine is set up and adjusted in accordance with defined procedures</p> <p>4.2. Work piece is held or clamped appropriately to avoid damage</p> <p>4.3. Grinding operations are performed safely, utilising all guards, safety procedures and personal protective clothing and equipment</p>
5. Check components for conformance with specifications	<p>5.1. Components are checked for conformance to specification using appropriate techniques, tools and equipment</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- reading and interpreting information on written job instructions, procedures, specifications, charts, lists, drawings and other applicable reference documents
- checking and clarifying task related information
- preparing an operational work plan
- planning and sequencing operations

REQUIRED SKILLS AND KNOWLEDGE

- using precision measurement equipment within the scope of this unit
- setting up work using tools, techniques and equipment
- using coolant and dust extraction devices
- selecting and preparing grinding wheels and accessories appropriate to the grinding task
- performing and monitoring internal/external cylindrical grinding process
- clamping/mounting work pieces
- checking for conformance to specifications
- performing numerical operations and calculations within the scope of this unit

Required knowledge

Required knowledge includes:

- reasons for selecting the chosen sequence of operations
- the application of a range of holding devices/accessories
- reasons for selecting specific work holding devices, tools, techniques and equipment
- coolant selection/function
- standard grinding wheel shapes
- the range of abrasive materials used in grinding wheels
- factors impacting grinding wheel selection including grain size of abrasive particles, grade or strength of bond and bond material
- grinding wheel dressing tools and their application
- internal/external cylindrical grinding process
- principles of effective clamping
- grinding operations/procedures
- the function of any grinding accessories
- tools, techniques and equipment for checking components for conformance to specifications
- hazards and control measures associated with grinding operations, including housekeeping
- use and application of personal protective equipment
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to perform a variety of grinding operations to specifications. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently apply the skills covered in this unit of competency in new and different situations and contexts. Critical aspects of assessment and evidence include:

- determining requirements for grinding job including quantity, material, measurements and tolerances
- correct job planning including identifying required measuring instruments and equipment, safety equipment, holding devices, grinding wheels, accessories and sequence of operations
- identifying guard, coolant and dust extraction requirements and checking equipment and coolant before grinding operation
- correct fixing of job
- correct monitoring of grinding operation
- undertaking grinding to trade standard in terms of time and responsibility for own work
- undertaking correct remedial procedures for out of specification results as per enterprise procedures e.g. procedures for scrapping or reworking of components not ground to specification.

Context of and specific resources for assessment

This unit has been developed to support training in and recognition of trade level competency in grinding operations as applied to a trade level fitting and machining work environment. Assessment should emphasise a workplace context and procedures found in the candidate's workplace.

The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

EVIDENCE GUIDE	
Method of assessment	<p>Typically, persons engaged in Engineering Tradesperson - Mechanical work are required to apply their grinding operations skills and techniques across a range of jobs and specifications.</p> <p>A single assessment event is not appropriate. On the job assessment should be included as part of the assessment process wherever possible. Where assessment occurs off the job, judgement must consider evidence of the candidate's performance in a productive work environment that includes a sufficient range of appropriate tasks and materials to cover the scope of application for this unit.</p> <p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>
Guidance information for assessment	<p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with grinding operations or other units requiring the exercise of the skills and knowledge covered by this unit.</p> <p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different

RANGE STATEMENT

work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Specifications	Specifications may include: <ul style="list-style-type: none"> • dimensions and tolerances • geometry and tolerances • surface finish
Holding devices	Holding devices may include: <ul style="list-style-type: none"> • vices • clamps • magnetic chucks • face plates • collets • 3/4 jaw chuck
Wheels	Wheels may include: <ul style="list-style-type: none"> • shape • grit/bond composition
Balanced	Balanced may include static and dynamic balancing
Grinding machines	Grinding machines may include surface, cylindrical and centreless machines

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Observe safety precautions	1.1. Correct safety procedures are observed and protective clothing and safety glasses are worn.
2. Determine job requirements	2.1. Drawings are interpreted and sequence of operations is determined.
3. Select appropriate tools and accessories	3.1. Tools and accessories are selected in accordance with standard operating procedures to meet job specifications.
4. Mount job	4.1. Job is set up using instruments such as dial test indicators and digital read out equipment.
5. Perform jig boring	5.1. Holes are bored relative to coordinate position and to specification. 5.2. Rotary or tilting rotary table is used as required.
6. Check components for conformance to specification	6.1. Components are checked for conformance to specification using appropriate techniques, tools and equipment.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on written job instructions, specifications, procedures, charts, lists, drawings and other applicable reference documents
- preparing operational work plan
- planning and sequencing operations
- selecting tools and accessories
- checking for conformance to specifications
- using precision measurement equipment
- checking and clarifying task related information
- performing numerical operations and calculations within the scope of this unit

Required knowledge

REQUIRED SKILLS AND KNOWLEDGE

Look for evidence that confirms knowledge of:

- reasons for selecting the chosen sequence of operations
- the application of rotary and tilting rotary tables to jig boring operations
- checks for conformance to specifications
- appropriate techniques, tools and equipment to measure machined components
- hazards and control measures associated with jig boring operations, including housekeeping
- use and application of personal protective equipment
- safe work practices and procedures

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Observe safety precautions	<p>1.1. Machine guards, coolant and dust extraction devices are checked.</p> <p>1.2. Correct safety procedures are observed, and protective clothing and safety glasses are worn.</p>
2. Determine job requirements	2.1. Drawings are interpreted and sequence of operations is determined.
3. Select appropriate tool and cutter grinding wheels and accessories	3.1. Tool and cutter grinding wheels are selected, based on knowledge of grinding wheel structure, and are balanced and dressed. Accessories are selected to facilitate production to specification.
4. Perform tool and cutter grinding	<p>4.1. Universal tool and cutter grinding machines are operated to sharpen and shape the full range of tools and cutters including side and face cutters, end mill, form relieved milling cutters, flat, vee and circular form tools and hobs, slitting saws, and drills.</p> <p>4.2. Parallel internal and/or external grinding is carried out.</p> <p>4.3. Internal and/or external taper grinding is carried out to drawing specifications.</p>
5. Check components for conformance to specification	5.1. Components are checked for conformance to specification using appropriate techniques, tools and equipment.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on written job instructions, specifications, charts, lists, drawings and other applicable reference documents
- checking and clarifying task related information
- preparing operational work plan
- planning and sequencing operations
- performing numerical operations and calculations within the scope of this unit

REQUIRED SKILLS AND KNOWLEDGE

- performing safety checks of equipment
- selecting tool and cutter grinding accessories
- balancing/dressing grinding wheels
- sharpening/shaping tools and cutters
- checking components for conformance with specifications
- using precision measurement equipment within the scope of this unit

Required knowledge

Look for evidence that confirms knowledge of:

- reasons for selecting the chosen sequence of operations
- function of coolant and dust extraction devices
- criteria for grinding wheel selection:
 - grain size of abrasive particles
 - grade or strength of bond
 - bond material
- grinding wheel dressing procedures and wheel dressing tools
- source(s) of data on tool geometry for the full range of tools and cutters, including the terminology used to describe the tool geometry
- procedures to be followed when parallel grinding on a tool and cutter grinder
- procedures to be followed when grinding tapers on a tool and cutter grinder
- tools, techniques and equipment used to check ground components for conformance with the following specifications:
 - dimensions and tolerances
 - geometry and tolerances
 - surface finish
- hazards and control measures associated with tool and cutter grinding, including housekeeping
- use and application of personal protective equipment
- safe work practices and procedures

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Select milling cutters	1.1. Correct milling cutter/s are selected for required operation. 1.2. Correct cutter inserts are selected as required using International Standard Organisation standards and mounted in cutter blank. 1.3. Cutter is mounted to machine spindle and checked for concentricity.
2. Set up work	2.1. Cutting parameters and steps required to mill given component/s are identified. 2.2. Machine is set up with appropriate accessories as required for milling operation. 2.3. Work is set up to required level of accuracy.
3. Perform complex milling	3.1. Components are milled and associated calculations are performed as necessary to achieve specification. 3.2. Components are verified using appropriate precision measuring equipment and reworked as necessary to meet specification.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying work related information
- setting up work to the required level of accuracy
- determining cutting parameters
- selecting the correct milling cutter inserts for the cutting parameters in accordance with ISO standards
- calculating cutting parameters such as speeds, feeds and ratios
- setting up gear trains according to calculations and standard operating procedures

REQUIRED SKILLS AND KNOWLEDGE

- safely operating milling machine
- performing complex milling operations using dividing heads and omniversal tables

Required knowledge

Look for evidence that confirms knowledge of:

- precision measuring equipment and their applications
- procedures for accurately setting up work
- ISO standards applicable to milling cutter inserts
- procedures for milling components such as racks and gears
- calculations, geometry and formulae relating complex milling activities
- accessories used for complex milling
- the applications and use of omniversal tables and differential dividing heads to complex milling operations
- hazards and control measures associated with complex milling operations, including housekeeping
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to perform complex milling operations. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.

Context of and specific resources for assessment

This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with performing complex milling operations or other units requiring the exercise of the skills and knowledge covered by this unit.

Method of assessment

Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine job requirements	1.1. Job requirements are determined from specifications, and sequence of operations is determined.
2. Set up work	2.1. Grinding wheels are selected and dressed to form and size as required. 2.2. Work is set up to required level of accuracy as per specifications.
3. Perform complex grinding	3.1. Specialised grinding operations are performed on components such as jigs, tools and dies, eccentrics, threads, gauge shapes and forms.
4. Check components for conformance to specification	4.1. Components are checked for conformance to specification using appropriate techniques, tools and equipment.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- preparing an operational work plan
- dressing grinding wheel to form and size
- performing specialised grinding operations
- reading, interpreting and following information on written job instructions, specifications, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying information
- entering routine and familiar information onto proformas and standard workplace forms
- checking for conformance to specifications
- using precision measurement equipment within the scope of this unit
- measuring components to specified tolerances
- performing numerical operations, geometry and calculations/formulae for specialised complex grinding operations

Required knowledge

REQUIRED SKILLS AND KNOWLEDGE

Look for evidence that confirms knowledge of:

- reasons for selecting the chosen sequence of operations
- function and application of work holding devices/accessories appropriate to complex grinding
- appropriate techniques, tools and equipment to measure machined components
- hazards and control measures associated with complex grinding, including housekeeping
- use and application of personal protective equipment
- safe work practices and procedures

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to perform machining operations using horizontal and/or vertical boring machines. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the performance of machining operations using horizontal and/or vertical boring machines or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p>Method of assessment</p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes,</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Obtain job instructions	1.1. Job sheets or equivalent instructions are understood and correctly followed.
2. Mount work holding fixtures/devices/tools	2.1. Machine is prepared to accept work holding fixtures/devices/tools. 2.2. Preset tooling is mounted as required into machine/equipment. 2.3. Work holding fixtures/devices are set on machine as required using standard operating procedures. 2.4. Tool offset or datum settings are identified/verified against job sheet using standard operating procedures. 2.5. Program is loaded, selected and verified in accordance with job instructions.
3. Conduct pre-start checks	3.1. Pre-start checks are undertaken to standard operating procedures. 3.2. Correct safety procedures are observed and all safety equipment is checked for correct operation.
4. Set machine	4.1. Machine is set/adjusted to meet operational requirements and specifications. 4.2. Production samples are checked for compliance with specifications using standard operating procedures.
5. Instruct machine operator	5.1. Operator is instructed, if necessary, ensuring that all safety procedures and devices are in place.
6. Replace worn/damaged tooling	6.1. Where appropriate, preset tools are replaced, tool offsets are adjusted or other corrective action is taken using standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

REQUIRED SKILLS AND KNOWLEDGE

- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying task related information
- mounting work holding fixtures/devices/tooling
- mounting preset tooling
- verifying tool offsets and/or datum settings against job sheets or instructions
- loading and verifying programs
- conducting pre-start checks
- following safety procedures
- checking safety features and safety equipment for correct operation
- performing numerical operations and calculations/formulae within the scope of this unit
- setting and adjusting machines
- measuring and verifying first-off samples
- instructing machine operators on the sequence of operations
- identifying worn or damaged tooling and taking appropriate corrective action

Required knowledge

Look for evidence that confirms knowledge of:

- work holding fixtures/devices/tools and preset tooling for different machines/processes
- procedures for mounting work holding fixtures/devices/tools
- location of work holding fixtures/devices/tools relative to the machine datum or zero
- reasons for establishing tool offsets
- the purpose of datum settings
- the source(s) of information on tool offsets and datum settings
- procedures to locate and load programs
- procedures for verifying loaded programs
- pre-start checks
- safety features of the machine/process
- the purpose and function of safety features and/or safety equipment
- machine/process setting procedures
- machine operating procedures
- adjustments that can be made to the machine/process
- the effect of adjustments on machine and operational specifications
- product or part specifications in relation to the machining process
- measuring devices for checking parts or products
- examples of worn or damaged tooling

REQUIRED SKILLS AND KNOWLEDGE

- the effects of worn or damaged tooling
- the corrective action for worn or damaged tooling
- hazards and control measures associated with numerical and computer controlled machines, including housekeeping
- safe work practices and procedures

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify job requirements	1.1. Instructions/plans are understood and correctly followed.
2. Set work holding fixtures/devices/tools	2.1. Correct ancillary devices are selected and attached to machine using standard operating procedures. 2.2. Machine is prepared to accept work holding devices. 2.3. Work holding fixtures/devices/tools are set to zero or a datum using appropriate setting devices.
3. Set tooling offsets	3.1. Tooling offsets are measured and recorded in machine controller.
4. Trial program	4.1. Machine is operated to produce first-off samples, observing all safety procedures. 4.2. First-off samples are checked for compliance with specifications. 4.3. Program editing to change speeds, feed and operational sequence requirements is undertaken as required to ensure job conforms to specification.
5. Instruct machine operator	5.1. Operator is instructed if necessary ensuring that all safety procedures and devices are in place.
6. Replace worn or damaged tooling	6.1. Where appropriate, tools are replaced, tool offsets are adjusted or other corrective action is taken using standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying task related information

REQUIRED SKILLS AND KNOWLEDGE

- attaching ancillary devices
- mounting work holding devices
- measuring tool offsets
- entering and verifying tool offsets
- producing and checking first-off samples
- editing programs
- instructing machine operator on the sequence of operations
- following safety procedures
- identifying worn or damaged tooling and taking appropriate corrective action

Required knowledge

Look for evidence that confirms knowledge of:

- ancillary equipment and its applications
- procedures for attaching the ancillary device(s) to the NC/CNC machine
- work holding devices, their application and procedures for mounting them
- location of work holding fixtures/devices/tools relative to the machine zero or datum
- reasons for establishing tool offsets
- procedures and devices for measuring tool offsets
- procedures for entering and verifying tool offset
- procedures for adjusting tool offsets
- operating procedures
- safety features and equipment
- measuring devices/ techniques for checking the parts or product
- effects of changes to cutting feeds and speeds
- the impact of changes to the sequence of operations on the part or product to be produced
- procedures for editing programs via the machine controller
- the sequence of operations of the machine/process
- examples of worn or damaged tooling
- the effects of worn or damaged tooling
- the corrective action to be taken for worn or damaged tooling
- hazards and control measures associated with computer controlled machines, including housekeeping
- safe work practices and procedures

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify basic NC/CNC machine program elements	1.1.Appropriate program elements are selected for machine controller.
2. Write basic NC/CNC machine program	2.1.Engineering drawings are understood and interpreted to define machine function and tool path geometry. 2.2.Coordinates calculated as required for tool path or machine functions. 2.3.Advanced operations using canned cycles and sub-routines are selected and applied appropriately. 2.4.Program is written in standard code format in accordance with standard operating procedures.
3. Write NC/CNC operation sheet	3.1.Operation sheets are produced to specification in accordance with standard operating procedures which includes appropriate Australian standard where required.
4. Trial program	4.1.Machine is operated in manual mode to test and prove program. 4.2.Program is edited if necessary to adjust operation. 4.3.Components are checked to conform to specification.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- interpreting engineering drawings, specifications and instructions
- calculating coordinates of all relevant points on the part or product to be produced
- writing NC/CNC program in standard code format and incorporating, where appropriate, canned cycles and sub-routines
- producing NC/CNC operation sheet(s)
- operating NC/CNC machine in manual mode
- editing NC/CNC program
- checking parts or products produced for conformance with specifications

REQUIRED SKILLS AND KNOWLEDGE**Required knowledge**

Look for evidence that confirms knowledge of:

- elements of an NC/CNC program
- the function of elements in controlling the operation of an NC/ CNC machine
- machining operations to be performed in the manufacture of the given part or product
- the appropriate type(s) of NC/CNC machine to perform the required machining operations
- the machining operations to be controlled by the program to be written
- the tool path(s) to be followed when producing the part or product
- the sequence of machining operations to be programmed
- reasons for selecting the chosen tool path(s) and sequence of operations
- the zero point of the NC/CNC machine
- the canned cycles and sub-routines accessible in the particular NC/CNC machine
- the application of each canned cycle and sub-routine available
- the canned cycles and/or sub-routines to be used in the NC/CNC program
- reasons for selecting the chosen canned cycles and/or sub-routines
- standard codes used in the writing of NC/CNC programs
- applications of standard codes in NC/CNC programming
- procedures for writing NC/CNC programs in standard code format
- procedures for completing NC/CNC operation sheets
- the information to be included in NC/CNC operation sheets
- relevant Australian standards
- procedures for manual operation of the NC/CNC machine
- the reasons for testing and proving the NC/CNC program
- the procedures for editing the NC/CNC program via the machine controller
- the effects of editing on the operation of the NC/CNC machine and the part or product to be produced
- the specifications of the part or product
- the measuring equipment/techniques to be used to check for conformance with specifications

<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to program a NC/CNC machining centre. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with programming a NC/CNC machining centre or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p>Method of assessment</p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

MEM07020C Program multiple spindle and/or multiple axis NC/CNC machining centre

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers identifying NC/CNC machine program elements, writing and trialling a machine program for multiple spindle and/or multiple axis NC/CNC machining centres, and preparing an operation sheet.
------------------------	---

Application of the Unit

Application of the unit	<p>This unit extends to writing programs to describe machine operations including tool paths using appropriate software for machines which include multiple spindles and/or multiple axis/B axis angular, multiple tool turrets, tool changers and may include component loaders of a pallet type etc.</p> <p>The program may use common M and G codes and include the programming of advanced operations, using canned cycles and sub-routines. Programs are trialled and edited as necessary to adjust operation of centre. Technical difficulties are resolved in consultation with appropriate technical advisers. Work would be undertaken autonomously using predetermined standards of quality.</p> <p>Where machining skills in excess of MEM07005C (Perform general machining) are required, then appropriate units should also be selected.</p> <p>This unit has dual status and is to be regarded as both a specialisation band A unit and Specialisation band B unit for progression to C7 (AQF level IV).</p> <p>Band: A</p> <p>Unit Weight: 2</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify NC/CNC machine program elements	1.1.Appropriate program elements are selected for machine controller.
2. Write NC/CNC machine program	2.1.Engineering drawings are understood and interpreted to define machine function and tool path geometry. 2.2.Coordinates are calculated as required for tool path or machine functions. 2.3.Advanced operations using canned cycles and sub-routines are selected and applied appropriately. 2.4.Program is written in standard code format in accordance with standard operating procedures.
3. Write NC/CNC operation sheet	3.1.Operation sheets are produced to specification in accordance with standard operating procedures which includes appropriate Australian standard where required.
4. Trial program	4.1.Machine is operated in manual mode to test and prove program. 4.2.Program is edited if necessary to adjust operation. 4.3.Components are checked to conform to specification.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying task related information
- calculating coordinates of all relevant points on the part or product to be produced
- writing NC/CNC program in standard code format and incorporating, where appropriate, canned cycles and sub-routines
- producing NC/CNC operation sheet(s)

REQUIRED SKILLS AND KNOWLEDGE

- operating NC/CNC machine in manual mode
- editing NC/CNC program
- checking parts or products produced for conformance with specifications

Required knowledge

Look for evidence that confirms knowledge of:

- elements of an NC/CNC program
- the function of elements in controlling the operation of an NC/ CNC machine
- machining operations to be performed in the manufacture of the given part or product
- the appropriate type(s) of NC/CNC machine to perform the required machining operations
- the machining operations to be controlled by the program to be written
- the tool path(s) to be followed when producing the part or product
- the sequence of machining operations to be programmed
- reasons for selecting the chosen tool path(s) and sequence of operations
- the zero point of the NC/CNC machine
- the canned cycles and sub-routines accessible in the particular NC/CNC machine
- the application of each canned cycle and sub-routine available
- the canned cycles and/or sub-routines to be used in the NC/CNC program
- reasons for selecting the chosen canned cycles and/or sub-routines
- standard codes used in the writing of NC/CNC programs
- applications of standard codes in NC/CNC programming
- procedures for writing NC/CNC programs in standard code format
- procedures for completing NC/CNC operation sheets
- the information to be included in NC/CNC operation sheets
- relevant Australian standards
- procedures for manual operation of the NC/CNC machine
- the reasons for testing and proving the NC/CNC program
- the procedures for editing the NC/CNC program via the machine controller
- the effects of editing on the operation of the NC/CNC machine and the part or product to be produced
- the specifications of the part or product
- the measuring equipment/techniques to be used to check for conformance with specifications
- hazards and control measures associated with numerical and computer controlled machines, including housekeeping
- safe work practices and procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine sequence of operations	1.1. Sequence of operations including job set-up is determined for maximum efficiency and to meet job specifications.
2. Set up work on lathe	2.1. Work is set up on the lathe to required level of accuracy using precision instruments such as dial test indicators etc. 2.2. Work piece is balanced as required when using face plates to ensure accuracy in machining. 2.3. Work piece is set up to ensure that work piece is free of distortion following completion of machining.
3. Select and prepare tooling	3.1. Tooling, accessories and consumables are selected appropriate to task, specifications and material. 3.2. Where necessary, cutting tool modifications required to perform complex turning operations are determined. 3.3. Tooling and accessories are prepared and modified as required. 3.4. International Standard Organisation standards for cutting tools or other appropriate standards to suit cutting parameters are applied as necessary.
4. Perform complex turning	4.1. Speeds and feeds are correctly calculated using appropriate mathematical techniques and reference material. 4.2. Complex turning is undertaken to specifications and workplace procedures. 4.3. Work piece is measured and verified to be in accordance with specification using precision measuring equipment.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

REQUIRED SKILLS AND KNOWLEDGE

- setting up work to the required level of accuracy using appropriate precision measuring equipment
- setting and supporting work to avoid distortion on release of clamping devices
- selecting correct cutting tools or inserts as appropriate to turning operation
- selecting and using appropriate feeds and speeds
- performing complex turning operations - counter balancing work on face plates:
 - mandrel work
 - trepanning
 - heavy (multi-tonne) shafts
- calculating cutting parameters, speeds and feeds
- reading, interpreting and following information on written job instructions, specifications, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying task related information
- entering routine and familiar information onto proformas and standard workplace forms
- checking for conformance to specifications
- using precision measurement equipment
- measuring components to specified tolerances
- performing numerical operations, geometry and calculations/formulae within the scope of this unit
- following oral instructions
- orally reporting information

Required knowledge

Look for evidence that confirms knowledge of:

- precision measuring equipment and measuring techniques within the scope of this unit
- reasons for selecting different measuring equipment
- procedures for accurately setting up work for a variety of techniques
- ISO or other standards applicable to cutting tool inserts
- cutting parameters for the given task
- feeds and speeds for complex turning operation(s)
- formulae and data relating to feeds and speeds
- techniques and procedures for carrying out the following turning operations:
 - single-start thread cutting
 - multi-start thread cutting
 - internal blind hole thread cutting
 - eccentrics
 - copy turning

REQUIRED SKILLS AND KNOWLEDGE

- taper turning
- techniques and procedures for carrying out the following turning operations:
 - counter balancing work on face plates
 - mandrel work
 - trepanning
 - heavy (multi-tonne) shafts
- hazards and control measures, including housekeeping
- use and application of personal protective equipment
- safe work practices and procedures

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Write program	1.1.Engineering drawings are understood and interpreted to define optimum tool path geometry. 1.2.Tool path is programmed using advanced operations, canned cycles and sub-routines or other appropriate sub-routines within system. 1.3.Program is written in standard code format, and confirmed and edited as necessary using appropriate routine and standard operating procedures. 1.4.Program is stored in accordance with standard operating procedures. 1.5.Operation sheet is produced to standard operating procedures.
2. Trial program	2.1.Program is downloaded, and machining parameters that may include wire offset, wire speed, power settings are selected. 2.2.Machine is prepared, work piece are loaded and aligned, datum and reference points are established in accordance with standard operating procedures. 2.3.Machine is operated in appropriate mode to test and prove program, work piece positioning. 2.4.Finished components are checked for conformance with drawing specifications.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- interpreting drawings, specifications and instructions
- calculating coordinates of all relevant points on the part or product to be produced
- storing programs
- producing NC/CNC operation sheet(s)
- downloading and verifying NC/CNC program
- setting machine parameters

REQUIRED SKILLS AND KNOWLEDGE

- mounting work holding fixtures/ devices/tools
- testing and proving NC/CNC program
- checking parts or products produced for conformance with specifications

Required knowledge

Look for evidence that confirms knowledge of:

- the operations to be controlled by the program to be written
- the tool path(s) to be followed when producing the part or product
- the sequence of operations to be programmed
- the reasons for selecting the chosen tool path(s) and sequence of operations
- the zero point of the wire cut machine
- the canned cycles and sub-routines accessible in the particular NC/CNC machine
- the application of each canned cycle and sub-routine available
- where appropriate, the canned cycles and/or sub-routines to be used in the NC/CNC program
- the reasons for selecting the chosen canned cycles and/or sub-routines
- the standard codes used in the writing of NC/CNC programs
- the applications of standard codes in NC/CNC programming
- procedures for writing NC/CNC programs in standard code format
- procedures for storing NC/CNC programs
- procedures for completing NC/CNC operation sheets
- the information to be included in NC/CNC operation sheets
- procedures for downloading NC/CNC programs
- procedures for verifying downloaded NC/CNC programs
- the machining parameters that may be entered into the machine controller
- the effect of varying the machining parameters on the product or part produced
- work holding fixtures/devices/tools
- procedures for mounting work holding fixtures/devices tools
- the location of the required work holding fixtures/devices/tools relative to the machine datum or zero
- purpose of datum setting
- pre-start checks
- safety features and equipment of the NC/CNC machine
- the purpose and function of the safety features and/or equipment
- the machine mode appropriate to the testing and proving of the NC/CNC program and the checking of the position of the work piece
- the procedures to be followed when using the machine in this mode
- the relative position of the work piece to the machine datum or zero
- the specifications of the part or product
- the measuring equipment/techniques to be used to check for conformance to

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Obtain job instructions	1.1. Job sheets or equivalent instructions are interpreted correctly.
2. Conduct pre-start checks	2.1. Pre-start checks are undertaken to standard operating procedure. 2.2. Safety procedures are observed and all safety equipment is checked for correct operation.
3. Operate machine/process	3.1. Machine/process is started up safely and correctly in accordance with standard operating procedures. 3.2. Machine/process is operated in accordance with job instructions or standard operating procedures. 3.3. Components/feed stock are loaded and maintained consistent with production requirements. 3.4. Machine/process output is unloaded safely to standard operating procedures, as required. 3.5. Machine/process output is handled and stored in a manner not likely to cause damage, as required. 3.6. Production data is recorded to standard operating procedures.
4. Monitor machine/process	4.1. Machine/process is monitored for safe and correct operation, deviations and faults are identified and reported in accordance with standard operating procedures. 4.2. Emergency procedures are understood and followed in accordance with standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- following job sheets, standard operating procedures and other applicable workplace forms
- manual handling
- following oral instructions

REQUIRED SKILLS AND KNOWLEDGE

- entering routine and familiar information onto proformas and standard workplace forms
- orally reporting routine information
- identifying deviations and faults in machine operation/process

Required knowledge

Look for evidence that confirms knowledge of:

- pre-start checks
- machine/process start-up and unloading procedures
- component/feed stock levels to ensure continuous process
- production recording and reporting requirements
- types of product fault/deviations
- consequences of improper handling and storing of finished work
- procedures to be followed in emergency situations
- use and application of personal protective equipment
- safe work practices and procedures
- hazards and control measures associated with operating and monitoring machine/process

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	<p>A person who demonstrates competency in this unit must be able to obtain the job instruction, conduct the pre-start checks, and operate and monitor the machine or process.</p>

Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with operating and monitoring machine/process or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Pre-start checks

Condition of machine before operation

Machine/process

Machines and processes used in pressing, punching, plastic moulding, extruding, bending, joining, rolling, forming, drawing, metal removal, pickling, cylinder filling, printing, painting etc.

Production data

Production schedules, job sheets, checklists

Unit Sector(s)

Unit Descriptor

Unit descriptor	This unit covers obtaining the job instructions, conducting the pre-start checks, and operating and monitoring the computer controlled machine or process.
------------------------	--

Application of the Unit

Application of the unit	<p>This unit applies to a range of NC, CNC and robot operated machines or processes in a production environment.</p> <p>Work is performed to established processes, practices, specifications and instructions as appropriate. Technical difficulties are resolved in consultation with appropriate technical advisers.</p> <p>An appropriate level of measurement skill should be selected with this unit. Where it is required to use tools, then Unit MEM18001C (Use hand tools) should also be selected.</p> <p>Where basic operation excludes setting and tool adjustment skills, then Unit MEM07024B (Operate and monitor machine/process) should be selected.</p> <p>When operational maintenance is required, unit MEM07001B (Perform operational maintenance of machines/equipment) should be selected.</p> <p>Band: A</p> <p>Unit Weight: 2</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Obtain job instructions	1.1. Job sheets or equivalent instructions are understood and correctly followed.
2. Conduct pre-start checks	2.1. Pre-start checks are undertaken to standard operating procedures. 2.2. Correct safety procedures are observed and all safety equipment is checked for correct operation.
3. Operate computer controlled machine/process	3.1. Installed computer controlled program is selected and verified in accordance with job instructions. 3.2. Computer controlled machine is operated safely to product specifications using standard operating procedures. 3.3. Machine malfunctions are identified and reported. 3.4. Production samples are checked for compliance to specification using standard operating procedures.
4. Monitor machine/process	4.1. Tool wear is monitored and, where appropriate, preset tools are replaced, tool offsets are identified in computer controlled program and adjusted, or other corrective action is taken using standard operating procedures. 4.2. Product deviation from specification is reported in accordance with standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying task related information
- making pre-start checks
- checking safety equipment and guards for correct operation

REQUIRED SKILLS AND KNOWLEDGE

- following safety procedures
- selecting and verifying the correct computer controlled program
- operating the computer controlled machine
- identifying and reporting machine malfunctions
- checking parts/products for conformance to specification
- monitoring the machine or process for signs of tool wear
- taking corrective action
- reporting part or product deviations from specification

Required knowledge

Look for evidence that confirms knowledge of:

- pre-start checks
- safety equipment and features associated with the machine/process
- safety procedures associated with the machine/process
- procedures for accessing computer controlled programs installed in the machine controller
- procedures for verifying the correct computer controlled program
- computer controlled machine operating procedures
- typical machine malfunctions
- procedures for reporting machine malfunctions
- measuring instruments/techniques
- examples of tool wear and the effect on product or part specifications
- procedures to be followed once tool wear has been detected
- replacing preset tools
- adjustments to tool offsets
- the effect of adjustments on part or product specifications
- procedures for reporting product or part deviations
- hazards and control measures associated with operating computer controlled machines/processes, including housekeeping
- safe workplace practices and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	<p>A person who demonstrates competency in this unit must be able to operate computer controlled machine/processes. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with operating computer controlled machine/processes or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Observe safety precautions	1.1. Correct safety procedures are observed and protective clothing and safety glasses are worn.
2. Determine job requirements	2.1. Drawings are interpreted and sequence of operation is determined. 2.2. Tools are selected to produce components to specifications. 2.3. Disc size is determined in accordance with appropriate procedures.
3. Perform spinning operations	3.1. Spinning speeds are calculated for various metals and metal thicknesses using appropriate mathematical techniques and reference materials. 3.2. Correct back centre and form chucks are selected and mounted in accordance with procedures and specifications. 3.3. Prepared disc is mounted for forming. 3.4. A full range of spinning accessories is used including: back centre, various chucks, trimming accessories, blank centre equipment and tee-rest. 3.5. Spinning operations are performed to specifications.
4. Check components for conformance to specifications	4.1. Components are checked for conformance to specifications using appropriate techniques, tools and equipment.
5. Remove and store components	5.1. Components are removed from the spinning lathe without marking or any deformation. 5.2. Components are correctly stored and packaged to avoid oxidation and damage.
6. Adjust and maintain spinning lathe	6.1. Routine maintenance and adjustments are carried out as required.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

REQUIRED SKILLS AND KNOWLEDGE

Look for evidence that confirms skills in:

- reading and interpreting routine information on written job instructions, specifications and standard operating procedures. May include drawings
- following oral instruction
- entering routine and familiar information onto proformas and standard workplace forms
- using all basic metal spinning tools
- minimising damage and defects
- calculating disc size and lathe speed
- undertaking manual handling related to spinning products
- using appropriate techniques, tools and equipment to measure materials and spinnings

Required knowledge

Look for evidence that confirms knowledge of:

- sequence of spinning operation
- types of spinning tools, their functions and requirements for maintaining tools
- types of damage and defects e.g. tool marks, cracking, stress marks, thinning and incorrect finish
- spinning lathe operation
- why and how lathe speed is calculated
- reasons for types of form chuck mounting
- function and operation of accessories for basic spinning
- methods used for each process
- methods for stacking and protecting finished product
- use and application of personal protective equipment
- safe work practices and procedures
- hazards and control measures associated with metal spinning lathe operations (basic)

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Observe safety precautions	1.1. Correct safety procedures are observed and protective clothing and safety glasses are worn.
2. Determine job requirements	2.1. Drawings are interpreted and sequence of operation is determined. 2.2. Tools are selected to produce components to specifications. 2.3. Disc size is determined according to relevant procedures. 2.4. Disc is cut to the correct size and tolerance.
3. Prepare form chucks for spinning	3.1. Metal turning lathe is set up for machining form chucks according to standard operating procedures and standards. 3.2. Form chuck is prepared for general spinning as per drawings and specifications. 3.3. Form chuck is prepared for seaming/swaging joints as per drawings and specifications.
4. Perform complex spinning operations	4.1. Spinning speeds are calculated for various metals and metal thicknesses using appropriate mathematical techniques and reference materials. 4.2. Correct back centre and form chucks are selected and mounted according to procedures and specifications. 4.3. Prepared disc is mounted for forming. 4.4. A full range of spinning accessories is used including: back centre, holding and sectional chucks, tee-rest, compound and additional slides, recessed and cranked followers, rollers and knurling wheels. 4.5. Spinning, beading, recessing, oval spinning, screw forming, (thread spinning) seaming, swaging, trimming finishing, annealing and pickling operations are performed to specification.
5. Check components for conformance to specifications	5.1. Components are checked for conformance to specifications using appropriate techniques, tools and equipment.
6. Remove and store components	6.1. Components are removed from the spinning lathe without marking or any deformation. 6.2. Components are correctly stored and packaged to avoid oxidation and damage.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify job requirements.	<p>1.1. Job requirements are interpreted from work instructions and standard operating procedures.</p> <p>1.2. Appropriate machine is selected to meet requirements.</p>
2. Set up machine	<p>2.1. Tools are selected appropriate to the work requirements.</p> <p>2.2. Cutting tools are sharpened as required.</p> <p>2.3. Tools are correctly installed using standard operating procedures.</p> <p>2.4. Guards are set and adjusted as required.</p>
3. Operate machine	<p>3.1. Material to be machined is mounted and secured using clamping device appropriate to the material and work requirements.</p> <p>3.2. Machine is operated correctly to suit work and material requirements.</p>
4. Check finished component	<p>4.1. Machined component is checked against work requirements and predetermined finish.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following routine and familiar information on written job instructions, standard operating procedures and other applicable reference documents
- selecting the appropriate machine for the given task
- setting up machines and tooling within the scope of this unit, including speeds and feeds
- sharpening tools within the scope of this unit
- operating machines within the scope of this unit
- checking finished components
- checking and clarifying task-related information

REQUIRED SKILLS AND KNOWLEDGE

- measuring components to specification within the scope of this unit

Required knowledge

Look for evidence that confirms knowledge of:

- cutting tool sharpening methods and techniques
- tool geometry within the scope of this unit
- units of measurement, tool geometry and numerical operations within the scope of this unit
- safe operation of tool sharpening equipment
- consequences of incorrect sharpening
- machine set-up
- consequences of incorrect speeds and feeds
- procedures for operating workshop machines
- reasons for poor surface finish.
- hazards and control measures
- use and application of personal protective equipment
- safe work practices and procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Load barrels etc., for mass finishing processes	1.1.Machinery is correctly loaded regarding load mass. 1.2.Machine access openings are safely secured.
2. Undertake jig work for non-electrolytic processes	2.1.Components are appropriately secured using standard operating procedures.
3. Undertake wire jig and rack work for electrolytic processes	3.1.Correct type and size of wire or rack is selected and inspected for conformance to specification. Damaged racks are identified for repair or replacement. 3.2.Components are secured presenting appropriate faces according to standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- correctly loading into the surface finishing machinery
- securing and positioning components to minimise damage
- securing machine access openings
- unloading and stacking components to minimise damage
- selecting the correct type and size of wire or rack
- planning and sequencing operations
- checking and clarifying task related information
- checking for conformance to specifications
- reading and interpreting routine information on written job instructions, specifications and standard operating procedures. May include drawings
- following oral instructions
- performing calculations using formulae

Required knowledge

Look for evidence that confirms knowledge of:

- the procedures for loading machinery for mass finishing processes

REQUIRED SKILLS AND KNOWLEDGE

- the distribution of the components within the machinery
- reasons for distributing the components in a particular manner
- the procedures for securing machine access openings
- the consequences of not securing machine access openings
- the procedures for jiggling work for non-electrolytic processes
- the precautions to be taken when jiggling work for non-electrolytic finishing processes
- the appropriate types and sizes of wire or racks used in conjunction with surface finishing using electrolytic processes
- different faces to be surface finished/coated
- procedures for securing the components to be surface finished using electrolytic processes
- procedures for unloading and stacking surface finished components
- the damage that can be caused by inappropriate handling and storing of surface finished components
- hazard and control measures associated with wiring, jiggling and barrel load/unloading work
- safe workplace practices and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	<p>A person who demonstrates competency in this unit must be able to perform wire, jig and barrel load/unload work related to non-electrolytic processes.</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with performing wire, jig and barrel load/unload work related to non-electrolytic processes or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Non-electrolytic processes

Pre-treatment and finishing processes typical of which are degreasing, de-scaling, surface blasting, flame cleaning, wet blasting, grinding, polishing, wet coating, powder coating, electroplating, anodising, electroless plating, electrophoretic coating and hot dip metallising

Components

Refer to components supplied by the customer

Damaged racks

- Damage to plastic coating or contact points
- Ensuring good electrical contact
- Positioning to facilitate optimum thickness on significant surfaces
- Avoidance of gas entrapment
- The position of contact marks

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify job material	1.1.Common metals, alloys and non-metals can be identified.
2. Identify job surface condition	2.1.Common surface soils and conditions can be identified.
3. Perform pre-treatment processes in correct sequence	3.1.Pre-treatment processes are carried out to standard operating procedures. 3.2.Pre-treatment process parameters are monitored to ensure they remain within specified limits.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading and following routine and familiar information on standard operating procedures
- recognising common surface soils and conditions from given samples
- carrying out appropriate pre-treatment processes
- monitoring and maintaining the pre-treatment process parameters within specified limits
- following verbal instructions
- orally reporting routine information

Required knowledge

Look for evidence that confirms knowledge of:

- characteristics of common metals, alloys and non-metals and procedures and techniques for identifying them
- common surface soils and conditions
- procedures for identifying the type(s) of soil on surfaces to be finished
- simple tests that can be used to assist in identifying surface soils and conditions
- pre-treatment processes applicable to a range of materials, surface soils and conditions
- procedures for carrying out pre-treatment processes

REQUIRED SKILLS AND KNOWLEDGE

- parameters and procedures for monitoring pre-treatment processes
- hazards and control measures associated with pre-treatment
- use and application of personal protective equipment
- safe work practices and procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify electroplating requirements	1.1. Electroplating requirements are identified. 1.2. Untreated materials and required electroplating treatment are identified.
2. Prepare for electroplating process	2.1. Materials and racking arrangement are checked for non-conformance to specifications/job requirements. 2.2. All plant and equipment relevant to process are checked for compliance with safety and operational requirements. 2.3. Instrumentation/gauges are checked for operation. 2.4. Condition of solution is checked.
3. Perform electroplating operations	3.1. Operation steps are carried out in correct sequence according to standard operating procedures or work instructions. 3.2. Safety precautions are observed.
4. Recognise and rectify process deviations	4.1. Compliance with operating parameters is ensured. 4.2. Uncontrollable variances are reported to appropriate persons. 4.3. Adjustments are made to rectify process deviation. 4.4. Finished products are visually inspected for compliance to specification.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- recognising deviations and faults in product/equipment/process
- identifying machine process requirements, untreated materials and process sequences
- identifying incorrectly loaded work
- inspecting job surface conditions
- checking plant and equipment for conformance to safety and operational requirements

REQUIRED SKILLS AND KNOWLEDGE

- checking solution levels and identifying visible contamination such as solution clarity, oil, surface contamination
- maintaining required contacts and immersions while moving materials
- monitoring operating parameters, identifying deviations and making required adjustments
- adjusting settings such as voltage, current and temperature within permissible limits
- correcting deviations within scope operator's control
- reading and interpreting routine information on written job instructions, specifications and standard operating procedures. May include drawings
- following oral instructions
- performing calculations using formulae

Required knowledge

Look for evidence that confirms knowledge of:

- basic knowledge of electroplating process, machine components, treatment solutions, process parameters
- a basic knowledge of electroplating solutions and handling procedures
- treatment stages
- information relevant to plating products, treatment baths, settings
- characteristics of a variety of base materials that can be plated
- pre-treatment s, treatments and post treatments in relation to task requirements
- required equipment checks
- hazards and control measures associated with electroplating processes
- operational requirements of all plant and equipment associated with the relevant process
- the purpose and typical settings of different instruments/gauges
- sequences and requirements involved in moving materials
- the range of adjustments permissible for given operating parameters including voltage, current and temperature
- variances outside the control of the operator
- common faults and imperfections/deviations
- adjustments to suit specific process deviations
- effects of rust, corrosion and other contaminants
- the reasons for rejecting incorrectly loaded work
- safe operating procedures, safety and personal protective equipment, hazards of specific solutions

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to start up, operate and monitor an electroplating process. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assess and prepare components for required coating process	1.1.Coating specifications are identified from operation sheets/work procedures. 1.2.Suitability of pre-treated components for finishing process is checked according to enterprise procedures. 1.3.Components are prepared as required for finishing application. 1.4.Components are positioned/located for finishing according to enterprise procedures.
2. Perform simple mixing and estimating operations	2.1.Mixing ratios are calculated and a range of wet coatings are mixed and thinned as required to standard operating procedures. 2.2.Required coating quantities are estimated using simple surface area calculations.
3. Perform coating operation	3.1.Equipment is set up to specification using standard operating procedures. 3.2.Coating and applied curing technique are monitored to standard operating procedures. 3.3.Coating application, thickness and colour are checked and maintained for compliance with specifications.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- obtaining all relevant drawings, specifications and/or instructions in accordance with work place procedures
- racking the components to be coated correctly in accordance with standard operating procedures
- calculating the correct mixing ratios for given wet coatings accurately
- where appropriate, mixing and thinning the given wet coatings
- calculating the surface area to be coated correctly

REQUIRED SKILLS AND KNOWLEDGE

- where appropriate, estimating the quantities of wet coating materials correctly
- setting up the appropriate coating equipment
- applying the coating correctly using the appropriate technique
- curing the coating correctly using the appropriate technique
- maintaining the coating thickness and colour in accordance with specifications throughout the coating operation
- checking the coating thickness and colour
- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying task-related information
- checking for conformance to specifications
- performing numerical operations, geometry and calculations/formulae within the scope of this unit

Required knowledge

Look for evidence that confirms knowledge of:

- work to be undertaken
- coating process to be used
- coating specifications
- appropriate type of racking for the coating process
- reasons for selecting the chosen rack type
- procedures for racking components to be coated
- source of data on mixing ratios for wet coatings
- mixing ratio for the given task(s)
- function of thinners as applied to the application of wet coatings
- procedures to be followed when mixing wet coatings
- surface area to be coated
- coverage rate of the coating material to be applied
- procedures for estimating quantities of coating materials
- types of equipment used for a variety of coating processes
- appropriate coating equipment for the given task(s)
- reasons for selecting the chosen equipment
- operating procedures applicable to the selected coating equipment
- a range of coating techniques
- a range of curing techniques
- appropriate coating and curing technique for the given task(s)
- reasons for selecting the chosen coating and curing techniques
- monitoring procedures to be followed

REQUIRED SKILLS AND KNOWLEDGE

- examples of coating defects
- the causes of coating defects
- where appropriate, procedures for rectifying coating defects
- where appropriate, procedures for reporting coating defects
- coating thickness and colour to be achieved
- the means of checking coating thickness and colour
- frequency at which checks are undertaken
- hazards and control measures associated with finishing work using wet, dry and vapour deposition methods, including housekeeping
- safe work practices and procedures
- use of personal protective equipment

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Perform a series of anodising steps	1.1.All steps are carried out in the correct sequence to standard operating procedures. 1.2.Masking techniques are correctly applied, where required. 1.3.Contact marks and shielding are minimised.
2. Assess preparation of work for correct jiggging/loading	2.1.Work is correctly connected for the required current flow and minimum contact marks and shielding. 2.2.All incorrectly loaded work is rejected.
3. Anodise work by a series of treatment steps	3.1.All steps are carried out in the correct sequence to standard operating procedures.
4. Seal or dye and seal anodised work	4.1.All steps on work are carried out in the correct sequence to standard operating procedures.
5. Monitor and control operating parameters	5.1.Process parameters are maintained within specified limits.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading and following routine and familiar information on standard operating procedures
- following all steps in the anodising process
- applying the correct masking materials and techniques
- minimising contact marks and shielding
- correctly connecting the work to the required electrical current
- identifying incorrectly loaded work
- maintaining process parameters within specified limits
- following verbal instructions
- orally reporting routine information

Required knowledge

REQUIRED SKILLS AND KNOWLEDGE

Look for evidence that confirms knowledge of:

- process for anodising aluminium
- materials, techniques and procedures for masking materials during anodising
- causes of contact marks and shielding during the anodising process
- procedures for minimising contact marks and shielding
- procedures for connecting the work to the required electrical current
- the electrical current required for the anodising process
- methods for correctly loading work
- examples of incorrectly loaded work
- reasons for rejecting incorrectly loaded work
- steps to be carried out in the seal/dye and seal process
- procedures and reasons for monitoring and maintaining the process parameters within the specified limits
- hazards and control measures associated with anodising operations, including housekeeping
- use and application of personal protective equipment
- safe work practices and procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine job requirements	1.1. Work requirements are determined from job sheet, instructions or other predetermined specifications in accordance with standard operating procedures. 1.2. Appropriate abrasive blasting process, equipment and blasting media are identified to meet job specification. 1.3. Work site is prepared for surface cleaning activities.
2. Set up equipment	2.1. Appropriate equipment and any required consumables are assembled, set up and prepared correctly and safely in accordance with manufactures' specifications and standard operating procedures. 2.2. Correct rust inhibitor for use in wet abrasive blast methods is selected where required. 2.3. Pre-operational checks are carried out on equipment and faults and are rectified or reported for further action.
3. Prepare surfaces using abrasive blasting	3.1. Blasting equipment is operated in accordance with standard operating procedures. 3.2. Emergency shut-down procedures can be undertaken. 3.3. Work procedures are undertaken to appropriate environmental requirements. 3.4. Abrasive media disposal is carried out in accordance with standard operating procedures. 3.5. Blasting equipment is cleaned and disassembled and inspected in accordance with manufacturers' specifications and standard operating procedures. 3.6. Equipment faults are recorded and reported in accordance with standard operating procedures.
4. Inspect prepared surface	4.1. Surface preparation is assessed for cleanliness and conformance with specifications. 4.2. Faults or defects are rectified where required and inspection results are recorded and reported in accordance with standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- planning and sequencing operations
- undertaking numerical operations within the scope of this unit
- selecting blasting equipment and media
- setting up equipment and consumables
- selecting rust inhibitor
- conducting pre-operational checks
- preparing surfaces using abrasive blasting
- disposing of abrasive media
- maintaining blasting equipment
- identifying, recording and reporting of faults
- inspecting prepared surface
- performing rectification work
- checking for conformance to specifications

Required knowledge

Look for evidence that confirms knowledge of:

- reason for selecting the chosen sequence of operations
- blasting equipment and media required
- equipment, consumables for various methods
- importance of using an appropriate rust inhibitor
- process for undertaking pre-operational checks
- procedures for using abrasive blasting equipment
- procedures for abrasive media disposal
- procedures for maintaining and storing blasting equipment
- recording/reporting procedures; faulty equipment
- checking prepared surfaces
- rectification techniques
- safe work practices and procedures
- hazards and control measures related to abrasive blasting

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	<p>A person who demonstrates competency in this unit must be able to prepare surfaces by abrasive blasting (at a basic level). Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both. Where assessment occurs off the job, i.e. the candidate is not in productive work, an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with preparing surfaces by abrasive blasting (basic) or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning should not require language, literacy and numeracy skills beyond those required in this unit. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Blasting processes	Surface preparation using propelled abrasives including water, air steam, grits and blasting mediums
Blasting media	Abrasives, shot, glass beads, sand, steel shot, garnet, and other mediums accepted by industry and all regulatory bodies
Rust inhibitor	A substance which, when added to a corrosive liquid in small amounts, reduces the rate of corrosion
Blasting equipment	Electric and diesel compressors, blast pots, blast rooms, centrifugal blast machines, water pressure washers to 35,000 kpa, air hoses and nozzles, and specified hand and power tools, etc.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine job requirements	1.1. Work requirements are determined from job sheet, instructions or other specifications in accordance with standard operating procedures. 1.2. Appropriate abrasive blasting process and equipment are selected to meet job specification. 1.3. Appropriate abrasive blasting media and equipment are selected to meet job specification. 1.4. Work site is prepared for surface cleaning activities.
2. Set up equipment	2.1. Appropriate equipment and any required consumables are assembled, set up and prepared correctly and safely in accordance with manufacturers' specifications and standard operating procedures. 2.2. Correct rust inhibitor for use in wet abrasive blast methods is selected where required. 2.3. Pre-operational checks are carried out on equipment and faults are rectified or reported for further action.
3. Inspect surface prior to cleaning	3.1. Work piece is inspected prior to cleaning in accordance with standard operating procedures. 3.2. Identified faults/defects requiring remedial or pre-treatment action are reported as required.
4. Prepare surfaces using abrasive blasting	4.1. Blasting equipment is operated in accordance with standard operating procedures. 4.2. Emergency shut-down procedures can be carried out. 4.3. Work procedures are undertaken to appropriate environmental requirements. 4.4. Abrasive media disposal is carried out in accordance with standard operating procedures. 4.5. Blasting equipment is cleaned and disassembled and inspected in accordance with manufacturers' specifications and standard operating procedures. 4.6. Equipment faults are recorded and reported in accordance with standard operating procedures.
5. Inspect prepared surface	5.1. Surface preparation is assessed for cleanliness and conformance with specifications. 5.2. Faults or defects are rectified where required and inspection results are recorded and reported in accordance with standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- preparing and sequencing operational work plan
- selecting blasting process and equipment
- selecting appropriate blasting media
- setting up equipment
- undertaking surface inspection prior to cleaning
- reading and interpreting routine information on written job instructions, specifications and standard operating procedures.
- following verbal instructions
- orally reporting routine information
- identifying faults and defects
- checking and clarifying task-related information
- checking for conformance to specifications

Required knowledge

Look for evidence that confirms knowledge of:

- calculations and numerical operations within the scope of this unit
- blasting media features
- equipment for the selected method
- inspection procedures
- procedures for using abrasive blasting equipment
- procedures for abrasive media disposal
- safe work practices and procedures
- hazards and control measures associated with preparing surfaces by abrasive blasting, including housekeeping

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Apply specific health and safety considerations to surface preparation	1.1. Products, hazardous materials and processes used in blaster cleaning and coating operations are identified. 1.2. Safety procedures appropriate to the work requirements are applied. 1.3. Unsafe working conditions are identified and reported to appropriate personnel.
2. Control by-products, materials and emissions	2.1. By-products, materials and emissions are contained using established procedures. 2.2. By-products, materials and emissions are monitored and directed to appropriate treatment or storage area. 2.3. Monitoring devices are checked for correct/continuous operation. 2.4. Status/reports are recorded and reported.
3. Dispose of by-product, materials and emissions	3.1. Waste treatment processes are applied in accordance with standard operating procedures. 3.2. Treatment processes are carried out in accordance with standard operating procedures and to meet relevant authority waste requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- collecting, storing and removing samples of by-products
- monitoring and transferring by-product and emissions
- checking monitoring devices
- implementing waste treatment process
- recording and reporting of all results
- collecting, storing, removing and sampling by-products

Required knowledge

Required knowledge

REQUIRED SKILLS AND KNOWLEDGE

- Look for evidence that confirms knowledge of:
- products, hazardous materials and processes within the scope of this unit
- regulatory and legislative requirements relating to control of blast coating by-products, materials and emissions
- procedures for collecting samples
- by-product collection equipment operation methods
- waste control monitoring equipment and procedures
- waste treatment processes
- requirements and procedures for recording and reporting process status reports
- hazards and control measures associated with controlling blast coating by-products, materials and emissions
- use and application of personal protective equipment
- safe work practices and procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Select treatments and processes/equipment for producing engineering finishes	1.1. Appropriate treatment processes are selected according to base metal type, surface condition and relevant job specifications. 1.2. Operating/process parameters are selected to achieve required coating. 1.3. Appropriate equipment is selected.
2. Prepare work for engineering finishes	2.1. Products are correctly masked (stopped off) for selective plating. 2.2. Where applicable, conforming anodes are constructed and fitted correctly. 2.3. Where applicable, shields and robbers are constructed and fitted. 2.4. Pre-treatment processes are carried out, where applicable.
3. Monitor and control operating conditions and processes for engineering coatings	3.1. Operating/process parameters are set to produce required surface conditions/specifications. 3.2. Surface conditions of finished components are monitored and confirmed and abnormalities are identified. 3.3. Corrective actions are taken to rectify non-conforming conditions.
4. Maintain solutions for engineering finishes	4.1. Solution compositions are checked and confirmed to specification/operating range. 4.2. Adjustment requirements/additions are determined. 4.3. Additions are made to adjust solution composition to correct operating range.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- selecting treatments and processes/equipment for producing engineering finishes

REQUIRED SKILLS AND KNOWLEDGE

- preparing work for engineering finishes
- calculating process parameters
- determining current densities
- assessing material condition for suitability for plating
- selecting equipment, masking, materials
- correctly sizing positioning and securing anodes
- sizing, positioning and securing shields and robbers
- carrying out mechanical/chemical pre-treatment
- setting times voltages/currents and temperature
- monitoring and controlling operating conditions and processes for engineering coatings
- maintaining solutions for engineering finishes

Required knowledge

Look for evidence that confirms knowledge of:

- effects of plating process on different materials
- conditions affecting engineering finishes
- base metal types
- surface finish of untreated material
- mechanical/chemical and specialised pre-treatment processes
- process parameters for achieving different coatings
- characteristics of different surface finishes
- masking materials and masking techniques
- safe operation of equipment to produce engineering finishes
- current distribution principles
- methods of constructing/fabricating, fitting anodes
- current-capacity of conforming/auxiliary anodes
- the role, construction, properties, applications, and positioning of shields and robbers
- finish requirements, permissible tolerances
- the causes of abnormalities and their related corrective actions
- purpose and application of simple tests including pH, titration, density
- calculations related to additions/adjustments to solution and of product surface area
- safe work practices and procedures, including handling chemicals

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Treatment processes	Electroplating, electroforming, electroless plating
Operating/process parameters	Treatment times and currents, bath pH temperatures and densities, anode conditions, addition agent content, cleanliness of contacts etc., make-up, maintenance of solution levels and purity
Coating	Hard chroming, heavy nickel, electroless nickel, nickel composites, heavy deposits of nickel, copper, bronze up to 10 mm
Equipment	Wire racks, handling equipment, barrels, jigs, shields, robbers, etc.
Products	Base materials such as cast iron, brass, steels with machine welded sections, etc.
Masking materials	Wax, lacquers, tapes, foils
Anodes	Soluble, insoluble auxiliary anodes, etc.
Solution compositions	Cleaning, pickling, electroplating, chromate, acid dips
Checks	Density, titration, pH
Adjustment	Strength of solutions, temperature range

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Select correct technical drawing	1.1. Drawing is checked and validated against job requirements or equipment. 1.2. Drawing version is checked and validated.
2. Interpret technical drawing	2.1. Components, assemblies or objects are recognised as required. 2.2. Dimensions are identified as appropriate to field of employment. 2.3. Instructions are identified and followed as required. 2.4. Material requirements are identified as required. 2.5. Symbols are recognised in the drawing as appropriate.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- checking the drawing against job requirements/related equipment in accordance with standard operating procedures
- confirming the drawing version as being current in accordance with standard operating procedures
- where appropriate, obtaining the current version of the drawing in accordance with standard operating procedures
- reading, interpreting information on the drawing, written job instructions, specifications, standard operating procedures, charts, lists and other applicable reference documents
- checking and clarifying task related information
- undertaking numerical operations, geometry and calculations/formulae within the scope of this unit

Required knowledge

Look for evidence that confirms knowledge of:

- application of AS1100.101 in accordance with standard operating procedures
- relationship between the views contained in the drawing

REQUIRED SKILLS AND KNOWLEDGE

- objects represented in the drawing
- units of measurement used in the preparation of the drawing
- dimensions of the key features of the objects depicted in the drawing
- understanding of the instructions contained in the drawing
- the actions to be undertaken in response to those instructions
- the materials from which the object(s) are made
- any symbols used in the drawing as described in range statement
- hazard and control measures associated with interpreting technical drawings, including housekeeping
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	A person who demonstrates competency in this unit must be able to interpret technical drawings as described.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with interpreting technical drawings or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning should not require language, literacy and numeracy skills beyond those required in this unit. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Interpret technical drawing

AS1100.101 is an extensive work and the candidate is not required to have complete familiarity with all its contents, the application of AS1100 would usually be in line with standard operating procedures; interpretation may require guidance particularly in respect to any geometric tolerancing

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify drawing requirements	1.1. Requirements and purpose of drawing are determined from customer and/or work specification and associated documents. 1.2. All data necessary to produce the drawing is identified and collected. 1.3. Drawing requirements are confirmed with relevant personnel and timeframes for completion are established.
2. Prepare or make changes to engineering drawing	2.1. Drafting equipment is selected appropriate to the drawing method chosen. 2.2. Drafting principles are applied to produce a drawing that is consistent with standard operating procedures within the enterprise. 2.3. All work is undertaken safely and to prescribed procedure. 2.4. Completed drawing is approved in accordance with standard operating procedures.
3. Prepare engineering parts list	3.1. Components parts are identified and organised by component type and/or in accordance with organisation/customer requirements.
4. Issue drawing	4.1. Drawings and or parts lists records are completed in accordance with standard operating procedures. 4.2. Approved drawings and or parts lists are copied and issued to relevant personnel in accordance with standard operating procedures. 4.3. Approved drawings and or parts lists are stored and catalogued in accordance with standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

REQUIRED SKILLS AND KNOWLEDGE

- obtaining all relevant job requirements, data/information and specifications necessary to produce the drawing in accordance with workplace procedures
- using drafting equipment appropriate to the drawing method chosen
- producing/changing the drawing to conform with the relevant standard
- undertaking all work safely and in accordance with workplace procedures
- checking the completed drawing in accordance with standard operating procedures
- producing the component parts list with part name, description of part, material specification or part number, quantities and all other details specified by the customer and/or organisational procedures
- recording completed drawings and or parts lists in accordance with standard operating procedures
- where appropriate, copying and issuing approved drawings and or parts lists in accordance with standard operating procedures
- handling and storing the approved drawings and or parts lists in accordance with standard operating procedures
- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying task related information
- undertaking numerical operations, geometry and calculations/formulae within the scope of this unit

Required knowledge

Look for evidence that confirms knowledge of:

- requirements and purpose of the drawing to be produced
- requirements and purpose of the engineering parts list
- sources of relevant data/ information
- timeframe for completion of the drawing(s)
- person(s) who can confirm drawing requirements
- method of drawing preparation
- the reasons for selecting the chosen drawing method
- procedures for producing an initial drawing
- procedures for changing an existing drawing
- drafting principles to be applied to the production/changing of a drawing
- standards to which the drawing is to be produced
- procedures for checking drawings
- the persons responsible for checking and approving drawings
- consequences of inappropriate/incomplete components parts lists
- procedures and reasons for recording completed drawings and or parts lists
- procedures for copying approved drawings and or parts lists

REQUIRED SKILLS AND KNOWLEDGE

- procedures for issuing approved drawings and or parts lists
- the personnel to whom copies of approved drawings and or parts lists can be issued
- procedures for filing approved drawings and or parts lists
- procedures for safe handling and storage of drawings and or parts lists
- consequences of inappropriate handling and storage of approved drawings and or parts lists
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to prepare basic engineering drawings. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with preparing basic engineering drawing or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p>Method of assessment</p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant personnel

Technical personnel, supervisors, manufacturers, suppliers, contractors, customers

Drafting equipment

Drafting and drawing equipment includes the use of Computer Aided Drafting systems

Drafting principles

Drawings are prepared in accordance with Australian Standard 1100.101, or equivalent, as required

Interpretation of AS1100.101 or other problems are resolved in consultation with a supervisor

Records

Drawing records may include cataloguing, issuing security classifications, filing, preparing distribution lists

Issued

In hard copy, photographic, slide or transparency form including presentation as a single drawing and/or with other drawings, support documentation as a package

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare CAD environment	1.1. System variables are customised to suit standard operating procedures. 1.2. Menus are customised to suit standard operating procedures. 1.3. Drawing defaults are customised to standard operating procedures. 1.4. Macros are developed to standard operating procedures.
2. Create 2D drawings	2.1. Drawings are created using the full capability of the available software system. 2.2. Drawing entities are linked to database attributes to suit job requirements. 2.3. Detailed views are created using various scales to meet job requirements.
3. Produce output	3.1. Files are saved in various formats to standard operating procedures. 3.2. Linked entities are listed in a bill of materials format to meet job requirements. 3.3. Supplementary data is extracted from drawing to meet job requirements and may include area, lengths, angles and perimeters.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- obtaining all relevant manuals, instructions and operation procedures for the CAD software and hardware being used
- where appropriate, customising the relevant system variables to suit the applicable drafting standards/procedures
- where appropriate, customising menus to suit the applicable drafting standards/procedures
- where appropriate, customising the system defaults to suit the applicable drafting

REQUIRED SKILLS AND KNOWLEDGE

standards/procedures

- where appropriate, developing macros
- creating drawings using the appropriate drawing features of the software system
- where appropriate, linking drawing entities to database attributes
- producing detailed views of the object being drawn
- printing drawing files at the appropriate scale
- saving drawing files in the appropriate format
- producing bills of material from the drawing files/database
- extracting supplementary data from the drawing file to meet job requirements
- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying task related information
- checking for conformance to specifications
- undertaking numerical operations, geometry and calculations/formulae within the scope of this unit

Required knowledge

Look for evidence that confirms knowledge of:

- CAD software system
- system variables that can be customised
- procedures for customising identified system variables
- reasons for customising the system variables
- applicable drafting standards/procedures
- procedures for customising menus
- reasons for customising menus
- procedures for customising system defaults
- reasons for customising system defaults
- procedures for developing macros
- reasons for developing macros
- drawing features of the CAD software system
- reasons for using specialised software features
- procedures for linking drawing entities to database attributes
- appropriate drawing scales
- procedures for printing drawing files
- procedures for creating additional views of the object being drawn
- procedures for saving drawing files
- various formats in which drawing files can be saved
- reasons for using different formats when saving drawing files

REQUIRED SKILLS AND KNOWLEDGE

- procedures to produce bills of material
- procedures to extract data with respect to drawn shapes/features
- properties of shapes/sections/ features that can be extracted from the drawing file
- hazards and control measures associated with using computer aided design system, including housekeeping
- safe work practices and procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Lift materials manually	1.1. Material weight is determined correctly utilising most appropriate technique, and risks associated with lifting are assessed. 1.2. Lifting techniques are undertaken to National Occupational Health and Safety Commission (NOHSC) and standard operating procedures. Types of movement, methods, storage, height and position are considered.
2. Move/shift materials manually	2.1. Appropriate equipment is selected where required. 2.2. Material is placed safely and securely on moving equipment. 2.3. Material is relocated ensuring safety of personnel and security of material. 2.4. Material is unloaded from moving equipment and placed in a safe and secure manner.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- identifying relevant standards and lifting techniques
- assessing weight of material
- selecting lifting equipment
- working and communicating in teams
- assessing risks
- planning
- reading and interpreting routine information on written job instructions, specifications and standard operating procedures. May include drawings
- following oral instructions

Required knowledge

Look for evidence that confirms knowledge of:

- manual handling techniques

REQUIRED SKILLS AND KNOWLEDGE

- hazards of incorrect procedures
- NOHSC standards for manual handling
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	A person who demonstrates competency in this unit must be able to move loads manually using appropriate aids.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Use comparison and/or basic measuring devices	1.1.Measuring devices are identified and used to undertake required comparisons or measurements using standard operating procedures. 1.2.Checking or sorting of items is undertaken using comparison and/or basic measuring device according to standard operating procedures.
2. Maintain comparison and/or basic measuring devices	2.1.Basic care and storage is maintained to manufacturers' standards or standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- using device in accordance with standard operating procedures
- storing and maintaining devices
- using basic numeracy skills for undertaking comparison measurements
- following oral instructions and written standard operating procedures

Required knowledge

Look for evidence that confirms knowledge of:

- use and application of various comparison or measurement devices
- procedures for the correct use of devices
- procedures for maintaining and storing devices
- hazards and control measures associated with conducting measurements, including housekeeping
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	A person who demonstrates competency in this unit must be able to use comparison and basic measuring devices.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Use precision measurement equipment	1.1. Appropriate precision equipment is selected to achieve specified outcome. 1.2. Correct and appropriate measuring techniques are used for the measurement task. 1.3. Measurements are taken accurately to the finest graduation of instrument. 1.4. Readings and measurements are interpreted correctly and accurately.
2. Set comparative measuring devices	2.1. Measuring equipment is set to specifications using manufacturer guidelines or standard operating procedures and techniques.
3. Maintain precision equipment	3.1. Measuring equipment is adjusted and maintained to required accuracy, using manufacturer or standard operating procedures and techniques. 3.2. Equipment is stored to manufacturer specifications or standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading and interpreting text and numerical information on manufacturer specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- selecting/using precision mechanical measuring devices
- setting measuring devices to specification
- obtaining specified mechanical measurements to the finest graduation of the device
- measuring components to specified tolerances
- reading and interpreting measurements
- maintaining and adjusting precision mechanical measuring devices
- storing precision mechanical measuring devices
- undertaking calculations and numerical operations for measurement using precision mechanical measuring equipment

REQUIRED SKILLS AND KNOWLEDGE**Required knowledge**

Look for evidence that confirms knowledge of:

- the appropriate precision mechanical measuring device for given measurement requirements
- procedures to verify equipment being used has been recently calibrated
- suitability of environmental conditions for the measurements being carried out
- procedures/techniques for obtaining a range of mechanical measurements
- the accuracy to which a range of precision mechanical measuring devices can be read
- procedures for reading graduated mechanical measuring devices
- units of measurement and numerical operations within the scope of this unit
- procedures for setting precision mechanical measuring devices
- specifications of the equipment to be set
- tools and equipment for setting mechanical measuring devices
- the adjustments that can be made to a range of precision mechanical measuring devices
- procedures for adjusting and maintaining precision mechanical measuring devices
- procedures for storing precision mechanical measuring devices
- hazards and control measures associated with precision mechanical measurement, including housekeeping
- safe work practices and procedures

Application of the Unit

Application of the unit	<p>This unit applies to the calibration skills used in the setting, adjustment, validation or verification of precision mechanical and/or electrical/electronic measuring instruments using reference standards in accordance with predetermined standard procedures. This may involve the use of electronic setting equipment and the selection or determination of an appropriate external standard in accordance with standard operating procedures.</p> <p>This unit is not meant to apply to simple zeroing, external adjustment or manual adjustment for size range e.g. micrometers etc; these skills are covered by Unit MEM12023A (Perform engineering measurements), Unit MEM12003B (Perform precision mechanical measurement) or Unit MEM12004B (Perform precision electrical/electronic measurement) as appropriate.</p> <p>There may be occasions when both pathways MEM12003B and MEM12002B will be required.</p> <p>Where additional electrical/electronic measurement skills are required, then Unit MEM12004B (Perform precision electrical/electronic measurement) should be considered.</p> <p>Competence in this unit does not require the level of skill that applies to calibration as defined in ISO 9000 and/or carried out by personnel accredited under ISO/IEC 17025/NATA certification or similar.</p> <p>Unit MEM15010B (Perform laboratory procedures) should be considered for this level of calibration.</p> <p>Where reference standards only are to be verified under laboratory conditions, then MEM15022B (Verify reference standards) should be considered.</p> <p>Band: B</p> <p>Unit Weight: 6</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Check equipment for correct operation	1.1. Appropriate checks are made of components, leads, fasteners, etc. for wear, loose connections or other faults.
2. Validate/calibrate precision measuring equipment	2.1. Calibration of precision measuring equipment is assessed to manufacturers' specifications and/or standard operating procedures. 2.2. Equipment is calibrated against appropriate physical standards using correct calibration devices, equipment, techniques using predetermined procedures. 2.3. Equipment is recommissioned in accordance with standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- interpreting work requirements
- using appropriate tools and equipment to check measuring equipment for faults
- using appropriate techniques to check the calibration of the measuring equipment for conformance to specifications
- calibrating the measuring equipment against the appropriate physical standard
- recommissioning the measuring equipment
- using literacy and numeracy skills to enable correct completion of calibration records

Required knowledge

Look for evidence that confirms knowledge of:

- measuring equipment specifications, operation, wearing parts, connections and components
- checks that are to be made of the measuring equipment and the tools and equipment to be used when checking the measuring equipment
- common fault(s) that may be found in the measuring equipment

REQUIRED SKILLS AND KNOWLEDGE

- effects of faults on the performance/accuracy of the measuring equipment
- general knowledge of standards, legislative or regulatory requirements applicable to the measuring equipment and/or its calibration
- standard operating procedures for calibrating the measuring equipment and the tools and equipment required to do so
- standard operating procedures for commissioning the measuring equipment
- calibration records to be kept/maintained in accordance with standard operating procedures
- hazards and controls associated with calibrating measuring equipment

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to check equipment for correct operation and validate/calibrate precision measuring equipment. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.

Context of and specific resources for assessment

This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with calibrating measuring equipment or other units requiring the exercise of the skills and knowledge covered by this unit.

Method of assessment

Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Calibration	To standardise the quantities of a measuring instrument
Physical standards	Reference standards of mass length, time, temperature, pressure, volume, process characteristics etc.
Calibration devices, equipment	Micrometer, vernier caliper, voltmeter, oscilloscope, all types of comparators, jigs and fixtures, templates and patterns etc.
Techniques	In standard operating procedures, manufacturers' manuals
Recommissioned	Sealing, tagging, identification or storage in accordance with standard operating procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Select appropriate device or equipment	1.1.Measurement requirements are determined from specifications. 1.2.Appropriate device or equipment is selected according to standard operating procedures, to achieve required outcome.
2. Obtain measurements using a range of measuring devices	2.1.Correct and appropriate measuring technique is used. 2.2.Measurements are accurately obtained . 2.3.Dimensions are determined or verified using basic calculations, where required.
3. Maintain measuring devices	3.1.Routine care and storage of devices is undertaken to manufacturers' specifications or standard operating procedures. 3.2.Routine adjustments to devices are made and checked.
4. Communicate measurements as required	4.1.Measurements are accurately recorded, where required. 4.2.Freehand sketch which depicts required information is prepared, as required.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- selecting the appropriate measuring device for given measuring tasks
- using appropriate measuring technique
- reading all measurements taken accurately to the finest graduation of the selected measuring device
- handling and storing measuring devices in accordance with manufacturers' specifications or standard operating procedures
- verifying all measuring devices before use
- making, where appropriate, routine adjustments to measuring devices
- reading, interpreting and following information on written job instructions,

REQUIRED SKILLS AND KNOWLEDGE

specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents

- planning and sequencing operations
- checking and clarifying task related information
- checking for conformance to specifications
- undertaking numerical operations involving addition, subtraction, multiplication, division, fractions and decimals within the scope of this unit
- preparing drawings as required

Required knowledge

Look for evidence that confirms knowledge of:

- correct application of a range of measuring devices
- correct and appropriate measuring technique for a range of measuring devices
- addition, subtraction, multiplication, division, fractions, decimals to the scope required by this unit
- procedures for handling and storing a range of measuring devices
- procedures for adjusting and zeroing a range of measuring devices
- methods of communicating measurements by drawings, as required
- safe work practices and procedures

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Specifications	Drawings, sketches, job instructions, schematics, diagrams, technical manuals
Range of measuring devices	Protractors, combination squares, set squares, dial indicators, thermometers, tapes, rules, micrometers, vernier-scaled measuring equipment
Basic calculations	Calculations needed to assist in determining measurements where a reading of the graduated device is not sufficient, for example subtracting one measurement from another to give a third measurement. Examples of calculations needed are addition, subtraction, multiplication, division, fractions and decimals. Calculations may be made using a calculator
Routine adjustments	Validating the device using simple zeroing or scale adjustment
Measurements	Measuring length, squareness, flatness, angle, roundness, clearances or any other measurements that can be read off analog, digital or other measuring device
Information	Dimensions, instructions, base line or datum points

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine work requirement	1.1. Required outcomes are established from job instructions. 1.2. Data is obtained from relevant sources and interpreted correctly. 1.3. Required calculation method is determined to suit the application, including selection of relevant arithmetic operations and/or formulae. 1.4. Expected results are estimated, including rounding off, as appropriate.
2. Perform calculations	2.1. Calculation method is applied correctly. 2.2. Correct answer is obtained. 2.3. Answer is checked against estimation.
3. Produce charts and graphs from given information	3.1. Data is transposed accurately to produce charts or graphs. 3.2. Charts or graphs accurately reflect data on which they are based.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- performing calculations involving whole numbers using all four basic rules
- performing calculations involving length, perimeter, area and volume
- checking calculated answers for accuracy
- rounding off estimated answers
- expressing information presented in fractional or decimal format as a percentage
- selecting appropriate formulae for the given application
- substituting the correct values for each term in the relevant formulae
- using appropriate mathematical operations
- performing calculations involving ratios or proportions
- determining required information from appropriate charts or graphs
- producing simple charts or graphs from given information or observations made

REQUIRED SKILLS AND KNOWLEDGE

- selecting appropriate scales and using them in the production of charts and graphs
- marking appropriate limits clearly on the graph or chart
- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying task related information
- checking for conformance to specifications
- undertaking numerical operations, geometry and calculations/formulae within the scope of this unit

Required knowledge

Look for evidence that confirms knowledge of:

- formula applicable to the determination of perimeter, area and volume of simple geometric shapes
- techniques for estimating approximate answers
- reasons for using dimensions with the same units when calculating length, perimeter, area and volume
- concepts of perimeter, area and volume
- procedures for rounding off figures when estimating approximate answers
- mixed numbers, decimals, fractions and whole numbers
- concept of percentage
- procedures to be followed in converting a decimal to a percentage
- procedures for carrying out calculations involving fractions and using each of the four basic rules
- procedures to be followed on converting a fraction to a percentage
- sources of appropriate formulae
- reasons for ensuring that the units of each term are consistent with the formulae selected
- procedures for converting given units to those required for use in formulae
- concepts of ratio and proportion
- given ratios and proportions can be expressed in terms of whole numbers, fractions and decimal fractions
- scales applicable to the axes of the graphs or charts
- three types of charts and/or graphs used in the individual's field of work
- where appropriate, upper and lower limits of acceptability applicable to data entered on a graph or chart
- where appropriate, the trends indicated by the slope or gradient of a graph
- where appropriate, the action to be taken when given trends occur or set limits are approached on graphs or charts
- procedures for drawing 'lines of best fit'

REQUIRED SKILLS AND KNOWLEDGE

- the trends indicated by the graphs or charts drawn
- hazards and control measures associated with performing computations, including housekeeping
- safe work practices and procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Use personal protective equipment	1.1. Correct and appropriate safety clothing including personal protective equipment is selected and used correctly based on information in relevant material safety data sheet (MSDS).
2. Identify emergency procedures	2.1. Emergency procedures and plan relevant to the particular work environment are documented, understood and demonstrated as laid down in approved safety instructions.
3. Observe safe working practices	3.1. Hazardous areas and materials are identified and special handling procedures are identified and understood. 3.2. Permits to work (if necessary) are obtained. 3.3. All equipment and hazardous materials are used in accordance with relevant OHS legislation, manufacturers' instructions and standard operating procedures. 3.4. All site-specific safety policies, safety signs, symbols and labels are correctly identified and understood. 3.5. Material safety data sheets are understood and applied. 3.6. Safe manual handling procedures (including equipment) are used. 3.7. Decanted chemicals and storage is to State/Territory dangerous goods and OHS legislation and requirements. 3.8. Housekeeping duties are performed according to standard operating procedures to maintain a safe working environment.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

MEM13013B Work safely with ionizing radiation

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers working safely with ionizing radiation when performing radiographic testing in a range of industrial applications.
------------------------	---

Application of the Unit

Application of the unit	<p>This unit applies to safely working with ionizing radiation in open or closed sites: on fabrications, structures and components across a wide range of industries. It is a prerequisite to undertaking any other radiographic competency standards unit. The work can relate to scheduled and unscheduled maintenance activities, using general tools, specific radiographic testing equipment as specified in maintenance documentation, testing procedures or operator instructions.</p> <p>All testing must be completed with particular attention to personal and OH&S regulations. Certification against Australian standards may be achieved where assessment in this unit of competency is carried out in conjunction with an examining authority as described in ISO 9712.</p> <p>Materials and chemicals which are subject to codes and regulations - for example, chemicals, explosives, solvents, dangerous materials, acids, or noxious waste products - must be subject to safe work habits must be stored and used in accordance with safe work practices.</p> <p>Band: A</p> <p>Unit Weight: 4</p>

--	---

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify the hazards and effects of ionizing radiation in the workplace	1.1.The source of ionizing radiation is identified in accordance with relevant organisational policy and procedures. 1.2.Production of X-rays and gamma rays is explained in relation to radiographic testing activities. 1.3.Attenuation factors of ionizing radiation and the biological effects on living tissue are outlined. 1.4.The biological effects of radiation are identified.
2. Apply radiation safety procedures/plans	2.1.Appropriate ionizing radiation protective measures are employed in accordance with relevant organisational policy and procedures. 2.2.SI units of radiation are explained as per the National Health and Medical Research Council/ statutory requirements. 2.3.Exposure limits for personnel as laid down by the radiation authorities in Australia are stated and adhered to. 2.4.Minimum exposure rates/distances are determined from calculations and charts. 2.5.Ionizing radiation sources are operated in accordance with legislation, standards and/or organisational policy, procedures or guidelines.
3. Select and use radiation monitoring equipment	3.1.The tools and equipment necessary to monitor radiation are selected and used as required. 3.2.Techniques and system verification checks necessary to monitor radiation are selected and applied. 3.3.Safety breaches are documented and/or reported in accordance with organisational policy and procedures.
4. Respond to emergency situations	4.1.Procedures for dealing with both X-ray and gamma ray emergency situations are demonstrated.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

REQUIRED SKILLS AND KNOWLEDGE**Required skills**

Look for evidence that confirms skills in:

- calculating and numerical operations within the scope of this unit
- reading and interpreting charts, written job instructions, specifications, standard operating procedures, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying task-related operations
- checking for conformance to specifications
- using monitoring equipment
- calculating and monitoring radiation
- handling emergencies
- following safety requirements
- assessing risk

Required knowledge

Look for evidence that confirms knowledge of:

- properties of X-rays and gamma rays and principal radioactive sources used in industrial radiography
- attenuation factors
- known biological effects of radiation
- general principles of gas ionisation, photographic effect, luminescence
- use of film, film badges, ionisation chamber devices, quartz fibre, fluorescent, electronic devices accuracy limits (energy/range)
- different SI units of radiation including becquerel, sievert and gray
- exposure limits for personnel as laid down by the radiation authorities in Australia
- the three exposure reduction factors including: time, distance and shielding
- procedures for establishing safe working barriers
- relevant techniques and checks
- emergency procedures
- safety procedures including for:
 - types of X-ray equipment
 - types of isotope cameras
 - shielding materials
 - design and requirements for exposure areas
 - requirements for storage of radioisotopes
- emergency situations, causes and appropriate responses
- hazards and control measures associated with ionizing radiation, including housekeeping
- storage requirements of equipment and materials

REQUIRED SKILLS AND KNOWLEDGE

- use and application of personal protective equipment
- safe workplace practices and procedures
- legal requirements including;
 - Australian/NSW regulations, code of practice (detail)
 - ICRP recommended limits for various persons and various parts of the body for short-term, long-term and accumulated exposure
 - background radiation
 - duties of RSO
 - requirements for transport
 - IATA regulations
 - obligations of the licensee

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	<p>A person who demonstrates competency in this unit must be able to safely work with ionizing radiation when performing radiographic testing.</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with radiographic testing or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant organisational policy and procedures

- Legislation
- Standard operating procedures (SOPs)
- Australian or international standards
- Risk assessments
- Previous testing reports
- Manufacturer specifications

Production of X-rays and gamma rays

- Atomic structure, protons, neutrons, electrons, atomic number, mass number, isotopes
- Electromagnetic radiation wavelength, frequency, energy relationships, intensity
- Construction and operation of X-ray tube anode, cathode, target
- Gas and coolidge tubes
- Glass and ceramic tubes
- X-ray spectrum
- Characteristic and continuous spectra effect of voltage and current on continuous spectra
- Efficiency
- Natural and artificial radioisotopes
- Production of radioisotopes
- Decay mechanisms, alpha, beta-, beta+, and gamma
- Concept of half life, decay constants
- Selection of gamma ray sources
- Units definition of curie, becquerel, conversion of units, multiple units (e.g. GBq), nuclide chart

Biological effects of radiation

- Ionisation, absorption, scatter (Compton, Rayleigh, photo-electric, pair production)
- Attenuation coefficient, absorption edges
- Units roentgen, rad, coulomb/kg, gray

RANGE STATEMENT	
	<p>conversions</p> <ul style="list-style-type: none"> • Effects of varying doses on living tissue • Somatic effects, genetic effects, cell biology nucleus, cytoplasm • DNA, chromosome, mitosis; symptoms, effect of time, ICRP recommendations • Dose, dose equivalent, RBE, rem, seivert, conversions • Occupancy factor
Protective measures	<ul style="list-style-type: none"> • Personal protective equipment (PPE) including for risks other than ionizing radiation • Safety protocols of workplace (e.g. flame limitations in refineries) • Signage, barriers/guards • Limitations on operation of specific equipment/machines
Minimum exposure	<ul style="list-style-type: none"> • Time, distance, shielding effect of distance, inverse square law • Half and tenth value layers • Emergency procedures, company procedure codes

MEM15004B Perform inspection

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers inspecting products, keeping records and providing feedback on the conformance of product to specifications.
------------------------	---

Application of the Unit

Application of the unit	<p>This unit applies to basic inspection of completed or partly completed products produced by others. Inspection is carried out according to a site quality plan or specifications; it applies to a range of manufacturing enterprises; and requires application of a range of measuring equipment/devices/tools.</p> <p>Location and frequency of checks/tests and measurements are undertaken to standard operating procedures. In general, verification should be made as close as possible to the point of production of the feature or characteristic. Inspection may involve 'first piece inspection', fixed interval, sample etc. Depending on the inspection process, other technical units may need to be accessed, for example, appropriate measurement units.</p> <p>This unit is not intended to be applied to maintenance personnel carrying out their day-to-day activities, for example, fault finding, remedial and checking activities. These skills are covered by other units such as Unit MEM18006C (Repair and fit engineering components).</p> <p>This unit should not be selected for the purposes of non destructive testing, where Unit MEM24002B (Perform penetrant testing), Unit MEM24004B (Perform magnetic particle testing), Unit MEM24006B (Perform eddy current testing), Unit MEM24008B (Perform ultrasonic testing) or Unit MEM24010B (Perform radiographic testing) have already been selected.</p> <p>Band: A</p> <p>Unit Weight: 2</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Inspect products	1.1. Products are tested for conformance to specifications in accordance with standard operating procedures.
2. Keep records	2.1. Test status identification is made on conforming and non-conforming products and records are accurately kept using standard operating procedures.
3. Provide feedback	3.1. Products are tested/inspected/measured after rework or repair. 3.2. Deficiencies or deviations are reported according to standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on written job instructions, standard operating procedures and other applicable reference documents
- testing products for conformance to specifications in accordance with job instructions
- testing reworked/repared products for conformance to specification, in accordance with job instructions
- entering routine and familiar information onto proformas and standard workplace forms

Required knowledge

Look for evidence that confirms knowledge of:

- the procedures as defined by job instructions to be used to check conformance to specifications
- the data to be recorded and the frequency of recording required
- the consequences of not keeping accurate records
- non-conformances of given products that can be removed by rework/repair in accordance with job instructions
- hazards and control measures associated with performing basic inspection activities
- use and application of personal protective equipment

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Work under laboratory conditions	1.1.Independent tests are conducted under controlled conditions.
2. Perform calibration	2.1.Equipment is verified and calibrated to agreed quality standards. 2.2.Calibration status is safeguarded against unauthorised adjustment. 2.3.Accurate records are kept for reference purposes. 2.4.Test equipment is periodically recalled for adjustment, repair and re-calibration. 2.5.Documentary evidence is maintained, covering identification of equipment; frequency of re-calibration; calibration status and procedures for recall, handling and storage, adjustment, repair, calibration, installation and use. 2.6.Calibration to reference standards of known accuracy such as national or international standards is traced, or where these do not exist, is set to specifically developed criteria.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- obtaining, reading and interpreting relevant drawings, circuits, specifications, instructions and data in accordance with standard operating procedures
- planning and sequencing operations
- checking and clarifying task-related operations
- using calculations and numerical operations within the scope of this unit
- conducting independent tests under controlled conditions
- checking measuring equipment for correct calibration against the agreed quality standards
- safeguarding the calibration status of the equipment against unauthorised adjustment

REQUIRED SKILLS AND KNOWLEDGE

- completing and maintaining records of measuring equipment calibrated
- recalling test equipment for adjustment, repair and re-calibration
- using reference standards or specific criteria as the basis for calibration.
- documenting test results
- preparing reports on the tests carried out
- conducting inspections, tests and audits in accordance with standard
- using results of inspections, tests and audits to inform the design and service

Required knowledge

Look for evidence that confirms knowledge of:

- the tests to be undertaken
- the conditions under which the tests are to be undertaken
- the testing procedures to be followed
- the reasons for conducting tests under controlled conditions
- the need for tests to be conducted independently
- the quality standards against which the measuring equipment is to be calibrated
- the correct operation of the measuring equipment
- the specifications of the measuring equipment
- the tools and equipment required to check the calibration of the measuring equipment
- the procedures for checking the calibration of the measuring equipment
- any codes, standards, legislative or regulatory requirements applicable to the measuring equipment and/or calibration
- the procedures for preventing unauthorised adjustment of equipment
- the reasons for protecting equipment against unauthorised adjustment
- the records to be kept with respect to the calibration of measuring equipment
- the reasons for keeping accurate calibration records
- the procedures for recalling test equipment for adjustment, repair and re-calibration
- the frequency of test equipment recall
- the reasons test equipment may be recalled
- all relevant documentation relating to the calibration/re-calibration of test equipment
- the procedures for completing the relevant documentation
- sources of reference standards and procedures to be used in the absence of reference standards
- the reports to be prepared/provided with respect to the test equipment being tested
- the procedures for preparing/ providing reports on tests carried out on test equipment
- the auditing processes to be applied to testing procedures
- the use of information from the inspections, tests and audits conducted in the development of design and servicing of products/equipment

REQUIRED SKILLS AND KNOWLEDGE

- hazards and control measures associated with performing laboratory procedures, including housekeeping
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify the appropriate class of reference standard suitable to verify a range of trade measuring instruments	1.1.Tolerances required for reference standards are researched in relation to testing a range of trade measuring instruments and legislation. 1.2.The correct classes of reference standards are selected to test a range of trade measuring instruments.
2. Use reference standards and test equipment in a safe and metrologically sound manner	2.1.Standards Laboratory purpose and function are explained. 2.2.An operational assessment on reference standards and test equipment is performed prior to use. 2.3.Documented operating policies and procedures for reference standards and test equipment are accessed and followed. 2.4.Safety requirements for the use of reference standards and test equipment within the work environment are demonstrated.
3. Store and transport reference standards and test equipment to maintain their integrity	3.1.Specialised equipment and reference standards are stored in accordance with organisational procedures. 3.2.Specialised equipment and reference standards are transported in accordance with organisational procedures.
4. Perform required maintenance of reference standards and test equipment	4.1.Maintenance requirements of reference standards and test equipment are identified. 4.2.Regular maintenance of reference standards and test equipment is undertaken in accordance with maintenance register. 4.3.Defective reference standards and test equipment are identified and reported for repair.
5. Interpret documentation relating to the use of maintenance of reference standards and test equipment	5.1.Information contained in the certificate of verification is checked and compared with reference standards and test equipment being used. 5.2.Reference standards are used in accordance with documented instructions and certificates.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- accessing correct reference manuals for appropriate information concerning tolerances for reference standards
- identifying correct class of reference standard and matching with the appropriate trade measuring instrument
- accessing documented operating procedures for reference standards and test equipment
- using reference standards and test equipment
- calibrating/maintaining reference standards and test equipment
- maintaining maintenance register
- identifying and recording/reporting malfunction of or damage to reference standards or test equipment
- interpreting certificates of verification in relation to the use of reference standards
- using graphs and tables within certificates

Required knowledge

Look for evidence that confirms knowledge of:

- definition of 'legal metrology'
- the hierarchy of reference standards in relation to legal metrology
- Australian legal units of measurement used for trade
- the organisations involved in legal metrology in Australia
- application of different classes of reference standards used to test measuring instruments
- maintenance requirements for reference standards and test equipment
- major function and purpose of the Standards Laboratory
- the actions to be taken if reference standards and test equipment are found to be defective
- test equipment and reference standards storage specifications and procedures
- personal responsibility for workplace, health and safety requirements
- specialised equipment, reference standards and transport specifications and procedures
- transport specifications and procedures
- variations from storage specifications and procedures requiring appropriate approval
- variations from transport specifications and procedures requiring appropriate approval
- maintenance required for test equipment where manufacturers' requirements are

REQUIRED SKILLS AND KNOWLEDGE

unavailable

- a range of maintenance and calibration procedures
- procedure for reporting faults
- action to be taken where legal traceability can not be confirmed
- the purpose of certificates of verification issued under the national legislation
- information in graphs and tables within certificates
- workplace, health and safety requirements relating to reference standards and test equipment

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to use and maintain reference standards. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.

Context of and specific resources for assessment

This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with using and maintaining reference standards, or other units requiring the exercise of the skills and knowledge covered by this unit.

Method of assessment

Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and conduct interviews	1.1. Interview is planned and initiated to achieve a specified purpose. 1.2. Suitable questions appropriate to the purpose are used. 1.3. Discretion and confidentiality are exercised where appropriate.
2. Participate in interviews	2.1. Appropriate preparation is undertaken. 2.2. Active listening skills are employed. 2.3. Self-presentation is applied appropriate to the purpose. 2.4. Questions are asked where appropriate. 2.5. Follow-up activities are clarified and reported in accordance with standard operating procedure.
3. Take part in negotiations	3.1. Language appropriate to the other party is used. 3.2. Own and others' needs/wants are stated and clarified. 3.3. The views of fellow employees, including own group or team, are represented to others. 3.4. The appropriate communication medium is selected. 3.5. Follow-up activities are clarified and reported in accordance with standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- planning and formatting interviews
- developing open and closed interview questions to gain required information
- building rapport
- maintaining discretion and confidentiality
- preparing for interviews
- using active listening skills
- identifying interview goals

REQUIRED SKILLS AND KNOWLEDGE

- identifying selection/assessment criteria
- clarifying follow-up activities
- reporting follow-up activities
- using appropriate language to the other party(s)
- clarifying needs/wants of others
- representing the views of fellow team or group members during negotiations
- selecting appropriate communication media during the negotiations

Required knowledge

Look for evidence that confirms knowledge of:

- the purpose of the interview
- the assessment criteria for the interview
- the procedures to be followed in planning and conducting the interview
- the detail/information to be obtained from the interview
- questions appropriate to the detail/information to be obtained
- active listening techniques that can be applied in interview situations
- the effect(s) of the individual's presentation during the interview upon the interview
- the effect(s) of the timing of questions on the interviewee
- the need to follow-up issues raised during the interview and negotiations
- the procedures for reporting the outcomes of follow-up activities
- the parties to be involved in the negotiations
- the reasons for using appropriate language
- the reasons for maintaining confidentiality
- the reasons for clarifying the needs/wants of others
- the needs/wants of the individual
- the views of fellow team or group members
- a range of communication media
- the appropriate communication medium
- safe workplace practices

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Access information and/or records	<p>1.1. Information requirements of tasks are determined and relevant information is accessed from a range of sources.</p> <p>1.2. Workplace terminology is correctly recognised.</p>
2. Organise and analyse information	<p>2.1. Information is interpreted and organised in accordance with enterprise and work requirements.</p> <p>2.2. Information is analysed according to enterprise and work requirements.</p>
3. Communicate organised information using established workplace methods	<p>3.1. Information is communicated using established workplace methods.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- accessing relevant information from a range of sources
- recording, where appropriate, the accessed information
- recognising and using workplace terms
- reading, interpreting and following information in workplace documentation
- checking and clarifying information
- organising, categorising and sequencing information

Required knowledge

Look for evidence that confirms knowledge of:

- types of information
- available sources of information
- information analysis techniques
- methods of categorising and organising information
- methods of recording and communicating information

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	A person who demonstrates competency in this unit must be able to organise, analyse and communicate information.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with organising, analysing and communicating information or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for	

EVIDENCE GUIDE**assessment****Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Range of sources

Job instructions, specifications, standard operating procedures, charts, lists, documents, computer data, drawings, sketches, tables, technical manuals and/or charts and other applicable reference material

Workplace terminology

Terminology - referring to equipment, processes, workplace areas, staff and procedures - specific to the processes and equipment used in the workplace

Analyse

Analysis for this unit involves simple determinations of relevance and implication for the employee's immediate work requirements

Established workplace methods

- Proforma reports
- Data entry e.g. bar coding and simple keyboard operations
- Verbal
- Drawings

Unit Sector(s)**Unit sector**

Competency field	Communication
------------------	---------------

MEM16010A Write reports

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers writing technical or non-technical reports that include some level of analysis and/or research.
------------------------	--

Application of the Unit

Application of the unit	<p>The term report is used to denote any required written communication that goes beyond a simple recording of facts (such as completion of a pro forma shift production schedule) and which is based on a level of analysis and/or research.</p> <p>Where reports include technical information or details, then the writer would have the required technical knowledge/capability.</p> <p>Conclusions and/or recommendations where required are based on prior research or analysis of data. The analysis and conclusions should be consistent with the level of skill and knowledge of an employee working at that level. Simple analysis and research would be required.</p> <p>If data research and analysis is necessary to produce information for the report, Unit MEM16009A (Research and analyse engineering information should also be selected).</p> <p>For preparation of simple technical reports, see unit MEM16014A (Report technical information).</p> <p>Band: B</p> <p>Unit Weight: 2</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify report requirements	1.1. Requirements for a written report are identified and confirmed with appropriate persons. 1.2. Information for the report is accessed according to workplace procedures. 1.3. Information is assessed for currency, accuracy and relevance for inclusion in the report.
2. Prepare and produce report	2.1. A structure and outline of the report are developed according to identified report requirements. 2.2. The report is written using terminology appropriate to the reader and established principles of report writing. 2.3. Findings and conclusions are based on factual analysis. 2.4. Recommendations, alternatives/suggestions are given, and supporting evidence supplied, where required. 2.5. Protocols, conventions and legal requirements related to acknowledgements and intellectual property are applied where necessary.
3. Finalise and distribute report	3.1. The report is checked for accuracy and edited as required. 3.2. The completed report is consistent with objectives and requirements. 3.3. The report is copied, distributed and stored according to instructions and workplace procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents

REQUIRED SKILLS AND KNOWLEDGE

- following instructions
- checking and clarifying information
- sorting information/data
- assessing information/data for relevance
- using terminology and language appropriate to the target audience
- structuring and writing reports
- applying principles of report writing
- presenting findings and conclusions based on factual analysis
- making recommendations
- managing own time
- planning and sequencing information
- reviewing and editing

Required knowledge

Look for evidence that confirms knowledge of:

- principles of report writing
- report types and purposes
- structure, style and parts of a report
- use of language and expression in reports
- common pitfalls, such as ambiguity, truisms, tautology, verbosity, circumlocution etc.
- report numbering systems
- techniques for reviewing and editing
- importance and benefits of preparing reports appropriate for the intended audience
- referencing and the importance of acknowledging sources
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	<p>A person who demonstrates competency in this unit must be able to write reports. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with writing reports or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Requirements

Purpose, expected outcomes, scope and nature, timeframe, required resources

Report

- Reports types:
 - accident/injury
 - equipment report
 - memo and letter reports
 - information report
 - analytical report
- Report structure:
 - title page
 - table of contents
 - summary
 - introduction
 - body (findings and conclusions)
 - recommendations
 - references
 - appendices
 - glossary
- Report content:
 - text
 - graphs
 - charts
 - tables
 - diagrams

Principles of report writing

- Use of headings, subheadings, sectioning and numbering
- Objectivity
- Expression

RANGE STATEMENT

	<ul style="list-style-type: none"> • Language and grammar • Sentence and paragraph structure • Logical ordering and sequencing • Summarising and editing • Layout and spacing • Content relevancy • Use of graphics, charts, tables, illustrations etc.

MEM17002B Conduct workplace assessment

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers identifying, planning and carrying out assessment; recording the results; and reviewing the procedure. Methods of assessment may include observation, documentation, demonstration, projects, oral tests, computer based assessment, written tests, etc.
------------------------	---

Application of the Unit

Application of the unit	<p>Appropriate assessment techniques will be selected based on assessor knowledge of the competency to be assessed or in conjunction with someone who is competent (technical expert). Assessment may be undertaken on an individual basis or in groups. This unit is intended to equate to national competency standards Assessment Standard Unit: Conduct assessment to an established procedure, and the Extension Unit: Plan and review assessment. This competency also meets the assessment skills required to be recognised by Manufacturing Skills Australia as a workplace assessor.</p> <p>This unit has dual status and is to be regarded as both a Specialisation band A unit and Specialisation band B unit for progression to C5 (AQF level V).</p> <p>Band: A</p> <p>Unit Weight: 2</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and plan assessment requirements	<p>1.1. Area and purpose of assessment are identified in consultation with appropriate personnel and person/s being assessed.</p> <p>1.2. Appropriate competency standard/s and assessment guides are identified and selected as required.</p> <p>1.3. Evidence required to establish competency is determined according to industry and enterprise assessment procedure.</p> <p>1.4. Evidence required and assessment arrangements are discussed and confirmed in an appropriate way with person being assessed.</p>
2. Carry out assessment	<p>2.1. Agreed assessment procedure is implemented in a manner, time and location to maximise active participation from assessment candidate/s.</p> <p>2.2. Evidence consistent with the agreed assessment procedure is gathered using appropriate and specified methods and tools, and is documented according to agreed industry or site procedures.</p> <p>2.3. Evaluation and assessment decisions are made according to agreed assessment procedures.</p> <p>2.4. Clear and appropriate feedback is provided to person/s assessed.</p> <p>2.5. Advice is provided to assessment candidate/s on training needs, appeal mechanisms, as appropriate.</p>
3. Record results and review the procedure	<p>3.1. Assessment results are recorded according to industry or site procedures.</p> <p>3.2. Records are kept/stored in a manner appropriate to maintenance of confidentiality and safety.</p> <p>3.3. Assessment procedure are reviewed in cooperation with person being assessed and revised, if appropriate.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

REQUIRED SKILLS AND KNOWLEDGE**Required skills**

Look for evidence that confirms skills in:

- obtaining and interpreting relevant competency standards and assessment guides
- discussing and confirming evidence required and the assessment arrangements
- performing assessments
- gathering and documenting evidence
- evaluating evidence and making assessment decisions
- providing clear and appropriate feedback
- advising on training needs and/or the appeals procedures
- recording assessment results
- storing records
- reviewing and revising the assessment procedure

Required knowledge

Look for evidence that confirms knowledge of:

- area and purpose of the assessment
- persons to be consulted when determining the assessments to be carried out
- relevant competencies
- evidence required to establish competency
- reasons for identifying the evidence to be obtained
- industry assessment procedure
- reasons for discussing and confirming the assessment arrangements with the assessment candidate
- time and location of the assessment
- reasons for selecting the time/location for the assessment
- methods of gathering the evidence
- reasons for using the selected methods of obtaining evidence
- procedures for documenting the assessment
- procedures for evaluating the gathered evidence
- need to provide clear and positive feedback to the assessment candidate
- appeals procedure
- any further training required by the assessment candidate
- procedures for recording assessment results
- need to keep records securely stored
- procedures for storing assessment records
- procedures for reviewing assessments undertaken
- reasons for evaluating assessment methods/procedures
- procedures for revising assessment procedures

Evidence Guide

EVIDENCE GUIDE

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Use hand tools	1.1. Hand tools are selected appropriate to the task requirements. 1.2. Hand tools are used to produce desired outcomes to job specifications which may include finish, tension, size or shape. 1.3. All safety requirements are adhered to before, during and after use. 1.4. Unsafe or faulty tools are identified and marked for repair according to designated procedures before, during and after use. 1.5. Routine maintenance of tools, including hand sharpening is undertaken according to standard operational procedures, principles and techniques. 1.6. Hand tools are stored safely in appropriate location according to standard operational procedures and manufacturers' recommendations.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading and following information on standard operating procedures
- following verbal instructions
- selecting hand tools appropriate to the task
- using hand tools safely
- identifying hand tool defects and marking for repair
- maintaining/sharpening hand tools using appropriate techniques
- storing hand tools in accordance with manufacturers'/standard operating procedures

Required knowledge

Look for evidence that confirms knowledge of:

- applications of different hand tools in a general engineering context
- common faults and/or defects in hand tools

REQUIRED SKILLS AND KNOWLEDGE

- procedures for marking unsafe or faulty tools for repair
- routine maintenance requirements for a range of hand tools
- storage location and procedures for a range of hand tools
- hazards and control measures associated with using hand tools
- use and application of personal protective equipment
- safe work practices and procedures

---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Use power tools	1.1. Power tools are selected appropriate to the task requirements. 1.2. Power tools are used for a determined sequence of operations - which may include clamping, alignment and adjustment to produce desired outcomes - to job specifications which may include finish, size or shape. 1.3. All safety requirements are adhered to before, during and after use. 1.4. Unsafe or faulty tools are identified and marked for repair before, during and after use according to designated procedures. 1.5. Operational maintenance of tools, including hand sharpening, is undertaken according to standard workplace procedures, principles and techniques. 1.6. Power tools are stored safely in appropriate location according to standard workshop procedures and manufacturers' recommendations.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading and following information on standard operating procedures
- following verbal instructions
- selecting power tools appropriate to the task
- using power tools safely
- using clamping/securing devices
- identifying power tool defects
- maintaining power tools using appropriate techniques
- sharpening tools/tool bits within the scope of this unit
- storing power tools according to manufacturers'/ standard operating procedures.

Required knowledge

REQUIRED SKILLS AND KNOWLEDGE

Look for evidence that confirms knowledge of:

- application of different power tools
- clamping/securing methods
- adjustments/alignments to a range of power tools
- common faults and/or defects in power tools
- procedures for marking unsafe or faulty power tools for repair
- routine maintenance requirements of a range of power tools
- tool sharpening techniques for a range of power tools
- storage location and procedures of a range of power tools
- hazards/control measures associated with power tools
- use and application of personal protective equipment
- safe work practices and procedures

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare inspection areas for basic penetrant testing	1.1. Inspection areas are cleaned and prepared for testing using appropriate procedures and materials. 1.2. Preparation processes are carried out in accordance with the relevant procedures and OH&S requirements. 1.3. Inspection areas are visually assessed and obvious discontinuities are identified.
2. Perform basic penetrant testing	2.1. Nominated test is identified from standard operating procedures. 2.2. Test equipment is prepared in accordance with standard operating procedures. 2.3. Test media is selected and applied in accordance with workplace practices and specifications. 2.4. Penetrant test is carried out in accordance with relevant work instructions and OH&S requirements. 2.5. Penetrant testing equipment is maintained and stored in accordance with standard operating procedures and OH&S requirements.
3. Report the results of penetrant test(s)	3.1. Basic indications are checked and defects are identified in accordance with enterprise standards and/or procedures. 3.2. Basic indications are confirmed in accordance with enterprise standards and/or procedures. 3.3. Test results are reported in accordance with enterprise standards and/or procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- preparing inspection areas
- identifying discontinuities
- applying procedures

REQUIRED SKILLS AND KNOWLEDGE

- applying test media
- applying principles of penetrant testing techniques
- identifying defects
- reading and interpreting routine information on written job instructions, specifications and standard operating procedures.
- following oral instructions
- entering routine and familiar information onto proformas and standard workplace forms

Required knowledge

Look for evidence that confirms knowledge of:

- cleaning and preparation processes
- precleaning methods and their areas of use - solvents, vapour degrease, etching, detergents, paint removers, mechanical methods
- consequences of incorrect preparation
- procedures and OH&S requirements in relation to the preparation process
- basic concepts and principles of NDT; general terms, purpose of NDT and areas of application of NDT
- scope and basic description of test
- general properties of penetrants - penetrability, removability, visibility
- emulsifier types
- developer types
- use of standard test panels
- established inspection procedures and techniques
- types of discontinuities and their consequences
- procedure for carrying out penetrant testing
- penetrant application
- dwell times
- penetrant removal
- developer application
- dry powder
- development time
- factors affecting indications
- non-relevant indications
- post-cleaning methods and their areas of use
- basic maintenance and storage procedures for testing equipment
- OH&S requirements including storage requirements
- definition of a defect and common basic defects
- methods/procedures for reporting test results

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	<p>A person who demonstrates competency in this unit must be able to perform basic penetrant testing. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with performing basic penetrant testing or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

Unit Descriptor

Unit descriptor	This unit covers performing penetrant testing in a range of industrial applications.
------------------------	--

Application of the Unit

Application of the unit	<p>This unit applies to penetrant testing techniques on fabrications, structures and components across a wide range of industries to Level 2 (AS 3669 and AS 3998) or equivalent by portable penetrant testing, processing on a dedicated penetrant line, visible dye and fluorescent methods.</p> <p>The work can relate to scheduled and unscheduled maintenance activities using general tools and specific penetrant testing equipment as specified in maintenance documentation, testing procedures or operator instructions.</p> <p>Actual and potential defects are to be considered, together with ongoing abnormalities in fabrications, components, structures and/or aircraft components. Penetrant tests are performed on critical component or structural zones, and may require re-assessment of competency at regular intervals in accordance with Australian standards and/or other relevant standards. All testing must be completed with particular attention to personal safety and OH&S regulations. Certification against Australian Standards may be achieved where assessment in this unit of competency is carried out in conjunction with an examining authority as described in ISO 9712. Materials and chemicals which are subject to codes and regulations - for example, chemicals, explosives, solvents, dangerous materials, acids, or noxious waste products - are subject to safe work habits and must be stored and used in accordance with safe work practices.</p> <p>Where power tools are required, Unit MEM18002B (Use power tools/hand held operations) should also be selected.</p> <p>Where tests require the interpretation of drawings, Unit MEM09002B (Interpret technical drawings) should also be selected.</p> <p>This unit has dual status and is to be regarded as both a Specialisation band A unit and Specialisation band B unit</p>

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare inspection areas for penetrant testing	1.1. Inspection areas are identified, cleaned and prepared for testing using appropriate procedures and materials. 1.2. Preparation processes are carried out in accordance with the relevant procedures, statutory and OH&S requirements. 1.3. Inspection areas are visually assessed and obvious discontinuities are identified.
2. Perform penetrant testing	2.1. The most appropriate penetrant test for the material/application is selected. 2.2. Test equipment is selected and prepared in accordance with standards and/or procedures. 2.3. Appropriate test media is selected and applied in accordance with workplace/industry practices. 2.4. Penetrant test is carried out in accordance with relevant standards, specifications and OH&S requirements. 2.5. Penetrant test equipment is checked for defects, maintained and stored in accordance with procedures, OH&S requirements and manufacturer instructions.
3. Interpret and report the results of penetrant test(s)	3.1. Indications are assessed and defects are detected and classified in accordance with national and international codes and standards. 3.2. Defects are confirmed in accordance with enterprise procedures and industry practices. 3.3. Test results are reported in accordance with enterprise procedures, accepted industry practices and customer service requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

REQUIRED SKILLS AND KNOWLEDGE

- interpreting and following procedures
- identifying inspection areas
- conducting visual inspections
- identifying discontinuities and defects
- selecting appropriate testing techniques and procedures
- using decision making skills
- assessing risk
- performing measurements needed to meet the requirements of this unit
- entering routine and familiar information onto proformas and standard workplace forms
- locating, reading and interpreting information on written job instructions, specifications, drawings, charts, lists and other reference documentation
- planning, sequencing operations

Required knowledge

Look for evidence that confirms knowledge of:

- cleaning and preparation processes for a range of test surfaces
- procedure, statutory and OH&S requirements in relation to the preparation process
- established assessment procedures and techniques
- types of discontinuities and their consequences/effect on the material
- penetrant testing techniques and procedures for a range of situations
- tools, equipment, techniques
- principles and applications of penetrant testing techniques
- hazards and safety requirements associated with penetrant testing
- maintenance and storage procedures for test equipment
- common faults and damage
- range of defects
- meaning and application of national and international codes and standards
- methods/procedures for reporting test results
- implications of test results for the particular material/application
- any applicable industry standards, national/Australian standards, NOHSC guides, State/Territory regulatory codes of practice/standards
- use and application of personal protective equipment
- safe work practices and procedures
- relevant hazards and control measures related to the competency

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- interpreting and following procedures

REQUIRED SKILLS AND KNOWLEDGE

- identifying inspection areas
- identifying discontinuities and defects
- selecting appropriate testing techniques, equipment and procedures
- reading, interpreting and applying relative testing standards
- reading, interpreting and applying relative conformance standards
- assessing risk
- undertaking calculations using formulae
- entering routine and familiar information onto proformas and standard workplace forms

Required knowledge

Look for evidence that confirms knowledge of:

- cleaning and preparation processes
- procedures and OH&S requirements in relation to the preparation process
- established assessment procedures and techniques
- types of discontinuities and their consequences
- magnetic particle testing techniques and procedures for a range of situations
- system verification checks necessary to carry out the magnetic particle test
- principles and applications of magnetic particle testing
- advantages and limitations of magnetic particle testing
- hazards and safety precautions associated with magnetic particle testing
- basic maintenance and storage procedures for testing equipment
- types of magnetism;
- magnetic properties
- magnetic materials
- magnetic circuits
- relative permeability of common engineering materials
- magnetic discontinuity, leakage fields
- types of equipment - portable, stationary, automated etc.
- equipment features
- nature and properties of the various types of magnetising current
- current requirements for testing
- media types - advantages and limitations of dry powders and fluid suspensions
- quality control of media, viewing conditions
- disposal procedures
- environment care
- preparation of parts
- effect of surface coatings on sensitivity
- effect of surface roughness
- dressing of welds

REQUIRED SKILLS AND KNOWLEDGE

- interpretation of indications
- lighting conditions
- use of magnification
- factors influencing appearance
- spurious indications, false indications
- surface and sub-surface indications
- common basic defects
- methods/procedures for reporting test results
- any applicable industry standards, national/Australian standards, NOHSC guides, State/Territory regulatory codes of practice/standards
- use and application of personal protective equipment
- safe work practices and procedures
- relevant hazards and control measures related to the competency

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to perform magnetic particle testing. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.

Context of and specific resources for assessment

This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with performing magnetic particle testing in a range of industrial applications or other units requiring the exercise of the skills and knowledge covered by this unit.

Method of assessment

Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.

---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare inspection areas for basic eddy current testing	1.1. Inspection areas are cleaned and prepared for testing using appropriate procedures and materials. 1.2. Preparation processes are carried out in accordance with the relevant procedures and OH&S requirements. 1.3. Inspection areas are visually assessed and obvious discontinuities are identified.
2. Perform basic eddy current testing	2.1. Nominated test is identified from standard operating procedures. 2.2. Test equipment is prepared in accordance with standards and/or procedures. 2.3. Eddy current test procedure is carried out in accordance with relevant work instructions and OH&S requirements. 2.4. Eddy current test equipment is maintained and stored in accordance with standard operating procedures and OH&S requirements.
3. Report the results of basic eddy current test(s)	3.1. Basic indications are checked and defects are identified in accordance with enterprise standards and/or procedures. 3.2. Basic indications are confirmed in accordance with enterprise standards and/or procedures. 3.3. Test results are reported in accordance with enterprise standards and/or procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: <ul style="list-style-type: none"> • interpreting and following procedures • identifying inspection areas • identifying discontinuities and defects • selecting appropriate testing techniques, equipment and procedures

REQUIRED SKILLS AND KNOWLEDGE

- documenting and reporting
- assessing risk
- reading and interpreting routine information on written job instructions, specifications and standard operating procedures. May include drawings
- performing calculations using formulae

Required knowledge

Look for evidence that confirms knowledge of:

- cleaning and preparation processes
- procedures and OH&S requirements in relation to the preparation process
- visual inspection
- eddy current instrument set-up
- probe selection
- established assessment procedures and techniques
- types of discontinuities and their consequences
- procedure for carrying out basic eddy current testing
- system verification checks necessary to carry out basic eddy current testing
- testing and compliance standards (enterprise specific)
- standard recording and reporting formats
- standard defects and comparative techniques
- basic principles of electricity, magnetism, electromagnetism and eddy current testing
- basic electrical principles
- test principles
- overview of factors affecting eddy current response
- basic metallurgy
- limitations of eddy current testing
- hazards and safety precautions associated with eddy current testing
- basic maintenance and storage procedures for testing equipment
- common basic defects (these are industry-specific and relevant workplace defects should be chosen)
- methods/procedures for reporting test results
- use and application of personal protective equipment

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to perform basic eddy current testing. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with operating eddy current testing equipment and applying basic testing procedures in a specific range of industrial applications, or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p>Method of assessment</p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

Unit Descriptor

Unit descriptor	This unit covers performing eddy current testing in a range of industrial applications.
------------------------	---

Application of the Unit

Application of the unit	<p>This unit applies to inspection, interpretation, classification and reporting of results of eddy current testing on fabrications, structures and components across a wide range of industries to Level 2 (AS 3669 and AS 3998) or equivalent. The work can relate to scheduled and unscheduled maintenance activities using general tools and specific testing eddy current testing tools and equipment as specified in maintenance documentation, testing procedures or operator instructions.</p> <p>Actual and potential defects are considered, together with ongoing abnormalities in fabrications, components, structures and/or aircraft components. Eddy current tests are performed on critical component or structural zones, and may require re-assessment of competency at regular intervals in accordance with Australian standards and/or other relevant standards. All testing must be completed with particular attention to personal safety and OH&S regulations. Certification against Australian standards may be achieved where assessment in this unit of competency is carried out in conjunction with an examining authority as described in ISO 9712.</p> <p>Materials and chemicals which are subject to codes and regulations - for example, chemicals, explosives, solvents, dangerous materials, acids, or noxious waste products - are subject to safe work habits and must be stored and used in accordance with safe work practices.</p> <p>Where power tools are required, Unit MEM18002B (Use power tools/hand held operations) should also be selected.</p> <p>Where tests require the interpretation of drawings, Unit MEM09002B (Interpret technical drawings) should also be selected.</p> <p>This unit has dual status and is to be regarded as both a Specialisation band A unit and Specialisation band B unit for progression to C5 (AQF level V).</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare inspection areas for eddy current testing	1.1. Inspection areas are identified, cleaned and prepared for testing using appropriate procedures and materials. 1.2. Preparation processes are carried out in accordance with the relevant procedures, statutory and OH&S requirements. 1.3. Inspection areas are visually assessed and obvious discontinuities are identified.
2. Perform eddy current testing	2.1. The most appropriate eddy current test for the material/application is selected. 2.2. Test equipment is selected and prepared in accordance with standards and/or procedures. 2.3. Eddy current test is carried out in accordance with relevant standards, specifications and OH&S requirements. 2.4. Eddy current test equipment is checked for defects, and maintained and stored in accordance with procedures, OH&S requirements and manufacturer instructions.
3. Interpret and report the results of eddy current tests	3.1. Indications are assessed and defects are detected and classified in accordance with national and international codes and standards. 3.2. Defects are confirmed in accordance with enterprise procedures and industry practices. 3.3. Test results are reported in accordance with enterprise procedures, accepted industry practices and customer service requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- interpreting and following procedures

REQUIRED SKILLS AND KNOWLEDGE

- identifying inspection areas
- identifying discontinuities and defects
- selecting appropriate testing techniques and procedures
- reading, interpreting and applying relative testing standards
- reading, interpreting and applying relative conformance standards
- using calculations relating to eddy current testing
- assessing risk
- entering routine and familiar information onto proformas and standard workplace forms

Required knowledge

Look for evidence that confirms knowledge of:

- cleaning and preparation processes
- procedures and OH&S requirements in relation to the preparation process
- established assessment procedures and techniques
- types of discontinuities and their consequences
- procedure for carrying out eddy current testing
- tools, equipment, techniques and system verification checks necessary to carry out eddy current testing
- basic principles of electricity, magnetism, electromagnetism and eddy current testing:
 - Reactance - field made by eddy current
 - Biot and Savant law - Definition, Practical (right hand) rules
 - Amperes law - Definition, Applications (toroid, infinite coil, flat coil)
 - Lenz law - Definition, Auto-induction factor, Mutual induction factor, Coupling factor
- induced currents - short circuit coil, metallic mass, skin effect, reactance
- cylindrical bars
- theory of eddy currents
- tubes
- geometric defect characterisation
- multiple defects
- characteristics of eddy current probes
- eddy current equipment:
 - transmission
 - reception
 - data presentation
- equipment controls
- types of equipment:
- physical properties of materials

REQUIRED SKILLS AND KNOWLEDGE

- electrical conductivity
- magnetic permeability
- applications of eddy current testing
- influence of various parameters on eddy current measurement
- defect position and orientation
- compensation
- structure and geometry of test part
- coupling influence
- relative speed
- limitations of eddy current testing
- hazards and safety precautions associated with eddy current testing
- basic maintenance and storage procedures for testing equipment
- common basic defects
- methods/procedures for reporting test results
- any applicable industry standards, national/Australian standards, NOHSC guides, State/Territory regulatory codes of practice/standards
- use and application of personal protective equipment
- safe work practices and procedures

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare inspection areas for ultrasonic thickness testing	1.1. Inspection areas are cleaned and prepared for testing using appropriate procedures and materials. 1.2. Preparation processes are carried out in accordance with the relevant procedures and OH&S requirements. 1.3. Inspection areas are visually assessed for obvious discontinuities.
2. Perform ultrasonic thickness testing	2.1. Nominated ultrasonic thickness test is identified from standard operating procedures. 2.2. Test equipment is prepared in accordance with standard operating procedures. 2.3. Ultrasonic tests are carried out in accordance with relevant standards and OH&S requirements. 2.4. Ultrasonic test equipment is maintained and stored in accordance with standard operating procedures and OH&S requirements.
3. Report the results of ultrasonic thickness tests	3.1. Basic thicknesses are identified and explained in accordance with enterprise standards and/or procedures. 3.2. Basic thicknesses are confirmed in accordance with enterprise standards and/or procedures. 3.3. Test results are reported in accordance with enterprise standards and/or procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- interpreting and following procedures
- identifying inspection areas
- identifying discontinuities and defects
- selecting appropriate testing techniques, equipment and procedures
- performing calculations

REQUIRED SKILLS AND KNOWLEDGE

- assessing risk
- entering routine and familiar information onto proformas and standard workplace forms

Required knowledge

Look for evidence that confirms knowledge of:

- cleaning and preparation processes for a variety of test surfaces
- procedures and OH&S requirements in relation to the preparation process
- established assessment procedures and techniques
- basic principles of ultrasonic thickness testing
- properties and behaviour of ultrasound
- basic concepts associated with frequency, velocity, wavelength, amplitude
- generation of ultrasound
- types of discontinuities and their consequences
- procedures for carrying out ultrasonic thickness tests
- tools, equipment, techniques and system verification checks necessary to carry out the ultrasonic thickness test
- advantages and limitations of ultrasonic thickness testing
- hazards and safety requirements associated with ultrasonic thickness testing
- basic maintenance and storage procedures for testing equipment
- common basic defects
- indications and thicknesses
- methods/procedures for reporting test results
- ultrasonic thickness testing equipment
- types of displays:
 - a-scan display
 - b-scan display
- types of couplants, desirable characteristics
- straight beam testing method:
- calibration of thickness testing equipment
- frequency
- probe size and shape
- thickness testing
- plate testing
 - acceptance standards within the scope of this unit
- recording and reporting:
 - job records
 - routine reports
 - codes and standards
- variables affecting test results

REQUIRED SKILLS AND KNOWLEDGE

- methods of controlling variables
- component variables:
 - size and geometry
 - distance location from entry surface
 - orientation to entry surface
 - reflecting characteristics of back wall
- any applicable industry standards, national/Australian standards, NOHSC guides, State/Territory regulatory codes of practice/standards
- use and application of personal protective equipment
- safe work practices and procedures

Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare inspection areas ready for basic radiographic testing	1.1. Radiographic specimens are cleaned and prepared for testing using appropriate procedures and materials. 1.2. Preparation processes are carried out in accordance with the relevant procedures and OH&S requirements. 1.3. Inspection areas are visually assessed and obvious discontinuities are identified.
2. Set up radiographic test equipment	2.1. Nominated test is identified from standard operating procedures. 2.2. Radiation testing and processing equipment is set up in accordance with standard operating procedures.
3. Carry out basic radiographic tests	3.1. Basic properties of X-rays and gamma rays are identified. 3.2. Safety practices and controls for minimising radiation exposure are applied. 3.3. Radiographic testing and safety equipment is operated in accordance with relevant work instructions and OH&S requirements. 3.4. Films are processed to achieve optimum results.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- interpreting and following procedures
- identifying inspection areas
- identifying discontinuities and defects
- selecting appropriate testing techniques, equipment and procedures
- calculating and producing optimum quality radiographs
- effectively designing exposure and storage areas
- calculating shielding thicknesses
- reading, interpreting and applying relative testing standards

REQUIRED SKILLS AND KNOWLEDGE

- reading, interpreting and applying relative conformance standards
- documenting and reporting
- assessing risk

Required knowledge

Look for evidence that confirms knowledge of:

- cleaning and preparation processes for a range of test surfaces
- cleaning and preparation processes for a range of test surfaces
- assessment procedures and techniques
- types of discontinuities and their consequences/effect on the material
- procedure for carrying out each radiographic test
- principal types of X-ray generators and radioisotopes and their effect on radiographic sensitivity
- tools, equipment, techniques and system verification checks
- relevant standards, regulations and codes
- hazards associated with radiographic testing
- procedures for specialised radiographic applications
- principles of image formation, film and chemical properties and processing techniques
- various types of films and screens, their properties and effects on image quality
- maintenance and storage procedures for test equipment
- common faults and damage
- safety features of radioisotope cameras and X-ray equipment
- production of X-rays and gamma rays
- absorption of ionizing radiation by matter and the biological effects on living
- X-ray equipment
- gamma ray sources
- comparison of X-ray and gamma ray sources on basis of energy and intensity
- shielding thickness
- exposure calculations
- reciprocity law
- preparation and use of exposure charts, radiographic equivalence charts
- exposure techniques
- equipment types
- recording and reporting
- safety aspects
- types of materials
- industrial applications
- set-up procedures
- methods/procedures for reporting test results

REQUIRED SKILLS AND KNOWLEDGE

- implications of test results for the particular material/application
- any applicable industry standards, national/Australian standards, NOHSC guides, State/Territory regulatory codes of practice/standards
- use and application of personal protective equipment
- safe work practices and procedures
- relevant hazards and control measures related to the competency

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	<p>A person who demonstrates competency in this unit must be able to perform basic radiographic testing. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</p>
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with performing basic radiographic testing procedures in a range of industrial applications, or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Preparation processes	Surface cleaning and drying
Obvious discontinuities	Observed changes in material homogeneity

Unit Descriptor

Unit descriptor	This unit covers operating radiographic testing equipment and applying the testing procedures in a range of industrial applications.
------------------------	--

Application of the Unit

Application of the unit	<p>This unit applies to inspecting, interpreting, classifying and reporting on radiographic testing techniques of fabrications, structures and components.</p> <p>Testing is across a wide range of industries to Level 2 (AS 3669 and AS 3998) or equivalent and includes identifying abnormalities such as corrosion, metal fatigue, deformation in non-ferrous/ferrous alloys steels, composite materials, fatigue cracks, stress corrosion cracking, manufacturing defects, thickness measurement and fit, mechanical and bonded repairs, welding defects and casting defects and/or aircraft components.</p> <p>The work can relate to scheduled and un-scheduled maintenance activities using general tools and specific radiographic testing equipment as specified in maintenance documentation, testing procedures or operators instructions.</p> <p>Actual and potential defects are to be considered, together with ongoing abnormalities in fabrications, components and structures on a wide range of applications. Radiographic tests are performed on critical component or structural zones, and may require re-assessment of competency at regular intervals in accordance with Australian standards and/or other relevant standards. All testing must be completed with particular attention to personal and OH&S regulations.</p> <p>Ionizing radiation equipment materials and chemicals, which are subject to codes and regulations, must be stored, used, and transported in accordance with safe work practices. Certification against Australian standards may be achieved where assessment in this unit of competency is carried out in conjunction with an examining authority as described in ISO 9712.</p> <p>Where power tools are required, Unit MEM18002B (Use power tools/hand held operations) should also be selected.</p>
--------------------------------	--

	<p>Where tests require the interpretation of drawings, Unit MEM09002B (Interpret technical drawings) should also be selected.</p> <p>This unit has dual status and is to be regarded as both a Specialisation band A unit and Specialisation band B unit for progression to C5 (AQF level V).</p> <p>Band: A</p> <p>Unit Weight: 6</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare inspection areas for radiographic testing	1.1. Inspection areas are identified, cleaned and prepared for testing using appropriate procedures and materials. 1.2. Preparation processes are carried out in accordance with the relevant procedures, statutory and OH&S requirements. 1.3. Inspection areas are visually assessed and obvious discontinuities are identified.
2. Select and prepare radiographic test	2.1. The most appropriate radiographic test for the material/application is selected. 2.2. Appropriate testing and processing equipment is selected and set up for various geometries in accordance with standards and/or procedures. 2.3. Quality of radiographic test is optimised.
3. Perform radiographic testing	3.1. Radiographic tests are carried out in accordance with relevant standards, codes, specifications and OH&S requirements. 3.2. Radiographs are set up and carried out for specialised applications. 3.3. Films are processed to maximise quality of image. 3.4. Films are processed to achieve optimum results.
4. Maintain radiographic testing equipment	4.1. Radiographic testing equipment is checked for defects, maintained and stored in accordance with procedures, OH&S requirements and manufacturer instructions.
5. Monitor and ensure radiation safety	5.1. Safety controls are set up and maintained. 5.2. Exposure to radiation employees and general public is minimised. 5.3. Radiation monitoring equipment is selected and used.
6. Interpret and report the results of radiographic tests	6.1. Conditions necessary to view and interpret radiographs are established. 6.2. Radiographs are interpreted/evaluated in accordance with applicable codes, standards and specifications. 6.3. Test results are reported in accordance with enterprise procedures, accepted industry practices and customer service requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- interpreting and following procedures
- identifying inspection areas
- identifying discontinuities and defects
- selecting appropriate testing techniques, equipment and procedures
- calculating and producing optimum quality radiographs
- effectively designing exposure and storage areas
- calculating shielding thicknesses
- reading, interpreting and applying relative testing standards
- reading, interpreting and applying relative conformance standards
- documenting and reporting
- assessing risk

Required knowledge

Look for evidence that confirms knowledge of:

- cleaning and preparation processes for a range of test surfaces
- cleaning and preparation processes for a range of test surfaces
- assessment procedures and techniques
- types of discontinuities and their consequences/effect on the material
- procedure for carrying out each radiographic test
- principal types of X-ray generators and radioisotopes and their effect on radiographic sensitivity
- tools, equipment, techniques and system verification checks
- relevant standards, regulations and codes
- hazards associated with radiographic testing
- procedures for specialised radiographic applications
- principles of image formation, film and chemical properties and processing techniques
- various types of films and screens, their properties and effects on image quality
- maintenance and storage procedures for test equipment
- common faults and damage
- safety features of radioisotope cameras and X-ray equipment
- production of X-rays and gamma rays
- absorption of ionizing radiation by matter and the biological effects on living
- X-ray equipment

REQUIRED SKILLS AND KNOWLEDGE

- gamma ray sources
- comparison of X-ray and gamma ray sources on basis of energy and intensity
- shielding thickness
- exposure calculations
- reciprocity law
- preparation and use of exposure charts, radiographic equivalence charts.
- exposure techniques
- equipment types
- recording and reporting
- safety aspects
- types of materials
- industrial applications
- set-up procedures
- methods/procedures for reporting test results
- implications of test results for the particular material/application
- any applicable industry standards, national/Australian standards, NOHSC guides, State/Territory regulatory codes of practice/standards
- use and application of personal protective equipment
- safe work practices and procedures
- relevant hazards and control measures related to the competency

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assess requirements for non-destructive test	1.1. Inspection area is assessed for testing and all possible failure sites are identified utilising metallurgical analysis. 1.2. Relevant information for test development is collected from available sources using accepted techniques. 1.3. Information is analysed and interpreted. 1.4. Test requirements are determined.
2. Establish non-destructive test techniques and procedures	2.1. Test methods, techniques and procedures to be used for specific NDT work are designated. 2.2. Codes, standards, specifications and procedures are interpreted. 2.3. Test procedures are developed in accordance with established techniques and metallurgical principles.
3. Validate/confirm non-destructive tests	3.1. General and specific test procedures are validated in accordance with established techniques. 3.2. Inspection results are interpreted and evaluated in terms of existing codes, standards and specifications.
4. Approve non-destructive test procedures	4.1. Procedures are approved in accordance with workplace procedures and relevant codes and standards. 4.2. Procedures are documented and distributed in accordance with workplace requirements and relevant codes and standards.
5. Evaluate non-destructive test procedures	5.1. Procedures are evaluated for effectiveness. 5.2. Evaluation results are documented and reported according to workplace requirements. 5.3. Changes/amendments to non-destructive test procedures are made and distributed as necessary.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

REQUIRED SKILLS AND KNOWLEDGE**Required skills**

Look for evidence that confirms skills in:

- conducting metallurgical assessment of inspection areas
- designating most appropriate method, technique or procedure
- referencing information
- developing and validating test procedures
- applying safety procedures, standard operating procedures and legislative requirements to all work
- reading/interpreting/applying relative testing standards
- reading/interpreting/applying relative conformance standards
- documenting procedure and results

Required knowledge

Look for evidence that confirms knowledge of:

- application of metallurgical analysis to assess inspection areas
- NDT methods, techniques and procedures
- meaning and validity of relevant codes, standards, specifications and procedures
- test procedure for testing techniques and specimen
- validation processes
- process for approval of procedures
- process for documentation/distribution of procedures
- evaluation procedures
- process for documentation of evaluation results
- process for amending tests and distributing amendments
- any applicable industry standards, national/Australian standards, NOHSC guides, State/Territory regulatory codes of practice/standards
- use and application of personal protective equipment
- safe work practices and procedures
- relevant hazards and control measures related to the competency

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Interpret and apply the principles of solidification and crystal structures in metals and alloys	1.1.Principles of solidification and crystal structures in metals and alloys are interpreted and applied in relation to NDT techniques.
2. Interpret equilibrium diagrams for metals and alloys	2.1.Equilibrium diagram for metal or alloy is correctly sourced 2.2.Equilibrium diagrams are correctly interpreted.
3. Interpret and apply the principles of fusion welding of metals and alloys	3.1.Principles and methods for fusion welding of metals and alloys are applied to NDT test selection. 3.2.Defects in weldments are identified and classified from NDT test results.
4. Interpret and apply the principles of the formation of castings	4.1.Principles and methods used to produce metal castings are applied to NDT test selection. 4.2.Defects in metal and alloy castings are identified and classified from NDT test results.
5. Interpret and apply the principles of steel forging	5.1.Principles and methods used to produce steel forgings are applied to NDT test selection. 5.2.Defects in steel forgings are identified and classified from NDT test results.
6. Interpret and apply the principles of mechanical testing	6.1.Principles of mechanical testing are applied to NDT test selection. 6.2.Defects in metal product are identified and classified from NDT test results

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: <ul style="list-style-type: none"> • research • understanding and applying metallurgy principles • selecting NDT test appropriate to metal or alloy and manufacturing process

REQUIRED SKILLS AND KNOWLEDGE**Required knowledge**

Look for evidence that confirms knowledge of:

- principles of solidification and crystal structures in metal:
 - classification of materials
 - structure of atoms
 - process of solidification
 - crystal structures
 - defects formed during solidification
 - modification of crystal structure
 - heat treatment processes
 - defects formed during heat treatment
- meaning of equilibrium diagrams representative of a range of metals including aluminium, iron, steel and common non-ferrous alloys:
 - alloy systems
 - solid and liquid solubility
 - basic equilibrium diagrams
 - equilibrium diagrams for common alloys
- principles of fusion welding in relation to NDT testing
- defects in fusion welding:
 - processing defects
 - grinding cracks
 - pickling cracks
 - heat treatment cracks
 - service defects
 - fatigue cracks
 - corrosion and stress corrosion cracks
- principles of the formation of castings
- defects in castings
- principles of steel forging
- defects in steel forging
- principles of mechanical testing:
 - mechanical testing
 - tensile testing
 - impact testing
 - hardness testing
 - fatigue testing
- other tests

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify common engineering materials by their principal properties	1.1. The principal properties of ferrous and non-ferrous metals are identified. 1.2. The principal properties of thermosetting and thermoplastic polymers are identified. 1.3. The principal properties of ceramics and composite materials are identified. 1.4. The effects of different types of bonding in materials are identified. 1.5. The effects of mechanical and thermal processes on the principal properties of materials are identified.
2. Select materials for specific applications	2.1. The engineering requirement for the specific application is determined in consultation with others. 2.2. Material is selected based on the requirement and consideration of principal properties and further processing. 2.3. Selection is confirmed according to standard operating procedures.
3. Verify selected material as fit for purpose	3.1. Appropriate tests for the required properties are identified. 3.2. Testing of materials is arranged with appropriate persons, if necessary. 3.3. Test results are analysed and material choices are confirmed or modified as appropriate.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: <ul style="list-style-type: none"> • undertaking research • selecting/carrying out tests appropriate to the material • communicating • documenting • planning and sequencing operations

REQUIRED SKILLS AND KNOWLEDGE

- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents

Required knowledge

Look for evidence that confirms knowledge of:

- classification of materials:
 - metals and non-metals
 - ferrous and non-ferrous metals
 - polymers (thermoplastics, thermosetting and elastomers)
 - ceramics
 - composite materials
- structure of materials
- physical properties of materials:
 - electrical conductivity/resistivity
 - specific gravity/density
 - thermal conductivity/expansion
 - specific heat
 - melting/boiling points
- magnetic properties
- optical properties
- mechanical properties:
 - strength - yield, tensile, compressive
 - stress/strain data
 - hardness
 - toughness (impact and slow strain)
 - elasticity
 - plasticity
 - ductility
 - malleability
 - fatigue

 - adhesives
 - finishing - coatings, metallic and non-metallic
- hazards and control measure associated with selecting common engineering materials, including housekeeping
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	A person who demonstrates competency in this unit must be able to select common engineering materials.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with selecting common engineering materials, or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning should not require language, literacy and numeracy skills beyond those required in this unit. The candidate must have access to all tools, equipment, materials and documentation required and must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Common engineering materials	Includes ferrous metals, cast irons, carbon and alloy steels, stainless steels, coated steels, non-ferrous metals, aluminium and its alloys, copper and its alloys, nickel alloys, zinc, titanium, magnesium, refractory metals, polymers, thermosetting polymers, thermoplastic polymers, ceramics and glasses
Appropriate tests	Tests which can be undertaken by a technician within the organisation as well as those required to be undertaken by external organisations, including simple tests
Required properties	Properties to be tested include tensile strength, compression, shear characteristics, torsion, hardness, impact resistance, fatigue resistance, creep resistance, visual appearance and colour, magnetic properties, corrosion resistance
Appropriate persons	Internal technicians and/or external organisations

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Use concepts of arithmetic in the solution of engineering problems	1.1.Units of physical quantities are converted to facilitate engineering calculations. 1.2.Calculations are performed to solve problems involving rational and irrational numbers. 1.3.Scientific notation is used to represent numbers. 1.4.Calculations are checked for reasonableness using estimating and approximating techniques.
2. Solve engineering problems involving algebraic expressions with one independent variable	2.1.Algebraic expressions are manipulated using mathematical operations in their correct order.
3. Use two-dimensional geometry to solve practical problems	3.1.Angles expressed in degrees are correctly converted to radians and vice versa. 3.2.The perimeter, area, length and angles of a range of two-dimensional figures are correctly calculated. 3.3.The volume and surface area of complex figures are correctly calculated. 3.4.Points identified in terms of cartesian coordinates can be converted to polar coordinates and vice versa.
4. Use trigonometry to solve practical problems	4.1.Basic trigonometry functions are used to calculate the lengths of the sides of right-angled triangles. 4.2.Inverse trigonometry functions are used to determine angles in a right-angled triangle given the lengths of two sides. 4.3.The sine rule is used to determine the lengths of the sides of acute and obtuse angled triangles given one side and two angles. 4.4.The cosine rule is used to determine the lengths of the sides of acute and obtuse angled triangles given two sides and one angle.
5. Graph linear functions	5.1.Linear functions are solved graphically and equations of straight lines are determined from the slope and one point, or two points. 5.2.Two linear functions are solved simultaneously both algebraically and geometrically. 5.3.The length and mid point of a line segment are determined.
6. Solve quadratic	6.1.Quadratic equations are solved.

ELEMENT	PERFORMANCE CRITERIA
equations	6.2. Simultaneous linear and quadratic equations are solved.
7. Perform basic statistical calculations	7.1. Mean, median and mode are calculated from given data. 7.2. Standard deviation is calculated and interpreted employing graphical representation.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- using and applying mathematical formulas:
 - logical thinking
 - problem solving
 - calculating
 - applying statistics
 - using computer numerical methods
 - drawing graphs

Required knowledge

Look for evidence that confirms knowledge of:

- transposing and evaluating formulae
- polynomials
- straight line coordinate geometry
- introduction to indices
- introduction to trigonometry
- circular functions
- trigonometry of oblique triangles
- trigonometric identities
- introduction to functions and their graphs

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competency in this unit must be able to apply mathematical skills and knowledge to simple engineering applications. Evidence from tasks and projects should/may be used to complement and demonstrate integration of competency.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</p>
<p>Context of and specific resources for assessment</p>	<p>This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</p> <p>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with applying mathematical concepts to engineering applications, or other units requiring the exercise of the skills and knowledge covered by this unit.</p>
<p>Method of assessment</p>	<p>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify current resource use and environmental issues.	1.1. Identify workplace <i>environmental and resource efficiency issues</i> . 1.2. Identify resources used in own work role. 1.3. <i>Measure</i> and record current usage of resources using <i>appropriate techniques</i> . 1.4. Identify and report workplace environmental hazards to appropriate personnel.
2. Comply with environmental regulations.	2.1. Follow <i>procedures</i> to ensure <i>compliance</i> . 2.2. Report environmental incidents to appropriate personnel.
3. Seek opportunities to improve environmental practices and resource efficiency.	3.1. Follow <i>enterprise plans</i> to improve environmental practices and resource efficiency. 3.2. Make <i>suggestions</i> for improvements to workplace practices in own work area.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include the ability to:

- report as required by procedures
- follow procedures and instructions and respond to change
- ask questions and seek clarifications relating to work requirements

Reading and writing is required in order to interpret required procedures and complete required workplace forms/reports.

Numeracy is required to interpret numeric workplace information, readings and measurements, handle data as required and complete numeric components of workplace forms/reports.

Required knowledge

Competency includes sufficient knowledge to:

- have a basic understanding of sustainability
- know the environmental hazards/risks, resource use and inefficiencies associated with own workplace (at an appropriate level)
- know the relevant environmental and resource efficiency systems and procedures for own work area
- know the impact of laws and regulations to a level relevant to the work context

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competence in this unit must be able to provide evidence of the ability to follow workplace procedures according to instructions given and to participate in the improvement of environmental and resource efficient work practices at own level of responsibility. Evidence must be strictly relevant to the particular workplace role.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- identify and measure resources used in their job
- identify situations likely to lead to an environmental incident
- follow procedures related to environmental performance.

Consistent performance should be demonstrated. For example, look to see that:

- work is routinely to procedures
- the minimum of resources is used consistent with the job requirements, good practice and the procedures.

Context of and specific resources for assessment

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Depending on the selected methods of assessment access may be required to:

- workplace procedures and plans
- documentation in relation to production, waste, overheads, hazard control/management
- reports from supervisors/managers
- case study/scenarios

Method of assessment

A holistic approach should be taken to the assessment.

Competence in this unit may be assessed:

- by demonstration in the workplace

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • using targeted questioning for appropriate portions • by use of a suitable simulation and/or a range of case studies/scenarios • by a combination of these techniques. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment.</p>
Guidance information for assessment	Assessors need to be aware of any cultural issues that may affect responses to questions. Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Procedures

All operations are performed in accordance with procedures including all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Environmental and resource efficiency issues

Environmental and resource efficiency issues include minimisation of environmental risks and maximisation of opportunities to improve business environmental performance and to promote more efficient production and consumption of natural resources, for example by:

- minimisation of waste, through implementation of the waste management hierarchy
- efficient and effective use of energy and other resources
- seeking alternative sources of energy
- efficient use of materials and appropriate disposal of waste
- use of controls to minimise the risk of environmental damage from hazardous substances
- efficient water use
- reducing emissions
- life cycle analysis applied to issues such as energy supply, materials, transport, production

Measure

Measure should be interpreted in a manner consistent with the scope of the job and may include things like:

- counting the number of items entering/leaving a work area
- reading indicators in the work area
- obtaining relevant information from support

RANGE STATEMENT	
	<p>personnel</p> <ul style="list-style-type: none"> • other simple means
Appropriate techniques	<p>Appropriate techniques include:</p> <ul style="list-style-type: none"> • material fed to/consumed by plant/equipment • plant meters and gauges • job cards including kanbans • examination of invoices from suppliers • measurements made under different conditions • examination of relevant information and data.
Compliance	<p>Compliance includes meeting relevant federal, state and local government laws, by-laws, regulations and mandated codes of practice. It also includes any codes and standards that the enterprise applies voluntarily.</p>
Incidents	<p>Incidents include:</p> <ul style="list-style-type: none"> • breaches or potential breaches of regulations • occurrences outside of standard procedure which may lead to lower environmental performance.
Enterprise plans	<p>Enterprise plans include:</p> <ul style="list-style-type: none"> • documented policies and procedures • work plans to minimise waste, increase efficiency of water/energy use, minimise environmental hazards
Suggestions	<p>Suggestions include ideas that help to:</p> <ul style="list-style-type: none"> • prevent and minimise environmental risks and maximise opportunities • reduce emissions of greenhouse gases • reduce use of non-renewable resources • improve energy efficiency • increase use of renewable, recyclable, reusable and recoverable resources • reduce waste • increasing the reusability/recyclability of wastes/products • reduce water usage and/or water wastage.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Investigate current practices in relation to resource usage.	1.1 Identify environmental regulations applying to the enterprise. 1.2 Assess procedures for assessing <i>compliance</i> with environmental regulations. 1.3 Collect information on environmental and resource efficiency systems and procedures, and provide to the work group where appropriate. 1.4 Measure and record current resource usage by members of the work group. 1.5 Analyse and record current purchasing strategies. 1.6 Analyse current work processes to access information and data and assist in identifying areas for improvement.
2. Set targets for improvements.	2.1 Seek input from stakeholders, key personnel and specialists. 2.2 Access external sources of information and data as required. 2.3 Evaluate alternative solutions to workplace environmental issues. 2.4 Set efficiency targets.
3. Implement performance improvement strategies.	3.1 Source <i>techniques/tools</i> to assist in achieving targets. 3.2 Apply continuous improvement strategies to own work area of responsibility and communicate ideas and possible solutions to the work group and management. 3.3 Integrate environmental and resource efficiency improvement plans for own work group with other operational activities and implement them. 3.4 Seek suggestions and ideas about environmental and resource efficiency management from stakeholders and act upon them where appropriate. 3.5 Implement costing strategies to fully value environmental assets.
4. Monitor performance.	4.1 Document outcomes and communicate reports on targets to key personnel and stakeholders. 4.2 Evaluate strategies. 4.3 Set new targets and investigate and apply new tools and strategies. 4.4 Promote successful strategies and reward participants where possible.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- using relevant environmental and resource efficiency systems, tools and procedures
- applying quality assurance systems relevant to own work area
- applying relevant supply chain procedures
- measurement and calculation techniques
- communication/consultation skills to ensure information is supplied to the work group

Reading and writing is required to comprehend documentation and interpret environmental and energy efficiency requirements and to document and maintain records

Numeracy is required to interpret numeric workplace information, readings and measurements, handle data as required and complete numeric components of workplace forms/reports.

Required knowledge

Required knowledge includes:

- how to access and use relevant environmental and resource efficiency systems, tools and procedures
- understanding of best practice approaches relevant to own area of responsibility
- strategies to maximise opportunities and minimise impacts relevant to own work area
- relevant environmental and resource efficiency issues specific to industry practices
- methods for measuring and calculating resource usage

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competence in this unit must be able to provide evidence of the ability to implement and monitor integrated environmental and resource efficiency management policies and procedures within an organisation.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:</p> <ul style="list-style-type: none"> • monitor and investigate current resource usage • develop plans to improve sustainability • implement environmental improvements. <p>Consistent performance should be demonstrated. For example, look to see that:</p> <ul style="list-style-type: none"> • environmental performance is routinely monitored and investigated • areas for improvements are followed through and the implemented changes are in turn monitored and investigated.
<p>Context of and specific resources for assessment</p>	<p>This section should be read in conjunction with the range of variables for this unit of competency. Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.</p> <p>Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation.</p> <p>A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.</p> <p>Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified</p>

EVIDENCE GUIDE	
	for people with disabilities.
Method of assessment	<p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed:</p> <ul style="list-style-type: none"> • by demonstration in the workplace • using targeted questioning for appropriate portions • through use of specific project(s) • by use of a suitable simulation and/or a range of case studies/scenarios • by a combination of these techniques. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment.</p>
Guidance information for assessment	<p>Assessors need to be aware of any cultural issues that may affect responses to questions.</p> <p>Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Environmental and resource efficiency issues

Environmental and resource efficiency issues include:

- addressing environmental and resource sustainability initiatives such as Environmental Management Systems, action plans, surveys and audits
- reference to standards, guidelines and approaches such as:
 - ISO 14001 Environmental Management Systems
 - Life Cycle Analyses
 - Cradle to cradle
 - Global Reporting Initiative
 - Ecological footprinting
 - Triple Bottom Line reporting
 - Product Stewardship
- determining enterprise's most appropriate waste treatment including waste to landfill, recycling, re-use and wastewater treatment
- applying the waste management hierarchy in the workplace
- initiating and/or maintaining appropriate enterprise procedures for operational energy consumption, including stationary energy and

RANGE STATEMENT	
	<p>non stationary (transport)</p> <ul style="list-style-type: none"> • efficient use of water • minimising greenhouse gas emissions • use of controls to minimise the risk of environmental damage from hazardous substances
Measure	<p>Measuring techniques include:</p> <ul style="list-style-type: none"> • material fed to/consumed by plant/equipment • plant meters and gauges • job cards including kanbans • examination of invoices from suppliers • measurements made under different conditions • examination of relevant information and data • others as appropriate to the specific industry contexts.
Techniques and tools	<p>Techniques and tools may include:</p> <ul style="list-style-type: none"> • visual workplace concepts • measurement, display and/or recording devices • changed work practices/procedures • competence development and awareness training • process and equipment items
Compliance	<p>Compliance includes meeting relevant federal, state and local government laws, by-laws, regulations and codes of practice.</p>
Incidents	<p>Incidents include:</p> <ul style="list-style-type: none"> • breaches or potential breaches of regulations • occurrences outside of standard procedure which may lead to lower environmental performance
Purchasing strategies	<p>Purchasing strategies include:</p> <ul style="list-style-type: none"> • influencing suppliers to take up environmental sustainability • selecting materials/components with a lower environmental profile.
Stakeholders, key personnel and specialists	<p>Stakeholders, key personnel and specialists include individuals and groups both inside and outside the organisation that have some direct interest in the</p>

RANGE STATEMENT	
	<p>enterprise's conduct, actions, products and services, including:</p> <ul style="list-style-type: none"> • employees at all levels of the organisation • customers • suppliers • other organisations • key personnel within the organisation, and specialists outside it who may have particular technical expertise
Suggestions	<p>Suggestions includes ideas that help to:</p> <ul style="list-style-type: none"> • prevent and minimise environmental risks and maximise opportunities • reduce emissions of greenhouse gases • reduce use of non-renewable resources • make more efficient use of energy, water and other resources • maximise opportunities to re use and recycle materials • identify strategies to offset or mitigate environmental impacts. e.g. purchasing of carbon credits • express purchasing power through the selection of suppliers with improved environmental performance. e.g. purchasing renewable energy and materials with lower embedded carbon • eliminate the use of hazardous and toxic materials increasing the reusability/recyclability of wastes/products.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Develop workplace sustainability policy.	1.1 Define <i>scope of sustainability policy</i> . 1.2 Identify and consult <i>stakeholders</i> as a key component of the policy development process. 1.3 Review environmental sustainability <i>strategies</i> relevant to all stages of work covered by the policy 1.4 Make recommendations for policy options based on likely effectiveness, timeframes and cost. 1.5 Develop policy is that reflects the organisation's commitment to sustainability as an integral part of the business planning and as a business opportunity. 1.6 Agree upon appropriate methods of implementation.
2. Communicate the policy.	2.1 Promote the policy, including its expected outcome to key stakeholders. 2.2 Inform those involved in implementing the policy as to outcomes expected, activities to be undertaken and responsibilities assigned.
3. Implement the policy.	3.1 Develop and communicate procedures to help implement the policy. 3.2 Implement <i>strategies</i> for continuous improvement in resource efficiency. 3.3 Establish record systems for tracking continuous improvements in sustainability approaches and assign responsibilities.
4. Review policy implementation	4.1 Record outcomes and provide feedback to key personnel and stakeholders. 4.2 Investigate success or otherwise of policy. 4.3 Monitor records to identify trends that may require remedial action, and use to promote continuous improvement of performance. 4.4 Modify policy and or <i>procedures</i> as required to ensure improvements are made.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- developing and implementing systems and procedures to aid in the achievement of sustainability in the workplace
- applying quality assurance systems relevant to own enterprise
- accessing and applying other relevant enterprise policies, procedures and protocols
- relevant industry competency
- interpreting business/strategic plans

This unit requires the ability to:

- read and evaluate complex and formal documents such as policy and legislation
- research, analyse and present information
- prepare written reports requiring precision of expression and language and structures suited to the intended audience
- adjust communication to suit different audiences
- deal with different points of view and dissenting stakeholders.

Required knowledge

Required knowledge includes:

- understanding of relevant policy development and implementation processes and practices
- understanding of the principles, practices and available tools and techniques of sustainability management relevant to the particular industry context
- best practice approaches relevant to own work area
- equal employment opportunity, equity and diversity principles and occupational health and safety implications of policy/s being developed

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>A person who demonstrates competence in this unit must be able to provide evidence of the ability to develop and implement integrated sustainability policies and procedures within an enterprise. The review of the policy after implementation will also need to be evidenced.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:</p> <ul style="list-style-type: none"> • develop relevant policy and procedures that comply with the regulatory requirements and business plans • develop a workable implementation strategy • include measurable criteria for reviewing improvement. <p>Consistent performance should be demonstrated. For example, look to see that:</p> <ul style="list-style-type: none"> • policy implementation is reviewed • policy is developed to become part of the routine practices of the organisation.
<p>Context of and specific resources for assessment</p>	<p>This section should be read in conjunction with the range of variables for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation.</p> <p>A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.</p> <p>Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.</p>
<p>Method of assessment</p>	<p>Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by</p>

EVIDENCE GUIDE	
	<p>the Elements, Performance Criteria and skills and knowledge.</p> <p>A holistic approach should be taken to the assessment.</p> <p>Competence in this unit may be assessed:</p> <ul style="list-style-type: none"> • by demonstration in the workplace • using targeted questioning for appropriate portions • through use of specific project(s) • by use of a suitable simulation and/or a range of case studies/scenarios • by a combination of these techniques. <p>In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment.</p>
Guidance information for assessment	<p>Assessors need to be aware of any cultural issues that may affect responses to questions.</p> <p>Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Procedures	<p>All operations are performed in accordance with procedures.</p> <p>Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.</p> <p>Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.</p>
Scope of sustainability policy	<p>Scope of sustainability policy include:</p> <ul style="list-style-type: none"> • The area/s of environmental sustainability to be targeted and whether social and economic sustainability will be incorporated • The parts of the enterprise to which it is to apply, including whether it is for the whole enterprise, one site, one work area or combinations of these • An investigation of the particular business and market context of the industry/ enterprise • Addressing sustainability initiatives through reference to standards, guidelines and approaches such as: <ul style="list-style-type: none"> • ISO 14001 Environmental Management Systems • Life Cycle Analyses • Cradle to grave/cradle to cradle • Global Reporting Initiative • Ecological Footprint Assessment • Triple Bottom Line reporting • Product Stewardship.
Stakeholders	<p>Stakeholders include individuals and groups both inside and outside the organisation that have some</p>

RANGE STATEMENT	
	<p>direct interest in the enterprise's conduct, actions, products and services, including:</p> <ul style="list-style-type: none"> • employees at all levels of the organisation • customers • suppliers • regulators • other organisations.
Strategies	<p>Implementation strategies include:</p> <ul style="list-style-type: none"> • awareness raising among stakeholders • training of staff in principles and techniques of sustainability • promotional activities. <p>Continuous improvement strategies include ongoing measuring, improving and monitoring such as:</p> <ul style="list-style-type: none"> • Plan, do, check, act cycles • Kaizen (continuous improvement) • Kaizen blitz (breakthrough improvement event) • Six sigma approaches <p>Environmental sustainability strategies include:</p> <ul style="list-style-type: none"> • reducing toxic material and hazardous chemical use • minimising resource use through changes in processes, facility design and management • supply chain and life cycle management approaches • sourcing renewable energy and low carbon footprint materials • reducing, re-using, recycling and waste reduction • product and process improvements • carbon offsets • reducing greenhouse gas and other emissions

Co-requisite units

Co-requisite units		

PMBPROD262B Operate tyre curing equipment

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the operation of tyre curing equipment in a tyre manufacturing plant or retreading situation where the 'green' tread is laid on the tyre casing.

Application of the Unit

Application of this unit

This competency applies to operators who are involved in curing 'green' tyres and 'hot cap' retreads (ie retreads made using green treads), assembled from a number of intermediate components and stored. This competency is typically performed by operators working independently.

The operator:

- takes product off machine
- checking product for quality and conformity to specifications
- checks raw material feed
- notices any problems and takes required action (eg reporting)
- deal with non-conforming products, waste and scrap
- complete logs and reports.

This unit does not include the use of pre-cured treads - see *PROD263A Operate retread curing equipment*

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisites

This unit has **no** prerequisites.

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Check work requirements.	1.1 Identify work requirements from production plan or request. 1.2 Check product, materials and equipment meet requirements for job(s). 1.3 Recognise requirements which may not be in accordance with usual practice. 1.4 Ask questions of appropriate person to confirm unusual practice. 1.5 Identify hazards associated with the job and take appropriate action. 1.6 Perform other pre-operational checks in accordance with procedures.
2. Start up tyre curing equipment to procedures.	2.1 Conduct pre-start checks. 2.2 Start up tyre curing equipment.
3. Operate equipment to procedures.	3.1 Start machine safely and correctly when required. 3.2 Check process is operating within required limits. 3.3 Check product is in specification and to required quality standard. 3.4 Ensure product is consistently ready for next operation. 3.5 Maintain supply of material(s) as required. 3.6 Complete logs and records when as required. 3.7 Collect and segregate scrap, trim and other materials as required in accordance with procedures. 3.8 Keep equipment and work area clean area in accordance with procedures. 3.9 Pause machine cycle and perform emergency stop, as required by procedures.
4. Respond to routine problems in accordance with procedures.	4.1 Recognise known faults that occur during the operation. 4.2 Identify and take action on causes of routine faults. 4.3 Log problems as required. 4.4 Identify non-routine process and quality problems and take appropriate action.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Application of an operational knowledge of the materials, equipment and process sufficient to recognise out of specification products, process problems and materials faults. For example temperature measurements are essential for curing of tyres, where the temperature must be kept constant during the process. Monitoring the temperature inside the mould is too difficult; therefore the temperature of the condensate is monitored using specialised equipment.

Knowledge of organization procedures and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and work standards.

Application of the knowledge of managing risks using the hierarchy of controls applied to the tyre curing process. Application of approved hazard control and safety procedures and the use of PPE in relation to handling materials, equipment operation and cleanup.

Knowledge of and skills in the operation of tyre curing equipment and main components sufficient for consistent production of quality products including:

- production workflow sequences and materials demand
- the reasons for checking process control panels and reporting readings which are outside of normal range of process variability
- accurately monitoring equipment operation and product quality
- the potential effects of variations in raw materials and equipment operation in relation to quality of product
- processing behaviour of polymers and the role of additives
- waste management and knowing the importance of reusing non-conforming products wherever possible
- correct selection and use of equipment, materials, processes and procedures
- explain the effect of unauthorised or emergency shutdown in relation to safety and production requirements
- identify factors which may affect product quality or production output and appropriate remedies.

Competence also includes the ability to:

- plan own work, including predicting consequences and identifying improvements
- identify when the operator is able to rectify faults, when assistance is required and who is the appropriate source for assistance
- identify and describe own role and role of others involved directly in the curing process.

Language, literacy and numeracy requirements

This unit requires the ability to read and interpret typical product specifications, job sheets, procedures, material labels and safety information as provided to operators.

Writing is required to the level of completing workplace forms.

Basic numeracy is required, eg to determine that two 25 kg bags are needed to make up a requirement for 50 kg.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- apply the required skills and knowledge to operate a tyre curing machine
- apply approved procedures.

Consistent performance should be demonstrated. For example, look to see that:

- tyre curing production standards are met consistently
- all safety procedures are followed.

Assessment method and context

Assessment will occur on an industrial curing machine(s) equipment and will be undertaken in a work-like environment.

Competence in this unit may be assessed:

- by using an appropriate, industrial tyre curing machine requiring demonstration of operation and emergency stop procedures
- in a situation allowing for the generation of evidence of the ability to respond to problems
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts. Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency unit includes curing operations.

This competency applies to all work environments within the tyre manufacture sector. It also includes the operation of all relevant ancillary equipment.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

This competency includes use of equipment and tools such as:

- curing press (eg bagomatic, collapsible bladder or shear strip, solid bladder)
- ancillary equipment (eg screens/strainers, computer data systems, ball float steam traps, condensate temperature and steam trap monitoring system)
- curing agents (eg sulphur sources, peroxides, metal oxides, amines, and phenolic resins)
- relevant personal protective equipment.

Hazards

Typical hazards include:

- manual handling
- noise
- humidity
- temperatures (eg from air and steam)
- fumes/vapours (eg from curing agents)
- cleaning equipment (eg screens/strainers)
- stationary and moving machinery.

Problems

'Respond to routine problems' means 'apply known solutions to a limited range of predictable problems'. Typical process problems may include:

- poorly aligned guides
- mould incorrectly placed on machine
- poor mould closure/alignment
- poorly prepared mould (dirty/mould release)
- incorrect temperature settings
- mould temperature/steam pressure/air blinded/waterlogged
- mould/air pressure.

Typical product problems may include:

- contaminated green tyres
- squashed or distorted green tyres
- scorched rubber

- curing time/cycle
- product
- excessive trim/spue
- out of round/eccentric.
-

Unit Sector(s)

Not applicable.

PMBPROD263B Operate retread curing equipment

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the operation of tyre curing equipment in retreading workplaces where pre-vulcanised tread is laid on the retread tyre.

Application of the Unit

Application of this unit

This competency applies to operators who are involved in curing retread tyres assembled from a prepared carcass and a pre-vulcanised tread. This competency is typically performed by operators working independently.

The operator:

- takes product off the machine
- checking product for quality and conformity to specifications
- checks raw material feed
- notices any problems and takes required action (eg reporting)
- deal with non-conforming products, waste and scrap
- complete logs and reports.

This unit does not include retread processes where the green extruded tread is laid onto the buffed casing. This unit also does not include:

- inspection - see *PROD324 Inspect tyres for retreading*
- preparation - see *PROD266 Prepare tyre casings for retreading*
- laying retreads - see *PROD325A Lay on tyre retreads*
-

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Check production plan.	1.1 Identify work requirements from production plan or request. 1.2 Check product, materials and equipment meet requirements for job(s). 1.3 Recognise requirements which may not be in accordance with usual practice. 1.4 Ask questions of appropriate person to confirm unusual practice 1.5 Identify hazards associated with the job and take appropriate action. 1.6 Perform other pre-operational checks in accordance with procedures.
2. Prepare retreads for curing to procedures.	2.1 Check stretch height and roundness of tyres. 2.2 Insert equipment used to pressurise inside of tyre to specifications. 2.3 Place tyre within rubber envelope.
3. Start up retread curing equipment to procedures.	3.1 Conduct pre-start checks. 3.2 Start up retread curing equipment.
4. Operate equipment to procedures.	4.1 Check process is operating within required limits. 4.2 Check product is in specification and to required quality standard. 4.3 Ensure product is consistently ready for next operation. 4.4 Maintain supply of material(s) as required. 4.5 Complete logs and records as required. 4.6 Collect and segregate scrap, trim and other materials as required. 4.7 Keep equipment and work area clean. 4.8 Pause machine cycle and perform emergency stop, as required.
5. Respond to routine problems in accordance with procedures.	5.1 Recognise known faults that occur during the operation. 5.2 Identify and take action on causes of routine faults.

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
	5.3 Log problems as required. 5.4 Identify non-routine process and quality problems and take appropriate action.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Application of an operational knowledge of the materials, equipment and process sufficient to recognise out of specification products, process problems and materials faults. For example high pressure is required to secure the retread and cushion gum to the casing to ensure adequate bonding. Therefore the correct amount of pressure applied by such equipment as envelopers and sealing rings needs to be monitored.

Knowledge of organisation procedures and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and work standards.

Application of the knowledge of managing risks using the hierarchy of controls applied to the retread curing process. Application of approved hazard control and safety procedures and the use of PPE in relation to handling materials, equipment operation and cleanup.

Knowledge of and skills in the operation of retread curing equipment and main components sufficient for consistent production of quality products including:

- production workflow sequences and materials demand
- the reasons for checking process control panels and reporting readings which are outside of normal range of process variability
- accurately monitoring equipment operation and product quality
- the potential effects of variations in raw materials and equipment operation in relation to quality of product
- processing behaviour of polymers and the role of additives
- waste management and knowing the importance of reusing non-conforming products wherever possible
- correct selection and use of equipment, materials, processes and procedures
- explain the effect of unauthorised or emergency shutdown in relation to safety and production requirements
- identify factors which may affect product quality or production output and appropriate remedies.

Competence also includes the ability to:

- plan own work, including predicting consequences and identifying improvements
- identify when the operator is able to rectify faults, when assistance is required and who is the appropriate source for assistance
- identify and describe own role and role of others involved directly in the retreading process.

Language, literacy and numeracy requirements

This unit requires the ability to read and interpret typical product specifications, job sheets, procedures, material labels and safety information as provided to operators.

Writing is required to the level of completing workplace forms.

Basic numeracy is required, e.g. to determine that two 25 kg bags are needed to make up a requirement for 50 kg.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- apply the required skills and knowledge to operate retread curing equipment
- apply approved procedures.

Consistent performance should be demonstrated. For example, look to see that:

- retread curing production standards are met consistently
- all safety procedures are followed.

Assessment method and context

Assessment will occur on an industrial retread curing machine(s) equipment and will be undertaken in a work-like environment.

Competence in this unit may be assessed:

- by using appropriate, industrial retread curing equipment requiring demonstration of operation and emergency stop procedures
- in a situation allowing for the generation of evidence of the ability to respond to problems
 - by using a suitable simulation and/or a range of case studies/scenarios
 - through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts. Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency unit includes curing operations in retreading operations. Curing is mainly of bonding agents.

This competency applies to most work environments within the tyre retreading sector, but does not include retread processes where the green extruded tread is laid onto the buffed casing. It includes the operation of all relevant additional equipment where that equipment is integral to the retreading process.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

This competency includes use of equipment and tools such as:

- autoclave (such as electric and steam curing chambers)
- envelopers
- sealing rings
- prepared casings
- relevant personal protective equipment.

Hazards

Typical hazards include:

- manual handling
- noise
- humidity
- temperatures (such as from air and steam)
- fumes/vapours
- hazards from high pressures
- stationary and moving machinery, parts and components

Problems

'Respond to routine problems' means 'apply known solutions to a limited range of predictable problems'. Typical process problems may include:

- equipment malfunction
- high humidity in curing oven
- air not being extracted properly from the envelope
- air blinding of steam equipment
- material contamination
- contaminated treads
- poorly prepared/contaminated casing
- poor quality bonding material
- curing time/cycle

- incorrect temperature settings
- incorrect air pressure settings.

Typical product problems may include:

- poor product finish
- poor binding of retread to buffed casing
- excessive trim/spue
- out of round/eccentric.
-

Unit Sector(s)

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Check work requirements.	1.1 Identify work requirements from workplace approved operating procedures. 1.2 Recognise requirements which may not be in accordance with usual practice. 1.3 Ask questions of appropriate person to confirm unusual practice. 1.4 Ensure housekeeping is to requirements. 1.5 Identify hazards associated with the job and take appropriate action.
2. Conduct pre-checks as required.	2.1 Inspect and sample products in line with workplace procedures. 2.2 Check equipment components and component function is to the required quality standard. 2.3 Check and test fluid circuits, pumps, shutoffs and control valves.
3. Operate recycle washer equipment in accordance with procedures.	3.1 Start machine safely and correctly when required. 3.2 Check process is operating with required limits. 3.3 Collect product samples and store. 3.4 Check product is in specification / to required quality standard. 3.5 Maintain supply of material(s) as required. 3.6 Complete logs and records as required. 3.7 Collect and reprocess/discard scrap/trim and other materials in accordance with workplace procedures. 3.8 Check readouts against standard statistical process information and enter production data into the control system. 3.9 Keep equipment and work area clean. 3.10 Pause machine cycle and perform emergency stop, as required.
4. Identify product quality requirements.	4.1 Check process and note conditions which may affect product quality standards. 4.2 Interpret reports from quality inspections and rectify or report as appropriate equipment conditions within workplace procedures.

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
	4.3 Note and implement authorised changes in standard operating procedures and specifications.
5. Respond to routine problems in accordance with procedures.	5.1 Recognise known faults that occur during the operation. 5.2 Identify and take action on causes of routine faults. 5.3 Log problems as required. 5.4 Identify non-routine process and quality problems and take appropriate action.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Application of knowledge of the materials, equipment and process sufficient to recognise out of specification products, process problems and materials faults.

A knowledge of organisation procedures, relevant regulatory requirements and the ability to implement them within appropriate time constraints and work standards.

Application of the knowledge of managing risks using the hierarchy of controls applied to the recycle wash process. Application of approved hazard control and safety procedures and the use of PPE in relation to handling materials, equipment operation and cleanup.

Knowledge of and skills in the operation of recycle wash equipment and its main components sufficient for consistent production of quality products including:

- impact of incorrect or faulty materials
- focus of operation of work systems and equipment
- hazards of the materials and process and appropriate hazard control procedures
- accurately monitor equipment operation
- identify factors which may affect product quality or production output and appropriate remedies
- explain the effect of unauthorised or emergency shutdown in relation to safety and production requirements.

Competence also includes the ability to:

- plan own work, including predicting consequences and identifying improvements
- identify when the operator is able to rectify problems, when assistance is required and who is the appropriate source for assistance
- identify and describe own role and role of others involved directly in the recycle wash process.

Language, literacy and numeracy requirements

This unit requires the ability to read and interpret typical product specifications, job sheets, procedures, material labels and safety information as provided to operators.

Writing is required to the level of completing workplace forms.

Basic numeracy is required, eg to determine that two 25 kg bags are needed to make up a requirement for 50 kg.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- apply the required skills and knowledge to operate recycle wash equipment
- apply approved procedures.

Consistent performance should be demonstrated. For example, look to see that recycle wash standards are met consistently.

Assessment method and context

Assessment will occur on industrial equipment and will be undertaken in a work-like environment.

Competence in this unit may be assessed:

- by using an appropriate, operating plant requiring demonstration of operation and emergency stop procedures
- in a situation allowing for the generation of evidence of the ability to respond to problems
 - by using a suitable simulation and/or a range of case studies/scenarios
 - through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method.

Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required.

Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency applies to all work environments and sectors within the plastics industry. It includes the operation of all relevant ancillary equipment.

Procedures

All operations are performed in accordance with procedures. Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

This competency includes use of equipment and tools such as:

- hand carts and trolleys and other manual handling aids
- knives and basic hand tools required for opening of material packaging
- hoists/lifting equipment not requiring any special permits or licences
- bung spanners and similar
- relevant personal protective equipment.

Hazards

Typical hazards include:

- spills
- hazardous materials
- moving equipment
- manual handling hazards.

Problems

'Respond to routine problems' means 'apply known solutions to a limited range of predictable problems'. Typical process and product problems may include:

- equipment malfunction
- variations in materials or contamination of materials.
- incorrect raw materials/additives
- incorrect quantity of materials/additives.

Appropriate action for non-routine problems may be reporting to designated person or other action specified in procedures.

Unit Sector(s)

PMBPROD265C Operate portable vulcanising equipment

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the application of technical expertise, work planning and problem solving to set up and operate portable vulcanising equipment.

This competency is typically performed by operators working either independently or as part of a work team.

Application of the Unit

Application of this unit

This competency applies to operators who set up and operate portable vulcanising equipment either in a production facility or an on-site work environment. The key factors are the establishment of the appropriate safe working environment, obtaining the necessary power and other supplies, conducting vulcanising operations and assessing and taking appropriate action at the end of the operations.

It includes:

- planning the curing job
- identifying hazards and applying appropriate controls
- obtaining all necessary clearances and permissions for site work
- setting up equipment and materials
- conducting vulcanising operations
- assessing the finished work and identifying and taking action on routine process problems
- completing logs and reports.
-

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisites

This unit has **no** prerequisites.

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT ELEMENT	PERFORMANCE CRITERIA
1. Identify work requirements for vulcanising operations.	<p>Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.</p> <p>1.1 Identify the job and vulcaniser characteristics and product quality outcomes required.</p> <p>1.2 Obtain specifications relevant to the material being vulcanised.</p> <p>1.3 Identify and obtain equipment and materials required for the vulcanising process.</p> <p>1.4 Identify hazards associated with the job and take appropriate action.</p> <p>1.5 Check materials, ancillary supplies, and equipment for quality, access and condition.</p> <p>1.6 Identify and check emergency stops, gauges, guards and controls.</p>
2. Plan vulcanising operations.	<p>2.1 Identify time, pressure and temperature requirements.</p> <p>2.2 Plan the task sequences</p> <p>2.3 Plan for waste management, maintenance and housekeeping requirements.</p>
3. Prepare vulcanising equipment.	<p>3.1 Check vulcaniser, ancillary, equipment and attachments are fit for purpose.</p> <p>3.2 Set up vulcanising press according to procedures.</p> <p>3.3 Set equipment control parameters to specifications.</p> <p>3.4 Obtain appropriate clearances for vulcanising to commence.</p>
4. Conduct and monitor vulcanising operations.	<p>4.1 Start the unit and commence vulcanising.</p> <p>4.2 Monitor the unit operation throughout the entire process</p> <p>4.3 Note and report non-conformity to specifications to procedures.</p> <p>4.4 Make adjustments as required.</p> <p>4.5 Shut down unit when cycle completed.</p> <p>4.6 Follow procedure to disassemble equipment as required.</p> <p>4.7 Assess the outcome of the vulcanising process and take remedial action as necessary and report to the appropriate person.</p> <p>4.8 Brand splice as per company policy</p>

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
	4.9 Clean up, lubricate and adjust equipment as required. 4.10 Complete waste removal or recycling as required.
5. Respond to routine problems to procedure.	5.1 Recognise known faults that occur during the operation. 5.2 Identify and take action on causes of routine faults. 5.3 Log problems as required. 5.4 Identify non-routine process and quality problems and take appropriate action.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Application of knowledge of the materials, equipment and process sufficient to recognise out of specification products, process problems and materials faults.

Knowledge of organization procedures and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and work standards.

Application of the knowledge of managing risks using the hierarchy of controls applied to the vulcanising process. Application of approved hazard control, safety procedures and the use of PPE in relation to handling materials, equipment operation and cleanup.

Knowledge of and skills in the operation of portable vulcanising equipment and main components sufficient for consistent production of quality products including:

- importance of correct selection and use of equipment, materials, processes and procedures
- identifying the function of vulcanising equipment, components and the materials used
- describing changes to materials during the vulcanising process
- explaining the impact of vulcanising speed, pressure, time, temperature and tension on product quality and production output
- describing the role of heat and pressure in relation to providing strength, stiffness, resistance to deformation, fatigue and abrasion
- explaining any differences in vulcanising processes and additives for natural, synthetic and mixed rubber compounds
- deciding if they (the operator) are able to rectify the fault or if assistance is required
- explaining the effect of unauthorised or emergency shutdown of equipment on the vulcanising process
- understand the underlying risks in the process and how best to manage them.

Competence includes the ability to:

- plan own work sequence, including identification of key checkpoints for equipment monitoring and product quality checks
- operate equipment and monitor product quality
- identify factors which may influence product quality and production output and appropriate remedies
- make appropriate authorised alterations to own work plan and equipment to maintain both product quality and required production output
- locate, interpret and apply relevant information and maintain workplace records
- identify and safely handle products and materials, read relevant safety information and apply safety precautions appropriate to the task.

Distinguish between causes of faults such as:

- equipment condition
- materials (eg. contaminated or wrong raw materials/additives/catalyst)
- process conditions (eg. incorrect temperatures or pressures and entrapped air in the vulcanised area).

Language, literacy and numeracy requirements

This unit requires the ability to read and interpret typical product specifications, job sheets and material labels as provided to operators.

Writing is required to the level of completing workplace forms.

Basic numeracy is also required, eg to determine that two 25 kg bags are needed to make up a requirement for 50 kg.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- understand the inherent risk associated with using a vulcaniser and the potential consequences of incorrect use
- understand procedures
- understand the importance of critical material properties and quantities
- recognise potential situations requiring action
- implement appropriate action and explain logic.

Consistent performance should be demonstrated. For example, look to see that:

- production standards are met consistently
- wire or reinforcing is not visible in the finished product
- bonding is achieved in accordance with specifications.

Assessment method and context

Assessment will occur on industrial equipment in a work-like environment.

Competence in this unit may be assessed:

- by using an appropriate, portable vulcanising equipment
- in a situation allowing for the generation of evidence of the ability to respond to problems
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required. Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts. Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency applies to all work environments and sectors within the rubber industry. It includes the operation of all relevant additional equipment where that equipment is integral to the vulcanising process.

Procedures

All operations are performed in accordance with procedures. Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

This unit of competency includes use of equipment and tools such as:

- portable vulcanising equipment (including dispersion plates, pressure bags, edge bars, controllers)
- knives and other rubber cutting and shaping equipment
- hoists/lifting equipment not requiring any special permits or licences
- manual handling aids such as handcarts
- relevant personal protective equipment
- powered equipment/aids.

Hazards

Typical hazards include:

- pressure
- heat and hot rubber
- chemical splashes or spills
- dust or vapours/fumes
- manual handling hazards
- knife hazards.

Task sequences

Task sequences include:

- location of vulcaniser
- process monitoring
- quality checks.

Monitoring of vulcanisation

Monitoring of vulcanisation includes noting:

- times,
- vulcanisation quality,
- equipment operating temperatures and times
- additional pressures applied.

Problems

'Respond to routine problems' means 'apply known solutions to a limited range of predictable problems'. Typical process and product problems may include:

- incorrect vulcaniser set-up
- variations in materials
- contamination of materials
- unsuccessful vulcanising processes
- entrapped gasses
- wire or reinforcing exposure
- inappropriate material specification.

Variables

Key variables to be monitored include:

- heat
- pressure
- time
- tension.
-

Unit Sector(s)

Not applicable.

PMBPROD266B Prepare tyre casings for retreading

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the preparation (buffing) of used tyres prior to the laying on of retread. It applies to the tyre retreading sector of the industry.

Application of the Unit

Application of this unit

This competency applies to operators who buff residual tread from used tyres to prepare a carcass for laying retread. The key factors are the removal of sufficient but not excessive old rubber from the used tyre to establish a sound platform for the new tread. This competency is typically performed by operators working either independently or as part of a work team.

The operator will:

- check job sheets for work requirements
- check product for quality and conformity to specifications
- check materials required
- check machine set-up
- buff the tyre
- deal with non-conforming products, waste and scrap
- notice any problems and take required action (eg repair holes or areas where the steel radial becomes exposed)
- complete logs and reports.
-

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisites

This unit has **no** prerequisites.

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT ELEMENT	PERFORMANCE CRITERIA
1. Check work requirements.	<p>Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.</p> <p>1.1 Identify work requirements from production plan. 1.2 Identify specific requirements of the tyre being retreaded 1.3 Identify required equipment including handling, buffing, inspection and repair equipment. 1.4 Ask questions of appropriate person to confirm unusual practice. 1.5 Identify hazards associated with the job and take appropriate action. 1.6 Perform other pre-operational checks in accordance with procedures.</p>
2. Start up of tyre buffer to procedures.	<p>2.1 Conduct pre-start checks 2.2 Start up tyre buffer.</p>
3. Operate buffing equipment to procedures.	<p>3.1 Start machine safely and correctly when required. 3.2 Monitor buffing operations noting process stages, depth of cut (according to standard operating procedures) and abrasion. 3.3 Check against workplace standards for colour and texture before completing process. 3.4 Make adjustments to remedy non-conformity to buffing requirements. 3.5 Buzz out areas around exposed steel radials with hand held stone grinder. 3.6 Collect and reprocess/discard scrap/trim and other materials, as required. 3.7 Keep equipment and work area clean. 3.8 Pause machine cycle and perform stop, as required.</p>
4. Repair imperfections.	<p>4.1 Locate casing imperfections from previous inspection. 4.2 Repair casings (especially exposed steel areas) with rubber plugs in accordance with standard operating procedures. 4.3 Complete logs and records as required.</p>
5. Complete operations.	<p>5.1 Check casings for compliance with specifications. 5.2 Create job card, tyre ID, other tracking/information</p>

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
	<p>items needed as specified by procedures.</p> <p>5.3 Adhere the metal tag/s to the tyre wall with uncured rubber.</p>
6. Respond to routine problems to procedures.	<p>6.1 Recognise known faults that occur during the operation.</p> <p>6.2 Identify and take action on causes of routine faults.</p> <p>6.3 Log problems as required.</p> <p>6.4 Identify non-routine process and quality problems and take appropriate action.</p>

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Application of knowledge of the materials, equipment and process sufficient to recognise out of specification products, process problems and materials faults.

A knowledge of organization procedures, relevant regulatory requirements and the ability to implement them within appropriate time constraints and work standards. For example the minimum allowable depth of cover over the belt before retreading.

Application of the knowledge of managing risks using the hierarchy of controls applied to the buffing process. Application of approved hazard control and safety procedures and the use of PPE in relation to handling materials, equipment operation and cleanup.

Show knowledge of and skills in the preparation of tyre casings for retreading and its main components sufficient for the consistent production of quality products including:

- different mould part types
- types of releasing agents
- role of releasing agents
- procedures
- factors which may affect product quality or production output and appropriate remedies

Competence includes knowledge of:

- production workflow sequences and materials demand
- the reasons for checking process controls
- the normal range of process variability
- the potential effects of variations in materials and equipment operation in relation to quality of product.
- purpose of the buffing and repair processes
- correct selection and use of equipment, materials, processes and procedures.

Competence also includes the ability to:

- check process controls and report readings which are outside the normal range of process variability
- identify factors which may affect product quality or production output and appropriate remedies
- recognise pre-cure retreads and cured recaps, remould retreads and the relevant procedures to buff casings for each type
- explain the effect of unauthorised or emergency shutdown in relation to safety and production requirements
- plan own work, including predicting consequences and identifying improvements
- accurately monitor equipment operation and product quality
- identify when the operator is able to rectify faults, when assistance is required and who is the appropriate source for assistance
- identify and describe own role and role of others involved directly in the preparation of tyre casing for retreading process.

Language, literacy and numeracy requirements

This unit requires the ability to read and interpret typical product specifications, job sheets, procedures, basic machine control panels, material labels and safety information as provided to operators.

Writing is required to the level of completing workplace forms.

Basic numeracy is required, eg to determine that two 25 kg bags are needed to make up a requirement for 50 kg.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- apply the required skills and knowledge to prepare tyre casings for retreading
- apply approved procedures.

Consistent performance should be demonstrated. For example, look to see that production standards are met consistently.

Assessment method and context

Assessment will occur on an industrial buffing machine(s) equipment and will be undertaken in a work-like environment.

Competence in this unit may be assessed:

- by using an appropriate, industrial tyre buffing machine requiring demonstration of operation and start/stop procedures
- in a situation allowing for the generation of evidence of the ability to respond to problems
 - by using a suitable simulation and/or a range of case studies/scenarios
 - through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method.

Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts. Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency unit includes the use of manual handling aids and various powered equipment/aids. This competency applies to work environments and sectors within the rubber industry. It includes the operation of all relevant ancillary equipment.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards. These may include:

- movement of materials
- stacking of materials
- basic measurement of quantities
- basic pre-blending of materials.

Tools and equipment

This competency includes use of equipment and tools such as:

- hand carts and trolleys
- knives and other bag opening equipment
- hoists/lifting equipment not requiring any special permits or licences
- bung spanners and similar
- basic hand tools required for opening of material packaging
- relevant personal protective equipment.

Hazards

Typical hazards include:

- spills
- dusts/vapours
- hazardous materials (including rubber dust produced during the buffing process)
- manual handling hazards
- knife hazards.

Problems

Respond to routine problems' means 'apply known solutions to a variety of predictable problems'. Typical process and product problems may include:

- variations in tyres

- contamination of tyres
- damaged tyres.
- wrong raw materials
- inappropriate blade selection
- insufficient or too deep buffing.
-

Unit Sector(s)

Not applicable.

PMBPROD324B Inspect tyres for retreading

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the inspection of used tyres to determine their suitability for retreading and the resolving of routine and non-routine problems.

Application of the Unit

Application of this unit

This competency is typically performed by advanced operators applying knowledge of materials, product purpose and processes to the inspection of second hand tyres for defects that would preclude use as a retread. It also requires using a range of well developed skills requiring some discretion and judgment to recognise and resolve a range of problems.

The operator will:

- check settings and adjustments of inspection equipment
- inspect tyres by eye and/ or electronically
- repair minor holes and cracks in the casing
- solve inspection equipment and process problems, seeking guidance where necessary or appropriate.
-

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisites

This unit has **no** prerequisites.

Employability Skills Information

Employability Skills

The required outcomes described in this unit contain applicable Employability Skills. The Employability Skills Summary of the qualification(s) in which this unit is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
1. Plan own work requirements.	1.1 Identify the most appropriate equipment to be used for inspection and upstream and downstream operations from production plan or request. 1.2 Identify tyres to be inspected and check equipment to be used. 1.3 Implement measures to control identified hazards in line with procedures and duty of care.
2. Conduct tyre inspection.	2.1 Identify quality specifications and standard operating procedures for rejecting tyres for retreading 2.2 Check casings for conformity with specification requirements. 2.3 Tag tyres suitable for retreading following workplace procedures 2.4 Discard non-conforming tyres in accordance with workplace procedures. 2.5 Repair minor holes in casings of retreadables, as required. 2.6 Clean, adjust and lubricate equipment as required.
4. Anticipate and solve problems.	4.1 Recognise a problem or a potential problem. 4.2 Determine problems needing priority action. 4.3 Refer problems outside area of responsibility to appropriate person, with possible causes. 4.4 Seek information and assistance as required, to solve problems. 4.5 Solve problems within area of responsibility. 4.6 Follow through items initiated until final resolution has occurred.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit. Application of knowledge of tyre construction and technology, inspection methods and equipment sufficient to recognise tyre conditions which may lead to out of specification retreads. For example, weather checking can be difficult when a tire is under-inflated. The inspector will need to stress the sidewalls by hand or with an inspection spreader. Knowledge and ability to implement organization procedures, quality requirements at each inspection stage, and relevant regulatory requirements, within appropriate time constraints and work standards.

Application of the knowledge of managing risks using the hierarchy of controls applied to tyre inspection methods. Application of approved hazard control and safety procedures and the use of PPE in relation to handling materials, equipment operation and cleanup.

Knowledge and skills in tyre inspection and retreading process sufficient for consistent identification of good quality tyres for retreading:

- characteristics of finished and second hand tyres in relation to the impact of the retread process on product quality and safety
- importance of tyre size, speed rating and aspect ratio markings of tyres on inspection decisions
- function and operating principles of inspection equipment
- impact of significantly faulty tyres falsely passing inspection
- correct selection and use of equipment, materials, processes and procedures.

Competence also includes the ability to:

- plan own work, including predicting consequences and identifying improvements
- maintain inspection output and product quality using appropriate instruments, controls, test information and readings
- identify and describe own role and role of others involved directly in the retreading process.
- identify factors which may affect product quality or production output and appropriate remedies
- identify when assistance is required to solve problems.

Language, literacy and numeracy requirements

This unit requires the ability to read and interpret typical product specifications, job sheets and material labels as provided to operators.

Writing is required to the level of completing workplace forms and production reports.

Basic numeracy is required, eg to determine how many 2 kg, 3 kg and 5 kg bags are needed to make up a requirement for 50 kg.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for this training package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- identify critical tyre properties and tyre inspection criteria in relation to the retreading process and the end product
- make adjustments to the inspection process as required
- identify and take appropriate action on inspection problems and potential problems.

Consistent performance should be demonstrated. For example, look to see that:

- inspection is done thoroughly and consistently
- all safety procedures are always followed.

Assessment method and context

Assessment will occur using industrial tyre inspection methods and equipment and will be undertaken in a work-like environment.

Competence in this unit may be assessed:

- by using an appropriate tyre inspection method and/ or machine
- in a situation allowing for the generation of evidence of the ability to respond to problems
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required.

Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts. Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

The competency applies to the initial inspection of tyres for retreading. It covers the operation of inspection equipment and all relevant additional equipment where that equipment is integral to the tyre inspection process.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

This competency includes use of equipment and tools such as:

- inspection equipment (such as NDI scanning equipment, nail hole detector, high pressure tester, x-ray or ultrasound)
- manual handling aids such as handcarts and overhead tracks
- hand held lights
- basic hand tools required for inspecting holes in the tyre casing
- relevant personal protective equipment.

Hazards

Typical hazards include:

- dust
- manual handling hazards
- noise.

Problems

'Anticipate and solve problems' means resolve a wide range of routine and non-routine problems, using product and process knowledge to develop solutions to problems which do not have a known solution/s recorded in the procedures.

Typical process and product problems may include:

- equipment malfunction
- detecting hidden damage
- blow-outs
- punctures
- broken chords
- cord body fabric damage
- wear patterns.

Appropriate action for problems outside area of responsibility may be reporting to an appropriate person.

Appropriate action for solving problems within area of responsibility includes asking questions and seeking assistance from appropriate persons/sources.

Variables

Key variables to be monitored include:

- tire size
- speed ratings
- aspect ration markings
- pressure
- discolouration.
-

Unit Sector(s)

Not applicable.

PMBPROD325B Lay on tyre retreads

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the laying of retread on casings prepared from used tyres and the solving of routine problems. It applies to the rubber sector of the industry.

Application of the Unit

Application of this unit

This competency is typically performed by advanced operators applying knowledge of materials, product purpose and processes to the operation of laying tyre retreads to produce product conforming to requirements. It also requires using a range of well developed skills requiring some discretion and judgement to recognise and resolve a range of problems.

The operator:

- start up tyre retread laying machinery
- check settings and adjustments of equipment
- monitor equipment and process operation
- make appropriate adjustments to correct materials, equipment or process variations
- solve retread laying equipment, material and process problems, seeking guidance where necessary or appropriate.

This unit does not include:

- inspection - see *PROD324 Inspect tyres for retreading*
- preparation - see *PROD266 Prepare tyre casings for retreading*.
-

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisites

This unit has **no** prerequisites.

Employability Skills Information

Employability Skills

The required outcomes described in this unit contain applicable Employability Skills. The Employability Skills Summary of the qualification(s) in which this unit is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT ELEMENT	PERFORMANCE CRITERIA
1. Plan own work requirements.	<p>Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.</p> <p>1.1 Identify the most appropriate equipment to be used for production and upstream and downstream operations from production plan or request.</p> <p>1.2 Identify and check materials required.</p> <p>1.3 Implement measures to control identified hazards in line with procedures and duty of care.</p> <p>1.4 Identify requirements for materials, quality, production and equipment checks.</p>
2. Start up retread laying process to procedures.	<p>2.1 Identify process settings required for product.</p> <p>2.2 Set process to required settings.</p> <p>2.3 Check materials are correct.</p> <p>2.4 Take appropriate action for non-conforming materials.</p> <p>2.5 Set up date, batch and materials markings to specifications, as required.</p> <p>2.6 Complete pre-start checks.</p> <p>2.7 Start up retread laying process.</p>
3. Operate and make adjustments to the retread laying process to procedures.	<p>3.1 Operate retread laying process, noting key variables.</p> <p>3.2 Monitor product/process quality.</p> <p>3.3 Make adjustments to remedy faults and non-conformity as required.</p> <p>3.4 Establish a stable retread laying process.</p> <p>3.5 Adjust process to minimise scrap and trim.</p> <p>3.6 Clean, adjust and lubricate equipment as required.</p>
4. Shut down equipment to procedures.	<p>4.1 Determine type of shut down.</p> <p>4.2 Leave machine in appropriate condition and with appropriate locks, tags or notices.</p> <p>4.3 Complete relevant documentation.</p> <p>4.4 Ensure area is clean and clear after the shutdown, in readiness for the next start-up.</p>
5. Anticipate and solve problems.	<p>5.1 Recognise a problem or a potential problem</p> <p>5.2 Determine problems needing priority action.</p> <p>5.3 Refer problems outside area of responsibility to appropriate person, with possible causes.</p>

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
	5.4 Seek information and assistance as required to solve problems. 5.5 Solve problems within area of responsibility. 5.6 Follow through items initiated until final resolution has occurred.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Application of knowledge of the materials, equipment and process sufficient to recognise material and equipment conditions which may lead to out of specification production. For example, the inspection and preparation of casings is crucial to the quality of a retreaded tyre. Therefore, it is important to check, once the casings have been prepared that there are no further problems with the casings prior to laying the retread.

Knowledge of organization procedures, quality requirements at each production stage and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and work standards.

Application of the knowledge of managing risks using the hierarchy of controls applied to the retread laying process. Application of approved hazard control and safety procedures and the use of PPE in relation to handling materials, equipment operation and cleanup.

Competence includes the ability for the practical completion of the job to apply and explain:

- characteristics of materials and behaviour in relation to heat, pressure, flow rate and time
- function and operating principles of retread laying processes, equipment, machine components and ancillary equipment
- impact of tyre size, faulty tyres, speed rating, finished and second hand tyres, and aspect ratio markings of tyres on product quality and production output
- phases of the retread laying cycle and the effect of the key variables on product quality, in order to make appropriate adjustments to process and equipment settings. For example, the adhesive laying phase is needed when laying pre-cured treads to the casings to bond tread during vulcanisation.
- processing behaviour of those polymers which are used in the workplace
- changes to materials at various stages of production
- waste management and importance of non-conforming materials
- impact of variations in raw materials and equipment operation in relation to final product.

Skill to identify the range of possible causes of product faults.

Competence also includes the ability to:

- plan own work, including predicting consequences and identifying improvements
- maintain output and product quality using appropriate instruments, controls, test information and readings
- identify and describe own role and role of others involved directly in the retread laying process
- identify factors which may affect product quality or production output and appropriate remedies
- identify when the when assistance is required to solve problems.

Language, literacy and numeracy requirements

This unit requires the ability to read and interpret typical product specifications, job sheets and material labels as provided to operators.

Writing is required to the level of completing workplace forms and production reports.

Basic numeracy is required, eg to determine how many 2 kg, 3 kg and 5 kg bags are needed to make up a requirement for 50 kg.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for this training package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- identify critical materials properties and retread laying process variables in relation to the process requirements and the end product
- make adjustments to the process as required
- identify and take appropriate action on problems and potential problems.

Consistent performance should be demonstrated. For example, look to see that:

- the process runs consistently and smoothly, with the minimum need for human intervention
- all safety procedures are always followed.

Assessment method and context

Assessment will occur on an industrial retread laying machine(s) and equipment and will be undertaken in a work-like environment.

Competence in this unit may be assessed:

- by use of appropriate, industrial retread laying equipment and machinery requiring demonstration of start up, operation and shut down procedures
- in a situation allowing the generation of evidence of the ability to recognise, anticipate and resolve problems
- by use of a suitable simulation and/or a range of case studies/scenarios
- by a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts. Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency applies to tyre retreading. It includes the operation of all relevant additional equipment where that equipment is integral to the tread lay-up process.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

This unit of competency includes use of equipment and tools such as:

- manual handling aids (eg hand carts and trolleys)
- powered equipment/aids (eg compression rollers, staplers, cutting instruments and stone grinders)
- tread application equipment (eg semiautomatic builders to applying cured or uncured tread)
- moulds (for mould cure process)
- ancillary equipment (eg guide lights)
- hand tools (eg for roughing the surface, cutting and stapling the tread)
- raw materials (eg moulded tread and cushion gum)
- relevant personal protective equipment.

Hazards

Typical hazards include:

- fumes/vapours
- cutting tools
- manual handling hazards
- noise
- moving components of machinery and equipment.

Problems

'Anticipate and solve problems' means resolve a wide range of routine and non-routine problems, using product and process knowledge to develop solutions to problems which do not have a known solution/a solution recorded in the procedures.

Typical routine faults include:

- incorrect tread selected

- incorrect tyre inflation pressure.

Non-routine faults, which may have multiple causes include:

- faulty casings
- contamination of materials.

Typical process and product problems may include:

- equipment malfunction
- poorly aligned tread
- tread too long/short
- wrong tread profile.

Appropriate action for problems outside of area of responsibility may be reporting to an appropriate person.

Appropriate action for solving problems within area of responsibility includes asking questions and seeking assistance from appropriate persons/sources.

Variables

Key variables to be monitored include:

- speed (including equipment speed, laying of cured and uncured tread)
- pressure
- colour
- tyre components
- tread alignment
- product integrity and general conformance to specification and quality sample.
-

Unit Sector(s)

Not applicable.

PMBPROD326B Inspect tyres

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the testing and inspection of tyres and the solving of routine and non-routine problems.

Application of the Unit

Application of this unit

This competency is typically performed by advanced operators applying knowledge of materials, product purpose and processes in tyre inspection and testing to ensure quality, in both performance and safety, of finished tyres. It also requires using a range of well developed skills requiring some discretion and judgement to recognise and resolve a range of problems.

The operator will:

- inspect tyres visually, manually and by use of inspection equipment
- check settings and adjustments of equipment
- monitor equipment operation and correct variations
- identify non-conforming products and take appropriate action (eg ensuring discarded products are repaired where possible and/or scraped tyres are disposed of in accordance with workplace instructions)
- solve inspection and equipment problems, seeking guidance where necessary or appropriate.
-

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisites

This unit has **no** prerequisites.

Employability Skills Information

Employability Skills

The required outcomes described in this unit contain applicable Employability Skills. The Employability Skills Summary of the qualification(s) in which this unit is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT ELEMENT	PERFORMANCE CRITERIA
1. Plan own work requirements.	<p>Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.</p> <p>1.1 Identify the most appropriate equipment and processes to be used for tyre inspection and testing.</p> <p>1.2 Identify different tyre types, identification codings and quality standards required.</p> <p>1.3 Implement measures to control identified hazards in line with procedures and duty of care.</p> <p>1.4 Identify repair, scrap tyre and housekeeping needs</p>
2. Start up testing process to procedures.	<p>2.1 Conduct visual inspection of tyres to spot obvious defects.</p> <p>2.2 Manually locate bumps or dips.</p> <p>2.3 Check inspection equipment settings and make adjustments as required.</p> <p>2.4 Complete other pre-start checks in accordance with procedures.</p>
3. Operate tyre testing machines to procedures.	<p>3.1 Operate machine to rotate and test tyres, following standard operating procedures and State OHS requirements.</p> <p>3.2 Monitor product quality in accordance with procedures.</p> <p>3.3 Clean, adjust and lubricate equipment as required.</p> <p>3.4 Shut down equipment to procedures, in normal or emergency situations.</p> <p>3.5 Complete relevant documentation.</p>
4. Respond to faults.	<p>4.1 Identify possible routine and non-routine faults in the tyre.</p> <p>4.2 Determine tyres needing action.</p> <p>4.3 Determine possible fault causes.</p> <p>4.4 Report faults outside area of responsibility to designated person.</p> <p>4.5 Maintain appropriate records and log books to meet procedures/work instructions.</p>
5. Stamp, label and sort tyres.	<p>5.1 Stamp identification number on each tyre.</p> <p>5.2 Label tyres with weekly code.</p> <p>5.3 Sort passed tyres by coding.</p>

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
	5.4 Sort tyres for repair or scrap.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit. Application of knowledge of the materials, equipment and testing process sufficient to recognise material and equipment conditions which may lead to out of specification production.

Knowledge and ability to implement organization procedures, the quality requirements at each production stage and relevant regulatory requirements, within appropriate time constraints and work standards.

Application of the knowledge of managing risks using the hierarchy of controls applied to the tyre inspection/testing processes. Application of approved hazard control and safety procedures and the use of PPE in relation to handling materials. equipment operation and cleanup.

Knowledge and skills in tyre inspection and testing equipment, including:

- different tyre types and their construction and material content
- quality requirements for the different types of tyres
- function and operating principles of tyre testing equipment, machine components and ancillary equipment
- correct selection and use of equipment and inspection/testing procedures
- waste management and importance of repairing non-conforming products.

Competence also includes the ability to:

- plan own work, including predicting consequences and identifying improvements
- maintain output and product quality using appropriate instruments, controls, test information and readings
- identify and describe own role and role of others involved directly in the inspection/testing process
- identify what faults the operator is able to recognise manually and when assistance by equipment is required.

Language, literacy and numeracy requirements

This unit requires the ability to read and interpret typical product specifications, job sheets and machine control panels such as those displaying SPC information.

Writing is required to the level of completing workplace forms and production reports.

Basic numeracy is required, eg to determine how many 2 kg, 3 kg and 5 kg bags are needed to make up a requirement for 50 kg.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for this training package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- identify critical tyre properties and inspection criteria in relation to the end product
- make adjustments to inspections/testing process and equipment as required
- identify and take appropriate action on problems and potential problems.

Consistent performance should be demonstrated. For example, look to see that:

- tyre inspection and testing standards are met consistently
- all safety procedures are always followed.

Assessment method and context

Assessment will occur on an industrial tyre inspection/testing equipment and will be undertaken in a work-like environment.

Competence in this unit may be assessed:

- by observation over a range of tyre inspection/testing procedures undertaken in the workplace
- in a situation allowing for the generation of evidence of the ability to respond to problems
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency applies to the inspection and testing of tyres within the rubber industry. It includes the operation of all relevant additional equipment where that equipment is integral to the inspection/testing process.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

This competency includes use of equipment and tools such as:

- tyre testing machines such as x-ray, uniformity, bulge test, and tyre balance test machines
- hand tools used in the inspection/testing process
- material loading equipment used for loading of tyres
- relevant personal protective equipment.

Hazards

Typical hazards include:

- manual handling hazards
- equipment operations
- dust/ vapours.

Problems

'Anticipate and solve problems' means resolve a wide range of routine and non-routine problems, using product and process knowledge to develop solutions to problems which do not have a known solution/s recorded in the procedures.

Typical routine faults include:

- bulges in sidewalls
- deformation
- damaged carcass
- offset
- snaking
- cuts.

Typical inspection/testing problems may include:

- equipment malfunction
- incorrect set-up of testing machine to tyre type
- detecting hidden damage.

Appropriate action for problems outside area of responsibility may be reporting to an appropriate person.

Appropriate action for solving problems within area of responsibility includes asking questions and seeking assistance from appropriate persons/sources.

Variables

Key variables to be monitored include:

- colour
- product weight

- product integrity and general conformance to specification/sample.
-

Unit Sector(s)

Not applicable.

PSPMNGT610A Manage public sector financial resources

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This unit covers input into public sector budgeting, financial forecasting and reporting requirements, and the allocation and management of resources to achieve the required outputs of the business unit. It includes contributing to financial bids and estimates, allocating funds, managing budgets and reporting on financial activity.

In practice, the management of public sector financial resources may occur in the context of other generalist or specialist public sector workplace activities such as managing compliance with legislation, maintaining and enhancing ethical practice, managing people, policy etc.

This unit is one of 6 units of competency in the *Working in Government* and *Management* Competency fields that deal with resources.

Related units are:

PSPGOV204B Access and use resources

PSPGOV305B Access and use resources and financial systems

PSPGOV403B Use resources to achieve work unit goals

PSPGOV503B Coordinate resource allocation and usage

This is a new unit of competency, added to the *Management* Competency field of the Training Package in 2004.

Application of the Unit

Not applicable.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements are the essential outcomes of the unit of competency. Together, performance criteria specify the requirements for competent performance. Text in *bold italics* is explained in the Range Statement following.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Contribute to financial bids and estimates	<p>1.1 Organisational initiatives requiring the preparation of <i>bids</i> and <i>estimates</i> are identified in accordance with resource constraints and organisational needs</p> <p>1.2 <i>Information</i> for bids/estimates is substantiated, contains logical assumptions and takes account of strategic plans, government policies and priorities</p> <p>1.3 Information for bids/estimates is prepared in accordance with government <i>budgetary requirements</i> including a timeframe to meet critical submission dates</p> <p>1.4 <i>Documentation</i> to support bids/estimates is prepared in accordance with budget guidelines</p>
2. Allocate funds	<p>2.1 <i>Budgets</i> are approved and financial resources are allocated according to organisational priorities/business plan</p> <p>2.2 Allocations are made in accordance with organisational policy and procedures and take account of any statutory requirements or constraints</p> <p>2.3 Audit trails are maintained to ensure accurate tracking and to identify variances between agreed and actual allocations</p> <p>2.4 Financial allocation is monitored against organisational objectives and priorities and <i>corrective action</i> is taken as required in accordance with organisational policy and procedures</p>
3. Manage budgets	<p>3.1 Budget management is undertaken that meets the financial accountability requirements of the organisation</p> <p>3.2 Expenses are monitored against budget and authorised in accordance with financial <i>delegation</i> and organisational <i>financial controls</i></p> <p>3.3 <i>Financial reports</i> are obtained and provided in accordance with organisational requirements</p> <p>3.4 Expenses are monitored through analysis of financial information/reports and problems are resolved or referred in accordance with organisational procedures and financial delegation</p> <p>3.5 Expenditure is aligned with service delivery milestones/expectations</p> <p>3.6 Changes to the budget are negotiated to account for potential under-spending, delays in service/program delivery, overruns and unneeded line items in accordance with organisational policy and procedures</p>
4. Report on financial	<p>4.1 Requirements for financial management and reporting are identified in accordance with the public sector <i>financial</i></p>

ELEMENT

activities

PERFORMANCE CRITERIA

management framework

4.2 Financial management and reporting are undertaken in accordance with organisational requirements and *public sector financial management policy and procedures*

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the essential skills and knowledge and their level, required for this unit.

Skill requirements

Look for evidence that confirms skills in:

preparing information and reports requiring precision of expression
meeting formatting and process requirements for bids and estimates and linkages to strategic plans
monitoring financial information
interpreting and signing off on financial reports
interpreting organisational information in financial terms
adjusting communication to suit different audiences
using cross-cultural communication relating to financial management - across professional cultures such as accounting, IT, arts, policy areas
responding to diversity, including gender and disability
accessing information and legislation electronically or in hard copy
applying environmental, sustainability and occupational health and safety procedures relating to working in the public sector

Knowledge requirements

Look for evidence that confirms knowledge and understanding of:

financial management principles
legislation, policies and processes relating to public sector financial management, such as conflicts of interest, procurement, value for money
the organisation's financial accountability mechanisms
corporate governance requirements
internal controls and why they are used
delegations and why the public sector uses them
public sector financial management framework (detailed knowledge) and the relationship between the elements of the framework
documents that make up the financial management framework
legislation related to working in the public sector such as equal employment opportunity, environmental, sustainability and occupational health and safety requirements

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide specifies the evidence required to demonstrate achievement in the unit of competency as a whole. It must be read in conjunction with the Unit descriptor, Performance Criteria, the Range Statement and the Assessment Guidelines for the Public Sector Training Package.

Units to be assessed together

- *Pre-requisite* units that must be achieved prior to this unit: *Nil*
- *Co-requisite* units that must be assessed with this unit: *Nil*
- *Co-assessed units* that may be assessed with this unit to increase the efficiency and realism of the assessment process include, but are not limited to:

PSPETHC601B Maintain and enhance confidence in public service

PSPLEGN601B Manage compliance with legislation in the public sector

PSPMNGT603B Facilitate people management

PSPMNGT602B Manage resources

PSPMNGT608B Manage risk

PSPMNGT609B Formulate business strategies

PSPPOL603A Manage policy implementation

Overview of evidence requirements

In addition to integrated demonstration of the elements and their related performance criteria, look for evidence that confirms:

- the knowledge requirements of this unit
- the skill requirements of this unit
- application of the Employability Skills as they relate to this unit (see Employability Summaries in Qualifications Framework)
- management of public sector financial resources in a range of (2 or more) contexts (or occasions, over time)

Resources required to carry out assessment

These resources include:

- public sector and organisational financial procedures and protocols
- workplace scenarios and case studies to capture the range of situations likely to be encountered when managing public sector financial resources
- financial legislation and guidelines such as central agency guidelines
- budget process and guidelines

Where and how to assess evidence

Valid assessment of this unit requires:

- a workplace environment or one that closely resembles normal

EVIDENCE GUIDE

work practice and replicates the range of conditions likely to be encountered when managing public sector financial resources, including coping with difficulties, irregularities and breakdowns in routine

- management of public sector financial resources in a range of (2 or more) contexts (or occasions, over time)

Assessment methods should reflect workplace demands, such as literacy, and the needs of particular groups, such as:

- people with disabilities
- people from culturally and linguistically diverse backgrounds
- Aboriginal and Torres Strait Islander people
- women
- young people
- older people
- people in rural and remote locations

Assessment methods suitable for valid and reliable assessment of this competency may include, but are not limited to, a combination of 2 or more of:

- case studies
- portfolios
- projects
- questioning
- scenarios
- authenticated evidence from the workplace and/or training courses

For consistency of assessment

Evidence must be gathered over time in a range of contexts to ensure the person can achieve the unit outcome and apply the competency in different situations or environments

Range Statement

RANGE STATEMENT

The Range Statement provides information about the context in which the unit of competency is carried out. The variables cater for differences between States and Territories and the Commonwealth, and between organisations and workplaces. They allow for different work requirements, work practices and knowledge. The Range Statement also provides a focus for assessment. It relates to the unit as a whole. Text in *italics* in the Performance Criteria is explained here.

- | | |
|---|--|
| <i>Bids may include</i> | <ul style="list-style-type: none"> • program discretionary bids • program, sub-program, section, business unit bids • portfolio managed bids |
| <i>Estimates may include</i> | <ul style="list-style-type: none"> • budget estimates • additional estimates • forward estimates • long-term estimates • forecasts |
| <i>Information may include</i> | <ul style="list-style-type: none"> • historical information • cost-benefit analysis • staff requirements • contractual information • efficiency/sustainability requirements |
| <i>Budgetary requirements may include</i> | <ul style="list-style-type: none"> • zero-based budgeting • accrual budgeting • activity-based costing/management • output-based budgeting • top-down/bottom-up approach • base plus increment |
| <i>Supporting documentation may include</i> | <ul style="list-style-type: none"> • phasing for liability and expenditure/cash flow implications • impact statements • reasons for major variations to financial guidance • staffing resources |
| <i>Budgets may include</i> | <ul style="list-style-type: none"> • capital expenses • recurrent expenses • staffing costs • cash flow • forward estimates |

| <i>Delegations are</i> | <ul style="list-style-type: none"> • functions or powers (under an act) assigned to others |

RANGE STATEMENT

- limited to specified powers or amounts
 - made to persons in specified positions
- Financial controls should*
- identify, record and measure revenue, expenses, assets, liabilities and equity
 - ensure assets are safeguarded and used to avoid waste, extravagance, loss and misuse
 - ensure liabilities are not incurred without proper authority
 - ensure correct valuation, cut-off, presentation and disclosure of financial balances and transactions
 - be linked to the organisation's risk management strategy
- Financial reports may include*
- program, sub-program, section, business unit financial reports
 - accrual reports
 - monthly/quarterly financial reports including cost/unit, costs incurred compared with share of program delivered
 - annual reports
- Elements of the public sector financial management framework may include*
- internal controls
 - segregation of duties
 - delegations
 - corporate governance requirements
 - service level agreements
 - internal and external reporting
 - risk management
- Public sector financial policies and procedures may include*
- financial management acts and regulations
 - financial administration and audit acts
 - Treasury guidelines
 - public sector finance standards
 - financial management benchmarking studies
 - the organisation's:
 - financial management practice manual
 - delegation manual
 - budget manual/instructions
 - style manual
 - quality manual
 - government financial policy statements

Competency field Management

PUADEFEO101D Work safely with explosive ordnance

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit covers the competency required to achieve a safe work environment when working with explosive ordnance.

Application of the Unit

Application of the Unit

This competency normally applies in any installation or organisation involved in the storage, distribution, maintenance and use of explosive ordnance; this includes research and development establishments, and proof and experimental establishments.

Explosive ordnance being all munitions containing explosives, nuclear fission or fusion materials, and biological and chemical agents.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Pre-requisite Unit/s

Nil

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency.

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the Required Skills and Knowledge and/or the Range Statement. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1. Access and apply safety procedures

- 1.1 *Safety procedures and instructions* are accessed and clarified
- 1.2 All work is conducted within the requirements of *organisational* permit-to-work and/or tag out procedures
- 1.3 Breaches in site safety are identified and acted on or reported in accordance with organisational reporting procedures
- 1.4 Load handling and shifting procedures are selected in accordance with identified requirements for particular goods
- 1.5 Handling equipment is checked for conformity with workplace requirements and manufacturer's guidelines
- 1.6 Where relevant, suitable signage is checked for compliance with workplace procedures

ELEMENT	PERFORMANCE CRITERIA
2. Apply personal safety measures	<p>2.1 <i>Personal protective measures</i> are followed in accordance with organisational policy and procedures</p> <p>2.2 Safety of immediate working area and equipment is established and maintained in accordance with organisational policy, procedures and directives</p> <p>2.3 Relevant authorisation is obtained before specialised and hazardous work is carried out in accordance with organisational procedures and directives</p>
3. Apply dangerous goods and hazardous substances requirements	<p>3.1 Individual responsibilities regarding <i>dangerous goods and hazardous substances</i> are recognised and applied</p> <p>3.2 Legislative requirements for hazardous substances and/or dangerous goods are understood and are used to plan work activities</p> <p>3.3 Dangerous goods and hazardous substances labels and characteristics are identified and recognised, and relevant action/criteria is applied</p> <p>3.4 Confirmation is sought from relevant personnel where dangerous goods or hazardous materials do not appear to be appropriately marked</p> <p>3.5 Dangerous goods and hazardous substances are stored in accordance with the relevant compatibility, separation constraints and security requirements</p> <p>3.6 Dangerous goods and hazardous substances are handled and moved in accordance with legislative requirements and organisational procedures</p>

ELEMENT

PERFORMANCE CRITERIA

4. **Apply net explosive quantity and compatibility**

- 4.1 Documentation and licensing limitations are identified and/or acquired in accordance with organisational policy and procedures
- 4.2 *Net explosive quantity* is applied in accordance with statutory requirements and organisational policy and procedures
- 4.3 *Compatibility* is applied in accordance with statutory requirements and organisational policy and procedures

5. **Identify and report incidents**

- 5.1 Incidents and injuries are identified, recorded and *reported* in accordance with organisational procedures
- 5.2 Participation in incident investigations is conducted in accordance with the responsibilities and protection under legislation

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Required Skills

- access, read, interpret and apply information on safety
- apply area safety procedures
- apply compatibility
- apply net explosive quantity
- apply safe manual handling procedures
- comply with hazardous materials requirements
- encourage other team members
- follow instructions/directives and report information
- identify and report hazards and incidents
- identify, select and use personal protection measures
- read to a level required to interpret job instructions, workplace forms and reports
- use a variety of verbal and non-verbal communication techniques
- write at the level required to complete workplace documentation and reports

Required Knowledge

- application of compatibility
- application of net explosive quantity
- composition of teams and roles and responsibilities of team members
- hazard and incident identification and reporting techniques
- hazardous materials requirements
- manual handling procedures
- organisational safety policies and structures
- organisational safety information sources
- personal protection measures
- safety and advisory signs
- team work
- techniques for supporting others
- verbal and non-verbal communication techniques
- written communication to a level required to complete workplace documentation and reports

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessment must confirm the ability to comply with organisational safety requirements, and appropriate legislative and regulatory requirements.

Assessment must also confirm the ability to work safely within an explosive ordnance environment and to:

- identify, select and use personal protective measures
- apply safe manual handling practices
- apply net explosive quantity
- apply compatibility
- identify and report hazards and incidents
- participate in incident investigations.

Consistency in performance

Competency should be demonstrated over time and observed in a range of actual or simulated explosive ordnance contexts.

Context of and specific resources for assessment

Context of assessment

Competency should be assessed in the workplace or in a simulated work environment and in accordance with all relevant legislation and organisational requirements.

Evidence should be gathered through observation of the practical component and targeted questioning to assess required knowledge.

Specific resources for assessment

Access is required to:

- facilities and resources used in the storage, distribution or maintenance of explosive ordnance.

EVIDENCE GUIDE

Method of assessment

In a public safety environment assessment is usually conducted via direct observation in a training environment or in the workplace via subject matter supervision and/or mentoring, which is typically recorded in a competency workbook.

Assessment is completed using appropriately qualified assessors who select the most appropriate method of assessment.

Assessment may occur in an operational environment or in an industry-approved simulated work environment.

Forms of assessment that are typically used include:

- direct observation
- interviewing the candidate
- journals and workplace documentation
- third party reports from supervisors
- written or oral questions.

Range Statement

RANGE STATEMENT

The Range Statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. ***Bold italicised*** wording in the Performance Criteria is detailed below.

Explosive ordnance include	<p>All munitions containing explosives, nuclear fission or fusion materials and biological and chemical agents, including:</p> <ul style="list-style-type: none"> • bombs and warheads • guided and ballistic missiles • artillery, mortar, rocket and small arms ammunition • all mines, torpedoes and depth charges • demolition charges • pyrotechnics • clusters and dispensers • cartridge and propellant actuated devices • electro explosive devices • clandestine and other improvised explosive devices • all similar or related items or components explosive in nature
Safety procedures and instructions may include	<p>Explosive ordnance governance regulations, policy and procedures</p> <p>Organisational instructions</p>
Organisation may include	<p>Defence organisation</p> <p>Enterprises that work with explosive ordnance</p> <p>Other government departments or instrumentalities that work with explosive ordnance</p>
Personal protective measures may include	<p>Adherence to all occupational health and safety (OH&S) regulations, policy and procedures</p> <p>Organisational instructions</p> <p>Personal protective equipment</p>
Dangerous goods and hazardous substances may include	<p>Any item that is identified by the UN Classification System for Dangerous Goods</p>
Net explosive quantity includes	<p>Explosive capacity calculated in a wide range of activities related to the storage, distribution and maintenance of explosive ordnance</p>

RANGE STATEMENT

Compatibility is

Applied in a wide range of activities related to the storage, distribution and maintenance of explosive ordnance and other hazardous materials

Reports may include

PUADEFEO501D Conduct explosive ordnance inspection

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit covers the competency required to conduct an inspection on all types of explosive ordnance in order to assess its condition and to process further action.

Application of the Unit

Application of the Unit

This competency normally applies to the individual who is required to conduct an inspection on all types of explosive ordnance in order to assess its condition and to process the explosive ordnance for further action.

The inspection of the explosive ordnance is carried out in a logical sequence while adhering to all relevant occupational health and safety (OH&S) requirements. How the explosive ordnance is processed is subject to the outcomes of the inspection. In the case of defective or damaged explosive ordnance it may be retained and returned to the manufacturer, maintained or disposed of, or restrictions may be placed on its use.

Licensing/Regulatory Information

Not applicable.

Pre-requisite Unit/s Nil

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency.

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the Required Skills and Knowledge and/or the Range Statement. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

1. Prepare for inspection

- 1.1 Requirement for *explosive ordnance inspection* is identified from work requests/instructions and confirmed
- 1.2 OH&S requirements, including those contained in *organisational* procedures, are applied throughout the operation
- 1.3 *Technical references*, tools and equipment required for the inspection are identified, acquired and prepared in accordance with organisation procedures
- 1.4 Explosive ordnance is acquired, identified and accounted for, moved or pre-positioned in preparation for inspection
- 1.5 *Net explosive quantities* and *compatibility* are identified, calculated, assessed and applied throughout the operation

ELEMENT

PERFORMANCE CRITERIA

2. **Inspect explosive ordnance**

- 2.1 Explosive ordnance is inspected in a logical set sequence to ensure that *defects or damage* are not overlooked in accordance with organisation policy and procedures and technical specifications
- 2.2 Damage or other defects are identified and recorded in accordance with organisation procedures

3. **Carry out post inspection procedures**

- 3.1 Explosive ordnance is processed in accordance with organisation procedures
- 3.2 *Documentation and records* are maintained in accordance with statutory, organisation and workshop requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Required Skills

- apply compatibility constraints
- apply safety policies and structures
- apply OH&S requirements
- calculate net explosive quantity
- communicate orally and in writing
- maintain documentation
- read, access, interpret and apply technical instructions and drawings related to explosive ordnance inspections
- use relevant tools and equipment

Required Knowledge

- assessment of compatibility
- calculation of net explosive quantity
- characteristics and limitations of explosive ordnance to be inspected
- inspection procedures
- organisational documentation requirements
- organisational OH&S requirements
- organisational safety policies and structures

Evidence Guide

EVIDENCE GUIDE

|

EVIDENCE GUIDE

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessment must confirm the ability to comply with:

- organisational safety requirements
- appropriate legislative and regulatory requirements.

Assessment must also confirm the ability to work safely within an explosive ordnance environment and to:

- calculate and apply net explosive quantity
- assess and apply compatibility
- process explosive ordnance
- maintain documentation.

Consistency in performance

Competency should be demonstrated in a range of actual or simulated explosive ordnance contexts.

Context of and specific resources for assessment

Context of assessment

Competency should be assessed in the workplace or in a simulated work environment, in accordance with all relevant legislation and organisation requirements.

Specific resources for assessment

Access is required to:

- facilities and resources used in the storage, distribution or maintenance of explosive ordnance, including a licensed explosive site.

EVIDENCE GUIDE

Method of assessment

This unit may be assessed with the following unit:

- PUADEFEO101D Work safely with explosive ordnance.

In a public safety environment assessment is usually conducted via direct observation in a training environment or in the workplace via subject matter supervision and/or mentoring, which is typically recorded in a competency workbook.

Assessment is completed using appropriately qualified assessors who select the most appropriate method of assessment.

Assessment may occur in an operational environment or in an industry-approved simulated work environment.

Forms of assessment that are typically used include:

- direct observation
- interviewing the candidate
- journals and workplace documentation
- third party reports from supervisors
- written or oral questions.

Range Statement

RANGE STATEMENT

The Range Statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. ***Bold italicised*** wording in the Performance Criteria is detailed below.

Explosive ordnance inspections may be conducted	<p>As part of a work program</p> <p>On direction</p> <p>On receipt</p> <p>Prior to maintenance</p> <p>Prior to or post any activity</p> <p>And may include inspection to confirm free from explosives, the use of special measuring devices, gauges and locally patented tools</p>
Organisation may include	<p>Defence organisation</p> <p>Enterprises that work with explosive ordnance</p> <p>Other government departments or instrumentalities that work with explosive ordnance</p>
Technical references may include	<p>Technical drawings</p> <p>Technical reference pamphlets</p> <p>Orders and instructions</p> <p>Other publications</p>
Net explosive quantities include	<p>Explosive capacity calculated in a wide range of activities related to the storage, distribution and maintenance of explosive ordnance</p>
Compatibility is	<p>Assessed in a wide range of activities related to the storage, distribution and maintenance of explosive ordnance and other hazardous materials</p>
Inspection may result in explosive ordnance being	<p>Passed for use</p> <p>Recommended for sentencing</p> <p>Rejected</p>
Explosive ordnance defects or damage may include	<p>Non-compliance with technical specifications</p> <p>Corrosion</p> <p>Surface damage</p>

RANGE STATEMENT

Processing may include

Disposal, including:

- jettisoning
- ditching
- destruction
- restrictions on use

Retention for return or maintenance

Documentation and records may include

Receipt and issue records

Timesheets

Work records

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to plan and organise the assessment process, including recognition of prior learning (RPL), in a competency-based assessment system. It also includes the development of simple assessment instruments.

Application of the Unit

This unit typically applies to assessors and workplace supervisors with assessment planning responsibilities; and trainers or other assessors responsible for planning assessment, including RPL.

The unit is suitable for those with an existing assessment strategy which documents the overall framework for assessment.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT

Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1. Determine assessment approach	<p>1.1 Identify candidate and confirm <i>purposes and context of assessment/RPL</i> with relevant people according to <i>legal, organisational and ethical requirements</i></p> <p>1.2 Identify and access <i>benchmarks for assessment/RPL</i> and any specific assessment guidelines</p>
2. Prepare the assessment plan	<p>2.1 Determine evidence and <i>types of evidence</i> needed to demonstrate competence, according to the <i>rules of evidence</i></p> <p>2.2 Select <i>assessment methods</i> which will support the collection of defined evidence, taking into account the context in which the assessment will take place</p> <p>2.3 Document all aspects of the <i>assessment plan</i> and confirm with relevant personnel</p>
3. Develop assessment instruments	<p>3.1 Develop <i>simple assessment instruments</i> to meet target group needs</p> <p>3.2 Analyse <i>available assessment instruments</i> for their suitability for use and modify as required</p> <p>3.3 <i>Map assessment</i> instruments against unit or course requirements</p> <p>3.4 Write clear instructions for candidate about the use of the instruments</p> <p>3.5 Trial draft assessment instruments to validate content and applicability, and record outcomes</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- cognitive interpretation skills to:
 - interpret competency standards and other assessment documentation, including material relating to reasonable adjustment
 - identify opportunities for integrated competency assessment
 - contextualise competency standards to the operating assessment environment, including RPL
 - consider access and equity needs of diverse candidates
- technology skills to use appropriate equipment and software to communicate effectively with others
- research and evaluation skills to:
 - obtain competency standards, assessment tools and other relevant assessment resources
 - research candidate characteristics and any reasonable adjustment needs
 - evaluate feedback, and determine and implement improvements to processes
- literacy skills to read and interpret relevant information to design and facilitate assessment and recognition processes
- communication skills to discuss assessment, including RPL processes with clients and other assessors
- interpersonal skills to:
 - demonstrate sensitivity to access and equity considerations and candidate diversity
 - promote and implement equity, fairness, validity, reliability and flexibility in planning an assessment processes.
- **Required knowledge**
- ethical and legal requirements of an assessor
- competency-based assessment, including:
 - work focused
 - criterion referenced
 - standards based
 - evidence based
- different purposes of assessment and different assessment contexts, including RPL
- how to read and interpret the identified competency standards as the benchmarks for assessment
- how to contextualise competency standards within relevant guidelines
- four principles of assessment and how they guide the assessment process
- purpose and features of evidence, and different types of evidence used in competency-based assessments, including RPL
- rules of evidence and how they guide evidence collection
- different types of assessment methods, including suitability for collecting various types of evidence

- assessment instruments and their purpose; different types of instruments; relevance of different instruments for specific evidence-gathering opportunities.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<ul style="list-style-type: none"> • Evidence of the ability to: • plan and organise the assessment process on a minimum of two occasions • collect evidence that demonstrates: <ul style="list-style-type: none"> • documented assessment plans • having covered a range of assessment events • catering for a number of candidates • different competency standards or accredited curricula • an RPL assessment • contextualisation of competency standards and the selected assessment tools, where required • incorporation of reasonable adjustment strategies • development of simple assessment instruments for use in the process • organisational arrangements.
Context of and specific resources for assessment	<p>Evidence must be gathered in the workplace wherever possible. Where no workplace is available, a simulated workplace must be provided.</p> <p>Assessment must ensure access to training products, such as training packages and accredited course documentation.</p>
Method of assessment	
Guidance information for assessment	

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Purposes of assessment/ RPL</i> may include:</p>	<ul style="list-style-type: none"> • recognising current existing competence of candidates • determining if competence has been achieved following learning • establishing candidate progress towards achievement of competence • determining language, literacy and numeracy needs of candidates • certifying competence through a qualification or Statement of Attainment • licensing or regulatory requirements.
<p><i>Context of assessment/ RPL</i> may include:</p>	<ul style="list-style-type: none"> • environment in which the assessment/RPL will be carried out, including real or simulated workplace • opportunities for collecting evidence in a number of situations • relationships between competency standards and: <ul style="list-style-type: none"> • evidence to support RPL • work activities in the candidate's workplace • learning activities • who carries out the assessment/RPL.
<p><i>Organisational, legal and ethical requirements</i> may include:</p>	<ul style="list-style-type: none"> • assessment system policies and procedures • assessment strategy requirements • reporting, recording and retrieval systems for assessment, including RPL • quality assurance systems • business and performance plans • access and equity policies and procedures • collaborative and partnership arrangements • defined resource parameters • mutual recognition arrangements • industrial relations systems and processes, awards, and enterprise agreements • Australian Quality Training Framework • registration scope • human resources policies and procedures • legal requirements, including:

	<ul style="list-style-type: none"> • anti-discrimination • equal employment opportunity • job role, responsibilities and conditions • relevant industry codes of practice • confidentiality and privacy requirements • OHS considerations, including: <ul style="list-style-type: none"> • ensuring OHS requirements are adhered to during the assessment process • identifying and reporting OHS hazards and concerns to relevant personnel.
Benchmarks for assessment/RPL may include:	<ul style="list-style-type: none"> • criterion against which the candidate is assessed or prior learning recognised, which may be: <ul style="list-style-type: none"> • competency standard/unit of competency • assessment criteria of course curricula • performance specifications of an enterprise or industry • product specifications.
Types of evidence may include:	<ul style="list-style-type: none"> • direct • indirect • supplementary.
Rules of evidence ensure that evidence collected is:	<ul style="list-style-type: none"> • valid • sufficient • authentic • current.
Assessment methods are the particular techniques used to gather evidence and may include:	<ul style="list-style-type: none"> • direct observation, for example: <ul style="list-style-type: none"> • real work/real time activities at the workplace • work activities in a simulated workplace environment • structured activities, for example: <ul style="list-style-type: none"> • simulation exercises and role-plays • projects • presentations • activity sheets • questioning, for example: <ul style="list-style-type: none"> • written questions, e.g. on a computer • interviews • self-assessment • verbal questioning • questionnaires • oral or written examinations (applicable at higher AQF levels) • portfolios of evidence, for example:

	<ul style="list-style-type: none"> • collection of work samples compiled by candidate • product with supporting documentation • historical evidence • journal or log book • information about life experience • review of products, for example: <ul style="list-style-type: none"> • testimonials and reports from employers and supervisors • evidence of training • authenticated prior achievements • interview with employer, supervisor, or peer.
<i>Assessment plan</i> may include:	<ul style="list-style-type: none"> • overall planning document describing: <ul style="list-style-type: none"> • what is to be assessed • when assessment is to take place • where assessment is to take place • how assessment is to take place.
<i>Simple assessment instruments</i> may include:	<ul style="list-style-type: none"> • instruments developed by an assessor as part of formative or summative assessment activities, including: <ul style="list-style-type: none"> • profiles of acceptable performance measures • templates and proformas • specific questions or activities • evidence and observation checklists • checklists for the evaluation of work samples • recognition portfolios • candidate self-assessment materials • instruments developed elsewhere that have been modified by the assessor for use with a particular client group.
<i>Available assessment instruments</i> may include:	<ul style="list-style-type: none"> • commercially available instruments • those created by others inside the registered training organisation.
<i>Map assessment</i> means:	<ul style="list-style-type: none"> • showing a clear relationship between the evidence and the requirements of the unit.

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to assess the competence of a candidate.

Application of the Unit

This unit typically applies to assessors.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT

Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1. Prepare for assessment	<p>1.1 Interpret <i>assessment plan</i> and confirm organisational, legal and ethical requirements for conducting assessment with relevant people</p> <p>1.2 Access and interpret relevant <i>benchmarks for assessment</i> and nominated <i>assessment tools</i> to confirm the requirements for evidence to be collected</p> <p>1.3 Arrange identified material and physical resource requirements according to assessment system policies and procedures</p> <p>1.4 Organise <i>specialist support</i> required for assessment</p> <p>1.5 Explain, discuss and agree details of the assessment plan with candidate</p>
2. Gather quality evidence	<p>2.1 Use agreed <i>assessment methods</i> and instruments to gather, organise and document evidence in a format suitable for determining competence</p> <p>2.2 Apply the principles of assessment and rules of evidence in gathering quality evidence</p> <p>2.3 Determine opportunities for evidence gathering in actual or simulated activities through consultation with the candidate and relevant personnel</p> <p>2.4 Determine opportunities for integrated assessment activities and document any changes to assessment instruments where required</p>
3. Support the candidate	<p>3.1 Guide candidates in gathering their own evidence to support recognition of prior learning (RPL)</p> <p>3.2 Use appropriate communication and interpersonal skills to develop a professional relationship with the candidate that reflects sensitivity to <i>individual differences</i> and enables two-way <i>feedback</i></p> <p>3.3 Make decisions on reasonable adjustments with the candidate, based on candidate's needs and characteristics</p> <p>3.4 Access required specialist support in accordance with the assessment plan</p> <p>3.5 Address any OHS risk to person or equipment immediately</p>
4. Make the assessment decision	<p>4.1 Examine collected evidence and evaluate it to ensure that it reflects the evidence required to demonstrate competence</p> <p>4.2 Use judgement to infer whether competence has been demonstrated, based on the available evidence</p> <p>4.3 Make assessment decision in line with agreed assessment procedures and according to agreed assessment plan</p> <p>4.4 Provide clear and constructive feedback to candidate regarding</p>

	the assessment decision and develop any follow-up action plan required
5. Record and report the assessment decision	5.1 Record assessment outcomes promptly and accurately 5.2 Complete and process an assessment report according to agreed assessment procedures 5.3 Inform other relevant parties of the assessment decision according to confidentiality conventions
6. Review the assessment process	6.1 Review the assessment process in <i>consultation</i> with relevant people to improve own future practice 6.2 Document and record the review according to relevant assessment system policies and procedures

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analysis and interpretation skills to:
 - break down competency standards
 - interpret assessment tools and other assessment information, including those used in RPL
 - identify candidate needs
 - make judgements based on assessment of available evidence
- observation skills to:
 - recognise candidate's prior learning
 - determine candidate's performance
 - identify when candidate may need assistance during the assessment processes
- research and evaluation skills to:
 - access required human and material resources for assessment
 - access assessment system policies and procedures
 - access RPL policies and procedures
 - evaluate evidence
 - evaluate assessment process
- cognitive skills to:
 - weigh up the evidence and make a judgement
 - consider and recommend reasonable adjustments
- decision-making skills to:
 - recognise a candidate's prior learning
 - make a decision on a candidate's competence
- literacy skills to:
 - read and interpret relevant information to conduct assessment
 - prepare required documentation and records or reports of assessment outcomes in required format
- communication and interpersonal skills to:
 - explain the assessment, including RPL process
 - give clear and precise instructions
 - ask effective questions
 - provide clarification
 - discuss process with other relevant people
 - give appropriate feedback
 - discuss assessment outcome
 - use language appropriate to candidate and assessment environment
 - establish a working relationship with candidate.

Required knowledge

- competency-based assessment, including:
 - vocational education and training as a competency-based system
 - criterion-referenced assessment as distinct from norm-referenced assessment
 - competency standards as the basis of qualifications
 - structure and application of competency standards
 - principles of assessment and how they are applied
 - rules of evidence and how they are applied
 - range of assessment purposes and assessment contexts, including RPL
 - different assessment methods, including suitability for gathering various types of evidence, suitability for content of units, and resource requirements and associated costs
 - reasonable adjustments and when they are applicable
 - types and forms of evidence, including assessment instruments that are relevant to gathering different types of evidence used in competency-based assessment, including RPL
 - potential barriers and processes relating to assessment tools and methods
 - assessment system, including policies and procedures established by the industry, organisation or training authority
- RPL policies and procedures established by the organisation
- cultural sensitivity and equity considerations
- relevant policy, legislation, codes of practice and national standards, including commonwealth and state or territory legislation that may affect training and assessment in the vocational education and training sector, such as:
 - copyright and privacy laws in terms of electronic technology
 - security of information
 - plagiarism
 - training packages and competency standards
 - licensing requirements
 - industry and workplace requirements
 - duty of care under common law
 - recording information and confidentiality requirements
 - anti-discrimination, including equal employment opportunity, racial vilification and disability discrimination
 - workplace relations
 - industrial awards and enterprise agreements
- OHS responsibilities associated with assessing competence, such as:
 - requirements for reporting hazards and incidents
 - emergency procedures
 - procedures for use of relevant personal protective equipment
 - safe use and maintenance of relevant equipment

- sources of OHS information.
-

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • assess competence of a number of candidates within the vocational education and training context against different units of competency or accredited curricula, following the relevant assessment plan • assess at least one candidate for RPL • consider reasonable adjustment and the reasons for decisions in at least one assessment • cover an entire unit of competency and show: <ul style="list-style-type: none"> • the application of different assessment methods and instruments involving a range of assessment activities and events • two-way communication and feedback • how judgement was exercised in making the assessment decision • how and when assessment outcomes were recorded and reported • assessment records and reports completed in accordance with assessment system and organisational, legal and ethical requirements • how the assessment process was reviewed.
Context of and specific resources for assessment	Evidence must be gathered in the workplace whenever possible. Where no workplace is available, a simulated workplace must be provided.
Method of assessment	
Guidance information for assessment	

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Assessment plan</i> may include:</p>	<ul style="list-style-type: none"> • overall planning, describing: <ul style="list-style-type: none"> • what is to be assessed • when assessment is to take place • where assessment is to take place • how assessment is to take place.
<p><i>Benchmarks for assessment:</i></p>	<ul style="list-style-type: none"> • refer to a criterion against which the candidate is assessed • may be a competency standard/unit of competency, assessment criteria of course curricula, performance specifications, or product specifications.
<p><i>Assessment tools</i> include:</p>	<ul style="list-style-type: none"> • the learning or competency unit(s) to be assessed • the target group, context and conditions for the assessment • the tasks to be administered to the candidate • an outline of the evidence to be gathered from the candidate • the evidence criteria used to judge the quality of performance (i.e. the assessment decision-making rules) • the administration, recording and reporting requirements • the evidence of how validity and reliability have been tested and built into the design and use of the tool.
<p><i>Specialist support</i> may include:</p>	<ul style="list-style-type: none"> • assistance by third party, such as carer or interpreter • support from specialist educator • provision of developed online assessment activities • support for remote or isolated candidates and assessors • support from subject matter or safety experts • advice from regulatory authorities • assessment teams and panels • support from lead assessors • advice from policy development experts.
<p><i>Assessment methods</i> include:</p>	<ul style="list-style-type: none"> • particular techniques used to gather different types of evidence, such as: <ul style="list-style-type: none"> • direct observation

	<ul style="list-style-type: none"> • structured activities • oral or written questioning • portfolios of evidence • review of products • third-party feedback.
<i>Individual differences</i> may include:	<ul style="list-style-type: none"> • English language, literacy and numeracy barriers • physical impairment or disability • intellectual impairment or disability • medical condition that may impact on assessment, such as arthritis, epilepsy, diabetes and asthma • learning difficulties • mental or psychological disability • religious and spiritual observances • cultural images and perceptions • age • gender.
<i>Feedback</i> may include:	<ul style="list-style-type: none"> • ensuring assessment/RPL process is understood • ensuring candidate concerns are addressed • enabling questions and answers • confirming outcomes • identifying further evidence to be provided • discussing action plans • confirming gap training needed • providing information regarding available appeal processes • suggesting improvements in evidence gathering and presentation.
<i>Consultation</i> may involve:	<ul style="list-style-type: none"> • moderation with other assessors, or training and assessment coordinators • discussions with client, team leaders, managers, RPL coordinators, supervisors, coaches and mentors • technical and subject experts • English language, literacy and numeracy experts.

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to participate in an assessment validation process.

Application of the Unit

This unit typically applies to those participating in assessment validation. It does not address leading the validation process.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
---------	----------------------

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1. Prepare for validation	<p>1.1 Discuss and confirm the approach to validation according to defined purposes, context, and relevant <i>assessment system policies and procedures</i></p> <p>1.2 Analyse relevant <i>benchmarks for assessment</i> and agree on the evidence needed to demonstrate competence</p> <p>1.3 Arrange <i>materials</i> for <i>validation activities</i></p>
2. Contribute to validation process	<p>2.1 Demonstrate active <i>participation</i> in validation sessions and activities using appropriate communication skills</p> <p>2.2 Participate in validation sessions and activities by applying the principles of assessment and rules of evidence</p> <p>2.3 Check all documents used in the validation process for accuracy and version control</p>
3. Contribute to validation outcomes	<p>3.1 Collectively discuss validation findings to support improvements in the quality of assessment</p> <p>3.2 Discuss, agree and record recommendations to improve assessment practice</p> <p>3.3 Implement changes to own assessment practice, arising from validation</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- planning skills to participate in validation activities within agreed timeframes
- problem-solving skills to identify information that is inconsistent, ambiguous or contradictory
- evaluation skills to:
 - determine evidence requirements from competency standards
 - review assessment process, tools and methods
 - review collected evidence
- communication skills to share information in validation meetings.

Required knowledge

- how to interpret competency standards and other related assessment information to determine the evidence needed to demonstrate competence, including:
 - criterion-referenced assessment as distinct from norm-referenced assessment
 - various reasons for carrying out validation and the different approaches to validation that may be appropriate before, during and after assessment
 - critical aspects of validation, including validation of assessment processes, methods and products
 - relevant OHS legislation, codes of practice, standards and guidelines, impacting on assessment
 - legal and ethical requirements of assessors, particularly in relation to validation activities
- principles of assessment
- rules of evidence.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • actively participate in a minimum of two validation sessions or meetings which, in combination, address the critical aspects of validation using different validation approaches and activities • clearly explain purposes of validation and the legal and ethical responsibilities of assessors • collate documentation relating to validation process in a logical manner • demonstrate communication and liaison with relevant people • provide feedback and interpret documentation in validation sessions • record contribution to validation findings.
Context of and specific resources for assessment	<p>Evidence must be gathered in the workplace wherever possible. Where no workplace is available, a simulated workplace must be provided.</p> <p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • assessment reports and records • other documentation relevant to validation.
Method of assessment	
Guidance information for assessment	

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Assessment system policies and procedures may include:</p>	<ul style="list-style-type: none"> • candidate selection • rationale and purpose of competency-based assessment • assessment records, and data and information management • recognition of current competency, recognition of prior learning and credit arrangements • assessment reporting procedures • assessment appeals • candidate grievances and complaints • validation • evaluation and internal audit • costs and resourcing • access and equity, and reasonable adjustment • partnership arrangements • links with human resource or industrial relations system • links with overall quality management system.
<p>Benchmarks for assessment:</p>	<ul style="list-style-type: none"> • refers to criterion against which the candidate is assessed • may be one or more units of competency or assessment criteria of course curricula.
<p>Materials may include:</p>	<ul style="list-style-type: none"> • assessment tools • samples of collected evidence • documentation outlining the basis of assessment decisions • reports and records of assessment decisions • samples of benchmarks of appropriate evidence • Assessment Guidelines of the relevant training packages • information from the evidence guide of the relevant units of competency.
<p>Validation activities may include:</p>	<ul style="list-style-type: none"> • analysing and reviewing: <ul style="list-style-type: none"> • assessment tools • collected evidence • assessment decisions and records of assessment outcomes • other aspects of assessment policies, processes and outcomes • recording evidence of validation processes and outcomes.
<p>Participation may include comparison and</p>	<ul style="list-style-type: none"> • assessment practices • assessment plans

evaluation of:	<ul style="list-style-type: none">• interpretation of units of competency• assessment methods and instruments• assessment decisions• collected evidence.

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to design and develop assessment tools, including tools used in formative, summative and recognition of prior learning (RPL) assessment.

Application of the Unit

An assessment tool is used to guide the collection of quality evidence in the assessment process. It includes the specific instruments for collecting evidence, as well as information about assessment methods and the procedures to be followed in conducting the assessment. This unit typically applies to those involved in training and assessment or in the development of learning resources or products, assessors, learning resource or product developers, and training and assessment consultants.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT

Elements describe the essential outcomes of a unit of competency.

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1. Determine focus of the assessment tool	<p>1.1 Identify target group of candidates, purposes of <i>assessment tool</i>, and <i>contexts</i> in which the tool will be used</p> <p>1.2 Access relevant <i>benchmarks for assessment</i> and interpret them to establish evidence required to demonstrate competence</p> <p>1.3 Identify, access and interpret <i>organisational, legal and ethical requirements</i> and relevant <i>contextualisation guidelines</i></p> <p>1.4 Identify other <i>related documentation</i> to inform assessment tool development</p>
2. Design assessment tool	<p>2.1 Select assessment methods that support the collection of defined evidence, taking into account the context in which the assessment will take place and meeting the principles of assessment</p> <p>2.2 Enable candidates to show or support their claim for recognition of current competency through selected assessment methods</p> <p>2.3 Consider different <i>assessment instruments</i> for the selected assessment methods to generate options for collection of evidence</p> <p>2.4 Consider how the assessment instruments will be administered</p>
3. Develop assessment tool	<p>3.1 Develop specific assessment instruments that address the evidence to be collected</p> <p>3.2 Define and document clear and specific <i>procedures</i> instructing assessor and candidate on the administration and use of the instruments</p> <p>3.3 Consider requirements of <i>assessment system policies and procedures</i> and address storage and retrieval needs, and review, evaluation and version control procedures as part of this process</p>
4. Review and trial assessment tool	<p>4.1 Check draft assessment tools against <i>evaluation criteria</i> and amend as required</p> <p>4.2 Trial assessment tools to validate content and applicability</p> <p>4.3 Collect and document feedback from relevant people involved in trialling</p> <p>4.4 Make amendments to final tool based on analysis of feedback</p> <p>4.5 Appropriately format and file finalised assessment tool according to assessment system policies and procedures and organisational, legal and ethical requirements</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analysis and interpretation skills to review and evaluate assessment tools
- critical thinking skills to translate the interpreted competency standards and other relevant assessment information into meaningful assessment instruments
- design skills to develop different assessment tool designs
- research and evaluation skills to evaluate assessment tools on the basis of trials and feedback.

Required knowledge

- principles of assessment and how they are applied when developing assessment tools
- different types and rules of evidence
- different assessment contexts and relationship to developing assessment tools
- components of competency and dimensions of competency
- contextualisation of competency standards and contextualisation guidelines
- Assessment Guidelines of training packages as relevant to developing assessment tools
- different assessment methods, their purposes and uses
- evaluation methodologies appropriate to the trial and review of assessment tools
- principles of reasonable adjustment
- relevant workplace information, including:
 - organisational policies and procedures
 - workplace tasks and activities
 - standard operating procedures
 - procedures for use of relevant personal protective equipment.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • develop assessment tools that support different assessment methods and address at least three units of competency packaged at different Australian Qualifications Framework (AQF) levels • develop assessment tools that: <ul style="list-style-type: none"> • include the instruments for collecting evidence, reflecting the principles of assessment and the rules of evidence, and the related instructions to assessor/s and candidates • show how the contextual needs of different environments are addressed • report on the trial and review of the assessment tools, including proposed changes.
Context of and specific resources for assessment	<p>Evidence must be gathered in the workplace wherever possible. Where no workplace is available, a simulated workplace must be provided.</p> <p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • training products, such as training packages and accredited course documentation.
Method of assessment	
Guidance information for assessment	

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Assessment tool</i> includes:</p>	<ul style="list-style-type: none"> • the learning or competency unit(s) to be assessed • the target group, context and conditions for the assessment • the tasks to be administered to the candidate • an outline of the evidence to be gathered from the candidate • the evidence criteria used to judge the quality of performance (i.e. the assessment decision-making rules) • the administration, recording and reporting requirements • the evidence of how validity and reliability have been tested and built into the design and use of the tool.
<p><i>Contexts</i> of assessment/RPL may include:</p>	<ul style="list-style-type: none"> • environment in which the assessment/RPL will be carried out, including real or simulated workplace • opportunities for collecting evidence in a number of situations • relationships between competency standards and evidence to support RPL • who carries out the assessment/RPL • relationships between competency standards and work activities in the candidate's workplace • relationships between competency standards and learning activities.
<p><i>Benchmarks for assessment:</i></p>	<ul style="list-style-type: none"> • refer to criteria against which the candidate is assessed which may be a unit of competency, assessment criteria of course curricula, performance specifications, or product specifications • where the benchmark is one or more units of competency the standards may be contextualised to reflect the immediate operating environment.
<p><i>Organisational, legal and ethical requirements</i> may include:</p>	<ul style="list-style-type: none"> • assessment system policies and procedures • industrial relations systems and processes, awards and enterprise agreements • licensing and legal ramifications of assessing competence • reporting, recording and retrieval systems for assessment • requirements of training, assessment and validation, including the AQTF Standards for Registered Training Organisations • human resource policies, procedures and legal requirements,

	<p>including:</p> <ul style="list-style-type: none"> • anti-discrimination • equal employment opportunity • job role, responsibilities and conditions • relevant industry codes of practice • confidentiality and privacy requirements of information relating to completed assessments • OHS considerations, including: <ul style="list-style-type: none"> • ensuring assessment methods and tools incorporate appropriate measures to maintain the health, safety and welfare of candidates • ensuring OHS requirements and specified benchmarks are accounted for within evidence requirements and assessment materials • identifying hazards and relevant risk control procedures associated with the assessment environment.
<i>Contextualisation guidelines</i> relate to:	<ul style="list-style-type: none"> • relevant training package or accredited course contextualisation guidelines.
<i>Related documentation</i> may include:	<ul style="list-style-type: none"> • requirements set out in the Assessment Guidelines of the relevant training packages • information from the competency standards about: <ul style="list-style-type: none"> • resources required for assessment • assessment context • appropriate assessment methods • assessment activities identified in accredited modules derived from the relevant competency standards • assessment activities in support materials related to the relevant competency standards • any requirements of OHS, legislation, codes of practice, standards and guidelines • indicators and levels of competence of the Australian Core Skills Framework • organisational requirements for demonstration of work performance • product specifications.
<i>Assessment instrument</i> may be:	<ul style="list-style-type: none"> • profiles of acceptable performance measures • templates and proformas • specific questions or activities • evidence and observation checklists • checklists for the evaluation of work samples • recognition portfolios • candidate self-assessment materials.

<i>Procedures</i> may include:	<ul style="list-style-type: none"> • those that guide the application of the instruments, such as: <ul style="list-style-type: none"> • instructions for the candidates • instructions for administering the assessment tool, including resources needed to conduct assessment and the context for the use of tools • guidance for development or review of decision-making process • guidance on reasonable adjustments • specified variations or restrictions on the tools • rules for verifying assessment decisions • OHS requirements, for example, identified hazards in the assessment environment and appropriate controls and reporting mechanisms • information on access and equity considerations.
<i>Assessment system policies and procedures</i> may include:	<ul style="list-style-type: none"> • assessment records, and data and information management • recognition of current competency, RPL and credit arrangements • assessor needs, qualifications and maintenance of currency • assessment reporting procedures • assessment appeals • candidate grievances and complaints • validation • evaluation and internal audit • costs and resourcing • access and equity, and reasonable adjustment • partnership arrangements • links with human resource or industrial relations systems • links with overall quality management system.
<i>Evaluation criteria</i> may include:	<ul style="list-style-type: none"> • effectiveness and relevance to the competency standards • whether assessment tool is appropriate to selected assessment methods • whether assessment tool is appropriate to target group and assessment context • appropriateness of language and literacy for intended audience.

TAEDEL301A Provide work skill instruction

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit describes the performance outcomes, skills and knowledge required to conduct individual and group instruction and demonstrate work skills, using existing learning resources in a safe and comfortable learning environment. The unit covers the skills and knowledge required to determine the success of both the training provided and one's own personal training performance. It emphasises the training as being driven by the work process and context.
------------------------	--

Application of the Unit

Application of the unit	This unit supports a wide range of applications across any workplace setting and so can be used by any organisation. Its use is not restricted to training organisations.
--------------------------------	---

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Organise instruction and demonstration	1.1. Gather information about <i>learner characteristics</i> and learning needs 1.2. Confirm a <i>safe learning environment</i> 1.3. Gather and check <i>instruction and demonstration objectives</i> and seek assistance if required 1.4. Access and review relevant <i>learning resources</i> and <i>learning materials</i> for suitability and relevance, and seek assistance to interpret the contextual application 1.5. Organise access to necessary equipment or physical resources required for instruction and demonstration 1.6. Notify learners of <i>details</i> regarding the implementation of the learning program and/or delivery plan
2. Conduct instruction and demonstration	2.1. Use interpersonal skills with learners to establish a safe and comfortable learning environment 2.2. Follow the learning program and/or delivery plan to cover all learning objectives 2.3. Brief learners on any <i>OHS procedures</i> and requirements prior to and during training 2.4. Use <i>delivery techniques</i> to structure, pace and enhance learning 2.5. Apply <i>coaching</i> techniques to assist learning 2.6. Use communication skills to provide information, instruct learners and demonstrate relevant work skills 2.7. Provide opportunities for practice during instruction and through work activities 2.8. Provide and discuss feedback on learner performance to support learning
3. Check training performance	3.1. Use <i>measures</i> to ensure learners are acquiring and can use new technical and generic skills and knowledge 3.2. Monitor learner progress and outcomes in consultation with learner 3.3. Review relationship between the trainer/coach and the learner and adjust to suit learner needs
4. Review personal training performance and finalise documentation	4.1. Reflect upon personal performance in providing instruction and demonstration, and document strategies for improvement 4.2. Maintain, store and secure learner records according

ELEMENT	PERFORMANCE CRITERIA
	to organisational and legal requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- verbal and non-verbal communication techniques, such as:
 - asking relevant and appropriate questions
 - providing explanations
 - demonstrating
 - using listening skills
 - providing information clearly
- safety skills to implement OHS requirements, by acting and responding safely in order to:
 - identify hazards
 - conduct prestart-up checks if required
 - observe and interpret learner behaviour that may put people at risk
- time-management, skills to:
 - ensure all learning objectives are covered
 - pace learning
- reflection skills in order to:
 - identify areas for improvement
 - maintain personal skill development
- literacy skills to:
 - complete and maintain documentation
 - read and follow learning programs and plans
 - read and analyse learner information
- technology skills to operate audio-visual and technical equipment
- interpersonal skills to:
 - engage, motivate and connect with learners
 - provide constructive feedback
 - maintain appropriate relationships
 - establish trust
 - use appropriate body language
 - maintain humour
 - demonstrate tolerance
 - manage a group
 - recognise and be sensitive to individual difference and diversity
- observation skills to:
 - monitor learner acquisition of new skills, knowledge and competency

REQUIRED SKILLS AND KNOWLEDGE

requirements

- assess learner communication and skills in interacting with others
- identify learner concerns
- recognise learner readiness to take on new skills and tasks

Required knowledge

- learner characteristics and needs
- content and requirements of the relevant learning program and/or delivery plan
- sources and availability of relevant learning resources and learning materials
- content of learning resources and learning materials
- training techniques that enhance learning and when to use them
- introductory knowledge of learning principles and learning styles
- key OHS issues in the learning environment, including:
 - roles and responsibilities of key personnel
 - responsibilities of learners
 - relevant policies and procedures, including hazard identification, risk assessment, reporting requirements, safe use of equipment and emergency procedures
 - risk controls for the specific learning environment

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	<p>Assessment must address the scope of this unit and reflect all components of the unit. A range of appropriate assessment methods and evidence-gathering techniques must be used to determine competency. A judgement of competency should only be made when the assessor is confident that the required outcomes of the unit have been achieved and that consistent performance has been demonstrated.</p>
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • carry out a minimum of three training sessions, involving demonstrating and instructing particular work skills for different groups; with each session addressing: <ul style="list-style-type: none"> • different learning objectives • a range of techniques and effective communication skills appropriate to the audience.
<p>Context of and specific resources for assessment</p>	<p>Evidence must be gathered in the workplace wherever possible. Where no workplace is available, a simulated workplace must be provided.</p>
<p>Method of assessment</p>	
<p>Guidance information for assessment</p>	<p>For further information about assessment of this and other TAE units, refer to relevant implementation guidance published on the IBSA website (www.ibsa.org.au).</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Learner characteristics</i> may include:	<ul style="list-style-type: none"> • language, literacy and numeracy levels • learning styles • past learning and work experiences • specific needs • workplace culture.
<i>Safe learning environment</i> may include:	<ul style="list-style-type: none"> • exit requirements • personal protective equipment • safe access • safe use of equipment.
<i>Instruction and demonstration objectives</i> may include:	<ul style="list-style-type: none"> • competencies to be achieved • generic and technical skills, which may be: <ul style="list-style-type: none"> • provided by the organisation • developed by a colleague • individual or group objectives • learning outcomes.
<i>Learning resources</i> may include:	<ul style="list-style-type: none"> • any material used to support learning, such as: <ul style="list-style-type: none"> • learner and user guides • trainer and facilitator guides • example training programs • specific case studies • professional development materials • assessment materials • a variety of formats • those produced locally • those acquired from other sources.
<i>Learning materials</i> may include:	<ul style="list-style-type: none"> • handouts for learners • materials sourced from the workplace, e.g. workplace documentation, operating procedures, and specifications.
<i>Details</i> may include:	<ul style="list-style-type: none"> • location and time • outcomes of instruction or demonstration

RANGE STATEMENT	
	<ul style="list-style-type: none"> • reason for instruction or demonstration • who will be attending instruction session.
<i>OHS procedures</i> may include:	<ul style="list-style-type: none"> • emergency procedures • hazards and their means of control • incident reporting • use of personal protective equipment • safe work practices • safety briefings • site-specific safety rules.
<i>Delivery techniques</i> may include:	<ul style="list-style-type: none"> • coaching • demonstration • explanation • group or pair work • providing opportunities to practise skills and solve problems • questions and answers.
<i>Coaching</i> may include:	<ul style="list-style-type: none"> • learning arrangements requiring immediate interaction and feedback • on-the-job instruction and 'buddy' systems • relationships targeting enhanced performance • short-term learning arrangements • working on a one-to-one basis.
<i>Measures</i> may include:	<ul style="list-style-type: none"> • informal review or discussion • learner survey • on-the-job observation • review of peer coaching arrangements.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Establish effective work environment for learning	1.1. Establish and agree upon objectives and scope of the work-based learning 1.2. Analyse work practices and routines to determine their effectiveness in meeting established learning objectives 1.3. Identify and address <i>OHS implications</i> of using work as the basis for learning
2. Develop a work-based learning pathway	2.1. Address <i>contractual requirements</i> and responsibilities for learning at work 2.2. Arrange for integration and monitoring of external learning activities with the <i>work-based learning pathway</i> 2.3. Obtain agreement from relevant personnel to implement the work-based learning pathway
3. Establish the learning-facilitation relationship	3.1. Identify context for learning and individual's learning style 3.2. Select appropriate technique or process to facilitate learning and explain the basis of the technique to learner 3.3. Develop, document and discuss <i>individualised learning plan</i> with learner 3.4. Access, read and interpret documentation outlining the OHS responsibilities of the various parties in the learning environment 3.5. Monitor supervisory arrangements appropriate to learner's levels of knowledge, skill and experience to provide support and encouragement and ensure learner's health and safety
4. Implement work-based learning pathway	4.1. Sequence introduction of workplace tasks, activities and processes to reflect the agreed work-based learning pathway 4.2. Explain objectives of work-based learning and the processes involved to learner 4.3. Encourage learner to take responsibility for learning and to self-reflect 4.4. Develop techniques that facilitate learner's transfer of skills and knowledge
5. Maintain and develop the learning/facilitation	5.1. Prepare for each session 5.2. Structure learning activities to support and reinforce new learning, build on strengths, and identify areas

ELEMENT	PERFORMANCE CRITERIA
relationship	<p>for further development</p> <p>5.3.Observe learner cues and change approaches where necessary to maintain momentum</p> <p>5.4.Practise <i>ethical behaviour</i> at all times</p> <p>5.5.Monitor effectiveness of the learning/facilitation relationship through regular meetings between the parties</p>
6. Close and evaluate the learning/facilitation relationship	<p>6.1.Carry out the closure smoothly, using appropriate interpersonal and communication skills</p> <p>6.2.Seek feedback from learner on the outcomes achieved and value of the relationship</p> <p>6.3.Evaluate and document process, including <i>impact, self evaluation and reflection</i>, and file according to legal and organisational requirements</p>
7. Monitor and review the effectiveness of the work-based learning pathway	<p>7.1.Document work performance and learning achievement and keep records according to organisational requirements</p> <p>7.2.Evaluate effectiveness of the work-based pathway against the objectives, processes and techniques used</p> <p>7.3.Recommend improvements to work-based practice in light of the review process</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- oral communication and language skills to:
 - motivate the learner
 - transfer skills and knowledge
- interpersonal skills to maintain appropriate relationships
- observation skills to monitor individual progress
- literacy skills to:
 - read and interpret organisational documents, legal documents and contracts
 - complete and maintain documentation
- organisational skills to provide guidance and feedback to individuals
- communication skills, including:
 - using effective verbal and non-verbal language
 - using critical listening and questioning techniques
 - giving constructive and supportive feedback
 - assisting learners to paraphrase advice or instructions back to the trainer/facilitator
 - providing clear and concrete options and advice
 - using appropriate industry/profession terminology and language
 - ensuring language, literacy and numeracy used is appropriate to learners

Required knowledge

- systems, processes and practices within the organisation where work-based learning is taking place
- operational demands of the work and impact of changes on work roles
- organisational work culture, including industrial relations environment
- systems for identifying skill needs
- introductory knowledge of different learning styles and how to encourage learning in each, for example:
 - visual learners
 - audio learners
 - kinaesthetic learners
 - theoretical learners
- relevant policy, legislation, codes of practice and national standards that may affect training and assessment in the vocational education and training sector
- OHS relating to the work role, including:
 - hazards relating to the industry and specific workplace

REQUIRED SKILLS AND KNOWLEDGE

- | |
|--|
| <ul style="list-style-type: none">• reporting requirements for hazards and incidents• specific procedures for work tasks• safe use and maintenance of relevant equipment• emergency procedures• sources of OHS information |

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must address the scope of this unit and reflect all components of the unit. A range of appropriate assessment methods and evidence-gathering techniques must be used to determine competency. A judgement of competency should only be made when the assessor is confident that the required outcomes of the unit have been achieved and that consistent performance has been demonstrated.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of the ability to: <ul style="list-style-type: none"> • prepare and facilitate work-based learning • provide evidence of a minimum of two examples of developing work-based learning pathways, that include: <ul style="list-style-type: none"> • identifying needs for learning • analysing work practices, work environment and work activities • organising and allocating work in a way that reflects learning needs and provides effective learning opportunities through work processes • provide a minimum of two examples of a learning facilitation relationship being conducted: <ul style="list-style-type: none"> • with different individuals • demonstrating communication skills and flexibility • demonstrating one or more of the processes or techniques identified.
Context of and specific resources for assessment	Evidence must be gathered in the workplace wherever possible. Where no workplace is available, a simulated workplace must be provided. Assessment must ensure access to information about work activities.
Method of assessment	
Guidance information for assessment	For further information about assessment of this and other TAE units, refer to relevant implementation guidance published on the IBSA website (www.ibsa.org.au).

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p><i>OHS implications</i> may include:</p>	<ul style="list-style-type: none"> • OHS obligations • workplace OHS policies and procedures • ensuring work practices, routines and proposed changes do not pose a risk to learners and others.
<p><i>Contractual requirements</i> may include:</p>	<ul style="list-style-type: none"> • training plans under apprenticeships/traineeships • requirements of government-funded training programs, such as Workplace English Language and Literacy (WELL).
<p><i>Work-based learning pathway</i> may include:</p>	<ul style="list-style-type: none"> • identifying specific goals for work-based learning • identifying job tasks or activities to be included in learning process • appropriate sequencing of job tasks/activities to reflect learner incremental development • direct guidance and modelling from experienced co-workers and experts • opportunities for practice.
<p><i>Individualised learning plan</i> may include:</p>	<ul style="list-style-type: none"> • information about individual's learning style, learner characteristics, and the context for learning • clear boundaries and expectations of the learning/facilitation relationship • documented equity or additional support needs for the learner • performance benchmarks to be achieved • activities and processes which together will achieve the benchmarks.
<p><i>Ethical behaviour</i> includes:</p>	<ul style="list-style-type: none"> • trust • integrity • privacy and confidentiality of the session • following organisational policies • knowing own limitations • having a range of other intervention referrals ready when needed • honesty

RANGE STATEMENT	
	<ul style="list-style-type: none"> • fairness to others.
<i>Impact</i> may be:	<ul style="list-style-type: none"> • successful achievement, rate of achievement, or lack of achievement of identified goals • achievement of other outcomes as a result of the relationship • development of new goals • new or increased motivation to learn • greater capacity to learn • increase in learner's self-confidence.
<i>Self-evaluation and reflection</i> may include:	<ul style="list-style-type: none"> • asking critical questions about: <ul style="list-style-type: none"> • own ability • what worked or didn't work • how the relationship building process could be improved • reviewing records and journals on sessions and critically evaluating own performance • reviewing feedback from learner and identifying critical aspects and areas for improvement.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Define parameters of the learning program	1.1. Clarify <i>purpose</i> and type of learning program with key stakeholders 1.2. Access and confirm the competency standards and <i>other training specifications</i> on which to base the learning program 1.3. Identify language, literacy and numeracy requirements of the program 1.4. Identify and consider characteristics of the target learner group
2. Work within the vocational education and training (VET) policy framework	2.1. Access relevant <i>VET policies</i> and frameworks, and apply to work practices 2.2. Identify changes to training packages and accredited courses and apply these to program development 2.3. Conduct work according to organisational quality assurance policies and procedures
3. Develop program content	3.1. Research, develop and document specific subject matter content according to agreed design options 3.2. Evaluate existing learning resources for content relevance and quality 3.3. Specify assessment requirements of the learning program
4. Design structure of the learning program	4.1. Break the learning content into manageable segments and document timeframe for each segment 4.2. Determine and confirm <i>delivery strategies</i> and required assessment methods and tools 4.3. Document complete learning program in line with organisational requirements 4.4. Review complete program with key stakeholders and adjust as required 4.5. Ensure a safe learning progression by analysing risks in the learning environment and including a risk control plan

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- organisational skills to ensure resources are available and suitable
- evaluation skills to determine the time required for each learning segment and the overall timelines of the learning program
- cognitive skills to develop the learning program content and design its structure
- language and literacy skills to read and interpret a range of documentation, including technical and subject matter documents, references and texts

Required knowledge

- information about training package developers and course accreditation agencies responsible for specific learning program parameters
- training packages and relevant competency standards to be used as the basis of the learning program
- other performance standards and criteria to be used as the basis of the learning program, where relevant
- distinction and relationship between a training package/accredited course, learning strategy and learning program, where linked
- different purposes and focus of learning programs
- sound knowledge of learning principles
- instructional design principles relating to different design options for learning program design and structure
- availability and types of different relevant learning resources, learning materials and pre-developed learning activities
- methodology relating to developing and documenting new learning activities and related learning materials
- different delivery modes and methods
- relevant policies, legal requirements, codes of practice and national standards, including commonwealth and state or territory legislation that may affect training and assessment in the VET sector
- relevant OHS knowledge relating to the work role, and OHS considerations that need to be included in the learning program

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must address the scope of this unit and reflect all components of the unit. A range of appropriate assessment methods and evidence-gathering techniques must be used to determine competency. A judgement of competency should only be made when the assessor is confident that the required outcomes of the unit have been achieved and that consistent performance has been demonstrated.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of the ability to: <ul style="list-style-type: none"> • design, develop and review learning programs within the VET context • prepare and develop a minimum of two learning programs: <ul style="list-style-type: none"> • that contain differentiated learning program designs to reflect particular needs, contexts and timelines • at least one of which must be based on competency standards or accredited courses and must cover at least one entire unit of competency or accredited course module.
Context of and specific resources for assessment	Evidence must be gathered in the workplace whenever possible. Where no workplace is available, a simulated workplace must be provided.
Method of assessment	
Guidance information for assessment	For further information about assessment of this and other TAE units, refer to relevant implementation guidance published on the IBSA website (www.ibsa.org.au).

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Purpose</i> may include:</p>	<ul style="list-style-type: none"> • developing vocational competency or vocational skills • developing language, literacy and numeracy skills • developing general education • meeting legislative, licensing and registration requirements, such as OHS requirements.
<p><i>Other training specifications</i> may include:</p>	<ul style="list-style-type: none"> • curriculum specifications • product specifications • organisational work requirements and training needs • induction needs • language, literacy and numeracy development needs • regulatory and licensing requirements.
<p><i>Vocational education and training policies</i> may include:</p>	<ul style="list-style-type: none"> • policies and procedures set by national organisations, such as the National Quality Council • Australian Quality Training Framework • other relevant policies.
<p><i>Delivery strategies</i> may include:</p>	<ul style="list-style-type: none"> • focus of delivery in terms of size and type of group • context of delivery, for example: <ul style="list-style-type: none"> • in the workplace • in a training room • in a community setting • mode of delivery, for example: <ul style="list-style-type: none"> • face-to-face • online • blended delivery mode • delivery methods, for example: <ul style="list-style-type: none"> • lock-step, learner-paced and mixed • interactive, participative and collaborative • blended delivery methods.
